Terraseeding®

2 Weeks Germination

EcoBlanket Before/After in Australia

Seeding With Soil

Terraseeding® is more than simply seeding with soil. It's an **exclusive** Express Blower process that allows the **calibrated** injection of seed, fertilizer, MicroBlend® or other granular additive directly into the blow stream of soils, compost, or mulches. Use for erosion control blankets, sediment control berms, athletic turf, golf courses, residential lawns, and native landscapes.

No wheelbarrows breaking your workers' backs. No wheelbarrows damaging landscapes. With only one operator, an Express Blower equipped with the optional **Supplemental Injection System** applies soil mix, fertilizer, and grass seed in one easy application to produce beautiful and professional results. No longer haul and wheelbarrow soil, level and rake, seed by hand, fertilize and topdress over the seed. In a **fraction of the time** it takes to install turf the old-fashioned way,
