Members of Oregon state boards and commissions are vital participants in policy making, regulation, advisory and advocacy efforts for a wide variety of issues affecting all Oregonians. Governor Kitzhaber makes direct appointments to approximately 200 boards and continuously recruits qualified applicants.

At all levels of state government, contributions by members of boards increase efficiency, innovation and responsiveness of governmental decision making. Most major state agencies and departments are headed by policy making boards appointed by the Governor. Many additional committees, councils, boards and commissions establish policy in given areas or serve in advisory roles.

With boards functioning at all levels, dedicated citizens have the opportunity to participate in developing a wide variety of governmental policies. Major issues range from consumer protection to economic development, education, conservation, personal rehabilitation and criminal justice.

The board system contributes to the success of Oregon state government and is key to bringing local citizens talent and interest to the state level. Governor Kitzhaber encourages all Oregonians to become actively involved in the administration of their state government.

How To Apply

On this site you will find information regarding state boards and

commissions. The [Boards & Commissions Book](#) describes all boards to which the governor makes appointments, the [Expiration List](#)* and [Vacancy List](#)* indicate when openings will occur, and the [Interest Form](#) serves as an application for one or more boards. The [Membership Handbook](#) is a general guide to board service.

Please review this material to see if any particular boards pique your interest. If you wish to apply, simply complete the [Interest Form](#) and return it to our office. You may apply at any time, regardless of whether there is a current opening, as resignations occur throughout the year.

We appreciate your interest in serving the State of Oregon.

OFFICE OF THE GOVERNOR

JUDICIAL APPOINTMENTS AND EXECUTIVE ORDERS

Office of the Legal Counsel to the Governor

Daniel P. Santos	Legal Counsel
Sean O'Day	Deputy Legal Counsel
Lorna Hobbs	Assistant to Legal Counsel

Duties of the Counsel to the Governor

Appointed by the Governor, the members of the Office of Legal Counsel serve as the legal advisors to the Governor and his staff and monitors legal issues related to the Governor, his staff, and all related State agency matters. The duties include assisting in matters such as:

- **Judicial Appointments**
- Executive Orders**
- Government-to-Government Relations and Indian Gaming**
- Clemency**
- Extraditions**
- Policy Advisor On Legal Issues Affecting the State**

Judicial Appointments

Under Article IV of the Oregon Constitution, The Governor appoints vacancies in Circuit Court Judges, Court of Appeals Judges, Supreme Court Justices, Justice of the Peace, and District Attorneys. The Office of Legal Counsel reviews applications for vacant positions, conducts first-round interviews, and makes recommendations to the Governor for final interviews and selection.

[Judicial Appointment Applications](#) *

This form can not saved and must be printed out then mail or fax to us.

Executive Orders

Under Article 4 of the Oregon Constitution, the Governor has the power to issue Executive Orders. An Executive Order is a directive by the Governor. Typical orders include those that reorganize executive agencies, reassigns functions among executive agencies, establishes advisory bodies, study body, or task force, adopts guidelines, rules of conduct, or rules of procedure for State employees

or units of State government, or proclaims or ends a state of emergency

Executive orders are published on the Governor's website. Executive orders are numbered by year and chronological number, i.e., 01-01, 01-02. The first number (01) represents the year (2001), the second number, or dash numbers, represents the executive order's chronological order.

[Executive Orders Issued by Governor Kitzhaber](#)

Government to Government Relations and Indian Gaming

Oregon has nine federally recognized tribes: including Burns Paiute, Coos, Coquille, Cow Creek, Grand Ronde, Klamath, Siletz, Umatilla, and Warm Springs. In May of 1996, Governor Kitzhaber signed Executive Order 96-30 which formalizes the relationship between the nine tribes and the State of Oregon. The Office of Legal Counsel addresses all tribal issues regarding economic development, education, human services, natural resources, public safety, and cultural development.

In addition, the Legal Counsel negotiates the federally recognized tribal gaming compacts and handles such issues as: gaming, land eligibility, site facilities, security, effects on the environment, transportation and roads, and community relations.

Clemency

The Governor has the authority to grant commutations and pardons. However, the Governor believes that he should use his authority sparingly and only in the most extraordinary of circumstances. The Office of Legal Counsel Criteria considered includes: the rationale for request; the crime and period of time since the crime; input from the District Attorney, the victim, the supporters, and the community; and the convicted has used all other options, including expungement. Governor Kitzhaber has granted four applications for executive clemency since Oregonians elected him to office in 1995.

Extraditions

Extraditions are a gubernatorial function by statute. Under Oregon law, extraditions are administered and funded by the state under the Arrest and Return Program. Guidelines for the Arrest & Return Program are established by the governor's office which administers the program for Oregon's 36 counties, Department of Corrections, Parole Board, Psychiatric Security Review Board and local supervisory authority boards. In order for an extradition to be funded by the Arrest & Return Program, it must comply with the guidelines and be approved by the governor's office.

Policy Advisor – liaison to agencies, stakeholders, and the community

The Legal Counsel is the liaison between the Governor and many agencies, including:

" The Department of Justice

- " The Judicial Department
- " Public Defender
- " Oregon Lottery
- " Oregon Liquor Control Commission
- " Government Standards and Practices Commission
- " Racing Commission

FOR IMMEDIATE RELEASE

December 11, 2002

Contact:

Tom Towslee
(503) 378-6496
Jon Coney
(503) 378-6169

Brenda Rocklin Named Interim Lottery Director

Governor John Kitzhaber today named Brenda Rocklin, an attorney with the Oregon Department of Justice, as interim director of the Oregon Lottery, effective immediately.

“As interim director, I am asking Brenda to bring the agency in line with the issues raised by the recent Secretary of State audit of the Lottery,” the governor said. “I am also asking her to work with the Lottery Commission in assessing the Lottery’s current administration, its policies and the need for public accountability at a time when all state agencies need to control costs.”

Rocklin, who begins work at the Lottery tomorrow (December 12, 2002), will serve as interim director until a permanent director is nominated by the incoming governor and confirmed by the Oregon Senate. Rocklin replaces Chris Lyons, who retired on November 30, 2002.

Rocklin is currently the attorney-in-charge of the District Attorney Assistance Section of the Department of Justice, a position she has held since July 1999. She joined the Department of Justice in 1985. She has work experience in the Appellate Division, the Criminal Justice Division, the Civil Enforcement Division and Administration.

Rocklin, 47, is a graduate of Idaho State University and Willamette University College of Law. She lives in Portland.

Oregon Mentors

(503) 450-0890

Barbara Fuller

OCCF

(503) 373-1283

Governor Urges State Employees to Participate in Mentoring Program

Governor John Kitzhaber joined with officials from Oregon Mentors, Portland State University and Legacy Health Systems today to announce a partnership that encourages state employees to participate in mentoring programs for children and families.

“Budget reductions have hampered our ability to help at-risk children,” the governor said. “It is time to stop turning our heads and looking away. Mentoring provides an excellent opportunity for these at-risk children to establish positive, supportive relationships with adults at a time when they need it the most.”

Under a new state policy, state employees are permitted to use flexible work schedules, job sharing, personal leave, vacation leave or leave without pay -- subject to applicable collective bargaining agreements -- to schedule regular time to participate in approved mentoring programs at no additional cost to the state.

The Oregon Commission on Children and Families will be the lead agency to work with state agencies to recruit state employees to become mentors.

The governor said studies have shown that children with mentors are less likely to begin using illegal drugs and alcohol and are less likely to engage in violence. Studies also show that young people with mentors feel more competent about their ability to do well in school, report more positive relationships with friends and parents, and have better attitudes toward school, their family and communities.

The new policy is in partnership with Oregon Mentors, a business-led, non-profit organization founded in 2001 by business, community and state government leaders to expand youth mentoring throughout the state of Oregon. Oregon Mentors is affiliated with the Portland Business Alliance.

“Today’s announcement is a milestone in the ongoing partnership between Oregon Mentors, the governor, state employees and Portland State University,” said Tom Nelson, executive director of Oregon Mentors. “This action enables more state employees to become directly involved in the lives of young people who need positive adult role models to help them succeed in school, and avoid drugs, alcohol and criminal activity.”

Nelson says state employees can connect with more than 125 certified programs providing mentors for kids in all 36 Oregon counties by logging on to www.orientors.org

Ken Thrasher, CEO of Compli, and co-chair of Oregon Mentors commended several companies whose leaders have or will soon issue corporate “calls to action” to get their employees involved in mentoring youth. Those companies include PGE, Wells Fargo, Intel, U.S. Bank, Providence Health System, Washington Mutual, Regence BlueCross Blue Shield, PacifiCorp, Asante Health System (Medford), Oregon Association of Minority Entrepreneurs, and Legacy Health System.

Robert Pallari, president and CEO of Legacy Health Systems and a founding member of the Leadership Council of Oregon Mentors, said his company provides 1½ hours per week, paid time off to every employee to mentor or tutor a young person and provides \$100 gifts to each school or program in which its employees volunteer.

“Our communities are the real beneficiaries of business-sponsored mentoring,” Pallari said. “We all benefit when young people have hopes and dreams, when they know they can succeed because they have someone by their side that believes in them. Our communities are healthier and safer when kids are successful in school and not involved in drugs, alcohol or criminal activity.”

Governor John Kitzhaber

Proclamation of Human Rights Day, and apology for Oregon's forced sterilization of institutionalized patients

Salem, Oregon

December 2, 2002

Today, I am here to acknowledge a great wrong done to more than 2,600 Oregonians over a period of about 60 years—forced sterilization in accordance with a doctrine called eugenics. Most of these Oregonians were patients in state-run institutions. The majority of them suffered from mental disorders and disabilities. Others were criminal offenders, sufferers of epilepsy or other conditions that required institutional care. Many were children. Virtually all of them were vulnerable, helpless citizens entrusted to the care of the State of Oregon by their families or by courts.

In a few minutes, I will also issue a proclamation that designates December 10 as Human Rights Day in Oregon, a day on which Oregonians will hereafter celebrate our state's commitment to human decency and personal freedom.

1. Background.

During the early decades of the last century, the doctrine of eugenics gained widespread support in scientific circles, philosophy and government. First expressed by a British scientist named Francis Galton in the 1800's, the doctrine sought to improve the human condition by simply breeding better human beings. The method was to encourage reproduction by people with "good" genes, while discouraging reproduction by those with "bad" genes. At various times, supporters of eugenics urged passage of laws to keep ethnic groups separate from one another, to restrict immigration to America by people from eastern and southern Europe, and to impose sterilization on those considered "unfit."

Between 1900 and 1925, Oregon was one of 33 states that enacted laws to provide forced sterilization. The Oregon law established a state Board of Eugenics, later to become the Board of Social Protection, which included the superintendents of the state institutions. The Board's job was to decide which people should undergo involuntary sterilization in the interest of promoting a higher quality of human beings in succeeding generations.

2. Abolishment of the Board of Social Protection and other reforms.

In 1983, I was a young state senator from Roseburg. I served on the subcommittee that gained the abolishment of the Board of Social Protection. That important legislation was not the final word, however, in reforming the policies and procedures that govern the treatment of people under the state's care—particularly those with developmental disabilities and mental disorders. Since the late 1970's, Oregon has undergone a steady sea-change in policies that affect care, therapy and protection of rights for people who have such conditions. These changes reflect the growing awareness of the need to safeguard human dignity and to ensure that the state relegates no one to second-class citizenship because of illness or affliction. They include:

Compensation of residents in institutions. Before the late 1970's, peonage was a common practice in our institutions—a practice that denied compensation to patients and residents for their work. We've ended that practice. For the past quarter-century, the state has compensated residents for the common labor tasks they perform.

Physical restraints, drugs and isolation. Until the mid-1980's, staff in the institutions commonly used inhumane devices to restrain and control patients—devices such as leather cuffs, helmets, straightjackets, and inappropriately high dosage of sedatives and psychotropic medications. Isolation for long periods was also common. Advances in professional

knowledge and new legal requirements have dramatically reduced or eliminated such practices in Oregon.

Patients' privacy. Oregon has discontinued the practice of housing institutional residents in large, open dormitories, in favor of smaller, more personal quarters that protect individual privacy. The state also ensures protection of their personal mail, their personal possessions, and access to telephones on a regular basis.

Transition to community care. Like the rest of the nation, Oregon has sought to maximize the benefits of integrating vulnerable Oregonians into the community and the family, rather than warehouse them in institutions. In the past ten years, the state has progressed to a point at which we actually devote more resources to community care than to institutions—which illustrates how far we've come. We have replaced the traditional old rambling institutions with smaller facilities and a vast array of options for community housing and employment for those who suffer mental disorders and disabilities. In the past 25 years, we've closed the Columbia Park Hospital in the Dalles, Eastern Oregon Hospital in Pendleton, Dammasch in Wilsonville, and Fairview in Salem, meaning that the patients who lived in those institutions now live in the friendlier, more therapeutic environments of our communities.

Conclusion. Oregon has made remarkable progress in treating citizens who suffer mental illness or disabilities. But even as we celebrate the progress we've made, we must also acknowledge the realities that darken the history of our state institutions. The time has come to apologize for misdeeds that resulted from widespread misconceptions, ignorance and bigotry. It's the right thing to do, the just thing to do. The time has come to apologize for public policies that labeled people as "defective" simply because they were ill, and declared them unworthy to have children of their own.

To those who suffered, I say, The people of Oregon are sorry. Our hearts are heavy for the pain you endured. And, it is in honor of you that I declare December 10 hereafter to be Human Rights Day in Oregon—a day on which we will affirm our commitment to the value of every human being in Oregon. On this day, we will renew our determination to protect the rights of all people, regardless of their color, their religious or philosophical beliefs, their sexual preference, their economic status, their illnesses or disabilities. We value them all, for they are our brothers and sisters. Thank you.

Governor John A. Kitzhaber, M.D. - Biography

Oregon Governor John Kitzhaber was born in 1947 in Colfax, Washington. He grew up in Oregon and graduated from South Eugene High School in 1965. After graduating from Dartmouth College in 1969, he attended the University of Oregon Medical School, earning a medical degree in 1973. He practiced emergency medicine in Roseburg, Oregon for 13 years. Kitzhaber is married to the former Sharon LaCroix of Saskatchewan, Canada. They have one son, Logan, born in October 1997.

Kitzhaber first ran for public office in 1978 and was elected to the Oregon House of Representatives. In 1980 he was elected to the first of three terms in the Oregon Senate representing Douglas County and parts of Jackson County. He was elected Senate President in 1985 and served in that position until 1993. Kitzhaber was elected governor November 8, 1994, and was sworn into office January 9, 1995. He was re-elected on November 3, 1998 and inaugurated for a second term on January 11, 1999.

As Senate President, Kitzhaber was recognized nationally for authoring the ground-breaking Oregon Health Plan. He is credited both with crafting the plan itself and for bringing together diverse interest groups to pass the law, which took effect in February 1994. Kitzhaber also received recognition for his many accomplishments in the field of environmental stewardship, including the prestigious Neuberger Award given by the Oregon Environmental Council.

During his first term as governor, Kitzhaber oversaw the expansion of the Oregon Health Plan, which reduced the rate of uninsured Oregon children from 21 percent to eight percent. In addition, Kitzhaber's welfare reform plan, known as the Oregon Option, has reduced the number of welfare caseloads more than 50 percent, saved more than \$200 million in the state budget, and helped nearly 20,000 Oregonians find work.

Preserving Oregon's environment remains a priority for Kitzhaber, and during his first term he developed and implemented the Oregon Plan for Salmon and Watersheds. This is a collaborative plan that encourages federal, state and local government agencies to work with private landowners to restore watershed health and recover endangered salmon species.

Education and opportunity for Oregon's children also has been a centerpiece of Kitzhaber's administration. He has fought for stable education funding, implementing the Education Act for the 21st Century, increasing investment in Oregon's colleges and universities, including freezing tuition, and juvenile crime prevention.

Kitzhaber is an accomplished fly fisherman and enjoys Oregon's wild rivers.

Welcome to the Oregon Governor's Office Web Site. As Governor, I am proud that valuable information about our state is available to Web users from around the world.

The Governor's Office web site is a resource from which to gather information about activity in the Executive Branch of Oregon government. Please feel free to browse recent Press Releases, Text from Speeches, my Weekly Public Schedule, as well as other topics.

This page is also linked to numerous state offices and agencies through Oregon OnLine. I urge you to take a look at what Oregon OnLine has to offer. I hope you find that the information posted there gives you a unique view of our great state.

Oregon is an innovative state as shown by our strong presence on the World Wide Web. If you are a resident of Oregon, I hope the information posted here will help you better understand your state government. If you are exploring Oregon from outside our state, I hope this web site serves as a warm welcome.

John A. Kitzhaber, M.D.

Dear Fellow Oregonians:

The financial condition of our state continues to worsen. According to the official September Forecast, the revenue expected in the current budget cycle will drop by another \$482 million. The total revenue expected during this two-year biennium has dropped by \$1.7 billion since the cycle began. This growing shortfall will require either \$482 million in additional cuts to state expenditures (on top of the \$560 million already cut) or additional revenue to fill the hole. There are only two responsible ways to avoid additional cuts -- the Legislature can raise additional revenue or they can allow the taxpayers themselves to vote on raising additional revenue.

The serious nature of these developments is well illustrated by the cuts that have already been taken in state programs. Examples are:

- Over 900 children who need mental health services will not receive them.
- 2700 high-risk young children will not receive services they need to grow up healthy and enter school ready to learn.
- At least 1,100 low income Oregonians will not receive needed substance abuse treatment.
- The Portland public school system now has the shortest school year in the nation. Condon has gone to four days per week. And there are school closures in Portland, Baker City, Pendleton, Eugene and Fernridge.
- 25,000 full time students will not be able to attend a community college.

We are faced with a difficult choice. Do we want to continue to fund schools, law enforcement, and critical preventive services like mental health care and substance abuse treatment at these currently reduced levels, or do we want to cut them even further? If we want to maintain these services at their current levels, then we must be willing to pay for them with real sustainable revenue -- without borrowing from future budgets, without accounting tricks, without leaving the difficult political decisions to someone else and without making the 03-05 projected deficit of \$1.5 billion worse. If we are not willing to pay for them with real sustainable revenue, they will be cut.

I have already begun the process of cutting \$482 million in state funded services. Let me be clear: I do not endorse or support these cuts. I think they are an irresponsible means of balancing the budget. But the longer we wait, the more irresponsible the cuts will be to the citizens who receive the services they represent. With only nine months left in the biennium, a \$482 million cut is the same as taking a \$1.2 billion cut over a full biennium -- or about a 20% reduction in the services that remain. A service cut of this magnitude would mean, among other things:

- Reducing the school year, on average, by almost three weeks.
- Closing four of our five regional Juvenile Correctional Facilities.
- A substantial reduction in the number of those eligible for the Oregon Health Plan and other programs serving frail and vulnerable citizens.
- Laying off more than 100 Oregon State Police troopers.

A full description of these cuts can be found by clicking the "Cuts in State Services" button.

The only way that these cuts can be avoided is through legislative action. The Legislature is currently meeting in special session. I do not know what the Legislature will decide to do in this its 5th special session, but I can tell you what I must do if the Legislature fails to act with a real solution to the budget crisis in this state. If they fail to act I will be forced to balance the budget through across the board cuts described here.

Cutting important services is a legitimate path to a balanced budget. It is not the path I have supported in the past, nor is it the path I support now. It is, in fact, a path to a different kind of Oregon than we know today – with a different quality of life, and a different definition of civic responsibility. But, it is a path that we will be forced to take unless the citizens of Oregon can make their legislative representatives understand the need for a different course.

That is where you come in. Unless the Legislature takes a more constructive path than it has to this point, the cuts described here will stand. The legislative leadership must hear from the citizens of Oregon in clear and unambiguous terms, whether you are willing to support new revenue to prevent these additional cuts from taking place.

Your elected representative and senator also need to know your opinion. You can find your legislator by clicking www.leg.state.or.us

OFFICE OF THE GOVERNOR

GOVERNOR'S OFFICE OF EDUCATION AND WORKFORCE POLICY

Mission Statement and Statutory Authority

This Office supports the Governor's mission to be proactive in addressing important education and workforce issues that have a major impact on the state, and formulate policy choices that better align state efforts and local needs. It facilitates communication and feedback with education and workforce stakeholders regarding state policies and investments. The Office requires and provides the state with the opportunity to advocate a strong position where federal actions or policies are involved.

The Governor's Office of Education and Workforce Policy was created pursuant to Chapter 652, Oregon Laws 1997. It was established in July 1997 to assist the Governor in examining education and workforce efforts with a view to supporting and strengthening what is working well. The Governor believes we must determine Oregon's current and future education and workforce needs and implement plans to address them. The goal is to have Oregonians prepared to meet the education and workforce needs of Oregon businesses rather than having to recruit from outside the state to fill quality jobs — giving more Oregonians an opportunity to become productive citizens. The Office provides statewide policy direction on education and workforce issues and offers stakeholders a direct link to the Governor.

State-Level Direction

The role of the Governor's Office of Education and Workforce Policy includes:

- Guiding the development of state-level strategic planning to address education and workforce issues;
- Providing general direction and liaison to local efforts in education and workforce development;
- Acting as a conduit for concerns of various stakeholders, including businesses with significant current and/or future

- workforce needs; and
- Establishing accountability by state agencies involved in education and workforce to the Governor for coordination and performance.

The office carries out these functions with the collective involvement of agencies and stakeholders that support education, workforce and economic development. These stakeholders include business, labor, local government, community-based organizations, and representatives of local workforce development efforts. The office leads or staffs various committees dealing with a wide variety of education and workforce issues, including school transformation, financial aid, implementation of the Federal Workforce Investment Act and other workforce activities.

Strategies

- Provide advisory and technical services for education and workforce policy under the executive direction of the Governor;
- Continue the development and implementation of an investment strategy for the education continuum;
- Integrate education and workforce development by coordinating the contributions of participating private and public partners;
- Involve interested stakeholders in the development and implementation of education and workforce policy;
- Achieve and maintain excellence in education, training and employment;
- Connect education and workforce to social and economic commitments; and
- Coordinate the continued growth and linkage of workforce and economic development strategies at the regional level.

SHARON KITZHABER - BIOGRAPHY

Sharon Kitzhaber grew up in Saskatchewan, Canada and graduated in physical therapy from the University of Saskatchewan in 1977.

Sharon first worked in Hawaii as a physical therapist in 1977, then worked for a year in Geneva, Switzerland. She traveled Europe, the Middle and Far East, and the Mediterranean before returning to Maui in 1981. Sharon opened her first private physical therapy practice in 1984, and over the next eight years, she developed, managed and sold a three-clinic physical therapy practice on Maui, Hawaii.

As the wife of Governor John Kitzhaber, Sharon has dedicated herself to working on behalf of Oregon's children and youth. She is a founder and the honorary chairperson for the Oregon Safe Kids Coalition, which is part of a national organization aimed at reducing preventable childhood injury. She is also deeply involved in the prevention of teen pregnancy through an abstinence-based peer mentorship program called "STARS" (Students Today Aren't Ready for Sex). Sharon is also a co-chair of a national initiative "Leadership To Keep Children Alcohol Free" aimed at reducing underage drinking.

Sharon is on the board of the Multiple Sclerosis Society of Oregon and also is a board member of the Oregon Ballet Theatre and the Oregon Health Sciences Foundation, and she serves on the Giving in Oregon Council. She is an outspoken advocate for the arts and is committed to enhancing young people's access and experiences with the arts throughout the state.

In her private life, Sharon is an instrument-rated private pilot and the delighted mother of a son, Logan.

STARS

Sharon Kitzhaber is Founder and Board Member of the STARS Foundation. The Foundation was established in 1995 to promote the STARS program in Oregon. STARS stands for Students Today Aren't Ready For Sex. The program's mission is to help reduce teenage pregnancies by postponing teenage sexual involvement.

STARS receives wide public, private and school support. It is an abstinence-based teen pregnancy prevention program that uses a tested and proven curriculum developed at the Grady Memorial Hospital in Atlanta, Georgia. Older teens deliver the skill-based curriculum to their sixth and seventh grade peers. STARS reached over 30,000 young Oregonians in the 1999-2000 school year.

SAFE KIDS

Soon after becoming Oregon's First Lady in 1995, Sharon Kitzhaber established an Oregon Chapter of the National SAFE KIDS Coalition. The National SAFE KIDS Campaign is the first and only national organization dedicated solely to the prevention of unintentional childhood injury - the number one killer of children ages 14 and under.

The Oregon Chapter of SAFE KIDS raises awareness, builds long-term grassroots coalitions for childhood injury prevention strategies statewide and in local communities, and works to change adult and child behavior, products and the environment to reduce childhood injury.

Mrs. Kitzhaber serves as Honorary Chair of the Oregon SAFE KIDS Coalition.

Governor Kitzhaber's Photo Gallery

Governor and Sharon Kitzhaber with son, Logan Kitzhaber.

Gov. Kitzhaber speaking at the memorial ceremony held in front of the Oregon Capitol Building on Wednesday, September 11, 2002.

Gov. John Kitzhaber discusses forest health with the media on August 6 at the Cache Mountain Fire Complex just outside of Sisters, OR. Most severe wildfires are a symptom of poor forest health, however, the U.S. Forest Service had thinned small trees from this particular area, and though it burned, the fire was significantly less hot and damaging than an adjacent untreated area. This also reduced the risk to over 1,200 homes on the nearby Black Butte Ranch.

Gov. Kitzhaber is meeting Sundance, a 9-year-old Red-Tailed Hawk, and Chinook, an 11-year-old Bald Eagle. Sundance was found in the wild in Arizona while she was still in the egg, and is imprinted onto people and is non-releasable. Chinook was found injured in the wild in Alaska; she can fly well enough to do a downhill flight in zoo shows but, because of her injury, she can't fly well enough to be released back into the wild.

Also on May 30, Gov. Kitzhaber visited David Douglas High School in Portland. While there, the governor drove the inaugural run of the David Douglas Express, a solar and wind-powered rail car that was designed and built entirely by students over the past six years. It will be used to transport students approximately 600 yards from one end of campus to the other.

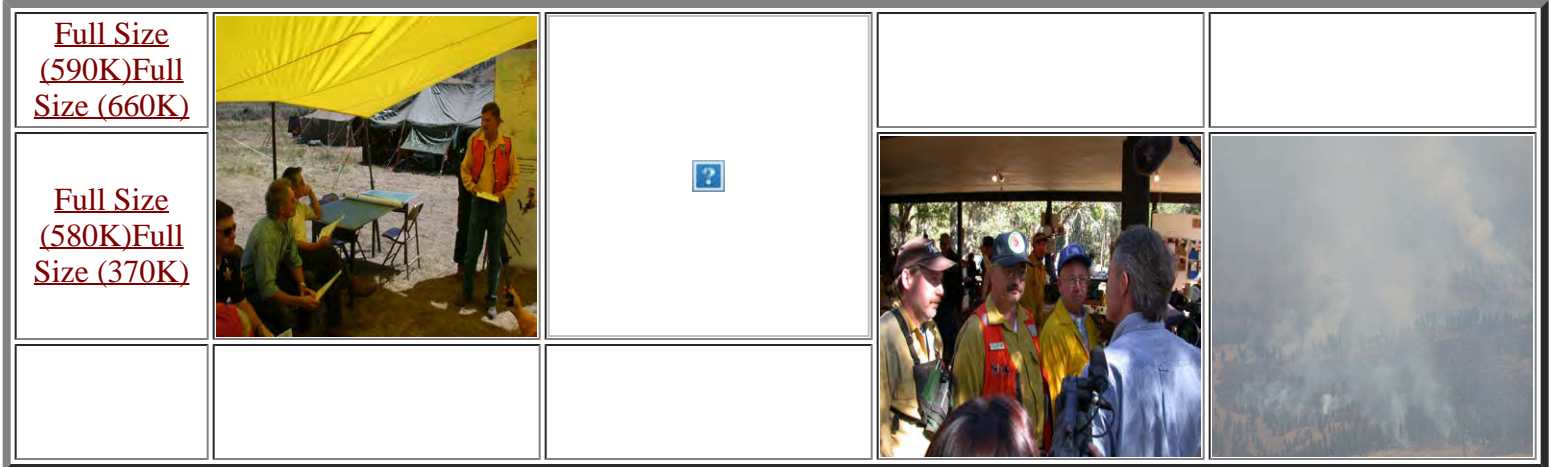

Gov. John Kitzhaber, Adjutant General of the Oregon National Guard Alex Burgin and Oregon State Police Superintendent Ron Ruecker at a news conference outlining Oregon's security and preparedness measures.

Gov. Kitzhaber speaking at the memorial ceremony held on the front steps of the Oregon Capitol Building on Friday, Sept. 14.

On Sunday, August 19, Gov. John Kitzhaber visited the Quartz Fire in southern Oregon and the Monument Fire in northeast Oregon. The governor received briefings from both Dept. of Forestry officials and members of the Oregon National Guard. The governor also toured both fire camps, met with fire fighting crews and National Guard troops and viewed the fires from the air.

Gov. Kitzhaber speaks at a ceremony dedicating the sale of the Wilsonville Tract property from the State to Metro on May 24.

Gov. Kitzhaber serves bread and greets customers at the Great Harvest Bread Company in Salem on Feb. 23. All proceeds from the day's sales will benefit the Governor's Food Drive.

Gov. Kitzhaber and the President of Mexico, Vicente Fox, discuss Oregon-Mexico trade relations at Los Pinos, the official presidential residence in Mexico City on February 12. Kitzhaber is currently on the first-ever official trade mission to Mexico by an Oregon governor. Photo courtesy of the Associated Press.

Gov. John Kitzhaber, Idaho Gov. Dirk Kempthorne and Alaska Gov. Tony Knowles at the Western Governors' Energy Roundtable on February 2, 2001.

Gov. Kitzhaber and Washington Gov. Gary Locke tape a public service announcement and hold press conference.

Governor Kitzhaber Presenting the 2001-2003 Budget

Gov. Kitzhaber, Sen. Peter Courtney and Willamette University President M. Lee Pelton ring bells for the Salvation Army on Friday, December 15 at the Salem Centre Mall.

Gov. Kitzhaber with students at the University of Oregon who built the World's Largest Ballot Box to raise voter participation among young voters

Governor Kitzhaber's Photo Archive Gallery

Governor John Kitzhaber views a demonstration of the Oregon National Guard's new Firehawk firefighting equipment over the Willamette River in Salem on July 19. The Firehawk is a rapid-filling 1,000 gallon water tank affixed to the bottom of a Blackhawk helicopter. It can fill-up using a snorkel in 60 seconds and transport water faster and dump it with greater accuracy than traditional helicopter buckets.

Gov. Kitzhaber watching kids at the climbing rock while visiting the recently-opened Boys and Girls Club in December, 1999 in Bend, Oregon.

Gov. Kitzhaber meeting with North Medford High School students at the Bear Creek Watershed project in February, 2000.

Gov. Kitzhaber and Secretary of State Bill Bradbury sign-up the Governor's Residence in Salem for "Salmon-Friendly Power."

Gov. Kitzhaber with a group of local elementary school kids in the Governor's Ceremonial Office in Salem.

Governor Kitzhaber is by trade an emergency room physician. Here he participates in a "well-baby" exam at a Hood River clinic.

4. Please list the names, addresses and telephone numbers of five people who may be contacted as references.

<u>Name</u>	<u>Address</u>	<u>Telephone</u>
1)		
2)		
3)		
4)		
5)		

Thank you for submitting your judicial interest form to the Office of the Governor. Writing campaigns are strongly discouraged. The Office of the Governor will acknowledge the first ten (10) letters of recommendation. In evaluating candidates for judicial selection, the governor seeks the views of local bar associations, as well as specialty bar associations, such as the Oregon Women Lawyers (OWLS), the Oregon Minority Lawyers Association (OMLA), the Oregon Chapter of the National Bar Association (OC-NBA) and the Oregon Gay and Lesbian Lawyers Association (OGALLA). Candidates can find contact information for these organizations in the State Bar Membership directory.

The Governor's Staff and the Oregon State Police may decide to conduct an in-depth background investigation about you. Please provide the following information and sign below to permit the investigation to be conducted.

Name: _____

Home Address: _____

Oregon Bar No.: _____

Driver's License No.: _____

Social Security No.: _____

Date of Birth: _____

I hereby authorize the Department of State Police and the Governor's Office to conduct an in-depth background investigation and to obtain any and all records pertaining to me on file with the Department of Revenue, the Motor Vehicles Division, law enforcement agencies, the Oregon State Bar, credit references or bureaus, and past and present employers, employees, business associates and acquaintances.

Summary of the Governor's Budget 2001-03

Governor's Message

To the Citizens of Oregon:

As we enter a new century, we can look back on a hundred years of progress in making and keeping Oregon the best place in the world to live. As I submit this budget for the fiscal years 2001-03, I do so with this great accomplishment in mind; knowing that we are taking the next steps forward in extending our prosperity and maintaining our quality of life.

This budget reflects the growth in our economy, the growth in our population and the growth in the State's responsibility to finance education, health care and public safety. It is a very tight budget and reflects the need to cover unanticipated revenue losses from lawsuits, a reduction in federal matching dollars and a 60 percent increase in prescription drug costs. It reflects the use of revenues from the national tobacco settlement, which, while scheduled to continue for many years, are not as stable as income tax revenues. This budget reflects the \$159 million income tax cut adopted by voters in Measure 88 and the difficult choices we have had to make in public safety and human services as a consequence.

This budget also reflects the growing discrepancy between the state budget and the revenue that supports it. Part of this discrepancy is due to the revenue losses just mentioned. But this discrepancy also reflects the growth in our human services and public safety budgets that is due, in large part, to our failure to invest in the youngest Oregonians—even before they reach school age.

We know that a growing number of Oregon children are exposed to a set of risks that correlate with school failure, school drop-out and subsequent involvement with the social welfare system and/or the criminal justice system. For example, 36 percent of incarcerated adults, 35 percent of incarcerated youth and 14 percent of those receiving public assistance dropped out of school. In addition, 85 percent of incarcerated youth and 77 percent of incarcerated adults suffer from an untreated drug abuse problem.

Therefore, this budget proposes to fund the Oregon Children's Plan, which represents a significant shift in state priorities. Currently, we invest a substantial and growing part of the General Fund budget to address these problems after they have occurred. The Oregon Children's Plan will target resources toward those children with the highest risk of this tragic future before these problems develop. This investment represents a reprioritization of resources from after-the-fact intervention to front-end prevention and treatment.

This new initiative, in conjunction with a major investment in education, reflects an important commitment to better schools, colleges and universities, and a more focused commitment to helping our children succeed. Let me share the highlights of this joint effort.

Education—Last month, the voters approved Ballot Measure 1, which calls on the governor and the Legislature to provide funding adequate to meet the goals of the Education Act for the 21st Century. To implement that charge, I have used the Quality Education Model, a model developed to help determine the resources needed to ensure that our children achieve the high academic standards we have set for them.

Governor's Message . . .

Using this tool as a guide, I have budgeted \$4.994 billion for the K-12 appropriation plus an additional \$220 million targeted to ensuring that 90 percent of 3rd and 5th graders meet or exceed the state reading benchmark within four years (for a total K-12 appropriation of \$5.21 billion). This targeted investment represents the first phase in fully funding the Quality Education Model. For the first time, Oregon will approve a K-12 budget that is built directly around the outcomes expected in the classroom.

In addition to K-12, I have budgeted \$20 million to improve engineering education in Oregon; \$45 million to help cover enrollment growth in our community colleges, and \$7.2 million to expand higher education in Central Oregon and to serve as a model for expanding geographic access to four-year degrees throughout the state. I have also dedicated \$10 million per year from the national tobacco settlement, beginning in 2002-03, to support expanded biotechnology research at the Oregon Health Sciences University. This funding, coupled with private investments, will allow OHSU to become a magnet to attract an estimated \$300 million in out-of-state medical research revenue each year.

The Oregon Children's Plan—The significant investment this budget commits to primary and secondary education cannot be justified unless we also take aggressive steps to reduce the number of children who, because of the conditions to which they have been exposed, enter school unable to fully engage in learning. Toward that end, I have budgeted \$66 million to fund the Oregon Children's Plan – a plan that will allow us to screen all first births in Oregon, on a voluntary basis, and offer those children and families at risk, access to community and in-home services.

By working with first-time mothers and their families—and by learning which of those families face either social or medical risks (such as being a single parent, a teen-age parent, having a history of drug addiction or being unemployed), we will be able to accomplish two important objectives. First, we will be able to help children who need it the most with the services to address their particular problems. Second, we will provide the opportunity for new parents to learn important parenting skills and to receive assistance with their first child.

Statistics show that 60 percent of first-born children face either some social or medical risk. Being able to identify those children early will help them get a healthy start in life, help them be ready to learn when they get to school and help them avoid the increasing problem of school failure, school dropout and subsequent involvement in the criminal justice system. It is estimated that every dollar invested in this kind of early prevention will reduce later costs by \$4.25.

While the Oregon Children's Plan represents an historic beginning for our state, we must not be blind to the fact that our current budget constraints leave this effort woefully underfunded. While we propose to screen all first births, these represent only 18,000 of the over 44,000 births that take place in Oregon each year. We cannot rest until we are able to offer these important services and protections to all of Oregon's children.

It is also important to recognize that in order to afford the initiatives I have been able to include in this budget, I have been forced to propose real cuts in other important services. For example, we will reduce the number of state police sworn officers; we will close 150 beds in the Oregon Youth Authority; we will end Oregon Project Independence which helps senior citizens stay in their homes.

These are very difficult choices that carry with them very real human consequences. It is my hope that, in the course of the legislative session, many of these services can be restored. In the short term, however—and to the extent that fiscal limits make difficult decisions inevitable—I am willing to defend these choices on the basis that putting an emphasis on prevention reflects a higher priority than paying more to mitigate problems after they have developed.

The National Tobacco Settlement—To the greatest extent possible, I wish to see these revenues used for health care-related purposes, including tobacco use prevention. In addition to the \$10 million to support biotechnology research at OHSU, I have recommended two additional expenditures. First, I have proposed using \$22 million to support the Family Health Insurance Assistance Program, which was started with revenue from the tobacco tax increase produced with the passage of Ballot Measure 44 in 1996. Second, I have budgeted \$7 million for tobacco use prevention. I believe that the bulk of the tobacco settlement revenue, however, should be put into a Health Care Trust Fund and I have budgeted \$100 million for that purpose.

In this budget, while I have recommended using \$110 million of the tobacco revenue for primary and secondary schools, I do so with the full knowledge that the settlement should not be viewed as a new long term, stable revenue source. As General Fund revenue grows during the remainder of this biennium, I recommend that a first priority be to replace the tobacco revenue in the K-12 budget with income tax revenue and to move the tobacco revenue into the Health Care Trust Fund. Likewise I recommend that, as income tax revenue becomes available, the \$99.2 million of Tobacco settlement revenue transferred to the General Fund also revert to the trust fund.

I look forward to working with Oregonians and with the Legislative Assembly to debate this budget in the upcoming year and to move forward in the best interest of our state.

Sincerely,

A handwritten signature in black ink, appearing to read "John Kitzhaber". The signature is fluid and cursive, with the first name "John" being larger and more prominent than the last name "Kitzhaber".

John A. Kitzhaber, Governor

The Budget Environment

After a decade of rapid growth and diversification in Oregon's economy, the state has now entered a period of stabilized growth.

From Rapid Growth to Modest Gains

During the 1990s, Oregon's economy experienced a period of exceptional growth. After adjusting for inflation, wages grew 18.5 percent and per capita income grew faster than the rest of the nation. The profitability of companies operating in Oregon also rose sharply.

State revenues benefitted directly from this growth. During the last decade, revenues from *personal income taxes* grew an average of nearly 10 percent annually. *Corporate income tax* collection more than doubled from less than \$150 million in 1990 to more than \$400 million in 2000. In addition, *capital gains income*, mostly from the stock market, grew at an incredible rate during the 1990s.

Growth in Capital Gains vs. Personal Income

Oregon's economy diversified substantially during this period. High technology companies, particularly those involved in semiconductor production, helped Oregon become increasingly connected to international markets. Asian markets, in particular, made up six of the top 10 destinations for Oregon products in 1999. At the same time, agricultural, lumber, and wood products continued to play a significant role in Oregon's economy.

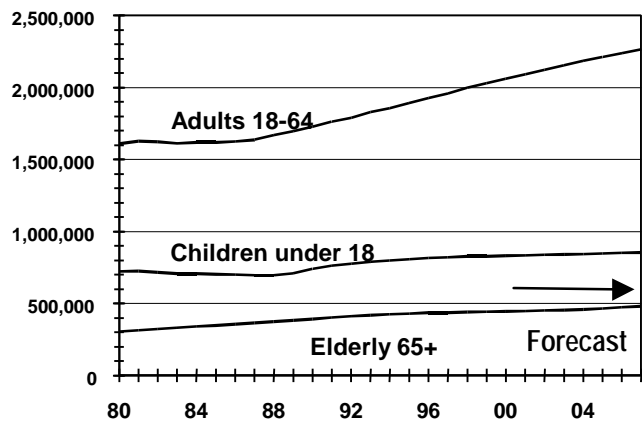

In addition, Oregon's population grew at a faster pace than the national average during the 1990s—16.1 percent compared to 9.6 percent respectively. Some of this growth came from in-migrants, particularly for individuals between the ages of 18-64 years. And while Oregon's population continues to be predominately White (93.4 percent of the total population), its population is slowly becoming more diverse. Oregon's Black, Asian, and Hispanic populations all grew at a significantly faster rate than the majority White, Non-Hispanic population.

However, as we enter a new century the rapid growth in Oregon's economy is beginning to stabilize. Growth in jobs, wages, and profits are all slowing down. This slowdown is expected to reduce Oregon's rate of growth in both personal and corporate income taxes. With the Asian financial crisis

behind us, exports in high technology, timber, and agricultural products should improve. However, factors could hinder Oregon's economy: a recession or inflation; a downturn in global economies, particularly in major export markets like Japan or Korea; a dramatic rise in energy prices; or a stock market crash.

Also, changes in demographics could affect Oregon's public services. Children under the age of five and school age populations are growing more slowly than in the 1990s. Their growth will continue to slow as the baby-boomers children exit this age group. Young adults aged 18-24 years, who comprise the "baby-boom echo," will continue to grow. And while Oregon's elderly population has slowed in recent years, those over age 65 have more than tripled since 1950. In particular, growth for those ages 75 years and older is expected to rise. Each of the populations consume a range of state services—from day care, to educational services, to health care.

Population of Oregon by Age Group, 1980-2007

Economic Factors Linked to the Budget

Several factors linked to the economy have the potential to increase or reduce the funds available to the Legislative Assembly for this state budget. Therefore, quarterly economic forecasts made during the legislative session may be especially important to state budgeting. Among the factors in uncertainty are:

- **Our state economy.** In the short run, Oregon's economy will grow slowly through 2001, and is projected to gain strength as it reaches the end of the 2001-03 biennium. The long-term outlook for the next five years calls for slow to moderate growth.
- **Our national economy.** Like Oregon, the U.S. economy is expected to slow significantly in 2001, and then accelerate in 2002 and 2003. While the stock market correction in April of 1999 did not lead to a market crash, the risk of a further correction still exists. This potential correction, along with rising energy prices, are the largest risks to the national economy.
- **Asian economies.** It appears that Asian economies have recovered from the financial crisis of the last decade. Asia's economic well-being is important to Oregon because their economies significantly affect our own. They import a range of products produced in Oregon, including timber, and agricultural, and high technology products.

The Budget Environment . . .

- **Special tax refunds.** A special refund could cause some uncertainty. The current revenue forecast anticipates a two percent surplus Kicker refund for personal income taxpayers to be paid out in 2001 on tax year 2000 liability. Corporate Kicker refunds are anticipated and will be credited in the 2001-03 biennium.
- **Ballot Measure impacts.** Ballot Measure 88 raises the maximum deduction of federal income taxes that may be deducted on Oregon income tax returns. It raises the maximum deduction allowed from \$3,000 to \$5,000 effective January 1, 2002. This change is anticipated to reduce revenue collections by \$159.2 million in the 2001-03 biennium.

**Biennial Growth in General Fund Revenue
1995-97 through 2005-07**

State Resources

The state uses money from five sources to pay for state services. The sources are grouped as General Fund, Other Funds (including Lottery), and Federal Funds. Property taxes are *not* a source that funds the state budget. They are the main source of funding for cities, counties, and some special districts. They are also the second largest source of local school funding.

The General Fund

The General Fund covers only 33 percent of what is spent in the state budget. However, it is the money that the Legislature can apply anywhere it is needed. The General Fund comes largely from our income taxes—about 85 percent from personal income tax and eight percent from corporate income tax. The rest comes from the insurance premium tax, gift and inheritance tax, cigarette tax, liquor tax, other minor sources, and the Fund's investment earnings. General Fund resources are estimated at \$11.1 billion for 2001-03.

Other Funds

Other Funds account for about 46 percent of what is spent in the state budget. Other Funds are mostly monies dedicated to certain purposes. They include some taxes, chiefly those related to highway use, employment, and forests. They include state licensing fees. Other Funds also include the state's business-like incomes. Examples include tuition and other fees for services, inmate workforce products, and many funds related to loans or bonds.

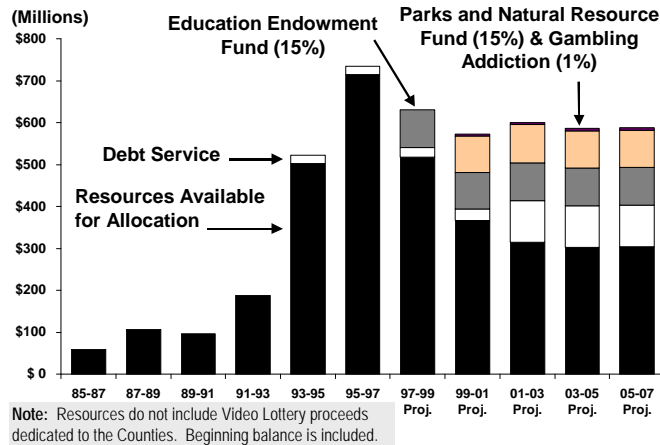

Federal Funds

Federal Funds cover about 19 percent of what is spent in the state budget. The federal government limits the state's choices about where and how Federal Funds may be used. Most federal funding has specific conditions, such as requiring the state to keep certain service levels, or providing matching funds.

The Budget Environment . . .

Lottery Funds

Lottery Funds account for a little less than two percent of total state spending. The forecast for Lottery Funds in the 2001-03 budget period is slightly higher than that for the previous biennium. Several reasons account for this increase. First, the beginning balance for 2001-03 is forecast to be slightly higher than that available for 1999-2001. Second, the Lottery is retaining gaming revenues above the 1999-2001 Close of Session (COS) forecast in a Lottery

Contingency Fund for the purchase of new video terminals. Total transfers to the Economic Development Fund, therefore, will remain at the COS level of \$580.4 million for the 1999-2001 biennium. No such agreement exists for the 2001-03 budget period. Third, Lottery will transfer \$15 million related to administrative actions during the 2001-03 budget period.

Although the total amount of Lottery Funds will increase slightly, the amount available for allocation will be lower. Increasing amounts of Lottery Funds are spent on dedicated distributions. These dedicated distributions include amounts for Sports Action, county economic development, the Education Endowment Fund, the Parks and Natural Resources Fund, as well as funds dedicated for debt service and gambling addiction allocations.

Tobacco Funds

In November of 1998 a national settlement agreement was reached between the tobacco industry and 46 states including Oregon. The November 1998 agreement, known as the Master Settlement Agreement (MSA), represented the largest financial recovery in the nation's history. It requires the tobacco industry to make payments to the states in perpetuity. Oregon's share of the payments through the year 2025 are an estimated \$2.2 billion. Oregon has received \$92.7 million in MSA payments as of November 1, 2000.

The Governor's Recommended Budget for 2001-03 proposes the following uses of Oregon tobacco settlement payments expected to be received through 2001-03:

- \$110.0 million—K-12 School Improvement Fund
- \$ 10.0 million—Bio-science Research Facility at Oregon Health Sciences University
- \$ 22.0 million—Family Health Insurance Assistance Program subsidies
- \$ 7.0 million—Department of Human Resources, Health Division programs
- \$100.0 million—Health Care Trust Account
- \$ 99.2 million—General Fund

The Oregon Children's Plan

"We cannot afford to ignore programs and policies proven to work in reducing juvenile delinquency. The resources for these programs must be found. We must no longer give 'lip service' to making children a priority: we must literally put our money where our mouth is."

—Citizen's Crime Commission KIDS Report, June 2000

Sixty percent of Oregon children are born with risks that can affect their success in life. By identifying these risks early we can give Oregon children the opportunity to succeed in life and in school, thus avoiding future problems such as drug addiction, school failure, delinquency or incarceration. Early investments in our children will benefit Oregon communities, families, and schools.

My budget allocates \$66 million to the Oregon Children's Plan—\$29 million in new revenue and \$37 million redirected from other programs. The Oregon Children's Plan will screen all first births in Oregon for an identifiable set of risks that can negatively affect a child's life. Children who screen positively for one or more risks will be offered in-home and out-of-home services. Although participation in this program is voluntary, in an early pilot model of the Oregon Children's Plan, 93 percent of families elected to participate.

The Oregon Children's Plan represents a significant shift in state priorities. Currently, a substantial and growing part of the General Fund budget is invested in addressing problems after they have occurred—children who have failed in school and who have become mired in the social welfare or the criminal justice systems. The Oregon Children's Plan will target resources toward those children with the highest risk of this tragic future. This investment represents a reprioritization of resources from after-the-fact intervention to front-end prevention and treatment.

The Oregon Children's Plan, which will be available in all 36 counties, proposes to replace the current fragmented system with a comprehensive approach for helping children. The Plan will make Oregon the first state in the nation to systematically screen for risks prenatally and at-birth for the earliest possible identification and treatment of potential problems.

This investment will make an enormous difference in the lives of thousands of Oregon's children and their families. Today, 42 percent of Oregon children show up for their first day of kindergarten unable to fully participate or engage in learning. The Oregon Children's Plan will increase the number of children who come to school ready to learn by identifying risks and then providing children and their parents with the services and supports necessary to address them.

The Oregon Children's Plan . . .

The following services will be provided to children and parents through the Oregon Children's Plan:

- **Prenatal/At-Birth Screening** (*\$4 million in new funds*)
Screen all first born Oregon children as early as possible for medical and psychosocial risks. In Oregon, 18,400 out of the 44,300 births were first births. Screenings will take place during prenatal or follow-up visits at medical clinics, hospitals or doctor's offices.
- **Coordinated Services** (*existing funds*)
Following a positive risk screen, community-based teams (such as doctors, educators and social workers) will match the child's risk with the most appropriate type of support and provider. It is estimated that 60 percent of families will have risks warranting additional support.
- **In-Home Support** (*\$4.1 million in new funds plus \$29.2 million in redirected funds*)
Each community will provide in-home services for children who have developmental disabilities or who are medically fragile, and families who have other medical or significant social risks. These services will be provided by nurses, social workers and other trained professionals.
- **Substance abuse and mental health treatment** (*\$14 million in new funds*)
We will provide communities with the ability to access resources for mental health treatment for children and/or substance abuse treatment for their parents. This budget should be sufficient to serve all children and parents who require these types of services.
- **Pre-school** (*\$5.9 million in new funds plus existing funds*)
We want every child to have the chance to participate in an early learning setting or pre-school, such as Head Start/Oregon Prekindergarten Program. We currently enroll 50 percent of eligible children in these programs. The Oregon Children's Plan will expand the Oregon Prekindergarten Program to serve 60 percent of eligible children in the next biennium. In addition, we will work with the federal Head Start program to identify efficiencies that may lead to a substantially greater enrollment by the end of the next biennium.
- **Community Programs** (*existing funds*)
The Oregon Children's Plan proposes to redirect the Great Start Program so that each county will have flexible funds to choose from a menu of programs that have been proven by research to be effective, such as relief nurseries and parent training among others. These programs will help serve as the connection between home-based programs and entry into school for the youngest, highest risk children.

The Oregon Children's Plan . . .

The success of the Oregon Children's Plan will be measured by the following outcomes:

- Decreased rate of child abuse and neglect
- Increased percent of children entering school ready to learn
- Decreased infant mortality
- Increased percent of children fully immunized at age 2
- Increased percent of women accessing early prenatal care
- Decreased percent of infants whose mothers used alcohol and/or tobacco during pregnancy

The Oregon Children's Plan will save taxpayers future expenditures by improving school performance, increasing access to health care providers and by reducing the cost of school failure, school drop out and involvement in the criminal justice system. A cost-benefit analysis of the early pilot model of the Oregon Children's Plan found that for every dollar invested, \$4.25 of costs were saved in other, more costly services.

Quality Education for Every Oregonian

Public education is the cornerstone of a progressive, democratic society. From grade school to graduate school to life-long learning, it is vital that Oregon's education system prepare all of our citizens for the challenges they will face in the 21st century economy.

Primary and Secondary Education

No public expenditure is as important or as far-reaching as the dollars we spend on education. Oregonians have set high standards for our students, and our public schools are responding to this challenge. But we must be wise and deliberate about how we budget our education dollars. That is why I put Measure 1 on the ballot this November.

On Election Day, Oregonians approved Ballot Measure 1. The measure directs the Legislature to fund schools sufficiently for students to meet the standards set forth in the Education Act for the 21st century. If legislators decide they are unable to sufficiently fund schools at that level, they must explain why and what impact this will have on student ability of students to meet the standards.

To help determine how much revenue is necessary to meet these standards I established the Quality Education Commission. This Commission created a model for school budgeting known as the Quality Education Model. I have used this model as the basis for my recommended budget. In compliance with the constitutional provisions of Ballot Measure 1, this budget is accompanied by a report that describes the impact of this K-12 appropriation on the ability of Oregon students to meet the standards.

By using the Quality Education Model to formulate this budget we have, for the first time in Oregon, a budget number based on what it actually costs to educate our children. This number, which is based on data that has been collected and tested, gives us the ability to create expectations for performance, based on clear outcomes. By passing Ballot Measure 1, and utilizing the tools of the Quality Education Model, I hope to reduce the contentious school funding debate that has characterized legislative sessions in the past. This budget lays the groundwork for a thoughtful debate based on real numbers—numbers that are grounded in solid research and which have been demonstrated to improve student performance.

Quality Education for Every Oregonian . . .

For the coming biennium, my budget appropriates \$4.994 billion for our kindergarten through high school public schools, plus an additional \$220 million targeted to ensure that 90 percent of 3rd and 5th graders meet or exceed the state reading benchmark within four years (for a total K-12 appropriation of \$5.21 billion). This allocation is in line with the Quality Education Commission's recommendations—to increase the literacy levels of our elementary students. Providing our youngest children with a solid foundation in reading will lead to long-term success in school.

This amount of money, which includes no bonding or other deficit financing, is sufficient for our public schools to both continue their existing level of service and to take the first step in implementing the Quality Education Model. Since there are not sufficient resources available to fund the entire cost of this first investment, I will ask our state's 198 school districts to reallocate approximately \$110 million in spending from the middle and high school levels (about 1.5 percent of their district budgets) to match \$110 million in new funding, for a total of \$220 million to reach this goal.

No other agency in state government, with the exception of community colleges, has received funding that exceeds its current service level. This funding level reflects the importance placed by Oregonians on the value of a quality education and, in particular, on the value of our youngest Oregonians succeeding.

This budget contains other important investments to support our primary and secondary schools. For example, we have included \$8.4 million in the Department of Education to assist low-performing schools, to reduce the student dropout rate and to support new teachers.

But public investments in education cannot end with high school. The success of Oregon's citizens and the expansion of our economy depends, in large part, on the quality of our post-secondary schools. It is critical that Oregon continue to have exemplary universities and community colleges that meet the needs of the 21st century employer and which offer opportunities for life long learning.

Community College Enrollment Growth

Community Colleges

Forty-five million dollars is targeted toward meeting enrollment growth at Oregon's community colleges. For many Oregonians, community colleges are the front door to better jobs and better futures. Last legislative session provided no increase in funding to cover the dramatic enrollment growth faced by our community colleges. As a consequence, community colleges were forced to limit enrollment, turning students away or creating waiting lists.

Quality Education for Every Oregonian . . .

This investment will enable our community colleges to provide accessible, affordable, and comprehensive educational opportunities to more Oregonians.

Higher Education

This budget expands access to four-year degrees in the fastest growing region of our state, central Oregon. \$7.2 million will be provided to the institution selected by the Oregon Board of Higher Education to offer four-year degrees in Bend. By the end of the 2001-03 biennium, it is expected that 400-700 full time students will be served through this branch campus. We expect that this investment will provide a model for increasing geographic access to four-year degrees throughout Oregon.

This budget targets \$20 million to support investments in engineering education in Oregon. In the previous century, Oregon invested heavily in its schools of agriculture and forestry—our economic mainstays. Today, we must make a similar commitment to the economic mainstay of the 21st century—technology. These funds will be distributed to the Board of Higher Education to support the two engineering proposals under consideration: a tier-one engineering school, and the expansion of the number of engineering graduates in Oregon. Additional private sector funding will be dedicated to these proposals.

The budget also includes \$10 million per year, beginning in 2002-03, to support expanded biotechnology research capacity at the Oregon Health Sciences University. This funding, coupled with private investments, will allow OHSU to become a magnet to attract an estimated \$300 million in out-of-state medical research revenues every year.

Sustainable Rural Oregon

We must equally share the benefits of prosperity by ensuring that our great economy is not just an urban phenomenon, but is an Oregon phenomenon.

—Governor John Kitzhaber, Pendleton, Oregon, August 3, 2000

The prosperity of the last six years has not been shared evenly across Oregon. While urban areas have added tens of thousands of well-paying jobs in technology, many parts of rural Oregon have continued to experience low wages, high unemployment, the loss of business opportunities, and the migration of their youth to other communities that offer more career choices. My budget proposal attempts to provide the foundation for a sustainable rural economy.

I want to make it clear that the investments in this budget for rural Oregon in no way diminish or disregard the challenges faced in our urban areas. The resources budgeted for improving engineering education and expanding research in biotechnology, for example, will certainly benefit urban Oregon. The resources budgeted for watershed assessments and for the Willamette Restoration Initiative will help improve water quality in the Willamette River Basin, including the urban components of this important watershed. In addition, many of the resources this budget contains for infrastructure investment can be accessed by urban as well as rural communities. In short, this budget reflects a commitment to preserve a high quality of life in both urban and rural Oregon.

There are three main components to this rural initiative: 1) infrastructure investment; 2) strengthening rural communities; and, 3) stabilizing our natural resource-based industries.

Infrastructure Investment

The last legislative session saw the passage of the Oregon Livability Initiative, which addressed challenges faced by both urban and rural communities. The four goals of the Livability Initiative are:

- to reinvest in rural and distressed urban economies,
- to revitalize downtowns and main streets,
- to reduce sprawl, and
- to provide affordable housing.

The centerpiece of this initiative is the 21st Century Community Fund, which is currently capitalized with \$140 million in lottery-backed and transportation revenue bonds. This budget proposes to build on the Livability Initiative with the following new investments.

Sustainable Rural Oregon . . .

Sewer and Water System Infrastructure—The proposed budget contains \$196 million in lottery-backed bonds issued over a three-year period, which is expected to stimulate more than \$1 billion in state and local investments in community infrastructure.

Because these funds are only in part need-based—and are also backed by charges to pay for infrastructure—our state revolving fund will accumulate a powerful base of capital for future investments in community infrastructure. At the end of a 10-year period, Oregon will be able to make infrastructure investments of \$75 million a biennium on a sustainable basis. This infrastructure investment is expected to generate thousands of new jobs in Oregon's smaller communities, increasing personal income and General Fund revenue by many millions of dollars; more than offsetting the \$20 million in annual debt service on these bonds.

Internet and Advanced Telecommunications—This budget reinforces our commitment to ensure that no Oregonian is left behind in the information age. It continues to support the \$120 million investment to bring broadband voice, data, and video services to rural and disadvantaged communities and businesses across Oregon through Senate Bill 622, which the 1999 Legislature passed. To date, hundreds of schools have gained high speed Internet connections. More than 40 communities are slated to receive high speed Internet service in the next 18 months. The Oregon Economic and Community Development Department (OECDD) will provide hands-on technical assistance and training to rural communities and businesses to encourage the use of this technology.

The State of Oregon will continue to leverage state investments through the Enterprise to bring this technology to even more communities. In addition, the State will encourage competition in local services to stimulate the use of technology. The OECDD will aggressively pursue the location (and relocation) to rural Oregon of businesses that need high speed Internet access but are not location-dependent.

Lastly, we look forward to a thorough discussion of the recommendations of the Oregon Internet Commission report (which will be issued this month) and its implications for rural Oregon.

The Community Solutions Network—This budget provides \$3.5 million to take full advantage of the infrastructure investments mentioned above through the Community Solutions Network. This network has three components. The first component is comprised of nine Regional Community Solutions Teams, each of which includes a representative from the five agencies that affect how communities develop physically: Transportation, Housing, Economic Development, Land Use and Environmental Quality. The second component is comprised of five Regional Coordinators, who will work with the Regional Teams. The final component is the continuation of the Community Development Office. This office, in conjunction with the regional teams and their coordinators, will continue its efforts to encourage state agencies to work collaboratively in a problem-solving mode, and will provide technical support and on-the-ground assistance to local communities throughout Oregon.

Strengthening Rural Communities

This budget maintains and enhances resources available to improve the quality of life in rural communities.

The Community Incentive Fund—This fund is a \$35 million sub-account in the 21st Century Community Fund. It will provide communities throughout Oregon with incentives to rehabilitate downtown buildings, enhance sidewalks along main streets, encourage mixed-use development and take full advantage of important historical assets. Investments of this nature can restore a sense of pride in the community, increase tourism, and ultimately assist in the recruitment of new businesses.

The Regional and Rural Investment Funds—This fund provides \$20 million in lottery funds to help counties with community development. Many rural communities do not have the local staff capacity or the resources to write grants or make loan applications. The rural component of this fund can be used to enhance local capacity as well as to provide the final piece of financing for important local projects.

Sustainability—This budget provides \$300,000 to help sustain rural economies through the Oregon Sustainability Initiative. This effort has three components. First, to develop a partnership between Portland area businesses and rural communities to explore opportunities to expand Oregon-based businesses where jobs are most needed. Second, to examine state purchasing policies to give rural and distressed urban communities better opportunities to provide goods and services. Third, to explore options for transferring more state agency operations into rural communities.

Stabilizing our Natural Resource-Based Industries

Brand Oregon Marketing Campaign—This \$3 million General Fund investment will be used to establish a joint effort between the Oregon Department of Agriculture and Tourism Division of the OECDD. This effort is aimed at increasing the sale of value-added Oregon natural resource products in select markets and to increase visitor expenditures from those markets. By leveraging a common marketing message between agriculture and tourism, we can significantly increase the potential for new domestic and foreign export markets for Oregon's natural resource products.

While the agriculture and the wood product industries will continue to be a cornerstone of the rural economy, their future stability depends on their willingness to examine and modify their practices including marketing, production, and their land management practices.

Sustainable Rural Oregon . . .

At the same time, we all—especially the conservation community—must recognize that rural communities need and deserve economic stability. In short, Oregonians need to separate people from practices. We must acknowledge the legitimacy of those in the natural resource industries to earn a living and of their contribution to our state, even as we work to help them modify their practices.

First, the practice of producing unprocessed bulk commodities for export into the world market must be replaced by the realization that the future of Oregon's natural resource industries lies in value-added processing and marketing efforts that differentiates our commodities from those of our competitors. This is exactly what the Brand Oregon Marketing Campaign was created for.

Second, land management practices must be examined and modified to reduce the impact of those activities on our natural environment. The key to success here is our ability to recast the environmental debate in a way that recognizes and balances a broad range of interests and values. Toward that end, my administration has put in place a variety of tools which have helped reduce polarization and increase collaboration, including the Oregon Plan for Salmon and Watersheds, the Healthy Streams Partnership, and the Eastside Forest Health demonstration project. While not directly related to the budget for a "Sustainable Rural Oregon," these initiatives are integral to our success.

The Oregon Health Plan

The Oregon Health Plan must meet significant new challenges in the coming years but is well-positioned to continue to provide health care and thousands of Oregonians who would otherwise have no care.

My recommended budget maintains the Oregon Health Plan (OHP) near its current service and eligibility levels, thus fulfilling our commitment to children, low-income adults, and seniors. In conjunction with this budget, I will seek legislation to address the major problems facing the OHP and to remove the obstacles which keep us from moving toward universal coverage.

Since 1994, more than one million Oregonians have received health care through the Oregon Health Plan. The OHP has been a major factor in increasing the number of Oregon newborns who have received proper prenatal care, thus decreasing the number of low birth-weight babies born in our state.

The OHP has helped ensure that Oregon children are properly immunized and it has reduced the number of children who attend school suffering from dental problems. The OHP has been responsible for higher levels of mammography and other preventive services among low-income Oregon adults. In short, the Oregon Health Plan has become a central element in the State's effort to provide the health care necessary for Oregonians to become self-sufficient.

Nonetheless, the OHP continues to face a number of budgetary and regulatory challenges that must be addressed if this important program is to be sustained for future generations.

The Shift to a Community-Based Delivery System

The initial emphasis on using commercial managed care companies for delivering OHP services has begun to shift to one that uses smaller community-based organizations which specialize in serving OHP patients. This approach, pioneered by providers in central Oregon, Linn and Benton Counties, Douglas County and elsewhere, is now being adapted in larger communities including Portland, Salem, and Eugene.

The approach is built around the concept of distributing the responsibility and resources for the OHP equitably among providers in a given community. In the best tradition of community support, doctors, hospitals, and commercial insurers have been working together to create transitions to community-based services that fit the particular needs of each area.

To support this important transition, my budget will couple a substantial increase in capitation rates with a concerted effort to reduce the cost of administrative requirements and an examination of how the State can assume more risk. Legislation will be introduced to seek standardization of the reporting requirements of health plans that contract with the OHP.

The Oregon Health Plan . . .

Medical Inflation

Double-digit medical cost inflation is putting pressure on both the private and the public health care systems. The OHP is not immune to this problem. The greatest pressure comes from the unprecedented increase in the cost of prescription drugs. To keep pace, the OHP budget for pharmaceuticals will increase 60 percent over the next two years. This accounts for over half of the budget increase in the OHP and comes to slightly over \$126 million in General Fund dollars. Clearly, this trend is not sustainable.

Efforts to control these increases have been hampered by Oregon's statutory prohibition against the use of formularies and by resistance to methods of controlling inappropriate utilization of drugs. Legislation will be needed to manage this cost increase. We need to allow the use of a formulary as well as a renewed commitment from physicians to utilize medications demonstrated to be the most cost-effective in their class.

Federal Waivers

The Oregon Health Plan was envisioned as far more than an improved Medicaid program. When created by the Legislature in 1989, the OHP was a comprehensive strategy for providing health insurance coverage for virtually all Oregonians. Since that time, the requirement for employers to provide health insurance for workers has been repealed, leaving a large number of working Oregonians and their families without health insurance and unable to afford the cost of health insurance premiums on their own.

To compensate for this, the OHP was expanded to care for pregnant women and children with incomes up to 170 percent of the federal policy level. The Family Health Insurance Assistance Program was created to assist additional Oregonians with similar incomes who do not qualify for Medicaid. Efforts to further address the needs of the uninsured have been frustrated by a lack of resources and by rigid federal policies which force us into all-or-nothing coverage decisions and one-size-fits-all benefit packages.

Legislation will therefore be introduced to challenge these restrictive federal policies that prevent Oregon from creatively using federal funds to expand coverage and access to care. This legislation will direct the state to obtain additional federal waivers that would allow more flexibility in eligibility and benefit design, as well as the judicious use of co-payments to obtain the maximum possible benefit from the federal funds the state receives.

Oregon Plan for Salmon and Watersheds

The Oregon Plan for Salmon and Watersheds has helped restore watersheds and salmon habitat across Oregon. This budget increases the overall state investment in this program by \$8 million and continues to build on the work of the previous two biennia.

The Oregon Plan for Salmon and Watersheds (OPSW)

Oregon's innovative plan to restore watershed health has been in effect since 1997. The OPSW is a state led effort to recover listed and at-risk salmonids, plus improve water quality across the state. Local, state, tribal, and federal government, watershed councils, soil and water conservation districts, landowners and many others are working to assess watershed conditions, to develop and implement locally-based strategies to address watershed health concerns, and to monitor the effectiveness of these actions.

The first budget for the OPSW, passed in 1997, provided \$30 million in state General Fund and private funds to begin the implementation of the plan during the 1997-99 biennium. Over half of this funding was in the form of grants to landowners, watershed councils and others through the Governor's Watershed Enhancement Board (GWEB) program. In 1998, voters passed Ballot Measure 66 dedicating a portion of lottery revenues to salmon and watershed restoration. This resulted in an increase in state funding for the OPSW to \$55 million in the 1999-2001 biennium. In addition, the GWEB was transformed from a program to an agency and renamed the Oregon Watershed Enhancement Board.

The increase in state investment in the OPSW that is reflected in my budget was achieved through budget reductions and efficiencies across the natural resource agency budgets. This increased state commitment, combined with federal funds from the National Marine Fisheries Service, will result in:

- Institutionalization of the OPSW by shifting responsibilities from the Governor's Office to OWEB;
- Completion of nine of the 12 Total Maximum Daily Load (TMDL) plans in the Willamette Basin by 2003;
- Implementation of the pesticide use reporting system;
- Increased funding for watershed council support grants;
- Increased funding for watershed assessments, monitoring and outreach;
- Adequate fiscal staff at OWEB to manage Ballot Measure 66 and other increased grant funds;

Oregon Plan for Salmon and Watersheds . . .

- Continuation of the state led Klamath Basin adjudication process;
- Start up of a new water stewardship and supply program;
Start up of a Senate Bill 1010 monitoring program;
- Full funding for the Independent Multidisciplinary Science Team (IMST);
- Base funding for the implementation phase of the Willamette Restoration Initiative; and
- Implementation of recommendations from the Forest Practices Advisory Committee to improve forest practices, thus providing better protection for salmonids and water quality

A Budget Overview

Producing a Balanced Budget

As mandated under state law, the Governor Budget is required to balance and rely only on the revenues predicted under current laws. In addition, this budget also proposes plans to meet the challenges we face in education, early childhood development, health care and rural and community infrastructure needs. These issues are addressed without new or increased taxes.

The Budget Process

The budget process is an ongoing one. State agencies continually gather information on performance and outcomes in order to engage in a meaningful planning process with their stakeholders. Agency information is then submitted to the Governor. He reviews the information presented by all agencies and then crafts a budget recommendation for consideration by the Legislative Assembly. These agency requests generally include:

- Funding to continue the services provided under current laws. The costs are adjusted for estimated inflation and caseloads.
- Funding for any proposed new or expanded services.
- Suggestions on what services are no longer needed and what to cut if state funds prove insufficient.

of Students in K-12 Schools

The state economist forecasts how much the state will have under current laws to fund the state budget. The total agency requests always equal more than forecast state funding could cover. Therefore, the Governor must decide what increases and decreases he will recommend to stay within available funds. He may propose new funding, shifts in funding, or cuts in some programs so the state can pay for other needs.

The Governor's Recommended Budget sets a balanced plan for state funding priorities. The Legislature evaluates the Governor's Recommended Budget and hears public testimony for and against each part of the proposed plan. The Legislature then deliberates to a final budget that it enacts as a series of laws. Those laws then control state spending for the next two years.

A Budget Overview . . .

Governor Kitzhaber's Recommended Budget provides total funding for most agencies at a level that covers estimated inflation and caseload increases. Inflation and caseloads are always estimates. So, some services are funded at less than an agency requested, but within a reasonable range. Some services are shifted from state taxes to other funding sources and some agency requests are reduced so that more pressing needs can be met.

General Fund and Lottery Expenditures

The Governor's Budget puts 57 percent of the General Fund (state tax dollars) and Lottery Funds into education. The second largest share, 23 percent, goes to human resources programs. There, state tax dollars are mostly used to meet matching funds or service-level requirements to qualify for federal funds. At 14 percent, public safety is the third largest user of state tax revenues. The state budget leaves a reserve of less than one percent as a General Fund ending balance. That reserve stands against the risk that actual revenues may be less than forecast.

Program Highlights

Following are program area highlights from the Governor's Budget. For a detailed explanation of program areas and agency budgets, see the *Governor's Budget* for 2001-03.

Education

Overview

This program area includes support for *all* public educational activities—from pre-kindergarten, to post-secondary and life-long learning. Agencies in this program area include the Department of Education, the Teacher Standards and Practices Commission, the Department of Community Colleges and Workforce Development, the Oregon Student Assistance Commission, and the Department of Higher Education. Also included is state support for the Oregon Health Sciences University public corporation.

Key elements of this program area include the following:

- \$220 million for a *K-12 School Improvement Fund* that will make investments to bring all kindergarten through 5th grade students up to state standards for reading. Half of this funding comes from tobacco settlement funds, while the other half comes from a reduction in the State School Fund and redirects the funding to these new investments.
- \$5 million available in local option equalization grants for lower property-wealth districts that pass local option property tax levies.
- \$45 million in additional funding to community colleges to help pay for large increases in student enrollment.
- \$20 million in General Fund to improve the quality of engineering and computer science programs, and to increase the number of graduates from these programs.
- \$10 million in tobacco settlement funds to expand biotechnology infrastructure at Oregon Health Sciences University, beginning in 2002-03. These resources are intended to pay debt service costs for a new facility beginning in the second year of the biennium. In future biennia, \$10 million per year will be needed for debt service.

Human Resources

Overview

This program area pays for support services to help Oregonians be as self-sufficient as their abilities allow. Services in this area place an emphasis on prevention and intervention for Oregonians in need. Agencies in this program area include the Department of Human Services, the Commission for the Blind, the Oregon Commission on Children and Families, the Oregon Disabilities Commission, the Insurance Pool Governing Board, the Long Term Care Ombudsman, and the Psychiatric Security Review Board.

A Budget Overview . . .

Key elements of this program area include the following:

- Allocation of \$66 million in funding for the Oregon Children's Plan— a plan that targets resources to high-risk children to prevent negative outcomes. \$29 million of new resources are used and \$37 million of funds redirected from other programs. All first births will be screened for medical and psychosocial risk. Targeted services provided by state and local partners will address issues identified.
- Increases funding to the Oregon Health Plan by over 20 percent to pay double-digit cost increase, driven by 60 percent increase in prescription drug expenses over the next two years.
- Reorganizes the Department of Human Services administrative structure to better serve clients. The Department expects to achieve better community and client outcomes through better collaboration, integration, and shared responsibility with the new structure.

Public Safety

Overview

This program area encompasses those agencies responsible for ensuring the public safety of Oregon's people, property, and natural resources. Agencies in this program area include the Department of Corrections, the Oregon Criminal Justice Commission, the Dispute Resolution Commission, the Department of Justice, the Oregon Military Department, the Board of Parole and Post-Prison Supervision, the Department of Public Safety Standards and Training, the Department of State Police, the Oregon Youth Authority, as well as District Attorneys and their Deputies.

Key elements of this program area include the following:

- Increases funding for Governor's Juvenile Crime Prevention Initiative to pay for basic services, prevention grants, and evaluation and administration.
- Establishes pilot programs offering parent-training and therapeutic visiting for inmates at two Department of Corrections institutions as part of the Oregon Children's Plan.
- Eliminates 157 officers at the Department of State Police—17 percent of all sworn positions. Patrol staffing is reduced to 446 officers; the number authorized at the beginning of the 1999-2001 biennium. Criminal detectives are reduced by 29 percent; fish and wildlife officers by 17 percent.
- Eliminates funding for 150 accountability camp beds operated by the Oregon Youth Authority, a 13 percent reduction. OYA will have fewer beds available for juvenile property offenders.
- Reduces funds at the Oregon Youth Authority for parole and probation, foster care, residential care, individual services, and county diversion grants. Multnomah County gang services funding is eliminated.
- Centralizes alcohol and drug treatment, education programs, mental health services and other Department of Corrections programs in those prisons best able to offer the programs. Inmates will be housed in institutions with programs appropriate to their incarceration/transition plans. Morning exercise yards are closed and various inmate activities are reduced or eliminated.

Natural Resources

Overview

This program area includes agencies that manage Oregon's natural resources for present and future generations, while supporting a sound and sustainable economy. Key to this program area is the *Oregon Plan for Salmon and Watersheds*—an effort by thousands of Oregonians to restore the health of watersheds. Agencies in this program area include the State Department of Agriculture, the Columbia River Gorge Commission, the Department of Environmental Quality, the State Department of Fish and Wildlife, the State Department of Forestry, the Geology and Mineral Industries, the Land Conservation and Development Department, the Land Use Board of Appeals, the State Marine Board, the State Parks and Recreation Department, the Division of State Lands, and the Water Resources Department.

Key elements of "Oregon Plan" efforts that are part of this program area include:

- Addition of a position at the Department of Agriculture to monitor Senate Bill 1010 implementation and effectiveness.
- Addition of riparian specialists at the Department of Forestry to help implement forest practices recommendations and their effect on watersheds.
- Continuation of funding for staff at the Department of Environmental Quality to complete plans required by the federal government for improving water quality. The budget also adds positions to monitor implementation of the plans.
- Provision of funds to begin the development of basin-wide assessments for each river basin in the state.
- Continuation of funding for staff to work on counts of groundfish at the coast.
- Continuation of ongoing recovery efforts for steelhead restoration across natural resource agencies.

Economic and Community Development

Overview

This program area includes agencies that aid businesses, communities, and people by providing economic and cultural enhancements throughout the state. These agencies participate in activities including job creation, placement and retention services, housing and infrastructure financing, business loans, and training. Agencies in this program include the Oregon Economic and Community Development Department, the Employment Department, the Oregon State Fair and Exposition Center, the Housing and Community Services Department, and the Department of Veterans' Affairs. Also includes funding for Oregon Public Broadcasting and the Oregon Historical Society.

A Budget Overview . . .

Key elements of this program area include the following:

- Provide loans and grants, backed by \$196 million in Lottery bond proceeds, from the Oregon Economic and Community Development Department for infrastructure and community facilities.
- Add resources to the Housing and Community Service Department by diverting \$1.4 million General Fund from the Housing Development Grant Program to address homelessness and poverty issues.
- Provide \$35 million in Lottery-backed bonds for Community Incentive Fund—a fund that will be used to rebuild downtowns and main streets; promote development of affordable housing near jobs and transportation; and rebuild rural and distressed communities.
- Expand health and safety reviews to include allchild care providers, enhance child care opportunities for post secondary students and parents in alcohol and drug treatments, and increase payments to child care resource and referral agencies.

Other Programs

Overview

This area includes funding for a range of other program areas in state government such as *administration, transportation, and consumer and business services*. *Administrative-related* agencies provide policy direction and core central services to state government. This program area includes funding for the Department of Administrative Services (DAS) the Department of Revenue, advocacy commissions, the Public Employees Retirement System, and some statewide elected officials. *Transportation-related* agencies, the Oregon Department of Transportation and the Department of Aviation, work to ensure that the state's transportation network is both safety and reliable, and that it enhances Oregon's economic competitiveness. Agencies within the *consumer and business service* program area work to protect the public, workers, and small businesses. Agencies in this program area include the Public Utility Commission, the Bureau of Labor and Industries, and the Department of Consumer and Business Services.

Key elements of this program area include the following:

Administration

- Increases tax compliance staff at the Department of Revenue, which will enhance the state's ability to monitor tax compliance and increase consumer education efforts.
- Includes funding for planned construction and maintenance of new state buildings and statewide technology projects.
- Strengthens DAS' ability to serve as the core management agency for state government.

Transportation

- The Oregon Department of Transportation is facing flat revenues. The agency is balancing to existing resources rather than proposing a new gas tax. Resources are reallocated internally to focus on highway and bridge preservation.

Consumer and Business Services

- Funding for increased staff is provided so that many of the agencies can address increased workload and increased enforcement activities.
- The implementation of Senate Bill 622, which created an Oregon Universal Service Fund within the PUC, which will subsidize the cost of telephone services in high-cost regions of the state.
- Extension of the Residential Service Protection Fund, which under current law will expire December 31, 2001. The programs funded with these dollars serve low-income and hearing and speech-impaired Oregonians.

Governor's Message

To the Citizens of Oregon:

We are so fortunate to live in this wonderful state. Not only is Oregon justly renowned for its breathtaking beauty, but it is also a place where people still know how to look beyond their differences and work together on common issues.

None of this happened by accident. Previous generations of Oregonians looked ahead to the future and made choices and investments that kept Oregon a special place.

Now, it is our turn. We face new challenges -- in educating our children, in preventing juvenile crime, and in protecting our quality of life.

This biennial state budget offers concrete proposals for meeting each of these challenges. It makes significant advances in our public schools, colleges, and universities. It breathes new life into our efforts to prevent juvenile crime. And it manages growth through important investments in transportation, housing, and land use.

Here are my key proposals in each of these three areas:

- **Education.** Giving Oregonians the education they need to succeed is one of the most crucial challenges we face today. I will propose that we add \$100 million to the School Improvement Fund to help children meet the high standards of the Education Act of the 21st Century. I will also seek \$73 million in additional funds for our community colleges and state universities. This will continue the freeze on in-state undergraduate tuition and help make our state university system more competitive and market-driven. Finally, I will propose expanding Oregon pre-Kindergarten programs to reach half of all eligible children.
- **Juvenile Crime.** There is no doubt that Oregon is "tough" on juvenile criminals. But the real challenge is to keep our children out of trouble in the first place. I will propose investing \$30 million in the High Risk Juvenile Crime Prevention Partnership. These funds, which will go to counties, will be targeted to address the needs of high risk children on a community by community basis. I will also seek \$20 million for alcohol and drug prevention and \$7 million for early childhood intervention.
- **Quality of Life.** We must manage our growth in a way that preserves not only our quality of life, but also protects the good economy we enjoy today. To accomplish this, I will propose investing \$30 million in the Oregon Livability Initiative. This new effort will encourage new jobs in rural communities, build affordable housing, and invest in mixed use development, downtowns, and mainstreets. I will also propose a state-wide transit network to connect rural Oregon and the Willamette Valley, and address the joint problems of sprawl and congestion..

It has been said that the future is a matter of choice, not chance. I believe that and this budget will help us build the future we want. It addresses what I believe to be the most important challenges facing our state, offers responsible choices to meet these challenges and keeps Oregon a prosperous and special place to live.

John A. Kitzhaber, M.D.
Governor, State of Oregon

The Budget Environment

The decade has brought many changes that affect Oregon's financing of public services. Votes on ballot measures have brought large changes. So has our changing economy.

The Challenge of Change

This has been a decade of change for Oregon. More people now work in services and high technology. Fewer work in lumber mills. Our population is now larger and older. Children of the baby boom swell our schools. Utilities, transportation, and banking are in more competitive, less regulated markets. Natural resource owners are more regulated. These all affect the finance of our public services. Here are further changes and impacts:

- Property and income taxes amount to about three-fourths of all state and local taxes. The locally controlled property tax has long been the larger of the two taxes. But in the last decade, ballot measures have moved the state income tax into first place.
- Wages have risen and total taxes, as a share of taxpayers' incomes, have fallen. But, the tax load on households has moved higher compared to the load on businesses. The new tax structure is changing state and local relationships. For example, the state now pays the largest share of local school costs.
- Public funding is now more sensitive to the economies of the state, nation, and Asia. A recession would be likely to impair the General Fund and local school funding. Local public funding is now likely to lag behind the state economy, more so in times of inflation.
- The new property tax system will lead to similar properties being taxed differently. Under this decade's new tax laws, the state will be less able to correct those problems.
- In this decade, voters dedicated state funds to certain purposes. Prisoners, parks, and others now have priority in funding.

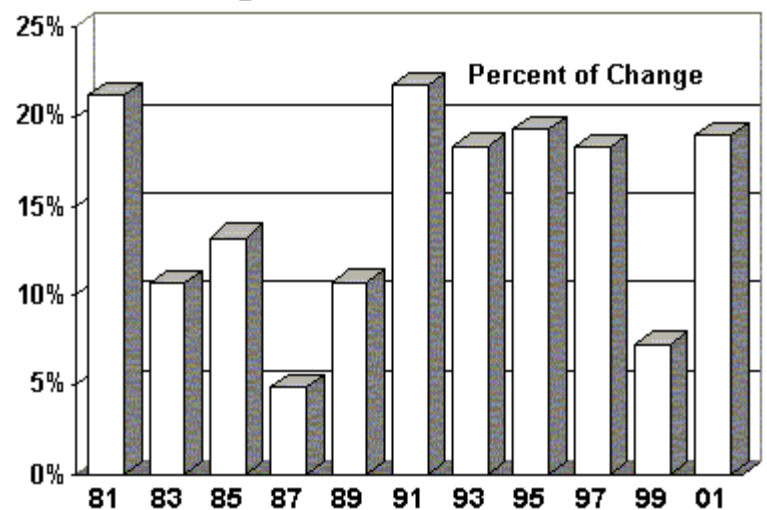

Dealing With Uncertainty

Several factors have the potential to increase or reduce the funds available to the Legislative Assembly for this state budget. Their likely impact is only a few percent. But that means a few hundred million dollars of uncertainty. Therefore, the quarterly economic forecasts that will be made during the legislative session may be especially important to state budgeting. Among the factors in uncertainty are:

- *Our state economy.* Though the long-term outlook is strong, a sharp slowing of the state's economy is expected for 1999.
- *Asian economies.* Asia is our major export market. Asian economies affect our own. There are signs their economies will start to recover in 2000.
- *Our national economy.* A state recession is not expected unless a national one occurs. However, the risk of a national recession is at its highest since 1991. Of course, world economies affect our national one.
- *Special tax refunds.* Two special refunds cause some uncertainty. First, in preparing the budget, we estimate that tax collections will not reach the level that triggers tax Kicker refunds. It appears certain

Swings in the General Fund

there will be no corporate Kicker refunds. The personal Kicker also looks unlikely in the light of economic forecasts. Second, the courts have found federal retirees are due refunds for past years' taxes on their federal pensions. Those refunds have been estimated and taken into account as a reduction in available tax funds.

State Resources

The state uses money from five sources to pay for state services. Following is a brief discussion of each source and how much the budget relies on it. The sources are grouped as General Fund, Other Funds (including Lottery), and Federal Funds.

Property taxes are not a source that funds the state budget. There is no state property tax. Property taxes are local. They are the main source of funding for cities, counties, and some special districts. They are the second largest source of local school funding.

The General Fund

The General Fund covers only about thirty-four percent of what is spent in the state budget. But, it is the money in the budget that the Legislature can apply anywhere it is needed. It comes largely from our income taxes. About eighty-five percent is from personal income tax and eight percent from corporate income tax. The rest comes from the insurance premium tax, cigarette tax, liquor tax, other minor sources, and the Fund's investment earnings. General Fund resources are estimated at \$10.22 billion for 1999-2001.

Other Funds

Other Funds (including Lottery) account for about forty-seven percent of what is spent in the state budget. Other Funds are mostly monies dedicated to certain purposes. They include some taxes, chiefly those related to highway use,

employment, and forests. They include state licensing fees. Other Funds also include the state's business-like incomes. Examples include tuition and other fees for services, inmate workforce products, and many funds related to loans or bonds. Lottery proceeds are counted as Other Funds.

Federal Funds

Federal funds cover about nineteen percent of what is spent in the state budget. The federal government limits the state's choices about where and how federal funds may be used. Most federal funding comes with conditions, like requiring the state to keep certain service levels or to provide matching funds.

Lottery Funds

Net lottery proceeds cover a little less than two percent of state spending. Technically, they are part of Other Funds. They are often thought of more like the tax dollars of the General fund. That is because they can be used for a wide range of state needs. They are not dedicated to a single program.

Lottery funds swing up or down with customer demand. The economic forecast is for another decline in lottery funds for the state budget. There are two reasons. First, the last two budgets started with tens of millions in unspent receipts from prior years. Those funds have been spent. Only \$5 million will remain to start the 1999-2001 budget. Second, video poker sales are expected to grow slightly, but the other games are still on a downward trend.

Along with these reductions, ballot measures and debt service are now directing more than 30 percent of net lottery proceeds to dedicated purposes.

Meeting the Livability Challenge

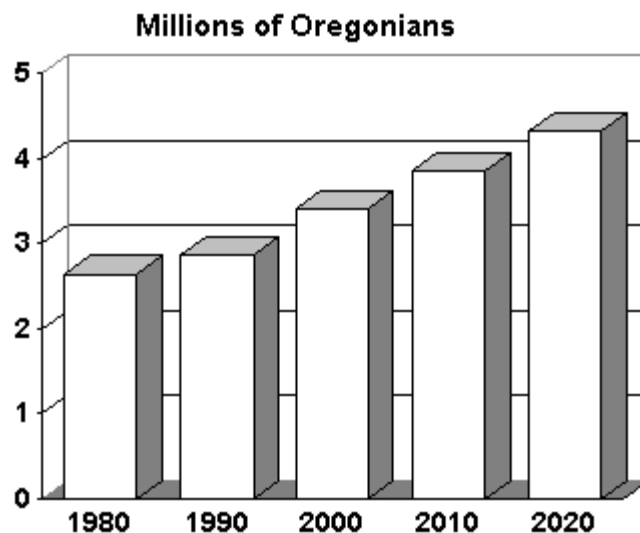

Oregon's population has grown by 500,000 since 1990. In the next 20 years, our population is expected to grow by another 900,000. Our challenge is to channel this growth and maintain our prosperity while enhancing and protecting the quality of life that defines our state.

Managing How and Where We Grow

Oregon's growth has been strong but uneven. Some communities have seen double digit growth while others are barely growing. Since 1970 we have relied on land use planning and zoning laws to manage growth. They are not enough. We

need incentives and better coordination to complement our laws.

We cannot allow growth to diminish the very things about Oregon which make it a special place. Instead, we must manage growth in ways that enhance the quality of life for us all. We must do this together, in ways that meet our varied needs and interests.

Key Strategies

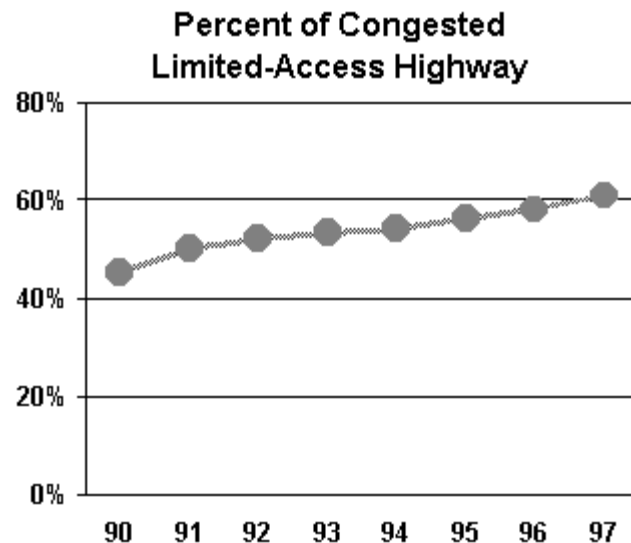

Governor Kitzhaber has proposed the *Oregon Livability Initiative*. This initiative consists of:

- *The 21st Century Community Fund*. The fund will leverage existing revenues from both the Oregon Lottery and transportation funds by using them to back bonds to invest in affordable housing, transportation, water, sewer, and main streets.
- *The Community Solutions Team*. This group is an interagency team that works with local governments and community leaders on collaborative planning and problem solving. The five state members are the Departments of Transportation, Land Conservation and Development, Economic Development, Oregon Housing and Community Services, and Environmental Quality.

Budget Support

Most of the funding to meet the livability challenge comes through coordination of existing programs under the umbrella of the 21st Century Community Fund.

- \$40 million in Lottery revenue bonds for sewer, water and community infrastructure grants and loans.
- Matching funds to obtain \$25 million in federal funds for low-interest loans to communities to construct water system improvement needed to meet health standards.
- \$5 million for affordable housing.
- \$25 million in Lottery revenue bonds to rebuild the urban centers in communities of all sizes.
- Partnership with the departments of Housing and of Human Resources to do joint pilot projects for low-income housing needs.
- The *Oregon Transportation Network* includes \$14 million General fund for high-speed rail and connecting busses to all regions of the state, \$10 million General Fund and \$10 million federal funds for elderly and disabled transportation. This will leverage additional resources in the human services programs.
- \$20 million in revenue bonds to buy highway rights-of-way for getting people safely on and off of state highways.

- \$30 million in revenue bonds to increase local, secondary street capacity so drivers can avoid busy intersections and heavily traveled roads.

Measurable Goals

We will use Oregon Benchmarks to measure our statewide success in achieving these goals:

- To create more jobs in distressed communities which want economic growth.
- To increase the supply of affordable housing.
- To reduce traffic congestion and sprawl in targeted locales.
- To revitalize urban centers, fostering mixed use developments in downtown and main street areas.
- To form community solutions teams throughout the state to solve problems rather than run programs.

A Livability Partnership

Some of the many partners in this effort include:

- *Governor's Community Solutions Team.* Coordinates state actions.
- *Economic Development Department.* Focusing on job creation and infrastructure funding.
- *Department of Housing & Community Services.* Focusing on investments in affordable housing.
- *Department of Land Conservation & Development.* Regional problem solving and land use issues.
- *Department of Environmental Quality.* Assists in waste water systems and other environmental issues.
- *Department of Transportation:* Funding for transportation services and coordination for the Oregon Transportation Network.
- *Department of Human Resources.* Working with the Housing and Transportation departments to help fund quality communities.
- *Association of Oregon Counties.* Assisting Oregon's counties with planning and coordination.
- *League of Oregon Cities.* Assisting Oregon's cities with planning and coordination.
- *Other Important Partners:*
 - *Oregon Home Builders Association.*
 - *Associated Oregon Industries.*
 - *Livable Oregon, Inc.*
 - *Oregon Transit Association.*
 - *Oregon General Contractors Association.*
 - *Oregon Environmental Council.*

Meeting the Juvenile Crime Challenge

Oregon is tough on juvenile criminals. But, the real challenge is to keep our children out of trouble in the first place. We need to find the children who are at risk and help them become successful citizens. We need to do this before they hurt themselves or someone else.

High Risk Juvenile Crime Prevention Partnership

Today, juveniles account for more than a quarter of all arrests in Oregon. Our juvenile arrest rate for property crimes is 74 percent above the nation's average, and rising. Juvenile crime costs state victims more than \$800 million a year. Yes, taxpayers are investing hundreds of millions in new jails and prisons. But, punishing crime is not enough.

We know what else needs to be done. We need to find the children who are at risk of embarking on lives of crime. We need to help them turn their lives around before it is too late.

We also know we must work together to accomplish this. It is not a state problem or a local one or a government one. It is everyone's concern and everyone's problem. Our response to it must be a partnership that is just as broad.

Key Strategies

- Mobilize a broad range of public and private partners at state and local levels.
- Focus on local planning and local actions that collaborate across disciplines and organizations.
- Invest in proven prevention tools that will produce measurable results.
- Focus on young people who are at the greatest risk of moving to criminal activity.

Juvenile Arrests

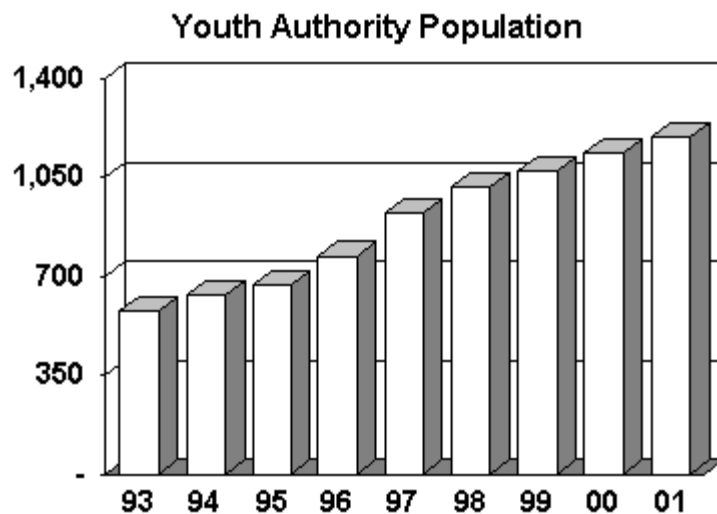

Budget Support

- \$30,000,000 for the *High Risk Juvenile Crime Prevention Partnership*. Counties will receive \$19 million to carry out local prevention plans. They will receive \$10 million for juvenile detention, shelter, sanctions, supervision, and aftercare. \$1 million will go to state evaluation and administration.
- \$20,000,000 to the Office of Alcohol and Drug Prevention. These funds will expand treatment services and prevention programs.
- \$3.5 million in state and federal funds to expand Oregon pre-kindergarten programs to reach half of all eligible children (see the Education Challenge).
- \$7 million General Fund and federal funds for home visits to foster early childhood development.
- \$20 million for the Distressed Schools Fund (see the Education Challenge).
- Funding existing services in dozens of state programs that provide important services to youth and crime prevention.

Measurable Goals

We will use Oregon Benchmarks to measure our statewide success in achieving these goals:

- To reduce the number of serious crimes committed by minors.
- To reduce anti-social behavior among our youth.
- To improve academic performance for our youth who are at risk.
- To give children at risk safer family lives.
- To improve peer relationships among youth.
- To reduce use by juveniles of alcohol and drugs .

A Broad Partnership

Some of the many state partners in this effort include:

- *Governor's Office.* The Governor and his staff provide statewide leadership.
- *Criminal Justice Commission.* The commission administers and evaluates the High-Risk Juvenile Crime Prevention Partnership. It provides grants to counties to help them carry out their local juvenile crime prevention plans.
- *High-risk Juvenile Crime Prevention Advisory Committee.* This committee is a broad-based policy advisor to the statewide partnership. The committee is a large and diverse, with state, local, public, and private members from a wide range of programs, cultures, and interests.
- *Local governments, organizations, and people.* The plans to find and rescue youth at risk are made and carried out locally, where the children are. Each county's commissioners oversee the local process.
- *Office of Alcohol and Drug Prevention.* Coordinates and provides treatment services and prevention programs.
- *Oregon Youth Authority.* Manages the state's juvenile corrections program. Gives technical advice to the counties. Its new data system will help evaluate prevention programs. OYA will make grants to counties for juvenile detention, shelter, sanctions, supervision, and aftercare.
- *Commission on Children and Families.* Provides funds and assistance for community programs targeting younger children. Funds Healthy Start programs.
- *Oregon Department of Education.* Provides programs to keep at-risk youth in school. Funds Oregon Pre-Kindergarten program. Runs Early Intervention and Early Childhood Special Education programs. Distributes Safe and Drug Free Schools funds.
- *Oregon State Police.* Participates in DARE, Juvenile Firestarter, SAFE KIDS, and other prevention programs. Collects and disseminates arrest data.
- *Department of Human Resources.* Provides funds for alcohol and drug abuse programs and community health and mental health programs. Builds community safety net programs. Provides protective services and adoption placement.
- *Oregon Military Department.* Runs prevention programs for children and youth.
- *Department of Public Safety Standards and Training.* Trains police officers in child abuse and cultural diversity issues.
- *Department of Corrections.* Works with adult offenders to reduce risk factors affecting their children.
- *Oregon Liquor Control Commission.* Works to prevent alcohol sales to minors.
- *Governor's Council on Domestic Violence.* Policy and planning advice to prevent domestic violence.

Some of the many local partners in this effort include:

- *League of Oregon Cities.*
- Association of Oregon Counties.*
- Oregon State Sheriffs Association.*
- Oregon Association Chiefs of Police.*
- Oregon Juvenile Department Directors Association.*
- Oregon District Attorneys Association.*
- Oregon Parent Teacher Association*
- YMCA of Marion and Polk Counties.*

Meeting the Education Challenge

All children in Oregon must have the opportunity for education that will prepare them for the demands of the 21st century. Education builds our skills, broadens our world, builds our self-worth, and determines our quality of life. The costs of ignorance are greater than any society can afford.

Educating Our Children For the 21st Century

Oregon's public education serves almost one million students a year. Success in the 21st century will require that these students have higher skill levels and a broader range of knowledge than ever before. It will require them to learn continuously. That requires an education system that is continuous. It must start before kindergarten and reach through high school, college or university schooling, and into life-long learning.

Key Strategies

- Our state system of local schools, community colleges, and universities will form a seamless continuum of public education.
- Invest in all phases of the educational system from pre-kindergarten to higher education.
- Gather the information needed to prove which strategies improve student performance most cost-effectively.
- Focus funding on student performance and accountability.

Added Strategies

- Emphasize a good beginning with Early Childhood and Ready to Learn programs.
- Intervene with targeted help for our neediest students.
- Remove the financial and geographic barriers to lifelong learning.
- Improve education facilities, equipment, and information systems.
- Improve the skills and knowledge of our educators.
- Freeze in-state, undergraduate tuition (instruction fees) at our universities.
- Create a market-driven, student-centered system of higher education.
- Form a financial assistance program that rewards student achievement.

Budget Support

- \$100 million, above and beyond the \$4.38 billion K-12 appropriation, will fund the *School Improvement Fund*. School Districts will submit plans to the State Board of Education for improving student performance with measurable performance benchmarks.
- \$50 million in bonded funds for technology to directly link classroom voice, data and video communications to the Internet or other approved services.
- \$20 million for the *Distressed Schools Fund*. This fund will help local schools overcome clusters of special barriers that impair student achievement.
- \$3.3 million to implement the statewide K-12 Database. The database will help all policy makers, managers and education stakeholders make wise decisions about education strategies.
- \$3.5 million to expand Oregon pre-kindergarten programs to reach half of all eligible children.
- \$10 million to increase target enrollment in universities and community colleges. Universities will target needed professions like teachers and engineers. Community colleges will target new students who need distance learning services.
- \$15.3 million for a tuition (instruction fees) freeze for resident undergraduates at state universities.
- \$5 million for targeted recruitment and retention of high quality university faculty.
- \$44.7 million to improve public universities, making them more responsive to student needs and to the marketplace.

Measurable Goals

We will use Oregon Benchmarks to measure our statewide success in achieving these goals:

- To increase to 50 percent the number of children served by pre-kindergarten programs.
- To increase the share of children who achieve reading and math standards on state assessment tests.
- To have approved plans to improve student achievement in each school district.
- To increase enrollment at our community colleges and universities.
- To increase the share of children who graduate from high school and attend college.

Partners in Creating the Education Continuum

Some of the many partners in this effort include:

- *Governor's Office of Education and Workforce Policy*. Coordinates state actions.
- *Oregon Department of Education and the State Board of Education*. Coordinate the pre-kindergarten through high school programs.
- *Office of Community College Services and the State Board of Education*. Coordinate the community colleges' programs.
- *Oregon University System and the State Board of Higher Education*. Coordinate the state's university programs.
- *Oregon State Scholarship Commission*. Provides financial assistance programs for college students.
- *Teacher Standards and Practices Commission*. Approves teacher preparation programs and licenses school teachers and administrators.

Some of the many important association partners:

- *Oregon Head Start Association.*
- Congress of Parents and Teachers.*
- Oregon School Boards Association.*
- Confederation of Oregon School Administrators.*
- Oregon Education Association.*
- Oregon School Employees Association.*
- Association of Oregon Industries.*
- Oregon Business Council.*
- Oregon Community College Association.*
- Oregon Student Association.*
- Community Colleges Student Association and Commissions.*
- Oregon Independent College Association.*

A Budget Overview

Producing a Balanced Budget

State law requires the governor to propose a balanced budget that relies only on the revenues predicted under current laws. Governor Kitzhaber's recommended budget does that. It also proposes plans to meet the challenges we face in education, juvenile crime, and in preserving our quality of life in the face of strong growth. It does so without new or increased taxes.

The Budget Process

Agencies start the budget process by talking with stakeholders about what is working and what needs improvement. Then, they make their budget requests of the Governor. Those requests include:

- Funding to continue the services provided under current laws. The costs are adjusted for estimated inflation and caseloads.
- Funding for any proposed new or expanded services.
- Suggestions on what services are no longer needed and what to cut if state funds prove insufficient.

The state economist forecasts how much the state will have under current laws to fund the state budget. When the separate requests are totaled, they always equal more than forecast state funding could cover. Therefore, the Governor must decide what increases and decreases he will recommend to stay within available funds. He may propose new funding, funding shifts, or cuts in some programs so the state can fund other needs.

The state budget becomes more than a plan. The Legislature evaluates the Governor's Recommended Budget. It hears public testimony for and against each part of the proposed budget. It then deliberates to a final budget that it enacts as a series of laws. Those laws then control state spending for the next two years.

Governor Kitzhaber's recommended budget provides total funding for most agencies at a level to cover estimated

inflation and caseload increases. Inflation and caseloads are always estimates. So, some services are funded at less than an agency requested, but within a reasonable range. Some services are shifted from state taxes to other funding sources. Some agency requests are reduced so that more pressing needs can be met.

General Fund and Lottery Expenditures

The Governor's budget puts fifty-six percent of the General Fund (state tax dollars) and Lottery funds into education. The second largest share, twenty-two percent, goes to human resources programs. There, state tax dollars are mostly used to meet matching-funds or service-level requirements to qualify for federal funds. At fifteen percent, public safety is now the third largest user of state tax revenues. The state budget leaves a reserve of less than one percent as a General Fund ending balance. That reserve stands against the risk that actual revenues may be less than forecast.

Agency Highlights

Following are some highlights from the budget. These deal with the General Fund, which is mostly income taxes, and with Oregon Lottery funds. See the *Governor's Budget* for more details.

Agriculture: The Governor's Recommended Budget maintains current services. Adds \$3.9 million in Lottery funds to control weeds and pesticide run-off that damage salmon and steelhead habitat. Stops state payments to counties to maintain their county fairgrounds, saving \$3 million in General Fund.

Asian, Black, Hispanic, Women's Commissions: Restores funding to keep them operating. Each is funded at \$135,000.

Children and Families Commission: Adds \$7 million in General and Federal Funds for home visits for early childhood development. Shifts youth conservation and federal juvenile justice and delinquency prevention funds to other agencies.

Columbia River Gorge: Increases biennial funding by \$0.3 million to carry out the National Scenic Area Act and assist stakeholders.

Community Colleges: Adds \$2 million to reach students who need distance learning services.

Corrections: Reduced \$20 million from continuing service levels. The differences are achieved largely from reducing the subsidy for inmate work crews and changes in new prison opening dates.

Criminal Justice : Maintains services. Adds \$20 million for High-Risk Juvenile Crime Prevention Partnership.

Division of State Lands: Maintains services. Adds \$466,000 lottery funds for added data coordination, resource inventory, and program aid for the restoration of salmon and steelhead runs.

Economic Development: Maintains services. Adds \$45 million in lottery-backed bonds for sewer, water, and other infrastructure projects in rural and distressed communities. This is part of the Governor's livability initiative.

Education: Adds \$100 million for the School Improvement Fund for measurable increases in student performance.

Raises \$50 million in bond funds for classroom technology. Adds \$20 million for the Distressed School Fund to overcome multiple local barriers to student achievement. Adds \$3.5 million for the K-12 database project. Increase Oregon pre-kindergarten by \$3.5 million in state and federal funds to reach half of all eligible children.

Employment: A central hearings panel is formed for contested cases, using staff transferred from several agencies. Costs for the panel will be paid by the agencies based on how many hearings are held.

Fish and Wildlife: Maintains current programs with funding for enforcement, predator control, and other programs.

Forestry: Maintains services. Adds \$2.4 million to fund the fire protection program for almost 16 million acres of forestlands, for salmon protection, and to continue the facilities plan.

Geology and Mineral Industries: Maintains services. Adds \$250,000 to set up a coastal field office for geologic risks and hazards to coastal communities.

Higher Education: Adds \$73 million to improve quality and to make a post-secondary education more accessible and affordable.

Housing and Community Services: Maintains services. Adds \$5 million for affordable housing. Uses \$25 million in lottery-backed bonds to rebuild downtown and community centers.

Human Resources: Adds \$20 million for alcohol and drug abuse prevention. Uses General Fund to restore federal cuts in Social Services Block Grant and Medicaid Disproportionate Share funds. Assumes continuation of the 10 cent-per-pack cigarette tax to maintain Oregon Health Plan services. Even with the tax extension, the budget cuts cost-based reimbursement to some hospitals, makes some eligibility changes, and moves the benefit line upward. Adds \$12 million to comply with the federal Adoptions and Safe Families Act. Includes a 2 percent annual inflation rate for providers. Re-projects caseloads. Opens a new forensics ward at the Oregon State Hospital. Closes Fairview by the year 2000. Changes the nursing home inflation rate following changes in federal law.

Insurance Pool Governing Board: Adds \$4.6 million to continue family health insurance assistance. These funds assume that the 10 cents per pack tax on cigarettes will be extended.

Justice: Adds staff to meet state agency needs for legal counsel. Increases are funded with charges to agencies for services.

Legislative and judicial agencies: Budgets for the legislative and judicial branches are increased 2 percent above initial current service level estimates. This was done to balance the statewide budget. It does not reflect recommendations on any specific budget elements.

Parks and Recreation: Adds \$30 million to keep the state's parks open and catch up on deferred maintenance. Of that, \$2 million is for grants to local governments.

Public Safety Standards and Training: Maintains services, except holds basic police course to 10 weeks instead of sixteen. Provides for new training delivery methods.

Scholarship Commission: Student loans, beginning in July 2001, for those who achieve Certificates of Mastery.

Secretary of State: The budget is increased 2 percent above initial current service level. This was done to balance the statewide budget. It does not reflect recommendations on any specific budget elements.

State Fair: Maintains current services. Adds \$0.7 million for core programs. Adds \$10.5 million Lottery Revenue Bonds to begin a long-term repair and improvement plan for facilities.

State Police: Maintains services and adds \$7 million. Picks up funding for twenty-five patrol troopers and seven new Fish and Wildlife officers. Makes other increases in programs and services.

Transportation: Adds \$10 million for high speed rail. Adds \$10 million for elderly and disabled transportation. Uses \$50 million in bond proceeds for local street networks and access acquisition. Adds \$162 million in federal funds to preserve existing roads. This is a shift in emphasis from building new roads.

Water Resources: Maintains services. Adds \$31.7 million of lottery funds for grants to local governments and others for projects to restore salmon and steelhead runs.

Youth Authority: Reduces \$4 million based on proposed "second look" hearings for some Measure 11 crimes. Adds \$10 million for the High-Risk Juvenile Crime Prevention Partnership. Makes other enhancements and reductions.

BILLS RECEIVED AND ACTED ON BY THE GOVERNOR

Listed in Alphanumeric Order

Here is a complete list of bills received and acted on by the Governor during the 1997 Legislative session. This list is comprehensive and final. For more information about individual bills see the web page maintained by the [Oregon Legislature](#). It provides history and text for each measure and a list of addresses and telephone numbers for House members and Senate members.

Here is a selected list of [Veto Messages](#) issued by the Governor.

Final Bill Status 1997 Legislative Session

Bills Received: 909
 Bills Signed: 871 (includes two bills with emergency clause vetoes and one bill with three line-item vetoes)
 Number of Vetoes: 43

Bill #	Bill Rec'd	Deadline	Bill Signed
HB 2002	07/04/97	08/15/97	07/10/97
HB 2004	07/04/97	08/15/97	07/14/97

1999-2001 BUDGET ISSUES

General Fund/Lottery Funds

(\$ in millions)

General Fund and Lottery Revenue @ Governor's Recommended 12/98	10,743.6
Changes due to March, 1999 Revenue Forecast	(113.3)
Expenditures @ Governor's Recommended 12/98	(10,687.0)
INCREASE STATE SCHOOL FUND Expenditures from 4.55 to 4.95 Billion	(400.0)
INCREASE SUPPORT FOR HIGHER EDUCATION	(14.5)
Tobacco Tax Shortfall @ March, 1999 Revenue Forecast	(9.4)
Debt Service for \$150 million of Bonds for Schools (one year)	(15.0)
Provision for Ending Balance	(56.6)
Total Revenue Shortfall @ May 1999	(552.2)

State School Fund and Higher Education Funding Options

- Common School Fund	40.0
- Property Tax Collection Increase (net of SB 123)	30.5
- Tobacco Settlement Proceeds plus bond debt service for 99-01	145.0
- Increased Revenue from May 1999 Revenue Forecast	42.9
- Bonds for Schools (Secured by Tobacco Settlement Proceeds) or use Kicker	150.0
- Total	408.4

State Agency Shortfall**(143.8)****Actions to Balance**

Reductions in state programs (excludes Public Safety and the Department of Human Resources)	6.2
Reductions in Public Safety	22.5
Reductions in Department of Human Resources	7.1
Department of Human Resources Revenue Enhancements	104.0
Department of Revenue, Revenue Enhancement Package	4.0
Subtotal Reductions and Revenue Enhancements	143.8
Balance	0.0

OFFICE OF THE GOVERNOR

COMMUNITY SOLUTIONS TEAM AND COMMUNITY DEVELOPMENT OFFICE

Governor Kitzhaber called together the Community Solutions Team ([CST](#)) directors in August 1995 as a cabinet-level advisory board to coordinate and integrate state agency actions, services, and investments in community development and partner with local governments to:

- * improve the quality of life in Oregon's towns and cities
- * to craft locally appropriate solutions to complex community development issues
- * to use limited state resources efficiently and wisely

The CST consists of the following five state agencies:

- * [Economic & Community Development](#) - Bill Scott, director
- * [Environmental Quality](#) - Stephanie Hallock, director
- * [Housing & Community Services](#) - Bob Repine, director
- * [Land Conservation & Development](#) - Bill Blosser, director
- * [Transportation](#) - Bruce Warner, director

The Governor's Community Development Office ([CDO](#)) - was organized in January 1998 to implement an integrated approach to community development within the five state agencies of the Community Solutions Team and to work with local government on increasing livability. The CDO consists of agency liaisons, senior staff "on loan" from each of the five Community Solutions agencies, and regional coordinators located in regions throughout the state. The CDO is located at 155 Cottage St., Salem, Oregon 97301-4047 and can be reached by calling 503.378.6892.

Draft

EASTSIDE ACTION PLAN

May 10, 1999

Using Oregon's eastside forest strategy to address regional ecosystem restoration issues

For over two years now the State of Oregon has pursued an ecosystem restoration strategy for the forests of eastern Oregon. Partnering with the Forest Service and the Bureau of Land Management, Governor John Kitzhaber has built a broad base of public support for the restoration effort. The strategy is based on a foundation of science and calls for active management to promote ecosystem health, while avoiding areas of high public controversy. Restoration efforts under the Governor's 11-point plan include prescribed burning, understory thinning, riparian restoration and road closure and obliteration.

The Action Plan will accelerate efforts under the 11-point strategy. It will focus on specific large "demonstration areas" on federal forest land in eastern Oregon. Monitoring of the effects of restoration treatments will be a key component of the effort.

Desired Outcome: Healthy forests, streams and watersheds. The goal of the effort is to enhance ecosystem restoration efforts using integrated watershed health activities. Restoration efforts would occur on the watershed scale and include funding for a wide array of activities. Collaborative stewardship and community-based solutions will help drive the strategy.

The Problem: Although it is widely acknowledged that past management practices have left us with unhealthy watersheds and ecosystems, there are a number of reasons why progress toward restoration has been limited:

1. Federal agencies receive inadequate funding to finance needed ecosystem restoration efforts.
2. Federal regulatory agencies are inadequately staffed to cope with consultation requirements under the Endangered Species Act.
3. Some projects have commercial thinning as a component. Income from the sale of these products could be used to help finance restoration costs, but many of these proposals fail to receive bids.
4. Eastside mills can help finance restoration efforts by purchasing commodities produced through active restoration efforts. The unpredictable flow of commodities from these forests makes it difficult to keep mills open.

We have an unprecedented opportunity:

- The Governor's 11-point strategy has provided a blueprint for an ecosystem restoration strategy that focuses on areas of common agreement among stakeholders.
- Scientific understanding of eastside forests is among the best in the world.
- There is broad agreement that commodities for local communities can be produced using beneficial ecosystem restoration treatments.
- There is widespread public support for active management that avoids controversial areas, promotes older forest structure and is scientifically well founded.

Proposed Action Plan

Scope: The action plan targets a large demonstration area in the Blue Mountains of eastern Oregon.

Timeline: All actions accomplished in 2000 and 2001.

Benchmarks: Each eastside forest and district would set ecosystem restoration targets by July 1, 1999 as part of their FY 2000 ecosystem restoration program. These benchmarks would serve as surrogates for the true goal of the effort: restoration of ecosystem health. Targets would be quantifiable and would include:

The Blue Mountain Demonstration Area will encompass portions of several forests and a number of watersheds. While efforts to improve watershed health will continue across all eastside forests using the 11-point strategy and the science of ICBEMP, the Blue Mountain Demonstration Area will see enhanced focus and accelerated efforts. Priority will be given to areas with completed watershed analyses and where there is broad public support for restoration.

Types of restoration work: Understory thinning, prescribed fire, road obliteration, noxious weed treatments and riparian restoration.

Key action items:

- Identify funding for enhanced restoration efforts
- Work with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service to improve the efficiency of ESA consultation
- Identify opportunities within the federal land management agencies to promote restoration activities
- Improve community involvement in ecosystem management strategies.

Eastside Forest Health Strategy

May 1999

1. There are broad areas of potential agreement about goals for restoration of ecosystem health to the forests of Eastern Oregon.
2. Ecosystem health includes the health of forests, streams, and watersheds. Achieving and maintaining good water quality and quantity should be a priority for all forest management activities.
3. Ecosystem health may be improved through active management in overstocked stands which have suffered from fire exclusion and highgrading of large trees. Thinning of small diameter green trees is an important component of active management for forest health and will help make sales economically viable.
4. Be responsive to the diversity of communities dependent on forest resources including Native Americans, timber dependent communities and recreation and tourism sectors.
5. Plan and implement operations first in less controversial areas. In the short run, avoid operating in roadless areas, near fish habitat and old growth areas.
6. For ecosystem health restoration activities to truly succeed, monitoring and learning from these efforts is essential. The Forest Service and the research community, Congress, the Administration and the Governor's Office should join together in assuring that we learn from the management strategy employed to restore ecosystem health. Monitoring actual results will be critical to justifying ongoing active management.
7. Cumulative effects analysis should include all ownerships within a watershed, where possible. This may be accomplished by working with local watershed councils.
8. Active management includes cutting trees, riparian area planting, reforestation, prescribed fire, road obliteration, stream rehabilitation, and protection of sensitive areas.
9. Use of low impact cost effective, equipment is an important element in effective restoration. The Forest Service, federal government and the state should provide incentives that encourage the use of such equipment.
10. Timber salvage may be an important component of ecosystem health restoration and fuel reduction strategies to the extent that it promotes ecosystem health goals.
11. Where the costs of ecosystem health restoration efforts are not paid for by timber sale proceeds, funds should be made available to finance these activities on a priority basis.

Gambling in Oregon

Legalized gambling in the state of Oregon has a long history, beginning with legalization of *pari-mutuel* (race track) gambling in 1931. Over the next 45 years, it came to include social gambling, whereby citizens could play "friendly" games in public by local option, and statutes allowing charities to raise funds for good causes through an occasional casino night. Until recently, Oregonians have had no reason to regard such scaled-down, controlled gambling as anything more than an infrequent and harmless diversion.

In 1984, when voters authorized a state-run Lottery, gambling in Oregon acquired a new dimension. And now a further complication has arisen, in the form of a large and growing tribal-sponsored gambling industry. Taken together, the expansion of state-run and tribal-sponsored gambling raises a number of serious concerns about Oregon's social and economic future, and about how the good of the public is protected and preserved within this context.

Governor Kitzhaber's Response

In 1995, motivated by concern about the long-term social and economic implications of the expansion of state-run and tribal-sponsored gambling opportunities, Governor Kitzhaber appointed a task force charged with examining the history, nature, and effects of gambling in Oregon. Among the preliminary findings of this task force, chaired by then Oregon Attorney General Ted Kulongoski, was concern about addictive behavior which, in turn, was having a visible but unquantified social impact in communities throughout the state. But the data necessary to make an accurate determination about the true effect of this rapid expansion was not available. As a result, the Task Force made the following recommendations:

- 1.
2. Oregon should avoid expansion of Lottery gambling until the long-term social impact of gambling can be more accurately measured.
3. The state should establish a research council charged with producing the necessary data for Oregon decision makers. [\(1\)](#)
4. Oregon law should be revised to reflect the changes in gambling which have occurred in the last 25 years and to attack illegal gambling.

These are sound recommendations which require serious attention before the state commits to actions which continue to contribute to social and economic instability. Citizens, the Lottery Commission, the Legislature, and the Governor must all have an opportunity to provide meaningful solutions to the very real problems that we associate with gambling.

The following policy discussion outlines the history of state-run and tribal-sponsored gambling in Oregon and, for each, the Governor identifies his adopted policy framework for managing these issues. The Governor's actions to manage gambling will be pursued consistent with these policies

The State-Run Lottery

Thirteen years ago, when the Lottery was born, Oregon was struggling to combat the recession of the early 1980s. The original idea behind the Lottery was to develop an additional revenue source in lieu of taxes with the limited (though conveniently vague) purpose of providing funds "to create jobs and further economic development." Since then, both Lottery offerings and Lottery proceeds have steadily grown. And the state's dependence on Lottery revenues has grown as well.

Lottery offerings, which began with scratch tickets in 1985, have expanded to include weekly and daily drawings, keno, sports betting, and national lotteries offering millions of dollars in prizes each week. As a result, Lottery revenues have grown from \$60 million in its first year to nearly \$700 million in the biennium ending June 30, 1997.

Source: Governor's Task Force on Gaming, 1996

Legislative introduction of video poker in 1991 created the potential for much larger revenues than was originally envisioned. In fact, proceeds from video poker have literally doubled total Lottery revenues for the past four fiscal years.

The increase in lottery dollars flowing to the State General Fund was made possible, in part, by the partnership between the State Lottery and many private retail establishments. These new General Fund dollars have brought benefits to the people of Oregon from educating our children to providing much needed rural infrastructure.

Source: Oregon State Lottery, June 6,1997

Nonetheless, as the dollars grew, state government and some private businesses began to rely more and more heavily on this revenue source. For example, the placement of video poker machines in OLCC-licensed establishments led to a greater dependence in the restaurant and bar business on the revenues that these machines could produce. Recently, we have even seen a new kind of business spring up: retail stores which receive a majority of their revenues from Lottery machines. At the state level, the unanticipated windfall of Lottery dollars was soon being allocated not just to job creation and economic development, but to natural resources, transportation, public safety, and even to local government. In 1995, voters approved a constitutional amendment adding the "financing of public education" to the list of allowable uses for Lottery proceeds.

Today, Oregon depends on gambling resources for nearly 10 percent of its budget, and state legislators have even begun making proposals based on Lottery dollars that have not yet materialized.

Given these facts, the time has come to re-examine the Oregon Lottery, to clarify the policy it reflects, and to determine whether it remains consistent with its original mandate: to maximize revenues commensurate with the public good.

Policy Directions: State-Run Lottery

The mandate for the Oregon Lottery Commission under the law is clear: to produce "the maximum amount of net revenues to benefit the public purpose described [in the Constitution], *commensurate with the public good*." The Commission has done an exceptional job of "maximizing revenue" but, unfortunately, there has been no policy framework to ensure that their actions have been "commensurate with the public good."

This is not meant to fault the Commission. It is the responsibility of state policy-makers, not the Commission, to provide the context for balancing "revenue" with the "public good." This white paper reflects Governor Kitzhaber's position on how this balance should be struck.

There are three categories of gambling "addiction" or dependency in Oregon: (1) gambling addiction among individuals; (2) dependence on Lottery proceeds by certain retailer establishments, and (3) dependence on Lottery proceeds by the State of Oregon itself. Governor Kitzhaber believes that **it is not commensurate with the public good to increase addiction or dependency in any of these three categories**. Rather, we should

take steps to reduce current levels of addiction and dependency.

Therefore, the following policy recommendations are set forth:

1. Reduce gambling addiction among Oregonians by increasing funding for identification, outreach, and treatment, and other measures
2. Reduce the dependence of certain retail establishments on Lottery proceeds by developing a narrower definition of "dominant use."
3. Reduce the dependence of the State of Oregon on Lottery proceeds by: (a) requiring a statutory ending balance for Lottery revenues, and (b) begin moving Lottery revenues out of operating budgets and dedicating them to "one-time" projects such as capital construction, basic infrastructure, equipment acquisition, etc.
4. Halt the expansion of the Oregon Lottery by prohibiting video line games and imposing a freeze on the number of Lottery machines until recommendations 1-3 (above) have been addressed.

Tribal-Sponsored gambling

The relation of tribal-sponsored gambling to legalized gambling policy in Oregon is more complex. To begin with, it has been well established under federal law that Indian tribes are "sovereign nations," entitled to their own form of self-governance which is largely separate from and independent of state authority. Although Congress has extended criminal law jurisdiction of the states onto Indian lands, the tribes retain a high degree of independence in other areas, among which is the matter of gambling on tribal territory.

The role of the states in regard to gambling on tribal lands within their boundaries was clarified by a 1987 Supreme Court ruling and by the Indian Gaming Regulatory Act of 1988 (IGRA). The former held that tribes could offer any type of gambling not expressly prohibited by state law. The latter allowed Indian tribes to conduct casino-style house-banked games⁽²⁾ on tribal land as approved by the Department of Interior, provided that the tribes and the state first negotiate a compact specifying how -- not whether -- such games will be conducted.

Beginning in 1992, the Roberts Administration entered into a series of compacts with eight of the nine federally-recognized tribes. The compacts allowed Video Lottery Terminals (VLTs) -- the Lottery had been authorized to field VLTs since 1989 -- but limited them to 15 percent of total floor space. Other so-called Class III, or house-banked games, were not authorized in the first compacts. ⁽³⁾

A look at these compacts indicates that at the time they were executed neither the state nor the tribes had a very clear conception of how the industry would grow or the impact it might have on the state as a whole. Moreover, the compacts give little attention to developing security standards across the industry and allow the Oregon State Police only a minimal security role.

Since taking office in 1995, Governor Kitzhaber has negotiated only one original compact with a tribe. However, negotiations with the tribes early in the Kitzhaber Administration resulted in a series of blackjack amendments⁽⁴⁾ to the earlier compacts that accomplished the following:

1. Clarification of the legitimate security role of the Oregon State Police in connection with tribal-sponsored gambling.
2. Payment by the tribes of all OSP Gaming Unit costs associated with tribal-sponsored gambling operations.

In 1993, the first Indian casino in Oregon opened its doors. When Governor Kitzhaber took office in January 1995, there were two Indian casinos operating in Oregon. By September of that year there were six. In May 1997, a seventh casino commenced operations and an eighth tribe has begun to seek financing for a gambling venture, although operations are not expected to begin for at least two years.

Policy Directions: Tribal-Sponsored Gambling

Governor Kitzhaber **supports the principle of tribal economic self-sufficiency and respects the sovereignty of the tribal governments.** At the same time, he recognizes that the state has a vital interest in remaining actively involved in a growing casino industry within its boundaries.

The Governor has established the following guidelines to shape policy development in the field of tribal-sponsored gambling.

1. Agree with each Oregon tribe on one gambling site per tribe. The current compacts are site-specific. In other words, the tribes are limited to offering gambling only at specified sites. The Governor favors explicit agreement on this point in subsequent compacts.
2. Ensure the security of tribal-run games so that they are conducted safely and honestly.
3. Promote charitable grants from Indian casinos in order to build stronger ties between tribes and surrounding communities. Consider using some of these grants to combat gambling addiction.

Gambling Conclusion

This white paper points out that we face a challenge in how we will choose to approach the growth of tribal-sponsored gambling and state-sponsored gambling in Oregon.

Governor Kitzhaber believes that while this challenge has been evident over the past several years, the public debate about gambling has not concerned itself with answering the essential question of what defines "the public good." Governor Kitzhaber proposes in this paper a definition of the public good based on decreasing personal, commercial, and governmental addiction and dependence on gambling. He is hopeful that his policies will help foster a wider debate about what is meant by the directive to operate gambling "commensurate with the public good."

Growth and Its Impacts in Oregon

*A Report from Governor
Kitzhaber's Task Force on
Growth in Oregon*

JANUARY 1999

Table of Contents

	Page
<i>Summary</i>	<i>iii</i>
<i>Chapter 1 Introduction</i>	
Objectives of the study	1-1
The process for the study	1-2
How to read this report	1-3
<i>Chapter 2 A Framework for Discussing the Impacts of Growth</i>	
Growth means more people (but other things grow too)	2-1
Many things contribute to growth, and growth has many different impacts	2-2
Many state and local policies attempt to manage growth in Oregon	2-4
No amount of definition and data will make discussions and decisions about growth easy	2-4
The debate about global growth in the long run only becomes relevant when we adopt policies today	2-7
<i>Chapter 3 Growth in Oregon: Trends and Forecasts</i>	
The Willamette Valley has always been Oregon's growth engine	3-1
New residents look a lot like us	3-3
The number and types of jobs in Oregon have changed significantly	3-5
Oregon will continue to grow and change	3-6
Many forces have affected, and will continue to affect, growth in Oregon	3-7
<i>Chapter 4 Impacts of Growth</i>	
The impacts of growth can be negative or positive	4-1
Direct costs of growth: what are they and who pays?	4-4
Comparing studies of costs of growth requires a definition and understanding of standards for evaluation	4-5
The literature suggests a range for costs estimates	4-7
For public policy, estimating who pays the direct costs of public facilities is as important as estimating how much they are	4-7
Beware simple statements about "costs of growth"	4-10

	Page
<i>Chapter 4 Impacts of Growth: Continued</i>	
Other impacts of growth: what are they and who is affected	4-10
Economic welfare	4-10
Environmental quality	4-12
Amenity	4-21
Cost of living	4-29
An identification and description of key impacts of growth does not lead to clear conclusions about the net impacts of growth	4-30
<i>Chapter 5 Tools for Growth Management</i>	
Growth management tools can be categorized in many different ways	5-2
State and local governments already use many tools to manage growth	5-4
Some additional tools might be helpful	5-6
To what degree can these tools be expected to address some of the big issues about growth?	5-8
Deciding on the best tools requires judgment, but some guidance is available	5-12
<i>Chapter 6 Conclusions and Recommendations</i>	
Conclusions	6-1
How communities and regions within Oregon are growing	6-1
How and when communities pay for, and benefit from, development	6-2
Tools communities may use to address growth-related issues	6-4
Recommendations	6-6
<i>Appendices</i>	
Appendix A Endnotes	A-1
Appendix B Bibliography	B-1
Appendix C Glossary	C-1
Appendix D Why Cities Grow	D-1
Appendix E Details on the Direct Costs of Growth	E-1
Appendix F Acknowledgements	F-1

CHAPTER 1 Introduction

Growth management, like all public policy, is ultimately about getting agreement on some painful and complicated tradeoffs. This study is intended to help clarify what those tradeoffs are. The study's purpose is not to determine whether growth is good or bad. Rather, it provides a descriptive analysis of both positive and negative impacts of growth, and provides an overview at the state level that is illustrated by local examples.

The technical focus of this study is on existing studies of growth and growth management, particularly recent studies and those done in Oregon. The Task Force appointed by the Governor to help review and develop the products of this study met six times between April and December of 1998. Interested organizations and members of the general public had opportunities to participate in addition to testimony at Task Force meetings. All interim material produced for the Task Force was also sent to anyone requesting it. People commented by letter, phone, e-mail, or fax.

This report starts with a framework for evaluating the impacts of growth, and then covers growth trends in Oregon, the impacts of growth, and policies that can affect growth and its impacts. It ends with conclusions from the Task Force about future policy direction at the state and local level.

CHAPTER 2 Framework

In its broadest sense, growth management covers most of what concerns citizens and governments. Growth has impacts, for good or ill, on every aspect of quality of life that people care about: environmental quality, social amenity, economic welfare, and cost of living.

This report defines growth in terms of population, employment, and the built space that accommodates them. Because all are correlated, it focuses on population growth. In Oregon, 70% of population growth is from people moving here. They locate primarily in urban economic centers: especially the Willamette Valley, and increasingly recreation and retirement areas.

Migration into and out of a region is driven by its relative performance on the factors related to economics and quality of life. Any region that temporarily has relatively high wages and environmental and social amenity, and relatively low cost of living can expect (1) in-migration, and (2) changes in those variables that will reduce the pressure for in-migration.

No amount of definition and data will make discussions and decisions about growth easy. People approach growth from different perspectives. Most people involved with state and local policy accept that both markets and government play a role in creating an Oregon where people want to live. The debate is that some think market forces have too much impact on what Oregon will look like, while others think the net result would be better with less government regulation.

Whether growth is good or bad for Oregon cannot be determined definitively because of the complexity of growth relationships, uncertainty, and the diversity of interests and perspectives. Characterizing the choices confronting citizens in the region as pro-growth versus no-growth is wrong both politically and technically. We have a lot of choices in between. The long-run questions about how much Oregon population will grow in 20 or 50 years, and what the impacts of that growth will be, will get answered not by policies that dictate what the future will look like, but by decisions we make today to deal with issues that we determine are affecting, or will affect, quality of life in Oregon communities.

CHAPTER 3 Growth in Oregon

Of Oregon's 1997 population (3,217,000), almost 70% is located in the Willamette Valley, which contains only 14% of the state's land area. The State's Office of Economic Analysis predicts continued population growth: Oregon is expected to add one million people by 2015 and another million by 2040. Most of that growth comes from migration. In this decade, over 70% of Oregon's total population growth is from net migration (in-migration minus out-migration), not natural increase (births minus deaths).

When talking about the impacts of growth, both the amount and rate of growth matter. Slow growth rates in the Portland metropolitan area still add a lot of people to the state. Very high or very low growth rates in small communities may not have much impact on state growth, but may have big impacts on the local economy and quality of life.

The pattern of employment growth is similar to that of population growth. As for population, over 70% of Oregon's employment is located in the Willamette Valley. Employment has grown more rapidly than population in Oregon because of increasing labor force participation rates (especially among women), a larger share of the population of working age, and an increasing number of people holding more than one job. Employment varies more than population because employment is more closely tied to economic conditions.

Many forces have affected, and will continue to affect, growth in Oregon. These changes have occurred not only because of national and international economic and demographic factors, but also because of government action in Oregon.

CHAPTER 4 Impacts of growth

The impacts of growth can be negative or positive. This chapter attempts to discuss impacts comprehensively, and divides them into two categories: (1) the direct costs of providing public facilities to the development (housing, buildings, and public services) that new growth requires; and (2) other impacts on economic welfare, quality of life, and cost of living.

Regarding the direct costs of supplying public facilities (infrastructure) to new development, the report finds that (1) on-site infrastructure costs (e.g., for local streets, sidewalks, sewer, water lines and meters) for a single-family housing unit are on the order of \$15,000 to \$20,000, (2) the construction costs of off-site facilities (e.g. improvements to arterial streets, sewer and water trunk lines and treatment plants, schools, fire stations) are on the order of \$15,000 to \$30,000 per housing unit for new development at the urban fringe, (3) these average costs may vary widely for particular developments because of the specifics of site and locational characteristics relative to existing off-site facilities, local standards, and other factors, (4) in rough terms, it is probably the case that for on-site and off-site public facilities (setting aside schools and major upgrades to the regional transportation system) new residential development directly pays on the order of 50% to 90% of their capital costs (through developer provided infrastructure, hookup fees, SDCs and other impact fees, special assessments, exactions, and user charges), and (5) any summary like this one is necessarily approximate and needs to be used only with a clear understanding of the assumptions required to develop it (as described in Chapter 4 and Appendix E).

Good public policy about growth must consider more than the direct costs of building the infrastructure it requires. It must

consider other impacts, positive and negative, that are no less real because they cannot be measured in dollars, or perhaps cannot be measured well at all. Growth also affects many aspects of what people see as their quality of life, and these impacts (real or perceived) are often the source of the strongest sentiments about of growth: for example, impacts on jobs, income, traffic congestion, environmental quality, and crime.

CHAPTER 5 Tools for Growth Management

The report uses “tools” or “policies” generally to mean any legislation, administrative rules, programs, investments, or other actions by some unit of government that affect the way growth occurs. Those policies may affect growth directly (e.g., a limitation on building permits) or indirectly (e.g., by requiring pollution control devices that increase costs of new business development and, thus, reduce the amount of new development, at least in the short run).

Growth management tools can be categorized in many different ways. The categorization used in this report is based on the question: What aspects of growth can public policy influence? (which, in turn, may affect the amount, location, and type of growth itself).

With the exception of policies that allow state or local governments to place direct limits on natural increase or migration, governments in Oregon have about every type of tool that has been tried anywhere in the country to manage growth. They address land use or intensity, design, public facilities, other aspects of environmental quality, other fees, taxes and incentives; and the process of how decisions are made. Any community that can get an agreement on how much and what type of growth is desirable can assemble a consistent package

of tools to encourage or discourage growth, and to shape its form, provided, of course, that it can convince its citizens (or others: state and federal agencies, developers) to pay for the form they want.

Nonetheless, there are actions that the state could take that would allow or encourage local governments to address growth issues more thoroughly. They include policies to revise tax codes, add local flexibility, and create new funding sources or increase state funding to local government.

This chapter and the previous one make it clear that there is no single package of growth management tools that will be right for every jurisdiction. Communities differ in many ways (size, location, socioeconomic characteristics and desires of citizens, to name a few), and those differences will lead to different opinions about the amount and type of growth that is desirable, and what constitutes a fair way to pay for that growth. Despite differences in desired results, the process for agreeing on growth policies is likely to be similar across jurisdictions. It will have to include some level of public debate that considers, among other things, alternative futures; full benefits and costs, and who they fall on; tradeoffs; and state requirements and regional implications.

CHAPTER 6 Conclusions and Recommendations

This chapter summarizes how the Task Force interprets information in Chapters 2, 3, 4 and 5 in the context of public policy. Only conclusions and recommendations on which the Task Force members agreed unanimously are included in this chapter

The Task Force agreed on three categories of conclusions:

- How communities and regions within Oregon are growing.
- How and when communities pay for, and benefit from, development.
- Tools communities may use to address growth-related issues.

The Task Forces recommendations address regional problem solving, protection of natural resources, better financing and some new financing mechanisms, state-funded technical assistance to local governments, and the creation and funding of a subsequent task force to address in more detail certain growth issues identified in this report.

Chapter 1

Introduction

SUMMARY

Growth management, like all public policy, is ultimately about getting agreement on some painful and complicated tradeoffs. This study is intended to help clarify what those tradeoffs are. The study's purpose is not to determine whether growth is good or bad. Rather, it provides a descriptive analysis of both positive and negative impacts of growth, and provides an overview at the state level that is illustrated by local examples.

The technical focus of this study is on existing studies of growth and growth management, particularly recent studies and those done in Oregon. The Task Force appointed by the Governor to help review and develop the products of this study met six times between April and December of 1998. Interested organizations and members of the general public had opportunities to participate in addition to testimony at Task Force meetings. All interim material produced for the Task Force was also sent to anyone requesting it. People commented by letter, phone, e-mail, or fax.

This report starts with a framework for evaluating the impacts of growth, and then covers growth trends in Oregon, the impacts of growth, and policies that can affect growth and its impacts. It ends with conclusions from the Task Force about future policy direction at the state and local level.

In the 1990s, Oregon grew rapidly: more people, more jobs, more buildings, more cars. In the early 1980s, Oregon grew not at all: in fact, in some years its population decreased, and the number of jobs in several industries (particularly in lumber and wood products) plummeted.

Growth and change—whether too much or too little—are never far from the center of debates about government policy. People do not agree on what the right amount of growth is, in part because of different values people have about development, government, the environment, other aspects of quality of life.

There is little any study, including this one, can do to determine whose values should take precedence: that decision has been, and will continue to be resolved through our political process. But that process is informed, or should be, by facts. In Oregon, as elsewhere, we disagree about some of those facts: about why growth has occurred, its desirability, its impacts, and how to manage it.

Recognizing the importance of the topic of growth to Oregonians, and the disagreement among them on many of its causes and impacts, Governor Kitzhaber saw a need for better information about growth in Oregon. He formed a Task Force to assemble that information. This report is a result of their participation.

Objectives of the study

As originally outlined, the Governor asked the Task Force for a report describing:

- How communities and regions within Oregon are growing
- How and when communities pay for and benefit from growth
- Tools communities may use to address growth-related issues.

The Governor wanted a statewide study with a local focus. The study was to be accessible and useful to multiple audiences. He wanted a study that would provide a framework for discussing and making local decisions about growth. Such a framework would have clear descriptions of what people mean by growth, its causes, its impacts (both in general, and for different agencies or groups—i.e., who benefits and who pays), and the tools local and state governments can use to manage it (not just regulatory, but also financial).

Growth management, like all public policy, is ultimately about getting agreement on some painful and complicated tradeoffs. This study is intended to help clarify what those tradeoffs are. The study's purpose is not to determine whether growth is good or bad. Rather, it provides a descriptive analysis of both positive and negative impacts of growth, and provides an overview at the state level that is illustrated by local examples.

The process for the study

This study is a synthesis and interpretation of existing studies about growth; it does not include new empirical work. It includes a review of studies from around the country on state and local growth management issues, but focuses on recent work in Oregon. Just in this decade there has been more technical work done in Oregon by state agencies and local governments on growth (either directly, or indirectly

on problems that are in part a result of growth) than can be summarized in this report.

The Task Force made key decisions about the format and content of this study, which was prepared by Task Force staff. The staff consisted of policy analysts from both state agencies and consulting firms (Appendix F describes the participants in more detail). The Task Force guided staff work to ensure that it provided useful, objective information to aid local and state decisions related to growth issues. The goal was to develop a document that the Task

Force could recommend to the Governor, legislators, state agencies, and local governments to help make decisions about growth.

To that end, the Task Force met six times between April and December of 1998. Meetings were open to the public and testimony was taken. The principal topics at these meetings were:

- 1. April.* Purpose of study; Task Force mission, roles, and responsibilities; Task Force procedures; review of draft outline and table of contents for final report
- 2. June.* A framework for discussing growth issues in Oregon; definition of growth; revised outline and table of contents for final report; extensive public comment by invited speakers and anyone else signing up on all aspects of growth (in general, what should the Task Force and this study be focusing on?).
- 3. July.* Growth trends: how much growth has occurred and is likely to occur in different parts of Oregon? Final decisions on content and format of the final report.
- 4. September.* Video conference with Task Force members listening to testimony from Ashland, La Grande, Bend, and Salem.
- 5. October.* Impacts of growth and tools for managing it; Discussion of preliminary draft of the first five chapters of this report.
- 6. December.* Discussion of full draft of this report.
- 7. January.* Discussion of sub-committee recommendations regarding conclusions and recommendations. Approval of text and format for final report.

Interested organizations and members of the general public had opportunities to participate in addition to testimony at Task Force meetings. All interim material produced for the Task Force was also sent to anyone requesting it. Some people commented in writing, others by phone, e-mail, or Fax.

How to read this report

The purposes and audience for this report influenced its content, format and size. It is designed to provide (1) a logical and understandable framework for discussing growth, (2) brief summaries of the best information available about the impacts of that growth on things people in Oregon care about, (3) a description of the range of policies (existing and potential) that can be used to control or manage growth, and (4) conclusions about future directions (to the extent that the Task Force members agreed on those conclusions).

The chapter titles convey the logic of the organization:

- *Chapter 2, A Framework for Discussing the Impacts of Growth.* How is growth defined for this study, and how does growth impact things that people care about?
- *Chapter 3, Growth in Oregon: Trends and Forecasts.* Where has growth occurred in Oregon, where is it expected to occur, and why?
- *Chapter 4, Impacts of Growth.* What evidence is there about how growth impacts quality of life (environmental resources, societally produced amenities, jobs and income, and cost of living)?
- *Chapter 5, Tools for Growth Management.* What policies do state and local governments use now, and which new ones might help?

- *Chapter 6, Conclusions and Recommendations.* What does the Task Force conclude and recommend?

Appendices provide more detail:

- *Appendix A, Endnotes*
- *Appendix B, Bibliography*
- *Appendix C, Glossary*
- *Appendix D, Why Cities Grow*
- *Appendix E, Details on the Direct Costs of Growth*
- *Appendix F, Acknowledgements*

Chapter 2

A Framework for Discussing the Impacts of Growth

SUMMARY

In its broadest sense, growth management covers most of what concerns citizens and governments. Growth has impacts, for good or ill, on every aspect of quality of life that people care about: environmental quality, social amenity, economic welfare, and cost of living.

This report defines growth in terms of population, employment, and the built space that accommodates them. Because all are correlated, it focuses on population growth. In Oregon, 70% of population growth is from people moving here. They locate primarily in urban economic centers: especially the Willamette Valley, and increasingly recreation and retirement areas.

Migration into and out of a region is driven by its relative performance on the factors related to economics and quality of life. Any region that temporarily has relatively high wages and environmental and social amenity, and relatively low cost of living can expect (1) in-migration, and (2) changes in those variables that will reduce the pressure for in-migration.

No amount of definition and data will make discussions and decisions about growth easy. People approach growth from different perspectives. Most people involved with state and local policy accept that both markets and government play a role in creating an Oregon where people want to live. The debate is that some think market forces have too much impact on what Oregon will look like, while others think the net result would be better with less government regulation.

Whether growth is good or bad for Oregon cannot be determined definitively because of the complexity of growth relationships, uncertainty, and the diversity of interests and perspectives. Characterizing the choices confronting citizens in the region as pro-growth versus no-growth is wrong both politically and technically. We have a lot of choices in between. The long-run questions about how much Oregon population will grow in 20 or 50 years, and what the impacts of that growth will be, will get answered not by policies that dictate what the future will look like, but by decisions we make today to deal with issues that we determine are affecting, or will affect, quality of life in Oregon communities.

Most people agree that Oregon can benefit from more family-wage jobs in environmentally responsible businesses, and that congestion has made driving and some of their favorite recreation sites less pleasant. Growth can lead to both. Growth can mean more jobs, households, workers, income, houses, cultural facilities, shopping centers, cars, pavement, and pollution: in short, more of many things people want and don't want.

In everyday conversations about growth, there is no requirement and little incentive to define terms. But the Task Force is charged to be more rigorous in its discussion of growth. What, exactly, is growing? Is it growth or its effects that are of concern? What are the important cause-and-effect relationships between what grows and its impacts? For the public debate about growth to go beyond opinions, we need to define the terms and describe the causal relationships.

Growth means more people (but other things grow too)

Local policy debates about growth focus on the growth and management of people (as residents and workers), the development that they require, and the public services that the development requires (which end up affecting these and other aspects of our quality of life). In its broadest sense, growth management covers most of what concerns citizens and governments, including:

- *Economic development*: the growth of jobs; the incomes, security, and opportunity those jobs generate; the buildings in which those jobs are located; the infrastructure that allows the buildings to function.
- *Land use*: the location and pattern of population and employment; the design of the buildings and neighborhoods that accommodate it; the policies about the infrastructure that supports it.

“Oregon families already make decisions to limit growth: they have far less than the twenty or more children possible during a couple’s lifetime. They decide to value other things more than increased family size. Similarly, the difference between ‘no-growthers’ and ‘pro-growthers’ is not about a basic belief in growth limits, but about how much growth is valuable.”

Oregon state agency planner

- *Public facilities*: the type, amount, quality, location, and price of facilities that allow and encourage growth to occur, and mitigate its impacts; the tax and fee system that funds the infrastructure.
- *Public safety*: protection from crime, fire, other natural hazards; emergency medical service.
- *Natural resources and environmental quality*: the health of ecosystems that are the ultimate sources of the resources that growth requires.
- *Markets*: the extent to which society should rely on individual decisions and unfettered markets in determining the amount, timing and location of our growth.
- *Social justice*: programs to deal with the people growth adds, and the impacts it creates on those already here.

No report can cover all these aspects of growth in the detail they deserve. This report narrows the definition of growth to focus on:

- Growth in Oregon and its communities
- Growth of population and employment
- Growth in and around urban areas, where most of the people are (while considering impacts on natural systems, farm land, and forest land).

For some people, the growth of population and employment, per se, is a primary concern. But for most, the problem is that population and employment growth are associated with and suspected to be the primary causes of the growth of other things they don’t like: growth of development (primarily housing units, secondarily non-residential space); of resource consump-

tion, both natural (e.g., farm and forest land) and social (e.g., infrastructure); and of impacts on people and government. They see a clear chain of cause and effect: more people, more development, more resources consumed, more impacts.

Many things contribute to growth, and growth has many different impacts

As defined for this study, growth has multiple causes. Many of the things that cause growth are affected by growth itself: there are feedbacks. Descriptions of the relationships can be too simple (growth is good for the economy) or too complex (computer models of urban growth) to be of much use to local and state policy making. This section attempts to illustrate the basic relationships.

The population of a region grows because of natural increase (more births than deaths among the resident population) and migration (more people moving in than people moving out). In Oregon, on average and over the long run, roughly a third of its growth has been from natural increase: births exceed deaths. There are policies that can reduce that component of growth (for example, information about and access to birth control devices, education for young adults), and there is some evidence that in the US and Oregon some progress is being made to reduce fertility rates, especially for teenagers. But that component of growth and growth management is not part of this study.

When people describe local growth problems as being too many people, they are more likely to be referring to the other 70% of growth: people moving to Oregon. Figure 2-1 shows that people are drawn to a region for two general reasons: both apply to some extent to all moves, but different people

weigh the components differently. The majority opinion among those who study economic growth and migration is that most people move to Oregon for a job, but quality of life is attracting more people who choose Oregon as a place to live and assume a job will follow.

As important as the amount of growth is its location: where do people move to in Oregon? Figure 2-2 shows where cities and highways have located. Chapter 3 shows most of the growth goes to urban areas. Large urban areas tend to be found in valleys or on plains, and at historical transportation hubs. These factors explain the concentration of growth in the Willamette Valley: it provides large amounts of buildable, arable land, and is easily served by infrastructure, especially transportation.¹

The causes and impacts of growth are multiple and interact in complex ways. Figure 2-3 illustrates a full-cost framework in concept.² A complete discussion of the impacts of growth would not only look at all impacts (both positive and negative), but also would evaluate those impacts across area, time, and type of household impacted. In practice, a comprehensive accounting of all costs and benefits of growth is impossible. Chapter 4 explains why.

Figure 2-4 gives an example of the complexity of growth issues. It shows factors that influence a typical concern about growth: its effect on the cost of real estate. A more complete model would have to be disaggregated by type of use (e.g., residential, industrial) type of product within each use (e.g., single-family dwelling, multi-family) and type of household with effective demand for those uses (e.g., by household size, age of household head, income). Yet public debates about the impacts of growth on real estate prices are often based on much simpler models than that in Figure 2-4.

And growth affects much more than the cost of development. It potentially has impacts, for good or ill, on almost every aspect of what people care about—of what constitutes their quality of life: environmental quality, social amenity, economic welfare, and cost of living. Each of these general factors comprises many others. Economic welfare, for example, comprises wages, job opportunity, job security, job diversity, and other factors. Chapter 4 describes how growth impacts these elements of quality of life, and attempts to quantify those impacts for Oregon where possible.

Given these many factors and their many interrelationships, there are few conclusions one can draw about the impacts of growth

Figure 2-1: People follow jobs, and jobs follow people

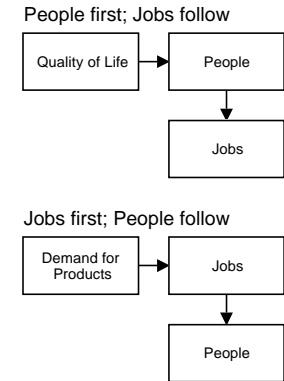

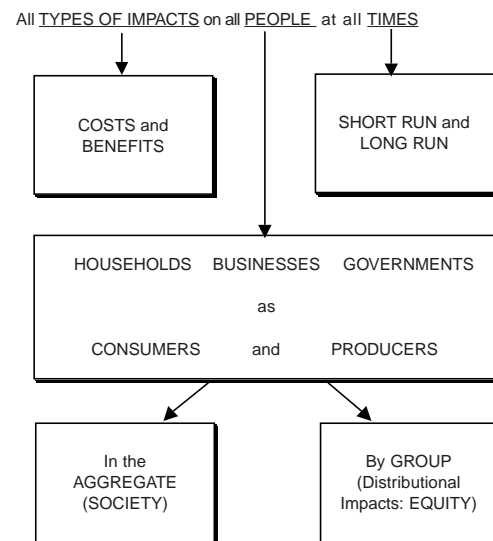

Figure 2-2: Growth goes primarily to urban areas; for several reasons, the biggest urban areas in Oregon have been, and will continue to be, in the Willamette Valley

Figure 2-3: In theory, good answers to questions about the net impacts of growth require a full-cost framework. In practice, calculating and summarizing full impacts is extremely difficult

based on theory: measurement is required. Nonetheless, most analysts of regional and metropolitan growth believe that inter-regional growth—i.e., migration into and out of a region—is driven by the relative performance of regions on the factors of quality of life just described. Any region that temporarily has relatively high wages and environmental and social amenity, and relatively low cost of living can expect (1) in-migration, and (2) changes in any or all of those variables that will reduce the pressure for in-migration. An implication of this dynamic is that if Oregon succeeds in maintaining its quality of life (and enhancing it relative to other regions) then it should expect more growth pressure. If it tries to use public policy to curb that growth, it should expect increases in cost of living as people wanting what Oregon has try to outbid one another for the places available.

Many state and local policies attempt to manage growth in Oregon

Public policy can have a big influence on growth. It can try to affect the amount of growth directly, either positively (e.g., business recruitment and incentives) or negatively (e.g., limits on building permits). But most policies affect growth indirectly, by affecting any or all of the key variables mentioned above that make Oregon more or less attractive relative to other regions. Policies tend to aim less at growth per se, and more at its impacts (e.g., on the environmental, social, and economic aspects of quality of life).

Chapter 5 describes in more detail the kinds of policies available to state and local jurisdictions to manage growth. Most of them are available in Oregon. Some are implemented by

state agencies, many by local government. The State allows and has encouraged the use by local governments of a wide range of tools to manage growth. They include direct controls through regulation, indirect controls through pricing and taxing, and incentives. Most are applied via the land use process (e.g., zoning, planning, urban growth boundaries), development design (e.g., planned-unit developments, transit-oriented development, site standards), or public facilities (e.g., level of service standards and codes, pricing of hookups and use).

In addition to these policies, all kinds of variations in taxing and spending policies by state and local government can affect the amount, type, location, and impacts of growth.

No amount of definition and data will make discussions and decisions about growth easy

People approach growth from different perspectives. The sidebars show some of the dimensions of those differences. Among them is a fundamental difference about the relative importance of preserving natural systems and enhancing economic opportunity.

Advocates of slow growth tend to start from an ecological perspective: they emphasize limits to growth, carrying capacity, and the inadequacies of technological fixes. Many of them see an impending collision of consumption and resources at a global scale: increased population and per capita consumption are approaching, or have exceeded, the limits of natural systems to sustain the consumption. Their concerns are not only technical; for many we have a moral obligation to reduce consumption and conserve natural systems.³

People who favor growth tend to start from an economic perspective. They emphasize the historic ability of technology to

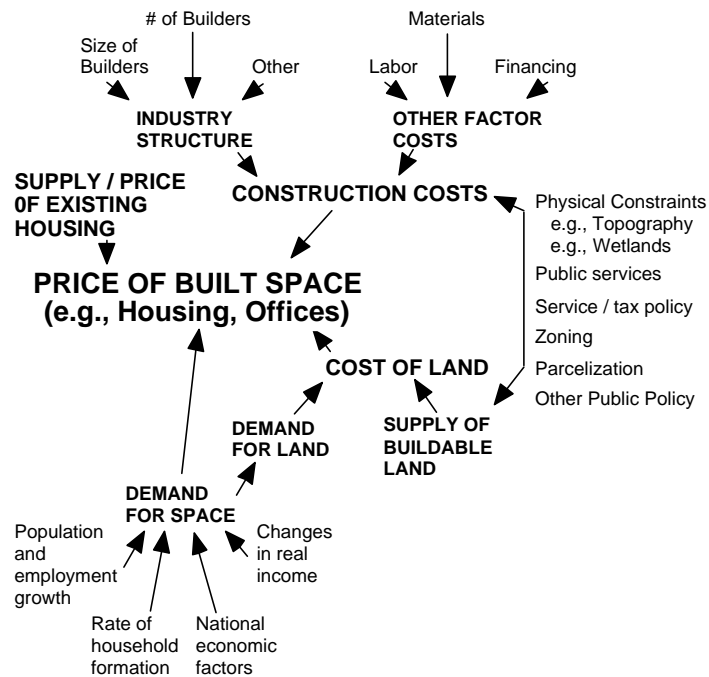

sustain a larger population at a higher standard of living, the benefits to societies and individuals of increased and more efficient production, the ability of proper pricing to signal resource scarcity, and the inequity and impacts on freedom of government controls on economic development.

There is evidence, however, that markets have not always led to wise use of resources. The problem occurs when market prices faced by individuals in a transaction do not reflect the value of all the impacts of that transaction on third parties: when there are *external impacts*. The savings and loan debacle of the early 1990s, the collapse of US fisheries, the loss of salmon in Oregon streams are all examples. Problems with externalities and public goods are not usually addressed completely without collective action, which usually means government actions. Such actions can supplant the market, or work with it to adjust the prices at which resources are being traded to more accurately reflect their full (collective) value.

Thus, the debate about growth is a debate about tradeoffs and philosophies. Most people involved with state and local policy accept that both markets and government play a role in creating an Oregon where people want to live. Focus groups on growth reveal other similarities among people who otherwise differ in their opinions about the desirability of growth: they that quality of life is extremely important and should be protected, that development should pay its full costs, and that there is a wide range of the policies available to control growth to protect quality of life.

The debate is that some people think market forces have too much impact on what Oregon will look like, while others think the net result would be better with less government regulation. The debate is less about general goals than about which policies best achieve those goals: do we have the right policies

Figure 2-4: Growth has many components, and many that interact

and, even if we do, are they being implemented in a way that effectively achieves their desired objectives?

That Oregon communities can have a debate about growth implies that people believe that government actions can influence that growth and their communities' futures. Oregon has many possible futures, many of them including higher standards of living for its residents. Who its residents will be, what jobs they will be doing, and what the world in which they live and work will look like depends in part on decisions made now about what we hope that future will be.

Attitudes differ about growth in Oregon

Many surveys have been conducted regarding public attitudes toward growth. Though generalizations are risky, here they are:

- People tend to emphasize the negative impacts of growth over the positive ones.
- Attitudes depend on how much growth an area is experiencing: recessions raise people's concerns about deteriorating economic opportunities and shift attitudes toward activities that stimulate growth (economic development policies).
- In random samples (as opposed to surveys of a particular interest group), a majority of people favor some type of government policy to manage growth (though there is less agreement as the policies get more specific).

In Oregon, several recent surveys have been conducted. Portland General Electric sponsored three statewide surveys on "Growth and the Economy" in 1996 and 1997. Some of the key findings:

- Oregon is on the right track (about 55%)
- The biggest problem facing Oregon is school funding, but "growth and overpopulation" rose steadily for each successive survey as the top answer (5%, 10%, 15%)
- People are about evenly split on whether growth has been good or bad for Oregon. There is only a small amount of variation across regions of the state, and none for areas classified as "high-growth." The trend statewide in successive interviews is for average responses to shift slightly from good to bad.
- If people believed the economy had improved their quality of life, they were much more likely to say growth was good for the state.
- On a scale of 1 to 10, people consistently gave Oregon about 5 as a rating for how well it is managing growth.
- Lower-income households felt growth had not improved their quality of life; higher-income households felt it had.

Choosing a future implies also choosing public policies that contribute to its reality. Those policies include ones about how to manage growth (i.e., about the proper scope of government action in a process of growth that is primarily driven by private actions). Some of the issues to consider when evaluating growth impacts and growth management policies follow.

Growth and its impacts

Ultimately, it is growth's impacts—how something affects the welfare of Oregon's residents by affecting things they value—that matter. Will we be most effective at getting the impacts we want by aiming at growth per se, or at the impacts themselves?

Full benefits and costs

The impacts of growth may be positive (benefits) or negative (costs). As Chapter 4 shows, *there is no way to unambiguously calculate some net social impact of growth.*

In many circumstances, not all costs or benefits are captured in the monetary costs—the prices—at which goods transact. For example, even if a new house pays for a sewer treatment plant through a hookup fee, if that treatment plant is of a type or size that it still allows pollution to occur, then the housing is not paying its full costs. For efficiency and fairness, those *spillover* or *external costs* need to be estimated and included in the price the housing pays: to build a bigger or better treatment plant, or to compensate downstream users (either directly or through fines that regulatory agencies should impose).

Aggregate impacts and sub-area or sub-group impacts

Even if one could demonstrate that a government's decisions to manage growth were, in the aggregate, beneficial to its citizens, it would still be the case that not all citizens would perceive themselves as better off. If one assumes that people are the best judges of their individual interest, then one only has to look at city council records and votes on ballot measures to see that no action to stimulate, manage, or curb growth is going to please everyone. That message also came across in the public meeting on growth in September: some areas wanted more, others less.

It is hard to identify supporters and opponents of growth as groups. One might expect people with poor or no jobs to favor growth. But one might also expect that many lower income people want to preserve quality of life or a rural life style, or believe that Oregon's economic boom is a boon for someone else (for example, middle- and upper-income professionals moving to Oregon). Similarly, it seems likely that upper-income residents are of mixed opinions: some will see growth as critical for their businesses and economic objectives; others may be comfortable with what they have and want to protect it from the negative impacts of growth (e.g., traffic congestion, overcrowding of public services).

Current residents and new ones

Some of the complaints about growth might more accurately be categorized as complaints about change, though the two are intertwined. Many current residents of a city moved there because of the way it was; newcomers are attracted by the way it is; few of either group are making location choices based on what it might become.

The debate about global growth in the long run only becomes relevant when we adopt policies today

The Governor did not ask the Task Force to come to a conclusion about whether growth was good or bad. He asked it to assemble facts about the impacts of growth to help people form their own conclusions about the amount, type, location, and rate of growth that would be desirable or acceptable. The question about the net impacts of growth cannot be answered definitively by reference to a few numbers. The complexity of growth relationships, uncertainty, and the diversity of interests and perspectives allow reasonable people to come to dif-

ferent conclusions. Characterizing the choices confronting citizens in the region as pro-growth versus no-growth is wrong both politically and technically. We have a lot of choices in between.

Even if the question did have a definitive and politically acceptable answer, public policy does not have complete control over the amount or rate of growth. Growth management tools can discourage or encourage growth, but they cannot, by themselves, quickly stop or double population growth in Oregon.

Thus, the long-run questions about how much Oregon population will grow in 20 or 50 years, and what the impacts of that growth will be, will get answered not by policies that dictate what the future will look like, but by decisions we make today to deal with issues that we determine are affecting, or will affect, quality of life in Oregon communities. A vision of a future can create an impetus for those policies, but most of them will be about things that affect quality of life now.

Thus, a key question about growth should be: Given our best guess about what the future will be like (in terms of the amount of growth and its impacts) what should we do today to prepare for or change that future? How do we agree on a desired future and a set of policies consistent with that future, and with each other?

Many factors contribute to those different views

- *Location*: urban compared to rural; western compared to eastern; Willamette Valley compared to the rest of Oregon; Portland compared to the rest of the Willamette Valley
- *Socioeconomic characteristics*: income, presence and age of children
- *Occupation*: growth dependent, resource dependent
- *Views on markets and government*: markets work compared to markets fail; government is inefficient and unfair compared to government is necessary
- *Local economic circumstances*: growing compared to stagnating areas
- *Views on the environment and the economy*: ecosystem preservation vs. use; ultimate limits vs. technological improvements; consumption as waste vs. consumption as satisfaction

Chapter 3

Growth In Oregon: Trends and Forecasts

SUMMARY

Of Oregon's 1997 population (3,217,000), almost 70% is located in the Willamette Valley, which contains only 14% of the state's land area. The State's Office of Economic Analysis predicts continued population growth: Oregon is expected to add one million people by 2015 and another million by 2040. Most of that growth comes from migration. In this decade, over 70% of Oregon's total population growth is from net migration (in-migration minus out-migration), not natural increase (births minus deaths).

When talking about the impacts of growth, both the amount and rate of growth matter. Slow growth rates in the Portland metropolitan area still add a lot of people to the state. Very high or very low growth rates in small communities may not have much impact on state growth, but may have big impacts on the local economy and quality of life.

The pattern of employment growth is similar to that of population growth. As for population, over 70% of Oregon's employment is located in the Willamette Valley. Employment has grown more rapidly than population in Oregon because of increasing labor force participation rates (especially among women), a larger share of the population of working age, and an increasing number of people holding more than one job. Employment varies more than population because employment is more closely tied to economic conditions.

Many forces have affected, and will continue to affect, growth in Oregon. These changes have occurred not only because of national and international economic and demographic factors, but also because of government action in Oregon.

Chapter 2 defined growth in terms of population and employment, and the built space that accompanies them. Figure 3-1 shows the growth of these components since 1977, adding vehicles (because complaints about growth are often about traffic congestion). Since these four components of growth have generally grown in unison, this chapter focuses on population as the measure of growth.

The Willamette Valley has always been Oregon's growth engine

Figure 3-2 shows the long-run trend for population growth in Oregon and the Willamette Valley, which has always been the center of growth in Oregon.¹ The population growth rate in the Willamette Valley has exceeded that of the state in every decade except 1970–80, when population in Southern and Central Oregon grew at a rapid rate. Figure 3-3 shows almost 70% of Oregon's population (3,217,000 in 1997) is located in the Willamette Valley, which contains only 14% of the state's land area. Most of the Willamette Valley's population is in the metropolitan areas of Portland, Salem, and Eugene.

Population growth in every region slowed in 1980–90, primarily because of out-migration prompted by poor economic conditions. Oregon's population growth regained momentum in 1987, growing at annual rates of 1.4%–3.1% between 1988 and 1996. While the Willamette Valley received most of the population growth during this period (72%), Central Oregon had the fastest annual population growth rates.

Population growth for Oregon and its regions has slowed in 1997, to 1.1% statewide, the slowest rate since 1987. Net migration into Oregon dropped from 34,000 in 1996 to 21,000 in 1997. The reasons most often cited for this slowing of population growth are the recovery of the California

economy, the combination of a high cost of living (especially housing) and low wages in Oregon, and the perception of a decline in the quality of Oregon's schools.

The figures above illustrate a point well known to demographers: annual variations in a state's population growth rate average out to relatively stable long-run growth rates. The lowest the growth rate has been for any decade since 1900 is 0.8% (1980-90); the highest is 5.0% (1900-1910). The average annual growth rate for population since 1990 is about 2.2%, which means that, on average, population doubles every 30 years. For example, Oregon's population was close to one million at the 1940 census, and two million at the 1970 census, 30 years later. If the trend had continued,

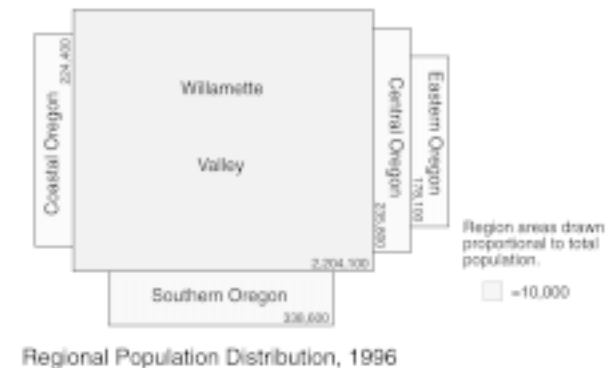

that two million would have doubled to four million in 2000. The 1997 estimate for population is only 3.2 million, so Oregon is unlikely to be at four million by 2000, primarily because of slow growth during 1988-90. That point illustrates another demographic truism: exponential population growth does not occur indefinitely.

Most of that growth comes from migration. Between 1990 and 1997, over 70% of Oregon's total population growth was from net migration (in-migration minus out-migration); 30% was from natural increase (births minus deaths). Net migration contributed a substantially larger share of population growth in the Coastal, Southern, and Central regions than for the state as a whole. Virtually none of Coastal Oregon's population growth was from natural increase. The only counties in

Oregon to lose population in the 1990–97 period were in Eastern Oregon: Harney and Sherman.

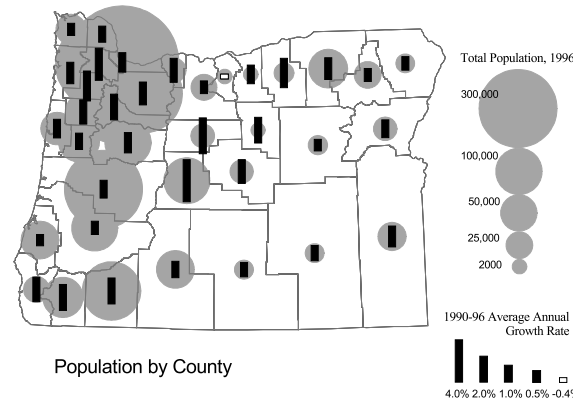

When talking about the impacts of growth, both the amount and rate of growth matter. Slow growth rates in the Portland metropolitan area still add a lot of people to the state; very high or very low growth rates in small communities may not have much impact on state growth, but may have big impacts on the local economy and quality of life. Figure 3-4 illustrates amounts and rates of growth by county. Figures 3-5 and 3-6 show Oregon's fastest growing cities, and their relative contributions to Oregon's population increase.

New residents look a lot like us (only more so)

One can find plenty of households in Oregon like the ones that are moving here. The differences only emerge when one compares average characteristics at a state or regional level. For example, Oregon has many young and well educated households, but on average the households moving to Oregon are younger and more educated than the average Oregon household. Recent in-migrants to Oregon have the following characteristics:³

- Most in-migrants are from California (43%), followed by Washington (12%), other states west of the Mississippi (18%), states east of the Mississippi (13%), and other countries (9%).
- Washington is the only state that attracts more people from Oregon than it sends.
- Compared to Oregon's population as a whole, in-migrants during the 1985–1990 period were, on average, younger and more educated, and were more likely to hold professional or managerial jobs.

- The race and ethnicity of in-migrants generally mirrors Oregon's established pattern, with one exception: Hispanics made up 9% of in-migrants but only 3% of the state's population.
- The number-one reason cited for coming to Oregon was family, followed by livability, job, and cost of living.

Migrants come to different parts of Oregon for different reasons, and migrants to these regions have different characteristics:

- In-migrants to the Portland metropolitan area are typically younger persons or families (aged 20–34) with a professional or technical occupation; they tend to come to Oregon for job-related reasons. They generally share the values of existing residents—they are career-driven and family-oriented, with a deep affinity for the environment and a higher-than-average belief in education and the value of government services.
- In-migrants to central Oregon are older-than-average, wealthier, more highly educated people than their neighbors, with much stronger pro-environment beliefs.
- Southern Oregon in-migrants are, on average, “midlife elite,” the oldest newcomers (many are over 65), with slightly higher incomes and considerably more education than their established neighbors. They are more interested in funding education and government services than the typical southern Oregonian.
- Retirees and visitor industry representatives are adding economic diversity to coastal communities that have traditionally relied on timber and fish for their income. The impact of new arrivals is especially intense in low-population coastal communities, and the pressure on watersheds and affordable housing may become an issue in the near future.

- Two areas are the primary destinations for very wealthy immigrants: the central Oregon counties of Deschutes, Crook, and Jefferson, and Clackamas County in the Portland area.

The number and types of jobs in Oregon have changed significantly

Trends for employment growth have been similar to those for population growth. Employment has grown more rapidly than population in Oregon because of increasing labor force participation rates (especially among women), a larger share of the population of working age, and an increasing number of people holding more than one job. Employment varies more than population because employment is more closely tied to economic conditions.

As for population, over 70% of Oregon's employment is located in the Willamette Valley. Accordingly, the Valley experienced the largest loss of employment in the recession of the early 1980s. The dominance of the Valley labor force means that the state trends described below are dictated by trends in the Willamette Valley: a more detailed analysis by county would show more variation.

Employment between 1969 and 1994 grew most rapidly in the 1970s, with annual employment growth above 5% in 1972–73 and 1977–78. More recently, employment growth rates peaked to just over 4% per year in 1988–89 and in 1994; the average annual employment growth rate in the 1990–95 period was 2.5%.

The composition of employment has changed since 1969. Figure 3-7 shows the level of employment by sector in Oregon over the 1969–1995 period. This figure clearly shows the domi-

nant change in the composition of employment over this period—employment growth has been led by the Finance, Insurance and Real Estate (F.I.R.E.) and Services sectors. The share of total employment in these sectors increased from 25% to 35% between 1969 and 1995. Slow growth in Manufacturing caused its share of total employment to decline from 20% to 13% over this period, while other sectors grew at rates close to the statewide average.

Looking at employment data by general sector masks another significant change in the composition of Oregon's employment—the decline of employment in the Lumber and Wood

Products industry and the concurrent growth of employment in high-technology industries (Industrial Machinery, Electronic Equipment, and Instruments). All of these industries are included in the Manufacturing sector shown in Figure 3-7. Figure 3-8 shows employment levels in these industries over the 1979–1996 period. It shows Lumber and Wood Products employment declining from its 1979 peak, and high-tech employment surpassing Lumber and Wood Products employment in 1995.

The changing composition of employment has not affected all regions of Oregon evenly:

- In every region, growth of Services employment has included jobs in restaurant, hotel, and recreation industries. Urban areas of Oregon have also experienced increases in relatively high-paying Service industries: legal, business, and health services.
- Growth in high-tech employment has been concentrated in urban areas of the Willamette Valley and Southern Oregon, particularly in Washington, Benton, and Josephine counties.
- The brunt of the decline in Lumber and Wood Products employment was felt in rural Oregon, where these jobs represented a larger share of total employment and an even larger share of high-paying jobs than in urban areas.

Oregon will continue to grow and change

Oregon's population is expected to continue to grow. A long-run population forecast by the State's Office of Economic Analysis predicts steady population growth at an annual average rate of 1.1% between 1995 and 2040. At this rate of

growth, Oregon is expected to add one million people by 2015 and another million by 2040, growing from 3.1 million in 1995 to 5.2 million in 2040. Over 70% of this population growth, 1.7 million people, is expected to come from net migration into Oregon.

Those forecasts make it clear why people are concerned about growth. A million more people in 30 years will need about 500,000 more housing units and the services and employment that go with them. As a rough estimate, they could create a demand for new urban land about equal to that which already exists in the Portland metropolitan urban growth boundary.

Population growth rates are predicted to be relatively even across Oregon's regions, with the Willamette Valley and Central Oregon growing slightly faster than the state. The result is that the share of Oregon's population by region does not shift more than 1% up or down over the 45-year period. Figure 3-10 shows the population forecast by region.

Actual population growth is likely to have much more variation than the steady growth rates used in the State's long-run forecast. A forecast of population growth through 2005 for the *Oregon Economic & Revenue Forecast* shows much more variation in the year-to-year growth of Oregon's population. Figure 3-11 shows the annual growth rate of the U.S. and Oregon population since 1980 and forecast through 2005. It shows the variation in Oregon's annual population growth rate, that with the exception of the recession of the 1980s, Oregon's population has grown more rapidly than in the U.S. as a whole, and this trend is expected to continue into the future. Barring a recession or other unforeseen economic conditions, Oregon's long-run population

“Forecasts are for a million more people in Oregon in the next 30 years.”

growth rate should average out to the 1.1% rate anticipated by the long-term forecast.

Many forces have affected, and will continue to affect, growth in Oregon

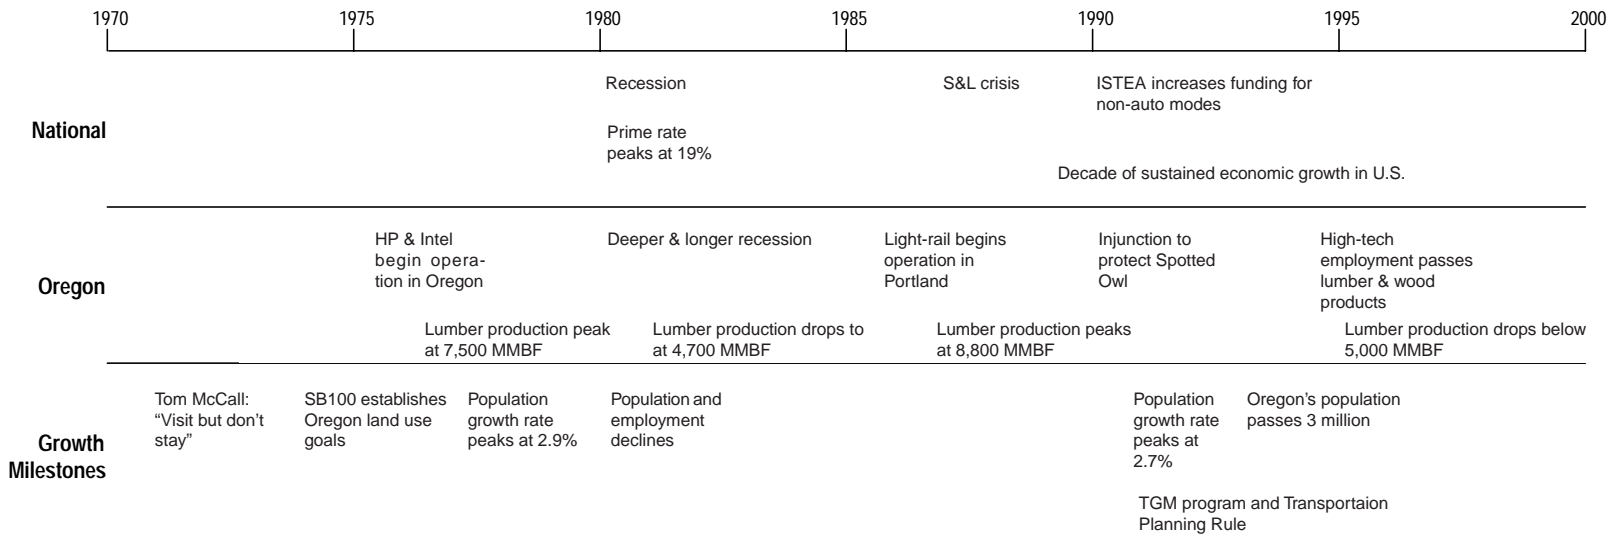

The data and figures in this chapter are pieces of a larger picture of growth and change in Oregon. The changes in Oregon have not occurred in isolation—Oregon has been affected by long-run national and international trends. The westward migration of the U.S. population, driven by economic opportunity and the increasing importance of amenities in location decisions, is likely to continue. Downturns in Asian economies notwithstanding, Pacific Rim trade will continue to be a significant part of

the nation's economy. In the last 20 years Oregon has made a transition to one of the most diversified state economies in the nation. Traditional resource-extraction industries are being supplanted by more diverse metropolitan economies. Oregon's national rank in economic diversification went from 13th in 1980 to 4th in 1992 (1st = most diversified).⁴

These changes have occurred not only because of national and international economic and demographic factors, but also because of government action in Oregon. State policy made a concerted effort to attract high-tech industries: with trade missions and offices in Japan and Taiwan, tax policy (e.g., no unitary tax, which would tax world-wide corporate income of businesses operating in Oregon), changes in Corporation

Codes, reforms to reduce the costs of workers' compensation, investments in infrastructure, and other incentives (e.g., enterprise zones and the Strategic Investment Program, which attempts to stimulate capital-intensive industries through property tax abatement). State policy on land use and environmental quality aimed at preserving the natural and cultural amenities that make Oregon attractive to its current and would-be residents and businesses. Figure 3-12 illustrates some of the key events that have influenced growth in Oregon since 1970, and in doing so repeats a theme from Chapter 2: Oregon's growth, and that of its communities, is a result of the interaction of many forces.

Figure 3-12: Many factors have influenced growth in Oregon

Chapter 4

Impacts of Growth

SUMMARY

The impacts of growth can be negative or positive. This chapter attempts to discuss impacts comprehensively, and divides them into two categories: (1) the direct costs of providing public facilities to the development (housing, buildings, and public services) that new growth requires; and (2) other impacts on economic welfare, quality of life, and cost of living.

Regarding the direct costs of supplying public facilities (infrastructure) to new development, the report finds that (1) on-site infrastructure costs (e.g., for local streets, sidewalks, sewer, water lines and meters) for a single-family housing unit are on the order of \$15,000 to \$20,000, (2) the construction costs of off-site facilities (e.g. improvements to arterial streets, sewer and water trunk lines and treatment plants, schools, fire stations) are on the order of \$15,000 to \$30,000 per housing unit for new development at the urban fringe, (3) these average costs may vary widely for particular developments because of the specifics of site and locational characteristics relative to existing off-site facilities, local standards, and other factors, (4) in rough terms, it is probably the case that for on-site and off-site public facilities (setting aside schools and major upgrades to the regional transportation system) new residential development directly pays on the order of 50% to 90% of their capital costs (through developer provided infrastructure, hookup fees, SDCs and other impact fees, special assessments, exactions, and user charges), and (5) any summary like this one is necessarily approximate and needs to be used only with a clear understanding of the assumptions required to develop it (as described in this chapter and Appendix E).

Good public policy about growth must consider more than the direct costs of building the infrastructure it requires. It must consider other impacts, positive and negative, that are no less real because they cannot be measured in dollars, or perhaps cannot be measured well at all. Growth also affects many aspects of what people see as their quality of life, and these impacts (real or perceived) are often the source of the strongest sentiments about of growth: for example, impacts on jobs, income, traffic congestion, environmental quality, and crime.

The impacts of growth can be negative or positive

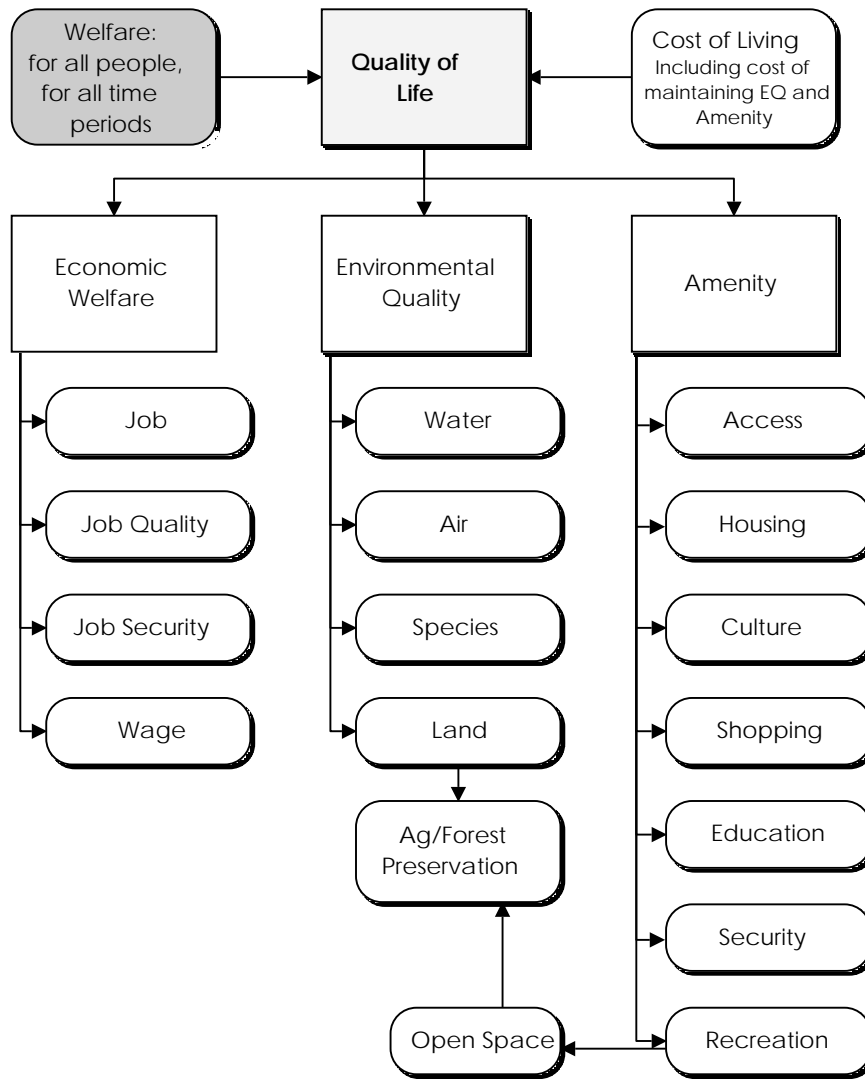

At several points this report has emphasized the importance of definitions. Nowhere are differences in definitions more apparent, and agreement more important, than when people discuss “the costs of growth.” Many of the numbers casually cited and compared in debates about costs are measuring very different things.

Any discussion of costs of growth tells at best half the story. This report has tried to consistently use the term *impacts* of growth to emphasize that those impacts may be costs (negative impacts) or benefits (positive impacts). Figure 4-1 organizes those impacts according to the aspect of quality of life that growth, and policies to manage growth, could potentially affect. Those impacts are, in broad categories, on:

- The economy (e.g., job opportunity, wage amount and security)
- Services and amenities (e.g., travel time, cost and level of service; cultural and retail opportunities)
- Social variables (e.g., change in neighborhoods and downtowns)
- The environment and natural resources (e.g., loss of farmland, changes in air and water quality)
- Cost of living (e.g., housing affordability).

There are problems with that organization, chief of which is that some of the big questions about growth do not fit neatly in those categories. For example, an overarching question about growth in Oregon is, Does growth pay its own way? That question cuts across issues of cost of living, public services, and finance. Another question is, Can growth be redirected from an

Figure 4-1: Growth, and policies to manage growth, can potentially affect many aspects of quality of life

area of the state with 'too much' to areas that 'need more' growth? Note also that cutting across any general discussion of impacts is a much more detailed discussion about their incidence: Who is impacted: Willamette Valley vs. Eastern Oregon; urban vs. rural; big city vs. small city; high growth area vs. low growth area; high income households vs. low income households?

Dealing with incidence makes any organization a problem. The ultimate concern should be about impacts on households and the individuals in them. Impacts on businesses and government are important primarily because they end up being passed on to households as workers and consumers (e.g., more and higher paying jobs; more and better quality products; lower prices), or as citizens and taxpayers (e.g., changes in the quality or cost of public services). In that context, the question "Does growth pay its own way?" gets recast as "Are current households in Oregon contributing through state and local taxes to the development of buildings, houses, infrastructure, and services that serve only households that are moving to Oregon from other states?" Or, at a sub-state level, "Are taxpayers in City X contributing to development that serves only people that currently do not live in City X?"

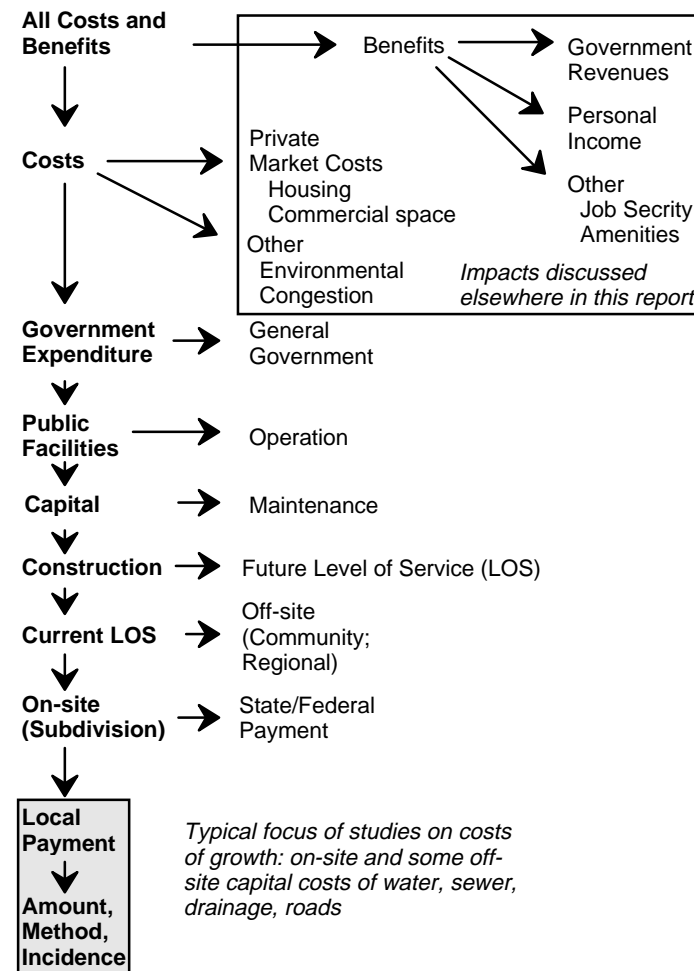

Despite the attempt of this report to discuss impacts (positive *and* negative), not just costs, most of the literature on growth impacts addresses only its costs, and does so using various definitions. In common usage, when people say some product "costs too much," they mean either that it is not a good value (what they get from the product is not worth it) or that the same product should be produced more cheaply (if producers were, for example, not so inefficient or greedy). People may complain about the high prices of a new car, a cappuccino, or a loaf of bread, but still buy them: they consider the benefits and estimate them to exceed their costs. The "cost of growth" literature, however, focuses, usually exclusively, on cost.

When benefits do get considered it is usually in the narrow sense of “revenues.” A fiscal impact analysis compares the impacts of new development on a government’s fiscal position to answer a limited version of the question, Is new development paying its own way? In the context of growth, the concern is less about, for example, the total cost of a house than about whether all the public costs of development are included in the price paid for the house. Thus, studies usually do not define the “cost of growth” to include the cost of land, lumber, and labor that go into building a new house because homebuyers are paying those costs; they usually focus instead on other costs of growth that homebuyers and others benefiting from growth allegedly do not pay.¹

Figure 4-2 shows that a definition of the impacts of growth has many components. It starts at the top with all costs and benefits, and illustrates how typical studies of the costs of growth narrow the definition of costs. Near the top, for example, a broad definition of costs includes any resources used up to accommodate growth:

- *Direct monetary expenditures by the private sector:* for example, for land, labor, and materials to build housing
- *Direct monetary expenditures by the public sector:* for example, for the construction, maintenance, and operation of public facilities at a given level of service (some of which is reimbursed through development and user fees) and for other general government functions like administration and courts (some of which is reimbursed by taxes on the developed property or future fees on its occupants).
- *Indirect costs that are usually not denominated in dollars nor paid directly:* for example, environmental degradation, stress, loss of small-town atmosphere.

Figure 4-2 Costs of public facilities are a subset of impacts of growth

Cost of living

Typical studies of costs of growth address only a few of those costs. Most often they are limited to looking at the costs of constructing capital facilities (usually transportation, water supply, and wastewater treatment, and sometimes drainage and schools) that development requires before it can be occupied (in Figure 4-2, the bottom left corner). The narrow focus on capital facilities gets even narrower: not all facilities are considered in every study. Some studies look only at on-site facilities (i.e., the roads, sidewalks, pipes, wires, and other structures and land that are within the boundaries of a new development). If off-site facilities are examined (e.g., sewage treatment plants, improvements to arterials, schools), it is usually only partially. Nonetheless, this subset of costs (itself a subset of total impacts) has usually been the focus of the debate about the impacts of growth.

Because there is so much inconsistency in discussions of the costs of growth, it is worth repeating the central point of this section in a different way. Ultimately, the costs of growth do get paid. The questions for the public policy debate are who

pays, when, in what form, and is that fair? Some costs are paid directly, up-front, and in dollars by players in the development process. Most of those costs, and others, are paid up-front, in dollars, by the households and businesses that be-

come owners of the development. Other costs are paid later in dollars by the owners of new development: special assessments, property and income taxes, user fees. If all those fees do not cover what it costs to provide the facilities and services the development requires, then current residents and businesses pay some of those costs directly in dollars by paying more in taxes and fees than they would have if growth had not occurred. Finally, to the extent that growth causes impacts, positive or negative, that are indirect and not captured through market prices, taxes, or fees (i.e., *externalities*), those impacts hit new and current residents and businesses alike.

Thus, this chapter is organized to address two multi-faceted questions about growth:

- *Direct costs of growth: what are they and who pays?* For this report, the direct costs of growth means the costs of providing public facilities to the development (housing, buildings, and public services) that new growth requires. This definition is admittedly narrow, but necessary. Because much of the debate about growth is whether it pays its own way in this narrow sense, this report puts this aspect of impacts into its own section.
- *Other impacts of growth: what are they and who is affected?* Growth has many effects besides the need for monetary outlays to build infrastructure and structures to accommodate it. That construction can have secondary impacts (e.g., loss of farm and forest land, air quality, water quality) that are not easily measured in dollars or, in some cases, any other units (e.g., sense of community). This section provides information about all these other costs.

Direct costs of growth: what are they and who pays?

This section addresses a *subset* of costs: the direct (monetary) costs of providing public facilities to the development that new growth requires. Even with this limited definition, different studies of cost usually focus on only one of many possible questions about direct costs:

- *What are the costs of growth, per se?* Few, if any studies, have been able to adequately address this overarching question. There are many reasons, but the key one is that growth has too many dimensions to measure. Growth is more than land development. Even if growth is defined that narrowly, there are many different kinds of land development (e.g., residential, commercial, and industrial) and many different ways that development can occur (e.g., by location, design, and density).
- *What are the costs of some specific development type?* For the reasons given in the previous point, most studies of the cost of growth focus on a certain type and pattern of development. Nationally, research has been driven by the debate about urban sprawl: do low-density development patterns cost more than higher density ones? The fact that such studies exist and find differences in cost based on the location and pattern of development shows why simple statements like “growth costs \$X per housing unit” are misleading: the estimate depends on many assumptions about the type and location of housing, its density, the size and economic conditions of a particular jurisdiction, the preferences of local residents for a particular level of service, and so on.
- *What are the fiscal impacts of some development type?* This question expands from the previous one about a subset of

costs (i.e., direct public costs) to include a subset of benefits (i.e., public revenues). Many studies have been done to estimate whether particular development types cost local governments more than they contribute.

- *Who is paying the costs, and is that fair?* This question expands on the former one to look at where the revenues to pay for the direct public service costs of growth are coming from, and the extent to which it meets some normative judgment about who *should* pay.

Appendix E of this report explores these and related questions in much more detail. It provides some standards for evaluating studies of the costs of growth, discusses problems associated in applying those standards, and evaluates several studies nationally and from Oregon that attempt to measure the costs of growth. Because the issues are complex, so is the discussion, which is why most of it has been relegated to an appendix. The rest of this section summarizes only the key findings.

Comparing studies of costs of growth requires a definition and understanding of standards for evaluation

Any study of the costs of growth should be specific and clear about several categories of assumptions. The point is not that there is a single right assumption for each of the points that follow, but that results cannot be interpreted without understanding what assumptions were made:

- *The question about the costs of growth addressed.* For this report, the essential question about direct costs is: Are the new people, employees, and development that are contributing to and benefiting from growth in a community paying a fair share of the additional costs of the public facilities and services they require?

- *The subset of costs evaluated.* This report, for example, focuses on the direct costs of key public facilities; other sections discuss other impacts (both costs and benefits). But the studies reviewed in this section do not all address the same facilities, and most do not consider indirect overhead costs of service provision
- *The treatment of capital and operating costs of public facilities.* Prior to 1980, most fiscal impact analyses focused on operating expenses and ignored construction costs. Many more recent analyses of costs in Oregon have gone the other direction, estimating construction costs but not operation costs. Direct costs obviously differ substantially with decisions about which costs, how long a time period to consider, and how to treat existing excess capacity (should growth be charged for its marginal cost or its average cost?).
- *The distinction between real costs and financing.* Using financing costs to estimate costs of growth may or may not be an appropriate measure of the true economic costs of the resources that growth requires. On the one hand, when capital improvements are financed, their cost may be reported as an annual payment, which can then be added to annual operating costs to get a rough approximation of an annual equivalent cost of the service. On the other hand, when some facilities are financed over a period not equal to their expected lives, when some facilities are financed and others are not, or when facilities are partially financed while other payments come from transfers from other local or state revenue sources, financial costs may bear little relation to the real economic costs.
- *The type and pattern of growth evaluated.* For this report, the focus is on residential growth in general, and on trying

to get an average cost per new household or housing unit. Obviously, the type and location of the housing unit that is built to accommodate the new household will have an effect on the costs the new household imposes on public facilities and services. Moreover, those facilities do not service residential development exclusively—they also serve commercial, office, and industrial development. Thus, total costs of new facilities cannot be reasonably attributed to housing only.

- *The other factors that influence cost.* All cities and counties do not offer the same package of services. Differences result from many factors, which include the historic pattern of growth; prior investments in and directions for services; and the preferences of property owners for type, level and cost of service (which is in part a function of their socioeconomic and demographic characteristics). Federal and state mandates have increased requirements for local facilities and services, while a phase-out of revenue sharing has reduced payments for others. Jurisdiction size also influences costs: larger cities typically provide more services.
- *The normative assumptions.* One can ask not only, *Does* growth pay its own way? but also, *Should* growth pay its own way? The answer depends on one's assessment of what is fair.
- *The limitations of the estimates.* There is a lot of uncertainty about the estimates of the amount and composition of population, its demand for services, costs, and all the other factors that go into calculating what a fair charge for the direct costs of public facilities should be. Some of that uncertainty is inherent (we can never be sure of the future until it's the past); some of it is introduced by bad techniques and data.

The literature suggests a range for cost estimates

Appendix E evaluates studies done both nationally and in Oregon on the costs of growth: go there for a more detailed discussion of the multiple problems in interpreting the results of those studies. The rest of this section reports only the conclusion of that evaluation with respect to the direct costs of supplying public facilities (infrastructure) to new development. See Appendix E for details. *In summary, a review of the literature found:*

- Any estimate of infrastructure costs must be explicit about, at least, the facilities considered, capital and operation and maintenance costs, on-site and off-site, and marginal and average costs. Unless otherwise noted, the analysis that follows is for average, capital costs only. Which facilities, and whether they are on-site or off-site, are noted explicitly.
- Total on-site costs of neo-traditional development does not cost less than traditional development in the aggregate at the subdivision level: for reasons described in Appendix E, it may cost more. But smaller lot size means more lots (greater density) and less, in most cases, cost per lot. The costs of housing construction (i.e., the structure itself, net of on-site and infrastructure costs) of neo-traditional types are about the same as traditional dwelling types (when controlled for quality) on a square-foot basis.
- On-site infrastructure costs (e.g., for local streets, sidewalks, sewer, water lines and meters) for a single-family housing unit in a typical subdivision are on the order of \$15,000 to \$20,000. Lower costs may be possible for large scale or denser developments, though higher costs are more likely as easier sites get used and requirements for stormwater retention and open space dedication increase.

- Because on-site costs do not vary much by subdivision design, any large differences in cost per single-family housing unit are usually a result of differences in off-site costs, which are more heavily dependent on the location of the development than on its design. The construction costs of off-site facilities (e.g. improvements to arterial streets, sewer and water trunk lines and treatment plants, schools, fire stations) are on the order of \$15,000 to \$30,000 per housing unit for new development at the urban fringe. Estimates could be even higher depending on what services get included and the specifics of site and locational characteristics relative to existing off-site facilities.
- These average costs, even if correct on average, would vary a lot depending on the type of household (the socioeconomic and demographic characteristics of the household affect its demand for services).

For public policy, estimating who pays the direct costs of public facilities is as important as estimating how much they are

So what? So what if the incremental contribution of an average housing unit to the cost of construction of new public facilities (on-site and off-site) is about \$40,000 to \$50,000 (or even more)? In general, our laws and conventions are not concerned about what somebody willingly pays for something he wants—they care when he does not pay. The real question is, Are the right households paying for these public services? In summary:

- Determining who pays these costs requires a basic understanding of how taxes and fees are used to finance public facilities in Oregon.

*“Average infrastructure cost for a single-family housing in a typical subdivision:
Onsite: \$15,000 - \$20,000
Offsite: \$15,000 - \$30,000”*

“In rough terms, it is probably the case that for on-site and off-site public facilities new residential developments directly pay on the order of 50% to 90% of their capital costs.”

- Measure 50 provides some incentive for cities to annex adjoining areas sooner than they would otherwise, because it allows new construction to add to a district's tax base.
- Regarding who pays the costs of growth, new development pays its share of property tax under the new rules (i.e., everybody pays proportionally less, but new development gets no special break). The new property tax rules allow budgets to grow if new property is annexed to a taxing district. Without annexation, it is unlikely (though theoretically possible) that municipal budgets could grow if growth (and, therefore, increases in taxable value) was high.
- In response to declining property tax revenue, many local governments have turned to fees in general, and in particular to system development charges and exactions on new development to help fund off-site infrastructure. The effects of such financing mechanisms are ambiguous: they depend on many other factors. If, for example, large system development charges (SDCs) are adopted by one city in a metropolitan area, the tendency in the short run may be to move development to other cities. If the financing in those other cities, however, is inadequate to handle necessary capital expansion and maintenance, then in the longer run their financial problems could drive growth away. If all cities in a region simultaneously increase SDCs, then the impact, if any, will be on the amount of regional growth, not its distribution.
- Many communities in Oregon use property tax abatements and enterprise zones to encourage business

location, retention, and new development. This practice has been increasingly criticized as citizens question the value of continued growth in their community.

- For new single family housing the construction costs of on-site facilities are paid almost entirely by developers (either directly as special assessments, or as fees to local governments and special districts).
- Some of the off-site costs are paid by developers through SDCs. Depending on many variables, those costs will be passed forward to the eventual owners of the new development (who may in turn pass most of them on to other users via rents or leases), passed back to landowners (via reduced land prices), or absorbed by developers (through lower profits, though this outcome is unlikely over the long run). Some are paid by past, current, and future property users through user fees calculated to recover costs of capital improvements. Some off-site costs are paid by past, current, and future property owners through taxes to retire debt. Some of the off-site costs are probably deferred,² with the result that either future households will have to pay for new facilities or accept a lower level of services, or methods and technology will have to change in ways that allow level of service to be maintained with less capital investment per capita.
- Thus, in rough terms, it is probably the case that for on-site and off-site public facilities new residential developments directly pay on the order of 50% to 90% of their capital costs (through developer provided infrastructure, hookup fees, SDCs and other impact fees, special assessments, exactions, and user charges). The percentage depends on how far one goes in allocating off-site public facility costs to new residential growth, and local circumstances (e.g., for

revenue collection and services standards). The percentage would be toward the high end if one does not count very large regional facilities (e.g., light rail in Portland, new electric generating capacity in Idaho), but does count property tax contributions to debt retirement for existing capital. It moves toward the lower end if one does the opposite. For the types of facilities that the cost literature commonly deals with (sewer, drainage, roads, parks, schools), it seems unlikely that the percentage could be much below 50% because (1) probably at least 30% to 40% of the capital costs are on-site costs, which are uniformly paid by development, and (2) all jurisdictions have some combination of hookup fees, SDCs, special assessments, and exactions to pick up some of the off-site costs. For operation and maintenance, it appears that new development, with its higher value and occupancy by households with higher than average incomes, pays more than its fair share of O&M.

These summary points make the evidence sound more straightforward than it is. Every point has a counter-point and qualifications. Do households that move within a city from an old house to a new constitute new growth, or is the growth the people that move from outside the city into the old house? Are SDCs paid entirely by new houses, or do SDCs increase the prices of all housing (new and old) so that their incidence is more diffuse? Appendix E provides more detail.

When interpreting the previous estimates, remember its limitations:

- The analysis in this deals with only the direct costs of public facilities and services for residential development. One possible assumption is that those facilities and services are of a quality that there are no large spillover costs. But that

assumption is probably incorrect. For example, the pricing of roads, the operation of combustion engines, and highway congestion means that there are spillover social costs.

- The analysis at this point does not discuss any of the benefits or beneficiaries of growth. It is not only developers who benefit, nor even just those involved in development (e.g., builders, Realtors). New homeowners benefit; existing homeowners may benefit from higher property values. Businesses and profits grow. The loss of farmland has a cost (for the farmer who wants to farm and urban residents that want open space and the protection of food-growing capacity), but it also has a benefit (to the farmer who wants to sell, and to the new homebuyers that might see lower prices).
- Even if the summary estimates of capital costs of public facilities were comprehensive and exactly right and if there were no other external costs of growth, one could still present the numbers in different ways to tell different stories. One story is that the average single-family house may not be directly paying, through up-front charges, anywhere from \$5,000 to \$25,000 of the capital costs of the public facilities it requires. That statement would have to be qualified by the statement that some, maybe most, of that up-front underpayment may be being paid through property taxes, user fees, and special assessments: it depends on the specific case. An alternative story starts with the total cost of a housing unit. When a buyer pays \$200,000 for a new house, he is paying for permit fees, construction costs, public facilities, SDCs: everything that went into the cost of building the house. If the capital cost he is not paying amounts to \$10,000, then his purchase price has covered 93% of the cost of the that new housing unit: the structure, the on-site infrastructure, and the off-site public facilities.

Beware simple statements about “costs of growth”

The previous section on the direct costs of growth has tried to illustrate why the answer to a simple question like “Does growth pay its own way?” has to be “It depends.”

The essential question about growth is about welfare: (1) Is growth likely to make people in some area over some period better off, in the aggregate, and, if so (2) Does it do so without having unacceptable costs on other areas, or on subsets of people within the area being considered? Again, no definitive answer to that question is possible. It depends on:

- Characteristics of existing and new infrastructure (e.g., whether there are economies of scale), which depend in part on the pattern (primarily density) of growth
- Characteristics of existing and new infrastructure (e.g., whether there are economies of scale)
- The way growth is distributed within the region
- What the governments choose to do: local governments have the ability to determine the magnitude and, sometimes, even the direction of the welfare change.

The next section provides information about other components of welfare (i.e., besides public facilities and their costs).

Other impacts of growth: what are they and who is affected?

The previous section is narrowly focused on direct costs (primarily for capital) to the public sector (primarily local government) for some of the public facilities (primarily roads, water, and sewer) that development (primarily residential) requires. Good public policy must consider other impacts, positive and negative, that

are no less real because they cannot be measured in dollars, or perhaps cannot be measured well at all. Growth also affects many aspects of what people see as their quality of life, and these impacts (real or perceived) are often the source of the strongest sentiments about growth: for example, impacts on jobs, income, traffic congestion, environmental quality, and crime. This section assesses these impacts, organized around the aspects of quality of life shown in Figure 4-1: economic welfare, environmental quality, amenity, and cost of living.³

Economic welfare

A central aspect of quality of life is standard of living, which is strongly correlated with income. For most people, income is determined by their ability to earn money through employment or by operating a business; some receive income from investments and transfer payments (insurance or Social Security). Figure 4-3 shows personal income growth in Oregon by source between 1969 and 1996, in constant 1996 dollars.

A person's ability to earn income through employment or investments is affected by national and regional economic conditions. In general, a strong economy increases the opportunity for people to find a high-paying job and increases the returns on investments. Figure 4-3 shows total earnings declined in the early 1980s due to the national recession—that recession also caused per capita income in Oregon to fall behind the U.S. average. Oregon's per capita income has recently made gains but remains behind the U.S. level. Per capita income in Oregon and the U.S. is shown in Figure 4-4.

As shown in Chapter 3, employment in Oregon has grown faster than population since 1977. The economy has diversified. Oregon's unemployment rate has been at or below 6%

for most of the 1990s. For many people in Oregon who lived through the recession of the 1980s, Oregon was probably a better place for them in the early 1990s than it was a decade earlier. Certainly their incomes were higher, which is the most typical measure of economic welfare.

The result of a growing economy and increasing diversification has been growth in the earnings received by employees and business proprietors in Oregon. Figure 4-5 shows the earnings per worker, measured in 1996 dollars, between 1969 and 1996. This figure shows that earnings in Oregon took a sharp drop during the early 1980s recession, and have only recently begun to reach the levels experienced in the 1970s. The sharp decline in earnings was due, in large part, to massive layoffs of high-wage jobs in the lumber and wood products industry.

Oregon's strong economy has been a major force behind migration to the state. The steady influx of people has a multiplier effect, creating the need for workers in construction and government to build the housing and public facilities and provide the public services that a growing population requires. Oregon's economic growth has drawn people to the area, which in turn has created a need for more jobs.

But growth in jobs, earnings, and per capita incomes has not benefited all Oregonians equally. Much of the income growth for working families in Oregon has occurred because spouses entered the work force and all wage-earners were working more hours. Moreover, there is evidence that income inequality in Oregon is worsening—the top fifth of Oregon households earned nine times more than the bottom fifth in 1994-96, compared to seven times more in 1988-90.⁴

Nor has economic growth affected all areas of Oregon equally. The Oregon Economic Development Department recently

ing by large corporations has caused layoffs, employment security has been replaced by a dynamic labor market that increasingly requires education and flexibility, and low savings rates have left many people unprepared for retirement. Moreover, the use of economic measures to measure well-being has been increasingly criticized. Economic indicators only measure monetary transactions, so crucial economic functions performed in households and the volunteer sector go uncounted. These measures also ignore other vital components of quality of life, such as environmental quality and urban amenities.

In sum, there is a strong link between economic growth and the growth of population and development that lead to some of the impacts of growth that people would like to eliminate or reduce. For most households, their own economic growth is desirable. It is difficult to create a strong argument that all

identified 149 communities and 15 counties in Oregon, primarily rural areas, as “economically distressed” (based on an index including the unemployment rate, the number of families living below the poverty level, and per capita income). The population of the 15 distressed counties accounts for only 12% of the total population of the state.

Despite economic growth, many people feel less secure about the future: restructur-

ing by large corporations has caused layoffs, employment security has been replaced by a dynamic labor market that increasingly requires education and flexibility, and low savings rates have left many people unprepared for retirement. Moreover, the use of economic measures to measure well-being has been increasingly criticized. Economic indicators only measure monetary transactions, so crucial economic functions performed in households and the volunteer sector go uncounted. These measures also ignore other vital components of quality of life, such as environmental quality and urban amenities.

Economic indicators only measure monetary transactions, so crucial economic functions performed in households and the volunteer sector go uncounted. These measures also ignore other vital components of quality of life, such as environmental quality and urban amenities.

Environmental quality
Water supply and quality

Both the quality and quantity of water affect the quality of life in Oregon. Adequate amounts of clean water are necessary for “beneficial uses” such as drinking, recreation, fisheries, industry, and agriculture. Water quality is primarily measured by the amount of toxic organic and inorganic compounds, dissolved oxygen, suspended sediments, and temperature. Water quality and quantity are intertwined, since water of poor quality may be unusable.

To understand water supply one must start with the water rights system. The people of Oregon own all water in the state. Anyone who wishes to use water must obtain permission from the state, through the Oregon Water Resources Department (OWRD).⁵ The OWRD issues water rights, which grant a landowner permission to use the public’s water. The right specifies, among other things, the allowed amount, use, place of use, point of diversion, and “priority date.” The latter determines where the landowner stands in the queue to withdraw water from a source. The water right does not guarantee that water will be available to everyone

who holds a right. It aims only to regulate and control water use among those who hold water rights, especially in times of scarcity.

The OWRD will not issue a new water right if it believes that water will not be available at least 20 percent of the time. It uses either historical data or sophisticated hydrological models to determine “water availability,” on a basin or watershed level. Eventually, the OWRD will stop issuing new water rights for a basin, once all of the available water has been appropriated. At that point, the only way a landowner could obtain a water right is by acquiring it from someone who already owns one, through the transfer process.

The end of new water rights, and the start of water rights transfers, would indicate that a basin has evolved from a period of abundant water to a period of scarcity. In reality, the transition is not so simple. The issuing of water rights does not stop suddenly, nor does the OWRD announce that no new water rights are available for a basin. Instead, it gradually becomes more difficult to obtain a new water right, and it becomes easier to obtain one through the transfer process. But even if new water rights are available, such water rights would have low priority dates, and so would be less useful. An increasing frequency of water transfers is a good indicator of water scarcity. Such signs are apparent in some parts of the state, especially in central Oregon, where an informal market for water rights has developed.

A recent innovation in the water rights system is rights for in-stream flows. This recognizes unappropriated water in a stream as a “beneficial use”, and so the right to maintain water in a river or stream is protected in the same manner as other rights—according to the priority date. Under state law, only certain state departments may apply for new water rights for in-stream flows. Such water rights would not be very useful in protect-

Deschutes County and Water Quality

The LaPine area south of Bend in central Oregon provides an example of the connection between growth and water issues. Prior to the adoption of the Oregon land use program in the early 1970s, over 10,000 parcels, most of 1/2 to 1 acre, were created in the area between SunRiver and LaPine in the drainage of the Deschutes River. Groundwater is the single source of drinking water for the region. Over half of the parcels have developed with houses and mobile homes using septic tanks.

The Department of Environmental Quality has found that decades of growth have resulted in significant areas of deteriorated water quality. Wells in some areas are developing unsafe levels of pollutants: DEQ models predict that nitrate concentrations will exceed federal standards within 10 years. Yet owners of vacant property believe, with justification, that they have vested rights to develop.

The relationship between development and deterioration of water quality is complex: DEQ scientists allow that models of possible future effects are approximate and uncertain. Deschutes County and DEQ are in the undesirable position of potentially having to restrict development on the basis of logically reasonable but empirically uncertain conclusions.

The best evidence, however, is that a problem exists and will get worse if new development looks like past development. But what if new development looks different? The County is considering both clustering of development, and transferring development rights to areas that are less sensitive or more easily served with waste-water treatment. The new development may be the necessary impetus for a water-treatment system that would serve existing development now on septic tanks. Without the growth, the situation might get slowly worse. With growth, it could get worse in a hurry or improve, depending on the policies that deal with the impacts of growth.

ing in-stream flows, though, since they would have the latest priority dates. Alternatively, the state allows anyone to obtain an existing water right for in-stream flows. The Oregon Water Trust is the only group currently pursuing this option, focusing its efforts on the Rogue, Umpqua, John Day, Umatilla and Deschutes River basins.

Water quality in Oregon has generally improved over the past several decades. Major improvements have been made in the last 50 years in controlling direct (point-source) discharges into water bodies from industry and sewage treatment plants. But there are still many cities in Oregon with inadequate sewage treatment capacity and persistent Department of Environmen-

Wilsonville and Water Supply

Lack of consistent state policy direction frequently blocks or increases the cost of local infrastructure development. Wilsonville, one of Oregon's fastest growing cities, depends on groundwater from wells for its water supply. Groundwater levels in the aquifer are declining. The problem is so acute that Wilsonville has declared a moratorium on future development, a moratorium declared even before a new prison was sited in the city. But, the moratorium law has severe time limitations and developers are pushing for a fast solution.

The Water Resources Department has restricted future groundwater development. Water Resources also directed Wilsonville to limit its pumping and develop its existing water right on the Willamette River. The Willamette is the most cost-effective long-term water supply option available to Wilsonville.

Yet the Department of Environmental Quality has expressed concerns about whether the Willamette River water can be treated sufficiently to be safe for drinking water. These statements have contributed to local opposition to developing the Willamette as a drinking water source. Some citizens have joined the development community in urging the City to develop groundwater from the Troutdale aquifer south of the Willamette. This aquifer is already used extensively by farmers in exclusive farm use zones just south of the city limits. Land use policies are designed to protect such prime farm lands and most farm use depends on water.

The City faces a real dilemma: Try to develop wells in the Troutdale aquifer by tiptoeing around EFU land knowing the wells have the potential to adversely impact the adjacent farmers (contrary to the spirit of our land use laws) or try to develop the Willamette when other state agencies are questioning its safety.

tal Quality (DEQ) violations. Many waterways still do not fully meet standards intended to protect fish, drinking water, recreation, and other beneficial uses, and the trend may be reversing. A recent report for the Willamette Valley livability Forum found long-run improvements from cleanup of the Willamette River, but new problems emerging.⁶

Describing trends in water quality is difficult because not all water-bodies are monitored. For example, Oregon's DEQ is required by the Clean Water Act to list water-bodies that do not meet water quality standards. The 1994/96 "303(d)" list included approximately 870 stream segments, rivers, lakes, and estuaries, while the 1998 list contains 1,163 segments. The

increase in listed segments does not necessarily suggest that water quality is getting worse; it is primarily due to more refined data collection methods and new data gathered by DEQ.⁷

Surface water runoff, or non-point source pollution, is currently the largest source of water pollution in Oregon⁸—more than 90% of the total suspended solids entering the main-stream of the Willamette are from non-point sources.⁹

The amount of pollution from non-point sources, particularly from storm drains, is directly affected by population and economic growth. More people means more houses, businesses, and pavement, which increases the water runoff from these surfaces. At the same time, population growth also increases the need for clean rivers and lakes to provide safe drinking water, recreation, and other beneficial uses for humans, as well as adequate water for fish and wildlife.

Here, as elsewhere in the debate about growth, the way the real world works make quick conclusions difficult. Though development clearly increases non-point source pollution, it may be replacing agriculture, which is a big contributor to water pollution. Though getting to net impacts is tricky, it is at least the case that the water pollution of new development is offset to some degree by the agricultural pollution it replaces.

Groundwater is also a key water resource. Oregonians currently use over 700 million gallons of groundwater each day, and almost 77% of residents depend on groundwater for some or all of their drinking water. As of March 1993, DEQ was aware of over 1,300 groundwater contamination sites in Oregon. This contamination is very difficult, and sometimes impossible, to clean up. Groundwater contamination is caused by failing septic systems, overuse of fertilizers, leaking underground storage tanks, buried wastes, unlined or improperly

lined landfills, and seepage runoff from animal feeding yards.¹⁰ Again, the lack of consistent data over time hampers the ability to describe any trend in groundwater contamination, and the number of contaminated sites has been increasing due to increased awareness of the problem and resulting regulation and testing by DEQ.

Growth obviously affects water quality: if settlers and technology had not come to Oregon in 1850, our rivers and groundwater would be clearer than they are now. Whether continued growth leads inevitably to poorer water quality is a debatable point. On the one hand, the Willamette River is cleaner than it was 20 years ago because of better regulation and more public funds (in part, from growth) spent on them. More can be done for both point-source and non-point-source pollution. On the other hand, most of the easy fixes have been applied. Even if pollution per person decreases, large amounts of growth can overwhelm the improvements.

Air quality

Poor air quality can cause health problems or decrease visibility, both of which are important to quality of life. Air quality is primarily measured by the amount of various air-borne compounds and particulate matter that affect health and visibility.

Even as Oregon's population has grown, air quality in Oregon has improved. Since 1980, the percentage of Oregonians living where the air quality meets the federal ambient air quality standards has increased, reaching 100% in 1993.¹¹ The annual number of days that Portland has exceeded national air quality standards for carbon monoxide and ozone have steadily decreased since the early 1980s.¹² Portland, which was not in compliance with either the ozone or carbon monoxide standards in the early 1980s, is currently in compliance with na-

tional air quality standards for ozone and carbon monoxide.

Population growth has a direct impact on air quality because more people means more cars, and motor vehicles are the number-one source of air pollution in Oregon.¹³ The emissions from cars contribute to ozone problems in summer, and carbon monoxide problems in winter. Growth-induced traffic congestion worsens the problem: congestion leads to more automobile operating hours, and sub-optimal operating speeds, which increases the pollutants released into the air. Auto traffic also kicks up road dust, which is a major source of particulate matter.

Population growth also increases the number of fuel-powered machines (cars, lawn mowers, boats), aerosol spray cans, and other devices that pollute the air. Growth of industrial activity also affects air quality by emitting sulfur dioxide and other toxic material into the air.

Air quality in Oregon has improved despite population growth because of improvements in technology such as automobile smog systems, and regulations to reduce polluting activities such as reliance on wood-burning stoves for heat. But gains from technology and regulation have reached the point of diminishing returns—the technology is increasingly expensive and curtailing activities requires more exacting levels of regulation. According to an analysis in *The Oregonian*, air quality in Portland is

Eight Oregon Communities are Designated as Air Quality Nonattainment Areas

The Department of Environmental Quality has designated eight Oregon communities as nonattainment areas for persistent air quality problems from excessive levels of carbon monoxide and particulate matter. Cars and trucks produce up to 90% of carbon monoxide emissions, and woodsmoke, wind-blown dust, and industrial emissions are the primary source of particulate matter. Both of these pollutants can cause health problems, and particulate matter can also reduce visibility. The nonattainment areas in Oregon are:

- *Carbon Monoxide*: Medford, Grants Pass, La Grande, Klamath Falls, and Salem
- *Particulate Matter*: Eugene-Springfield, Medford-Ashland, Klamath Falls, Grants Pass, La Grande, Oakridge, and Lakeview

Figure 4-6 Growth and development have changed the habitat provided by many rivers

expected to get worse in the next decade due to increased industrial emissions and road dust from traffic. Population growth is the primary reason these pollutants are expected to increase.

Species

Plants, fish, and wildlife contribute to quality of life by providing recreational opportunities (viewing, hunting, and fishing), medicine, food, and healthy and diverse ecosystems, and through the intrinsic value people place on their existence. The existence of plant and animal species can serve as an indicator of the overall health of the environment, which is an important contributor of quality of life in Oregon.

Humans affect the population of plant and animal species primarily through hunting and actions that reduce the quantity or quality of habitat that is essential for a species' survival. Much of the decline of native species occurred due to human activities earlier in Oregon's history—hunting beaver and otter for fur, commercial salmon fishing, conversion of prairie

and wetlands for agriculture, damming and channelization of streams for power and navigation (see Figure 4-6), logging of old-growth forests, and urbanization.

Because of these actions in Oregon's past, the quantity and quality of remaining habitat is increasingly crucial for the survival of native species. Society places increasing importance on their survival as evidenced by federal and state endangered species acts and the many efforts to protect species and their habitat in Oregon. Currently there are 30 plant and animal

species listed as threatened or endangered by the state or federal government.¹⁴ While actions are being taken to protect all listed species, the listing (or potential listing) of the Northern Spotted Owl and several species of salmon have had significant effects in Oregon.

The Northern Spotted Owl was listed as threatened in 1989, and the result of this listing and other environmental concerns has been to significantly curtail timber harvests on National Forest land in the Pacific Northwest. This example illustrates a point made several times in this report: growth has multiple impacts that interact in complex ways. Economic growth (timber harvest) caused a decrease in forest habitat, which caused the perception and public concern that a species was endangered, which led to restrictions on harvest, which contributed to both a slow-down of that aspect of economic growth and a loss of revenues to counties for all services (especially roads), which might further decrease quality of life and growth.

With the listing of coastal coho and other salmon species, Oregon has developed a plan that seeks to avoid the traditional regulatory approach used to protect species. The Oregon Plan for Coastal Salmon Restoration and the Healthy Stream Partnership rely on cooperation and voluntary activities to improve water quality for salmon and other species. The Oregon Plan involves coordination of effort by all parties, development of action plans with relevance and ownership at the local level, monitoring progress, and making appropriate corrective changes in the future.

The link between growth and species varies from direct to indirect. For example, population growth can lead to urbanization that destroys endangered plant species or habitat for animal species; logging of Oregon's forests is primarily for na-

tional and international markets rather than for growth in the state. Increased awareness and regulation has allowed some species to recover despite population growth. Efforts to protect raptors such as the Peregrine Falcon and Bald Eagle have allowed populations of these species to increase in recent years.

The case that growth and urbanization have a negative impact on ecosystems and the species they support is compelling. Here, as elsewhere, the question is about tradeoffs: can we grow in urban areas, and use natural resources, in a way that allows us to improve the economic and some of the amenity aspects of quality of life without losing too much of the natural system? For some, the answer is that no loss of natural systems is acceptable given how much has already been used. For others, there is still a possibility for economic use of some of the resources, while protecting the ecosystem.

Land

Land use impacts are among the most immediate and tangible impacts of growth. Development intensifies land use; those changes, in turn, have other tangible impacts. For example, conversion of agricultural land to urban uses decreases the amount of arable land, and may affect surrounding agricultural operations, which leads to a reduction in agricultural production capacity.

Figure 4-7 shows Oregon land use about 10 years ago (the last update of the statewide land use map). Even though the detail cannot be read at this scale, it is good enough to illustrate the small percentage of urban land, and its concentration in the Willamette Valley. Figure 4-8 focuses on the Willamette Valley to show how land use has changed and is expected to change. It illustrates the importance of detailed, sub-area analysis: though Oregon has a lot of agricultural land, that part of it

Figure 4-7 Most land in Oregon is in agriculture, forest, and range

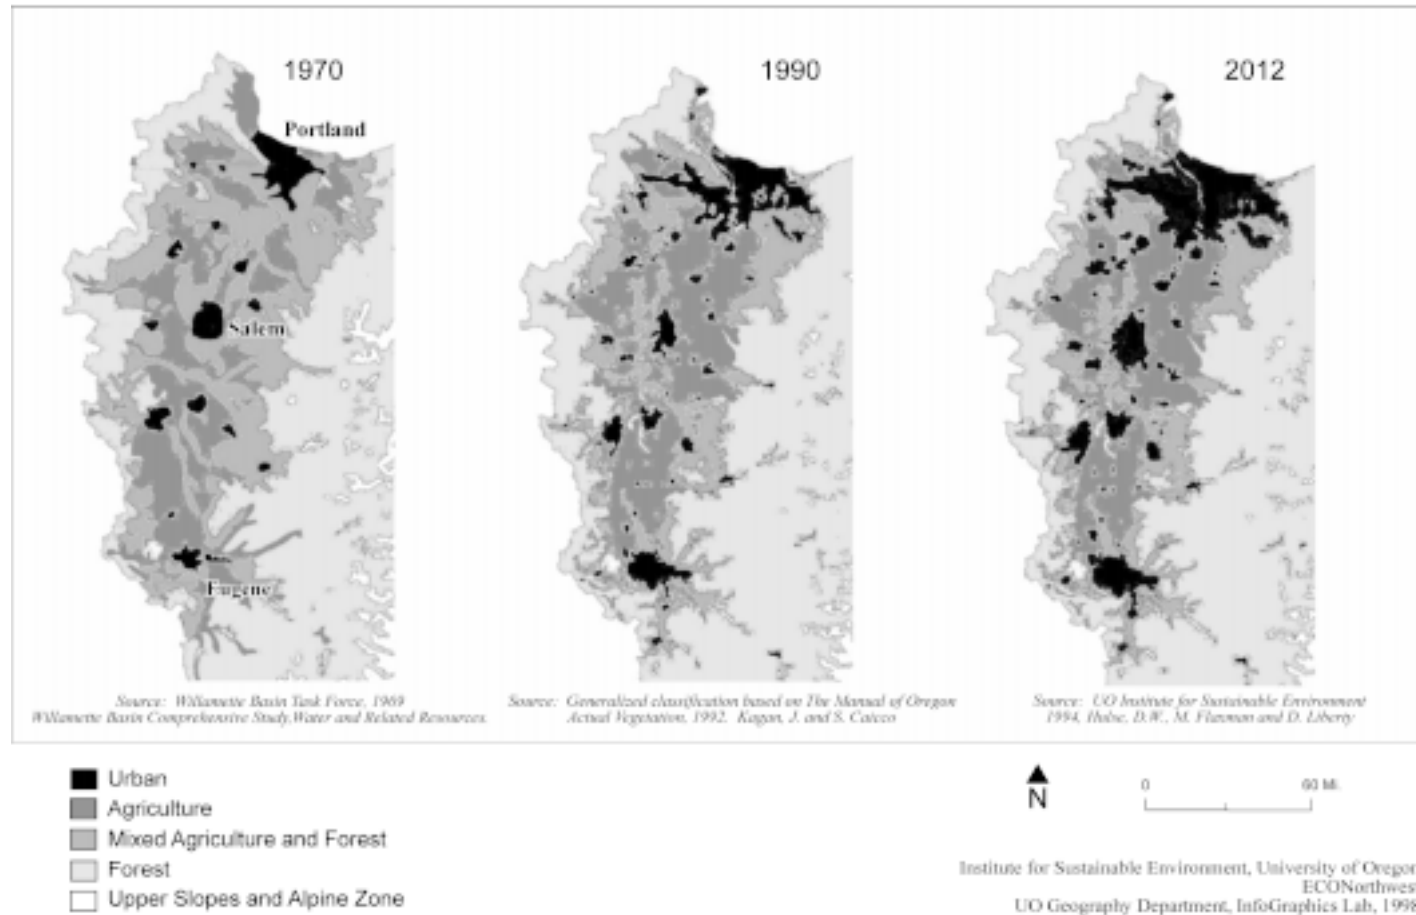

that is in the Willamette Valley is converting to urban uses more rapidly. Figure 4-9 shows how farmland has been converted in Lane County.

Impacts of growth on land use can be measured as changes in population density, the amount of agricultural and forest lands, the number of rural residences, parcelization in rural areas, densities in urban areas, and so on. This section focuses on a few of these impacts: amendments to Urban Growth Boundaries (UGBs), changes in population density for selected communities, creation of farm and forest dwellings, and rezoning or conversion of agricultural and forest lands.

Perhaps the most tangible land use impact is the growth of cities. In Oregon the expansion of UGBs is one measure of this growth: Figure 4-10 shows the change. In 1986, Oregon

Figure 4-8 Land use in the Willamette Valley has changed over the last 20 years

Willamette River Basin Land Use

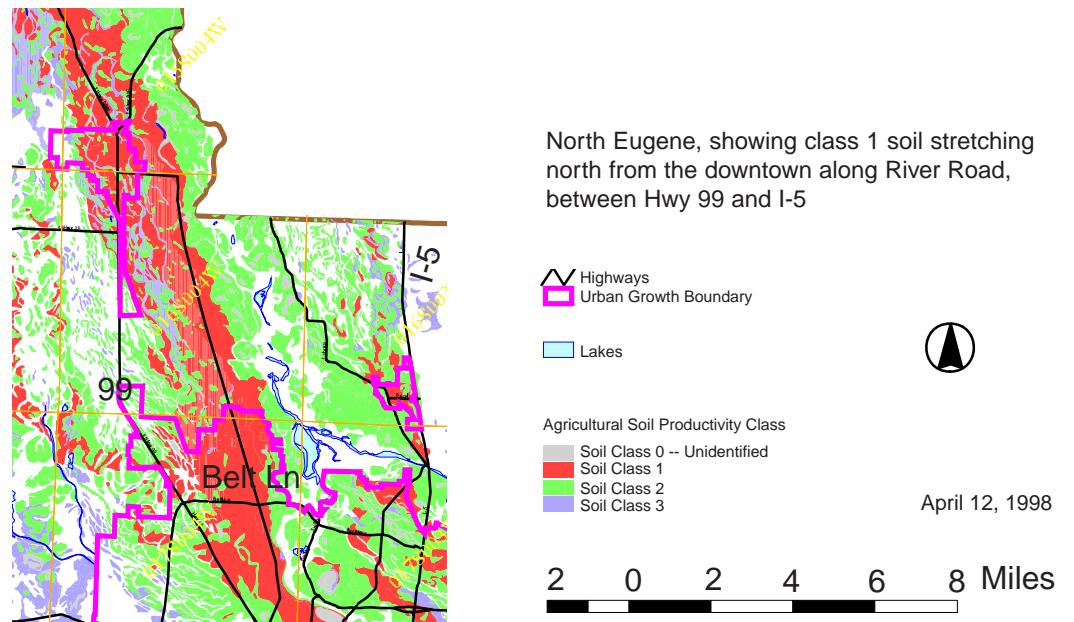

had approximately 1,200 square miles (769,000 acres) inside UGBs. Between 1987 and 1996, UGB amendments added about 13,700 acres (slightly more than 21 square miles) to UGBs—an increase of about 2%, compared to a 20% population increase during the same period.¹⁵ Most planners believe that a significant reason for the slow growth of UGBs is that they all had a 20-year supply of buildable land within their UGB in 1986, and the limits of UGBs on land supply have only recently been felt.

While UGBs expanded relatively slowly compared to population, some of those expansions occurred on agricultural and forest land. Moreover, the expansions are not uniform: some areas have substantial urbanization at relatively low densities outside of urban growth boundaries. Those losses mean potential losses to economic production now and in the future. A key part of the debate about growth is about the protection of these resource lands for economic, ecological, and recreational reasons. State law gives a heavy weight to their protection. Here, as elsewhere, the issue is about tradeoffs: is it more efficient to have urban growth at the fringe and lose some resource land, or constrain that conversion by policies that push urban growth into existing urbanized areas? The answer depends not only on an assessment of the value of resource land preserved, but also of the efficiency and direct costs of providing urban services (discussed previously in this chapter).

More than 50% of the 13,700 acres added to UGBs between 1987 and 1996 was land zoned at the time for agricultural and forest uses. The overall amount of agricultural and forest land added to UGBs is a tiny percent (less than 0.001%) of the total amount of farm and forest land. This figure, however, understates the impact of development on farm and for-

Figure 4-9 In some areas, urban development occurs on prime agricultural land

Source: Map prepared for Paul Atkinson by the University of Oregon G.I.S. lab

est lands: it does not include, for example, land outside UGBs that gets converted to non-resource uses. One estimate is that over 57,000 acres of agricultural land have been converted to urban uses (both inside and outside UGBs) in the past decade.¹⁶ In the context of the Oregon planning program, however, land inside UGBs is supposed to be converted to urban uses. For example, in the Portland metropolitan area the vast majority of farm and forest land that urbanized between 1980 and 1994 was inside UGBs.¹⁷

Density is another key measure of land use change. Table 4-1 summarizes from a recent review of densities measured

Figure 4-10 Additions to UGBs vary substantially year to year: on average, about 1,400 acres per year have been added to UGBs between 1987-1996

Source: DLCD, 1997

Table 4-1. Population and housing densities have increased between 1970-1990 in a sample of Oregon cities

1990 Population	Population Density (Persons/Acre)			Dwelling Density (DU/Acre)		
	1970	1990	Change 70-90	1970	1990	Change 70-90
<2500	3.6	4.2	0.6	1.2	1.4	0.2
2500-4999	3.2	4.2	1.1	1.1	1.7	0.6
5000-9999	3.9	5.6	1.7	1.2	2.1	0.8
10000-19999	4.5	4.9	0.3	1.9	2.0	0.1
20000 or more	5.3	5.1	-0.2	1.8	2.0	0.2
Total	4.8	5.1	0.3	1.7	2.0	0.3

in persons per acre for 20 Oregon communities between 1970 and 1990. It indicates a 6% increase in population densities between 1970 and 1990. Several communities (Canby, Central Point, and Troutdale) had density increases in excess of 2 persons per acre, while others (Bend, McMinnville) had decreases. While population densities increased moderately, densities in dwelling units (DU) per acre increased by more than 26% from 1.8 DU/acre to 2.2 DU/acre. These figures include *all* acres within the city limit, not just acres in residential use.¹⁸

Besides losses to urban development, agricultural and forest lands also face pressure from urban residents who desire a rural lifestyle on large lots close to urban areas. Some of these residents have no desire to continue agricultural or forest operations on their lands, and some object to intensive agricultural and forest practices on nearby land. The impacts of such rural development include fragmentation of farm and forest tracts, and a low-density residential land use pattern that makes the provision of urban services expensive.

One measure of the proliferation of residential uses on resource lands is the amount of farm and forest land redesignated or zoned for other uses. Between 1987 and 1996, about 16,800 acres of agricultural land was rezoned to other non-resource uses. About 5,900 acres of forest land was rezoned to other non-resource uses during the same period.¹⁹ Such rezonings, however, do not necessarily mean that the land is taken out of agricultural production.

The US Department of Agriculture tracks the conversion of nonfederal resource lands to urban uses.²⁰ Between 1982 and 1992 over 150,000 acres of crop, pasture, range, and forest land were converted to urban uses in Oregon. But

other numbers give some perspective. That acreage amounted to just over 0.5% of the total acres of resource land in Oregon, and Oregon's percentage change was lower than any other western state. For prime soils, Oregon converted about 55,000 acres to urban uses during the same period, about 1.6% of the base: a lower percentage than most western states (except Idaho), but higher than the US average of 1.1% (during this period Oregon had to accommodate slightly greater population growth: 12% compared to 10% for the US as a whole).

Another measure of the impact is approvals of dwelling units on farm and forest lands.²¹ Dwelling units developed on farm lands are either classified as "farm" (i.e., the dwelling unit is directly related to the farm operation) or "non-farm." About 275 farm and 325 non-farm dwelling units were approved each year between 1987 and 1996. More than 700 dwelling units were approved each year between 1990 and 1996 on lands zoned for forest use.²² The rate of development for these dwellings on farm and forest land declined after tighter regulations in 1993/94.

As with other impacts, population growth in Oregon clearly contributes to changes in land uses (for good or ill), but its relative importance is hard to quantify. Even in the absence of population growth, economic and demographic changes will continue to increase demand for rural residential development. It seems likely, however, that without that growth Oregon land use law would not allow cities to justify amendments to UGBs (not just the modest ones that have occurred, but the larger ones that will occur to handle forecasted growth). Thus growth probably means that more resource land will change to urban uses.

Amenity

Access (transportation)

Between 1982 and 1995 in Oregon, population has grown 18%, the number of drivers licenses has grown 34%, real per-capita income has grown 26%, the number of registered vehicles has grown 35%, and the real price of gasoline has declined 39%.²³ All those factors increase travel: vehicle-miles traveled on arterials and collectors grew 59% during the same period. But the number of lane-miles on arterials and collectors in Oregon grew only 6%.²⁴ The result: more congestion.

As with other impacts, population growth is not the only cause of the problem. Real incomes, on average, have been increasing. That's a benefit of growth, but it also means that people spend more money on transportation. With the real price of gasoline decreasing, every dollar spent buys more miles on the road than it used to. The biggest congestion problem—freeway and major arterial travel in metropolitan areas—is largely a result of the fact that everyone with a car can access those roads at any time. For water, telephones, movies, and many other congestible goods, prices increase at peak times to ration access and avoid gridlock. Not so for transportation.

Whatever its causes, people perceive traffic congestion to be increasing, and the data support their perceptions. In a na-

Congestion creeps down I-5.

As the Portland region grows, development along I-5 is causing traffic congestion that is costing the state and local governments millions of dollars. In recent years, this problem has spread from Tualatin to Wilsonville and Woodburn.

Wilsonville's population more than doubled in the 1980s and increased another 50% between 1990 and 1996. Development around Wilsonville's two interchanges exploded, and the resulting traffic caused extreme traffic congestion conditions at the interchanges—by the mid-1990s, morning and afternoon traffic at Wilsonville exits had reached gridlock conditions. Current construction projects at these interchanges and on Wilsonville Road have a total cost of more than \$17 million, including \$8 million from the City of Wilsonville. Without funding from the City, the state would not have made these improvements for years.

Woodburn now faces the same situation—its population has grown 20% in the 1990s, and a significant amount of development has occurred around the I-5/Hwy 214 interchange. In addition, daily freeway traffic has increased by 50% between 1987 and 1997. The result is that afternoon traffic fills the I-5 off-ramps and backs up onto the freeway, and Hwy 214 is clogged for over a mile into Woodburn. Additional population growth and development, including a 232,000 sq. ft. factory outlet mall, threatens to make the situation worse. One proposed solution is to rebuild the I-5/Hwy 214 interchange at an estimated cost of \$10 million, which neither ODOT or the City can afford.

tional study of congestion in 1982, Portland was ranked as the 20th most congested metropolitan area in the country. By 1994 Portland's congestion index had risen by 27% and Portland was the 15th most congested metropolitan area.²⁵

More is lost to congestion than time: it takes a little bit of our sanity and humanity as well. Studies are hardly necessary to prove to most people what they have experienced first hand: driving has moved steadily from pleasurable to stressful. Fifteen years ago a trip from Eugene to Portland on I-5 was usually and mostly a trip on the open road; now it is trucks and tailgating, construction and congestion for the entire length. One reaction has become prevalent enough to get a name: *road rage*.

Any city with an expanding developed area is obviously going to need new highways and other transportation improvements. Highway planners generally agree that in areas of high demand

they cannot build enough roads at a reasonable cost to solve problems of congestion as long as access is priced as it is: more highway capacity eventually fills up, and any new capacity is more expensive and less effective than the capacity we already have. Though new construction is often preferred by local governments when the state is paying, planners and policy are increasingly focused on influencing the demand for travel and encouraging denser land uses to facilitate trips by means other than the single-occupant auto. But the evidence is strong that demand (behavior) will change little if the inducement is moral rather than monetary, and density could result in even more auto trips in the same area (even with improvements in other transportation options). Congestion is going to get worse.

A 1998 report by ODOT concludes that there will be no inexpensive or painless ways of avoiding significant congestion increases in the future. Over the next twenty years, Oregon's population is expected to increase by about 30%, which will lead to a 38% increase in travel miles. Even if metropolitan areas are successful in reducing travel miles per capita as called for in the Transportation Planning Rule, travel miles will still grow substantially. If pricing of highway travel does not change, increases in highway capacity will be needed to avoid growing congestion.²⁶

Transportation preservation and finance are other transportation problems. Here, as elsewhere, the effects of growth are ambiguous. Whether growth comes or not, existing highways and bridges have to be maintained. Most state and local studies conclude that the cost of needed preservation far outstrips identified funding. The chief source of revenue for preserving and expanding the transportation system is the gas tax, and increases in that tax have not kept pace with inflation.

Though highway transportation dominates concerns about growth, other modes get congested as well. Air travelers are united in their criticism of construction at the Portland airport, and the delays and inconvenience it causes. Population growth in Portland gets only part of the blame. Deregulation of the airline industry has allowed airlines more freedom to respond to market conditions, resulting in reduced levels of service and increased prices at smaller airports. For example, the Eugene Airport is served by only 3 airlines while Portland is served by 17 passenger airlines. A comparison of lowest round-trip airfares from Eugene and Portland show flights from Portland are consistently cheaper, averaging \$175 less than flights from Eugene for the same destination.²⁷ The Eugene Airport estimates 36% of passengers originating in their market area drive to Portland for lower airfares.²⁸ But the overall impact of deregulation and increased air travel out of Portland has been lower cost travel for airline passengers.

Housing

A previous section on costs of growth defined the principal focus of this section to be the costs of public facilities and who pays for them. There are good reasons, however, to be concerned about not just the cost of public facilities, but the total cost of housing. Minimum shelter and food are basic to any societally acceptable definition of quality of life, and together make up the bulk of expenditures by low-income families. As housing costs have risen in Oregon, the concern about housing has extended to middle-income families.

In 1990, about 12% of Oregon households fell below the federal poverty level. While this number has not changed significantly since 1990, other data paint a more grim pic-

ture of housing affordability. Housing is generally considered affordable if a household spends no more than 30% of their income on housing and utilities. Households that pay more than 30% of their income for housing and utilities are considered to experience “cost burden.” In 1996, 38% of Oregon homeowners experienced cost burden; this figure increases dramatically for renters—nearly 60% of renters experienced cost burden in 1996.²⁹

Housing prices and costs increase for many reasons, but all are fundamentally a result of the interplay of forces—both market and policy—affecting the supply of housing units and the demand for them. A recent study of housing development costs in Portland (White et. al. 1997) provides a good description of the components of housing cost and found that:³⁰

- When measured either per square foot or per person housed, the direct costs of single-family housing (i.e., the costs paid for in dollars by the developer of the housing) are less than those for multi-family housing. Compared to single-family costs per square foot, those for multi-family are almost 25% greater; those for mixed use are over 30% greater.
- When costs are measured per unit, the conclusion flips: single-family units costs are about 35% more than multi-family units (but only about 6% to 8% more than multiplexes (duplexes, quads) or mixed-use housing).

These findings provide yet another example of tradeoffs for public policy. If the objective is to provide some generic product called “shelter” at low cost, then denser, smaller units will do that, but households, if they have the means, will choose to purchase more than minimum space and quality: it’s worth it to them. If more square footage is what they want, then in many cases, it is cheaper to provide at lower densities in single-family units.³¹

“In 1996, 38% of Oregon households spent more than 30% of their income on housing and utilities.”

The Oregon Housing Affordability Study (in progress) is addressing state-wide housing issues.³² Some preliminary information documents rising housing costs in Oregon, both absolutely and relative to other regions:

- Since 1980, the housing price index has increased to 143% (using a 1980 base of 100%) in Oregon, compared to 114% nationwide, and 137% for Pacific states.
- The median sales price of homes “listed” in the Multiple Listing Service increased nearly 90% in Portland and 80% in Eugene/Springfield between 1990 and 1997. The national average increase was slightly less than 30%.
- The median sales price for all homes increased nearly 90% in the Portland PMSA, 84% in the Eugene PMSA, 79% in the Salem MSA, and 51% in the Medford MSA between 1991 and 1997. Median prices increased 27% nationally.
- The median sales price in 1997 was \$155,000 in the Portland PMSA, \$123,000 in the Eugene PMSA, \$119,000 in the Salem MSA, and \$199,000 in the Medford MSA between 1991 and 1997. The median price nationally was \$127,000.

The housing story gets told differently depending on the data cited. Clearly housing prices are rising in Oregon, especially in the metropolitan areas of the Willamette Valley. Eugene and Portland have made headlines in the last year as being among the top 10 least affordable housing markets in the nation. But Table 4-2 shows a picture: despite large increases in housing prices, the relative cost of housing in Portland and Eugene (as measured by cost-of living indices) are still below national averages. The forthcoming Housing Affordability Study may help resolve some of these issues.

Much of the debate in Oregon about growth and housing price centers on the effects of Urban Growth Boundaries on the prices. There is general agreement that prices have been rising faster in Oregon metropolitan areas than elsewhere in the nation. Advocates of tight UGBs blame rising demand; opponents blame lack of supply because of a government-induced scarcity of buildable land. Some middle ground is probably the right place to stand, since prices are determined by both supply and demand forces. Most detailed studies of UGBs find prices higher inside the boundary, though there is disagreement about the relative importance of the contributing causes.³³

Whatever the reasons for the increases in housing costs, state and local policymakers are concerned about it and trying to address it through many different policies: housing development corporations, preservation of affordable housing stock, fee waivers, and so on.³⁴

In addition to housing values, other aspects of housing in Oregon have changed since 1990. For example, legislation passed in 1991 requires cities to plan for manufactured housing as a “needed” housing type. Manufactured units now account for more than one-quarter of new housing units in some communities. Manufactured housing increasingly offers an affordable housing alternative to units built using conventional methods.

Homelessness is a growing problem in Oregon. The 1990 Census reported 2,977 homeless in Oregon. That figure, however, probably underestimated the extent of homelessness in Oregon. In 1993, a “One Night Shelter Count” showed a total of 5,196 persons, 2,077 adult males, 1,345 adult females, and 1,744 children applying for services that one night.³⁵

Culture

In most cases, the existence of cultural amenities is closely linked to population. Larger communities tend to have more cultural facilities such as museums, galleries, theaters, performing arts centers, and professional sport arenas, and more activities associated with those facilities. The largest concentration of these amenities exists in Portland and Oregon's other major urban areas (Eugene, Salem, Medford).

There is not much debate that bigger or higher quality facilities require more people to support them. Whereas for other impacts we have focused almost exclusively on residential population growth, the existence and quality of some cultural amenities depends on the growth of non-resident population—i.e., tourists—as well. Thus, Oregon has a diversity of cultural amenities not only in its metropolitan areas, but also in smaller places that can attract tourists: Ashland, Jacksonville, Newport, Hood River, and Bend.

Measuring the impact of growth on the amount and quality of cultural amenities is difficult.³⁶ But anecdotally, it seems logical to argue that cultural amenities are a benefit of growth (any negative impacts that result from the attraction of people and cars to those amenities are discussed under other headings in this section). The Ashland Shakespeare Festival, the Britt Festival, the Bach Festival, and others seem to get better over time, and their improvement is linked to the revenues they generate from growing. Portland in this decade makes everyone's "quality places" list, and the scope and quality of its cultural amenities contribute strongly to its rating.

For want of a better heading, one could also include in this category all the psychological benefits and costs that come with having more people in one place. Though the extrapolations from the density of rats in laboratory cages to urban popula-

tions have been discredited, most people's personal experience is that more people can occasionally cause stress. As a trivial but indicative example, Colorado's population boom required a shift to 10-digit phone numbers for local calls. The example also illustrates a recurrent theme: costs are usually accompanied by benefits, and vice versa. In Colorado, the telephone demand was less from new people than from fax machines, second phone lines, wireless phones, and pagers: all things that households and businesses find beneficial.

Shopping

Shopping is no longer an activity that fulfills peoples' daily needs—many people consider shopping a leisure activity. The evidence verifies what people already know: shopping and shopping opportunities have increased substantially over the past decades. To some extent, it is those shopping opportunities that define growth.

In 1987, 18,712 retail stores had sales of \$16.8 billion. In 1992, 19,561 retail stores had sales totaling \$24.2 billion, a 44% increase in total retail sales. For the same period paid employees (full- and part-time) engaged in retail trade increased 11%.³⁷

The growth of shopping opportunities is driven by growth in aggregate disposable income, which is a function of growth in both population and income. Inflation-adjusted per capita personal disposable income increased by 7% between 1990 and 1996. In 1996, Oregon had 473 shopping centers accounting for 54 million square feet of retail space. This represents a 4% increase in retail space from 1995.³⁸ In 1994, Oregon had more than 20,000 retail establishments that employed over 100,000 workers and generated \$3.7 billion in payroll.

More shopping opportunities, however, come at a cost. The advent of malls and discount retail stores make it easier for

people to get to a broader array of shopping opportunities, but profoundly impact downtown areas, local economies, and transportation patterns. Moreover, visual preference surveys have consistently found that people dislike the appearance of “big box” stores. While big box stores are flourishing, many residents lament the demise of downtown areas and the homogenization of retail opportunities. Communities have long sought approaches that ensure the continued success of downtown areas and independent local retailers. These efforts have met with mixed success.

Technology is also increasing shopping opportunities available to consumers. Mail order retailing increased by more than one-third between 1990 and 1994. Internet shopping is similar to mail order shopping in many respects. While providing more shopping opportunities, the Internet could also decrease demand for retail space and the amount of driving for retail purposes. Internet shopping clearly offers some convenience, but will probably not replace traditional shopping for many consumers as long as people perceive shopping to be as much a leisure activity as a way to meet daily needs.

The availability of health care facilities (doctors offices, hospitals) are another aspect of consumer choice. Growth allows economies of scale and scope: one typically finds more and higher quality health care options as concentrations of population increase.

With respect to this impact alone, growth is positive: it generally provides more choice of retail goods, easier access, and lower prices. In doing so, it imposes costs (transportation, land use, community values) that are discussed elsewhere in this report.

Education

Population growth has a direct impact on the need for educational services: more households mean, eventually, more stu-

dents.³⁹ Because the linkage is so strong, all Oregon school districts develop enrollment forecasts to assist in delivery of educational services. Between 1988 and 1997, population and school enrollment in Oregon grew at nearly the same rate, about 1.6 percent annually. Enrollment forecasts suggest this trend will continue at least through the 2001-02 academic year.⁴⁰

While enrollment has grown at about the same rate as population, the number of full-time equivalent (FTE) teachers decreased by nearly 1,800 (about 0.7% annually) between 1988 and 1997. As a result, the average student/teacher ratio (which is not the same as average class size) increased by over 13%, from 17.7 in 1988 to slightly over 20 in 1997.

School funding has been an issue in Oregon since the passage of Ballot Measure 5 in 1990, which limited property taxes collected for education to \$5 per \$1,000 of assessed valuation. As a result of Measure 5, Oregon shifted from a locally-funded system of public education to a state-funded system. Before the passage of Measure 5, 26% of the total budget for public schools came from the state; in 1997-98, nearly 59% came from the state. In 1997, Measure 50 further limited property taxes for schools.⁴¹ Despite these financial changes, on average, public schools in Oregon spent more on education every year between 1995 and 1998 (without adjusting for inflation), and more per student. At the same time, however, the ratio of students to schools and students to teachers both increased.⁴²

Related to funding problems (and ultimately to other issues about the impacts of growth on development patterns) are issues of school siting. The incentives are strong for school districts to site new schools at the urban periphery: land costs are lower, political problems are less (schools have become locally unwanted land uses), and the state picks up

70% of the transportation costs. To the extent that school districts opt for peripheral locations, they are inconsistent with a spate of state policy that encourages greater density of new development.

If the discussion of growth and education is limited to building new schools for new students, it is clear that communities that are growing very rapidly often have difficulty expanding educational facilities fast enough to accommodate growth. As a previous section showed, the costs of these facilities is substantial. But changes in technology and institutional arrangements may mitigate the need for more space for more students. Moreover, the quality of education depends on much more than facilities.

The Oregon Department of Education uses a number of standardized tests to evaluate education in the state. State tests are “criterion-referenced,” meaning student performance is evaluated by predetermined standards. Between the 1991-92 and 1996-97 academic years, statewide tests of 3rd, 5th, 8th, and 10th grade students showed improvements in math and reading, and held steady in reading. Class of 1997 graduates averaged the highest scores on the SAT exam since 1972.

There is a substantial literature on the measurement and evaluation of K-12 education. No one believes that standard test scores measure everything, or even that they do a complete job of measuring math and reading skills. Bigger budgets are no assurance of better education, but quality teachers are, and more money may attract and hold them. The connection between growth and the quality of education is too complex to put much faith in any correlations about the direction of the impact: it could be positive or negative.

Security

A basic need is to feel safe. Housing gives security from weather, health care from disease, seat belts and air bags from the worst consequences of traffic accidents. This section, however, focuses on security from crime.

Figure 4-11 shows Oregon’s total crime rate has fluctuated widely over the past twenty years. In contrast, the U.S. total crime rate grew slowly between 1984 and 1991, and has since declined. Oregon’s crime rate has been higher than the U.S. for most of the years shown in Figure 4-11. According to the Oregon State Police, crime is concentrated in Portland, Salem, and Eugene—these cities have 24% of Oregon’s population but reported 32% of total crimes in 1994.

People are increasingly concerned about crime, sometimes despite falling crime rates. In Oregon, this increasing concern led to passage of several anti-crime initiatives by Oregon voters, including Measure 11 in 1994 which established mandatory minimum sentences for specified crimes. The result of Measure 11 and other crime measures has been a prison population that is increasing at a faster rate than total population—in the 1995–2005 period, Oregon’s population is projected to grow at an annual average rate of 1.4%, while prison population is projected to grow at an average of 5.2% per year. Figure 4-12 shows Oregon’s prison population since 1985, with a forecast through 2008.

Figure 4-11: Oregon’s crime rate has fluctuated widely

Source: U.S. Federal Bureau of Investigations, annual. *Crime in the United States*.

The evidence in Oregon suggests there is not a link between population growth and reported crime rates—Figure 4-11 shows that Oregon’s crime rate has fluctuated widely over the past twenty years, while population has grown steadily over this period. But state level data may mask strong associations at a local level. Obviously there are more felonies committed in Portland than in Corvallis: the more interesting question is whether there is statistical evidence or a perception that one is more likely to be a victim of a crime in one place or the other.

Whether supported by data or not, it is clear that many people act on their perception that denser urban areas are less safe. “Gated communities” surrounded by security walls are appearing more in Oregon. Concerns about security are also being addressed in designs for new development. Designing “defensible space” is particularly important for multi-family and neotraditional single-family development, because security

concerns are often a criticism of high-density development.

As with other issues, it may not be growth itself that creates less security. In the larger picture, the unique impact of population growth is probably small compared to the socioeconomic and demographic characteristics of that population, changing societal values, school funding, state policies and budgets for crime prevention and criminal justice.

Recreation

Oregon has long held a reputation as a recreation destination. More than half of the land in Oregon is in public ownership, and 90% of public lands in Oregon are held by the U.S. Forest Service or the Bureau of Land Management. In addition to federal lands, Oregon has a nationally-recognized state parks system. Moreover, most communities and counties have parks systems.

Population growth increases demand for recreational facilities and opportunities. The State Parks Department and most communities use standards to determine how much and what type of recreational facilities to develop. While these standards vary, many communities have a difficult time meeting these standards. Without developing new facilities, more people will compete for the same facilities leading to inevitable conflicts. Moreover, many communities and agencies are finding it difficult to garner public support for parks funding.

The Oregon state parks system provides an excellent example. The Oregon state parks system, established in 1913, presently has more than 200 properties. In 1995, state parks had 92,000 acres, more than 41 million visits, and over \$11 million in revenues.

In 1980, voters passed an initiative prohibiting use of gas tax money for parks. State park user fees, federal funds, recreational vehicle registration fees, and a small part of the state general fund shouldered the burden of funding parks. As a result, few additions have been made to the state system since 1980; the State Parks Department has had difficulty maintaining the system. In 1996, the state Parks and Recreation Commission ordered the closure of 65 parks, a resolution that was staved off by a last-minute budget fix. The future of the state parks system, however, remains uncertain because of ongoing budget problems.

Communities are using a variety of approaches to address park and recreation needs. Some communities have moved towards privatizing many recreational programs. Many have adopted exactions and systems development charges to help provide land and fund park development and maintenance. Others have decreased the level of service, cutting programs, or decreasing maintenance. Land management agencies have initiated pilot fee projects that require users to pay fees for trail access and entrance to many recreational sites.

Population growth has direct impacts on parks: more people want to use them. But other factors contribute substantially. Incomes have risen: people have leisure time and money to spend on outdoor technology: RVs, boats, jet skis. Travel books, tourist brochures, and the internet get more and more information out about Oregon's "best places"—local knowledge is no longer a price of admission. A recent newspaper article commented on increased conflicts for surfing spots in California that resulted from Internet posting about little-known spots and optimal conditions. The only ways that highly desirable recreation locations can be preserved in the face of this rising demand is with regulation (of time and type of use), pricing, or additional funding to expand their capacity to handle the demand.

Cost of living

Prices for consumer goods have been generally increasing in the U.S. and Oregon since the Great Depression. National inflation rates were historically high (for the U.S.) in the 1970s but have since declined to levels of 2–3% per year in the 1990s. Prices in the Portland-Vancouver area have grown slightly faster than the U.S. average in most years since 1970. Figure 4-13 shows, for example, between 1990 and 1997 consumer prices grew at an average annual rate of 3.7% in Portland-Vancouver compared to the U.S. average of 3.0%.

Figure 4-13: Consumer prices have grown faster in Portland-Vancouver than in the U.S.

Source: U.S. Department of Labor, Bureau of Labor Statistics. Annual. "Consumer Price Indexes for All Urban Consumers." Monthly Labor Review. January.

While overall price levels are increasing, the prices of some goods are declining. For example, the prices of electronic goods such as computers, stereos, and televisions have declined because of technological innovations in the manufacturing process, and the real (inflation-adjusted) price of gasoline is currently lower than it has been since the late 1950s due to worldwide market conditions. These trends are true for the U.S. and Portland-Vancouver area.

However, the Consumer Price Index indicates that prices in general have increased faster in Portland than in the U.S., and the result is that the cost of living in Oregon is slightly higher than the U.S. average. Table 4-2 shows a cost of living index for Oregon cities in 1996, where the U.S. average is 100. This index is designed to represent the cost of living for persons

employed in mid-management occupations. The composite index shows the cost of living in Oregon cities is 6%–9% higher than the U.S. average. The indexes for components of cost of living show Oregon cities are more expensive for utilities, transportation, and health care, and less expensive for groceries. The results for housing are mixed, with Salem more expensive and other Oregon cities less expensive than the U.S. average.⁴³

Chapter 2 explained the expected relationship between growth and cost of living: cost of living is a measure of how prices bring the relative attractiveness of a region back into equilibrium with other regions. Thus, if growth in Oregon does cause many aspects of quality of life to deteriorate, one should expect to see cost of living in Oregon decrease relative to other regions whose quality of life is not deteriorating.

An identification and description of key impacts of growth does not lead to clear conclusions about the net impacts of growth

Chapter 1 notes that this report is not intended to determine whether growth is good or bad for Oregon and its communities. Even if this report does an adequate job of describing

types of impacts on a statewide level, it does not begin to cover the ways people in different circumstances are impacted by various aspects of growth. People do not share in the benefits and costs equally. Even if the ideal data were available (per Figure 2-4, information on all types of impacts, on all types of people, in all different locations, for all time periods), those data do not lead inevitably to a conclusion about the net impacts of growth: such a conclusion requires assumptions and value judgments. Chapters 2 and 4 have provided more detail on the reasons for that conclusion.

Nonetheless, it is not likely that people who care about growth issues in Oregon will reach the end of this chapter without some conclusions about the desirability of growth in Oregon. Those conclusions will imply a direction for public policy about growth: to encourage, discourage, or manage it. But a decision about specific policies requires an understanding of what they are, how they influence growth and its impacts, and what other impacts (usually costs) they themselves have. Chapter 5 attempts to make some progress toward that understanding.

Table 4-2: Oregon’s Cost of Living is Higher Than the U.S. Average

City	Composite	Groceries	Housing	Utilities	Transportation	Health Care
Eugene	108.3	93.4	73.6	105.0	115.7	104.1
Portland	109.1	99.7	89.2	112.8	124.0	104.1
Salem	106.0	95.1	103.6	108.4	124.9	101.8

Chapter 5

Tools for Growth Management

SUMMARY

The report uses “tools” or “policies” generally to mean any legislation, administrative rules, programs, investments, or other actions by some unit of government that affect the way growth occurs. Those policies may affect growth directly (e.g., a limitation on building permits) or indirectly (e.g., by requiring pollution control devices that increase costs of new business development and, thus, reduce the amount of new development, at least in the short run).

Growth management tools can be categorized in many different ways. The categorization used in this report is based on the question: What aspects of growth can public policy influence? (which, in turn, may affect the amount, location, and type of growth itself).

With the exception of policies that allow state or local governments to place direct limits on natural increase or migration, governments in Oregon have about every type of tool that has been tried anywhere in the country to manage growth. They address land use or intensity, design, public facilities, other aspects of environmental quality, other fees, taxes and incentives; and the process of how decisions are made. Any community that can get an agreement on how much and what type of growth is desirable can assemble a consistent package of tools to encourage or discourage growth, and to shape its form, provided, of course, that it can convince its citizens (or others: state and federal agencies, developers) to pay for the form they want.

Nonetheless, there are actions that the state could take that would allow or encourage local governments to address growth issues more thoroughly. They include policies to revise tax codes, add local flexibility, and create new funding sources or increase state funding to local government.

This chapter and the previous one make it clear that there is no single package of growth management tools that will be right for every jurisdiction. Communities differ in many ways (size, location, socioeconomic characteristics and desires of citizens, to name a few), and those differences will lead to differ-

ent opinions about the amount and type of growth that is desirable, and what constitutes a fair way to pay for that growth. Despite differences in desired results, the process for agreeing on growth policies is likely to be similar across jurisdictions. It will have to include some level of public debate that considers, among other things, alternative futures; full benefits and costs, and who they fall on; tradeoffs; and state requirements and regional implications.

In this report, “tools for growth management” means the policies currently or potentially available to state and local governments in Oregon to change the way growth occurs. The report uses “policies” generally to mean any legislation, administrative rules, programs, investments, or other actions by some unit of government that affect the way growth occurs. Those policies may affect growth directly (e.g., a limitation on building permits) or indirectly (e.g., by requiring pollution control devices that increase costs of new business development and, thus, reduce the amount of new development, at least in the short run).

As Chapter 2 noted, a broad definition of growth and its impacts leads to a broad definition of growth management tools—a majority of government policies in land use, economic development, and public facilities address some aspect of quality of life (welfare) that growth influences.¹ Those policies vary along at least three key dimensions:

- *Amount of regulation.* Least flexible are regulatory policies that say “You must do this” (e.g., you must hook-up to municipal water and wastewater lines to develop in some urban growth boundary). Slightly more flexible are regulations that say “You must not do this” (e.g., you must not have more than eight units per acre in some residential zone, but if you want less we won’t stop you). Even more

flexible are performance standards (e.g., for storm water, you can build what you want as long you don't increase downstream flows by more than 5%).

- *Amount of incentive.* The flip-side of regulation is incentive: instead of prohibiting what is not desired, policies encourage what is desired. Incentives usually take the form of cost reductions (e.g., tax abatement to encourage chip manufacturers to build and bring jobs to a city) or regulatory reductions (e.g., if you build this way, you can have more density than the underlying zoning allows).
- *Amount of pricing.* Pricing overlaps with regulation and incentives. Parents regulate when they tell a child “Mow the lawn”; they use incentives when they say “I’ll give you \$2 if you mow the lawn”; they use pricing when they say “Your weekly allowance will be reduced by \$1 per day until the lawn is mowed.” Pricing is used commonly and crudely in some policies (e.g., sewer and water hook-up fees); more sophisticated applications are usually suggested by economists, and occasionally applied (e.g., emission fees for pollution, pricing (tolls) by time and location for transportation).

Growth management tools can be categorized in many different ways

Defining growth management as government action that affects quality of life is too broad. For this report, we use a narrower definition: growth management tools are any plans, policies, ordinances, programs, investments, or other actions that seek to influence, directly or indirectly, the rate, amount, type, location, or quality of future development in a jurisdiction.

Even with this narrower definition, the literature on growth management covers dozens of tools that have been applied with varying levels of success.² A comprehensive review of those tools is beyond the scope of this report: this chapter provides an overview only. For such an overview to cover the range of potential tools, some type of classification system is required. Several systems are possible:

- *By type of impact.* Tools are commonly classified by impacts on (i.e., the growth of or changes in) things like population, housing units, industrial and commercial development, jobs, environmental quality, public facility and services, or community character and livability. Chapters 2 and 4 of this report use a similar classification system.
- *By part of the physical environment affected.* Various growth management tools target different parts of the physical environment. Some tools are designed to protect the natural environment (i.e., wetlands, air quality, soil erosion, agricultural lands), while others specifically target the built environment (i.e., design standards, infill and redevelopment policies). Some, such as urban growth boundaries affect both natural and built environments by determining where growth will occur. This type of organization would presumably have to have additional categories for non-physical effects (e.g., on the economic and social environments).
- *By jurisdictional level.* Tools exist at the federal, state, and local levels. The Environmental Protection Agency air quality standards are federal standards that must be implemented by local jurisdictions. Oregon’s statewide land use planning system contains numerous growth

management policies. Local jurisdictions can adopt and implement a broad range of growth management tools.

- *By location of growth.* Different tools get applied where growth is desired (e.g., in urban areas; in higher density areas) than where growth is not desired (e.g., farm and forest land). Tools for suburban areas may be different from those for central cities, tools for large cities different from those for small cities.
- *By type and degree of government intervention.* Most growth management tools rely on one or a combination of approaches: regulations, incentives, and pricing.

Moreover, growth crosses many boundaries and is crossed by many considerations. A tool that addresses land use impacts may also affect economic development and the environment. Tools regarding where services will be provided may also affect their costs. Financing cuts across all aspects of the growth and development process.

In short, there is no professional agreement on a classification system for growth management tools. Each study is free to invent its own, as this one does. The following system is similar to ones that organize by impacts of growth. It is based on the question: *What aspects of growth can public policy influence?* (which, in turn, may affect the amount, location, and type of growth itself). Growth may be limited directly (the first category), or it may be managed in a way that it is accommodated while its negative impacts are mitigated (the rest of the categories).³ Public policy can aim to affect:

- *The amount of population, employment, or built space.* Growth management tools can try to limit directly growth itself (as defined in this study, growth means more

population, employment, or development). Examples include moratoriums on residential building permits or sewer hookups, or caps on commercial square footage.

- *Land use or intensity.* Tools that regulate the location, type, and intensity of land uses are in common use: they can be found in virtually any municipal zoning ordinance. Most zoning ordinances divide a city into districts; each district has specific requirements that define the permitted uses of land and buildings, the height and size of buildings, the supply of parking spaces, and other characteristics of development.
- *Design.* Two developments that have the same location, types of use, and density can look and operate quite differently: design matters. Examples of growth management tools addressing design include design standards or review boards, landscaping buffers, and tree conservation requirements.
- *Public facilities.* Public facilities allow growth, mitigate its impacts, and provide amenity. The impacts of growth frequently manifest themselves first through inadequate infrastructure: traffic congestion, overcrowded schools, inadequate sewer treatment facilities, or inadequate water supplies are a few examples. Managing infrastructure has obvious linkages to location of growth, environmental quality, and financing.

Examples of public facility tools include concurrency requirements (i.e., requirements that adequate levels of on-site and off-site public facilities be provided at the same time as buildings are constructed), capital improvement plans, and facility performance standards.

- *Other aspects of environmental quality.* Growth management tools also address a variety of environmental quality issues. Many tools applied at the local level are in response to federal or state standards (e.g., for water or air quality, wetlands). Federal and state requirements, however, are not the only reason that communities adopt such tools. Environmental quality is inextricably linked to people's perception of quality of life. Communities have applied a variety of tools to address environmental quality such as open space requirements, wetlands preservation, riparian buffers, and cluster development
- *Other fees, taxes, and incentives.* Jurisdictions are increasingly searching for fiscal tools to better link the cost of providing public services for individual developments to those who directly benefit from those developments. Such tools include system development charges, exactions (i.e., fees or in-kind contributions exacted as a condition of development), special taxing districts, and tax increment financing. Other incentives include write-down on land and service costs, tax and fee abatement, and the use of municipal financing authority to lower private development costs.
- *The process of how decisions about growth are made.* Tools in this category include institutional change (e.g., enabling or encouraging regional government or regional problem solving), better public involvement and representation

(e.g., on annexation and development issues just outside city limits), mediation, and education.

The categories above underscore the inter-relationships and multiple objectives that characterize most growth management tools. The overlaps that exist among the categories create difficulty in defining a system that allows tools to be classified in mutually exclusive categories. The classification system used in the next section suffers from these same limitations, but is consistent with the system described above.

State and local governments already use many tools to manage growth

Tools that regulate various aspects of the built environment have been applied in U.S. communities for decades. Traditional planning tools such as zoning have been widely applied in U.S. communities since the 1930s. The concept of "growth management" emerged in the late 1960s with national interest in environmental protection at that time. In concept, "growth management tools" can either discourage or encourage growth: policies to encourage economic development are growth management tools under this broad definition. In practice, most growth management tools aim generally to accommodate growth while mitigating its negative impacts.

A comprehensive discussion and evaluation of growth management tools is beyond the scope of this study and readily available in the literature on growth management.⁴ Table 5-1 gives some examples of typical tools organized by the aspect of growth they try to affect (as outlined in the previous section). It briefly describes what advocates of a particular tool hope it will achieve, and the aspect of quality of life most likely to be affected by the application of the tool.

The Oregon statewide planning goals, and the administrative rules that define and implement them, are the foundation for most city and county growth management policies. They all develop comprehensive land use plans and implementing ordinances. Communities over 2,500 must have capital improvement plans and transportation system plans. All cities must have Urban Growth Boundaries that provide a 20-year supply of buildable land.

Many Oregon communities use tools beyond those required by statewide planning statutes. Many have system development charges for some public facilities, level-of-service standards, or design review. Few have used minimum density requirements, building caps, urban service boundaries, focused public investment plans, or transfer of development rights.

Many studies have addressed the effectiveness of growth management policies in Oregon.⁵ They find the following patterns of development in various parts of the state:

- Development at densities lower than planned
- Leapfrog and dispersed development in urbanizable areas
- Inconsistent development charges, impact fees, and other exactions across jurisdictions
- Overburdened public facilities, and development in areas lacking the full range of urban services
- Lot and building designs that discourage future redevelopment at higher intensities
- Less than planned amounts of infill development and redevelopment of decaying areas
- Less-than-planned amounts of development that allows and encourages trips other than by single-occupant vehicles.

Table 5-1: Many types of policies are used by or available to local governments in Oregon. Some examples...

Aspect of growth the tools affect/tools	Assumptions about the beneficial impacts of the tool (assuming efficient implementation)	Aspect of quality of life affected	
		Primary	Secondary
Amount of Growth			
Building Caps	Growth, after some point, is not beneficial: its net negative impacts either cannot or will not be controlled by other policies	EQ	A
Employment Limits		EQ	A
Economic Development	Diversifies economic base; increases employment	EW	
Land Use/Intensity			
Community Planning; Visioning	(Includes public involvement) Improves all aspects of quality of life	EQ/A/EW	-
Zoning (traditional)	Preserves amenity; reduces cost of conflict and spillovers. Incentive if upzoning.	A	-
Zoning (minimum density)	More efficient use of public infrastructure.	EQ	
UGB/Annexation Policies	Preserves farmland; encourages efficient provision of services	EQ	A
Building Caps	Reduces growth and all the presumed net negative impacts connected with it	EQ	A
Development Plans	Amenity; environmental protection; more efficient use of services	A/EQ	-
Transfer of Development Rights	Preserves farmland, open space, and natural areas by creating marketable rights	A/EQ	-
Greenspace Acquisition	Preserves farmland, open space, and natural areas by buying them	A	EQ
Development Permits	Ensures plans and standards get implemented	EQ	A
Design			
Design Review	Preserves amenity; potential protection to natural systems	A	EQ
Design Overlay Zones	Same	A	EQ
Performance Standards	Same	A	EQ
Public Facilities			
Level of Service Standards	Maintains health and safety; preserves amenity and environmental quality	A/EQ	-
Service Extension Limits	Reduces the amount and spread of growth	EQ	-
Capital Improvement Plan	Defines the location and timing of public facilities and services	EQ	EW
Focused Public Investment	More efficient use (and therefore lower cost) of public facilities and services	EW/EQ	-
System Development Charges	Growth pays greater share of cost: more efficiency and equity; less growth and fewer impacts	EW/EQ	-
Hookup Charges	Same	EW/EQ	-
User Fees	Same	EW/EQ	-
Other Environmental Quality			
Emission Regulation	Maintains health and safety; preserves amenity and environmental quality	EW/A	-
Emission Fees	Same	EW/A	-
Other Fees and Taxes			
Site Value Tax	Shift of tax to land encourages density and efficient use; equity	EW	-
Tax Increment Financing	Encourages growth, and in places deemed desirable	A	-
Federal Grants	More money to accommodate or control growth	A/EQ/EW	-
Process			
Public Involvement	Leads to better decisions, consensus, or at least partial agreement on approach	A/EQ/EW	-
Education	Provides citizens and policy makers with information, which leads to better decisions	A/EQ/EW	-
Mediation	Avoids litigation	A/EQ/EW	

Recent state and local efforts related to growth management

DLCD case studies on growth outside and inside UGBs

TGM funded research: many local studies; statewide study on growth management tools (*Tools of Trade*) and Adequate Public Facility Requirements

ISTEA: federal mandate and funding for integrated planning

Transportation Planning Rule: state mandate for integrating land use and transportation

DLCD periodic review: TSPs; buildable lands; consistency of local plans with regional growth forecasts

Regional problem solving: e.g., Deschutes, Clatsop, Metro 2040

Eugene Growth Mangement Study: multi-year effort to define a future development pattern

Community Solutions Team; Integration Task Force

Quality Communities (Governor's Executive Order 97-22) Quality Development Objectives

Willamette Valley Liveability Forum

Willamette Basin Commission

EPA: Pacific Northwest Consortium: ecological model for Willamette Basin

ODOT's Strategy for Integrating Transportation/Land Use

ODOT statewide model: transportation, economics, land

Oregon Transportation Plan, corridor plans, and Area Commissions (J-PACT, MWACT, RVACT)

EDD's new Directions in Economic and Community Development

Oregon Housing Affordability Study

"New Directions" for economic and community development

State and local governments have begun to respond to these and other findings about the patterns and impacts of development. By the mid-1980s many parts of Oregon had crawled out of a five-year economic slump and have been growing ever since. By 1990 some of the negative impacts of that economic growth were being felt, especially in areas with high growth rates. New ways of managing those impacts were explored (e.g., the transportation planning rule, minimum density zoning, specific location plans, intergovernmental agreements, specific development plans, and a number of other tools).⁶ The emphasis of current policy with respect to reducing, controlling, or encouraging growth is definitely influenced by prevailing economic conditions.

Ten years of a growing economy have enabled Oregon's communities to focus on tools to manage the impacts of the development that is a manifestation of economic growth. Institutional mechanisms have also improved for coordinating policy among the five

state agencies with primary responsibilities for managing growth in Oregon.

In 1995 Governor Kitzhaber established the Community Solutions Team, composed of the directors of the five state agencies that have the most direct effect on the physical development of communities (the Departments of Land Conservation and Development, Transportation, Environmental Quality, Housing and Community Services, and Economic Development). He charged the group with integrating investments and coordinating programs in order to be more effective at solving local and regional community development problems. A sidebar shows some of the new efforts related to growth management.

Some additional tools might be helpful

With the exception of policies that allow state or local governments to place direct limits on natural increase or migration, governments in Oregon have about every type of tool that has been tried anywhere in the country to manage growth. In most cases growth management is not a lack of policy tools, but a lack of agreement within a community about which ones to pick up and how hard to swing them. Any community that can get an agreement on how much and what type of growth is desirable can assemble a consistent package of tools to encourage or discourage growth, and to shape its form provided, of course, that it can convince its citizens (or others: state and federal agencies, developers) to pay for the form they want.

Such agreement, of course, is difficult for the reason already described in this report: different people, different goals, facing different impacts. People and groups argue strongly at both the state and local level for different policies. The result is often a policy to please each interest, which collectively results

in little change to the trajectory of public policy. Significant increases or decreases in growth or any of its impacts require complementary, not offsetting, policies.

That said, there are certainly actions that the state *could* take that would allow or encourage local governments to address growth issues more thoroughly. Following are some possibilities (these are *not* necessarily recommendations of the Task Force, which are contained in Chapter 6):

- State legislation could be adopted to allow System Development Charges (SDCs) for schools, electricity, fire and emergency services, police.
- The State could revise its tax structure. Many possibilities exist; here are a few examples. A shift to a sales tax would probably reduce Oregon's relative advantage for retail and disadvantage for residential property tax and influence the type of land development on both sides of the Oregon/Washington border. Reducing or eliminating current tax deferral on farmland inside UGBs would encourage development. Economists have long argued that a property tax on land, rather than land and improvements, is more efficient, less distorting, and would encourage greater density of development in urban areas.
- The State could allow more flexibility for local solutions. This suggestion can be interpreted in different ways. First, for reasons noted, local governments already have flexibility: within the context of state and federal mandates, they still have substantial room to either encourage or discourage growth, or to require mitigation of its impacts. Thus, more flexibility would mean going even farther toward local decision. Second, it may mean that local governments are willing to meet mandated

federal and state performance standards, but they want to be able to implement creative local solutions in place of standard ones that the mandates require. That seems a reasonable request: if objectives can be achieved more efficiently, provide the flexibility to allow it to happen. Third, it may mean that local governments want relief not only from the means prescribed by the federal and state mandates, but from the ends as well. For example, some counties would like more flexibility to choose a future growth forecast to plan for, rather than having to use the forecasts of the state economist. The state could go even farther: it could allow jurisdictions the flexibility to grow less by repealing requirements for a 20-year supply of land and removing limitations on moratoria.

- State funding to local governments could be increased, or new local funding mechanisms authorized. Though local governments may have the legal authority for growth management actions, and may desire to mitigate some of the negative impacts of growth, they may lack the money to undertake them. One might argue that they have the authority to raise the money locally, and that local revenue generation would be consistent with getting growth to pay its full costs. Alternatively, one could argue an overriding state interest in local growth management makes state funding desirable. Funding for economic development, infrastructure, and intergovernmental coordination would be useful to local governments.

Some tools require big action at the state level: changing the tax structure would require legislative action *and* widespread public support. Others, such as expanding SDC legislation to allow charges for new schools would require legislative approval but probably would find public support. But many of the things

“Local governments in Oregon have many tools they can use to influence the amount, type, location, rate, and design of growth. Nonetheless, the state could adopt policies that would allow or encourage local governments to address growth issues more thoroughly.”

that have been suggested during this project can be done without new legislation: for example, DEQ can raise emission fees, special districts can raise fees based on new estimates of full costs of service, local governments can offer and rescind tax incentives or shift toward performance zoning.⁷

To what degree can these tools be expected to address some of the big issues about growth?

Community growth management programs employ a combination of the tools discussed in the previous section. But do these programs—these collections of tools—do a good job of addressing the aspects of growth that people are concerned about? Public testimony and Task Force discussion raised dozens of questions about growth during this study. Each of these questions could have been the topic of a separate study, or at least a separate chapter. The rest of this chapter addresses a few of the more general ones to provide a sense of the ability of growth management tools to deal with the negative impacts of growth.

Can we grow less?

At the *state* level, a review of the components of population growth provides some insight into this issue: nearly one-third of the state's forecast population growth over the next 20 years will come from natural increase. In other words, even if Oregon were to close its boundaries to migration, population would still increase unless people move out.

Given the likely range of policies that fit with the likely local authority and political will of state decisionmakers, the state can probably reduce population growth, but cannot eliminate it. If one takes statewide growth as a given, at least in the short run, a relevant question plays out at the local level: Can some communities in Oregon grow less? Theoretically, communi-

ties could adopt policies that would strictly limit the expansion of urban services, and as a result growth. Oregon's land use program, however, requires UGBs to contain a 20-year supply of land:⁸ they must accommodate forecasted growth. (Their lever for slowing growth is to forecast less of it, which would need to be justified by growth-reducing land use and infrastructure policies that they intend to adopt.) Moreover, if the restrictive policies achieve a desired end of making one community more attractive than the alternatives, the pressure for growth will increase, and so may growth in the long run.

Within a region, it is almost certainly possible to redistribute growth—ideally from communities that don't want it to those that do. In the Portland region, with multiple cities and counties offering different mixes of service and policies, growth can shift. Shifts *across* regions (e.g., Western to Eastern Oregon) are discussed in the next section.

Finally, note that at some level it has to be the case that we can use public policy to get less growth if we believe that we can use public policy to get more growth. State and local governments now have in place tools to encourage some types of economic development. If they have any affect, then eliminating them would lead to less growth. Similarly, they have policies that, while not necessarily aimed at this goal directly, have the secondary impact (at least in the short run) of reducing growth (e.g., regulatory environmental protection that may increase the cost of development). Changing those policies could increase growth if that were desired.

In sum, the range of policies that are typically described for managing growth can probably not make Oregon grow at 10% per year any more than they can make it grow at 0%. It takes national economic conditions to make that happen: policies

over which Oregon policy has little control. Oregon can, however, adopt policies that make its expected long-run population growth rate of 1.9% per year move a little in either direction. At the local level, more significant changes are possible.

Can we redirect growth from one part of the state to another?

For every period in Oregon's history, the majority of its growth has occurred in the Willamette Valley. If, as some people believe, the negative impacts of growth now outweigh its benefits in the Willamette Valley, and if other parts of the state want growth, then a reasonable question is whether a combination of state and local policies can redirect growth from one part of the state to another.

A study for the Puget Sound Council of Governments (ECONorthwest 1990) found that neither state nor local governments had made concerted efforts to redistribute growth from one region to another. Moreover, not only had they not tried, none had wanted to. While the effort to redistribute growth may have few precedents, the literature offers empirical and theoretical insights on the issue. If citizens of a region *want* to slow economic and population growth, they can do it through intelligent design and aggressive implementation of state and local policies.

The growth foregone in metropolitan areas of the Willamette Valley, however, will not necessarily redistribute itself to other parts of the state. Part of the foregone growth would not occur at all. The other part would be much more likely to occur in other urban centers along I-5 (e.g., Seattle, Vancouver (BC) with possible spillover to Vancouver (WA), Sacramento, San Francisco, or Los Angeles) than in Klamath Falls, Ontario, or Pendleton.

The reasons are straightforward. Portland's economy—both its size and composition—is not simply a larger version of Pendleton's economy. It more closely resembles Seattle. Those resemblances are not limited to geography and topography. For example, Portland provides specialized cultural, legal, medical, and financial services that are not available in Pendleton. The firms and households that will make up Portland's expected growth through 2020 will make their decisions based on their own evaluations of the advantages and disadvantages of Portland's scale, complexity, and location. If they are denied them in Portland, they will find them in Seattle, Vancouver (BC), or San Francisco sooner and at less cost than they will find them in Pendleton.

The idea that we are redistributing some given population of new households and jobs is not the right way to think about the issue. There is a link between the urban and rural, western and eastern, economies of Oregon, but it is more likely to be complementary than offsetting: eastern Oregon is more likely to grow if the Portland economy does also.⁹

Thus, it is probably best for the purposes of this policy question to think about different regions in the state; the answer is then more clear. Some regions (*or communities within regions*) can adopt policies that encourage growth while others adopt

policies whose effects, at least in the short run, are to slow it down. The result of those policies will look like a redistribution of the growth that had been forecast, but will, in fact, be composed of different households and firms than would have existed in the absence of those policies.

Can we grow smarter?

If growth is going to occur, can policies mitigate its negative impacts? In general, yes: most of the policies in Table 5-1 have that objective and can have that effect. More specifically, considerable work has been done nationally and in Oregon on ways communities can grow “smarter.” Smart growth initiatives typically aim to direct resources to revitalize older developed areas, preserve valuable resource and open space lands,

and discourage the continuation of urban sprawl.

Table 5-1 shows examples of policies that can do all those things. Smart growth initiatives are closely related to growth management programs—so closely that it is hard to distinguish how policies for smart development would differ from those for good growth management. Both attempt to balance economic development with impacts on communities and the environment. Both use many of the same planning and fiscal tools.

At least a dozen states are presently considering or have adopted smart growth initiatives. In Oregon, the Transportation and Growth Management Program initiated a “Smart Development” program to provide grants to communities to help develop and enhance more livable environments.¹⁰ In keeping with the theme of this chapter is the question of net impacts: is this mitigation of the negative impacts of growth enough to justify a continuation of other policies that allow us to enjoy the benefits of growth like economic security, consumer goods, and urban amenities? There is no neat quantitative answer to that question: unanimous agreement at the local or state level is impossible.

Can we change the incidence of cost?

A broad range of cost-recovery techniques are available to local governments to pay for public services associated with growth. Communities may, and do, take different approaches to paying for growth; approaches that presumably reflect a community consensus on who should pay for what and when. Those approaches, implicitly or explicitly, are the local decision about what is a fair incidence of cost. Thus, communities clearly have the ability to shift the incidence of cost to one group or another.

Financial tools such as exactions, system development charges, and hookup fees place the initial incidence of cost on developers. Most of those costs, in most cases, are ultimately passed on to the consumers of the development: some may be shifted back to landowners; almost none stay with a developer or builder.

A change in government policy almost always has a redistributive effect: it benefits and burdens some people more than others. More important than an answer to the general questions about whether growth management policies can affect the incidence of cost (yes, they can and almost always will), are answers to the more specific

Smart Development

Uses land and resources efficiently—Smart development is compact and reuses existing sites and buildings wherever possible.

Is located in cities or areas with full urban services—Smart development supports existing development or creates centers of new development to make the fullest use of existing services.

Mixes Uses— Smart development combines many activities, including commercial, retail, education and recreation, with housing. This allows people to take care of much daily need without driving, and creates a lively and safe environment in the community.

Encourages transportation choices— Smart development connects a community’s existing network of walkways, bicycle paths and streets and provides direct routes to housing, employment, commercial services, schools, parks and public transportation, if available.

Uses detailed, human-scale design—Smart development is designed to the scale and comfort of people, and uses locally-appropriate design to reinforce a community’s identity and heritage.

Smart Development Principles developed by TGM in cooperation with Livable Oregon.

questions about the incidence of costs and benefits from the application of a specific policy in a specific location. A previous section of this chapter provided some information on that topic, but an evaluation of the distribution of costs of all policies or combinations of policies is beyond the scope of this study.

Can we deal with regional problems?

Few of the impacts of growth tie closely to political boundaries like city limits and county lines. One jurisdiction's growth can have an impact on another that is downstream, downwind, or down the street. Eugene, at the southern end of a Valley with northwest prevailing winds, suffers from the effects of field burning in other counties. An arterial built by one jurisdiction may have its excess capacity consumed by growth in another.

The economist's solution to the problem of spillovers is to "internalize the external costs." One way to do that is with prices. If air pollution from motor vehicles operating in Portland is polluting air to the south, charging emission fees (which may reduce driving) provides incentives to car owners to get less polluting vehicles, and creates revenues to offset the costs that people to the south of Portland may bear.

Another way to internalize costs is to expand jurisdictional boundaries until external costs are appropriately small: in other words, to establish some form of regional decision making. Metro is widely considered a model regional government in the U.S. It deals with the regional issues of transportation, land use, greenspaces, and so on. The Minneapolis/St. Paul regional government is a notable example for its regional tax-base sharing. Other formal institutional arrangements in Oregon are Metropolitan Planning Organizations and Councils of Government.

Less formal regional arrangements are also available and in use in

Oregon: the Regional Problem Solving¹¹ program, the Willamette Valley Livability Forum, and watershed councils are a few examples.

Can we improve the public's participation in decisions about growth be improved?

There are plenty of indications that public participation needs improvement. There are many complaints about local process ("I wasn't notified," "the decisions were already made"). The movement for voter approval of annexations derives in a large part from a belief that city governments do not fairly represent interests of the people most directly affected by those annexations. The success of that movement (all seven local initiatives for voter-approved annexations on the ballot in November 1998 passed) means voters are asking for more involvement in local choices about the pattern and jurisdiction of growth, if not also its amount. The spate of ballot initiatives could be construed as a strength of public participation or a reaction to the inability of elected representatives to make decisions that reflect the desires of their constituents.

Public involvement can certainly be increased, and the funding to allow it to be more expansive and substantive can also be increased. Thus, it can be improved.

More relevant, however, is some assessment of whether cost-effective improvements are possible. No matter what they choose for a community decisionmaking process, local governments will be criticized. If they do little, the criticism is obvious. But if they do a lot, the criticism is that they are being ineffective and wasting taxpayer money.¹² Thus, local governments want to find some middle ground: a citizen involvement process that is fair, substantive, appropriate to the scale of the problem, and effective in getting in a timely man-

Public Involvement in Regional Policies for Growth

Oregon jurisdictions have been at the forefront nationally of regional planning for growth and citizen participation in that planning.

The two best known, and related efforts, come out of the Portland metropolitan area. *Region 2040* started in 1990 as some general goals: it evolved to a regional plan for land use that is binding on cities and counties in the region. *LUTRAQ* was organized and funded by non-profit groups, and grew out of citizen concerns with highway planning in the Portland region. The study won national planning awards and has become a model for both the political and technical aspects of grassroots efforts in transportation and land use planning.

Many cities—Eugene, Salem, Corvallis, and Albany, to name a few—have had (or are currently involved in) extensive efforts to get citizens involved in growth management issues. Eugene, for example, spent over a year on *Shaping Eugene*, which ultimately led to workshops and surveys for citizens that asked them to consider the many conflicting aspects of growth (the positive and negative impacts, as described in this report) and to make decisions about a vision and the policies consistent with it. In parallel to that effort was one by a nonprofit group that spent a year facilitating education and discussion about growth in Eugene among a small group representing diverse interests.

Other efforts have crossed political boundaries to look at regional solutions. The Regional Problem Solving program has funded pilot projects in Clatsop, Deschutes, Jackson, and Polk/Yamhill Counties. The Rogue Valley Civic League, a two-county, non-profit was organized to provide a neutral forum for public dialogue about regional issues, and has produced a “Regional Vision Plan” for Jackson and Josephine Counties. Several cities in Umatilla County joined together to address community needs arising from rapid employment growth.

alternatives. One possible implication is that cities need more flexible state requirements that would allow them to remove some of the buildable land that is unlikely to be annexed from

ner to decisions that people agree were made openly.

The principles and techniques for effective public participation have been well known for decades and have been applied extensively in Oregon. More recent and slightly different applications in Oregon include local designs charrettes, extensive polling and focus groups, real-time electronic voting on policy preferences, and small-group process for conflict resolution and mediation.

Clearly, more citizen participation of this type has a process cost. But the structure of that participation could also change how planning gets practiced in Oregon. For example, voter-approved annexations mean, at a minimum, that a city should not simply assume that it will be able to grow into contiguous areas that are already partially urbanized. Thus, it must do additional planning to consider

their buildable land inventories: the result would be different, probably larger, urban growth boundaries.

Deciding on the best tools requires judgment, but some guidance is available

This chapter and the previous one make it clear that there is no single package of growth management tools that will be right for every jurisdiction. Communities differ in many ways (size, location, socioeconomic characteristics and desires of citizens, to name a few), and those differences will lead to different opinions about the amount and type of growth that is desirable, and what constitutes a fair way to pay for that growth.

This report has argued, however, that managing growth is just another way of talking about planning for a future. Despite decades of looking for an alternative, the general steps for that kind of public planning are hard to improve on. It requires a community to engage its citizens in a discussion of facts about growth; possible futures (alternatives) and the impacts of those alternatives on the community and surrounding communities; and how those alternatives could be achieved (the policies). Figure 5-1 illustrates a typical process.

That discussion is not easy. Appendix E gives an example of some of the thorny issues about fairness that underlie decisions about a system development charge for schools. Other policy changes are equally difficult. In trying to decide on a position on growth and a package of policies to support that position, local governments should have some level of public debate that considers:

- *Alternative futures.* What's likely? What's desirable?
- *Local responsibility for global problems.* To what extent, and how, should local policies attempt to address larger

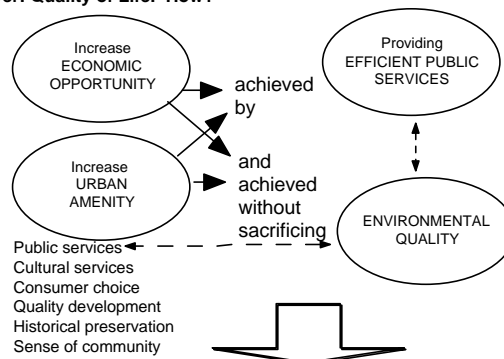

problems like population growth, global warming, resource depletion, and social justice?

- *Full social costs, externalities, and distributional impacts.* Chapter 4 shows that impacts of growth are much greater than the costs to local governments of providing public facilities. What are the biggest impacts of a particular policy course, and how are those impacts likely to be distributed (including impacts that occur outside local boundaries)?
- *State requirements; other local and regional policy direction.* Impacts cross boundaries in both directions: what other levels of governments do can have big impacts on the success of local policy. Do local policies fit into a consistent state and regional framework for dealing with growth?
- *Tradeoffs.* Because there are options, there are tradeoffs. As some factors that contribute to quality of life become more scarce, local policy may want to take stronger steps to protect them. Local government is the logical place for taking a collective, long view of what a place could and should become. Some risk assessment is required: given inherent uncertainty, which actions best protect quality of life? Are some things becoming so scarce that they need protection, even if the cost is greater than current market prices might suggest the protection is worth?
- *Consistency.* It is common for government policies, in an effort to give something to all interests, to offset one another. Choose a future and realign local policy to work consistently toward it.

Figure 5-1: One way to structure a local discussion of growth and growth management

**What is the city trying to achieve by managing growth?
In other words, What are the goals?**

Answer: Quality of Life. How?

1 GOAL SETTING

The amount and the distribution of the impacts (benefits and costs) over time is important.

What are the policies that the City has used in the last 10–20 years to achieve these goals?

Should there be growth?

Should there be growth? As a matter of policy, is the City for, against, or neutral on growth?

Answer: may not be answered directly in a specific policy statement, but other policies imply the answer. Most cities in Oregon, at a minimum, have accepted and tried to accommodate growth. Some policies have actively sought to encourage growth (ECONOMIC DEVELOPMENT). Those policies, however, can change.

Given, at a minimum, the acceptance of growth, what has the City done to reduce its negative impacts?

Implemented policies to:

- Get growth to the right place (LAND USE/LOCATION: planning, zoning, growth boundary)
- Get growth designed right (DESIGN: subdivision ordinances, design review)
- Get adequate services to growth to avoid negative impacts (SERVICES: sewer, water, roads)
- Mitigate the negative impacts that do occur (MITIGATION: wetlands reclamation, transit)

**2 REPORT CARD
POLICY HISTORY;
POLICY FRAMEWORK**

What policies are available for future growth management, and how well do they work?

3 EVALUATION

How do the policies relate to each other? How do they interact with market forces?
How are they likely to work?

Chapter 6

Conclusions and Recommendations

SUMMARY

This chapter summarizes how the Task Force interprets information in Chapters 2, 3, 4 and 5 in the context of public policy. Only conclusions and recommendations on which the Task Force members agreed unanimously are included in this chapter

The Task Force agreed on three categories of conclusions:

- How communities and regions within Oregon are growing.
- *How and when communities pay for, and benefit from, development.*
- *Tools communities may use to address growth-related issues.*

The Task Forces recommendations address regional problem solving, protection of natural resources, better financing and some new financing mechanisms, state-funded technical assistance to local governments, and the creation and funding of a subsequent task force to address in more detail certain growth issues identified in this report.

Chapters 2, 3, 4 and 5 summarize the information the Task Force reviewed during its investigation of the impacts of growth. It also considered more detailed information presented in appendices and attachments to this report, including public testimony, both oral and written, on growth and growth management issues. Collectively, this information constitutes the facts about growth and its impacts that the Task Force was charged to assemble.

This chapter summarizes how the Task Force interprets these facts in the context of public policy. The Task Force drew several conclusions from the facts, and then agreed on eight recommended next steps. The specific charge to the Task Force did not require it to go any farther than getting agreement on facts about growth (i.e., Chapters 2-5). The members decided,

however, that they would make recommendations whenever they could reach unanimous consensus.

Conclusions

How communities and regions within Oregon are growing

1. Different rates of growth affect communities differently and the impacts of growth vary by local conditions

Communities throughout Oregon are changing. Some communities are growing rapidly due to an influx of people and jobs. Others are distressed due to the loss of local jobs and services. This report references several studies that suggest that the per capita costs of growth are higher in both slow and fast growing communities than in communities growing at a moderate pace. Slow-growing communities have difficulty raising the funds to pay for services. However, it is clear that higher rates of growth do not solve a jurisdiction's revenue problem. Fast-growing communities have more difficulty managing the effects of growth than slow- or moderately-growing communities.

The Task Force also concluded that the type and magnitude of growth impacts, both good and bad, vary significantly depending on local conditions. Variables such as geography, growth rate, methods of paying for growth, levels of healthy civic engagement on growth issues, and size of the community, among others, can have a substantial effect on growth impacts.

2. Communities should consider growth and development-related issues in a regional context

Community development issues are complex and interrelated, often affecting surrounding jurisdictions. For

example, if a community decides it wants to focus its community development efforts on creating jobs rather than on providing housing, surrounding communities may receive additional pressure to provide housing for people who are attracted to the area for job opportunities. This type of jobs/housing imbalance within a community may also affect the level of congestion on roadways connecting the jobs and housing as people travel longer distances to and from work.

Another example might involve a community that does not want to grow (e.g. a town surrounded by high-value farmland). If decisions about if, where, when, and how communities should grow are made in a regional context, communities that want to grow and that can absorb that growth (e.g., are surrounded by lower-quality soils) may agree that they are better suited for development than those communities surrounded by high-quality soils.

Regional treatment of issues also presents opportunities to tailor state policies to local needs. Sometimes implementing a policy regionally rather than locally is more sound given that many issues transcend local boundaries. For example, the Regional Problem Solving Program provides money to local governments to solve problems in a regional context.

3. Communities must be cognizant of the relationship between growth, natural resources and quality of life

Fast-growing communities cannot sustain high growth rates without affecting quality of life and environmental quality. Even communities growing at a moderate or slow pace should be cognizant of how growth affects the quality of the natural and built environment. Air, water and other natural resources have a finite supply. If a community

grows, it should develop in a way that minimizes negative affects on regional environmental concerns and available natural resources (e.g., available water, air quality, etc.)

How and when communities pay for, and benefit from, development

4. Paying for growth-related infrastructure presents a significant challenge to many Oregon communities

The amount of population and employment growth forecasted for Oregon cannot occur without the construction of public facilities. For new single family housing, the construction costs of on-site facilities (e.g., local streets, sidewalks, sewer, water lines and meters) are on the order of \$15,000 to \$20,000 per housing unit. Developers initially pay those costs either directly by building the infrastructure themselves, through special assessments, or as fees to local governments and special districts. In turn, developers pass these costs on to purchasers.

The construction costs of off-site facilities (e.g., improvements to arterial streets, sewer and water trunk lines and treatment plants, schools, fire stations, parks) are on the order of \$15,000 to \$30,000 per housing unit. Some of these costs are paid by developers (and purchasers) through System Development Charges (SDCs) and exactions or dedications; some are paid by current and future property owners through taxes to retire debt; funding for some projects is also available through federal grants and revenue sharing.

Some of the off-site costs are probably deferred, with the result that either (1) future households will have to pay for new facilities or accept a lower level of service, (2)

methods and technology will have to change in ways that allow level of service to be maintained with less capital investment per capita, or (3) growth will need to be slowed or stopped. Studies reviewed by the Task Force showed that in most cases there is a gap between the level of off-site costs incurred by a community and the revenue available to cover those costs. The amount of the gap varies from community to community and there is strong debate about the size of any shortfall. The Task Force did not resolve this debate.

Communities may be able to reduce the costs of growth by selecting development patterns that use infrastructure efficiently. The most efficient growth pattern may vary depending on unique local conditions.

Shortfalls in revenues that would enable a jurisdiction to construct and maintain public facilities at current levels of services are a problem regardless of a community's rate of growth. Slow-growing communities have difficulty raising funds for infrastructure to support growth. Fast-growing communities have trouble building infrastructure to keep up with growth.

This problem is particularly acute for transportation. State gas tax revenues are not adequate to pay for transportation needs, and cannot be spent for transit, which in some cases might be an efficient alternative to road construction.

In some cases, financing mechanisms do not raise revenue when revenue is needed. Large capital investments require up-front financing, while the revenues often flow in small increments over time. Taxes and fees also are not assessed at the time when land is added to urban growth

boundaries, even though significant property value is created by this act.

5. Oregon's tax system affects the resources available at the local level to deal with growth-related issues

Oregon's tax system increasingly relies on income tax revenues; the state does not have a sales tax and property tax increases have been limited by voters. Income taxes are highly responsive to growth, meaning that more revenue is generated during high growth periods and in fast growing communities than during slow-growth periods and in slow-growing communities.

Income taxes are collected and spent by the state. Local governments rely heavily on property tax revenues which are limited through voter-approved initiatives. Property tax revenues provide a relatively constant flow of revenue, but are less responsive to growth. Local governments must bear much of the cost of providing the infrastructure needed to support growth, but do not have a revenue stream commensurate with the need.

For example, state law requires state income tax revenues that exceed forecasts to be returned directly to taxpayers as the income tax "kicker". Local governments seeking funds to pay for growth related infrastructure costs have no access to this growth-related income, nor has there been an adequate method of projecting this income within the forecasting formula.

This study did not examine whether redirecting revenues from state to local governments would eliminate or reduce the infrastructure funding gap or have other consequences.

Tools communities may use to address growth-related issues

6. Communities may need to use incentives to foster the type of development they desire

Not all communities in the state are growing rapidly. In many counties and small cities, public policy is aimed at encouraging growth, not restraining it. It is important to focus public attention and resources on small slow-growing communities that want to encourage growth as well as to help fast-growing communities to deal with the effects of growth or to assist them in slowing growth.

If slow-growing communities hope to grow at rates in excess of what market forces would cause, they will need to offer incentives to stimulate development that is compatible with local, regional, and statewide needs. For example, financial incentives may be used to encourage development that reinforces downtowns and community centers as well as helps to diversify a local economy.

Rules and regulations only permit development to occur; they do not make it happen. Land may be zoned for commercial, industrial or residential development, but that does not ensure development will occur. Many Eastern Oregon communities that have an adequate supply of land zoned for economic development purposes are unlikely to get a type and amount of development consistent with community goals unless they target investments and offer incentives, or unless there are significant changes in market patterns and market development.

Incentives can also be used to focus growth in moderate- or fast-growing communities in downtowns, main streets and neighborhoods rather than on the urban fringe. For example, if land near community centers is more expensive than is land on the urban fringe, different types of incentives could be crafted to reduce the cost of the land near the community center. Similarly, if development on infill sites is more time consuming, incentives and tools could be offered to encourage developers to choose to build on infill locations.

7. State agencies need to integrate their programs better to respond to local needs

Many communities believe that state agencies do not act consistently when implementing programs and policies. An example cited is the inconsistency between the Oregon Department of Transportation (ODOT) and the Department of Land Conservation and Development (DLCD). DLCD encourages higher-intensity, mixed-use development patterns in certain locations, while ODOT sometimes recommends denial of such development on the basis that such development will overburden state highways or that congestion problems on existing roadways will be exacerbated. This can create frustration at the local level.

Another issue cited is that state programs need to respond to a range of community development issues. What works to enhance the quality of life in one community may be inadequate in another. State agencies need to work more collaboratively with each other to find the most appropriate and effective ways to achieve state policy goals in ways that work in local areas.

The committee was briefed on the Governor's Community Solutions Team which was established to integrate the programs of state agencies, and to work together to solve community development problems, rather than simply run agency programs. The team consists of the directors of five state agencies whose programs and investments most directly affect the physical development of communities and regions across Oregon. These agencies are Economic Development, Environmental Quality, Housing and Community Services, Land Conservation and Development, and Transportation. State agencies need to support local and regional efforts to maintain and build livable communities through collaboration and creative problem solving. To do this, it is often necessary to break down the institutional barriers that exist between them.

8. Use existing tools to achieve community goals

Chapter 5 outlined the range of tools available to address community development issues. Communities have access to the tools that can help them shape or direct growth. However, the Task Force heard that some jurisdictions need technical and financial assistance to help identify how to apply available growth management tools in a manner that supports local priorities and visions. The Task Force also heard that additional tools are needed to enable communities to encourage, direct, or slow growth.

9. High-quality design is important

The debate about growth is not just about how much, but what kind. Two developments of identical size and density can have very different impacts on their community depending on how they are designed.

Community acceptance is closely tied to good quality design that is sensitive to impacts on surrounding properties and whether the development contributes or detracts from the aesthetic value of the community. High-quality design and construction may, however, increase housing cost.

10. Citizens are increasingly concerned about if, how, and when their community should develop

Many people and community representatives indicated that citizens are feeling increasingly disconnected from their local governments on growth issues. One example of this trend is the recent increase in local initiatives to amend city charters to require a public vote prior to approval of annexations.

Business, civic, and government leaders must constructively respond to growing citizen concerns about growth-related issues and quality of life in communities. The intensity of citizen concern has reached the point that failure to act may jeopardize Oregon's land use planning program and the economic future of the state.

"Business, civic, and government leaders must constructively respond to growing citizen concerns about growth-related issues and quality of life in communities. The intensity of citizen concern has reached the point that failure to act may jeopardize Oregon's land use planning program and the economic future of the state."

Recommendations

1. The State Legislature and Department of Land Conservation and Development need to ensure that adequate tools exist so that communities will participate in sound regional planning for purposes of protecting farm and forest land and achieving other statewide goals. For example, the Regional Problem Solving Program, which provides resources to local governments to help address problems that are regional in scope has met with some

success and should be funded by the legislature. The State should also consider ways to coordinate the timing of the periodic review processes within a region to make it more conducive to addressing regional problems.

2. The State should study whether there are better ways, within a regional context, to limit growth in certain areas for purposes of natural resource protection.
3. The added value created when property is added to urban growth boundaries should be taxed by the local jurisdiction for the purposes of defraying the cost of growth and promoting affordable housing.
4. The State should develop mechanisms that would allow local governments to finance infrastructure needs in a timely manner. One mechanism could be a state-funded loan fund available to municipalities.
5. The State Legislature should increase the gas tax to fund transportation improvements across the state and should also create funding mechanisms for local transit needs.
6. State agencies should increase their efforts to coordinate their activities and programs with one another, consistent with the Community Solutions Team approach.
7. As a follow-up to this project the state should consider increasing technical assistance to local government officials on matters of managing growth. One useful product would be a growth management “how to” manual to help local governments use existing tools as effectively as possible to advance their unique vision for their community’s future. This can be in the form of a written manual, workshop, or a web-site.

8. A new committee or task force should be convened during the 1999-2001 biennium to more thoroughly research issues and oversee implementation of these recommendations. This group should specifically address the basic fairness issues surrounding the question, “who should pay for growth?”, and should also consider the adequacy of tools available to local governments to slow or stop growth. The Legislature should allocate sufficient time and resources to allow the group to thoroughly address the range of issues.

Appendix A

Endnotes

Chapter 2

¹ For a more detailed description of how regions and metropolitan areas grow see an appendix to this report, and O'Sullivan (1994), Moore and Thorsnes (1994), ECONorthwest (1994). For the importance of metropolitan growth, and of capturing suburban growth, to central cities, see Rusk (1993).

² See ECONorthwest (1994) for a longer discussion of the importance and essential components of a full-cost framework for evaluating growth-management policies.

³ For an overview of this perspective, see the material submitted to the Task Force from Tom Bender, which provides evidence of ecosystem misuse, resource depletion (especially fossil fuels), and population growth, and argues that growth has immense costs (both direct and social) that could be avoided by population stabilization, transition to renewable resources, and a four-fold reduction of consumption.

People with this perspective often advocate sustainable development as an alternative to today's level of growth and consumption. Sustainability is a philosophy about limits, connections, the importance of natural systems, social justice, and civic engagement. The literature on sustainable development is strong on underlying philosophy, information about global ecological limits, and suggestions for local process, but weaker on tradeoffs and applications to regional growth management. In general, its policy recommendations derive directly from its assumptions: since sustainable local development means less consumption, more conservation, and greater community awareness and participation, desirable policies include recycling, energy conservation, non-auto transportation, protection of farm land, tight urban growth boundaries, greater urban density, and more substantive public involvement (Krizek and Power 1996).

Chapter 3

¹ Much of the data in this report is available by county. Oregon has 36 counties, and describing conditions and trends for each individual county would be complex and possibly confusing for the reader. To simplify our presentation we grouped counties into five regions, based on physical proximity and economic ties. The composition of these economic regions are as follows:

Coastal Oregon: Clatsop, Columbia, Coos, Curry, Lincoln, Tillamook. *Willamette Valley:* Benton, Clackamas, Lane, Linn, Marion, Multnomah, Polk, Washington, Yamhill. *Southern Oregon:* Douglas, Jackson, Josephine. *Central Oregon:* Crook, Deschutes, Hood River, Jefferson, Klamath, Sherman, Wasco. *Eastern Oregon:* Baker, Gilliam, Grant, Harney, Lake, Malheur, Morrow, Umatilla, Union, Wallowa, Wheeler.

² Frohnmayer, Dave. 1993. "The New Pioneers." *Old Oregon* (Autumn): 23-27.

³ Frohnmayer, Dave. 1993. "The New Pioneers." *Old Oregon* (Autumn): 23-27. Judson, Dr. Dean H. 1994. *The Oregon In-Migration Survey*. Salem: State of Oregon, Employment Department.

Chapter 4

¹ They may also be concerned about housing affordability, an issue covered later in this report.

² See Carson (1998, 36-40). If, for example, the facilities that we build do not completely handle all external costs (e.g., waste

water treatment), then costs of future cleanup are being deferred. Similarly, if this decade's growth is using and not adding to excess capacity built in previous decades (e.g., highways, bridges, dams), then some costs of growth are being deferred.

³ The same warnings apply: (1) most of the information is at the state level—it cannot be directly applied to any particular city, which may have a situation substantially different from general statewide tendencies; and (2) the analysis is an overview: it cannot provide enough detail about any individual impact and its effects from and on all aspects of growth (amount, rate, location) to allow quantified conclusions about the net impacts of growth.

⁴ Bernstein, Jared. Forthcoming. *The State of Working America*. As reported by Sleeth, Peter. 1998. "Wages Slowly Regain Ground." *The Oregonian*. September 27. p. B1.

⁵ There are some important exceptions; for example, homeowners do not need permission to extract a limited amount of groundwater for domestic use.

⁸ Surface water runoff, or non-point source pollution, is currently the largest source of water pollutants in Oregon. When it rains, water washes over driveways, roofs, agricultural lands, streets, lawns, construction sites, and logging operations picking up soil, garbage and toxics. Pollution from surface water runoff is hard to detect and control because it doesn't come

from a single source like a factory or sewage treatment plant. Instead, many everyday activities and traditional land use practices allow pollutants to wash into our waters. Non-point sources of pollutants include: (1) Household chemicals and soaps running off driveways, roofs and yards into streets and down storm drains directly to streams and rivers. (2) Fertilizers and pesticides running off agricultural lands and urban areas such as yards, parks, golf courses and landscaped areas. (3) Oil, anti-freeze, and other toxic materials running off roadways into storm drains or directly into streams. (4) Soil erosion which comes from construction sites, logging activities and agricultural lands. (5) Failing septic tanks that cause both surface and groundwater pollution. (6) Livestock and pets, such as dogs, which pollute the water with bacteria, cause erosion, and destroy aquatic habitat. ³⁰ White, Bole, and Sheehan, (1997). *Affordable Housing Cost Study, An Analysis of Housing Development Costs in Portland, Oregon*.

³¹ In discussions about growth in Oregon it is often asserted or implied that multi-family housing is less expensive. The findings of White (1997) for Portland give mixed evidence. Multi-family housing costs less per unit, but there is more to the story.

People have a lot of experience with consumer purchases, and they know lowest price does not necessarily mean greatest value. People do not buy a generic product called "shelter" any more than they buy generic products called "car" or "stereo" or "dinner." Yes, that one's the cheapest, but this one tastes better, is more nutritious, and is big enough that I'll have left-overs for lunch tomorrow.

The food analogy has other parallels for the debate about growth. People worried about population growth and the ability of natural systems and technology to provide food for more people usually argue that population growth should be reduced. An extension of the argument is that for a given amount of population, natural limits to carrying capacity suggest some people should either eat less, or more nutritiously and lower

down the food chain. If some people lack the means to produce or purchase basic nutritional requirements, social programs like school lunches and foreign aid should assist them.

By analogy, if the goal for housing were to produce a uniform shelter unit as efficiently as possible, then denser, multi-family housing has advantages. But when people consider all the things they want housing, many see single-family housing as a better value. The Portland study shows they get more space per dollar, or they get other attributes they want.

As with other aspects of growth, one's choice of policy depends in part, perhaps strongly, on one's view of ecological limits. On the one hand, if resources are very scarce, standardized and modest products will conserve them. Some economists have argued that a better theory of economics, one consistent with ecological systems and limits, is one that aims to satisfy basic needs with a minimum of throughput (rather than one that aims to provide whatever people are willing to pay for at the lowest price). On the other hand, generic products certainly limit consumer choice and, thus, satisfaction, and may be seen as an abridgement of personal freedom and an obstacle to creativity.

³⁹ “Eventually” because demographic shifts in the existing population can cause school enrollments to decrease even as total population is increasing.

⁴⁰ Oregon Department of Education (1997). *Ten-Year Historical Profile of Education Statistics*. <http://www.ode.state.or.us/stats/profile.pdf>.

⁴¹ Measure 50 reduced the maximum assessed value of property for the 1997-98 tax year, limited future growth in assessed value to 3% annually, and permanently fixed the maximum tax rate for each tax district, based on the 1997-98 levy.

⁴² Oregon Department of Education, from National Public <http://www.ode.state.or.us/stats/finance/ncesexph.htm>.

⁴³ The relative cost of housing here is opposite that shown by median sales price data in Chapter 3. The opposite results arise from measuring prices for different segments of the housing market. The cost of living data is meant to measure the relative price levels of goods for a “mid-management standard of living,” so the prices measured by the index are only for those goods and services that correspond to that standard of living. Median sales price data for housing, however, is based on sales prices for all housing.

Chapter 5

¹ Chapter 2 also showed why it is always difficult, if not impossible, to quantify rigorously the impacts of any growth management policy on aggregate welfare: that aggregate calculation requires the consideration of all impacts, on all people, now and in the future.

² In *Managing Growth in America's Communities*, Porter (1997) indicates that 59 distinct growth management tools exist.

³ Note that the categories overlap, and that tools to manage and mitigate growth, if they become very expensive, will have the effect of limiting growth as well (e.g., fees for facilities deemed necessary to protect environmental quality potentially could raise the cost of development enough that growth slows down as a result). Alternatively, if such tools achieve their desired goals efficiently, then quality of life could increase and attract more growth.

⁴ See, for example, Kelly (1993), Nelson and Duncan (1995), Porter (1994), ECONorthwest (1994).

⁵ ECONorthwest (1991). *Urban Growth Management Study: Case Studies Report*. Salem: Department of Land Conservation and Development.

⁶ Transportation and Growth Management Program, Department of Land Conservation and Development and Oregon Department of Transportation, 1996. *Tools of the Trade*. <http://www.lcd.state.or.us/issues/tgmweb/pub/tools.htm>. This publication provides a detailed discussion of innovative growth management tools and examples of communities that are applying those tools.

⁷ Tools that local governments genuinely lack the authority to implement are largely a subset of financing tools: for example,

SDCs for schools, or a state sales tax. In most other cases, local governments have the *authority* to implement more or stronger tools, but have not done so for many reasons. In some cases, the argument for state action is to compel local jurisdictions to take actions that they can already take if they wanted. While the rhetoric of local government is uniformly in favor of local control, the reality is occasionally some local governments favor state regulatory requirements so that they have a compelling reason to adopt growth management policies that would otherwise remain stuck in a gridlock of local debate.

⁸ A main reason is to reduce any impacts on land price and, thus, housing that could otherwise result from a restricted supply of buildable land.

⁹ Because the Portland economy has a big influence on the demand for the products and services that Pendleton provides.

¹⁰ Transportation and Growth Management Program, Department of Land Conservation and Development and Oregon Department of Transportation (1996). <http://www.lcd.state.or.us/issues/tgmweb/smart/smart.htm>

¹¹ In 1995, the Oregon legislature authorized a process that allows local governments, state agencies, citizens, and affected organizations to work together to address problems that extend beyond city or county boundaries. The act allows LCDC to acknowledge regional solutions that include plan changes and regulations that do not fully conform with the Commission's rules. The pilot project is scheduled to end in December 1998.

¹² Asking for that input does not guarantee that a community consensus will emerge on what the community should look like in the future or how to get there. The huge expenses associated with broad-scale citizen involvement processes and the

expectations that accompany those expenditures further increase the risk to local decisionmakers. For example, Eugene ran extensive public involvement processes as part of *Eugene Decisions* and *Shaping Eugene's Future*. That process did not insulate the City from the criticism that it already had an agenda, or that the process was both too little and cost too much.

Appendix D

¹ ECONorthwest (1994). *Evaluation of No-Growth and Slow-Growth Policies for the Portland Region*, Chapter 4.

² Or also as *external economies of scale*—external because they do not result from the internal operation of a particular firm.

³ *Wages* are a colloquial way of expressing the term usually used by economists to describe the objective of growth: *increases in real per incomes*. Those increases are typically assumed to be the best proxy measure available for the true objective: (Pareto optimal) increases in welfare. The assumption is that if people have more money they are better off because they can buy more of what they want.

⁴ One of the critiques of a strict no-growth policy is that it would not only stop in-migration: it would also require out-migration to counterbalance the growth from natural increase. In the extreme, some people criticize no-growth policy as requiring “our sons and daughters to move somewhere else.” In fact, of course, even policies aimed at a very low growth in population would probably not include residency cards—people would be free to move. The point is that if slow growth is achieved by increasing prices, then people who are mobile and lower-income (including sons and daughters) are the most likely to migrate from the region.

⁵ *The Oregon In-Migration Study* (Oregon Employment Division, 1991) found that Oregon's recent arrivals took an average pay cut of about \$4,500 per household.

⁶ Such as: the impact of national and international policies and economic conditions; the anchoring effect of homeownership on mobility; and the fact that wanting to be near friends and family is typically the most important reason given by newcomers to a region (to name a few).

⁷ Note that here, as throughout this appendix, we are dealing generally with a metropolitan region as a whole. There is ample evidence that the size of the whole can be declining at the same time parts of the whole can be growing. Thus, individual communities in a metropolitan region may feel they are growing too fast even as the region itself might be growing slowly. We do not try in this appendix to describe sub-regional dynamics.

⁸ Edwin Mills the dean of urban economists, has been more forceful: "There is no such thing as optimum metropolitan area size." (personal communications, 1994).

⁹ See Landis and Sawicki (1988:336), in which the authors conclude that while the "*Places Rated Almanac* may be of some use to footloose migrants, the volume contains some basic conceptual and measurement problems and therefore is of little use to planners who are attempting to evaluate and understand localities' quality of life."

¹⁰ Job opportunity could also be considered a component of quality of life, and could be influenced by economic development policies. We grouped job opportunity in this diagram as a subset of wages.

¹¹ For example, federal and state investment in sanitary sewer and water systems contributed to growth and suburbanization after World War II. The full costs of those systems was often

not considered either: for example, Portland is looking at a billion dollars to correct its sewer system; the Northwest will spend or lose more than that as it deals with the loss of salmon from hydroelectric facilities. The list goes on: in every case, we got more growth than we would have if we had been paying full cost.

¹² This distinction gets fuzzy because some jurisdictions may actually want to affect the rate of growth, but they attempt it indirectly through public facility policy or changes to the UGB.

Appendix E

¹ For estimations of the costs of public facilities and services, most studies do not allocate a portion of the costs of administrative overhead (e.g., city manager, finance, legal, city council) which might be around 10% of the general fund budget. But if those same facilities are provided by a single-purpose special district (e.g., a water district), then the overhead costs are probably rolled into the connection fees and user charges: if those fees and charges are used as measures of costs, then they include more costs than are included in other studies.

² For those costs to be truly comprehensive, one would also have to assume that the public facility would be designed and sized in such a way that there would be no significant spillover (external) costs: e.g., that a sewer treatment plant would handle wastewater in such a way that there would be no measurable deterioration in water quality. The reality, however, is that good design, by definition, does not attempt to eliminate all risk of externalities: to do so would be prohibitively and inefficiently expensive because eliminating each additional increment of risk gets increasingly expensive. Environmental regulation has increased substantially over the last 30 years to eliminate some

of the worst externalities (e.g., lack of tertiary sewage treatment, or frequent overflows from the treatment plant), but failures still occur. The next section on indirect impacts addresses some of these issues.

³ That thinking is consistent with economists' conclusion that "current and future residents will face the true economic costs [assuming no external costs] of the facilities they use if the local government finances all capital facilities through bonds and if the terms of the bonds are identical to the useful lives of the facilities." (Altshuler and Gómez-Ibáñez 1993, p. 79).

⁴ (Fischel, 1990)

⁵ For example, with 80% and 90% federal funding for LRT, did Portland pay the cost of growth? There is no simple answer: it requires more details on interim and ultimate sources of funds, and assumptions about the extent to which LRT is dealing with existing transportation problems.

⁶ The studies span a couple decades, so the costs they report are not directly comparable: \$1,000 today does not buy as much infrastructure as it did 20 years ago. We cite the cost estimates as reported in the studies, note the year of the estimate, and provide in parentheses an equivalent estimate in 1998 dollars (i.e., what would that infrastructure cost today). Such adjustments are very rough, but better than no adjustment at all (which is the case in many studies). In some cases, the studies do not report the year of the cost estimates, so we have had to guess. All estimates are brought to 1998 dollars using a Gross Domestic Product deflator for the personal consumption index of the gross domestic product from the Economic Report of the President.

⁷ For example, there is no documentation of whether the study

is looking at on-site or off-site costs, or what services are included in the category of "utilities."

⁸ Her work illustrates the importance of definitions for studies that try to determine that one pattern of growth (typically, higher-density) costs less than another. What level of geography is density being measured at: subdivision, neighborhood, city, or region? The densities, analysis, and implications for policy are different for each.

⁹ Ladd (1998), Nelson (1988), and Altshuler and Gómez-Ibáñez (1993) do address the incidence of costs.

¹⁰ In his original work Foder implied that all the costs he estimated were net costs to existing citizens of growth. His subsequent response to LCOG's analysis (October 1996) considers SDCs, but only SDCs, as offsets to the costs he estimates.

¹¹ One good reason not to include O&M costs is that for many facilities (schools is an important example) the burden of new households on O&M is paid through property taxes or user fees.

¹² The stream of these annual O&M costs would have to be discounted to present value, and converted to a cost per unit. That discounting could lead to present values that are on the order of 10 to 20 times greater than the annual cost.

¹³ ECONorthwest (1998), for example, has done work for a large Oregon corporation showing its operation yields net fiscal benefits to government when all costs and payments are considered. The key to a large surplus is capital intensity for the employer and high incomes for the employees, conditions typical of many high-tech firms.

Appendix C

Glossary

Actual Housing Mix and Actual Net Density—As defined by state statute, the housing mix (e.g., single-family, multi-family) and density (dwelling units per net acre) that has actually been developed in the community in the last five years or since the last periodic review, whichever is greater. (See “net vacant acre.”)

Adequate Public Facilities Requirements (APFRs)—Regulations to ensure that public facilities and urban services are provided at the same time as new development. Also called “concurrency.”

Affordable Housing—Housing is affordable when households with incomes at or below 80% of the area median income pay no more than 30% of their gross income on housing costs, including rent or mortgage payment plus utilities and insurance.

Assessed Valuation—The market valuation estimated on real estate or other property by a government for the purpose of levying taxes.

Available Housing—The net number of existing housing units available to meet projected housing requirements.

Buildable Lands Inventory—A study of lands inside the UGB that are vacant, available, and suitable for urban development.

Buildable lands—Lands in urban and urbanizable areas that are suitable, available and necessary for residential uses. Buildable lands include both vacant land and developed land likely to be redeveloped.

Capital Improvements—New or expanded public facilities that are relatively large-size, expensive, and permanent. Some common examples are streets, public libraries, water and sewer lines, and park and recreation facilities.

Capital Improvement Plan or Program (CIP)—A multi-year (5-6 years) plan for the construction of capital improvements that includes a discussion of their timing and cost.

Central Business District (CBD)—An area within a city which has a centralized, high concentration of retail and service businesses, governmental offices and facilities, financial districts, professional offices, hotels and motels, cultural, recreational and entertainment establishments, colleges and universities, residences, appropriate industrial activities, and transportation facilities. (Often same as Downtown.)

Community Development Corporation (CDC)—An organization meeting the statutory definition of a Community Development Corporation as recognized by the State of Oregon.

Comprehensive Plan—A plan prepared by a local government which establishes policies and land use designations to achieve and support the statewide planning goals.

Comprehensive Plan Density Ranges—The lowest permitted density and the highest permitted density for each comprehensive plan designation.

Concurrency—A requirement that public facilities and urban services necessary to meet the demands of new development are in place to accommodate development as its impact occurs. Same as adequate public facility requirements.

Constrained land—Land that is not part of the buildable land inventory because of physical impediments (e.g., steep slopes, floodway) or legal impediments (e.g., designated wetlands or riparian area) to development.

Current Population—The most recent annual Portland State University population estimate of study area population.

Current Vacancy Rate—The actual vacancy rate of dwelling units in the study area, distinguished between owner occupied and rental properties.

Developed land—Parcels that have improvements on them with no vacant areas.

Development Codes—Zoning and subdivision ordinances and standards to implement comprehensive plan policies.

Economic sector—A specific industry or group of inter-connected industries.

Exactions—Discretionary fees, dedications, or off-site improvements imposed as a condition of approval to mitigate off-site impacts of a development. These may vary by project.

Floodplain—The area adjoining a stream that is subject to inundation by flood. The floodplain consists of two parts:

1. **Floodway**: the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than 0.2 feet.

2. **Floodway fringe**: The area of the floodplain lying outside the floodway.

Focused Public Investment Plan—A plan that specifies the location and timing of planned public facility improvements in specific areas. Can be used to focus growth to sub-areas within an urban growth boundary.

Fringe Area—Urbanizable land or future growth area that is at the edge of an urban area.

Geographic Information Systems (GIS)—Computer-based tools for capturing, integrating and presenting geographically

related data items, such as natural resources, population information, zoning information, housing development, utility locations, and roadways.

Government assisted housing—Housing that is financed in whole or part by either a federal or state housing agency or a housing authority as defined in ORS 456.005, or housing that is occupied by a tenant or tenants who benefit from rent supplements or housing vouchers provided by either a federal or state housing agency or a local housing authority.

Gross Vacant Acre—An acre of vacant land before land has been dedicated for public right-of-way, private streets, or public utility easements. For example, a standard assumption is that between 20% and 30% of land in a subdivision is used for streets and utilities: if so, then a gross vacant acre will yield only about 35,000 sq. ft. (70%-80% of a full acre) for lots. (See “net vacant acre.”)

Group Quarters—All persons not living in households are classified as living in group quarters. Two general categories of persons in group quarters are recognized: (1) institutionalized persons and (2) other persons in group quarters such as dormitories (also referred to as “noninstitutional group quarters”). Persons in group quarters are not considered to be living in housing units.

Household—One or more persons residing together as a unit [e.g., a single person, married couple (with or without children), unmarried persons who share the same dwelling]. The National Affordable Housing Act of 1990 made the terms “household” and “family” almost synonymous though the U.S. Census Bureau still distinguishes between family and non-family households.

Housing Need—The gross number of housing units needed to accommodate the population expected in a study area for the planning period.

Housing Unit—A house, an apartment, a mobile home or trailer, a group of rooms or a single room occupied as separate living quarters or, if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from outside the building or through a common hall.

Industrial Base—Those industries which make up a community's economy; industries creating the most impact and job creation.

Industry—A distinct group of productive or profit-making enterprises including forestry, fishing, hunting and trapping; mining; construction; manufacturing; transportation; communication, electric, gas and sanitary services; retail and wholesale trade.

Infill Development—New construction activity occurring on vacant parcels located within an area which is predominantly developed.

Infrastructure—The original, specific definition of *infrastructure* — the *sub*structure of basic utilities on which structures (residential, commercial, industrial) get built — has been lost. Infrastructure is now synonymous with “public facilities” and can include not only roads and water, sewer, and electric lines, but also police and fire stations and equipment, schools, parks, and other public buildings. The variability in the definition contributes to problems in defining the costs of growth.

Institutional Uses—Include publicly owned parcels, parks, governmental, or public facilities and are considered unavailable for development.

Land Use Plan—A graphic depicts existing and future land uses and intensities. It shows land use compatibility and spatial relationships, establishes the physical form of the community and identifies urban design opportunities. A land use plan serves as a guide in the preparation of zoning ordinances and zoning district maps.

Leapfrog Development—New development that is not contiguous with existing development and leaves vacant land in between.

Level of Service (LOS) Standard—Minimum capacities or performance standards required for adequate public facilities. For example, standards can address emergency service response time, water pressure, and/or park acres per 1,000 population.

Living Quarters—Living quarters are classified as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (for example, a one-family home, apartment house, hotel or motel, boarding house, or mobile home). Living quarters also may be in structures intended for nonresidential use (for example, the rooms in a warehouse where a guard lives), as well as in places such as tents, vans, shelters for the homeless, dormitories, barracks, and old railroad cars.

Minimum Comprehensive Plan Density—The lowest number of units permitted per acre for development by a comprehensive plan designation.

Multi-modal—Capable of accommodating a variety of transportation modes, such as buses, automobiles, rapid transit,

rail, bicycles and pedestrians. A multi-modal transportation hub is a facility for the transfer of passengers or goods between different modes of transportation.

Natural Resources—Elements relating to land, water, air, plant and animal life, and the interrelationship of those elements. Natural resource elements include soils, geology, topography, flood plains, vegetation, wildlife, surface and groundwater and aquifer recharge zones.

Neighborhood—An area of a community with characteristics that distinguish it from other community areas. It may be defined by physical barriers such as major highways and railroads or natural features such as rivers. It may also be distinguished by unique architectural, historical, social, or ethnic characteristics.

Neighborhood Facility—A public facility that is typically within a one-half mile radius of the residents it serves.

Neighborhood Shopping Center—Generally sells goods necessary to meet daily needs, occupies up to 10 acres, has up to 130,000 square feet of gross leaseable area, and draws its clientele from a 5-minute driving distance. Typically this type of center is located on a secondary arterial or major arterial.

Net Vacant Acre—An acre of vacant land after land has been dedicated for public right-of-way, private streets, or utility easements. A net vacant acre has 43,560 square feet available for construction, because no further street or utility dedications are required: all the land is in lots.

Nonconforming Use—A use or activity that was lawful prior to the adoption, revision, or amendment of a zoning ordinance but that fails by reason of such adoption, revision, or amendment to conform to the present requirements of the zoning district.

Owner-Occupied—A housing unit that is owned by the household living in it.

Partially vacant land—Parcels or tax lots with some development, but vacant portions large enough to develop.

Periodic Review—Regularly scheduled DLCDC reviews of local government comprehensive plans and implementing ordinances. Jurisdictions may have to revise their plans and policies to bring into compliance with the statewide planning goals.

Persons per Household—The average number of persons in each household, as determined by dividing the total population of persons in a jurisdiction's households by the number of households.

Population In Households—The total number of people living in households other than group quarters.

Public Facilities—Roughly synonymous with “Infrastructure” (see definition above). In the broadest sense, all of the facilities and equipment that have typically been provided by the public sector (e.g., water and sewer pipes and treatment plants, police stations and vehicles, schools, libraries). In current use, the term covers all such facilities, even if they are not provided by public entities.

Public Facility Plans—A component of a comprehensive plan that describes the types and levels of urban services required to support planned development for areas inside a UGB.

Public housing—Housing available only to low-income households which is owned and administered by a public or non-profit agency.

Public Investment Area (PIA)—Identifies an area where a local government plans to focus public facility improvement spending over the next five to seven years.

Redevelopment Potential—Parcels or tax lots with developed structures that are likely to be demolished and new buildings constructed in their place.

Regional Shopping Center—Contains a wide range of retail and service establishments, occupies 50 to 100 acres of land, has at least one or more anchor stores, and contains over 400,000 square feet of leaseable space. It usually has direct freeway access and draws clientele as much as a 45-minute drive away.

Renter Occupied—A housing unit that is owned by other than the household occupying the unit, including units rented for cash and those occupied without payments of cash rent.

Seasonal Housing Units—Housing units available only for temporary use through the year.

Sense of Place—The characteristics of a location that make it readily recognizable as being unique and different from its surroundings. A feeling of belonging to or being identified with a particular place.

Shadow Plat—A planning tool whereby initial low-density development of a large property is according to a site plan that makes it easier to further subdivide and develop the property at planned densities at some future time.

Special Needs Population—For the purpose of providing affordable housing, this term refers to the physically and mentally disabled, the elderly, and the homeless.

Specialty Shopping Center—A shopping center whose shops cater to a specific market and are linked together by an architectural, historical or geographic theme or by a commonality of goods and services. Varies in size and location.

Specific Plan—A custom land use plan and development criteria for a given geographic area. A specific plan may detail (a) the location and density of land uses; (b) the list of permitted and conditionally permitted uses; (c) development standards such as building setbacks, building heights, lot coverage, and parking requirements; (d) public infrastructure such as a circulation system, street improvements, street lights and drainage systems; (e) architectural guidelines including architectural styles, themes and building materials; and (f) landscape guidelines such as types of trees and planting materials for public parkways and private front yard setbacks.

Streetscape—The elements that constitute the physical makeup of a street and that, as a group, define its character, including building frontage, street paving, street furniture, landscaping, awnings and marquees, signs, and lighting.

Strip Center—Commercial or retail development, usually one store deep, that fronts on a major street.

Super Regional Shopping Center—Includes retail, office, entertainment and service uses, occupies over 100 acres, has four or more anchor stores and contains over one million square feet of leaseable space. (Usually this type of center is developed with direct freeway or expressway access).

System Development Charges (SDCs)—A uniform fee collected by local governments to pay for off-site public facility improvements to mitigate impacts associated with a development.

Tenure—Whether a housing unit is owner or renter occupied. Owner Household - A dwelling whose principal occupant is the owner of the dwelling. Renter Household - A dwelling that is not occupied by its owner.

TGM—The Transportation and Growth Management Program of the Oregon Department of Transportation and the Department of Land Conservation and Development.

Traffic Demand Management Strategies—Policies or programs aimed at reducing the volume of traffic and the distance of a trip by influencing the manner in which people travel to work. Examples of traffic demand strategies include carpooling, congestion pricing, and providing a financial subsidy for transit riders.

Transportation Planning Rule—An administrative rule adopted by the Oregon Department of Land Conservation and Development that provides details regarding what cities, counties, and metropolitan areas in Oregon must do to comply with state land use laws (Goal 12, Transportation).

Transportation System Plan—Identifies street types and transportation modes, and defines design criteria for all street elements such as signage, bus stops, lighting, etc. Required of larger cities in Oregon for the Transportation Planning Rule.

UGA—An Urban Growth Area is the land inside the UGB but outside city limits that represents the future growth area of a city. Also referred to as urbanizable land.

UGB—An Urban Growth Boundary separates urban land from rural land. It shows the outermost limit of urban development over the next 20 years.

Underutilized Property—Property with land or buildings that are at least 50 percent vacant or that are abandoned, dilapidated, or otherwise impaired by physical deficiencies. (See “partially vacant” and “redevelopment potential.”)

Urban Centers—Characterized by mixed or concentrated commercial, public and residential uses at a regional scale which capture the highest practical proportion of projected regional population while supporting the development of an efficient and effective high capacity transit system.

Urban Design—A process to creatively shape a city’s physical form, image or identity. An integral part of the process of city and regional planning. It is primarily and essentially three dimensional design but must also deal with the non-visual aspects of environment such as noise, smell, or feelings of danger and safety, which contribute significantly to the character of an area.

Urban Land—Land inside and adjacent to cities that is served by urban services and is intensively developed.

Urban Reserves—An area outside a UGB to be maintained as the most likely future expansion of the UGB during a 20-50 year period.

Urban Services—Public facilities that serve urban development, including sewers, water, fire protection, parks, open space, recreation, streets, roads and public transit.

Urbanizable Land—Land inside a UGB that represents the future growth area where development and urban service extensions will take place.

Appendix D

Why Cities and Regions Grow

This appendix is primarily a reprint, with a few additions and editing, of work done by ECONorthwest for Metro in Portland.¹ It provides detail on the process of growth that would have overloaded Chapter 2. Its purposes are to give more information about the causes of growth to readers wanting the detail, and to document the assertions in Chapter 2 that (1) the process of growth is complex: many market and policy factors interact, and (2) such complexity means that simple statements about the impacts of growth at a minimum do not tell the full story, and may tell the wrong story.

Introduction

Development of a metropolitan region takes place in an environment of market forces constrained by public policies. Most policies evolved over decades, and the market has evolved with them. There is no static and no right answer about what policies a region should adopt to control growth.

Three long-term trends dominate 20th century urbanization of population and employment in the United States: (1) increasing concentration of population and employment in metropolitan areas, (2) decentralization of population within metropolitan areas (suburbanization), (3) decreasing population density within metropolitan areas.

The fundamental economic forces that drive urbanization, and how they interact with public policies, is much more complicated than policymakers typically acknowledge. Ultimately, residents of a region must make a tradeoff between after-tax income and the environmental and urban amenities that a region has to offer. If all were growing at the same time, it would induce migration, which would cause one or more of them to decrease. Because of the number of variables involved in estimating the net impacts of growth, and the complexity of their

interactions, the best one can hope for is an approximate description of impacts to stimulate and inform public debate about growth-management policies.

The fundamental economic (market) forces that drive urbanization

Though the growth in the proportion of the population living in urban areas must slow, continued growth in the national population (expected to occur at about 1% annually, mostly in metro areas), combined with changes in regional economies, guarantees continued growth and change in metropolitan areas.

Why do cities exist? The short and simple answer is that some locations offer lower production costs for businesses. Competition forces businesses, and their employees, to those locations. Of interest, and much less simple to describe, are the reasons production costs are lower in metropolitan areas.

The most fundamental source of lower production costs in cities is that many goods and services can be produced at lower unit cost when produced at relatively high volumes. *The economic advantage that comes from putting people together with machines under one roof is one of the primary forces of urbanization.*

Some cities grew larger than others principally because of differences in accessibility. Transporting inputs (including raw materials, manufactured inputs, and labor) to the business and outputs to market is a significant cost for most businesses. Some locations offer lower total transportation costs than others. Some manufacturing firms, for example, locate close to input sources, others close to markets. The most attractive locations provide good access to both. Because freight can be transported by water in very large quantities, areas with good ports have always attracted urban growth. Most of the largest cities in the U.S.

are located on navigable waterways. The location of rail lines also played a major role in the development of many cities in the U.S. Within the past several decades, the interstate freeway system and the location of air terminals have heavily influenced the growth and change of metropolitan areas.

The competition for areas that reduce transportation costs gives cities their most significant characteristic: high-intensity development near particularly accessible (and, therefore, attractive) places. One of the reasons that cities can grow large in population is that businesses (and households) can economize on high-priced land. All businesses need land, some more than others (e.g., manufacturing activities typically require more land per worker than office activities). Most, however, can make significant adjustments to the high price of land caused by competition for locations with good access to transportation. They can, for example, build vertically. Innovations in the construction of tall buildings, and in the transport of freight and people vertically, fueled the growth of the largest cities in the late nineteenth century. Those businesses that can best economize on land (such as office firms) occupy the most centrally-located land. *The ability to substitute capital for high-priced land is another of the principal forces of urban growth.*

Though access to inter-urban transportation systems attracts businesses to urban areas, the characteristics of the transportation system within the city also strongly influence growth. Large cities grew not only from technological changes that allowed development skyward, but also from changes that reduced the cost of travel on the ground. Before about 1850, most workers commuted by foot, which strongly limited the length of commutes and the number of workers that could access a particular area. The innovations of the horse-car, the electric streetcar, and the automobile progressively increased

the amount of land area within commuting distance of places particularly attractive to businesses. These innovations in intra-city transportation made possible the growth of very large metropolitan areas.

The auto, truck, and highway have been particularly important in the development of modern multi-centered metropolitan areas, such as Portland. Both households and a wide variety of businesses can use highways to access relatively low-priced land in suburban areas while maintaining links to all parts of the metropolitan area. The trend toward suburbanization that started with the electric streetcar, accelerated with the development of autos, trucks, and highways is now decelerating as highway systems are being completed. These highway systems now are the dominant influence on patterns of development in metropolitan areas.

One additional economic force is fundamental to the growth of cities: growth itself. The concentration of a large number of households and businesses makes possible the local production of a wide variety of highly specialized goods and services. Many of these goods and services can be found nowhere other than in large metropolitan areas; nowhere else would their producers enjoy the demand that allows them to exploit the scale economies necessary to produce at reasonably low cost. Examples of these goods and services are specialty food stores and restaurants; specialists in law, medicine, and financial services; and manufacturers of key components of specialized machinery. Businesses and workers also benefit from the relatively large pool of skilled workers and specialized employment found in large cities. In general, the economic relationships that size encourages are numerous, highly complex, and fundamental to the economic efficiency of metropolitan areas. Economists refer to the cost advantages that sheer size provides as *economies of agglomeration*.²

Modern metropolitan areas exist as a result of the combined forces of agglomeration and scale. The long-term (two centuries old) trends toward the growth of large metropolitan areas have been driven by extremely powerful economic forces. The economic benefits of that growth to the nation as a whole and to the residents of urban areas is difficult to measure but certainly very large. The source of much of the growth in per-capita income experienced over the last two centuries is in cities. Short of a revolutionary improvement in transportation technology (such as the matter transporter used in the Star Trek television series) metropolitan areas will continue as vital sources of economic growth and centers of culture.

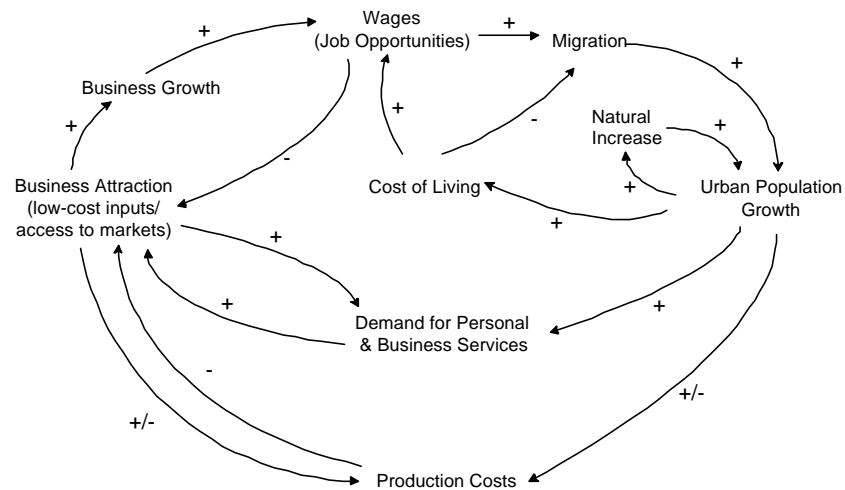

The causes of growth and change in modern metropolitan areas

Cities and regions change because people move. People have been moving off the farm and into large cities for centuries. They have also moved from city to city (and from other countries), which accounts for a much larger share of the change in metropolitan population now that the major rural-to-urban shift has passed. The development of sound policy depends on a clear understanding of the reasons people move to urban places. We describe those reasons in this section.

The conventional and prevailing economic theory of interregional migration holds that people move to find better jobs: people follow jobs. This conventional theory suggests that growth and change in the location and size of cities can be understood by explaining the causes of changes in the location of employment. The theory focuses on the effects of technological improvements on the location decisions of manufacturing firms. The idea is that large cities grow around manufacturing firms that choose locations that minimize the costs of transporting inputs to the factory and outputs to market.

Figure D-1 illustrates the process of urban growth embodied in the conventional theory. It lists the key variables that influence urban growth, simplified in the figure to mean *population growth* (on the right) and *business growth* (left top). Arrows show the dominant relationships between the variables. (We emphasize *dominant*; other relationships certainly exist.) A plus sign means a positive impact: the first variable causes the second variable (at the end of the arrowhead) to increase; a minus sign means the opposite. The signs follow the standard rule of algebra when multiplied: a negative times a positive is negative; a negative times a negative is positive. For example, since *cost of living* decreases (-) *migration*, which increases (+) *population growth*, increases in cost of living decrease population growth (- times + equals -).

Figure D-1 : The conventional theory of urban growth

Source: ECO Northwest based on Myers, 1989, p. 93.

Consider first the top half of Figure D-1, which illustrates how growth begins. Something (e.g., a technological change) increases the attractiveness of a region to a business (*business attraction*), which increases *business growth*. The lower costs of production at that location allows the firm to offer *wages*⁶ high enough to attract workers from other areas; the growth of the firm usually also means more *job opportunities*. More jobs and higher wages leads to *migration*, which causes *urban population growth*. The population growth is augmented not only by migration, but also by *natural increase* (the excess of births over deaths for the existing population).⁴

This relationship explains, for example, the long-term growth trends in cities located, like Portland, on natural harbors. Natural harbors first attracted urban development as improvements in the technology of shipping freight by sea gave port cities good access to distant markets. Natural endowments often gave (and continue to give) one area cost advantages in the production of some commodities over other areas. Areas near Portland could supply agricultural and forest products at relatively low cost in exchange for manufactured goods produced in cities on the eastern seaboard. These *comparative advantages* make possible gains from trade, given sufficiently low transportation costs. Until this century, most commodities, whether produced at a factory or at home, could be shipped most cost-effectively by firms that invested in ships, equipment to load them, and people that could sail them. Thus, economies of scale in shipping encouraged the growth of port cities. As shipping companies attracted workers to ports, other business followed—businesses that served shipping companies (ship builders, financiers, accountants) and retail firms that sold goods to workers.

With time, Portland grew not only because it served as a distribution and collection point for goods coming from and

going to the Willamette Valley, but also for all of the reasons described in the previous section. The Willamette and Columbia Rivers, rail lines that converged at Portland, streetcars, and the highway system all give the Portland area key transportation advantages over any other area nearby. As a variety of industries—including wood products, ship building, and even beer brewing—took advantage of Portland's accessibility, the city grew. That growth itself improved Portland's prospects for further growth improving the range of specialized goods and services available in the metro areas.

These effects are shown on the bottom portion of Figure D-1. *Urban population growth* and *business growth* increase the *demand for personal and business services*, which directly increases the attraction of the area for business, which contributes to more urban population growth. Agencies charged with economic development try to lure new manufacturing firms to an area because they expect that the factory and its workers will support a variety of service-oriented businesses. Urban growth has indirect effects that further stimulate growth.

The argument so far suggests that well-located metropolitan areas might grow without bound as agglomerative economies reduce production costs. Some seem to (e.g., L.A., Mexico City). A particular technological improvement, however, usually has limited effects on the growth of most urban areas (when Boeing grows Seattle grows, but not without bound). What slows the process of growth? Often it is the effects that accompany the growth itself: the congestion, higher land and housing prices, and other disamenities associated with growth eventually increase the costs of production: the marginal costs of these disamenities surpass the benefits of further agglomeration.

Figure D-1 shows the sources of the increases in production costs. First, as population grows, so typically does the *cost of living* in the city. The increase in the population increases the demands for all products, some of which can be supplied only at higher prices: land for housing and commercial services, transportation, and a variety of urban services. (Offsetting some of the increase in the cost of living are potential decreases in the cost of goods and services because of scale and agglomerative economies.) Increases in the cost of living slow migration directly by discouraging workers who are considering a move, and indirectly as higher wages discourage more firms from locating in the city. Increased population also increases production costs by increasing the cost of non-labor inputs, such as land and business services. Given a limited supply of land with good access, land prices increase as the urban area grows, which directly increases production costs for the manufacturer, and indirectly increases production costs by increasing the cost of business services.

Urban growth stops when the costs of growth exceed its benefits to new arrivals. Growth occurs when some change allows the growing city to offer a better combination of wages and cost of living than other cities. Firms and workers respond by moving away from cities or regions with less favorable combinations of wages and living costs. The movement away from low-wage, high-cost cities reduces living costs relative to wages in those cities (living costs may decrease, as they have recently in many California cities; wages may rise; or both).⁵ At the same time, the growth of the high-wage, low-cost city decreases wages relative to the cost of living (again, living costs may rise as, for example, housing prices increase, wages may fall with the influx of workers, or both). This process of economic adjustment continues until an *equilibrium* regional development

pattern is established: in other words, until regions offer roughly the same total advantages to migrants (though the mix of advantages summing to the same total may differ).

Note that this apparently straightforward process is sufficiently complex to make forecasting future growth in population and employment highly uncertain. First, it is difficult enough to identify just the key variables and their antecedents and successors in a chain of cause and effect. Second, it is difficult to foresee the changes in these variables that influence growth. Third, the complexity of the growth process makes it difficult to predict how much an area will grow given the initial impetus. For example, Figure D-1 shows the population growth of an urban area has effects that can move in opposite directions: (1) it increases the cost of living and some production costs; and (2) it decreases other production costs because of agglomerative economies. How much the urban area grows depends in complex ways on the characteristics of the city: the types of goods and services produced, the ability to accommodate new households, and so on.

Remember that Figure D-1 is what we called the *simple* model of urban growth. The actual process is much more complex. Figure D-1 leaves out, among other things,⁶ an important determinant of urban growth: the level of amenities, livability, or (as we will refer to it in the rest of this report) *quality of life*. That variable is particularly important to the arguments of slow-growth advocates.

Though conventional theory suggests that people move when the wages offered somewhere else exceed their current wage, a large proportion of migration in the U.S. is no longer from low-wage to high-wage areas. Instead, amenities like a warm climate, access to recreation, and clean air appear to attract people. The value of quality of life is so important that we

have coined the phrase “the second paycheck” to make explicit the relationship we will describe shortly: that people make location decisions based on wages (the first paycheck), quality of life (the second paycheck), and cost of living (what the first paycheck can buy). A complete theory of inter-regional migration must recognize that not only do people follow jobs, but jobs also follow people.

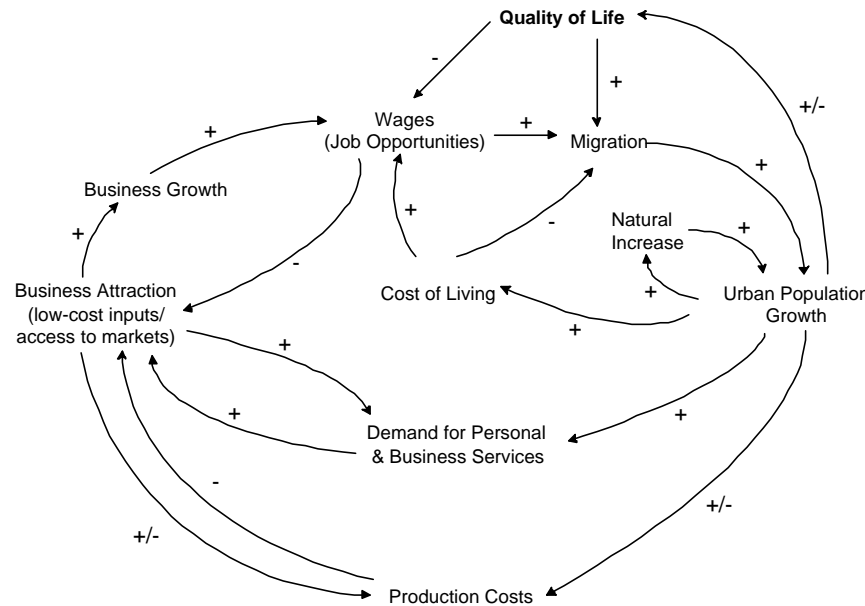

Much of the recent growth in employment in the region has been in high-tech, specialty metals, plastics, and professional services, not the traditional resource-based industries. The Port-

land area has grown sufficiently diverse to provide the intermediate inputs (marketing, legal services, technical support) necessary to support many non-traditional industries. Many of these industries use highly-skilled workers who value the kind of environmental amenities the region has to offer: relatively clean air and water, low traffic congestion, good restaurants, art galleries, and public facilities, and good access to recreation. A skilled worker can move to the region and bring her job with her or find one relatively easily.

Figure D-2 adds to Figure D-1 to include the effects of difference in the quality of life between regions. Suppose quality of life improves *relative* to other areas in the region (for example, because quality of life decreases in California or Seattle). If other things remain constant, a relative improvement in quality of life attracts new residents. Labor supply increases, which decreases wages and attracts new business (the minus sign on the arrow from wages to business growth indicates that higher wages reduce business growth, so lower wages will increase business growth). People do not follow businesses to the region: businesses follow people who are willing to accept a lower wage for improved quality of life.

Aggregate growth in a region stops when inter-regional equilibrium re-establishes itself.⁷ Growth in population and employment increase the cost of living, decrease wages, or reduce quality of life until the people are indifferent about where they live. Equilibrium is re-established when the combination of quality of life, wages, and the cost of living makes the overall standard of living comparable to that in other areas. The important point is that disproportionate regional growth (migration) will slow down as the standard of living (as measured by wages, the cost of living, and quality of life) becomes similar across regions. In economic terms, migration slows

Figure D-2 : A newer theory of urban growth

Source: ECO Northwest based on Myers, 1989, p. 93.

down when real incomes in one region decrease relative to those in other regions.

Some people in Portland focus groups suggested that there is an optimum metropolitan-area size (say 100,000 to 500,000 people), and that the Portland metro area had or would soon exceed its optimum size. Given this belief, they argue for either slower growth or growth policies that would create new cities.

Our analysis suggests that the complexity of the economic activity both within a single urban area and within the system of metro areas in the region and nation prevents any clear definition of optimal city size.⁸ Well-located cities usually grow to take full advantage of their location. That growth provides higher incomes, better job opportunities, and a much richer variety of goods and services. It almost certainly also implies some decrease in the quality of important amenities such as environmental quality and access to recreation. The types of trade-offs that affect the quality of life are so numerous, however, that determining a single optimal metropolitan area population is almost certainly impossible.

A very large metropolitan area can, for example, possess better environmental quality than even much smaller ones. As we argue below, public policy plays a crucial role making a particular set of trade-offs. Though we have no doubt that metropolitan area growth will hurt some aspects of the quality of life (for example, more people in the Portland area certainly means larger crowds at the ski areas and the coast), the trade-offs available make it hard to demonstrate that, for the range of city and Metropolitan sizes that exist in Oregon, any particular size is clearly too big. The benefits and costs of metropolitan growth to its citizens depends more on how growth is handled than on the amount of growth.

Nonetheless, though urban and regional economists generally agree that there is no such thing as an optimum metropolitan size, there are probably many people in the region who feel that the Portland metro region is somehow “just too big;” that it has exceeded or will soon exceed a size they feel was better for them. Some researchers have tried to quantify these feelings about the quality of life by rating cities on multiple variables. While the ratings are great news items and a boon for growth promoters, they are not much more: their methods do not withstand scrutiny.⁹ Though difficult to measure, those feelings about a region gone wrong are real and probably not uncommon.

The role of public policy in metropolitan growth

To this point the models that we have described have not included any reference to public policy. Clearly the policies that a region adopts can have an influence on all of the variables contained in Figure D-2. Figure D-3 shows some of the relationships. The chief influence of public policy is through its impacts on *production costs* via the provision of *public infrastructure and services*, and on *quality of life* via effects on *environmental quality*, *urban amenities*, and *infrastructure and services*: the three factors at the center of Figure D-3. The bottom of Figure D-3 shows in more detail some of the components of these general categories that policies can influence.

The three factors (environmental quality, urban amenities, and the capacity and quality of infrastructure and services) simultaneously provide a definition of *quality of life*: they are the things that public policy must encourage if people are to perceive that their second paycheck is anything more than chump change.¹⁰

Public policies influence virtually all aspects of urban development. Local governments provide most of the infrastructure needed for important urban services: transportation, water,

sewer, and drainage. Local governments regulate the provision of other services: electricity, natural gas, and garbage collection and disposal. The conditions under which these services are provided can affect the pattern of land development. Local governments control land development directly via a wide range of land-use and building regulations: zoning, building codes, development guidelines, and so on. Effectively designing new policies to control growth requires a clear understanding of how existing public policies influence growth.

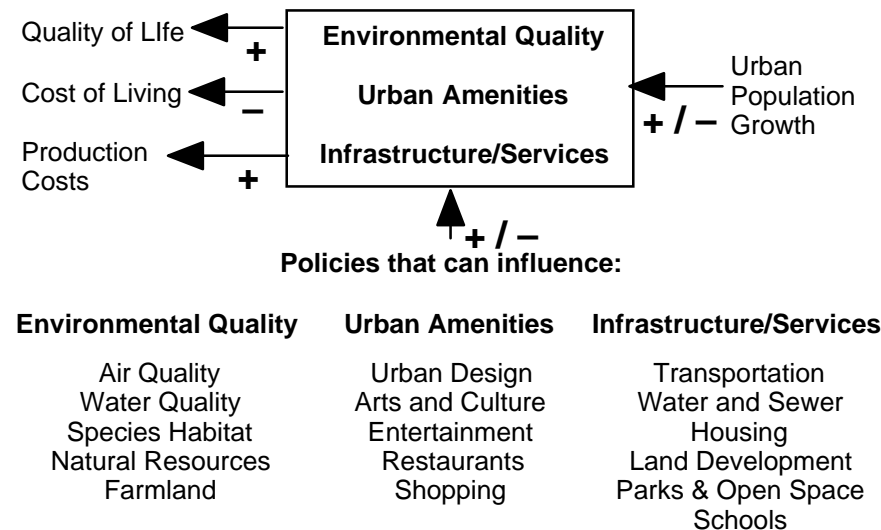

Public policy in the U.S. evolved as the country developed. Policy in the 19th century focused on war and defense (both

international and domestic), protecting individual liberties, and assisting in the development of North America's vast resources. Most of the people who immigrated to North America were poor by today's standards, and were most concerned about improving their economic condition. Municipal governments did not have the power and resources to monitor and regulate the activities of individuals that local governments have today. Even today, although most people enjoy a very high standard of living by historical standards, many people feel strongly that government's major role should continue to be to assist in the development of natural resources.

It is hard to over-emphasize the importance of the objective of increasing growth and development in the evolution of local public policy. Local governments grew because they could contribute significantly to growth and development. Only in the last 30 years has there been a significant shift toward conservation of resources as an important objective of public policy. Until very recently local government policy was directed mainly toward the growth of the community: if not toward stimulating growth, then certainly to accommodating it. Though the commitment to conservation has increased in strength in recent years (largely as a result of the increases in incomes made possible, in part, by policies to promote growth), in most communities the commitment to policies that promote growth and development remains strong.

Transportation illustrates the typical pattern in the historical development of public policy. In the 19th century the transportation policy that existed was aimed at growth and development, primarily of ports and railroads, secondarily at urban-streetcar systems. Those transportation systems were provided almost entirely by the private sector; public policy focused on keeping private markets efficient by regulating mo-

Figure D-3 :The role of public policy in urban growth

Source: ECO Northwest based on Myers, 1989, p. 93.

nopoly power, and subsidizing the private development of transportation systems. In the 20th century, policy shifted toward government provision of transportation services. Highways and transit, originally provided privately, became the domain of the public sector. Transit systems shifted to public control; the highway system was almost entirely public. The focus remained on developing capacity, not curbing its growth.

Given the successes of all public works during the depression of the 1930s, and the growing demand for high-quality roadways, the public supported large-scale government construction of highways and related infrastructure. As with the coming of the streetcar, it was easy for the public to envision the benefits of a system of urban expressways. The new expressways could supply low-priced land for both residential and commercial purposes. Moreover, given current populations, sufficient capacity could be built to provide convenient access to all parts of the city. Not surprisingly, the construction of urban expressways had the same effect on well-located urban areas as had the streetcar systems constructed at the turn of the century: it allowed these cities to grow. The highways opened up large quantities of low-priced land with good access to inputs and markets to commercial and industrial development. They also provided access to the land workers wanted for housing.

We have no doubt that autos, trucks, and highways contributed immeasurably to the economic vitality of urban areas and to the standard of living enjoyed by urban residents. The public investment in transportation infrastructure that has occurred over the last several decades almost certainly contributed more to urban areas than it hurt them. This is true not in spite of growth, but because of growth. The reason businesses and households move to cities in response to infrastructure investments is that urban areas offer them something better than

they currently have. They gain from the move. It is frustrating to current residents to see the new highway expected to speed travel quickly become congested. The highways were built because the existing facilities already were congested. The businesses and households that move to the now more attractive city put pressure on a wide variety of urban services. They also, however, make possible the supply of the wide range of goods and services typically found in cities, and they increase wages and the range of employment opportunities. It is easy to focus on the nice aspects of the city before it grew, and fail to consider the benefit of the growth.

The growth that transportation policy stimulated, however, caused the same kinds of problems experienced earlier with construction of streetcar systems: large parts of cities remained crowded and dirty as more people poured in, land and housing prices increased, and the highway system became congested. The auto itself, which was used to escape the poor environmental conditions in the city contributed significantly to the degradation of urban environments.

It is only in the last third of the 20th century that public policy has given serious attention to the impacts of the growth in transportation capacity. The problems emerged first as air pollution, but recently have expanded to include all the things that transportation policy and the growth of access can affect: the economic impacts of congestion, consumption of farmland, land use patterns that cause social and fiscal problems, and so on. Unfortunately, some of the policy responses only exacerbated some of the problems. The natural response to congestion and high land prices was to widen existing highways and build new highways to undeveloped areas. The response was the same: more growth, more congestion, higher land prices, and more air pollution. Going back to Figure D-1, improvements to the

highway system decreased production costs, which attracted employers to the city. The employers offered wages high enough to attract workers. The process continued until the combination of wages, the cost of living, and the quality of life more-or-less equalized between cities and regions. Some urban areas grew more than others because of their accessibility and the characteristics of businesses and natural environments.

The problem with public policy isn't that it focuses too much on expanding public infrastructure and services that encourage growth, but that it often fails to treat directly and effectively the most important problems associated with growth. For example, policy typically treats congestion by increasing roadway capacity. That would work if the volume of traffic remained constant. But the new capacity decreases the cost of travel in the short run, which encourages people to take more trips, and to change travel modes, routes, and times. In the long run, some people move farther from their destinations (which increases the amount they travel) and people move into the urban area. The new highway capacity often fills up very quickly. This realization has led to the recent thrust of transportation policy: a renewed interest in the full impacts of transportation investments on *all* systems, and an emphasis on having people pay the full costs (of operation, maintenance, lost time to others, pollution, and so on) of their trips.

The basic evolution of transportation policy is a pattern repeated (with important variations) in policies for all public services related to the development of land and the resources it contains:¹¹ full scale support of development for two centuries, tempered in the last 30 years by a growing awareness of the impacts of that development as the frontier disappears.

Returning for this example to policies more directly associated with growth management, we note four general categories of regulatory growth management techniques being used in the U.S. today (Kelly 1993:43):

- Adequate public facilities requirements
- Urban growth boundaries
- Growth phasing programs
- Rate-of-growth programs

Jurisdictions in Oregon rely primarily on policies in the first two categories, and to a lesser extent the third, to manage growth. We are not aware of any jurisdictions that have policies aimed directly at changing the rate of growth.¹² Adequate public facilities and growth phasing are closely related: the former focuses on the impacts of development on public facilities to ensure adequate capacity; the latter on the timing of growth in particular locations (but usually based on the availability of services). In addition, there are several nonregulatory (or quasiregulatory) techniques to affect the timing, amount, location, and quality of growth: things like land acquisition, annexation, economic development incentives, and the development of regional facilities (especially major highways). All of these techniques are used by at least some jurisdictions in Oregon. Chapter 5 discusses the potential impacts of the various categories of policies.

The model of growth we have presented in this chapter requires merging Figure D-2 with Figure D-3. The result is Figure D-4.

Even as Figure D-4 makes the process and determinants of growth more complex, it does not make them complicated enough. It's

Direct costs of growth: What are they and who pays?

This appendix addresses a subset of costs: the direct (monetary) costs of providing public facilities to the development that new growth requires. For a framework for thinking about the full costs of growth, go to the beginning of Chapter 4. Even with this limited definition, different studies of cost usually focus on only one of many possible questions about direct costs:

- What are the costs of growth, per se? Few, if any studies, have been able to adequately address this overarching question. There are many reasons, but the key one is that growth has too many dimensions to measure. Growth is more than land development. Even if growth is defined that narrowly, there are many different kinds of land development (e.g., residential, commercial, and industrial) and many different ways that development can occur (e.g., by location, design, and density).
- What are the costs of some specific development type? For the reasons given in the previous point, most studies of the cost of growth focus on a certain type and pattern of development. Nationally, research has been driven by the debate about urban sprawl: do low-density development patterns cost more than higher density ones? The fact that such studies exist and find differences in cost based on the location and pattern of development shows why simple statements like “growth costs \$X per housing unit” are misleading: the estimate depends on many assumptions about the type and location of housing, its density, the size and economic conditions of a particular jurisdiction, the preferences of local residents for a particular level of service, and so on.
- What are the fiscal impacts of some development type? This question expands from the previous one about a

subset of costs (i.e., direct public costs) to include a subset of benefits (i.e., public revenues). Many studies have been done to estimate whether particular development types cost local governments more than they contribute.

- Who is paying the costs, and is that fair? This question expands on the former one to look at where the revenues to pay for the direct public service costs of growth are coming from, and the extent to which it meets some normative judgment about who should pay.

Although discussion of definitions and assumptions is tedious, it is essential for a fact-finding study such as this one. Different studies of costs of growth measure different aspects of those costs, in different units, over different levels of geography and time periods. In most cases, simple comparisons across studies is inappropriate. Without clear statements of definitions and assumptions, the debate about costs of growth is primarily rhetorical, and the evaluation of policies primarily political. Regardless of whether such a decisionmaking process is desirable or inevitable, the objective of this report has been to provide a technical basis for the debate about growth by describing the technical issues as clearly and fairly as possible.

Comparing studies of costs of growth requires a definition and understanding of standards for evaluation

Such a description begins with a list of principles for evaluating any study of the costs of growth to make sense of what is being measured. Any such study should be specific and clear about:

The question about the costs of growth addressed

For this report, the essential question about direct costs is: Are the new people, employees, and development that are contrib-

uting to and benefiting from growth in a community paying a fair share of the additional costs of the public facilities and services they require?

The subset of costs evaluated

Fig 4-2 shows all the different levels of costs that might be addressed. This section of this appendix, for example, focuses on the direct costs of key public facilities; other sections discuss other impacts (both costs and benefits). But the studies reviewed in this section do not all address the same facilities, and most do not consider indirect overhead costs of service provision.¹

Figure 4-2 also shows where study methods differ significantly and make simple cost comparison incorrect. Some studies of public facility costs look only at on-site costs for facilities that serve the development exclusively (e.g., interior roads and sidewalks in a subdivision, pipe to hookup to water mains and sewer trunk lines). Other studies consider off-site costs (also called neighborhood, community, or central costs) that can be attributed to the site development (e.g., more capacity in arterial streets, water mains, wastewater treatment plants, schools, parks, and jails).²

The treatment of capital and operating costs of public facilities

An analysis of the direct costs to government of providing public facilities must state how it is calculating those costs. From an economist's perspective, the desired measure of cost would be an annual equivalent value that accounted for the stream of costs that it would take to plan, build, operate, maintain, decommission, and salvage some public facility over its useful life.³

Think of it this way: if construction on a new residential development were begun today in a community, how much

money should it ask a developer to put in an escrow account so the full stream of costs (capital, operation, maintenance, and (perhaps) environmental clean-up) could be paid for when the costs came due?³

No studies, however, attempt such a measure. Prior to 1980, most fiscal impact analyses focused on operating expenses and ignored construction costs (Altshuler and Gómez-Ibáñez 1993, p. 79). Many more recent analyses of costs in Oregon have gone the other direction, estimating construction costs but not operation costs.

Further complicating the cost analysis is the treatment of excess capacity and full life-cycle costs. What is the efficient level of excess capacity to design for, and how should it be paid for? If, for example, a current wastewater treatment plant has a peak capacity 50% greater than the largest historical demand recorded, should growth have to pay for a part of a new treatment facility that won't have to be built for another 20 years? Or does the growth actually reduce costs for existing residents by paying average-cost prices for use of the system while its additional cost burden is hardly noticeable? This is a question about average versus marginal costs, and potential economies of scale.

Moreover, jurisdictions can reduce current costs by reducing quality of construction and maintenance, both of which could reduce the effective life of the facility and, thus, the period over which its costs should be amortized. The cost differences that result cannot be handled by studies that do not take a life-cycle approach to cost estimation.

The distinction between real costs and financing

Using financing costs to estimate costs of growth may or may not be an appropriate measure of the true economic costs of

the resources that growth requires. On the one hand, when capital improvements are financed, their cost may be reported as an annual payment, which can then be added to annual operating costs to get a rough approximation of an annual equivalent cost of the service. On the other hand, when some facilities are financed over a period not equal to their expected lives, when some facilities are financed and others are not, or when facilities are partially financed while other payments come from transfers from other local or state revenue sources, financial costs may bear little relation to the real economic costs.

Concern in Oregon about the financing of infrastructure, however, is not about methodological distinctions between real economic costs and the stream of financed costs that pay for them. Rather, it is about the ability of government to raise enough revenue to pay for needed and desired public facilities, and the fairness of who pays. The two largest sources of tax revenue in Oregon are income and property taxes, which together account for approximately 75% of total state and local tax revenue.

Changes in Oregon's income tax reflect changes in the state's economy. Personal and corporate income tax collections have grown rapidly in the 1990s because of an increase in population, per-capita income, national corporate profits, and the share of corporate profits allocated to Oregon. The electronics industry is now the largest payer of corporate income taxes in the state. Income tax collections surpassed property taxes as the largest source of state and local revenue in 1994, caused by growth in income tax collections and declines in property tax collections that resulted from ballot measures to reduce them.

Before Measure 5, the total amount of tax revenue to be raised (the tax base) was divided by total assessed value in the taxing

district to calculate a tax rate. A tax base could not increase more than 6% per year without voter approval. Under that system, local voters determined the level of property tax revenue to counties, cities, and school districts. Property tax revenue was the largest source of school district funding, accounting for over half of all school district revenue.

Ballot Measure 5, passed by voters in 1990, limits the property tax rate to \$10 per \$1000 assessed value (i.e., 1% of assessed value) for non-school taxes, and limits the tax rate limit for schools to \$5 per \$1000. These limits were added to the Oregon Constitution: they can not be increased by local voters, but local voters can approve taxes beyond the limits to fund capital improvements. Measure 5 requires the State to replace lost property tax revenue to schools, effectively creating a state-funded school system.

Ballot Measure 50, approved by voters in 1997, limits the property tax rate and growth of property values. Measure 50 rolled back the assessed value of property to 1995-96 levels less 10%, and limited growth of the assessed value to 3% per year. Under this system, the property tax rate in Oregon is no longer applied to the actual market value of property, but rather to a lesser assessed value. There are exemptions for new construction, re-zoning, and subdivisions.

In addition to limiting the assessed value of property, Measure 50 required a 17% cut in tax levies, and permanently froze the resulting tax rate. Levies for bonds are exempt from this cut. The combination of fixed permanent tax rate and the 3% limit on assessed value growth effectively limits property tax revenue growth to no more than 3% per year plus increases for new development, either from new construction within a jurisdiction, or an expansion of its boundaries (e.g., annexation).

Voters can approve levies beyond the permanent rate, but only at general elections or an election with 50% voter turnout. Operating levies beyond the permanent rate are limited to five years, and capital levies to ten years. Bond levies are exempt from the time limits of Measure 50, but must be approved by voters in a general election or in an election with at least 50% voter turnout.

A basic understanding of state and local finance is necessary to any assessment of the costs of public policies and services, and of who pays them. The important relationships between the tax system and growth in Oregon include:

- Economic growth has increased personal and corporate income tax revenue, and changes in the economy have changed the composition of industries paying the largest share of corporate taxes, and has increased the share of income taxes paid by residents.
- Economic growth also increased residential property values, which caused property taxes to increase even under Measure 5 limits, which in turn contributed to the approval of Measure 50.
- Measure 50 provided some incentive for cities to annex adjoining areas sooner than they would otherwise, because it allows new construction to add to a district's tax base.
- Regarding who pays the costs of growth, new development pays its share of property tax under the new rules (i.e., everybody pays proportionally less, but new development gets no special break). In high growth areas it is theoretically possible for municipal budgets to increase more than they would have under the old rules (e.g., a lot of new development in a city, combined with a 3%

increase in assessed value of existing property, could increase tax revenues by more than the old 6% lid).

- The loss of local control of school district funding prevents communities from voting to increase funding for higher-quality schools. While state funding and equalization may be desirable for reasons of equity, the quality of schools has historically been a key determinant of residential local decisions. The effects of that limitation on location decisions, however, may not be great since desirable school districts will continue to have the capital and human resources, and local support, to find ways to remain good districts.
- The shift in Oregon's tax system to increased reliance on income taxes has increased the sensitivity of funding to changing economic conditions. An economic downturn could have a significant effect on the state General Fund and, consequently, on school funding.
- In response to declining property tax revenue, many local governments have turned to fees in general, and in particular to system development charges and exactions on new development to help fund off-site infrastructure. The effects of such financing mechanisms are ambiguous: they depend on many other factors. If, for example, large SDCs are adopted by one city in a metropolitan area, the tendency in the short run may be to move development to other cities. If the financing in those other cities, however, is inadequate to handle necessary capital expansion and maintenance, then in the longer run their financial problems could drive growth away. If all cities in a region simultaneously increase SDCs, then the impact, if any, will be on the amount of regional growth, not its distribution.

- Many communities in Oregon use property tax abatements and enterprise zones to encourage business location, retention, and new development. This practice has been increasingly criticized as citizens question the value of continued growth in their community.

The type and pattern of growth evaluated

For this report, the focus is on residential growth in general, and on trying to get an average cost per new household or housing unit. Obviously, the type and location of the housing unit that is built to accommodate the new household will have an effect on the costs the new household imposes on public facilities and services. Moreover, those facilities do not service residential development exclusively—they also serve commercial, office, and industrial development. Thus, total costs of new facilities cannot be reasonably attributed to housing only. Some studies, especially those that take a public utility rate perspective on cost analysis, deal with this problem by estimating costs per equivalent dwelling unit (e.g., assume that 2.5 employees have the same impact on a water system, on average, as a single-family dwelling unit).

The other factors that influence cost

All cities and counties do not offer the same package of services. Differences result from many factors, which include the historic pattern of growth; prior investments in and directions for services; and the preferences of property owners for type, level and cost of service (which is in part a function of their socioeconomic and demographic characteristics). For example, the amount of driving in the US, and therefore need for highway facilities, has grown two to four times faster than population in each of the last five decades, leading to conjecture that land development itself may account for only 25% to 50% of the increase in driving and highway demand (Altshuler and Gómez-Ibáñez 1993, p. 64).

Federal and state mandates have increased requirements for local facilities and services, while a phase-out of revenue sharing has reduced payments for others. There is ample evidence that many state agencies and local governments, faced with requirements for more services, inflation, and budget limitations, make ends meet by deferring maintenance (in essence, borrowing from the future). Whether mandated or locally chosen, different standards for level of service can easily change costs by a factor of two or more (Frank 1989, p. 11).

Jurisdiction size also influences costs. Larger cities typically provide more services. To some extent, that results from different regulatory standards, and from the need for a critical mass of demand to allow certain services to take advantage of economies of scale that lower the per capita costs. Increasing per capita expenditures may also be a result of the effects of the amount and density of population (i.e., congestion). For example, more people means that some intersections now need traffic lights. Several studies find the relationship between metropolitan growth and per capita public sector expenditures to be U-shaped: when controlled for other variables, per capita spending is higher at low growth rates, declines with growth, and then increases after the growth rate reaches some level.

The larger the jurisdiction the smaller the impacts of a new household (that might have higher marginal costs) on average service costs of all households, the more likely that excess capacity will exist and mean decreasing marginal costs for growth, and the more likely that external benefits and costs will be internalized.

The normative assumptions

One can ask not only, Does growth pay its own way? but also, Should growth pay its own way? The answer depends on one's

assessment of what is fair. Considerations of equity add a layer of complexity to questions about the cost of growth. Consider:

- Fiscal zoning. Municipal governments have incentives to use land use policy for fiscal purposes.⁴ While law prohibits many types of discrimination, it does allow municipalities police powers regarding the type, density, and standards for land uses. Should municipalities be allowed to adopt high standards and full-cost recovery policies if that means that only high-income people can afford new housing?
- The principles and mechanisms for recovering costs. There are at least four notions of a fair way to charge for a good or service. For goods in the market place, one of them is used exclusively: if you have the money, you can have the product (ability to pay). That mechanism is deemed fair: an informed buyer and seller agree to an exchange that makes both feel better off. For collective goods provided by government, however, other principles get applied. People could get charged based on their share of the costs (e.g., what share of the sewage treatment plant they use), their estimated benefit (much harder to calculate since people have incentives to underestimate their benefit), or special status (e.g., half-price for senior citizens, independent of their cost, benefit, or ability to pay).

The financing of schools illustrates the problems. If education were purely a private good, then school districts could be run like businesses and students or their parents could be charged for the full cost. But there are other public benefits to education (the development of better citizens through shared understanding and values), and an argument that everyone has a right to a good education, whether they can pay or not. Lee (in Nelson 1988, p. 305)

argues that “to the degree that there is a public purpose, the costs should be borne by the community, with the share falling on each taxpayer bearing no relationship to the load placed by the taxpayer on the educational system....the number of school children associated-directly or indirectly-with new development is not only irrelevant, it should be illegal for impact fee purposes.” Thus, whether and to what extent system development charges should be used to finance schools depends a lot on bigger decisions about education and fairness.

- Initial versus final incidence of cost burdens. Ultimately, most of the direct facility costs of new development get paid by someone or the development cannot occur. There is no free lunch, and municipalities have to balance budgets. Thus, the question about growth is more about who pays, and in what form, than about total cost.

What public facility costs are paid directly by developer (e.g., on-site streets); what costs are paid indirectly by developer (fees paid to municipalities and special districts for public facilities that they install, either on site or off site); and what part not covered by developer/builder fees that the public sector must pick up? Even if a developer pays initially, the final burden gets distributed to different groups (landowners, developers (as landowners, or just as developers), new residents, current residents, other state and federal taxpayers) depending on the conditions of supply and demand.

For housing, the direct costs are usually borne primarily by households buying or renting. If some of the direct infrastructure costs are recovered via impact fees, for example, in markets where buyers and renters are sensitive

to price, some of those costs will be pushed back to landowners in the form of lower land prices. Most studies conclude that the shift to landowners will be small (Nelson 1988, p. 316 and Altshuler and Gómez-Ibáñez 1993, p. 100), but that conclusion is debatable and dependent on many variables. The counter-argument is that in a large urban housing market, the new housing in any given year is a small percentage of total stock, so the price of new housing (adjusted for constant quality) is determined by the price of existing housing. Thus, a developer cannot simply charge more to cover the SDC: in the short run the developer pays; in the longer run, land prices must drop to capitalize the SDC. This effect will be most likely for SDCs that are for services that are not an obvious and direct benefit to the individual property (e.g., for an SDC to pay for off-site road improvements or regional parks, compared to an SDC to pay for sewer treatment capacity).

But if homeowners and renters are paying most of the costs, how are the costs distributed among them? Consider, for example, that not all people buying new houses are new to a community. Much of the development that occurs in a community gets occupied by households and businesses that already reside in that community and pay fees and taxes. Are they the ones that should pay the cost of growth? Or should the burden fall on those households and businesses that are moving into the area and are most directly responsible for population growth? How that question gets answered implies different methods of charging for growth.

Moreover, the population of a jurisdiction changes composition even as it grows. In Oregon, on average, less than half the households in the state live in the same house

they lived in five years earlier; over 25% lived in a different county. Even with an assessment that perfectly matched facility life, current taxpayers pay more for the system than future ones: people who pay early pay more because payments do change in time as inflation makes future payments less valuable. Property taxes complicate the picture further, as do taxes paid to state and returned to local governments, and federal grants.⁵

The limitations of the estimates

Finally, and perhaps most obviously, there is a lot of uncertainty about the estimates of the amount and composition of population, its demand for services, costs, and all the other factors that go into calculating what a fair charge for the direct costs of public facilities should be. Some of that uncertainty is inherent (we can never be sure of the future until it's the past); some of it is introduced by bad techniques and data.

Differences in objectives, scope, definitions, assumptions, methods, and data in studies of costs of growth make comparisons, and some of the conclusions derived from the, questionable

National studies

We compare several key studies against these principles. Some studies regarding the costs of development are cited in almost any cost study. The classic, *Costs of Sprawl* (Real Estate Research Corporation 1974), is of limited use: not only is it 25 years old, but it has been shown to have methodological flaws (Windsor 1979). Recent work on development costs starts with Frank (1989), whose report is itself a summary of the best studies he reviewed going back to 1955. Much of the more recent work has been done in the context of fiscal impact analysis by Burchell (Burchell 1997; Burchell and Listokin 1995;

Burchell, Listokin, and Dolphin 1985). Other significant work on costs comes from the literature on development impact fees (Nelson 1988, and Altshuler and Gómez-Ibáñez 1993) and on property tax (Ladd 1998).

Some of the works cited above are themselves summaries of other studies-this report must compress those summaries even further. All the points listed above about different research questions (e.g., the costs of growth, or the costs of different patterns of growth?) and methods (construction vs. operation, on-site vs. off-site, total cost vs. costs unreimbursed directly at the time of development, differences between residential and non-residential demand patterns and marginal costs) apply. With the obvious caveats, here are the key points.⁶

Frank's (1989, 39-41) conclusion from his review of cost studies is that when all on-site and off-site capital costs for streets, sewers, water systems, storm drainage, and schools are counted they amount to about \$35,000 (\$1987, which would be about \$50,000 in \$1998) per dwelling unit for a low-density residential pattern. That estimate depends heavily on the assumed location of the dwelling units from central facilities and on the density of the development. Frank shows different reasonable assumptions that cause costs to be from about 50% to 250% of that base estimate. Service standards have big effects: capital costs for schools and streets across jurisdictions vary by a factor of two. He notes that costs can be reduced even further if standards are reduced, but that such reductions are usually only acceptable with less density, which means that distance-related costs (roads and pipes) will increase and at least partially off-set the savings (assuming water and sewer hookups to a central system). His conclusion is that "in most communities, costs beyond the neighborhood level are not fully passed on to the consumer as part of buying a house...." Note

that though he reviewed studies that looked at O&M costs, his summary is for capital costs only.

Frank also notes an obvious point that is critical to any estimate of the costs of growth: marginal costs vary substantially because of big differences in unused capacity. If cost estimates are based on having growth connect to existing infrastructure that has excess capacity, those estimates will be lower. Frank found that if only marginal costs are considered, scattered, infill development has the smallest short-run impact on cost because it takes advantage of unused capacity.

The American Farmland Trust (1986 and 1995) has sponsored studies related to the costs of growth: their focus is the cost of different patterns of growth; their conclusion is that denser patterns are preferable because they cost less and also save farmland. The 1986 study for Loudoun County, Virginia, is notable for its documentation of assumptions and adherence to most of the underlying economic principles described in this report. It did not actually estimate total cost, because it noted that the costs of local streets and water and sewer hookups are paid by developers. The study looked primarily at off-site capital costs and all other costs of government operation, including costs for schools, road maintenance, water and sewer, public safety (police, fire, EMS), health and welfare, and general government. The conclusion was that these costs were about \$3,500 to \$5,000 per household (\$1986, which would be about \$5-7,000 in \$1998; Table 4, page 32), with denser patterns costing less. About 2/3 of the costs were for school operation and instruction.

The work of Frank and others since Frank is identified and briefly summarized in Burchell et al. (1998), which is primarily based on his previous summary (Burchell 1995). Burchell's work in New Jersey is a state-level analysis of the relative costs

of alternative development patterns. He looks at roads, water, sewer, and schools, but his reference to the study does not include sufficient documentation to determine exactly what components of those costs are being measured. His results are not reported in his summaries as a cost per dwelling unit. His summary table (Burchell 1995, 17) allows the calculation of an average cost per household, which is about \$33-\$36,000 (\$1992 [but some mixing of different years], which would be about \$37-\$41,000 in \$1998). That estimate allocates total infrastructure costs for all development to only households: if employment were considered with standard assumptions for equivalent dwelling units, the allocation might be more like \$20,000 per household. Burchell also cites a study by Duncan (1989) but does not provide enough detail to determine what aspects of capital costs that study is measuring.⁷ Despite these problems, Burchell summarizes from three studies to argue that certain service costs are less expensive under compact development than under traditional development. He estimated “compact” costs as a percent of “sprawl” costs to be about 75% for local roads, 80% for utilities, and 95% for schools.

Like Burchell, Ladd (1998) has done substantial work on government cost and growth, and has done a review of that literature. While most other work on costs makes estimates based on the assumed characteristics of subdivisions, her work is done at a metropolitan scale.⁸ She finds a U-shaped relationship between the rate of population growth and growth in local government per capita spending. On average, for a few hundred metropolitan areas, spending declines at low rates of population growth (less than 1% per year) and then rises at an increasing rate after the annual population growth rate reaches about 3.8%. Among the reasons: in fast-growing counties state governments do not maintain their share of state-local spend-

ing; fast-growing counties have larger capital expenditures. Ladd concludes that “the results suggest that new development, as measured by population growth, may not pay its way when population growth is rapid.” (Ladd 1998, 67). A corollary is that in slow-growth areas, more people could reduce per capita spending and reduce tax burdens.

With respect to density, Ladd finds that it has the same U-shaped impact on spending as she found for growth, and that greater density is associated with higher public sector costs. Higher density requires more public expenditure to deal with what Ladd refers to as “the harshness of the environment.” For example, the costs of pollution and the need for expenditures on pollution control are greater when people are closer together: the pollution impacts more people.

The maturation of the neo-traditional development movement has led to some tests of its initial assertions about cost savings. In general, the findings are that neo-traditional development does not cost less in the aggregate at the subdivision level, but smaller lot size means more lots and less cost per lot (Steuteville 1998). A study in Oregon (ECONorthwest 1995) found similar results, and that housing construction of neo-traditional type costs about the same on a square-foot basis.

That study also supports the conclusions of other studies: that infrastructure costs depend more on the location of the development than its design because of significantly different impacts on off-site costs. Many analysts agree with Kain (1967, quoted in Frank (1989, 23)) that the cost of inter-neighborhood (i.e., community) facilities “depends primarily on the shape and size of the region being served rather than on density.”

The conclusion that distance from central facilities leads to

greater off-site costs has been used by many planners to argue that leap-frog development is inefficient. From an economic perspective, however, greater off-site costs are not necessarily bad. Peiser's empirical work (1989) suggests that over time discontinuous development patterns actually promote higher density. He examined lot sizes over time along major arterial roadways in Dallas, TX; Montgomery County, MD; and Fairfax County, VA). He found higher densities (i.e., smaller lot sizes) in later in-fill development than in the original development.

The studies cited so far focus on subsets of the total costs of government services that are needed to accommodate growth. Most do not focus on exactly who is paying for those services and through what mechanisms.⁹ Dauter (1998) attempts to sort out what developer pays and what households subsequently pay through user charges and property tax. He looks at the full range of capital costs and municipal services growth requires for cities in Texas. His conclusion is that new subdivisions, because they are higher than average value, will pay more than the average amount into the general fund for general fund services like police and fire protection, parks and recreation, libraries, and municipal courts. The amount of debt that can be supported by revenues from the new subdivisions (e.g., development fees, ongoing user charges) exceeds the amount of capital improvements cities have provided to these areas. Despite uncertainties and limitations (e.g., he looked at water, sewer, storm and streets, but not schools, which were not municipally provided), the findings make it clear that growth already pays a lot of its direct costs on public facilities.

Oregon studies

In addition to all the other criticisms of national studies, Oregonians can add one: Oregon is different. Direct costs might not be that much different, but service standards, densities,

and fee structures certainly will be. What do Oregon studies say about the costs of growth?

Carson (1998) is the most recent Oregon work on costs of growth, the bulk of which deals with not the total cost of growth per se, but who does, should, and could pay for the public facilities and services that growth requires. A subset of the report deals with costs. Carson summarizes six studies into a single table (Carson 1998, 31). Four of the studies are national. For several reasons cited above, only the Frank study (1989) has enough documentation to merit citing the numerical estimates. The two other studies are from Oregon: one by Fodor (1996; updated 1997), and one by Conder (1997).

The Fodor study of public facility costs in Eugene has been well publicized in Oregon: references in policy debates to new residential growth costing \$20,000 to \$25,000 per housing unit are usually based on the findings of this study. With respect to the principles discussed above, the report gets a mixed review. On the positive side, it states explicitly that it is evaluating only a subset of costs, it documents where the cost estimates came from, and it provides reasonable ballpark estimates of some of the costs of adding new public facilities. On the negative side, a minor problem is that the cost estimates are from different states and not standardized to constant dollars. More importantly, the analysis appears to assume that any of the estimated costs not paid by system development charges is a cost that is borne, unfairly, by other citizens in Eugene.¹⁰

A study for the City of Eugene by Lane Council of Governments (1996) in response to the Fodor study found some of the costs of facilities to be similar, but also found, as did Dauter (1998), that many of those costs were being paid by develop-

ers and subsequent users of the developed space. Carson makes the same point. Among LCOG's conclusions:

- Eugene's City Council has been explicit about the costs of public facilities and how they should be funded. Many costs are paid initially by developers in a number of ways:
- As part of their construction cost. E.g., on-site streets
- As fees or special assessments for on-site facilities. E.g., sewer and water hookup. For example, sewer and water fees were calculated by the utility to cover all operating and capital needs. Where metering is possible, such a system has several advantages over impact fees. Yet other facilities and services, typically those of general and regional nature, are funded on an ongoing basis by property taxes, to which residents of the new development contribute.
- As SDCs for off-site facilities. LCOG concludes that the SDCs charged cover 100% of the costs of the facilities that the City Council has decided can and should be covered by SDCs. The Council decided not to cover regional parks or regional transportation through SDCs because of their general benefit to the entire community: user fees and general funds are used instead. The Council could not cover schools or fire, because state law does not allow SDCs for those facilities.
- School and fire costs in Eugene do not rise in proportion to growth. LCOG showed, for example, that the long-run trend in Eugene has been for a relatively stable school-age population despite substantial growth, and argued that most of the reasons for a new fire station were unrelated to growth.

- The large majority of the direct costs of growth for public facilities are paid for either up-front by the development that accommodates that growth, or over time by those occupying that development through special assessments, user fees, and property taxes.

One point illustrated by differences in the Fodor and LCOG findings is the importance to the calculations of things like excess capacity, a short-run versus long-run perspective, and marginal versus average costs. Fodor is correct that eventually growth will be great enough that new public facilities will be required (and that, in that sense, those facilities are a cost of that growth); LCOG is correct that those relationships are not the linear ones that Fodor implies—excess capacity and changes in technology, service standards, institutional relationships, and pricing may reduce future costs in real terms.

Conder (1997) did his work on cost as part of the Metro evaluation of the public facility costs of urban growth in the Portland area. His memo, though short, comports with many of the principles above. He distinguishes between on-site and off-site costs, builds to regional totals from hypothetical subdivision costs, brings cost estimates to constant dollars, notes that he is looking at capital costs only (and for only a subset of services), estimates the components of those costs individually, and effectively calculates an up-front capital cost per dwelling-unit equivalent. It does not, however, consider life-cycle or O&M costs: it implicitly assumes that all growth happens today and builds facilities to today's standards to accommodate that growth.

Carson cites Conder as estimating a cost of about \$23,000 per single-family dwelling unit (\$1996, which would be about \$24,000 in \$1998), which he then compares to estimates (by

facility type) from other studies. This type of comparison, typical in much of the planning literature, illustrates the problem noted previously: simple comparisons of costs from different reports give an inaccurate picture. Conder's cost estimate is for on-site and most off-site public facilities (including parks, jails, and some new arterials, but not including major improvements to the regional transportation system), reported in 1996 dollars for dwelling-unit equivalents (which means that costs are not allocated exclusively to single-family, or even residential, development). Fodor's cost estimate is for a substantially reduced subset of those costs, reported in dollars from different years, and allocated exclusively to single-family development. Frank has yet a different subset of costs reported in 1989 dollars. The Burchell estimates are not comparable at all: they are costs in millions of dollars for the entire state of New Jersey.

ECONorthwest (1995) developed cost estimates for on-site public facility construction costs (local streets, sidewalks, water, sewer, electrical, and lighting) for two prototypical subdivisions: traditional and neo-traditional. Attempts were made to control for type, number, and quality of units, and expected demographic mix. The results were consistent with subsequent national studies showing no absolute cost savings for on-site public infrastructure (streets; water, sewer, and gas pipe; and electrical conduit) for neo-traditional development. At best, the total cost per acre of typical public infrastructure is no greater for neo-traditional development than for a standard subdivision: depending on the amenities provided, it may cost more per acre.

But any greater site cost is offset by two considerations. First, the amenity of a neo-traditional development may be greater: open space, design, and other factors make its housing a more

desirable product for buyers, who may pay more to live in such a development. Second, the neo-traditional pattern usually has smaller lots (more density), which means more lots to distribute on-site costs to. The end result of the ECO study was that the cost per lot is about the same: about \$12,000 for construction only (\$1995, including hook-up fees, which are typically based on service-provider estimates of the cost of the hook-up). Adding in design engineering and contingency, and updating to current dollars would bring that estimate to about \$15,000 to \$18,000 in \$1998.

Conversations with engineers and developers conducted as part of the research for this project suggest that number is in the ballpark, but could easily be higher, and maybe a little lower. Increased standards and, increasingly more difficult sites as all the easiest lands get used up, might cause those cost to be higher. Moreover, the estimates do not include other on-site costs that might be offered or exacted (e.g., open space, trails, and especially storm water retention). Costs could go lower for larger scale developments, where the costs can be spread over more lots, or for different jurisdictions, which have different site conditions and standards. In summary, \$15,000 to \$20,000 is probably a good estimate of the costs of designing and building all the on-site public services that a new single-family subdivision would require, with costs quickly moving toward the higher end. Note that these on-site costs only: they do not include, for example, systems development charges.

Most if not all of those on-site costs are paid as part of the development process. The ECO study also concluded, consistent with other national studies cited above, that "off-site public costs are primarily affected by the overall pattern of development [especially the location of the development relative to

central facilities] and public infrastructure capacity.” (ECONorthwest 1995, 4-6).

The most recent study we reviewed aimed at estimating public facility costs of growth was done as part of Metro’s urban reserve analysis (W&H Pacific 1998). The study looked at only the off-site (regional) costs of constructing and operating wastewater, stormwater, drinking water, and transportation facilities to serve 49 urban reserve areas (URA) in the Portland Metropolitan area. The study was empirically based, looking at the topography of each URA and its proximity to existing facilities. By including the present value of annual operation and maintenance costs (O&M)-i.e., an average annual payment that would have to be made to cover the long-run stream of slightly variable O&M costs-the study gets at an estimate of life-cycle costs (unlike Conder (1997) for example, which estimates only a one-time capital cost).

The study did not look at other types of public facilities: for example, schools, police and fire, and electrical distribution systems. Transportation costs did include new arterials and collectors estimated to be needed to link to the regional highway system, but did not include any improvements to the existing regional highway system to accommodate more growth beyond those envisioned in the regional transportation plan, regional transit improvements or costs, or new signalization. For this study, W&H Pacific estimated total signalization costs and allocated it to dwelling units to calculate an average cost per new dwelling unit of \$865.

The estimated costs per dwelling unit varied significantly from one URA to another, but most were in the range of \$15,000 to \$40,000. Some costs were exceptionally high because the servicing costs were high and the estimated growth of dwelling

units in a URA was low. The average off-site costs per dwelling unit for 37 URAs considered typical are shown in Table E-1. Adding in the estimated cost for signalization brings the total to \$24,300.

ECO’s work on on-site costs can be combined with that of W&H Pacific’s work on off-site cost to get a rough estimate of the capital costs for the subset of public facilities that have typically been included in analyses of the costs of growth. The combination is rough because not all facility types are included in the off-site costs (e.g., electrical and gas transmission lines, regional transportation costs) and the ECO estimate is for one-time capital costs only, not for O&M or life-cycle costs. But if we limit the analysis to one-time construction costs, we get an estimate of roughly \$35,000 per average single-family unit (\$15,000 to \$20,000 on-site, plus \$18,500 off-site). O&M probably adds \$5,000 to \$7,000.

There is plenty of evidence that the capital costs for schools (K-12) is on the order of \$10,000 to \$20,000 per pupil. If one assumes \$15,000 per pupil, an average household size of 2.4 persons, and that school-aged (K-12) children are about 15% of the population, then an average household adds 1/3 students and potentially creates a part of a demand for a new school that could lead to an additional \$5,000 of cost; other

Table E-1 Off-site infrastructure costs: construction and O&M

Present Value of Costs in 1998 Dollars			
	Construction	O&M	Total
Wastewater	5,600	1,800	7,400
Water	5,700	600	6,300
Stormwater	2,400	1,200	3,600
Transportation	4,800	1,300	6,100
Total	18,500	4,900	\$23,400

Source: W&H Pacific, Public Facility, Metro Urban Reserve Productivity Analysis, September 1998, and additional calculations for this study.

studies have estimated that cost to be \$10,000 or higher, especially if land costs are included at current market prices.¹¹

The result of these assumptions is that the incremental cost for the public facilities discussed so far (i.e., the ones typically considered in fiscal impact studies) imposed by an average new household if it requires a new single-family housing unit is on the order of \$40,000 to \$45,000 (perhaps even \$50,000). That average cost, even if correct on average, would vary a lot depending on the type of household (the socioeconomic and demographic characteristics of the household affect its demand for services). One could add other capital costs as well.

Sooner or later incremental growth will use excess capacity for other services as well: eventually it will contribute to the need for a new police or fire station, library, park, swimming pool, jail, solid waste transfer station, city hall, and municipal court, as well as other general government plant and equipment. In many cases some of that need will also be attributable to existing development. For example, the increased congestion of and demand for transportation facilities over the last 20 years in Oregon resulted more from increased per capita demand than from more people. Nonetheless, using this reasoning, and depending what detail one goes to in identifying and quantifying public costs, we would not be surprised if the incremental impact of a new household could eventually lead to additional capital costs of another \$5,000 to \$15,000. Adding these to the previous estimates would bring the estimate of total capital costs for public facilities to \$45,000 to \$60,000 per household/housing unit.

Note that these are just the capital costs, which are most often what studies and discussions of cost of growth address. One could also, however, consider operation and maintenance costs

as part of the cost of growth.¹² Those costs occur year after year, so they have to be summed over some time period (which should probably be the life of the facility) and discounted to a present value. The present value of O&M costs for all capital facilities and services is probably on the order of \$25,000.

For public policy, estimating who pays the direct costs of public facilities is as important as estimating how much they are

So what? So what if the incremental contribution of an average housing unit to the cost of construction of new public facilities is around \$50,000? In general, our laws and conventions are not concerned about what somebody willingly pays for something he wants—they care when he does not pay. The real question is, Are the right households paying for these public services?

To keep it simple, let's start with an average estimate for capital only. The number could be higher or lower, but assume that \$50,000 covers all the incremental capital costs that, in the long-run, are necessary to accommodate a household occupying one new single-family unit. Embedded in the \$50,000 is approximately \$15,000 to \$20,000 of assumed costs for on-site public services. In most places in Oregon these are paid by developers and passed on to buyers and renters of residential property. The other \$30,000 to \$35,000 is for off-site costs for sewer, water, transportation, drainage, schools, and other public facilities. In most jurisdictions in Oregon, some of these costs are paid with SDCs, which may range from roughly \$2,000 to \$10,000, depending on the jurisdiction. Some are paid with special levies (e.g., Washington County's levy for major street improvements). Some are paid by federal and state revenue sharing and grants, whose ultimate source of revenue

is primarily income and gas taxes paid by everyone. Some may be paid in some jurisdictions by the general fund, which means all local taxpayers are contributing. These costs do not include increments to O&M costs.

Who is paying for that residential growth? The answer depends on some assumptions, most importantly about when and in what form the costs of growth should be paid. Consider:

- Wherever metering is possible, user fees do the best job of having the people who impose costs pay them. The essence of the complaint about costs of growth is that the growth does not pay. Thus, if a new household is paying a user fee (say to a water, sewer, or electrical utility) that is calculated to cover operation, maintenance of existing facilities, replacement, and capital expansion, one could argue that the household is paying its share of costs. The counter-argument is that but for that household (and other new ones like it) user fees could be kept lower for existing users. Issues of prior capital investment and debt financing complicate the issue. But in an ideal situation, if all capital and O&M costs are adequately covered in local user fees calculated by service providers around Oregon, then there is a reasonable argument that each new household pays approximately its fair share, and does so for only as long as it lives in Oregon and uses public facilities.
- For regional facilities that are not easily or desirably financed from user fees (e.g., open space, fire stations, schools), there is a reasonable difference of opinion. On the one hand is the argument that, but for new growth, additional open space, schools, and so on would not be needed: thus, the new facilities should be paid for with SDCs, which will fall directly on developers and be passed

on to occupants of new buildings. On the other hand are the arguments that the occupants of new buildings are not exclusively—perhaps not even primarily—new to the community; that existing residents enjoy investments made by people that preceded them; and that new residents will contribute a fair share by paying the property and income taxes (usually greater than average) that support general government expenditures on these types of facilities.

- For operation and maintenance, a justifiable and simplifying assumption is that new growth pays its proportional share through standard cost-recovery mechanisms. For most cities, a large part of road maintenance is funded with their share of state gas taxes. School operation is primarily funded through state income taxes, personal and corporate, that are passed back to school districts. Thus, though the costs per student of K-12 education are large, it is likely that people moving into new houses are paying more than average property and income taxes, which is how public school operation is funded. If maintenance is being deferred (as it appears to be in many cities and the state for some transportation facilities and for buildings), growth is responsible for only its (small) proportional share of that deferred cost. In other words, that cost is probably not appropriately classified as a cost of growth.

Again in rough terms, trying to put some boundaries on the estimates, the evidence reviewed leads us to conclude it is probably the case that for on-site and off-site public facilities new residential development directly pays on the order of 50% to 90% of the capital costs (through developer provided infra-

structure, hookup fees, SDCs and other impact fees, special assessments, exactions, and property taxes).

The exact percentage will vary by jurisdiction, depending on things like the local type and level of service, the details of the cost-recovery structures of service providers, and how one chooses to treat future property tax payments and users fees, some of which may be paying down financed capital costs. If a city in a smaller region (which will have a less complex regional transportation system) also provides most public facilities through enterprise funds and special districts, then its recovery rate will be toward the higher end. Even where these conditions do not apply, 50% still seems like a reasonable lower bound because (1) probably at least 30% (and maybe as much as 40%) of the capital costs for public facilities are on-site costs, which are uniformly paid by development, and (2) all jurisdictions have some combination of SDCs, special assessments, and exactions to pick up some of the off-site costs. For operation and maintenance, it appears that new development, with its higher value and occupancy by households with higher than average incomes, pays more than its fair share of O&M.

Identifying all the costs is difficult, but tracing through who is ultimately paying the costs, and who should be paying the costs, adds even more complexity. Should the cost of Portland's LRT or a new bridge, neither of which would have happened without growth but now benefit all households, be allocated to new households only? The question of who does and should pay the capital costs for K-12 schools provides a good example of how difficult this kind of analysis can be. Consider:

- How should future school capital costs be calculated? As the Eugene analysis shows, the need for new schools is not a linear function of population growth. One precedent for calculating an SDC, probably preferable to per-unit

factors, is to develop a 10-to-20-year capital improvement program for schools, identify those improvements that are strictly needed to respond to growth, and allocate that cost to new units based on estimates of their contribution (by type of unit and assumed demographic characteristics) to the need for the new facilities.

- Should school costs be borne in SDCs by childless households who, after paying taxes in the community for 20 years, move across town to a new house?
- Assume that a roughly uniform SDC for schools is adopted in a region. That cost gets capitalized into not only the prices of new housing, but also existing housing. The result is a one-time benefit for owners of existing housing, many of whom had the advantage of using schools paid for before they moved to the region. And because Measure 50 limits the growth of assessed property value, that increment in value does not result in more property taxes as long as property values are increasing at least 3% per year anyway. The combined effect of an SDC and Measure 50 is to shift even a greater burden for school to new development.
- More fair than having new housing pay for schools is to have users pay for schools. There are private schools in Oregon that charge tuition. But the consensus in the US and Oregon has always been that equality means equal opportunity, and that requires equal access to public education regardless of means. An SDC may not be the most fair way to provide that public good.
- The previous points notwithstanding, ultimately new residential growth will reach a point or occur in a location where new school facilities are required. It is that

assumption that makes the argument for placing the cost of those facilities on growth. A school SDC, crude as it is, pushes some of those costs on new residents.

When interpreting the previous estimates, do not forget several qualifications:

- The analysis in this deals with only the direct costs of public facilities and services for residential development. One possible assumption is that those facilities and services are of a quality that there are no large spillover costs. But that assumption is probably incorrect. The pricing of roads, the operation of combustion engines, and highway congestion means that there are spillover social costs. Many cities in Oregon have sewage treatment systems that fail in the rainy season. If, to accommodate growth, we build and price facilities no better than we have in the past, then there will be some additional costs of growth on society (though in that example current development also contributes to those costs).
- The analysis at this point does not discuss any of the benefits or beneficiaries of growth. It is not only developers who benefit, nor even just those involved in development (e.g., builders, Realtors). New homeowners benefit; existing homeowners may benefit from higher property values. Businesses and profits grow. The loss of farmland has a cost (for the farmer who wants to farm and urban residents that want open space and the protection of food-growing capacity), but it also has a benefit (to the farmer who wants to sell, and to the new homebuyers that might see lower prices).
- Even if the summary estimates of capital costs of public facilities were comprehensive and exactly right and if there were no other external costs of growth, one could still

present the numbers in different ways to tell different stories. One story is that the average single-family house may not be directly paying, through up-front charges, anywhere from \$5,000 to \$25,000 of the capital costs of the public facilities it requires. That statement would have to be qualified by the statement that some, maybe most, of that up-front underpayment may be being paid through property taxes, user fees, and special assessments: it depends on the specific case. An alternative story starts with the total cost of a housing unit. When a buyer pays \$200,000 for a new house, he is paying for permit fees, construction costs, public facilities, SDCs: everything that went into the cost of building the house. If the capital cost he is not paying amounts to \$10,000, then his purchase price has covered 93% of the cost of the that new housing unit: the structure, the on-site infrastructure, and the off-site public facilities.

Beware simple statements about “costs of growth”

The previous section noted in several places a key point: it is dealing only with the costs of public facilities. The larger question about the impacts of growth requires an evaluation of other costs and benefits of growth as well. Thus, a conclusion that growth does not pay the full cost of all the public facilities it requires is not the same as saying that growth is a net loss to a community. Chapter 4 shows the many other impacts that must be considered (some additional costs, some additional benefits) before such a conclusion could be justified. Even the answer to a narrower question about what percent of the capital costs growth pays for depends on several categories of assumptions:

- Treatment of costs and benefits. Among the conclusions that can be drawn with confidence from the review of

studies of the impacts of growth is that they deal with different impacts, defined and measured in different ways. Ladd (1998, 63) summarizes the economists' consensus about fiscal impact analysis: "a bastardized form of benefit-cost analysis...[that] cannot by itself provide appropriate signals about whether new development should be allowed, even in the absence of equity concerns about the people who are excluded." Decisions about growth policies require at least a qualitative assessment of benefits and costs, including external ones. The perspective of this report is broader than fiscal analysis. In concept, it cares about the impacts of growth on welfare.

- Perspective. One's conclusions about the impacts of growth can vary based on whether one is looking at a neighborhood, city, region, or state; at the near-term or long-term; at household welfare or fiscal impacts on local government; at high-income households or low-income ones.
- Residential vs. nonresidential growth. How will we measure and attribute costs to growth-as new people or as new buildings? To make the discussion of direct costs of growth manageable, the previous section used an "average" dwelling unit with an "average" household as the units of analysis. But the real world has substantial variation in housing and household type, and in their combined impacts on the demand for public facilities and services. Moreover, in a typical city only about half the land is in residential use, and about 1/4 of the assessed value is in commercial and industrial property. In other words, commercial and industrial development is a significant part of growth, and that growth will have different requirements and pay different amounts for public facilities.

An analysis of the type above for commercial and residential property is beyond the scope of this report. The conventional wisdom has been that non-residential growth was fiscally beneficial to a jurisdiction: that it typically contributed more to revenues than it required in costs of service. Burchell's work (1998, p. 56) describes a fiscal impact hierarchy, in which most residential categories are negative or break-even, retail is break-even, and all other business categories are fiscally positive (at a municipal level). Ladd (1998) summarizes those studies, concluding that improvements in the methods of fiscal impact analysis are likely to show those benefits to be less than commonly believed. Most recent studies cited on the topic in the national literature have given mixed results. At a minimum, the conclusion should be that the net impacts of commercial and industrial on a local government's fiscal position depends on local conditions.¹³

- The studies reviewed. Studies have sponsors; researchers have opinions.

The essential question about growth is about welfare: (1) Is growth likely to make people in some area over some period better off, in the aggregate, and, if so (2) does it do so without having unacceptable costs on other areas, or on subsets of people within the area being considered? The answers to those questions depend, among other things, on:

- Characteristics of the old and new populations
- Characteristics of existing and new infrastructure (e.g., whether there are economies of scale)
- The way growth is distributed within the region
- What the governments choose to do: local governments have the ability to determine the magnitude and, sometimes, even the direction of the welfare change.

Thus, questions about the net benefits of growth cannot be answered only by an evaluation of how much public facilities to serve growth cost, and who pays those costs. It requires a consideration of all the impacts of growth shown in Figure 4-1 and discussed in Chapter 4.

Jeff Rogers
Portland City Attorney
Portland

Mike Salsgiver
Oregon Site Materials & Services Manager
Hillsboro

The members of the Task Force extend special thanks to its sub-committee that worked to get agreement on the conclusions and recommendations of Chapter 6: Judie Hammerstad (sub-committee chair), Dorothy Anderson, Greg Kantor, Larry Medinger, and Jeff Rogers.

Staff to the Task Force included consultants and agency staff. ECONorthwest was prime contractor; Terry Moore of ECO was project manager and principal author of this report. He was assisted with research by Bob Parker and David Helton. Mike McKeever and Kimi Iboshi-Sloop of McKeever/Morris prepared for and facilitated the Task Force meetings, and prepared most of the Task Force's findings reported in Chapter 6. Jim Meacham and Masao Matsuoka of the InfoGraphics Lab of the University of Oregon prepared most of the maps in the report. Tom Davis, James Kapla, and Andy Mortensen of

W&H Pacific assisted with estimations of infrastructure costs reported in Appendix E. Skip McFarlane did the graphic layout for the final report.

Robin McArthur Phillips was the Governor's staff person in charge of the project. Margaret Van Vliet assisted her with day-to-day management and agency coordination, and worked with a sub-committee of the Task Force to draft Chapter 6 of this report. Sheryl Glenn assisted with all aspects of preparation for Task Force meetings.

Many other people gave of their time to comment on various aspects of the project as it developed. Some did so at public meetings; other submitted written material; others responded via fax and phone. They are too numerous to name, but they know who they are: on behalf of the Task Force members and staff, thank you for helping us improve this report.

Despite those improvements—the result of many rounds of review—this report will certainly have many omissions (the scope of the topic makes that inevitable) and some errors. As prime contractor and principal author, ECONorthwest is responsible for any such errors, and hopes that there is more in this report to use than to criticize.

Governor John A. Kitzhaber

Healthy Streams Partnership PRINCIPLES AND AGREEMENT

Oregon Healthy Streams Mission Statement

The Oregon Healthy Streams Partnership will integrate private sector energy, resources and knowledge with the public sector to improve the health and function of aquatic systems and enhance beneficial uses of water for future generations. The integration of our best scientific information with intensive monitoring of individual water bodies will help test and refine our knowledge of aquatic systems, water quality standards and management alternatives. The partnership will address all of the factors impacting water quality in high priority streams in the most intensive and progressive manner possible while also enhancing positive ongoing programs throughout Oregon.

The strategic prioritization of streams and the integration of available resources and programs will greatly assist and increase the effectiveness of ongoing programs. Collective knowledge, positive cooperative efforts, stewardship incentives, increased technical assistance and outreach, and educational programs will be implemented at all levels of planning and management.

Working to develop a new level of trust, cooperation and knowledge will build a permanent partnership and stewardship process that will carry to future generations. Managing for the proper function of aquatic systems and watersheds will help make those systems more productive for all beneficial uses, improve water quality and develop a legacy and model of how to work together for shared goals and objectives.

Principles:

The parties to this agreement believe the following principles are important as a foundation to restoring Oregon's streams to a healthy condition.

- Oregonians strongly support protecting and improving water quality in Oregon's streams.
- Although there have recently been significant voluntary programs undertaken to improve stream health, many of Oregon's streams do not meet the state's water quality standards.
- Statewide, the causes of stream impairment include point source discharges from commercial, industrial, and residential land uses in urban and suburban areas as well as non-point source discharges from agriculture, forestry and urbanized landscapes, recreation and natural conditions.
- Failure of the state of Oregon to address water quality issues will result in the U.S. Environmental Protection Agency becoming responsible for water quality management in Oregon.
- To effectively improve water quality, stream function and watershed health, all Oregonians must support protection and enhancement programs and modify damaging activities in a cooperative manner.
- Science based educational programs and research projects are necessary to develop effective watershed programs.

- The development of collaborative ways to solve problems requires the identification of all causal factors, the development of alternative solutions and the effective implementation of locally appropriate solutions.
- Attainment of proper functioning condition is a primary element in achieving water quality standards associated with non-point source pollution.
- Oregon has several legislative authorities in place to address water quality problems based on the Clean Water Act and Oregon's water quality laws administered by the Departments of Environmental Quality, Forestry, and Agriculture.
- The state can not effectively implement Oregon's laws to address the water quality problems facing the state with current staffing and funding resources.
- In order to enhance Oregon's watersheds over the long term, the state must consistently invest in watershed restoration.
- The parties believe that integrated solutions that include all landowners in the planning and implementation are necessary to improve water quality in Oregon.
- The Governor and the parties will reach out to the legislative leadership to make this approach work.

Agreement:

This agreement identifies the general approach and limitation that all parties have discussed and agree to in order to address the non-point source water quality problems facing Oregon.

- Water quality management area plans for agricultural areas designated under Senate Bill 1010 for the stream segments on the 1996 303(d) list will be adopted by the Board of Agriculture by July of 2001. Watersheds with listed and/or candidate species will be given special consideration in setting priorities. (See Attachment A for description.)
- Total Maximum Daily Load requirements will be completed by July of 2007. Prioritization of the basins to work on will be completed by January 1997. (See Attachment B for description.)
- An agricultural water quality management area plan must be completed before enforcement action is taken under Senate Bill 1010. Landowners shall also be notified and given reasonable opportunity to respond.
- The parties agree to cooperate with the Department of Agriculture in developing administrative rules that specify a procedure for the public to notify the agency and trigger an investigation and appropriate enforcement action where a violation of an adopted plan is demonstrated.
- The parties agree to support the staff for the Departments of Agriculture and Environmental Quality necessary to meet the time schedules in this agreement.
- Individual landowners and community groups, for example, watershed councils, Soil and Water Conservation Districts and interest groups, will be eligible for project funding to improve and monitor water quality while area management plans are being developed, and to share in the implementation of water quality plans.
- Projects/programs will be eligible for statutorily defined technical assistance grants from watershed improvement grant funds, given priority to those projects/programs which directly result in on-the-ground improvement.
- The parties agree to work with the legislature to secure a dedicated fund for watershed improvement programs emphasizing projects designed to achieve water quality standards.
- All parties agree to work in good faith to secure the funding and implement the approach established in this agreement.
- The parties encourage the Governor to submit a recommended budget to the Legislature to fund and implement the provisions of this agreement. The Governor has developed a recommended budget to meet the time frames of this agreement that totals \$5.8 million for 19 FTE's each in both the Department of Agriculture and the Department of Environmental Quality. The Governor has also identified a need and proposal for a dedicated watershed improvement fund providing \$20 to \$35 million per biennium. (See Attachment C for the budget summary and Attachment D for a description of the improvement fund.)
- All parties agree to work together on the implementation of this cooperative partnership to improve water quality in Oregon. (See Attachment E for elements of Work Plan.)

Participants:

John A. Kitzhaber, Governor

Andy Anderson, Oregon Farm Bureau
Fred Otley, Oregon Cattlemen's Association
Pat Wortman, Wallowa County Commissioner
Terry Witt, Oregonians for Food and Shelter
Dave Nelson, Oregon Dairy Farmers
Todd Heidgerken, Water for Life
Ward Armstrong, Oregon Forest Industry Counsel
Ray Wilkeson, Oregon Forest Industry Counsel
Geoff Pampush, Oregon Trout
Jeff Curtis, Water Watch
Wayne Elmore, Bureau of Land Management
Paul Cleary, Division of State Lands
Bruce Andrews, Department of Agriculture
Phil Ward, Department of Agriculture
Lang Marsh, Department of Environmental Quality
Lydia Taylor, Department of Environmental Quality
Martha Pagel, Water Resources Department
Geoff Huntington, Water Resources Department
Jill Zarnowitz, Department of Fish and Wildlife
Steve Marks, Governor's Office
Paula Burgess, Governor's Office
Ken Bierly, Governor's Office

ATTACHMENT A

PROCESS FOR IMPLEMENTING SB 1010

Declaration of Water Quality Impairment

When the Department of Environmental Quality (DEQ) issues a notice of water quality impairment, either through the listing of stream or stream segments in accordance with the Environmental Protection Agency's (EPA) 303d process or by establishing a TMDL, the Oregon Department of Agriculture (ODA) through its SB1010 authority will establish its non point pollution control process in the affected area.

Geographic Boundaries Set

Once the ODA has been notified of a 303d listing or the establishment of a TMDL, it will in consultation with DEQ, identify the boundaries of the proposed area for the purpose of implementing the SB1010 planning process. Basins or sub-basins will be prioritized in order of response when a large number are identified through the 303d listing process.

Appointment of a Local Advisory Group

Once boundaries have been set a local advisory group will be established to provide the maximum amount of local input to the water quality management area(basin) plan. Advisory groups wherever possible will include affected landowners, members from public interest groups, representatives of local governments, and such technical experts as needed to help the advisory panel create a credible plan.

Local Management Agency

The ODA may choose to use the services of a local agency to serve as technical support for the planning process. Local agencies could be Soil and Water Conservation Districts (SWCD's), watershed councils or even county commissions.

The use of such an entity to provide support for the advisory group is seen as an excellent means to keep the planning focus local and coordinate efforts of all parties involved.

Note: The process described in this document applies only to the agricultural sources of non-point source pollution impacting water quality limited basins. Other sources will be addressed through other processes as defined in state or federal law.

Creation of a SB1010 Water Quality Management Area (basin or sub-basin) Plan

The local advisory groups with the help of technical advisors will draft a plan that addresses the water quality concerns contained in the 303d or TMDL listing. Contained in the plan must be:

1. Problem identification
2. Goal statement of water quality objectives
3. Measures needed to establish goals
(describe prohibited conditions)
4. Implementation schedules
5. Guidelines for public participation process, including state and local government roles and responsibilities.
6. Compliance establishment and reviews
7. Monitoring of plan for effectiveness
8. Plan review schedule and revision process if conditions warrant.
9. Enforcement process and strategy

Once the draft plan is forwarded to ODA, the agency will consult with DEQ and the Environmental Quality Commission on the sufficiency of the plan to meet water quality impairment concerns. After consultations the plan is reviewed in public during local hearing. Comments and suggestions are reviewed by the agency and incorporated as needed and forwarded to the Oregon State Board of Agriculture for hearing and adoption by rule.

Plan Implementation

Once a plan has been adopted by rule the local management agency will seek to implement the plan. Technical assistance, cost sharing, education programs and demonstration projects will be utilized as the initial means to introduce the plan and the needed corrective actions.

Area-wide farming and ranching conditions that are creating water quality impairment will be identified and targeted with funds to help mitigate identified problems. If problems persist additional technical help will be employed to correct deficiencies where and when possible.

Landowners who choose not to participate and ignore the requirements of water quality management area plans will be notified of prohibited conditions and offered assistance. If conditions persist because of inattention on the part of the landowner the ODA will identify plan violations and proceed with enforcement action.

Areas Outside ODA Jurisdiction

Federal lands controlled by either the Department of Interior (DOI) or the United States Department of Agriculture (USDA) will be consulted about the basin plan and encouraged to participate in the implementation process. Tribal lands managers will be notified of the basin planning process and invited to participate in the planning and implementation process. In either case the State of Oregon does not have authority to regulate these entities and must seek cooperation from the affected federal or tribal agencies.

Water Quality Management Area (basin) Plan Review

After four years, the local advisory panel along with ODA will review the implementation progress of the plan. At this time assessment will be made to determine whether the plan continues to be sufficient to meet and address water quality concerns established under the 303d or TMDL process. If timeframes and benchmarks are being met no further plan modifications will be required. If deficiencies are noted the plan will be revised following the process established for plan adoption.

Certification of TMDL Compliance

Once a TMDL including the SB 1010 basin plan is approved by EPA, DEQ will remove it from the 303d list.

Voluntary Farm Plans

After the prioritization of basins or sub-basins for the planning process, area-wide public meetings will be held to explain the SB 1010 process. Agricultural industry groups will be encouraged to hold SB 1010 workshops with the assistance of the local Oregon State University (OSU) Extension Service Agents and/or the Designated Management Agency. During this time farmers and ranchers whose property is near or whose operations are affecting stream segments, will be encouraged to seek a voluntary farm management plan. The farmers who participate in the voluntary farm or ranch management plan will be provided directed technical assistance as well as be given immunity from the regulatory process during the creation and implementation phase of their plans.

Technical Assistance

Technical assistance may be provided by a number of entities including industry technicians, OSU Extension Service, SWCD's, private consultants and agency personnel.

Voluntary Farm/Ranch Plan Elements

Voluntary farm or ranch plans must contain a statement identifying the water quality problems, which the plan addresses, a management strategy that addresses those problems, options of practices for improving water quality conditions, a list of intended results, a timetable for implementation practices and projects, a list of resources needed, and identify technical help necessary to complete implementation of the plan. Also included should be a discussion of methods to determine how progress is being made toward stated goals should be included in the plan summary.

Voluntary Farm and Ranch Plan Approval

Once the voluntary farm and ranch plans are completed they will be reviewed with the ODA to determine if they adequately address the water quality concerns identified. The plan review will include the farmer/rancher and any technical help utilized in the drafting of the plan. Included in this review will be a timetable for site visits to verify plan implementation. Once accepted the landowner or manager is free to proceed with implementation of the plan.

ODA funds allocated for basin projects either through direct grants or cost-sharing will first be directed to those farmers/ranchers who have entered into a voluntary plan.

Voluntary Farm and Ranch Plan Coordination with Basin or Sub-Basin Plan

Since in many situations local farmers and ranchers will be encouraged to seek voluntary plans and to begin implementing water quality friendly practices before the basin area plan has been adopted, a plan alignment review will take place at the conclusion of the area-wide planning process. At this time if any issues are contained in the basin area plan but not addressed by the voluntary farm/ranch plans the voluntary plans will be updated to include any issues that are absent.

Role of Industry Associations and OSU Extension Service and Local Soil and Water Conservation Districts

Industry groups, OSU Extension Service and local SWCD's are essential players in the implementation of the SB1010

process. The industry through state or federal grants from the ODA may employ water quality technical experts to help farmers and ranchers construct voluntary plans and to conduct area-wide educational seminars on achieving water quality through sound management practices. OSU Extension Service and local SWCD's may also offer technical assistance and set up demonstration projects in the water quality limited basins. OSU Extension and SWCDs will also be eligible for state and federal grants to carry out water quality initiatives.

Non-Participation in Voluntary Farm Plans

Not all farmers or ranchers in a water quality limited basin will choose to participate in the adoption of Voluntary Farm water quality plan. Once basin water quality management area plans have been adopted by rule these producers are however responsible for implementing practices that adhere to these plans. In the event of discovery that farm or ranch management practices are causing degradation to water quality, the farmer/rancher will be notified. Technical help will be offered by the local management agency or other source to solve the particular problems of the land manager and a schedule of correction will be negotiated. If additional water quality violations take place ODA may proceed with enforcement action.

Enforcement Action

If a farmer or rancher is found to be in violation of the SB1010 Water Quality Management Area Plan and is not progressively working with the department or the local management agency the farmer or rancher may be issued a Notice of Violation. At this time the ODA may enter into a compliance agreement with the landowner or seek an enforcement remedy.

After one year has elapsed from the date of adoption of a water quality management area plan, the department, upon request from a group or individual asserting that provisions of the plan are being violated by a landowner or group of landowners, shall investigate and make a finding within 90 days as to whether any violations have occurred. Should these assertions be found accurate in part or whole, the department shall within 30 days enter into enforcement action according to the provisions of the local water quality management area plan, or statewide SB 1010 implementation rules.

To request an investigation and finding of the manner discussed above a group or individual must:

1. remit to the department a \$200.00 non refundable filing fee and,
2. provide specific evidence of alleged violations of the water quality management area plan.

Time Line for Basin Management Plan Completion

The Oregon Department of Agriculture is committed to having all basin plans included in the 303d/SB1010 process completed by the end of four years (July 1, 2001).

While initiation and implementation of basins plans will begin as they are approved, full implementation in some cases will depend on DEQ's ability to establish TMDLs.

Attachment B

DRAFT DEQ DEVELOPMENT PROCESS FOR TMDLs

1. Based on existing data developed from DEQ water quality monitoring throughout Oregon and evaluation of data collected by other agencies DEQ lists those stream segments, lakes and estuaries which don't meet water quality

standards on the 303(d) list. As of June 1996, 870 stream segments and other waters in Oregon's 91 sub basins have been listed.

2. In consultation with affected agencies and interests, DEQ develops criteria for and then ranks and prioritizes water quality limited waterbodies for TMDL development.

3. DEQ either forms a local advisory group for priority areas including the public, major interests, federal agencies, state agencies, major industrial and municipal dischargers, or uses existing watershed councils, or other groups, as the advisory group for the TMDL establishment. The advisory group is kept informed throughout the entire process; makes recommendations and provides a forum for discussion of issues. If a subbasin is primarily agricultural, a group will be established in the SB 1010 process which could serve as the advisory group for TMDL development.

DEQ establishes the appropriate geographic areas (basin, subbasin, watershed or segment) and pollution parameter(s) to be addressed for TMDL development and assigns responsibility for corrective action including determination of Designated Management Agencies (like Agriculture, Forestry, federal land owners etc.) Meetings of the advisory group are public.

4. DEQ, in conjunction with Designated Management Agencies, the advisory group and other stakeholder groups, conducts an assessment of the area characterizing the water quality problem, identifying potential causes and sources (point, non point and natural conditions) and estimates relative contributions to the problem. For agricultural areas, this is done by ODA and its advisory group, with appropriate DEQ technical participation. Increased monitoring or data evaluation may be needed at this step.

5. In areas where water quality problems are related primarily to agricultural and forestry non-point sources (DEQ estimates this constitutes 75% of the 91 sub basins in Oregon), DEQ will work with federal and state agencies, watershed councils, communities, counties, SWCD's and others to identify data needs, collect, manage and analyze data and provide results to stakeholders such as members of the 1010 group, forest landowners, federal and state agencies, including Designated Management Agencies.

6. In areas which have numerous sources of pollution, (DEQ estimates these complex areas constitute 25% of state subbasins) including both point source and non-point sources, data collection and analysis will be more intensive and modeling and possible pollution trading analysis will be required. Based on this work, DEQ will develop the total load the stream is capable of handling without exceeding water quality standards.

7. Individual point sources and classes of non-point sources are assigned a load allocation. The load allocation will result in individual permit limits being modified to meet the allocation. This is often a process which takes time to review with the permit holders to assure they are getting their fair share of the wasteload allocation, and to assure that the technology or other measures they propose to use will meet that wasteload allocation. Incorporating the load allocation into the permits could occur when they expire, prior to when they expire or in a way that all of the permits are modified in a subbasin on the same five-year schedule. Public participation in the permit modification process will often extend times for its completion. A time frame for compliance may be included in a separate compliance schedule. This is usually five years or less.

Any city, county or special district may be asked to develop a plan for activities which are under their jurisdiction. For example, large cities which provide pretreatment of industrial waste into their sewage treatment systems may need to revise those pretreatment permits. Counties may need to review their road maintenance efforts. Cities or counties may need to develop water quality management plans of handle urban stormwater runoff.

Non-point sources would be provided a load allocation as well. This allocation may be made to the entire group or subgroups within a non-point source category (Agriculture, Forestry or large components of such groups).

DEQ compiles plans from the Designated Management Agencies and its own permit load limits for point sources into a TMDL document. By this time DEQ will have reviewed all of the plans and permit load limits to assure that in combination, over time, they will attain water quality standards.

8. In primarily non-point source areas, the water quality management plans prepared by the DMAs will be consolidated into a TMDL for that area after a technically-based evaluation by DEQ, together with appropriate water quality data and monitoring requirements.

A. The Department of Agriculture implements its SB1010 process. Its plan, after a technically-based evaluation, will be included by DEQ in the TMDL.

B. The Department of Forestry prepares a plan to implement the Forest Practices Act. Its plan, after a technically-based evaluation, will be include by DEQ in the TMDL.

C. Federal agencies are asked to reach agreement with DEQ on their plans to meet their share of the load allocation.

D. Any other state or federal agency as appropriate is asked to reach MOU's with DEQ on their share of the plan.

9. Public hearings are held on the proposed TMDLs which are then finalized. (Note: TMDL "equivalents" are also subject to a DEQ public hearing prior to submission to EPA)

10. DEQ submits TMDLs to EPA for approval.

11. When approved by EPA, DEQ will remove the subbasin, basin or stream segment covered by the TMDL from the 303(d) list.

12. DEQ throughout this process and after submission to EPA will implement the permit changes required by the TMDL and the Designated Management Agencies will implement the measures developed by them.

13. DEQ, in conjunction with cooperating agencies or groups, continues to monitor water quality to determine if progress is being made. DEQ reviews progress with the Designated Management Agencies to ensure that their plans are being implemented.

14. DEQ reviews and evaluates the monitoring data and requires revisions of point source and non-point source permits and non-point source plans, if necessary. In the event that the monitoring shows that improvements in water quality are not taking place along the timeline identified in the TMDL, it may be necessary to re-list the stream on the 303(d) list.

DEQ estimates that 75% of the 91 sub basins in Oregon are primarily affected by forestry or agricultural non-point source activity. Of these 68 subbasins, 50% are federally owned lands. The other 50% are either privately owned lands or mixed federal, state and ownership.

The remaining 25% of the 91 subbasins (23) are affected by municipal sewage treatment plants, industrial discharges, urban stormwater runoff, construction activities, agriculture and forestry and citizens.

COMPONENTS OF A TMDL

1. Problem statement
2. TMDL loading calculations
3. Target or goal
4. Actions planned/agency responsible
5. Implementation schedule including interim targets & deadlines
6. Monitoring plan
7. Evidence of public participation

Attachment C

Healthy Streams Partnership 1997-99 Budget Proposal

The Healthy Stream Partnership representatives have agreed to work together to obtain the following funding through a dedicated revenue source.

Agency	Activity	Funding Millions of Dollars
ODA	Implementation of SB 1010 water quality program	2.9 (19 FTE)
DEQ	Preparation of Total Maximum Daily Load allocations as required under the Clean Water Act	2.9 (19 FTE)

NOTE 1: Although funding for implementation of the Coastal Salmon Restoration Initiative is not a part of the Healthy Streams Partnership Agreement, they are shown here because they will be part of the Governor's budget proposal. Salmon funds include the following:

ODFW	Technical assistance to watershed councils and landowners, monitoring, improvement of the riparian tax credit program, etc.	2.2
WRD and GWEB	North and central coast water masters, data collection and analysis, grants administration, etc.	2.1
ODF	Stewardship assistance, fish presence surveys, watershed assessments	1.3
DSL	Fill and removal field staff	.2
DLCD	Coastal non-point pollution control program	.1

NOTE 2: The state will seek federal assistance in funding off-stream storage, stream gauging, marine survival studies, screening of diversions, alternatives to push-up dams, and groundwater studies.

Attachment D

WATERSHED AND RIPARIAN HABITAT CONSERVATION INVESTMENT FUND

The Healthy Streams Partnership representatives have agreed to work together to obtain from \$20 to \$35 million per biennium through a dedicated revenue source that would be continuously appropriated.

Purpose

The purpose of the Watershed and Riparian Habitat Conservation Fund is to:

- (a) provide funding for watershed and riparian habitat conservation activities that include; planning, coordination, assessment, implementation, and monitoring;
- (b) provide funding for watershed and riparian education efforts including peer education of stream processes for landowners;
- (c) provide funding for the acquisition of fee or protection of interests in land of less than fee from willing sellers

for protection of watershed resources.

(d) provide funding to implement watershed enhancement plans developed by watershed councils or water quality improvement plans approved by Dept. of Agriculture or DEQ.

(e) provide funding for the purposes of the Governor's Watershed Enhancement Board as provided by law.

Use of Funds

Funds from the Watershed and Riparian Habitat Conservation Investment Fund may be used for any purpose listed above if:

(a) there is a match from other program funds, in-kind services, or other investment in the project by the landowner or others.

(b) the projects funded are reviewed by a technical committee and found to be of merit.

(c) the project provides a public benefit either through improved water quality, fish and/or wildlife habitat, or other public benefit.

(d) funds are used for acquisition by public or qualified non-profit entities, it will only involve willing sellers and a "good neighbor" policy for management of acquired properties will be implemented.

Fiscal Management

1. The fund shall be continuously appropriated for the purposes of the fund.
2. The annual funds appropriated and not expended shall remain in the fund.
3. The fund will be available to receive revenue from:
 - (a) federal grants or appropriations,
 - (b) private donations or bequests, or
 - (c) other revenues suitable and applicable to the purposes of the fund.

Attachment E

Healthy Streams Partnership Implementation Work Plan

Action	Responsible Party	Schedule
Brief legislative leadership on the agreement	HSP	November
Sign agreement and hold press conference	HSP	On or before November 12
Develop outreach to local levels. Hold public meetings to explain the program and its implications in communities throughout the state.	Agriculture lead, varied attendance	November/December
Discuss program with Senate Natural Resource Interim Committee	HSP	December
Meet with legislative committee chairs	Governor	March
Review and discuss priorities. Develop better		

information on public lands
distribution and agricultural
area priorities.

The Oregon Health Plan

General Description

The Oregon Health Plan is a comprehensive health reform strategy predicated on public values, clinical efficacy, and cost-effectiveness. These three factors are at the heart of the Plan, from the prioritized list of health services to ongoing improvements in public and private purchasing of health care. The Plan relies on public/private partnerships for its successes in improving the effectiveness and accountability of all health care and health insurance programs in the state. Its mission is to improve the health of Oregonians. The primary method for achieving this mission is to increase the availability of an adequate level of high quality health care at an affordable cost.

Specific goals include:

- Reducing the percentage of Oregonians without health coverage
- Containing the rate of growth in health care expenditures
- Eliminating cost shifting
- Improving quality (clinical, process, science, and administration)
- Promoting accountability for explicit priorities based on public input

Conceived in the late 1980s by then-Senate President John Kitzhaber, the Plan rests on an evolving body of legislation passed by the Oregon Legislature in the sessions from 1987 through 1997. The Plan includes both government programs and public/private collaborative efforts.

Government programs include:

- Medicaid expansion through an 1115 demonstration waiver (1989)
- Insurance market reforms (1991, 1995, 1997)
- Children's Health Insurance Program (CHIP) for uninsured children with modest income who are not eligible for Medicaid (1997)

Public/Private collaborative efforts include:

Insurance Pool Governing Board (IPGB) program for small businesses not previously offering employee health insurance (1987)

- Oregon Medical Insurance Program (OMIP) program for high risk individuals able to afford health insurance who are denied private coverage due to pre-existing conditions (1989)
- Family Health Insurance Assistance Program (FHIAP) for uninsured families with modest income, requiring subsidies to afford private health coverage (1997)
- Oregon Coalition of Health Care Purchasers (1999)
- Oregon Corporation for Health Care Quality (2000)

Results

Overall, the gains have been substantial. At any given time, the OHP participated in covering nearly 400,000 Oregonians. In an unduplicated count, over one million Oregonians have at one time or another used the OHP. From 1990 to 1999, the percentage of Oregonians without health insurance has dropped from 18% to 10%. For children, the percentage without insurance has dropped over the same period from 21% to 8%.

In addition to expanded public coverage, a substantial portion of these gains occurred in commercial organizations. It is widely believed that the Medicaid expansions contributed to the commercial gains by helping to control cost shifting.

Through its various health insurance programs, the Plan directly funds coverage for approximately 400,000 Oregonians. Through its quality improvement efforts, cost-containment strategies, and insurance market reforms, the Plan has enabled thousands to gain and retain health coverage. Equally important is the fact that Oregon's cost and quality profile compares quite well with national experience. Oregon's costs (both overall and per service) have been among the lowest of the states, and the quality of health care is high, whether measured through patient satisfaction surveys or clinical indicators.

Outlook for the Future

The next legislative session will bring new opportunities to improve the health of Oregonians. These opportunities will be found not only in health reform, but also in education, housing, the Oregon Children's Plan and in the continued enhancement of economic development statewide. Wherever health is at issue, the Oregon Health Plan will serve as a platform for increasingly efficient use of limited public resources to improve the quality of life for all Oregonians.

JOHN A. KITZHABER, M.D.
Governor

The Oregon Livability Initiative

Oregon's population has grown by 500,000 since 1990. In the next 20 years, our population is expected to grow by another 700,000. Our challenge is to channel this growth so it does not reduce the quality of life that has defined Oregon for generations. Governor Kitzhaber believes that together, we can manage how and where our communities grow to make sure that growth doesn't overwhelm us.

This means acting now to build communities in our metropolitan areas that prevent sprawl, make wise use of our existing land and provide transportation choices. It means acting now to encourage economic growth in Oregon's rural communities; communities which want and need a stronger, more diverse job base. And it means making state government work in a better, more coordinated fashion to help businesses and communities.

This white paper will discuss The Oregon Livability Initiative. Under this initiative, we will create a fund to encourage job creation in rural Oregon, investments in affordable housing, transportation, water, sewer and strong downtowns.

In short, this initiative seeks to revitalize downtowns and mainstreets, reduce sprawl and traffic congestion, reward development of affordable housing and rebuild rural and distressed economies. We will also restructure the state's community development approach so that we better coordinate these investments.

The Oregon Livability Initiative consists of two parts: The 21st Century Community Fund and the Community Solutions Team.

The 21st Century Community Fund will leverage existing revenues from both the Oregon Lottery and transportation funds to invest in affordable housing, transportation, water, sewer and main streets.

The Community Solutions Team is a new way to plan and deliver assistance from state government to local communities and businesses. It brings together the Oregon Department of Transportation, the Department of Land Conservation and Development, the Economic Development Department, the Oregon Housing and Community Services Department and the Department of Environmental Quality, to work with local communities and business. The Community Solutions Team will develop an integrated investment plan for the state. The plan will bring transportation, economic development, housing, planning and infrastructure investments together to solve unique regional and local problems around the state.

The 21st Century Community Fund

This new fund, made up of existing revenues, specifically will target the following areas:

Rebuild rural and distressed economies. The prosperity of the last decade has not been evenly distributed across Oregon. Too many parts of rural Oregon have not shared in the growing incomes and job base that has occurred in metropolitan parts of the state. The 21st Century Community Fund will seek to bring jobs and economic diversity to rural and distressed Oregon communities that want and need it by:

- Providing more financial incentives for job creation;
- Increasing infrastructure investments that support job creation while maintaining quality communities, and,
- Ensuring industrial zoning is adequate and removing unnecessary barriers to its development and is supported by commercial services and housing.

Reward development of affordable housing. Over the last several years, housing in Oregon has become much less affordable. The 21st Century Community Fund will seek to reverse this trend and create housing stock that is affordable to lower and middle income Oregonians by:

- Investing in Oregon's Housing Trust Fund which is used to help finance new housing;
- Leveraging housing funds in the Department of Human Resources to construct permanent affordable housing units;
- Providing financial incentives (other than financing) for developers to build affordable housing, and,
- Developing a location-efficient mortgage program that rewards people who make a choice to live near transit and other services. Such programs allow people to borrow a greater proportion of the cost of a home.

Revitalize downtowns and mainstreets. Towns large and small need to retain a strong downtown commercial and residential section in order not to become merely a series of strip malls strung out along state highways. Such strong downtowns provide places for people to gather, live, shop and recreate. The 21st Century Community Fund will help revitalize downtowns by:

- Discouraging strip commercial development along Oregon's high volume, high speed state highways such as Highway 97 through Bend and Redmond or Highway 99W through Newberg;
- Providing financial incentives for development that brings together housing, commercial, and retail uses in one location;
- Serving downtowns and mainstreets with transportation investments that support their function as community centers, and,
- Providing financial and regulatory incentives for retail uses to locate in downtown and mainstreets.

Reduce sprawl and traffic congestion. We can no longer afford to encourage development that both creates the need to drive more miles, clogs our roads and state highways and undermines our mainstreets and downtowns. The 21st Century Community Fund will address the joint problems of sprawl and congestion by:

- Building street networks that carry local traffic to reduce congestion on state highways;
- Purchasing access rights along high volume, high speed state highways;
- Creating a statewide transit network connecting high speed rail in the valley with bus connections around the state and leveraging Department of Human Resources transportation funding to better serve the elderly and disabled, and,

- Providing financial incentives for "infill" development.

Community Solutions Team

Historically, state government has exacerbated some community development problems by making investments and administering programs and regulations in a fragmented and uncoordinated manner. In order to change development patterns and target growth we must change the way government does business. We can no longer develop transportation systems, land use plans, housing and economic development solutions separately. This fragmented approach can lead to mutually undermining investments.

Business as usual will not be able to deliver the investments called for in the 21st Century Community Fund in a strategic, coordinated fashion. Governor Kitzhaber is proposing to deal with this challenge with the Community Solutions Team.

This approach recognizes that Oregon's communities are diverse and changing. High growth rates in Bend, Medford, and the Willamette Valley have challenged the ability of those communities to respond to traffic congestion, sprawl, strip commercial development, and the need for open space and affordable housing.

Conversely, towns such as Coos Bay, Enterprise, John Day and Lakeview have been especially hard hit by downturns in the timber and agricultural industries and need new jobs to maintain their communities.

Every community in the state has a different challenge. In some jurisdictions the priority may be affordable housing, in another the need is for a new water system, or the clean-up of an old mill site. In each case the solution must fit the problem.

Currently this new approach is being piloted in four regional partnerships around the state by bringing state, local, business and citizen leaders together to identify problems and develop solutions.

Such an approach was used to ease the growing pains created by the expansion of the Snake River Correctional Facility in Ontario. State agencies worked hand in hand with the leaders of Vale, Ontario, Nyssa and other affected communities to ensure the growth in population caused by the prison expansion didn't overwhelm the community.

The Community Solutions Team approach also helped bring new, mixed-use development to Martin Luther King Jr. Blvd. in Portland. Oregon Housing and Community Services Department, the Oregon Department of Transportation and other state agencies worked with the City of Portland and neighborhood leaders to bring about traffic pattern changes on the boulevard and encourage mixed use developments which combine residential and retail uses.

Using this approach for planning and delivering investments under the 21st Century Community Fund will ensure that these investments are locally desired, don't undermine or conflict with other government efforts and are part of an agreed-upon strategy.

Conclusion

Twenty five years ago, Oregon developed a much-heralded statewide land use program. People from all over the country have come to learn about this remarkable Oregon story.

What that program gave us was the ability to stop the rural subdivisions on some of the best farm and forest land in the world. It gave us urban growth boundaries to draw a line between the country and our cities and towns.

It is a plan that preserves our farm and forest lands by using regulations to protect them. It is a plan we need to defend and keep for our children and their children.

Now we face a new challenge: To ensure that the growth that is coming will come in a way that enhances and protects

our quality of life within our communities instead of diminishing it.

For this challenge our statewide land use system is not enough. The Oregon Livability Initiative is the plan for the next 25 years; the second phase of Oregon's plan to grow on our own terms. It is a plan based on strategic investments and incentives. It is a plan designed to make each and every investment contribute to creating quality places to live in the next century.

The Oregon Strategy for Social Support Policy Paper

Governor's Office of Health, Human Services and Labor

Introduction

An overarching objective of the Kitzhaber Administration is to improve the social and economic health of Oregon in ways that will be sustainable over time. Investing in people is the best -- and perhaps the only -- way to achieve that goal, since the strength and stability of any society depends on a body of citizens who are as independent and productive as possible.

The reality is, however, that not all citizens are equally productive and self-sufficient. Many of them depend, either permanently, or temporarily at different times of their lives, on some form of support from others, including that provided by state government.

Oregonians have a long tradition of helping to care and provide for those who are unable to do so for themselves. Governor Kitzhaber endorses that tradition. At the same time, he believes that changing circumstances in the late 20th century warrant a re-examination of the way in which the state provides support for our citizens in need.

With few exceptions, the state's method of delivering social supports has not changed for the last 30 years. In order to determine what changes may be necessary, the Governor believes we must first answer some fundamental questions:

- What are our intended outcomes?
- What are we currently doing to achieve them?
- Are we doing it right?
- Are the right people doing it?
- Are the right people getting the help they need?
- And are we getting the outcomes we want?

This paper describes a new vision for Oregon's system of social support. It outlines Governor Kitzhaber's Human Investment Framework, summarizes the findings and recommendations of his original Work Group on Social Support Investment (SSIWG), and suggests policy directions as a basis for future action, aimed at achieving the highest possible degree of independence and productivity for all Oregonians.

Underlying Assumptions

Governor Kitzhaber's policy on Human Investment and Social Support rests on several underlying assumptions:

- That everything we want to accomplish as a state depends on a thriving economy. A strong economy provides the resources necessary to fund the services and programs for which the state is responsible -- education, public safety, transportation, environmental protection, economic development, and a variety of human service programs.
- That a strong economy depends on the wide availability of well-paying jobs *and* on a workforce capable of filling those jobs. A key factor in the ability of communities to maintain or increase their well being is the economic opportunity available to their residents. When people lack decent-paying jobs or a way of moving into them, the social and economic health of the state as a whole is diminished.
- That a well-trained, highly skilled workforce depends upon the strength of our education system. While a great number of jobs could once be performed by workers with less than a full high-school education, success in the 21st century will require both a wider range of knowledge and a higher level of skills than has ever before been necessary. In fact, much of the increased demand on our social service, welfare, and criminal justice systems is due to the new inability of under-educated individuals to find work that pays well enough to support themselves and their families.
- That in order for children to be successful in school, and in order for adults to be successful at finding and maintaining employment, certain social supports must be present in their lives. Not only are these supports necessary for educational and/or workforce success, their presence makes achieving success easier for most people, while their absence will usually produce a bad outcome. Examples would be access to health care, access to transportation, adequate nutrition, and safe, affordable housing. Such supports are provided in some cases by government, but more often by families, neighbors, churches, and community organizations.
- That in an era of limited resources and a growing number of competing demands, it is essential that we invest prudently. Efforts should be focused and money should be spent in ways that will produce the greatest long-term benefit for the state as a whole. In particular, increasing the independence and productivity of needy Oregonians would allow more public dollars to be spent on further increasing the productivity and livability of our communities and our state.

This means, in part, eliminating inefficiencies and redundancies in current programs, as well as identifying and filling any gaps that may exist or may be likely to develop. It also means promoting a greater degree of partnership and shared responsibility among state agencies, between state and local government, and between the public and private sectors.

Historical Background

Human Investment Framework

In the spring of 1996, Governor Kitzhaber developed the Human Investment Framework, a process involving hundreds of Oregonians, which established the goals for Oregon's approach to investing in its people. It recognized that no individual is literally self-sufficient, that everyone depends on support from family and community (both public and private) at various points in a lifetime in order to achieve success in school and in the workplace.

It held that such success was a matter of shared responsibility among state and local, public and private partners, including individual Oregonians. Government is responsible for the cost-effective use of public resources and is accountable for measurable results from the use of those resources. Private employers, as important community members and good citizens, are responsible for providing economic opportunities to the public. Individuals are responsible for working to improve their lives by striving for economic independence, rather than relying on public support for their daily expenses.

The Human Investment Framework also held that it is in the best long-term interests of all concerned -- individuals, families, the community and the state -- to provide those social supports that will assist as many citizens as possible to become contributing members of society. This strategy helps people to be independent and productive rather than merely maintaining them in positions of dependence.

Social Support Investment Work Group

The task of determining which social supports were most necessary to achieving the highest possible degree of independence and productivity was given to the 28-member Social Support Investment Work Group, appointed by the Governor in May of 1996. The Group was asked to identify the specific social supports most critical to achieving educational and workforce success, to define the most appropriate role of state government in providing those "core" supports, and to recommend some strategic investments and/or interventions which would increase the availability of such supports to those most in need of them.

(A "support" should be distinguished from a "service," which is simply one means of delivering a support. Supports are delivered in various ways by numerous people and organizations -- e.g., families, churches, community service groups, government agencies.)

Core Social Supports

The Work Group compiled a list of 26 social supports which appear to be most critical in helping individuals achieve success in school and in the workplace. From this list, the Group then selected ten which it recommended should be reviewed immediately. The rationale was that, because of the inter-relationships which exist between various social supports, focusing attention in certain areas first could, in some cases, lessen the need for other supports later on. For example, availability of child care is critical to individuals getting and maintaining employment -- or finishing their education so they can obtain family-wage jobs. This abbreviated list includes, in alphabetical order:

Access to diagnosis and early evaluation
Access to in-home assistance
Access to health care (including specialized medical care)
Access tobacco, alcohol and other drug treatment
Affordable, safe housing
Available and accessible child care
Employment opportunities
Life skills assistance
Non-residential physical and mental health therapy
Opportunities to learn outside the formal educational system.

Three additional supports are in the review process during 2000:

Access to transportation
Adequate nutrition
Access to mental health services

Levels of Vulnerability

Individuals will need different types and amounts of social support, depending on their circumstances and on their stage of life. In order to make it easier to understand who may need what kind of support, and when, the Work Group divided the normal lifespan into six stages: early childhood, school age, adolescence, young adult, adult, and seniors. It also designated three types of population according to the degree of social support likely to be needed by each.

Those who make up the **general population** (the majority of Oregonians) need very little social support from state government either because their situation does not require it or because they are able to obtain it from family or community.

The **at-risk population** indicates persons who need short-term social support from the state in order to overcome a temporary barrier to eventual independence and productivity. The at-risk nature people's lives will depend on their particular situation at any given time. For example, a person who is at-risk for access to health care as a child may or may not be at-risk for obtaining affordable housing as an adult.

Those with an **identified condition** are individuals who may require ongoing social support from the state or from some other source in order to be as independent and productive as possible. These people make up the smallest percentage of Oregon's population.

Key Hydraulics and Opportunities for Strategic Intervention

The Work Group also identified three broad issues -- outside the core social supports -- which directly affect personal independence and productivity, and which thus have a bearing on the need for social supports: substance abuse, particularly underage alcohol consumption; school failure, which is alarmingly high among Oregon's minority students, especially Hispanics; and lack of available and affordable housing.

The Group characterized these broad issues as "key hydraulics," because addressing (or failing to address) any one of them will have an impact on other parts of the system. And

because individuals whose lives are affected by these particular problems account for a high number of those who require services from state agencies. Strategic investments in these areas would help reduce preventable costs and would yield the greatest payback over time.

For example, underage substance abuse characterizes 85 percent of incarcerated youth and 82 percent of juvenile parole violators, as well as a substantial number of those who drop out of high school. In addition, alcohol-related car crashes remain the number one killer of teenagers, while the other leading causes of death among teens and young adults -- homicides, suicides, and drowning -- are also associated with alcohol use. And substance abuse accounts for at least one out of every five dollars Medicaid spends on hospital care.

Alcohol use among Oregon eighth graders has risen from 23 to 30 percent between 1990 and 1996, and research indicates that alcohol is a "gateway" drug. That is, it leads to the use of more serious illicit drugs like marijuana, cocaine and heroin, which translates into immeasurable social and economic costs. Investments aimed at preventing young people from abusing alcohol in the first place, and at treating those who have already started, would reduce the incidence of numerous other social problems -- e.g., school failure, juvenile crime -- in the future.

The same is true of school failure. School drop-outs account for 36 percent of incarcerated adults, 35 percent of incarcerated youth, and 14 percent of individuals receiving public assistance. Unemployment rates for high school dropouts are more than double the rates for high school graduates.

Focusing on improving the academic achievement and graduation rates for Oregon's minority students, who now make up 16 percent of primary and secondary school enrollment, would have a positive impact in these areas. It would reduce the probability of arrest by 90 percent, of welfare dependence during adulthood by 35 percent, and of out-of-wedlock pregnancy (which places additional burdens on our health care and welfare systems) by 50 percent for these individuals.

Lack of available, affordable housing presents much the same picture. Research has linked insufficient housing with public health risks, substance abuse, and increases in crimes against people and property. Historically, lower income Oregonians have counted on inexpensive housing as a way to balance their budgets, and they are considered cost-burdened if they must spend more than 30% of their income on housing. The Oregon Population Survey indicates that in 1998, 70% of renter households and 38% of homeowner households who were below the median income of their respective groups were cost burdened. In December 1999, the number of households on wait lists for housing authority subsidized housing was 17,645.

These Oregonians are left with little money for food, clothing, transportation, education and other life necessities. As a consequence, far too many are living in unsafe housing, sharing housing with other families, making frequent moves, or, at worst, becoming homeless. Investments that would increase housing opportunities for high risk, cost-burdened Oregonians would be a simultaneous investment in their increased independence and productivity.

Roles & Responsibilities

The new vision for Oregon's system of social supports involves a major shift in approach. In the past, the state has been widely and actively involved in providing direct services to those in need. Under the new approach, the state would provide fewer direct services itself and instead would partner with communities in the design and delivery of core social supports. The rationale is that because essential social supports affect individual lives, these supports will be most effective if they are designed and delivered at the local, community level, rather than by the state, which has a more distant relationship with those involved.

Depending on both the nature of the support and the people who need it, the state might:

- provide services directly;
- provide funding for a particular support -- either to individuals or to a program or service provider;
- oversee the quality of a particular service through regulation or licensing;
- serve as an investment partner with local government or other local entity;
- serve as a catalyst to stimulate the existence or delivery of a particular support;
- provide technical assistance (e.g., convening work groups, providing data) to local communities and governments in their efforts to provide social supports; or
- have no involvement whatsoever in the provision of social supports.

Policy Directions - The Oregon Strategy

The new vision for Oregon's system of social support includes policy directions as a basis for future action at both the state and the community level.

State Directions

Having identified a list of core social supports, and having sorted out the responsibility for putting those supports in place among state agencies, work groups are undertaking an analysis of current state agency programs and practices. The goal is to increase efficient and effective delivery of supports through cooperative efforts. This involves clarifying each state agency's role and aligning or adjusting these roles in order to reduce redundancies and fill in gaps. The following work groups have completed their analyses and have forwarded recommendations to the Governor:

- Access to diagnosis and early evaluation
- Access to in-home assistance
- Access to health care (including specialized medical care)
- Access to tobacco, alcohol and other drug treatment
- Affordable, safe housing
- Available and accessible child care
- Employment opportunities
- Life skills assistance
- Non-residential physical and mental health therapy

In addition three groups are currently reviewing the core supports of access to transportation, access to mental health services, and adequate nutrition.

Community Directions

The work groups are working with community and private sector partners to identify local responsibility for designing and delivering core supports at the closest community level. This includes involving citizens, service organizations, businesses, non-profit providers, local government agencies and others in the partnerships necessary to assure the availability of supports that will increase the health and safety of children, families, and communities. These efforts, in turn, will lay the foundation for long-term independence and productivity.

Results

Much of the work done by through the collective efforts of the many participants in the Oregon Strategy is already paying dividends. Systematic changes are being made in many areas. Some examples include:

- Funding streams for delivery of alcohol and drug treatment services have been fragmented with numerous agencies providing uncoordinated services. Now the rate structure for treatment will be revised to allow wraparound services and continuing care.
- To promote the development of safe and affordable housing, funding processes will be consolidated and priorities established for projects. Oregon Strategy groups have worked to coordinate housing needs of Oregon's most vulnerable citizens.
- Early childhood supports include an agreement by public and private providers to use common screening tools for medical and social risk factors.
- In order to make family day care safer, basic safety standards will be required as well as criminal history checks.
- To improve access to transportation, mechanisms will be established to coordinate human services transportation with public transit and student transportation systems.

Conclusion

This is Governor Kitzhaber's vision for investing in people. He believes that the strength of our state is directly linked to the self-sufficiency and productivity of Oregonians, and the Oregon Strategy for Social Support is a means to that end. He further believes that state, community, and private sector partners must share responsibility for helping individual Oregonians reach their highest potential as students, workers, and citizens.

The Governor is committed to those social policies which are most likely to produce educational and workforce success. He is hopeful that when fully implemented, his new approach to social support investment not only will reflect the realities of today's world, but also will help every Oregonian--as individuals and as members of society--to reach the highest possible degree of independence and productivity.

Oregon Department of Education
A Discussion of the \$12.8m Budget Reduction

- I want to discuss the impacts of reductions of the Oregon Department of Education, and want you to understand that the Department, like school districts, directly operate or support instruction to students and must face the same difficult decisions school districts do resulting from the \$12.8m reduction.
- The Oregon School for the Blind and the Oregon School For the Deaf reductions will mirror the actions school districts will have to take as I just explained.
 - 17 staff, including 5 teachers, will be eliminated;
 - An additional 19 staff will be put on reduced hours;
 - Eliminates all athletic programs, and School for the Blind sports and recreation programs;
 - Closure of Howard Hall, a dorm on the School for the Deaf Campus.
- The Department of Education operated Early Intervention/Early Childhood Special Education Program will also experience reductions similar to school districts.
 - Reduces general fund resources by an average of \$600 per infant, toddler and preschooler with disabilities across the state.
 - The funds pay for teachers, teaching assistants, speech therapists, physical therapists, psychologists, nurses, and a variety of other professionals needed to implement services described in these children's service plan which are required by federal laws.
 - Added to the direct effect of reducing services to these vulnerable children, the reductions will most likely result in violating federal requirements which will put the Department at extreme risk of litigation brought by parents and advocates.
- Three additional special education programs supported by the Department of Education include the Regional Programs for Low Incidence Students, Hospital Programs and Long Term Care and Treatment Programs.
 - The effect of the reductions are:
 - \$325 per student enrolled in Regional Programs;
 - \$190 per student enrolled in Hospital Programs;
 - \$1,200 per student enrolled in Long Term Care and Treatment Programs.
 - The programs are operated by school districts and ESDs, which will have the same cost cutting alternatives available – reductions in the services provided by teachers, instructional assistants and other professionals. The programs may also shortened school years as these agencies make decisions based on the State School Fund reductions.

- The reductions will run the same litigation risk as I described earlier, but, since the students enrolled in these programs are the legal responsibility of their school districts, the reductions will put the school districts at risk as well as the state.
- The Oregon Pre-Kindergarten Program reduction will dramatically affect services to pre-school children.
 - The effects of the general funds reduction are approximately \$123 per preschooler. These funds are used to pay for teachers, instructional assistants and related instructional costs such as transportation, books and materials, facilities. These expenses directly related to educating preschool children will be reduced or eliminated.
 - The reductions will eliminate all expansion of services, which, when coupled with Oregon's student growth patterns, the Department will actually lose ground. We will drop from serving 50% to serving 45% of Oregon's preschoolers;
 - The reduction will eliminate the Department's ability to meet the state target of 100% participation by 2004;

These programs serve children from Oregon's poorest families. These families cannot go elsewhere.

- The reduction to the Oregon Public Education Network (OPEN) will eliminate the Teachers Resource Center Clearinghouse.
- Unexpected affects, ones not obvious on first glance, is best represented by School Nutrition. Because of the expected reduction in school days in school districts across the state, the Department estimates that:
 - \$6.3m will be lost in federal revenue distributed to school districts for school lunch programs;
 - \$884,000 will be lost for school districts' earned commodity value; and
 - \$2.1m will be lost for school districts' school breakfast programs.

These lost federal funds are to assist Oregon's poorest families.

- The reduction of approximately \$1.8m in Department operations will have dramatic effects on our ability to assist school districts. These include:
 - Eliminates services for charter, private, home and alternative schools.
 - Eliminate second language, arts, physical education, curriculum and instructional support to teachers and administrators in Oregon schools.
 - Elimination of any new Data Base Initiative reports.

OREGON DEPARTMENT OF EDUCATION
Budget Reduction Scenarios for 2002-03 School Year*

Examples of Resource Reduction

Statewide Effect

Current Reductions

1. \$82 Million Cut - Eliminate \$112 School Improvement Fund & add \$30 million to School Fund	Eliminates programs supported by the School Improvement Fund. Cuts 1.5 FTE in reading specialists in elementary schools and eliminates programs to provide additional instruction time for students not meeting standards.	Cuts a total of 1,120 reading specialists in elementary schools or eliminates 6 school days.
2. \$96 Million Cut - Drop in Local Revenues and Increases in Enrollment since Governor's Rec Budget	Cuts 1.0 FTE in specialists from elementary and middle schools, 2.0 FTE in specialists from high schools, and 0.5 FTE in counselors from middle and high schools.	Cuts a total of 1,350 specialists and 215 counselors or eliminates 7 school days.
3. \$50 Million Cut - Veto of HB 4056 - Revenue Bonds - \$50 million	Cuts .5 FTE classroom teachers from elementary schools, 1.0 FTE classroom teachers from middle schools, 1.5 FTE classroom teachers from high schools.	Cuts a total of 780 teachers. Increases class sizes in elementary schools by 1.0 student, in middle schools by 1.0 student, and in high schools by 1.0 student or eliminates 3 school days.

Potential Reductions

4. \$202 Million Cut - K-12 share of \$482 million across-the-board cut	Cuts 1.5 FTE classroom teachers from elementary schools, 3.0 FTE classroom teachers from middle schools, and 6.0 FTE classroom teachers from high schools. Also cuts 0.5 FTE middle school counselors and 1.0 FTE high school counselors.	Cuts a total of 2,850 teachers and 290 counselors. Increases class sizes in elementary schools by 3.0 students, in middle schools by 3.0 students, and in high schools by 4.0 students or 14 school days.
5. \$150 million Cut - if Endowment Fund transfer defeated	Cuts 1.5 FTE classroom teachers from elementary schools, 2.0 FTE classroom teachers from middle schools, and 3.5 FTE classroom teachers from high schools.	Cuts a total of 2,320 teachers. Increases class sizes in elementary schools by 3.0 students, in middle schools and high schools by 2.0 students each, or eliminates 12 school days.

Total \$598 million

8,710 FTE or 42 school days

02-03 Original Budget \$7.327 bil. **(State School Fund Formula Revenues)**

29,350 FTE 175 school days

*Based on Quality Education Model Scenarios for education costs

Examples of School District Impact Statements

School District	Budget Cuts	Budget Cuts #1 & #2	Proposed Budget Cuts #3,4,5
Klamath Falls City SD Total Budget: \$30.5M Student Enrollment: 4,038	#1 & #2 \$1.9M #3 \$400,000 #4 \$1.6-1.7M #5 \$1.2M <hr/> TOTAL \$5.2M	<ul style="list-style-type: none"> • Did not replace 16.5 teachers due to retirements/attrition • Did not replace 2.5 administrators due to retirements/attritions • Delayed purchase of text books • Cut purchase of supplies by 10% 	<ul style="list-style-type: none"> • Cut 54 teachers and operate full school year – class sizes of 40 to 50 – teach basic classes only <li style="text-align: center;">Or • Operate current program as long as \$'s last. General days would be cut from school year.

Youth Corrections and Juvenile Detention	Youth Corrections and Juvenile Detention budget reductions will include reductions in teaching positions and school days as applied to school districts.		

BUDGET REDUCTION PLANNING

OREGON UNIVERSITY SYSTEM

August 29, 2002

Chancellor Richard Jarvis

OVERVIEW OF REDUCTIONS TO DATE

- At the close of the 2001-2003 legislative session, OUS was appropriated \$834.4 million. So far this year, the OUS has experienced \$50 million in General Fund reductions, which translates into a 6% reduction in the OUS appropriation as of today.
- These cuts have come during a period of rapid growth, with enrollments estimated to increase by as much as 10% in this biennium. In the past five years, enrollments have grown by 24%, and the demand curve for access moves relentlessly upwards into the future. These budget cuts, when combined with rapid and sustained enrollment growth, double and triple the negative impact on Oregon's public university system.
- To address the budget reductions, the OUS implemented a hiring freeze almost one year ago that is aimed at sheltering instructional support for our growing enrollment, while reducing overall personnel costs.
- The budget cutting so far has served to protect instruction, which has required an extra detrimental burden for research, public service, and other non-enrollment-driven programs.
- This new budget cut of nearly \$40 million will raise the overall reduction to \$90 million, or nearly 11% of the OUS biennial General Fund appropriation. With the reductions compressed into the remaining nine months of the budget year, the problem is compounded tremendously.
- It is estimated that up to 3,000 students were denied access as an outcome of the \$50 million reduction. Denial of access not only means some students did not enter our universities; it also means some of our current students were closed out of courses and had their programs delayed; it also means some of them will have to stop out. For those students there is an immediate and ongoing financial impact. For our institutions, denial of access means lost tuition revenue of the order of an additional \$11 million.

PRELIMINARY PLANNING FOR THE \$38.9 MILLION REDUCTION

- Before I review the following impact statement, I want to begin by saying that, although I've only been in Oregon for a short period of time, I have already learned that we must not repeat in this new and drastic budget cut the destabilization of the System that occurred in the Measure 5 era. Therefore, I am committed to protect quality and stability in academic programs for the students we can serve with the remaining budget resources. This means that access, now and in the foreseeable future, will be limited in the face of such enormous

reductions in the instructional budget, especially when it is compressed into a single academic year.

- What you have before you is the impact from the next \$38.9 million in General Fund budget reductions from the Board's planning this year, and the reduction scenarios prepared for the next biennial budget. This will be the beginning point for our work.

Impact of Additional \$38.9 Million General Fund Reductions

On the basis of the reduction planning developed in November 2001, subsequently modified through the earlier reductions, and shared earlier with the Governor and legislature.

- \$7.35 million reduction in Statewide programs:
 - OSU Statewide Public Services (Extension Service, Agricultural Experiment Station, and Forest Research Laboratory) reduced by an additional 7%, which will limit OSU state out-reach programs and agricultural research, and could affect federal funding support.
 - \$28.65 million reduction to Instruction and Instructional Support:
 - Eliminate hundreds of class sections
 - Reduce enrollments up to 6,500 (5.5% of biennial fundable enrollment of 117,200)
 - 500 faculty and staff lay-offs
 - Limit program access for 2003-2005 (permanent limitations)
 - Reduce tuition revenues by \$21.5 million, compounding General Fund reductions
 - Further reductions in support programs: Libraries, student counseling, public safety, etc.
 - Instructional funding falls to the 37th percentile of OUS peers.
 - \$2.9 million reduction to Engineering Initiatives:
 - Reduce Board/state commitment to increase number of engineers and computer scientists. Step back from commitment for qualitative enhancements to attain national standing
 - State and national perception will be of restricted opportunity for access to quality four-year universities in Oregon; will reduce both student and faculty interest to pursue Oregon as an option.
 - The ability to implement lay-offs and close programs is highly problematic given collective bargaining and legal/contractual conditions of employment. Moral obligations to continuing students should be considered as well.
-
- The final product may not have the same shape, but it will reach the total of \$38.9 million, for a combined cut of almost 11% from the biennial General Fund appropriation.

- We must begin the exercise immediately, because each day of delay makes the task worse, and time is running out. Our Board has already been engaged in an intensive strategic planning effort, and we must be sure that the immediate actions taken to meet this crisis are consistent with the essential goal of a sustainable university system of the quality demanded by Oregonians.
- We will begin the work immediately, but before we step off into the deep end of this new budget reduction, I will consult with the presidents of each of the seven OUS institutions. Preliminarily, I have asked the presidents to give me their first look at campus budget reductions before the State Board of Higher Education's Executive Committee meeting on September 20. This will allow me to discuss the preliminary budget cuts with the presidents and Executive Committee, and give our constituents time to give their inputs, before a final decision is reached and implemented no later than the full Board meeting on October 18.
- Let me close by saying that the route for success for Oregon in the knowledge economy of the 21st Century is not going to be achieved by subtracting the resources needed by K-12, community colleges, and the public university system to prepare Oregon citizens for that future. Reducing the budgets for education reduces the horizon of Oregon's social, civic, and economic progress, to the lasting detriment of every Oregonian.

Testimony before Governor Kitzhaber
On Impact of Budget Reductions
8/29/2002

For the record Camille Preus-Braly - Commissioner of Community Colleges.

Appreciate the opportunity to speak directly on the impact of budget reductions.

Agency General Fund budget as adopted	\$ 474,528,195
Agency Operations	2,659,258
Community College Support Fund	467,068,191
Oregon Youth Conservation Corp	448,661
Current Agency General Fund budget	\$ 404,500,221
Community College Fund Shift	(55,961,053)
Additional Budget Reduction	(14,066,921)
Agency Operations	(81,163)
Community College Support Fund	(13,899,546)
Oregon Youth Conservation Corp	(26,212)
Agency General Fund including proposed cuts	\$ 384,451,153
Additional Budget Reduction	(20,049,068)
Agency Operations	(131,081)
Community College Support Fund	(19,704,860)
Oregon Youth Conservation Corp	(21,159)

First, I would like to speak to the impact of cuts to the agency operations budget. The general fund pays for whole or part of 11 employees within CCWD. In light of the proposed cuts we will continue our hiring freeze on two positions and will likely be required to proceed with staff layoffs. An alternative option is to reduce our share of General Fund match for the federal Carl Perkins grant, but doing so would reduce services at both the state and local community college level to professional technical programs.

The larger impact of the proposed across the board cuts comes to the community college support fund. Currently the reduction 19.7 million coming

from direct cuts in services to community college students. This cut comes in addition to a nearly 14 million dollar cut taken in Special Session #2.

Examples of the impact of nearly 35 million dollars to community colleges:

Reduced access to students and businesses - clearly there will be less options for first time freshman, returning students, workers who have been laid off and individuals and businesses who look to community colleges to bring competitive skills to those already working.

Enrollment continues to increase across the state at an average of +5% per year. Over 400,000 students come to community colleges each year and our capacity to serve them is decreasing.

As enrollment increases and state funding decreases (state general funds make up approximately 50% of the operating revenue for colleges) colleges are making the conscious choice to downsize their colleges. Historically, when students register for classes, and classes fill up, the colleges have maintained waiting lists so when there was a sufficient number of 'wait listed' students another section of the class would be offered. That will not happen now. Colleges can no longer afford to continue to expand class offerings, they simply do not have the resources. The additional cut of 19+million could affect the access to community colleges for as many as 14,000 students.

Tuition continues to increase. Nearly every community college has raised tuition anywhere from \$3 to \$10 per credit hour. And, although community colleges remain a quality bargain for a post secondary education we cannot avoid the reality that as tuition closes in on \$2,000 per year some of the most needy, and deserving students, will not be able to afford the price.

Program reductions will continue. After the second special session many colleges reviewed their program offerings with an eye to reducing and eliminating any program that wasn't attracting a full complement of students. Many profession technical programs fall into this category. Colleges are making difficult decisions to cut programs

in order to save resources but some of these programs provide the very high skill, high wage jobs Oregon needs for economic recovery.

Ability to respond to business needs is also in jeopardy. As colleges continue to seek ways to reduce costs they have reviewed the ways in which they can serve businesses, as they can no longer help support and underwrite the cost of building a custom training program. This means the business who cannot provide all the funding for such customization - that particular piece that keeps them competitive and profitable - putting at risk the real economic engine colleges have provided to their communities.

Attached is a report prepared by Blue Mountain Community College on the impact of the budget reductions to their college. It is clear in reading this report that Blue Mountain specifically, and all community colleges, are fighting for their very existence within their communities. The comprehensive mission of Oregon's community colleges is at risk, and, so too are the citizens of Oregon who count on the community college for skill development, economic development and as a vital community resource.

Blue Mountain Community College **Impact of Reductions in State Funding**

Blue Mountain Community College (BMCC) students, employees and the services provided to taxpayers have been seriously impacted by the reduction in community college state funding. The possibility of additional reductions in state funding is hard to even imagine. BMCC has used all available reserves. If the fund balance were to drop any lower, the College would be required to borrow money to maintain operations.

BMCC has already made the largest tuition and fee increase in the College's history this year with a 23% increase. However with additional reductions in state funding, BMCC will consider an additional \$10 or 23% increase in tuition and fees. This would be a total increase of 46% in one year.

Besides eliminating all counselor positions, all instructional middle management, a custodial and an athletic support position, BMCC has eliminated the Skills Center Programs, OATC (Oregon Advance Technology consortium) and all funding to support four-year programs (EOCCC). The College is in the process of eliminating the Mechanical Technology, Criminal Justice and the Industrial Maintenance Technology programs. Final action for these three programs is expected during the first week of September. With reduced funding, the College must look to eliminate additional programs, which may include the Theater program, the Human Services program and cut the music program in half and make reductions to the dental program. In addition to all other reductions, the College has identified a required across the board spending reduction of 3.5%. However, that may increase to as much as 6% or more. Finally, the College would significantly reduce all funding for instructional equipment, equipment repairs & maintenance and building repairs & maintenance. Currently, all building maintenance projects have been put on hold.

With the current and the proposed reductions, Blue Mountain Community College would eliminate 16 faculty positions or 25% of the College's general fund full time faculty. In addition, BMCC would eliminate 17 management and support staff positions or 23% of the General Fund staff.

Reduced funding for Blue Mountain Community College has and will have a critical impact for all students, staff and taxpayer services in northeast Oregon. Reduced funding will continue to erode the ability of community colleges to fulfill their mission in serving students and taxpayers.

In summary, the changes for Blue Mountain Community College include the following:

- Higher student tuition and fees by as much as 46%.
- Elimination or reduction of 10 different programs.
- Elimination of 33 positions or almost one-fourth of the College's general fund staff.
- Elimination and reduction of services to students and taxpayers.
- Elimination or reduction of funding for replacing and maintaining equipment.
- Elimination or reduction of funding to maintain buildings.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
1	OMAP	Reduce OHP pharmacy reimbursement to Average Wholesale Price (AWP) minus 17% and dispensing fee. Implementation date: January 2003	867,408			1,005,883		Payments to pharmacies will be reduced, possibly without their ability to obtain similar reductions in cost from the manufacturers. Pharmacies in WA and CA are currently threatening to drop out of Medicaid over similar issues. There may be access problems for clients.
2	OMAP	Do not distribute the Safety Net Clinic funding. Implementation date: October 2003. (\$1,000,000 reduction already taken at the February 2002 Emergency Board)	1,200,000					Safety Net Clinics provide health care to persons who have barriers to accessing health care. Barriers may include: lack of insurance; inability to pay; geographic isolation; personal, cultural and/or linguistic needs. Failure to allocate these funds to the safety net clinics may impose a financial hardship on some clinics with inadequate operating margins. Some individuals may have more difficulty accessing health care without these resources and there will more pressure on hospital emergency rooms.
3	OMAP	Change beginning date of Health Plan eligibility for adults/couples and families to the first of the month following eligibility determination. This would impact about 120,000 eligibles. This action would require federal approval which could affect the implementation date. Currently, OHP eligibility is effective with the date of request. OMAP pays medical costs retroactively to the date stamped on the application. This change would reduce the retroactive period for which OMAP is liable by the time between the date of request and the first of the next month. Implementation date February 2003. OMAP savings only, further savings in MH budget.	1,663,369			2,460,004		Clients would still receive six full months of eligibility. Mental Health Services would have increased costs for clients which meet the criteria for civil commitment and OHP eligibility since the State must pay for their hospitalization and federal match is only available when they become eligible. This may result in a cost shift to providers. This policy change may encourage eligible persons to apply for coverage before they are ill; thus, contributing to our goal of providing preventive care. This would likely keep some substance abuse clients from getting treatment since providers may not be available when clients need to start treatment.
4	OMAP	Eliminate outlier payments for DRG hospitals and reduce DRG unit value. This action eliminates outlier payments to DRG hospitals and reduce inpatient and outpatient reimbursement levels to DRG hospitals by 24%. Outlier payments are an additional payment made at the time a claim is processed for exceptionally costly services provided to Medicaid clients.	3,375,000			4,991,386		This would impact 28 DRG hospitals through out the state. This change may impose a financial hardship on some hospitals with inadequate operating margins.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
5	OMAP	Eliminate remainder of Mental Health/Alcohol & Drug portions of the Oregon Children's Plan. Implementation date: December 2002 - Impacts over 500 clients It is estimated that there are 26,132 firstborn children and families who have, or are at risk of developing, mental health and addiction conditions. This program is designed to prevent or treat those conditions.	2,600,000					Failure to treat these children and their families will create added problems for early education systems, child welfare, and ultimately juvenile justice. Untreated, these children and their families may experience poor outcomes, including abuse, neglect & domestic violence rates, juvenile and adult crime rates, poor school preparedness, increased use of special education, increased grade repetition, higher drop-out rates, poor maternal reproductive health, higher use of public assistance, and higher unemployment rates.
6	OMAP	Reduce Oregon Health Plan eligibility for pregnant women and children down to 133% of the Federal Poverty Level. Implementation date: April 2003 due to federal approval requirement. Impacts 2,500 clients. OMAP savings only, additional savings in the MH budget.	953,623			1,410,340		Pregnant women and children lose ready access to health care. They may show up in emergency rooms or safety net clinics with more severe health issues. A lack of prenatal care can result in increased health problems for the mom and the newborn child.
7	OMAP	Eliminate CHIP program. (W/OHP2, CHIP can not be reduced before adult couples & families) Impacts 20,000 children. Implementation date: April 03 due to federal approval requirement. OMAP only, additional savings in the mental health budget.	1,194,596			3,088,645		Children without ready access to health care may result in a decreased immunization rate, school attendance issues and sicker children seeking treatment from emergency rooms and public clinics.
8	OMAP	Eliminate medically needy program for 8,395 clients who are elderly or disabled. These clients generally suffer from disabilities and chronic illnesses that can only be successfully managed through the utilization of maintenance prescription drugs. Implementation date: Jan 03 - OMAP savings only, further savings in SDSA budget.	6,897,091			10,200,309		Elimination of the Medically Needy Program will result in clients without access to necessary medication, such as those needed for heart conditions, seizure disorders, and HIV infections. Without medications and no alternative source of prescriptions some of the clients would deteriorate to the point that they would require long term care services. There also exists the possibility of increased mental health services as the lack of sustaining medication could generate psychiatric issues that would require hospitalization. Cost could shift to General Fund only in mental Health programs.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
9	OMAP	<p>Reductions to this point are insufficient to reach the target for OMAP. The remaining \$12 million GF cannot be reached without reducing benefits by moving the line on the prioritized list of services, implementing reductions which require Legislatively adopted statutory changes, or reducing services and/or eligibility if the OHP-s waiver is approved.</p> <p>A reduction in services from a line change would require federal approval. In the past the federal government has been very negative in their view in moving the line any further. To reach this amount of savings, the line would have to be moved from 566 to 514 on the prioritized list of health services.</p> <p>Implementation date: January 1, 2003.</p>	12,020,487			22,111,282		<p>Some of conditions which would no longer be covered include: diabetes with end stage renal disease; treatable cancers of the esophagus, liver, pancreas, and gall bladder; eye injuries; disorders of the vestibular system; incontinence; salivary gland disease; rectal prolapse; social phobia, dental related issues, and amputation of the toe.</p> <p>Alternatives to the line change include actions requiring statutory changes such as Type B hospital reimbursement reductions, removal of groups of services like adult dental or mental health, or lowering eligibility thresholds to less than 100% of the federal poverty level for adults/couples.</p> <p>If the OHP-2 waiver is approved there is greater flexibility allowed to the department to change benefit levels in the OHP standard benefit and in the number of clients served.</p>
	TOTAL		30,771,574	-	-	45,267,849	-	
1	SDSD	<p>Eliminate GF for Retired Senior Volunteer Program. The program coordinates and provides 4,500 volunteers for such programs as social services for seniors and people with disabilities, academic tutoring and mentoring to people inschools, etc. During the 1999-2001 biennium, the local RSVPs provided 4,500 volunteers who were involved in projects reaching more than 50,000 children and seniors and providing more than 350,000 hours of volunteer services. Implementation date is November 1, 2002.</p>	93,000					<p>15 local RSVP projects are impacted by the cut. RSVP projects integrate with social services and public safety agencies and schools in local communities to provide a variety of volunteer services, including social services to seniors and people with disabilities; academic tutoring and mentoring to young people in public schools and community colleges, and community policing and senior crime prevention programs. This cut in funding will negatively impact the local RSVP's ability to continue the valuable local programs and services they implement.</p>
2	SDSD	<p>Eliminate nursing facility inflationary increase (rebasng) for 2002-2003. This requires notice to MLTCRAC and approval from the November Emergency Board prior to notice of rulemaking. Earliest implementation date is January 1, 2003. Approximately 5400 clients and 138 nursing facilities with Medicaid contracts are impacted. The average daily decrease is \$3.26 per client.</p>	993,218			1,499,800		<p>Facilities may be forced to curtail expenses since this will be a real decrease in revenues received. The largest part of nursing facility expense is associated with direct care staff wages and benefits.</p>
3	SDSD	<p>Move 198 Spousal Pay clients to Medicaid Services. Implementation date November 1, 2002.</p>	1,076,109					<p>These severely impaired clients will no longer be able to receive long term care from the their spouses. All will qualify for other Medicaid long term care services.</p>

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
4	SDSD	Restructure Special Needs Payments for Oregon Supplemental Income Program (OSIP) clients. Special needs payments are available to supplement one time needs for long term care clients who are receiving SSI or who are receiving Medicaid waived services. Implementation date is Dec 1, 2002.	500,000					Eliminating special cash payments may cause a need for more expensive long-term care services up to and including nursing care. Additionally, by eliminating special needs payments the state risks being out of compliance with federal regulations. Non-compliance would make the state ineligible for title XIX payments for quarters containing a month in which compliance was not met.
5	SDSD	Reduce the average monthly Assisted Living Facility rates from approximately \$1,550 to \$1,125 by December 1, 2002. This requires notice to MLTCRAC and approval from the November Emergency Board. Rule changes are not needed. Approximately 3,200 of the 3,450 clients in ALFs would be impacted and it is expected all 163 ALF providers that participate in Medicaid would be affected.	3,299,262			4,982,018		At this payment level, 21 of the 43 assisted living facilities financed by Oregon Housing and Community Services likely move into technical default. Many of these are located in rural parts of the state and may be the only long-term care resource in the community. Urban providers may choose to curtail Medicaid access. If facilities were forced to close due to default, residents (both Medicaid and private pay) may have to seek alternatives outside of their local communities. Rural facilities may also start to close since they generally have a higher Medicaid census than urban facilities and the impact of a rate reduction at this magnitude will be felt more quickly.
6	SDSD	Eliminate balance of Oregon Project Independence (OPI) for the remainder of the biennium. OPI is a state-funded program providing long-term care services to low income people age 60 and older not receiving Medicaid services. In-home services will be eliminated to approximately 3,000 clients currently receiving OPI. The program's original intent was to keep seniors in their own homes instead of an institutional setting. 5% of the clients return as Medicaid cases. Effective October 2, 2002.	2,684,505			357,834	(0.74)	One-third of OPI clients have survival priority levels between 1 and 3. In-home services will be eliminated to approximately 3,000 clients currently receiving OPI. These individuals will have to rely upon their own resources and some may not be able to remain at home, resulting in spend down to Medicaid eligibility. Many OPI providers are low-income home care workers. Programs are administered by local AAAs. A number of the small, rural AAAs will be put at risk of having to close all of their seniors programs.
7	SDSD	Eliminate Medicaid Long-Term Care for clients receiving in-home hourly services in Survival Priority Levels 15 - 17. 1,536 clients in these priority levels need some assistance and/or need a structured living environment. 824 in-home clients will be eliminated from services. Approximately, 40% will return to services over an approximate 21 month period. (16% are expected to return over the remaining 8 months of this biennium). Of the remaining balance of clients, 66% will return to Personal Care. Additional savings will occur in OMAP's budget. Implementation date is November 1, 2002.	1,615,216		176,441	2,272,240	2.30	Clients at these levels require assistance with bathing and grooming and may require mobility assistance. In addition, many of these clients have significant additional health issues such as diabetes, hypertension, heart conditions, behavioral health needs and require assistance with medications. Clients who lose Medicaid eligibility because of the loss of waived services will have difficulty accessing needed medical service. There will also be loss of employment for in home care givers.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
8	SDSD	Eliminate General Assistance Program for 2,472 clients with a long-term disability. This program provides grants to individuals who are unable to work because of long-term disability. Implementation date is December 1, 2002.	6,406,655			908,026	5.80	Increased acute care emergency room visits, increased demand for homeless shelter space, and increased demand for city and county services. General assistance cases known as "service cases" are both Medicaid eligible and eligible for services. As long as service levels remain covered, these 200 service clients would continue to receive the cash grant to pay for room and board in Medicaid long-term care services.
9	SDSD	Eliminate medically needy program of 8,395 clients who are elderly or disabled. Implementation date is January 1, 2003. See description in OMAP section.	1,397,519			1,263,859	13.78	When program eliminated by OMAP, 15% of the clients return as long term care cases. Only 67 clients phased in during the balance of 2001-2003. See impact description in OMAP section.
10	SDSD	Eliminate Medicaid Long-Term Care for clients receiving in-home hourly services in Survival Priority Levels 10 - 14. 4,826 clients in these priority levels need substantial assistance with eating, mobility, and other activities of daily living in a structured living environment. 2,589 in-home clients will be eliminated from services. Approximately, 40% will return to services over an approximate 21 month period (16% are expected to return over the remaining 8 months of this biennium). Of the remaining balance of clients, 66% will return to Personal Care. Additional savings will occur in OHP. Implementation date is November 1, 2002.	4,982,980		616,991	6,932,654	7.22	Clients in these levels require assistance with mobility, toileting, and/ or eating and in addition have substantial physical or behavioral health needs. Most have significant chronic health conditions and require daily medication assistance. Many new clients would require 24 hour care services. Absent care supports, protective service issues would escalate for many of these clients. Those clients who lose Medicaid eligibility because of the loss of waived services will have difficulty accessing needed medical services. There will also be substantial loss of employment for in home care givers.
11	SDSD	Eliminate Medicaid Long-Term Care for clients receiving 24 hour care services in Survival Priority Levels 10 - 17. 1,515 clients in these priority levels need substantial assistance with eating, mobility, and other activities of daily living in a structured living environment. 901 will be eliminated from services. Approximately, 50-60% will return to services over an approximate 21 month period (18% are expected to return over the remaining 8 months of this biennium). Of the remaining balance of clients, 66% will return to Personal Care. Implementation date is November 1, 2002.	4,952,830			7,375,440	1.57	Clients receiving 24 hour in home live in, substitute care, or nursing home care would be at high risk for rapid deterioration, including potential emergency room or hospitalization services with the loss of care services. Most of these clients have significant chronic health conditions and require daily medication assistance as well as health monitoring. Many of these clients have dementia or other behavioral health needs and require 24 hour supervision. Care facilities would evict clients because of lack of Medicaid payment. Protective service would escalate dramatically since housing and care services would not be available for clients who have no or limited family supports. Clients who lose Medicaid eligibility because of the loss of waived services would have difficulty accessing medical care. There will be further loss of employment for in home care givers and for staff in 24 hour living settings.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
12	SDSD	Eliminate Medicaid Long-Term Care for clients care services in Survival Priority Levels 7-9. 624 clients in these priority levels require assistance with eating, mobility, and other activities of daily living in a structured living environment. 320 will be eliminated from services. Approximately, 50-60% will return to services over an approximate 21 month period (18% are expected to return over the remaining 8 months of this biennium). Of the remaining balance of clients, 66% will return to Personal Care. Implementation date is November 1, 2002.	2,406,575		241,608	2,904,372	1.60	Clients in levels 7 through 9 are at high risk for rapid deterioration, including potential emergency room or hospitalization services with the loss of care services. Most have significant chronic health conditions and require daily assistance for basic life activities like toileting and eating. Many of these clients have dementia or other behavioral health needs and require 24 hour supervision. Care facilities would evict clients because of lack of Medicaid payment. Protective service would escalate dramatically since housing and care services would not be available for clients who have no or limited family supports. Clients who lose Medicaid eligibility because of the loss of waived services would have difficulty accessing medical care. There will be further loss of employment for in home care givers and for staff in 24 hour living settings.
	TOTAL		30,407,869	-	1,035,040	28,496,243	31.53	
1	MH	Eliminate mental health Office of Consumer Technical Assistance. This program provides technical assistance to mental health clients often provided by former clients of the system. (October 2002)	221,250					Eliminating this program would end statewide consumer technical services to adults who are developing support networks, serving on mental health advisory groups at local, state and national levels; a highly successful annual conference for consumers would be eliminated; major opposition would develop from hundreds of consumer/survivor activists who would view this as a withdrawal of state support for recovery and recognition of the role of consumers in improving the public mental health system.
2	MH	Eliminate funding directed to local mental health services' plans (HB 3024). A portion of this amount has already been taken. Planning funds have been distributed to counties.	2,433,864					House Bill 3024 embodies the recommendations of the Governor's Mental Health Alignment Work Group. Removal of the funds to support the process will eliminate much needed local collaboration between the Local Mental Health Authority (LMHA) and such entities as local law enforcement, juvenile justice, adult corrections and other allied service providers. Given the dramatic increase in demand for services, particularly with respect to acute and long term care, eliminating collaboration would stall potential systemic remedies to an already existing resource crisis.
3	MH	Eliminate mental health supported employment program for 180 people with mental illness. These programs provide employment opportunities for clients in the mental health system. Supported Employment services include: Supervision and job training with the consumer; on-the-job visits; consultation with employer; job coaching with the consumer; counseling; skills training; and transportation. (November 15, 2002)	765,853					This will remove 180 people with mental illness from services that make it possible for them to work. The 13 programs that support these people will close. These people will lose their jobs and need some level of service to avoid becoming civilly committed. They are at risk of local hospitalization, homelessness, and crime.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
4	MH	Eliminate 135 non-Medicaid Psychiatric Day Treatment (DARTs) slots. These programs provide mental health services to children and adolescents. Medicaid eligible clients would still be funded. (December 2002)	2,414,195					This would deprive children of access to critical treatment in times of psychiatric crisis. Costs will shift to schools, the juvenile justice system, and inpatient care. There will be a destabilization of children in foster care, and an increased need for out of home placements. Providers with low Medicaid participation will close.
5	MH	MH component of reductions in OMAP including the change in the date of eligibility, reduction income eligibility for PLM and CHIPs. See description in OMAP section.	532,082			705,381		See impact descriptions in the OMAP section.
6	MH	Delay opening of new Oregon State Hospital (OSH) ward planned for January 2003 until next biennium.	930,000					The caseload problem for this population remains and grows. Potential for additional legal action. Clients may have to stay in local jails longer.
7	MH	Eliminates 11 beds for psychiatric residential services for children and adolescents. This a reduction in residential bed capacity of 3.6%.	238,682			352,993		These youth are often in the custody of DHS - Child Welfare and cannot successfully live at a lesser level of care. Without 24-hour psychiatric treatment, their illness will worsen, they will fail in school, be removed from their families and may commit crimes and end up in the juvenile justice system.
8	MH	Reduce community mental health services for non-Medicaid adults and children by reducing medication and treatment access for 1,700 clients. (December 2002)	3,180,379					Without access to appropriate medication and treatment, 1,700 adults with mental illness will be unable to continue functioning in the community. Those with jobs will be unable to continue working and may end up being civilly committed or may commit crimes. Will affect those who need less intensive services first. Without treatment services, the illness of these clients will worsen. Some will require hospital treatment and may end up homeless.
9	MH	Eliminate funding for 182 beds of adult mental health residential treatment, which is 27% of capacity. This would end housing, supports, treatment including medication management, for an estimated 290 adults with the most disabling psychiatric conditions.	928,382					These persons would become homeless, many would commit crimes or become suicidal. All would be at risk of psychotic episodes, civil commitment, and increased psychiatric hospitalizations. The costs of these consequences would far exceed savings both this biennium and in future biennia.
10	MH	Cut remaining community mental health services for non-Medicaid adults and children eliminating outpatient services for an estimated 2,000 adults and 3,500 children.	3,180,379					Without access to appropriate medication and treatment, another 2,000 adults and 3,500 children with mental illness and children with severe emotional disturbance (SED) will be unable to continue functioning in the community. Those adults with jobs will be unable to continue working and may end up being civilly committed or may commit crimes. Children with SED will be unable to succeed in school. Will affect those who need less intensive services first. Without treatment services, the illness of these clients will worsen. Some will require hospital treatment and may end up in foster care or homeless.

11	MH	Close Portland psychiatric unit, transferring half of patients to the Salem campus of the Oregon State Hospital. OSH-Portland is a 68-bed intermediate care psychiatric hospital, located in a facility leased from Legacy Healthcare until March 31, 2005. The majority of the 33 patients leaving OSH-Portland will not have placements available in the community.	1,300,000		143,775		9.50	Impacts include: no early termination clause in the lease; would significantly increase the admissions wait list for state hospital beds; the wait list increase will increase the number of patients and length of stay in community acute care hospitals; insufficient community hospital psychiatric beds will impact other systems, for example, law enforcement, jails, emergency rooms; necessary to stop admissions to OSH-Portland on October 1, 2002; there are insufficient structured and supervised placements for seriously mentally ill persons in the community; there may be public safety issues in discharging patients without adequate supervision; civilly committed patients transferred from forensics and the loss of beds by closing OSH-Portland will result in severe overcrowding on Adult Treatment Services wards in Salem; construction/remodeling of usable ward space at OSH-Salem must begin immediately; would be unable to open a new forensics ward on January 1, 2003 as appropriated by the Legislature to meet mandated caseload; would require a forensics 2001-03 budget reduction to be TLC; would place civilly committed patients within the secure forensics perimeter, thereby curtailing treatment and movement options for those patients; legal risk in housing civilly committed patients and forensics patients by program, rather than on an individual, as-needed, case-by-case basis; remodeled ward space at OSH-Salem would cost at least \$1,000,000 and the available timeline would make it very difficult to finish by January 1, 2003.
	TOTAL		16,125,066	-	143,775	1,058,374	9.50	
1	DD	State Operated Community Program Savings. Savings occurred resulting from a change in staffing pattern and increased use of existing staff for duties formerly contracted. These duties include client functional and behavioral analysis.	515,097			761,828		Flexibility to respond to unexpected increased program costs is reduced by taking management actions toward these savings. Services to clients will be reduced as staff perform additional functions.
2	DD	State Operated Crisis Home. Eliminates stabilization and placement planning for 20 children with Developmental Disabilities per year. These children are in crisis in their current living situation.	368,260			542,210	11.73	Permanent successful placement for children with developmental disabilities will be hampered by the lack of crisis programs that will address their specific needs. The result of this will be an increase of failed placements for these children.
3	DD	Staley Agreement/Universal Access. Eliminates all non-24-hour care consolidated under the Staley Settlement Agreement, for children and adults with developmental disabilities. A total of 4,373 people will lose services, including 2,088 people who are already enrolled in services and 3,661 people scheduled to begin receiving services under the Settlement agreement. Ten regional brokerage programs established to provide services will close their doors. Clients would lose services as of December 1, 2002.	12,705,332			6,863,022	10.08	County crisis and emergency services will experience a significant caseload increase. Many of the people that lose services will be returned to state care by local courts, through the civil commitment process. This reduction would also constitute a breach of the Staley Settlement Agreement and the plaintiffs are likely to resume their case in court. States that have taken similar disputes to court have typically been ordered to provide services, at significantly higher cost than the current agreement. An estimated 640 jobs will be lost by people currently employed to provide services for this population.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
4	DD	Reduce DD Group Homes: Eliminates residential services through closure of some group homes for 427 people with developmental disabilities. Elimination of these services would leave people without residential services. DHS is reviewing the spending so far for the universal access program. It appears there may be one-time savings as the rollout of this program continues. These savings would offset some or all of this reduction.	3,196,125			892,575		These individuals are unable to care for themselves. In addition to mental retardation or other developmental disabilities, these individuals typically have complex behavior or medical conditions. Many were former residents of state training centers. Most have no family ties, or their parents are elderly and unable to care for them. Many of the non0profit agencies that operate these homes would be forced to close for economic reasons. This could displace additional people living in homes that were not included in the closure plan. In most cases, the Department would be required by local courts to provide care for individuals that lose services, after civil commitment proceedings. The reduction would close 101 group homes, 22% of all homes licensed to provide such services. An estimated 1,040 jobs would be lost to the local economy.
	TOTAL		16,784,814	-	-	9,059,635	21.81	
1	HD	Eliminate core funding for 20 School Based Health Clinics and technical support to all 43 clinics throughout the state. Clinics served 25,193 children in 2001, with a total 89,627 visits. November 1, 2002 implementation date due to contractual agreements.	820,144				1.84	Would reduce primary health care and referral services for youth at SBHC's. Staff reductions in local clinics are likely, but unknown. Reimbursement funding from insurance reimbursement would likely be eliminated.
2	HD	Eliminate General Funding for the Babies First program paid to counties. November 1, 2002 implementation date due to contractual agreements. Annually, approximately 9,000 infants received a total of 25,000 visits. Counties use these funds to leverage Medicaid revenues.	385,280					Babies First provides home visits by Public Health Nurses to infants at risk of physical and emotional health problems and developmental delay. Nurses provide screening and assessment, case management, health education, counseling and support, and referral to other services.
3	HD	Reduce General Fund support of perinatal and prenatal programs. Implementation date: November 2002.	155,072					These funds are used at county level for maternity case management to help insure pregnant women receive necessary care, avoiding costly birth complications, and needs for further social services.
4	HD	For the remaining 9 months of the biennium starting October 2002, reduce state support to county public health for communicable disease control.	85,049					Decreased funding to counties will severely limit their ability to meet statutory requirements. Potential for increased risk of exposure to the general population for communicable diseases.
	TOTAL		1,445,545	-	-	-	1.84	
1	AFS	Increase Employment Related Day Care (ERDC) co-pay by \$18 for all families. Copays will increase for 11,200 families. 335 families will leave ERDC and 67 families will return to TANF. Implemented November 2002 due to rule filing and system changes.	2,401,399				0.16	Clients bear more of the cost for childcare. For some, it will force them back to TANF. Providers will come under pressure to accept the reduced reimbursement from DHS, and potentially "forgive" the additional copay. These and other actions in AFS and SCF could create problems in meeting state Maintenance of Effort recoupments for TANF.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
2	AFS	Reduce JOBS Program contract and support services. No rules or system changes would be required to achieve this cut, thus implementation begins October 2002.	2,100,044				0.98	47 fewer families would require daycare services. Admin cost would climb by \$64,000 as a result of more TANF cases. Offset by fewer daycare cases.
3	AFS	Eliminate the minimum \$25 copay for the first two months of ERDC eligibility. Increase the average copay for all cases by \$37 including the \$18 increase listed in item 1 for AFS. 259 families will leave ERDC and 104 families will return to TANF. Implemented November 2002.	2,043,653				3.37	Clients bear more of the cost for childcare. For some, it will force them back to TANF. Providers will come under pressure to accept the reduced reimbursement from DHS, and potentially "forgive" the additional copay.
4	AFS	Limit daycare coverage to families below 150% of Federal Poverty Level (FPL). This eliminates 446 current families from further service. 45 of these families will return to cash assistance. Implemented November 2002.	420,787				0.62	Will increase day care expenses for some families causing some to return to cash assistance. Providers will be affected as they loose clients. Families with income between 150% and 180% of the FPL are less expensive because they pay a larger portion of childcare costs. The return rate to cash assistance is less because they have been off assistance for a longer period of time.
5	AFS	Reduce TANF Grant by an average of \$5 per month. Reduces TANF caseload by 164 families, 42 of which move onto ERDC. Affects about 17,000 families. Implemented November 2002.	894,257				0.82	Grant has not been increased since 1991. Currently the grant represents about 72% of the spending power in 1991. Clients will have additional problems meeting daily living needs. They may access Food Banks and other community providers more often.
	TOTAL		7,860,140	-	-	-	5.95	
1	SCF	Reduce Foster Care Special Rates by 10%. It may be a combination in number of cases and/or a reduction in the amount paid to foster parents for children eligible for the Special Rate. Implemented October 2002.	347,522		70,661	1,377,242		These children have medical and/or behavior problems that make them difficult to parent. Some would otherwise be in residential treatment. Finding placements for these children will be much more difficult and may result in children being inappropriately placed.
2	SCF	Reduce child welfare related contracted family treatment and support funds by 5%. This includes reductions to Intensive Family Services, Parent Training, Family Sex Abuse Treatment, Intensive Home Based Services and a Multnomah Self Enhancement Program. Implemented October 2002.	67,074		2,525	232,899		Either some Oregon counties would no longer be served or an across the board reduction would be made. This would result in some providers dropping out of the system. Some children could remain longer in foster care; others could enter care as their parents could no longer maintain them in the home.
3	SCF	Eliminate funds for System of Care Consultants. These consultants provide training to DHS staff and partners as well as evaluation of the program. Implemented October 2002.	300,000					This action increases the risk of litigation with Legal Aid, the Juvenile Rights Project (JRP) and the National Center for Youth Law. If consultants were eliminated at this time none of the Phase 4 SDA's would benefit from the expertise developed by these consultants and Phase 4 implementation would suffer dramatically. Training would have to be provided in-house straining the capacity of DHS trainers.

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
4	SCF	Eliminate 25% of Flex Funds from System of Care. Flex funds are used to purchase services families may need to address issues that put them at risk. At an estimated average expenditure of \$1,122 per child, we estimate that at least 1,700 children would be affected by each 25% reduction in flex funds. Of these children, approximately 1/3 will either remain in care three more months or be placed in care when it would otherwise be prevented, through the use of flex funds. Implemented October 2002.	1,695,781		82,516	20,832		Fewer children would be served and range of services would be reduced. Some children could be denied needed services with a potential for increased length of stay in foster care. This action increases the risk of litigation with Legal Aid, the Juvenile Rights Project (JRP) and the National Center for Youth Law. DHS has avoided litigation through a settlement agreement in which DHS agreed to provide individualized services under a System of Care model. If the JRP perceives that the state does not maintain its commitments a class action court mandate may be the next step. Of these children, approximately 1/3 will either remain in care three more months or be placed in care when it would otherwise be prevented, through the use of flex funds. The estimated foster care offset could then be as many as 567 children for three months at \$403 per month, or \$685,503.
5	SCF	Reduce Regular Foster Care payments by 7.5%. Implemented October 2002.	395,273		202,225	1,008,039		Foster Care providers will see significant reductions in reimbursement for providing a safe environment for at-risk children. Payments are presently insufficient to provide compensation for the costs of foster care providers. Access to foster care will also suffer as fewer families are willing to become foster care providers because of lower payments. This could lead to increased costs in other parts of the child welfare system (e.g. residential care) and greater risk to the child in some cases. Other reductions on this list contribute to greater demand for foster care, making this option more problematic.
6	SCF	Staffing for the System of Care would be reduced by 10%. Staffing reductions would basically come from two areas: (1) Resources Developers who develop and obtain access to System of Care services. Many of them initiate and monitor all contracted services out of SOC funds, including negotiating rates with providers and verifying insurability and other contracting requirements. (2) After hours workers who provide 24 hour protective services including Multnomah County's "night hotline." Implemented October 2002.	110,560		2,611	74,665	1.80	The current distribution of Resource Developer's is no more than one per branch and some smaller branches have had to absorb the workload into their existing responsibilities. A reduction of RD's would likely eliminate that service for the branches selected. The workload would then shift to existing workers, reducing the amount of time available to explore available resources.
7	SCF	Reduce Flex Funds from System of Care for child welfare by another 25%. Flex funds are used to purchase services families may need to address issues that put them at risk. At an estimated average expenditure of \$1,122 per child, we estimate that at least 1,700 children would be affected by each 25% reduction in flex funds. This reduction is based on a Oct 1, 2002 implementation date.	1,695,781		82,516	20,832		Fewer children would be served and range of services would be reduced. Some children could be denied needed services with a potential for increased length of stay in foster care. This action increases the risk of litigation with Legal Aid, the Juvenile Rights Project (JRP) and the National Center for Youth Law. DHS has avoided litigation through a settlement agreement in which DHS agreed to provide individualized services under a System of Care model. If the JRP perceives that the state does not maintain its commitments a class action court mandate may be the next step. Of these children, approximately 1/3 will either remain in care three more months or be placed in care when it would otherwise be prevented, through the use of flex funds. The estimated foster care offset could then be as many as 567 children for three months at \$403 per month, or \$685,503.

Reduction Options: Department of Human Services

			General Fund	Lottery Funds	Other Funds	Federal Funds		
8	SCF	Reduce supportive remedial day care by 50%. This is an alternative to placing children in foster care when parents are experiencing incapacity or illness, or when the disturbed behavior of a pre-school child may be remediated. Implemented October 2002.	428,545		20,446	540,999		This reduction could result in additional children being placed in foster care due to abuse and/or neglect by their caregivers. This program not only provides valuable socialization services for the child, but adds an outside review of the child's development process. It is also used to reduce stress and recurrence of physical abuse. Without this resource, children will be more likely to be placed in foster care by workers if they believe this service is not available to monitor the child while at home and reduce family stress (children could be more at risk).
9	SCF	Reduce adoptions assistance payments by 7.5%. This program provides financial assistance to families who adopt children with special needs as well as Medicaid coverage for the children. The program serves almost 7,700 clients biennially. Implemented October 2002.	1,176,887		12,952	1,060,443		This action would most likely result in litigation and administrative hearings for some current adoptive parents. It also could impair the relationship between the agency and adoptive parents and be seen as a breach of an agreement. Some individuals may elect to not adopt children and children will remain in foster care. The number of adoptive disruptions will likely increase. Adoptive parent advocates will gain strength because of their defense of adoptive families. Numerous legislators are already concerned about the agency's limited ability to support these families.
10	SCF	Reduce child welfare residential treatment capacity by 30 beds. Implemented October 2002.	389,053		50,476	541,475		Children would most likely have to go to special rate foster care which would be an inappropriate placement to address the level of need for these children. Some of these children will rapidly deteriorate in these placements to the point where they would need psychiatric hospitalization or placement in more restrictive and costly service programs. Courts could also, under OR 419B.349 find that special rate foster care placement is "not in the best interests of the child". Foster parents forced to take inappropriate children would "burn out" and stop being foster parents.
11	SCF	Eliminate remaining system of care resources in the child welfare system. This includes staff and programs. Previously the AG determined the state would not likely prevail in this litigation. At an estimated average expenditure of \$1,122 per child, we estimate that at least 1,700 children would be affected by each 25% reduction in flex funds. Implemented October 2002 for program and December 2002 for staff.	4,386,605		188,530	713,647	16.17	Fewer children would be served and range of services would be reduced. Some children could be denied needed services with a potential for increased length of stay in foster care. This action increases the risk of litigation with Legal Aid, the Juvenile Rights Project (JRP) and the National Center for Youth Law. DHS has avoided litigation through a settlement agreement in which DHS agreed to provide individualized services under a System of Care model. If the JRP perceives that the state does not maintain its commitments a class action court mandate may be the next step. Of these children, approximately 1/3 will either remain in care three more months or be placed in care when it would otherwise be prevented, through the use of flex funds. The estimated foster care offset could then be as many as 567 children for three months at \$403 per month, or \$685,503.

Reduction Options: Department of Human Services

		2001-03						
Item Number	Division	Short Description	General Fund	Lottery Funds	Other Funds	Federal Funds	Full Time Equivalent	Impact
1	OADAP	Reduce Alcohol and Drug residential treatment capacity from 608 to 511 effective November 2002.	1,450,123			969,028		Residential services would be unavailable to 104 clients. The reduction in residential capacity comes at a time when waiting lists for services exist at all programs. Without access to residential treatment, clients will either receive no treatment or will enter treatment at a level of care that is insufficient to address their problems. For many clients failure to gain access to residential treatment will result in continued use of alcohol or other drugs. Continued substance abuse use will negatively affect the physical health and social functioning of the client. These ill effects will, in turn, be reflected in increased pressures upon other services provided by state system, such as employment, welfare, food stamps, children abuse, medical services, and corrections. We currently estimate that each dollar spent on substance abuse services will save seven dollars spent on other social or medical services.

Reduction Options: Department of Human Services

		2001-03						
Item Number	Division	Short Description	General Fund	Lottery Funds	Other Funds	Federal Funds	Full Time Equivalent	Impact
1	VR	Eliminate sheltered services employment program for 93 severely disabled adults.	316,421					This would eliminate sheltered services employment program for 93 severely disabled adults that are currently employed. For many, this structured employment are opportunity are for severely disabled persons who are not capable of competitive employment.
2	VR	Reduce basic vocational rehabilitation services program by eliminating services for an estimated 929 severely disabled clients.	375,005			1,385,582	3.11	Persons with disabilities would not receive assistance in seeking and obtaining employment. This cut would increase the probability of OVRS entering "order of selection", by which only the most severely disabled clients would be served. For every \$1 general fund reduction, OVRS loses approximately \$4 federal funds.
	TOTAL		691,426	-	-	1,385,582	3.11	

Reduction Options: Department of Human Services

Item Number	Division	Short Description	2001-03				Full Time Equivalent	Impact
			General Fund	Lottery Funds	Other Funds	Federal Funds		
1	DWSS	Administrative Reductions - Reduce Department-wide Support Services (DWSS) by \$4.4 million. DWSS provides the general business functions of the department including information systems, accounting, budgeting, human resource management, facilities, training, contracting and overall management of the DHS. These are core functions supporting the multitude of services provided by DHS. DWSS is also responsible for managing and implementing large department-wide projects like HIPAA which involves meeting federal deadlines. The majority of the DWSS budget is dedicated to staff costs or for contracting services in the development of information systems. The majority of reductions would have to be made by reducing or eliminating major information systems development projects, or a combination of the two. DHS is reviewing the reduction options and their impacts. A reduction of this size likely means a 17% cut to staff and systems projects for the remainder of the biennium. The impact on Federal and Other Funds is an estimate. It should also be noted that many areas of DWSS will see a workload increase as a result of implementing many of the programmatic changes on this list. Examples include significant changes to information systems, increased contract activity as many contracts must be amended, and additional personnel work as staff are terminated.	4,447,470		1,891,000	8,408,000		Depending on the selection of the reductions, potential impacts may include: -Loss of federal Medicaid funds and possible legal actions for if HIPAA deadlines are not met. -Delay in implementing contracts and contract changes which will likely mean a delay or failure to provide necessary services to clients, increased costs for some services and potentially higher legal costs. -Reduction or elimination of major information systems development like MMIS, mental health payment system, projects related to the transformation of the department and systems to increase accountability and security. This would lead to greater costs in the future as old legacy systems must be maintained or federal/state requirements are not met. The Department may also be at greater risk of federal penalties or legal action as a result of inadequate systems. DHS and the State have invested millions of dollars already in replacing systems like the current MMIS project; delaying or terminating this project would increase costs in the future. -Reduction in accounting staff will mean the loss of interest on state funds, delay the payments made to clients and providers and a decline in the internal financial controls of the department, increasing the risk of federal disallowance and/or penalties. -Reduction in the budget staff will mean less oversight on spending and slower response to the requests of department staff, Legislature and Executive Branch. -Reductions to human resources staff will mean delays in criminal records history checks of staff and providers potentially putting clients at risk, increasing the legal and other risks of DHS as employment issues are not addressed in a timely manner, and potentially higher workers comp claims. -Reductions to facility resources will slow the integration of field staff and offices. -Reductions to Forms and Documents staff would slow claims processing and eligibility determination.
		TOTAL	120,977,108	-	3,785,273	100,235,784	91.71	

DEPARTMENT OF CORRECTIONS
Governor's Budget Hearing
August 29, 2002

Legislatively Approved Budget at close of 2001-2003 Session:

\$ 861,647,992	General Fund
144,492,504	Other Funds
<u>6,823,316</u>	Federal Funds
\$1,012,963,812	Total

Changes to date:

February 2002 rebalance plan – action by the Emergency Board -

- Internally financed \$37.8 million of identified needs – the largest needs were inmate health care (\$13.3 million), overtime and differential pay (\$13.1 million) and fuel & utilities (\$7.6 million).
- Internal financing came from construction savings (\$16.4 million), delayed hires & services and supplies savings (\$8.2 million), reduced food costs (\$4.5 million), delayed opening of institution housing units (\$4.3 million) and other (\$4.4 million).

February 2002 Special Session –

- Each division produced additional savings through efficiency plans, additional delay in housing units, additional delay in hiring staff, restructure ways to do business, etc. In addition, community corrections funding for inflation was reduced, additional federal funds and construction savings were assumed.
- The funding change was as follows:

(\$36,863,828)	General Fund
14,840,698	Other Funds
<u>2,500,000</u>	Federal Funds
(\$19,523,130)	Total
- The internal reductions necessary to accomplish the rebalance plan, plus the reductions made during the February special session eliminated all flexibility within the budget. Work done during the Fall of 2001 to plan for emergencies and potential shortfalls was crucial to DOC's ability to accommodate these reductions.

June 2002 Special Session –

- Program changes included:
 - Eliminate remaining Deschutes County rental bed funding (\$133,500)
 - Reduce by 1/3 rd funding for non-mandated programs such as work-based education (\$1,790,130)
 - Underfund the salary adjustment package (\$4,298,218)

- The funding change was as follows – the positive number results from the salary adjustment allocation:

\$10,434,597	General Fund
4,465,408	Other Funds
\$14,900,005	Total
- The salary adjustment shortfall will be funded through elimination of the salary adjustment for Salary Range 38 and higher positions, overtime savings from the moratorium on in-service training and reduced hospital watches, payoff or refinance of energy loans, and further vacancy savings.

DOC portion of the current projected shortfall of \$482 million = \$41,398,849

As previously discussed with representatives from the Governor’s Office and the Department of Administrative Services, the DOC plan to save the additional \$41.4 million must include a law change to give the Director release authority. The only way to reach that kind of cost saving is to lay off staff and close institutions. Without the release authority the only option would be to consolidate the inmate population into fewer facilities, housed in temporary type housing, under a lock down atmosphere. That would be an extremely dangerous environment for both staff and inmates. In addition, none of the elements necessary for successful re-entry of offenders back into the community would be present.

We also ask that we be allowed to adjust appropriations disproportionately rather than equally across the board. Construction savings used to offset debt service is a large part of the proposed solution – greater than it’s proportional share. Also, the community corrections proportional reduction may be large enough to trigger the opt out provision and return of responsibility for certain offenders back to the DOC.

Our plan is outlined below:

- | | | | | | | | | | | | | | | | | |
|---|----------------------------|------------|----------------------|---------|-------------------------|-----------|---------------------|------------|----------------------------|-----------|--|---------|---|-----------|---|------------|
| <ul style="list-style-type: none"> • Eliminate the balance of non-mandated programs <table style="margin-left: 20px; border-collapse: collapse;"> <tr> <td style="padding-left: 20px;">Alcohol and drug treatment</td> <td style="text-align: right;">\$ 721,007</td> </tr> <tr> <td style="padding-left: 20px;">Work-based education</td> <td style="text-align: right;">752,133</td> </tr> <tr> <td style="padding-left: 20px;">Cognitive Restructuring</td> <td style="text-align: right;">1,098,675</td> </tr> </table> • Reduce community grant inflation to match DOC rate • Use CCCF construction savings to offset GF debt • Close up to seven institutions and release inmates <table style="margin-left: 20px; border-collapse: collapse;"> <tr> <td style="padding-left: 20px;">Institution savings</td> <td style="text-align: right;">17,698,455</td> </tr> <tr> <td style="padding-left: 20px;">Associated program savings</td> <td style="text-align: right;">7,491,414</td> </tr> <tr> <td style="padding-left: 20px;">Associated institution based ISSD and HR staff</td> <td style="text-align: right;">248,840</td> </tr> <tr> <td style="padding-left: 20px;">Other central support and administration reductions</td> <td style="text-align: right; border-top: 1px solid black;">1,101,432</td> </tr> </table> • Total | Alcohol and drug treatment | \$ 721,007 | Work-based education | 752,133 | Cognitive Restructuring | 1,098,675 | Institution savings | 17,698,455 | Associated program savings | 7,491,414 | Associated institution based ISSD and HR staff | 248,840 | Other central support and administration reductions | 1,101,432 | <table style="border-collapse: collapse;"> <tr> <td style="border-top: 1px solid black;">41,398,849</td> </tr> </table> | 41,398,849 |
| Alcohol and drug treatment | \$ 721,007 | | | | | | | | | | | | | | | |
| Work-based education | 752,133 | | | | | | | | | | | | | | | |
| Cognitive Restructuring | 1,098,675 | | | | | | | | | | | | | | | |
| Institution savings | 17,698,455 | | | | | | | | | | | | | | | |
| Associated program savings | 7,491,414 | | | | | | | | | | | | | | | |
| Associated institution based ISSD and HR staff | 248,840 | | | | | | | | | | | | | | | |
| Other central support and administration reductions | 1,101,432 | | | | | | | | | | | | | | | |
| 41,398,849 | | | | | | | | | | | | | | | | |

Please note: Under this plan we assume 3,950 inmates would be released and 943 institution staff would be laid off. In addition, the support unit staff reductions could number 40. We also assume the released offenders would be added to existing community corrections caseloads – without additional funding. The cost of the additional supervision to be absorbed by the counties is approximately \$7.5 million.

The savings assume elimination of the correctional programs contracts as of November 1, 2002, and the institution closures as of January 1, 2003. Implementing the lay-off of over 900 staff is anticipated to take longer than contractually required 15-day lay-off notice period. We believe that operational issues at some of our facilities would require us to review the lay-off differently than just determining the most recently hired and giving them notice. Current laws and court case findings regarding inmate privacy issues must be taken into account. For example, we will need to have a certain number of female staff at the women's facility to deal with on-going security issues such as showers and body cavity searches. Another operational issue for staff at the remaining facilities will be their ability to meet the department's standards for armed posts. In summary, the special needs of inmates, minimum qualifications for staff positions, and bumping right issues requires additional process time.

OREGON YOUTH AUTHORITY

2001-2003 AGENCY OVERVIEW
AUGUST 29, 2002

OREGON YOUTH AUTHORITY

AGENCY OVERVIEW

OYA Overview – Mission

Statutory Authority ORS 420A

The Oregon Youth Authority was established as a separate agency:

- by the Oregon Legislative Assembly in 1995 in Senate Bill 1
- as the cornerstone of an improved Oregon system of juvenile justice
- as a response to intolerable rates of violent juvenile crime and the passage of Ballot Measure 11
- to maintain a balance between public safety, accountability, and reformation
- recognizing that younger people are more amenable to treatment by specifying that offenders between the ages of 12–25 requiring incarceration are better served by OYA

Oregon Youth Authority Mission Statement

To protect the public by holding youth offenders accountable and providing opportunities for reformation

TO ACHIEVE THIS, WE

- Emphasize public safety;
- Provide certain, consistent sanctions for youth offenders;
- Support the concerns of crime victims;
- Provide comprehensive youth reformation programs;
- Promote and support juvenile crime prevention activities;
- Encourage family involvement and responsibility; and
- Select, train, support and empower a competent and diverse work force.

WE VALUE

- Excellence in public service;
- Partnerships with local communities and other agencies;
- Openness and accountability to the public; and
- Provision of service in a fair, respectful, and humane manner.

OREGON YOUTH AUTHORITY

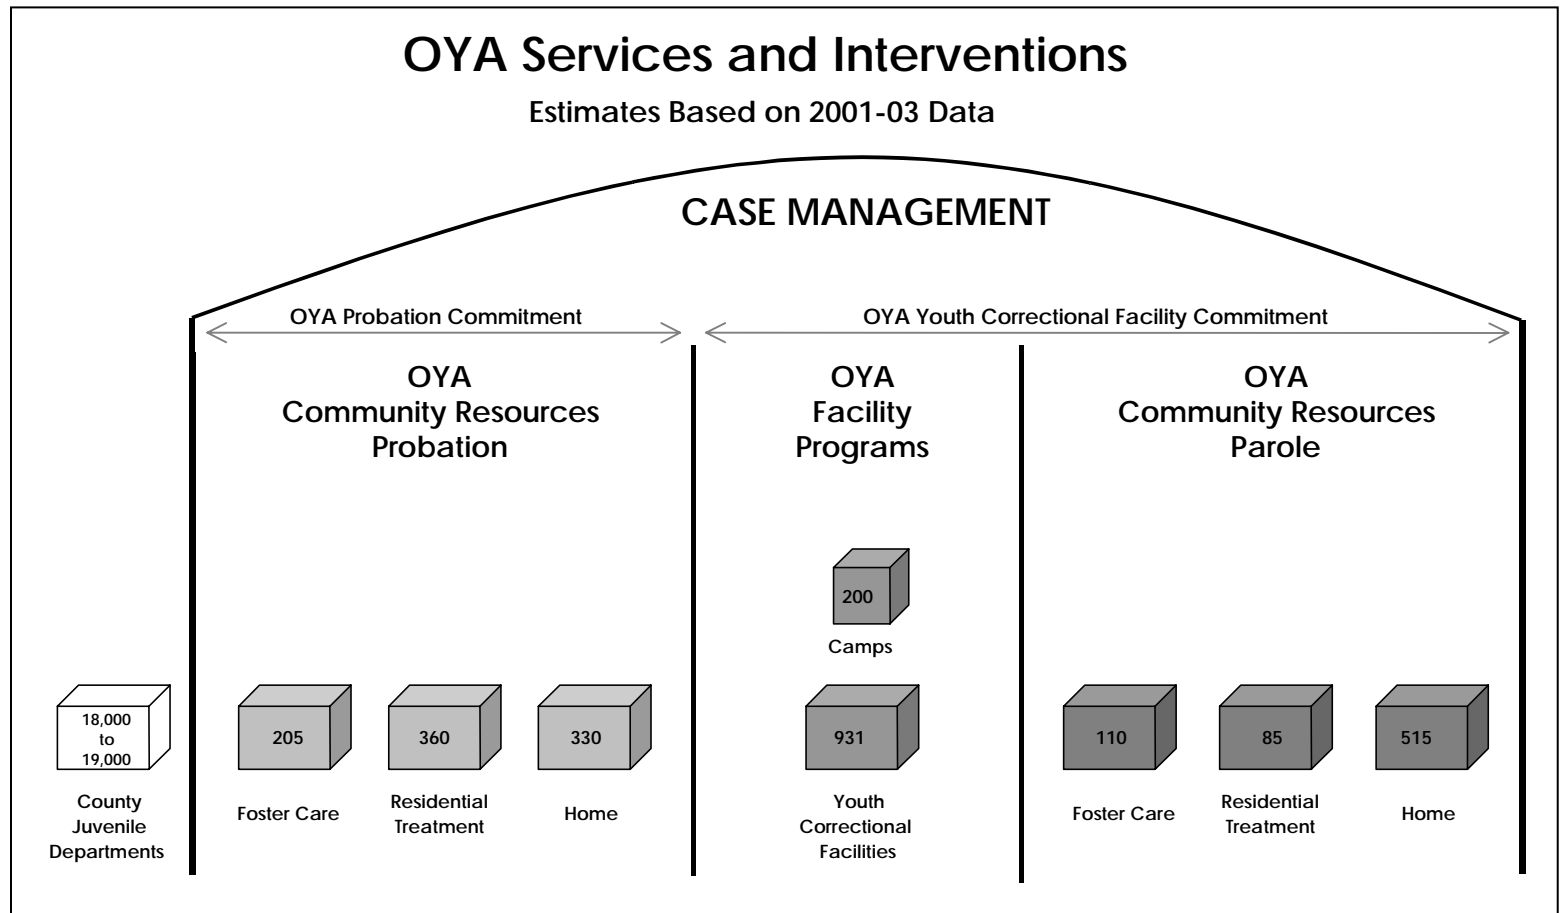

AGENCY OVERVIEW

The OYA:

- exercises legal and physical custody of youth offenders ages 12-25 who have been committed to the OYA by county juvenile courts.
- exercises physical custody of offenders 15-25 who have been committed to the legal custody of Department of Corrections by adult courts.
- provides community-based services and supervision to youth offenders.
- provides facility-based services and supervision to youth offenders and youth convicted of adult crimes.

Most offenders return to their communities.

Some youth convicted of adult crimes continue their sentences in the custody of the Department of Corrections.

OREGON YOUTH AUTHORITY

Summary of 2001-2003 Legislatively Adopted Budget

Legislatively Adopted Budget
 \$270.1 Million Total Funds
 \$229.5 Million General Funds

Legislatively Adopted Budget
 Revenue Source
 \$270.1 Million Total Funds

The **Legislatively Adopted Budget** for the Oregon Youth Authority consists of:

Facility Programs

- ◇ MacLaren Youth Correctional Facility
- ◇ Hilcrest Youth Correctional Facility
- ◇ North Cost Youth Correctional Facility
- ◇ Oak Creek Youth Correctional Facility
- ◇ Rogue Valley Youth Correctional Facility
- ◇ Ochoco Youth Correctional Facility

OREGON YOUTH AUTHORITY

Further Reductions

Description		Impact	2001-2003 GF	POS
Facilities			(6,500,000)	265-275
•	Close Youth Correctional Facilities in Burns (50 Beds), Warrenton (75 Beds), Albany (75 Beds) and Prineville (50 Beds) - Eliminating 250 Close Custody Beds	The release of a significant number of youth on parole to their communities - leaving only the most serious offenders in state custody. These youth will displace those currently being served in local programs.		
Community Programs			(4,800,000)	Approx 30
•	Eliminate Deschutes County Youth Investment Project (equates to 16 close custody beds)	Community services receive a double-hit in that the 250 youth who will be immediately paroled back to their communities will be competing for severely reduced services. The youth who had been receiving those services will be terminated from OYA's custody		
•	Eliminate Multnomah Gang Funding			
•	Reduce Probation/Parole Staff			
•	Reduce 160-180 Residential, Shelter and Foster Beds			
•	20% Reductions to Other Treatment Services			
•	Approx. \$1 M Reduction to Counties to serve youth in local programs including County Diversion and Juvenile Crime Prevention			
		Reductions	(11,300,000)	295-305

* Above assumes a January 1, 2003 implementation date to allow time for contract amendments and the employee layoff process.

From: Stephanie Hallock
Director

Re: Proposed General Fund Budget Cuts for the Remainder of 2001-03

Agency Budget Totals at Close of 01-03 Session

General Fund and Lottery Fund is 14% of DEQ's total Legislatively Adopted Budget of \$304,195,824.

\$130 million or 43% of DEQ's budget is passed through to communities in the form of loans or is used for debt service. The remainder forms DEQ's operating budget. General Fund is 16.4% of DEQ's \$173 million operating budget in the Legislatively Adopted Budget.

General and Lottery Fund Appropriations by Program:

Program	GF/LF	Total Funds
Air Quality	\$ 5,168,182(GF)	\$44,587,534
Water Quality	20,102,255 (GF) 192,000 (LF)	\$47,491,263
Land Quality	2,087,036(GF)	\$61,562,880
Cross Media	867,855	\$1,838,755
Agency Management	247,563	\$17,840,164
Debt Service	14,399,945 305,510 (LF)	\$16,610,393
Non-Limited	--	\$114,264,835
TOTAL	43,370,346	\$304,195,824

Cuts to Date from 4 Special Sessions

The Air Quality program has reduced its General Fund budget by \$719,421 and 4.44 FTE. This has resulted in reductions in the Air Quality monitoring network, complaint response for open burning, and our technical support to local clean air communities.

The Water Quality program has reduced its General Fund budget by \$611,949 and 5 FTE. This has resulted in reductions to our water quality monitoring network, less effort to reduce pollution from nonpoint sources, and delays in developing Total Maximum Daily Loads of pollutants.

The Land Quality program has reduced its General Fund budget by \$313,467 and 0.55 FTE. This has resulted in reductions in staff available to oversee environmental clean-ups, and support for regional pollution prevention efforts.

The total budget of the Agency Management program was reduced by \$323,443 and 0.25 FTE, this translated into \$172,000 of General Fund. This has resulted in reduced contract funding available for development of performance measures, citizen surveys, and database upgrades.

Total General Fund cut is \$1,816,837, which equates to 6.4% of the General Fund in DEQ's Operating Budget. Total FTE cut is 10.24.

During the special sessions, DEQ was appropriated approximately 75% of the money needed to cover salary increases in General Funded positions and was provided increased limitation for this purpose in Other and Federal Fund positions.

In addition, DEQ took \$920,929 in temporary reductions during Special Session 2 in the form of vacancy savings and a bond sale delay.

Cut Amount of \$482 Million Across the Board

Air Quality	\$ 215,086
Water Quality	880,375
Land Quality	79,967
Cross Media	43,831
Agency Management	12,271
Debt Service	689,002
Total Reduction	\$ 1,920,532

How DEQ Will Manage the Cuts

Air Quality

Air Quality will eliminate approximately 3 FTE in the Air Contaminant Discharge Permit (ACDP) program, which minimizes air pollution from small to medium sized industrial businesses. This program was already reduced by about 10% in the 2001-2003 budget, and further cuts will result in a significant reduction in service to the regulated community and an increased risk to public health. These cuts could jeopardize the Air

Quality program's ability to meet match requirements for the \$4.4 million federal air quality grant. The reductions would be taken across the regions and headquarters.

The ACDP reductions will eliminate DEQ oversight of testing conducted by industrial sources used to show compliance with air quality standards, which could increase health risks from excess emissions. Without DEQ oversight, permittees without registered engineers on staff would be required to pay for an independent certification of testing. The reductions would also increase the time to obtain a permit, causing some businesses to miss market opportunities and leading to a significant backlog in air quality permitting over time. In addition, the reductions would lead to a lack of statewide consistency in air quality permitting. Finally, the reductions would slow DEQ's ability to streamline and update regulations, which would result in inefficiency and possibly reduced protection of public health.

Air Quality General Fund also supports approximately 25% of the Agency Cross-Program/Green Permits Coordinator. Without this position, resources are reduced to coordinate across programs (e.g. EPA Performance Partnership Grant); Green Permits coordination is eliminated; and technical assistance and outreach to businesses is reduced.

Water Quality

Water Quality reductions total 12.58 FTE. These cuts would prevent DEQ from meeting the court ordered schedule to complete TMDLs by 2010 and may threaten Oregon's delegation status with the Environmental Protection Agency for the Wastewater Management Program.

In TMDL Development and Monitoring, Water Quality will eliminate 3 FTE as follows: 1 FTE in monitoring work that supports TMDLs, and 2 FTE in TMDL development. DEQ is under a court order to complete TMDLs statewide by 2010. The loss of 3 FTE, combined with earlier reductions to the program in the 2001-2003 biennium, will prevent DEQ from meeting the court-ordered schedule. We estimate that it will now take until 2014 to complete work. The implications of this delay are significant. EPA may decide to undertake the delayed TMDLs and simply set numbers rather than work with local advisory committees to focus on best management practices. A delay in TMDL development means a delay in addressing known water quality problems (through permits, the Forest Practices Act, Senate Bill 1010) which means a delay in water quality and fish habitat improvements.

In Wastewater Permits, Water Quality will eliminate 4.58 FTE as follows: 2.58 FTE in storm water program development and 2 FTE in issuing wastewater permits and conducting compliance inspections for industrial and municipal dischargers. These reductions would be taken across the three regions and headquarters. The storm water reduction eliminates DEQ's ability to complete development and begin implementation of a federally-required storm water permitting regulations which require DEQ to issue permits to control stormwater discharges from certain municipalities and construction

projects. These regulations become effective in December 2002. In response to this reduction, EPA may exercise its oversight authority and perform compliance inspections and enforcement in Oregon, including activities targeting unpermitted storm water dischargers.

In the base permit program, Water Quality will reduce the number of inspections conducted and permits issued, which will cause a commensurate increase in the permit backlog. As of July 2002, the backlog of individual permits is 48% (172 of 361 Federal discharge permits). Since permits are the primary method that DEQ uses to achieve and maintain water quality, we will have more out-of-date permits and will not be able to integrate new pollutant loads from TMDLs, nor will we be able to ensure compliance with those requirements. In addition, further reductions to the wastewater permitting program could cause EPA to consider revoking delegation of this program to Oregon. There is no absolute trigger for revoking delegation, but the size of the backlog and other factors have already caused EPA to question the program's adequacy.

In Water Quality Monitoring, Water Quality will eliminate one analytical chemist position in the Inorganic Analysis Section and one Oregon Plan monitoring position in the Biomonitoring Section. The loss of the analytical chemist reduces DEQ's ability to conduct nutrient analyses of water quality samples by 20%. In addition, this cut will lengthen the turn around time for the LaPine on-site demonstration project (testing new septic technology) which also requires nutrient analyses. The loss of the Oregon Plan position represents a 20% cut in our Oregon Plan coastal monitoring work. This will reduce our ability to measure the positive water quality impacts of the Oregon Plan for Salmon and Watersheds.

In Water Quality Standards and Assessments, Water Quality will eliminate the senior scientist (toxicologist) in the Water Quality program and non-TMDL water quality studies, including toxicity studies in the Willamette River. DEQ's involvement in advancing the state of the science and understand of emerging water quality issues (e.g., pharmaceuticals in ground and surface waters, pesticides, mercury and sediments) is severely curtailed.

Water Quality will eliminate 2 FTE in Data Management Geographic Information Systems (GIS). This will eliminate technical and clerical support to permits, groundwater, standards and assessment, and monitoring, and also eliminates support for hardware/software systems in the Water Quality Division. This will impair DEQ's ability to efficiently maintain and process electronic information and will significantly reduce DEQ's ability to use sophisticated computer mapping tools to aid with the analysis of water quality information. For example, the loss of the GIS position will eliminate DEQ's ability to determine how many stream miles are water quality limited based on the 303(d) list and to map water quality limited streams. This information will not be available to others.

The reduction in State Revolving Fund Debt is a reduction in DEQ's debt service by buying down the existing debt service using \$251,772 State Revolving Fund money. As

a result of this reduction, DEQ will have \$251,772 less to loan to communities to address the water quality needs of rural Oregonians. In addition, we are delaying the bond sale resulting in a debt service reduction of \$267,006.

This program also supports approximately 25% of the Agency Pollution Prevention/Green Permits Coordinator. Without this position, resources are reduced to coordinate across programs (e.g. EPA Performance Partnership Grant); Green Permits coordination is eliminated; and technical assistance and outreach to businesses is reduced.

Land Quality

The Land Quality program would be reduced by \$79,967 or 1 FTE. This reduction would result in curtailing technical assistance and response to questions about cleanups. Existing guidance documents, which provide direction to environmental contractors, would not be updated. New guidance documents for emerging issues would not be developed. Technical assistance and guidance documents are relied upon by property owners, responsible parties, prospective property purchasers and the environmental consultants they hire to conduct cleanup work. Cleanups will be more difficult and costly without these services and guidance documents.

Funds for debt service would be reduced by \$170,224. The Environmental Cleanup Program will delay the sale of bonds to finance the cleanup of "orphan" sites, where the responsible party has not been identified or is either financially unable or unwilling to clean up contamination that threatens human health and the environment. The bond sale is still planned for this biennium, but has been delayed so that debt repayment will not begin until at least July, 2003.

This program also supports approximately 50% of the Agency Cross-Program/Green Permits Coordinator. Without this position, resources are reduced to coordinate across programs (e.g. EPA Performance Partnership Grant); Green Permits coordination is eliminated; and technical assistance and outreach to businesses is reduced.

Agency Management

The only General fund in Agency management is for Central Government Service Charge, which supports the Governor's Office and Legislative Fiscal Office. The proportional reduction to this charge is \$12,271.

Cross Media

The Community Solutions Team funding will be reduced by \$43,831. This reduction will be accomplished through reducing staff work to collaborate on CST projects throughout the regions and headquarters.

Governor John Kitzhaber

An Oregon Commemoration: Remembering September 11, 2001

Capitol Mall Plaza - Salem, Oregon

September 11, 2002

Thank you – each and every one of you – for being here today. I’m especially grateful to the performers of the Tualatin Valley Junior Academy for that stirring rendition of America the Beautiful.

Before getting underway, I want to say a special thank you to some people sitting behind me – men and women who represent the various public agencies who stand ready to protect us from harm, or rush to help us when disaster strikes.

The tragedy of September 11, 2001, taught us many things. Among the most poignant lessons we learned that day, and in its aftermath, was the importance of our public safety agencies -- and the selfless courage of firefighters, police and other emergency responders as they plunged into harm’s way to save lives.

During these past few months here in Oregon, we’ve called upon those who fight wildfires to put themselves on the line to protect the lives and property of our citizens. They’re all important to us, the firefighters and police, the public health workers and the paramedics, the military – they all deserve our gratitude.

I want to ask these representatives to stand and remain standing as I call the agencies they represent, so that we can recognize them today, and say, “Thank you.”

First the fire service, municipal and county firefighters, and those who fight fires in our wild lands.

Next, law enforcement, including the State Police, city police departments, and county sheriffs’ offices.

Next, the military, including people who are in training – in this case the Oregon Chapter of the US Naval Sea Cadets.

Next, public works.

Emergency medicine and emergency dispatchers.

The public health services.

And finally, the volunteers — people who lend a valuable hand, expecting no compensation beyond that they’re helping make their world a better place.

Let’s all express our gratitude not only to these fine Oregonians, but also to their comrades, and give them a big round of applause.

Please be seated.

One year ago, America suffered the first casualties inflicted on North American soil by a foreign foe since the War of 1812. We bled, we shed tears, and we grieved. We went to war, and we rebuilt. In the aftermath of that calamity, we’ve

faced important issues like homeland security and citizens' rights, together with the apparent contradictions that they present.

On a human level, we've confronted the harsh reality of the emotional anguish that first responders and other public safety professionals have endured, the people who arrived first on the scene at the World Trade Center and the Pentagon; those who shouldered the burden of caring for thousands of injured and dead citizens; those who gave heartbreaking news to survivors; and those who suffered the loss of comrades.

But September 11, 2001, has given us more than an appreciation for the public safety agencies we rely on to protect us. It has also given us a brutal reminder that we dare not take our freedom and our democracy for granted.

Since that dark day, we've had reason to reflect on who we are, on our aspirations as a nation, and on our appropriate role in the world community. Many of us have paused to consider exactly what America represents.

Our country emerged from the turmoil and upheaval of the pre-industrial world to forge the institutions of freedom that we hold dear today. The words are familiar to us – freedom of association, freedom of the press, freedom of speech, all the others individual liberties that our Constitution guarantees.

It's critical, however, that we not forget that these are more than words. We must never lose our appreciation for the ideas and the values behind them.

Democracy, if it is to endure, requires effort by the citizens – people like you and me, our friends and neighbors, our families. We must all be willing to roll up our sleeves and work to secure the future for ourselves and for those who follow us – for our children, and their children. We must be willing to sacrifice today in order to ensure that our country is strong enough to face the challenges of tomorrow.

Though we cannot lower our guard against the kind of enemies who invade airliners, neither should we forget about the common enemies that challenge every human being on this planet – drought and famine; global warming and pollution; the AIDS pandemic; the crisis of diminishing fisheries; poverty, ignorance, social and economic injustice.

America must once again take the role of leadership in helping defeat these enemies. We must mobilize our talent, our intellect and our capital resources to help make the world a better place. The way to do that is to strengthen our democracy here at home, ensuring that our government reflects the good that is in our hearts.

On the most basic level, each of us must be willing to take the time to vote. We must be willing to invest in our children's future, ensuring that they receive the best possible education. We must be willing to volunteer our time, our money and our talent to ease the hardships endured by our fellow human beings, knowing that whatever we do for the vulnerable and less fortunate among us, we also do for ourselves.

We must reaffirm our faith in the dream of America, to rededicate ourselves to bolstering the institutions that have made America the paragon of freedom.

This is how we can strengthen our democracy at home, and prepare ourselves for a new and more productive role in the community of nations.

By shoring up our democracy at home, we can prepare America to lead the way to a better world – a world free of drought and famine; a world with clean air; a world with justice and security for all; a world of economic opportunity, of affordable health care and education for even the poorest children, in every land on every continent.

I have boundless faith in the potential of this great nation – even beyond what we have achieved up to this moment. I fully believe that we can prove to our brothers and sisters worldwide that we are worthy of the mantle of leadership.

One of our greatest wartime presidents, Franklin Delano Roosevelt, said: "The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

Even in the aftermath of September 11, we must never doubt the strength of the institutions that have made America what it is. If we renew our faith in ourselves and our country, if we work to strengthen the freedom that defines America, we will fashion a future of prosperity and justice that all the world can share. Let's make that the legacy of September 11, 2001.

Thank you very much.

[Return to Speeches](#)

[Return to Governor's Office](#)

September 10, 2002

To my fellow Oregonians and my fellow Americans:

On this September day America remembers the thousands lost in the terrible attacks that occurred one year ago. It is right to honor their lives and their sacrifice.

Many of us spent last September 11 transfixed by the unbelievable pictures of destruction in New York and at the Pentagon. Even a year later, it is a struggle to tear our focus away from the terrible crime that happened, and the terrible tragedy it caused, and to turn our faces toward the future. The thousands of families who lost loved ones are still wrestling with their grief as they try to go on. The rest of us are still dealing with anger and sadness as we learn to live in a very different world.

Americans should look back, and should never forget the heartache and the heroism of that day. But to truly honor the heroes of September 11, 2001, America must look forward – and work for a future full of peaceful mornings in September.

At this moment, the men and women of our armed forces are risking their lives to bring about those peaceful days. They have our gratitude today – but our gratitude is not enough. Every one of us must work to fulfill the rest of America's mission.

While this country wages a war against evil, there must also be a struggle *for good*. There must be human dignity instead of poverty. There must be human rights instead of oppression. There must be human understanding instead of fear. Once the seeds of enmity are gone, the roots of peace can reach deep into our society. Every American can have a hand in this important work, and I urge you to find a way to help.

Today is a difficult day. The sense of security taken from us last September 11 may never be fully restored. But I believe that in its place many of us have found new strength and new appreciation for life and for those we love.

I have never been prouder to be an American, to be an Oregonian, or to represent so many people who love their country so much. Thank you for your presence here today.

Walden Statement on September 11 Anniversary

WASHINGTON, D.C.—U.S. Congressman Greg Walden (R-OR) wrote the statement below concerning the one-year anniversary of the September 11th terrorist attacks, which will be read at a number of commemorative events across Oregon tomorrow.

* * *

Dear Fellow Oregonians:

Today we gather together as one people united in observance of the greatest tragedy in American history. We do so mournful of the staggering loss of life we suffered that terrible day one year ago and humbled by the heroes whose courage lifted the spirit of a grieving nation.

The attacks of September 11th offered us a grim view of the evil capacity of mankind, just as it showed us the triumph of the human spirit and the resilience of the American people. In the heroism of the firemen and policemen of New York, who rushed into burning buildings without regard for their own lives, we saw barbarism met with humanity. In the bravery of Pentagon personnel, who pulled their wounded comrades from the fiery ruins, we saw wickedness met with honor. And in the defiance of the passengers of Flight 93, who sacrificed their lives to deny victory to murderers, we saw cowardice met with valor.

While a year has passed since the Twin Towers fell and the symbol of America's military strength was breached, we remain numb to the magnitude of the suffering wrought by evil men. And while our grief subsides with time, it never leaves us completely. The emotions that swept over us that awful day – horror, sadness, fear and anger – still come creeping back to remind us that the scars of September 11th will never fully heal.

But just as the terrorists dealt us a grievous wound, they also succeeded in uniting the American people like never before. We have renewed our faith in our system of government and reaffirmed our commitment to the spread of freedom and justice around the globe. And we have been reminded that whatever differences separate us, we remain a profoundly unified people.

In the years ahead, the attacks of September 11th will be remembered not merely as an unspeakable tragedy, but as a date that triggered a renewal of the American spirit. As we move forward in our battle against the perpetrators of evil, we will proceed with the unshakable certainty that America's brightest days lie ahead.

God bless you, and God bless America.

Congressman Walden represents the Second Congressional District of Oregon, which includes 20 counties in southern, central and eastern Oregon. He is a member of the House Committee on Energy and Commerce as well as the Committee on Resources.

OFFICE OF THE GOVERNOR
STATE OF OREGON

PROCLAMATION

WHEREAS: On September 11, 2001, the United States suffered the worst terrorist attack in its history when thousands of innocent lives were lost; and

WHEREAS: The State of Oregon wishes to remember and memorialize the victims and convey to the victims' families its compassion and grief for their loss; and

WHEREAS: The State of Oregon also wishes to commend the heroic efforts of our nation's first responders; and

WHEREAS: The United States of America remains a strong nation and leads the world in the pursuit of justice and peace.

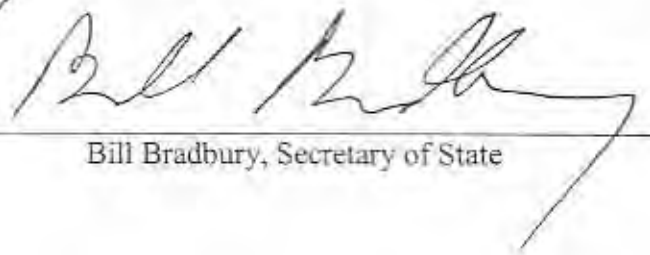

NOW,

THEREFORE, I, John A. Kitzhaber, Governor of the State of Oregon, hereby declare that the State of Oregon, on behalf of its citizens and communities, recognize the one-year anniversary of the terrorist attacks of September 11, 2001 with a commemoration at the State Capitol Building in Salem on Wednesday, September 11, 2002, beginning at 12:00 p.m.; and I hereby order flags in the State of Oregon to be flown at half-staff from sunrise to sunset on this same day of remembrance.

IN WITNESS WHEREOF, I hereunto set my hand and cause the Great Seal of the State of Oregon to be affixed. Done at the Capitol in the City of Salem in the State of Oregon on this day, August 28, 2002.

John A. Kitzhaber, Governor

GOVERNOR TO LEAD SEPTEMBER 11 COMMEMORATION

Governor John Kitzhaber is planning a noon ceremony at the Capitol on Wednesday, September 11, 2002 to recognize the one-year anniversary of the terrorist attacks on New York City and Washington D.C. Named "An Oregon Commemoration: Remembering September 11, 2001," the ceremony will focus on the victims: those who lost their lives and the families who continue to cope with their loss. It will also honor the emergency personnel who bravely responded to the crash sites, and it will celebrate the strength of the American spirit during its recovery over the past year.

The one-hour event will be held across the street from the Capitol Building in the Capitol Mall Plaza. The program will begin with a procession of police, fire, medical, public health and public works responders led by the Tualatin Valley Fire & Rescue Pipes and Drum Corps. Dozens of emergency and military vehicles from around the state will be parked along Court Street and fire trucks from several jurisdictions will form an arch with their extended ladders. An honor guard comprised of numerous law enforcement and military agencies will present the colors, followed by the reading of the Firefighters' Prayer, the ringing of a station bell and a moment of silence. A military fly-over is being planned by the Oregon Air National Guard.

Special musical performances include a patriotic medley sung by Oregon State Police Trooper Dan Johnson and the Tualatin Valley Junior Academy bell choir. The Bells of the Tualatin Valley Junior Academy, also known professionally as "The Ring of Fire," have performed at the inauguration of President George W. Bush and at post-September 11 ceremonies in New York City and Washington, D.C. Governor Kitzhaber will deliver brief, keynote remarks. Choirs will be invited to perform in the Capitol Rotunda throughout the day (contact: Earlene Naylor, Capitol Building Visitor Services, 503-986-1624).

The planning team includes representatives from the Oregon State Police, Oregon Military Department, Oregon Emergency Management, the State Fire Marshal, Oregon Association Chiefs of Police, Oregon State Sheriffs' Association, Oregon Fire Chiefs' Association and the Oregon Association of Public Safety Communication Officials. The ceremony coordinator is Teri Lemman, Governor's office, 503-373-1565.
teri.lemman@state.or.us

SPECIAL NOTE TO MEDIA: Press packets will be available on September 5. The packets will contain detailed information on the schedule of events, biographical information on the participants, parking and staging information. Parking for television satellite trucks is available by contacting Lt. Gower of the Oregon State Police (503-986-1122) for arrangements.

- 3,045 lives lost

"Fire Station Bell Memorial Ring"

5-5-5 is the standard signal for Line-of-Duty Death. It was originally used in the State of New York in the days of telegraph alarm systems. When a Line of Duty Death was reported, a firefighter would key in the code 5-5-5, followed by the box number nearest the death, and dispatch it to all fire department dispatch boxes within the state.

Lyrics to

"God Bless America"

written by Irving Berlin

God bless America, land that I love,

Stand beside her and guide her

through the night with the light from above.

From the mountains to the prairies to the oceans white with foam,

God bless America, my home sweet home.

God bless America, land that I love,

Stand beside her and guide her

through the night with the light from above.

From the mountains to the prairies to the oceans white with foam,

God bless America, my home sweet home.

From the mountains to the prairies to the oceans white with foam,

God bless America, my home sweet home

God bless America, my home sweet home.

BROADCAST INFORMATION

Legislative Media will provide CCTV's multi-camera coverage of the event which is available on the Capitol Building's press room router.

Audio services will be provided by Omega Audio (Portland).

Contacts:

Bill Gross, Legislative Media, 503-986-1195

Rosa Leonardi, Salem CCTV, 503-588-2288

Omega Audio, 503-235-2743

PARKING FOR SATELLITE TRUCKS

Parking for satellite trucks will be accommodated on either two service roads that parallel the Public Service Building and State Library Building.

See the Capitol Mall Plaza map.

Trucks must enter from Center Street and drive south along the service road toward Court Street.

Arrangements should be made in advance by contacting Lt. Mike Gower, Oregon State Police Capitol Mall Office, at 503-986-1122.

RESERVED MEDIA LOCATIONS

An area for broadcast and print media will be roped off. A riser behind the last row of folding chairs will be available for cameras.

See the Capitol Mall Plaza map.

Contact: Teri Lemman, Governor's Office, 503-373-1565

STREET CLOSURES, PARKING & SALEM CHERRIOTTS

A street closure is planned at Court Street, from 12th Street to Winter Street, from 6:00 am to approximately 3:00 pm. Parking will be available in the Capitol Mall parking structure, Yellow Lot, and at City of Salem parking meters around the Capitol Mall area.

Guests can catch a Cherriotts bus from the downtown transit mall and ride free to the Capitol Mall. Contact Salem Area Mass Transit at 503-588-BUSS for routes that stop at the Capitol Mall.

EMERGENCY APPARATUS DISPLAY ON COURT STREET

Emergency apparatus from public and private agencies all around the state have traveled to Salem to participate in this ceremony. They are present on Court Street to display their unity and to demonstrate the multi-agency/multi-discipline cooperation required of first responders. First responders represented here today include:

- Albany Fire Department
- American Medical Response
- Bureau of Land Management
- Burns Fire Department
- Dallas Fire Department
- Depoe Bay Rural Fire Protection District
- Douglas County Fire District #2
- Hillsboro Fire Department
- Hubbard Rural Fire Protection District
- Keizer Fire District
- Lake Oswego Fire & Life Safety
- Marion County Fire District #1
- Marion County Sheriffs Office
- Metro West Ambulance
- Mohawk Valley Fire District
- Monitor Rural Fire Protection District #58
- Newberg Fire Department
- Nobel Ambulance
- Oakland Rural Fire Department
- Oregon State Police
- Philomath Rural Fire Protection District #4
- Portland Fire Bureau
- Salem Fire Department
- Salem Police Department
- Sandy Fire District #72
- Siletz Valley Rural Fire Protection District
- Silverton Rural Fire Protection District
- Siuslaw Valley Fire & Rescue
- Sublimity Fire District
- Tualatin Valley Fire & Rescue

The two ladder trucks forming an arch and proudly flying the U.S. flag are from Salem and Tualatin Valley Fire and Rescue. Emergency vehicles present on Court Street include fire engines, ladder trucks, command vehicles, rescue and medical units, motorcycles, and police patrol vehicles.

Contact: State Fire Marshal Bob Garrison 503-373-1540, Ext. 216.

BLACKHAWK HELICOPTER

The UH-60 blackhawk on display is from the Army National Guard's 1042 Medical Company (Air Ambulance). The 1042nd's mission is to provide evacuation of injured and wounded soldiers to field hospitals. The 1042nd also assists in search and rescue missions in Oregon, to include evacuating injured hikers and climbers. Currently, the 1042nd is serving in the Middle East assisting in the war on terror.

Contact: Jeff Julum, Oregon Military Department, 503-584-3885

TUALATIN VALLEY FIRE & RESCUE
AND
PORTLAND POLICE HIGHLAND GUARD

The Portland Police Highland Guard was formed in 1998 in the memory of fallen law enforcement officers. The band's motto "Nunquam Obliviscar" translates to "We Shall Never Forget." By charter, the majority of the band's members are Portland police officers and the balance of the band is made up of law enforcement and public safety professionals from around the Portland area. The band wears the Modern Red MacPherson tartan.

The Tualatin Valley Fire & Rescue Pipes and Drums were formed in August of 2000. While originally made up of TVF&R firefighters, the band's ranks have grown to include members from five area fire departments and the Washington County 9-1-1 center. The band wears the MacKenzie tartan, chosen both for the fire service symbolism found in its colors and the clan's motto "Luceo non Uro," which translates to "I Shine, Not Burn."

The bands will perform together at the Capitol, and will play "Scotland the Brave" and "The Minstrel Boy."

Contact: Tim Birr, TVF&R, 503-642-0339.

PROCESSION OF FIRST RESPONDERS

The march element is composed of members of the American Red Cross, Emergency Medical Technicians, Marion County Sheriff, Salem Police, Salem Firefighters, Oregon State Police, Oregon Public Health Service Officials, the Oregon National Guard, wild land firefighters from the Bureau of Land Management, Salem Public Works, Oregon U.S. Naval Sea Cadets and other agencies.

This group represents their agencies and all those who labor to protect life and property in Oregon. They stand behind the podium as our honored guests for all that that they have done.

Contact: Jeff Julum, Oregon Military Department, 503-584-3885

FLAG DETAIL

The flag detail is composed of marchers from the Salem Police Department, the Oregon State Police, the Salem Fire Department, the Marion County Sheriff, the Oregon National Guard, American Medical Response, and other community entities. They represent all those who strive to provide safety and security for all Oregonians. They also represent the gallant individuals who directly dealt with the tragic events of last year. The detail has been organized by Staff Sergeant Lee Smith of the Oregon Army National Guard.

THE FIREFIGHTER'S PRAYER

When I am called to duty,
Wherever flames may rage
Give me strength to save a life
Whatever be its age.

Let me embrace a little child
Before it is too late
Or save an older person from
The horror of that fate.

Enable me to be alert
And hear the weakest shout,
And quickly and efficiently
To put the fire out.

I want to fill my calling and
To give the best in me,
To guard my friend and neighbor
And protect their property.

And, if, according to your will,
While on duty I must answer death's call;
Bless with your protecting hand
My family, one and all.

BIOGRAPHY — DENNIS SIMONS

Chaplain Dennis Simons began his service as a chaplain in public safety in 1994 when he was appointed chaplain for the Sandy Fire District in Sandy, Oregon, assisting both the community and the firefighters. Shortly thereafter, the chief of the Sandy Police Department asked if he would also serve as chaplain for the police department. In the years since then, he has also become chaplain for the Gresham Fire Department.

A chaplain is called on for emotional and spiritual caregiving in a crisis such as traumatic traffic accidents, in house fires, painful family transitions or loss of a loved one. The traumas of life often paralyze people; the chaplain's job is to figuratively put their arm around the sufferer's shoulder and help them move forward. Dennis has extensive crisis intervention training to help emergency personnel deal with the crises they experience in serving the public. Many of our emergency service personnel experience burnout because of accumulated stress; the chaplain helps them keep their perspective.

A genuine relationship is the critical part of being a good caregiver to people in crisis. Dennis saw that in action as chaplain of Mt. Hood Hospice, a position he accepted in 1987 and held for a year. He found working with a staff of caring nurses, social workers, and home health-care workers who were helping people through their last stages of life to be very rewarding.

Simons has been an ordained minister for 27 years. He holds a bachelor of science degree in Christian Education. He also holds an associate of arts degree in business administration and has 37 years experience in business management. He is a member of the International Critical Incident Stress Foundation and the International Federation of Fire Chaplains, where he is the Northwest representative. He is also a member of the International Conference of Police Chaplains and the Association of Traumatic Stress Specialists. He serves on two local crisis response teams, the National Organization for Victims Assistance and the Critical Incident Stress Foundation, who facilitate debriefings and defusings.

Born in Bakersfield, Calif. in 1942, he has been married for 39 years to Kathy; they have two children and four grandchildren. He came to Oregon to prepare for mission work. With fellow students and a professor, they started a church, which over the years developed into five churches, and he decided to stay in Oregon.

Dennis considers himself blessed and fortunate to have the privilege of serving as chaplain for the departments and organizations he serves and looks forward to serving for many years to come.

Contact: Dennis Simons, 503-668-2751

THE FIRE STATION MEMORIAL BELL RING

The Bell

The memorial bell used in today's ceremony was donated by the Portland Fire Bureau in 1986 to the Oregon Fire Chiefs' Association during the OFCA Annual Conference in Clackamas, Oregon. Portland Fire Chief Kenneth Owen, who retired from active service in 1988, orchestrated the donation with the help of Fire Bureau Commissioner Mildred Schwab.

The Bureau's tradition had been to remove the bell from an old apparatus that was being taken out of service and re-install it on the new, replacement apparatus. This bell was discovered to be surplus and Chief Owen secured permission to donate it to the OFCA for future memorial services.

The bell, estimated to be 50+ years old, was used in a memorial service at the 1986 conference. The Chief of each department that honored a fallen firefighter carried a white cross to the front of the meeting room and the memorial bell was rung to honor the lost firefighter.

The OFCA Memorial Bell has been used at conferences, funerals and memorial services since that time.

The Ring

5-5-5 is the standard signal for Line of Duty Death. It was originally used in the state of New York in the days of telegraph alarm systems. When a line of duty death was reported, a firefighter would key in the code 5-5-5, followed by the box number nearest the death, and dispatch it to all fire department dispatch boxes within the state. The bell will be rung by a member of the Oregon Fire Service Honor Guard.

THE BELLS OF TUALATIN VALLEY JR. ACADEMY "RING OF FIRE"

Performing: "America the Beautiful" and "Capriccio"

Ring of Fire is based in the Pacific Northwest, a region known for its volcanic activity. In the groups few years of existence, they have earned a reputation for outstanding excellence in handbells. They are widely known for their ability to memorize their music and their unique, spirited style. They continue to meet their goal of bringing their fiery music to many diverse audiences, including schools and churches, corporate functions, charity events, marathons, NBA basketball games, and on national and international television. Their performance is an explosive combination of an energetic director, exuberant youth, and the brilliance of 61 bells begging to be rung!

In September of 1997, Tualatin Valley Junior Academy, a Christian K-10 school in Hillsboro, Oregon purchased a 5-octave set of Malmark handbells. Since then, the 13 musicians in Ring of Fire, ages 12 to 16, have performed hundreds of times across Canada and the United States. They've been seen twice on international television on "The Hour of Power" from the Crystal Cathedral in Garden Grove, California and twice by 20,000 fans in the Rose Garden for Portland Trailblazer games. They have performed numerous times on KPTV-12's "Good Day Oregon" show, KATU-2's "AM Northwest", a KOIN-6 Christmas special, and on KTLA-5's "Morning News" in Los Angeles. In April 2002 the group will perform on NPR's top rated radio show, "From the Top."

Ring of Fire has twice been a featured performer at national handbell conventions. Their first AGEHR event was performing in Las Vegas, Nevada at "Pinnacle 2000." In 2001 the group performed in the final showcase concert of the "Handbell Spectacular 2001" in Palm Springs, California.

Also in 2001, Ring of Fire had the honor of representing the state of Oregon at the Inauguration of President George W. Bush. They group was one of 38 chosen from thousands of applicants nationwide. This invitation marked the first time handbells have been a part of the Inauguration of an U.S. President. Ring of Fire played at three official inaugural functions: Laura

Bush's "Celebration of American Authors", the Inaugural Parade, and at the Inaugural Ball in the Ronald Reagan Federal Building later that night. Their adventures were covered on CNN, MSNBC, FOX, and in print with the Washington Post and the Wall Street Journal.

In the fall of 2001, Ring of Fire had the incredible opportunity to share their music with those in New York City and Washington D.C. after the horrific events of 9-11. In Washington D.C. they performed "America the Beautiful" with the U.S. Army Orchestra, the group for all official state functions that has played for nearly every world leader. They also had the opportunity to view the destruction at the Pentagon and later travel to ground zero in New York City. The East Coast tour ended with a memorable performance in St. Patrick's Cathedral on 5th Avenue for over 6,000 people for Sunday morning Mass.

The group's founder and director is Jason Wells. He has served as a handbell clinician in Canada and the U.S. and has taught classes at national events focusing on motivation and memorization. During his "formative" years as a handbell ringer in southern California, Jason worked with Cynthia Dobrinski, Douglas Wagner, and Katsumi Kodama at various handbell conventions. Five years later he started a handbell choir on the island of Palau in 1993. During the 1995-96 school year he directed an elementary school handbell choir while finishing his senior year at Walla Walla College in Washington. In 1996 Jason accepted a position teaching English, music, history, religion, and photography at Tualatin Valley Junior Academy. In 1997 after playing the tape "Alive" by Kodama's Glee Ringers to 13 interested kids who had never rung a bell, the adventure began...

SENIOR TROOPER DAN JOHNSON
OREGON STATE POLICE

Senior Trooper Dan Johnson began his career with the Oregon State Police in 1988 and was assigned to the Patrol Division. He was promoted to the rank of Trooper in 1989. In 1993 Trooper Johnson became a member of the Oregon State Police, Honor Guard. In 1996 he was assigned to the Gaming Enforcement Division. In 1997 he received a promotion to Senior Trooper. He currently performs his duties as a Detective and Safety Committee representative for the Gaming Enforcement Division.

As a member of the Oregon State Police, Honor Guard, Senior Trooper Johnson has performed as a vocalist and team member representing the department at special ceremonies singing the National Anthem. He has represented the department by forwarding the department's encouragement and consolation to families, employees and communities grieving their loss of loved ones locally and in the nation. In 1997, Senior Trooper Johnson was selected from many across the nation and invited to sing "America the Beautiful" a patriotic medley, at the National Law Enforcement Memorial Candlelight Vigil in Washington, D.C.

Senior Trooper Johnson has held assignments in the Patrol, Criminal Investigations and Training Divisions of the Oregon State Police and continues to promote safety, courtesy and dignified service to the citizens of Oregon.

He participates in his local community as a Fitness Specialist advocating overall health and heart attack prevention measures. Senior Trooper Johnson has been asked to sing for weddings, funerals, sporting events, local churches, Veteran's Commemoration events and other agencies. He works with education professionals at community colleges, high schools and elementary schools as a motivational speaker. His presentations have covered, business protection and fraud prevention, fitness, abduction prevention, fire safety and prevention, gang resistance, gun safety and leadership. He is also a member of the Oregon Army National Guard.

Senior Trooper Johnson and his loving wife Yollanda have between them a family of eight children and five grandchildren.

MILITARY FLY-OVER

The jet flyover is provided by the Oregon Air National Guard. The F-15 Eagle is from the 142nd Fighter Wing based out of Portland, Oregon. The 142nd provides security for the skies over Oregon and other western states. On September 11, they were airborne within hours of the horrific acts of violence. They maintained a constant vigil to thwart other potential terrorist acts.

The jet will arrive from the north, flying south.

AMERICAN RED CROSS
WILLAMETTE CHAPTER
Salem

The American Red Cross Willamette Chapter will host the Hospitality Tent for the ceremony participants and the public in the morning hours prior to the noon event. Beverages and snacks will be available, as well as information about our services.

Several Red Cross volunteers assisting with the hospitality tent traveled to New York City after the terrorist attack. They are:

Steve Sanchez is a Disaster Team Leader for the Willamette Chapter, which means he responds on a rotating on-call basis to local disasters. He made two trips to New York last Fall. The first trip was 15 days, starting on September 14, the second was a ten day trip. On both trips he served in a variety of functions, but mostly as a grief counselor.

Jeff Kresner is the Willamette Chapter's Emergency Services Director, and also serves as a Disaster Team Leader. He traveled to New York in early October and spent three weeks working in a Government Liaison function at the Red Cross headquarters in New York. Both will attend the 9/11 Commemoration.

Rosemary Fros is a Family Services volunteer who served almost four weeks in New York.

A total of 13 volunteers from the Willamette Chapter responded to the September 11 event, in addition to 300 volunteers from the State of Oregon.

The Willamette Chapter of the American Red Cross provides basics such as food, clothing and shelter to victims of residential fires and other local disasters. The chapter also provides emergency communications to active military personnel and their families. They conduct a variety of classes in health related areas such as CPR, first aid, babysitting, and water safety, and work with the Red Cross Pacific Northwest Blood Services Region to collect blood for area hospitals, collecting over 22,000 units per year.

THEIR STORY

GIRL SCOUT TROOP 158

from
Woodburn, Aurora, Donald

**In the United States Capitol Building
on the morning of September 11, 2001**

Girl Scout Cadets

Nichole Kordenat (then 13)

Kim Petersen (then 12)

Amanda Choin (then 11)

The Girl Scout cadets (Nichole, Kim and Amanda) will hand out printed programs at the
September 11, 2002 ceremony

Contact: Denise Choin, Troop Leader
Telephone: 503-378-2911 ext. 222 (office/days)
503-678-4287 (home/evenings)

Five years, hundreds of cans of nuts, thousands of boxes of cookies, but we, Troop 158 were finally here in Washington D.C. The girls from Troop 158 from Woodburn, Aurora and Donald worked very hard for five years. Nichole Kordenat (13), Kim Petersen (12) and Amanda Choin (11), Cadets in the Girl Scouts, sold cookies and nuts, did extra fundraisers, planned, plotted and negotiated to finally make that dream trip. Planning first began when they were Brownies, continued through their time as Juniors and now that they were Cadets, they were ready to go. They packed up their cases, brought some parents and left Oregon for Washington D.C. Our group included: Marie Kordenat (Troop Leader), Carl Kordenat, Nichole Kordenat, Rebecca Smith, a friend of the Kordenat's, Nancy Petersen (Assistant Troop Leader), Kim Petersen, Denise Choin (yours truly, current Troop Leader), Vern Choin and Amanda Choin.

We started sightseeing on September 10th. We first went to four of the five Smithsonian Museums, and looked forward to going to the Capitol on the 11th and the White House, by invitation on the 12th. We were so excited. We had spent hours working on our itinerary and had written letters to get invitations and special "behind the scenes tours". We were going to see how the Metro worked and had a call in to the Pentagon to see it on the 13th or 14th. We planned to pack a lot of sightseeing into our week.

We got up with an air of excitement on the 11th. We wrote Senator Gordon Smith and had been invited to take a tour of his office and the Capitol that morning at 10:00 am. As we walked from the Metro stop we went around the back of the Capitol. We saw some guards standing at the station and asked if we could have our pictures taken with them. They said sure and after we had posed, one of the guards asked us if we had heard the Trade Towers in New York had been hit. He had such a joking aura around him, we dismissed that and said "Oh yeah, sure and the Capitol is next". He told us he was quite serious. This sobered us and we talked quietly as we headed for the Senate Building and Senator Smith's office.

We had to go through the security area and have our bags x-rayed. We weren't particularly worried about that, it seemed standard in this city of power. We went up to Senator Smith's office. TV's were on full blast and it took a minute to get the attention of the staffers in the room. We explained that we had a tour scheduled and Fritz and Jamie called in Ali our Intern, to begin our tour. As we waited for her arrival, we looked in horror as the TV showed the airplanes hitting the towers, again and again.

Ali showed up, a little nervous and not sure exactly what to do, but she decided to go ahead and start our tour. We went down to the basement as she gave us the history of the building. She took us to the mini-tram that the Senators and staffers took to the Capitol all the time. As we were about to get on, we heard a rumor that they were evacuating the Capitol. Still unsure of what to do, the tram driver said, "You may never get to do this again, jump in." We did and he took us on a whirlwind trip to and from the Capitol basement. We didn't stop. As we were going, people were walking and running away from the Capitol down the corridor.

When we got back to the Senate building, we started up the stairs to Senator Smith's office. As we approached the second floor, we were told to go back down one flight. First Lady Bush was in the building and they were escorting her out, we could not go up until she left the building.

Before we were able to get back to Senator Smith's office, security guards told us that we needed to evacuate. We started down the steps, we hurried through the security area and out onto the grass between the Senate building and the Capitol. We were trying to get our bearings and figure out what to do when the Jamie and Fritz, Senator Smith's staffers came running out and found us. They asked us if we were the group from Oregon. We said yes and they conferred for a moment and said follow us.

We were walking away from the downtown area when we heard a big boom. We found out later that it was the plane exploding at the Pentagon. We told the girls that it was probably the sonic boom from Lady Bush's plane, then we hurried into a park. We sat the girls down and the staffers began asking them about their patches and experiences, trying to get their minds off everything. A few minutes later the park was getting quite full. Ali, our tour guide showed up and Fritz took two of the ladies of our group to find a phone because cell phones were not working. When Fritz returned, he had food and drinks for the girls.

The whole time the remaining staff and adults from our troop were trying to keep the girls busy talking about other things. After conferring with each other, Jamie told us that they were going to take us to his house to wait and see what would happen. We walked there and spent most of the rest of the morning and early afternoon at his home. They played games with the girls, tried to get them to eat and generally distracted them. Chris who is Senator Smith's Chief of Staff also shares the apartment with Jamie and he met us there later. The guys were very helpful and offered their phone so that we could contact our various relatives. We contacted the Girl Scout Council, and each of us started our telephone tree contacts.

At about 2 pm, we found out the Metro was running. It was only transporting out of DC, but we were staying in Alexandria and we were very happy to get on our way. The guys took us one bunch at a time in their car to the Metro station and we returned to our hotel.

When we got to our station, we decided we had better get something to eat now, because we didn't know if anything would be open later. The mall near our hotel was eerily quiet. Most of the stores were closed. We went to the food court and found that only one place was open, the Subway shop. As we were standing in line, we noticed some ladies covered in dried mud. We asked their story. They had been outside the Pentagon when the plane was coming in and had dived into the slough to avoid being hit. That brought it all home to us in a big way.

Back at the hotel, we tried to keep the girls away from the TV. We encouraged them to play a little. Unbeknownst to us, they decided to play elevator operator and interviewed everyone who came back about where they were and what happened. I think it was very

healing for them to realize it wasn't just them, but everyone was involved. Sometimes kids just seem to know what they need. That night the smoke from the Pentagon was so thick that several people called the fire department thinking our hotel was on fire. It was, to say the least, a very tense situation.

The next day we made a short foray to Arlington National Cemetery. You could see the devastation from the cemetery and we took lots of pictures.

On the 13th, we ventured into DC again. We planned to go to the Holocaust Museum. As we walked down the streets, we could still see the smoke from the Pentagon. At the Museum, we were astonished to see snipers on the roofs of the buildings and everything was closed. We went on to the Washington Memorial, but we couldn't even get close. We walked down to the Lincoln Memorial, park staff told us it would be two hours before it opened to the public, we decided to wait and eventually were able to see all the Memorials in that area. It was all very strange. On the 10th, the city teemed with people. Today, the silence spoke louder than words. Helicopters and military planes constantly roved the area. It seemed the whole city was deserted.

We never got into the Capitol or the White House. One set of parents and their daughter (my family) were stuck an extra day because of flight delays.

We will never forget our experiences on September 11th. Some say that it was a shame we were not able to do all the things we had planned. Others say that we will always be a part of history. I think that we all were blessed that those courageous passengers of the plane that crashed in Pennsylvania gave their lives for us. Everyday heroes saved many lives that day and we are grateful that we were a part of history.

PS. When I asked the girls if they still wanted to travel, they gave me a resounding YES! Girl Scouts is truly where Girls Grow Strong.

Respectfully submitted,

Denise Choin

SIGN LANGUAGE INTERPRETER

Robyn Brown
Oregon School for the Deaf

Robyn Brown is a graduate of California State University, Sacramento and completed her Master's Degree in Deaf Education from Gallaudet University in Washington D.C. She has been a sign language interpreter for 22 years and holds national certification from the Registry of Interpreters for the Deaf. She has been teaching deaf and hard-of-hearing students for 18 years in a variety of educational settings in California and Oregon and is the adoptive parent of three deaf children.

"Fire Station Bell Memorial Ring"

5-5-5 is the standard signal for Line of Duty Death. It was originally used in the State of New York in the days of telegraph alarm systems. When a Line of Duty Death was reported, a firefighter would key in the code 5-5-5, followed by the box number nearest the death, and dispatch it to all fire department dispatch boxes within the state.

Lyrics to

"God Bless America"

written by Irving Berlin

God bless America, land that I love,
Stand beside her and guide her
through the night with the light from above,
From the mountains to the prairies to the oceans white with foam,
God bless America, my home sweet home,
God bless America, land that I love,
Stand beside her and guide her
through the night with the light from above,
From the mountains to the prairies to the oceans white with foam,
God bless America, my home sweet home,
From the mountains to the prairies to the oceans white with foam,
God bless America, my home sweet home
God bless America, my home sweet home

GOVERNOR TO LEAD SEPTEMBER 11 COMMEMORATION

Governor John Kitzhaber is planning a noon ceremony at the Capitol on Wednesday, September 11, 2002 to recognize the one-year anniversary of the terrorist attacks on New York City and Washington D.C. Named "An Oregon Commemoration: Remembering September 11, 2001," the ceremony will focus on the victims: those who lost their lives and the families who continue to cope with their loss. It will also honor the emergency personnel who bravely responded to the crash sites, and it will celebrate the strength of the American spirit during its recovery over the past year.

The one-hour event will be held across the street from the Capitol Building in the Capitol Mall Plaza. The program will begin with a procession of police, fire, medical, public health and public works responders led by the Tualatin Valley Fire & Rescue Pipes and Drum Corps. Dozens of emergency and military vehicles from around the state will be parked along Court Street and fire trucks from several jurisdictions will form an arch with their extended ladders. An honor guard comprised of numerous law enforcement and military agencies will present the colors, followed by the reading of the Firefighters' Prayer, the ringing of a station bell and a moment of silence. A military fly-over is being planned by the Oregon Air National Guard.

Special musical performances include a patriotic medley sung by Oregon State Police Trooper Dan Johnson and the Tualatin Valley Junior Academy bell choir. The Bells of the Tualatin Valley Junior Academy, also known professionally as "The Ring of Fire," have performed at the inauguration of President George W. Bush and at post-September 11 ceremonies in New York City and Washington, D.C. Governor Kitzhaber will deliver brief, keynote remarks. Choirs will be invited to perform in the Capitol Rotunda throughout the day (contact: Earlene Naylor, Capitol Building Visitor Services, 503-986-1624).

The planning team includes representatives from the Oregon State Police, Oregon Military Department, Oregon Emergency Management, the State Fire Marshal, Oregon Association Chiefs of Police, Oregon State Sheriffs' Association, Oregon Fire Chiefs' Association and the Oregon Association of Public Safety Communication Officials. The ceremony coordinator is Teri Lemman, Governor's office, 503-373-1565, teri.lemman@state.or.us.

SPECIAL NOTE TO MEDIA: Press packets will be available on September 5. The packets will contain detailed information on the schedule of events, biographical information on the participants, parking and staging information. Parking for television satellite trucks is available by contacting Lt. Gower of the Oregon State Police (503-986-1122) for arrangements.

Revised 8/8/02

OFFICE OF THE GOVERNOR
STATE OF OREGON

PROCLAMATION

WHEREAS: On September 11, 2001, the United States suffered the worst terrorist attack in its history when thousands of innocent lives were lost; and

WHEREAS: The State of Oregon wishes to remember and memorialize the victims and convey to the victims' families its compassion and grief for their loss; and

WHEREAS: The State of Oregon also wishes to commend the heroic efforts of our nation's first responders; and

WHEREAS: The United States of America remains a strong nation and leads the world in the pursuit of justice and peace.

NOW,

THEREFORE, I, John A. Kitzhaber, Governor of the State of Oregon, hereby declare that the State of Oregon, on behalf of its citizens and communities, recognize the one-year anniversary of the terrorist attacks of September 11, 2001 with a commemoration at the State Capitol Building in Salem on Wednesday, September 11, 2002, beginning at 12:00 p.m.; and I hereby order flags in the State of Oregon to be flown at half-staff from sunrise to sunset on this same day of remembrance.

IN WITNESS WHEREOF, I hereunto set my hand and cause the Great Seal of the State of Oregon to be affixed. Done at the Capitol in the City of Salem in the State of Oregon on this day, August 28, 2002.

John A. Kitzhaber, Governor

Bill Bradbury, Secretary of State

The Oregon Children's Plan

Introduction

The Oregon Children's Plan represents the continuation of a long-time endeavor to identify and assist at-risk children and their families. The Plan, which will increase services available to children and families through the State and counties, expands the Healthy Start program statewide with its emphasis on home visiting, and it continues implementation of the early childhood planning portion of Senate Bill 555. (SB 555, established by the 1999 Legislature, is a comprehensive policy for Oregon's children and families. SB 555 directs state agencies to establish policies for a statewide early childhood system of social supports and requires the development of a local coordinated comprehensive plan that includes children ages 0-8 and their families.)

The Oregon Children's Plan, which is entirely voluntary and optional, focuses resources on front-end prevention and treatment instead of after-the-fact intervention. Currently, the state invests substantial and growing amounts of funding to address problems after they occur when children have become mired in the social welfare system or the criminal justice system. In recent years Oregon has seen a massive expansion of prisons, a costly consequence of our failure to help ensure that all the State's children get a healthy start in life.

The Plan begins at birth. It provides for voluntary screening of all first-born children for both medical and social risks. The State's screening costs are limited to technical development and training for medical personnel. Actual screening could be as simple as taking a patient's history, something that physicians already do when seeing a new patient. Children who are exposed to one or more risks will be offered coordinated assessment and a plan for in-home and out-of-home services. For families that don't need assistance with further assessment or services, there would be no additional cost to the state. Although participation in the Plan is voluntary, in an early pilot model 93 percent of families who were offered the opportunity elected to take part.

The goal of the Oregon Children's Plan is to screen all Oregon children and to provide follow-up support to those families who need and request it. However, the measure is woefully under funded and predicted to reach less than 40% of those families in need. By focusing initially on first-borns, the Plan provides an important start with a cohort that can be effectively evaluated. Also, many of the social risks for first births, if addressed, will also be addressed for subsequent children.

The Governor remains solidly committed to all of Oregon's children. In his proposed budget to the 2001 Legislature he maintained and even increased the budget by \$10 million-raising it to \$30 million-for high-risk juveniles in criminal prevention programs. That brought the total dollars budgeted for community-based, youth crime prevention to \$96 million.

The 2001 Legislature approved a \$60 million budget for key early childhood services under the Oregon Children's Plan (the Governor had proposed \$66 million). The funds were to be allocated from both new revenue and from funds redirected from other programs.

The plan will be available in all 36 counties. A key feature is the coordination of existing programs into a system of supports. The Plan proposes to replace the current fragmented system with a comprehensive approach for helping

children. In most cases, the funds redirected from other programs will continue to target many of the same families.

Sixty percent of Oregon children are born with risks that can adversely affect their success in life. The Oregon Children's Plan is based on research that shows by identifying and addressing these risks early, we can help children succeed in school and avoid future problems such as drug abuse, school failure, delinquency, or incarceration. Oregon taxpayers will benefit as well by the decreased need to fund costs associated with services such as drug treatment and justice system programs for delinquent youth. A cost-benefit analysis of the early pilot model of the Oregon Children's Plan found that for those dollars invested, more were saved in other, more costly services.

In a report issued in June 2000, the Citizen's Crime Commission stated, "We cannot afford to ignore programs and policies proven to work in reducing juvenile delinquency. The resources for these programs must be found. We must no longer give 'lip service' to making children a priority: we must literally put our money where our mouth is." The Oregon Children's Plan takes up the Commission's challenge.

Oregon Children's Plan – HB 3659 Frequently Asked Questions

What is the Oregon Children's Plan?

The Oregon Children's Plan is a systematic approach to identifying needs early and responding with the most appropriate type of support for the child and family. The key components of the OCP include early identification, assessment, referral, service plans and a broad spectrum of early childhood services. The Children's Plan will increase the availability of key services and improve coordination within the service delivery system.

Where did the Oregon Children's Plan come from?

The Oregon Children's Plan has its roots in several different state and local efforts. Governor Kitzhaber proposed the Oregon Children's Plan in 2001 based on the common ground from these efforts. The efforts include:

- ✓ Healthy Start program, begun in 1993
- ✓ SB 555 from the 1999 Legislative Session
- ✓ Early Childhood System Work Group, part of the Governor's Strategy for Social Support (1999)
- ✓ Legislative Interim Committee on Children and Families, 2000
- ✓ Citizen's Crime Commission report entitled "KIIDS", 2000

FUNDING AND BUDGET

What is the budget for the Oregon Children's Plan?

The 2001 Legislature approved a \$60 million budget for key early childhood services under the Oregon Children's Plan (the Governor had proposed \$66 million). The key services and budget breakdown includes:

- | | |
|--|---|
| • Early Identification | \$1.3 million (Oregon Commission on Children & Families and Dept. of Human Services) |
| • Home Visiting Services | \$29.3 million (Oregon Commission on Children & Families and Dept. of Human Services) |
| • Community Based Services | \$8.3 million (Oregon Commission on Children & Families) |
| • Preschool | \$5.9 million to expand Oregon Prekindergarten/Head Start (Oregon Dept. of Education) |
| • Mental Health and Alcohol & Drug Treatment | \$11 million (Dept. of Human Services) |
| • Evaluation and Technical Assistance | \$ 3.4 million (Oregon Commission on Children & Families) |

Funding for the Oregon Children's Plan will be on delayed roll out. Existing Healthy Start counties remain at 60% of full funding until January 2003. Counties currently without Healthy Start get 60% of full funding February 2002, and all counties will be funded at 80% of full funding January 2003. The legislature expects communities, businesses, and foundations to contribute the balance of funding.

How flexible are Great Start funds?

Great Start funds are flexible resources local commissions are given to put in place research-based programs in each county to support identified families' needs. There are two primary changes to Great Start: 1) the age range expanded from 0-6 to 0-8; and 2) the funds are to be used to put research-based programs in place. The OCCF has conducted research on best practices and is posting information on their web site. Training will be conducted on best practices in February 2002. These funds will be used for the "community-based services" component (see above).

If we already have a Healthy Start Program, will we get additional funds under the Oregon Children's Plan?

The Oregon Children's Plan significantly enhances Healthy Start funding so home visits will be available to children throughout the state and so that nurse home visits are also available. Counties that already have a Healthy Start program will be able to enhance services to families by working with partners to connect families to additional OCP services such as local alcohol and drug treatment and mental health treatment programs. Overall, the OCP increases funding for home visits for more children and their families.

Can county boards of commissioners use OCP funds to fund other county services (such as juvenile departments or health departments)?

No. Funds for the Oregon Children's Plan are intended to put in place a systematic approach to identifying the needs of pregnant women and children birth to 8 years of age and responding with the most appropriate type of support. The key components of the OCP include early identification, assessment, referral, and coordination of a broad spectrum of early childhood services. OCP funds may be used only to fund the OCP.

PLANNING & COORDINATION

Will there be a separate planning process for the OCP or will it be folded into existing planning processes?

HB3659 of the 2001 Legislative Session, the Oregon Children's Plan bill, amended SB 555 from the 1999 Legislative Session to detail the key components of an early childhood system. As a result, it follows the planning framework established under SB 555. The new statute directs the State Commission on Children and Families, the Department of Education and the Department of Human Services to establish policies for a statewide early childhood system of supports, including planning, outcomes, coordination of services and consolidation of administrative functions. The statute directs the state and local commissions to facilitate the development of a coordinated comprehensive plan for children and families with one emphasis being on an early childhood system for children 0-8 years (as detailed by the Oregon Children's Plan). We will use this statutory planning process to ensure that the Oregon Children's Plan is in place and functioning in every county. Local plans will be submitted by each county board of commissioner to the State Commission on Children and Families.

How do 0-8 program elements, which are a piece of the OCP going to be seen in the SB 555 planning process?

Coordinated, comprehensive planning, through SB 555, is designed to prioritize limited resources and to convey issues of local importance. As counties look ahead to the implementation phase of the planning process, early childhood programs may be reflected in several ways:

- ✓ *As part of a strategy.* County planners select strategies that are intended to make progress toward identified priorities. In general, strategies will be broad enough to engage the work of multiple, specific programs. For example, the strategy, "Strengthen parenting skill through home visitations, parenting classes and support groups" broadly reflects the work of multiple partners.
- ✓ *As part of the mapping update.* A second area programs may find a connection to the plan is in the "mapping" section. State and local data is included here. Data demonstrating significant risk or need could relate to particular programs, populations or areas. For instance, data on the number of childcare slots may reflect a large need for infant childcare.
- ✓ *As part of the analysis section.* A third area is in the local analysis of data. This section frequently includes local perspectives about the strengths, gaps and barriers seen in a county. A listing of needs might indicate that certain services are lacking for diverse populations,

Plans holistically reflect a county portrait. Whether it is in the particular section of data and analysis, or priorities and strategies, specific programs may see a connection to the SB555 plan.

Who will determine how the Oregon Children's Plan (early childhood system) planning portion of SB 555 is implemented at the local level?

As a result of both SB 555 and HB 3659, statute directs the state and local commissions to facilitate the development of a coordinated comprehensive plan for children and families with one emphasis being on children 0-8. We will use this statutory planning process to ensure that the Oregon Children's Plan is in place and functioning in every county. Local plans will be submitted by each board of commissioners to the State Commission on Children and Families because the boards have the legal and statutory responsibility to do so.

What are the expected outcomes for the Oregon Children's Plan?

Statute requires the Directors of the Oregon Commission on Children and Families, the Department of Human Services and the Department of Education to set high-level and intermediate outcomes for the Oregon Children's Plan. The Directors drafted outcomes and asked for feedback from local partners. The feedback is being incorporated and outcomes will be finalized in February 2002. It is expected that many of the outcomes for the Oregon Children's Plan will coincide with the outcomes identified for SB 555.

How will services be coordinated at the state and local levels?

First, statute requires state agencies to establish coordinated policies & services, joint outcomes & data, and to streamline administration. Second, statute asks that local agencies build a continuum of coordinated services

and also streamline program administration. Finally, it is expected that key early childhood services (as articulated in the Oregon Children's Plan) will use a "team case management" approach. In this approach providers work together to ensure that child/family need determines the service that is provided and how it will be provided.

IMPLEMENTATION

Is the Children's Plan only intended for first-born children? What about older children or 2nd, 3rd or 4th born?

The goal of the OCP is to screen and provide follow-up support to those families who need and want it, for ALL Oregon children. This will help quantify need and prioritize services and supports for those children and families most in need.

The OCP budget is significantly under-funded to accomplish this goal. For service delivery purposes, programs receiving OCP funds, including Healthy Start, Mental Health and Addiction Services, should be viewed as sponsorship for first-born children/families with insufficient resources. Non-first born children/families should be linked to other existing resources and services. For older first-born children, OCP will not expend the first dollar. Other services will be sought first. If no other resources are available, OCP may be an option for those children.

How will mental health and addiction services be included as part of the early childhood system of supports under the Oregon Children's Plan?

It is estimated that approximately 20% of families screened through the OCP process will need mental health or addiction treatment. It is expected that qualified providers of mental health and addiction services work with other providers of key services under the OCP to form a multi-disciplinary team that will ensure the child/family received needed services and that those services are coordinated and not duplicated.

Why does the OCP start with screening by doctors or other medical personnel?

The health care community comes into contact with the vast majority of women during pregnancy and at birth. Doctors, nurses and other early caregivers are often the first to spot a potential area of risk or concern. They are also often in a position to encourage a family to consider the offer of support services. Research and practice is clear that earlier is better when addressing a problem. The goal of the Oregon Children's Plan is to begin as soon as possible. In addition, there are certain conditions of medical importance whose early identification are subtle, but can otherwise be life threatening (failure to thrive, developmental delays, etc.).

Will local communities be able to access additional Medicaid funds for Oregon Children's Plan services?

Yes. Many of the key services funded under the Oregon Children's Plan are Medicaid "match-able". Medicaid funds may be able to be accessed for the portion of services that are funded with state or local general funds or with private donations if the services provided with those funds support the Medicaid program. The match rate is approximately 60% federal, 40% state or local public funds.

There are two general types of Medicaid (or Title XIX) matching: 1) administration and 2) services. Examples of administration claims could include referral and coordination, coordinated case management, interagency coordination and other efforts. Service claims are typically provided by physicians or hospitals. Service claims could also involve “targeted case management” for eligible clients (this may include medical, social or educational services).

Because matching is complicated, staff at the Department of Human Services has been assigned to help communities identify and realize the possibilities. Counties may, for example, need to pay attention to how and where Children’s Plan funds will be invested.

Will there be Quality Assurance Standards for services under the Oregon Children’s Plan?

Yes. Quality Assurance Standards are based on six overarching themes:

- ✓ Family-centered practices
- ✓ Comprehensive and responsive services
- ✓ Respect for diversity
- ✓ Qualified staff
- ✓ Effective partnerships
- ✓ Results-based accountability

How will data be kept?

A plan for an Early Childhood Data System is being jointly developed according to state and statutory data standards. The Department of Human Services is leading the effort. The System will be developed by linking data from existing systems, not by creating one new “super system”. The development will occur in three phases:

- Phase One: Identification and screening processes
- Phase Two: Assessment, referral and service delivery
- Phase Three: Evaluation

The System will be governed by values that preserve confidentiality and data security, ensure multi-agency cooperation and provide for easy use.

MENTAL HEALTH AND ADDICTION SERVICES

What does the OCP mental health and addiction services funding mean to families in my county?

It means that families, with young children, who struggle with substance abuse issues or who have a mental health concern will have an additional opportunity to get help. Mental health and addiction services under the OCP will be available directly to families. This means that families will get the help they need, and funds will be provided to pay for these services.

What kind of treatment services will be available for mental health and addiction issues?

Eligible treatment providers will make available essential treatment services. Supportive and preventive services will also be available.

Who will deliver OCP Mental Health and Addiction services?

Providers in each county will be identified who meet specific criteria for early childhood related treatment. For addiction services, providers must have a Women's Specific Letter of Approval from the Office of Mental Health and Addiction Services. For mental health services, providers must have early childhood mental health qualifications and capacity.

When will the mental health and addiction services begin?

Service delivery has already begun in several counties (Jackson, Lane, Clackamas, Hood River, Wasco, Sherman and Gilliam). Other counties will be added in March, with services available to all counties by June.

How will local communities access the mental health and addiction services?

Resources are available on a county or regional basis through fee-for-service by qualified providers. All providers in the county or region must collaborate to not exceed the county's billing cap.

Will providers bypass Prior Authorization (PA) processing?

The OCP services do not require prior authorization.

Will clients who have insurance be eligible for OCP funded services?

Only if their insurance does not cover the services they need.

When does the eligible child become too old? At his 8th birthday or 9th?

At the 9th birthday and the entire family is no long eligible for OCP services. Services that have begun prior to the child's 9th birthday will be completed, but the family would not be eligible for additional services.

Currently, if a client is not a member of a Mental Health Organization they have to receive services from county mental health services. Is this affected by OCP?

County mental health and A&D providers for clients not enrolled with a Managed Care Organization will provide OCP services. Claims will be processed fee-for-service.

- [Revised OCP Budget Summary](#) *

* Note: You need [Adobe Acrobat Reader](#) to review this document

Legislature Approves HB 3659, The Oregon Children's Plan

The children and families of Oregon won a significant victory July 7, 2001 when the legislature passed the Oregon Children's Plan (OCP). The vote in the Senate was 25 to 4 (voting no Senators R. Beyer, George, Harper, and Miller); and in the House 50 to 10 (voting no Representatives Butler, Close, Hayden, Kropf, Krummel, Lowe, P. Smith, Wilson, Witt and Zauner).

House Bill 3659 became the vehicle for the Plan, which originated as SB 965. The measure improves the Healthy Start program by adding early identification, nurse home visits, and connection to mental health and substance abuse treatment and makes it available statewide. It also directs the Commission for Child Care to create the Task Force on Financing Quality Child Care.

Amendments emphasize voluntary participation and require written consent for participation in services. Also modified were provisions relating to family resource centers, relief nurseries, Great Start grants, Oregon prekindergarten programs, and parent-as-teacher programs.

The measure was funded at \$60 million total funds (the Governor proposed \$66 million). Some funding in the State Commission on Children and Families' budget for the OCP was reduced for the Healthy Start roll out, staff and evaluation. There were also reductions in mental health and alcohol and drug services.

Overall, however, the focus, funding and direction of the original Plan survived. It will provide an early childhood system with these goals:

1. Prevent child abuse and neglect
2. Improve the health and development of young children
3. Promote bonding and attachment in the early years of a child's life.
4. Support parents in providing the optimum environment for their young children.
5. Link and integrate services and supports in the voluntary statewide and local early childhood systems.
6. Ensure that children are entering school ready to learn
7. Ensure that children receive quality child care.

Now the difficult but essential work of implementation begins. Realizing the goals above will require a continuation of the dedication and perseverance demonstrated by those who made the development and passage of the Children's Plan possible.

Friends and supporters of Oregon's children and families can be proud of their efforts to establish this important piece of legislation. Their hard work all session providing education and support for the measure paid off. The Children's Plan is a prevention program that will help Oregon 's children become successful, productive members of their community.

The final version of the bill can be found at: http://pub.das.state.or.us/LEG_BILLS/PDFs/BEHB3659.pdf

More details will be posted on this website as they become available. [/FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/gol_health.htm](#)

Governor's Testimony Senate Rules and Redistricting May 8, 2001 Governor John Kitzhaber

SB 965, otherwise known as the Oregon Children's Plan, may well be the most important initiative in the \$12 billion budget I have submitted to you this session. It is important for two reasons. First, it gives our children the foundation to succeed. It gives real substance to the often-used phrases: "Let's put our children first" and "Children are our most important resource". Second, it is important because of its potential impact on the cost and scope of state services in the future.

Let me start with the second, by offering a context for the budget you and your colleagues will consider. Ten years after the passage of Ballot Measure 5, we are at the end of an era. During the 1990's state government assumed the major responsibility for funding primary and secondary schools. In 1989, the year before Measure 5, the K-12 budget was \$1.17 billion ñ or about 24 percent of the general fund. Today it is \$5.2 billion ñ or about 43 percent of the general fund.

In 1994 Oregon adopted a "one strike and you're out" policy with Ballot Measure 11, and our public safety budget ballooned. In the last biennium before Measure 11, the budget for the Oregon Department of Correction was \$363 million. Today it has grown to \$863 million ñ and we have bonded an additional \$1 billion to finance prison construction.

In this same five-year time period our population grew by 600,000 people, and the number of children in our public school system increased by 60,000. There has been no general tax increase to offset these costs to the contrary, over the last decade, we have returned \$1 billion to individuals and corporations through the kicker and cut the capital gains tax. And, last November, the voters approved another \$160 million tax cut with the passage of Ballot Measure 88.

These actions would have had a devastating effect on the state were it not for two things: the longest period of sustained economic growth on record, and the introduction and expansion of video poker. As a result, in every biennium since 1993, there has been more revenue available to the legislature at the end of the session than at the beginning.

Those days are over. We are looking at flat, if not reduced revenue, next week. The economy is slowing and we are left with a challenge of a state budget that cannot be sustained over time with the revenue we anticipate.

So, how do we survive? How do we have it all? How can we continue to invest in improving the quality of our schools, a growing prison population and the other rising costs of doing business when the economy ñ which made it all possible in the first place ñ is slowing?

The answer, in the absence of new revenue, is prevention. That is why SB 965 is critical.

SB 965 completes the comprehensive approach to prevention put in place by SB 555 in the 1999 Legislature. The Juvenile Crime Prevention and Alcohol & Drug components of SB 555 will help prevent older at-risk youth and their families from entering the juvenile justice system, and lives of destruction. But it is not soon enough for some children and families. In many cases the pattern of behavior and risk factors is set much earlier in life, when the child is 5, or 3, or 3 months.

SB 965 will provide support to all children and families who need and want it. And, most importantly, it will lay the foundation to identify at risk children ñ before they even get into school, before they get into trouble ñ and it will provide them the support they need to ensure successful and productive lives.

Preventing problems from occurring in the first place can save millions of dollars in future years. Although the numbers vary, many studies show that dollars invested in this type of prevention, save in many more dollars in avoided costs later in life. The packet of information provided to you on SB 965 includes a summary of the research on cost savings. This kind of return on investment ñ in terms of our capacity to sustain the state budget into the future ñ is something we cannot afford not to do.

But while the budgetary case for the SB 965 is a compelling one, it pales in significance next to the human side of the equation.

If the headline in tomorrow's paper read: "Six out of ten Oregon children exposed to a potentially fatal, preventable disease", you would be shocked and outraged. And, rightly so.

Yet, this is not a hypothetical situation. Each year, we lose thousands of children to school failure, school drop out and subsequent involvement in the criminal justice system. Sixty percent of children born in Oregon today have at least one social or medical risk factor that puts them in jeopardy. Over forty percent of our children arrive at school unable to fully take advantage of the learning experience due to these same risk factors.

The fact of the matter is that we know who these children are long before they veer off the road to success. We know that there is a set of easily identifiable risk factors that have a close, well-documented correlation with school drop out and juvenile criminal activity later in life. These risk factors occur in the home and include: parents who are living at or below the federal poverty level or who abuse drugs or alcohol; parents who have been incarcerated in the criminal justice system or with a history of domestic violence; single parent households and teenage parents.

The fact that we know these risk factors, we know the children they effect, and the fact that we fail to do

something about it is unconscionable. Especially when we also know the kinds of programs and supports that have been proven to be effective in preventing these tragic outcomes and making these children and their families successful.

That is exactly what SB 965 is designed to do. It is an effort to first, provide all families with the information they need to raise healthy children; second to identify as early as possible children and families who would benefit from additional help and who would voluntarily sign up to receive it; and third, to offer those children and families with the in-home and out-of-home supports they need to raise healthy, well-developed children.

SB 965 builds on the efforts of Healthy Start, Early Intervention and other programs by adding missing elements and linking them together into a comprehensive and coordinated system of supports. SB 965 includes: early problem identification; home visits and in-home supports; substance abuse and mental health treatment; community based programs such as relief nurseries, parent training and other assistance to parents; and early learning opportunities such as the Oregon Prekindergarten Program.

Participation is entirely voluntary. And, the supports are family-driven and delivered at a community level. Research-based practices, a focus on outcomes and quality assurance will guarantee effective results. Our data shows that each of the supports I mentioned is needed and that each needs to work with the others in a systemic fashion in order to achieve desired results.

I understand that SB 965 represents a shift in state priorities from after-the-fact intervention to front-end prevention and treatment. But it is an important shift and one that must be made both because of the human consequences of failing to do so and because of the fiscal reality we face.

I also understand this type of investment will not come easily. All general fund dollars have constituencies attached to them. Fiscal limits mean that priorities must be set, and my budget proposal to you includes cuts that also carry with them very real human consequences and cuts in public safety, cuts in services to seniors, and cuts in higher education. But, I am willing to defend these choices on the basis that putting an emphasis on prevention reflects a higher priority than paying more to mitigate problems after they have already developed.

To close, let me put the Oregon Children's Plan into the budget context again. The K-12 budget accounts for 43 percent of the general fund; higher education 7 percent; public safety 11 percent; the budget for senior citizens 4 percent. The proposed budget for the Oregon Children's Plan accounts for one half of one percent of the general fund. One half of one percent. And, SB 965 would only be available to first births, which represents less than half of Oregon's children. We should be offering these important services and protections to all of Oregon's children.

This is not a budget argument. It is about whether we have the courage to change our priorities, reflected by how we invest our resources. It is about whether we are willing to be accountable for the outcomes of the resources we invest, and the outcomes for the resources we fail to invest. This is about the depth of our commitment to give a voice to the voiceless. It is about really putting children first.

SB 965 gives us the tool. Whether we wield it or not is up to us.

Governor's Testimony
Ways and Means Subcommittee on Human Resources
February 21, 2001
Governor John Kitzhaber

The Oregon Children's Plan may well be the most important initiative in the \$12 billion budget I have submitted to you this session. It is important for two reasons. First, it gives our children the foundation to succeed. It gives real substance to the often-used phrases: "Let's put our children first" and "Children are our most important resource". Second, it is important because of its potential impact on the cost and scope of state services in the future.

Let me start with the second, by offering a context for the budget you and your colleagues will consider. Ten years after the passage of Ballot Measure 5, we are at the end of an era. During the 1990's state government assumed the major responsibility for funding primary and secondary schools. In 1989, the year before Measure 5, the K-12 budget was \$1.17 billion ñ or about 24 percent of the general fund. Today it is \$5.2 billion ñ or about 43 percent of the general fund.

In 1994 Oregon adopted a "one strike and you're out" policy with Ballot Measure 11, and our public safety budget ballooned. In the last biennium before Measure 11, the budget for the Oregon Department of Correction was \$363 million. Today it has grown to \$863 million ñ and we have bonded an additional \$1 billion to finance prison construction.

In this same five-year time period our population grew by 600,000 people, and the number of children in our public school system increased by 60,000. There has been no general tax increase to offset these costs to the contrary, over the last decade, we have returned \$1 billion to individuals and corporations through the kicker and cut the capital gains tax. And, last November, the voters approved another \$160 million tax cut with the passage of Ballot Measure 88.

These actions would have had a devastating effect on the state were it not for two things: the longest period of sustained economic growth on record, and the introduction and expansion of video poker. As a result, in every biennium since 1993, there has been more revenue available to the legislature at the end of the session than at the beginning.

Those days are over. We are looking at flat, if not reduced revenue, in March. The economy is slowing and we are left with a challenge of a state budget that cannot be sustained over time with the revenue we anticipate.

So, how do we survive? How do we have it all? How can we continue to invest in improving the quality of our schools, a growing prison population and the other rising costs of doing business when the economy ñ which made it all possible in the first place ñ is slowing?

The answer, in the absence of new revenue, is prevention. That is why the Oregon Children's Plan is critical.

The Oregon Children's Plan completes the comprehensive approach to prevention put in place by SB 555 in the 1999 Legislature. The Juvenile Crime Prevention and Alcohol & Drug components of SB 555 will help prevent older at-risk youth and their families from entering the juvenile justice system, and lives of destruction. But it is not soon enough for some children and families. In many cases the pattern of behavior and risk factors is set much earlier in life, when the child is 5, or 3, or 3 months.

The Oregon Children's Plan will provide support to all children and families who need and want it. And, most importantly, it will lay the foundation to identify at risk children ñ before they even get into school, before they get into trouble ñ and it will provide them the support they need to ensure successful and productive lives.

Preventing problems from occurring in the first place can save millions of dollars in future years. For every dollar invested in this type of prevention, for example, over four dollars are saved in avoided costs later in life. This kind of return on investment ñ in terms of our capacity to sustain the state budget into the future ñ is something we cannot afford not to do.

But while the budgetary case for the Oregon Children's Plan is a compelling one, it pales in significance next to the human side of the equation.

If the headline in tomorrow's paper read: "Six out of ten Oregon children

exposed to a potentially fatal, preventable disease", you would be shocked and outraged. And, rightly so.

Yet, this is not a hypothetical situation. Each year, we lose thousands of children to school failure, school drop out and subsequent involvement in the criminal justice system. Sixty percent of children born in Oregon today have at least one social or medical risk factor that puts them in jeopardy. Over forty percent of our children arrive at school unable to fully take advantage of the learning experience due to these same risk factors.

The fact of the matter is that we know who these children are long before they veer off the road to success. We know that there is a set of easily identifiable risk factors that have a close, well-documented correlation with school drop out and juvenile criminal activity later in life. These risk factors occur in the home and include: parents who are living at or below the federal poverty level or who abuse drugs or alcohol; parents who have been incarcerated in the criminal justice system or with a history of domestic violence; single parent households and teenage parents.

The fact that we know these risk factors, we know the children they affect, and the fact that we fail to do something about it is unconscionable. Especially when we also know the kinds of programs and supports that have been proven to be effective in preventing these tragic outcomes and making these children and their families successful.

That is exactly what the Oregon Children's Plan is designed to do. It is a \$66 million effort -- \$28 million in new revenue and \$38 million redirected from other programs -- to screen all first births in Oregon for the risks that can negatively effect a child's life. Children that screen positively for risks will be offered in-home and out-of-home supports.

The Oregon Children's Plan builds on the efforts of Healthy Start, Early Intervention and other programs by adding missing elements and linking them together into a comprehensive and coordinated system of supports. The Oregon Children's Plan includes: prenatal and at-birth screening; community based

programs; home visits and in-home supports; substance abuse and mental health treatment; relief nurseries, parent training and other assistance to parents; and early learning opportunities such as the Oregon Prekindergarten Program.

All supports are voluntary, family-driven and are delivered at a community level. Research-based practices, a focus on outcomes and quality assurance will guarantee effective results. But, our data shows that each of these supports is needed ñ and that each needs to work with the others in a systemic fashionñ in order to achieve desired results.

I understand that the Oregon Children's Plan represents a shift in state priorities from after-the-fact intervention to front-end prevention and treatment. But it is an important shift and one that must be made ñ both because of the human consequences of failing to do so and because of the fiscal reality we face.

I also understand this type of investment will not come easily. All general fund dollars have constituencies attached to them. Fiscal limits mean that priorities must be set, and my budget proposal to you includes cuts that also carry with them very real human consequences ñ cuts in public safety, cuts in services to seniors, and cuts in higher education. But, I am willing to defend these choices on the basis that putting an emphasis on prevention reflects a higher priority than paying more to mitigate problems after they have already developed.

To close, let me put the Oregon Children's Plan into the budget context again. The K-12 budget accounts for 43 percent of the general fund; higher education 7 percent; public safety 11 percent; the budget for senior citizens 4 percent. The proposed budget for the Oregon Children's Plan accounts for one half of one percent of the general fund. One half of one percent. And, I am proposing to make it available only to all first births, which represents less than half of Oregon's children. We should be offering these important services and protections to all of Oregon's children.

This is not merely a budget argument. It is about whether we have the courage to change our priorities, reflected by how we invest our resources. It is about whether we are willing to be accountable for the outcomes of the resources we

invest, and the outcomes for the resources we fail to invest. This is about the depth of our commitment to give a voice to the voiceless. It is about really putting children first.

The Oregon Children's Plan gives us the tool. Whether we wield it or not is up to us.

The Oregon Childrenís Plan Budget

"We cannot afford to ignore programs and policies proven to work in reducing juvenile delinquency. The resources for these programs must be found. We must no longer give "lip service" to making children a priority: we must literally put our money where our mouth is."

--Citizen's Crime Commission KIDS Report, June 2000

Sixty percent of Oregon children are born with risks that can affect their success in life. By identifying these risks early we can give Oregon children the opportunity to succeed in life, in school and avoid future problems such as drug addiction, school failure, delinquency or incarceration. Early investments in our children will benefit Oregon communities, families and schools.

This budget allocates \$60-million to the Oregon Childrenís Plan - \$21.3 million in new revenue and \$38.7million redirected from other programs. The Oregon Childrenís Plan will screen all first births in Oregon for an identifiable set of risks that can negatively affect a childís life. Children who screen positively for one or more risks will be offered in-home and out-of-home services. Although participation in this program is voluntary, in an early pilot model of the Oregon Childrenís Plan, 93 percent of families elected to participate.

The Oregon Childrenís Plan represents a significant shift in state priorities. Currently, we invest a substantial and growing part of the General Fund budget to address problems after they have occurred -- children who have failed in school, and who have become mired in the social welfare system or the criminal justice system. The Oregon Childrenís Plan will target resources toward those children with the highest risk of this tragic future. This investment represents a reprioritization of resources from after-the-fact intervention to front-end prevention and treatment.

This investment will make an enormous difference in the lives of thousands of Oregonís children and their families. Today, 42 percent of Oregon children show up for their first day of kindergarten unable to fully participate or engage in learning. The Oregon Childrenís Plan will increase the number of children who come to school ready to learn by identifying risks and then providing children and their parents with the services and supports necessary to address them.

The Oregon Childrenís Plan, which will be available in all 36 counties, proposes to replace the current fragmented system with a comprehensive approach for helping children. The Plan will make Oregon the first state in the nation to systematically screen for risks prenatally and at-birth for the earliest possible identification and treatment of potential

problems.

The following services will be provided to children and parents through the Oregon Children's Plan:

1. Prenatal/At-birth Screening (\$1.3 million)

Screen all first-born Oregon children as early as possible for medical and psychosocial risks. Out of the 44,300 births each year in Oregon, 18,400 are first births. Screenings will take place during prenatal or follow-up visits at medical clinics, hospitals, or doctor's offices.

2. Coordinated Services

Following a positive risk screen, community-based teams (such as doctors, educators and social workers) will match the child's risk with the most appropriate type of support and provider. It is estimated that 60 percent of families will have risks warranting additional support.

3. In-Home Support (\$29.3 million)

Each community will provide in the home services for children who have developmental disabilities or who are medically fragile, and families who have other medical or significant social risks. These services will be provided by nurses, social workers and other trained professionals.

4. Substance abuse and mental health treatment (\$11 million)

We will provide communities with the ability to access resources for mental health treatment for children and/or substance abuse treatment for their parents. It is estimated that all children and families participating in the Oregon Children's Plan who need this treatment will receive it.

5. Pre-school (\$5.9 million)

We want every child to have the chance to participate in an early learning setting or pre-school, such as Head Start/Oregon Prekindergarten Program. We currently enroll 50 percent of eligible children in these programs. The Oregon Children's Plan will expand the Oregon Prekindergarten Program to serve 60 percent of eligible children in the next biennium. In addition, we will work with the federal Head Start program to identify efficiencies that may lead to a substantially greater enrollment by the end of the next biennium.

6. Community Programs (\$8.3 million)

The Oregon Children's Plan proposes to redirect the Great Start Program so that each county will have flexible funds to choose from a menu of programs -- such as relief nurseries, parent training and others -- that have been proven by research to be effective. These programs will help serve as the connection between home-based programs for the youngest, highest risk children and entry into school.

The success of the Oregon Children's Plan will be measured by the following outcomes:

-
- Decreased rate of child abuse and neglect
- Increased percent of children entering school ready to learn
- Decreased infant mortality
- Increased percent of children fully immunized at age 2
- Increased percent of women accessing early prenatal care
- Decreased percent of infants whose mothers used alcohol and/or tobacco during pregnancy

The Oregon Children's Plan will save taxpayers future expenditures by improving school performance, increasing access to health care providers and by reducing the cost of school failure, school drop out, and involvement in the criminal justice system. Cost benefit analyses of similar early childhood approaches have shown that for every dollar invested, between one and four dollars in costs were saved, mostly by avoiding other, more costly services.

Performace Measures and Benchmarks

Performance measures are tools that state agencies use to help them focus on results. State law requires agencies to develop measures aimed at achieving the vision set out in the Oregon Benchmarks, a set of 92 quality of life measures. Benchmarks, for example, address student achievement, crime, housing affordability, per capita income and air and water quality.

Most state agencies have performance measures in place. The measures can be used to improve agency operations, support budget requests, and increase agency accountability to the Legislature and the general public. The Legislature reviews agency performance information during the budget approval process.

In recent years, focus has turned to developing linked sets of measures spanning the gap from agency outputs to high level Oregon Benchmarks. In 1997, the Governor developed linked set of measures for three funding initiatives:

-
- Oregon Health Plan expansion.
- Oregon pre-kindergarten expansion.
- Oregon coastal salmon recovery/Healthy Streams Partnership.

The 1999-2001 budget included two additional funding initiatives tied to benchmarks:

-
- High risk juvenile crime prevention.

- Teen pregnancy reduction.

In each instance, monitoring efforts are on going.

This budget request includes one new initiative, the Oregon Children's Plan. It identifies six Oregon Benchmarks as key result areas, and lists 11 intermediate outcomes that are shared by more than one agency.

Each program area section of this document describes several priority Benchmarks for agencies in that area. Please see each program area section for further discussion.

High Level Outcomes for Oregon Children's Plan (Measured biennially)

-
- Decreased rate of child abuse and neglect (Measured by Benchmark 50).
-
- Increased percent of children entering school ready to learn (Measured by Benchmark 18).
-
- Decreased infant mortality (Measured by Benchmark 41).

- Increased percent of children fully immunized at age two (Measured by Benchmark 42).
-
- Increased percent of women accessing early prenatal care (Measured by Benchmark 40).
-
- Decreased percent of infants whose mothers used alcohol and/or tobacco during pregnancy (Measured by Benchmark 52).

Intermediate Outcomes (Measured semi-annually or annually)

-
- Percent of children who show improved patterns of growth and development.
-
- Percent of families reporting increased skills in parenting their children.

- Percent of families who regularly read to their children.

-
- Percent of families who have a primary health care provider.

-
- Percent of children receiving regular well-child check ups.

-
- Percent of children who are diagnosed with a disability and who are receiving early intervention services.

-
- Percent of families who are working and have income above 185 Percent Federal Poverty Level.

-
- Percent of children living in foster care or other alternative out of home setting.

-
- Percent of child care slots per 100 children under 13.

-
- Percent of children in quality child care settings.

-
- Percent of children with special needs who receive care appropriate their needs in normal child care settings.

The Beginnings

The Oregon Children's Plan (OCP) is the next step in Oregon's movement to provide community-based support to our youngest children and their families. The OCP builds on at least four important statewide efforts, beginning in 1993

1993. The Healthy Start program was created under the Commission on Children and Families. It requires, among other elements, that counties provide a comprehensive risk assessment of all first born children and their families, identify families that would benefit most from help, and provide support services. Services must include community-based home visiting intervention services provided by a paraprofessional family support worker. Family risk assessment, follow-up services and supports from birth through five years of age are required as well. At its core, the Oregon Children's Plan expands Healthy Start statewide.
1994. The 1999 Legislature amended the Healthy Start program and established a comprehensive investment policy for Oregon's children and their families. SB 555 required the development of a local coordinated comprehensive plan including a provision for children ages 0-8 and their families. SB 555 also included alcohol and drug treatment services for youth and their families. SB 555 acknowledges that certain early intervention programs substantially reduce the chances that a child will become a juvenile offender. The Oregon Children's Plan uses SB555 local coordinated comprehensive plans to ensure that Healthy Start and other proven community-based programs are in place.
1995. A work group of more than 60 individuals, representing 25 local and state organizations developed recommendations for the early childhood component in SB 555. The group recommended that a statewide community-based home visitor system be achieved by linking existing programs and adding missing elements. The seven-month process produced guidelines for local planning; quality standards, outcomes and accountability;

universal screening; home visitor training; roles and responsibilities; and strategies to maximize resources. The Oregon Children's Plan will implement these recommendations.

1996. Also created by SB 555, the Interim Task Force on Children and Families met to gather information about early childhood assessment programs and evaluated the feasibility of a statewide coordinated program such as the one recommended above. This group, comprised of eight state legislators and 19 other public and private stakeholders, issued its findings and recommendations in January 2001 in a report entitled, *Oregon's Early Childhood Investment Strategy: It's About Time*. Recommendations of the task force addressed by the Oregon Children's Plan include: implement voluntary, universal home visitation in all Oregon counties; ensuring that children with special needs receive specialized home visits and community services; implementing core common data collection and outcome measures; developing universal screening and assessment tools; and assuring clear statewide standards for home visitors.

The Oregon Children's Plan is based on the efforts of the Healthy Start Program and legislative activities to support Oregon's youngest children. By adding components that will make Healthy Start as successful as possible, and by building on the foundation laid by the Legislature and its work groups, the Oregon Children's Plan will create the relationships necessary to improve school performance and prevent involvement in the criminal justice system.

Oregon's Children and Families: The Numbers Behind the Faces

The percentage of children under the age of 18 living in poverty has increased since 1990. Currently approximately 1 in 6 of Oregon's children live in poverty. ¹

Confirmed cases of child abuse have risen 38.3% since 1990, placing Oregon with some of the highest levels of child abuse in the nation. ²

One-third of children in state custody due to risk of child abuse and neglect are placed due to parental drug or alcohol problems. ³

Each year, 1 out of 6 children in Oregon witnesses violence between the adults in his or her home. ⁴

42% of Oregon kindergartners do not enter school "ready to learn." ⁵

Over 5% of babies are born to mothers who received inadequate or inconsistent prenatal care. ⁶

16% of pregnant mothers use tobacco during their pregnancy and 2% use alcohol. ⁷

54 out of every 1,000 babies born are low birth weight. ⁸

Approximately 5 out of 1,000 infants die before their first birthday. ⁹

10% of Oregon's children do not have access to any health insurance. ¹⁰

17 out of every 1,000 girls age 10-17 become pregnant. ¹¹

Over 25 % of Oregon high school students do not finish high school. ¹²

Helping Our Children Succeed

"We cannot afford to ignore programs and policies proven to work in reducing juvenile delinquency. The resources for these programs must be found. We must no long give lip service to making children a priority: we must literally put our money where our mouth is."

--Citizens Crime Commission KIDS Report, June 2000

Six of every ten children are born exposed to risks that can affect their future success. By identifying these risks early, we can give children the opportunity to succeed in school and in life. Identifying these children and their families and providing them the help they need is the heart of the Oregon Children's Plan (OCP).

The OCP, which will be available in all 36 counties, will replace the current fragmented system of aid to children and parents with a comprehensive approach. The plan will make Oregon the first state in the nation to systematically and voluntarily screen for risks before and at birth for the earliest possible identification and treatment of possible problems.

A Closer Look

The very early experiences of children play a critical role in determining later outcomes. Children with medical and social risk factors are more likely to suffer school failure, delinquency and involvement with the social welfare and criminal justice systems. The Oregon Children's Plan (OCP) is needed to help reduce the poor outcomes many children in Oregon face.

The Oregon Children's Plan will help achieve the following outcomes for the children and families served:

Decreased rate of child abuse and neglect

Decreased infant mortality

Decreased percent of infants whose mothers used alcohol and/or tobacco during pregnancy

Increased percent of children entering school ready to learn

Increased percent of children fully immunized at age two

Increased percent of women accessing early prenatal care

Infants' unique ways of thinking, knowing and acting develop best under the influence of loving and nurturing adults. The implication of this is that positive early experiences can help overcome risks that lead to negative outcomes. And that is what the Oregon Children's Plan is about. It recognizes that:

1. New brain research underscores the importance of early experience, the power of effort, and the hope of education.

2. Early experience affects how brains are "wired."
3. The young brain is a work in progress.
4. Every child is unique.
5. Children learn in the context of important relationships.
6. Other caregivers can meet young children's needs but don't take the place of parents. This is true even when a parent is incarcerated.
7. Frequent, warm and responsive "small talk" with infants can make a world of difference.
8. Children need many kinds of stimulation.
9. Prevention is crucial. The earlier the intervention, the more effective. The more follow-up, the more sustainable.
10. Unconditional love goes to the heart of what it means to be a parent, from a child's viewpoint, good care is responsive care.¹

In his remarks before the Ways & Means Human Resources Subcommittee, Governor Kitzhaber emphasized the importance of prevention when he asked, "How can we continue to invest in improving the quality of our schools, a growing prison population and the other rising costs of doing business when the economy is slowing?"

"The answer, in the absence of new revenue, is prevention—making every effort to invest today in areas which will prevent expensive problems tomorrow. We have made two great investments in prevention the last decade: the Oregon Health Plan and the Juvenile Crime Prevention Plan that was adopted by the last legislative session."

The Oregon Children's Plan is the critical next step. The Plan completes the comprehensive approach to prevention put in place by SB 555 in the 1999 Legislature. The Juvenile Crime Prevention and Alcohol & Drug components of SB 555 will help prevent older at-risk youth and their families from entering the juvenile justice system and lives of destruction. But it is not soon enough for some children and families. In many cases the pattern of behavior and risk factors is set much earlier in life when the child is five, or three, or three months.

The Oregon Children's Plan will provide support to all children and families who need and want it. And most importantly, it will lay the foundation to identify at-risk children before they even get into school, before they get into trouble and it will provide them the support they need to ensure successful and productive lives.

Preventing problems from occurring in the first place can save millions of dollars in future years. For every dollar invested in this type of prevention, for example, approximately four dollars in benefits will be received.² Speaking to a large group of civic leaders recently, the Governor illustrated this reality by contrasting the outcome of two young Oregon women who shared common risk factors, but experienced very different outcomes.

The first is a girl born into an abusive family. She was sexually and physically abused by her alcoholic father, left home and was living on the street in Portland. Alone and homeless, she continued to be victimized, abused alcohol and became pregnant at age 17. Lacking prenatal care and emotional support, she continued to use alcohol and drugs during her pregnancy. Her child, a daughter, was born premature and suffered from fetal alcohol syndrome. At 19, this girl is still living on the streets with little hope of having a healthy life filled with accomplishment and satisfaction. Her child, a ward of the state, has been diagnosed with depression and multiple mental disorders. Her original adoptive parents gave her up because of her severe mental disorders. She had 26 different foster placements before being admitted to a residential mental health facility where she now lives. This happened before her tenth birthday.

This is the tragedy of a mother who is still drug addicted, who will never know her daughter, and of a young girl who is severely mentally ill and who may live out her life in institutions. In 1999 there were over 1100 cases in Oregon where parental rights were terminated due to circumstances like this case. In the same year, 18 children died in Oregon from parental neglect or abuse.³

The second case described by the Governor was of a single mother who had twins at age 17. She lived in an area that had home visits available. She was seen by a public health nurse during her pregnancy. Nonetheless, she had limited financial resources and the twins were born early, one with low birth weight making a stressful situation even more difficult. However, with the help of her family support worker and the public health nurse, the young mother accomplished much for herself and her children. She has kept the children up to date on immunizations and health care. She has been reading to them since they were very young. She has stayed in contact with the public health nurse over

concerns with the low birth weight child, been enrolled in the Oregon Health Plan and connected with the Women, Infant and Children nutrition program. She has returned to school to get her high school diploma and plans to go to community college. She has obtained her driver's license and with the help of child support enforcement, is now receiving child support from the father. In short, she is on the road to making a life for herself and her family and to being a contributing member of her community.

The Oregon Children's Plan is designed to turn stories like that of the first young girl into stories like the second one. Many children in jeopardy of veering off the road to success can be identified. There is a set of easily identified risk factors that are closely correlated with school drop out and juvenile criminal activity later in life. These factors occur in the home and include parents who abuse alcohol or drugs, who have been incarcerated, who have a history of domestic violence, who live at or below the federal poverty level or who are teenagers. There are programs and supports that have been proven to be effective in preventing later involvement with the social welfare or criminal justice systems. The Oregon Children's Plan is designed to screen all first-borns in Oregon for the medical and psycho/social risks that can negatively affect their lives. Those that screen positively will be offered in-home and out-of-home services.

A majority of Oregonians support investment in intervention programs to reduce juvenile crime.⁴ In a May 2000 survey conducted for the Citizens Crime Commission, 61% of Oregon voters believed that spending money now on early intervention programs will save money later by reducing the number of young people entering the criminal justice system. Three in four supported the use of public funds to pay for the intervention of high-risk children under age ten.

What will the OCP do for Oregon's children?

- **Improve school performance**
- **Increase access to health care providers**
- **Reduce school failure**
- **Prevent school drop out**
- **Prevent involvement in criminal justice system**

What will the OCP provide?

Prenatal/At-birth screening

All first-born Oregon children will be screened, on a voluntary basis, for medical and psychosocial risks. Screenings will take place during prenatal or follow-up visits or both at medical clinics, hospitals or doctors' offices.

[More Information*](#)

Coordinated services

Local support service teams such as nurses, educators and social workers will further assess the child's and family's needs and then match them with the most appropriate type of services and provider.

[More Information*](#)

In-home support

Children who have developmental disabilities or who are medically fragile and families who have other medical or

significant social risks and who desire help will receive supportive services in their home.

[More Information](#)*

Substance abuse and mental health treatment

Communities will access resources for early mental health treatment for children and/or substance abuse treatment for their parents.

[More Information](#)*

Early learning

More children will have an opportunity to enroll in early learning programs such as Oregon Pre-kindergarten Program and Head Start.

[More Information](#)*

Community programs

Flexible funds will be provided to counties so that a variety of proven programs--such as relief nurseries and parent training can be offered.

Invest In What Works: Research Based Practices

Research supports three fundamental principles:

1. Invest Early

Investing early is cost effective.¹ Investments in early preschool can save taxpayers an estimated \$1.50 for every dollar spent.² For every dollar invested in Oregon Healthy Start home visits, approximately \$4.25 in benefits is received.³

Providing services early will improve the quality of the early childhood environment and promote positive parent-child interactions. Evidence suggests that brain development is highly influenced by environmental factors and that sensitive, nurturing care is essential to healthy development.⁴

Parents are most open to information and assistance during the early years of their child's life.⁵

Young children are most vulnerable to child maltreatment. Eighty-eight percent of fatalities due to child maltreatment occur among children under age five. Early investment in these families holds promise for saving children's lives.⁶

2. Promote Healthy Brain Development

"Early care has decisive and long-lasting effects on how people develop and learn, how they cope with stress, and how they regulate their own emotions.⁷

There is a mismatch between where money is invested and the greatest opportunity for impact on the developing brain.⁸ Recent brain research has emphasized the importance of the early years. Environmental factors have a dramatic influence on the young child's developing brain. It is during these early years that there is the greatest opportunity to

impact future outcomes.⁹

3. Offer a Comprehensive and Coordinated Array of Supports

Every family is unique and has an individual set of strengths and needs. Offering a variety of services and supports allows assistance to be tailored to individual family needs. Successful and cost effective early intervention services must be carefully coordinated and delivered effectively.¹⁰

Who Will Benefit:

One Family's Story*

I remember thinking when I got pregnant with Jeremy that I didn't know what I was going to do. I was working part-time at a fast-food place and my boyfriend Tim pumped gas at a station not far away from our apartment. He made just enough money to make payments on his pickup, buy gas and pay for the insurance. Rent ate up my paycheck and since I had no benefits, I had no money to pay to see a doctor.

Besides, I was pretty scared about the whole idea of having a baby. At 21, I didn't know much about kids; I didn't have anyone around to talk to because I'd moved out of the house four years earlier when my alcoholic step-dad got tired of beating up on my mom and started in on me.

Tim was pretty excited about the baby, and he said I should check out the clinic near where I worked because maybe they wouldn't charge us. Everyone was really nice, and I liked the doctor. He said he was glad I came and that things looked OK, but I should have come in earlier. He said bad stuff can happen to a baby before it's born if the mother does things like drink alcohol, take drugs or even just not eat right.

Anyway, I found out that if I wanted, people from the clinic could come to my place after I got home from work and bring information about services for me and my baby before and after it was born. I was a little unsure at first but Tim said go ahead, so a woman named Connie came by and told us about their home-visiting program. We talked about the things that stressed us out, and she gave us some hints about how we could be good parents for our baby. I was glad she said she would come by on a regular basis if we wanted her to.

When Jeremy was born it was great! At the hospital, the nurses helped me with breastfeeding and Connie asked if I wanted her to keep coming by. I was glad of that because I had to quit my job to take care of Jeremy, and I knew things would be stressful. I was more worried than ever about how we were going to pay rent. Sometimes when Jeremy cried a lot it would get to me, and I was worried I would take it out on him.

I had a lot of questions about what to do with Jeremy. What to feed him, how to tell if he was sick and what was normal for him to do. Connie also told us about a place we could go to get temporary help with the rent until Tim could get his hours changed. That way I could go back to work and he could be home when I was gone.

My life has changed a lot over the past year. My baby's birth has brought on a lot of these changes and Connie has helped Tim and me get through a lot of them. We needed a bigger apartment so she referred us to the housing department. They helped us make arrangements for another place. She told us about the Women, Infants and Children program so we can be sure Jeremy gets good nutrition. She also helped us with information about insurance, food stamps and other places where we could get help. She even connected us with a parent support group where we've met other parents who have some of the same problems we do. And it's great to have people to talk to. We are so thankful

for all the help and support Connie has given us.

*This is a composite story written from a combination of actual family information and data derived from the Oregon Healthy Start effort.

Measuring Success:

Benchmarks And Shared Outcomes

Oregon needs a comprehensive approach to helping our children enter school ready to learn. Too many are born with risk factors that are correlated with high degrees of failure in school, involvement in the criminal justice system, child abuse or other forms of violence and involvement with alcohol and other drugs.

Oregon's current approach to helping these children is often fragmented. Many existing programs were developed independent of one another and as a result, too many Oregon children are falling through the cracks.

The Oregon Children's Plan (OCP) replaces this fragmented approach with a comprehensive and coordinated system of supports. The ability to measure the success of this comprehensive, systems-based approach to helping children is a strength of the OCP. The success of the system and its services will be measured through the following set of outcomes. These outcomes will be tracked at the child, program, county, and state levels and will be measured on a regular basis.

Benchmarks

- Increased percent of women accessing early prenatal care
- Increased percent of children fully immunized at age two
- Increased percent of children entering school ready to learn
- Decreased percent of infants whose mothers used alcohol and/or tobacco during pregnancy
- Decreased rate of child abuse and neglect
- Decreased infant mortality

Shared Outcomes

- Percent of children who show improved patterns of growth and development
- Percent of families reporting increased skill in parenting their children
- Percent of families who have a primary health provider
- Percent of children receiving regular well-child check ups
- Percent of children who are diagnosed with a disability and who are receiving early intervention services
- Percent of families who are working and have income above 185% Federal Poverty Level
- Percent of children living in foster care or other alternative out-of-home settings
- Number of child care slots per 100 children under 13
- Percent of children in quality child care settings
- Percent of children with special needs who receive care appropriate to their needs in normal child care settings

Measuring Success

The Oregon Children's Plan replaces the current fragmented system of independent programs with a comprehensive and coordinated approach for helping children. This approach builds on independent existing efforts and links them together into a system of supports for young children and their families. The measured successes of these independent programs

will be enhanced by the comprehensive approach of the Oregon Children's Plan.

<u>Benchmarks</u>	<u>Example of measured success in independent programs</u>
Decreased rate of child abuse and neglect	Child abuse among all Healthy Start families is lower than among non-served families. The child abuse incidence rate for Healthy Start children is 9 per 1000 children vs. 21 per 1000 children for the non-served children in the same age group. (1)
Increased percent of children entering school ready to learn	Head Start children are ready for school. The typical four-year old child completing Head Start has knowledge and skills in early literacy and numbers, as well as social skills. Head Start four-year olds perform above the levels for children who have not attended Head Start programs. (2)
Increased percent of children fully immunized at age two	Ninety-seven percent of Healthy Start's two-year olds have completed the immunization sequence. In contrast, only 75% of all Oregon's two-year olds are adequately immunized. (3)
Percent of families reporting increased skill in parenting their children	By the time their child is six months of age, 73% of Healthy Start's higher risk families <i>consistently</i> engage in positive, supportive interactions with their children. In contrast, only 33% of families responded in this fashion during the first month of their child's life. (4)
Percent of families who have a primary health provider	After 12 months, 71% of Healthy Start families report needs for health care, including medical and dental service, are usually met. Eighty six percent of Healthy Start families have a primary health care provider and 73% have dental care. (5)

The Oregon Children's Plan: Why Treat Parents for Drug and Alcohol Abuse?

Parents or other family members who abuse drugs or alcohol constitute a significant risk to a child's chances of achieving success in life. While prenatal exposure to alcohol and other drugs has received much attention, little has been done to comprehensively target and educate pregnant women about the risks that follow heavy use of alcohol or drugs during pregnancy. Fetal Alcohol Syndrome (FAS) and the effects of drug use on babies are entirely preventable disabilities. Many more children are harmfully exposed through the behavior of their parents and through the environment in which they grow up. This is why substance abuse prevention and treatment for parents as provided in the Oregon Children's Plan (OCP) is critical. It will increase a child's opportunity to have a healthy and satisfying life.

As part of the effort to give Oregon's children the services and supports they need to become healthy, successful and productive members of their communities, the OCP allocates \$14 M in new funds for services. The dollars will allow families to access resources for mental health treatment for children and/or substance abuse prevention and treatment for their parents. Supports such as in-home and school-linked services, child care, prevention education related to FAS and drug effects, parenting education, outreach, transportation, preventative skill building services for children, and other wrap-around supports will be available as well as traditional clinical care.

This serious effort is vital to counter the negative effect on children of their parents' or care-givers' substance abuse. The *1999 Child Abuse and Neglect Report* from Child Protective Services, Oregon Department of Human Services found that drug and alcohol abuse is one of the major problems facing families of abused and neglected children.¹ In a study of over 3,700 cases where children had been removed from their homes because of abuse or neglect, alcohol and drug problems were pervasive. The presence of these conditions was a substantial barrier to the children returning home. Data from the recently completed Portland State University, Child Welfare Partnership Cohort study clearly show that a large number of the children entering longer-term foster care come from families that are using methamphetamine.²

The National Center on Addiction and Substance Abuse at Columbia University in a publication entitled *No Safe Haven: Children of Substance Abusing Parents* found that substance abuse causes or exacerbates 7 out of every 10 cases of child abuse or neglect.³ In addition, children whose parents abuse drugs and alcohol are almost three times likelier to be abused and more than four times more likely to be neglected than children of parents who are not substance abusers. Sadly, this situation is getting worse. Over the past 10 years, because of alcohol and illegal drugs, the number of abused and neglected children has more than doubled. This constitutes a rise more than eight times greater than the increase in the children's population.⁴

Oregon has seen a similar increase. In the 1999 Child Fatality Review Annual Report released by the Oregon Health Division, Department of Human Services, the number of child deaths where there is a family history of alcohol and drug abuse has risen from 20 in 1997 to 42 in 1999. To prevent deaths among these families, the report recommended among other actions, that Oregon increase screening for drug and alcohol problems among family and extended family members.⁵ Recommendations in the Columbia University report included providing timely treatment and training to parents.⁶ The Oregon Children's Plan will do both of these things.

A child can suffer severe harm even before birth if its mother abuses drugs or alcohol while pregnant. Fetal Alcohol Syndrome is a pattern of abnormalities observed in children born to alcoholic mothers and can include speech and hearing impairment.⁷ The National Institute on Alcohol Abuse and Alcoholism has written that "mental handicaps and

hyperactivity are probably the most debilitating aspects of FAS, and prenatal alcohol exposure is one of the leading known causes of mental retardation in the Western World."⁸

There is little doubt that treatment is a viable approach to dealing with substance abuse. The CalData project, conducted by the University of Chicago, is one of a series of studies showing the effectiveness of alcohol and other drug treatment.⁹ The CalData team examined more than 3,000 clients in state-supported substance abuse programs and found:

- While 73.6% were committing crimes before treatment, after treatment only 20.3% were committing crimes.
- While 33.2% of participants had been arrested or taken into custody before treatment, after treatment only 13.1% were arrested or taken into custody.

Sadly, there is far too little treatment available to protect Oregon's children. The 1999 Oregon Household Survey found that more than 400,000 Oregonians (380,000 adults and 25,000 youth) need access to alcohol or other drug treatment – and nearly half of these need state help to pay for their treatment. Yet, the state was able to treat only 75,000 per biennium.¹⁰

In 1999 the Legislature allocated \$10 million to cover the costs of state supported treatment. An additional \$56 million is needed. Over the last biennium, the need for substance abuse treatment has risen sharply for two reasons. First, Oregon's population has increased. And second, the increase in the percentage of the population needing state supported treatment has grown.

These dollars would be a wise investment. Results of the 1999 Oregon Household Survey indicate that treatment provides a high return on taxpayer investment. This study found that treatment saved taxpayers an average \$5.62 for every dollar invested. The savings were due to reductions in state costs for health care, welfare, and criminal justice.¹¹

Oregonians overwhelmingly support using public funds to pay for intervention of high-risk children under ten years of age. In a survey of Oregon voters conducted in June 2000, 61% said they would be willing to spend money now on proven intervention programs for high-risk children if they knew that spending that money now would save money later by reducing the number of juvenile offenders entering the criminal justice system in Oregon.¹²

Effectiveness of the Oregon Children's Plan May 2001

The Oregon Children's Plan (OCP) (SB 965) will ensure that a comprehensive continuum of services is available to support Oregon's youngest children (0-8) and their families. Each component of the continuum proposed under the OCP (SB 965) is based on an effective service model(s) that has proven results. Each component also has at least one study that demonstrates a return for taxpayer investment.

Overall research shows that early childhood interventions can yield substantial advantages to recipients in terms of emotional and cognitive development, education, economic well-being and health (the latter two apply to the child's family as well). In addition, the more carefully the interventions are targeted to children most at risk, and those most likely to benefit, the more likely it is that savings will exceed costs.¹

The Oregon Children's Plan (SB 965) includes the following components:

Home Visits by Nurses

The Oregon Children's Plan will make nurse home visitors available to high-risk families who need them. The OCP proposes to begin these visits as early as possible. Studies conducted by Dr. David Olds have shown multiple and long-term benefits for low-income and unmarried mothers for both the mother and the child when nurses provide home-visits during the woman's pregnancy and first two years after birth. The benefits are retained at 15-year follow-up, and include reductions in child abuse and neglect, and fewer arrests among the mothers, fewer arrests and convictions, less substance abuse, and fewer sexual partners among the adolescents. Costs are estimated at \$4 saved for every dollar invested. Savings are from child welfare costs, taxes on increased income, and reductions in criminal justice costs.²

Home Visits by Paraprofessionals

Healthy Start is Oregon's program to provide paraprofessional home visits. The Oregon Children's Plan will enhance the Healthy Start model and include home visits by trained family support workers. Among participants in Healthy Start:

- 89% of children are developing normally
- 98% of children have a primary health care provider and 92% receive regular well-child checkups
- 97% of children have completed their immunization sequence (compared to 81% of all Oregon children)
- The rate of child maltreatment is 13 per 1,000 among participants. The rate among the general population is 26 per 1,000.³

For every dollar invested in Healthy Start services, approximately \$4 in benefits will be received. Estimated dollar benefits arise from child welfare costs, reductions in criminal justice costs, improved health care and improved education.⁴

Alcohol and Drug Treatment

The Oregon Children's Plan will provide alcohol and other drug treatment for parents of young children. Untreated substance abuse is associated with higher rates of incarceration of juveniles and adults, child welfare and foster care

cases, higher rates of preventable illnesses and higher utilization of public assistance (welfare).⁵ Treatment is a viable approach to dealing with substance abuse. An Illinois study found that after completing treatment, offenders had over a 72% reduction in illegal activity, a 60% reduction in arrests, and an 80% reduction in the average time involved in criminal activity.⁶ An Oregon-based study found that taxpayers save an average of \$5.62 for every dollar invested in treatment. The savings were due to reductions in state costs for healthcare, welfare, and criminal justice.⁷

Mental Health Treatment

Early childhood mental health treatment can help reduce risk factors, enhance protective factors, and support young children and their families in achieving optimal levels of development and functioning. World Health Organization evidence indicates that "by the year 2020, childhood neuropsychiatric disorders will rise proportionately by over 50% to become one of the five most common causes of morbidity, mortality and disability among children."⁸ Recent brain research confirms that if trauma, stress and early onset mental health conditions are recognized and addressed during the first few years of life, structural and functional changes in the brain that would otherwise compromise the child's success and self-sufficiency can be avoided or reversed.⁹ Growing evidence confirms that specific mental health interventions in early childhood lead to positive outcomes for children, families, schools and communities. These benefits accrue across the life-span, and include: improved school readiness, lower utilization of special education, higher educational achievements, lower rates of criminal behavior, reduced emergency room visits, decreased rates of child abuse, decreased maternal substance abuse, lower welfare usage, and higher rates of employment.¹⁰ A three-year study of Medicaid patients found that medical costs decreased by 20.7% for those receiving mental health care.¹¹ Another study found that patients hospitalized for physical ailments, who were provided mental health care realized an average cumulative savings of \$1,000 over a 2-1/2 year period. In other words, the cost of mental health intervention was entirely paid for (or offset) by these savings.¹²

Early Learning

The Oregon Children's Plan will ensure that children have the opportunity to participate in an early learning program. It will do so by expanding access to quality preschool programs and the Oregon PreKindergarten/Head Start Program. Research indicates that children who participate in Oregon PreKindergarten/Head Start enter school ready to learn. The typical child completing the program has skills in early literacy and numbers and social skills.¹³ Head Start is based on the acclaimed Perry Preschool Program. Longitudinal research of the program (up to age 27 of the child participant) found short-term gains in IQ and educational achievement, and long-term gains in increased graduation rates, decreased crime and delinquency, higher income and decreased participation in welfare.¹⁴ A RAND study estimates, with a 95% confidence rate, that the savings to government are much higher than the costs for the program (\$25,000 versus \$12,000).¹⁵ Another review found that in 1998 dollars, the Program would cost \$13,938 per child. A \$9,237 taxpayer gain in subsequent criminal justice system benefits was found for each program participant. Taxpayers receive \$0.66 in criminal justice system benefits for every dollar spent. And, crime victims saved an average of \$11,717 in costs for each program participant, for a combined taxpayer and crime victim benefit of \$1.50 for every dollar spent.¹⁶

Summary

Research findings suggest that critical brain development occurs in the early years of life. These early childhood years provide a window of opportunity to enhance input into the brain by addressing such stressors as poverty and dysfunctional home environments. In addition, "the most effective and cost efficient way to reduce crime is to identify and intervene with high-risk children early in their lives."¹⁷ Many studies now confirm the common sense belief that the sooner at-risk children receive help, the greater the chances of keeping them out of the criminal justice system and other related troubles. And, reduced use of the criminal justice system will result in a return to taxpayers in the form of healthy and productive citizens, decrease in victimization, increase in educated and taxpaying adults and decreased utilization of public services (including child welfare, public assistance and criminal justice). Quite simply, we can pay now, or pay later.

The Oregon Children's Plan is built on successful models of providing support and services to families with young children. Each component of the OCP is grounded in research. The Oregon Children's Plan will result in improved outcomes for children and their families, and a return on taxpayer investment.

DEPARTMENT OF HOMELAND SECURITY
REORGANIZATION PLAN
November 25, 2002

Introduction

This Reorganization Plan is submitted pursuant to Section 1502 of the Department of Homeland Security Act of 2002 (“the Act”), which requires submission, not later than 60 days after enactment, of a reorganization plan regarding two categories of information concerning plans for the Department of Homeland Security (“the Department” or “DHS”):

- (1) The transfer of agencies, personnel, assets, and obligations to the Department pursuant to this Act.
- (2) Any consolidation, reorganization, or streamlining of agencies transferred to the Department pursuant to this Act. Section 1502(a).

Section 1502(b) of the Act identifies six elements, together with other elements “as the President deems appropriate,” as among those for discussion in the plan. Each of the elements set out in the statute is identified *verbatim* below, followed by a discussion of current plans with respect to that element.

This plan is subject to modification pursuant to Section 1502(d) of the Act, which provides that on the basis of consultations with appropriate congressional committees the President may modify or revise any part of the plan until that part of the plan becomes effective. Additional details concerning the process for establishing the Department will become available in the coming weeks and months, and the President will work closely with Congress to modify this plan consistent with the Act.

Plan Elements

(1) Identification of any functions of agencies transferred to the Department pursuant to this Act that will not be transferred to the Department under the plan.

Except as otherwise directed in the Act, all functions of agencies that are to be transferred to the Department pursuant to the Act will be transferred to the Department under the plan. The functions of agencies being transferred to the Department which the Act directs are not to be transferred are the following:

- Pursuant to Section 201(g)(1) of the Act, the Computer Investigations and Operations Section (“CIOS”) of the National Infrastructure Protection Center (“NIPC”) of the Federal Bureau of Investigation (“FBI”) will not transfer to the Department with the

rest of NIPC. CIOS is the FBI headquarters entity responsible for managing all FBI computer intrusion field office cases (whether law enforcement or national security related).

- Pursuant to Sections 421(c) & (d) of the Act, the regulatory responsibilities and quarantine activities relating to agricultural import and entry inspection activities of the United States Department of Agriculture (“the USDA”) Animal and Plant Health Inspection Service (“APHIS”) will remain with the USDA, as will the Secretary of Agriculture’s authority to issue regulations, policies, and procedures regarding the functions transferred pursuant to Sections 421(a) & (b) of the Act.
- Pursuant to Subtitle B of Title IV of the Act, the authorities of the Secretary of the Treasury related to Customs revenue functions, as defined in the statute, will not transfer to the Department.
- Functions under the immigration laws of the United States with respect to the care of unaccompanied alien children will not transfer from the Department of Justice to DHS, but will instead transfer to the Department of Health and Human Services pursuant to Section 462 of the Act.

(2) Specification of the steps to be taken by the Secretary to organize the Department, including the delegation or assignment of functions transferred to the Department among officers of the Department in order to permit the Department to carry out the functions transferred under the plan.

A. Steps to be taken by the Secretary to organize the Department. The President intends that the Secretary will carry out the following actions on the dates specified. All of the following transfers shall be deemed to be made to DHS, and all offices and positions to be established and all officers and officials to be appointed or named shall be deemed to be established, appointed, or named within DHS.

January 24, 2003 (effective date of the Act pursuant to Section 4):

- Establish the Office of the Secretary.
- Begin to appoint, upon confirmation by the Senate, or transfer pursuant to the transfer provisions of the Act, as many of the following officers as may be possible:
 - (1) Deputy Secretary of Homeland Security
 - (2) Under Secretary for Information Analysis and Infrastructure Protection
 - (3) Under Secretary for Science and Technology
 - (4) Under Secretary for Border and Transportation Security

- (5) Under Secretary for Emergency Preparedness and Response
 - (6) Director of the Bureau of Citizenship and Immigration Services
 - (7) Under Secretary for Management
 - (8) Not more than 12 Assistant Secretaries
 - (9) General Counsel
 - (10) Inspector General
 - (11) Commissioner of Customs
- Name, as soon as may be possible, officers to fill the following offices created by the Act:
 - (1) Assistant Secretary for Information Analysis
 - (2) Assistant Secretary for Infrastructure Protection
 - (3) Privacy Officer
 - (4) Director of the Secret Service
 - (5) Chief Information Officer
 - (6) Chief Human Capital Officer
 - (7) Chief Financial Officer
 - (8) Officer for Civil Rights and Civil Liberties
 - (9) Director of Shared Services
 - (10) Citizenship and Immigration Ombudsman
 - (11) Director of the Homeland Security Advanced Research Projects Agency
 - Establish, within the Office of the Secretary, the Office for State and Local Government Coordination, the Office of International Affairs, and the Office of National Capital Region Coordination.
 - Establish the Homeland Security Advanced Research Projects Agency and the Acceleration Fund for Research and Development of Homeland Security Technologies.
 - Establish within the Directorate of Science and Technology the Office for National Laboratories.
 - Establish the Bureau of Border Security, the Bureau of Citizenship and Immigration Services, and the Director of Shared Services.
 - Establish the Transportation Security Oversight Board with the Secretary of Homeland Security as its Chair.

March 1, 2003:

- Transfer the Critical Infrastructure Assurance Office (“CIAO”) of the Department of Commerce, the National Communications System (“the NCS”), the NIPC of the FBI (other than the CIOS), the National Infrastructure Simulation and Analysis Center (“NISAC”), the Energy

Assurance Office (“EAO”) of the Department of Energy, and the Federal Computer Incident Response Center of the General Services Administration (“FedCIRC”).

- Transfer the Coast Guard.
- Transfer the Customs Service, the Transportation Security Administration (“the TSA”), functions of the Immigration and Naturalization Service (“the INS”), the Federal Protective Service (“the FPS”), the Office of Domestic Preparedness (“the ODP”), and the Federal Law Enforcement Training Center (“the FLETC”).
- Transfer the functions of the Secretary of Agriculture relating to agricultural import and entry inspection activities under the laws specified in Section 421(b) of the Act from the Animal and Plant Health Inspection Service.
- Transfer the United States Secret Service.
- Transfer the following programs and activities to the Directorate of Science and Technology:
 - The chemical and biological national security and supporting programs and activities of the nonproliferation and verification research and development program of the Department of Energy.
 - The life sciences activities related to microbial pathogens of the Biological and Environmental Research Program of the Department of Energy.
 - The National Bio-Weapons Defense Analysis Center of the Department of Defense.
 - The nuclear smuggling programs and activities within the proliferation detection program of the nonproliferation and verification research and development program of the Department of Energy.
 - The nuclear assessment program and activities of the assessment, detection, and cooperation program of the international materials protection and cooperation program of the Department of Energy and the advanced scientific computing research program and activities at Lawrence Livermore National Laboratory of the Department of Energy.

- The Environmental Measurements Laboratory of the Department of Energy.
- Transfer the Federal Emergency Management Agency (“FEMA”).
- Transfer the Integrated Hazard Information System of the National Oceanic and Atmospheric Administration, which shall be renamed “FIRESTAT.”
- Transfer the National Domestic Preparedness Office of the FBI, including the functions of the Attorney General relating thereto.
- Transfer the Domestic Emergency Support Team of the Department of Justice, including the functions of the Attorney General relating thereto.
- Transfer the Metropolitan Medical Response System of the Department of Health and Human Services, including the functions of the Secretary of Health and Human Services and Assistant Secretary for Public Health Emergency Preparedness relating thereto.
- Transfer the National Disaster Medical System of the Department of Health and Human Services, including the functions of the Secretary of Health and Human Services and Assistant Secretary for Public Health Emergency Preparedness relating thereto.
- Transfer the Office of Emergency Preparedness and the Strategic National Stockpile of the Department of Health and Human Services, including the functions of the Secretary of Health and Human Services and Assistant Secretary for Public Health Emergency Preparedness relating thereto.
- Transfer to the Secretary the authority (in connection with an actual or threatened terrorist attack, major disaster, or other emergency in the United States) to direct the Nuclear Incident Response Team of the Department of Energy to operate as an organizational unit.

June 1, 2003:

- Transfer the Plum Island Animal Disease Center of USDA.
- Establish the Homeland Security Science and Technology Advisory Committee.

By September 30, 2003:

- Complete any incidental transfers, pursuant to Section 1516 of the Act, of personnel, assets, and liabilities held, used, arising from, available, or to be made available, in connection with the functions transferred by the Act.

B. Delegation or Assignment Among Officers of Functions Transferred to the Department. The President intends that the Secretary will delegate or assign transferred functions within the Department as follows:

1. Information Analysis and Infrastructure Protection

- a. Under Secretary for Information Analysis and Infrastructure Protection (“IA and IP”): Will be responsible for oversight of functions of NIPC, NCS, CIAO, NISAC, EAO, and FedCIRC transferred by the Act, the management of the Directorate’s Information Analysis and Infrastructure Protection duties, and the administration of the Homeland Security Advisory System.
- b. Assistant Secretary for Information Analysis: Will oversee the following Information Analysis functions:
 - Identify and assess the nature and scope of terrorist threats to the homeland; detect and identify threats of terrorism against the United States; and, understand such threats in light of actual and potential vulnerabilities of the homeland.
 - In coordination with the Assistant Secretary for Infrastructure Protection, integrate relevant information, analyses, and vulnerability assessments (whether such information, analyses, or assessments are provided or produced by the Department or others) in order to identify priorities for protective and support measures by the Department, other agencies of the Federal Government, State and local government agencies and authorities, the private sector, and other entities.
 - Ensure the timely and efficient access by the Department to all information necessary to discharge the responsibilities under Section 201 of the Act, including obtaining such information from other agencies of the Federal Government.
 - Review, analyze, and make recommendations for improvements in the policies and procedures governing the sharing of law enforcement information, intelligence information, intelligence-related information, and other information relating to homeland security within the Federal

Government and between the Federal Government and State and local government agencies and authorities.

- Disseminate, as appropriate, information analyzed by the Department within the Department, to other agencies of the Federal Government with responsibilities relating to homeland security, and to agencies of State and local governments and private sector entities with such responsibilities in order to assist in the deterrence, prevention, preemption of, or response to, terrorist attacks against the United States.
- Consult with the Director of Central Intelligence and other appropriate intelligence, law enforcement, or other elements of the Federal Government to establish collection priorities and strategies for information, including law enforcement-related information, relating to threats of terrorism against the United States through such means as the representation of the Department in discussions regarding requirements and priorities in the collection of such information.
- Consult with State and local governments and private sector entities to ensure appropriate exchanges of information, including law enforcement-related information, relating to threats of terrorism against the United States.
- Ensure that—
 1. Any material received pursuant to the Act is protected from unauthorized disclosure and handled and used only for the performance of official duties; and
 2. Any intelligence information under the Act is shared, retained, and disseminated consistent with the authority of the Director of Central Intelligence to protect intelligence sources and methods under the National Security Act of 1947 (50 U.S.C. Section 401, et seq.) and related procedures and, as appropriate, similar authorities of the Attorney General concerning sensitive law enforcement information.
- Request additional information from other agencies of the Federal Government, State and local government agencies, and the private sector relating to threats of terrorism in the United States, or relating to other areas of responsibility assigned by the Secretary, including the entry into cooperative agreements through the Secretary to obtain such information.

- Establish and utilize, in conjunction with the Chief Information Officer of the Department, a secure communications and information technology infrastructure, including data-mining and other advanced analytical tools, in order to access, receive, and analyze data and information in furtherance of statutory responsibilities, and to disseminate information acquired and analyzed by the Department, as appropriate.
- Ensure, in conjunction with the Chief Information Officer of the Department, that any information databases and analytical tools developed or utilized by the Department—
 1. Are compatible with one another and with relevant information databases of other agencies of the Federal Government; and
 2. Treat information in such databases in a manner that complies with applicable Federal law on privacy.
- Coordinate training and other support to the elements and personnel of the Department, other agencies of the Federal Government, and State and local governments that provide information to the Department, or are consumers of information provided by the Department, in order to facilitate the identification and sharing of information revealed in their ordinary duties and the optimal utilization of information received from the Department.
- Coordinate with elements of the intelligence community and with Federal, State, and local law enforcement agencies, and the private sector, as appropriate.
- Provide intelligence and information analysis and support to other elements of the Department.

c. Assistant Secretary for Infrastructure Protection: Will oversee the following Infrastructure Protection functions:

- Carry out comprehensive assessments of the vulnerabilities of the key resources and critical infrastructure of the United States, including the performance of risk assessments to determine the risks posed by particular types of terrorist attacks within the United States (including an assessment of the probability of success of such attacks and the feasibility and potential efficacy of various countermeasures to such attacks).

- In coordination with the Assistant Secretary for Information Analysis, integrate relevant information, analyses, and vulnerability assessments (whether such information, analyses, or assessments are provided or produced by the Department or others) in order to identify priorities for protective and support measures by the Department, other agencies of the Federal Government, State and local government agencies and authorities, the private sector, and other entities.
- Develop a comprehensive national plan for securing the key resources and critical infrastructure of the United States, including power production, generation, and distribution systems, information technology and telecommunications systems (including satellites), electronic financial and property record storage and transmission systems, emergency preparedness communications systems, and the physical and technological assets that support such systems.
- Recommend measures necessary to protect the key resources and critical infrastructure of the United States in coordination with other agencies of the Federal Government and in cooperation with State and local government agencies and authorities, the private sector, and other entities.
- In coordination with the Under Secretary for Emergency Preparedness and Response, provide to State and local government entities, and upon request to private entities that own or operate critical information systems, crisis management support in response to threats to, or attacks on, critical information systems.
- Provide technical assistance, upon request, to the private sector and other government entities, in coordination with the Under Secretary for Emergency Preparedness and Response, with respect to emergency recovery plans to respond to major failures of critical information systems.
- Coordinate with other agencies of the Federal Government to provide specific warning information, and advice about appropriate protective measures and countermeasures, to State and local government agencies and authorities, the private sector, other entities, and the public.

2. Science and Technology

Under Secretary for Science and Technology: Will be responsible for performing the functions set forth in Section 302 of the Act, including the following:

- Advise the Secretary regarding research and development efforts and priorities in support of the Department's missions.
- Develop, in consultation with other appropriate executive agencies, a national policy and strategic plan for identifying priorities, goals, objectives, and policies for, and coordinating the Federal Government's civilian efforts with respect to, identifying and developing countermeasures to chemical, biological, radiological, nuclear, and other emerging terrorist threats, including the development of comprehensive, research-based definable goals for such efforts and of annual measurable objectives and specific targets to accomplish and evaluate the goals for such efforts.
- Support the Under Secretary for Information Analysis and Infrastructure Protection by assessing and testing homeland security vulnerabilities and possible threats.
- Conduct basic and applied research, development, demonstration, testing, and evaluation activities that are relevant to any or all elements of the Department, through both intramural and extramural programs, except that such responsibility does not extend to human health-related research and development activities.
- Establish priorities for directing, funding, and conducting national research, development, test and evaluation, and procurement of technology and systems for—
 1. preventing the importation of chemical, biological, radiological, nuclear, and related weapons and material; and
 2. detecting, preventing, protecting against, and responding to terrorist attacks.
- Establish a system for transferring homeland security developments or technologies to Federal, State, and local governments, and to private sector entities.

- Enter into work agreements, joint sponsorships, contracts, or any other agreements with the Department of Energy regarding the use of the national laboratories or sites and support of the science and technology base at those facilities.
- Collaborate with the Secretary of Agriculture and the Attorney General as provided in Section 212 of the Agricultural Bioterrorism Protection Act of 2002 (7 U.S.C. § 8401), as amended by Section 1709(b) of the Act.
- Collaborate with the Secretary of Health and Human Services and the Attorney General in determining any new biological agents and toxins that shall be listed as ‘select agents’ in Appendix A of part 72 of title 42, Code of Federal Regulations, pursuant to Section 351A of the Public Health Service Act (42 U.S.C. § 262a).
- Support United States leadership in science and technology.
- Establish and administer the primary research and development activities of the Department, including the long-term research and development needs and capabilities for all elements of the Department.
- Coordinate and integrate all research, development, demonstration, testing, and evaluation activities of the Department.
- Coordinate with other appropriate executive agencies in developing and carrying out the science and technology agenda of the Department to reduce duplication and identify unmet needs.
- Develop and oversee the administration of guidelines for merit review of research and development projects throughout the Department, and for the dissemination of research conducted or sponsored by the Department.

3. Border and Transportation Security

The Directorate of Border and Transportation Security (“BTS”) will include the following: the Bureau of Border Security; the Office for Domestic Preparedness; the Customs Service; the Transportation Security Administration; FLETC; and FPS.

The BTS Directorate will also have in place the key leaders of the new Directorate to include:

- a. Under Secretary for BTS: Will be responsible for oversight of all responsibilities set forth in Section 402 of the Act, including the following:
- Prevent the entry of terrorists and the instruments of terrorism into the United States.
 - Secure the borders, territorial waters, ports, terminals, waterways, and air, land, and sea transportation systems of the United States, including managing and coordinating those functions transferred to the Department at ports of entry.
 - Establish and administer rules, in accordance with Section 428 of the Act, governing the granting of visas or other forms of permission, including parole, to enter the United States to individuals who are not a citizen or an alien lawfully admitted for permanent residence in the United States.
 - Establish national immigration enforcement policies and priorities.
 - Administer the customs laws of the United States, except as otherwise provided in the Act.
 - Conduct the inspection and related administrative functions of the USDA transferred to the Secretary of Homeland Security under Section 421 of the Act.
 - In carrying out the foregoing responsibilities, ensure the speedy, orderly, and efficient flow of lawful traffic and commerce.
 - Carry out the immigration enforcement functions specified under Section 441 of the Act that were vested by statute in, or performed by, the Commissioner of the INS (or any officer, employee, or component of the INS) immediately before the date on which the transfer of functions takes place.
- b. Assistant Secretary for Border Security: Will report directly to the Under Secretary for Border and Transportation Security, and whose responsibilities will include the following:

- Establish and oversee the administration of the policies for performing such functions as are--
 1. transferred to the Under Secretary for Border and Transportation Security by Section 441 of the Act and delegated to the Assistant Secretary by the Under Secretary for Border and Transportation Security; or
 2. otherwise vested in the Assistant Secretary by law.
 - Advise the Under Secretary for Border and Transportation Security with respect to any policy or operation of the Bureau of Border Security that may affect the Bureau of Citizenship and Immigration.
- c. Director of the Office for Domestic Preparedness - Will report directly to the Under Secretary for Border and Transportation Security and will have the primary responsibility within the Executive Branch of the Federal Government for the preparedness of the United States for acts of terrorism, including the following responsibilities:
- Coordinate preparedness efforts at the Federal level, and work with all State, local, tribal, parish, and private sector emergency response providers on all matters pertaining to combating terrorism, including training, exercises, and equipment support.
 - Coordinate or, as appropriate, consolidate communications and systems of communications relating to homeland security at all levels of government.
 - Direct and supervise terrorism preparedness grant programs of the Federal Government (other than those programs administered by the Department of Health and Human Services) for all emergency response providers.
 - Incorporate homeland security priorities into planning guidance on an agency level for the preparedness efforts of the Office for Domestic Preparedness.
 - Provide agency-specific training for agents and analysts within the Department, other agencies, and State and local agencies, and international entities.
 - As the lead executive branch agency for preparedness of the United States for acts of terrorism, cooperate closely with the FEMA, which shall have the primary responsibility within the

executive branch to prepare for and mitigate the effects of non-terrorist-related disasters in the United States.

- Assist and support the Secretary, in coordination with other Directorates and entities outside the Department, in conducting appropriate risk analysis and risk management activities of State, local, and tribal governments consistent with the mission and functions of the Directorate.
- Supervise those elements of the Office of National Preparedness of FEMA that relate to terrorism, which shall be consolidated within the Department in the ODP established pursuant to Section 430 of the Act.

4. Emergency Preparedness and Response

The Emergency Preparedness and Response Directorate will be headed by the Under Secretary for Emergency Preparedness and Response.

Under Secretary for EP&R: Will be responsible for all of those functions included within Section 502 of the Act, including:

- Helping to ensure the effectiveness of emergency response providers to terrorist attacks, major disasters, and other emergencies.
- With respect to the Nuclear Incident Response Team (regardless of whether it is operating as an organizational unit of the Department pursuant to the Act):
 1. Establishing standards and certifying when those standards have been met;
 2. Conducting joint and other exercises and training and evaluating performance; and,
 3. Providing funds to the Department of Energy and the Environmental Protection Agency, as appropriate, for homeland security planning, exercises and training, and equipment.
- Providing the Federal Government's response to terrorist attacks and major disasters, including:
 1. Managing such response;

2. Directing the Domestic Emergency Support Team, the Strategic National Stockpile, the National Disaster Medical System, and (when operating as an organizational unit of the Department pursuant to the Act) the Nuclear Incident Response Team;
 3. Overseeing the Metropolitan Medical Response System; and
 4. Coordinating other Federal response resources in the event of a terrorist attack or major disaster.
- Aiding the recovery from terrorist attacks and major disasters;
 - Building a comprehensive national incident management system with Federal, State, and local government personnel, agencies, and authorities, to respond to such attacks and disasters.
 - Consolidating existing Federal Government emergency response plans into a single, coordinated national response plan; and
 - Developing comprehensive programs for developing interoperative communications technology, and helping to ensure that emergency response providers acquire such technology.

5. Other Officers and Functions

- a. Director of the Bureau of Citizenship and Immigration Services: Will report directly to the Deputy Secretary; and will be responsible for the following:
 - Establishing the policies for performing such functions as are transferred to the Director by Section 451 of the Act or otherwise vested in the Director by law.
 - Oversight of the administration of such policies.
 - Advising the Deputy Secretary with respect to any policy or operation of the Bureau of Citizenship and Immigration Services that may affect the Bureau of Border Security of the

Department, including potentially conflicting policies or operations.

- Establishing national immigration services policies and priorities.
- Meeting regularly with the Ombudsman described in Section 452 of the Act to correct serious service problems identified by the Ombudsman.
- Establishing procedures requiring a formal response to any recommendations submitted in the Ombudsman's annual report to Congress within three months after its submission to Congress.

b. Citizenship and Immigration Services Ombudsman: Will report directly to the Deputy Secretary; and will be responsible for the following:

- Assisting individuals and employers in resolving problems with the Bureau of Citizenship and Immigration Services;
- Identifying areas in which individuals and employers have problems in dealing with the Bureau of Citizenship and Immigration Services; and
- Proposing changes in the administrative practices of the Bureau of Citizenship and Immigration Services to mitigate identified problems.

(3) Specification of the funds available to each agency that will be transferred to the Department as a result of transfers under the plan.

- The attached tables provide estimates of the funds available to the agencies and entities that will be transferred to the Department by operation of the Act. The two tables include total funding (mandatory and discretionary including fees) and discretionary funding net of fees. The tables provide the enacted levels for 2002 and 2002 supplementals, and the President's requested levels for 2003.

Because of the current state of the 2003 budget process, information concerning the funds that will be available to each transferring agency on the date of the proposed transfers is not currently available and will not likely be available during the time period in which the President is to submit this Reorganization Plan. As additional information becomes available, it will be provided as

may be required in accordance with the procedures under the Act for modification of this Plan or other applicable law.

(4) Specification of the proposed allocations within the Department of unexpended funds transferred in connection with transfers under the plan.

- The attached tables provide estimates of the unobligated balances as of September 30, 2002, for the agencies and programs that will be transferred to the Department. The first table provides estimates of unobligated balances for the accounts that are moving to the Department in whole. The second table provides estimates of the unobligated balances in the accounts of which only a portion will be transferring to the new Department. These latter estimates, however, are of the unobligated balances for the full account, only a portion of which are associated with the activities that will be transferred to the Department. In addition, these unobligated balances are based on the Department of Treasury's estimates as of September 30, 2002, which are the latest available figures. Since October 1, 2002, Departments and agencies (except the Department of Defense) have been operating under continuing resolutions, and, as such, have been spending these balances to maintain current operations.

Authority to reallocate unexpended funds of agencies transferred under this Plan is found in H.J. Res. 124, the continuing resolution in effect currently and until January 11, 2003. The resolution provides authority for the Office of Management and Budget to transfer an amount not to exceed \$140,000,000 from unobligated balances of appropriations enacted before October 1, 2002 "for organizations and entities that will be transferred to the new Department and for salaries and expenses associated with the initiation of the Department." Such authority may be exercised upon providing 15 days' notice to the Appropriations Committees. We anticipate that it may be necessary to provide funding through such transfers both for transferring entities and for salaries and expenses associated with the initiation of the Department, including, for example, those associated with establishing the Office of the Secretary and other new offices provided for in the Act. Any plan to use such funding will follow the procedures required under the continuing resolution, including the provision of at least 15 days' notice to the Appropriations Committees.

(5) Specification of any proposed disposition of property, facilities, contracts, records, and other assets and obligations of agencies transferred under the plan.

- There is no intention to dispose of property, facility, contracts, records, and other assets and obligations of agencies transferred under the plan. All of such assets and obligations will transfer with each agency pursuant to Section 1511(d)(1) of the Act.
- Prior to and during the transition period (as defined by Section 1501(a)(2) of the Act), the Department may identify property, facilities, contracts, records, and other assets and obligations of agencies transferred that would be candidates for disposition due to duplication, non-use, obsolescence, and the like. If and when any such proposed dispositions are identified, we will follow provisions of the Act relating to modification of this plan or further notification of Congress.

(6) Specification of the proposed allocations within the Department of the functions of the agencies and subdivisions that are not related directly to securing the homeland.

- As agencies and subdivisions are transferred into the Department, any functions of those entities that are not directly related to securing the homeland will continue to be allocated to the agencies and subdivisions in which they are currently incorporated.

ACKNOWLEDGEMENTS

The Governor's Eastside Forest Advisory Panel, a diverse, 9-member citizen panel appointed by Governor John A. Kitzhaber has been together since April 1996 with the goal of identifying guiding principles and opportunities to restore the health of forests, watersheds and the communities that depend upon them.

The team work built upon the consensus findings of a distinguished panel of Pacific Northwest scientists who, in 1995, responded to Governor Kitzhaber's request to provide recommendations for restoring forest health, providing wood products to local communities, and reducing risk of catastrophic fires in the National Forests in the Blue Mountains of Oregon.

This progress report reflects the cumulative efforts of many people who served on the Panel and those who worked with them to implement its recommendations.

The Panel's partners include scientists, Federal, State and Tribal agency administrators and on-the-ground staff with land management and economic development responsibilities in eastern Oregon.

Community groups and county commissioners were also essential partners as the scope of the Panel's work evolved over time to include private lands and broader connections to the health of eastside communities.

At the end of six years, hundreds of people have played a part in the work and success of this effort.

EXECUTIVE SUMMARY

The Governor's Eastside Forest Advisory Panel (Panel) and its partners have made important progress in identifying common ground among diverse interests that could allow us to collectively meet the goals of restoring eastside forest ecosystems, reducing the risk of catastrophic wildfire and enhancing the economic stability of rural communities.

This significant accomplishment is captured in the Governor's 11-point strategy. Examples of how it has worked on the ground can be seen in two reports, issued in 1997 and 1999, which catalogued 56 projects on public lands. Subsequent accomplishments are described in Blue Mountains Demonstration Area annual reports.

This report highlights the importance of working collaboratively across the landscape using an agreed-upon set of guiding principles to improve the health of forests, watersheds and communities in eastern Oregon. The Panel's efforts have proven that working together with scientists, managers, communities and citizen leaders over this six year period has tremendous potential to restore forests, watersheds and communities in both the short and long term.

This report outlines the Panel's major activities. The Panel unanimously believes that the six-year effort has been worthwhile. The Panel believes its work should continue. Not only could more be accomplished on the ground given additional time, but the relationships, analyses and understanding of the problems and opportunities provide a strong foundation for experimenting and resolving forest and community health challenges faced at a national level.

The Panel's experiences, conclusions and recommendations are outlined in this report. Based on the Panel's experiences and results, we make the following findings and recommendations.

FINDINGS

- There is broad agreement among scientists and diverse stakeholders regarding our ability to improve the health of forests, watersheds and communities.
- Incorporating the Governor's 11-point strategy across all ownerships can lead to enhanced forest health and watershed management for eastern Oregon's ecosystems.
- There are barriers to achieving the land management objectives outlined in the 11-point strategy and recommended in the 1995 science panel's report.
- Continued monitoring of the Panel's recommendations regarding barriers should provide broadly applicable lessons and suggest new procedures and ways to work in eastern Oregon forests, watersheds and communities.
- Long-term dedication of elected and community leaders, Panel members and partners is essential to making significant progress to improve forest, watershed and community conditions.
- Timely, upfront involvement by distinguished scientists helps assure scientific information is used effectively by managers, citizens, partners, and communities as they collaborate on and design projects for forest and watershed restoration purposes.
- Alignment of purpose between public agencies, communities and the Administration and congressional representatives is essential to assure continuing investments over many years.
- Using an approach that empowers a diverse Panel as an overarching support and leadership framework creates and fosters effective relationships to accomplish important work.
- Field trips are essential to understanding individual frames of reference as well as to reaching agreement on effective forest, watershed and community restoration actions. Field trips and meetings are critical to gauging and celebrating progress.

RECOMMENDATIONS

- 1) Adopt the 11-point strategy for eastern Oregon as a “code for collaboration and cooperation” for restoring eastern Oregon forests, watersheds and communities.
- 2) Commit to improving processes, funding and support for creative approaches to accomplish forest, watershed and community restoration work.
- 3) Seek effective involvement of scientists with managers and partners through,
 - timely transfer of current and new science,
 - use of balanced teams of scientists, including social scientists, to periodically review progress and new developments,
 - improve availability of university, private sector, federal and state agency scientists for periodic land management practices reviews.
- 4) Invest in sharing “lessons learned” with key leaders, citizens, stakeholders and the community.
- 5) Make sure communities, leaders and public agency administrators are clearly communicating in order to achieve results for community infrastructure improvements while achieving forest and watershed ecosystem health.
- 6) Set periodic report milestones and benchmarks to review monitoring and evaluation results so progress can be determined and new barriers may be addressed. An annual report and celebration is essential to keeping partners motivated and engaged.

AN 11-POINT STRATEGY FOR RESTORING EASTERN OREGON FORESTS, WATERSHEDS AND COMMUNITIES

- 1. There are broad areas of potential agreement about goals for restoration of ecosystem health in the forests of eastern Oregon. The time is now to move forward on restoration efforts where success is most likely and that have scientific and public support**
- 2. Ecosystem health includes the health of the forests, streams, and watersheds. Achieving and maintaining good water quality and quantity should be a priority for all forest management activities.**
 - Ecosystem health involves many considerations: biological diversity, soils, resilience of the system to disturbances such as insects, disease, fire and flood.
 - Historic conditions are an important source of information when developing restoration objectives.
 - Extend watershed considerations from headwaters to human communities, and be responsive to both natural and human needs.
- 3. Ecosystem health may be improved through active management in stands which have suffered from fire exclusion, removal of large trees, and grazing. Understory thinning of green trees to restore forests to a healthy condition more representative of historic conditions is an important component of active management for forest health and can help offset costs. These conditions may be sustained by the periodic use of prescribed fire.**
 - Land management should mimic natural processes to the extent practicable. Use prescribed fire to restore historic open stand conditions in lower and mid elevation forests that have appropriate levels of surface and ladder fuels.
 - Understory thinning, especially when combined with prescribed fire, can mimic some of the effects of natural fire, and prepare the forest to function with periodic fires in the future.
 - Thinning and prescribed burns may not be appropriate for higher elevation or cold forest types (except some lodgepole pine) that historically had disturbance regimes based on stand-replacement fires.
 - Protect old growth stands that were historically maintained by fire, such as pine, larch, and aspen. Understory thinning and burning to remove young trees and inappropriate species can be effective tools to protect these important stands.
 - Management techniques will likely require financial investments and innovative contracting efforts because the economic value of these thinnings is generally lower.

- 4. Be responsive to the diversity of people dependent on forest resources including American Indian Tribes, timber-dependent communities and recreation and tourism sectors.**
 - A healthy watershed includes healthy communities that share the same geographical areas. Resource management should include strategies that maintain both forest and community health.
 - Monitoring communities and cultures is as important as monitoring forest resources.
 - Place emphasis on local participation and input that fosters ownership of land management strategies.

- 5. Plan and implement active restoration first in less controversial areas. In the short run, avoid operating in roadless areas, near fish habitat and old growth areas.**
 - Carry out active restoration first in areas and in ways of broadest public consensus, develop a track record of success, and then expand agreement and efforts to other areas.
 - Give higher restoration priority to areas with relatively high ecological integrity but with values most at risk from threats such as catastrophic fire, severe erosion, invasive species, or crowded understories.
 - Healthier ecosystems may benefit from maintenance treatments such as prescribed fire, as well as active restoration of adjacent areas.
 - Avoid treating old-growth areas unless they are at risk of uncharacteristically severe fire and understory competition, in which case understory thinning and prescribed fire may be used.

- 6. Monitoring and learning are essential to the success of ecosystem health restoration activities and will be critical to justifying continuing active management. The Forest Service, the Bureau of Land Management, the research community, Congress, the Administration, the Oregon Department of Forestry, other agencies, and the Governor's Office should join together in assuring that we learn from the management strategies employed to restore ecosystem health.**
 - A monitoring program for active restoration must include baseline data from which assessments can be made.
 - Monitoring is the essential element of adaptive management and should include implementation, effectiveness and validation monitoring.
 - Monitoring is the foundation of public acceptance and expansion of consensus on ecosystem restoration. Independent "all party" monitoring helps ensure credibility of the monitoring.

- 7. Restoration activities and planning should include all ownerships within a watershed, where possible.**
 - Look for ways that federal and state agencies and private partners such as local watershed councils, soil and water conservation districts, family forestland owner associations and other non-profits can build collaborative relationships and provide funding sources to meet watershed restoration needs irrespective of ownership.
 - Conduct watershed assessments and cumulative effects analyses across boundaries.

8. **Active management includes, but is not limited to, cutting trees, riparian area planting, reforestation, prescribed fire, road treatments, stream rehabilitation, and noxious weed management, as well as protection of ecologically sensitive areas.**
 - Develop restoration strategies that address forest, watershed, and community concerns in an integrated and comprehensive way.
 - Combine active treatments with passive approaches, for example managing livestock grazing to allow re-establishment and growth of aspen, cottonwood or other native vegetation.
 - Road treatments include fish passage and drainage improvements, closure, decommissioning, obliteration and re-contouring.

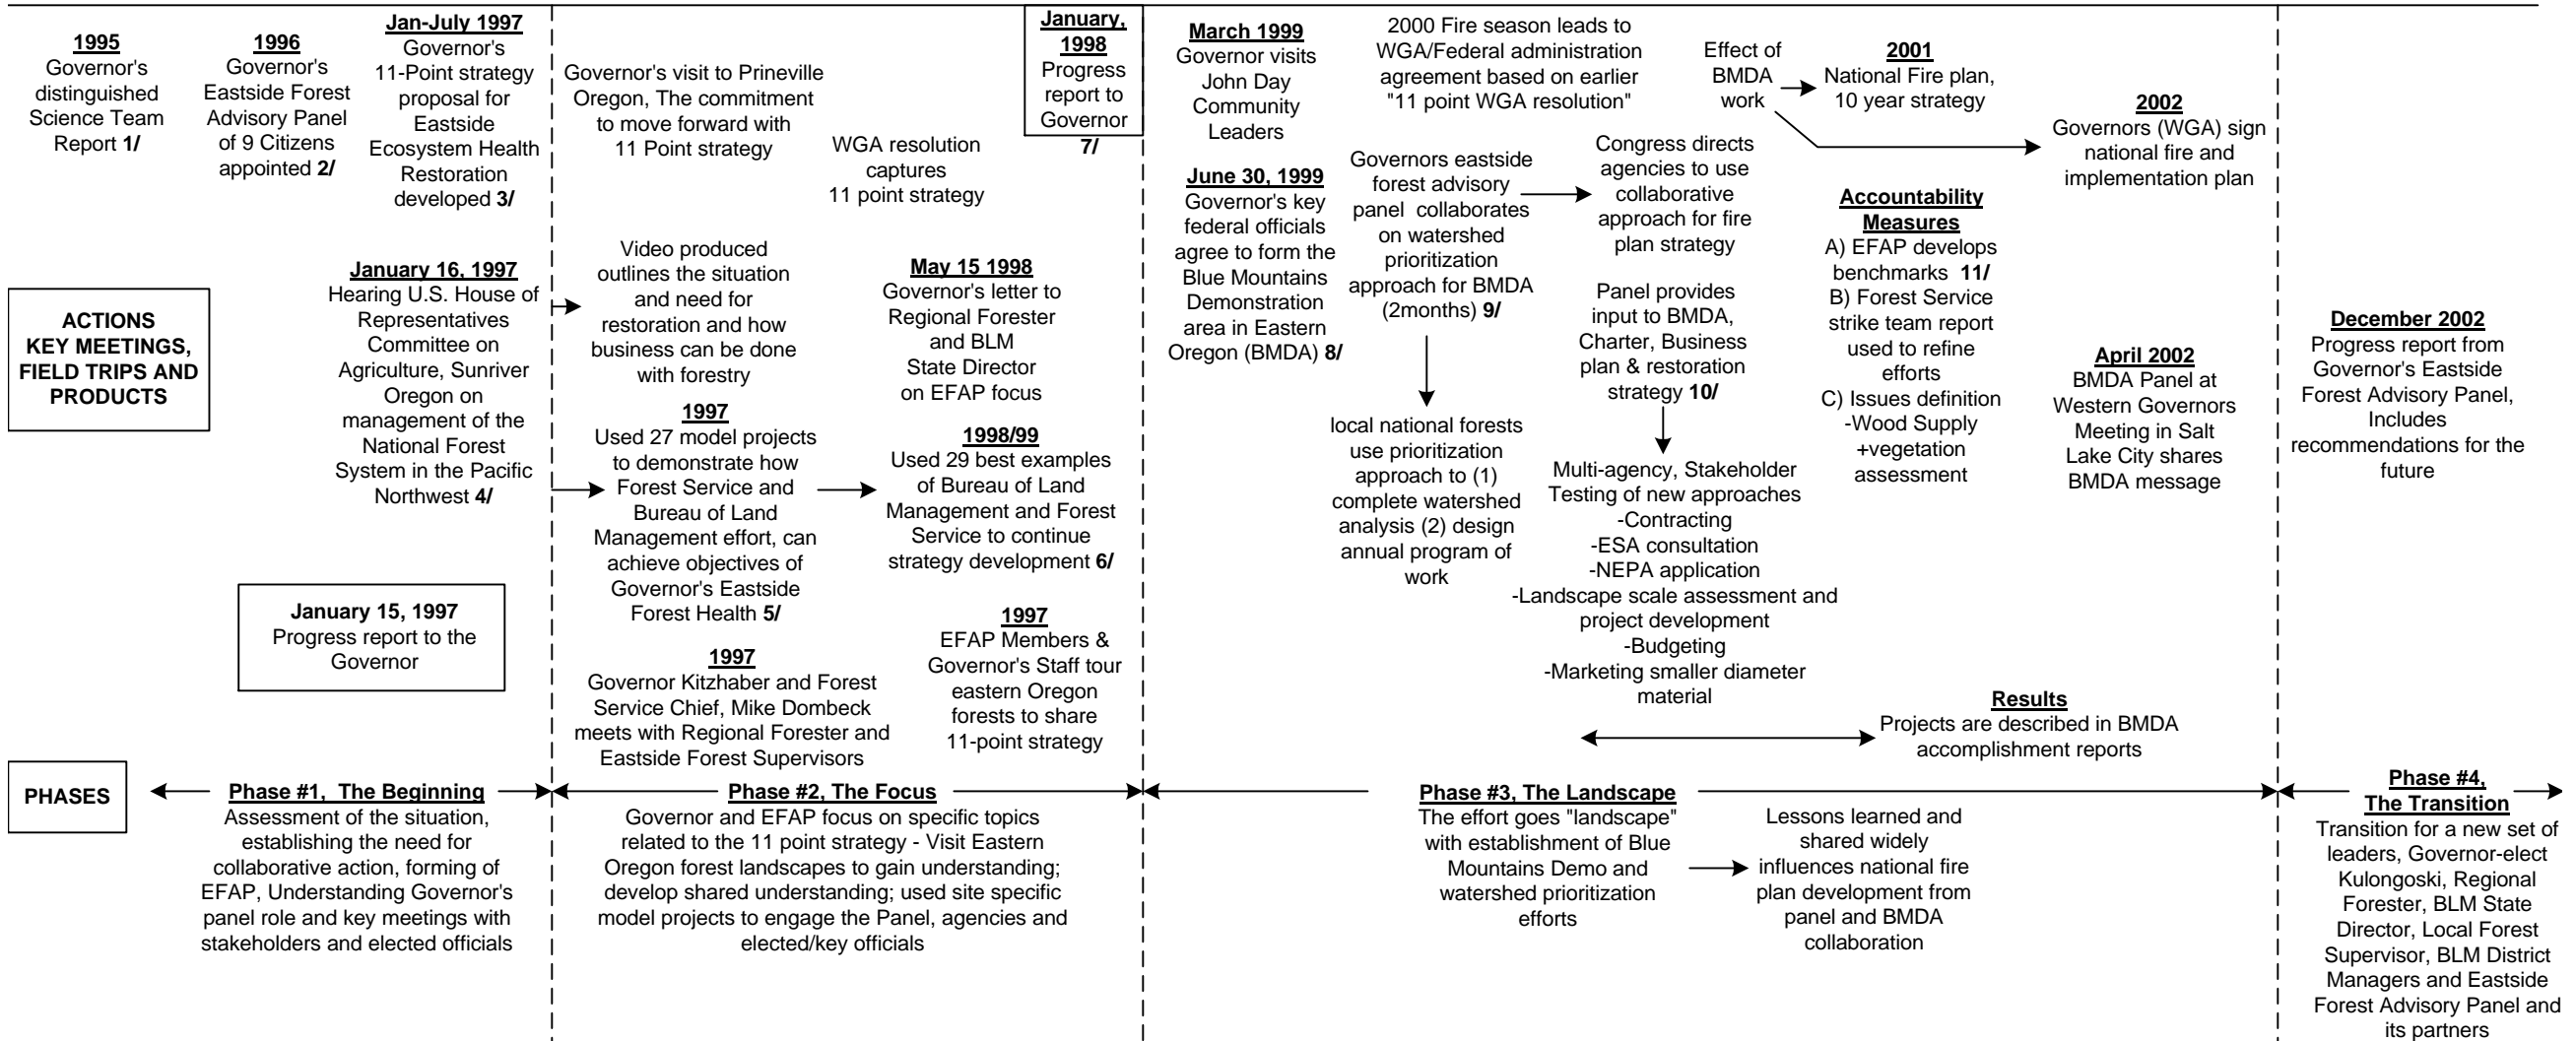

9. **Protecting soils through the use of low-impact, cost effective equipment and techniques is an essential element of restoration.**
 - Soil protection should be a high priority for all restoration activities. Soil protection involves more than selection of proper equipment. Plan projects to minimize impacted areas and avoid sensitive areas. Pre-designate skid trails and limit activities to seasons when soils are less vulnerable to damage.
 - Provide clear direction to equipment operators based on prescriptions that establish a common understanding of soil protection objectives. Monitoring active management impacts on soil is essential.
 - Maintain and enhance workforce skills, training, and development to required.
 - Create predictable opportunities to use modern low-impact equipment to increase the likelihood of investment in such equipment.
 - Consider incentives that encourage investment in low-impact equipment, including bidding preferences or grants. As acceptance of these practices improves, look for ways to expand their application.

10. **Post-fire salvage logging is primarily an economic activity intended to benefit local communities, but may be compatible with watershed restoration and fuel reduction strategies if consistent with ecosystem health goals.**
 - Abundant snags in burned areas can provide important habitat for many species of wildlife.
 - Soils, particularly in severely burned areas, can be sensitive to disturbance and should receive even greater protection than usual.
 - Salvage logging can provide economic value and reduce the likelihood of bark-beetle outbreaks. General guidance for such logging should be developed in a way that fosters public understanding and acceptance to ensure prompt implementation and realization of benefits.

11. **Where the costs of ecosystem health restoration efforts are not paid for by sale of forest products, funds should be made available to finance these activities on a priority basis. Restoration is a long-term investment that will require support by the public and Congress.**

WORKING TO RESTORE OREGON'S EASTSIDE FOREST ECOSYSTEMS AND COMMUNITY HEALTH:

OREGON'S EXPERIENCE

A Report to Governor John Kitzhaber

Governor's Eastside Forest Advisory Panel 2002 Report

Introduction

As John A. Kitzhaber M.D. campaigned for Oregon Governor in 1994 he saw and heard about the forest health crisis. These forests faced uncharacteristically large and severe wildfires due to decades of fire exclusion and inappropriate land management practices, declining indigenous species, invading noxious weeds and extensive dead and dying stands of trees from insects and disease. The impacts of these trends on local communities, coupled with changes in land management policy in response to concerns over past management practices, had significant impacts on communities' economies and stability.

From the very beginning of his administration Governor Kitzhaber made restoring eastside forest ecosystem health one of his top priorities. He began by requesting a highly respected panel of scientists to advise him on the ecological needs of the forest. This diverse science panel provided a remarkable consensus view of what the forests needed for their health to improve.

In March of 1996 the Governor then invited nine citizens with diverse backgrounds and values to work together as members of his Eastside Forest Advisory Panel (EFAP) to advise him on how best to take the scientists' information and make progress on restoring the health of eastern Oregon's forests, streams, watersheds and communities.

The Panel's advice ranged from a broad set of guiding principles captured in the Governor's 11-point strategy to opportunities to improve current regulations and practices in order to overcome obstacles to implementing worthwhile projects on the ground.

This is the third Governor's Eastside Forest Advisory Panel progress report. What follows is a brief discussion of the Panel's background and work to date. We conclude with recommendations to the Governor and a vision for the future of eastside forests.

We begin this report with lessons learned from six years of working towards common objectives with government agencies, interested stakeholders and citizens throughout eastern Oregon.

Collaboration through a high-level advisory panel works!

The Panel is unique in that many disparate interests—elected officials, foresters, environmentalists, commodity interests, educators, and tribal officials—were able to come together and reach agreement on how eastern Oregon forests should be managed. Consequently, the Panel has served as a crucible for divergent interests to work through problems and conflicting ideologies to find common ground. The Panel became a sounding board for federal and state land managers, regulatory agencies, and other interested parties to gauge public reaction to their policies and to generally discuss forest health issues in eastern Oregon. As advisors to the Governor, the highest levels of government took the Panel seriously. Their access to the Governor, their ability to provide quick feedback and their demonstrated ability to find common ground made this Panel valuable to a host of audiences and decision-makers. Adaptive management and active forest restoration are keys to managing healthy eastside forests.

Based on the work of this Panel, recommendations of the Governor's Blue Mountains science panel, review of scientific reports published over the last decade, and review of several outstanding projects designed to restore forest health, this Panel strongly supports an active management approach using adaptive management principles and the Governor's 11-point strategy. Through review of numerous exemplary forest health restoration projects, and noting movement toward strategic project prioritization across the landscape, we believe there is great promise for implementation of restoration actions across eastern Oregon forests.

We define active restoration to include activities such as prescribed fire, understory thinning, road obliteration and riparian restoration. The work and potential products generated from active restoration can help communities and local businesses remain vital and, where possible, to grow.

We must take bold action to address process and funding problems.

Process barriers, inadequate funding and mistrust of management agencies have hindered implementation of restoration work in many places. The Panel believes that there are process and regulatory changes that should be collaboratively derived to provide efficiencies and greater effectiveness while retaining environmental protection. These changes should be guided by the principle of restoring ecosystem health and community sustainability. Budget structures must change to reflect the current ecosystem restoration emphasis of federal agencies. Finally, Congress must significantly increase funding to meet the level required to restore health to landscapes in eastern Oregon. This includes reforming the way fire suppression is funded at the expense of proactive restoration work. While we see great potential for accelerated forest ecosystem restoration work applied at a landscape scale, this will only happen with a sustained, strong, unified commitment from federal agencies, the Tribes, the state, Congress, and interested stakeholders.

As stewards of surrounding forestlands, local communities in eastern Oregon must have a role in determining their own destiny.

There is a strong connection between rural communities and nearby federal forests. Various federal land management and revenue sharing laws encourage a strong interdependence. Changes in scientific understanding and social values have altered this relationship. Efforts in eastern Oregon, especially on the Blue Mountain Demonstration Area, demonstrate the role communities can play as stewards. There is a clear need for restoration across eastern Oregon

This approach is exportable

All of the consensus building, education, and community involvement coalesce around a simple strategic plan. In our case, that plan is the 11-point strategy for restoring eastern Oregon forests, watersheds, and communities. We believe the 11-points strategy cuts through the mind-numbing complexity of several issues into a central strategic framework that all citizens can understand. With some modifications, we believe the general principles found in the 11-point strategy can be used in western states. We believe our plan has staying power to guide the decades of ecosystem restoration needed throughout the Inland West.

The Governor's Eastside Forest Advisory Panel, Its Charter, and Its Work-1996-2002

In March of 1996, Governor John A. Kitzhaber M.D. invited nine citizens with diverse backgrounds and values to work together as members of his Eastside Forest Advisory Panel to help advise him on the progress of restoring the health of eastern Oregon's forests, streams, watersheds and communities. The Panel was created as a way to blend the values of Oregonians with the science panel's recommendations. The 1995 Science Team recommended to the Governor "active management is desired to improve the long-term health of Oregon forests and reduce the risk of catastrophic wildfire".

At the Panel's first meeting on April 3, 1996, in Pendleton, the Governor outlined his expectations and direction that would guide the Panel's work. He said:

"You may want to meet five or six times a year and I see most of the meetings to involve on-site reviews of the most successful and most controversial forest health projects...you may solicit input from federal, state and local governments, environmental groups, industry and from the public... I have asked the scientists who authored the report to serve as a separate panel and provide you with technical expertise."

He recognized "the key to our progress will be moving ahead first where we have the broadest areas of agreement and taking on progressively more complex and controversial tasks later."

The Governor instructed the Panel to construct a vision for eastern Oregon forest ecosystems that: 1) restores the health of the forests themselves; 2) restores the health of riparian systems and watersheds; 3) provides wood to communities; and 4) reduces the risk of catastrophic fire. His mission statement directed the Panel to:

- 1) Review efforts by the public and private landowners to restore ecosystem health;
- 2) Assess the success of various management strategies and identify impediments to improving forest and aquatic health;
- 3) Suggest ways in which local, state and federal agencies can better assist restoration efforts; and
- 4) Report to the Governor periodically.

The Beginning Phase - 1996 to 1997

From 1996 to early 1997, keying on the scientists' report and the 11-point strategy, the Panel found itself building relationships, reaching out to key stakeholders and elected leaders, building its collective understanding of the challenges in its mission. There were spirited discussions and debate between Panel members who shared their frustrations, interests and views about the situation and what it would take to reach a common understanding.

The Panel refined their mission statement and further defined, collaboratively, the Governor's 11-point strategy.

The Focus Phase - 1997 to 1998

An important product in this phase was the further refining and applying the Governor's 11-point strategy. At a January 16, 1997 U.S. House of Representatives field hearing on the "Management of National Forests in the Pacific Northwest" Governor Kitzhaber shared his 11-point strategy and outlined the importance of working together with all affected parties to address eastern Oregon forest, watershed and community conditions.

The Panel worked to make operational the 11-point strategy and to measure the progress and quality of the work being done. The Panel was a critical conduit for communicating the strategy among National Forests. Following meetings and field tours across eastern Oregon with stakeholders, agency leaders and implementers, the Panel used the information to help the Governor work with federal agencies to select model projects illustrating how agencies were achieving the Governor's forest health restoration strategy. The Governor and Panel members visited communities like John Day, Enterprise and Prineville to underscore their commitment and to discuss the Panel's work and opportunities.

In January, 1998, the Panel posted its second progress report and shared its views on five important barriers needing attention: 1) U.S. Forest Service agency procedures, 2) political processes, 3) funding, 4) public trust and 5) use of the 11-point strategy.

The Landscape Phase-1999 to Present

Following the success of the "model projects" approach, in the spring of 1999, the Panel decided to move from a project to a landscape focus in order to test and learn in the context of a larger area. The Panel worked with the Governor and federal agencies to create the 2.6 million-acre Blue Mountains Demonstration Area (BMDA), designated on June 30, 1999. The Panel provided input to agency officials for their development of a BMDA Charter, Business Plan and Restoration Strategy.

In 1999 the Panel's watershed prioritization for the BMDA helped the National Forests refine their prioritization of watersheds, which then influenced the design of annual restoration programs of work. In 2000, Panel and BMDA work found its way into Western Governors' Association (WGA) resolutions, workshops and collaborative thought in the West. The work served as a blueprint for WGA strategies dealing with the effects of a historic 2000 wildfire season.

In 2001 the Panel began its work on Benchmarks to measure progress under the 11-point strategy and mission statement. In April 2002 at the WGA Enlibra II Conference, the BMDA and Panel's work were discussed and supported as successful collaborative models for resolving forest health and governance problems.

The Transition Phase 2003 and Beyond

As 2002 winds down, Governor-elect Ted Kulongoski prepares to take office and a new Regional Forester and BLM State Director begin their tenure. The future of the Panel and its partners is uncertain. The Governor's Eastside Forest Advisory Panel continues to be a forum where diverse interests can build consensus and learn from one another as they advocate for improving the health of forests and rural communities.

We feel it is important to continue the collaborative work of the Panel. The 11-point strategy remains a valid approach and one that is gaining acceptance and momentum across the West. The strategy succinctly and coherently summarizes the lessons and recommendations of interested stakeholders inside and outside of eastern Oregon.

The Panel: Meeting Its Objectives and Future Work

Accomplishments

A reference point to gauge accomplishments comes from the Panel's November 1999 Mission Goals and Objectives Statement (Appendix C) stated objectives.

1) Review and provide feedback on implementation of the Blue Mountains Demonstration Area effort and the 1997 and 1998 model projects.

Under this objective the manager of the Blue Mountains Demonstration Area and Umatilla National Forest Supervisor were regular participants and contributors to help the Blue Mountains and related Panel efforts to progress. The Panel's individual and collective public outreach efforts built public understanding. Useful advice was gained from the U.S. Forest Service Chief's Strike Team visit. Formal and informal support from key leaders developed from such actions and field related activities.

2) Represent the Governor in the Blue Mountains Demonstration Area partnership.

The Panel provided consistent input to BMDA staff and managers by focusing on the citizen point of view, on what was important and appropriate. This was underscored by field trips and dialogue around BMDA business plan development.

3) Assist collaborative efforts between regulatory agencies and land management agencies.

The Panel and Governor were insistent on the need for integrated concurrent funding and staffing for cooperating agencies to allow projects to move ahead in a timely fashion while assuring protection of the environment and habitat for sensitive species.

Regulatory staff from the U.S. Fish and Wildlife Service and National Marine Fisheries Service (now known as NOAA Fisheries) moved to eastern Oregon to be close by their land management agency colleagues. This was done by with Panel encouragement and support. Since that time regulatory agency teamwork has improved and approval has been received for Endangered Species Act related project design criteria for land management agencies use. This is an important step in the right direction.

4) Monitor the implementation by the Forest Service and BLM of the Governor's recommendations (including those in the Governor's May 15, 1998, letter).

Monitoring was accomplished by constant field trips and presentations. The 56 pilot projects resulted from the Panel's use of the 11-point strategy to discuss, sort and establish project priorities. Tribal member, Lewis E. Pitt Jr., provided important insight and advice on the Panel's approach. Trips were taken to Tribal lands to gain greater understanding so Tribal interests and needs were not left out.

Oregon State University scientists worked on Panel sub-committees to provide important information and insight for proposed projects and approaches. The successful U.S. Forest Service Strike Team visits and recommendations further improved the teamwork and approach. It also focused national attention on important processes like National Environmental Policy Act planning procedures.

Presentations on local forest product markets by the U.S. Forest Service, Sustainable Northwest and Joseph Timber gave the Panel and its partners better understanding of connection between vegetation treatments and local manufacturing capacity. This work continues, as critical data are needed on vegetation condition across the landscape. Recently the Panel adopted a set of benchmark measures for success as the best way to measure Panel progress. Those measures need to be put into place in 2003.

5) Make on-the-ground visits to address specific ecosystem health and restoration issues as identified by the Panel.

Many on-the-ground visits were made. Past Panel progress reports and this report's appendix E. outlines the number, location, and topics discussed by the Panel.

The Panel's Future: Addressing the Challenges in Moving Forward

The Panel has unanimously endorsed continuing to have a citizen-based forest advisory panel. It has proven valuable and important to working across the landscape in eastern Oregon to restore forests, streams, watersheds and communities. Equally important is the fact that barriers needing lasting solutions still remain to be fully addressed.

Barriers

- **U.S. Forest Service Agency procedures:** Compartmentalization and conflicting goals both within the U.S. Forest Service and between federal and state agencies can potentially restrict the agency from efficiently implementing the broad ecosystem management approach needed for restoring forest health. Procedures and administrative requirements can be very time consuming and expensive to implement. NEPA requirements and interagency consultation can take years to complete.
- **Political Landscape:** Natural resources debates continue in the Pacific Northwest. Although the Panel's efforts as well as those of the Western Governor's Association and other local groups have brought stakeholders together, it would be very easy for the issue to again become very polarized. It is critical that we continue to focus on areas of agreement.
- **Funding:** Significant and drastic cuts in agency staffing and funding have made it difficult to implement the forest health strategy. Congress must recognize the need to provide a stable, long term funding source for the work that needs to be done on these federal lands. Revenues from timber harvest cannot and should not be depended on to fully fund these activities.
- **Public Trust:** Forest health efforts are complex and do not have quick fixes. The Panel believes that if the federal agencies can successfully implement forest health restoration projects and effectively communicate these successes, significant progress in improving public trust can be made. Strong scientific support combined with broad stakeholder involvement is essential to building this trust. Inaccurate media coverage, incomplete scientific understanding and uncoordinated performance accountability erode public trust. Availability of scientists, technology transfer and public outreach specialists can provide accurate, clear communication, critical to making progress and rebuilding public trust of management and restoration approaches for public and private lands.
- **Public Agency Cultures:** Agency staff should be rewarded for innovative, effective approaches to working across the landscape and in communities to restore forest, watershed conditions and to help restore hope. Agency approaches and cultures have developed through independent program silos. This is reflected in how federal agency budgets are structured and delivered. Communities and partners lament the turnover of valuable staff in local communities. They also see a decentralized agency culture that attempts to work with highly centralized agency cultures who do not have field delegated authority. Agency administrators understand this and are starting to promote and demand horizontally integrated approaches. These efforts need to continue, as does the orientation of new leaders and managers who have not previously worked in this environment.

Struggles

The Panel's greatest success has been its ability to identify and deliver a forest management strategy that can improve forest health, protect sensitive species, reduce the risk of catastrophic wildfire and provide commodities to local communities. Unfortunately, getting the work done "on-the-ground" has been disappointingly slow. The result is that many rural communities continue to suffer significant economic hardship, especially those dependent on timber from federal forests.

Achieving this Panel's goal of providing wood to communities has been problematic. As illustrated in Appendix G and I, the trends for total forest products, saw-timber wood products and numbers of wood manufacturing facilities continues to decline. All major eastern Oregon communities are located within fifteen miles of a National Forest. There are numerous National Forests in eastern Oregon and many communities of this region evolved with a timber-based economy. Companies erected permanent sawmills based on their acquired private timberlands and because local National Forests and Bureau of Land Management units were being managed to provide a high level of timber.

However, as scientific understanding improved and public interest in protecting special places like wilderness and watersheds increased, the land base that might produce forest products on a regular basis declined. Public and private forests continued to be harvested, experienced severe wildfire, and insect and disease events as forest conditions changed. The Panel is in the midst of looking at this situation. It is important to have a common understanding and consensus on the interaction of the Panel's four goals, the potential restoration opportunities, the desire to promote community vitality and the potential mix of restoration activities for investment purposes.

On December 3, 2002, the U.S. Forest Service's Acting Regional Forester sent to the Governor an assessment of timber products that could result from thinning of dense (forest) stands in the Blue Mountains of Oregon. She observed that this 5.5 million acre landscape-level assessment does need further specific local refinements. She said the companion assessment of private and State forestlands is progressing, but is not yet available. It is important the Panel review both assessments before coming to judgments about how this information could affect future investments in timber processing and manufacturing.

Budget, staffing and capacity to increase our efforts, is a struggle.

This is a dynamic struggle that is usually long, hard, raises hopes and expectations and draws people together. When forces beyond the control of the local forests and regional forester shift resources away, reducing their capacity, it undermines the willingness to partner and the ability to get needed restoration work done. It also puts a chill on private investment.

In many instances, this happened during the tenure of the Panel, creating communication challenges, disappointments, and real hurdles. For example, funding was reduced on the eastside forests after partners had lobbied for and succeeded in having other funds targeted for the BMDA effort, and ultimately found relatively few new resources.

In 2002, this struggle became more pronounced when a historic wildfire season caused the agencies to have to "borrow" significant funds from existing accounts to pay for the unexpected firefighting costs. Borrowed funds drained funding scheduled to go into restoration and rural community projects. This slowed the pace of restoration and left many partners "holding the bag." It is not clear whether all of the private partners will remain viable lacking the income expected from projects. This can turn relationships sour and generate cracks in fledgling relationships critical to success of restoration work

The Panel learned that there needs to be significant multi-year funding. Some of those resources can come from forest product values recovered, but they will not cover the total funding needed to accomplish the landscape restoration activities in a coordinated and integrated fashion.

Processes and active adaptive management needs constant attention by top-level managers to keep relationships and communication effective. Timely changes are made through adaptive management as we continue to learn from our experiences and apply effective solutions. This is an important area where the Panel is most effective in working with communities, Congressional representatives and top-level agency officials to take coordinated action.

Eastside Forest Advisory Panel's Report Recommendations to the Governor

- 1) The Governor's Office, U.S. Forest Service, Bureau of Land Management, U.S Fish and Wildlife Service, NOAA Fisheries and Environmental Protection Agency should adopt the 11-point strategy for eastern Oregon forests as a "Code of Collaboration and Cooperation for Eastern Oregon Forest and Community Health".**

This adoption ensures collaborative work to date continues. The Governor's Eastside Forest Advisory Panel should continue under its collaboratively developed Mission Statement and November 12, 1999, Goals and Objectives statement. We agree with ecosystem management principles from the 1995 Science Team's report. The Panel should advance and advocate projects on public lands which meet this intent. The Panel's benchmark measures and collective monitoring to gauge progress should be adopted.

- 2) Seek effective involvement of scientists with managers and partners through a) timely and quality transfer of current and new science, b) use of balanced teams of scientists, including social scientists, to periodically review progress and new developments, and c) improve availability of university, private sector, federal and state agencies scientists for periodic review of land management practices.**

The Panel working with the Oregon's Institute of Natural Resources should develop criteria for utilizing scientific information generated from within and outside of the public agencies to assure consistent application and speedy implementation. The Panel, Governor and elected officials should seek enhanced funding to support research and transfer of new technology and information to agency staff.

- 3) Commit to improving processes, funding and support for creative approaches to accomplish forest, watershed and community restoration work.**

The U.S. Forest Service and its partners should continue on and expand the Blue Mountains Demonstration Area and other associated work with effective application of processes under the National Environmental Policy Act and Section 7 Consultation under the Endangered Species Act throughout eastern Oregon. Federal and State agencies should work with communities and interested local organizations to ensure that landscape analysis and packaging of projects and funding provide quality work opportunities on public and private lands. The Governor and U.S. Forest Service should work with the Panel to seek effective involvement in upcoming National Forest Plan revisions with the 11-point strategy and benchmarks as a framework for dialogue, cooperation and coordinated action.

4) Invest in sharing “lessons learned” with key leaders, citizens, stakeholders and communities.

It is important to invest in continuing the relationship with communities, citizens, Congressional leaders, and interested organizations, both public and private, so a stronger network of allies is developed. The Governor’s Office, state, federal agency, and Tribal administrators should continue with the Panel’s help to sponsor and conduct field trips and presentations. Congress and agency partners should request and acquire the resources and support to work creatively to achieve shared objectives. Agencies and their partners should leverage resources with interested people and organizations' resources to work from site-specific projects to working landscapes to achieve our goals. Congress, the Governor and agencies should acquire and promote the use of effective high and low technology means so public understanding and engagement is encouraged through use of improved writing, presentation tools and approaches for analysis and decision documents.. The Panel should encourage effective dialogue to build decisions that lead to results.

5) Invest to assure leaders and public agency administrators understand the effects of forest restoration decisions on infrastructure capacity and community vitality.

The Governor, agency administrators and elected leaders should provide the incentives and resources to use effective tracking, sharing and projecting forest products information and forest restoration schedules so communities and businesses understand the capability of local public lands to supply local manufacturing so that businesses can revise, refine and/or build new business plans. The Governor, elected leaders and agency administrators need to be open, sensitive and timely in implementing and supporting “community/business transition strategies” and assistance. Agencies and communities should use all-party monitoring, evaluation and real time feedback to inform stakeholders and the Panel.

Congress needs to increase agency budgets far above current levels—even above the budget boost from the National Fire Plan. It took 150 years for the landscape to reach this unhealthy condition, and it will take decades of sustained funding to restore more natural disturbance patterns consistent with human use. The Panel, Governor and elected leaders need to support increased federal agency program budgets for this work and seek agency budget reform so all involved federal agencies can work effectively together on a landscape basis.

6) Set periodic report milestones and benchmarks to review monitoring and evaluation results so progress can be determined and new barriers can be addressed. An annual report and celebration review is essential to keeping partners motivated and engaged.

The Panel should report on a regular basis its achievements and challenges. The Governor, Panel, agencies and communities should regularly celebrate and recognize successes.

Mission, Goals and Objectives Statement

MISSION STATEMENT- Fall, 1996

Human influences on the landscape of Eastern Oregon have produces valuable commodities and contributed to community stability. These influences have also disrupted the natural processes in many places and impacted ecosystems health and functioning. In order to restore healthy ecosystem functions, the nature of human activity on the landscape needs to change in many places.

Active management on a landscape and watershed basis in a manner described in the report "Forest Health and Timber Harvest on National Forests in the Blue Mountains of Oregon" can help bring about the restoration of forest health in Eastern Oregon. At the same time, this approach will reduce the risk of catastrophic fire and provide wood to communities. A long-term commitment of resources and effort will be required.

The Eastside Forest Advisory Panel will review efforts by public and private landowners to restore ecosystem health, and will report periodically to the Governor. The Panel will assess the success of various management strategies and identify impediments to improving forest and aquatic health. The panel will also suggest ways in which local, state, and federal agencies can better assist restoration efforts.

GOALS – November 1999

1. Promote and evaluate the progress in the implementation of the eastside ecosystem restoration efforts outlined in the 11-point strategy, the Blue Mountain Demonstration Area, and in the Governor's May 15, 1998 letter to Regional Forester Bob Williams and Elaine Zielinski.
2. Provide the Governor with advise and recommendations that will achieve the goals outlined for the panel at its inception

OBJECTIVES – November 1999

1. Review and provide feedback on implementation on the Blue Mountain Demonstration Area effort and the 1997 and 1998 model projects.
2. Represent the Governor in the Blue Mountain Demonstration Area partnership.
3. Assist collaboration efforts between regulatory agencies and land management agencies.
4. Monitor the implementation by the Forest Service and BLM of the Governor's recommendations

The areas where the panel will focus include the recommendations outlined in the Governor's May 15, 1998 Letter:

- a. Public outreach and highlighting successes
 - b. Financing ecosystem health efforts
 - c. Monitoring
 - d. Public and tribal involvement in decision making
 - e. Project scope and design, including performance measures
 - f. Integrating science
 - g. Developing local markets for forest products
5. Make on the ground visits to address specific ecosystem health and restoration issues as identified by the panel

APPENDIX D

Benchmarks for Blue Mountains Demonstration Area and Eastside Oregon forests

May 2002, the Governor's Eastside Forest Advisory Panel recommended 3 areas where benchmark measures are needed to gauge our progress. These 3 areas are, land and water management, socio-economic health and administrative process. What follows are the metrics for these benchmark measurements for success.

Land and water Management

1. Water Quality and fish habitat improvement
 - Miles of streams restored as a percentage of miles in need of restoration as of 2001
2. Road density
 - Miles of road maintained to standards, restored, closed or obliterated in priority watersheds as a percentage of miles in need of restoration as of 2001.
 - Miles of road per square mile per fifth field watershed
3. Acres treated with forest health restoration efforts
 - Land base treated with thinnings or fuel reduction efforts within designated high priority watersheds as a percentage of acres in need of restoration as of 2001.
 - Target Selected: 8 Percent per year of the total.
 - Acreage treated for noxious weeds as a percentage of acres in need of restoration as of 2001.
4. Acres in healthy condition
 - Percent of acres by fifth field watershed within historic range of variability

Administrative Processes

1. Funding
 - Baseline: Non-fire NFS budget for 3 national forests over last 3 years/X acres treated for last 3 years = cost per acre treated. X acres were treated over the last 3 years for a total non-fire cost of X times BMDA acres/total acreage of 3 national forests.
 - Benchmark #1: Cost per acre treated X number of acres treated benchmark above X 1.25
 - Benchmark # 2: Within 5 years, forests have the ability to reprogram up to 40 percent of BMDA NFS budget without congressional appropriations committee authorization, and 75 percent of NFS vegetation management and related funds are spent on high priority projects.

2. Watershed Analyses

- Baseline: X percent of 6th-field watersheds in the three national forests are covered by completed watershed analysis (a.k.a. Environmental Analysis at the Watershed Scale—EAWS)
- Benchmark: All watersheds have completed watershed analyses by 2005, and thereafter, 14% of watersheds will have completed revised analyses per year (equal to an average analysis life of 7 years).

3. ESA Consultation

- Benchmark #1: Average time from project introduction to the LEVEL 1 Consultation team to a completed biological assessment is 90 days. Benchmark #2: Average time from draft biological assessment to completed ESA §7 consultation is 180 days.
- These 2 benchmarks will be estimated through sampling.

4. NEPA Work

- Baseline: Average length of the NEPA process for non-timber projects on the three national forests over the last three years is X months, and for timber projects, it is X months.
- Benchmark #1: For NEPA projects with a merchantable timber component, 50 percent of such projects will take less than 18 months from initial NEPA scoping to completion/award of contracts.
- Benchmark #2: The average length of time to complete NEPA analysis is reduced 10 percent per year for the next five years.

Socio-economic

1. Number of jobs created by county by sector.
2. Volume and value of commercial forest products offered for sale per fiscal year. Includes state and private land as well.
3. Total value of agreements, grants, and contracts from USFS sources.

APPENDIX F

Model Projects Summary

U.S. Forest Service Projects

Deschutes National Forest

1997 Projects

- *Demo Butte Timber Sale
- *Red Plague & Landing Timber Sales
- *Black Butte Fuels Reduction
- *Big Marsh Wetlands Restoration
- *Katalo East Young Forest Restoration

1998 & 1999 Projects

- *Seven Buttes Natural Fuels
- *Soda Creek Stream Restoration
- *Noxious Weed Prevention
- *Sisters/Why-Chus Watershed Assessment & Hwy 20 Project

Fremont National Forest

1997 Projects

- *Upper Thomas Creek Ecosystem Mgt
- *Thomas Creek Landslide Project

1998 & 1999 Projects

- *Upper Chewaucan Prescribed Burn
- *Recomb Thinning

Malheur National Forest

1997 Projects

- *Prescribed Fire Underburning
- *Badger Planning Area
- *Dovespike Range Allotment

1998 & 1999 Projects

- *Clear Creek Forest Restoration
- *Pete Thinning
- *Summit Fire Monitoring

Mt Hood National Forest

1997 Project

- *Three Conifer Forest Health Salvage

1998 & 1999 Project

- *Diablo Timber Sale

Ochoco National Forest

1997 Projects

- *Mill Creek Wilderness Prescribed Fire
- *Williams Prairie Restoration
- *Trout Creek Timber Sales
- *Snow Mountain Non-Commercial Thinning
- *Silver Creek Natural Fuels Underburn
- *Willow Creek Riparian Enhancement

1998 & 1999 Projects

- *Bridge Creek Noxious Weeds
- *Mill/McKay Cr. Restoration
- *Lone Pine Basin Prescribed Fire

Umatilla National Forest

1997 Projects

*North Fork John Day Wild & Scenic River

Wallowa-Whitman National Forest

1997 Projects

*Wapti Ecosystem Management
*Provincial Monitoring-3 Blue Mountain Forests
*Noxious Weeds Management in Hell's Canyon
*National Recreation Area-Bark Beetle Salvage

Winema National Forest

1997 Projects

*Desert Old-Growth Management Areas
*Bugsy Salvage

Bureau of Land Management Projects:

Lakeview District

1997 Projects

*Gerber Block Restoration

Burns District-1998 & 1999

*Catlow Conservation Agreement

Vale District-1998 & 1999

*Trout Creek Mountain Riparian

Prineville District-1998 & 1999

*South Boundary Forest Management

Medford District-1998 & 1999

*Applegate Restoration

1998 & 1999 Projects

*Phillips Creek Noxious Weeds
*Subalpine Fir Management
*Skookum Underburn
*Mallory Commercial Thinning

1998 & 1999 Projects

*Upper Grand Ronde Restoration
*Hungry Bob Forest Restoration
*Minam II Prescribed Fire
*Washington-Baker Watershed

1998 & 1999 Projects

*Spencer Creek Watershed
*Lone Pine Access & Travel Mgt
*Stony Eagle/Bugsy Eagle Timber Sale
*Antelope Pilot Thinning/Fire

1998 & 1999

*Bear Valley Bald Eagle Enhancement

State of Oregon Projects

1998 & 1999

*Sun Pass State Forest:
Roundhouse Timber Sale

3/
Activity fuels are from commercial forest product sales, sales fund their treatment
Hazardous fuels are from growing forests/insects and disease and windthrow/snow breakage,
treatment is funded by Congressional appropriations

Eastern Oregon National Forests^{1/}
National Fire Plan – Priority Treatment Needs

(By Fire Regime, Condition Class ^{3/} and Acres)			
	Total by Fire Regime	Condition Class 2	Condition Class 3
Fire Regime#1 Recurring, Low severity fires 0-35 Years	6,859,970	2,278,204	4,581,766
Fire Regime #2 Stand Replacing Fires 0-35 Years	179,639	100,787	78,852
Fire Regime#3 Mixed Severity Fires 35-100 Years	678,939	488,914	190,025
Grand Total ^{2/}	7,718,548		

1/ Tim Rich, Pacific Northwest Region, U.S. Forest Service, Portland OR, 2002

2/ Total Net acreage Eastern Oregon National Forests 9,520,000 Million Acres of which 1,039,260 is National Forest Wilderness.

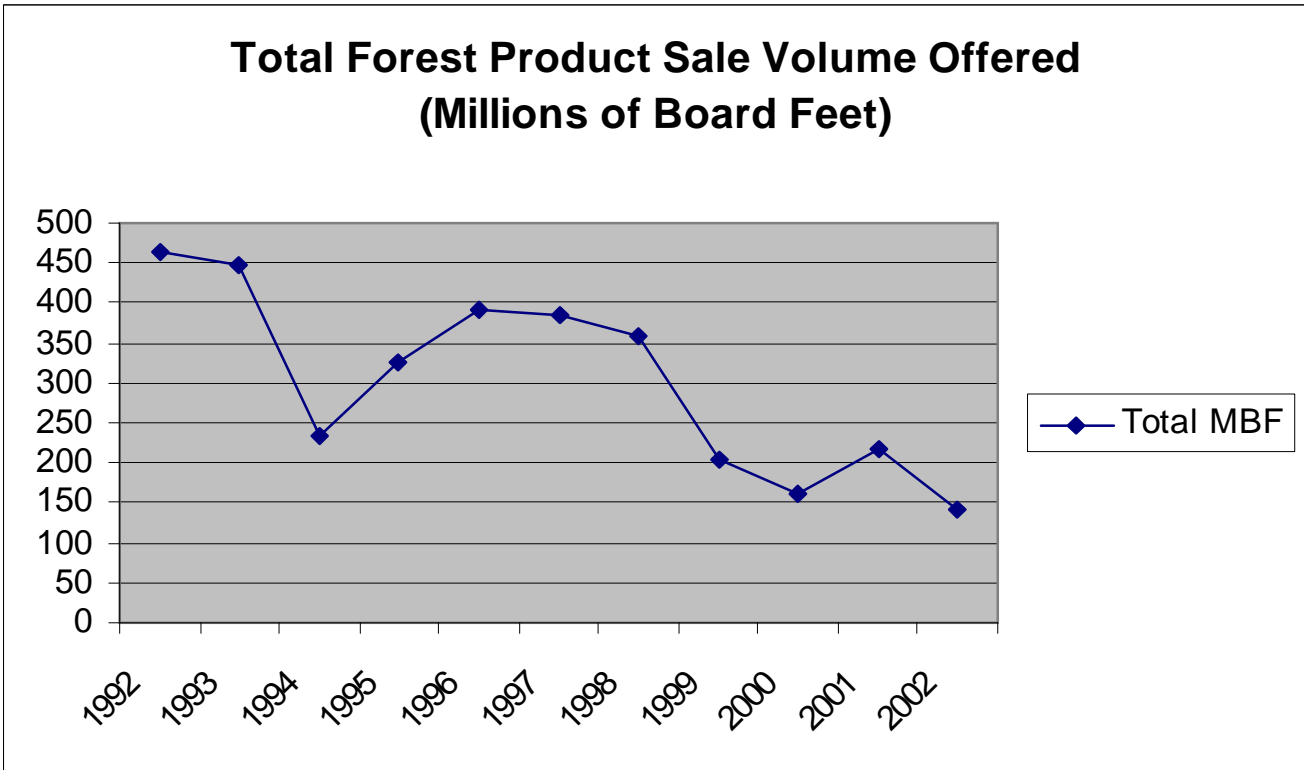

3/ Increasing Fuels Treatment on Federal and Non-Federal Lands in the Pacific Northwest-A Collaborative Strategy- Report to PNWCG, January 2001.

Condition Class Ratings indicate the degree of departure from historical fire regimes resulting in alterations of key ecosystem components such as species composition, structural stage, stand age and canopy closure.

Condition Class 2 is where fire regimes have been moderately altered from their historic range

Condition Class 3 is where fire regimes have been significantly altered from their historic range, the risk of losing key ecosystems components is high. High levels of restoration treatments are needed in condition class 3 situations.

The Oregon Agreement Project

December 2002 Progress Report

INTRODUCTION

The Oregon Agreement is a partnership representing all levels of government, key stakeholders and local participants working together to benefit the environment, economy and communities of Oregon. This agreement offers opportunities for federal, tribal, state and local participants including landowners and businesses to design, improve and test strategies, improve their cooperation and collaboration to make more efficient use of public resources and reduce regulatory gridlock. The empowered results expected from this unique opportunity can improve watersheds, assist in salmon recovery and support efforts to achieve a strong economy.

OREGON AGREEMENT PROJECT DESCRIPTIONS, CONTACT INFORMATION AND STATUS

Since November 2001 Oregon Agreement partners have been working together on a variety of statewide projects. This progress report outlines their context, status, key summary information and a point of contact.

1. Improved Conservation Reserve Enhancement Program delivery to achieve wider ranging results to meet Oregon Plan goals and objectives. Contact: Ken Bierly, Oregon Watershed Enhancement Board

The Oregon Watershed Enhancement Board (OWEB) enlisted the support of the Oregon Department of Agriculture and Oregon Association of Conservation Districts, who provided an evaluation of the Conservation Reserve Enhancement Program (CREP). This evaluation outlined CREP implementation successes and significant barriers to widespread landowner participation. As a result, the OWEB board at their September 2002 meeting approved hiring a CREP state coordinator to assist in outreach activities to achieve more widespread participation.

On October 15, 2002, Governor John A. Kitzhaber signed an Addendum Agreement with the U.S. Department of Agriculture-Commodity Credit Corporation to continue our work to enhance salmonid species listed under the federal Endangered Species Act thru implementation of the Oregon Conservation Reserve Enhancement Program.

2. Develop and employ enhanced forest/watershed tools, such as stewardship contracting, for watershed and forest restoration purposes. Union and Wallow County projects.

- *Community Forest Restoration Board-Union County, Oregon.* Contact: John Herbst, Chair

On September 5, 2001, under Court Order 2001-39, Union County established a Board to make recommendations to the Board of Commissioners on restoration goals, objectives and priorities for the La Grande Ranger District, Wallowa-Whitman National Forest. The Board is participating with the La Grande Ranger District in updating watershed assessments, identifying and recommending projects to meet the objectives of the National Fire Plan and provide assistance in dispute resolution over land management activities.

- *Wallowa County Forest & Watershed Stewardship-Wallowa County, Oregon.* Contact: Nils Christoffersen, Wallowa Resources, Enterprise, Oregon

The Wallowa County Board of Commissioners is working with many partners in the Upper Joseph Creek Watershed project in the Wallowa-Whitman National Forest. Project objectives:

- Ensure planning and collaborative relationship building on a watershed basis (5th level watersheds) to facilitate cumulative effects analysis and address management actions over multi-year cycles,
 - Secure efficiencies through National Environmental Policy Act and Endangered Species Act consultation processes,
 - Seek to generate local benefits including employment opportunities in all facets of this work.
 - Maintain and enhance watershed conditions to provide a variety of long-term benefits to the ecosystem, and
 - Establish a practical and sustainable multi-party monitoring system that combines local and scientific knowledge and contributes to effective adaptive management of the watershed.
- *Blue Mountain Demonstration Project.* Contact: Jeff Blackwood Umatilla National Forest, Pendleton, Oregon

In 1999, the Blue Mountain Demonstration area (BMDA) was established in an effort to speed watershed and forest ecosystem restoration across whole landscapes in ways that would also aid the economic health of local communities. This Area is comprised of nearly 3 million acres of private and federal lands in Northeastern Oregon.

Results from the first three years of the BMDA present a clear demonstration that it is possible to engage in broadly supported watershed and forest restoration work that both improves ecosystem health and provides some economic benefits to local communities. The Blue Mountain Demonstration Area accomplishment reports document the challenges and progress in meeting these goals.

Partners in the BMDA efforts are discussing its future operation and the possible expansion of its boundaries.

3. Develop a Northwest Natural Resources Forum for governors, tribal leaders and regional/state agency administrators. Contact: Paula Burgess, Oregon/Washington Office, Bureau of Land Management, DOI, Portland, Oregon

As residents of the Northwest, we have many expectations about our environment. And while we do expect the environment to change over time with a growing human population, we also expect certain aspects of the quality of our environment to be there forever. Dozens of governments and agencies have a role in maintaining the quality of the environment in the Northwest, yet these agencies are haphazardly linked.

The Northwest Natural Resource Forum (Forum) would be an annual gathering where top federal, state and tribal executives have a chance to discuss and collaborate on the broad scale issues needing resolution. The Forum's goals would include:

- identify high priority problems in the Northwest that need collaborative solutions,
- establish intergovernmental task teams to evaluate and suggestion solutions to these issues,
- coordinate on programs and budgets, and

- develop relationships and build trust among government leaders.

The transfer of key federal executive leaders interested in establishing this Forum has hindered the progress of this project. The project has merit and needs interested Pacific Northwest leaders' support to realize its potential gains.

4. Clarify and focus roles and work plans for intergovernmental entities - specifically the federal-state agency partners' watershed group, and the Oregon Plan Core and Implementation teams to achieve effective intergovernmental networks to meet mutual salmon and watershed goals.

The Oregon Plan for Salmon and Watersheds (Oregon Plan), the federally administered Northwest Forest Plan and related watershed based plans require a top-flight integrated team effort to achieve their goals and objectives. This project sought to clarify and establish federal/state/local Oregon Plan roles and responsibilities. This work was completed in December 2002. The teams are chartered and their contact points are listed below:

- ▣ **CORE TEAM**. A forum for state natural resources agencies to collaboratively develop and recommend watershed protection and restoration strategies and policies central to implementing the Oregon Plan for Salmon and Watersheds, which transcend the authority of any one single agency. This team addresses state policy coordination issues and provides strategic direction to the Implementation Team. The team maintains working relationships with the regional teams to identify successes and failures, issues needing resolution and support required to implement needed measures. Contact: Karen Tarnow, Oregon Department of Environmental Quality, Portland, OR
- ▣ **IMPLEMENTATION TEAM**. A forum for information exchange and clearinghouse for all respective agency measures and programs. They systematically review progress on, monitor problems and barriers to, assess effectiveness of and recommend priorities for, the implementation of agency measures. This primary forum will identify issues, problems and coordination needs regarding watershed protection and restoration activities for referral to respective state, federal, local and tribal agency authorities for resolution. Contact: Karen Tarnow, Oregon Department of Environmental Quality, Portland, OR
- ▣ **REGIONAL TEAMS**. These teams provide a direct link between "headquarters" Oregon Plan policy development and implementation in the field. They are committed to partnership approaches between state agencies and regional scale stakeholders to achieve the Oregon Plan goals. Contact: Karen Tarnow; Oregon Department of Environmental Quality, Portland, OR
- ▣ **OUTREACH TEAM**. This team utilizes partnerships to effectively communicate the purpose of the Oregon Plan to all Oregonians, to help them understand their connection to urban and rural landscapes, and to motivate them to take action to protect and enhance Oregon's watersheds, salmon and clean water. Contact: Ken Bierly, Oregon Watershed Enhancement Board, Salem, OR
- ▣ **MONITORING TEAM**. This team provides a forum for development and coordination of public and private monitoring activities in support of salmon recovery efforts. It assists in establishing priorities for monitoring activities, coordinated resource-monitoring activities, and provides timely and effective distribution of information for adaptive management. Contact: Kelly Moore, Oregon Watershed Enhancement Board, Salem, OR

▣ **INDEPENDENT, MULTIDISCIPLINARY SCIENCE TEAM** This team's role (seven members) is to advise the State of Oregon on matters of science related to the Oregon Plan. They work in good faith, focus on science, maintain their independence, operate by consensus (with minority positions identified) and report its findings and conclusions in writing. Contact: Kathy Mass-Hebner, Department of Forest Science, Oregon State University, Corvallis, OR

5. Develop cooperative, web based and searchable inventory database for watershed restoration purposes. Contact: Doug Terra, Oregon Watershed Enhancement Board, Salem, OR

Unprecedented numbers of watershed restoration projects are conducted by public and private entities across the State of Oregon to improve water quality, watershed health and to improve salmon populations. Currently there is incomplete watershed restoration reporting, which hampers evaluation and accomplishment efforts. This project is designed to develop a cooperative, web-based, searchable database for watershed restoration projects on public and private lands. Little progress was made on the project due to staff limitations and agency resources.

6. Receive multi-year or multi-project environmental permits for highway projects supported by the Oregon Department of Transportation adoption of ISO 140001 environmental management systems and independent third party certification. Contact: Lori Sundstrom, Oregon Department of Transportation, Salem, OR

Oregon's Department of Transportation (ODOT) finds that compliance with land use and environmental requirements can result in delays and project costs difficult to predict. Most significant are a lack of regulatory agency resources to respond in a timely and effective manner.

Oregon is faced with replacing about 200 concrete bridges on Interstates 5 and 84. Completing individual environmental reviews and obtaining individual environmental permits will tax staff resources, making timely completion of the environmental regulatory process unlikely. Lack of permits will result in construction delays, potentially putting Oregon's two interstates at risk of partial closure to freight.

This project used collaborative workshops, September 30 through October 9, 2002, where agency staff, stakeholders and key leaders identified specific ways to streamlining environmental review and permitting while achieving superior environmental results. Seven streamlining approaches were identified. In addition, ten changes to ODOT's "bridges program" approach were discovered and changes are being presented to ODOT executives and Commission members for their support. These seventeen improved approaches could be used for the entire State Transportation Improvement Program thereby conserving scarce public resources and getting critical infrastructure work done while achieving superior environmental results.

7. Develop an integrated watershed investments approach so municipalities can address "wet weather" impacts on water quality more effectively. Integrate related state/federal investment schedules and programs to achieve this result. Contact: Michael Llewelyn, Oregon Department of Environmental Quality, Portland, OR

Watershed investments related to "wet weather" such as storm water management and sewage infrastructure can be poorly coordinated and sequenced under state and federal regulations. Environmental regulatory mechanisms are too often aimed at geographic units that are mismatched

with the natural systems they are intended to protect. Implementation of environmental laws tends to focus on remedies specific to each statute independently, biasing against the use of solutions that have benefits beyond the coverage of each statute.

This project seeks to improve the health of the Tualatin Watershed ecosystem while coordinating with various environmental statutes i.e., Clean Water Act, Endangered Species Act and Safe Drinking Water Act. The result optimizes investments and environmental gain by managing on an integrated watershed approach, rather than a single regulatory requirement at a time. The U.S Environmental Protection Agency, Clean Water Services, the Oregon Department of Environmental Quality and partners are making significant investments and progress on projects objectives.

The U.S. Environmental Protection Agency has made a significant financial contribution under a partnership agreement with the Department of Environmental Quality performance agreement with its project partners.

8. Develop a cooperative watershed monitoring and information system for the Rogue River basin and southern Oregon coastal watersheds for evaluating and reporting on watershed health progress, and future investments needs. Contact: Kelly Moore, Oregon Watershed Enhancement Board, Salem, OR

Local citizen groups in the Rogue River and South Coast area are active in developing recovery plans for salmon. This project builds on their work to date on effective intergovernmental teamwork. The objective is to implement a regional watershed monitoring strategy for southwest Oregon. The outcome will be a monitoring strategy that works for all partners.

Another benefit will be an information sharing capability that clearly communicates watershed conditions and supports efficient permitting processes. Due to the historic fire season, tighter state/federal budgets and staffing this project was unable to be implemented. It continues as an important project with great potential. There has been continuing progress on watershed assessment using the REO Decision support model, continuing attention to fish passage issues, and a revival of interest in supporting a coordinated approach to Clean Water Act/Endangered Special Act compliance and consultation.

9. Develop an integrated intergovernmental partnership model in the McKenzie-Willamette River confluence area to sustain economic development while protecting and enhancing critical floodplain, riparian and river habitat. Contact: Gary Lynch, Oregon Department of Geology and Minerals Industry, Albany, OR

The McKenzie Watershed Council is facilitating a collaborative process to protect and restore fish and wildlife habitat while providing flood protection for a variety of land uses in the McKenzie and Willamette Rivers confluence area. This project features incentive based, collaborative approaches so a long-term flexible framework provides for certainty, accountability and adaptive management to achieve desired results.

The result will be to give the river more “elbow room” to handle flood events while restoring gallery forests associated with flood plains and concurrently providing for a balance of land uses important to the area’s economic base. Good progress has been made in bringing all the parties into the discussion of needs including priority flood plain restoration projects.

10. Develop a market branding approach for agricultural products produced in the Klamath basin associated with restoring this watershed area within a local agricultural strategy. Contact: Andrew Stuedli, South Central Economic Development District, Klamath and Lake Counties, Klamath Falls, OR

Local citizens, with the assistance from State of Oregon agencies, are looking to develop sustainable agriculture strategies that improve farm and ranch profitability while responding to watershed restoration needs and opportunities. Market branding of agricultural products linked to watershed restoration and protection can attract consumer support.

There were information exchanges with local partners, regional and statewide organizations interested in this project's goal. Early in 2003, interested organizations will partner with the Upper Klamath Working Group to host an educational session on market branding based on watershed restoration and protection purposes for those interested in pursuing such an approach.

11. Develop partnership agreement, technical capacity, benchmarks and desired watershed conditions in the City of Portland, Oregon, so the Mayor and city officials can work in an efficient, integrated, intergovernmental way to meet federal statutes for Clean Water, Endangered Species and Superfund purposes with local, state and federal agencies. Contacts: Tommy Brooks, Office of the Mayor, Portland, OR

The Portland River Trust is part of Portland's River Renaissance-an integrated city-wide initiative to promote a healthy Willamette River, a working harbor and vital urban riverfront. This project seeks to develop an integrated watershed approach to meet Endangered Species Act, Clean Water Act and federal Superfund statute objectives. Specific project outcomes sought are:

- development of urban benchmarks for baseline and desired future environmental conditions,
- integrated Endangered Species Act consultation process, and
- one stop shopping approach for applicants that meet Endangered Species Act, Clean Water Act and Superfund compliance objectives.

12. Achieve a new Clean Water Act-State Programmatic General Permit (Section 404-SPGP) in concert with state/federal agency partners. Contact: Eric Metz, Oregon Department of State Lands, Salem, OR

Currently separate certification is required from several state and federal agencies in making section 404 Clean Water Act determinations. This project seeks to eliminate permitting process overlaps and to gain better alignment of standards and processes. We can preserve the quality of life in Oregon, enhance natural resource protection and still create a more efficient and cost effective permitting system. In 2002, we gained alignment among the interested and affected state and federal agencies. We held important coordination meetings that have us on the path so the U.S. Army Corps of Engineers can issue the Statewide Programmatic General Permit mid-2003. The state could assume the 404 program by mid 2005.

THE OREGON AGREEMENT

A PROPOSED MODEL FOR
RESULTS DRIVEN ENVIRONMENTAL POLICY

FIRST DRAFT – For Discussion Only

APRIL 2001

...as President, Governor Bush will set high environmental standards, and work to build conservation partnerships between the federal government and state governments, local communities and private landowners to meet – and exceed – those standards.

-Bush-Cheney 2000 Campaign Website

Westerners desire to create a region that will provide our children an extraordinary quality of life.... Our future includes a belief that we are better off if we can redirect energy away from polarized battles and toward solving our common problems. It is a vision of rebuilding trust, partnerships and community; of better understanding the cumulative effects of our actions; and of enhancing individual and collective environmental understanding and its associated stewardship....

It must be clear that in implementing this vision, Westerners do not reject the goals and objectives of federal environmental laws, nor the appropriate role of federal regulation and enforcement as a tool to achieve those objectives.... As the federal government sets national standards, they should consult with the states, tribes and local governments...With standards and objectives identified, there should be flexibility for non-federal governments to develop their own plans to achieve them, and to provide accountability. Plans that consider more localized ecological, economic, social and political factors can have the advantage of having more public support and involvement and therefore can reach national standards more efficiently and effectively.

-Western Governors' Association, 1999

While most people understand that our economy, culture, and environment are all important to the quality of our lives, we still have been unable to avoid protracted, divisive, and costly political and legal conflicts. Perhaps more troubling is that after 20 years of intense debate, our progress toward finding workable solutions has been limited, and in some cases has significantly regressed. We must find a better way to bring people together to solve environmental problems in a cooperative, consensus-based, and long-term capacity.

-Oregon Republican Senator Mark Hatfield, 1995

PROPOSAL SUMMARY

The Proposal

Oregon proposes a special partnership with the Bush Administration to demonstrate how a healthy environment and a strong economy can work hand in hand. Oregon agrees with the administration: “the 30-year-old federal model needs to be modernized.” Oregon offers the administration a new model – a model that illustrates the Administration’s environmental role but also returns significant authority to the states.

A partnership to demonstrate how a healthy environment and a strong economy can work hand in hand.

Specifically, we propose to achieve recovery of salmon and to improve watershed health using recently-established (since 1995) structures and plans such as the Oregon Plan for Salmon and Watersheds, the Columbia/Snake Recovery Plan, and the Blue Mountain Demonstration Project, and applying the principles enunciated by the Western Governors’ Association known as *Enlibra*. These principles were found to be the common denominator of success stories around the West. In 1998, the Western Governors committed to these principles – this “new doctrine,” to guide natural resource and environmental policy development and decision-making in the West. The principles are summarized below. (A full description of the principles is attached.)

- National Standards, Neighborhood Solutions: Assign responsibilities at the right level.
- Collaboration, Not Polarization: Use collaborative processes to break down barriers and find solutions.
- Reward Results, Not Programs: Move to a performance-based system.
- Science For Facts, Process for Priorities: Separate subjective choices from objective data gathering.
- Markets Before Mandates: Pursue economic incentives whenever appropriate.
- Change A Heart, Change A Nation: Environmental understanding is crucial.
- Recognition of Benefits and Costs: Make sure all decisions affecting infrastructure, development and environment are fully informed.
- Solutions Transcend Political Boundaries: Use appropriate geographic boundaries for environmental problems.

The Problem To Be Overcome

For decades, Pacific Northwest salmon runs and the watersheds that support them have been in decline. Both salmon abundance and water quality are extensively linked to the economic and community health as well as the ecological health of the Northwest. Our ability to restore salmon runs and watersheds will have implications for the future of both our natural resource-based economies as well as most of our more diversified economies

due to their reliance on hydropower-produced electricity and adequate urban infrastructure – both of which hang in the balance with salmon.

For the last six years, Oregon has been working to restore salmon, watershed health and water quality holistically through a broad network of partnerships. While Oregon's Plan for Salmon and Watersheds has shared the same goals as the federal laws, and is designed to meet the established standards and objectives of multiple laws simultaneously, Oregon's efforts have often been slowed or obstructed by more traditional and rigid interpretations of how individual federal laws must be implemented.

Over time, we have collectively worked with federal partners through some of these hurdles and yet we continue to encounter additional rigid processes that may not even serve to achieve the goals of the laws, much less our interest in moving beyond the laws towards restoration.

We believe that, by working with a high level action team representing all levels of government and critical stakeholders, we can work together to identify barriers to our common goals and design strategies to meet environmental laws, and economic and community goals simultaneously. We can gain greater local buy-in and commitment, design solutions appropriate for specific locations or situations where they need to be applied, and create mechanisms for integrating strategies to simultaneously meet the full range of laws and public values.

Why Seize This Opportunity With Oregon?

Oregon is an ideal state to test an outcomes-based partnership with the federal government. It has a 20-year strategic plan that is regularly updated, and through the Oregon Benchmarks we know what we want to accomplish. The test of an outcomes-based approach to environmental policy is likely to be more successful where the state is already using an outcomes based model for establishing a long-range vision, setting public priorities, allocating resources, and measuring results. We are well along in pioneering an effort – Oregon Benchmarks – to do all of these things. Our environmental benchmarks focus on air quality, water quality, salmon recovery and land preservation, just to name a few. In addition, Oregon recently completed the State of the Environment Report, which provides excellent baseline data for an effective monitoring program.

The State also has numerous efforts underway aimed at solving natural resource problems holistically, through extensive partnerships, and focussing on outcomes. For example, in 1997, Governor Kitzhaber and the Oregon Legislature adopted the Oregon Plan for Salmon and Watersheds (mentioned above) and the Healthy Streams Partnership to address degraded water quality. The focus is on voluntary actions by landowners coordinated with statewide restoration and recovery strategies. Under the Governor's leadership, citizens and landowners throughout Oregon have joined together through watershed councils, soil and water conservation districts and other groups to cooperatively restore their watersheds.

To assist these local groups, the Oregon Watershed Enhancement Board was created in 1999 which provides a framework and funding for salmon and watershed restoration that tries to focus on the highest priority investments for fish recovery and watershed health. In addition, the Willamette Restoration Initiative, with a broad-based representation, has developed a framework for recovery in the Willamette River basin. In fact, Oregon has a decade of experience with locally based watershed and basin councils working to recover salmon and restore watersheds throughout the state. There are now approximately 90 watershed councils and 45 soil and water conservation districts statewide.

Today's salmon and watershed health problems can only be solved locally. No one else knows Oregon rivers and streams like the people that live there and in some cases have lived there for generations. No one cares more or knows more about the fisheries, the water quality, the health of the watersheds, and the place we call home.

Oregonians respond well when they are empowered to do the right thing. The federal government can and should set reasonable standards to be met for endangered species recovery and water quality, but to achieve results, we must all work together – federal agencies, state and local governments, landowners and citizens – to develop appropriate plans and actions to achieve the standards. We should all be held accountable to the broader goals presented by the suite of laws, and, through our experience, find this is best done by tailoring plans to local circumstances.

We see an opportunity with the new Administration to engage the next generation of these efforts through an agreement of cooperation between all levels of government. We would call this “the Oregon Agreement,” and propose that we be guided by the principles articulated in *Enlibra*.

The Benefits

We believe that Oregon can serve as a model for the rest of the country in developing a bottoms-up, top-down, outcomes-directed environment achieving results. The most important benefit, and Agreement, will be the outcomes: salmon recovery, economy. Other benefits include more efficient use of regulatory gridlock. The Oregon Agreement also of and local participants to learn from their efforts and act on what they learn to improve federal regulation. In short, The Oregon Agreement will advance the Administration's commitment to a new era of environmental protection.

The Oregon Agreement will advance the Administration's commitment to a new era of environmental protection.

What Oregon needs from the Bush Administration

Based on the *Enlibra* principles, we propose the federal government and Oregon mutually identify salmon recovery and watershed health outcomes for the partnership. From this work, focused federal-state attention and partnership (perhaps resources, but this is not just about funds) would flow in resolving some of the more difficult natural resources challenges Oregon faces. Examples of known challenges we are eager to address include:

- streamlining the Section 404 permitting process and other permit requirements for local landowners and groups to engage in restoration activities;
- expanding the application of the Conservation Reserve Enhancement Program to make it a more meaningful incentive or tool for agricultural producers across Oregon;
- assessing and addressing a suite of emerging urban issues; and,
- addressing staffing and funding constraints to National Marine Fisheries Service and their ability to complete consultation demands in our Eastside Forest Health Efforts and other Fire Plan demands.

This approach would require an ongoing high-level commitment to finding and implementing solutions that may be different from existing processes but would demonstrate more efficient and effective ways of meeting environmental goals.

Oregon cannot achieve its vision for a health environment and a strong economy if its vision is not shared by the responsible federal agencies. We must integrate responsibility and authority for salmon and watershed restoration and respect the part that each of us is implementing towards our common vision.

We look forward to working with you.

AN 11-POINT STRATEGY FOR RESTORING EASTERN OREGON FORESTS, WATERSHEDS AND COMMUNITIES

- 1. There are broad areas of potential agreement about goals for restoration of ecosystem health in the forests of eastern Oregon. The time is now to move forward on restoration efforts where success is most likely and that have scientific and public support.**
- 2. Ecosystem health includes the health of the forests, streams, and watersheds. Achieving and maintaining good water quality and quantity should be a priority for all forest management activities.**
 - Ecosystem health involves many considerations: biological diversity, soils, water, the processes by which these elements change and interact, and the resilience of the system to disturbances such as insects, disease, fire and flood.
 - Historic conditions are an important source of information when developing restoration objectives.
 - Extend watershed considerations from headwaters to human communities, and be responsive to both natural and human needs.
- 3. Ecosystem health may be improved through active management in stands which have suffered from fire exclusion, removal of large trees, and grazing. Understory thinning of green trees to restore forests to a healthy condition more representative of historic conditions is an important component of active management for forest health and can help offset costs. These conditions may be sustained by the periodic use of prescribed fire.**
 - Land management should mimic natural processes to the extent practicable. Use prescribed fire to restore historic open stand conditions in lower and mid elevation forests that have appropriate levels of surface and ladder fuels.
 - Understory thinning, especially when combined with prescribed fire, can mimic some of the effects of natural fire, and prepare the forest to function with periodic fires in the future.
 - Thinning and prescribed burns may not be appropriate for higher elevation or cold forest types (except some lodgepole pine) that historically had disturbance regimes based on stand-replacement fires
 - Protect old growth stands that were historically maintained by fire, such as pine, larch, and aspen. Understory thinning and burning to remove young trees and inappropriate species can be effective tools to protect these important stands.
 - Management techniques will likely require financial investments and innovative contracting efforts because the economic value of these thinnings is generally lower.

- 4. Be responsive to the diversity of people dependent on forest resources including American Indian Tribes, timber-dependent communities and recreation and tourism sectors.**
 - A healthy watershed includes healthy communities that share the same geographical areas. Resource management should include strategies that maintain both forest and community health.
 - Monitoring communities and cultures is as important as monitoring forest resources.
 - Place emphasis on local participation and input that fosters ownership of land management strategies.

- 5. Plan and implement active restoration first in less controversial areas. In the short run, avoid operating in roadless areas, near fish habitat and old growth areas.**
 - Carry out active restoration first in areas and in ways of broadest public consensus, develop a track record of success, and then expand agreement and efforts to other areas.
 - Give higher restoration priority to areas with relatively high ecological integrity but with values most at risk from threats such as catastrophic fire, severe erosion, invasive species, or crowded understories.
 - Healthier ecosystems may benefit from maintenance treatments such as prescribed fire, as well as active restoration of adjacent areas.
 - Avoid treating old-growth areas unless they are at risk of uncharacteristically severe fire and understory competition, in which case understory thinning and prescribed fire may be used.

- 6. Monitoring and learning are essential to the success of ecosystem health restoration activities and will be critical to justifying continuing active management. The Forest Service, the Bureau of Land Management, the research community, Congress, the Administration, the Oregon Department of Forestry, other agencies, and the Governor's Office should join together in assuring that we learn from the management strategies employed to restore ecosystem health.**
 - A monitoring program for active restoration must include baseline data from which assessments can be made.
 - Monitoring is the essential element of adaptive management and should include implementation, effectiveness and validation monitoring.
 - Monitoring is the foundation of public acceptance and expansion of consensus on ecosystem restoration. Independent "all party" monitoring helps ensure credibility of the monitoring.

- 7. Restoration activities and planning should include all ownerships within a watershed, where possible.**
 - Look for ways that federal and state agencies and private partners such as local watershed councils, soil and water conservation districts, family forestland owner associations and other non-profits can build collaborative relationships and provide funding sources to meet watershed restoration needs irrespective of ownership.
 - Conduct watershed assessments and cumulative effects analyses across boundaries.

8. **Active management includes, but is not limited to, cutting trees, riparian area planting, reforestation, prescribed fire, road treatments, stream rehabilitation, and noxious weed management, as well as protection of ecologically sensitive areas.**
 - Develop restoration strategies that address forest, watershed, and community concerns in an integrated and comprehensive way.
 - Combine active treatments with passive approaches, for example managing livestock grazing to allow re-establishment and growth of aspen, cottonwood or other native vegetation.
 - Road treatments include fish passage and drainage improvements, closure, decommissioning, obliteration and re-contouring.

9. **Protecting soils through the use of low-impact, cost effective equipment and techniques is an essential element of restoration.**
 - Soil protection should be a high priority for all restoration activities. Soil protection involves more than selection of proper equipment. Plan projects to minimize impacted areas and avoid sensitive areas. Pre-designate skid trails and limit activities to seasons when soils are less vulnerable to damage.
 - Provide clear direction to equipment operators based on prescriptions that establish a common understanding of soil protection objectives. Monitoring active management impacts on soil is essential.
 - Maintain and enhance workforce skills, training, and development to ensure skills are available to deliver the high level of soil protection required.
 - Create predictable opportunities to use modern low-impact equipment to increase the likelihood of investment in such equipment.
 - Consider incentives that encourage investment in low-impact equipment, including bidding preferences or grants. As acceptance of these practices improves, look for ways to expand their application.

10. **Post-fire salvage logging is primarily an economic activity intended to benefit local communities, but may be compatible with watershed restoration and fuel reduction strategies if consistent with ecosystem health goals.**
 - Abundant snags in burned areas can provide important habitat for many species of wildlife.
 - Soils, particularly in severely burned areas, can be sensitive to disturbance and should receive even greater protection than usual.
 - Salvage logging can provide economic value and reduce the likelihood of bark-beetle outbreaks. General guidance for such logging should be developed in a way that fosters public understanding and acceptance to ensure prompt implementation and realization of benefits.

11. **Where the costs of ecosystem health restoration efforts are not paid for by sale of forest products, funds should be made available to finance these activities on a priority basis. Restoration is a long-term investment that will require support by the public and Congress.**

Governor's Office for Health, Human Services and Labor

The Governor's Office for Health, Human Services and Labor advises the Governor on issues relating to the health and livelihood of Oregonians and provides policy direction to state agencies. Some of the areas included in the broad category of health and human services are the Oregon Health Plan, the Oregon Children's Plan, the Oregon Strategy for Social Support, Juvenile Crime Prevention, and Workers' Compensation.

The Oregon Health Plan is a comprehensive health reform strategy predicated on public values, clinical efficacy, and cost-effectiveness. The Plan includes both government programs and public/private collaborative efforts. Its mission is to improve the health of Oregonians. The primary method for achieving this mission is to increase the availability of an adequate level of high quality health care at an affordable cost. Oregon Health Plan services are delivered through managed care and based on a prioritized list of medical conditions and effective treatments. The health plan's Medicaid expansion, begun Feb. 1, 1994, was authorized by the Oregon Legislature and received a federal waiver of Medicaid rules.

The Oregon Children's Plan represents the continuation of a long-time endeavor to identify and assist at-risk children and their families. The Plan, which will increase services available to children and families through the State and counties, expands the Healthy Start program statewide with its emphasis on home visiting, and it continues implementation of the early childhood planning portion of Senate Bill 555. (SB 555, established by the 1999 Legislature, is a comprehensive policy for Oregon's children and families. SB 555 directs state agencies to establish policies for a statewide early childhood system of social supports and requires the development of a local coordinated comprehensive plan that includes children ages 0-8 and their families.) The 2001 Legislature approved a \$60 million budget for key early childhood services under the Oregon Children's Plan.

This office coordinates **the Oregon Strategy for Social Support**, which is based on Governor Kitzhaber's Human Investment Framework. The Framework requires that education, workforce and social support investments must be carefully balanced and coordinated to be most effective in making Oregonians as self sufficient as possible. Some examples of social supports are affordable, safe housing; access to alcohol and drug treatment; and available and affordable child care. The Oregon Strategy for Social Support ensures that state resources used to provide social supports are properly focused and carefully coordinated with partners in local government and the private sector.

The goal of the **Juvenile Crime Prevention** program is not only to prevent crime but also to give all children an opportunity to succeed. This effort requires establishing a strong partnership to coordinate the state's juvenile crime prevention system with community-based programs and targeting efforts at those youth who are at highest risk. These efforts are overseen by the state Juvenile Crime Prevention Advisory Committee. In addition, a statewide information system--The Juvenile Justice Information System-- has been established in the Oregon Youth Authority to encourage policy decisions based on accurate information and effective programs.

Labor and management leaders and the Governor's Office have worked together to reach agreement on recommendations for improving the Oregon **Workers' Compensation** system. One goal of the measure adopted by the 2001 Legislature is to create a less adversarial system for all. It attempts to remove uncertainty about payment for medical treatment for injured workers and brings them needed health services and wage replacement. Many of these workers previously fell through the gaps in our system. It also addresses compensability standards and benefits providing more certainty to employers about future liability exposure.

The Governor's Office of Health, Human Services and Labor is directed by Mark Gibson, Policy Advisor, and includes Pam Curtis, Policy Analyst; Evelyn Bloemhard and Grace Roth, Executive Assistants; and Alicia Philpot, Community

Outreach Coordinator. The office can be reached at (503) 378-6895.

Governor's Office

Health, Human Services & Labor Newsletter

Farewell Edition

December 2002

Positive Programs Mark Administration's Eight-Year Term

Programs designed to improve the health and well being of Oregonians, especially Oregon children, are a hallmark of Governor John Kitzhaber's administration. Long an advocate of helping children become successful citizens, the Governor has promoted initiatives to improve adult and child health, prevent juvenile crime, and reduce the incidence of alcohol and drug abuse, school failure, and poverty. Among the most notable of his initiatives in the Health and Human Services field are:

Oregon Health Plan

Conceived in the 1980s by then-Senate President John Kitzhaber, the Oregon Health Plan (OHP) is a comprehensive health reform strategy predicated on public values, clinical efficacy, and cost-effectiveness. Its mission is to improve the health of Oregonians, and its specific goals include reducing the percentage of Oregonians without health coverage as well as containing the rate of growth in health care expenditures. It seeks to eliminate cost shifting while improving the quality of health services. The Plan is based on a prioritized list of health services and relies on public/private partnerships to improve the effectiveness and accountability of health care and health insurance programs in the state.

Overall, the gains have been substantial. At any given time, the OHP participated in covering nearly 400,000 Oregonians. In an unduplicated count, over one million Oregonians have at one time or another used the OHP. From 1990 to 1999, the percentage of Oregonians without health insurance dropped from 18% to 10%. For children, the percentage without insurance dropped over the same period from 21% to 8%.

In addition to expanded public coverage, a substantial portion of these gains occurred in commercial organizations. It is widely believed that the Medicaid expansions contributed to the commercial gains by helping to control cost shifting.

Human Investment Framework

The Governor developed the Human Investment Framework in 1996 to form the foundation needed for Oregonians to be as independent, productive and self-sufficient as possible. It held that in order for children to succeed in school and for adults to succeed at finding and maintaining employment, certain social supports must be present. The Framework called for new roles for state government and state agencies with increased emphasis on collaborative partnerships, wise investments and increased accountability. It stressed the importance of community-based services and community responsibility in supporting families. Work groups studied the need for specific social supports and identified potential inconsistencies in their delivery. The groups tried to determine the most efficient means of aligning efforts to deliver those supports and made recommendations to the Governor.

This extensive examination of Oregon's social support system provided building blocks for other initiatives aimed at improving the safety and (continued on page 2)

In this issue

States employees urged to participate in mentoring	3
Governor declares human rights day; apologizes for eugenics	3
Child oral health grant.....	4

(Human Investment Framework – continued)
 well being of Oregonians. Bills passed by subsequent legislatures made way for improvements in alcohol and drug treatment, access to transportation, accessible and affordable child care, and safe and affordable housing. Recommendations regarding an early childhood system of supports led to the Oregon Children’s Plan (see below).

Juvenile Crime Prevention

In response to concern about juvenile crime, Governor Kitzhaber created the Juvenile Crime Prevention Task Force in 1996. In 1999, following the recommendation of the Task Force, the Legislature adopted a comprehensive strategy to prevent juvenile crime. The four elements of the approach include focusing on community-designed strategies for high-risk youth, coordinating existing efforts at state and local levels, holding the juvenile justice system accountable for achieving results, and reinvesting the resulting savings into further prevention efforts.

Now, every Oregon county has a comprehensive juvenile crime prevention strategy in place, supported in part by state resources. They have utilized strategies and services proven to reduce and prevent involvement in the criminal justice system, and they have succeeded in identifying high-risk youth early before they commit a crime. The results are clear. By 2001, Oregon’s

juvenile crime rate had dropped 25%. (See graph.)

Oregon Children’s Plan

Six of every ten children are born exposed to risks that can affect future success. By identifying these risks early, we can give children the opportunity to succeed in school and in life. The Oregon Children’s Plan represents the continuation of statewide efforts to provide an integrated, comprehensive system of services to children 0-8 years and their families. Building on SB

555, the 71st Legislative Assembly enacted HB 3659 which contains three key policy elements. They are: to define the goals and elements of a state voluntary early childhood support system, define and coordinate state and local responsibilities in carrying out such a system, and build upon existing programs and improve linkages between them. The basic components of the plan are:

- Early identification
- Home visiting services
- Community-based services
- Preschool
- Mental health and alcohol and drug treatment
- Evaluation and technical assistance

Preliminary data from the Oregon Progress Board indicate that providing an integrated system of services early in a child’s life can help families. In Oregon the number of children under 18 reported to be abused or neglected since 1994 has dropped 20%.

Oregon’s current poor economic climate has forced a reduction in many programs, but the structure for providing services to help create strong families and communities is in place and will contribute to the future well being of all Oregonians.

Comprehensive Planning—Senate Bill 555

Over 100 citizens and professionals were involved in developing SB 555, the landmark legislation that recognized the interdependence between healthy children and families and strong families and healthy communities.

This focus on children, families, and communities calls for state agencies and local communities to collaborate in comprehensive planning for children 0-18 years of age. Senate Bill 555 provides a framework for identifying community resources. It defines the goals and essential elements of an early childhood system of supports. Building on an existing system, it defines coordinated responsibilities in carrying out the early childhood system.

Did you know...?

In the past ten years, teen pregnancies have decreased by more than one third.*

The Governor’s Action Agenda of 1997 which laid out a multi-faceted plan has made a difference according to Sue Abrams, Office of Prevention & Transitional Benefits, CAF, DHS. In addition, teens are making responsible choices more often.

**Oregon Vital Statistics Annual Report for 2001*

State Employees Urged to Participate in Mentoring Project

Governor Kitzhaber recently announced a state policy initiative that will link employees with qualified mentoring programs for children and families through a partnership with Oregon Mentors, a statewide business-led organization. This effort, at no additional cost to the State, encourages state employees to use flexible work schedules, job sharing, personal leave, vacation leave or leave without pay—subject to applicable collective bargaining agreements—to schedule regular time to participate in mentoring programs. Mentoring is designed to provide an opportunity for youth to establish positive, supportive relationships with adults, an important element in a child's ability to develop trust and confidence.

Studies have shown that children with mentors are less likely to begin using illegal drugs and alcohol and are less likely to engage in violence. Studies also show that young people with mentors feel more competent about their ability to do well in school, report more positive relationships with friends and parents, and have better attitudes toward school, their family and communities.

Mentoring benefits adults as well. They feel better about themselves for playing a positive role in a child's life; they enjoy an increased sense of responsibility and accomplishment. As the saying goes, "If you help someone up the hill, you get closer to the top yourself."

Oregon is fortunate to have a strong mentoring program already in place. Oregon Mentors is a community-driven, nonprofit organization that is dedicated to the dramatic expansion of quality youth mentoring. It maintains a comprehensive list of mentoring programs in Oregon in a statewide database that can be accessed online. It recruits and refers mentors and provides training and technical assistance for groups and individuals.

Joining the Governor at the news conference held December 4 was PSU President Daniel Bernstine; Ken Thrasher, co-chair, Oregon Mentors; and Robert Pallari, President & CEO, Legacy Health Systems, and Tom Nelson, Executive Director of Oregon Mentors.

The Oregon Commission on Children and Families (OCCF) will work with state agencies to recruit State employees to participate in identified mentoring opportunities. For additional information, contact Barbara Fuller at (503) 373-1570, ext. 229.

Governor Kitzhaber urges state employees to participate in a mentoring project with Oregon Mentors, a non-profit Organization dedicated to expanding high quality youth mentoring.

Governor Declares Human Rights Day; Apologizes for Past Eugenics Practices

Governor Kitzhaber declared December 10 to be Human Rights Day in Oregon. Hosting a public reception to celebrate the progress Oregon has made in the treatment of people with mental health disorders, developmental disabilities and those incarcerated by the criminal justice system, the Governor acknowledged past eugenic practices in the state. "Even as we celebrate the progress we've made," he said, "we must also acknowledge the realities that darken the history of our state institutions. The time has come to apologize for misdeeds that resulted from widespread misconceptions, ignorance and bigotry. It's the right thing to do, the just thing to do."

The Governor listed changes in state policies that reflect the growing awareness of the need to safeguard human dignity and to ensure that the state relegates no one to second-class citizenship because of illness or affliction. These changes include compensation of residents in institutions, discontinuation of the use of inhumane devices to restrain and control patients, respect for patients' privacy, and greater emphasis on a transition to community care.

**Governor's Office
Health, Human Services & Labor

Governor Kitzhaber's Office of Health, Human Services, and Labor has appreciated the interest and participation of all those stakeholders who have shared with us their concern and expertise to promote the well-being of Oregonians.

Health Services Receives Grant for Improving Child Oral Health

The Office of Family Health in DHS, Health Services has been awarded \$932,000 in "State Action for Oral Health Access" grant funds from the Robert Wood Johnson Foundation to expand and enhance preventive oral health programs for low-income pregnant women and children up to 24 months of age.

Oregon's proposal for the Early Childhood Cavity Prevention Project was one of 6 states (out of 35 proposals) selected by the RWJ National Advisory on Oral Health to receive funding. Project evaluators and representatives of the RWJ Advisory Committee made a site visit in August to learn more about the plan for improving the oral health of children. Elements of the proposal focus on access to early intervention and prevention, collaboration with private providers, primary care and health systems, education of private providers and health systems, and evaluation of client population and provider involvement.

The Early Childhood Cavities Prevention Project is a collaborative effort of the Office of Family Health in DHS and the Office of Medical Assistance Programs in DHS, Health Services. The proposal includes three demonstration projects that will serve pregnant women in Klamath County, infants in Multnomah and neighboring counties, and children up to 24 months in Central and Eastern Oregon counties. The implementation and evaluation of these projects over the three-year period will create models that can be replicated and sustained statewide.

Governor Kitzhaber is particularly pleased with these continuing activities to strengthen oral health in Oregon, noting that early childhood cavities is the most prevalent chronic disease affecting children in the state, even surpassing asthma. Untreated tooth decay can seriously affect a child's normal growth and learning abilities and is associated with other costly infections and medical conditions such as failure to thrive, slowed growth rate, delayed speech, learning delays, and hospitalization for restorative and surgical treatment. Infant tooth decay is associated with oral bacterial infections of the mother and can be transmitted from mother to infant.

This project furthers the recommendation accepted by the Governor from the Oregon Strategy for Social Support Health Care Work Group.

Fall 2002

Oregon's Prescription Drug Conference Breaks New Ground

Leaders in public and private-sector health care professions from the U.S., Canadian provinces and other countries hailed Oregon's pioneering effort to promote clinical excellence and value purchasing of prescription drugs in a special conference October 10th and 11th in Portland.

A collaborative effort with AARP and the Milbank Memorial Fund, the conference provided an opportunity for participants to share progress in applying systematic reviews and evidence-based research more broadly to policies authorizing and financing the purchase of prescription drugs. AARP Executive Director and CEO, William D. Novelli, described Oregon's Practitioner-Managed Prescription Drug Plan (PMPDP) as "innovation at its best." He noted that for the first time, consumers and physicians are receiving credible, unbiased information and consumers are able to compare drugs and make choices based on credible research rather than marketing efforts.

Oregon's drug program, passed by the legislature in 2001 to help reduce drug costs to the State, will allow Oregon to base its Medicaid prescription drug plan on public, evidence-based reports of the safety and effectiveness of similar medications. (See www.oregonrx.org or www.aarp.org/or for lists of cost-effective drugs studied by OHSU's Evidence-Based practice Center.)

Governor Kitzhaber spoke to the issue of creating a functional marketplace for prescription drugs. He observed that unlike other commercial products, there is little or no competition in drug pricing. Consequently, pharmaceutical companies have little incentive to reduce costs. The PMPDP addresses that problem by providing a comparative process based on evidence and science in full public view for determining first the effectiveness and then the relative cost of similar medications. The Plan has built-in flexibility, so physicians always make the final decision regarding the best drug for individual patients.

"...for the first time, consumers and physicians are receiving credible, unbiased information and consumers are able to compare drugs and make choices based on credible research."

William D. Novelli, Executive Director and CEO of AARP.

The conference also included a well-attended mental health track that explored whether evidence-based reviews hold promise for improving the practice of mental health care. Attendees discussed the opportunities and obstacles in using evidence to make clinical decisions when treating mental health disorders and considered the differences in evidence-based approaches for mental health care from those used in other medical care.♣

Summit on Minority Over-representation Focuses on Education

The Governor's recent conference on the over-representation of minority youth in the justice system emphasized enhancing partnerships with the education community. In his address to the gathering, Governor Kitzhaber cited the importance of a strong partnership among law enforcement, juvenile justice, education, health care and social service agencies in the effort to reduce the over-representation, noting that no single agency, entity or professional community can do the job by itself. He repeated his strong belief that success in school is one of the strongest protective factors that can keep a young person from falling into delinquent behavior, no matter whether he or she happens to be a Native American, an African-American, Asian, Latino or white.

YOUTH award winners shown with Governor Kitzhaber are Michael Arnold, Tasha Murphy, Cody Campbell, Melissa Garcia, and Mike Greene.

A panel of youth, moderated by Attorney General Hardy Myers, discussed their education experiences and the difficulties they encountered with the system. They offered suggestions to teachers and administrators for improving the education of minority youth, especially of those with troubled backgrounds, and offered encouragement to youth in the audience for overcoming obstacles.

Attendees, participated in morning and afternoon workshops to explore strategies for engaging and supporting minority youth in the education process.

Students and adults discussed diverse topics including integrating culture into education, alternatives to suspension and expulsion for high-risk youth, and engaging students in rural communities.

Two young women from Corvallis House opened the morning session singing Amazing Grace. The Native American drumming group, Eagle Beak Singers of Grand Rhonde, performed at the beginning of the summit and during the lunch break.

The highlight of the day occurred when Governor Kitzhaber presented the annual YOUTH awards to five young people who have shown consistent progress in overcoming adversity. The 2002 winners are Michael Arnold, Tasha Murphy, Cody Campbell, Melissa Garcia, and Mike Greene.

The awards honor youth who take positive risks in turning their lives around, achieving success, and contributing to the success of others. ♣

Tax Measure Set for January

The income tax measure that will determine whether House Bill 5100 takes effect has been scheduled for the January 28 special election. HB 5100 contains \$310 million in legislatively approved cuts to education, public safety and human services programs. It becomes effective February 1, 2003 if voters do not approve the tax measure.

Under HB 5100, K-12 will lose \$95 million in state support while funding for Higher Education will drop by \$23 million. Community colleges will lose \$14 million.

Public Safety will have cuts as well. The Dept. of Corrections budget will be reduced by \$18 million, resulting in reductions in community corrections. The Oregon Youth Authority will close four facilities due to an \$8 million reduction.

The \$90 million reduction to Human Services programs will reduce or eliminate programs for medical assistance, seniors and the disabled, the developmentally disabled, and for abused and neglected children. After they have been compiled, details of the cuts in HB 5100 will be posted on the Governor's web page.

If the tax measure does not pass, these cuts will be taken by June 30, 2003, the end of the fiscal year. ♣

For Very Little Investment, Public Health is Quietly Improving the Quality and Length of Our Lives

(Excerpted from an opinion piece by Barry S. Kast, MSW, Assistant DHS Director for Health Services)

In grade school, we read about an almost forgotten disease called rickets. Only 80 years ago, it was America's leading nutritional disease among children.

That beautiful baby you saw recently will probably live into his or her 70s, perhaps longer. But a century ago, children under age six accounted for three of every ten deaths in this country.

The almost miraculous improvement in the quality and length of our lives is largely a result of advances in public health. Medical science is critical, but most of the gains in our health status have been achieved by our largely unrecognized public health system, complemented by advances such as refrigeration, pasteurization, and adding vitamin D to milk and iodine to table salt. In fact, of the 30-year gain in U.S. life expectancy since 1900, federal officials attribute 25 years to advances in public health.

Our public health system delivered effective polio vaccine to millions in the 1950s and warned Americans that tobacco caused cancer in the 1960s. Public health received some of its greatest attention by identifying anthrax threats as recently as last fall. Americans are gaining a new appreciation of public health as it plays a central role in the growing preparedness against possible bio-terrorism.

As important as public health is to us, resources are available to do only a third of what is needed. This year, the State will spend more than \$1,500 per each Oregonian on K-12 public education. We'll spend about \$300 each on state Corrections. By contrast, we'll spend less than \$49 each this year on public health services, only \$9 of which is from Oregon state funds. That's a little more than two cents a day!

Measured by what public health has done for us, and as cost-saving prevention, it's a great investment. ♣

More Uninsured Oregonians to Receive Health Coverage

Federal officials recently approved the Medicaid waiver required to implement the 2001 Legislature's expansion of the Oregon Health Plan (OHP). This will extend health coverage to 60,000 low-income working Oregonians and their families at no additional cost to the State.

Approval of the expansion was required because federal money pays for more than half the cost of the OHP. Other costs will be offset by increased premiums, co-pays for services and reduced benefits for low-income adults who don't normally qualify for Medicaid but who are eligible for coverage under the Oregon plan.

Governor Kitzhaber said "Oregon's ability to deliver health care to more Oregonians at no more direct cost to Oregon taxpayers is another example of this state's ability to find innovative ways to save money while still expanding services to needy Oregonians." ♣

Prevention Conference

Do you interact with individuals, families, schools and communities on a preventive basis? Then the 2002 Prevention Conference is for you. It's an opportunity for agencies and communities to learn about current techniques and programs for physical and behavioral health risk prevention. Presentations will cover skill-building techniques, latest prevention research and best practices, tools for community mobilization, opportunity for professional development, and networking and collaboration. The date is **November 19, 20, 21 at the Eugene Hilton**. For more information, contact **Caroline Cruz (503) 945-6190** or **Kristal Yoakum (503) 945-6197** or <http://www.ohd.hr.state.or.us/cahs/>

Corvallis House Provides Young Women With Support & Opportunities

Corvallis House, a 25-bed closed custody facility under the direction of the Oregon Youth Authority (OYA), serves young women from all Oregon counties. It provides youth offenders opportunities for reformation and rehabilitation and offers a transition program that can ease their entry back into the community.

Currently, 10 of the 16 youth in Corvallis House are working, attending college, or volunteering in the community. Three started college in September. Their interests range from biology and mathematics to ceramics and music instruction. It is important for these young people to experience some success in higher education. Besides the practical benefit of increasing later employment opportunities, college boosts their self-esteem as they become positive role models for girls at the residential facility who have not yet completed high school and for those considering additional education.

Through collaboration with the city of Corvallis' Youth Garden Project, some Corvallis House residents were able to gain experience in the landscape field. They provided the preparation work for a pathway and gazebo that will be surrounded by flowers and other plants. Youth participating in the project receive high school credit.

The Corvallis House staff provides a wide range of support and education groups. One is the Be Proud, Be Responsible curriculum designed to bring about HIV awareness. Using a combination of media resources, the program incorporates role-playing, music videos, and lectures selected for maximum effectiveness with young people. For additional information about Corvallis House, contact Lori McGovern at (541) 757-4144 X24. ♣

Late Summer 2002

Fifth Special Session Seeks to Fill Budget Hole

For a record-breaking fifth time, the Oregon Legislature has met to find a way to address another large budget shortfall. At a hearing August 29, state agencies described the effect of budget cuts to their programs should the Legislature choose not to support an effort to raise additional revenue. Governor Kitzhaber warned that Oregon's future is at risk. The ability of children to receive an education, the safety net for vulnerable citizens, and the state's ability to provide effective and responsive law enforcement are all threatened by loss of funding. Without an increase in current funding, cuts to education, public safety, and services to groups such as the disabled, frail elderly, and those with mental health disorders are likely because of a \$482 million budget deficit.

To those who contend that the state should not raise taxes in a recession, Governor Kitzhaber points out that cuts to programs providing needed services to Oregon families will result in increased costs to the state for unemployment compensation and other social services needed by Oregonians without jobs. In addition, job cuts will further decrease revenue to the state through loss of income taxes.

The longer the delay in taking action, the more severe the impact of any cuts taken because service reductions will be focused in the last months of the biennium. Immediate legislative action is needed to finance some or all of the budget reductions necessitated by the new revenue forecast.

Governor Kitzhaber addresses a rally supporting an increase in revenues.

✕ Potential Cuts

To see the range of cuts facing our state without additional revenue, click on www.governor.state.or.us/ ; then click on *August 29, 2002 Information from State Agency Budget Hearing.*

The Governor has long opposed borrowing from the future to finance current programs, but he has been willing to compromise as long as the net result is to substantially mitigate further cuts in the current biennium and to greatly reduce the projected deficit for 2003-2005. As this newsletter goes to press, legislative leaders and the Governor are negotiating to address the shortfall by some combination of service reductions, bonding, and revenue increases through a temporary tax surcharge.♣

State Drug Cost and Effectiveness Study Provides Guide to Prescriptions

Consumers and health professionals now have a guide to the first publicly funded, unbiased source of information comparing the effectiveness of certain similar prescription drugs. The guide is already being touted as a national model by state policy makers and consumer organizations such as AARP.

The State is developing evidence-based evaluations on the effectiveness of similar drugs in specific classes to help the state and consumers purchase drugs more wisely. For example, the research conducted by the Oregon Health and Science University shows that three cholesterol lowering drugs have demonstrated superior outcomes. These drugs are lovastatin (a generic), Mevacor (brand name for lovastatin), and Zocor (a brand name drug still on patent and so has no generic equivalent). Of these three most effective drugs in this class, the least expensive is generic lovastatin. For purchasers such as the state and seniors, it makes the most sense to buy lovastatin, because the cost is lower and the results are virtually the same.

Four categories of drugs have been researched so far. The reports compare the effectiveness of drugs for high cholesterol, stomach acid and heartburn, severe pain, and arthritis. In the near future, reports on drugs for high blood pressure, migraine headaches, and hormone replacement will be available, and there are plans to research drugs for heart disease, urinary incontinence, muscle relaxants, and oral hypoglycemics.

The AARP has joined the effort to bring consumers and health professionals information needed to assist in making wise decisions regarding prescription drugs. The information is available at www.aarp.org/or and on the state web page at www.oregonrx.org. ♣

Social Support Initiative Review

The Governor's Office has released a review of the work of the Oregon Strategy for Social Support Initiative work groups. It is available online at www.governor.state.or.us/gol_health.htm or contact Alicia Philpot at alicia.h.philpot@state.or.us (503) 373-7489

Prescription Drug Conference to Focus on Clinical Excellence and Value Purchasing

The Governor has invited leaders in public-and private-sector health-care purchasing and the health professions to a one-and-a-half-day conference on prescription drugs. Entitled Creating a Functional Marketplace for Prescription Drugs, it will take place in Portland October 10-11. Attendees will discuss the evidence available about the effectiveness and cost of prescription drugs and how that evidence can inform policies that maximize the well being of patients at an affordable cost.

Since 1995, drug costs have increased by double-digit percentages. According to a brief issued by the U.S. Pharmacopoeia Public Policy Center in 2002, these increases have been double or triple those of hospital care and physician services. To help reduce drug costs to the State, the legislature passed Senate Bill 819 in 2001 which will allow Oregon to base its Medicaid prescription drug plan on public, evidence-based reports of the safety and effectiveness of similar medications. (See www.oregonrx.org or www.aarp.org/or for lists of cost-effective drugs studied by OHSU's Evidence-Based Practice Center.)

The conference will include a mental health track to explore whether evidence-based reviews hold promise for improving the practice of mental health care. Experts will consider the implications of evidence-based reviews for practice and behavior in a community setting and discuss what the evidence says about the integration of physical and mental health care. Participants will also explore how to connect medication management with the behavioral health supportive services necessary for good outcomes named in the literature.

The conference, which will include an international faculty, is planned to share progress in states, Canadian provinces, and other countries, as well as among private-sector purchasers in applying systematic reviews and evidence-based research more broadly to policies authorizing and financing the purchase of prescription drugs.

For more information call Michael Wiltfong (503) 378-2422, Ext. 418. *To register and submit your payment online, visit our web site: www.oregonrx.org* ♣

Building Economic Self-sufficiency for Oregon Families

In 1996, Governor Kitzhaber established the Human Investment Framework to establish goals for Oregon's approach to investing in its people. It was an effort to help Oregonians be independent, productive, and self-sufficient. Here's an update on some of the ways Oregon is helping families to become economically self-sufficient

- Housing and Community Services (HCS) is developing the **Oregon Economic Well-being** website with tools and links to tools that should help Oregonians achieve economic resilience (Go the HCS website and click on Economic Well-being: <http://www.hcs.state.or.us/>). One of the tools is **Oregon Helps** where people can find out on line what types of economic or social assistance they are eligible to receive (<http://www.oregonhelps.org/>). Other tools linked at the Well-being site to help families make the most of available opportunities are **One-Economy's Beehive** (provides information and resources about handling money, health, jobs, and other topics: <http://www.thebeehive.org/>) and the **Portland Metro Area Housing Connections** (provides housing information about availability, loans, etc.: <http://www.housingconnections.org/>). The Governor's Well-being website should be fully updated soon
- Oregon Housing and Community Services is part of a collaborative of homeownership training providers called the **Homeownership Education Collaborative of Oregon** that provides the "ABCS of Homebuyers" training across the state. This is a great program providing potential home buying families the skills to handle homeownership.
- Several of the local Commissions on Children and Families in their Comprehensive Plans for Children and Families, have embraced the **Search Institute's Forty Developmental Assets for Youth**. Though not focused on financial assets, this is another asset-building front.

- The **Oregon Children's Plan (OCP)**, a recent initiative by the Governor, can also be seen as a strategy to focus and build on individual family's assets. Under the OCP, first-born children in the state will receive a voluntary screening prenatally or at-birth for significant medical or psychosocial risk factors that could impede their healthy development. Risk factors include family and income status indicators. Assuming a positive risk screen and willingness of the family to participate, the child/family is then matched and provided with the appropriate type of community-based support. This may include nurse home visits, income development strategies, substance abuse treatment for the parent, etc. For more information about the Oregon Children's Plan, see <http://www.governor.state.or.us>.

For more information about some of these programs, see the Spring 2002 edition of this newsletter at http://www.governor.state.or.us/gol_health.htm. ♣

Sale of Dammasch State Hospital Improves Housing Options for People with Mental Illness

Dammasch, the former state facility was closed several years ago and sold last June. Part of the proceeds from the sale will go to purchase or rehabilitate housing for people with mental health disorders. They face a serious housing shortage so the impact of the sale on housing for this population is significant. Of about 35,000 people with mental illness served in Oregon at any one time, more than 12,000 are in immediate need of affordable housing, and 2600 would benefit from some kind of residential setting

Housing at the Dammasch site will include a variety of options for people with mental illness and blend in with surrounding residential properties. ♣

Save the date: Governor's Summit on the Over-representation of Minorities in the Juvenile Justice System Planned for October

What can you do to address the problem of the disproportionate presence of minority youth in the justice system? Come to the Governor's Summit planned for October 9, 2002 in Portland to hear what is being done and what has been accomplished to overcome the problem. Governor Kitzhaber hosts this event annually with the long-term goal of reducing minority over-representation in the juvenile justice system through strategic partnerships that develop a sustainable ongoing effort to address over-representation. It is also a celebration of progress made by many committed state and community-based groups and organizations.

The theme of this year's Summit is Enhancing Partnerships with the Education Community. Sessions will feature programs, projects, and other activities to keep minority youths in school and help them achieve academic success. Poor school performance is one of the highest predictors of involvement in the juvenile justice system. School success is among the strongest "protective factors to deter young persons from engaging in delinquent behaviors.

The summit is free, but registration is required. Additional information and on-line registration is available at www.Oregon.gov/summit. For more information, contact Grace Roth at grace.roth@state.or.us or (503) 378-5884.

Health Plan Waiver on Way to Feds

Oregon's application for a waiver that will permit 50,000 more people to obtain coverage under the Oregon Health Plan is finally on its way to the Bush administration for consideration. Earlier this month the Emergency Board acted on the Governor's request of last January to submit the waiver. Federal permission is needed to make changes in the Plan.

The increased number of Oregonians served will not require additional dollars because of savings obtained by requiring a co-pay and by reducing benefits for certain adults without disabilities. Benefits for children, pregnant women, and the disabled would not be reduced.

House Bill 2519 grants the Governor the authority to request a waiver providing coverage for persons up to 185% of the federal poverty level within the funds available. However, the bill also requires the expansion to be limited to "the funds available" which means that the program will be capped before it covers all persons without insurance under 185% of FPL. Coverage will be provided through both the Medicaid program and the Family Health Insurance Assistance Program that subsidizes access to commercial insurance.

The next step in the long process involves an effort to negotiate terms with the Centers for Medicare and Medicaid Services. *For more information on the Oregon Health Plan waiver, call (503) 378-2422, ext. 401* ♦

What makes a successful citizen?

(See back page)

Governor Visits Designers of Award at MacLaren

Governor Kitzhaber paid a recent visit to MacLaren, the Oregon Youth Authority's correctional facility for youth. He was there to visit with Carlos Cordova and Enrique Rivera, the designers of an award given to youth who take positive risks in turning their lives around. The Governor presents the award each year at the Summit on the Over-representation of Minorities in the Juvenile Justice System. During this visit, Governor Kitzhaber wore a belt buckle with the same design. It had been given to him at the last Summit in recognition of his efforts to address the problem of the disproportionate number of minority youth that end up in courtrooms and jails.

The Governor has continued to follow Rivera and Cordova's progress. His visit was an opportunity to present them with a copy of the award they designed and to learn about their experience in the Secure Intensive Treatment Program implemented at MacLaren. ♦

Gov. John Kitzhaber is shown with Carlos Cordova and Enrique Rivera, the designers of the Minority Over-representation Youth Award.

Governor Cuts Budget and Supports Increasing Revenue to Avoid Adding to Future Deficit

Governor John Kitzhaber in a move to avoid pushing more painful budget cuts into the next biennium, took the difficult step last March of using an Administrative Rule to make additional cuts in the state budget.

Stating that these were not cuts he supports, the Governor emphasized that they were necessary to responsibly balance the budget. The half-billion dollars in one-time revenue passed by the Legislature created a fiscal hole that would have required even greater cuts in the next biennium to services Oregonians care deeply about.

The problem facing Oregon is not a temporary downturn in the economy, but rather the fact that the State's revenue base will not support all of the programs the 2001 budget originally funded. The Governor believes that Oregonians value the programs he cut and those cut by the Legislature and that, if given the choice, they would vote to provide ongoing revenue to fund them.

Raising revenue will not be easy, but if Oregonians value services and the people who receive them, then everyone must work together to find real, permanent revenue to fund those services. Quoting Martin Luther King Jr., the Governor said, "Whatever affects one directly, affects all indirectly." ♦

Good Health News: Smoking Declines In Oregon

Oregon taxpayers can take satisfaction in knowing that the tobacco tax increase they approved in 1996 has a good outcome: cigarette consumption has fallen 29 percent in Oregon, more than twice the rate of the national decline. This decrease in smoking is due partly to the fact that people smoke less if they have to pay more. This is especially so among young people. But the decline is also attributed to a successful anti-smoking campaign, which has been funded by revenue provided by the tax. Ten percent of the tax income is dedicated to a statewide effort to educate Oregonians about the dangers of tobacco use. ♦ For additional information: Call Bonnie Widerburg at (503) 731-4180 or visit this web page: <http://www.ohd.hr.state.or.us/news/2002/0320tob.htm>

Steps Urged to Curb Underage Drinking

According to the results of the *Oregon Healthy Teen Survey 2001* released by Oregon's Department of Human Services, 43 percent of the state's 11th graders are likely to consume alcohol in the next month. This startling finding is one more indication that unlike tobacco, alcohol use among Oregon's youth is not declining.

The consequences of underage drinking can be devastating. Young people who drink alcohol are more likely to consider attempting suicide, skip school, get poor grades, carry a gun, and be involved in car crashes.

Barbara Cimaglio, DHS Special Assistant for Child and Adolescent Health Services, says adults and especially parents need to take steps to stop underage drinking. She encourages parents to talk to their children about alcohol and let them know that adolescent drinking is not acceptable. She adds that it's also important for parents to set a good example in their use of alcohol.

To address the problem of underage drinking, a variety of activities were planned for April, Alcohol Awareness Month. First Lady Sharon Kitzhaber, who co-chairs the National Leadership to Keep Children Alcohol Free unveiled a new OMSI exhibit showing youth the effects of alcohol on the brain. The Oregon Partnership, a statewide nonprofit organization dedicated to substance abuse prevention and treatment referral launched a Spanish language alcohol and drug information and referral hotline funded by DHS.

Other recent efforts to combat underage drinking include the 17th Annual All-Night Teen Conference at Jefferson High School in Jefferson, Oregon sponsored by Operation Student Safety On the Move (OSSOM). In its effort to raise alcohol awareness among young people, the Oregon Liquor Control Commission (OLCC) has funded an essay contest for students about why it's important for them to wait to use alcohol until they are 21. And on May 1 DHS launched its new statewide public awareness campaign, *Wise Up: Straight Talk on Alcohol*

To underscore the Governor's commitment to this serious problem, the 1997 task force which he appointed on underage drinking is being re-established and will be revitalized. ♦

New Information on Services Now Available on the Web

Oregon families seeking assistance have more options for locating services and housing and for determining their eligibility now that two web-based programs are available. Information can be obtained by anyone with access to the Internet at home, work, schools, libraries, or any public computer location. (Programs to help families locate housing and needed social services were recommended by the Oregon Strategy for Social Support.)

To help locate affordable housing, Oregon Housing and Community Services has launched a searchable database of over 1000 government assisted, privately owned buildings around Oregon. Both subsidized and non-subsidized units are listed within the system. Searchers can specify criteria as to location, price, etc. and learn where they can apply directly for housing that meets their needs. The affordable housing information system can be found at

http://www.hcs.state.or.us/housing_locator/index.jsp

The city of Portland has also established a website containing information about affordable housing in the Portland area at www.housingconnections.org. This site provides information for both renters and landlords and provides a way to search for affordable and accessible homes for sale in the Portland Metro area. Landlords can advertise their properties on-line at no cost and will eventually be able to accept on-line rental applications.

Future additions to the Portland site will include a Housing Problem Solver to help people find other services and shelters and a Housing Connector, which will accept online applications.

Another exciting, newly launched website designed to help families locate services is available at www.oregonhelps.org. Still being tested, this site known as the Eligibility Estimator can be used to determine the services Oregonians might be eligible for. Without traveling to many different agencies, Oregonians can learn whether they are likely to qualify for assistance such as coverage under the Oregon Health Plan, Food Stamps, or Temporary Assistance for Needy Families. The website is multilingual, available in Spanish, Vietnamese, Russian, and English. ♦

Efforts to Preserve Affordable Housing Underway

Many affordable housing development projects that have served lower income residents through rental and other subsidies have contracts that will be expiring over the next few years. These units may soon be lost, or have already been lost, as affordable housing stock in Oregon.

There are approximately 282 projects—11,619 units—in Oregon that receive project-based Section 8 rental assistance from the US Department of Housing and Urban Development (HUD). The contracts on these properties are set to expire over the course of the next 8 years. The owners of thousands of these units can choose not to renew their contract for the subsidy or even to opt out of their contract by prepaying their existing loans. They can then convert the projects to market rate units thereby forcing a large percentage of the households into homelessness.

Oregon Housing and Community Services (OHCS) has developed a Strategic Plan for the 2001-2003 biennium to address this potential loss. One goal of the Plan focuses on the preservation of cost-effective affordable housing with an emphasis on those that contain project-based rent subsidies. These rental subsidies not only provide a guaranteed revenue source for the owner, but also provide rental assistance to residents. Residents that live in these projects have incomes at or below 50% of area median income and pay no more than 30% of their income for rent.

If owners want to opt out of their contract and convert projects to market rate units, OHCS attempts to match up buyers whose mission is to provide affordable housing, so that the project-based rental subsidy can be maintained for the project. To date 75 properties have been maintained as low income housing that otherwise would have gone to market rate. It is estimated that an additional 15 expiring properties will be preserved this biennium totaling 442 units. *For more information, call Shelly Cullin at (503) 986-2118 or e-mail shelly.cullin@hcs.state.or.us*

Did you know...?

Newborn screening saves lives. The Oregon-based Northwest Regional Newborn Screening Program annually tests 230,000 specimens for diseases such as PKU, Maple Syrup Urine Disease, sickle cell disease and hypothyroidism. Before the start of statewide newborn screening, one percent of Fairview Training Center admissions were for untreated PKU. After screening began, there were no more such admissions.

Successful Citizens: The Next Step

Success in school and the future of our state are inseparable because people who succeed in school most often succeed in life. For those who fail in school, however, success is often elusive. Oregon's drop out rate in the 1999-2000 school year was 6.3 percent, which means that on average, 20 percent of the students in every freshman class drop out before the end of their senior year. Society pays a high price for our children's school failure. An estimated 36 percent of incarcerated adults and 35 percent of incarcerated youth in Oregon have dropped out of school. Eighty-two percent of incarcerated youth have a need for special education.

Since the 1980's we've seen an emphasis on improving schools and the school environment in order to improve our young people's success. We have raised standards and expectations. We have focused on raising test scores. In our effort to improve *schools*, however, we have failed to give *children* the focus they need. We have ignored the fundamental fact that in order to improve our schools, we must first lay a solid foundation. We have not paid attention to the root causes of poor student performance—lack of parental control and parenting skills, child abuse and neglect, substance abuse in the home, mental health disorders on the part of parent or child, and family instability.

Now it is time to take the next step: to connect our efforts to help children be ready to learn when they enter school—and to help schools prepare to teach the diversity of students they receive, especially those who are high-risk. A three-pronged approach is proposed:

1. Increase the adult-child ratio in our schools and in our communities.
2. Increase the connection between families, social services, and schools.
3. Provide purposeful, relevant and engaging curriculum.

(For more information, see the *Successful Citizens* concept paper by going back to our home page at: http://www.governor.state.or.us/gol_health.htm)

Winter 2002

Implementation is Focus of OCP Conference

Providers of childhood services from throughout the state gathered in January to gain a clearer understanding of the Oregon Children's Plan (OCP) and to share information for implementing its provisions.

Governor Kitzhaber delivered the keynote speech, describing the Plan as a framework for bringing services to those in need – putting kids, not programs, first. He described the Plan as both an investment and a preventive measure intended to identify and address risk. And he noted the importance of teamwork to make certain that firstborns receive screening and any indicated follow-up service.

Referring to the short fall in state revenue, Governor Kitzhaber warned that we should not jeopardize our commitment to at-risk children and their families who could fall into the trap of drug abuse, academic failure, and criminal activity.

Attendees also heard the guest speaker, Dr. Terry Carrillio, Director of the Social Policy Institute at San Diego State University, discuss the integrated team case management approach to supporting vulnerable families.

Teams comprised of representatives from various county providers of services to children met to hear information covering the various OCP components. Armed with information obtained in these breakout sessions, team members discussed how they would structure the key elements of the OCP/Early Childhood System in their areas. They also identified the assistance needed to put an agreed-upon structure in place. This information will aid state early childhood planners in providing support to local providers of services. Preliminary rollout of the effort to identify families of newborn children who could benefit from a variety of social supports has already begun in some counties. ♦

Governor Seeks Solutions for Rebalancing Budget

Governor Kitzhaber has continued to seek ways to bring the state budget back into balance. As in most states (and unlike the federal government), Oregon cannot carry a budget deficit, so the current loss in revenues due to the economic recession requires some painful decisions. Either a reduction in spending or an increase in revenue, or both, is needed.

To fill the budget shortfall, the Governor has proposed a combination of spending cuts and revenue increases. He called a second special session, urging the legislature to find ways to rebalance the budget that will protect essential human services and education without mortgaging the state's future. To accomplish this, he is unwilling to borrow funds from state accounts that will force future legislatures to deal with even bigger deficits. ♦

Gov. John Kitzhaber discusses budget options relating to education with (L to R) John Marshall from the Oregon School Boards Association, Kris Kain, President of the Oregon Education Association, and Ozzie Rose, from the Confederation of Oregon School Administrators.

Improved Treatment Location for Children with Mental Disorders

Seriously mentally ill children will no longer have to endure being housed in a facility at the Oregon State Hospital young children's unit where their playground is adjacent to an area for the criminally insane. These children will now be served in Portland and Corvallis facilities especially designed to treat young mentally ill patients who need long-term and specialized care.

This change has been a goal of advocates for improved mental health services for children. In recommendations to the Governor in January 2001, the Mental Health Alignment Workgroup emphasized the importance of providing needed treatment and support for children as soon as possible.

Under a policy package approved by the 2001 Legislature and aimed at serving children and adolescents in the least restrictive setting, a Secure Children's Inpatient program and additional psychiatric residential beds will be available for those aged 13 and younger. The policy package makes resources available to fund a locally developed, individualized plan to support those children who are clinically ready in their home community. This will improve the state's ability to provide "wrap around" care for these children, and they will go home sooner and be better cared for.

Confinement of mentally ill children in the state hospital often prevents them from receiving appropriate levels of care because it is not designed for children. Community-based facilities are better able to provide different levels of care in a setting that can give younger clients hope.

This change will not increase costs, and will actually allow the state to gain eight more beds for children ages 5-13. ♦

Oregon Health Plan Update

The Oregon Health Plan (OHP) has found itself in the midst of significant changes as Oregon's economy and health care industry changes. These changes include:

- Substantial increases in enrollment have occurred since the downturn in Oregon's economy began. The Legislature has approved a rebalance of the Department of Human Services budget to cover these increases.
- Fully capitated health plans in Eugene, Salem, and Portland have continued to move through the transition created by the departure of insurance-based plans.
- Substantial increases in enrollment have occurred in the Oregon Medical Insurance Pool (OMIP), Oregon's high-risk pool. As Oregonians lose employer based coverage or health insurance coverage becomes more important because of a chronic illness, high risk Oregonians are able to purchase health insurance through OMIP.
- Implementation plans for a variety of changes in the OHP are moving forward. This includes co-payments on prescription drugs and limits on use of multiple pharmacies.
- The Health Resources Commission's analysis of four families of drugs that are frequently prescribed continues. Findings regarding these families of drugs should be available in the Spring of 2002.
- Waivers that would change the OHP have been prepared based on input from multiple stakeholders, the Legislature and the Governor. These waivers await further review prior to submission to the federal government. (*See related item on page 4*)

Did You Know...?

On any given night, an average of 8,840 Oregonians are homeless and seeking assistance, 37 percent of which are children under the age of 17. Of those seeking assistance, more than 2,000 are turned away, including about 800 children.

Homelessness in Oregon, OHCS, Fall 2000

Affordable Housing: Human Services and Economic Development

Affordable housing plays a critical role in improving the lives of Oregonians. In a report to the Governor in 1998, the Work Group on Safe, Affordable Housing identified housing as one of ten critical social supports necessary to ensure the state's education and workforce goals. But in these times of economic dislocation, the ability of Oregonians to live in secure, economical, community-based accommodations is more threatened than ever.

According to a Fall 2000 report from Oregon Housing and Community Services on homelessness, the number of homeless Oregonians has increased. As the cost of housing shot up through the boom times of the 1990s, even some minimum-wage workers, unable to afford the higher rents commanded by the hot economy, were forced into homelessness. Affordable housing is needed now more than ever. Many of those families whose breadwinner has lost a job in the current recession might also need lower-cost housing.

Another group with unmet housing needs are mental health consumers. The Mental Health Alignment Work Group in its report to the Governor a year ago cites research showing that housing is one of the central features of effective treatment and recovery. Yet in a report compiled by the State Office of Mental Health Services, 36,732 adults with psychiatric disorders needed either subsidized rent or a special housing program.

Affordable housing developments can help address these housing needs and help stimulate the economy at the same time. According to the Home Builders Association estimate, local one-year impacts of building 100 multifamily units include:

- \$5.2 million in local income
- \$579,000 in taxes and other revenue for local governments
- 122 local jobs

The additional, recurring impacts of building 100 multifamily units include:

- \$1.8 million in local income
- \$308,000 in taxes and other revenue for local governments
- 46 local jobs

(Continued on page 4)

HHL Personnel Changes

The Health, Human Services and Labor Office lost one of its longest serving staff members last month. **Julia Cooley**, who began working as a policy assistant in the Governor's office eight years ago, has accepted the position of agency administrator of the Oregon Board of Licensed Professional Counselors and Therapists. Legislators, visitors to the Capitol, and other staff will miss her friendly assistance and wicked sense of humor.

Although Julia's duties required high-level administrative work and research, she placed strong value on customer service and helping others. She made extra effort to understand the difficulties people endure. A single mother at the time, she once met with a young woman—also a single mother—who was struggling to live independently while on a very limited income. For one month, Julia matched her spending to the woman's income to better understand her problems and to be able to provide practical help.

We know wherever Julia works, she will always be an advocate for those in need of human services.

HHL will also miss **Roslyn Romero** who has accepted a position as program coordinator for the Director of the National Policy Consensus Center at Portland State University. Roz came to HHL from the Justice Department where she provided executive support in the Government Services Section. As executive assistant to Policy Analyst Pam Curtis, her reputation for efficiency and organization spread quickly. That probably accounts for widespread efforts to steal her away. Roz also brightened the office with comical stories. She is sad to leave HHL, but confesses she will not miss the long commute from Southeast Portland.

Evenly Bloemhard has assumed the position of executive assistant to Mark Gibson, HHL Policy Advisor. She comes to HHL from the Governor's Community Solutions Office where she served as the office manager. She also assisted the Governor's Community Development Advisor. Before that Evelyn worked for several attorneys general in the Oregon Department of Justice. She is from the Salem area but has lived in Seattle and Europe. ♦

Grace Roth will be joining HHL as executive assistant to Pam Curtis. She leaves the post of Oregon Health Plan Specialist at the Salem Clinic where she has served since 1999. We look forward to Grace's start at HHL March 19.

Housing (continued from page 3)

This stimulus benefits both urban and rural Oregon. During the last biennium twenty-three out of the thirty-six counties received funding for development. These projects have taken place in both large and small communities, so the positive economic effect is experienced equitably. In the last three years, 61% of the state's competitively allocated housing funds have gone to areas outside of the Portland Metro area. All funds are directed toward low-income and rural areas that are likely to be hardest hit during the recession. This is money well spent—the state's investments are leveraged at \$5.77 to \$1 from private investors, the federal government, and from banks.

Current Status of OHP2 Waivers

HB 2519, passed by the 2001 Legislature, requires that the Department of Human Services request a federal waiver to restructure and expand the Oregon Health Plan (OHP). Under that law, about 100,000 of current OHP recipients (non-categorical adults) would receive a reduced benefit package. Those savings, along with federal funds for the Family Health Insurance Assistance Program (FHIAP), would be used to expand coverage under the OHP. Coverage for pregnant women and children up to age 19 would be expanded to 185% of the Federal Poverty Level (FPL). Coverage under FHIAP and for other non-categorical adults would also be expanded to 185% FPL, but subject to caps on enrollment. No action has yet been taken by the Legislature to either approve or deny submittal of the waiver request to the federal government. Planned implementation would be October 1, 2002.

State Employees Food Drive

State employee volunteers will soon be completing their annual food drive with the theme of "Fighting Hunger, Feeding Hope." The statewide team collecting food and cash donations from co-workers set a goal of raising 3.5 million pounds of food. Last year's drive brought in a record 3.3 million pounds. According to the Oregon Food Bank, every dollar raised can generate six pounds of food, so this drive is important for Oregonians in need—especially during the current economic downturn.

A New Odyssey

Looking for Solutions for Reducing the Over-representation of Minorities in the Juvenile Justice System

Odyssey = A long wandering or voyage, an intellectual or spiritual quest.

Many who attended last month's Governor's summit on the over-representation of minorities in the juvenile justice system regard their efforts to reduce the number of minority youth who end up in trouble with the law as a special odyssey. It is a quest to find ways to overcome the challenges and barriers that prevent youth from leading successful lives. For minority youth, the challenge is especially clear. They continue to comprise a larger percentage of school dropouts, and they still serve Measure 11 sentences at rates higher than others.

Last month's fifth annual conference brought together youth and adults from all over Oregon. Attendees represented a wide number of justice system agencies and departments, as well as social service agencies and many youth.

Governor Kitzhaber has said that the search for solutions to racial imbalance must include prevention. Because one of the highest predictors for involvement in the juvenile justice system is poor performance in school, the Governor called for continued emphasis on school improvement. School success is one of the strongest "protective" factors that can keep a young person from engaging in delinquent behavior. These predictors are even stronger for youth of color.

Still, he noted that to succeed in school, children must also be loved and well nurtured. They need good health care and supportive families to become successful, independent learners. To improve the opportunities for

children and families to succeed, the Legislature recently passed the Oregon Children's Plan. It will offer voluntary screening of first-born infants and help to identify risk factors that might be mitigated through a range of proven services.

Governor Kitzhaber with members of the Minority Over-representation Planning Committee.

In his remarks, the Governor noted that in spite of the challenges remaining, there is still much to celebrate. Oregon is the first state with ample statistical evidence to show that we are making a difference and actually reducing the number of minorities involved in the juvenile justice system. For example, while the percent of minority youth in the general population is rising – from 15 percent of youths in Oregon just a few years ago to 19 percent today – their overall representation in the juvenile justice system is declining. In addition, since the first youth summit in 1997, (*Continued on page 2*)

(Odyssey - Continued from page 1)

arrests of all juveniles are down almost 25 percent. (Arrests of African American youth declined steadily until this last year, when they crept up just short of a percent.) The Governor also pointed to the fact that more than 125 young people were in the audience. He commended them for being present to help think about and discuss the issue of youth in the justice system.

A highlight of the conference came when the Governor awarded four young people special recognition – the YOUTH award (Youth Overcoming Difficult Times and Hardship) for having overcome difficult circumstances. They are Ernan Contreras, Noah Winterhawk, Ellie Heater, and Elton Seals ♦ (See related story on page 3)

CHANGING THE OREGON HEALTH PLAN

The summer and fall has seen multiple activities related to changing the Oregon Health Plan (OHP). These changes were approved by the 2001 Legislature and Governor within HB 2519. This legislation allows Oregon to pursue federal waivers that will provide flexibility to Oregon around Medicaid benefits – flexibility related to eligibility and enhanced ability to work with uninsured Oregonians who have access to employer based health insurance. When fully implemented, these changes would allow Oregon to make maximal use of state, federal, employer and individual funding streams. Additional federal funds would come to Oregon, which in combination with employer and individual funds, would allow a significant number of currently uninsured Oregonians to afford coverage.

The Health Services Commission (HSC) has completed its work toward the establishment of a second and more basic benefit plan for those adults currently covered by OHP and for additional adults to be added. Children, pregnant women, and persons with disabilities will continue to receive the current OHP benefit. The Waiver Application Steering Committee (WASC) has held multiple sessions in October and early November to study the list of benefit packages developed by the HSC. In late November and early December the WASC will form a recommendation on where the “line” for

coverage should be drawn on the HSC list in determining the new OHP Standard benefit package. Presentations were made in mid-November to the Commission on Health Care Costs and Trends and the Emergency Board as they begin to examine these issues in preparation for a final decision in January 2002.

The Insurance Pool Governing Board has issued its recommendations regarding benchmarks for employer-based plans that Oregon proposes to be subsidized by the state in specific circumstances. These benchmarks will require that benefits be provided in 21 different benefit families with overall cost sharing not to exceed 20 % for all benefits except prescription drugs where cost sharing is recommended to be no higher than 25%. This should allow a more simple and inclusive subsidy approach leading to increased eligibility for employees who have access to insurance but cannot afford it.

Multiple state agencies (Office of Medical Assistance, Office of Oregon Health Policy and Research, Family Health Insurance Assistance Program and Governor's Office) are working together to staff the decision-making bodies involved and to prepare the federal waivers needed. Jean Thorne from the Governor's Office has been selected as the project director.

Oregon has been awarded a three-year grant from the Robert Wood Johnson Foundation to prepare and implement these changes. More information about all of these issues, including times of various meetings, minutes, and documents related to these issues are available at the web site of Office for Oregon Health Policy and Research—ohpr.state.or.us ♦

The Oregon Children's Plan: What's in it for the Medical Community?

During the 2001 legislative session, the Governor proposed and oversaw the passage of the Oregon Children's Plan. The vision of the Children's Plan is to ensure the success of all Oregon's children by creating a seamless system of services and supports for young children and their families.

Oregon's early childhood system of services has three key components:

- ✓ A process to identify as early as possible children and families who would benefit from services;
- ✓ A plan to support the identified needs of the child and family, coordinating case management and service delivery; and
- ✓ A broad array of services and supports for families with pregnant women and children through their 8th year.

This legislation engages community planning efforts to improve our system of services for families with children ages 0-8. It also provides for more effective delivery of funds for these services to local communities across the state.

The medical community plays a key role in the success of the Oregon Children's Plan. Oregon needs pediatricians, obstetricians, nurses, and family physicians to conduct voluntary screening, identifying families with needs, and connecting them to services. Partnerships between community service providers and the health care community will be critical in serving families in need.

The benefits of early preventive care and supports are numerous and well known to the health care community. We know expectant mothers with good pre-natal care and a support system will need fewer stays in neonatal care units. Through health and social supports, more children will receive immunizations on schedule and fewer will suffer from abuse and neglect. Parenting skills will be enhanced and children will develop better early literacy skills.

Through collaboration between the medical community, state and local government, and local service providers, children and families will be healthier and other social service needs will be better met. ♦

A Life Changed

For Doug Harder, a 15-year employee of the Department of Corrections, and Elton Seals, a college student and football player, their chance meeting at a recent conference had special meaning. Both were attending an annual summit on racial imbalances in the justice system where Governor Kitzhaber presented Seals with a youth award. The honor was in recognition of Seals overcoming difficult times and hardship to turn his life around. Now a 25 year-old senior at Western Oregon University, Seals will graduate soon with a degree in sociology.

It was before Seals turned his life around that Harder first knew him. The two met at Eastern Oregon Corrections Institution (EOCI) where Seals was serving a long prison sentence. He had grown up in Portland and got involved in gang activity and serious crime. Harder, now executive assistant to the EOCI superintendent, was a corrections officer at the time. For him, the unexpected meeting at last month's conference was an emotional moment. "It was inspiring to see such an outcome," he recalled. "This was a young man who was extremely focused."

In prison Seals had redirected his energy to positive activities like weight lifting and other physical programs. "Everybody needs a passion," he says. "Mine was football, but among my friends, I was ridiculed for being a jock. Being in a gang made me feel accepted."

When he happened to see Harder at the conference, Seals says he was happy. "Prison was rough, but it helped me deal with all the issues that had put me on the wrong path." To the young people at the conference, Seals shared what he had learned: "Let go of your anger," he said, "it just gets you in trouble." ♦

Did You Know...?

...the social and economic costs of alcohol and drug abuse last year carried a price tag of \$1,000 for every American adult and child.

Barbara Cimaglio, Special Assistant for Child & Adolescent Health, DHS

What Is Oregon Doing to Control Drug Costs?

The cost of prescription drugs in the Oregon Health Plan (OHP) will rise approximately 60% in the next two years. At Governor Kitzhaber's urging, the 2001 Legislature passed SB 819 which authorizes the state to adopt a prescription drug formulary through an approach called the "practitioner-managed prescription drug program."

Overview of Practitioner-Managed Prescription Drug Plan

The Practitioner-Managed Prescription Drug Plan (PMPDP) will enable the state to purchase drugs more economically without compromising the quality of care for patients using the OHP. It will be part of the benefits provided to OHP patients who are not in managed care plans. Costs will be contained by carefully evaluating the effectiveness of similar drugs and among drugs found to be equally effective, using the least expensive drug. The evaluation of effectiveness will rely on independent, evidence-based research. Establishing a list of preferred drugs for a health plan is called a formulary.

Prescription drug formularies have been used extensively by private insurance plans and hospitals for some time. Unfortunately, until SB 819 was passed, it was illegal for the state to use this widely accepted cost containment tool due to heavy pressure from pharmaceutical companies.

Practitioners will be able to prescribe drugs other than the preferred formulary drug based on medical necessity. The procedure for doing so will be to note on the face of the prescription – in the practitioner's handwriting – the phrase "do not substitute." If the practitioner determines that a drug other than the formulary drug is medically necessary, the patient will be provided the drug at a cost no greater than the preferred formulary drug. ♦

Oregonians Score Successes in Legislative Session

The 71st session of Oregon's Legislative Assembly produced significant wins for Oregonians in the Health and Human Services area. Among the many gains were measures to increase access to health care, reduce the cost to the state of prescription drugs, establish a refundable working family child care credit, and provide newborns and their families the offer of needed services. Lawmakers also gave thumbs up to laying the groundwork for reforming Oregon's mental health system, increasing funding for juvenile crime prevention, improving child care, and improving workers' compensation benefits for injured workers. Here are some of the many important measures passed by legislators and either signed by the Governor or awaiting his signature:

CHILDREN'S ISSUES

The Oregon Children's Plan – HB 3659

"The OCP is visionary legislation aimed at providing comprehensive and early support for the highest risk young children and their families. By focusing efforts and community-based support on the early years of life, the bill seeks to prevent chronic social problems and thereby reduce costs associated with treatment, crime, and incarceration. No other state has taken this type of coordinated, comprehensive and systematic approach.

The bill includes voluntary early screening for medical and psychosocial risks. Follow up services will be provided as risks are identified, and the family consents to services. Follow up services provided for in the bill include: home visits by nurses and other trained professionals, research-based model programs that are provided out-of-the-home, access to health, mental health and substance abuse treatment, and access to quality preschool or child care environments.

The bill requires communities to submit a plan for providing services prior to the receipt of resources. The plan will become part of the overall comprehensive plan for children required by SB 555 from the 1999 session (juvenile crime prevention). The bill also requires coordination of administrative functions by state agencies such as data collection, technical assistance and planning, and the coordination of services by local providers.

Governor Kitzhaber signs HB 3659, the Oregon Children's Plan, with the help of young friends who attended the ceremony.

HB 3659 also includes an interim task force on financing childcare. The work of this task force will be important as Oregon seeks to increase the availability of affordable, safe childcare in the context of diminishing general funds, and a profession that suffers from low wages and high turnover.

(For more information about the Oregon Children's Plan:
http://www.governor.state.or.us/gol_health.htm)

Child Care –The following summarizes Child Care legislation of major importance:

HB 2281 and HB 2716, the refundable working family childcare credit bills are of particular importance to low-income families who use child care. **HB 2716** changes the working family child care tax credit to refundable credit while **HB 2281** modifies the formula used to apportion business income under the Uniform Division of Income for Tax Purposes Act. This means that families with income insufficient to pay taxes will still receive a refund for childcare expenses.

SB 436 and HB 5015 expand on-site and safety review visits by the Child Care Division of the Employment Department to all registered child care providers, including those applying for renewal of registration. The bills continue funding for programs established by the 1999 Legislature and provide for the investigation of citizen complaints.

HB 2676 assists businesses by extending the period in which income and corporate excise taxpayers may claim dependent care assistance tax credit.

Child Safety Seats

The seat belt law adopted by voters in 1990 and the use of infant safety seats have saved the lives of many Oregonians. However, seat belts installed for adults don't always protect younger children who have outgrown infant seats. Now protection for children between the ages of four and six or weighing between 40 and 60 pounds will be improved by the passage of **HB 3155**. The bill requires that these children must be properly secured with a safety belt or safety harness that meets requirements established by the Oregon Department of Transportation and consistent with regulations and standards of the U. S. Department of Transportation.

College for Foster Care Children

HB 2431 includes former foster children among those to be provided scholarships by the Oregon Student Assistance Commission to any state institution of higher learning. Students are required to enroll as undergraduates not later than three years from the date they were removed from the care of the State Office for Services to Children and Families, when they graduated from high school, or the date they received the equivalent of a high school diploma, whichever is earliest.

Significant gains were also achieved for children in the area of health issues.

HEALTH ISSUES

Some of the most noteworthy bills passed in the last legislative session relate to health care.

Formulary (Prescription Drug Plan)

SB 819, the Practitioner-managed Prescription Drug Plan, creates the Oregon Formulary. The formulary will establish a priority list of prescription drugs that doctors are encouraged to use because the drugs are equally or more effective and the most economical. The Plan recognizes that decisions concerning the clinical effectiveness of prescription drugs should be made by licensed health practitioners based on both the condition and individual characteristics of the patient and the latest peer-reviewed research relating to the condition and available treatment protocols. The Plan is the Governor's major effort to reduce soaring prescription drug costs. Savings to the state will increase over the years as pharmaceutical companies compete to qualify their drugs for the list.

OHP Waiver

HB 2519 expands access to the Oregon Health Plan through Medicaid, the Children's Health Insurance Program, and the Family Health Insurance Assistance Program for Oregonians with income up to 185% of the Federal Poverty Level. This effort will require a federal waiver to allow state flexibility in benefit design and to garner additional federal funds. If the waiver is approved, **HB 2519** will allow up to 50,000 more uninsured Oregonians – many of whom are children – to receive healthcare.

Mental Health Reform

HB 3024 represents the number one priority of the Governor's Mental Health Alignment Work Group. The bill represents a significant step in reforming Oregon's mental health system for both children and adults. It directs local mental health authorities to develop a local plan for mental health services. It lays groundwork for reform of Oregon's mental health system that is coordinated, accountable, cost effective, consumer-centered, community-based, comprehensive and culturally competent.

LABOR ISSUES**Workers' Compensation**

A major accomplishment for labor-management relations, **SB 485** creates a less adversarial system for settling workplace injury claims. It helps bring needed health services and wage replacement to injured workers who previously fell through the gaps in our system. The bill also protects employers from certain lawsuits.

Dislocated Workers

HB 2993 permits the payment of unemployment compensation to certain dislocated workers who are otherwise eligible and who receive a lump sum retirement payment. Under current law unemployed workers receiving retirement benefits or other periodic payment from previous work are disqualified from unemployment benefits.

Unemployment Insurance Extension for Dislocated Workers

HB 3759 extends Unemployment Insurance benefits for up to an additional 26 weeks (for a total of 52 weeks) for dislocated workers who have lost their jobs due to high energy costs; extended drought conditions and the attendant economic conditions; secondary effects of foreign trade; or a shift of production to another state or territory of the United States. The worker must be enrolled in professional technical training approved by the Employment Department.

HOUSING**Individual Development Accounts**

HB 3391 is an effort to provide poverty-level Oregonians with the same opportunities as other citizens to "get ahead." It increases the income tax credit for Individual Development Accounts. These accounts can be used for three purposes: obtaining an education, owning a home, and starting a business.

Farmworker Housing

HB 3171 eliminates the special conditions required for approval of farmworker housing. The bill prohibits cities and counties from imposing zoning requirements on single-family or multi-family housing for farmworkers and their immediate families more restrictive than for non-farmworker housing.

HB 3172 directs the Housing and Community Services Department to facilitate measures that promote adequate housing for farmworkers.

HB 3173 removes the 12/31/01 sunset of the Farmworker Housing Construction Tax Credit and makes the tax credit permanent. The bill allows non-profit corporations to sell credits to another taxpayer. It also expands the tax credit.

HB 3573 creates the Farmworker Housing Development Account to expand Oregon's supply of housing for low and very low income farmworkers.

**Reorganization of Department of Human Services Underway**

Governor Kitzhaber has signed HB 2294, authorizing the reorganization of the Department of Human Services. Previously, a wide number of divisions, programs and offices made up the 9700 employee department. Because most DHS clients have multiple needs, services will be consolidated into a one-stop integrated system for clients.

For more information about DHS reorganization, visit the department's web site at <http://www.hr.state.or.us/> or call 503-945-5944.

Spring 2001

Governor Proposes Children's Plan

Speaking to the Ways and Means Sub-Committee on Human Resources, Governor Kitzhaber said that the Oregon Children's Plan (OCP) may well be the most important initiative in the \$12 billion budget he submitted this session. He cited two reasons. First, it gives children the foundation to succeed and second, it is important because of its potential impact on the cost and scope of state services in the future.

The OCP completes the comprehensive approach to prevention put in place by SB 555 in the 1999 Legislature. The Juvenile Crime Prevention and Alcohol & Drug components of SB 555 will help prevent older at-risk youth from entering the juvenile justice system. But it is not soon enough for some children and families. In many cases the pattern of behavior and risk factors is set much earlier in life. The Plan will lay the foundation to identify at-risk children, before they even get into school, before they get into trouble.

The OCP builds on the efforts of Healthy Start, Early Intervention and other programs by adding missing elements and linking them together into a comprehensive and coordinated system of supports. The OCP includes: prenatal and at-birth screening; assessment and family support; community based programs; home visits and in-home supports; substance abuse and mental health treatment; and early learning opportunities such as the Oregon Prekindergarten Program.

The well-being and future success of Oregon's children is the most important basis for the OCP, but there's a budgetary case to be made as well. The

Governor noted that the economy is slowing and state revenue is likely to be reduced; yet there are more demands on the state budget today than ever. What is the wisest response? Preventing problems from occurring in the first place can save millions of dollars in future years. For every dollar invested in this type of prevention, over four dollars are saved in avoided costs later in life.

Governor Kitzhaber shares photos of his son, Logan, with new parents Dennis Kelsay and Jana Rowley as Pam Curtis looks on. Multnomah County Early Childhood Advocates presented the Governor with a resolution supporting the Oregon Children's Plan. (Photo by Jim Clay)

Governor Kitzhaber said this is not merely a budget argument, however, "It's about whether we have the courage to change our priorities, reflected by how we invest our resources. It's about whether we are willing to be accountable for the outcomes of the resources we invest and the outcomes for the resources we fail to invest." ♦

Availability of Affordable Housing Threatened

Many affordable housing development projects that have served lower income residents through federal Section 8 subsidies will be expiring over the next few years. This can mean dislocation and possible homelessness for the occupants who are often elderly and disabled.

Approximately 4400 Section 8 units and 3000 tax credit funded units could expire in the next five years. These units, which typically represent the affordable housing inventory serving the lowest income tenants, could be converted to market rate when they come up for sale.

One means of addressing the affordable housing issue is currently being considered by the Oregon Legislature. HB 2258 would allow the Oregon Housing and Community Services

Department (OHCS) to own property for a time before selling it to a non-profit

entity. A model for this effort to retain affordable housing exists. OHCS entered into a partnership with Mental Health and Developmental Disability Services (MHDDS) through the Community Integration Program to provide housing for developmentally disabled clients as they were being moved out of Fairview. OHCS achieved this by acquiring and holding housing until MHDDS closed the permanent financing with the service provider.

Oregon will continue to work with its national partners and local affordable housing advocates to seek ways to retain housing for lowest-income Oregonians. This includes supporting efforts to streamline federal regulations and encouraging private investors to acquire and manage affordable housing properties. ♦

Did You Know...?

...the Oregon Health Plan has been the single greatest factor in increasing access to needed mental health care in recent history.

Report to the Governor of the Mental Health Alignment Work Group, 2001

Health, Human Service Bills on Legislative Agenda

Oregonians are concerned about the high cost of prescription drugs and the lack of adequate mental health services as well as other issues. Below are some health and human service bills introduced this session:

Prescription Drug Affordability Act – SB 879 & HB

3300: These bills provide a tool to help control the huge increase in drug costs in the Oregon Health Plan (OHP) by removing the statutory prohibition preventing the OHP from using a prescription drug formulary.

Bill Status: House Health and Public Advocacy Committee and Senate Health and Human Services Committee. (See page 4 for additional information on the drug formulary.)

Mental Health Parity – HB 3017: Directs the Legislative Assembly to determine a basic level of health care services provided by carriers in health benefit plans. Ties the level of health care services to the prioritized list of services developed by the Health Services Commission (HSC) for the Oregon Health Plan. Although the bill does not specifically require that mental health services be provided, those services are on the prioritized list established by the HSC and thus would be required to be provided by non-OHP providers.

Bill Status: House Health and Public Advocacy Committee; subsequent referral to Ways and Means.

Local Mental Health Plans – HB 3024: Directs local mental health authorities to develop a local plan for mental health services (replacing existing requirements) and directs the Department of Human Services to develop a statewide plan for mental health services from the needs identified in local plans.

Bill Status: House Health and Public Advocacy Committee.

Affordable Housing – HB 2258: Allows the Oregon Housing and Community Services Department to acquire title and hold property before transferring it to an entity that will develop the property for affordable housing.

Bill Status: House Health and Public Advocacy Committee. Work session on February 27.

Legislative Agenda (cont.)

Child Care On-Site Review – SB 436: The Governor and other advocates for children have worked hard to ensure the health and safety of children in child care. This bill continues that effort by directing the Child Care Division of the Employment Department to conduct on-site reviews of child care facilities applying for renewal of registration.

Bill Status: Passed the Senate March 29.

Reorganization of the Department of Human

Services – HB 2294: Provides a comprehensive restructuring of the Department of Human Services to enhance collaboration and increase efficiency. Clients of the department often face multiple, related needs and require access to a full range of services. The reorganization will make available an integrated system that provides a single, coordinated case plan tailored to the needs of each client or family.

Bill Status: Hearings before House Health and Public Advocacy Committee were held January 30 and February 20.

Workers' Compensation – SB 485: Labor and management leaders and the Governor's Office have worked together to reach agreement on recommendations for improving the Oregon workers' compensation system. SB 484 creates a less adversarial system for settling workplace injury claims. It provides faster decisions, removes uncertainty about payment for medical treatment and gives more certainty to employers about future liability exposure. It also creates fairer compensability standards and benefits for injured workers.

Bill Status: Passed Senate March 22. ♦

Mental Health Alignment Work Group Sends Recommendations to Governor

The hard working Mental Health Alignment Work Group completed its assignment recently and presented its report to the Governor. Members were charged with recommending how to best align existing programs, policies, and resources into a statewide mental health system for children and adults. In addition, they were

asked to recommend steps that need to be taken to fully implement such a system.

Generated after an inclusive and thorough yearlong study by a diverse group of mental health consumers, family members, practitioners, local officials and stakeholders, the report contains eighteen recommendations aimed at solving the problems of the current mental health system in Oregon. It forms a plan for creating a system that is community based, consumer centered, and adequate to meet the diverse needs of persons with mental health disorders.

The work group identified concerns and barriers to improving Oregon's mental health system and then designed a model or "ideal" system to address the barriers. Although all the recommendations are considered essential for designing such a system, members of the work group agreed that initial emphasis should be given to the first two. They are:

1. Develop local biennial blueprint plans that use a multi-system team approach to coordinate and deliver services for children, families and adults.
2. Establish equal benefits for mental health and physical health (parity).

To begin implementation of these recommendations, Senator Gordly and Representative Jeff Kruse, both members of the workgroup, have introduced legislation. The first bill, HB 3024, would begin to set policy in place to support a community-based mental health system that is consistent with the values, vision and accountability structures recommended by the report. It directs local mental health authorities to develop a plan for mental health services and requires the Department of Human Services to develop a statewide plan for mental health services based on the needs identified in the local plans.

The second, HB 3017, would achieve parity (equal) benefits for mental health services by establishing a basic health benefit package based on the Oregon Health Plan prioritized list. ♦

A copy of the complete mental health report to the Governor as well as work group meeting summaries can be found at
<http://www.governor.state.or.us/governor/hhslp/mental/alignmnt.htm>

Reducing Drug Costs: The Prescription Drug Affordability Act

The cost of prescription drugs in the Oregon Health Plan (OHP) will rise 60% in the next two years. To help control these costs, Governor Kitzhaber, as well as representatives of business, labor, health care consumers, doctors and hospitals are supporting a bill to address the high cost of prescription drugs through the use of a drug formulary. (A formulary is a list of preferred drugs that doctors are encouraged to use because they are equally or more effective, and the most economical.) Providers of commercial health plans routinely use drug formularies to help control their drug costs and report significant savings without affecting quality. The OHP fee-for-service program is the only major insurer in the state that does not use a formulary.

The Prescription Drug Affordability Act, SB 879 and HB 3300, would help to reduce the cost of prescription medicine by removing the statutory prohibition that prevents the OHP from using a prescription drug formulary. It would empower the existing Health Resources Commission (HRC), to evaluate groups of prescription drugs that yield therapeutically equivalent outcomes, yet have a wide variation in cost. The HRC

would select a "reference" drug for each of these groups using expert panels of specialists and their review of evidence-based literature. The reference drug must be just as effective as other drugs within the group for initial treatment and be more cost effective than the other drugs in the group.

It's important to note that the Act applies only to fee-for-service plans within the Oregon Health Plan, not to inpatient services or managed care plans. Treating physicians and pharmacists (with the concurrence of the treating physician) can make exceptions to the formulary.

The Prescription Drug Affordability Act builds on a history of decision making in the OHP that is explicit, public and evidence-based. "We have to put some reasonable, intelligent limits on prescription drug costs and prioritize what the State will pay for," Governor Kitzhaber said. "There is no reason we can't be both more cost effective and provide quality prescription drugs for Oregon Health Plan patients." The Prescription Drug Affordability Act is predicted to save up to \$7 million in the next biennium. ♦

GOVERNOR'S TASK FORCE ON PERS

PERS Headquarters
11410 SW 68th Parkway
Tigard, Oregon

Thursday
August 1, 2002
1-5 PM

AGENDA

- 1. Review the Task Force Charge**
- 2. Introductions**
- 3. Review of the Draft Work Plan**
- 4. General Discussion of Pension Policy, Objectives, Principles and Issues**

Governor's Task Force on PERS

Draft Schedule and Work Plan

Meeting One

August 1, 2002

Agenda

- Governor's Charge
- Pension Policy Objectives and Principles—Discussion
- Issue Definition--Discussion
- The Task Force Work Plan—Review and Discussion
- Planned Analyses and Resources—Presentation
- Preview of Next Meeting's Agenda

Meeting Two

Aug/Sept xx, 2002

- Governor's Review of Policy and Issues Definition
- The State of the PERS Statute—Presentation and Discussion
- Case Analyses:
 1. Equal vs. Sequential Crediting and Equal to or Better
 2. The IRS and Oregon Contract Rights—Presentation and Discussion
 3. Current PERS Related Litigation—Presentation and Discussion

Public Comment: Members and Retirees

Meeting Three

Sept/Oct xx, 2002

PERS Financial Parameters—Presentation and Discussion

Historical

Current

Projected

Case Analyses:

1. The Assumed Rate
2. Life Expectancy
3. Financial Simulation Study
4. Replacement Ratio's: Recent Experience

Public Comment: Public Employers and Private Organizations

Meeting Four

October xx, 2002

- Pension Plan Structures and Comparative Experience—Presentation and Discussion
- Options and Alternatives—Presentation
- Options and Alternatives—Discussion
- Instructions to Staff Regarding Draft Report

(Virtual) Meeting Five

November xx, 2002

- Electronic Circulation of First Draft of Task Force Report
- Written TF Members Comments/Suggestions Assembled and Distributed
- Electronic Circulation of Second Draft

Meeting Six

December xx, 2002

- Presentation of Final Draft
- Discussion
- Final Revisions as Directed

Final Task Force Report Released

December xx, 2002

Pension Policy Objectives and Plan Structure

Discussion Paper

Jim Voytko
Executive Director
Oregon Public Employees Retirement System
July 19, 2002

Purpose: The purpose of this discussion paper is to provide as broad an array of pension policy objectives as possible to aid elected and appointed officials in reviewing our state's pension policy. The list of possible pension policy objectives may not be comprehensive and can be expanded as the review moves forward. The paper also contains some general descriptions of generic plan structures and initiates a discussion of the linkage between choices over plan structure and the degree to which those choices achieve one or more the policy objectives noted. Finally, the paper makes the important point that decisions about plan structure do not predetermine the levels of pension benefits provided (and thus plan costs) nor do they predetermine the distribution of those costs among plan participants. The paper does not offer recommendations regarding either priorities among pension policy objectives or among various plan structures.

“How” and “How Much”: Different Questions

In considering a successor pension plan—if that should be the Legislature's desire—there are two fundamental questions on the table. First, “how” the system would work (i.e., its structure and the manner in which it permits members to earn pension credit and determines the distribution of the costs required to fulfill those obligations). Second, “how much” those benefits and the costs they generate should be. *Any plan structure*—including all those discussed below—can be set up to (1) produce either high or low retirement benefits, (2) be very costly or very inexpensive overall or (3) create equal or unequal distribution of those costs among participants. Decisions over successor plan structure (the “how”) are important but they do not predetermine whether a successor system will produce a level of pension benefits and costs that any particular stakeholder group might find exceptionally attractive or unattractive.

Some Commonly Considered Pension Policy Objectives

How does one choose among many possible pension plan structures? Obviously, it depends on the policy objectives of decision-makers. In this regard, it would be helpful to note some of the issues, questions or objectives in evaluating competing plan structures. In presenting these potential objectives, we do so without advocating one versus another nor do we even maintain that this list below is comprehensive. Nor do we maintain that all objectives can be achieved simultaneously as some, such as flexibility versus uniformity discussed below—are at least partially mutually exclusive. Consider it

the start of a potential checklist for considering the merits of one plan structure versus another.

Cost to the Plan Sponsors (Public Employers):

The costs public employers and their constituents bear to provide pension coverage to their employees are substantial under most systems and, of course, must compete with other needs for those same funds. Those needs range from salaries and health care benefits for those same employees to the full range of needs found in every public budget—parks, education, public safety, etc.

Predictability of Plan Costs and Other Parameters:

Since pension costs are virtually a perpetual expense (and, indeed, under some plan and legal structures contractual in nature), there is obviously tremendous value to public employers and their constituents when pension costs are highly predictable. Pension plan structures that produce greater predictability in pension expense also allow both public employers and employees to bargain more intelligently over the elements of the compensation package that traditionally vary from contract cycle to contract cycle—primarily salaries. Predictability also allows cities, counties, etc., to make other budget decisions—especially multi-year ones—with greater confidence.

Compensation Value to Members (Public Employees):

Pension plan coverage (or, more generically, retirement saving/income generation) is a substantial element in most employee compensation, but particularly so for public employees and even more so presently for the majority of Oregon's public employees. To note that employees normally scrutinize carefully their assessment of the value delivered in this element of the compensation package is to state the obvious.

However, it is also true that while the value delivered under the pension plan structure can be viewed in isolation, it is just as appropriate for employees as for employers to assess it in the context of the entire compensation package. For example, at least for some, perhaps many, public employees, it is possible to have a compensation package that is too heavily or too lightly weighted toward pension value. If pension expense is sufficiently large, it will tend to crowd out or depress value delivered in the other elements of the compensation package. This is particularly possible when the pension expense is long-term and contractual in nature and subject to little or no control by employers or employees. A “pension-heavy” compensation package can also prove ineffective in attracting candidates who place greater weight on salary levels as is often claimed to be true in the case of younger, highly mobile workers with skills new to (or scarce within) the workforce. Conversely, it is conceivable that a compensation package weighted toward pension value at the expense of the other elements may prove attractive to a desirable portion of the workforce for many public sector activities.

Alignment of Interests Among Participants (Employers and Employees):

There is a case for placing value on elements of plan structure that tend to align the interests of employers and employees. Aligning interests offers at the least the opportunity to ameliorate strife and adversarial conduct in pension policy management, especially when unanticipated problems arise. One example of this is structures that, on a permanent basis, equalize the relative employer and employee responsibilities for bearing pension plan expense—anticipated and unanticipated, actuarial (benefit related) and administrative. Another plan structure that addresses the alignment question does so by eliminating the problem altogether. This is accomplished by creating separate pension structures (see the description of hybrid but discrete earlier) and placing all funding burdens and control over one in the hands of employers and the other in the hands of employees.

Plan Flexibility For Public Employers:

Not all public employers are equal in size, financial resources, the sophistication of their financial management infrastructure, preferred balance of pension expense versus salary versus other fringe benefits in the compensation package, ability to attract the desired employee universe to public service, ability to take on long-term investment risk, etc. Plan structures that offer public employers some range of variability in cost and administrative complexity (for example, the ability to adjust key parameters to reflect changes in local environments, variations in local employee preferences or degree of long-term investment risk) may be extremely valuable when these employers vary substantially within the universe of Oregon public entities.

Some employers, for example, may be perfectly comfortable and see recruiting value in providing a highly defined retirement benefit to employees while retaining the investment risk associated with providing it. Others may find retention of all or some of the long-term investment risk of providing a defined benefit unwise given their circumstances and, like most small companies in the private sector, prefer the more controllable commitment of an annual “contribution match” in a defined contribution retirement plan structure, shifting a portion or all of the long-term investment risk to employees saving for retirement. Plan structures that allow public employers the option to participate in the plan at all, to what degree, for what types of employees, at what terms, and for what length of time are similar degrees of freedom which may carry great value. However, we caution that providing substantial flexibility in this area, if not done carefully, can add to the complexity of any successor plan.

Plan Flexibility For Members:

Just as public employers may vary substantially, one from another, so do employees. Some public employees place great emphasis on the pension plan element of the compensation, some far less. Some place great value on the security of a defined benefit at retirement; others prefer the unconstrained upside, sense of direct asset ownership and at least partial personal control of investments associated with defined contribution plans. Plan structures that offer choice and flexibility to members obviously offer value as well.

Once again, however, we caution that adding substantial flexibility to members, if not done carefully, can add substantial complication to the successor plan. This is particularly true in the case of members simply because of the sheer numbers of individuals involved.

Plan Uniformity:

The gains to employees and employers from any flexibility offered in a pension plan structure come at some cost. There is a case that highly uniform pension coverage across the entire universe of the state's public employers and employees reduces competition among employers for employees using this portion of the compensation package and creates a sense of total equality among public employees. Some pension stakeholders may well place considerable value on statewide uniformity. These achievements are offset, however, to the extent that competition among employers is inevitable and that this competition and the variability in compensation packages mandated by varying local circumstances is simply shifted from the pension arena to the other elements of the compensation package—largely, salaries. Indeed, if there is no opportunity to vary pension coverage offered, *all* variability is likely to be concentrated on salaries alone, which may or may not be desirable to either employers or employees. Precisely how any stakeholder group may view this is quite difficult to predict as it depends in part on where they would prefer to focus compensation discussions and decisions. A final note: multi-tier plans, by definition, reduce uniformity and the overall sense of equality it fosters.

Predictability of Retirement Income

Plan structures differ in the precision with which one can predict a member's benefits in retirement. Defined benefit plans tend to have high predictability and this certainty has considerable value to most employees, and even more value for some. Indeed, for some employees, the predictability of a retirement benefit may be nearly as important as the dollar amount (without normal ranges of actual plan experience). Defined contribution plans are less predictable in their contribution to retirement income. Though they offer theoretically uncapped benefits without cost implications for employers, the actual benefits produced are always constrained by capital market realities.

Simplicity:

There is enormous value in simplicity, sometimes obvious but often less apparent. The value of pension plan simplicity is particularly large where the vast sums involved and the huge numbers of people affected inevitably generate strong views and create incentives for adversarial action. Simple structures allow all participants to know and understand clearly what drives both costs and benefits. Simple structures allow quick and easy analysis of results that do not meet the expectations of any participant. Simple plan structures reduce the cost of administration in each and every year the plan is in effect, leaving more value to the participants. Simple plan structures dramatically reduce opportunities for conflict, adversarial behavior, inadvertent inequities and litigation among participants. Simple plan structures allow both employers and employees to more accurately assess the value of pension coverage and integrate it into periodic negotiations

over other elements of the compensation package such as salaries. In short, simplicity in pension plan design generates benefits in multiple dimensions for as long as the plan is in effect.

Moreover, unlike the fairly direct trade-off between flexibility and uniformity, there are many plan structures that can simultaneously provide flexibility without sacrificing simplicity. Something as simple as a defined contribution plan with a varying match by employers or varying contribution levels by employees can be structured to retain most of the simplicity of a defined contribution plan structure yet offer participants enormous flexibility for coping with changing circumstances or desires. Similarly DB structures can be relatively simple in form or far more complex and even in their simple forms still offer the high predictability in benefit obligations often sought under this structure. These comments hold true for hybrid plans as well.

Three Generic Plan Structures

Defined Contribution: Defined contribution plans are exactly what the term implies. The annual contribution to the assets designed to provide retirement income for a particular employee are “defined” and represent the obligation of both the employer and the employee to the retirement plan. There is enormous flexibility in the manner in which annual contributions may be defined. Employee and associated employer contributions may vary in any number of ways. The resulting assets from accumulated contributions are invested in a range of broad categories usually pre-screened by an impartial, expert fiduciary body. There is tremendous flexibility in the degree of choice and control over investments offered to plan participants. The retirement income available under this structure is not capped by the plan structure itself nor does the structure provide a guaranteed floor. Rather, retirement income is determined by the magnitude and duration of the contributions to the asset account by both the employee and the employer and long-term performance of the investments.

Defined Benefit: Defined benefit (DB) plans start with a premise that certain attributes of active employment are linked to defined values in terms of the financial value delivered to the employee from the pension plan. Many standard defined benefit plans link, for example, years of service and final average salary, to a highly specified monthly or annual retirement income obligation to the member from the plan. There is usually no structured opportunity for achieving retirement income higher than what the plan specifies, though often some more limited upward flexibility is offered via cost-of-living adjustments (COLA) provisions in the plan. However, DB plans generally offer the employees the highest degree of certainty and predictability with regard to retirement income. There is virtually no flexibility in the total contribution streams, as the specified benefits mandate actuarially required contribution levels. There is considerable flexibility as to how responsibility for the total contribution stream necessary to adequately fund those retirement obligations is apportioned between employers and employees.

Hybrid But Discrete: Some pension plans attempt to incorporate the attributes of both defined contribution (DC) and defined benefit (DB) structures. Because the two structures are fundamentally different, this is increasing done by putting in place a plan with two discrete, separately operating structures—one DC, the other DB. These operate independently, each producing a retirement income stream for the plan participant. The streams combine only at the point when a monthly check is drawn up representing the combined obligation due from the pension plan to the retiree. This eliminates the complications and potential for unintended consequences that may arise if the two plan structures are programmatically and financially entangled while the employee is in active service and retirement obligations are still being earned.

Hybrid but discrete plan structures offer an enormous array of flexibility in pension plan elements for both employers and employees. In addition, they offer the opportunity to deliver a portion of the retirement obligation with the security inherent in a defined benefit plan and a portion where the employer expense is tightly controlled and so carries with it the cost certainty and predictability inherent in a defined contribution plan.

LEGISLATION TO SUPPORT CHILDREN

2001

2001 LEGISLATION PASSED TO SUPPORT CHILDREN

During the recent legislative session, Oregon's 71st Legislative Assembly passed numerous bills benefiting children. Among the many gains are measures that establish a refundable working family child care credit, increase access to health care, offer newborns and their families needed services, improve child care, and expand emergency medical services for children.

The following are summaries of the legislation compiled from enrolled bills and from legislative committee reports and agency information. (This is only a partial list—it does not include every bill passed by the legislature that could benefit children.) The complete text of all 2001 bills can be found on the web at <http://www.leg.state.or.us/billsset.htm>.

SENATE BILLS

SB 199 – Safe Surrender of Newborn

Allows a parent to leave an infant, who is 30 days of age or younger, with an employee at an authorized facility. Provides that the parent's anonymity is guaranteed as long as the infant shows no sign of abuse. The measure grants immunity for an authorized facility acting in good faith, and requires the facility to notify the State Office for Services to Children and Families (SCF) who must take protective custody of the infant. Compliance with this provision provides affirmative defense to the crime of abandonment of a child. The act authorizes the Department of Human Services to accept grants and contributions to fund payment of expenses and costs incurred in carrying out provisions of the bill.

SB 243 – Emergency Medical Services for Children

Expands emergency medical services for children by requiring the Health Division in the Department of Human Services (DHS) to provide advice and technical assistance to the state and area trauma advisory boards regarding emergency services for children.

Emergency Medical Services (EMS) in DHS operates a federally funded grant program called Emergency Medical Services for Children to enhance pediatric emergency care, education, and the infrastructure within Oregon. The program has conducted a needs assessment of emergency services, is developing collaborative projects with emergency care nurses and Oregon's Safe Kids Coalition, and makes free, continuing education available to all Oregon EMS agencies. It co-sponsors or conducts other training and conferences on pediatric emergency services.

SB 243 requires the Health Division to report to the Emergency Board by June 30, 2002 on the progress and implementation of the program. It establishes the Emergency Medical Services for Children Advisory Committee and sets guidelines for pediatric care systems for critically ill or injured children.

SB 419 – Protective Custody—Best Interests of the Child

The bill directs a court to include in a protective custody order, findings about best interests of the child. It amends juvenile dependency laws to bring Oregon into compliance with federal requirements, and it also clarifies a court's right to relieve the local citizen review board of the responsibility to review a case if the court has conducted a complete judicial review within a specified period. It expands authority of the local citizen review board to make findings and recommendations in certain circumstances. Finally, it requires SCF to adopt rules regarding criminal records checks for foster parents, adoptive parents, relative care givers and others over 18 who will be in the household with a foster child, ensuring that Oregon continues to receive federal funds for the state's child protective services.

SB 436 – Child Care

(Generated by the Oregon Strategy for Social Support Initiative)

Expands on-site health and safety review visits by Child Care Division of Employment Department to all registered family care providers, including those applying for renewal of registration. Continues funding for programs established by the 1999 Legislature and provides investigation of citizens' complaints. SB 436 also prohibits the division from waiving the on-site review before renewing the registration.

The Child Care Division of the Employment Department is responsible for regulating child care in Oregon. The division currently certifies over 1,100 child care centers and group homes and registers 7,776 family child care homes (a family child care home is operated in the living quarters of the provider's home). The home may provide care for a maximum of ten children. No more than six children may be younger than school age, and no more than two may be 24 months of age or younger.

The registration process for a family child care home includes completing an application, paying a \$30 fee, and passing a criminal history check. Since January 2000, the division has conducted a total of 2701 reviews. Of those, 45 percent passed on the first review, 99 percent passed on the second visit, and one percent did not pass. Prior to the 1999 Legislative Session, Oregon was one of only five states that did not conduct regular on-site reviews of family child care homes. In 1999, HB 2241 required on-site reviews of new providers, providers who are changing addresses, and providers re-entering the field after a period of absence.

SB 656 – Child Neglect

Expands crime of child neglect in first degree to include leaving child or allowing child to stay at a place that has been determined not fit for use due to illegal drug manufacturing. Current law prohibits a person from permitting a minor to enter or remain in a place where drug activity is conducted. Health risks to children stemming from the toxic chemicals used in drug manufacturing persist after the drug manufacturing has ceased. Children were present in 54 out of the 230 methamphetamine labs seized in Oregon in 2000.

SB 5527 – DHS Budget

DHS budget bill includes elimination of child care "cliff" for families receiving public assistance by reorganizing AFS child care co-pays for low-income families.

HOUSE BILLS

HB 2330 – OCCF Grants

Requires the Oregon Commission on Children and Families (OCCF) to make grants to local commissions on children and families for 1) research-based services and initiatives to improve outcomes for children, youth or families, and 2) Great Start grants for community-based programs for children newborn through age 8. The grants are to be used at the local level according to the county's local coordinated comprehensive plan. Requires OCCF to assist counties in implementing efficient, accountable, coordinated, and readily available community services. Eliminates Student Retention Initiative and juvenile services grants.

HB 2431 – College for Foster Care Children

This measure includes former foster children among those to be provided scholarships by the Oregon Student Assistance Commission to any state institution of higher learning. Students are required to enroll as undergraduates not later than three years from the date they were removed from the care of SCF, when they graduated from high school, or the date they received the equivalent of a high school diploma, whichever is earliest.

HB 2491 – Community-Based Foster Care

Allows SCF, in consultation with local commissions on children and families, to establish community-based foster care demonstration projects. The measure was effective on passage.

Community-based foster care is built on the premise that comprehensive service for children and families must be rooted in the child's natural community and must have considerable community involvement. This model allows children to stay in their own neighborhood school and maintain friendships and familiar connections, thus limiting the amount of trauma children may experience when starting in a new school, making new friends, and becoming acclimated to new surroundings. Another goal of community-based foster care is to help children and their natural parents connect to community-based organizations and support services in one place, which assists families to continue accessing services after reunification.

SCF is currently administering a pilot project called Family-to-Family Foster Care with a grant from the Annie E. Casey Foundation. Family-to-Family is a family-centered approach that places a child with caring, capable relatives or with another family within the child's own community. The program has four goals: identifying and working closely with foster families in the communities from which foster children are usually drawn; training the foster families to work closely with birth parents – family to family; recognizing cultural differences; and decreasing the number of children placed in institutional care.

HB 2519 – OHP Waiver

Expands access to the Oregon Health Plan through Medicaid, the Children's Health Insurance Program, and the Family Health Insurance Assistance Program for Oregonians with income up to 185% of the Federal Poverty Level. This effort will require a federal waiver to allow state flexibility in benefit design to garner additional federal funds. If the waiver is approved, HB 2519 will allow up to 50,000 more uninsured Oregonians – many of whom are children – to receive health care.

HB 2676 – Child Care – Tax credit for business

(Generated by the Oregon Strategy for Social Support Initiative)

Extends the period in which income and corporate excise taxpayers may claim Dependent Care Assistance and Referral Credit through December 31, 2007. The credit equals 50 percent of the total costs the employer paid for dependent care (but no more than \$2,500 per employee) and 50 percent of the cost of providing information and referral services. It caps the total value of tax credits for certified contributions at \$500,000 per calendar year. The employer may not take the credit if the provision of dependent care services is part of a salary reduction plan. Credits unclaimed due to insufficient tax liability may be used in later years, for up to five years.

The measure requires that employers electing to receive the credit submit an application to the Child Care Division of the Employment Department each year. It creates a new tax credit for certified contributions to the Child Care Division and/or a qualified community agency for the purpose of promoting child care, effective 1/1/2002 – 12/31/2006, and it establishes a fund for collecting these contributions. It directs the Child Care Division to establish and administer a program for identifying qualified community agencies and distributing collections to community agencies for allocation to eligible child care providers.

HB 2676 defines criteria for identifying eligible child care providers, including maximum income limits for a specific share of clientele. It also defines criteria for determining allocations to eligible child care providers, based on actual costs of providing quality child care.

HB 2716– Refundable Working Family Child Care Credit

Changes the Working Family Child Care Tax Credit to refundable credit, making the tax credit for child-care expenses refundable to the poorest families. It continuously appropriates amounts necessary to make refunds in excess of tax liability from the General Fund to the Department of Revenue Suspense Account and adjusts the indexation of the minimum earnings limit. Currently, low-income taxpayers are unable to effectively use the Working Family Child Care Credit because their income tax liability is low. Beginning with the 2003 tax year, the full amount of entitled credit is refunded to taxpayers, regardless of their tax liability.

HB 2877 – Reorganization of Criminal Fine and Assessment Funds

Provides that moneys in the Criminal Fine and Assessment Account are to be distributed to the General Fund and to the Criminal Fine and Assessment Public Safety Fund for services, many of which are for children (such as Children's Trust Fund, child abuse assessment centers and child abuse multi-disciplinary teams).

Specifically, it redirects 70.35 percent of the moneys in the Criminal Fine and Assessment Account to the General Fund and 29.65 percent to the Criminal Fine and Assessment Public Safety Fund. Establishes the Crime Fine and Assessment Public Safety Fund; provides for continuous appropriation of the funds to the Department of Revenue; and establishes three distribution priorities. The distribution priorities are 1) public safety standards, training, and facilities; 2) Criminal injuries compensation and assistance to victims of crime; and 3) Emergency Medical Services Enhancement Account. Funds may not be allocated for any other purpose. The funds are to be distributed as the Legislative Assembly so directs. The new distribution formula takes effect July 1, 2003.

HB 2884 – Criminal Background Check Information

Authorizes private organizations and non-profits dealing with children, the elderly or dependent persons to request criminal offender information from an authorized agency. It allows a qualified entity to request a criminal records check from the State Police or through the FBI on an individual for the purpose of evaluating that individual as an employee or volunteer. It requires a person or agency receiving criminal records information to enter into an agreement limiting how the information will be used. A qualified entity is defined as a business or organization that provides care or placement services, or licenses or certifies others to provide care or placement services for children, elderly or dependent persons. It requires the Department of State Police to waive the fee for doing a criminal records check, including the fee charged by the FBI, for nonprofit organizations providing tutoring and mentoring programs for persons under 18, a dependent person, or elderly person. It authorizes the State Police to furnish a Native American tribe with criminal records of a person employed or seeking employment with a tribal agency responsible for child care, child welfare, law enforcement, health care, housing, or social services.

HB 2891 - Paid Family Leave

Establishes the 14 member Paid Family Leave and Unemployment Insurance Task Force , staffed by the Employment Department, to study and report to the appropriate interim committee on the issue of extending unemployment benefit eligibility to workers on leave due to the birth or adoption of a child and other paid family leave issues. It became effective on passage.

HB 2918 – Funding for Domestic Violence Programs

Appropriates \$2.5 million for the establishment of the Domestic and Sexual Violence Services Program. The Department of Justice will collaborate with DHS, State Police, local service providers and advocacy groups and victims of domestic violence and sexual assault on how the funds will be allocated. The measure was proposed because the Internet provides stalkers with increased opportunities to intimidate and endanger their victims.

Specific provisions include:

- Specifies that electronic communication is contact for the purposes of stalking.
- Includes electronic threats within the crime of harassment.
- Expands state of mind requirement needed to sustain conviction for identity theft to include “intent to deceive.”
- Allows the state to appeal a trial court order suppressing evidence or dismissing or setting aside an indictment directly to the Supreme Court and requires the Supreme Court to issue the opinion upon review within one calendar year of the state’s filing of the notice of appeal.
- Changes title “criminalist” to “analyst” in regard to those employed by the Oregon State Crime Lab to conduct analysis.
- Changes term “state police crime detection laboratory” to “state police forensic laboratory”

- Sets level that constitutes substantial quantities for purposes of the possession, delivery, or manufacture of the drug known as ecstasy
- Sets level that constitutes a factor in determining whether the possession, delivery, or manufacture of the drug ecstasy is a commercial drug offense.
- Allows a Uniform Traffic Citation to be used as a complaint if the peace officer certifies on the citation that the officer has reasonable grounds to believe that the person named in the citation committed the offense specified .
- Eliminates need for the state to prove that the criminal delivery or manufacture of drugs in a vehicle was for consideration or profit to sustain a conviction for child neglect in the first degree for any drug other than marijuana .
- Allows the state to aggregate the damages caused by criminal mischief if the incidents of criminal mischief were committed by a defendant within a 30-day period against multiple victims by similar means .
- Requires peace officer to give District Attorney copy of citation when officer cites a youth in lieu of custody and requires person taking youth into custody to give a copy of report to the district attorney .
- Re-defines computer for purposes of computer crime .
- Repeals sunset regarding limitation of time defendant may be held in custody prior to trial.

HB 3024 – Local mental health plans

Directs local mental health authorities to develop a local plan for mental health services and to submit a copy of the first plan to DHS by March 1, 2002. It directs the development of a statewide plan for mental health services from needs identified in local plans. It stipulates deadlines for reporting on development and implementation of local plans and encourages the development of regional mental health authorities at the county level. It clarifies that plans referenced in the act are biennial plans created with state and local effort. It requires a biennial report of local plans to the legislature and governor each biennium. It ensures that a continuum of care is clinically appropriate and that it is based on patient need. It was effective upon passage.

HB 3024 lays the groundwork for reform of Oregon's mental health system that is coordinated, accountable, cost effective, consumer-centered, community-based, comprehensive, and culturally competent. It represents the number one priority of the Governor's Mental Health Alignment Work Group. The group met for a year to arrive at the provisions in HB 3024 and 17 other recommendations to improve mental health services in Oregon. The bill represents a significant step in reforming Oregon's mental health system for both children and adults.

HB 3059 – Missing Children

Requires Board on Public Safety Standards and Training to ensure, subject to availability of funds, that all police and certified reserve officers are trained to investigate and report cases of missing children. The measure requires the board to offer federal training programs when these programs are available free of charge.

HB 3155 – Child Safety Seats

Requires children between four and six years of age or weighing between 40 and 60 pounds to be secured in a child safety system that elevates the child so that a seat belt fits properly. It requires the Oregon Department of Transportation (ODOT) to establish minimum standards and specifications for child safety seats. The measure adds to the offense of failure to use safety belts and punishes violations by a maximum fine of \$75. It also clarifies current law in reference to “proper use” of a lap or shoulder belt system.

HB 3330 – Outdoor Youth Programs

Establishes and appropriates money for the Outdoor Youth Program Advisory Board. Its purpose is to provide advice to the SCF on licensing outdoor youth programs as child-caring agencies. The board will provide advice to the office on policies regarding outdoor youth programs, requirements for treatment programs provided by outdoor youth programs, for behavior management by the programs, and for health and safety.

It requires outdoor youth programs to be licensed by the SCF. HB 3330 defines an outdoor youth program to include services to children with behavioral problems, mental health problems or problems with abuse of alcohol or drugs. It establishes the five-member Outdoor Youth Program Advisory Board to advise on implementation of the new licensing requirement and requires board members to be appointed by the Governor subject to Senate confirmation. It requires outdoor youth programs to post a bond of \$50,000 or fifty percent of the program’s annual budget, whichever is less, as a condition of licensure. The licensing provision becomes operative January 1, 2002. It also requires reports from SCF and the board to the Legislative Emergency Board and the 2003 Legislative Assembly. It became effective upon passage.

HB 3391 – Individual Development Accounts

Increases the income tax credit for donations to fiduciary organizations administering Individual Development Accounts (IDAs). This bill increases the maximum credit amount from \$25,000 or 25% of the amount donated to \$75,000 or 75% of the amount donated. IDAs can be used for three purposes: obtaining an education, owning a home, and starting a business. The IDA program was established in the 1999 session. It is an asset-based anti-poverty strategy providing matching funds (raised through the tax credit incentive) to low-income people. This is an effort to provide people living at poverty level to have the same opportunities as higher-income Oregonians.

HB 3444 – At-Home Infant Child Care

Directs DHS, if Child Care Division of Employment Department obtains a federal waiver, to establish At-Home Infant Child Care pilot program in a geographic area that includes Jackson County and two other geographic areas. The purpose is to help eligible families with infants cover some costs of staying home and caring for their infants by providing a subsidy in lieu of child care assistance under the temporary assistance for needy families program.

HB 3659 – The Oregon Children's Plan (Generated by the Oregon Strategy for Social Support Initiative)

Represents the continuation of a long-time endeavor to identify and assist at-risk children and their families. It defines the goals and essential elements of an early childhood, voluntary system of supports and defines coordinated state and local responsibilities in carrying out such a system. Finally, it builds on existing programs and links them together into a coordinated and efficient system.

HB 3659 also includes an interim task force on financing child care. The work of this task force will be important as Oregon seeks to increase the availability of affordable, safe child care in the context of diminishing general funds and a profession that suffers from low wages and high turnover.

HB 3669 – Terminating Parental Rights

Expands the definition of conduct that constitutes extreme conduct for purposes of terminating parental rights to include exposing a child to storage or production of methamphetamine.

It includes knowingly exposing a child to the manufacture of methamphetamines as extreme conduct in a juvenile dependency case, allowing a court to terminate parental rights without the requirement that reasonable efforts be made to reunify the child with the parents. It requires a court to consider the extent of the child’s exposure and the potential harm to the physical health of the child in deciding whether extreme conduct exists.

HB 3962 – Unsafe Cribs

Prohibits the remanufacture, retrofitting, sale or lease of unsafe cribs and makes it illegal to remanufacture, retrofit, sell, contract to sell or resell, lease, or sublet any infant crib that is unsafe. It defines “commercial user” and exempts antique or vintage cribs. The measure provides a penalty of not more than \$1,000 for commercial users, \$200 for others. It became effective on passage.

The Danny Foundation, a non-profit organization named after a young child who was accidentally hanged in an unsafe crib, was formed to prevent injuries, conduct research and provide leadership to set standards for safe nursery products. The foundation reports that over 10,000 children are injured in unsafe cribs each year and that 540 children have died from crib injuries in the past ten years.

**Successful Citizens
Ready for School & Ready Schools
A Concept Paper**

May 2002

We all bear the responsibility to nurture our children as they grow, and we work to ensure that they live safe and healthy lives. We want them to be ready to learn when they enter school, so that they can become productive, successful citizens as they mature. This is a goal we all share, one that requires a good-faith effort from all of us.

Most children receive the nurturing and stimulation they need from parents who encourage them, from responsive schools and supportive emotional environments that enable them to develop emotional, social and intellectual competencies. Unfortunately, a certain group of children lacks these benefits, and their development does not proceed smoothly, which places them at greater risk for poor cognitive, social and behavioral outcomes, and subsequent failure in school. Some children don't develop the skills they need to succeed in school and become productive, self-sufficient citizens of Oregon.

Success in school and the future of our state are inseparable, because people who succeed in school most often succeed in life. For those who fail in school, however, success is often elusive. Those who cannot communicate, for example, are powerless to help themselves in today's world. Those who know nothing of their past suffer cultural impoverishment. People with inadequate training lack the necessary preparation to face the future with its new technologies. Without good schools, Oregon cannot remain economically competitive or civically vital.

We ignore these facts at our peril. Uneducated children will likely lack adequate skills to secure employment and become self-sufficient adults. Nationally, approximately 63 percent of high school dropouts are unemployed. Those dropouts who do find jobs often languish at the low end of the pay scale without benefits or job security. Over their lifetimes, high school dropouts earn significantly less than high school graduates, and less than half of what college graduates earn. Similarly, dropouts experience more unemployment during their work careers. They are more likely to end up on public assistance. In short, people who lack a basic education must overcome tremendous barriers to achieve financial success, or even meet their basic needs.

Oregon's drop out rate in the 1999-2000 school year was 6.3 percent, which means that on the average, 20 percent of the students in every freshman class drop out before the end of their senior year. The three-year average high school completion rate for Oregon is worse than the national average, and lower than that of neighboring states. For Latinos,

Native Americans and African Americans, the dropout rate is more than double that for Asian and Caucasian youth.

Society pays a high price for our children's school failure. An estimated 36 percent of incarcerated adults and 35 percent of incarcerated youth in Oregon have dropped out of school. Eighty-two percent of incarcerated youth have a need for special education. Experts have estimated that every year's class of dropouts costs the nation \$240 billion in lost earnings and taxes over their respective lifetimes. The country spends billions more on crime control, law enforcement and prison programs, welfare, healthcare and other social services. This staggering drain on federal, state and local governments is unsustainable, as it is for the private sector.

A recent five-year study of Oregon Youth Authority (OYA) youth revealed that the average age at first adjudication is 14. Research tells us that youth who end up in court for serious offenses at age 14½ typically begin to suffer minor behavior problems in school at age seven, progressing to moderately serious behavior problems at age 9½ and serious delinquency offenses beginning at age 11.9. On average, more than seven years pass between the earliest behavior problems and the first court appearance for an offense.

By the time these youth enter intermediate grades, they have formed antisocial peer groups. A member of a "negative peer group" has an almost 70-percent chance of experiencing his or her first felony arrest within two years. An Oregon-based study has found that many of these students live in dysfunctional homes, where their parents lack parenting skills as well as an ability to provide positive support and reinforcement for the children. These families often experience severe stress, which disrupts the parents' ability to monitor and discipline their children.

A just-completed study examined transition issues and recidivism in 531 youth leaving OYA facilities between 1993 and 1999. Generally speaking, the study found a significant link between school attendance revocation. Among the specific findings are the following:

- Youth who don't attend school or work are more than twice as likely to return to OYA within six months of release.
- Youth who have special education needs are about three times as likely to return to OYA.
- Youth who leave OYA's custody are at the highest risk of returning within the first 6-10 months, making it critical for them to go back to school immediately after release.

Since the 1980's, we've seen an emphasis on improving schools and the school environment in order to improve our young people's success. We have raised standards and expectations. We have focused on raising test scores.

In our effort to improve *schools*, however, we have failed to give *children* the focus they need. We have ignored the fundamental fact that in order to improve our schools, we

must first lay a solid foundation. The more risks a child faces *outside* the classroom, the higher the probability that his or her cognitive and emotional development will be compromised. We have not paid attention to the root causes of poor student performance—lack of parental control and parenting skills, child abuse and neglect, substance abuse in the home, mental health disorders on the part of parent or child, and family instability.

We have failed to recognize that the institution of the *family* may face an even greater peril than schools face, and that many of “education’s failures” relate to problems in the lives of children that precede schooling and maybe even birth. In focusing on school outcomes, we have forgotten the critical importance of providing a good beginning and a stable, nurturing environment for all our children. If they lack nurturing and love during the first years of their lives, we will have great difficulty compensating for such omissions later on.

The difficult truth is that in Oregon today, more than 40 percent of children enter school unprepared to participate fully in the learning experience. These children grow up without good health care, supportive families, and the love they need to become successful, independent learners. Too often we demand that schools do what homes, churches and communities have failed to do. If the schools fail along the line, we condemn them (and the teachers) for not meeting our high expectations.

The truth is that most people who work in schools care about every child. Unfortunately, our schools and our education system are not set up to help *every* child succeed.

Our focus must both be *children* and *schools*. Children must be ready to learn when they enter school and every day thereafter, and schools must be ready and able to teach even the most high-risk students.

Most recent polls and surveys agree: the public wants education to be our first priority. Many states and communities seek ways to reform schools and promote excellence. We have paid comparatively little attention, however, to policies and practices *across* systems—education, human services, and community—in order to promote healthy development and success in school. Parents, teachers, mentors, ministers and other community members are *all* active agents in influencing how and whether a child’s development will thrive or founder.

The consequences of failure are often long-lasting and sometimes severe. The circumstances under which a child grows and develops, and the individuals and institutions who govern those circumstances, are many and interrelated, and they are cumulative in their effects. We can gain much from deliberate efforts to forge ongoing partnerships among families, schools, human service agencies, juvenile justice and others to ensure that all our children receive the skills and support they need to succeed in school and in life.

Oregon has laid an important foundation for such partnerships.

In 1999, the Oregon Legislature passed the “High Risk Juvenile Crime Prevention Initiative,” aimed at addressing the top five risk factors that correlate to delinquent behavior and involvement in the juvenile justice system (including school failure). This effort experienced early success, and the juvenile crime rate has declined. Many local communities, however, struggle with making important connections among parents, schools and social services, both to plan and to implement prevention efforts. Making these connections is critical if Oregon’s juvenile crime rate is to continue to go down.

In 2001, Oregon enacted the Oregon Children’s Plan. The goal of this initiative is simple: Give every child and family a chance to succeed. We do this by offering voluntary screening of first-born infants. We believe that we can identify risk factors such as illegal drug use, unemployment and poor parenting skills. We offer families a range of proven services by coordinating the efforts of many different agencies. In this way, we help families overcome these barriers and get the children off to a good start. The plan received a \$60 million budget, which is tiny in comparison to the \$5.2-billion school budget, and a small fraction of our corrections budget. But it may be the single most important \$60 million in the state’s budget, because it will lead to happier, healthier lives by helping children enter school with the ability to participate and learn. In the long run, the program will reduce the amount we must spend on juvenile justice, the Oregon Youth Authority and the Department of Corrections.

Now it is time to take the next step: to connect our efforts to help children be ready to learn when they enter school—and to help schools prepare to teach the diversity of students they receive, especially those who are high-risk. Collaboration among schools, businesses, families and community groups is a prerequisite. This paper proposes a three-pronged approach:

1. **Increase the adult-child ratio in our schools and in our communities.** Citizens and community groups should guarantee that every child in Oregon has *at least* one positive adult supports and cheers for his or her success. Children grow and thrive in the context of close and dependable relationships that provide love and nurturance, security and responsive interaction. In the absence of positive parental support, volunteers, school janitors or secretaries can help make a difference in helping a child succeed. Research shows that the most successful “mentoring” efforts are those that provide a specific focus on helping a child succeed in school. One study found that 68 percent of the young people who enjoy this kind of structured relationship develop more positive attitudes toward school, and 58 percent achieve higher grades. Other studies have also noted lower related risk factors such as alcohol and drug abuse and anti-social behaviors. Adult-child ratio is very important to school success and particularly so with high quality interactions.
2. **Increase the connection between families, social services and schools.** Schools and social services should work together to build partnerships with parents and

families that address the broad range of factors contributing to a child's success in school. Many models exist for family-school-community partnerships. But research is clear that all must become *actively involved* with each other in order to maximize the success of highest-risk students. Close communication must occur at a planning level and in day-to-day communication among parents, the school and service providers. The most effective efforts are those that address multiple problems and occur simultaneously in the home and at school. Connections among families, social services and schools are paramount to meeting the needs of at-risk children.

- 3. Provide purposeful, relevant and engaging curriculum.** Schools should be called upon to ensure that high-risk students have an equal chance to succeed; this starts by maintaining high expectations for all students. Instead, of moving many antisocial youth from mainstream classrooms into school-based, specialized placements or home tutoring programs, or suspending them, schools must demonstrate flexibility to deal with the diversity and ambiguity of their students by personalizing opportunity and learning for each student. Understandably, attempts to address the needs of high-risk students will create management and administrative challenges. With one in every five students dropping out of school, however, one of the best investments we can make in Oregon's future is to find a way to keep these youth engaged in school. Relevance is a cornerstone of meaningful learning beyond the classroom and into the adult world. These qualities in Oregon schools will prepare each student with the skills and dispositions to be an active and successful citizen.

In summary, there are two sides to the issue of "readiness to learn": Getting children ready for school; and getting schools ready for the particular students they serve—children of all ages and risk levels. All children are born "ready to learn." We need to join the efforts of parents, schools and communities to nurture every child's learning potential, and provide opportunities for continued growth, no matter the level of child's risk. Many ideas are emerging to help high-risk children who don't enjoy nurturing opportunities at home, including interventions for parents and children (both together and separate), school-based efforts, and screening and assessment strategies. We must now link these efforts. In the face of limited and shrinking resources, by forging new alliances, by constructing new partnerships and by building on efforts already under way at the state level and in communities, we can help *all* our children become successful citizens.

Governor John Kitzhaber

**Governor's Summit on the Over-Representation
of Minorities in the Juvenile Justice System**

Portland, Oregon

October 9, 2002

Thank you very much. Today I want to talk with you about the theme of this year's summit—"Enhancing Partnerships with the Education Community"—and what it means to our cause of ending the injustice of over-representation of minorities in the juvenile justice system.

But first, I want to express my deep appreciation to all of you for being here today—whether you're a young person or an adult. To you young people, I say, Thank-you for giving us hope. Thank-you for setting the example of personal strength and character that inspires others to overcome the bad things in their lives—the disadvantages and pressures that too often doom young people to poverty and hopelessness. You are showing the way, and we owe you more than we can ever express.

To the older folks who are here today—the professionals in education and juvenile justice, the teachers and counselors, the administrators and planners—I say, Thank-you for your commitment and hard work. Thank-you for rolling up your sleeves and doing the hard things, and the often-thankless things, that help young people of color overcome the risks and hardships to become successful citizens. You too are making a difference, and Oregon owes you much.

This year's Summit on Over-Representation will be the final one I host as your governor. Since we starting sponsoring this event six years ago, we've accomplished a great deal, and we've learned even more. We have shown that by recognizing the over-representation of minority kids in the juvenile justice system, and by acting to reduce that over-representation, we can make a better world for everyone.

"Enhancing Partnerships with the Education Community" [PAUSE]—in my view, that is the right theme for two very important reasons.

First, it expresses the fact that no single agency, entity or professional community can do this job alone. Success requires a multilateral effort. Nothing short of a strong partnership among law enforcement, juvenile justice, education, health care and social service agencies can achieve the goal we've set for ourselves.

Second, this year's theme expresses an idea that I believe in with all my heart, one that I've stated many times in the past. Today I'll state it one more time: Success in school is one of the strongest protective factors that can keep a young person from falling into delinquent behavior, no matter whether he or she happens to be a Native American, an African-American, Asian, Latino or Caucasian.

In the broader context, we know that success in school and the future of Oregon are inseparable, because people who succeed in school are more likely to succeed in life. For those who fail in school, however, success is often an elusive thing.

Those who lack the power to communicate forcefully and persuasively, for example, are powerless to help themselves in today's world. Those who know nothing of art or history suffer cultural impoverishment that causes isolation and alienation. People with inadequate training lack the ability to make use of the new technologies of the 21st century. In short, without good schools that turn out well-educated people, Oregon cannot remain economically competitive or

civically vital.

You and I know that uneducated children are unlikely to become self-sufficient adults with secure, productive jobs. We also know that well over half of Oregon's employed people are high school dropouts, and that dropouts can expect to earn 30 percent less than those who graduate from high school.

Forty-six point two percent of the youth who enter the juvenile justice system have suffered academic failure within a six-month period prior to contact with the system. More than a quarter of them are chronically truant. Almost a third display antisocial behavior in school before the age of 13. We know who they are. We should be helping them. All these youth are likely to suffer problems with substance abuse and mental health issues.

Even more telling is the fact that 79 percent of the adults who enter Oregon's prisons have dropped out of high school. To me, this is the most illustrative and most tragic of all the statistics I've tossed out today, the one that underscores the importance of the partnership with education. The cost of failure on this front is staggering—the cost of prisons, police, probation programs, drug and alcohol counseling; the list goes on and on—costs that taxpayers must bear. When Children fail in school, taxpayers pay the price. It's as simple as that.

From a purely human perspective, I can think of no greater injustice than the one that so many children of color endure in today's world—the injustice of bearing the high risk of failing in school; the injustice of being poor through no fault of their own, of living in homes where they don't get the support they need to become good students; the injustice of coping with parents or foster parents who abuse drugs and commit crimes.

The State of Oregon has resolved to fight the injustice that weighs these young people down, for their sakes and all Oregonians who care about their fellow human beings. Today, I want to reaffirm this state's commitment to win that fight.

Can any of us estimate how many great scientists we've lost, or how many poets, doctors, jurists, or writers, or homemakers because we've allowed so many children to fall victim to the risks that many young people of color endure? No, we can't begin to make such an estimate. But the loss is no less real, and we're all poorer because of it.

Fortunately, we've made some notable progress in recent years.

The statewide dropout rate for the 2000-2001 school year was 5.3 percent, which reflects a 23-percent reduction in just three years. And even though the dropout rates for African-American and Hispanic students were 11 percent and 11.3 percent respectively—more than twice the overall average—both have declined measurably in the past five years, which is good news.

We still have much to do, no doubt about that. During the past four years, the percentage of minority students in Oregon has grown more than 18 percent, to the point where nearly one out of every five kids in school is a person of color. Yet, the percentage of minority teachers has grown hardly at all. We need more minority teachers in Oregon's schools, and our partnership with the education community must make this a priority.

Enhancing that partnership also means addressing the policies and practices that cut across systems—education, human services, and community—in order to promote healthy development and success in school. Parents, teachers, mentors, ministers and other members of the community are all active ingredients in influencing how and whether a child of color will thrive or fall by the wayside.

In Oregon, we've laid the foundation of such partnerships. Three years ago, we enacted the High Risk Juvenile Crime Prevention Initiative, and—just last year—the Oregon Children's Plan. Our goal is to give every child and family an equal chance to be successful. Rather than thinking of at-risk students as liabilities, we think of them as assets that need some extra attention. They need our respect and our care if they are to grow up to become healthy, productive members of society.

My friends, the time has come to link our efforts to help ensure that minority children are ready to learn when they reach our public school system. We're talking about helping schools prepare to teach the diverse student populations who

enter their doors. We're talking about collaboration among schools, businesses, families and community groups.

Let me challenge you to make two measures a matter of policy in Oregon's schools, and then work to implement them throughout the state.

First, let's increase the adult-child ratio in our schools and communities. Let's enlist individual citizens, charitable organizations and community groups to ensure that every minority child gets the personal support of at least one upstanding adult—someone who provides encouragement and support, someone who cheers for his or her success and comfort them in their times of failure. We know that kids thrive with close and dependable relationships that give them love, nurturance, security and responsive interaction. Studies have told us that the most successful mentoring efforts are those that focus on helping a child succeed in school. So let's get that job done.

Second, let's increase the connection among families, social services and our public school system. Agencies and schools should extend their partnership to parents and families, and enlist them as allies to ensure that every child has a chance to succeed. What does this mean? It means close communication with parents on a day-to-day basis—communication that includes people from the schools and the social service agencies.

I don't doubt that doing these things will require investments of time, resources and money, none of which is in ample supply these days. For this reason, I urge each and every one of you to give your strong support to the ballot measure that will go to voters on January 28 of next year—a measure to establish a modest, temporary surtax that will provide critical financial support to education and other services in Oregon. Passage of this measure will give the next legislature and the next governor time to examine the larger issue of Oregon's revenue structure, and make changes that make it more reliable and more responsive to our state's needs.

My friends, never has it been more important for those of us who care about people to make our voices heard. Never has it been more important for us to stand up for the values that have made Oregon a leader among states, a place where the citizens work to ensure that no man, woman or child suffers because of race, religion, philosophy, sexual orientation, or cultural background.

Francis Bacon, the great Renaissance humanist of the 17th century, said, "If we do not maintain justice, justice will not maintain us." Let's keep our commitment to justice strong in Oregon, so that justice will continue to keep us strong. Let's reaffirm that commitment by renewing our efforts at every level and every part of this state to ensure that every child, regardless of the color of his or her skin, gets an equal chance to succeed in school. This, I believe, is the richest legacy that we could leave to the generations that follow us.

And now, for my favorite part of the program—the presentation of the Governor's Youth Awards.

Our first recipient is Michael Arnold, who's 19 years old, from Salem. He's a young man who has made a big impression on the people who nominated him. Even though he has spent time in a youth correctional facility and several different households, he's shown himself to be creative, willing to learn, eager to improve, and—perhaps most important—respectful of others. Today, thanks to his own basic goodness and the efforts of people at the Oregon Youth Authority, Michael has taken full accountability for his life. No longer on probation, he's a contributing and successful member of the community. I'm proud to present to him the Governor's Youth Award for 2002. Michael . . .

Our next recipient is Melissa Garcia, who's 15. She lives in one of my favorite parts of Oregon—Tillamook. After her father died in a shooting in 1999, Melissa fell in with people who did drugs and took part in gang violence. In her emotional turmoil, she came to hate police officers and other authority figures, and became more and more antisocial. But then she began to learn about the richness of Hispanic culture—the dances, the traditions and the cooking. She became more active in her church, and joined the school volleyball team. She became a volunteer translator to help Latino families, a wonderful way to use her precious bilingual skills. Today she's a great student, an example for people of all races and backgrounds to follow. I'm pleased and proud to present the Governor's Youth Award to Melissa Garcia. Melissa . . .

Cody Campbell is a young man who first turned up at the Marion County Juvenile Justice Department when he was only 12. A sufferer of ADHD, he was failing all his classes. Charges against him ranged from unauthorized use of a

motor vehicle to theft and criminal mischief. Having lost both his father and his stepfather at a very early age, and having seen a close friend shot dead right in his own neighborhood, his emotional troubles were significant. But after participating psychological counseling, and after learning to manage his anger and grief through classes, and has started college. Through hard work, Cody has succeeded admirably, even to the point of becoming a staff assistant in the Marion County Fuel program, which develops skills in mechanics, welding and construction. He also works as a peer counselor for Mother Oakes Child in grief counseling. Here's a young man who has learned that the greatest rewards come to those who help others, and I'm proud to present to him the Governor's Youth Award. Cody . . .

People call Tasha Murphy a survivor. At the tender age of 15, she knows the hardship of living in a condemned building. She knows poverty and privation. She has suffered the pain that comes with being an at-risk child. Despite the troubles she's known, Tasha has displayed courage and determination, and she's worked hard to overcome hardships, risks and disadvantages. Today, she's a high school graduate with a GPA of 3.0, and a volunteer with the Tillamook County SMART program. She will shortly begin her college education. Those who know her describe her as sensitive, caring and supportive of other students, a person to whom others are drawn. She's always willing to lend a hand, and exhibits tremendous resolve, as well as a capacity to see the big picture. Maybe this is why she hopes to become a special education teacher for pre-schoolers, a career that will enable Tasha to help others avoid the hardships and pitfalls that she herself learned to surmount. Ladies and gentlemen, I'm delighted and proud to present the Governor's Youth Award to Tasha Murphy.

Our final recipient is Mike Greene. During his childhood, his parents lived lives of delinquency, so a friend of the family adopted him. Despite the problems he endured, Mike was a good student. But he started to suffer extreme abuse by an adopted parent, which included imprisonment in a locked room for 30 days. He rebelled, starting running away, stealing cars and committing other crimes. At the age of 13, he sold drugs, and took up an affiliation with a gang. He lost friends to gang violence, and suffered a gunshot wound himself. But then he found strength and inspiration in religion, and thanks to counseling and friendships at the House of Umoja, Portland's safe house for threatened youth, he showed what he's made of. Mike now works as a counselor at the House of Umoja, helping other young people steer clear of the troubles that he himself suffered. He's a young man who's giving back to his community, a young man any of would be proud to have a friend. I'm honored to present the Governor's Youth Award to Mike Greene. Mike . . .

Join me in giving these young Oregonians a big hand. Thank-you all for coming, and keep the faith!

Governor's Summit 2001: A New Odyssey
Effective Solutions for Reducing the Over-representation of
Minorities in the Juvenile Justice System

Summit Report

This report published by the office of Governor John A. Kitzhaber, M.D.
Health, Human Services and Labor
August 2002

Available on line at http://www.governor.state.or.us/gol_health.htm

Annual Report From Governor Kitzhaber

It would be good if there were no need for an annual summit on reducing the over-representation of minorities in the juvenile justice system. There would be no need for a summit if there were no problem.

We have had some successes, and we have more work to do. Let me start with the successes:

- Many young people are willing to discuss and think about this challenge. Over 125 youth attended the 2001 Summit—an incredible testimony about our future that so many would take the time to participate in an all-day conference.
- There is ample statistical evidence that we are making a difference and actually reducing the number of minorities involved in the juvenile justice system. For example, while the percent of minority youth is rising—from 15 percent of youths in Oregon just a couple of years ago to 19 percent today—their overall representation in the juvenile justice system is declining.
- Since we held our first summit in 1997, arrests of all juveniles are down almost 25 percent. Specifically, arrests of Hispanic youth have dropped 12 percent. Arrest of Asian youths has dropped 42 percent and Native American Youth arrests have dropped almost 15 percent. Arrests of African American youth declined steadily until this last year when they crept up just short of 1 percent.
- We have seen a continued decline of minority youth sentenced to Ballot Measure 11 sentences at the Oregon

Governor John A. Kitzhaber

Youth Authority since 1999. The percentage of minority youth has gone from 40 percent in 1997 to 43 percent in 1999 to 35 percent in 2001.

In short, we have a lot to celebrate! Oregon is truly a national leader on solving the problem of minority over-representation in the juvenile justice system. We take action here in Oregon, and we have the data to show our successes. No other state has seen this kind of progress.

But there are still some troubling statistics that we must continue to address.

- Minority youth continue to comprise a larger percentage of school dropouts: 25 percent in 2001 compared to 22 percent in 1996. We know that one of

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

the strongest predictor of avoiding juvenile justice involvement is school success.

- Measure 11 charges and sentences still represent some of our biggest challenges for certain ethnic groups: Asian youth serve Measure 11 sentences at a rate more than two times their representation in the population. African American youth serve Measure 11 sentences at a rate five times their representation in the population.
- African American kids are also arrested at a rate three times their representation, and in overall closed custody (regardless of crime) four times their representation in the population.

So, our work is not done. Far from it. That's why I will continue to pour energy both into school quality and into helping kids to be ready to learn.

We already know that one of the highest predictors for involvement in the juvenile justice system is poor performance in school. Conversely, school success is one of the strongest "protective" factors that can keep a young person from engaging in delinquent behavior. These predictors are even stronger for youth of color.

Schools, then, play an integral role in preventing crime and in preventing minority youth from involvement with the juvenile justice system.

Since the 1980's, there has been an emphasis on school improvement and improving the school environment so that our young people have a better chance of succeeding. We have raised standards and

expectations. We have focused on improving test scores.

The quality of our schools and the future of our state are inseparably connected. People who are successful in school are more often successful in life. People who cannot communicate are powerless. People who know nothing of their past are culturally impoverished. People who are poorly trained are ill prepared to face the future. Without good schools, Oregon cannot remain economically competitive or civically vital.

But in our search for school excellence, the *children* have somehow been forgotten. We have ignored the fundamental fact that in order to improve our schools, a solid foundation must be laid beforehand.

We have failed to recognize that the family may be a more imperiled institution than the school, and that many of education's failures relate to problems that precede schooling -- even birth itself. We have focused on school outcomes, forgetting that if children do not have a good beginning -- if they are not well nurtured and loved during the first years of life -- it will be difficult, if not impossible to compensate fully for such deficits later on.

The difficult truth is that in Oregon today, over 40 percent of children are entering school unable to fully participate in the learning experience. These children are growing up without good health care, without supportive families, without the love they need to become successful, independent learners.

Schools in turn are being asked to do what families and churches and communities have not been able to accomplish. And if

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

the schools fail along the line, we blame them and the teachers for not meeting our high expectations. Our focus, our concern must be *children* – not just the schools.

That's why we worked hard to pass the Oregon Children's Plan in the last session of the Legislature. Our goal is simple: give every child and family the chance to

succeed. We do this by offering voluntary screening of first-born infants. Hopefully, we will identify family risk factors such as drug use and unemployment and offer a range of proven services that will help young families get off to a good start. Your participation and commitment in this effort are more important than ever, and I appreciate your help.

John A. Kitzhaber, M.D.

What is Disproportionate Minority Confinement (DMC)?

In many areas across the country, the number of minority youth in secure facilities exceeds the population of such groups in the general population. In 1998 during the reauthorization of the Federal Act on Juvenile Justice and Delinquency Prevention, Congress established a new requirement for states to determine whether or not minority youth are being confined in disproportionate numbers in secure facilities and to create a strategy for addressing racial inequality where it is present. States go through stages of data gathering, analysis and problem identification, assessment, program development, and systems improvement initiatives.

Oregon was selected as one of five states to receive assistance in the data gathering and analysis stage. The research includes the extent of over-representation statewide and in the three largest counties (Lane, Marion, and Multnomah), the points in the juvenile justice system at which it is most likely to occur, and the implications of the current research for future policy research on the reasons for over-representation. The summary data from 1990-93 indicate that African American youth are particularly likely to be over-represented at every decision point from arrest to final case disposition than at the front end of the system.

Over-representation

Over-representation exists when, at various stages of the juvenile justice system, the proportion of a certain population exceeds its proportion in the general population.

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

**Reference Data for the Governor's Summit on the
Over-representation of Minority Youth in the Juvenile Justice System
October 2001**

The chart in Figure 1 illustrates some of the changes that have occurred over the past five years regarding minority youth. (Figures in the chart are rounded.) The biggest change from the 2000 data on youth is the increase in the Hispanic youth population. Long-term, minority youth have gone from 15% to 19% of the youth population, driven primarily by the number of young Hispanics. The good news is that while the percent of minority youth are rising, their overall representation in the juvenile justice system is declining.

The drop out rate of minority youth has remained steady over the past three years at 25%, but that is an increase compared to 22% percent in 1996. Since 1997, Hispanic dropouts have increased from 12.4 percent of all dropouts to 15.6 percent. Asian and black youth have increased slightly (about one-half percentage point each). Native American dropouts, however, have declined by one percent. Drop out rates are significant because school failure is strongly equated with juvenile crime.

The percent of total youth arrests has increased for minorities by two percent from last year, but for the long term, minority arrest rates have fluctuated year to year from 15 to 17 percent. Native Americans declined one percentage point, while Hispanics increased one point and Blacks increased two points.

There is a continued decline of minority youth sentenced to Ballot Measure 11 sentences at the Oregon Youth Authority (OYA) since 1999. The percentage of minority youth has gone from 40% in 1997 to 43% in 1999, then dropping to 35% in 2001. The overall percent of minority youth in closed custody (regardless of crime) at the OYA showed a sharp drop in 2001 from 28% to 25%.

Figure 1

- (1) US Census Bureau, www.census.gov, ages 0-17, Race and ethnicity are defined differently for census figures and the Oregon Youth Authority. For the youth population figures, Non-Hispanic and Hispanic African-Americans were grouped together as African-Americans and all other Hispanics were grouped together as Hispanic. Asian and Native-American groups include only Non-Hispanics. Oregon Corrections figures use a "self-identification" system. The Census Bureau changed its race and ethnicity categories for Census2000, allowing respondents to check multiple categories. The '01 data are estimates from that multiracial data.
- (2) Oregon Department of Education for grades 9-12. Rates reflect the previous school year (e.g., 2001 data is from the 1999-2000 school year).
- (3) Oregon Law Enforcement Data System, 0-17 arrests. Data for 1999 ('00) is preliminary and unaudited data, and does not include data from Roseburg and 18% of cases from Portland. There is no evidence that the missing data would affect the results cited here.
- (4) Oregon Youth Authority. ('01 data are as of July 1, 2001 and do not include sentences reduced under SB1049).
- (5) Oregon Youth Authority. ('01 data are as of July 1, 2001 and include total close custody population).

Summit Activity

Speakers

The 2001 Governor's Summit on the Over-representation of Minorities in the Justice System was all about action. When **Governor Kitzhaber** addressed the conference, he emphasized the importance of schools, judges, and district attorneys being more proactive in their response to the issue of over-representation. He reminded the audience that school success is a strong shield against delinquency and that schools play an integral role in preventing crime and in keeping minority youth from involvement with the juvenile justice system.

Chief Justice Wallace P. Carson, Jr.

reaffirmed the Oregon Judicial Department's long-standing commitment to ensure that all people who come before the courts are treated fairly and with respect. Because he

Chief Justice Wallace P. Carson

knows that minority over-representation in the juvenile justice system is a complex problem that goes beyond the courthouse doors and requires sustained collaboration by all three branches of state government, he pledged to continue the Oregon Judicial Department's initiatives and to work with the Executive and Legislative branches to make resolving this problem a priority.

In her keynote address, **Senator Avel Gordly** also posed challenges for the group. She told the audience to address the dropout issue. The Legislature didn't

pass proposals expanding options for dropouts or a bill requiring teachers and other educators to have cultural competence. She believes these issues must be brought up in the next regular session. Senator Gordly urged attendees to ask gubernatorial candidates to make reducing the over-representation of minority youth in the justice system a priority. "This is about saving young people and eradicating racism," she said.

In his introductory remarks, **Attorney General Hardy Myers** encouraged participants to reassess what is important and to keep these goals in mind as they searched for solutions to the problem of over-representation. "Envision what can be done," he urged. "Demand accountability, but assure justice for youth while seeking accountability."

Lane County Commissioner Bobby Green also urged action. He told the group to take advantage of "teachable moments" to get the message out that over-representation of minorities in the justice system is still a problem. He advised advocates to use community resources and to identify key legislators who recognize the need for cultural competency. In addition, he recommended using agenda-specific programs to network and collaborate with others. "Be creative," he said. "Imagine a service delivery system as if you had to use it."

Discipline Areas

After hearing the speakers, participants focused on how tools and strategies could be used at different points in the system to reduce the numbers of minority youth who end up in the juvenile justice system. The seven discipline areas identified for the

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

Summit as points in the system where steps can be taken were:

- Prevention
- Arrest
- Adjudication
- Commitment
- Intervention
- Transition/Aftercare
- Legislation

Participants discussed positive developments underway in their communities and the outcomes those activities generated. Group members described how the activities have built positive relationships within their communities, and they considered additional opportunities to build such relationships. They discussed how their organizations could do a better job of working with other parts of the system to reduce over-representation, while brainstorming ideas about steps that could be taken to overcome barriers. Some of the barriers identified are:

- Lack of parenting skills
- Lack of nurturing homes in early childhood
- Lack of money and resources (unlikely potential for more money)
- Lack of knowledge about accessing existing resources
- Negative images of youth in media
- Hopelessness created by poverty and hunger
- Youth mental health and drug/alcohol issues
- Low expectations – racist attitudes
- Cultural barriers
- Lack of opportunities
- Leadership not diverse

The main themes coming out of the discussions on effective solutions centered on:

- The importance of early intervention
- Youth participation and advocacy
- Family involvement in these discipline areas:

During the afternoon workshop, participants considered unique crime profiles of different populations and noted that prevention efforts need to be targeted toward the specific needs of these populations. Discussions across all discipline areas throughout the day emphasized the importance of cultural competency training in order to meet those specific needs.

Prevention

Some of the programs featured to keep minority youth out of trouble are the Partnership Program in Clackamas County, a collaboration of multi-disciplinary agencies, and the Solutions Program in Salem, both of which provide wrap-around case management. Other state agencies are also involved in prevention. The Oregon Liquor Control Commission has initiated prevention-through-education programs that deal with teen drinking. The Department of Corrections developed a special program called the Children of Incarcerated Parents Project two years ago. Because such children are five times more likely to be incarcerated later in life than their peers, the project uses the period of a parent's incarceration as an opportunity for positive intervention with families at risk. Currently, a parent education curriculum is being taught to inmates in the prison system. In addition, an Early Head Start

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

program will open soon at the Coffee Creek Correctional Facility.

Some suggestions made for overcoming barriers to prevention included:

- Make parenting classes available.
- Use interested kids to talk to kids who are at risk.
- Focus more on middle-school kids.
- Increase volunteerism.
- Integrate more "systems" to provide easier access to services.
- Emphasize local young people as role models.
- Increase outreach to help address poverty and hunger regarding food stamps, etc.
- Offer nurturing by "mentor parents" and programs like Healthy Start.
- Equalize access to mental health and treatment services (middle class kids get lighter sentences because they're "in treatment" which they can afford but poor families cannot).
- Hold schools accountable because low expectations can cause performance to drop.
- Address cultural barriers by tailoring programs to fit communities. Have members of community deliver programs.
- Expand mentoring programs in schools.
- Create opportunity programs to give minority kids work experience.

- Seek greater participation by education.
- Utilize more schools as "community centers" for cultural activities and training.
- Mandate educators to meet competencies in cultural awareness

Arrest

Participants discussed the problem of racial profiling. Chief Ron Louie, of the Hillsboro Police Department described the profiling project his department has implemented and some of the data available. Police are collecting information on traffic stops that include their perception of a driver's age, sex, and race; the reason for the stop; whether the car was searched; and what, if anything, illegal was found. At the time of the Summit, existing evidence did not show racial profiling, but because the amount of information gathered was small, it is possible that the conclusion could change. The perception persists that police do target drivers based on race, and that problem must be addressed.

Programs implemented by the Confederated Tribes of Warm Springs to address racial profiling emphasize relationship building and involvement of the community in the process. This might include ride-alongs that pair youth with police officers, officers "hanging out" in the community, and probationers becoming part of the sanctioning process by recommending their sanctions. Other suggestions for addressing the issues of racial profiling and ways to improve the relationship between the community and police included:

- Police districts should recruit more

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

- bi-lingual officers and provide more cultural competency training.
- Police departments should represent demographics of the community it serves.
 - There should be advocates for arrested youth.
 - Arresting officers should explain rights in native language.
 - Each community needs a citizen review committee.
 - Don't neglect "small, everyday actions" that can create understanding. These could be gestures like offering meals to families/youth, mentoring, police/youth get-togethers.

Participants in the discipline area of arrest also discussed the importance of promoting understanding of juvenile-unique offenses. For example, policies that target youths can be posted, such as no gang-related clothes permitted in Lloyd Center.

Adjudication

Groups discussing adjudication focused on alternatives to sentencing and advocacy programs. They considered what the alternatives are, why they work, and whether they're being used frequently enough. Some of the alternatives discussed included prevention services, a formal accountability agreement, diversion programs, peer counseling, and peer courts. The peer court in Klamath County is a voluntary program that youth offenders may choose as an alternative to going before a judge. The objective is to ensure that offenders get a truly representative jury of their peers. Youths who serve as jurors for the court issue sanction contracts that must first be approved by a judge. Sanction contracts have included requirements such as

maintaining a minimum grade point average or participation in extra-curricular activities. Klamath County juvenile court judges support the peer court and decided it was sufficiently stable and successful to handle substance abuse charges. Other alternatives to sentencing include community service, environmental service programs, and advocacy programs like Court Appointed Special Advocates (CASA).

Participants discussed a variety of suggestions for improving the adjudication process. Members believed that including families in every step of the process is central to increasing understanding and successful completion of court-ordered programs. To achieve this, defense attorneys serving youth should be uniquely qualified. All forms and processes should be translated into native language, and the adjudication process should be age appropriate and consider the developmental stages of youth, as well as cultural differences. The use of interpreters should be increased and judges should receive more cultural competency training.

Commitment

Once youths are committed to a facility, what can be done to prevent recidivism and to promote personal success? Participants in breakout sessions considered these general factors key in addressing recidivism:

- Commitment settings should be age appropriate and must consider the developmental and cultural needs of youth.
- Educational standards should be high.
- Assure adequate cultural

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

- programming and cultural competency among staff.
- Staff composition should reflect youth service.
 - Encourage strong family involvement in programming delivered in correctional settings.
 - Include youth in the development of program including design, implementation, operations, and continuous improvement.
 - Have grievance system in place in all correctional settings to handle complaints about racial discrimination or lack of culturally relevant services.

The panel considering this discipline area looked for those specific cultural issues that are more common among minority youth and that need to be addressed in facilities. The workshop reviewed the demographics of youth committed to and incarcerated at the Oregon Youth Authority (N=1,065). For females, the percentages below are usually higher (except where noted).

- More than 50% have a special education designation.
- More than 50% have a major mental health diagnosis.
- More than 70% have a substantial history of substance abuse.
- More than 15% have had at least one suicide attempt (there is a higher frequency of self-mutilation and multiple suicide attempts among girls).
- More than 30% have parents convicted of a felony.
- More than 60% have been placed in alternative care settings prior to incarceration.
- 60% have a history of running away.

- 30% have failed at least one grade (the statistic is lower for girls).
- 10% are adopted and have a very difficult time finding their place in the world.
 - 10% are parents or are expecting.
 - 25% come from families where the job history is of semi-skilled employment.
 - 44% come from families where the job history is of professional employment.
 - More than 70% of the girls have been sexually abused (this is believed to be grossly under-reported).

Panelists presented key issues related to preventing recidivism among girls, Native American youth, and Latino youth. Oregon has the only secure transition program for girls in the United States. Program design for this and other programs should be based on the following factors.

- Research for girls.
- Attention paid to sexual violence, especially control and decision-making.
- Sexism and racism in a social context with attention paid to the socialization process.
- Emotional and financial dependence on males.
- The likelihood of sexual activity and parenting.
- Seamless continuum of services and consistency of services, including language.
- Staff that represents the population of youth and the use of consultation services where necessary.

Challenges faced in putting together services for girls include the lack of

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

community-based programs that target girls, the prevalence of domestic and sexual violence, the lack of affordable housing, and the need for educational/vocational training.

Effective services that are relevant to the Native American youth and their culture are very important. Members of the discussion group believe that if youth are failing in the services provided, then the question should be asked: how are the services failing the youth? One of the most important factors in serving Native youth is the issue of identity and identity development. Factors important in preventing recidivism with this population include:

- Identity development
- Peer pressure
- Family makeup
- Lack of ties to culture and community
- Rates of addiction
- Diet and nutrition
- Emotional and health status of the culture and community.

For Latinos, relevant services must be provided before adjudication. It is particularly important that the community take ownership of these youth and that they join together in a broad partnership in order to do so. The "identity gap" between youth and parents as acculturation occurs was emphasized. It was noted that greater acculturation has been associated with poorer outcomes. Also, that as skill in negotiating the dominant culture increases, so do risk factors. The gap between parent and child may lie at the heart of this risk. To this end, specific suggestions were made for services:

- Language and cultural identity

should be part of any assessment for Latino youth.

- The family should be seen as very important.
- Culture and language should be viewed as a "protective factor".

Through panel presentations and discussion, several themes emerged that cross all ethnic, racial, and sexual lines. The following components and ideas were offered as part of the solution to preventing recidivism:

- Honestly address and discuss our own bias, sexism, and racism.
- Develop effective services, relevant to the youth's culture that help with identity development. Begin by connecting in a positive way with who the youth are.
- Develop or use culturally appropriate assessment techniques. There is not one "tool" because cultures are complex.
- Involve the family and members of the youth's culture as soon as possible and include culture in transition or parole plans.
- Communication is especially important. Share information and develop relationships across agencies and departments. Break down the confidentiality barrier.
- Seek greater involvement and commitment from the dominant culture, particularly from schools, judges, and district attorneys.
- Devote time, energy, and resources to each individual youth. Use mentors.
- System plans should not just require culturally appropriate services. The planning itself should reflect the diversity of the community.

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

- It is especially important not to do things just from the service provider's convenience. We must change the way we do things and deliver services.

Intervention

Groups considering intervention discussed effective intervention programs and why alternatives to detention aren't being utilized. They wanted to learn more about programs that are community or faith-based or that involve approaches such as residential treatment, community service, restitution, or house arrest.

Alternative programs might be utilized more if offenders and their families were more aware of their availability or if the treatment services and staff composition were more culturally relevant and reflect the community population.

Recommendations to address the issue of appropriate and effective intervention included:

- Provide stronger emphasis on family involvement and participation, e.g., emphasize parent training and support.
- Develop special services for families where parents have limited English proficiency. Youth should not be expected to translate for parents. Interpreters should be used or services provided by bilingual staff members.
- Develop more treatment alternatives to detention.
- Make treatment and intervention services accessible before youth get in trouble.
- Provide more diversion programs and models for youth with mental

health and/or substance abuse problems.

- Make culturally relevant intervention and treatment services for youth with mental health disorders available upon demand to prevent further involvement with justice system. Research shows that at least one in five youths under the age of eighteen who have been arrested have serious mental health problems.
- Expand treatment courts and juvenile drug courts for youth with substance abuse problems.
- Develop and fund more research-based family centered treatment models, such as Multi-systemic Family Therapy (MST) and Functional Family Therapy (FFT) to serve minority youth and their families. These treatment models have proven to be more effective than traditional community-based treatment models and have been researched and tested with various cultural groups and communities.
- Use a strengths-based, family-centered framework to develop juvenile crime prevention, intervention, and treatment services. Agencies incorporating this approach view adolescents within an interactive context of family, cultural, and community systems, and they tailor their activities and programming accordingly.

Legislation

Summit participants discussed the role of legislation in combating over-representation of youth in the justice system. There are laws that specifically address the problem of over-representation while other legislation carries unintended

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

negative consequences and thereby contributes to over-representation. One example of a law that attempts to address the problem—at least indirectly—is SB 415, passed during the regular 2001 Legislative Session. It establishes the Law Enforcement Contacts Policy and Data Review Committee to receive and analyze demographic data to ensure that law enforcement agencies do not discriminate based on race. The reporting required by the law was prompted by charges of racial profiling, believed by many to occur especially during traffic stops and with minority youth.

Measure 11, passed by the voters in 1994, requires mandatory sentences for certain crimes and applies to convicted persons aged 15 and up. It was cited as an example of legislation with the unintended consequence of affecting minority youth disproportionately.

The group discussing legislation emphasized the importance of everyone feeling empowered to affect the legislative system. To encourage greater participation in law making, they shared information about effective ways to educate policy makers

Transition/Aftercare

Participants examining transition and aftercare engaged in a discussion about expanding the efforts of the Oregon Youth Authority's transition program to include probation youth and those waived to the adult system. They stressed the importance of involving the family in the transition process with strong emphasis on maintaining a relationship-based approach. The recommendation to network with

home schools generated concern about accountability for youth coming from special districts and the responsibility of those districts to provide an educational opportunity. It was also recommended that parole and probation officers establish a relationship with their clients' school officials to enhance communication and services.

The group believes it is unreasonable to expect improvement by sending young people back to the same circumstance from which they came and therefore recommended:

- Don't place youth back in public school settings immediately after being incarcerated; instead use a step-down approach to integrating them back into that setting.
- Involve family members.
- Provide more diversity in all education, training, and workplace initiatives.
- Invest dollars in programs.
- Use multiple approaches.
- Establish more treatment foster care homes.
- Engage in strategies that gradually build more community support.
- Provide more training for court workers.
- Utilize multi-color volunteerism.
- Increase collaboration among service providers.

Commitments To Reduce Minority Over-representation

Mixed groups of youth and adults met in breakout rooms during morning sessions and attended workshops in the afternoon to identify individual and collective actions that can be taken. Both adults and teens made personal commitments—actions they pledged to take as individuals--to reduce minority over-representation. Many of the individual teen commitments focused on continuing their education and mentoring younger children. Adults pledged a wide variety of actions including mentoring, increasing outreach, working with schools to educate youth regarding cultural differences, and advocating for changes in Measure 11 law.

In past years, groups working on the issue of over-representation of minority youth in the justice system have committed to taking specific steps to address the problem. During the 2001 Summit, representatives of specific discipline areas did not make group commitments as in the past, but they have continued working to fulfill the earlier commitments. Some of the progress made by the law enforcement community, those involved with juvenile/adult corrections, and the community-based social service agencies follows:

Law Enforcement Commitments

Develop a method and curriculum to educate and train veteran officers in "risk factors" and cultural competency.

A training video was produced featuring the superintendent of Oregon State Police, a representative of the Oregon Police Chiefs, and Oregon Sheriffs that reinforced the expectation of police leaders that the only appropriate enforcement decisions are those based on legitimate law enforcement concerns. It was emphasized that racial bias in policing would not be tolerated. This video was incorporated with written materials and a test to ensure that officers understand the expectations and statutory provisions contained in House Bill 2433, the 1997 law passed related to conducting traffic stops in a lawful manner.

In addition, the Department of Public Safety Standards and Training has initiated training at the entry level that deals with diversity and recognizing predisposition. The department of State Police includes entry level and in-service training curricula pertaining to cultural awareness and civil rights issues.

Continue to implement HB 2433

Oregon law enforcement agencies have completed training on HB 2433. The representatives of the legislative work group presented a report to the 1999 Oregon Legislative Assembly and continued their work as the Community Relations Work Group, a subcommittee of the Governor's Public Safety Policy and Planning Council. The diverse group supported Senate Bill 415 in the 2001 Oregon Legislature. This bill served as a mechanism to provide a statutory committee to continue the process of addressing and resolving issues of minority community trust of law enforcement. One provision of this legislation was to establish funds for the analysis of traffic stop data, which was being collected on a voluntary basis by several police agencies.

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

Create a nondiscrimination declaration for police to sign

Declaration was created and Oregon State Police as well as northwest and southwest Washington police departments signed it.

Take personnel action against police who profile or otherwise discriminate against minorities.

All Oregon police agencies adopted a non-discrimination policy and reported complaints of discrimination and the outcome of the investigations to the Legislature. The Department of State Police continues to track complaints alleging bias and conducts investigations of such allegations.

Juvenile/Adult Corrections Commitments

Continue to enhance and expand the Minority Youth Transition Program

The Oregon Youth Authority, Office of Minority Services continues to expand and enhance the Minority Youth Transition Program. The program provides services to minority youth leaving secure custody and returning to Marion, Multnomah, Washington and Clackamas counties as well as to others on a case by case basis. The Transition Program has been recognized as a national model at the National Office of Juvenile Justice and Delinquency Prevention (OJJDP) Conference in December 2000 in Washington, DC and last spring at the National American Correctional Association/OJJDP “*Going Home*” Conference in Charlotte, North Carolina. The Office of Minority Services provides consultation and technical assistance nationally regarding transition/re-entry services. The transition specialists continue to work with parole officers and supervisors, community providers, Minority Services staff, faith-based organizations, the youth’s family and the youth to develop individualized transition plans. Youth may receive incentives and graduated consequences while on the Transition Program. As of April 2002, the Transition Program served 107 youth of which only 11 were either suspended from the program or received new charges.

Assist facilities in establishing effective culturally specific treatment services by providing staff development, training, technical assistance, and program development.

The Office of Minority Services continues to assist facilities in providing culturally specific and language appropriate treatment services including Gang Intervention/Youth Empowerment Treatment support groups, multicultural and ethnic specific treatment services, Gang Tattoo Removal Program, and Native American spiritual services. The Office of Minority Services provides staff training in cultural competency and working effectively with minority youth. Currently the office is in the process of developing curriculum for gang intervention/youth empowerment that will be standardized and used statewide for gang intervention services.

Develop a mentorship program

The Office of Minority Services provides ongoing support to the OYA Regions in developing key focus areas including training and mentorship programs. It advocates for resources in the region particularly through the Native American Advisory Committee and Hispanic Advisory Committee.

For more information regarding these or other services provided by the Office of Minority Services call (503) 378-4667.

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

Community-based Social Service Agencies Commitments

Use multiple strategies to increase parental involvement with youth.

The Native American Youth Association (NAYA) strives to hold meetings with students, parents and teachers at least twice a year to set goals on improving students' academic experience. It is a priority of NAYA to involve parents in all youth programming.

The Morrison Center for Child and Family Services planned to adopt at its July meeting the primary goal of improving and increasing parental/family involvement in different aspects of its work with clients.

Work in partnership with other agencies to create and implement intervention strategies to support minority communities.

NAYA staff participates in the Native American Providers Circle and the Native American Leaders Round Table. It also works closely with the Native American Rehabilitation Association to streamline services for Native youth.

The Morrison Center has been developing a cultural accountability effort to increase staff and volunteer knowledge and training on a variety of cultural issues in the workplace.

The Morrison Center has operated a Latino project for the past year and a half that focuses on decreasing substance abuse in the Latino population

Help youth from counties communicate their wishes within their communities.

The young adult group housed by NAYA acts as a leadership group. They meet regularly with the board of directors as well as other community leaders to discuss issues that affect Native American youth.

NAYA has held two community strategic planning sessions where communities and youth came together and discussed issues that affect the community, including over-representation. A youth forum was scheduled for July 2002 where Measure 11 was discussed.

The Multnomah Youth Advisory Board (YAB) has a primary goal to provide a voice for young people in the community and strives to represent as diverse a population as possible. In the past year, JAB members worked on "innovation teams" with youth-serving organizations such as Portland Impact, Familyworks and Campfire, as well as the Commission on Children, Families and Communities, to develop youth-adult partnerships. In addition, JAB has worked with the Oregon Mentoring Initiative, met with Portland City Council, and participated in the School-Aged Services Policy Framework process. The Framework will help guide Multnomah County's involvement in services for school-aged children and youth.

**Over-representation of Youth in the Juvenile Justice System
2001 Summit Report**

**YOUTH Award Winners
(Youth Overcoming Difficult Times and Hardship)**

The Governor's YOUTH award, presented annually at the Summit on Over-representation, recognizes young people who show consistent progress in overcoming adversity. Governor Kitzhaber established the award two years ago to honor four youths who take positive risks in turning their lives around, achieving success, and for contributing to the success of others. Award winners receive plaques that were designed by three young men in custody of the Oregon Youth Authority who are also working to overcome adversity. During the 2001 Summit, the Governor was given a belt buckle with the same design. It was presented in recognition of his efforts to address the problem of the disproportionate number of minority youth that end up in courtrooms and jails.

Winners of the 2001 YOUTH awards are an inspiring group of young people. All have overcome a variety of economic and social struggles.

Ernan Contreras was the youngest recipient this year. Sixteen years old and a student at Hood River High School, Ernan has been on the honor roll for two years. He excels in math and science and is a positive influence on other young Latino students. He was nominated by his assistant principle because of how he also inspires the adults in his school and in the community.

Noah Winterhawk was described as someone who will succeed because he refuses to fail. He entered his second year of studies at Eastern Oregon University September 2001. During the summer, he was employed by a youth program and is a positive influence for many younger, troubled youth. Nominated for this award by the judge who sentenced him since he was ten years old, Noah is a one-person example of the successful people connections.

Ellie Heater overcame violence, drug abuse and poverty to complete successfully complete all the terms of her probation, graduated with honors from Roseburg High School (receiving the award of excellence for both math and English) and entered a work-study program where she is employed. She began studying to be a paramedic, rides her bike twenty miles each day to attend classes, and has moved into her own apartment. Staff at the treatment facility she attended nominated Ellie.

Elton Seals was involved in significant gang activity and serious crime, but decided to change his life while in prison. When he was released, he started to work on his education. He graduated with an associate's degree with a 3.26 GPA and then went on to complete work on his bachelor's degree in social sciences at Western Oregon University. He was a starting defensive back on the football team and earned Division 2 Player of the Week, Greater Northwest Player of the Week and Conference Player of the Week. Elton was nominated by his mentor.

Governor John Kitzhaber

Minority Overrepresentation Summit

October 17, 2001

Good afternoon. I wish I could say I was glad to be here, but I'm not. I wouldn't be here if there wasn't a summit on Reducing the Over-representation of Minorities in the Juvenile Justice System. And there wouldn't be a summit if there wasn't a problem.

So the fact that we are all here together today is a signal that we have more work to do to address the problem of minority overrepresentation in the juvenile justice system.

But that does not mean that we have not had some successes. Let me start with those today:

First, it's important to note that we have more than 125 young people in the audience today to help us discuss and think about this challenge. I think that's incredible testimony about our future that so many of you would take the time to participate in this all day conference.

Second, there is ample statistical evidence that we are making a difference and actually reducing the number of minorities involved in the juvenile justice system. For example, while the percent of minority youth are rising – from 15 percent of youths in Oregon just a couple of years ago to 19 percent today – their overall representation in the juvenile justice system is declining.

Since we held our first summit in 1997, arrests of all juveniles are down almost 25 percent. Specifically, arrests of Hispanic youth have dropped 12 percent. Arrest of Asian youths has dropped 42 percent and Native American Youth arrests have dropped almost 15 percent. Arrests of African American youth declined steadily until this last year, when they crept up just short of a percent.

Furthermore, we have seen a continued decline of minority youth sentenced to Ballot Measure 11 sentences at the Oregon Youth Authority since 1999. The percentage of minority youth has gone from 40 percent in 1997 to 43 percent in 1999 to 35 percent in 2001.

In short, we have a lot to celebrate. Oregon is truly a national leader on solving the problem of minority overrepresentation in the juvenile justice system. We take action here in Oregon and we have the date to show our successes. No other state has seen this kind of progress.

But there are still some troubling statistics that we must address.

- Minority youth continue to comprise a larger percentage of school dropouts: 25 percent in 2001 compared to 22 percent in 1996. We know that one of the strongest predictors of avoiding juvenile justice involvement is school success.

- Measure 11 charges and sentences still represent some of our biggest challenges for certain ethnic groups: Asian youth serve Measure 11 sentences at a rate more than 2 times their representation in the population. African American youth serve Measure 11 sentences at a rate 5 times their representation in the population.
- African American kids are also arrested at a rate 3 times their representation, and in overall closed custody (regardless of crime) 4 times their representation in the population.

So, our work is not done. Far from it. That's why I will continue to pour energy both into school quality and into helping kids be ready to learn.

We already know that one of the highest predictors for involvement in the juvenile justice system is poor performance in school. Conversely school success is one of the strongest "protective" factors that can keep a young person from engaging in delinquent behavior. These predictors are even stronger for youth of color.

Schools, then, play an integral role in preventing crime and in preventing minority youth from involvement with the juvenile justice system.

Since the 1980's there has been an emphasis on school improvement and improving the school environment so that our young people have a better chance of succeeding. We have raised standards and expectations. We have focused on improving test scores.

The quality of our schools and the future of our state are inseparably connected. People who are successful in school are more often successful in life. People who cannot communicate are powerless. People who know nothing of their past are culturally impoverished. People who are poorly trained are ill prepared to face the future. Without good schools, Oregon cannot remain economically competitive or civically vital.

But in our search for school excellence, the *children* have somehow been forgotten. We have ignored the fundamental fact that in order to improve our schools, a solid foundation must be laid beforehand.

We have failed to recognize that the family may be a more imperiled institution than the school, and that many of education's failures relate to problems that precede schooling -- even birth itself. We have focused on school outcomes, forgetting that if children do not have a good beginning -- if they are not well nurtured and loved during the first years of life -- it will be difficult, if not impossible to compensate fully for such deficits later on.

The difficult truth is that in Oregon today, over 40 percent of children are entering school unable to fully participate in the learning experience. These children are growing up without good health care, without supportive families, without the love they need to become successful, independent learners. Schools in turn are being asked to do what families and churches and communities have not been able to accomplish. And, if the schools fail along the line, we blame them, and the teachers, for not meeting our high expectations.

Our focus, our concern must be *children* -- not just the schools.

That's why we worked hard to pass the Oregon Children's Plan in the last session of the Legislature.

I've probably described this idea to most of you so many of you are familiar with it. Our goal is simple: give every child and family the chance to succeed.

We do this by offering voluntary screening of first-born infants. Hopefully, we will identify risk factors such as drug use and unemployment and offering a range of proven services that will help young families get off to a good start.

The plan received a \$60 million budget. Tiny in comparison to the \$5.2 billion school budget and still much less than our corrections budget. But I believe it is the single most important \$60 million in the budget because I firmly believe it will lead to happier, healthier lives and will, in the long run, cut the amount of money we have to spend on juvenile justice, the Oregon Youth Authority and the Department of Corrections. And I will work very hard to ensure that these

priorities stay in place and receive funding.

After all, a budget is not a bloodless document. It is a detailing of our priorities as a society. And rather than blindly cutting anything new out of the budget, I will work to ensure that we keep high priorities programs and initiatives like these in place.

Now for the best part of the program.

Two years ago I asked the young people attending this conference to come up with an award that recognizes other young people who have overcome challenging circumstances. I am pleased to give this award – the YOUTH award (Youth Overcoming Difficult Times and Hardship) – to four courageous young Oregonians.

First, Ernan Contreras, who is the youngest recipient this year. He is 16-years old and a student at Hood River High School. Ernan began his high school career involved in criminal activities, dabbling in gangs and skipping school. He comes from a family that has overcome a variety of economic and other struggles as well. Now, Ernan has been on the honor roll for two years. He excels in math and science, and is a positive influence on other young Latino students. Ernan was nominated by his Assistant Principle because of how he also inspires the adults in his school and in the community.

Our second recipient could not be here today due to school commitments, but I would like to tell you about him. Noah Winterhawk was before the court a lot when he was growing up, both because there were no stable adults to care for him and because of delinquency.

He did not have a consistent home life and lived with a variety of friends and relatives, often in abusive situations. When he was asked by a judge what he would like to change in his life, he replied "I would like parents at home". After many foster placements and extensive criminal involvement, Noah was placed in the custody of the Oregon Youth Authority. One of his foster moms commented that "Noah will succeed because he refuses to fail." This fall, Noah enters his second year of studies at Eastern Oregon University. During the summer, he was employed by a youth program and is a positive influence for many younger, troubled youth. Noah has also established a good relationship with his parents, due to his own initiative. Noah was nominated for this award by the judge who saw him and sentenced him since he was 10 years old.

Third, please join me in congratulating Ellie Heater. Ellie is a person who statistically should fail. She came from a single parent home where there was violence, drug abuse and poverty. By age 15, Ellie was failing in school, she was a runaway and on probation, and she was a drug addict. She decided to change her life about this same time. In addition to maintaining sobriety for over two years, Ellie has successfully completed all the terms of her probation (and is off probation), graduated with honors from Roseburg High School (receiving the "award of excellence" for both math and English), and has entered a work-study program where she is still employed. This summer, Ellie began studying to be a paramedic. She moved into her own apartment and rides her bike twenty miles each day to attend classes. And, she just saved enough money to purchase her first car. Ellie was nominated by staff at the treatment facility she attended.

Finally, let's give a hand of applause to Elton Seals. Elton used to be involved in significant gang activity and serious crime. Due to the serious nature of his crimes, Elton was sent to prison at age 17. In prison he decided to change his life. When he was released, he started to work on his education. He graduated with an associates degree with a 3.26 GPA. He enrolled at Western Oregon University where he is now in his second year. He is a starting defensive back on the football team. He has earned Division 2 player of the week, Greater Northwest Player of the week and Conference Player of the week. Most importantly, however, he will receive his bachelor's degree in social sciences this fall. Elton was nominated by his mentor.

You know, when you look at what these kids have achieved, it is simply humbling. Who among us has conquered as much? I dare say few of us. So, as we go forth for another year, working to help minority children in our community, let us never be discouraged. And if we are, remember these names: Ellie, Elton, Ernan and Noah. Thank you.

Executive Summary

In 1996, Governor John A. Kitzhaber developed the Human Investment Framework to establish goals for Oregon's approach to investing in its people. The objective of the Framework was to assist Oregonians to be as independent, productive, and self-sufficient as possible. It was to be achieved through collaboration between state, local, community, and private partners. The Framework recognized that all people depend on support from others at various points in their lives. It held that in order for children to succeed in school and for adults to succeed at finding and maintaining employment, certain social supports must be present.

The Human Investment Framework also held that it is in the best long-term interests of individuals, families, the community, and the state to provide the social supports that will assist citizens in becoming contributing members of society. This strategy helps people to be independent and productive rather than merely maintaining them in positions of dependence.

The Governor appointed twenty-eight state agency heads, city and county government officials, and citizen advocates to identify those social supports. Known as the Social Support Investment Work Group (SSIWG), it was asked to:

- ❑ identify social supports critical to education and workforce productivity and success
- ❑ identify those social supports that state government has a primary responsibility to provide and to identify the most appropriate way to provide them, i.e., as a primary payer, a provider of technical assistance, an investment partner, etc.
- ❑ identify a process by which Oregon can begin to address potential gaps, redundancies and inconsistencies in current systems of social supports and to
- ❑ identify opportunities for strategic investments to achieve the availability of the core social supports.

The group met over a period of nine months and in April 1997 issued its recommendations in *Report to Governor Kitzhaber: Investing in Independence, Productivity and Self-Sufficiency for Oregonians*. It recommended that a process be adopted to further analyze potential inconsistencies in the delivery of social supports and to determine the most efficient means of aligning efforts to deliver them. It also recommended a state policy shift that would:

- ❑ move the state out of the business of providing direct service in favor of the role of working with communities as partners in the design and delivery of core social supports and
- ❑ provide a stronger role for communities in delivering service at the closest level possible to Oregon's citizens.

The process became the Oregon Strategy for Social Support Initiative (OSSI). It provided that work groups composed of community members and state agencies, as well as legislators and local government leaders, would meet for each social support identified

Oregon Strategy for Social Support Review

to analyze it and recommend the most efficient means of delivering support services consistent with the earlier work.

Thirteen different work groups met from 1997 through 2001. In addition to evaluating and identifying gaps and redundancies in services, they collaborated on how best to organize and improve current support systems. They made recommendations for needed policy, programmatic, legislative, or other changes. And they attempted to identify local responsibility for designing and delivering core supports at the closest community level. This included involving citizens, service organizations, businesses, non-profit providers, local government agencies, and others in the partnerships necessary to assure the availability of supports that will increase the health and safety of children, families, and communities. These efforts were designed to lay the foundation for long-term independence and productivity through systematic changes.

Over the four-year time period, the work groups recommended policy proposals on the core social supports. The Governor accepted recommendations submitted by nine of the thirteen work groups studying these supports:

- ❑ Access to alcohol and other drug treatment
- ❑ Access to diagnosis and early evaluation
- ❑ Access to family support and in-home assistance
- ❑ Access to health care
- ❑ Affordable, safe housing
- ❑ Available, affordable child care
- ❑ Mental health
- ❑ Nutrition
- ❑ Transportation

Applicable Oregon Benchmarks

Substantial work has been done to carry out many of the work groups' recommendations. This is helping the State make progress in implementing the Human Investment Framework and in meeting some of the social support goals of the State's strategic plan, *Oregon Shines*. Outlined below is a summary of major elements that implement recommendations of the nine work groups, arranged by applicable Oregon Benchmarks. It is important to note that not all Oregon Strategy efforts were linked directly to the Benchmarks. For those that were, however, percentages have been calculated based on data collected by the Oregon Progress Board from 1994 to 2000 unless other years are noted. (A list of the work groups' recommendations can be found in Appendix A. A full discussion of their implementation begins on page 1.)

Access to Alcohol and Other Drug Treatment

Benchmark

49: *Percentage of 8th grade students who report using*

- a. *alcohol in the previous month – **dropped 13%***
- b. *illicit drugs in the previous month – **dropped 26%***

52: *Percentage of pregnant women who abstain from using*

- a. *alcohol – **increased 2%** (Decreased number of confirmed cases of drug-affected*
- b. *tobacco – **increased 6%** babies)*

Oregon Strategy for Social Support Review

- Treatment criteria were revamped so specialized treatment programs must meet the same criteria as all alcohol and drug programs.
- Established statewide consistent standards for all alcohol and drug treatment progress including detox.
- A central hotline has been established to provide information about local alcohol and drug assessment resources.
- Implemented a single, flexible case rate for nonresidential services.
- Established a shared social support data system.
- Campaigns have been mounted providing information about fetal alcohol syndrome.
- Statewide campaign is in place to increase awareness about the problems and social costs of addictions.
- The Oregon Children's Plan was started, including universal prenatal and at-birth screening and immediate access to treatment.
- Smoke-free Mothers and Babies program was started and will eventually expand statewide.
- Used \$1 million in General Fund investment to leverage \$11 million in "alcohol free housing".
- Established Governor's Task Force on Underage Drinking
- Enforcing Underage Drinking Laws program (EUDL) implemented in 1998.
- EUDL provided mini-grants to several communities, which implemented research-based programs for reducing underage drinking.
- EUDL implemented public awareness campaigns and improved coordination among partners.
- Local community EUDL partner delivered numerous trainings and informational opportunities to parents, youth, law enforcement, teachers and other community groups.
- Formed coalition of Oregon universities and community colleges to address problems of underage, binge, and high-risk drinking on campuses and in college communities.
- Oregon Liquor Control Commission has implemented a "Responsible Vendor" program to encourage retailers to train employees and establish good policies regarding underage drinking laws.

Access to Available, Affordable Child Care

Benchmark

*47: Percentage of families with incomes below the state median income for whom child care is affordable – **dropped 10%***

*48: Number of child care slots available for every 100 children under age 13 – **increased 31%***

- Child Care Division (CDC) began on-site health and safety reviews of family child care providers.
- CDC initiated annual unannounced inspections of all child care facilities
- One hundred percent of serious complaints received against family child care providers are investigated; before 2000, only 20% were investigated.
- Inspectors' caseloads have been reduced and rural coverage increased.

Oregon Strategy for Social Support Review

- Mandatory training is now required for family child care providers in recognizing and reporting child abuse, first aid, safe food handling, and training in child care.
- Child Care Subsidy Program revamped to lower co-pays and decrease coverage more slowly as wages rise.

Access to Health Care

Benchmark

No specific benchmark linked during Oregon Strategy

- A state dental director was appointed, and efforts to promote good dental health for children have been implemented. State Health Services has also started an early childhood cavities prevention campaign and an initiative for state planning and fluoridation systems development.
- Started a campaign to educate women about the importance of good prenatal oral care.

Family Support and In-Home Assistance

Benchmark

*18: Percentage of children entering school ready-to-learn – **increased 16% from 1997 to 2000***

50: Number of children per 1000 persons under 18, who are

*a. neglected/abused – **dropped 20%***

*b. at substantial risk of being neglected or abused – **increased 180%** (increase due to early screening provided by Oregon Children's Plan and inclusion of high-risk families who have been reported, but who have no substantiated abuse)*

- The Oregon Children's Plan (OCP), which the legislature passed during the 2001 Session, has addressed most of the recommendations made by the Oregon Strategy for Social Support for preparing children for school:
 1. universal prenatal and at-birth screening
 2. local coordinated triage and referral
 3. local system planning for home visits, community-based services, alcohol and drug treatment, mental health, and early learning.
- OCP exemplifies the effort to align state services by focusing on clients, i.e., children and their families instead of specific programs.
- Expanded access to the Pre-Kindergarten program.
- Child "safety nets" established in every county to provide services for high-risk families who have been reported, but who have no substantiated abuse.

Access to Safe, Affordable Housing

Benchmark

*55: Number of Oregonians that are homeless on any given night (per 10,000) – **dropped 4%***

74: Percentage of low-income households spending more than 30 percent of their household income on housing (including utilities)

*a. Renters – **increased 6% from 1996 to 1999***

*b. Owners – **dropped 7% from 1996 to 1999***

- Developed mechanism to track local housing market trends (both rent and sales).

Oregon Strategy for Social Support Review

- Established an effective, consolidated local needs assessment and prioritization process to assure best use of State's limited affordable housing resources.
- Established economic well-being website, including web-based housing locator tool to identify low-income housing and a web-based eligibility estimator for low-income services.
- Developed computerized database of needed housing data.
- Established one consolidated funding cycle, integrating special needs housing
- Commissioned a University of Oregon study to examine NIMBY issues that pose barriers to siting affordable housing. Trained service providers to encourage public acceptance of affordable housing.
- Developed Fair Housing Plan.
- Enhanced the role of regional community solutions teams in reviewing community periodic review process.
- Used \$1 million in General Fund investment to leverage \$11 million in alcohol free housing.
- To date, successfully maintained 50% (75 of 150 properties) as low-income housing that otherwise would have gone to market rate under HUD's Section 8 expiring use policy.
- Consolidated housing rehabilitation programs of Economic and Community Development and Oregon Housing and Community Services.
- Developed an environmentally safe rehabilitation component for owner-occupied housing.
- Established tenant readiness program with landlord guarantee so that high-risk Oregonians could obtain housing.
- Expanded home ownership opportunities programs for low-income and special-needs Oregonians.
- Created trust fund for long-term special-needs housing.
- Increased availability of lodging options for farm workers.

Mental Health Alignment

No specific benchmark linked during Oregon Strategy

- Increased access to forensic beds at State hospital.
- Increased availability of acute care resources.
- Closed ward for youngest children (age 10 and under) at State hospital and increased options for community care.
- Increased availability of early childhood mental health services under Oregon Children's Plan.
- Increased availability of funding for proven local mental health services.
- Implementing plan to improve care at Oregon State Hospital.
- Created parity for mental health conditions under Public Employees Benefit Board (beginning in 2003).

Nutrition

Benchmark

57: Percentage of Oregonians that are:

- a. food insecure with hunger – **increased 2% from 1997 to 1999***
- b. food insecure – **dropped 2% from 1997 to 1999***

Oregon Strategy for Social Support Review

- Hunger benchmark created.
- Legislative Emergency Board granted five additional staff to child nutrition, so that the school meals, after-school snack, child care meals, and summer food meal programs could be supported and expanded statewide.
- USDA food security survey questions included on the Oregon Population Survey and Health Behavioral Risk Survey (adult).
- Survey conducted with Low-Income Energy Assistance Program (LIEAP) families on their food security and use of food programs.
- Labor surplus county exemptions granted for Able-Bodied Adults Without Dependents (ABAWDs).
- Simplified Food Stamp Outreach Application implemented along with allocation of state money for food stamp outreach and a toll-free information line.
- Legislature allocated \$100,000 to expand food stamp outreach to other areas of Oregon over the biennium. (\$30,000 was subsequently cut from the second year funding.)
- After-school meal pilot program applied for and granted from USDA (1 of 7 states).
- Funding awarded to create a senior farmers market program, including a community-supported agriculture pilot.
- Working Family Child Care Tax Credit made refundable, effective in 2003.
- Legislature clarified and expanded Donated Crops Tax Credit to include some already-harvested crops.

Transportation

No applicable benchmarks available

Increased coordination of transportation services across agencies to provide better access to services

- Joint technical assistance teams from ODOT and DHS deployed to help overcome local barriers to coordinating transportation services.
- Developed uniform operating safety and vehicle standards and specifications across agencies.
- Established policy group to work on risk reduction strategies, consolidate regulatory actions, and address barriers to coordinating school bus and public transportation.
- Established regional transportation brokerages in six areas.

Results

The effort to learn about the success of the Oregon Strategy was divided into two parts. The first reviewed the status of the implementation of the recommendations (see Benchmarks above and Appendix A). The second was to critique the Oregon Strategy process by surveying those who participated in it.

Overall, respondents believed that the greatest benefit of the Oregon Strategy is improved communication and collaboration among providers and advocates of social services. The Strategy work group process demonstrated the importance of the complementary nature of agency roles in the delivery of those services. Agency collaboration and the alignment of services have helped to achieve policy integration.

Oregon Strategy for Social Support Review

The survey produced a range of ideas for how the process that produced the recommendations could be improved. Most suggestions related to narrowing the overall project, increasing resources, consistency of attendance, and avoiding too much emphasis on process. When asked whether the work of the Oregon Strategy should be continued by the next governor, 86% of the survey respondents answered yes.

Conclusion

This review was not a comprehensive study, but judging by the extent of the implementation of the work group recommendations and the opinion of participants who took time to express their views, results seem clear. The Strategy has accomplished much that has and will continue to improve services to Oregonians. Important strides have been made in organizing and improving current support systems. The Strategy has promoted the alignment of some social services and has provided a model for cooperation and collaboration among agencies and providers of social supports that can serve as a foundation for future achievement.

**The Oregon Strategy for Social Support Initiative:
Making Connections**

**A Review of the Work
July 2002**

Part I: Status of Implementation of the Recommendations

What was accomplished?

Now that the work of the Oregon Strategy for Social Support Initiative (OSSI) work groups has been completed, it is time to ask: What has been accomplished and what have we learned about the Strategy process? Was the investment of time and resources fruitful and did the effort accomplish its goals? Have state agency roles been aligned sufficiently to reduce redundancies where appropriate and to fill in gaps? Has the role of the state been reduced as the primary direct service provider of social supports where appropriate, and have new community-based roles been explored? Nine work groups made recommendations to achieve those objectives—what is the status of the implementation of those recommendations?

This review does not purport to provide a professional statistical analysis and evaluation of the Oregon Strategy to answer the above questions. Rather, it is an effort to provide a snapshot of the outcomes as reported by the agencies responsible for the implementation of the recommendations and from the perspective of some of the participants.

This assessment has considered only those recommendations made by the OSSI work groups that were accepted by the Governor. Therefore, by merit of that acceptance, they are considered at least to be pending. Those recommendations that are part of an on-going process—i.e., most of them—are considered partially implemented. Those that were very specific were easier to judge. The Health Care work group, for example recommended that a state dental director be appointed, and in 2000, the Department of Human Services hired one. That recommendation has clearly been implemented. The status of others, however, tends to be less clear. One work group member said the work is like a circle. "When you get to the end, it's a beginning because there's always something more to do." Nevertheless, substantial work has been done to carry out many of the work groups' recommendations. This is helping the State make progress in implementing the Human Investment Framework and in meeting some of the social support goals of the State's strategic plan, *Oregon Shines*.

Most of the work groups presented their reports to the Governor in November 1998. The Transportation report was issued in 2000, and the Mental Health and Nutrition reports were submitted in 2001. It's good to bear in mind that although recommendations from some work groups were made earlier than others, they are not necessarily more likely to have been implemented. Work group recommendations vary considerably in their cost and in their impact on other stakeholders. Consequently, the likelihood of their implementation varies as well.

The following is a summary of the status of the implementation of work group recommendations.

Access to Alcohol and Other Drug Treatment

The work group's report contained over forty-six recommendations. They fall into seven general categories: 1) rate structure and pooled funding, 2) a shared data system, 3) beer and wine tax, 4) central information hotline, 5) specialized training, 6) statewide standards and tools, and 7) client centered supports and aftercare.

Seven of the forty-six recommendations have been implemented, twenty-four have been partially implemented, and fifteen are pending. The recommendations were aimed at increasing effective services to a wider number of clients in need of drug and alcohol treatment.

Implemented recommendations include a statewide campaign to increase awareness about the problems and social costs of addiction. Several campaigns have been mounted providing information about topics such as inhalants, fetal alcohol syndrome, and underage drinking. Also, a central hotline has been established that provides information about local alcohol and drug assessment resources.

First Lady Sharon Kitzhaber co-chairs the National Leadership to Keep Children Alcohol Free, has agreed to be spokesperson on underage drinking. The Governor's Task Force on Underage Drinking, which was appointed in 1997, is being re-established. One of the programs fostered by the task force, Enforcing the Underage Drinking Laws (EUDL), has achieved several successes in reducing underage drinking. These accomplishments address access and availability of alcohol to minors and implementation of proven programs or strategies to reduce underage drinking. EUDL provided mini-grants to several communities which implemented researched-based programs like Project Alert and Programa de Prevencion del Uso de Alcohol de Menores.

The work group recommended that existing alcohol and other drug policies and rules should be revised to support an individualized continuum of care approach. It also recommended that specialized treatment programs should meet the same criteria that all alcohol and drug programs must meet and that the State should establish statewide consistent standards. Criteria have been adopted for all treatment providers, including those who provide detox services. Case rate funding was established to provide for a continuum of care approach.

State resources have not yet been pooled to create a funding model for treatment, but rate structures have been changed. The Office of Mental Health and Addiction Services (OMHAS) has implemented a single, flexible case rate for nonresidential services and has completed a study and implemented uniform residential rates.

The development of specific steps and recommendations for a shared social support data system is underway. The Office of National Drug Control Policy committed \$50,000 to fund preparatory work for a statewide shared data system. A preliminary report will be released soon to agencies and organizations involved, outlining the next steps.

Also partially implemented is the recommendation to review existing contract regulations that State agencies have for local partners to ensure they are consistent with the recommendations of the work group's report and to coordinate master contract language

Oregon Strategy for Social Support Review

among agencies. OMHAS contracts have been amended to reflect this recommendation, but work on statewide master contract language is pending.

A good example of Alcohol and Drug program alignment with other social supports is the implementation of the recommendation to inventory and coordinate available transportation resources to support Oregonians who are accessing or completing treatment. The Transportation Coordination group, which completed its study and report in June 2000, is actively pursuing this effort. Eight local projects are leveraging approximately \$2.23 million of ODOT source funds with \$2.45 million of DHS source funds. These projects directly improve access to medical, alcohol and drug treatment, and other services for DHS clients

Other recommendations made by the Alcohol and Drug work group relate to training. Members urged the use of innovative training techniques and technologies to expand existing training on issues for offender populations. It also urged agencies to reach out to ethnic communities to encourage training and apprenticeships in alcohol and other drug treatment fields. To address these directives, the Governor's Council on Alcohol and Drug Abuse Programs in partnership with the Department of Corrections, the Oregon Youth Authority, and others held a summit recently to develop county-based plans for offender community re-entry. OMHAS now has an apprenticeship program in place and has drafted a plan to collect measures of cultural competency, including training for alcohol and drug treatment providers.

Also partially implemented is the recommendation to identify specific communities for drug-free housing placements and to issue specific Requests for Proposals using existing state and federal housing development resources. In another example of interagency cooperation to provide a social support, OMHAS and the Department of Housing and Community Services issued grants of \$2 million which leveraged to as much as \$12 million for drug-free housing.

Finally, in response to the recommendation to consider restructuring and increasing beer and wine taxes to provide additional treatment availability, proposals were made to the 2001 Legislature, but no legislative action was taken. This issue will probably be addressed again soon.

Access to Affordable Child Care

Implementation of the recommendations made by the Child Care work group focused on those proposals that emphasize child health and safety. All five of the relevant recommendations have been implemented.

One of the biggest goals of the work group was for the Child Care Division (CCD) to obtain the authority and resources to conduct on-site health and safety reviews of family child care providers. The Legislature authorized this in 1999 and in 2001 extended the authority to cover renewals as well.

Additional resources authorized by the Legislature in 1999 helped implement other recommendations made by the Child Care work group. Because the Legislature approved additional full time positions, annual unannounced inspections of all child care

Oregon Strategy for Social Support Review

centers have been reinstated. CCD also received the funds and authority to investigate all serious complaints received against family child care providers. The agency now investigates 100% of all serious complaints received; before 2000, it was able to investigate only 20%. Sufficient resources also have allowed CCD to reduce caseloads and increase rural coverage.

Another goal of the Child Care work group was to develop and distribute information on safety and encourage voluntary compliance with safety principles for exempt child care settings. The 1999 legislation requires mandatory training for family child care providers in recognizing and reporting child abuse, first aid, safe food handling, and training in child care. Contracts have been let to provide and coordinate training statewide. Also, DHS has implemented an enhanced rate for exempt providers who voluntarily meet CCD registration standards.

Diagnosis and Early Evaluation

Access to Diagnosis and Early Evaluation was defined in the SSIWG report as "the ability to obtain information as soon as possible about the causes, treatment, and prognosis of conditions or situations." The two recommendations accepted from this group were: 1) design an eligibility tool in order to address confusion around eligibility requirements, and 2) implement a standard screening protocol. Both of these have been partially implemented. A wide variety of community groups under the leadership of Multnomah County are launching a web-based statewide eligibility determinant for social services. Visitors to the site can learn whether they are likely to qualify for assistance such as coverage under the Oregon Health Plan, Food Stamps, or Temporary Assistance for Needy Families. Also, a DHS study to determine shared clients within the department has been completed. A statewide screening tool has been developed under the Oregon Children's Plan and is being tested in several counties.

Access to Health Care

This group recommended that a state dental director be appointed to emphasize the importance of dental health, and that has been implemented. Among the programs being put into practice under this initiative are efforts to promote good dental health for children, an initiative for state planning and fluoridation systems development, and an early childhood cavities prevention education campaign.

Family Support and In-Home Assistance

Two recommendations of the seventeen made by this group have been implemented, eleven have been partially implemented, and four are pending. The Oregon Children's Plan (OCP), which the Legislature passed during the 2001 Session, is addressing most of the recommendations. The OCP exemplifies the effort to align state services by focusing on clients, i.e., children and their families, instead of on specific programs. However, funding to implement some of the Plan has since been cut in the 2002 Special Session 2.

Many of the recommendations of the Family Support and In-Home Assistance work group also relate to screening. They call for universal prenatal and at-birth screening and referral by any provider receiving state or federal funding and voluntary screening for others. Early screening can identify children with physical or social risks and thereby:

Oregon Strategy for Social Support Review

- ❑ decrease the rate of child abuse and neglect
- ❑ decrease infant mortality
- ❑ decrease the percent of infants whose mothers use alcohol and/or tobacco during pregnancy
- ❑ increase the percent of children entering school ready to learn
- ❑ increase the percent of children fully immunized at age two
- ❑ increase the percent of women accessing early prenatal care

Screening recommendations include the use of a common screening tool, the connection of screening to medical testing at birth, and education for all to understand the benefits of universal screening. The OCP includes only voluntary screening, but the effort is still getting under way. A screening tool has been developed and is being piloted in four counties. The Oregon Commission on Children and Families (OCCF) provides resources for physician and hospital education and began training for screening in July 2002.

Other recommendations addressed by the OCP include local flexibility for counties, Early Childhood System planning by counties or county groups, and the creation of coordinated referral and triage teams at the local level—an OCP required component. The Early Childhood System plans must meet OCP guidelines. The plan will become part of the overall 0-18 plan under SB 555.

Still to be implemented are recommendations to pool state and federal resources for “non-mandated” populations and services. The funds should go directly to the pool, not through agencies. An attempt was made during the 2001 Legislative Session to pool funds, but individual program lobby efforts prevented the attempt from moving forward.

Access to Safe, Affordable Housing

This work group made four broad recommendations with many sub-recommendations under each. All of the main recommendations are partially implemented while a variety of the sub-recommendations have been implemented or are pending.

The first general recommendation of the work group was to improve the decision-making process. This was to be accomplished by bringing together information on the availability, affordability, adequacy, and accessibility of housing at the community level and by establishing an effective, consolidated local needs assessment and prioritization process. In the summer of 1998 a model for a computerized database of needed housing data was developed. Information from the special needs population assessment and housing requirements was integrated into the Consolidated Funding Cycle in Fall 2000. Oregon Housing and Community Services (OHCS) and DHS are developing a web-based reporting tool for anti-poverty programs that will provide additional information. Information will also be available from a study on farm worker services being completed by the University of Oregon to identify service gaps.

The second recommendation of the work group on Access to Safe, Affordable Housing was to increase community acceptance of special needs and low-income housing. This is being accomplished through a variety of cooperative steps. OHCS commissioned a study, completed in 1999 by University of Oregon graduate students from the Planning, Public Policy and Management Department, to examine “NIMBY” issues that pose

Oregon Strategy for Social Support Review

barriers to siting affordable housing. OHCS also formed the Fair Housing Collaborative with the Bureau of Labor and Industries, the Fair Housing Council, the Oregon Economic and Community Development Department, and landlords and tenants. The department is working with the Oregon Dispute Resolution Commission on a grant to provide training and outreach to minority populations.

The third recommendation of the work group mirrors the larger goal of the Oregon Strategy. It is to align state agency goals, policies, and practices. Some of the specific tasks recommended included convening a multi-agency task force to review relevant statutes and regulations on health, safety, sanitation, licensing and zoning requirements and to increase collaboration between agencies and private organizations. Several housing initiatives are the result of partnerships with other agencies. OHCS teamed up with the Department of Corrections to build farm worker housing in the Hood River area and to provide transitional housing for released offenders. The department joined with the Office of Alcohol and Drug Abuse Program (now Office of Mental Health and Addiction Services) in the establishment of Oxford House, a residential drug-free housing program for clients who have completed treatment. It has also worked with Health Services in a program called Housing Opportunity for People With Aids (HOPWA), leveraged with Ryan White case management funds.

The last recommendation made by the housing work group was to re-deploy and increase resources. Some of this has been accomplished by providing services more efficiently. An OHCS web-based housing locator tool to identify low-income housing went on line in April 2002. To help increase awareness of available affordable housing across the state, OHCS has supported the Housing Connections program in the Portland area and the web-based Eligibility Estimator project spearheaded by Multnomah County.

The department has used a Housing and Urban Development Continuum of Care grant to unite housing with services. The process involves community action agencies and other state agencies. Other funding strategies include a trust fund from the sale of state-owned real estate dedicated for creation of housing opportunities for people with special needs and helping to secure \$15 million for Portland Development Commission to put in place a first-time homebuyer program for targeted areas in Portland.

Mental Health Alignment

Seventeen main category recommendations came from the Mental Health Alignment Work Group (MHAWG) only a year ago, so none of the recommendations have been fully implemented. Eight have been partially implemented and nine are pending. The work group's 100-page report detailed the then current mental health system in Oregon and followed up with a description of what an ideal system would look like.

Partially implemented recommendations include developing local biennial blueprint plans that use a multi-system team approach to coordinate and deliver services for children, families, and adults. Legislative members of the MHAWG, Senator Avel Gordly and Representative Jeff Kruse sponsored and the Legislature passed HB 3024 requiring local mental health authorities to develop such plans. Work is underway and some counties have already submitted plans. This bill also requires local mental health authorities and the local public safety coordinating council to work together to address the interface

Oregon Strategy for Social Support Review

between law enforcement and mental health for both youth and adults, another recommendation of the work group. State mental health personnel are working with the Department of Corrections on the steering committee of Transition Services to develop release processes.

Senator Gordly and Representative Kruse introduced an additional bill that would have helped establish parity, i.e., equal benefits for mental health and physical health, but the Legislature failed to act on the measure. Instead, it established an interim committee on the issue. This number two priority of the MHAWG got a big boost, however, when the Public Employees Benefit Board adopted the benefit for state employees effective January 2003. This is especially significant because sometimes once the state has established mental health parity, private insurance plans have followed suit. Legislators introduced a measure to establish an FHIAP-like subsidy program for purchase of employer-based insurance based on a basic benefit package, but it failed. The interim committee will discuss this also.

The recommendation to develop or adopt statewide performance measures and allow for additional local measures is partially implemented. DHS is including mental health measures in its overall outcome system, and work will be done with counties to specify high level and intermediate outcomes for a state mental health plan. The steering committees of SB 555 and the Oregon Strategy are working on recommendations to integrate administrative functions to support local service delivery.

Recommendations that are still pending include providing public mental health funds through a block grant for the purpose of implementing local plans and encouraging local mental health authorities to enter into “blended funding” agreements with the state and providers. Also pending is the creation of a seamless data system, simplification of the Oregon Health Plan (OHP) enrollment process and elimination of periods of non-coverage, formation of a consortium of public and private groups to provide public education, and the establishment of an independent ombudsperson office. Recommendations for future implementation call for the establishment of a developmentally appropriate screening tool for children and adolescents, the development of an abuse/neglect and safety policy, and the development of standardized levels of care criteria linked to local plans.

Nutrition

The Interagency Coordinating Council on Hunger (ICCH) in coordination with the Oregon Hunger Relief Task Force (OHRTF) undertook the nutrition work and made five major recommendations, all of which have been partially implemented. They pertain to outreach, nutrition education, program monitoring, and data collection and use. The first recommendation targeted outreach to areas with greatest needs. A target of serving 80% of those eligible has now been set for the food stamp program. The State allocated \$100,000 for food stamp outreach, which is being matched with federal funds. Other nutrition service targets were to be set after the release of the 2000 census information and program service statistics are available.

Under the outreach recommendation, the Oregon Department of Education (ODE) suggested that the ICCH assess the feasibility of expanding program resource information

Oregon Strategy for Social Support Review

offered through SAFE NET and add statewide site information for the Summer Food Service Program. They urged exploring the development of a statewide portal that references local programs. In 2001, the Summer Food Service Program was added to SAFE NET as well as the School Breakfast, Lunch & After School Program and the At-Risk program. ICCH members are reviewing whether there is a need for information and referral in the program.

The ICCH recommended assessing staff efficiencies and/or the need for additional staff to handle increases in participation for program budgeting. This was addressed by the Senior Farmer Markets Coupon program, which brought together farmers, farmer markets, representatives from the Department of Human Services, gleaners, and others in writing a successful grant application. Also, the Portland Women, Infants, and Children program (WIC) is piloting a program to offer assistance in filling out and filing food stamp applications.

The recommendation for nutrition education contained many sub-recommendations. It includes using the Nutrition Education Network to deliver and promote simple, consistent messages about nutrition and physical activity that lead to healthy lives, conducting a needs assessment, and developing an implementation plan which involves target audiences and community groups in each phase of the process. The Network is working toward a statewide social marketing program to promote family meal times. It has reviewed existing data and, in conjunction with Oregon State University, plans to conduct focus groups to further identify needs and messages. The Oregon Hunger Relief Task Force has created and distributed extensive outreach materials in multiple languages and conducted mailings through schools and low-income programs to provide information on the Food Stamp program.

Under the program monitoring recommendation, the ICCH urged a review of the monitoring requirements of each nutrition program to determine whether there is sufficient crossover to coordinate or integrate program-monitoring functions. The ODE assessed both the Summer Food Service Program and the Child and Adult Care Food Program and found that it was not feasible to share program-monitoring functions due to the extent of program specific information and regulatory oversight knowledge needed for such reviews to be conducted correctly. There is one area of cross over between the two programs: the Child Care Division conducts health and safety reviews in Child and Adult Care Food Programs.

The last series of recommendations from the nutrition group relates to data collection and use. The first proposal was to determine what nutrition-related data is needed and how it could be used and shared. To accomplish this, ICCH reviewed and discussed each of the major food security studies that have been conducted in Oregon. For additional data, ICCH will continue to fund the food and security questions on the Health Behavioral Risk Survey (Adult). DHS has outlined a strategy to develop a plan and work toward the sharing and integration of data systems among agencies.

Recommended program improvements are mostly ongoing. The 1996 Comprehensive Child Nutrition waiver proposal was revisited. This is a seamless federal child nutrition program proposal developed as a joint effort between ODE and the HRTF. Another

example was ODE's transfer of surplus USDA commodities from the Commodity Food Distribution Program to the Emergency Food Assistance Program. Also, waivers were submitted to USDA in the winter of 2001 to streamline the Summer Food Service Program.

Transportation Coordination Initiative

Transportation as a social support was added later to the original list identified by the Social Support Investment Work Group. Its interdependency with other social supports is clear, however. If individuals have access to health care, education, and child care, but have no way of getting to those supports, then in effect, the supports are not available. Members of the Transportation Coordination Initiative (OTCI) made twenty-six recommendations, four of which were implemented, twelve have been partially implemented and ten are pending.

The means for implementing the framework of the Coordination Initiative were identified in a scope-of-work document issued in July 2001 with lead agency designation and staff assignments. One of the recommendations was to encourage the creation of local coordination entities to provide community level structures for continuous improvement of coordination for all state-supported transportation services. To implement this, DHS and the Oregon Department of Transportation (ODOT) are deploying joint technical assistance teams to help agency partners and local communities in identifying and overcoming coordination barriers.

Some recommendations still to be implemented are the creation of a mechanism to reduce the risks associated with mixing clients in transportation; the development of consistent standards for transportation services and planning among DHS, ODOT, the Department of Veterans Affairs (ODVA) and others; and the development of consistent transportation billing and tracking systems among state agencies.

Funding is an area that has been resistant to coordination and consolidation. The work group recommended that where appropriate, fragmented funding and transportation reimbursements from all state agencies be consolidated into a single transportation coordination grant to local communities. Also recommended but pending is the development of a consolidated inventory of transportation funding resources, providers and coordinated services within Oregon.

Other pending recommendations are to maximize the use of existing vehicles in community programs through shared use programs and the establishment of a capital asset management plan to identify when vehicles need to be replaced.

The recommendation to develop uniform operating, safety and vehicle standards and specifications such as child restraints and training has been partially implemented. The Policy Group of the OTCI brought together a comprehensive team from regulatory departments and agencies in state government and began an identification of the regulatory practices of the multiple agencies. That group will identify best practices and the common areas needing attention and then recommend program alignment, changes to practices, policies, regulations, and statutes.

Oregon Strategy for Social Support Review

Also partially implemented are the recommendations to coordinate transportation programs of ODOT, DHS, ODE, and ODVA and to make available a brokerage or other locally appropriate transportation coordination mechanism in each county or region. ODOT continues to co-invest with DHS in developing regional Medicaid brokerages. Three are up and running: Tri Met, Sunset Empire, and Rogue Valley Transit Department. Two are in the planning stage: Salem Area Mass Transit District and Mid Columbia Council of Governments. A sixth, the Central Oregon Intergovernmental Council, is soon to be under contract.

Another partially implemented recommendation is an effort to create incentives in the school transportation allocation for school districts to participate in coordinated transportation services (e.g., allow districts to keep savings in the state allocation from coordinating services). A study analyzing regulatory issues and barriers to coordination of school bus and public transportation was sponsored by ODOT in partnership with the Oregon School Boards Association and the DOE. It is scheduled for completion soon.

Finally, the recommendation to develop a performance monitoring and tracking system to assess the effectiveness of agencies in implementing these recommendations and in achieving desired outcomes is partially implemented. The OTCI Policy Group, DHS, and ODOT will review all Oregon Benchmarks to determine which are transportation dependent and then determine and propose the method of measuring the impact of transportation on those dependent benchmarks. When that has been completed, the group will determine and propose overarching benchmarks specific to coordinated transportation.

Conclusion

The work of the Oregon Strategy for Social Support drew on the time and talents of over two hundred individuals representing service organizations, businesses, non-profit providers, local and state government agencies and others interested in improving the way social services are provided for the health and well being of Oregonians. This review of the Oregon Strategy lacks the tools to categorically declare their efforts to change the way the State does business as either a success or failure.

But while it may be difficult to demonstrate significant progress in reducing redundancies in the provision of social services or in the role of the State as a direct service provider, the Strategy has accomplished much that has or will improve services to Oregonians. Judging by the extent of the implementation of the work group recommendations and the opinion of participants who took time to express their views, some results are clear. The Strategy has provided a model for cooperation and collaboration among agencies and providers of social supports that can serve as a foundation for future achievement. Thanks to the effort of the work groups, important strides have been made in organizing and improving current support systems. One of the work group members said, "The Oregon Strategy gave people a chance to be visionary."

The work of the Strategy has not only raised awareness about the inter-dependencies associated with the delivery of social supports and the need for collaboration, but it also promoted the alignment of some services, one of the goals of the Strategy. The planning and integration built into recent legislation dealing with mental health services and the

Oregon Strategy for Social Support Review

Oregon Children's Plan is a good example of this alignment. Other examples are the combined efforts of the Department of Corrections and Housing and Community Services in the construction of farm worker housing. Mental Health and Addiction Services and the Department of Transportation cooperated in connecting clients with treatment services. These developments might have occurred without the Oregon Strategy, but they are the kind of outcomes that result from diverse groups of people coming together and sharing common understanding and goals—a process used by the Oregon Strategy.

Part II: Review process

The effort to learn about the success of the Oregon Strategy was divided into two parts. The first reviewed the status of the implementation of the recommendations. The second critiqued the Strategy process by surveying those who participated in it. How did they feel about the work that had been done? What did they believe should have been done differently? Did they believe the goals of the Oregon Strategy have been achieved?

Surveys were sent to 171 of the over 200 participants in the nine work groups, an advisory group, and the Steering Committee. One to two weeks later reminders were sent to those who had not responded. Participants were given a brief written summary of the status of the implementation of the work groups' recommendations. The status summaries were compiled with the assistance of the agencies charged with the implementation of the recommendations. Twenty-eight of the participants—selected to provide a wide variety of perspectives—were interviewed in person.

The survey included nine multiple-choice questions and ten open-ended questions to allow additional expansion of views. The responses to the surveys were scored according to the multiple-choice answers given by the respondents. Participants were asked about their familiarity with the Oregon Strategy and with the recommendations made by the work groups. Questions followed about outcomes and about the process by which the Oregon Strategy had been developed.

Of the 171 surveys sent, 53 responses (31%) were returned. Because some of the participants served on more than one work group or served as members of the Steering Committee as well as work groups, the total responses for each question in some cases exceed the total number of respondents. (See Appendix C)

As expected, responses tended to vary by work group. Members regarded some groups as more successful than others in how well the group carried out its charge and in the quality of its recommendations. Work groups varied in size, as did the number of respondents in each group. Also later work tended to be judged more successful than work completed earlier, possibly reflecting better recollection of both process and results.

Themes

Even though the response was fairly low, some themes emerged. Overall, respondents believed that the greatest benefit of the Oregon Strategy is that the process improved communication among providers and advocates of social services. The Strategy work group process demonstrated the importance of the complementary nature of agency roles in the delivery of those services. Survey participants said agency collaboration and alignment of services has been key and has led to successful policy integration. Comments stressed the value of process outcomes such as collaborative planning and local integration projects. Some examples of other comments include, “positive steps were made toward bigger thinking about collective work for the common good of

Oregon Strategy for Social Support Review

Oregon's citizens", "excellent example of the value of cross training among agencies and stakeholders", "extremely valuable contacts were established along with deeper understanding of each agency's challenges", "gained a tremendous amount of knowledge relating to other department programs and processes", "intriguing to see that everything is linked", and "got people to thinking differently."

Some participants believed the project was too broad, provided "too much to chew on", and "took too big a bite of the apple". There was also a sense that the effort could have been improved if more resources had been available. On the other hand, several mentioned that de-emphasizing funding was beneficial to the process because it forced people to be creative. For some members of the Oregon Strategy effort, there was too much process while others believed the process, because of its inclusive nature, was instrumental in reducing the "silo mentality" of agencies.

Most respondents reported that they were either somewhat familiar or very familiar with the Oregon Strategy and the recommendations made by their work groups. When asked whether the work group process was effective in helping to *identify* ways of accomplishing the goals of the Oregon Strategy, ninety percent reported that it was somewhat or very effective.

Perhaps the most agreed upon barrier to progress of the work groups was the lack of continuity in attendance. Because some agencies sent several different attendees, it took time to "bring them up to speed." This was viewed as a lack of commitment.

The Mental Health Alignment Work Group was an exception in this area. Even though the committee size of fifty-three members was very large, attendance was generally consistent and commitment on the part of the agency heads and the Governor's office was regarded as very strong. Even in this group, however, lack of steady attendance by some was mentioned as a cause for inconsistent input and understanding.

Results

Responses varied as to how effective the Oregon Strategy has been in helping to actually accomplish the overall goals of aligning state agency roles, reducing the role of the state as the primary direct service provider of social supports and exploring new community-based roles. Sixty-one percent believed the Strategy had been somewhat effective or very effective in these areas.

But when asked specifically about whether the individual goals have been achieved, the responses were less positive. Fifty-three percent said agency roles have been greatly or somewhat aligned to reduce redundancies and fill in gaps, while 46% said state roles have been only slightly or not aligned or that there was not enough information to determine. One participant reported that his group was good at identifying redundancies, but not in identifying true ways to solve them. (He added the qualification that redundancies are not necessarily bad in that different types of services might require specialization.) Another respondent said that when it comes to human services, redundancies are not nearly as big a problem as gaps.

Oregon Strategy for Social Support Review

The question of whether the role of the state has been reduced as the primary direct service provider also received a less positive response. Thirty-two percent said the state role has been greatly or somewhat reduced. Sixty-eight percent said the role has been only slightly or not reduced, or that there was not enough information to determine.

Suggestions for improvement

Respondents had a range of ideas for how the process could be improved. As noted above, most suggestions related to consistency of attendance, the broad undertaking, limited resources, and too much process. Other, less common comments included complaints about confusion and unclear expectations in the work groups. These respondents would have liked a clearer definition of roles and responsibilities. Others mentioned that having more input from the private sector would have improved the process. Better facilitation was cited as another element that would have improved the quality of the work of some of the groups. These views were expressed primarily from participants in the earlier work groups.

Successful elements

Participants identified an array of factors that they believe made the process successful. When asked to list words that describe their overall appraisal of the work-group process by which the Oregon Strategy developed, they repeatedly used the terms comprehensive, focused, inclusive, organized, productive, and thorough. They also described it as challenging, difficult, and long. (See Appendix D for complete list.) Integrating the Oregon Strategy with the benchmarks in Oregon's long-term strategic plan was cited as a means of ensuring a consistent focus for the work of each committee.

Typically, the work groups devoted several days a month for several months to the task of studying the existence of gaps and redundancies in their social service area and to the work of recommending ways to align services. But as one respondent said, in the case of the Mental Health group, they didn't just do gap analysis. "The beauty of the process," he said, "was that it showed folks this is a better way to do business because it provides better service and better bang for the buck."

The facilitation of the work and the commitment of leadership were mentioned more often than any other factors contributing to the success of those work groups that were considered productive, especially the Mental Health Alignment Work Group. Respondents believed the level of involvement by the Governor was an important element. The more involved he and his staff were perceived to be, the more the work groups were judged successful.

When asked what changes, if any, they would attribute to using this kind of process, most respondents answered that it enabled them to better understand the role of other agencies and organizations. This led to raising awareness about the interdependencies of state and local programs. One participant said that day-to-day demands do not allow new connections across "silos" to be consistently nurtured, but that it was a major accomplishment of the Oregon Strategy that these connections were developed in the work groups.

Oregon Strategy for Social Support Review

When participants were asked, "What do you think *wouldn't* have happened without the Oregon Strategy", their answers provided another way of stating what they believed was successful about it. It raised awareness of the interconnectedness of social supports and of the importance of closer relationships among city, county, state, and citizen partners. Without that awareness, some gains in human services might not have occurred.

One respondent believes that without the Oregon Strategy, the Oregon Children's Plan wouldn't have gotten as far and bills introduced in the 2001 Legislative Session relating to mental health parity and community planning would not have been introduced. Another said, "I'm proud that we managed to develop this consistent articulation of federalist principles between counties and state government." Others credited the effort with improved communication, and a framework to think about planning.

Not everyone was optimistic about the opportunities that occurred as a consequence of the Strategy, however. One participant in the Mental Health work group wrote "economic conditions and public support and perceptions are much bigger factors than government planning in this field and at this time."

Many respondents believe the outcomes that they are aware of are generally consistent with the recommendations made by their work groups. Sixty-five percent judged the outcomes to be very consistent or somewhat consistent. Nine percent said they were slightly consistent, and 25% said there was not enough information to determine. Many of those members whose work groups completed their reports within the last year or so said it's simply too soon to say. One Mental Health work group member who rated the outcomes as somewhat consistent said the mental health planning bill passed by the Legislature was like "dropping the work group's report through a shredder. You could still see the phrases, but they didn't have the same integrity or clarity about how the pieces will all work together."

Few of the participants said they were aware of any unexpected outcomes from the Oregon Strategy. One person in the Mental Health work group said the combining of mental health and addiction services in the Department of Human Services was a surprise and another said she was happily surprised that an outcome recommended by the Diagnosis and Early Evaluation work group materialized as the Oregon Children's Plan.

Participants in the Oregon Strategy were asked whether they were aware of any changes in circumstances that have occurred that could have affected outcomes. Most of those who answered the question mentioned the budget difficulty Oregon has been experiencing and the re-organization of the Department of Human Services. They believe both of these circumstances have resulted in increased workloads and consequently left fewer resources and time necessary to proceed with implementation of the work group recommendations.

One of the final questions on the survey asked about the reaction of stakeholders to the implementation of the recommendations. Most respondents answered this in terms of the reaction of stakeholders to the recommendations themselves. Responses ran from simply "positive", to "mixed", to "not sure stakeholders are aware of the work." Perhaps the

Oregon Strategy for Social Support Review

reaction of many was summarized by one response: "Mixed, as with all change efforts. But I think there is mostly hope for improvement."

Recommend to next governor

Eighty-six percent of the participants said a recommendation to continue the work of the Oregon Strategy should be made to the next governor, while 4% said it should not be recommended and 7% were uncertain. Most acknowledged that a new administration will have its own values and priorities and will bring with it the prerogative of choosing which issues to emphasize and how it will attempt to implement its ideas. Nevertheless, most participants believed the work was valuable and that a strong effort should be made to keep the results alive. One respondent stated that any governor will need to have an instrument for thinking through policy issues and for articulating his vision for what those elements of state policy should look like. "It should be recommended as a tool for him to put his own policy stamp on goals and various strategies. It would also put the governor in the position of having to make a conscious choice in those strategies."

Recommendations of the Social Support Initiative Work Groups

Recommendations of Alcohol & Drug Work Group

- ❑ Establish a new rate structure and pool State resources to create a funding model for alcohol and other drug treatment based on client centered supports rather than the current slot system.
- ❑ Convene a policy group to establish consistent principles across State agencies regarding opportunities and sanctions for lack of follow-through with treatment.
- ❑ Address barriers that State agencies can/should remove.
- ❑ Convene a work group to develop specific steps and recommendations for a shared social support data system.
- ❑ Work group should build on successful local & State efforts already underway and engage community partners in the process.
- ❑ Review existing contract regulations that State agencies have for local partners to ensure they are consistent with recommendations of this report.
- ❑ Coordinate master contract language among agencies.
- ❑ Explore Oregon Option waiver with federal officials regarding alcohol and drug treatment, schools and juvenile crime to allow data sharing in order to achieve identified outcomes.
- ❑ Establish collaborative State-level biennial alcohol and other drug planning process that involves all affected agencies.
- ❑ Consider restructuring and increasing beer and wine tax to provide additional treatment availability to geographic areas that need treatment.
- ❑ Develop a mechanism to ensure that local treatment revenue is spent on treatment.
- ❑ Develop a statewide campaign to increase awareness about the problems and social costs of addiction.
- ❑ Educate the public about its responsibility. Include the role of treatment and access to it, using the new model recommended in this report.
- ❑ Reach out to ethnic communities to encourage training and apprenticeships in alcohol and other drug treatment field.
- ❑ Use innovative training techniques and technologies to expand existing training on issues for offender populations.
- ❑ Provide training locally and link to pooled resources.
- ❑ Create practicum sites at detox centers.
- ❑ Require continuing education for all alcohol and other drug and mental health service providers based on standards of best practice, met within a designated time line.
- ❑ Set standards for each type of training or cross training needed.
- ❑ Expand the type of provider required to attend training. Consider providing incentives for attending training.
- ❑ Provide training to VRD staff regarding alcohol and other drug abuse, treatment dynamics and cycle of addiction.
- ❑ Make screening & referral part of existing State agencies' eligibility processes.
- ❑ Enforce OHP criteria that 75% of patients be screened and referred for assessment and treatment for substance abuse issues.
- ❑ Adopt a critical decision path model for screening. This model should be based on a brief general screen, which triggers a more detailed, or population specific assessment for high-risk populations.
- ❑ Create a central hotline that provides information about local alcohol and other drug assessment resource information.

Oregon Strategy for Social Support Review

- ❑ The state should identify and implement incentives for local systems to improve treatment service for high-risk youth to help ensure the most impact from limited service capacity.
- ❑ Develop or agree on a standardized tool to be used by all State funded treatment agencies performing alcohol and other drug assessments.
- ❑ The tool should include information about clients' mental health and developmental status, as well as need for wraparound support services.
- ❑ Create a "paradigm" shift among State agencies so they serve as catalysts to assess and treat substance abuse issues among clients, particularly in agencies where large proportions of clients are estimated to need alcohol or other drug treatment, by providing training for all agency and provider staff.
- ❑ Governor needs to issue a "call to arms" of state agencies.
- ❑ Use the Detox Task Force to fully study detox issue and address lack of OHP coverage and related problems.
- ❑ Revise existing alcohol and other drug policies and rules to support an individualized continuum of care approach, as recommended in this document.
- ❑ Expand ASAM criteria to include detox.
- ❑ Create a regional approach to detox.
- ❑ Link housing and residential treatment to detox.
- ❑ Involve criminal justice system community in local alcohol and drug planning, particularly around the issue of "sobering."
- ❑ The act of driving under the influence identifies a potential alcohol or other drug problem. It should continue to be viewed as an opportunity for early intervention.
- ❑ *Amend ORS.813.260 and subsections so that local alcohol and drug comprehensive plans, under OADAP guidelines, identify agencies qualified to conduct diagnostic assessment and recommend treatment plans at a local level.*
- ❑ Merge OADAP's diversion funding into the county planning process and funding process.
- ❑ Develop and share culturally appropriate and specific training on specific populations based on progressive standards of care and best practices among all involved or concerned agencies.
- ❑ Form a work group to examine OHP/DHR payment and contract system and to develop treatment model guidelines for residential services addressing special populations and co-occurring disorders.
- ❑ Support holistic approach to residential treatment.
- ❑ Integrate development of beds for special populations into existing settings.
- ❑ Specialized treatment programs should meet same criteria as all A&D programs per OAR S 415-51-000 to 130, and 415-10-000 to 170.
- ❑ The State should establish statewide, consistent standards.
- ❑ Continue to refine and develop service structure to meet 100% of treatment need in the institutions.
- ❑ Develop a close working relationship with OADAP for improved coordination of services and increased technical assistance to counties as inmates transition.
- ❑ Restructure system for allocating DOC services to assure rate parity and avoid duplicating purchase of service.
- ❑ Ensure involvement in "pool of service" recommendations.
- ❑ OYA should complete a thorough needs assessment of their population to determine youth in need of treatment.
- ❑ Ensure all State agencies use same definition of "aftercare".
- ❑ Prioritize aftercare supports and advocate for funding and statutory provisions for them.
- ❑ Replicate successful models for self-help groups for special populations and persons with co-occurring disorders.
- ❑ State agencies should provide a single point of coordination and technical assistance to communities about the location of self-help groups and how to connect with them.

Oregon Strategy for Social Support Review

- ❑ The State should inventory and coordinate available transportation resources to support Oregonians completing treatment.
- ❑ Develop holistic approach to treatment that focuses on family supports, not individual supports.
- ❑ Focus especially on including therapeutic child care as part of treatment by developing an information and referral system.
- ❑ Develop specific steps to support the employment needs of Oregonians in treatment, and assist them to make a transition back to a community setting.
- ❑ Coordinate A&D treatment services with content in the workforce system. This should include those clients at risk who are receiving mental health and vocational rehabilitation services.
- ❑ Create a joint planning process among all state agencies to provide for client-centered supports.
- ❑ Jointly staff client case plans.
- ❑ Continually combine programs and case plans at a state and local level.
- ❑ Evaluate drug-free housing programs in Medford, Hillsboro and McMinnville for possible replication in targeted areas.
- ❑ Upon positive evaluation, acquire funding to build site and run project.
- ❑ Ensure location of housing in community centers.
- ❑ Assure that each A&D treatment facility coordinates client centered supports and aftercare services.
- ❑ Secure drug-free housing options for clients upon release.
- ❑ Identify specific communities for drug-free housing placements and issue specific RFP using existing state and federal housing development resources.

Recommendations of Child Care Work Group

- ❑ Provide CCD with legislative authority and sufficient resources for annual inspection of family child care businesses.
- ❑ Require inspection of new family child care businesses before approval of registration.
- ❑ Improve inspections of center-based care.
- ❑ Develop and distribute information on safety and encourage voluntary compliance with safety principles for exempt child care settings.
- ❑ Provide CCD with legislative authority and sufficient resources to investigate serious complaints.
- ❑ Provide CCD sufficient resources to reduce certification caseloads.

Recommendations of the Diagnosis and Early Evaluation Work Group

- ❑ Design an eligibility tool.
- ❑ Implement a standard screening protocol.

Recommendations by Family Support and In-Home Assistance Work Group

- ❑ Family support casework needs a separate workgroup to identify providers, redundancies, and gaps.
- ❑ Resume SSIWG work at a later date, to continue looking at other areas of family support and in-home assistance, including senior and disabled services.
- ❑ Require universal prenatal & at-birth screening and referral by any provider receiving state/federal funding. Voluntary for others.
- ❑ Education for all to understand the benefits of universal screening.
- ❑ Use of a common screening tool.

Oregon Strategy for Social Support Review

- ❑ Connect screening to medical testing at birth.
- ❑ Increase awareness of early childhood support and referral systems.
- ❑ Create coordinated referral and triage teams at the local level.
- ❑ Pool state and federal resources for "non-mandated" populations/services. Funds to go directly to pool, not through agencies.
- ❑ County or self-declared multiple counties will submit a coordinated plan to the Coordinating/Development Team consisting of state and local partners for approval for funding.
- ❑ Each county or self-declared multiple counties individually determine who and how local referral/triage team will function, within statewide parameters, minimum membership requirements and accountability (data & evaluation).
- ❑ Each team will serve both as referral triage mechanism and purchaser of all home visit and auxiliary supports.
- ❑ Local flexibility for counties. Responsibility and accountability through county commissioners.
- ❑ Funding for (named) home visiting programs be diverted in the 1999-01 biennium from the current recipient and sent to a pooled fund, to be distributed via a grant system, using a state/local team approach.
- ❑ During the 1999-01 interim, planning for the possible inclusion of (named) funds or partial funds should be accomplished and necessary legislation introduced in the 2001 Legislative Session.
- ❑ Any new early intervention home visiting resources—state, federal, or other—be tied to the statewide system to assure their participation in the local planning process.
- ❑ A state/local/legislative implementation group continues to work on additional details, including where at the state level pooled resources will reside and where state staff work will be accomplished.

Recommendation by Health Care Work Group

- ❑ Appoint a state dental director.

Recommendations by Safe, Affordable Housing Work Group

- ❑ **Improve the decision-making process**
 - Bring together information on the availability, affordability, adequacy and accessibility of housing at the community level.
 - Establish an effective consolidated local needs assessment and prioritization process.
- ❑ **Increase community acceptance of special needs and low-income housing**
 - Train service providers to handle the public's concern.
 - Develop broad public relations campaign about special populations served in communities by state agencies.
 - Create materials for developers that summarize legal and procedural aspects of siting special needs housing.
 - Assign resources and staff for fair housing advocacy, issue tracking, complaint investigation and resolution, and legal action where necessary
- ❑ **Align state agency goals, policies, practices**
 - Align Governor's Community Solutions Team and SSIWG initiatives.
 - Implement Statewide Planning Goal 10 and Governor's Quality Development Objectives.
 - Make issue-specific materials available to teachers.
 - Convene a multi-agency task force to review relevant statutes and regulations on health, safety, sanitation, licensing and zoning requirements.

Oregon Strategy for Social Support Review

- Create a common language between Building Codes Division and agencies serving persons with special needs.
- Drafting and adopt a "dangerous building" code for residential buildings.
- Increase collaboration between agencies and private organizations.
- **Re-deploy and increase resources**
 - Make information on vacant units readily available to those receiving services from other state human services agencies.
 - Provide information on local housing availability through public schools.
 - Create a trust fund from the sale of state-owned real estate, which previously served persons with special needs.
 - Expand home ownership opportunities for lower income citizens and persons with special needs.
 - Facilitate acquisition of affordable disability insurance.
 - Increase availability of temporary lodging options for homeless and lower income Oregonians.
 - Use inmates to build housing for low-income purchasers.
 - Provide reimbursement fee to non-profits for each eligible low income Oregonian that goes through OHCSA's home buying training course and becomes a homeowner using the state's Residential Loan Program.
 - Incorporate an environmentally safe rehabilitation component for owner-occupied housing.
 - Re-deploy state rental assistance to the production of affordable housing.
 - Study impact of shifts in federal housing policy and funding levels.
 - Increase the capacity of Oregon Housing Trust Fund.
 - Consider consolidation of all affordable housing production programs into a single housing program with flexible, broad activity categories and join all housing-related income subsidy programs with public assistance programs.
 - Limit the mortgage interest and property tax deductions enjoyed by higher-income households.

Recommendations by the Mental Health Alignment Work Group

- Develop local biennial blueprint plans that use multi-system team approach to coordinate and deliver services for children, families and adults.
- Establish equal benefits for mental health and physical health (parity).
- Provide public mental health funds, including OHP, through a block grant for implementing local plans, and encourage local mental health authority to enter into "blended funding" agreements with state and providers.
- LMHA and local public safety coordinating council work together to address the interface between law enforcement and mental health for both youth and adults.
- Results become a part of the local blueprint plan. Corrections and OYA (state) to work with local mental health to develop release plans.
- Create a seamless data system-and an "information system guidance committee": to inform the process.
- Simplify OHP enrollment process and eliminate periods of non-coverage.
- Develop or adopt statewide performance measures and allow for additional local measures.
- Establish a FHIAP-like subsidy program for purchase of employer-based insurance, based on a basic benefit package.
- Conduct a study and analysis of the needs of the mental health workforce.
- Delineate workforce needs and responsibilities according to a matrix.
- Identify core competencies and develop training across the system.
- Form a consortium of public and private groups to provide public education.

Oregon Strategy for Social Support Review

- ❑ Governor and State agencies should make changes necessary to integrate administrative functions to support local service delivery.
- ❑ Establish an independent ombudsperson office.
- ❑ For implementation purposes, transfer Dammasch Housing Trust Fund to OHCSO to leverage and grow.
- ❑ Establish a developmentally appropriate screening tool for children and adolescents.
- ❑ Develop a state comprehensive plan consistent with MHAWG values and guiding principles and derived from local plans.
- ❑ Develop abuse/neglect and safety policy.
- ❑ Develop standardized levels of care criteria linked to local plans.

Recommendations of the Nutrition Work Group (Interagency Coordinating Council on Hunger)

- ❑ **Outreach**
 - Identify unserved and under served communities. Target outreach to the areas with greatest needs.
 - Assess feasibility of expanding program resource information offered through SAFE NET. Add summer food Service program.
 - Consider adding all nutrition programs to SAFE NET and explore the development of a statewide portal that references local programs.
 - Jointly develop outreach strategies. Continue with direct certification.
 - Assess staff efficiencies and/or need for additional staff to handle increases in participation for program budgeting.
- ❑ **Nutrition Education**
 - Use Nutrition Education Network to deliver and promote simple, consistent messages about nutrition and physical activity, which lead to healthy lives.
 - Conduct a needs assessment that includes a review of current educational services, research on nutrition health issues, and use of consumer focus groups.
 - Develop an implementation plan that includes identification of best practices in nutrition education, specific initiatives, and partner responsibilities.
 - Involve target audiences and community groups in each phase of the process.
 - Coordinate outreach efforts of partners.
 - Identify opportunities to coordinate/integrate nutrition and physical activity education programs
 - Invite other partners to participate in Nutrition Education Work Group.
 - Coordinate with other specific nutrition efforts.
 - Conduct a nation-wide review of nutrition education work groups and identify best practices and partnership needs.
- ❑ **Program Monitoring**
 - Review monitoring requirements of each nutrition program to determine whether there is sufficient crossover to coordinate or integrate program-monitoring functions.
- ❑ **Data Collection and Use**
 - Determine what nutrition-related data we need to know and how we would use and share it.
 - Determine how to paint a picture of hunger in Oregon.
 - Better define the relationship between nutrition programs and hunger.
 - Set targets for reaching under-served areas or populations.
 - Develop strategy and work toward the sharing and integration of data systems.
- ❑ **Program Improvements**
 - Revisit the Comprehensive Child Nutrition waiver proposal and resubmit appropriate waiver requests

Oregon Strategy for Social Support Review

- Facilitate transfer of surplus USDA commodities from the Commodity Food Distribution Program to The Emergency Food Assistance Program.
- Request necessary waivers for Summer Food Service Program.
- Continue to look for other partners to address food insecurity.
- Determine whether the Summer Food Program can utilize congregate meal sites, Head Start facilities and senior service centers for lunch sites
- Consider feasibility of using smart cards for programs beyond Adult & Family Services (now Children, Adults & Families).
- Explore use of portable point of sale machines at farmers' markets to allow for use of Food Stamps and WIC farmers' market benefits.
- Federal rules and regulatory changes.

Recommendations of the Transportation Coordination Initiative Work Group

- Charge state agencies with implementing coordination initiative and hold them accountable.
- Determine means for implementing framework of Coordination Project.
- Encourage creation of local coordination entities to provide community level structures for continuous improvement of coordination for all state-supported transportation services.
- Provide periodic reports on goals, objectives, and accomplishments.

State Activities to Achieve Outcomes

- Identify new coordination barriers and obstacles as they emerge.
- Monitor agency initiatives to address problems.
- Identify gaps in the current delivery system and opportunities to improve coordination of services.
- Integrate administration of state agency programs.
- Provide policy solutions and technical assistance.
- Collect and disseminate common information about activities and outcomes.
- Define and implement innovative projects and initiatives.
- Provide financial incentives to encourage coordination.
- Ensure a coordination mechanism exists for the OTN.
- Report to Governor on progress based on common service measures (benchmarks).
- Create mechanism to reduce the risks associated with mixing clients in transportation.
- Develop consistent standards for transportation services and planning among Dept. of Human Services (DHS), Dept. of Transportation (ODOT), Dept. of Veterans Affairs, and others.
- Develop uniform operating, safety and vehicle standards & specifications (such as child restraints, special licensing) and training.
- Condense existing rules where practical and develop a consistent set of state agency policies, administrative rules and standards to govern eligibility.
- Coordinate transportation programs of ODOT, DHS, ODE, Veterans and other agencies involved in transportation services.
- Make available a brokerage or other locally appropriate transportation coordination mechanism in each county or region.
- Create incentives that encourage local jurisdictions to integrate transportation services
- Establish a method to reinvest coordination savings into the community to increase transportation service and improve quality.
- Assist communities in identifying and overcoming barriers to coordinated transportation services.
- Coordinate transportation funding and planning (both generalized and specialized) among ODOT, DHS, ODE, Veterans, and their local partners.
- Develop consistent transportation billing and tracking systems among state agencies.

Oregon Strategy for Social Support Review

- Where appropriate, consolidate fragmented funding and transportation reimbursements from all state agencies including ODOT, DHS, Veteran's and ODE into a single transportation coordination grant to local communities.
- Develop and maintain a consolidated inventory of transportation funding resources, providers and coordinated services within Oregon.
- Establish a single point of contact for local communities to call for assistance and "barrier busting".
- Maximize the use of existing vehicles in community programs through shared used programs. Establish a capital asset management plan to identify when vehicles need to be replaced, maximize vehicle utilization, and avoid redundancy.
- Create and offer funding for local jurisdictions to integrate transportation services and consolidate funding.
- Create incentives in the school transportation allocation for school districts to participate in coordinated transportation services (e.g., allow districts to keep savings in state allocation from coordinating services).
- Develop a performance monitoring and tracking system to assess the effectiveness of agencies in implementing these directives and in achieving desired.
- Develop a uniform tool to evaluate local transportation coordination efforts, including quality attributes such as avoided healthcare costs, etc.
- Oregon should build a statewide trip planning system.
- Research insurance and risk barriers and identify opportunities.

Appendix B

The Oregon Strategy for Social Support Initiative
Opinion Survey
March 2002

Your name _____ Agency/Organization you represented _____

Please circle the role(s) that describes your participation in the SSI

Work Group Member Steering Committee Member Advisory

If work group member, please enter name of group(s):

When responding to the questions below, if you participated in *more* than one work group, please respond for each group and write its name under the appropriate answer, e.g.:

Very familiar Somewhat familiar Slightly familiar Not familiar
Mental Health *Transportation*

Please circle the most appropriate response to the following questions regarding the SSI:

1. Are you familiar with the outcomes of the OSSSI recommendations *in general*?

Very familiar Somewhat familiar Slightly familiar Not familiar

2. Are you familiar with the outcomes of the recommendations made by your work group(s)?

Very familiar Somewhat familiar Slightly familiar Not familiar NA

3. There were several objectives of the Oregon Strategy for Social Support: One was to **align state agency roles to reduce redundancies where appropriate and to fill in gaps**. Another major goal of the strategy has been **to reduce the role of the state as the primary direct service provider of social supports where appropriate and to explore new community-based roles**. In your opinion, how effective was the work group process in *identifying* ways to accomplish this?

Very effective Somewhat effective Slightly effective Not effective NA

Oregon Strategy for Social Support Review

4. In your opinion, how effective has the Oregon Strategy been in helping to *accomplish* the goals in question #3?

Very effective Somewhat effective Slightly effective Not effective

Not enough information to determine

5. In your opinion, have state agency roles been aligned sufficiently to reduce redundancies where appropriate and to fill in gaps?

Greatly aligned Somewhat aligned Slightly aligned Not aligned

Not enough information to determine

6. In your opinion, has the role of the state been reduced as the primary direct service provider where appropriate?

Greatly reduced Somewhat reduced Slightly reduced Not reduced

Not enough information to determine

7. Please **list** four or more **words** that describe your overall appraisal of the work-group process by which the Oregon Strategy has developed.

8. In your opinion do you believe outcomes have been consistent with the recommendations made by your group?

Very consistent Somewhat consistent Slightly consistent Not consistent

Not enough information to determine

9. Do you believe that a recommendation to continue the work of OSSI should be made to the next governor?

Yes No

Now will you take a few more minutes to respond to the questions on the next page?

Oregon Strategy for Social Support Review

To further assist in the evaluation, please respond to the following questions using examples from your understanding of the status of the various work group recommendations. Feel free to use the back of this page or an additional sheet of paper.

These questions are about the process used to develop the SSI:

10. What changes might have improved the process by which the Oregon Strategy has developed (e.g., frequency of meetings, meeting structure, number of groups or composition of groups participating)?

11. If you believe the process was successful, what are the factors that made it work? (e.g., staff, meeting locations, facilitator, legislative/participant involvement etc.) What elements would you change?

12. What changes, if any, would you attribute to using this kind of process?

13. If you believe the process was *not* successful, can you describe one that would have been better?

These questions are about the outcomes of the SSI:

14. Outcomes can be affected by changes in many different circumstances such as personnel changes, agency culture, or other factors that have occurred since the recommendations were adopted. Are you aware of any changes in circumstances that have occurred and that have affected outcomes?

15. What unexpected outcomes, positive or otherwise, are you aware of that resulted from the Oregon Strategy?

16. Have the outcomes from the recommendations been consistent with the goals of the recommendations? If not, what factors contributed to the result?

17. What has been the reaction of stakeholders to implementation of the recommendations?

Oregon Strategy for Social Support Review

18. What do you think *wouldn't* have happened without the Oregon Strategy for Social Support (i.e., what are the opportunities, if any, that have been brought about by the OSSI that otherwise might not have existed)?

19. If you believe that the SSI is a work-in-progress, what suggestions do you have to ensure that the effort is sustained and institutionalized (e.g., re-activate groups, legislative action, etc.)?

Any additional comments you wish to make?

Thank you for taking time to participate in this survey. Your comments are very much appreciated.

Please return as soon as possible to:

Appendix C

Responses to The Oregon Strategy for Social Support Opinion Survey

Of the 171 surveys sent, 53 responses were received. Because some of the participants served on more than one work group or served as members of the Steering Committee as well as work groups, the total responses for each question in some cases exceed the total number of respondents.

Question 1: Are you familiar with the outcomes of the OSSI *in general*?

	Very Familiar	Somewhat	Slightly	Not familiar	Not enough Information	TOTAL Responding
TOTAL	19	27	16	3	0	65

Question 2: Are you familiar with the outcomes made by your work group(s)

	Very Familiar	Somewhat	Slightly	Not familiar	Not enough Information	TOTAL Responding
TOTAL	29	21	7	1	0	58

Question 3: In your opinion, how effective was the process in *identifying* ways to accomplish the goals of the OSSI?

	Very Effective	Somewhat Effective	Slightly Effective	Not Effective	Not enough Information	TOTAL Responding
TOTAL	22	42	4	1	2	71

Question 4: In your opinion, how effective has the Oregon Strategy been in helping to accomplish the goals in question 3?

	Very Effective	Somewhat Effective	Slightly Effective	Not Effective	Not enough Information	TOTAL Responding
TOTAL	10	30	11	2	12	65

Oregon Strategy for Social Support Review

Question 5: In your opinion, have state agency roles been aligned sufficiently to reduce redundancies and fill in gaps?

	Greatly Aligned	Somewhat Aligned	Slightly Aligned	Not Aligned	Not enough Information	TOTAL Responding
TOTAL	3	33	11	4	16	67

Question 6: In your opinion, has the role of the state been reduced as the primary direct service provider?

	Greatly Reduced	Somewhat Reduced	Slightly Reduced	Not Reduced	Not enough Information	TOTAL Responding
TOTAL	3	16	8	12	21	60

(For question 7, see Appendix D)

Question 8: In your opinion, do you believe the outcomes have been consistent with the recommendations made by your (the) work group?

	Very Consistent	Somewhat Consistent	Slightly Consistent	Not Consistent	Not enough Information	TOTAL Responding
TOTAL	23	18	6	0	16	63

* One Steering Committee member did not respond to this question. Three responded in their role as work group members.

Question 9: Do you believe that a recommendation to continue the work of the Oregon Strategy should be made to the next governor?

	Yes	No	Don't Know	TOTAL Responding
TOTAL	48	3	5	56

Spring 2002

Appendix D

Question 7: Please **list** four or more **words** that describe your overall appraisal of the work group process by which the Oregon Strategy has developed.

Descriptive Words Used by Respondents

Accomplished	Fatiguing	Outstanding
Aggressive	Focused	Painstaking
Ambitious	Focused	Political
Cautious	Focused	Positive
Challenge	Hard	Practical
Challenging	Holistic	Pre-arranged
Challenging	Hopeful	Productive
Challenging	Hopeful	Productive
Collaborative	Hopeful	Productive
Collaborative	Human	Productive
Committed	Inadequate	Protective
Communicated	Incisive	Purposeful
Complex	Inclusive	Refreshing
Complex	Inclusive	Restrictive

Excellent	Open	Valuable
Exciting	Opportunity	Vision
Energy	Organized	Willingness
Exhilarating	Organized	Workaholic
Expertise	Organized	

Phrases used by some respondents to answer Question 7

A mystery at first, but then an ah-ha! experience	Minimal impact achieved to date	Work group process was excellent
Awareness of groups	Misunderstood, but on point	
Awareness of groups	Not focused enough	
Black hole	Outcome driven goal	
Broad based	Overwhelmed by complexity of MH systems	
Brought divergent groups to table	Policy focused	
Carefully managed	Prevention vs. high-end supports	
Collective, multi-disciplinary approved using brainstorming facilitated discussion	Process became more important than conclusion	
Committed to the patients and consumers	Resistant to major change	
Common support for a systems approach	Round peg in square hole	
Common understanding	Shifting focus	
Consensus building	Slightly frustrating	
Dedicated & conscientious people	Sometimes frustrating	
Disappointment (failure to enact an insurance parity law!)	Team building	
Excellent facilitation	Tedious but effective	
Excellent recommendations	Threads of continuity	
Exploratory/education	Time consuming	
Extraordinary process	Time consuming	
Far reaching	Tremendous process	
Forward looking	Turf oriented	
Future efforts?	Under funded	
Future support	Variable in terms of commitment and knowledge	
Good effort	Varied membership	
Good intent	Very effective	
Good opportunity to communicate	Very risky activity	
Good product	Well facilitated	
Great common language	Well thought out using systems approach. It has a strong conceptual foundation. It is just hard to implement. It is just hard to change the direction of such a large ship.	
Great process		
Helpful goals identified		
Informative		
Local vs. state control

**REPORT TO
GOVERNOR KITZHABER:**

**INVESTING IN
INDEPENDENCE, PRODUCTIVITY
AND SELF-SUFFICIENCY
FOR
OREGONIANS**

APRIL 1997

Submitted by:

THE SOCIAL SUPPORT INVESTMENT WORK GROUP

April 21, 1997

Governor John Kitzhaber
Oregon Capitol Building
Salem, OR. 97310

Dear Governor:

We are pleased to deliver this report on investing in independence, productivity and self-sufficiency for Oregonians.

Over the last nine months, we and our staff have been working diligently to recommend to you a core continuum of social supports for Oregonians which can supply the foundation for workforce and educational productivity. Twenty-eight state agencies, city and county representatives, and citizen advocates, along with input from scores of stakeholders, have produced this report.

We have analyzed and are recommending the most appropriate role of state government in providing core social supports in collaboration with our community partners. In some cases, this means a shift in our current way of doing business.

We are recommending a method to address potential gaps and redundancies in Oregon's current system of social supports.

We systematically analyzed the underlying correlation's and cause/effect relationships that prohibit self-sufficiency successes of our citizens and may be driving some of our system inefficiencies. We likewise, recommend a method to address these issues.

We have learned a lot from this process, yet there is more to be done. We commit to continuing the work begun here by:

- Using the process, principles, objectives and interests contained in this report to negotiate social support partnerships with local communities;
- Agreeing to participate in the next phase of work that is recommended in this report, should you assign it to us; and
- Establishing necessary partnerships and making necessary adjustments within our own agencies to align with the core supports and state roles we have identified and recommend to you.

We thank you for your catalytic and visionary leadership in this and other areas. We ask that you continue such foresight and leadership in any implementation work you may assign to us.

Members of your Social Support Investment Work Group:

Roger Auerbach, Senior and Disabled Services Division, DHR
Karen Brazeau, Oregon Youth Authority
Dave Cook, Department of Corrections
Hersh Crawford, Office of Medical Assistance Programs, DHR
Jan Dean, Employment Department
Janis Elliot, Child Care Division, Employment Department
Lynn Fallin, Oregon Commission on Children and Families
Mark Gibson, Office of the Governor
Muriel Goldman, Citizen Advocate
Mayor Larry Griffith, League of Oregon Cities
Elinor Hall, Health Division, DHR
Sandie Hoback, Adult and Family Services, DHR
Barry Kast, Mental Health and Developmental Disabilities Division, DHR
Phil Lemman, Criminal Justice Commission
Judy Miller, Oregon Department of Education
Bobby Mink, Department of Human Resources
Greg Peden, Oregon State Police

EXECUTIVE SUMMARY

Introduction

In the spring of 1996, Governor John Kitzhaber developed a Human Investment Framework. This Framework set the goals and tone for Oregon's approach to investing in its people. It said that Oregon's approach would be one of shared investments -- among state, local and community, public and private partners. It also said that Oregon's approach would recognize the inter-connected relationship between education, workforce development and social supports. The Framework held that in order for children to be successful in school, and in order for adults to be successful at finding and maintaining employment, certain social supports had to be present in their lives. The overall goal of the Framework is to empower Oregonians to be as independent, productive and self-sufficient as possible so that we can attain this vision we all share for our state.

The Framework stopped short of identifying the specific social supports, but did direct us to honor the relationship between social supports, education and workforce development. Child care, for example, may be a critical social support in order for some Oregonians to advance in their education or to obtain and hold a job. Having Oregonians advance their education and employment is an interest we all share. It helps us achieve our vision for Oregon: quality jobs, engaged communities and healthy surroundings. In May 1996, the Governor appointed a special "Social Support Investment Work Group" to define the critical social supports necessary to ensure success with the Framework's goals of education and workforce success. The Social Support Investment Work Group was charged with the following activities:

- ✓ identify social supports critical to education and workforce productivity and success;
- ✓ identify those social supports that state government has a primary responsibility to provide, and the most appropriate manner for the state to do so;
- ✓ identify a process by which Oregon can begin to address potential gaps, redundancies and inconsistencies in current systems of social supports; and
- ✓ identify opportunities for strategic investments to achieve the availability of the core social supports.

Product and Process

Over nine months, a work group of 28 people consisting of agency heads, city and county government representatives and citizen advocates met to address the charge given them by the Governor. Broad-based and enthusiastic participation from members of the Work Group provided the opportunity to form new and closer relationships among state, city, county and citizen partners. The approach used by the Work Group ensured a cross-agency understanding and resulted in recommendations in the following areas:

- ✓ Adoption of a set of principles to guide a continuum of core social supports and to serve as an important link among agencies and across traditional service lines.
- ✓ A continuum of core social supports according to level of vulnerability and stage of life.
- ✓ Seven possible state roles as potential methods to deliver each social support. The most appropriate role for state government is identified for each support.
- ✓ A process to further analyze potential inconsistencies and determine the most efficient means of aligning our efforts to deliver supports as recommended by the core continuum.
- ✓ A collaborative public-private method to make strategic investments in specific areas that could result in reduced cost and increased positive outcomes for the state.

A summary of recommendations may be found at the end of this Executive Summary. These recommendations provide two shifts of policy for the state. They seek to:

- ✓ move the state out of the business of providing direct service, in favor of the role of partnering with communities in the design and delivery of core social supports; and
- ✓ recommend a stronger role for communities in delivering service at the closest level possible to Oregon's citizens.

An important step in achieving this shift is additional dialogue with and among local partners. The process of understanding the interconnected relationships among state, local, public and private partners for social supports has just begun.

By working together in partnership to provide the identified core social supports and make targeted, strategic investments where possible, Oregon will form the foundation to increase individual educational and workforce success. Individual educational and workforce success in turn will lead to the three goals Oregon has agreed to in *Oregon Shines II*, The State's Strategic Vision: 1) quality jobs for all Oregonians; 2) safe, caring and engaged communities; and 3) healthy sustainable surroundings.

Summary of Recommendations

1. The Governor should direct the adoption of the principles for social support.
2. The Governor should direct and support state agencies' use of the Guiding Principles, Objectives, State Interests and Process for State and Local Partnerships in the social support arena.
3. The Governor should direct the adoption of the recommended Core Support Continuum and corresponding roles for state agencies as part of his Human Investment Framework. The Governor should direct agencies to align their resources, support and roles according to the Core Support Continuum, and by the recommended method below.
 - ✓ The Governor should appoint an oversight committee to manage and ensure that analysis is completed and recommended adjustments are made.
 - ✓ Small groups should analyze apparent inconsistencies and determine the most efficient means to deliver supports as recommended by the core social support continuum.
 - ✓ The original 28-member Social Support Investment Work Group should reconvene periodically to review progress.
4. Analysis and alignments to the core social support continuum should be completed for the following core supports first:
 - ✓ Access to diagnosis and early evaluation
 - ✓ Access to family support and in-home assistance
 - ✓ Access to health care (including specialized medical care)
 - ✓ Access to tobacco, alcohol and other drug treatment
 - ✓ Affordable, safe housing
 - ✓ Available and affordable child care
 - ✓ Employment opportunities
 - ✓ Life skills development and assistance
 - ✓ Non-residential therapeutic care
 - ✓ Opportunities to learn outside the formal educational system
5. The Governor should encourage local partners (counties, cities and others) to establish a shared vision of *their* role in ensuring core social supports.
6. The Governor should call together state, local, community, public and private partners to develop a collaborative Oregon investment initiative in each of the key hydraulic areas of:
 - ✓ Substance abuse;
 - ✓ Lack of available and affordable housing;
 - ✓ Mental health treatment needs of children and their families;

- ✓ School failure; and
 - ✓ Lack of skills for self-sufficiency.
7. The Governor should stay informed of progress made on the investment initiatives and should remain a catalytic leader for change.

Social Support Investment Work Group

Full Report to the Governor

INTRODUCTION

In the spring of 1996, Governor John Kitzhaber developed a Human Investment Framework. This Framework set the goals and tone for Oregon's approach to investing in its people. It said that Oregon's approach would be one of shared investments -- among state, local and community, public and private partners. It also said that Oregon's approach would recognize the inter-connected relationship between education, workforce development and social supports. The Framework held that in order for children to be successful in school, and in order for adults to be successful at finding and maintaining employment, certain social supports had to be available and present in their lives. The overall goal of the Framework is to empower Oregonians to be as independent, productive and self-sufficient as possible so that we can attain this vision we all share for our state.

The Framework stopped short of identifying the social supports, but did direct us to honor the relationship between social supports, education and workforce development. Child care, for example, may be a critical social support in order for some Oregonians to advance in their education, obtain or hold a job. Having Oregonians advance their education and employment is an interest we all share. It helps us achieve our vision for Oregon: quality jobs, engaged communities and healthy surroundings. In May 1996, the Governor appointed a special "Social Support Investment Work Group" to define the critical social supports necessary to ensure success with the Framework's goals of education and workforce success. The Social Support Investment Work Group was charged with the following activities:

- ✓ identify social supports critical to education and workforce productivity and success;
- ✓ identify those social supports that state government has a primary responsibility to provide, and the most appropriate role for the state to do so;
- ✓ identify a process by which Oregon can begin to address potential gaps, redundancies and inconsistencies in current systems of social supports; and
- ✓ identify opportunities for strategic investments to achieve the availability of the core social supports.

PROCESS

The Social Support Investment Work Group began its work with a retreat on May 27, 1996, with Governor Kitzhaber. Considering the Governor's charge to the group a mission statement was defined to guide the work.

Mission

- ✓ To understand the connections and relationships among Oregon's systems of social support;
- ✓ To establish a clear, publicly accepted and prioritized social support continuum; and
- ✓ To define a structure and process to guide, accomplish and evaluate the work.

The Work Group identified the following outcomes for its work:

- ✓ Define the desired continuum of social supports.
- ✓ Determine outcomes for the continuum and opportunities for investment.
- ✓ Identify areas of refocus.
- ✓ Develop broad based coalitions to support the continuum.
- ✓ Agree on the most appropriate providers for services and agree on desired service outcomes.
- ✓ Increase understanding among service providers, decision makers and the public of the links, causes and effects between different areas of the continuum, and overall framework.
- ✓ Identify root causes and corresponding supports to mitigate risk factors.
- ✓ Develop a plan for achieving system adjustments, including "who" is responsible for achieving the adjustment.

Monthly meetings were held May 1996 through February 1997. The Work Group consisted of twenty-eight agency heads (or their designees), representatives of city and county government and citizen advocates. (A membership list and work plan may be found in Appendix A.) Consistent and broad base participation of the many agencies involved ensured an approach that cut across traditional agency and service boundaries. The nine-month time frame also ensured that new relationships were built between agencies.

In order to also ensure broad understanding and input into the Work Group's process, 600 key stakeholder organizations were identified to provide feedback at any time and to receive monthly progress updates. Community input opportunities were made available. These included:

- ✓ An Ednet telecast with two-way down link in five Oregon communities.
- ✓ An information packet about the Work Group that included a message from Governor Kitzhaber, an introductory video, handouts and discussion questions.
- ✓ Focus group meetings held in five additional communities.
- ✓ Monthly meetings, including two in rural Oregon communities.

Overall, 13 Oregon communities had direct contact with the Work Group. Over 750 stakeholders (individuals or groups) across the state were contacted for feedback. In addition, each Work Group member agency gathered input from their own stakeholder organizations or advisory groups. Stakeholders will also

provide feedback about how to proceed with the next phases of work recommended in this report.

CORE SOCIAL SUPPORT CONTINUUM and STATE RESPONSIBILITY

Principles

Broad-base agreement was reached on a set of principles to guide the establishment of a continuum of core social supports. These principles serve as an important link among agencies and across traditional service lines. They transcend the often referred to “silo” or “stove pipe” mentality to social support, whereby each agency is responsible for a service or population, often to the exclusion of other services or agencies. The principles transcend typical bureaucratic boundaries and have the full support and commitment of the Work Group’s member agencies and organizations.

Moreover, the established principles tie the identified core social supports into a consistent continuum, and form the foundation for addressing the interconnected nature of the supports, state agencies and community partners. They provide a means to move toward the core social support continuum. And they illustrate that the core social supports, and those who provide them, do not exist in isolation.

The principles are consistent with recent legislation and are rooted in three overarching goals articulated by Governor Kitzhaber: wise investments, partnerships and independence and productivity.

Key Principles of Oregon's Social Support System

Oregon's Social Support System will promote the following for Oregonians:

Wise Investments

- Target available resources toward efforts that increase productivity and quality of life.
- Re-invest savings from increased effectiveness to prevent entry or re-entry into services.
- Promote the inter-connection among state and local agencies, their services and clients.
- Utilize accepted standards and best *possible* practices in providing supports.
- Focus our resources on the social supports that help us achieve the best outcomes.

Partnerships

- Involve shared risk and responsibility among all state agencies and their local partners.
- Recognize that supports are best delivered and utilized at the closest community level possible based on state mandates, federal regulations, consolidated community planning, and capacity.
- Involve consumers and citizens in the design, delivery and evaluation of services.
- Build on the service integration that is a natural part of community support.
- Promote the need for a "customer service" orientation among state and local agencies and the clients they serve.

Individual Strengths and Productivity

- Understand and accommodate a wide range of abilities and needs for support, including addressing cultural, gender and geographic differences.
- Recognize that the level of support needed by Oregonians will vary depending on the conditions they face, and the other supports available in their lives.
- Acknowledge that all Oregonians may need extra support at certain points in their life.
- Encourage Oregonians to be as productive and independent as possible.
- Maximize individual and family strengths and sense of personal responsibility.
- Promote multiple points to access support, based on individual needs.
- Promote the interconnection of social supports with other needs, such as education and employment.
- Promote access to a core level of social supports.

Partnerships

The recommended principles recognize the interconnected nature of social supports and those who provide them. These principles recognize that social supports are best delivered at the closest community level possible and that interconnected partnerships are often simply the way communities do business. Further, the Work Group acknowledges that a lack of coordination at the state level makes it difficult for community partners to collaborate and draw upon the strength of interconnectedness. In order to accomplish the principles in implementing the core social support continuum, the Work Group believes it is necessary to build increasing numbers and levels of partnerships among state, local, public and private entities.

Building on the “Principles for Partnership” agreed to by the Governor, League of Oregon Cities and Association of Oregon Counties in March 1996, the Work Group member agencies have agreed to a common process and set of collective interests that will be represented when negotiating any social support agreement with local partners. By agreeing to these interests, partners can expect a consistent set of core interests that will be common to any future social support partnership arrangement. The “Principles for Partnership” and core interests may be found in Appendix B.

Determining Core Social Supports

Oregonians, in order to be successful in their workforce or educational endeavors, need certain social supports. While there are many *possible* supports that may increase the likelihood of an individual’s educational or workforce success, the Work Group took seriously the charge to identify those supports that are critical to ensuring that Oregonians are as independent and productive as possible. The Work Group identified as core social supports, for example, those supports which Oregonians “need to have” in order to be successful in education or employment. The Work Group distinguished core social supports from those that are less critical -- in other words, those that are “nice to have”, but not absolutely necessary.

In identifying core social supports the Work Group was driven by certain characteristics that distinguish a “core” social support from one that is not critical. A *core* social support is:

- ✓ needed for educational and/or workforce success and self-sufficiency regardless of who provides it;
- ✓ characterized by a bad outcome for most people if it is absent;
- ✓ able to make educational and/or workforce success much easier to achieve for most people;
- ✓ quantifiable, measurable and documentable;
- ✓ feasible and do-able (if it means a new way to do it); and
- ✓ received through the delivery of a service (it is not a service or service delivery method).

Without the core social supports identified, the Work Group believes that education and workforce success would be much more difficult -- and for some individuals -- impossible. Consistent with the Governor's Human Investment Framework (see Appendix C), individuals, families, churches and community based agencies all provide core social supports. The core social support continuum was designed to articulate those areas where the state has a key role in providing a core social support through a variety of approaches.

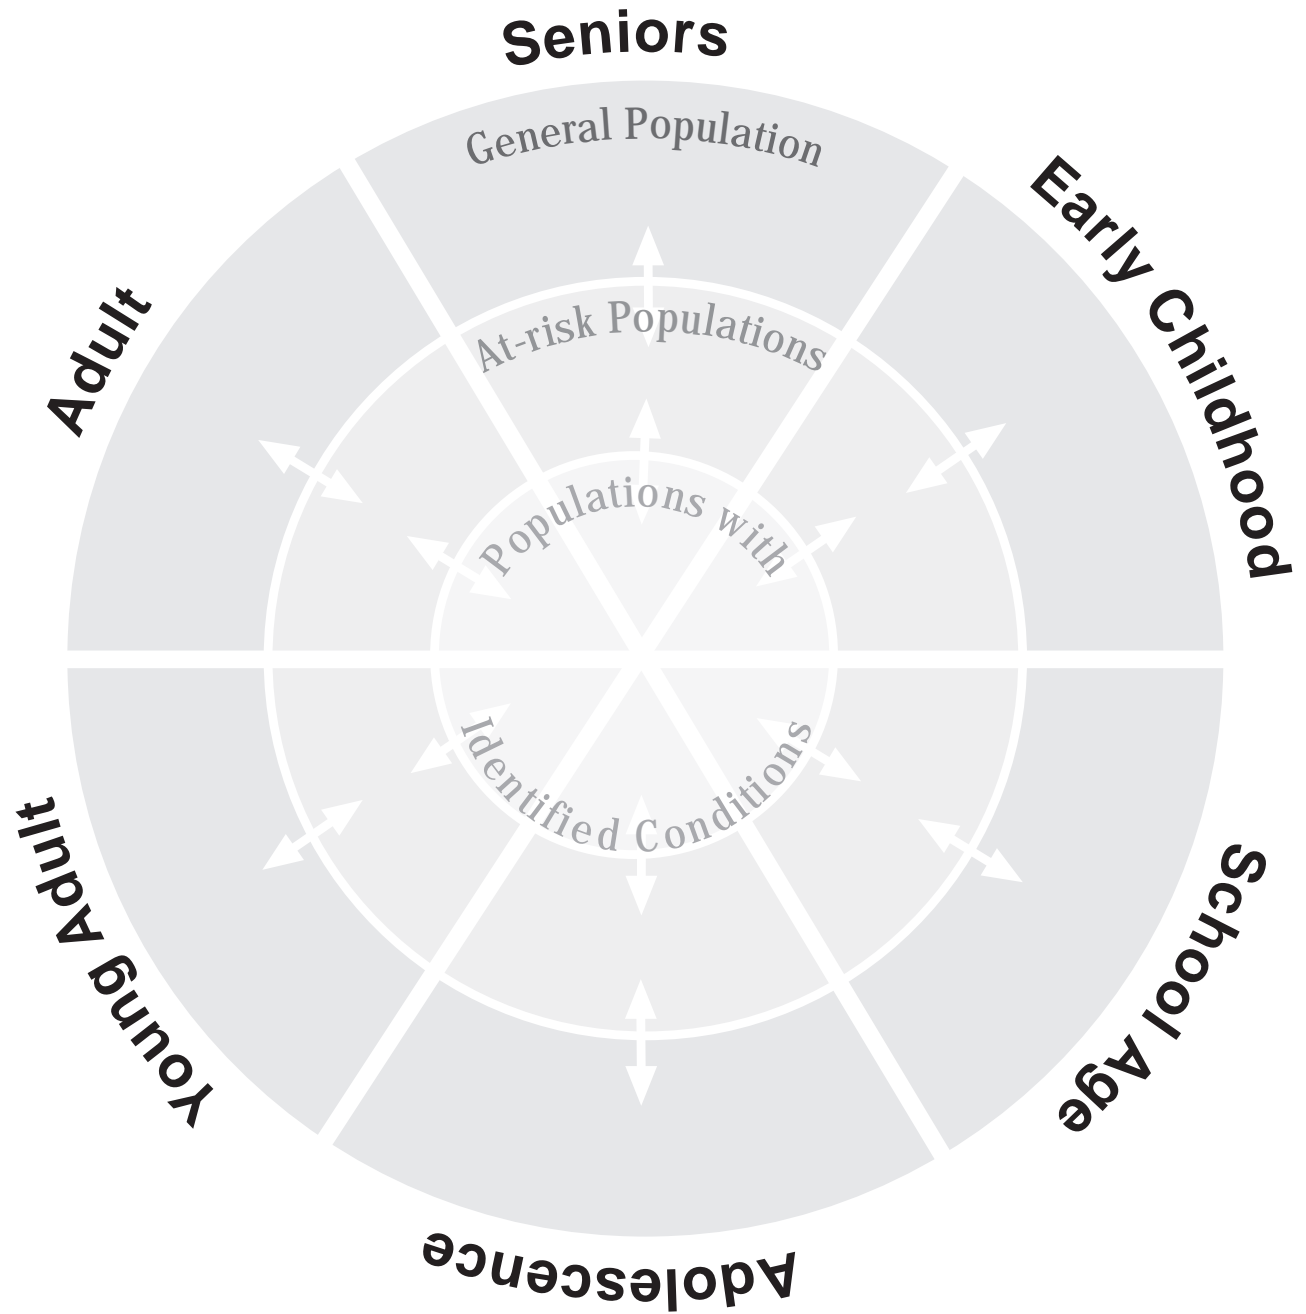

The Work Group recognizes that there may be other supports needed by certain individuals. Likewise there may be other types of support predominately addressed through the roles played by individuals, families or the private sector, etc. The core social support continuum articulates those supports that are critical to the educational and workforce success of Oregonians *and* where the state has a primary role in ensuring the existence of the support.

The core social support continuum only identifies supports that are *social* in nature. In other words, it only addresses the core social supports that would be provided through agencies aimed at individual, child or family well-being, *and* that support an individual's ability to be successful in education or workforce endeavors. It does not include supports that are core provisions of our K-12 education system or our workforce training programs. By working together in partnership to provide the identified core social supports, Oregon will form the foundation to increase individual educational and workforce success. Individual educational and workforce success in turn will lead to the three goals Oregon has agreed on through the *Oregon Shines II*, The State's Strategic Vision: 1) quality jobs for all Oregonians; 2) safe, caring and engaged communities; and 3) healthy sustainable surroundings.

Design of the Core Social Support Continuum

In response to the Governor's charge to recommend a core continuum of social supports in accordance with his Human Investment Framework, the Work Group presents a concept that is not traditional in the use of the word "continuum". However it does form the foundation for workforce and educational success, and fits squarely with the illustration contained within the Framework. (Please refer to Figure 1).

Core Social Support Continuum

The circle graphic used to illustrate the continuum represents the stages of an individual's life. The dotted lines between the stages indicate that there is not a well-defined beginning or end to most of the stages.

Some individuals will need more or less support and need it for varying lengths of time depending on their situation. Therefore, the graphic summarizes three broad types of populations. The outside ring of the circle represents the "general" population because it is the largest portion of Oregon's population. It characterizes those individuals who need very little social support from state government either because their situation does not require it, or they are able to obtain needed support from family members and their community.

The middle ring of the graphic shows Oregonians who are "at-risk" due to their need for short-term social support from the state in order to overcome a temporary barrier to independence, productivity and self-sufficiency. The at-risk population are generally of smaller number and are therefore represented by a smaller circle. The Work Group does not recommend a specific definition of at-risk Oregonians. Rather, the core social support continuum realizes that the at-risk nature of an individual's life may depend on their particular situation at any given time. The arrows between each of the population rings indicate the fluid nature of a person's level of risk. As individuals progress through life, they may be at-risk for certain conditions, they may have identified conditions in other areas, or they may not have any particular risk or condition at all.

The inner circle on the graphic represents those individuals who have "identified conditions" because they may require ongoing social support from the state in order to be as independent and self-sufficient as possible. It also recognizes that there are some for whom complete independence may be impossible (as in the case of certain persons with handicapping conditions). Those individuals will consistently require state support. Because these individuals are the smallest percentage of Oregon's population, they are represented using the smallest circle.

The Work Group has not recommended one definition for each of the types of populations (general, at-risk and identified condition). Because an individual may be at risk for one social support at one time in their life, but not at another, a definition has been generated for each type of population (or level of risk) pertinent to each core social support. For example, a person who is at-risk for access to health care as a child, may or may not be at-risk for obtaining affordable housing as an adult.

Figures two through eight represent the relationship between the larger "general" population and the smaller, more vulnerable population groups. The Work Group

has organized the core social supports by level of vulnerability and stage of life. For each stage of life and level of vulnerability, the core social supports needed by most Oregonians for education and workforce success have been identified. Again, not every conceivable support is listed, but rather only those that seem the most crucial to the Governor's human investment goals. Appendix D provides a definition of the recommended core social supports, and a definition for each of the types of populations relative to each support.

Organizing Supports

It is important to emphasize that the Work Group focused on core social *supports*, not core *services*. *Services* are one example of how a support can be delivered. The Work Group did not address services because it believes that service designs are best left to the expertise of communities and agencies operating under the recommended principles. *Supports*, on the other hand, are the focus, outcome or reason why a particular service might be delivered. Supports are delivered through a myriad of people or organizations such as by individuals, families, churches, natural helpers, and agencies. Any particular service design is but one means of delivering support. The recommendations section of this document contains suggestions regarding the delivery of services relative to the core social support continuum.

In designing the continuum of core social supports, the Work Group grappled with the long standing issue of child-centered versus family-focused approaches. While the Work Group was not focused on service delivery, it was important to arrive at a core social support continuum with a consistent organizational framework. For example, is the availability of child care a support to the parent or the child? Is prenatal care a basic necessity for the mother or her unborn baby? The child is often the ultimate beneficiary of supporting the parent. *However, for the sake of organizational consistency, core social supports were placed in the stage that reflected whose life would be most immediately impacted by the availability of the support.* If there was ambiguity, the support was placed at the stage of the continuum for the child.

State Roles

"It is time to take a fresh look at how our policies should work together to concentrate our public resources and allow the greatest short-term and long-term investments in our state's human resources", directs the Governor's Human Investment Framework.

To accomplish a "fresh look" a critical question needs to be answered: What should be the expectations and responsibilities for government, the individual/family, businesses and communities in supporting the continuums (of education, workforce development and social supports)? One of the charges to the Work Group was to recommend the *most* appropriate state role and responsibility in addressing the continuum of social supports.

For each core social support, the Work Group identified the most appropriate state role in contributing to the availability of the support. This was a difficult task. The Work Group, its sub-committees and stakeholders all found that it would be easier to add supports and expand the state's role. However, given recent legislative and citizen initiatives, and the state's fiscal situation, this was a spirited exercise in focusing on and narrowing to the most appropriate state role for each support and type of population.

The Work Group identified seven possible roles the state might take in ensuring the availability of the core social supports identified. These range from being the direct provider of services at the most intensive end to being a catalyst that stimulates the existence of a particular support, or having no role. The roles are defined in Appendix E and appear in Figures two through eight.

The left side of figures three through eight show the core social supports for each stage of development. Moving to the right, numbers correspond to the recommended state role for each level of population at risk. The dotted lines show that an individual may move between levels of risk for different supports. Note the change in recommended state role moving from the general population on the left to more vulnerable populations on the right. It is important to note that in those situations where an individual may be a ward of the state (e.g. abused child, incarcerated youth, etc.), the state functions in the role of parent. In those unique situations, the state may actually play more of a role than otherwise indicated on the graph.

In developing the core social support continuum, the Work Group found an inverse relationship between the level of vulnerability of the population and the level of state involvement in the recommended state role. While there are some exceptions, the Work Group generally recommends less state involvement for the "general population" and more involvement for populations at-risk or with identified conditions. Figure two illustrates this relationship and recommendation.

The assignment of these roles for state government marks the beginning of an important dialogue with community and other partners to identify the most collaborative and efficient means of ensuring the availability and funding of the core social support continuum. The discussion of community or private sector roles was not part of the Work Group's process.

Interfacing with Community Roles

With the help of City and County partners and local stakeholders, the Work Group has identified and recommends the most appropriate involvement of the state in delivering the core social supports identified. In general, the

Core Supports: Relationship to State Roles

State Roles Summarized

6. Direct service

State is responsible for providing the service or support directly to clients or citizens

5. Primary payer/funder

State is the sole or primary funder of a service or program; funding may go directly for or to an individual to access a support (such as OHP, cash awards) or to a program or service provider. This includes grants to the local level for services when the state is not involved in the design or delivery of the service through a partnership arrangement.

4. Quality assurance, regulation, licensing

State oversees and assures the quality of a particular service or support delivery, often through regulation or licensing.

3. Investment partner in the local delivery of service

State resources are invested in a mutual partnership of shared risk and responsibility with local government or other local partner that involves the design or delivery of a service or service system.

2. Technical assistance

State provides a variety of activities (such as convening work groups, best practices, providing data, etc.) to assist local government, service providers or others in the delivery of quality support services.

1. Catalyst

State is involved or responsible for stimulating the existence or delivery of a particular support through a variety of activities.

0. None

State Roles Summarized

0. None

1. Catalyst

State is involved or responsible for stimulating the existence or delivery of a particular support through a variety of activities.

2. Technical assistance

State provides a variety of activities (such as convening work groups, best practices, providing data, etc.) to assist local government, service providers or others in the delivery of quality support services.

3. Investment partner in the local delivery of service

State resources are invested in a mutual partnership of shared risk and responsibility with local government or other local partner that involves the design or delivery of a service or service system.

4. Quality assurance, regulation, licensing

State oversees and assures the quality of a particular service or support delivery, often through regulation or licensing.

5. Primary payer/funder

State is the sole or primary funder of a service or program; funding may go directly for or to an individual to access a support (such as OHP, cash awards) or to a program or service provider. This includes grants to the local level for services when the state is not involved in the design or delivery of the service through a partnership arrangement.

6. Direct service

State is responsible for providing the service or support directly to clients or citizens.

State Roles Summarized

0. None

1. Catalyst

State is involved or responsible for stimulating the existence or delivery of a particular support through a variety of activities.

2. Technical assistance

State provides a variety of activities (such as convening work groups, best practices, providing data, etc.) to assist local government, service providers or others in the delivery of quality support services.

3. Investment partner in the local delivery of service

State resources are invested in a mutual partnership of shared risk and responsibility with local government or other local partner that involves the design or delivery of a service or service system.

4. Quality assurance, regulation, licensing

State oversees and assures the quality of a particular service or support delivery, often through regulation or licensing.

5. Primary payer/funder

State is the sole or primary funder of a service or program; funding may go directly for or to an individual to access a support (such as OHP, cash awards) or to a program or service provider. This includes grants to the local level for services when the state is not involved in the design or delivery of the service through a partnership arrangement.

6. Direct service

State is responsible for providing the service or support directly to clients or citizens.

recommendations move the state out of the business of providing direct service, in favor of the role of partnering with communities in the design and delivery of core social supports.

The Work Group also recommends a stronger role for communities in delivering service at the closest level possible to Oregon's citizens. An important step in achieving this shift is additional dialogue with and among local partners. The Work Group recommends the Governor encourage local partners (counties, cities and others) to establish a shared vision of their role in ensuring core social supports. In addition, the Governor should provide a forum for continued discussion among state, counties and cities to establish partnerships that actualize the core social support continuum. The Work Group realizes that the process of understanding the interconnected relationships among state, local, public and private partners for social supports has just begun.

GAPS AND INCONSISTENCIES IN THE CONTINUUM

A core social support continuum has been identified to form the foundation of workforce and educational success. The next step is to analyze the availability of current social supports relative to the core social support continuum in order to identify apparent gaps or inconsistencies. This aspect of the project is off to a strong start.

Work has begun to map the social supports provided by existing agencies and services. Roles currently used by each agency have been determined using the definition of state roles found in Appendix E.

Using the recommended design of the core social support continuum, each of the core social supports identified has been mapped according to availability, stage of development, level of vulnerability and current role of state agencies in providing the support. Mapping of current supports will allow a graphic representation of apparent gaps and inconsistencies in the existing availability of core social supports.

The next step is to analyze the apparent inconsistencies. An in-depth evaluation of current services needs to be completed in order to determine whether the apparent inconsistencies indicate gaps and redundancies in services, or whether they merely seem inconsistent due to target population, funding restrictions and policies. Further analysis then needs to be done to identify opportunities for integration, re-alignment, and efficiencies. The next section outlines recommendations to complete this work.

ANALYZING GAPS AND INCONSISTENCIES

The Social Support Investment Work Group recommends the following steps to analyze potential inconsistencies identified in the current availability of core social supports.

1. The Governor should appoint an oversight committee to manage and ensure that analysis is completed and recommended adjustments are made. This committee should be under the leadership of the Governor's Office and comprised of the Director of the Department of Human Resources, the Director of the State Commission on Children and Families, the Director of the Oregon Youth Authority, the Director of Housing and Community Services (or their designees), a representative of the Department of Administrative Services, a representative of city government, a representative of county government, an education representative and a citizen representative.

The Governor should ask legislative leadership to appoint two members to the oversight committee, one from the house and one from the senate. The oversight committee should report findings from the work outlined below to the next legislative assembly.

2. Affected state agencies should meet in small groups by support area. These groups should analyze apparent inconsistencies and determine the most efficient means to deliver supports as recommended by the core social support continuum.
3. A Work Group member agency head whose agency is not immediately affected by recommended adjustments should facilitate each of the small group meetings. This will involve each agency in making difficult adjustments and in helping other agencies make similar complicated changes.
4. The original 28-member Social Support Investment Work Group should reconvene periodically to review progress.

It is possible that if the apparent inconsistencies are founded, adjustments may need to occur in four areas: 1) in the type of support provided, 2) in the agency that provides the support, 3) in the role of the state agency(ies) in providing the support, and 4) in the alignment of services and resources between agencies and local partners to provide the support. The Work Group recommends the process described above be used to analyze all potential inconsistencies in the continuum.

In addition, the Work Group recommends the Governor continue to discuss with local partners their role as well as partnership opportunities to achieve the core social support continuum.

Implementing the core social support continuum will require time consuming adjustments. The core social support continuum contains 26 supports. While the Work Group recommends analyzing all current supports, and advises making all necessary adjustments, it also recommends prioritizing such analysis based on underlying causal correlations and barriers that are most significant to implementing the continuum (please refer to the next section of this report). In other words, the first analysis should focus on those root causes requiring social support that are associated with opportunities for strategic investment in the core social support continuum.

Based on this rationale, the Work Group recommends first completing analysis and alignments for the following ten core social supports (listed in alphabetical order):

- ✓ Access to diagnosis and early evaluation
- ✓ Access to family support and in-home assistance
- ✓ Access to health care (including specialized medical care)
- ✓ Access to tobacco, alcohol and other drug treatment
- ✓ Affordable, safe housing
- ✓ Available and affordable child care
- ✓ Employment opportunities
- ✓ Life skills development and assistance
- ✓ Non-residential therapeutic care
- ✓ Opportunities to learn outside the formal educational system

OPPORTUNITIES FOR STRATEGIC INTERVENTION

Recognizing the complexity of the interrelationships between social supports, the Work Group engaged in a systematic analysis of the underlying links, correlations, and causes and effects to help determine how concentrating strategic attention could result in more positive outcomes. The Work Group characterized these relationships as “hydraulic”, i.e. an action (or inaction) on one part of the continuum might also provide positive (or negative) results in another part of the continuum. For example, dealing with a particular cause of juvenile substance abuse might also help to reduce juvenile crime rates. Key hydraulics are those actions that have the greatest impact on the overall system.

Identification of Key Hydraulics

The Work Group began its analysis of these hydraulic relationships by first listing those areas of major state expenditure where it believes costs could be substantially reduced by significant preventive activities. Six areas were identified:

- ✓ public assistance;

- ✓ health care;
- ✓ child protective services;
- ✓ dependent care for the elderly and persons with physical or emotional disabilities;
- ✓ juvenile corrections; and
- ✓ adult corrections.

The Work Group then questioned state agencies involved in providing these services to determine what types of data or research existed that would identify and quantify the primary characteristics of persons receiving these types of assistance. Those key characteristics identified were in turn subjected to the same type of analysis. Focus groups in five communities were also asked to identify client characteristics from their experience, to serve as a “check” on the research data.

Through this process, 13 key characteristics were identified. Many of them appeared as characteristics of clients in several of the systems listed above (for instance, substance abuse was a key characteristic of clients in child protective services, adult corrections, public assistance and health care). From there, the Work Group analyzed how much progress the state might be able to make in addressing a particular issue by looking at such data as Oregon trends versus national trends. The Work Group also calculated a potential return on investment should each characteristic be eliminated from the system.

The Work Group utilized these analyses to identify the top five issues (key hydraulics) that would provide the greatest payback for an investment aimed at reducing preventable costs. The key hydraulics are:

- ✓ Substance abuse;
- ✓ Lack of available and affordable housing;
- ✓ School failure;
- ✓ Unmet mental health treatment needs of children and their families;
and
- ✓ Lack of skills for self-sufficiency.

If Oregonians make concerted and immediate progress in addressing these issues, the Work Group believes the state could decrease costs of public assistance, child protective services and corrections within two to three biennia. These savings could then be reinvested in these activities, as well as other efforts, to provide longer-term solutions to these problems, such as services designed to support families of young children. The Work Group estimates that if expenses associated with these key hydraulics could be reduced by five percent, Oregon could potentially re-invest over \$500 million in strategies designed to produce long-term results for its citizens. But, up-front investments must be made.

A brief discussion of each key hydraulic is provided below.

Substance Abuse

Substance abuse problems affect a high number of the client populations receiving services from state agencies, including:

- ✓ 50 percent of those receiving public assistance;
- ✓ 77 percent of adults incarcerated and 55 percent of those on parole or probation;
- ✓ 85 percent of incarcerated youth;
- ✓ 40 percent of those in dependent care due to a mental illness; and
- ✓ 11 percent of those participating in managed care for a preventable illness.

Over the past six years, Oregon eighth grade students have been at or above the national average in use of alcohol, illicit drugs and cigarettes. Nationally, the trend for alcohol use among youth is slightly down, while drug use has increased. Across the United States more young people are smoking cigarettes as well. In Oregon, alcohol use by eleventh graders is slightly down, while use among eighth graders has risen. Drug use among Oregon teenagers has risen sharply, particularly for marijuana. Drug use among Oregon teens has been consistently at or above the national average since the early 1990s. Oregon has decreased its rate of alcohol and tobacco use among pregnant women since 1990.

The Work Group grades Oregon's room for improvement in the area of substance abuse as: Significant.

Lack of Available and Affordable Housing

Lack of available and affordable housing affects many of the clients served by state agencies, including:

- ✓ 100 percent of those in dependent care because of a mental illness;
- ✓ 100 percent of those in dependent care due to a developmental disability;
- ✓ 67 percent of those receiving public assistance

Historically, lower income Oregonians have counted on inexpensive housing as a way to balance their budgets. Since 1990, the number of lower income Oregonians who are paying more than 30 percent of their household income on housing has increased. In 1996, 7 percent more Oregon homeowners paid over 30 percent of their household incomes on housing than in 1990. The percentage of renters remained virtually the same. In 1990, 53 percent of Oregonians were not able to afford a median priced home. While Oregon housing costs are at or under comparable national averages, they are expected to increase as housing prices continue to escalate.

The number of homeless Oregonians increased by 1,821 from 1991 to 1995. The number of homeless children has grown since 1990 for a total increase of 1,169 by 1996. In the metro tri-county area, apartment vacancy rates are among the lowest in the nation --- a 0.7 percent average vacancy rate, down significantly from 3 percent in February 1996. The national average vacancy rate is 8.5 percent.

The Work Group grades Oregon's room for improvement in the area of available and affordable housing as: Modest.

Mental Health Treatment Needs for Children and their Families

Untreated mental health problems affect a significant number of the clients seen in Oregon's agencies, including:

- ✓ 75 percent of those receiving public assistance;
- ✓ 66 percent of incarcerated adults;
- ✓ 48 percent of youth in community programs, but in the jurisdiction of the Oregon Youth Authority;
- ✓ 40 percent of those on the child protection caseload;
- ✓ 30 percent of youth incarcerated in a state institution; and
- ✓ 7 percent of youth in the jurisdiction of local juvenile departments;

While mental health treatment needs are broad and correlated with many issues, there are key data that may help us measure our ability to address the issues.

Oregon has been at or near the national average on many of these issues since 1990. However, suicide rates in Oregon are historically higher than the national average and have gone up since 1990, while the national rate has remained steady. Oregon's suicide rate among youth is still 34 percent higher than the national average.

The Work Group grades Oregon's room for improvement in the area of unmet treatment needs for children and their families as: Significant.

School Failure

Failure in school is a common characteristic of the clients served by many of Oregon's state agencies, including:

- ✓ 36 percent of incarcerated adults have dropped out of school;
- ✓ 35 percent of incarcerated youth have dropped out of school, 82 percent have a special education need; and
- ✓ 14 percent of individuals receiving public assistance have dropped out of school.

Oregon's high school drop out rate has risen almost one percent since 1990. The percentage of 16-19 year old Oregon youth not attending school or working

has gone up since 1990, while the national trend has remained steady. Oregon ranks 26 of 50 states in youth not working and not in school. While national trends have also improved, Oregon is doing better than the nation in adults completing high school equivalent programs.

The Work Group grades Oregon's room for improvement in the area of school failure as: Significant.

Lack of Skills for self-sufficiency

A significant number of Oregonians appear to lack the basic skills necessary to be self-sufficient and maintain independence from ongoing state support. These basic skills may include work skills, parenting skills, and the skills to access support within family or community systems. Lack of basic skills to achieve self-sufficiency is reported as a significant contributor to the problems of clients in state systems, including:

- ✓ 100 percent of mentally ill Oregonians in dependent care;
- ✓ 60 percent of those receiving public assistance;
- ✓ 57 percent of those who receive child protective services; and
- ✓ 49 percent of incarcerated adults and 30 percent of those on parole or probation.

According to surveys conducted in the past five years, almost one-quarter of Oregon adults lack basic literacy skills and almost one-third of all children are entering school unprepared to participate successfully. While national data are not comparable, Oregon is thought to be at or moderately above national averages. Data on other self-sufficiency skills are not readily available.

The Work Group grades Oregon's room for improvement in the area of lack of skills for self-sufficiency as: Unknown.

The inter-connectedness of these issues is illustrated by the story of Melissa Madison. Melissa (not her real name) is a 16 year old girl who was part of the state juvenile justice system until her most recent crime placed her with the adult system under Measure 11. Melissa is an alcoholic who dropped out of school at age 13. She cannot read and has no marketable job skills. Since she was eight years old Melissa, her mother and younger brother have not had a permanent residence. She is emancipated. Melissa has just received a hearing to give her a "second look" for her crime. Due to the low risk nature of her crime, the judge would like to release her. The only potential sources of support for Melissa are public assistance, subsidized housing and state supported skill training. Without this support, Melissa will likely return to the corrections system. The judge has ordered state agencies to provide him with a plan to support Melissa.

Recommendations to Address Key Hydraulics

Likely the most significant finding from the Work Group's "hydraulic" exercise is that social supports cannot, and should not, be placed in separate, stand-alone categories. Little, if anything, in the social support arena is mutually exclusive. As the Governor's Human Investment Framework points out, the responsibility for addressing these issues is shared among many partners, as is the return on any gain Oregon may make in eliminating the barriers they present.

As a result, the Work Group recommends that Governor Kitzhaber call together state, local, community, public and private partners to develop a collaborative Oregon investment initiative in each of the key hydraulic areas outlined above. Such an initiative should:

- ✓ supplement the data provided with additional or updated information;
- ✓ determine key points of impact on our collective state, local, public and private enterprises;
- ✓ establish the most efficient means of utilizing collective resources and expertise to address the issue;
- ✓ identify prompt and effective actions for short-term and long-term impacts;
- ✓ capture, measure and communicate potential savings for reinvestment; and
- ✓ communicate and recommend any changes necessary to the Governor and Legislature.

The Governor should stay informed of progress made and should remain a catalytic leader for change. The Governor should further play a visible role in helping Oregonians understand the interconnections and hydraulic relationships between these issues and our ability to have a livable Oregon where Oregonians have jobs; where our communities are safe, caring and engaged; and where our surroundings are healthy and sustainable.

RECOMMENDATIONS

This final report of the Governor's Social Support Investment Work Group has made a series of recommendations for future action. For ease of reference, the recommendations are repeated here by category.

Implementing the Core Support Continuum

1. The Governor should direct the adoption of the principles for social support.
2. The Governor should direct and support state agencies' use of the Guiding Principles, Objectives, State Interests and Process for State and Local Partnerships in the social support arena.
3. The Governor should direct the adoption of the recommended Core Support Continuum and corresponding roles for state agencies as part of his Human Investment Framework. The Governor should direct agencies to align their resources, support and roles according to the Core Support Continuum, and by the recommended method below.
 - ✓ The Governor should appoint an oversight committee to manage and ensure that analysis is completed and recommended adjustments are made. This committee should be under the leadership of the Governor's Office and comprised of the Director of the Department of Human Resources, the Director of the State Commission on Children and Families, the Director of the Oregon Youth Authority, the Director of Housing and Community Services (or their designees), a representative of the Department of Administrative Services, a representative of city government, a representative of county government, an education representative and a citizen representative.

The Governor should ask legislative leadership to appoint two members to the oversight committee, one from the house and one from the senate. The oversight committee should report findings from the work outlined below to the next legislative assembly.

- ✓ Affected state agencies should meet in small groups by support area. These groups should analyze apparent inconsistencies and determine the most efficient means to deliver supports as recommended by the core social support continuum.

A Work Group member agency head whose agency is not immediately affected by recommended adjustments should facilitate each of the small group meetings. This will involve each agency in making difficult adjustments and in helping other agencies make similar complicated changes.

- ✓ The original 28-member Social Support Investment Work Group should reconvene periodically for advice and check-in.

Addressing Barriers and Key Hydraulics

1. Analysis and alignments to the core social support continuum should be completed for the following core supports first:
 - ✓ Access to diagnosis and early evaluation
 - ✓ Access to family support and in-home assistance
 - ✓ Access to health care (including specialized medical care)
 - ✓ Access to tobacco, alcohol and other drug treatment
 - ✓ Affordable, safe housing
 - ✓ Available and affordable child care
 - ✓ Employment opportunities
 - ✓ Life skills development and assistance
 - ✓ Non-residential therapeutic care
 - ✓ Opportunities to learn outside the formal educational system
2. The Governor should encourage local partners (counties, cities and others) to establish a shared vision of *their* role in ensuring core social supports. The Governor should also provide a forum for continued discussion among state, counties and cities to establish partnerships to actualize the core support continuum.
3. The Governor should call together state, local, community, public and private partners to develop a collaborative Oregon investment initiative in each of the key hydraulic areas outlined above. Such an initiative should:
 - ✓ supplement the data provided with additional or updated information;
 - ✓ determine key points of impact on our collective state, local, public and private enterprises;
 - ✓ establish the most efficient means of utilizing collective resources and expertise to address the issue;
 - ✓ identify prompt and effective actions that can be taken for short-term and long-term impacts;
 - ✓ capture, measure and communicate potential savings for reinvestment; and
 - ✓ communicate and recommend any changes necessary to the Governor and Legislature.
7. The Governor should stay informed of progress made on the investment initiatives and should remain a catalytic leader for change. The Governor should further play a visible role in helping Oregonians understand the interconnections and hydraulic relationships between these issues and our

ability to have a livable Oregon where our citizens are as productive and self-sufficient as possible and where Oregonians have jobs, communities are safe, caring and engaged, and our surroundings are healthy and sustainable.

SUMMARY AND CONCLUSION

This report makes a series of recommendations that, if implemented, can form the foundation needed for Oregonians to be as independent, productive and self-sufficient as possible. It recognizes the individual needs of many in our state and acknowledges that there are some for whom total “self-sufficiency” will never be possible.

This report recommends potential new roles for state government and state agencies. It suggests continuing the emphasis of Governor Kitzhaber on collaborative partnerships, wise investments and increasing accountability. In particular it suggests furthering his call for community-based services and for communities’ responsibility in supporting their family and neighbors.

This report calls to action the Governor, state agencies and community partners to implement a new vision for Oregon’s system of social support. It suggests a changing approach particularly focused at the state level and regarding the interaction of state agencies. It recommends a series of collaborative investment initiatives among all partners to address common barriers that could prevent Oregon’s goals of independence and productivity for its citizens.

Finally, this report recommends seven specific steps that should be taken to implement Oregon’s approach to social support and self-sufficiency.

Appendix A Work Group Membership and Work Plan

Roger Auerbach, Senior and Disabled Services Division
 Karen Brazeau, Oregon Youth Authority
 Dave Cook, Department of Corrections
 Hersh Crawford, Office of Medical Assistance Programs
 Jan Dean, Employment Department
 Janis Elliot, Child Care Division, Employment Department
 Lynn Fallin, Oregon Commission on Children and Families
 Muriel Goldman, Citizen Advocate
 Larry Griffith, League of Oregon Cities
 Elinor Hall, Health Division
 Barry Kast, Mental Health and Developmental Disabilities Division
 Toni Phipps, Alcohol and Drug Program Office
 Phil Lemman, Criminal Justice Commission
 Mark Gibson, Office of the Governor
 Judy Miller, Oregon Department of Education
 Bobby Mink, Department of Human Resources
 Sandie Hoback, Adult and Family Services Division
 Greg Peden, Oregon State Police
 Judge Laura Pryor, Association of Oregon Counties
 Connie Revell, The Oregon Option
 Joil Southwell, Vocational Rehabilitation Division
 Jean Thorne, Office of the Governor
 Kay Toran, State Office for Services to Children and Families
 Jeff Tryens, Oregon Progress Board
 Sharlene Walker, Office of Community College Services
 Gary Weeks, Department of Human Resources
 Kathryn Weit, Citizen Advocate
 Gustavo Wilson, Housing and Community Services

Workplan and Timeline

May 1996

- √ Letter goes to agency heads from Governor outlining his intentions/expectations, and asking for participation at highest levels.
- √ Secure participation from county commissioners (Laura Pryor).
- √ Secure participation from cities (Larry Griffith).
- √ May 23rd retreat. Governor attends delivers charge and expectations, answers questions; establish shared vision with specific focus statements, statements of desired results and strategies; establish meeting schedule through January 1997.
- √ Staff arrangements are secured.
- √ Staff meets individually with agency heads to begin to assess issues
- √ Establish decision making protocol.

June 1996

- √ Identify methods to evaluate outcomes & interrelationships of process.
- √ Outline individual and agency self-interests and contributions to the effort.
- √ Letter to stakeholders (such as local commissions, local public safety coordinating councils, local DHR branches, service integration and CPT projects, legislators and others) from Governor outlining intentions and expectations for the project.
- √ Staff review and summarize existing documentation to assist with the effort.
- √ Begin to draft strategic continuum.
- √ Finalize mission and ground rules.
- √ Establish conflict resolution process.
- √ Staff to create communications plan for information and feedback from other key partners (add to workplan).
- √ Staff begins to assess supports provided by existing services (using 1991 Coordinating Council services inventory as a base)

July 1996

- √ Continue to review and adjust draft continuum (adding domains of responsibility).
- √ Staff continues to update/assess existing supports; place on data base.
- √ Begin to sketch existing continuum, including roles, responsibility for investment, planning and relationships.
- √ Begin to identify domains of responsibility for strategic supports (state, local, individual)

August 1996

- √ Identify system beliefs, including cause/effect & root cause.
- √ Staff begin to gather data regarding root causes.
- √ Finalize state roles, responsibility for investment, etc.
- √ Send monthly update to stakeholders.
- √ Governor to discuss SSIWG in quarterly meeting with LOC/AOC

September 1996

- √ Governor attends SSIWG meeting
- √ Staff finalize database entry.
- √ Review root causes and relationship to continuum
- √ SSIWG reviews and approves initial draft of strategic continuum
- √ Send monthly update to stakeholders.
- √ SSIWG intro over EdNet and initial feedback.

October 1996

- √ Send monthly update to stakeholders.
- √ Circuit rider presentations and gather input Harney, Sherman, Coos, Lane, Multnomah counties

- √ Begin to develop evaluation procedures for strategic continuum--link to Oregon Shines.
- √ Begin to identify implementation issues (gaps, redundancies, etc.).
- √ Begin to review data related to root causes; finalize key work on key hydraulics.

November 1996

- √ Governor attends SSIWG meeting.
- √ Identify draft outcomes for strategic continuum.
- √ Draft evaluation procedures for process and results.
- √ Send monthly update to stakeholders.
- √ Governor to discuss SSIWG in quarterly meeting with LOC/AOC

December 1996

- √ Use principles and strategic continuum to prioritize gaps, redundancies, etc.
- √ Begin design of legislative presentation (process and product).
- √ Begin design of workplan for system reinvestment and realignment.
- √ Send monthly update to stakeholders.

January 1997

- √ Staff begin to write report.
- √ Plan for succession of the work.
- √ Schedule presentation of key findings to Governor.
- √ Review of continuum of existing supports, services, responsibilities, etc.
- √ Begin to review overlay of strategic continuum with existing supports, services.

February 1997

- √ Finalize implementation plan.
- √ Report finalized.
- √ Staff meets with agency communication managers and/or media contacts.
- √ Begin to implement promotional plan.
- √ Staff conducts process interviews with SSIWG members.
- √ Celebrate success and close the work!
- √ Finish review of current system vis a vis strategic continuum.
- √ Create promotional plan.
- √ Deliver plan to Governor Kitzhaber.

Appendix B Principles, Objectives and Process for Partnership

Guiding Principles for State/Local Partnerships

Agreed upon at local government summit: Governor, County and City Officials (March 27, 1996)

Preamble

All governments working together provides a better tool through which the people of Oregon can achieve their aspirations. Obtaining our preferred future requires a partnership guided by the following principles, objectives, and interests.

Principles

- 1) Work together to support each Oregon community's vision for the future. Help them see how their individual vision can fit into and support shared vision for Oregon. Such visions must be collaboratively developed and widely communicated, understood, and supported.
- 2) Work together to achieve the vision, with accountability established through negotiated, locally appropriate outcomes.
- 3) Put aside past differences - build trust and courage to change.
- 4) Take the reasonable risks that change and innovation require: Be positive, constructive, and proactive; listen to and understand each other; tell each other what we want and what's happen--avoid surprises; stand together, openly and honestly, with public and press.
- 5) Include each other and all stakeholders, private and public--respect the diversity of Oregonians, their communities and their viewpoints.
- 6) Build policies and services from the local level. Respect local uniqueness. Maximize local flexibility. Strengthen local capacity. Focus local governmental resources on community goals and negotiate conditions for transfer of responsibility.
- 7) Recognize the power of concerted action. Expand the opportunities to work together.
- 8) Negotiate responsibilities based on common goals, not traditional positions.
- 9) Mobilize public and private resources to achieve common goals. Be good stewards of Oregon's values and resources.
- 10) Maintain the continuity and integrity of the partnership and its goals. Meet regularly to ensure the application of these principles and enhancement of the partnership.

Objectives and State Interests for Local Partnership/Delivery of Services

Objectives

- 1) Any partnership will clearly enhance overall wellness of communities, families, adults, or children, and will honor the diversity within and among communities.

2)Any partnership will clearly enhance a service system with the rationale and context for locally designed system clearly articulated.

3)Any partnership will clearly further an Oregon or local Benchmark goal.

4)Any partnership will recognize that all resources are limited and will reflect appropriate allocation of these resources.

State Interest

1)Any partnership will be included in all applicable state and local comprehensive or strategic plans.

2)Any partnership will have support and approval of the key governing boards (e.g. Board of Commissioners, City Council, etc.).

3)Any partnership will include shared investments, risks, and responsibilities by both state and local partners.

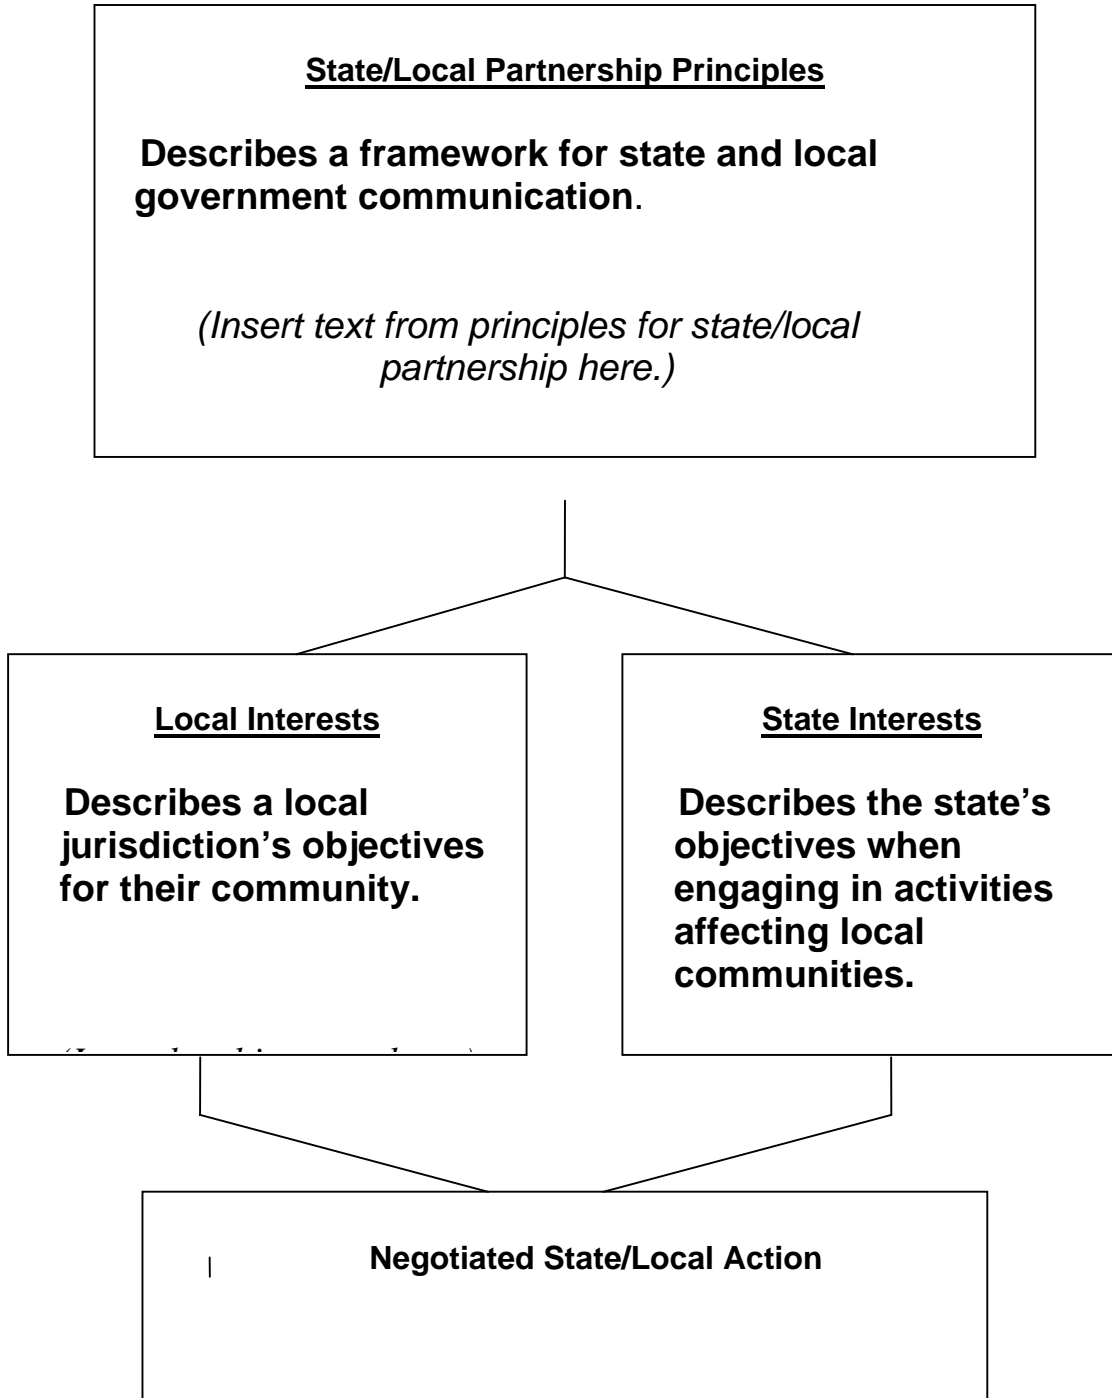

4)The design of any partnership will include clearly articulated financial accountability for all parties and completion of legally required plans.

5)The planning work for any partnership will include the effected local, state, consumer, and citizen stakeholders.

6)The evaluation methods for any partnership will include short term outcome measures and indicators (real change in children, adults, families, communities) that are linked to the Benchmark goal(s).

7) Any partnership will provide learning and redesign opportunities for all partners through the course of implementation and evaluation.

Example of Relationship Between State/Local Partnership Principles, State Interests and Local Interests

Appendix C Human Investment Framework**A FRAMEWORK FOR OREGON'S HUMAN INVESTMENT POLICIES****GOVERNOR JOHN A. KITZHABER, M.D.**

As Oregon communities plan for maintaining or increasing their well being, a key component involves economic opportunities available to their residents. Without decent-paying jobs or a strategy to move to them, the ability of the community and the state to increase its own social and economic health is diminished. Investing in people through education, health and other basic services is critical to supporting a healthy economy. A thriving economy in turn generates the added resources needed to investing more in people. A human investment strategy at the state and local levels is critical to maximizing our public and private resources so people can become employable, productive and contributing citizens.

The State of Oregon continues to confront limitations in public resources and now may face the prospect of federal funding reductions and changes in a variety of program areas relating to human investments (such as education, employment and training, welfare and social services). At the same time, the public questions the level of government performance, rightfully expecting that government will implement more effective and efficient ways of achieving important outcomes. Human investment policies is one arena in which additional collaboration and concentration of our resources will allow us to increase the productivity and independence of Oregonians and the well being of our communities.

Oregon has made major strides in assisting low-income people to move from welfare to work, usually into entry-level jobs. Yet many Oregonians also are being displaced or stranded by regional, national and global economic changes. Employers are facing new economic challenges that require new ways of using technology and organizing work that in turn require continual restructuring of the workforce.

Enabling Oregonians to be as independent and productive as possible allows us to steer more public dollars away from providing maintenance for persons in need and toward efforts that further increase the productivity and livability of our state and communities. It is time to take a fresh look at how our policies should work together to concentrate our public resources and allow the greatest short-term and long-term investments in our state's human resources. To do that, there are two primary issues to address:

1. What should be the continuums and interrelationships of our policies surrounding education, workforce, welfare and social supports?
2. What should be the expectations and responsibilities for government, the individual/family, businesses and communities in supporting those continuums?

Addressing these issues will provide a framework within which public and private partners at all levels can come together to better define roles, responsibilities and

necessary linkages to accomplishing these overarching goals. This framework can be the foundation on which communities can build partnerships to meet local needs.

INTERRELATIONSHIP OF HUMAN INVESTMENT POLICIES

Although Oregon, at both the state and local levels, has begun to look at how services (both public and private) can be integrated within the education, workforce or social service arenas, there is no overall vision for how these programs should support each other to accomplish our human investment goals.

Many sectors must contribute to the goal of Oregonians being as independent and productive as possible. Education and social support systems help prepare people for the workforce. At the same time, job opportunities must be available to allow people to actually enter employment. Employment services, training and other social supports also may be necessary to assist individuals in entering the workforce and progressing up the economic ladder. Continuation up the economic ladder requires higher-wage jobs and more highly educated people to fill those jobs. Care and supports for those unable to become completely self-sufficient are also necessary.

The goal of making Oregon's workers and employers more productive and competitive in a global economy must remain a guiding vision. Public investments must respond to economic realities facing our state. New kinds of government and business partnerships are necessary to more clearly focus investments towards reducing worker turnover and gaining agreement on the kinds of skills and training workers need in this changing economy.

In times past, much of the needed work could be performed competently by workers with less than a full high-school education. In the past decade or two, the economy's needs have shifted dramatically toward work requiring a much higher level of formal education and training. Unquestionably, much of the increased demand on our social service, welfare, and criminal justice systems is due to the new inability of poorly educated individuals to find work that pays well enough to support themselves and their families.

We must make investments not only in our current workforce, but also prepare our students for these workforce changes and help lower-income people progress up the economic ladder and away from the need for governmental support in their daily lives.

EXPECTATIONS AND RESPONSIBILITIES

As we face limitations in public resources, it is critical that various parts of the public and private sectors work together at both the state and local levels to define areas of expectations and responsibilities. These partnerships enable us to focus our public resources on those activities where we cannot realistically expect the private sector to bear the entire burden.

In determining responsibilities, we should consider the benefits that will be derived by the public, business, individuals and their families, as well as by communities as a whole:

- **Individuals** have a personal interest (both economic and social) in being independent and productive.
- **Businesses** have an interest in a well-trained workforce that allows them to be competitive and thus more profitable.
- **The public and communities** have an interest in a healthy economy in which their residents can be employed at a level where they are: 1) not reliant on individual governmental support; 2) capable of contributing to the economic well being of the community and 3) unlikely to engage in criminal activity. For those individuals who are unable to be completely self-sufficient, the public has an interest in them being as productive as possible, reducing the long-term costs of full dependence on public support.

Government has the responsibility for cost-effective use of public funds and resources and is accountable for measurable results from use of these resources. Private employers, as important members of their communities, have the responsibility to act as good citizens and provide economic opportunities to the public. Individuals are responsible for working to improve their lives, striving for economic well-being without public support for their daily expenses.

CONTINUUM OF HUMAN INVESTMENT POLICIES

No individual is literally self-sufficient. Everyone depends on support from family and community (public and private) at various points in a lifetime. Such supports are needed to become and remain as self-sufficient as possible. The continuum of family and community support begins before conception and continues on throughout a person's life.

The use of public resources must be focused on helping individuals move to a point of being at least minimally self-sufficient; from that point on, government (the public) and the individual share an interest (responsibility) in moving to a higher level of income. This should provide greater assurance that the individual will not be reliant on individual governmental support in the future. Central to moving up this continuum, however, is the need to have higher-wage employment opportunities. Public resources also must be used to enhance the ability of businesses to generate such jobs. Businesses, because they depend on capacities developed by a number of public investments, should then have an interest in helping develop and maintain the continuum of public and private support.

There is a minimum level of knowledge and skills needed to assure at least an entry-level job. There is a certain level of education necessary to gain that level of knowledge and skills to enable people to be at least minimally self-sufficient and not in need of public assistance (welfare). We also assume that increasing these skills will decrease the incidence of criminal behavior. The **public** has an interest in providing for that system of education, not only to prepare people to participate in a democratic society, but to become productive members of their communities.

To take full advantage of these educational opportunities, individuals need a nurturing family and other social supports (e.g. safe living, food, clothing, housing, health care, transportation). Where families are not capable of providing such supports, the **public** has an interest in assisting these families to care for and protect their members. Public support increases the personal wellness of these families and allows them to complete their education and move into productive employment.

As a person acquires the knowledge and skills necessary to be minimally self-sufficient, the **public** has an interest in assisting that person to move further into self-sufficiency and away from the potential need for public assistance. The **individual** also has an interest in improving his/her income. People not reliant on governmental support for their day-to-day living assume more responsibility and the public (government) becomes less responsible for funding the activities necessary to their advancement. For example:

- People moving off welfare still may require governmental assistance in the form of child care subsidies, housing supports, health care or food stamps to enable them to work. Once they are in entry-level jobs, they may be able to take publicly-supported training programs to help them advance further into higher-wage jobs. These jobs, in turn, will decrease the possibility that the person will return to public assistance.
- A person moving into post-secondary education is expected to pay tuition, but the public partially subsidizes the cost of post-secondary public education because it benefits from having education available to all and from a well-trained and productive workforce.
- As an individual moves up the income or educational ladder, the amount of direct assistance available from the government (public) decreases, as the benefit becomes more pronounced on the personal side.

There are workers in family-wage jobs who are displaced because of changes in our economy or personal circumstance. The **public and private sectors** have an interest and responsibility in assisting these workers to find comparable employment through reemployment services and, if necessary, to assist those who need further retraining to be productive. Publicly subsidized training programs must be available so those workers can be reemployed at a self-sufficient wage level.

Businesses with a well-trained workforce are more competitive and profitable. Furthermore, **businesses** have a strong interest in providing a level of compensation and benefits to their employees that decreases the likelihood that those employees will need governmental support. This then allows public resources to be put to more productive uses.

There are certain people who, because of age or disability, cannot be fully self-sufficient. The family or community often can provide the daily supports they may need to be as productive as possible. The **public**, however, has an interest and responsibility in providing supports that assist these individuals in being productive and that may be necessary to allow them to live in the home or community for the longest period of time, thus preventing later higher public costs for treatment or institutionalization. In addition, a “safety net” of public services may be necessary to care for those who do not have the family supports to allow them to adequately care for themselves.

HOW THIS FRAMEWORK CAN SUPPORT PLANNING FOR CHANGE

Assuming the goal is to develop a system that increases self-sufficiency and better serves the economy, it is necessary to determine how various programs and activities can provide support to personal, social, and economic success along these continuums.

In addressing issues of productivity and self-sufficiency, there must be a proper balance in the allocation of resources. For instance, if we only address the needs for education without recognizing that people need supportive families and communities and a system of social supports to take advantage of educational opportunities, we will not maximize that educational investment. With limited governmental resources, our ability as a state to be as productive as possible must rely on support from all parts of our community, including the private sector. We need partnerships and mutual responsibilities among a number of parties and sectors for us, as Oregonians, to best address these issues.

As we plan how to best utilize our resources, we need to constantly examine how these plans fit within this overall framework. This means that it is necessary to work across agency lines at the state and local levels, as well as with other communities of interest, to determine how we can provide the continuums of support to accomplish our goals.

frame8.doc -- 5/29/96

FRAMEWORK FOR THE INTEGRATION OF OREGON'S HUMAN INVESTMENT POLICIES

Appendix D Definition of Core Social Supports

Social Supports:

1. Access to Alcohol, Tobacco and Other Drug Education
2. Access to Alcohol, Tobacco and Other Drug Treatment
3. Access to Community Support Networks
4. Access to Diagnosis and Early Evaluation
5. Access to Family Support and In-home Assistance
6. Access to Health Care
7. Access to Transportation
8. Adequate Nutrition
9. Affordable, Safe Housing
10. Assisted Decision Making
11. Available and Accessible Child Care
12. Employment Opportunities
13. Family Safety and Protection
14. Healthy and Accessible Environment
15. Information About Child and Human Development
16. Life Skills Development and Assistance
17. Non-residential Therapeutic Care
18. Opportunities for Positive Interaction with Peers and Role Models
19. Opportunities to Explore Career Options
20. Opportunities to Learn Outside Formal Education System
21. Parental Standards and Positive Discipline
22. Prenatal Care and Preparation
23. Responsible Health and Sexual Interactions
24. Safe and Accessible Work Environment
25. Safe and Secure Residential Settings
26. Understanding Financial Management

Access to Tobacco, Alcohol and Other Drug Education

The ability to obtain information and training about tobacco, alcohol and other drugs and their effects.

General Population

Any Oregonian

State's role: Catalyst to ensure the support gets delivered
Technical assistance
Investment partner in the local delivery of services

At-risk Populations

Oregonians in danger of misusing tobacco, alcohol and other drugs who may need short-term assistance to access training and education. Examples might include status offending youth, parolees, youth who have dropped out of school, pregnant women and their partners, etc.

State's role: Catalyst to ensure the support gets delivered
Investment partner in the local delivery of services
Technical assistance

Populations with an Identified Condition

Oregonians misusing tobacco, alcohol and other drugs who need ongoing assistance to access training and education. Examples include individuals arrested for driving under the influence, homeless individuals abusing alcohol, pregnant women or their partners abusing drugs or alcohol, individuals incarcerated for drug-related crimes, etc.

State's role: Catalyst to ensure the support gets delivered
Investment partner in the local delivery of services
Primary payer for individuals to access support
Direct service provider through existing case management
Technical assistance
Quality assurance/regulation/licensing

Access to Alcohol and Other Drug Treatment

The ability to obtain information and culturally appropriate and effective care related to alcohol or drug abuse and addiction.

General Population

Any Oregonian

State's role: None

At-risk Populations

Oregonians with an alcohol or other drug DSM-IV diagnosis in need of temporary assistance to access alcohol or other drug treatment. Examples include status offending youth, parolees, low-income seniors, low-income individuals arrested for driving under the influence, pregnant women and their partners, etc.

State's role: Quality assurance, regulation, licensing
Catalyst to ensure access is available
Investment partner in the local delivery of services
Technical assistance to service providers
Primary payer for individuals to access support

Populations with an Identified Condition

Oregonians with an alcohol and other drug DSM-IV diagnosis in need of ongoing assistance to access alcohol or other drug treatment. Examples include low-income homeless, incarcerated individuals, parents in danger of losing parental rights, etc.

State's role: Catalyst to ensure access is available
Primary payer for individuals to access support
Quality assurance, regulation, licensing
Investment partner in the local delivery of services
Technical assistance to service providers

Access to Community Support Networks

The opportunity to obtain information about and connection to organizations, groups and agencies in the community that provide social interaction and emotional support, (such organizations include churches, service clubs, scouting, etc.).

General Population

Any Oregonian

State's role: None

At-risk Populations

Oregonians in need of assistance to access community support organizations or networks. Examples include children or adults transitioning out of residential care or institutional settings, homeless people with tuberculosis, pregnant women, etc.

State's role: Catalyst to ensure the availability of support networks
Technical assistance to the local level
Investment partner in local delivery of services

Populations with an Identified Condition

Oregonians in need of ongoing access to community support organizations or networks and may need them on an ongoing basis in order to become or remain as productive as possible. Examples include high need children or adults transitioning out of residential care or institutional settings with a diagnosed disability, individuals with Alzheimer's disease, etc.

State's role: Catalyst to ensure the availability of support networks
Technical assistance to the local level
Investment partner in local delivery of services

Access to Diagnosis and Early Evaluation

The ability to obtain information as soon as possible about the causes, treatment and prognosis of physical, emotional or mental conditions or situations.

General Population

Any Oregonian

State's role: See education continuum

At-risk Populations

Oregonians in danger of having or developing physical, or mental conditions, and especially those who may need initial assistance in accessing diagnosis and early evaluation. Examples include drug-abusing pregnant women, pregnant teens, etc.

State's role: Primary payer for individual to access services

Investment partner in local delivery of services

Quality assurance, regulation and licensing

Catalyst to ensure the service is available

Technical assistance to local communities

See education continuum

Populations with an Identified Condition

Oregonians with a diagnosed physical, or mental condition and who need ongoing assistance in accessing additional diagnosis and evaluation. Examples include babies born with congenital anomalies to a poverty-level family, an out-of-work adult recently diagnosed with multiple sclerosis, etc.

State's role: Primary payer for individual to access services

Investment partner in local delivery of services

Quality assurance, regulation and licensing

Catalyst to ensure the service is available

Technical assistance to local communities

See education continuum

Access to Family Support and In-home Assistance

The ability to obtain help in the home targeted toward the family for the purpose of addressing individual and family conditions, behaviors or situations that may reduce independence, productivity or self-sufficiency.

General Population

Any Oregonian or Oregon family

State's role: None

At-risk Populations

Oregonians who need in-home or other family support assistance for a short period, and are not able to access such assistance. Examples include families in poverty with low birth weight babies, teen parents, families of children with disabilities, individuals who are unable to use facility-based services due to physical language or cultural barriers, etc.

State's role: Investment partner in local delivery of services
Technical assistance to ensure quality services
Catalyst to ensure the availability of services

Populations with an Identified Condition

Oregonians who need in-home or other family support assistance on an ongoing basis, especially as an alternative to institutional care, who are not able to obtain such assistance. Examples include families with drug-affected infants, senior citizens with developmental disabilities, low-income families of children with disabilities, etc.

State's role: Primary payer or funder
Investment partner in local delivery of services
Technical assistance to ensure quality services
Catalyst to ensure the availability of services

Access to Health Care

The ability of Oregonians to have information about and availability of the supports necessary to care for and maintain their physical well-being, including preventive care.

General Population

Any Oregonian

State's role: Quality assurance, regulation and licensing of health care providers/facilities and health insurance
Catalyst to increase geographic capacity
Technical assistance to providers

At-risk Populations

Oregonians who need temporary assistance in order to access health care or information about it. Examples include individuals who are unemployed, low-income individuals who are employed in jobs without health coverage, homeless families, pregnant women, etc.

State's role: Investment partner in the local delivery of services, including incentives to expand coverage to low income individuals
Quality assurance, regulation and licensing of health care providers, facilities and health insurance
Catalyst to increase geographic capacity
Primary payer for those with least resources
Technical assistance to providers

Populations with an Identified Condition

Oregonians in need of regular assistance to access health care or information about it. This includes the ability of Oregonians to access or obtain medicine or therapy to address a specific physical condition in order to maintain a healthy and independent life. Examples include developmentally disabled individuals, certain persons with chronic conditions, incarcerated individuals, etc.

State's role: Investment partner in the local delivery of services, including incentives to serve those with communicable diseases
Quality assurance, regulation and licensing of health care providers, facilities and health insurance
Catalyst to increase geographic capacity
Primary payer
Technical assistance to providers

Access to Transportation

The ability to obtain and utilize means of carrying oneself or one's family from one place to another in order to be as independent and productive as possible by working, obtaining services, meeting basic needs or participating in community life.

General Population

Any Oregonian

State's role: See also Oregon's Transportation Initiative report

None

At-risk Populations

Oregonians in need of access to transportation on a temporary basis in order to be as independent and productive as possible. Examples include unemployed individuals, homeless youth, etc.

State's role: See also Oregon's Transportation Initiative report

Quality assurance and licensing

Primary payer for certain individuals

Catalyst to ensure that transportation exists

Investment partner to support building local infrastructure

Technical assistance concerning licensing

Populations with an Identified Condition

Oregonians in need of access to transportation on a regular basis in order to be as independent and productive as possible. Examples include physically or developmentally disabled individuals, geographically isolated families, etc.

State's role: See also Oregon's Transportation Initiative report

Quality assurance and licensing

Primary payer for certain individuals

Catalyst to ensure that transportation exists

Investment partner to support building local infrastructure

Technical assistance concerning licensing

Adequate Nutrition

The ability to obtain proper diet and nourishment necessary to sustain one's physical well-being.

General Population

Any Oregonian

State's role: None

At-risk Populations

Oregonians in need of temporary assistance in accessing adequate nutrition for themselves or their families. Examples include unemployed adults, individuals recently released from residential settings, low income pregnant women and children, etc.

State's role: Investment partner in the local delivery of nutrition services

Primary payer for certain individuals to access nutrition

Quality assurance, regulation and licensing of dietitians

Catalyst to ensure that information about nutrition is available

Technical assistance concerning regulation and licensing

Populations with an Identified Condition

Oregonians in need of regular assistance in accessing adequate nutrition for themselves or their families. Examples include developmentally disabled, individuals with a chronic mental health problem, senior citizens living below the poverty line, etc.

State's role: Investment partner in the local delivery of nutrition services

Primary payer for certain individuals to access nutrition

Quality assurance, regulation and licensing of dietitians

Catalyst to ensure that information about nutrition is available

Technical assistance to service providers

Direct service provider for existing case management

Affordable, Safe Housing

The ability of Oregonians to access and continue to live in secure, economical community-based accommodations.

General Population

Any Oregonian

State's role: Catalyst to ensure housing and information about housing is available

Technical assistance to banks, housing authorities, non-profit providers and developers

At-risk Populations

Oregonians in need of temporary assistance to access safe, affordable housing. Examples include individuals recently released from institutions, large families where no adult is currently employed, etc.

State's role: Investment partner in local development of safe, affordable housing
Catalyst to ensure housing and information about housing is available

Technical assistance to banks, housing authorities, non-profit providers and developers

Populations with an Identified Condition

Oregonians in need of regular assistance to access safe and affordable housing. Examples include the chronically mentally ill, developmentally disabled adults, low income seniors, etc.

State's role: Investment partner in local development of safe, affordable housing
Catalyst to ensure housing and information about housing is available

Technical assistance to banks, housing authorities, non-profit providers and developers

Quality assurance, regulation and licensing

Primary payer for individuals to access housing

Assisted Decision-making

The need to have guidance in order to make necessary decisions about one's life or situation because the individual is unable to do so.

General Population

Any Oregonian

State's Role: None

At-risk Populations

Oregonians who periodically need assistance to make beneficial choices. (See other supports such as Understanding Financial Management, Access to Health Care and Specialized Medical Care, etc.)

State's Role: None

Populations with an Identified Condition

Oregonians who because of their condition, situation or behavior (including the lack of a care-giver) need beneficial decisions made for their lives on a regular or long-term basis. Examples include head trauma patients, abusive parents, incarcerated individuals, children with permanent and severe birth defects.

State's role: Direct service provider through existing case management

Primary payer or funder for individuals to access services

Quality assurance for services received

Investment partner in local delivery of services

Technical assistance with local entities who provide decision making

Catalyst to stimulate assistance with decision making

Available and Accessible Child Care

Ensuring that safe care is available, provided for and matches the developmental level of the child(ren) when their parent or primary caregiver is unable to give it, including before or after school.

General Population

Any child who is in need of safe and appropriate child care

State's Role: Quality assurance, regulation and licensing of facilities
Catalyst to ensure the care gets delivered
Technical assistance to providers in the areas of regulation and licensing

At-risk Populations

Any child who needs periodic assistance to obtain safe and appropriate care *and* whose parent or primary caregiver may not be able to provide such care due to lack of service availability, affordability or other factors. Examples include families transitioning from state income support to employment, families with disabled children or with children in need of remedial education or therapeutic services.

State's Role: Quality assurance, regulation and licensing of facilities
Catalyst to ensure the care gets delivered
Investment partner in the local delivery of services
Technical assistance to local level
Primary payer for individuals to access services

Populations with an Identified Condition

Any child who needs ongoing assistance in obtaining safe and appropriate care *and* whose parent or primary caregiver is not be able to obtain such care due to certain factors or conditions which may include financial ability, disability, etc.

State's Role: Primary payer for individuals to access services
Investment partner in local delivery of services
Quality assurance, regulation and licensing of facilities
Technical assistance to the local level
Catalyst to ensure the care gets delivered

Employment Opportunities

The chance to be involved in gainful or meaningful work.

General Population

Any Oregonian

State's role: See workforce development continuum

At-risk Populations

Oregonians who periodically need assistance to obtain or maintain employment due to situation, condition or behavior. Examples include parolees, alcohol and drug abusers, individuals with a loss of physical capacity, seasonal workers, individuals in poverty, etc.

State's role: Catalyst to ensure the availability of gainful or meaningful work
Investment partner in local employment systems
Technical assistance to Oregonians to obtain or maintain employment
Licensing and regulation for certain employment systems
Primary payer for individuals to access employment services

Populations with an Identified Condition

Oregonians who need assistance on an ongoing or long-term basis to obtain or maintain employment. Examples include developmentally disabled adults, individuals with a chronic mental health condition, individuals with physical disabilities, and incarcerated individuals.

State's role: Primary payer for individual to access employment services
Licensing and regulation of certain employment systems
Investment partner in local employment systems
Catalyst to ensure the availability of gainful or meaningful work
Technical assistance to Oregonians to obtain or maintain employment

Family Safety and Protection

The ability of families to care for, nurture, protect and ensure the safety and well-being of their children or other dependent members.

General Population

Any Oregonian or Oregon family

State's role: Catalyst to ensure that families have access to information about how to protect and care for their children and dependent members.

At-risk Populations

Oregonians in need of assistance in providing adequate care and protection of their children or other dependent family members due to short term conditions. Examples include families whose primary wage-earner has been laid off, families who may be abusing alcohol or other drugs, etc.

State's role: Investment partner in local delivery of services
Catalyst to ensure that families have access to information about how to protect and care for their children or dependent members
Technical assistance in the areas of regulation and licensing

Populations with an Identified Condition

Families who need assistance to care for their children or other dependent members on a regular basis. Examples include families who abuse or neglect their children, families with a convicted sex offender as a primary member, families who have a confirmed case of elder abuse, families where there is a history of violence, etc.

State's role: Direct service provider through existing case management
Primary payer of individual access to services
Investment partner in local delivery of services
Quality assurance, regulation and licensing of services to protect/care for children or other dependent members
Catalyst to ensure that families have access to information about how to care for their children or dependent members
Technical assistance in the areas of regulation and licensing

Healthy and Accessible Environment

Factors and conditions influencing Oregon's infrastructure, surroundings, and atmosphere that are safe, nourishing, beneficial and barrier free to Oregonians.

General Population

Any Oregonian

State's role: None

At-risk Populations

Oregonians in need of special short-term assistance or accommodations in order to access, participate in or benefit from Oregon's environment. Examples include injured workers, others with temporary impairments, etc.

State's role: None

Populations with an Identified Condition

Oregonians in need of regular assistance or accommodations in order to access, participate in or benefit from Oregon's environment. Examples include individuals living in a long term care facility, visually or hearing impaired individuals, individuals that utilize wheel chairs, etc.

State's role: Catalyst to ensure a healthy and accessible environment
Investment partner in the development of healthy, accessible environments
Technical assistance regarding regulation and licensing
Primary payer for individuals to access services
Direct service provider

Information about Child and Human Development

Knowledge about the ways in which people normally grow and mature, including data about abnormal growth and maturation. See also Responsible Sexual and other Health Interaction.

General Population

Any Oregonian

State's role: See education continuum

At-risk Populations

Oregonians who need to understand child or human development and need temporary assistance in doing so. Examples include pregnant women and their partners, potentially abusive or neglectful parents, parents with a learning disability, teen parents, etc.

State's role: Investment partner in the local delivery of services

Technical assistance to direct service providers

Direct service provider through existing case management

Catalyst to ensure the support is available

Quality assurance of services available

Primary payer or funder for individuals to access service

See education continuum

Populations with an Identified Condition

Oregonians who need to understand child or human growth and development and need assistance in doing so. Examples include abusive or neglectful parents, some developmentally disabled parents, incarcerated youth, etc.

State's role: Direct service provider through existing case management

Investment partner in the local delivery of services

Catalyst to ensure the support gets delivered

Technical assistance to service providers

Quality assurance of services available

Primary payer or funder for individuals to access service

See education continuum

Life Skills Development and Assistance

Obtaining information and the skills necessary to make beneficial choices in order to be as self-sufficient as possible.

General Population

Any Oregonian

State's role: None

See education continuum

At-risk Populations

Oregonians who need information or skills necessary to progress successfully and independently through their life. Examples include youth in the juvenile justice system, alcohol and other drug abusers, teen parents, welfare recipients, dislocated workers, displaced homemakers, etc.

State's role: Investment partner in the local delivery of services

Catalyst to ensure the availability of local services

Technical assistance to service providers

Primary payer or funder for individuals to access service

See education continuum

Populations with an Identified Condition

Oregonians who need ongoing assistance to obtain the information or skills necessary to progress successfully and independently through life. Examples include developmentally disabled individuals, those with a chronic mental illness, etc.

State's role: Direct service provider through existing case management

Primary payer for individuals to access assistance

Investment partner in local delivery of services

Technical assistance to service providers

Quality assurance of support provided through direct service

Catalyst to ensure the availability of local services

See education continuum

Non-residential Therapeutic Care

Treatment elements necessary to address mental, behavioral, emotional or physical health needs in an outpatient or non-residential setting. May include preventive evaluation, crisis intervention, treatment, counseling or therapy services and extended care.

General Population

Any Oregonian.

State's Role: None

At-risk Populations

Oregonians in need of short-term therapeutic who may need assistance in obtaining such care due to their situation (physical, financial, mental, emotional). Examples include children in state protective custody, persons in youth or adult corrections systems, individuals in need of assistance in removing barriers to end their dependence on state income support, pregnant teens, etc.

State's Role: Quality assurance, regulation, licensing of providers of care
Investment partner in local delivery of services
Technical assistance
Catalyst to ensure the availability of services

Populations with an Identified Condition

Oregonians who require ongoing non-residential therapeutic care and need assistance in obtaining such care. Examples include developmentally disabled adults, low-income individuals with a mental illness, etc.

State's Role: Primary payer or funder
Investment partner in local delivery of services
Quality assurance, regulation, licensing of providers of care
Technical assistance
Catalyst to ensure the availability of services

Opportunity for Positive Interaction with Peers and Role Models

The ability to identify and obtain access to positive relationships with other Oregonians, especially for children and youth a relationship with at least one adult who can serve as a positive example of values, independence and productivity.

General Population

All Oregonians, particularly children and youth

State's Role: None

At-risk Populations

Oregonians, particularly children and youth, needing periodic assistance to obtain access to positive peers and role models due to personal or family situations. Examples include youth from alcohol or other drug dependent families, homeless children and youth, home bound seniors, pregnant youth, etc.

State's Role: Investment partner in local delivery of services

Catalyst to stimulate the interest and importance of positive peer and role model interaction

Populations with an Identified Condition

Oregonians, particularly children and youth, who need ongoing assistance in order to engage in a relationship with a positive role model. They include children in state custody, youth in the juvenile justice system, youth undergoing alcohol and drug treatment, etc.

State's Role: Primary payer or funder

Catalyst to stimulate the interest and importance of positive peer and role model interaction.

Investment partner in local delivery of services

Opportunities to Explore Career Options

The chance to examine and investigate possible professions, occupations or vocations.

General Population

Any Oregonian

State's role: None

See education and workforce development continua

At-risk Populations

Oregonians who need short-term assistance to identify career opportunities that fit their situation or condition. Examples include individuals who have had a change in physical capacity, parolees, teen parents, individuals in poverty, dislocated workers, etc.

State's role: Investment partner in the local delivery of services

Primary payer or funder of career exploration services

Catalyst for information

Technical assistance to ensure that services are provided well

Quality assurance, licensing of career possibilities

See education and workforce development continua

Populations with an Identified Condition

Oregonians who need ongoing assistance in order to explore or identify possible career opportunities to fit their situation or condition. Examples include individuals with developmental disabilities, incarcerated individuals, etc.

State's role: Investment partner in the local delivery of services

Technical assistance to ensure that services are provided well

Primary payer or funder of career exploration services

Catalyst for information

Quality assurance or licensing of career possibilities

See education and workforce development continua

Opportunities to Learn Outside Formal Education System

The chance to gain knowledge and discovery in addition to opportunities provided via educational institutions.

General Public

Any Oregonian

State's role: See education and workforce continua

At-risk Populations

Oregonians temporarily without access to opportunities to learn outside school. Examples include homeless youth and families, individuals living in geographically isolated settings, etc.

State's role: Catalyst to ensure opportunities are available.

Technical assistance to local communities

Investment partner in the local delivery of services

Quality assurance, licensing of opportunities available

See education and workforce continua

Populations with an Identified Condition

Oregonians without regular access to opportunities to learn outside school. Examples include incarcerated individuals, etc.

State's role: Investment partner in local delivery of services

Catalyst to ensure opportunities are available

Technical assistance to local communities

Quality assurance, licensing of opportunities available

See education and workforce continua

Parental Standards, Positive Discipline

The knowledge and ability of parents to access information and skills in order to set consistent positive expectations for their children and to respond to misbehavior with methods of discipline that foster the ability of the child(ren) to learn and develop.

General Population

All Oregon parents

State's role: See education continuum

None

At-risk Populations

Oregon parents who need periodic assistance in obtaining knowledge or providing consistent standards or positive discipline for their children. Examples include parents experiencing intense short term stress, parents who are incarcerated, homeless parents, teen parents, etc.

State's role: Investment partner in local delivery of services

Catalyst to ensure that information about standards and positive discipline practices are available

See education continuum

Populations with an Identified Condition

Oregon parents in need of ongoing assistance in providing consistent standards or positive discipline for their children. Examples include parents with certain developmental disabilities, drug-addicted parents, etc.

State's role: Primary funder

Catalyst to ensure that information about standards and positive discipline practices are available

Investment partner in local delivery of services

Quality assurance of services provided directly

See education continuum

Prenatal Care and Preparation

The ability to access health and lifestyle information, care, and training for the purpose of getting ready for the birth of a child.

General Population

Any Oregonian.

State's role: None

See education continuum

At-risk Populations

Oregonians in need of temporary assistance with care, information or training necessary for the arrival of a child. Examples include pregnant women and their partners, recently immigrated families, families living in poverty, etc.

State's role: Catalyst to ensure child birth education and preparation is available

Technical assistance to service providers

Quality assurance of information available

Primary payer for individual to access services

Investment partner in local delivery of services

See education continuum

Populations with an Identified Condition

Oregonians in need of ongoing assistance with care, information or training necessary for the arrival of a child. Examples include pregnant homeless women, pregnant teens, pregnant women who have a mental health or developmental disability, etc.

State's role: Catalyst to ensure child birth education and preparation is available

Technical assistance to service providers

Quality assurance of information available

Primary payer for individual to access services

Investment partner in local delivery of services

See education continuum

Responsible Health and Sexual Interactions

Knowledge and ability to act accountably and reliably for health interactions, sexual activity (sexually transmitted diseases, pregnancy, etc.), communicable diseases, etc.

General Population

Any Oregonian

State's role: Quality assurance and licensing of information and service
Catalyst to ensure that information is available on responsible sexual and health behavior
Primary payer for individuals needing services
Technical assistance to local communities
Investment partner in the local delivery of services

At-risk Population

Oregonians in need of temporary assistance in accessing information in order to act responsibly in their sexual or other health interactions. Examples include sexually active teens, pregnant women and their partners, individuals who are abusing drugs, etc.

State's role: Catalyst to ensure that information is appropriately developed and targeted to at-risk populations
Primary payer for certain individuals
Technical assistance to local communities
Quality assurance and licensing of information and service
Investment partner in the local delivery of services
Direct provider of services for certain individuals

Populations with an Identified Condition

Oregonians in need of regular assistance in accessing or utilizing information in order to act responsibly for their sexual or other health interactions. Examples include individuals with a communicable disease, children in protective custody, disabled seniors living in state facilities, etc.

State's role: Investment partner in the local delivery of services
Catalyst to ensure that information is appropriately developed and targeted to populations with identified conditions
Direct provider of services for certain individuals
Primary payer for certain individuals
Technical assistance to local communities
Quality assurance and licensing of information and service

Safe and Accessible Work Environment

Factors and conditions influencing an individual's employment surroundings that create a barrier-free atmosphere.

General Population

Any Oregonian

State's role: Catalyst to ensure the existence of safe, accessible work environments

At-risk Populations

Oregonians in need of special short-term accommodations in order to access and participate fully in a work environment. Examples include injured workers, others with temporary impairments, etc.

State's role: Quality assurance, regulation, and licensing
Investment partner in the local delivery of services
Technical assistance to employers
Catalyst to ensure the existence of safe, accessible work environments

Populations with an Identified Condition

Oregonians in need of regular accommodations in order to access or participate fully in a work environment. Examples include individuals living in a long term care facility, visually or hearing impaired individuals, individuals that utilize wheel chairs, etc.

State's role: Quality assurance, regulation and licensing
Direct service for existing case management
Technical assistance to employers
Primary payer for certain individuals
Investment partner in the local delivery of services
Catalyst to ensure the existence of safe, accessible work environments

Safe and Secure Residential Settings

Stable facilities where Oregonians may live or stay on a temporary or long-term basis in order to be free from danger or harm to or from themselves or others. These include (but are not limited to) facilities for restorative or public safety purposes, such as shelter care, group homes, foster care, residential treatment, prisons, etc.

General Population

Any Oregonian

State's role: None

At-risk Populations

Oregonians in need of periodic assistance to access safe and secure residential settings. Examples include homeless youth, families who are in danger of abusing their children, etc.

State's role: Quality assurance, regulation and licensing
Technical assistance to concerning regulations and licensing
Primary payer for individuals to receive services
Investment partner in local delivery of services

Populations with an Identified Condition

Oregonians in need of regular assistance to access safe and secure residential settings in order to maintain safety for themselves or others. Examples include abused or neglected children, convicted felons, individuals with intensive mental health treatment needs, low-income disabled seniors who cannot live alone, etc.

State's role: Direct provider of existing case management
Primary payer
Quality assurance, regulation and licensing
Investment partner in local delivery of services
Technical assistance to concerning regulations and licensing
Catalyst to ensure that services are available

Understanding Financial Management

The knowledge and ability necessary to guide, conduct and govern fiscal affairs.

General Population

Any Oregonian

State's role: None

See education continuum

At-risk Populations

Oregonians who need assistance to understand or manage their finances on a short-term or temporary basis. Examples include individuals with a learning disability, dislocated workers, teen parents, etc.

State's role: Catalyst to stimulate assistance with understanding financial management

Investment partner in the local delivery of services

Quality assurance or licensing of financial service businesses

Primary payer or funder of financial management support

Direct service provider through existing case management

Technical assistance to businesses concerning licensing

See education continuum

See also life skills development and assistance support

Populations with an Identified Condition

Oregonians who need assistance to understand and manage their finances on a regular basis. Examples include individuals with developmental disabilities, individuals with a chronic mental health condition, seniors with dementia, etc.

State's role: Direct service provider through existing case management

Investment partner in the local delivery of services

Primary payer or funder of financial management support

Quality assurance or licensing of financial service businesses

Catalyst to stimulate assistance with understanding financial management

Technical assistance to businesses concerning licensing

Appendix E Definition of State Roles

6 = Direct Service	State is responsible for providing the support directly to clients or citizens through services or other means
5 = Primary payer or funder	State is the sole or primary funder of a support. Funding may go directly for or to an individual to access support (such as OHP, cash awards) or to a program or service provider. This includes grants to the local level for services when the state is not involved in the design or delivery of the service through a partnership arrangement
4= Quality assurance, regulation, licensing	State oversees and assures the <i>quality</i> of a particular service or support delivery, often through regulation or licensing
3 = Investment partner in the local delivery of service	State resources are invested in a mutual partnership of shared risk and responsibility with local government or other local private or public partner that involves the delivery of a support or design service system
2 = Catalyst	State is involved or responsible for stimulating the existence or delivery of a particular support through a variety of activities
1 = Technical assistance	State provides a variety of activities (such as convening work groups, best practices, providing data, etc.) to assist local government, service providers or others in the delivery of quality support services
0 = None	Self explanatory

Governor Kitzhaber Appoints Multnomah and Clackamas County Circuit Court Judges

Governor Kitzhaber has appointed Eric Bloch and Douglas Van Dyk to the Multnomah and Clackamas County Circuit Court, respectively.

Mr. Bloch graduated from Cornell University with a BS in Industrial and Labor Relations and received a Juris Doctorate from the University of Oregon, School of Law. Mr. Bloch worked in private law practice in Portland, and then as an Assistant Attorney General for the Oregon Department of Justice in the Special Litigation Unit, before assuming his current position as one of the two Oregon members of the Northwest Power Planning Council.

Mr. Bloch replaces Robert W. Redding who retired October 1, 2002. Mr. Bloch will work with Multnomah County Circuit Court Presiding Judge Dale Koch as to when he will take the oath of office.

Mr. Van Dyk graduated from the University of Washington with a BA in Comparative Literature and received a Juris Doctorate from Case Western Reserve Law School in Cleveland, Ohio. Mr. Van Dyk currently works for the law firm of Jordan Schrader, P.C. where he handles complex litigation matters.

Mr. Van Dyk replaces Raymond R. Bagley Jr. who retired September 30, 2002. He will work with Clackamas County Circuit Court Presiding Judge Robert Selander as to when he will take the oath of office.

Governor Accepts Resignation of Lottery Director

Governor John Kitzhaber today accepted the resignation of Chris Lyons as director of the Oregon Lottery, effective November 30, 2002.

“Ms. Lyons informed me today that she has decided to step down as Lottery Director for personal reasons and I accept her decision,” the governor said. “I would like to thank Ms. Lyons for her past service to the state and to the people of Oregon and to wish her success in the future.”

The governor will designate an interim director who will serve until the Oregon Senate confirms a permanent director. The governor will leave the decision about a permanent director to the incoming governor.

Lyons has 23 years of state service and has been Lottery director since 1995. The Lottery provides nearly \$315 million a year to Oregon for public education, economic development and natural resource programs.

Flags at half staff in honor of Coos Bay firefighters

Governor John Kitzhaber ordered state flags to be flown at half staff today to honor the memory of the three firefighters who died yesterday while fighting a fire in Coos Bay.

“On behalf of all Oregonians I want to extend my condolences to the families of these three firefighters, to their friends and to the entire community of Coos Bay,” the governor said. “Tragedies such as this touch the hearts of everyone, but none more than the firefighters, police officers and other first responders who risk the ultimate sacrifice on behalf of the common good.

“All of us owe a great deal to these three Coos Bay firefighters and to all other public servants who do their jobs with quiet dedication, day after day, year after year-often without fanfare or public recognition, never seeking publicity or praise. The lack of fanfare, however, cannot diminish their importance to the lives of Oregonians.”

Governor to Proclaim Human Rights Day, Acknowledge Past Eugenic Practices

Governor John Kitzhaber will host a reception at the Oregon State Capitol at 1 p.m. December 2, 2002, to proclaim Human Rights Day in Oregon and to acknowledge past eugenics practices in Oregon.

The purpose of the event is to celebrate the progress Oregon has made in the treatment of people with mental health disorders, developmental disabilities and those incarcerated by the criminal justice system. The governor will also proclaim December 10 to be Human Rights Day in Oregon.

The public is invited.

Governor To Implement Amber Alert System

Governor John Kitzhaber signed an Executive Order today implementing Oregon's Amber Plan. The governor was joined by Rep. Bruce Starr and many law enforcement and broadcast media representatives.

Oregon's Amber Plan has been developed with voluntary partnership among the Oregon State Police, Oregon Emergency Management, Oregon Department of Transportation, the Oregon Association of Broadcasters, Oregon Association Chiefs of Police, Oregon State Sheriffs' Association, emergency number representatives, state lawmakers and others. The statewide plan was approved unanimously by members of the Governor's Public Safety and Policy Council at its October 2 meeting.

The plan provides that if a child is reported to have been abducted and there is imminent danger of serious bodily injury or death to the child, local law enforcement agencies can request that the Amber Plan be activated.

The Emergency Alert System (operated by Oregon Emergency Management) will be used to notify listeners and viewers with a description of the suspected abductor and vehicle, if any, the victim and instructions on how to notify law enforcement if the suspect or victim is recognized. The Oregon Department of Transportation will also include the alert on its statewide highway reader boards.

"Time is critical following an abduction. If the victim is harmed, it usually occurs within the first few hours of the abduction. The eyes and ears of the public and advanced communication technologies are powerful tools. I think we all understand that a missed opportunity to save a child when the resources are at our doorstep is unacceptable," Kitzhaber said.

The Amber Plan was launched after the abduction and brutal murder of 9-year-old Amber Hagerman, from Arlington, Texas. To date, 24 states have adopted the AMBER (America's Missing: Broadcast Emergency Response) alert system. Additional information can be found at the Federal Communications Commission website www.fcc.gov/cgb/consumerfacts/AMBERPlan.html and the National Center for Missing and Exploited Children at www.missingkids.com.

Please Note: Oregon's Amber Plan will be tested by broadcasting venues and public safety agencies over the next several weeks. The statewide Amber Alert system will not be operational until early-November 2002. A separate event will be held to announce the toll-free hotline number and provide instructions to the public.

Governor Vetoes Inheritance Tax Bill

Governor John Kitzhaber today vetoed legislation that would repeal Oregon's inheritance tax.

The governor notified the Secretary of State's Office that he is returning House Bill 4077, which was passed by the fifth special session of the Oregon Legislature, "unsigned and disapproved."

"A decision whether to continue the inheritance tax must be part of the larger debate on the appropriate balance of state spending to state revenue," the governor said. "Because that debate did not occur and given the substantial decrease in revenues that would result from bill, I am compelled to veto HB 4077."

HB 4077 would repeal Oregon's inheritance tax in 2005. In addition, the bill connects Oregon to certain provisions of the federal estate tax law changes made in 1997 and 2001. As a result, the bill would result in a \$5.6 million loss to the state in the current 2001-03 budget period and an \$18.1 million loss in the 2003-05 biennium. The losses after that would more than \$92 million for each subsequent biennium.

A copy of the governor's veto message is attached.

Governor Allows Measure 28 Ballot Title To Become Law Without His Signature

Governor John Kitzhaber said today that even though the legislatively approved ballot title for the income tax measure that will go before voters January 28 is misleading, he would allow it to become law without his signature.

Passed in September by the fifth special session of the Legislature, HB 4075 sets out the text of a ballot title, financial impact statement and explanatory statement for Measure 28, the state income tax increase that goes before voters on January 28.

“The reason I am not exercising my veto authority is my concern about further erosion in the integrity of the electoral process,” the governor said in the letter to Secretary of State Bill Bradbury announcing his decision. “Already, the opponents of the temporary corporate and personal income tax increase have made threats to file a lawsuit if I veto HB 4075, hoping to deprive the people of Oregon of the opportunity to vote on this matter on January 28.”

“As concerned as I am about the misleading way HB 4075 puts the question to voters, I am confident in the ability of Oregon voters to cut through that deception and fully understand the question being asked,” the governor said.

Kitzhaber said the information about the measure provided by the Legislature “deliberately fails to inform Oregonians about the deep cuts to public services” that will occur if the measure is rejected by voters. Those cuts, which total \$310 million, include:

- \$95 million from the State School Fund (K-12);
- \$27 million from higher education;
- \$14 million from community colleges;
- \$90 million from health care and human services programs to seniors, the disabled and low income Oregonians;
- \$55 million from public safety services, including the Department of Corrections, Oregon State Police, Community Corrections and the Oregon Youth Authority.

The governor pointed out that ballot titles, financial impact statements and explanatory statements are important sources of information for voters about the substance of a measure and, in many instances, are the only source of information for a voter.

“As the dissemination of this information is a public service, ballot titles, financial impact statements and explanatory statements should provide an objective and balanced description of the question,” he said. “Unfortunately, HB 4075 does not adequately perform that public service.

In allowing HB 4075 to go into law without his signature, the governor asked all Oregonians who care about vital public services to redouble their efforts to make the choices clear.

“I have made no secret about my full support for Measure 28 and look forward to working with the many individuals and organizations that have already pledged their support,” the governor said. “One of our first tasks will be to undo the damage caused by this misleading ballot title.”

Governor Allows Borrowing Bill to Become Law Without His Signature

Governor John Kitzhaber will allow the legislature's plan to balance the state's budget by borrowing against future proceeds from the tobacco settlement to become law without his signature.

The governor notified the Secretary of State's Office today that he is returning House Bill 4073 passed by the fifth special session of the Oregon Legislature "unsigned but not disapproved."

"I have clearly stated that I believe we should pay as we go," the governor said in a letter to Secretary of State Bill Bradbury. "If we believe government services are important we should pay for them. If we are not willing to pay for government services, we should cut them. Borrowing to pay for one-time operations is bad fiscal policy."

The governor said that even though he opposes borrowing to balance the state budget, he is not vetoing the bill because it limits the borrowing to \$150 million and it was part of a package agreed to in order to bring a close to the fifth special session on September 18th.

HB 4073 establishes a Master Settlement Asset Corporation that would sell proceeds from the tobacco settlement for up to eight years in order to generate \$150 million in proceeds necessary to balance the state's 2001-2003 budget.

The governor pointed out that borrowing undermines the state's finances. Moody's Investor Services and Standard and Poor's have already downgraded the state's credit rating outlook from stable to negative.

"There really are only two honest and prudent ways that remain to deal with the budget gap facing Oregonians," the governor said. "Either make hard choices to further cut schools, prisons, health care and other vital services or seek stable and adequate revenue."

Oregon Receives Okay to Expand Oregon Health Plan at no Additional Cost to State

Federal officials notified Gov. John Kitzhaber today that the state has received federal approval to restructure and expand the Oregon Health Plan by up to 60,000 people at no increased cost to the state.

Approval by the federal Department of Health and Human Services is required because federal money pays for more than half the cost of the health plan. Federal action means that both the Medicaid program and the Family Health Insurance Assistance Program (FHIAP) will be expanded.

The 2001 Oregon Legislature authorized this expansion of the health plan, called OHP 2, which currently covers more than 400,000 Oregonians.

“Oregon’s ability to deliver health care to more Oregonians at no more direct cost to Oregon taxpayers is another example of this state’s ability to find innovative ways to save money while still expanding services to needy Oregonians,” Kitzhaber said.

The higher cost will be offset by a combination of increased premiums, co-pays for services and reduced benefits for low-income Oregonians who don’t qualify for traditional Medicaid but who are eligible for coverage under the Oregon Health Plan, which is currently about 108,000 people.

For the first time, low-income working Oregonians above the federal poverty level will be eligible for health plan coverage if they meet tests of income, assets and Oregon residency. The program will open initially to those up to 110 percent of the poverty level, with future expansion possible to 185 percent as funding allows. Eligibility for pregnant women and for children and teens under age 19 will rise from 170 percent of the federal poverty level to 185 percent. The program will be expanded Feb. 1, the ninth anniversary of the start of the Oregon Health Plan.

Under this restructuring, an “OHP Plus” benefit package will continue current benefits for enrollees entitled to benefits by age or disability or because they are pregnant, newborns, or children under age 19 with qualifying household incomes. An “OHP Standard” benefit package with reduced benefits and cost sharing resembling those in private insurance plans will cover all other plan participants.

Meanwhile, FHIAP will be expanded by up to 25,000 people beginning on Nov. 1. FHIAP, which supplements

employer-sponsored and individual insurance for low-income Oregonians, will receive federal dollars for the first time. This will enable more people to be covered and for eligibility to extend to households earning up to 185 percent of the federal poverty level (from 170 percent currently). FHIAP now enrolls about 3,500 Oregonians.

Medicaid and FHIAP are administered by the Oregon Department of Human Services and the state Insurance Pool Governing Board, respectively.

Governor Signs House Bill 5100

Kitzhaber Signs Bill Containing \$310 Million in Legislatively Approved Cuts to State Services.

Governor John Kitzhaber today signed HB 5100, the bill that contains \$310 million in legislatively approved cuts to education, public safety and human resource programs. The cuts will go into effect February 1, 2003 if voters fail to approve an income tax measure on January 28.

HB 5100 was passed by the fifth special session of the Oregon Legislature, which ended September 18. The bill reduces state support of:

- K-12 by \$95 million;
- Community colleges by \$14 million;
- Higher education by \$23 million;
- Prisons by \$18 million;
- Oregon Youth Authority by \$8 million;
- Medical assistance programs by \$22 million;
- Programs for seniors and the disabled by \$22 million;
- Services for the developmental disabled by \$12 million;
- Services for children and families by \$11 million.

Additional cuts would occur in mental health programs, the state Judicial Department, Community Corrections, adult and family services, indigent defense and the operation of the state Department of Revenue. The cuts would also reduce the number of Oregon State troopers.

“These cuts are devastating to Oregon’s ability to educate children, care for the frail and elderly, protect citizens and incarcerate criminals,” Kitzhaber said. “By signing this bill, Oregonians now have a clear choice between cutting vital state services or voting to increase temporarily the state income tax. A ‘yes’ vote on January 28th on Measure 28 will restore funding for these services. A ‘no’ vote will result in implementation of these cuts.”

HB 5100 also contains \$43 million in savings and specified cuts, including reductions in law enforcement, public broadcasting, arts and culture, film and video and the Oregon Children’s Plan. It also eliminates the Progress Board.

“What is not included is the untold millions of dollars of federal funds lost to Oregon if these cuts go into effect,” the governor said.

The governor exercised his line-item veto authority and restored funding to two programs that contribute to the state's economic development efforts. They are \$400,000 for Community Solutions, which helps local government attract and retain businesses and \$468,000 to the Oregon Historical Society to help promote the Lewis & Clark Bicentennial Celebration, which will increase tourism. Restoring the funding to these two programs does not put the budget out of balance.

The governor has until October 30 to decide whether he will veto, sign or let become law without his signature three other bills passed by the last special session. Those bills include the ballot title for the January 28 special election, repeal of the inheritance tax and \$150 million in borrowing.

Governor to Host Prescription Drug Conference

Governor John Kitzhaber will host a two-day conference on “Creating a Functional Marketplace for Prescription Drugs.” The conference will take place October 10 and 11, at the Portland Hilton, 921 SW Sixth Ave.

The conference will focus on the evidence available to public, and to private sector purchasers and health professionals about the effectiveness and cost of prescription drugs. It will also examine how that evidence can contribute to the well being of patients at an affordable cost.

The governor will deliver the conference’s keynote speech at 12:30 p.m. on Thursday in the Grand Ballroom. He will also moderate a panel discussion at 4:15 p.m. on “Responses from Leaders in Government and Private Industry.” The governor will make closing comments at 11:30 a.m. Friday.

Other speakers include:

- Bill Novelli, Executive Director and CEO of AARP, will give the opening address at 8:45 a.m. Thursday in the Grand Ballroom.
- Joel Gurin of Consumer Reports will provide the consumer perspective at 3:45 p.m. on Thursday.

For more information about the conference and the other participants, go to www.oregonrx.org.

WEST COAST GOVERNORS CALL FOR RESOLUTION OF LABOR DISPUTE AT WEST COAST PORTS

The governors of California, Oregon, and Washington today joined together in calling for an end to the labor dispute that has shut down ports along the west coast.

“At a time when our national and state economies are fragile and the nation is experiencing significant unemployment, the shutdown of our ports only exacerbates this problem and diminishes the chance for a swift economic recovery,” wrote Governors Gray Davis (D-Calif.), Gary Locke (D-Wash.), and John Kitzhaber (D-Ore.) in a letter to James Spinosa, President of the International Longshore and Warehouse Union, and Joseph Miniace, President of the Pacific Maritime Association. “We understand that you face tough issues in your contract negotiations, but we ask you to end the shutdown and continue to bargain in good faith to quickly resolve your issues as you have done in the past.

“Farmers are unable to ship agricultural goods overseas and risk losing current customers to foreign competitors,” the letter continued. “Factories that rely on imports are being shutdown. Retailers are impacted during the prime pre-holiday shipping season. Countless truckers and other workers that rely on the ports are stalled and their livelihoods threatened. And, ultimately, consumers will suffer.”

The three governors said they were “encouraged” that both sides had returned to the bargaining table with federal mediators on Thursday.

On Wednesday, Gov. Davis telephoned James Spinosa, President of the International Longshore and Warehouse Union, and Joseph Miniace, President of the Pacific Maritime Association, urging them to return to the bargaining table and offering the services of state mediators.

Attached letter

Mr. James Spinosa
President, International Longshore and Warehouse Union
1188 Franklin Street, 4th Floor
San Francisco, CA 94109

Mr. Joseph N. Miniace, President
Pacific Maritime Association
PO Box 7861

San Francisco, CA 94120

Dear Mr. Spinosa and Mr. Miniace:

We are writing to express our grave concern about the labor dispute that has resulted in the shutdown of West Coast ports. Though in its early stages, our states are already experiencing the economic effects.

Farmers are unable to ship agricultural goods overseas and risk losing current customers to foreign competitors. Factories that rely on imports are being shutdown. Retailers are impacted during the prime pre-holiday shipping season. Countless truckers and other workers that rely on the ports are stalled and their livelihoods threatened. And, ultimately, consumers will suffer.

At a time when our national and state economies are fragile and the nation is experiencing significant unemployment, the shutdown of our ports only exacerbates this problem and diminishes the chance for a swift economic recovery.

We understand that you face tough issues in your contract negotiations, but we ask you to end the shutdown and continue to bargain in good faith to quickly resolve your issues as you have done in the past. We are encouraged by your steps to work with the federal mediator.

Please let us know if we can provide additional assistance toward facilitating a swift settlement. Our state and national economies, consumers, and the livelihood of thousands of workers are counting on you.

Sincerely,

Gary Locke Gray Davis John Kitzhaber

Statement By Governor John Kitzhaber Negotiations Between Shippers And ILWU

Ports are vital to the economic wellbeing of most West Coast cities, including Portland. It is extremely important that these ports remain open, that ships are unloaded and that cargo moves across the docks. Any shutdown, regardless of how short, represents a serious blow to the Oregon economy. Because of the importance of these ports, particularly during these difficult times, I encourage both the Pacific Maritime Association and the International Longshore and Warehouse Union to return to the bargaining table immediately and negotiate in good faith to ensure that workers are treated fairly and that the flow of products continues unimpeded.

Governor Kitzhaber Announces Union County District Attorney Vacancy

Governor Kitzhaber today announced that applications are being accepted for the Union County District Attorney position.

Oregon law requires that, among other qualifications, applicants must be admitted to practice in Oregon.

For an application form, interested persons should contact Lorna Hobbs of the Governor's Legal Counsel's Office at (503) 378-6246. For this District Attorney vacancy, our office will be using the Interest Form for Judicial Appointments. This form is also available on the Governor's web site www.governor.state.or.us

The Interest Form for Judicial Appointment is available at:

www.governor.state.or.us/governor/legal/Intrsfm1.pdf

Applications should be sent to the Governor's Office and are due by October 11, 2002.

Governor Approves Funds To Promote Oregon

Innovative Marketing Campaign Will Continue to Attract New Business Investment and Jobs to Oregon

Governor John Kitzhaber has approved \$250,000 to help promote Oregon as a prime location for business investment. The money, allocated from the state's Strategic Reserve Fund, will support the continuation of the Oregon Business Development Marketing Campaign, a multi-faceted marketing program developed in 2001 through a unique collaboration of public and private organizations seeking to recruit outside companies, retain existing businesses and diversify Oregon's economy.

"With the state in recession and job losses at an all time high, attracting new business investment to Oregon is vital to our economic recovery and success," Kitzhaber said. "This marketing program is an important tool in that effort."

The Oregon Business Development Marketing Campaign was formed through a partnership between the Oregon Economic and Community Development Department (OECDD) and the Oregon Economic Development Association (OEDA), a group of local partner organizations concerned with business expansion, recruitment and retention in Oregon. Since the program was launched in September 2001, the campaign has generated more than 450 business leads, nearly double the number in the previous period.

"The marketing campaign has created an exciting forum where urban and rural economic development professionals work with OECDD to promote Oregon," said Katy Coba, OECDD Director. "This unique partnership of public and private groups investing in economic development recruitment is not found in many other states. Oregon is a great place to do business and we are broadcasting that message throughout the nation."

The goals of the marketing campaign are two-fold. First, a "core campaign" seeks to create an awareness and image that Oregon is open for business, and is aggressively seeking new business investment and family-wage jobs. The core campaign markets all regions of the state to businesses, corporations and site selectors. Second, "target campaigns" focus on recruiting from specific industry sectors. The campaign encourages partners to "buy-in" and support the core activities as well as target a portion of their contribution toward specific industry sectors they want to attract.

Campaign activities in the first year have included targeted advertising, direct mail and e-mail, tradeshow, video production, custom publications and Web site development. Additionally, news articles and editorials have appeared in national publications about successful recruitments in Oregon and recent economic development initiatives that are instrumental in bringing new business to the state.

Funding from Oregon's Strategic Reserve Fund are awarded to business projects that:

- assist Oregonians in communities that are rural, distressed or lacking diverse employment;
- assist Oregonian's who are underemployed or in low-income jobs; and
- show a commitment to making strong progress toward integrated structures and strategic planning.

Money raised by OEDA through public and private fundraising will match the \$250,000 in Strategic Reserve Funds approved by the governor for the marketing campaign.

Governor Releases List of Potential Vetoes

Governor John Kitzhaber today released a list of potential vetoes. The governor is under no obligation to veto these bills, but is required to provide prior notice of bills that might be vetoed.

The governor has until October 30, 2002, to sign or veto bills sent to him by the special legislative session that ended September 18. He also has the option of letting bills become law without his signature.

The list of potential vetoes includes:

- House Bill 5100 – Cutting \$312 million from state general fund agencies in the event a ballot measure to temporarily increase the state income tax fails on January 28, 2003. The governor is serving notice of possible line-item vetoes within HB 5100 that would not put the current budget out of balance.
- House Bill 4075 – The ballot title for the January 28, 2003, statewide election to avoid budget cuts by implementing a temporary increase in the state income tax.
- House Bill 4077 – Eliminating the inheritance tax.

The governor said that he is noticing the potential veto of House Bill 4075 until he gets a better understanding of the legal implications of vetoing the bill.

“My concern with the ballot title in HB 4075 is that it fails to explain what is at stake for Oregon,” the governor said. “I believe we need a ballot title that clearly explains the choice between increasing the income tax rate for the top tax bracket and for corporations or cutting services to education, public safety, health care and other vital services.”

Governor Announces Sixth Annual Over-Representation of Minorities In The Juvenile Justice System Summit

The Sixth Annual Governor's Summit on the Over-representation of Minorities in the Juvenile Justice System will be held October 9, 2002, 7:30 a.m. to 5 p.m., at the New Hope Community Church in Portland. The governor hosts this event annually with the long-term goal to reduce minority over-representation in the juvenile justice system through strategic partnerships that develop a sustainable, ongoing effort to address over-representation. It is also a celebration of progress made by many committed state and community-based groups and organizations.

To register call Anna Suess at 503-986-4573. For more information regarding minority over-representation visit the website <http://oregon.gov.summit>

The theme of this year's summit is "Enhancing Partnerships with the Education Community." Sessions will focus on programs, projects, and other activities to keep minority youths in school and help them achieve academic success. Poor school performance is one of the highest predictors of involvement in the juvenile justice system. School success is among the strongest "protective" factors to deter young persons from engaging in delinquent behaviors.

The 2002 Governor's Summit has three specific objectives:

1. Identify factors that contribute to minority youth drop-out, suspension, and expulsion rates and to closing the achievement gap;
2. Increase collaboration between stakeholders to develop action plans that address identified factors;
3. Reduce minority over-representation at all decision points by modeling effective methods used in regular and alternative education programs that contribute to the success of minority youth in school, and by promoting effective transition into regular education.

Law enforcement officers, school personnel, district attorneys and other local leaders will attend the summit. Superintendent of Public Instruction-elect Susan Castillo will provide the keynote address. Attorney General Hardy Myers will facilitate a panel of youth, and Chief Justice Wallace P. Carson, Jr. will address participants. Governor Kitzhaber will speak following lunch. The two major party candidates for governor have also been invited to speak.

The 2002 Governor's Summit is free of charge, but registration is required and limited to 500 participants. Registration will close when capacity is reached or on October 2, 2002, whichever comes first. Additional information are available on the Governor's Summit Website at www.governor.state.or.us/governor/hhslp/summit.htm For further assistance, please contact Lonnie Jackson at

503-373-7622 or email: lonnie.jackson@oya.state.or.us.

GOVERNOR CRITICIZES PRESIDENT'S FOREST PROPOSAL

President Bush's Healthy Forests proposal violates the spirit of a 10-year fire plan agreed to in May by key members of the President's cabinet, Governor John Kitzhaber said in a letter to Oregon's congressional delegation.

The President's forest proposal modifies and waives a number of environmental and public involvement laws for more than 10 million acres of federal lands. The plan deviates from the bi-partisan, 10-Year Comprehensive Fire Plan developed by the Western Governors' Association (WGA) under congressional direction.

Governor Kitzhaber wrote in the letter that any congressional action needs to be consistent with the broad consensus for action laid out in the WGA plan, which was collaboratively developed over two years with multiple stakeholders and government agencies. The Bush Administration, western governors, and county and tribal representatives earlier this year signed the 10-year agreement.

"The 10-year plan makes it clear that the forest health treatments are to be done in a way that meets federal environmental laws," Kitzhaber said.

In contrast, under President Bush's bill proposal, the secretaries of Agriculture and Interior would not have to follow the National Environmental Policy Act and the Federal Advisory Committee Act. Nor would there be administrative appeals, temporary restraining orders or preliminary injunctions when there are legitimate public concerns about proposed activities -- including logging -- on more than 10 million acres of federal forest.

Kitzhaber said these proposals "stand in stark contradiction to the spirit and the letter of the 10-Year Fire Plan, which was signed by Secretary of the Interior Gale Norton and Secretary of Agriculture Ann Veneman on behalf of the Bush Administration at a ceremony in Idaho just four months ago."

"This course of action puts at risk the delicate consensus for action that we have so painstakingly achieved, and threatens once again to polarize the debate over timber policy in the West," the governor said.

Kitzhaber further cautioned, "There are a number of departures from the 10-Year Fire Plan in the Administration's proposed bill, but clearly the greatest fear I have is that it will undermine the trust that is critical to ongoing collaboration necessary to strategically invest in the health of our forest ecosystems across whole landscapes."

The governor also expressed concern about the Administration's resistance to funding efforts to improve forest health.

“This effort is about getting the work done in the forests,” the governor said. “While the Bush Administration has put tremendous energy into finding ways to shortcut processes, they have been consistently cutting or reducing federal funds that have supported the very work everyone agrees needs to be done.”

“For the record, the Administration cut funds for local community assistance this last year, reduced funding levels in the Fire Plan accounts, and reluctantly released emergency funds only after significant political pressure was applied by the western governors and a host of other stakeholders.”

September 10, 2002

The Honorable Ron Wyden, Chairman
Forests and Public Land Management Subcommittee
SD-306 Dirksen Senate Office Building
Washington DC 20510

Dear Senator Wyden:

When President Bush visited Oregon to review the 500,000-acre Biscuit Fire – the largest in the nation this year – he used the occasion to announce his new Forest Health Initiative. While the visit certainly served to elevate the importance of forest policy and the growing threat of catastrophic wildfires, the President’s plan appears to deviate significantly from the National 10-Year Fire Plan, developed by the Western Governors’ Association and signed by the Bush Administration earlier this year.

This is of particular concern because I believe that the premises underlying the Fire Plan can form the foundation from which a broader forest policy can emerge. As one of the co-chairs for WGA’s 10-Year Fire Plan, I believe that we stand at a crossroads. How the President chooses to proceed with the development and implementation of a forest policy for the West – and the extent to which the United States Congress supports his efforts – will largely determine our course for the future.

One path will lead us to a future in which we continue to argue with each other from our deeply entrenched positions while each year our forests burn, destroying an invaluable natural resource and threatening communities and lives. The other path can lead us beyond the seemingly intractable conflict between the environmental community and the timber industry to a future of healthy thriving forests yielding clean water, diverse habitat and commercial wood products.

As you may know, the 10-Year Fire Plan was put together around a focus on the area in which all stakeholders could agree: improving forest ecosystem health. Increasingly severe fires were the most visible symptom of poor forest health. Other symptoms include declining species, noxious weeds, and increased outbreaks of insects and disease.

The agreement to craft a long-range plan to get us out of the fire suppression rut and to move us towards this goal of ecosystem restoration emerged from the terrible fire season of 2000. Six Western governors met with Secretary of Interior Bruce Babbitt and Secretary of Agriculture Dan Glickman in Salt Lake City at the residence of Utah Governor Mike Leavitt to lay the foundation for what was to become the 10-Year Fire Plan.

The Honorable Ron Wyden, Chairman
September 10, 2002
Page 2

As you know, I believe that commercial logging has been and will continue to be an important element in the economy of Oregon and of the Intermountain West. But we must not allow efforts to improve the health of our

forests to become ensnared with the controversial issues of salvage logging, sufficiency language, roadless areas or the preservation of old growth forests.

At our meeting in Salt Lake City, we acknowledged that these were legitimate issues which we would continue to debate. But we also recognized that this debate must take place in other forums that were separate from the strategy to improve forest health so as not to distract from the critical work we all agreed must be done.

Thus, from the beginning we agreed that harvest activities under the plan would have as their primary objective improving forest health, as opposed to commercial logging. In other words, trees would be removed based not on their commercial value, but rather on the ecological needs of the forest as dictated by good multidisciplinary science. In many cases, however, the by-products of thinning activities and fuel reductions would be wood products of commercial value. We acknowledged that and built a plan that accommodated that expectation of potential economic opportunity.

Furthermore, the plan makes it clear that the forest health treatments are to be done in a way which meets federal environmental laws. To quote directly from the Fire Plan: "This strategy should enhance collaboration among all levels and all parties for planning, decision-making, implementation, monitoring, and learning – without altering the responsibilities or statutory authorities of participation Federal and State agencies."

In contrast, the Executive Summary of the President's Forest Health Initiative refers to legislation which "exempts forest management activities in the Black Hills from environmental laws such as the National Environmental Policy Act and the National Forest Management Act. The legislation also exempts timber cutting as part of a fuels treatment project from public notice and comment as well as judicial review and appeals." This direction and intent now seems to be at the heart of the Administration's proposed legislation.

In his remarks on the fire tour, the President said: "If it is good enough for South Dakota, it should be good enough for Oregon." These statements stand in stark contradiction to the spirit and the letter of the 10-Year Fire Plan which was signed by Secretary of the Interior Gale Norton and Secretary of Agriculture Ann Veneman on behalf of the Bush Administration at a ceremony in Idaho just four months ago. This course of action puts at risk the delicate consensus for action which we have so painstakingly achieved and threatens to repolarize the debate over timber policy in the West.

Indeed, some of the initial skepticism about the plan within the conservation community stemmed from a concern that the fear of wildfires would be used as an excuse to log larger more valuable trees, the removal of which could not be scientifically justified in terms of forest health. The President's approach appears to validate these concerns.

The Honorable Ron Wyden, Chairman
September 10, 2002
Page 3

I am writing you to provide some of the underlying agreements that the 10-Year Fire Plan was built upon, and to urge you not to support the direction being taken in the Administration's current bill proposal. There are a number of departures from the 10-Year Fire Plan in the Administration's proposed bill. The greatest fear I have is that the bill will undermine trust that is critical to ongoing collaboration necessary to strategically invest in the health of our forest ecosystems across whole landscapes.

I am also skeptical about the Administration's commitment to seriously address this problem. It will take a significant investment of resources – far greater than what is envisioned to be saved through process efficiencies. Yet, for the record, the Administration cut funds for local community assistance this last year, reduced funding levels in the Fire Plan accounts, and reluctantly released emergency funds only after significant political pressure was applied by the Western Governors and a host of other stakeholders. Furthermore, the Administration withdrew funds from several restoration projects that are consistent with NEPA, that have made it through the

appeals period and process, and have the kind of broad local and regional collaborative support envisioned as the guide under the 10-Year Fire Plan.

To cite a specific example, this year U.S. Forest Service Region 6 sent back to Washington, D.C. \$52.3 million slated for grants and agreements with local contractors and communities for restoration and fuels treatment work - as well as other land management needs -- in order to pay for rising fire suppression costs. The Administration has not yet signaled that it will ask for emergency funds in the FY 2003 Interior Appropriations bill to cover the fire fighting costs and to put back on course the restoration projects that lost funding this year.

I am deeply committed to improving the health of our forest ecosystems and to the agreement I made to the Nation when I signed on to the 10-Year Fire Plan. I urge you to oppose the Administration's proposal as it is currently drafted and to develop an alternative that is more consistent with the broad consensus for action developed by the Western Governors.

Sincerely,

/s/

John A. Kitzhaber, M.D.

JAK/NR/sm

GOVERNOR NAMES COUNCIL TO STUDY PUBLIC SAFETY COMMUNICATIONS INTEROPERABILITY

Governor John Kitzhaber will sign an executive order on Tuesday, September 10 at 11:45 a.m. in the Governor's Ceremonial Office establishing a statewide council to plan for the creation of a wireless communication system that supports public safety agencies at all levels of government.

Currently, not all public safety agencies can communicate with each other simultaneously during an emergency.

The Statewide Interoperability Executive Council will direct the planning, designing and implementing guidelines, best practices, and standard approaches to address Oregon's public safety communications issues. The Council shall also recommend funding strategies that support development of a statewide system.

The Council will be made up of representatives from:

- Oregon State Police
- Office of Emergency Management
- Department of Forestry
- Department of Corrections
- Department of Transportation
- Department of Administrative Services
- Department of Human Services (for emergency medical services)
- Oregon Military Department
- Oregon Fire Chiefs Association
- Oregon Association Chiefs of Police
- Oregon State Sheriff's Association
- Oregon Association of Public Safety Communications Officials/ National Emergency Number Association

Other federal, state, and local organizations may be added as deemed appropriate by the Council.

"In the aftermath of September 11, 2001, everyone living in Oregon should expect public safety professionals to protect life and property, mitigate damage, and provide emergency assistance during disasters," the governor said. "To do their job effectively, these professionals depend on mission-critical information relayed via wireless communication systems."

"No Oregonian should ever lose their life in an emergency because public safety professionals were unable to adequately communicate with each other. Interoperable communication systems are the cornerstone of being able

to provide a coordinated response to emergencies,” Kitzhaber added.

STATEMENT BY GOVERNOR JOHN KITZHABER
Education, Public Safety and Human Services Funding Rally

Today Oregon's future is at risk. At risk is a generation of children; the citizens of tomorrow; the workforce of tomorrow; the leaders of tomorrow.

At risk is their ability to receive an education that will give them the knowledge and skills to succeed in a competitive, information-driven world.

Is that the future we want for our state?

At risk is the ability of our high school graduates to attend a college or university because it is too expensive or because there simply isn't enough room.

Is that the future we want for our state?

At risk are children who, through no fault of their own, are exposed to risk factors early in life which, if left unaddressed, will increase dramatically the likelihood that they will struggle in school, fail and drop out – to end up in the criminal justice system.

Is that the future we want for our state?

At risk is our safety net by which we reach out to vulnerable citizens; to those with disabilities; to the frail and elderly; to those suffering from mental disorders; to those who cannot afford even the most basic health care; to the homeless and the hungry; to the abused and neglected.

Are we willing to simply turn our backs on these people – and to abandon our sense of compassion as Oregonians?

At risk is our system of public safety – our ability to provide effective and responsive law enforcement; to patrol our highways; to incarcerate those who are a danger to society; and those who must be held accountable for their actions.

Are we willing to back away from our commitment to safe and secure communities – and to swift, certain justice?

Is that what our future holds?

I say we are better than that.

I say we can do better and that we must do better.

Last week Oregon's credit outlook changed from stable to negative because of the \$1.4 billion structural budget deficit projected for the next biennium. We have forced school districts to manipulate their accounting procedures. We have created the specter of serious cash flow problems.

Are we content to stand by and let this happen to our Oregon?

We can no longer accept stop-gap measures.

We can no longer push this problem into the future.

We need additional permanent revenue – along with the cuts we have already made – to provide stable funding for public education and other services that are important to Oregonians.

We all know that our heavy reliance on the income tax – and the fact that we have shifted funding for our schools onto this unstable revenue source – has left us vulnerable to fluctuations in the economy – and has created a false competition and sense of scarcity between K-12 and post-secondary education – and between education, public safety and human services – when all of these services are interdependent and vital to our success.

The single most important task facing the next legislature when it convenes in less than six months – will be to reduce our reliance on the income tax and to increase the stability of the way we finance public services in Oregon.

The legislature cannot accomplish that crucial task if – by our actions today – we plunge it into yet another budget crisis as severe as the one we are facing now.

You all know my view on borrowing from the future to finance programs today. But in an effort to help forge a solution that can garner bipartisan support – I am willing to compromise ... as long as the net result is to substantially mitigate further cuts in this biennium and to dramatically reduce the projected deficit for 2003-2005.

Over the past few days, I have had productive discussions along these lines with members of both the Republican and Democratic caucuses – and these members deserve your thanks and your support for their leadership.

But our task has just begun. I appreciate your presence here today. I appreciate your enthusiasm. But now you need to go into this building and make sure each and every legislator understands the stakes involved and what is at risk.

We have an opportunity today to move beyond partisanship and divisiveness; to heal our wounds; to rekindle that sense of belonging and common purpose and concern for each other which has held us together in the past and which can give us the strength and the courage to face an uncertain future as an Oregon community.

With your help we can seize that opportunity and secure Oregon's future. One state.
One people. One destiny.

Letter to Speaker, Senate President

August 30, 2002

The Honorable Mark Simmons
900 Court St NE, H-269
Salem, OR 97301

Dear Speaker Simmons:

Thank you for informing me of your intention to call yourselves into session tomorrow, August 31, in order to refer to the November ballot a proposal to raise \$250 million by bonding the revenue stream from the cigarette tax. It is my understanding that you intend to use this revenue to pay for primary and secondary schools, community colleges and higher education for the remainder of this biennium – thus, minimizing the cuts that would otherwise be necessitated by the additional shortfall of \$482 million. Furthermore, I understand that you propose to repay this loan over the next five years. I am writing to outline my probable actions should you proceed along these lines.

First, it appears that what you are proposing is not a balanced budget plan but rather only half a plan. While you will raise \$250 million – assuming the voters approve your measure – a deficit of over \$232 million will still remain – a figure which will increase by any prudent ending balance you wish to reserve against the distinct possibility of another revenue downturn in the December forecast.

I assume, then, that ? in addition to your referral – you also intend to pass a budget bill to allocate the remaining \$232 million cut among the various state agencies. As you have vigorously asserted, only the legislative branch has the authority to make selective budget cuts that can set priorities among state services. Given the depth of the current crisis, and the magnitude of the cuts involved – especially in the areas of public safety and human services – establishing such budget priorities is clearly the most effective way to mitigate the damage to services on which Oregonians depend. As I have indicated before, I will not veto a budget reduction bill that helps to rebalance the state budget.

Second, a legislative referral, while it bypasses the governor, also requires a ballot title which would need my signature. While I certainly would want to ensure that voters have a clear sense of what they are voting on, I would insist that the ballot title be passed with strong bipartisan support and that it provide reference to the cuts that remain unfunded.

I continue to believe that any solution must include some new revenue to help maintain critical public services in the short term and – perhaps more importantly – to reduce the size of the projected deficit for the next biennium. I am aware that there are other proposals being considered by members of your respective caucuses ? proposals which do include new revenue. I would hope that these concepts receive careful public consideration before you arrive at a final course of action.

Toward that end, I want to again encourage you to immediately open both revenue and budget committees to begin looking at various strategies for addressing this fiscal crisis. There are a number of ways to solve the problem and there should be an opportunity to explore these in public.

I remain committed to working with you and your members to find a workable solution to both Oregon's short term and long term fiscal challenges.

Sincerely,

John A. Kitzhaber, M.D.

Cc: Deborah Kafoury

OFFICE OF THE GOVERNOR
STATE OF OREGON

PROCLAMATION

Whereas; The State of Oregon faces a budget deficit, currently projected to be \$480 million; and

Whereas; Under Article IX, section 2, and Article IX, section 6, of the Oregon Constitution, the Legislative Assembly has the duty to raise revenue sufficiently to defray the state's expenses and to cover deficiencies; and

Whereas; The State of Oregon must rebalance the budget in a responsible manner; and

Whereas; The citizens of the State of Oregon deserve a full and open debate about rebalancing the state budget with either sustainable revenue or through budget reductions;

NOW,

THEREFORE, I, John A. Kitzhaber, Governor of the State of Oregon, pursuant to Article V, section 12, of the Oregon Constitution, hereby proclaim Tuesday, September 3, 2002 at 10:00 AM to be

THE CONVENING OF THE OREGON LEGISLATIVE ASSEMBLY

for the purposes of rebalancing the budget.

IN WITNESS WHEREOF, I hereunto set my hand and cause the Great Seal of the State of Oregon to be affixed. Done at the Capitol in the City of Salem in the State of Oregon on this day, August 29, 2002.

John A. Kitzhaber, Governor

Paddy McGuire, Deputy Secretary of State

STATEMENT BY GOVERNOR JOHN KITZHABER

“Oregon is facing a very serious problem in light of the \$482 million additional revenue shortfall announced this morning.

In the absence of any legislative action I will be forced by the Oregon Constitution to rebalance the budget through across the board cuts in services – since only the Legislative Branch has the constitutional authority to raise revenue and to enact targeted cuts.

We should not take lightly the impact of an additional \$482 million reduction in services on top of the \$565 million we have already taken. For example, an across the board service cut of this magnitude would mean – among other things:

- Reducing the school year on average by almost three weeks;
- Closing four of our five regional Juvenile Correctional Facilities;
- A substantial reduction in the number of those eligible under the Oregon Health Plan, and in other programs serving frail and vulnerable citizens;
- The loss of millions of dollars in federal matching funds in the Department of Human Services;
- Laying off more than 100 Oregon State Police troopers.

I want to make it clear that this is not a course of action I support. But it is the only tool available to the governor to balance the budget and – absent immediate and definitive action by the legislature – these are the cuts in services that will take place.

Let me take a moment to provide some context for the position we find ourselves in today. With this September forecast, we have lost \$1.7 billion in revenue since the close of the 2001 legislative session. In other words we are trying to cope with a \$1.7 billion deficit in the legislatively adopted budget for 2001-03.

As you can see, in the first four special sessions, the legislature addressed this problem with:

- \$565.3 million in program cuts;
- \$812 million in fund shifts and one-time revenue;
- \$108 million from a partial and temporary delay in a tax cut;
- and only \$68 million in permanent revenue -- \$65 million of which has not yet been approved by the voters.

In other words, to address a \$1.7 billion problem, we have raised at best only \$68 million in permanent revenue to help sustain state services in future biennia. As a result, the projected deficit for 2003-05 is estimated to be at least another \$1.3 billion.

This is something that should alarm all of us. Today, we received a letter from Moody's Investors Services stating that Oregon's credit rating outlook has changed from stable to negative. This is due in part to what Moody's refers to as a \$1.4 billion "structural gap" in the General Fund for the next biennium.

State Treasurer Randall Edwards, in a transmittal letter accompanying the Moody report, said "... we cannot be solely concerned with current fiscal year finances. Although most economists agree that national recovery is underway, next biennium's projected budget deficit and the state's ongoing structural budget imbalance points toward the difficult and more long-term collective challenge before us."

This underscores my resolve to resist any proposed solutions to the current revenue shortfall that would worsen our fiscal picture in the next biennium.

We have a structural budget deficit in Oregon – one that preceded the current recession and which will continue after the economy recovers. In other words, we are not going to simply grow our way out of this.

It is no secret that I believe that we need additional permanent revenue – along with the cuts we have already made – to provide stable funding for public education and other services that are important to Oregonians.

By the same token it is no secret that Republican leadership of the legislature disagrees with me – refusing to consider any permanent new revenue in the first two special sessions and only in the third session finally referring the question of a cigarette tax to the voters in an election set for September 17.

My position, in terms of what I believe we need for Oregon, has not changed. Apparently, neither has the position of the Republican leadership. In yesterday's meeting the majority leader of the Senate stated flatly that he would not support permanent new revenue. The Speaker of the House said that a discussion of new revenue was "inappropriate" at this time.

The problem here is that we do not have the time to go through the kind of protracted ideological debate we had in the first three sessions. We are facing an emergency.

While a revenue reduction of \$482 million would constitute a 5 percent cut if spread out over the entire biennium, it represents nearly a 20 percent service reduction when focused in the last eight months of the biennium. In other words, each day we delay taking action, the more severe will be the impact on any cuts we finally make.

For that reason, today I am directing state agencies to begin the implementation of a \$482 million across the board cut to put our budget back into balance. This is the only constitutional tool available to the governor to rebalance the budget. The fact remains that only the legislature has the constitutional authority to raise revenue to reduce the magnitude of these service reductions.

By taking this action, it is my hope that we can refocus the debate from the revenue side of the equation – which has not been very productive -- to the program side. After all, tax dollars are related to programs and services – many of which are important to Oregonians.

This action will give the Republican leadership an opportunity to study the programs that we can no longer fund in light of the new forecast and to consider which programs they wish to preserve and how they wish to pay for them – something only the legislature can do.

On Thursday I will conduct a public hearing at which state agencies will outline the steps the executive branch will be taking to implement the across the board cuts – a process that will take 60 to 90 days, assuming we start today.

I would strongly recommend that the Legislative leadership immediately – in the next day or two -- convene a Joint Budget Committee to publicly examine the implications of a \$482 million across the board cut -- in order to determine which services need to be preserved.

I would also recommend that the House Revenue Committee – the only committee in which revenue bills may originate -- also be immediately convened to consider various revenue options that the leadership may wish to pursue in order to pay for programs and services which they do not wish to cut.

I will convene the next Special Session on Tuesday September 3rd to take whatever legislative action the leadership arrives on to finance some or all of the budget reductions necessitated by the new revenue forecast.

A session next week will also give the legislature the important option of letting Oregonians vote directly in November on whether or not they are willing to finance these state services.

RESPONSE TO GOVERNOR'S SPEECH "OVERWHELMING"

Governor John Kitzhaber's office has received more than 1,300 telephone calls, e-mails and letters in response to last Wednesday's speech when he vetoed parts of the legislative budget package. Those responses are running better than 10-to-1 in favor of the governor's action.

"The response has been overwhelming," the governor said. "Oregonians understand that they should have a voice in this process before programs are cut and that they should demand more of legislative leaders."

During a statewide address last Wednesday the governor called the Oregon Legislature back into special session this Friday to deal with veto overrides.

"The first step is to sustain the vetoes this Friday," the governor said. "The next step is for the legislative leadership to begin a serious revenue discussion."

The governor said he believes Friday's override votes will be a very close, but the overwhelming public response is having an effect. After talking to legislators this week, the governor believes that many of them understand that the bills he vetoed were not good public policy and that they are warming to the idea that Oregonians need to have a say in the future of their state.

"I want to thank all of those who contacted me, their legislators and their local newspapers," the governor said. "It's my hope that Oregonians will continue to talk to their legislators. I have always had faith in Oregonians' ability to rise to the occasion and recognize the importance of doing the right thing."

Governor appoints Jim Hill to Board of Higher Education

Governor John Kitzhaber's office announced today that he has appointed former State Treasurer Jim Hill to the State Board of Higher Education, subject to Senate confirmation.

"The Oregon University System will reap the benefits of Jim's experience as State Treasurer, in addition to his many years in the Legislature and the private sector," the governor said. "Jim understands the link between education and the economy, and how it affects the quality of life in Oregon."

Following is a complete list of appointments the Governor Kitzhaber submitted to the Senate in August. All are subject to Senate confirmation. The Senate Interim Committee on Rules and Executive Appointments has tentatively scheduled a meeting on Sept. 4, 2002.

Accountancy, Oregon Board of	Kent, Bailey	Baker City
Children and Families, State Commission on	Samuel Henry	Troutdale
Dispute Resolution Commission	Mike McArthur	Moro
Electrical and Elevator Board	Thomas Lindberg	Portland
Fair Dismissal Appeals Board	Charlene Balzer	Cornelius
Fair Dismissal Appeals Board	Laura Lanka	L.O
Fair Dismissal Appeals Board	Alice Meyer	Portland
Fair Dismissal Appeals Board	Patrick Neill	Eugene
Fair Dismissal Appeals Board	Diane West	Oregon City
Health Services Commission	Andrew Glass	Portland
Higher Education, State Board of	Jim Hill	Salem
Investment Council, Oregon	Diana Goldschmidt	Portland
Land Use Board of Appeals	Michael Holstun	Portland
Midwifery, State Board of Direct Entry	Peter Howison	Dunes City
Pacific Northwest Electric Power & Conservation Planning Council	Melinda Eden	Milton- Freewater
Parole and Post-Prison Supervision, State Board of	Diane Rea	Salem

Physical Therapist Licensing Board	Nancy Wilson	Dallas
Public Employees Benefit Board	Paul McKenna	Salem
Student Assistance Commission, Oregon	Caspar Sharples	North Bend
Teacher Standards and Practices Commission	Mary Lou Pickard	Eugene
Tri-Met Board	George Passadore	Portland
Voluntary Action & Service, Oregon Commission on	Saul Ettlin	Portland
Voluntary Action & Service, Oregon Commission on	Elizabeth Hakala	Astoria
Workers' Compensation Management-Labor Advisory Committee (MLAC):		
	Kenneth Hector	Portland
	John Kirkpatrick	Portland
	Mike O'Rourke	Tualatin
	Bob Shiprack	Tualatin
	Sheri Sundstrom	Lake Oswego
	Lisa Trussell	Salem
	J.L. Wilson	Keizer
	Brad Witt	Salem
	Vickie Fleming	Salem
Workforce Investment Board, State	Eric Johnson	Portland
Workforce Investment Board, State, Youth Program Advisory Board, Outdoor	Larry Solie	Redmond

OFFICE OF THE GOVERNOR
STATE OF OREGON

PROCLAMATION

WHEREAS: I, John A. Kitzhaber, Governor of the State of Oregon, have exercised my constitutional prerogative to veto Senate Bill 1022, House Bill 4056, and House Bill 4064, which were passed by the Legislative Assembly in the 2002 Third Special Session; and

WHEREAS: Under Article V, section 15b, of the Oregon Constitution, both chambers of the Legislative Assembly constitutionally may override my veto of those bills with a two-thirds vote of the members present; and

WHEREAS: A full and beneficial debate about balancing the state budget with sustainable revenue for operations of public schools cannot realistically occur until the Legislative Assembly has had the opportunity to consider and take action on the vetoes;

NOW,

THEREFORE, I, John A. Kitzhaber, Governor of the State of Oregon, pursuant to Article V, section 12, of the Oregon Constitution, hereby proclaim Friday, August 16, 2002 at 9 a.m. to be

THE CONVENING OF THE OREGON LEGISLATIVE ASSEMBLY

for the purposes of considering whether to override the veto of
Senate Bill 1022, House Bill 4056, and House Bill 4064.

IN WITNESS WHEREOF, I hereunto set my hand
and cause the Great Seal of the State of Oregon to
be affixed. Done at the Capitol in the City of Salem
in the State of Oregon on this day, August 7, 2002.

Governor Kitzhaber Appoints Lane County Circuit Court Judge

Governor Kitzhaber has appointed Charles D. Carlson as Lane County Circuit Court Judge. Carlson replaces Judge Jack L. Mattison, who retired June 30, 2002.

Carlson graduated from the University of Oregon in 1979 with a Juris Doctorate, and received his Bachelors degree from Penn State University in 1975.

Carlson is currently a member of the Lane County Bar Association and the U.S. District Court Local Rule Committee. Carlson is actively involved with the OSB Affirmative Action Professional Partnership; and St. Mary's Episcopal Church Journey to Adulthood Youth Program.

Carlson has been married to his wife, Rebecca Kamitsuka, for 4 years, and has one daughter, Kate, 13.

In order to retain this position Mr. Carlson must stand for election in November 2002.

GOVERNOR APPOINTS MELINDA EDEN TO NORTHWEST POWER PLANNING COUNCIL

Governor John Kitzhaber announced today that he has appointed Melinda Eden to the Northwest Power Planning Council (NWPPC). Eden replaces John Brogoitti, whose term expired January 15, 2002.

Eden's appointment is subject to Senate confirmation; the Senate Interim Committee on Rules and Executive Appointments is tentatively scheduled to meet September 4.

Eden is from Milton-Freewater, Oregon. She is a farmer-viticulturist, a former herd manager, and also works as a hazardous substances attorney.

OREGON TO SEE EXPANSION OF GEORGIA-PACIFIC OPERATIONS AND NEW JOBS

Governor John Kitzhaber and Pete Correll, chairman and chief executive officer of Georgia-Pacific, announced today plans by Georgia-Pacific Corp. to expand significantly the company's presence and workforce in Oregon through an investment of \$200 million. Georgia-Pacific will add new facilities and a new paper machine at its Wauna mill in eastern Clatsop County. The new machine at Wauna is scheduled to begin production in 2004; it will have capacity to produce 80,000 tons of paper annually.

The expansion at Wauna is expected to bring 110 new permanent jobs with an average wage of \$60,000. Additionally, an additional 200 jobs will be created for construction and new equipment through the end of 2003.

"This is a clear show of confidence in Oregon as a place to do business," Kitzhaber said. "The mills will make products for distribution throughout the western United States. We have the personnel, the business climate and the transportation and distribution networks to meet the demands of such a facility," he added.

"Gov. Kitzhaber and his staff were tremendously supportive as were the many other state officials and agencies that helped us build a strong case for our management and board to install this equipment here. We extend thanks to all the public officials who made our job much easier," said Correll.

The governor credited the cooperative efforts of the local community solutions team – made up of several state agencies and local government partners – in helping Georgia-Pacific choose Oregon in the competitive site selection process. "If you talk with company officials, you'll see that our approach made the difference," Kitzhaber said.

Correll added that the Oregon team helped strengthen his company's view of the state's positive business climate. Georgia-Pacific is headquartered in Atlanta. The Wauna Mill now employs 1,000; another 2,000 Oregonians work at other Georgia-Pacific facilities throughout the state.

DETAILS FOR GOVERNOR'S LIVE ADDRESS

Governor Will be Available to Media following Address

Attention TV/Radio News Directors and Producers

Here are the technical and logistical details for this evening's live speech by Gov. Kitzhaber:

- Legislative Media Systems will run the camera and provide the feed.
- At 6:00:00 p.m., Legislative Media will broadcast an image of a digital clock on the press router on Channel 19; audio tone will be provided at that time.
- At 6:34:00 p.m., the image will cut from the clock to a live shot of the governor's desk.
- At 6:34:55 p.m., Gov. Kitzhaber will be cued to enter from camera right, sit at the desk and begin his remarks at 6:35:00 p.m.
- The governor's speech has been timed at approx. 5 min, 30 sec.
- As soon as the governor is finished, Legislative Media will dissolve to a live image of the Capitol Mall.
- For those stations unable to receive Legislative Media's feed, there will be a satellite feed: AMC2/ K9 (formerly GE2/K9); 85 West Downlink; 11880 (Vertical). Contact: Legislative Media or Master Control, Oregon State University (541) 737-2723

Immediately following the broadcast, Gov. Kitzhaber will be available to the media in the lobby of the Governor's Office. Lights and a mult-box will be provided.

GOVERNOR VETOES CIGARETTE TAX SUNSET BILL

Governor John Kitzhaber today vetoed House Bill 4064, which would sunset a 60-cent per pack increase in the cigarette tax in 2009.

“I believe we continue to need additional revenue and I believe that revenue must be permanent,” the governor said in his veto message to Secretary of State Bill Bradbury.

HB 4064 was one of the bills passed by the last special session of the Oregon Legislature. The cigarette tax increase goes before voters September 17th in a statewide election.

“Our current level of state programs and services is not sustainable into the future, based on the projected revenue forecast – even when the economy has fully recovered,” the governor said. “The fact is that we are not going to grow our way out of this problem. The only option left is to add permanent new revenue to fund important and needed services.”

By 2009, when the tax would be repealed, Oregon will be receiving an estimated \$220 million per biennium from the cigarette tax, funds primarily dedicated to the Oregon Health Plan.

GOVERNOR TO GIVE LIVE TELEVISION, RADIO ADDRESS

Governor John Kitzhaber will deliver a live address on television and radio at 6:35 p.m. on Wednesday, August 7 regarding his decision on the remaining bills passed by the last special session of the Legislature.

As of today, television stations KATU (2), KGW (8) and KOIN (6) in Portland will air the governor's address live, as will radio station KOPB (91.5 FM) in Portland. Other stations interested in carrying the address should contact one of these stations or Legislative Media Services at 503-986-1195. The address will also be available on the internet at www.leg.state.or.us

The governor will hold a news conference in the Governor's Ceremonial Office immediately following the address.

The bills remaining from the last special session are:

- Senate Bill 1022, shifting the final 01-03 payments to K-12 and community colleges into the next biennium (03-05).
- House Bill 4056, revenue bonds on the cigarette tax.
- House Bill 4064, sunset the cigarette tax increase in July 2009.
- House Bill 5091, omnibus disappropriation bill.

GOVERNOR TO HOLD PUBLIC HEARING

Governor John Kitzhaber announced today that he will hold a public hearing to solicit testimony on the next steps to take in order to deal with the resulting cuts to K-12 and the community college system if he vetoes certain bills from the special session.

Specifically, the governor is interested in how to deal with the revenue shortfall that would occur with the veto of SB 1022, which shifts the final 2001-2003 K-12 and community college payment into the next biennium, and HB 4056, which bonds the cigarette tax.

Governor Kitzhaber held a public hearing on July 19 to receive recommendations on whether to sign or veto bills on which he had issued potential veto notice. At this public hearing, however, the governor is asking for ideas to balance the budget should he veto these bills.

The public hearing details are as follows:

Thursday, August 1

7 to 9 p.m.

Multnomah County Board of Commissioners Boardroom,
Multnomah Building, 501 SE Hawthorne Blvd., Portland

- Sign-up begins at 6:30 p.m.
- Those unable to attend the hearing, but wish to express their thoughts are encourage to submit their testimony in writing by Monday, August 5 to the Governor's Office:
- Mail: 254 State Capitol Bldg., Salem, Oregon 97301, Attn: Katy Coba
- Fax: (503) 378-4307, Attn: Connie McMullen

Katy Coba Appointed Interim Director of Economic and Community Development Department

Governor John Kitzhaber today named Katy Coba as interim director of the Oregon Economic and Community Development Department, effective September 1.

Coba, currently the governor's chief policy adviser, will replace Bill Scott, who announced earlier this month that he is stepping down August 1.

Louise Solliday, the governor's natural resources adviser, will assume the role of chief policy adviser.

Coba has worked for the governor since 1995 in a number of capacities, including executive appointments director, economic development and international policy adviser, community development field director and her current position as chief policy adviser.

She is a native of Pendleton and graduated cum laude and Phi Beta Kappa with a Bachelors degree in economics from Whitman College in Walla Walla, Washington. Her career in state government also includes working as assistant director in the Department of General Services and special assistant to the director of the Oregon Department of Agriculture. In 1994, she became administrator of the Agriculture Department's Marketing and Business Development Division.

"Katy has been an invaluable member of my staff since I took office in 1995," the governor said. "She is not only a dedicated public servant, but a good friend whose wise counsel has been a great benefit to me and to the state of Oregon. Her background makes her the perfect choice to lead this important state agency."

Partners for Disaster Resistance Releases Household Survey Findings

Despite the fact that nearly one-third of Oregonians who responded to a recent survey have experienced a natural hazard event, fewer than half of them have undertaken any form of disaster preparedness, including simply talking to members of their household about what to do in case of emergency.

That was one of the findings of a survey that assessed Oregonians' perception of risk and level of disaster preparedness activities. The survey represents the opinions of 744 Oregon households.

The survey also found that while the perils of earthquake and wildfire topped the list of events experienced by Oregon residents, less than a third of respondents have taken protective measures such as securing their water heaters from toppling during a quake.

“Considering the potential for damage and loss from natural hazards that communities all over Oregon face, these survey findings illustrate a remarkably low level of preparedness,” said Beverlee Venell, Director of Oregon Emergency Management.

Survey findings also indicated that relatively few Oregon residents have taken long-term measures to protect themselves from loss. For example, only one-third of respondents said that they have earthquake insurance. But, the survey showed, there is hope that Oregonians can become safer in the future. A majority of respondents indicated that tax breaks and insurance discounts might persuade them into undertaking risk-reduction activities.

Nearly half of respondents said that they would be willing to spend anywhere between four to 16 hours or more on disaster preparedness activities.

“This is a significant finding for organizations such as the American Red Cross, Oregon Trail Chapter and their Prepare for Life Campaign” said Governor Kitzhaber, “as well as other members of the emergency management community statewide who sponsor outreach and other public safety campaigns on a regular basis.”

The American Red Cross, Oregon Trail Chapter, Institute for Business & Home Safety (IBHS), Oregon Emergency Management, and SAFECO Insurance Companies joined forces to fund the statewide Household Natural Hazards Preparedness Survey. The Oregon Natural Hazards Workgroup at the University of Oregon

designed, implemented and conducted the survey analysis.

In December 2000, Governor John Kitzhaber signed an Executive Order proclaiming Oregon as a Showcase State for Natural Disaster Resistance and Resilience. Partners for Disaster Resistance: Oregon Showcase State Program is a cooperative effort among public and private sector organizations working together to reduce disaster losses.

Oregon is only the second state to be recognized for its efforts in making natural disaster preparedness a priority through the IBHS Showcase State Program. IBHS developed this public/private initiative to foster an environment that reduces disaster losses and promotes recovery in a shortened period of time with less outside assistance. ONHW is facilitating Partners for Disaster Resistance with funding support from the Public Entity Risk Institute and SAFECO Insurance Companies. For more information visit www.oregonshowcase.org.

Governor Names Task Force On Medical Professional Liability Insurance

Governor John Kitzhaber today announced that he has appointed a task force to find ways to address medical professional liability insurance costs in Oregon. The task force plans to hold its first meeting in early August

Medical professional liability insurance premiums nationwide have risen sharply across the board this year, especially for doctors in certain specialties. In Oregon, rates for obstetricians and surgeons are up by over 50 percent. At the same time, some insurance carriers have left the Oregon market entirely, while others will not accept new doctors or renew current policies. Many hospitals have also increased the amount of coverage they require doctors to carry before they will allow use of their facilities.

The task force will examine the causes of the recent steep rate increases and investigate the current affordability and availability of medical professional liability insurance in the Oregon market. It will then catalogue a range of possible solutions for consideration in the next legislative session. It will meet through the rest of the summer with the goal of presenting an analysis of policy options to the governor and legislative leaders this fall.

The task force is made up of representatives of the insurance industry, medical providers, the legal system, consumers, purchasers, and the Oregon Legislature. It will have staff support from the Oregon Department of Consumer and Business Services, which regulates the sale of insurance statewide.

“Lack of access to medical professional liability insurance has drifted into a full-blown crisis in several states,” Kitzhaber said. “Here in Oregon, some communities are losing essential medical services because doctors have lost coverage. That’s not acceptable.”

The governor noted that the problem is acute in rural communities where smaller medical practices are especially vulnerable to premium increases, potentially creating situations where residents must travel long distances for access to care.

Medical professional liability insurance premiums in Oregon total about \$50 million per year. That does not include costs of medical organizations that self-insure, such as Kaiser Permanente and Oregon Health and Science University.

“Very strong opinions have been expressed in recent weeks about the causes of this problem,” Kitzhaber said, “I think it’s critical to recognize that, whatever the cause or causes, the needs of the people of this state demand that we pull together and look for ways to resolve it. I hope we’ll find that there are a variety of measures we can consider - both in government and in the private sector.”

The following individuals will serve on the task force:

Mick Alexander, Oregon Trial Lawyers Association

Andris Antoniskis, Oregon Medical Assoc. Risk Purchasing Group

State Senator Kate Brown, Oregon Senate, District 21

Lynn-Marie Crider, Oregon AFL/CIO

Lori Davis, Legacy Mt. Hood Medical Center Oregon Assoc. of Hospitals and Health Systems

Robert Dervedde, Oregon Medical Association

James T. Dorigan, Jr., NW Physicians Mutual Insurance Company

Phil Griffin, NW Natural Gas, Oregon Health Care Purchasers Coalition

Jeff Heatherington, Osteopathic Physicians and Surgeons of Oregon

Roger Miyagi, Kaiser Permanente

Cheryl Pellegrini, Oregon Department of Justice

Lisa Trussell, Associated Oregon Industries

Cynthia Wickstrom, Oregon Health and Science University

State Representative Max Williams, Oregon House of Representatives, District 35

Frank Yraguen, Malheur County Circuit Court Judge (Retired)

Governor Announces Potential Line-Item Veto, Public Hearing On Budget Bills

Governor John Kitzhaber announced today that he is considering exercising his line item veto authority to disapprove portions of House Bill 5091 passed by the special session of the Oregon Legislature.

The governor also announced plans to hold a daylong public hearing on Friday, July 19, in Salem to take invited testimony from representatives of education and from the public. The hearing will be in Room 50 in the State Capitol, starting at 10 a.m. with invited testimony from education groups. Testimony from the public will begin at 1 p.m.

House Bill 5091 is the budget bill passed by the Oregon Legislature during the special session that ended June 30. The portions of the bill that the governor is considering vetoing would restore \$267 million in K-12 and community college funding. If this action is taken, the state budget would be out of balance by \$267 million, which would require the governor to take actions that would bring the budget back into balance.

The governor is under no obligation to exercise his line-item veto authority, but is required to provide five working-days notice of bills or portions of bills which might be vetoed; he has until August 9, 2002 to sign or veto bills that reached his desk after the special session adjourned.

On July 11, Kitzhaber said that he is considering vetoing four bills. The public hearing on July 19 is intended to provide the governor with additional information before he makes a final decision about those bills and about any line-item veto.

"Obviously, I want to hear from the education community because teachers and schools, particularly K-12 and community colleges have the most at stake", Kitzhaber said. "I also believe that it is important to hear what the public has to say about whether I should veto any of these bills."

The public is also invited to submit written testimony at the hearing or to express their view by calling the Governor's Office at 503-378-4582 or submitting e-mail through the Governor's Office Website

www.governor.state.or.us/governor/mail/mailform.html

Governor Releases List of Potential Vetoes

Governor John Kitzhaber today released a list of potential vetoes. The governor is under no obligation to veto these bills, but is required to provide prior notice of bills that might be vetoed.

The governor has until August 9, 2002, to sign or veto bills sent to him by the special legislative session that ended June 30. He also has the option of letting bills become law without his signature.

The list of potential vetoes includes:

- Senate Bill 1022, shifting the final 01-03 payments to K-12 and community colleges into the next biennium (03-05).
- House Bill 4055, distributing money from the Common School Fund, abolishing certain state positions, and other provisions.
- House Bill 4056, revenue bonds on the cigarette tax.
- House Bill 4064, sunset the cigarette tax increase in July 2009.

STATEMENT

The following is the text of Gov. Kitzhaber's July 9 statement on the budget that the Legislature sent him from the special session:

"I want to commend the Legislature for getting a balanced budget to my desk. Many people worked very hard - the Republican and Democratic leadership and Senators Hannon and Courtney.

Having said that, I believe this budget reflects the politics of the institution, but not what's best for the people of Oregon.

It puts at risk the education of future Oregon children in order to enhance the perceived electability, or re-electability, of members of the Oregon Legislature. That is distressing.

This budget in reality does not reflect an ideology. It reflects a drive to retain the majority or gain the majority. It reflects a drive to acquire power, but not to wield that power for a larger public purpose.

I want to take this opportunity to discuss how I intend to dispose of the budget that has been presented to me. First of all, I have signed three bills already: HB 4051, HB 4065 and HB 4059. I have until August 9 to decide whether to sign or veto the remaining bills. I will announce a list of potential vetoes on Thursday.

Let me make a few general comments about the budget, then highlight some areas that concern me deeply:

First of all, I think this budget violates the principle of "pay-as-you-go." This is not a fiscally conservative budget. It is a fiscally irresponsible budget, because it is not balanced by program cuts, not by new revenue, but rather by one-time revenue, borrowing against the future and a series of complex accounting maneuvers.

In particular, I have concerns with HB 4056, which would commit our tobacco revenue to back debt service on bonds to be sold for \$50 million for K-12 funding in the current biennium, and against any potential revenue shortfall in September up to \$175 million. The total bonding package is \$225 million.

If we were to issue all \$225 million, and the cigarette tax fails in September, the existing tobacco tax money would be liable to pay that debt service. On a biennial basis, we get about \$100 million from the tobacco tax - this would take \$80 million of it right off the top, creating an additional \$80 million liability in the 03-05 biennium.

The \$50 million in K-12 bonding amounts to nothing more than robbing from future school children to pay for one year of K-12 funding in this biennium. The \$175 bonding scheme, in my view, abrogates the Legislature's constitutional responsibility to balance the budget and puts the state further into debt.

I'm also concerned about SB 1022, which shifts the final K-12 and community college payment into the next biennium. I'm concerned about this on several levels: first, this is a shift in payment date that is not accompanied by a shift in revenue level. If the next biennium were flush, one could make the argument that this kind of cash management scheme could work, but this doesn't reflect cash management, this reflects an effort to avoid accountability. We have a \$1.4 billion projected deficit in the next biennium and we're adding a \$211 million K-12 liability on top of that.

Secondly, if we have a cash flow problem in July of next year - which is almost inevitable, given the way this budget has been constructed -- we will have to borrow money in order to make this payment. In other words, issue tax anticipation notes. But in order to issue tax anticipation notes, you need a balanced budget, which means that the Legislature, in order to avoid a very serious cash flow crisis, must have the budget balanced and adjourn sine die by June. That's happened only twice since 1985.

Third, this bill employs to extraordinarily complicated accounting maneuvers - which makes the kind of accounting we saw with Enron and Worldcom seem simple in comparison.

The question we have to ask ourselves is, "When the nation is expressing outrage at corporate bookkeeping practices - should the state of Oregon be adopting the same questionable practices for the public sector?"

Finally, I'm concerned with HB 4055, which takes \$17.7 million from the statutory principle of the Common School Fund to spend in the last year of this biennium. It took 50 years to accrue that \$17.7 million, and we would spend it in one year. It will reduce future earnings for the Common School Fund and - depending where the stock market is -- when we have to liquidate these assets, we will have to do it at a loss.

So again, it's borrowing from future school children to take care of a short-term political problem in this biennium. And it is very, very bad cash management because we would have to sell low, rather than sell high.

Now, I haven't made a final determination about what I may or may not veto. I will be giving notice on Thursday about potential vetoes. But there is one final point I want to make. There is a drumbeat that is beginning to appear around the state, and the mantra is, "This is as good as it gets, so we should just accept it."

Even though the current Legislature as an institution slipped into mediocrity does not mean that Oregonians should not have high expectations. If "this is as good as it gets," then it's going to get a whole lot worse, because many of the architects of this plan are going to return to the next Legislature. And accepting at face value that "this is as good as it gets" is an acknowledgement that Oregon is a mediocre state. That is a slippery slope and I refuse to accept that."

Bill Scott To Step Down As Director of Oregon Economic and Community Development Department

William C. "Bill" Scott will step down July 31st after more than nine years as director of the Oregon Economic and Community Development Department, Gov. John Kitzhaber announced today.

Since his appointment in April 1993, the Department has provided critical assistance for the dramatic growth of the high technology industry, which now employs more than 100,000 Oregonians, up from 60,000 in 1992. The Department has also responded to the loss of more than half of Oregon's forest product mills by focusing most of its resources and time on financing critical infrastructure and recruiting new employers to Oregon's rural communities.

"Under Bill Scott's leadership, the Department led our efforts to rebuild the economic base of rural Oregon, which is now paying off with many important new business investments in eastern, southern and coastal communities," the governor said. "Bill has provided years of dedicated service to the State of Oregon. At all times, he has been a consummate professional and has maintained his commitment to making Oregon a better state."

The governor pointed out that Scott was responsible for constructing and maintaining a department that is seen as a national model for providing key services to both rural and urban communities.

Scott said, "I am grateful for the opportunity to serve the courageous men and women who are building Oregon's businesses and communities. Our Department has received constant support from Governors Kitzhaber and Roberts and the legislative leadership. Oregon's ongoing challenges make it essential that this support continue."

Scott is leaving for a business opportunity that will be announced later. No decision has been made on Scott's replacement.

GOVERNOR'S OFFICE ANNOUNCES STAFF CHANGES

Governor John Kitzhaber's office announce the following staff changes today:

- Legislative and Intergovernmental Relations Director Olivia Clark will be leaving the Governor's office effective July 12, 2002. She has been a member of Governor Kitzhaber's staff since March, 1995. Chief of Staff Steve Marks said Pat Egan, the governor's transportation and economic development adviser, will assume Clark's duties for the remainder of the Administration.
- Press Secretary Bob Applegate will be leaving the Governor's office effective July 8, 2002. He has served as Press Secretary since January, 1995. Marks said Applegate would be replaced by Tom Towslee, who is on loan from the Oregon Parks and Recreation Department.

"I greatly enjoyed working with both Bob and Olivia," said Kitzhaber. "They both made a great contribution to my administration and they will be missed. I wish them the best of luck in their next endeavors."

(Advisory: Beginning July 8, Tom Towslee can be reached at 503-378-6496. Cell phone is 503-510-1113. Pager is 503-540-3758.)

American Bridge Breaks Ground In Reedsport

American Bridge Co. broke ground today on a new \$10 million steel fabrication plant and offices on Bolon Island north of Reedsport. Today's ribbon-cutting ceremony kicks off 15 months of construction that will eventually create 120 family wage jobs with benefits. American Bridge selected Bolon Island in February for its west coast headquarters. The 60,000 square foot fabrication plant and 10,000 square foot office complex is being built on 35 acres purchased from Douglas County.

The governor and William Scott, director of the Oregon Economic and Community Development Department, released \$250,000 from the Strategic Reserve Fund for the project. The money will be used for modifications to a dock on the property to accommodate barge traffic.

"This project would not have been possible without the cooperation of local officials, representatives of American Bridge and the State of Oregon," Kitzhaber said. "This is an excellent example of all levels of government working together to bring a much needed economic boost to the Reedsport area and to Oregon's South Coast."

"I very much look forward to joining the ranks of quality Oregon companies," said Bob Luffy, president and CEO of American Bridge. "I want to thank the Douglas County Commission, the City of Reedsport, the Port of Umpqua and all the local community partners. I also want to thank Governor John Kitzhaber, his staff and the key support of his state agencies in moving this proposal to a rapid conclusion. We are very appreciative of the contributions to this effort at every level, including the use of Strategic Reserve Funds for infrastructure improvements."

American Bridge is one of the oldest and most successful bridge-building corporations in the United States, building many of the world's most famous bridges, including the San Francisco Bay Bridge and the Verrazano Narrows Bridge in New York. The company selected the Bolon Island site after a three-year search for a location that would provide rail, water and interstate access.

The Bolon Island site is redeveloped industrial land that was improved with a number of investments and cooperative public-private efforts.

Statement By Governor John Kitzhaber

"I will shortly join my wife Sharon and my son Logan for the final three days of their month-long vacation in France, and return with them to Oregon on Sunday, June 30. My family left on May 31, while I remained behind to advocate my budget proposal to the Legislature during its current special session. Part of this proposal is a referral of a temporary income tax increase to the voters, in order to help solve the state's budget deficit.

We have the responsibility not only to solve the current shortfall, but also to reduce the looming fiscal crisis in 2003. I believe that we should pay as we go and provide sustainable funding for our schools and other services -- not simply patch together a short-term solution based on one-time revenue and borrowing.

The Legislature has clearly chosen to move in a different direction - although I want to commend the House leadership for recognizing the need for new revenue as part of the solution, and particularly for including both a tobacco tax component and an income tax component as part of their plan. Though I do not intend to help broker a deal with which I fundamentally disagree, I will give thoughtful consideration to any rebalancing plan the Legislature can produce. But first, the Legislature must send something to my desk.

I remain concerned about the level of education payments that the Legislature proposes to shift into the next biennium. I strongly oppose borrowing as a part of the solution, but I am stopping short of threatening to exercise my veto power.

I will maintain daily contact with my staff during my short absence, and I will be available to consult with the legislative leadership, if necessary. I hope to see a responsible rebalance package on my desk when I return on Sunday."

Governor Certifies Preparedness Plan For Disposal Of Chemical Weapons At Umatilla

Governor John Kitzhaber certified today that an emergency preparedness plan is "adequate and fully operational," allowing the U.S. Army to proceed with test burns to dispose of chemical weapons at the federal Umatilla Chemical Depot in northeastern Oregon.

In a ceremony in his office, Kitzhaber signed a letter to the Oregon Environmental Quality Commission giving final approval to a Chemical Stockpile Emergency Preparedness Plan (CSEPP) and certifying that the communities surrounding the Depot can handle any mishap that might occur.

"My certification is the culmination of years of work by hundreds of people who have toiled to make their communities safe in the event of an accident at the Umatilla Chemical Depot," Kitzhaber said. "I am extremely proud of the way the communities in Umatilla and Morrow counties, along with our partners in Washington state, have pulled together to build a strong emergency preparedness program, and I have full confidence in it. In 1999, the program met just a few of its emergency performance measures. In the most recent comprehensive exercise last month, it met all fifteen-an extraordinary achievement in so short a period of time."

Among the officials who participated in the signing ceremony were Beverlee Venell, Director of Oregon Emergency Management, and Umatilla County Commissioner Dennis Doherty. Also present was John Pennington, Region 10 director of the Federal Emergency Management Agency (FEMA), who voiced FEMA's ongoing, strong support of the preparedness plan.

"Keeping our CSEPP at its present high level of effectiveness will require a sustained effort and continued federal funding, until all the chemicals are destroyed," Kitzhaber said. "For this reason, I am asking my Executive Review Panel-which consists of first responders, local officials and tribal leaders, and state agencies-to continue meeting at least once a year, and to report to the Governor on the condition of CSEPP. Should CSEPP ever fall short of its present high standards, the Governor may then ask the EQC to take corrective action through the permit process. I am confident that this on-going mechanism will guarantee a robust CSEPP for the duration of the incineration."

**GOVERNOR ANNOUNCES HIRING FREEZE AND TRAVEL REDUCTION
Action Formalizes Earlier Steps**

Governor John Kitzhaber announced today further efforts to reduce state spending by ordering a freeze on hiring for all executive branch state agencies for positions financed in full or in part with general funds or lottery funds.

The freeze formalizes budget-cutting measures started in October, 2001, and takes effect immediately. It is the latest in a series of actions which have included cuts in supply and service budgets, holding positions vacant and reduction of travel by state employees.

In addition, Governor Kitzhaber announced a freeze on all out-of-state travel paid for in full or in part with general fund or lottery fund dollars.

"State managers have been doing a good job working with the state's budget agency to limit expenditures, hold vacancies open and hire only essential personnel," said Kitzhaber. " But the latest budget news means we have to constrain spending even further."

Both the hiring freeze and the travel restrictions will be in effect until further notice.

GOVERNOR ANNOUNCES SPECIAL SESSION

Governor John Kitzhaber today called the Oregon Legislature back to Salem on Wednesday, June 12, for a special session to rebalance the state's 2001-2003 budget.

In announcing the special session, the third this year, the Governor called on the Legislature to craft a budget-balancing plan that has the support of both parties and will gain acceptance with voters.

"The answer may lie somewhere between the plan I proposed last week and the plan put forward by the Republican leadership," the Governor said. "While a compromise will, in all likelihood, leave a significant revenue shortfall for the next governor and the next Legislature, it would represent something with solid bipartisan support. And that, in itself, would be a significant step in the right direction."

The Governor called the special session after conferring with legislative leaders over the weekend. The timing of the session recognizes that the Legislature needs to act by Friday on a cigarette tax increase or lose additional revenue, that local school districts need to make their budget decisions by July 1 and that some legislators have commitments next week.

The State of Oregon has a projected shortfall of \$870 million in the current 2001- 2003 biennium. In addition, tentative budget projections point to an additional deficit of over \$1.3 billion in the 2003-2005 biennium.

Governor Kitzhaber Appoints Multnomah County Circuit Court Judge

Governor Kitzhaber has appointed Katherine E. Tennyson as Multnomah County Circuit Court Judge to fill the vacant position created by Presiding Judge James R. Ellis' retirement of April 1, 2002. In the May 21st election, the voters of Multnomah County selected Tennyson to that position, and her judicial term is scheduled to begin in January 2003. In order not to have the position stay vacant until January, Governor Kitzhaber has appointed Tennyson so that she may begin her judicial duties.

Tennyson graduated from the Lewis and Clark College Northwest School of Law in 1984 with a Juris Doctorate, and received her Bachelors degree in Political Science from Duke University. Tennyson has been in private practice since 1984, developing her practice into her current firm partnership of Tennyson and Winemiller.

Tennyson is currently a member of the Multnomah Bar Association; Girl Scouts Columbia River Council; chairs the Government Standards and Practices Commission; and serves on the MBA Court Liaison Committee. Tennyson has served on the Children's Justice Act Task Force, Adoption Services Task Force, Multnomah County Dependency Model Court Site Committee, and David's Harp Board of Directors.

Governor Opens Blue Cross/Blue Shield Call Center In Medford

Governor John Kitzhaber today opened a new call center being operated by Regence Blue Cross/Blue Shield in Medford. When fully operational, the facility will employ 340 people, with 180 of those jobs coming online by 2003.

"This represents a true expansion and not just a re-location of jobs," Kitzhaber said. "And these will be quality jobs, with entry-level salary and benefits packages exceeding 150 percent of the average Jackson County family wage level."

The Medford, Oregon site was selected after a multi state competitive process. The Oregon Economic & Community Development Department (OECDD), which has aggressively reached out to Oregon businesses hoping to expand their Oregon presence, played a major role in landing this facility. OECDD helped Regence with technical data, \$125,000 in workforce assistance and training assistance from the Governor's Strategic Reserve Fund, and coordination of workforce service providers to provide one stop service for Regence Blue Cross/Blue Shield's workforce needs.

"Regence's move to Medford fits right into Oregon's commitment to grow business and jobs in every part of our state. And the ripple effect of this investment will mean an immediate \$50 to \$70 million injection into the Jackson County economy," Kitzhaber said.

Kitzhaber also cited other recent successful recruitment efforts, which all worked closely with OECDD and the Governor's Office in recent months:

- **Vestas American Wind Technologies**, the world leader in wind turbine manufacturing and sales, is moving its North American headquarters to Portland from Palm Springs. Vestas is also locating its first North American manufacturing plant in Portland, creating over 1,200 jobs in Oregon.
- **American Bridge Company**, which will bring 120 jobs to Reedsport, Oregon.
- **IMEX Corporation**, a Japanese-based company, which is locating its first North American printer cartridge manufacturing and recycling plant in Salem, Oregon.
- **Bear Creek Corporation** in Medford, announced phase one of a five-year expansion program, which may add up to over \$50 million of new investments in this community.

Governor Announces PERS Task Force

Governor John Kitzhaber announced today the creation of a task force to examine the Public Employees Retirement System. The task force will be charged with completing a comprehensive assessment of the system and making recommendations to ensure that the funding of retirement benefits for Oregon's public employees is financially sound, affordable and stable.

The governor will serve as chair; the task force will issue recommendations prior to the 2003 Legislative Session. Due to the undetermined date of the upcoming special session, the task force is unlikely to have its initial meeting scheduled until sometime in July.

Specifically, the task force will make recommendations to the next governor and Legislature to improve the system's administrative efficiency and strengthen its financial and legal foundations.

"I have great confidence and trust in this group," Kitzhaber said. "Their collective expertise in both public and private compensation and retirement systems will clarify the issues we face, and help define the steps we can take to improve the system in the long-term."

The complete membership of the task force is as follows:

Chairperson

John A. Kitzhaber, M.D.

Representing Business

Kenneth Thrasher, Business Executive and Former CEO of Fred Meyer
Benjamin R. Whiteley, Chairman and CEO (Retired), Standard Insurance Co.

Representing Labor

Pat West, Oregon State Fire Fighters Council
Ken Allen, AFSCME Council 75
Rich Peppers, SEIU Local 503, OPEU
Tricia Bosak, Oregon Education Association

Representing Public Employers

Christopher L. Dudley, Oregon School Boards Association
Helen Berg, Mayor, City of Corvallis
(representing the League of Oregon Cities)
Michael W. McArthur, Judge, Sherman County

(representing the Association of Oregon Counties)

Experts

Donald A. Burns, Attorney, Miller Nash LLP
Sharon Griffin, Louisiana Pacific
Randy Pozdena, ECONorthwest
Gregory A. Hartman, Attorney, Bennett Hartman Morris & Kaplan LLC
William F. Gary, Attorney, Harrang Long Gary Rudnick PC

Resources and Support

Mike Greenfield, Director, Dept. of Administrative Services
James Voytko, Executive Director, Public Employees Retirement System

Governor Issues Statement On Budget Forecast

Governor John Kitzhaber issued the following statement today about the state budget forecast:

"In their press conference today, Sens. Hannon and Courtney sounded a realistic alarm about the budget shortfall. While the June forecast is not yet out, I agree with their assessment that a growing revenue shortfall is realistic, and that it will have serious implications for this biennium's budget and for the next.

While our immediate challenge is balancing the 2001-2003 budget, the 2003-2005 budget could easily be out of balance by \$1 billion. I hope the Legislature will spend time considering the effects of any actions taken in the upcoming special session on the next biennium.

I believe both this Legislature and I have the responsibility to hand our next governor and the next Legislature -- not sea of red ink -- but a budget that they have a realistic chance of managing. To answer the current and future fiscal shortfalls we face, and to provide stability for state services important to Oregonians, we either need to make more cuts, or take actions to increase revenues. The continuing challenge of this crisis underscores my strong resolve that we need to adopt a pay-as-you-go approach."

Governor Kitzhaber Appoints Jackson County Circuit Court Judge

Governor Kitzhaber has appointed Lorenzo A. Mejia as Jackson County Circuit Court Judge. Mejia will replace Judge Ross G. Davis who will retire May 31, 2002

Mejia graduated from the University of Oregon School of Law in 1986 with a Juris Doctorate, and received his Bachelors degree from the University of Oregon.

Mejia worked for the Southern Oregon Public Defender's office from 1988 to 2001.

Mejia has served on the Board of Directors for the Center for Nonprofit Legal Services since 1996. Mejia has also been an active member of the Jackson County Public Safety Coordinating Council; Committee for Law Enforcement/Court & Hispanic Community Relations; Oregon Criminal Defense Lawyers Association; and the Clinica Del Valle.

Mejia's daughter is 6 years old, and he has been married to his wife, Cristina Sanz, for 10 years.

In order to retain this position Mr. Mejia must stand for election in November 2002.

GOVERNOR ISSUES HEALTH PLAN WAIVER TERMS

Governor John Kitzhaber today issued a letter to legislative leadership outlining several of his concerns with their approach to requesting a federal waiver to expand the Oregon Health Plan.

Earlier this week the governor directed state agencies to discontinue all work on the waiver until such time as the Legislature takes action on the request to submit it to the federal government for consideration.

This announcement came after months of waiting for the Legislature to act on the request, which was submitted by the governor to leadership in December 2001.

Kitzhaber cited three specific areas of concern:

- 1. The timing of the proposed expansion of the Family Health Insurance Assistance Program (FHIAP).**
- 2. The proposal to give immediate subsidies to persons with incomes up to 185% of the federal poverty level who have employment-based coverage available to them, while denying the same assistance to lower income person who do not have such coverage available.**
- 3. The proposal to reduce benefits by 10% for children, pregnant women and the frail elderly.**

Kitzhaber said that he once again would urge the legislative leadership to act on his request to submit the waiver.

The full text of the letter is attached and is also available on the Governor's Office web site:

April 26, 2002

The Honorable Gene Derfler
President of the Senate
900 Court St. NE Room S-203
Salem, OR 97301

Dear Gene:

As you know, I have directed that the agencies stop work on the waiver application and implementation for the expansion of the Oregon Health Plan (OHP) authorized by

HB 2519 until such time as the legislature takes action. I am writing to place on the record my concerns with several of the conditions you want to place on approving the submission of the waiver application.

Maintain FHIAP expansion into October of 2003

This would amount to agreeing to conditions that would stretch into the next biennium. As we both know, neither you nor I can commit the next legislature or the next governor to specific actions in the next biennium. We can only set the budget and the policy for the current biennium which ends June 30, 2003.

Limiting the Enrollment and Phase in to 110% of Federal Poverty Level for OMAP Coverage

This provision, as it relates to persons with incomes under the poverty level, violates the explicit policy of the state in ORS 414.036(e)(2): "it is the policy of the State of Oregon to provide medical assistance to those individuals in need whose family income is below the federal poverty level..." Capping eligibility for persons eligible for OHP Standard with an income below the federal poverty level is a clear violation of this policy.

In addition, HB 2519 grants my administration the authority to request a waiver providing coverage for persons up to 185% of the federal poverty level within the funds available. This specific 185% limit was negotiated directly with the Senate President's office during the 2001 legislative session. Within that limit I believe we need the latitude to negotiate the most appropriate phase in strategy with the federal government consistent with state policy. Your proposal would obstruct implementation of one of the most important policies in HB 2519: its express intent to structure subsidies in a manner that helps Oregonians transition from subsidized to unsubsidized insurance coverage.

Furthermore, because the expansion of OMAP coverage is strictly limited, your proposal would in effect make it impossible for us to continue to subsidize coverage for a person who was able to increase his/her income from below the federal poverty level to 120% or 130% of the federal poverty level. These persons would be forced into the Faustian choice of either declining additional income or losing their health insurance coverage.

This either breaks the progress of moving to an income sufficient to afford unsubsidized private insurance coverage, or it breaks the insurance coverage crucial to staying healthy enough to continue working and moving up the income scale. I simply disagree with this policy.

Furthermore, this proposed condition discriminates against persons whose employers do not offer employment based coverage. You have provided no policy argument that I am aware of which justifies immediately giving subsidies up to 185% of the federal poverty level for persons who have employment based coverage available while denying the same assistance for persons who don't have such coverage offered. Why should persons with similar incomes be treated differently based on the actions of their employers? Shouldn't working Oregonians struggling to become self-sufficient be treated equitably based on their own actions? Why should some of us be sanctioned because our employers don't offer access to group coverage?

Health Services Commission (HSC) to make recommendation for 10% cuts to the benefit package for the frail elderly, pregnant women, and children

On this point, the Oregon statute is clear. The HSC has only the authority to prioritize health services based on their relative effectiveness in terms of improving health. The authority and the responsibility to establish the benefit level itself rests solely with the legislature.

The HSC is currently reviewing its prioritized list to ensure that the list gives the legislature the greatest possible flexibility in determining which services will be covered. If you wish to cut OHP benefits for children, pregnant women and the frail elderly by 10% you have the authority to recommend a line change to achieve this reduction at the next special session. Furthermore, this issue is unrelated to the new waiver request.

As you both know, the remainder of your document restates conditions that I have previously agreed to. I am again urging you to take the necessary action to move this important effort forward.

Sincerely,

John A. Kitzhaber, M.D.

**GOVERNOR ANNOUNCES HE WILL NOT SUBMIT OREGON HEALTH PLAN WAIVER
Cites Lack of Legislative Action on Waiver Request**

Governor John Kitzhaber announced today that his administration will cease efforts at submitting a waiver request to the federal government for the Oregon Health Plan. The proposed waiver, which has been in the legislature's hands since December 2001, would have allowed the health plan to expand coverage to an additional 58,000 Oregonians.

"We can no longer commit state resources to a process that the legislative leadership steadfastly refuses to move forward," Kitzhaber wrote in a letter to Senate President Gene Derfler and House Speaker Mark Simmons. "Without the waiver, the Oregon Health Plan will be left without an important cost containment mechanism. Furthermore, our health care system will forgo a badly needed infusion of federal funds -- \$27 million in this biennium and \$90 million in 2003-05."

"Cost increases in commercial insurance and Medicare make it clear that the Oregon Health Plan cannot be sustained as currently structured," Kitzhaber wrote. "There is really only one tool available to gain significant control of costs - eliminating people from coverage."

"While I am saddened by your unwillingness to move this forward," the Governor concluded, "I am even more saddened by the impact which your lack of action will have on thousands of low income working Oregonians. Nonetheless, we have learned a great deal from this ten-year effort - from its implementation, its successes and its shortcomings. Hopefully, these lessons will help inform the debate as you decide where to take state-sponsored health care in the future."

A copy of the full text of the letter is attached.

April 23, 2002

The Honorable Gene Derfler
President of the Senate
900 Court St. NE Room S-203
Salem, OR 97301

Dear Gene:

Given the lack of action by the Legislative Emergency Board on the waiver request for the Oregon Health Plan (OHP), I am writing, with regret, to inform you that I am directing that all activities associated with developing the waiver request and planning for the implementation of the reform and expansion of the OHP be discontinued. We can no longer commit state resources to a process that the legislative leadership steadfastly refuses to move forward.

The passage of HB 2519 set us on a course to obtain a federal waiver which would accomplish several important goals:

- To gain flexibility in benefit design that would help us control the future cost of the OHP.
- To obtain federal matching funds for a larger share of the state dollars being spent on healthcare.
- To utilize all of the CHIP matching funds that provide a higher ratio of federal dollars to state dollars in the OHP.
- To substantially expand commercial insurance coverage under the OHP through the Family Health Insurance Assistance Program (FHIAP).
- Through savings from benefit reductions and the increase in federal funds expand access to 58,000 Oregonians who currently have no health insurance coverage at no additional cost to the state.
- Through expanded access reduce the cost shift from the uninsured onto businesses and individuals currently covered.

Unfortunately, because of your unwillingness or inability to approve submission of the waiver to the Centers for Medicare and Medicaid Services (CMS), none of these goals will be accomplished. The OHP will be left without an important cost containment mechanism. Our health care system will be left without a badly needed infusion of federal funds, and thousands of Oregonians who needed health care coverage will go without.

This obstinance is made even more frustrating by the cooperation of the federal government. As we have worked to draft the waiver document for submission to the federal government we have received supportive and collaborative feedback from the Bush Administration's CMS. They are looking forward to receiving our waiver request, and prepared to act on it in an expeditious manner. Where in the past it has always been the federal government that has stifled innovation in Oregon, now in an ironic twist, it is the state legislative leadership that erects the roadblocks to progress.

So that there is no mistaking your role in blocking this vital program I am including the following chronology:

8/02/01 - HB 2519 is signed into law.

10/1/01 -- Insurance Pool Governing Board recommends benchmark for coverage under the Family Health Insurance Assistance Program, as required by HB 2519.

11/1/01 - Health Services Commission identifies possible packages for the OHP Standard Benefit Package, as required by HB 2519.

11/13/01 - Governor's Office and Department of Human Services (DHS) present status report on progress in developing waiver request to Leadership Commission on Health Care Costs and Trends.

11/15/01 - Governor's Office and DHS present status report on progress in developing waiver request to Emergency Board Subcommittee.

9/19/01-1/9/02 - Waiver Application Steering Committee (WASC) assists and advises the Department of Human Services in development of waiver request, as required by HB 2519.

12/13/01 - WASC finalizes recommendation on the OHP Standard benefit package, as required by HB 2519.

1/7/02 - DHS submits letter to January Emergency Board asking for permission to submit waiver request to federal government.

1/22/02 - Meeting of the Leadership Commission on Health Care Costs and Trends scheduled to hear the waiver request is cancelled.

1/29/02 - Governor's Office and DHS report to Joint Committee on Health and Human Resources on the waiver request.

1/31-2/1/02 - Emergency Board meets but does not include the waiver request on its agenda.

2/8/02 - DHS submits letter to Joint Committee on Ways and Means asking that the waiver request be considered during the legislative Special Session.

2/8-11/02 - Legislature meets in Special Session but does not take up waiver request.

2/25-30/02 - Legislature meets in Second Special Session but does not take up waiver request.

3/25/02 - DHS submits letter to April Emergency Board again asking for permission to submit waiver request to federal government.

3/26/02 - Governor's Office and DHS present waiver request to Leadership Commission on Health Care Costs and Trends. Commission takes no action, but asks Oregon Health Council (OHC) to consider major concerns of the Commission at a special meeting scheduled for 4/4/02.

4/2/02 - Senate President and House Speaker send letter to OHC outlining four concerns of the Commission.

4/4/02 - Senate President and House Speaker present a proposal for the OHP2 waivers to the OHC.

4/4/02 - OHC hears testimony and adopts resolution addressing concerns and proposal from President/Speaker.

4/11/02 - Governor responds to Senate President and House Speaker on their proposal.

4/16/02 - Governor, Speaker and Senate President meet and agree to a set of guidelines to implement the waiver.

4/18/02 - Emergency Board subcommittees meet. Request to approve waiver application not included on the agenda.

4/19/02 - Emergency Board full committee adjourns without addressing the waiver request.

As this chronology illustrates, a tremendous amount of effort by hundreds of Oregonians has gone into the development of the waiver request. All groups required to produce components of the work met their requirements under HB 2519. This work was completed in early January, but the Legislature has refused to act on the requests since that time, although it had opportunities in two Emergency Board meetings and two Special Sessions to move these requests forward to the federal government.

Although I believe I have the authority to forward this request without legislative approval, the federal government has made it clear that they wish to see bipartisan support for any such waiver request. Given that I have tried to work with you to understand your concerns and address your issues over the past several months and still have not seen any movement, I am interpreting your lack of action to be a lack of support.

After hearing no alternative to the proposed waiver request from you for over two months, you presented a one-page concept paper to the Oregon Health Council on April 4. I responded to that proposal on April 11. The three of us and our staff met to discuss this issue the afternoon of April 16. At that time, I understood we had reached agreement, yet at the April 18-19 Emergency Board, no action was taken.

Cost increases in commercial insurance and Medicare make it clear that the OHP cannot be sustained as currently structured into the 2003-05 biennium. The waivers would have provided the Legislature the tools to control costs

through a rational and fair manner. The savings garnered through benefit reductions and the additional federal funds would have provided additional support to Oregon's health care system.

In the absence of these tools, there is only one tool left available to gain significant control of costs - eliminating people from coverage, whether they are covered under the current waivers, as "optional" coverage groups (e.g. pregnant women and children over 133% of the Federal Poverty Level), or through FHIAP. This, of course, takes us back to how we managed costs a decade ago - one of the main reasons we enacted the OHP in the first place.

As you know, most of the additional administrative costs performed over the past several months in developing the waiver request and planning for implementation were to be covered by savings to be generated after waiver approval. Given the current budget situation and the refusal of the legislative leadership to move the waiver request, I can no longer justify incurring these costs and so have ordered the agencies to cease all activity relating to the waiver. The costs incurred to date will be part of a future DHS rebalance plan.

While I'm saddened by your unwillingness to move this forward, I am even more saddened by the impact which your lack of action will have on thousands of low-income working Oregonians. I deeply regret the loss of 27 million of additional federal funds to the health care delivery system in this biennium and 90 million of federal funds in the next. I also regret that businesses and workers will find themselves facing even greater burdens because of the cost shift associated with caring for more uninsured Oregonians.

Nonetheless, this ten-year effort has brought coverage to hundreds of thousands of Oregonians and we have learned a great deal from its implementation, its successes and its shortcomings. Hopefully, these lessons will help inform the debate as you decide where to take state-sponsored health care in the future.

Sincerely,

John A. Kitzhaber, M.D.

GOVERNOR VETOES FARM LABOR BILL
Action is Last on Bills from Second Special Session

Governor John Kitzhaber announced today the expansion of the Lewis and Clark Bicentennial in Oregon (LCBO) Board of Directors. The LCBO is a non-profit organization established in 1998 to coordinate statewide planning of events for the Lewis and Clark Bicentennial, which will take place from 2003 to 2006.

The governor will be meeting with the new board on Wednesday, April 17th at the Oregon Historical Society in Portland to discuss the state's strategic plan for the commemoration.

State Rep. Betsy Johnson will serve as Chair of the board. Julie Curtis, Assistant Director of the Oregon Tourism Commission, will serve as acting Executive Director.

The complete list of the LCBO Board is attached.

Honorary Chair

The Honorable John A. Kitzhaber, M.D., Governor

Chair

The Honorable Betsy Johnson, Oregon State Representative

Board of Directors

Neil Bryant, Bryant, Lovlien & Jarvis, Secretary
Les McNary, Lewis & Clark Bicentennial Assoc., Treasurer
George Forbes, Governor Hotel
Steve Forrester, Daily Astorian
Keith Hay, Oregon Chapter L & CTHF, V.P.
Ken Karsmizki, Columbia Gorge Discovery Center
Peter Gray
Tim Martinez, Oregon Bankers Association
Michael Mooney, Lewis & Clark College
Norma Paulus, Oregon Historical Society
Joe D'Alessandro, Portland Oregon Visitors Association
Nancy Steuber, OMSI
Dr. Les Bergeron
Gert Boyle, Columbia Sportswear
Bud Clark
Bobbie Conner, Tamastlikt Cultural Center
Kim Duncan, Tri-Met

Jan Mitchell, Astoria
Warne Nunn, Meyer Memorial Trust
Chet Orloff
George Passadore, Wells Fargo Bank
Louie Pitt, Confederated Tribes of Warm Springs
BG Thayer, Sr., Civilian Liaison to Secretary of the Army
Tom Walsh, Tom Walsh & Co.
Debby Kennedy, Port of Portland
Bill Hansell, Umatilla County

Ex-Officio

The Honorable Victor Atiyeh
The Honorable Earl Blumenauer
The Honorable Bill Bradbury, Secretary of State
Adjutant General Alexander Burgin, Oregon National Guard
Michelle Bussard, National LCB
Mike Carrier, Oregon State Parks
The Honorable Peter DeFazio
The Honorable Neil Goldschmidt
The Honorable Mark Hatfield
The Honorable Darlene Hooley
The Honorable Barbara Roberts
The Honorable Gordon Smith
Don Striker, Fort Clatsop National Memorial
The Honorable Greg Walden
The Honorable David Wu

Governor Announces Opposition To Dept. of Interior's Land Designation

Governor John Kitzhaber announced today that he would file a court challenge to the U.S. Dept. of Interior's determination that a parcel of land in Florence is eligible for Indian gaming. The Confederated Tribes of the Coos, Lower Umpqua & Siuslaw Indians had requested to begin Indian gaming compact negotiations with the State of Oregon for a casino on that site.

Kitzhaber said his opposition to Interior's determination was based on the issue of eligibility of "restored" lands. Under federal law, tribal gaming on land acquired after the 1988 Indian Gaming Regulatory Act (IGRA) requires a governor's approval. This particular tract of land was acquired after 1988. Interior's finding that the land is "restored" means that it falls outside of the governor's approval requirement.

"I am concerned that Interior's decision will significantly impinge any governor's authority under the law," Kitzhaber said. "I have given Interior's determination careful consideration, but in the interest of the state in terms of the larger potential for siting other tribal gaming facilities, I am taking this action."

Kitzhaber said he remains supportive of tribal economic development, and will continue to maintain the positive relationship the state has built with the sovereign nation of the Coos, Lower Umpqua & Siuslaw. "I recognize that my decision to challenge Interior's findings will come as a disappointment to some, but I hope they will appreciate my reasons for initiating this challenge."

Oregon Joins Nationwide Emergency Management Assistance Compact

Governor, FEMA Region 10 Administrator Also Sign Disaster Declaration Agreement for Storm Damage to Five Oregon Counties

At a ceremony in Salem today with Federal Emergency Management Agency (FEMA) Region 10 Administrator John Pennington, Gov. John Kitzhaber signed SB 1001, which joins Oregon in the National Emergency Management Assistance Compact (EMAC). Gov. Kitzhaber and Pennington also signed a FEMA federal/state agreement to deliver federal assistance to Coos, Curry, Douglas, Lane and Linn counties, which experienced severe windstorm damages Feb. 7-8.

EMAC is a mutual agreement among member states to share expertise and resources with 45 other states that face the common threat of major disasters.

While states are capable of managing most emergencies, some severe disasters may exceed state and local resources, thus requiring outside assistance. Usually this assistance comes from federal agencies. But EMAC provides another way for states to receive interstate aid that is more readily available and cheaper than federal assistance. The compact provides fast and flexible assistance.

"This is an important step for Oregon and provides a valuable and significant option to assist Oregonians when disaster strikes," Kitzhaber said. "Further, and most important, the compact allows for a quick response to disasters using unique resources and expertise possessed by member states."

Governor Announces Reductions To Responsibly Balance Republican Budget

Governor John Kitzhaber detailed approximately \$80.7 million in additional budget cuts needed to responsibly balance the budget submitted by Republican leadership as a result of the second special session that ended March 3, 2002. The Republican budget spends almost a half billion dollars in reserves and trust funds to rebalance the budget.

Governor Kitzhaber vetoed portions of the Republican plan that used reserves from 911 emergency services and National Tobacco Trust proceeds, which were dedicated by the previous Legislature for providing health care for low income Oregonians.

"It's an unfortunate necessity to make these additional cuts," Kitzhaber said. "However, the Republican budget created a huge financial cliff for Oregon and I am just trying to do what I can to bring this budget into a more responsible balance. I am still hopeful that we can adopt a more sustainable, responsible budget in a subsequent special session."

Kitzhaber announced the following reductions in the following areas that will go into affect over the next four months:

- Community Colleges & Workforce Development: **\$3.3 million;**
- K-12 School Fund: **\$20 million;**
- Oregon University System, including agricultural and forest research and extension services: **\$27.2 million;**
- Human Services: **\$25.55 million;**
- Public Safety: **\$2.85 million;**
- Other Government Services: **\$1.7 million.**

A spreadsheet with exact reductions is attached and is also available at [/FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html](http://FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html)

Five Oregon Counties Will Get Federal Disaster Aid

Governor John Kitzhaber announced today that five Oregon counties hit hard by last month's windstorm will get federal disaster assistance through the Federal Emergency Management Agency (FEMA).

The governor requested the aid for Curry, Coos, Douglas, Lane, Linn and Benton counties following the February 7 storm. The storm caused major damage to public utilities and other public infrastructure. Benton County was not declared, as damages in the county did not meet federal thresholds for assistance.

"This assistance comes at an important time for Oregon. Public utilities, faced with budget shortfalls due to last year's energy crisis, will benefit greatly from the federal assistance that this declaration provides," said Kitzhaber.

The disaster declaration means local governments will be able to apply for federal funds to cover 75 percent of the cost of debris removal, emergency services and restoration of public property. Applicant briefings for those public entities in the declared counties could start as soon as next week.

Governor Kitzhaber Appoints Gilliam County District Attorney

Governor Kitzhaber announced today that he has appointed Marion T. Weatherford as Gilliam County District Attorney. Weatherford replaces John D. Burns who will resign effective March 10, 2002.

Weatherford graduated from Lewis & Clark College in 1996 with a Juris Doctorate, and received his Masters in Finance from Oregon State University in 1987.

Weatherford has served as Deputy District Attorney in Gilliam County since April 2001. Weatherford has maintained a private law practice and been active civically in Gilliam County since 1996. He has also been City Attorney for the City of Condon and recently served as the chairman for the Hotel Codon Restoration which was completed in September 2001.

In order to retain this position, Mr. Weatherford must stand for election in May 2002.

Governor Vetoes Legislative Ballot Titles, Allows Attorney General To Follow Standard Procedures In Explaining Measures

Governor Will Sign Measures Creating Expedited Process for Ballot Title, Explanatory Statement and Fiscal Impact

Governor John Kitzhaber announced today that he would veto legislatively proposed ballot titles for Senate Joint Resolution 50 (SJR 50) and House Joint Resolution 76 (HJR 76). The resolutions refer to the May primary ballot the use of \$120 million and \$220 million respectively of the Education Endowment Fund.

The effect of the vetoes is that the ballot titles for the measures -- the brief explanation of the measures that actually appears on the ballot -- will be written by the Attorney General's Office, which is standard procedure. The Attorney General's proposed ballot title will also be subject to public comment.

"These are important, expensive propositions," Kitzhaber said. "It is important that we have an accurate, unbiased ballot title explaining both measures," he said.

The bills to be vetoed are HB 4042 and HB 4041, which create the ballot titles for SJR 50 and HJR 76, respectively. Veto letters will be released next week when Gov. Kitzhaber returns from a family vacation. Gov. Kitzhaber also announced that he would sign SB 1010 and HB 4032, which create an expedited process for the Attorney General to complete work on ballot titles for SJR 50 and HJR 76, respectively.

Governor Kitzhaber Allows Vacant Grant County District Attorney Position to Stand for Election

After the recall of District Attorney Nancy Nickel, Governor Kitzhaber accepted applications for the Grant County District Attorney position. A number of applications were received and of those candidates, several indicated that they planned to file for and stand for election for the District Attorney position.

Given that a number of Grant County District Attorney applicants, and possibly others, plan to stand for election, the Governor has decided to allow the electorate of Grant County to vote for the candidates in the May election. After the May vote, the Governor may make an appointment to fill the District Attorney position at that time.

The filing deadline for candidates is March 12, 2002, with the primary election on May 21. Oregon law requires that candidates for District Attorney be admitted to practice in Oregon.

Until the vacancy is filled, the Governor must ensure that the duties of the Grant County District Attorney are carried out under lawful authority and without interruption. Therefore, the Governor has directed the Attorney General and his assistant attorneys general to continue to discharge the responsibilities of Grant County District Attorney until a successor is selected and sworn in. The Governor is grateful to Attorney General Hardy Myers and his Department of Justice staff for all of their assistance to the County and the State.

Governor Kitzhaber Appoints Multnomah County Circuit Court Judge

Governor Kitzhaber has appointed Maureen H. McKnight as Multnomah County Circuit Court Judge. McKnight replaces Judge William C. Snouffer who retired January 1, 2002.

McKnight graduated from the University of Oregon School of Law in 1979 with a Juris Doctorate, and received her Bachelors *summa cum laude* from Loyola University of Los Angeles California.

McKnight has worked for Legal Aid Services of Oregon since 1989, and is currently the Director for the Multnomah City Office. McKnight currently serves as a pro-tempore judge in Washington County. McKnight also served as an Adjunct Professor in Family Law at the Northwestern School of Law from 1986 - 1988.

McKnight currently serves on the Oregon Judicial Department, State Court Administrator's Office, Advisory Committees on Model Family Law Forms and Courthouse Facilitator Training; Governor's Council on Domestic Violence; Oregon Chief Justice's Statewide Family Law Advisory Committee; and the Stalking Resource Center of the National Center for Victims of Crime, National Advisory board.

McKnight has 2 daughters: Kellen 14 and Mairin 10.

In order to retain this position Ms. McKnight must stand for election in May 2002.

Governor Announces Actions On Special Session Rebalance Plan

Governor John Kitzhaber announced today that he would veto a number of the revenue elements in the Republican budget rebalance plan passed in the special session that ended Saturday, March 2. In addition, he announced that he would use his allotment authority to make the additional budget reductions necessary to ensure that the budget is balanced so the state can continue to meet its financial obligations.

"The Republican budget plan uses a staggering half billion dollars in one-time revenue, spending virtually every dime of the state's reserves," Kitzhaber said. "They have pushed a \$220 million Education Endowment Fund raid onto the ballot under the guise of a school stabilization fund, spent almost the entire National Tobacco Settlement account and created a huge financial cliff for the next biennium -- particularly for public education. This is stunningly irresponsible."

"This entire budget is an embarrassment and deserves to be vetoed," Kitzhaber said. "Nonetheless, the state is facing a serious cash flow problem and needs a balanced budget within the next week. For that reason, I will line item veto the use of \$67.5 million in National Tobacco Settlement proceeds in SB 5575 and reluctantly let the rest of the bill become law without my signature. Let me be clear, however, that the depth of these cuts is unnecessary and difficult to defend."

Kitzhaber also indicated that he will veto the use of \$14 million in 911 emergency services fund contained in HB 4030, as well as the \$6.1 million resulting from cutting dental services for Oregon Health Plan patients in HB 4029. The result of these actions will leave the Republican plan \$87.6 million out of balance. "To rebalance, I will use my allocation authority to make additional cuts that will bring the size of state services nominally closer the actual revenue that taxpayers will generate in the next two years," the governor said.

To ensure that the state can proceed with cash management actions that will allow Oregon to continue to meet its financial obligations, Kitzhaber said his rebalance actions will go into effect by March 12. "I have discussed this plan with Treasurer Edwards, and it will allow him to meet his March 8 deadline for proceeding with the sale of the Tax Anticipation Notes."

"Although my actions today will allow us to get through our short term cash flow the second special session did very little toward solving the state's budget crisis," said Kitzhaber. "On the contrary, the legislative leadership simply pushed the difficult choices into the future, hurt vulnerable citizens, undermined public education and left Oregon with an unsustainable General Fund budget. I fully expect to call a third special session in June to see once again if responsible budgeting can overcome narrow ideology."

Finally, Kitzhaber issued notice of possible vetoes on the following bills:

- **SB 5575** Budget reductions bill;

- **HB 4025** Farm worker collective bargaining;
- **HB 4026** Economic development planning;
- **HB 4028** Allows Sunday sales of liquor;
- **HB 4029** Oregon Health Plan dental services;
- **HB 4030** Appropriation of 911 emergency services funds;
- **HB 4032** Ballot Title for HJR 76, which asks voters to approve using \$220 million of the Education Endowment;
- **HB 4035** Reallocates net income and net proceeds from the sale of the Space Age Industrial Park and miscellaneous other revenues;
- **HB 4036** Eliminates the school improvement fund;
- **HB 4038** Ballot title for SJR 17 from the 2001 regular session, which allows universities to receive equity in private companies;
- **HB 4041** Ballot Title for HJR 76, which asks voters to approve using \$220 million of the Education Endowment;
- **HB 4042** Ballot Title for SJR 50, passed by the first legislative special session which asks voters to approve using \$120 million of the Education Endowment;
- **HB 5081** Which appropriates lottery dollars.

Governor's Statement

"At the beginning of this process to rebalance our budget, I put forward a simple plan: over \$400 million in budget cuts; a judicious use of existing revenue; and a modest increase in beer, wine and cigarette taxes coupled with the repeal or delay of a scheduled income tax cut. This package differs little from others offered by both Republican and Democratic governors around the country who are dealing with similar budget deficits.

Today, on the fifth day of the second special session in two weeks, I have moved considerably from that opening position. I have voiced my support for over \$300 million in existing reserves, including tapping the Education Endowment Fund. I am also willing to use a portion of the National Tobacco Settlement to help balance the budget if the Legislature will approve permanent new revenue.

In addition, I have informed the leadership that I will not veto the disappropriation bill passed by the Senate last night if it is part of a balanced strategy that includes at least the sustainable revenue from a 50 cent per pack increase in the tobacco tax.

Let me say that this is a significant concession because this budget is, in many ways, an embarrassment. It makes cuts in education -- K-12, community colleges and higher education -- and in services for at-risk children and other vulnerable Oregonians -- cuts that are both unnecessary and very hard to defend. Nonetheless, this budget appears to reflect a bipartisan consensus -- at least in the Senate.

What I am not willing to do, however, is to balance this budget with close to a half billion dollars in one-time revenue -- a position I have held consistently and openly for months. Why? Because this strategy will leave an equally large deficit in the next budget, no reserves whatsoever for the remainder of this biennium and will carry Oregon into another certain budget crisis by the end of this year.

I want to be sure that the Republican leadership understands that if this is what is put on my desk we will all be returning to Salem to take another run at this.

I suppose that it would be easier to walk away, to throw up my hands and say 'if that is the best we can do, I guess we'll just have live with it.' But I am wed to a set of principles. One of them is pay as you go. This budget doesn't do that. Another is 'fight for what you think is right.' A balanced, sustainable budget is worth fighting for. And that's what I am going to keep doing."

Governor Proposes Next Step In Balancing State Budget, Suggests Improvements To School Stabilization Fund Proposal

Kitzhaber Announces Vetoes, Posts Notice on Additional Possible Vetoes, Targets February 25 for Next Special Session

Governor John Kitzhaber today called on the legislative leadership to continue to work with him toward a balanced budget by agreeing to pass bills immediately at the beginning of the next legislative session that reflect \$295 million in agreed-upon budget cuts, and \$284 million in agreed-upon revenue sources.

The governor also articulated various improvements he would be seeking in the proposal to change the existing Education Endowment Fund to a School Stabilization Fund. Kitzhaber also announced his veto of six bills from the special legislative session that concluded Monday, February 11. He also gave notice of the potential veto of House Bill 4020, which relates to using \$14 million in 911 emergency services surpluses.

Finally, Kitzhaber said he intends to bring the Legislature back into special session on February 25, 2002.

At his news conference today, Kitzhaber released a list of the \$295 million in budget reductions that reflect a bipartisan consensus on acceptable reductions, including a \$50 million reduction in K-12 spending. He also released a list that reflects the bipartisan consensus on approximately \$284 million in acceptable one-time revenue sources.

"We are closer than it appears to agreeing on a balanced budget," said Kitzhaber. "What I have proposed to both Senate President Gene Derfler and House Speaker Mark Simmons is that we begin a second special session by agreeing to these cuts and revenues, thus reducing the size of the budget disagreement to approximately \$351 million. We may still have disagreements about how best to solve that problem, but at least we will have taken a solid step forward."

In outlining changes to the proposal to convert the Education Endowment Fund into a School Stabilization Fund, the governor proposed the following:

- Reducing the amount of the fund used this biennium to \$101 million. This change would use only the revenue generated this biennium;
- Adding lottery revenues in excess of \$600 million. In the next budget, this change would add approximately \$20 million to the fund;
- Adding more rigorous and specific conditions under which the fund could be accessed to assist schools. For example, Gov. Kitzhaber proposed using the fund only to cover deficits in existing legislatively approved budgets - not as a resource to establish spending levels during the legislative budget process.

"I believe these changes would make this an excellent School Stabilization Fund, with the kind of funding levels and spending safeguards that will allow it to grow to a size that would help soften the impact of future recessions on schools," said Kitzhaber.

Finally, the governor issued vetoes on the following bills:

- [Senate Bill 1008](#): Reduces dental benefits in the Oregon Health Plan.
- [Senate Bill 5574](#): Disappropriates money from state budgets.
- [House Bill 4012](#): Borrows money from the Common School Fund.
- [House Bill 4015](#): Relates to the School Improvement Fund.
- [House Bill 5070](#): Makes adjustments to budget disappropriation bill (SB 5574).
- [House Bill 5071](#): Adjusts lottery allocations.

Copies of the veto letters will be available at the end of the business day on the Governor's Office Web Site:
www.governor.state.or.us

Governor Commends Historic PCUN-NORPAC Agreement, Praises All Parties

Governor John Kitzhaber today commended the historic agreement reached between NORPAC Foods and Pineros y Campesinos Unidos del Noroeste (PCUN), calling it an important step in addressing the goals of enhancing the well being of farm workers and the agricultural industry.

"In my January 29th letter to PCUN and NORPAC calling for dialogue among the parties, I noted that my interest was to seek a solution that benefits farm workers, while also benefiting the industry," Kitzhaber said. "I am pleased that NORPAC and PCUN have reached an agreement creating a framework for solutions to these important issues."

In addition to PCUN and NORPAC, the governor praised Sodexo, the largest provider of food and facilities management in the nation, for its efforts to bring the parties together. Kitzhaber also thanked Sodexo for releasing the following public statement: "This agreement will help improve conditions for Oregon farm workers, while ensuring the future viability of the family-owned farms that comprise NORPAC."

The governor also expressed his appreciation of the services of the National Consensus Center at Portland State University, in particular the involvement of Center Director Greg Wolf and mediator Paul F. Stuckenschneider of the Federal Mediation and Conciliation Service.

"I recognize that we have faced these challenges for decades, yet I believe NORPAC and PCUN have seized this opportunity to make important advancements. I congratulate them and all parties involved, and I stand ready to support such efforts to make continued progress."

Governor Announces Public Hearing Details

Governor John Kitzhaber announced today the following details of the public hearings that he is holding on the budget on February 14 and February 15:

THURSDAY, FEBRUARY 14:

10 a.m. to 1 p.m. (Human Services)

2 to 5 p.m. (Public Safety)

FRIDAY, FEBRUARY 15:

10 a.m. to 1 p.m. (Education)

2 to 4 p.m. (Open to all other topics)

Hearings will be in Room F of the State Capitol

FORMAT:

- The hearings will be similar to a legislative hearing, with the governor presiding and the public invited to testify.
- The governor is asking that oral testimony be brief (2-3 minutes), but more lengthy written testimony is welcome and will be included in the official record.
- Those unable to attend, but wish to introduce testimony, are encouraged to do so in writing by 5 p.m. on Friday, Feb. 15 to the Governor's Office:
 - **Mail:** 254 State Capitol Bldg., Salem, OR 97301, Attn: Katy Coba
 - **Fax:** (503) 378-4307, Attn: Connie McMullen
 - **Email:** Connie.S.McMullen@state.or.us

BROADCAST/VIEWING ACCESS:

- The hearings will be aired on the Legislative Media system (Ch. 28) and also on Multnomah Community TV (Ch. 29) in Portland, and CCTV (Ch. 22) in Salem.
- The hearings will be available live on the web at: www.leg.state.or.us
- Hearing Rooms C and E in the Capitol Building will be available for overflow.

Governor Releases List Of Potential Vetoes

Announces Public Hearings on Budget Rebalance, New Budget Schedule

Governor John Kitzhaber today released a list of potential vetoes. The governor is under no obligation to veto these bills, but is required by law to provide five working-days notice of bills that might be vetoed.

The bills on which the governor gave notice are as follows:

- Senate Bill 1008: Reduces dental benefits in the Oregon Health Plan
- Senate Bill 1010: Establishes a ballot title for SJR 50
- Senate Bill 5574: Disappropriates money from state budgets
- House Bill 4012: Borrows money from the Common School Fund
- House Bill 4013: Allows liquor sales on Sundays
- House Bill 4014: Appropriates money to various budgets
- House Bill 4015: Relates to the School Improvement Fund
- House Bill 5070: Makes adjustments to budget disappropriation bill (SB 5574)
- House Bill 5071: Adjusts lottery allocations

In addition, the governor announced he would hold two days of public hearings on the budget cuts adopted by the Legislature, and the potential need to cut further should the deficit grow. **The hearings will be held from 10 a.m. to 1 p.m. and 2 to 5 p.m. on Thursday, February 14, and from 10 a.m. to 1 p.m. and 2 to 4 p.m. on Friday, February 15 in Hearing Room F of the State Capitol.** Gov. Kitzhaber has invited Senate President Gene Derfler, House Speaker Mark Simmons and the four caucus leaders to join him.

Kitzhaber announced that Thursday morning's hearings would focus on Human Services; Thursday afternoon would focus on Public Safety budgets; Friday morning would focus on Education and Friday afternoon would be open to any subject.

Kitzhaber also said he would release a rebalanced budget by February 19, 2002.

Governor Warns Of Further Revenue Decline, Proposes Greater Cuts And Increased Revenue

Kitzhaber Calls for Adoption of Economic Stimulus Plan, School Stabilization Fund

In a news conference in Salem today, Governor John Kitzhaber said that early data indicates a continued decrease in state revenue of conservatively \$100 million due to the recession. To address this shortfall, he proposed an additional \$30.5 million in budget reductions and \$58 million in revenue to rebalance the budget. The next official budget forecast is scheduled for March 1, but data about actual revenue collected by the state in December 2001 and January 2002 shows a high likelihood of a continuing drop in revenues.

"It is only prudent that we assume those decreases as we meet in special session beginning tomorrow," said Kitzhaber. "Unfortunately, a balanced approach to solving the problem means an additional cut in State services and the need for additional real revenue. It would not be responsible to balance the budget in mid February, only to have to come back in March."

Specifically, Kitzhaber proposed additional cuts of \$10.1 million in education, primarily in universities and other education services; \$17.3 million in human services and \$3.1 million in public safety.

To raise additional revenue, the governor proposed increasing cigarette taxes by 50 cents a pack instead of the original 30 cents a pack increase he originally proposed. This change would produce an additional \$38 million in the current budget.

Further, Kitzhaber proposed raising \$21 million by limiting a tax deduction for senior citizens' medical expenses. The deduction, the only of its kind in the nation, allows those over 62 years of age who itemize deductions - regardless of their income -to deduct all of their medical and dental expenses. The governor's proposal would eliminate that deduction for single filers with adjusted gross income greater than \$50,000, and joint filers with adjusted gross income greater than \$100,000. These senior citizens, however, like all other Oregonians, would still be able to deduct any medical or dental expenses that exceeds 7.5 percent of their adjusted gross income.

Kitzhaber also called on the Legislature to approve an increase in vehicle registration fees of \$15 per year designed both to stimulate economic activity and make critical repairs to Oregon's roads and bridges. "I have made it clear to the legislative leadership that we cannot simply borrow for new road work without raising new money. My proposal, which has broad public support, will create both a strong new source of funding for roads and allow us use that money to finance \$750 million in projects."

Finally, Kitzhaber asked for legislative approval of his proposal to create a school stabilization fund. "I have outlined a

responsible proposal to use existing revenue and new revenue to capitalize a school stabilization fund. If we had done this 10 years ago, we would have cash in reserve to help fund our education system. I urge the legislative leadership to help me create that fund."

Bob Applegate

(503) 378-6496

Jon Coney

(503) 378-6169

The Honorable Mark Simmons
Speaker of the House
900 Court St. NE - Room 269
Salem OR 97301

Dear Mark:

Since our meeting last Wednesday, I want to reiterate my opposition to the proposal to help rebalance the state budget by borrowing \$100 million from the Statutory Account of the Common School Fund. I have made my position clear - first privately and now publicly - that if we want to preserve programs in the face of the current budget deficit, we need to pay for them with real revenue options - not by borrowing or by raiding trust funds.

Yesterday, in my speech to the Eugene City Club, in response to a direct question I made it clear that I would veto a proposal to borrow money from the Common School Fund. Not only do I believe that it is an inappropriate use of the trust fund, but it is incredibly expensive and will take money away from education over the long term.

I must stress that I have not yet seen a specific proposal on how the loan from the Common School Fund would be structured. However, using the advice of the Attorney General and staff at the Division of State Lands, it appears that it would first require having to liquidate \$100 million of the assets of the statutorily governed portion of the fund. This would result in an investment loss of \$12 million in today's market. Under the laws that govern the Common School Fund, this investment loss would need to be repaid by the Constitutional Account of the Common School Fund. Our best estimates are that this repayment would mean that the current K-12 distributions from the Constitutional Account would be suspended for six years to restore the investment loss.

This does not address repayment of the actual \$100 million loan - only the \$12 million investment loss from the untimely liquidation of the assets. To retire the \$100 million loan would require establishing a dedicated revenue source. My understanding is that the proposal under consideration would dedicate future earnings of the Common School Fund to repay the debt. However, it is vital to note that only earnings on the remainder of the funds left in the statutorily-governed portion of the fund would be available to repay the loan. Further, to be prudent, the interest on the loan would need to be established on the basis of what the money could be earning if it had not been borrowed and expended in this biennium.
