Our investment advisers suggest that the proper interest rate is 7.33 percent. Given these assumptions - which are conservative and based on sound financial and legal advice - the total repayment of this \$100 million loan would cost \$309 million. It would also mean that there would be no distributions from the Statutory Account for K-12 schools during the 25-year loan repayment timeframe.

I'm a doctor, not an accountant, but I know a bad deal when I see one. This is not in the best interests of Oregon school children, it is a violation of a 143-year old trust and it is a long-term debt for a short-term problem.

I urge you to reconsider your support for this proposal.

Sincerely,

John A. Kitzhaber, M.D

The Honorable Gene Derfler
President of the Senate
900 Court Street N.E., S-203
Salem, OR 97301

Dear Gene:

I am writing to express my deep concern over your decision not to approve submission of the Oregon Health Plan (OHP) waiver request to the federal government.

As you know, this groundbreaking waiver puts our state at the forefront of health care reform once again. It gives us new tools to control the future costs of the Oregon Health Plan, it helps address the health care needs of Oregonians who have lost their jobs as a result of the recession, and does this without spending one additional dime of state general fund dollars.

If we are to succeed in gaining federal approval this year, the time frame for submission is immediate. Federal waiver approval is a complex process and the recent experience of other states shows that at best three to four months will be required to gain permission to proceed with our initiative. Every day that passes without the waiver submitted reduces our ability to implement the needed OHP changes by October 2002. Every day that our changes are not in place after October 1, costs our state and our constituents money and coverage.

Rapid approval of the waiver will have three major effects. It will provide a much-needed boost in access to health care for Oregonians who have lost jobs due to the recession. The savings gained from modifying the current benefits provided by the OHP will be used to make coverage affordable for approximately 50,000 more Oregonians. Obviously, good health is a critical factor in successfully regaining employment.

Approval will also bring \$21 million of new federal funds into our state in this biennium alone (\$78 million in 03-05 biennium). This is critically important to maintaining the networks of doctors and hospitals that serve our state, especially in rural areas. In addition, this money goes directly into our local economies providing an enormous and badly needed boost to communities across the state. If we do not gain approval of the waiver in the shortest possible time frame, we will again lose these federal funds to states that have taken full advantage of the federal offer.

Finally, the waiver gives us the ability to manage costs in the OHP over the long term. By allowing flexibility in benefit designs, the waiver provides options for controlling costs other than just reducing eligibility. It also breaks down the barrier that has heretofore kept federal funds from subsidizing commercial group insurance provided through the work place.

Delaying the approval of the waiver means that we will miss out on the benefits it brings the state including millions of

dollars of federal funding that should go to Oregon residents but if left unspent by us will be spent by New York and other states that will claim them instead. To date, everyone from the volunteers who sat on the Waiver Application Steering Committee, to the agency personnel who assembled the information required by the federal government have met their deadlines. Now it is time for the legislature to meet its responsibility and approve submission of the waiver.

I stand ready to do anything needed to expedite the submission of the waiver.

Sincerely,

John A. Kitzhaber, M.D.

c: Sen. David Nelson, Senate Majority Leader
Sen. Kate Brown, Senate Democratic Leader
Rep. Karen Minnis, House Majority Leader
Rep. Deborah Kafoury, House Democratic Leader

Governor, Education Community Express Opposition To Common School Fund Borrowing, School Payment Delay

At a news conference in Salem today, Governor John Kitzhaber reiterated his opposition to borrowing from the state's Common School Fund or using accounting maneuvers to delay payments to schools into the next budget. He was joined at the news conference by representatives of the Oregon School Boards Association, the Confederation of Oregon School Administrators and the Oregon Education Association.

Some legislators have suggested borrowing at least \$100 million from the Common School Fund as well as delaying the final \$211 million state payment to schools until the next biennial budget.

"Use of the Common School Fund," said Kitzhaber, "would constitute borrowing from the future to meet our current needs. We've got to stop putting off the hard choices and be accountable for the programs we want to fund and pay for them as we go."

Kitzhaber also addressed the concept of delaying the payment of the state school funds for this biennium until the beginning of the next. "This would be a bad idea, even if it did work. But it doesn't. It creates financial chaos for some districts. And the bottom line is this: there is no way for this Legislature to bind the next. The next Legislature may choose to pay it, pay part of it or pay none of it depending on the financial challenges it faces."

Kitzhaber urged legislators to consider new revenues in beer, wine and cigarette taxes and to repeal a tax cut passed by voters in 2000. "I urge legislators to consider these options and to balance not only this budget, but create better budget stability for the future."

Governor Outlines Budget Cuts And Revenue, Calls For Economic Stimulus Package, School Stabilization Fund

Governor Calls Special Session to Begin February 8

Facing an \$830 million deficit in the State's budget, Governor John Kitzhaber today proposed a budget rebalance plan that incorporates approximately \$414 million in budget reductions and uses \$181 million of existing resources.

In addition, Kitzhaber proposed three new revenue sources to close the remaining gap and increase the State's ending balance: repeal the income tax cut Ballot Measure 88, which would produce \$133 million; increase beer and wine taxes by five cents a drink, which would produce \$44 million, and increase cigarette taxes by 30 cents a pack, which would produce \$67 million.

Further, Kitzhaber outlined an economic stimulus package that would increase funding for transportation improvement projects, free up lottery bonding for rural infrastructure and increase the State's ability to attract and retain businesses. He also called for creation of a School Stabilization Fund, which would be available for use in future recessions.

Finally, Kitzhaber said he would call the Legislature into special session on Friday, February 8.

"We have three major challenges in front of us," Kitzhaber said. "We must rebalance the budget without doing long term harm to schools, health care, senior citizens, public safety or economic development. We must act now to do what we can to stimulate job growth by assisting businesses and investing in critical public infrastructure. And we must confront the fact that we are one of only three states with no "rainy-day" fund to help tide us over bad economic times."

Governor Kitzhaber's balanced budget proposal would reduce spending by \$414 million over the next 15 months, compared with the Legislature's earlier proposal to cut \$525 million. Specifically, those reductions would be:

- \$112 million or 2.2 percent from K-12 schools;
- \$15.5 million or 3.3 percent from Community Colleges;
- \$44.5 million or 5.5 percent from the Oregon University System;
- \$21 million or 5.8 percent from other education programs;
- \$69.7 million or 2.7 percent from Human Services, such the Oregon Health Plan;
- \$73.1 million or 5.4 percent from Public Safety programs, such as the Oregon State Police and the Oregon Department of Corrections.

The remaining \$78 million in reductions comes from cuts in economic development, transportation, administration, natural resources and consumer services. In the legislative proposal, the university system was cut by an additional \$32

million, including a \$28 million cut to Oregon Health and Sciences University, and Human Services were cut an additional \$48 million.

The \$181 million in existing resources comes from the use of \$131 million in surplus federal funds, \$12.4 million in Department of Revenue collection actions, \$4 million in debt service savings, \$2.5 million in increased federal funds for the Department of Corrections, \$14 million in 911 system surpluses, \$13 million in surplus senior citizen property tax deferral accounts, and \$3.7 million in anticipated land sales.

"Legislative leadership and the working group they appointed have done a great job in moving us closer to an agreement for a balanced budget," Kitzhaber said. "We need to work together to iron-out remaining differences about an acceptable level of State service reductions and about revenue options that are permanent, legally sustainable and don't involve accounting tricks or long-term debt."

"For the long-term financial health of the State and for long-term budget stability, it is important that we produce real revenue options," said Kitzhaber. "I would rather see us reduce programs rather than engage in expensive borrowing or questionably legal raids on trusts such as the Common School Fund." Kitzhaber pointed out that the 1982 Legislature used \$87 million from the State Accident Insurance Fund (SAIF), was sued and had to pay back \$240 million.

Economic Stimulus and Budget Stability Package

Governor Kitzhaber also proposed an economic stimulus package focused on increased road and highway funding, accelerating lottery bonding of vital rural infrastructure and streamlining permitting processes and State financial assistance for business expansion. He will also pursue proposals forwarded by his Economic Strategy Advisory Group that he named in October 2001.

Specifically, Kitzhaber called for increasing vehicle registration fees \$15, which would raise approximately \$60 million per biennium. Oregon currently has the next-to-lowest registration fee in the nation. With the proposed increase, Oregon would have the sixth lowest registration fee in the nation.

The money would be targeted at the back-log in bridge repair and maintenance and modernization. Currently, the State is beginning \$400 million worth of road projects approved by the 2001 Legislature and the Oregon Transportation Commission.

Kitzhaber also advanced legislation that will allow the proposed sale of lottery-backed bonds to proceed. Currently, more than \$200 million water and sewer improvements and other projects are in limbo pending outcome of a court challenge to the Oregon Lottery. The legislation proposed by the governor would simply assure bond buyers that the State would repay the bonds even if the Lottery is declared unconstitutional.

Third, Kitzhaber pledged to focus State personnel on fast-tracking permits for business expansion and proposed increasing the State Business Incentive Fund, known as the Strategic Reserve, from \$4 million to \$7 million.

"This recession is national, even international, in scope and state government can affect it only minimally," said Kitzhaber. "However, that doesn't mean we shouldn't do all we can. The road, sewer and water projects we are seeking to fund will both provide employment in the short-term and lay the foundation for growth in the future."

School Stabilization Fund

Finally, the governor proposed the creation of a School Stabilization Fund similar to what 47 other states have. His proposal resembles HB 2299, which he submitted to the 2001 Legislature: a fund capitalized by using the 15 percent of lottery proceeds currently going to the Education Endowment Fund, any lottery revenues in excess of \$600 million per biennium, and a one percent tax on the value of real estate transactions, excluding the first \$100,000. This would produce approximately \$230 million in the coming biennium. The size of the fund would be capped at 10 percent of the General Fund.

Under the governor's proposal, creation of the School Stabilization Fund would be referred to voters as a constitutional

amendment. If created, the fund could only be used after a shortfall in revenue, referral by three fifths of the Legislature and subsequent voter approval.

Governor Kitzhaber Announces Grant County District Attorney Vacancy

With the certification of the recent recall election of Nancy Nickel, Governor Kitzhaber today announced that applications are being accepted for the Grant County District Attorney position.

Oregon law requires that applicants must be admitted to practice in Oregon.

For an application form, interested persons should contact Shelley Dillon of the Governor's Legal Counsel's Office at (503) 378-6246. For this District Attorney vacancy, our office will be using the Interest Form for Judicial Appointments. This form is also available on the Governor's web site www.governor.state.or.us.

The Interest Form for Judicial Appointment is available at: /FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/governor/legal/Intrsfrm1.pdf.

Applications should be sent to the Governor's Office and are due by February 12, 2002.

Until the vacancy is filled, the Governor must ensure that the duties of the Grant County District Attorney are carried out under lawful authority and without interruption. Therefore, the Governor has directed the Attorney General and his assistant attorneys general to immediately, and continuing until a successor is selected and sworn, discharge the responsibilities of Grant County District Attorney.

Governor Releases Potential Budget Cuts

Decreased Revenue and Increased Cost Create \$830 Million Budget Shortfall

Governor John Kitzhaber today released a list of \$830 million in budget reductions that would be necessary to rebalance the 2001-2003 state budget without new revenue. The governor released the list of possible cuts as the first step in a bipartisan process with legislative leadership to rebalance the budget in a special legislative session targeted for early February.

"It is critically important for Oregonians to understand the depth of our budget problem and see the level in reduction in state services necessary to rebalance the budget," Kitzhaber said.

The cuts were made necessary by a projected \$700 million decrease in state revenue due to the recession; and by \$130 million in increased costs due to medical cost inflation in the Department of Corrections; and to an increased demand for social services by Oregonians directly affected by the recession.

"Let me be clear that this is not a 'Governor's Recommended Budget'," Kitzhaber said. "I believe that making this level of cuts is neither responsible nor politically possible. This should be viewed as a starting point for the debate and I will work over the next week to come up with a more balanced approach involving budget cuts, the use of existing unallocated resources as well as a consideration of new revenue." Kitzhaber targeted the week of January 14 as the probable release date for a more balanced budget plan.

Governor Kitzhaber also noted that the fiscal challenge involved not only rebalancing the budget for the current biennium, but doing so in a way that begins to reduce the looming billion dollar shortfall projected for the 2003-2005 and the 2005-2007 budgets. "Our responsibility is to make the tough choices now that will put our General Fund budget back on a sustainable footing for the future," he said.

Since nearly 90 percent of the General Fund is allocated to three program areas -- education (56.1%), human services (21.7%) and public safety (11.3%) -- those are the areas that must bear the brunt of the budget reductions.

The general outlines of the proposed cuts are as follows:

EDUCATION

Primary and Secondary (K-12)

Over 42 percent of the General Fund budget -- \$5.2 billion -- goes to our primary and secondary school system. For this reason, it is very difficult to rebalance the budget without cutting funding for public schools. The proposed rebalanced

budget would reduce state funding of our K-12 system by \$304 million or six percent.

How those reductions will affect our children's education will differ among Oregon's 198 school districts. While each locally elected school board will make the final decisions, it is reasonable to assume that these cuts will affect student to teacher ratios, access to language and art instruction, textbook purchases, transportation services and length of school year.

Community Colleges

The proposed rebalance would cut the state appropriation to Oregon's 17 community colleges by \$38 million or eight percent. Like our primary and secondary school system, locally elected boards govern Oregon's community colleges. Exactly how those reductions will be managed is up to those local boards. However, some examples of possible cuts include: reduction or elimination of outreach programs, reduction of English as a second language offerings and adult literacy classes, reduction or elimination of evening and weekend classes and increases in tuition ranging from 15 to 25 percent.

Oregon University System

The proposed rebalance would cut \$84 million or ten percent of the state appropriation to Oregon's institutions of higher learning. Specifically, the proposed reductions include:

- Elimination of state support for a top-tier engineering school -- \$5 million
- Reduction of statewide services including extension services, agricultural and forest research by 17 percent -- \$17.3 million.
- Reduce direct support for undergraduate education by 5.1% -- \$19 million.
- Reduce investment in engineering graduates by 15% -- \$2.9 million.
- Reduce campus-based service programs by 20 percent. Examples of such programs are Small Business Development Centers; campus-based radio stations and other specialized programs -- \$1.5 million.
- Cut state support for research by 20 percent -- \$2.4 million.

HUMAN SERVICES

Oregon's services to vulnerable citizens comprises \$2.59 billion or 21.7 percent of the total budget. The governor's proposed rebalance of the budget would reduce that by \$172.3 million or 6.6 percent. Following are some examples of proposed service cuts:

Oregon Health Plan The Oregon Health Plan budget will be cut by \$59 million or six percent. Examples of services that will be cut include:

- Elimination of the Family Health Insurance Assistance Program (FHIAP). FHIAP provides health insurance subsidies and assistance to about 6,500 working poor Oregonians and their children each year. There are 23,000 Oregonians on the "waiting list" for the program -- \$12.5 million.
- Reduction in dental benefits for 190,000 adults, including elimination of some services and increased co-pays - \$9.4 million.
- Reduction in the income eligibility level for children and pregnant women from 180 percent of the federal poverty level to 133 percent of the federal poverty level -- \$9 million.
- Reduce medically needy eligibility for more financially-advantaged clients -- \$4.5 million.

Oregon Children's Plan The Oregon Children's Plan budget will be cut by \$9.8 million or 17 percent. These program cuts will include:

- Delay implementation of the plan in seven counties -- \$131,000.
- Reduce funding for substance abuse and mental health treatment portion of the plan by 36 percent, which cuts services

to 622 children and their families -- \$4 million.

- Reduce services to 1,800 children -- \$866,000.
- Eliminate "Babies First" program. This program provides nurse home visits to about 8,000 high-risk infants each year -- \$629,000.

Other examples of cuts in the Department of Human Services include:

Eliminate DARTS (Day and Residential Treatment Services) program for non-Medicaid children & adolescents. DARTS are psychiatric day treatment facilities for seriously emotionally disturbed children and youth. This cut will affect an estimated 193 children per year in 16 counties -- approximately 35% of the slots. In addition, we would not open a new DARTS program in Medford for about 10 kids -- \$5.2 million.

- Eliminate the Senior Drug Assistance program. This eliminates a discount for prescriptions for an estimated 100,000 senior citizens -- \$5 million.
- Eliminate Oregon Project Independence. This program provides services that enable senior citizens to stay in their homes rather than in alternative care settings. This will affect more than 3,500 seniors and approximately 530 will become Medicaid-eligible as a result -- \$5.8 million.
- Increase the co-pay for Employment Related Day Care (ERDC), and eliminate assistance for families over 150% of the federal poverty level. One of the most important supports that allows low-income parents to get and maintain employment is the availability of affordable childcare. ERDC has been critically important to reducing Oregon's welfare rolls. This will affect 12,569 families. It is estimated that 314 of these families will return to cash assistance as a result -- \$3.4 million.
- Eliminate state funding for school based health centers. There are 46 school based health centers in the state. All 46 would lose training and technical assistance. In addition, 20 clinics in 11 counties would lose state funding. State funding represents an average of about 40 percent of the resources for these school based health centers -- \$1.5 million.
- Eliminate Medicaid Long Term Care for Levels 15-17. This cut affects 3,900 senior citizen clients who are served in their homes (3,418) or in facilities (582). These are people who need assistance with dressing or bathing -- \$10.8 million.

PUBLIC SAFETY

The public safety budgets include the budget for the Department of Corrections (DOC), the Oregon Youth Authority (OYA) and the Oregon State Police (OSP). In total, public safety consumes \$1.3 billion or 11.3 percent of the total budget. To balance the budget without new resources, public safety programs would be cut by \$103 million or 7.66 percent. Examples of proposed cuts include:

- Cut OYA by 150 beds -- \$6.8 million
- Transfer 18-year-olds from OYA to DOC -- \$6.6 million.
- Eliminate crisis intervention in domestic violence cases. This action would eliminate all grants to victims of violence and terminate the one Program Representative position -- \$2.5 million.
- Delay opening medium security unit and special management unit at Coffee Creek, and delay opening a 48-bed Intensive Management Unit (IMU) at Snake River. The 15-month delay at Coffee Creek will force Oregon State Penitentiary to utilize emergency beds at other institutions, causing management stress. Delay of the IMU at Snake River will require continued use of beds at Oregon State Penitentiary -- \$4.68 million.
- Cancel the OSP 2003 Recruit School. This action would create substantial hardship for OSP in its effort to ensure well-trained new recruits to fill 41 sworn positions that become vacant due to retirement and other separations. It will primarily affect the Patrol Division -- \$1.85 million.
- Delay startup of second unit of OYA in River Bend. This action would delay startup of a second 25-bed unit until July 2002 -- \$289,000.
- Eliminate rural forensics laboratories in Ontario, Bend, Pendleton, and Coos Bay. This action would occur as a consolidation of the OSP's seven labs into four, which will improve productivity of the overall system, but will impair crime scene investigations in areas that lose labs -- \$676,630.

"These are some of the more graphic examples of how we will cut services if we must reduce the budget by \$830

million without new resources," Kitzhaber said. "I am hopeful I will be able to reach agreement with legislators on a plan that does not force us to cut all these services but instead will allow us to restore those that are most important for Oregon's future."

A chart is attached to this news release that shows the total proposed reductions by program area and what percent reduction that represents. For greater detail on all the proposed cuts, visit the governor's website at: ES-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/

Governor Submits Appointments

Governor John Kitzhaber submitted the following names to the Senate for confirmation to various boards and commissions. The Senate is expected to vote in February. Among the names are Kerry Barnett to the State Board of Higher Education, and Jerry Bidwell to the State Investment Board.

The complete list of names is as follows:

Board	First Name	Last Name	City
Aviation Board	John	Loacker	Portland
Aviation Board	Steven	Schreiber	Portland
Aviation Board	R. P. Joe	Smith	Portland
Commission on Black Affairs	Yolanda	Houston	Salem
Commission on Children and Families	Ramona	Soto Rank	Portland
Trust for Cultural Development Board	Chuck	Butler	Ashland
Trust for Cultural Development Board	Marilyn	Dell Worrix	McMinnville
Electrical and Elevator Board	James	Johnston	Portland
State Fair Commission	Howard	Lomax	Portland
Fair Dismissal Appeals Board	Carolyn	Ramey	Seaside
Fish and Wildlife Commission	Marla	Rae	Salem
Health Services Commission	Eric	Walsh	Portland
State Board of Higher Education	Kerry	Barnett	Portland
Commission on Hispanic Affairs	Jason	Leon	Salem
Commission on Hispanic Affairs	Lucy	Veliz	Irrigon
Oregon Investment Council	H. Gerald	Bidwell	Portland
State Marine Board	Deborah	McQueen	Scappoose
State Board of Nursing	Marguerite	Buderus	Pendleton
State Board of Nursing	Beverly	Shields	Medford
State Plumbing Board	Roscoe	Lawless	Keizer
Public Employees Retirement Board	Christine	Brown	Portland
Public Employees Retirement Board	Janice	Deringer	Lake Oswego
Public Employees Retirement Board	Jeanne	Garst	Milwaukie
Public Employees Retirement Board	Dawn	Morgan	Molalla

Public Safety Standards and Training Board	Erik	Kvarsten	Troutdale
State Accident Insurance Fund Corporation	John	Anhorn	Medford
State Accident Insurance Fund Corporation	Matt	Chapman	Lake Oswego
Tax Practitioners Board	Cheryl	Brown	La Grande
Teacher Standards and Practices Commission	Carol	Mack	Portland
Teacher Standards and Practices Commission	Katrina	Myers	Klamath Falls
Voluntary Action & Service Commission	Kevin	Kronin	Ashland
Workers' Compensation Board	Virgil	Osborn	Salem
Workers' Compensation Board	Karen	Smith	Corvallis
Workforce Investment Board	Lina	Garcia Seabold	Beaverton
Workforce Investment Board	Susan	Reece	Beaverton
Workforce Investment Board	Lisa	Searle	Tualatin
Workforce Investment Board	Steven	Wallace	Eugene
Outdoor Youth Program Advisory Board	James	Brown	Salem
Outdoor Youth Program Advisory Board	Gabriel	Rivera	Sisters

Governor Appoints Multnomah County Circuit Court Judge

Governor Kitzhaber has appointed Nancy Waller as Multnomah County Circuit Court Judge; she replaces The Honorable Robert Paul Jones who resigned August 31, 2001. Waller has served as a referee/pro-tem judge for Multnomah County since 1989. She has also served as a Metropolitan Public Defender from 1983 to 1988.

Waller was appointed to the Commission on Children and Families by the Multnomah County Board of Commissioners in 1991. Her other community involvements have included training Court Appointed Special Advocates, Citizen Review Board Members and DHS Staff; Multnomah Bar Association Mentor Program; National Charity League; and numerous other Court and Community related activities. She plays on the Bridlemile Diva Soccer team.

In 2001 Waller received Chief Justice's Juvenile Court Champion Award, and in 1999 Waller received the Outstanding Volunteer Award in Portland Public Schools. Waller is the Author of the Oregon State Bar Juvenile Law CLE Chapter on Dependency Adjudication (1995).

Waller graduated from the University of Oregon School of Law in 1979 with a Juris Doctorate, and received her bachelor's degree from Stanford University.

Waller is married and has 3 children: Polly 16; Kate 12; and Sam 10. In order to retain this position, Ms. Waller must stand for election in May 2002.

Governor Announces Elevation Of Oregon Emergency Management To Department Level Status, Appoints Director

Governor John Kitzhaber today issued an executive order elevating Oregon Emergency Management to an independent department and making its director a member of his cabinet. He also announced that he would appoint Beverlee Venell, formerly commander of the Intergovernmental Services Bureau of the Oregon State Police, as the director of Oregon Emergency Management.

Under the executive order, Oregon Emergency Management will execute the governor's responsibilities to maintain emergency services, and prepare for management of emergencies or disasters that present a threat to the lives and property of Oregon citizens.

"This is an important change to make in light of the unprecedented terrorist attacks on the United States," Kitzhaber said. "Further, there is clearly financial and technical assistance in anti-terrorism and security efforts headed our way from the federal government."

This new organizational structure allows direct interaction with the governor and Director of Oregon Emergency Management in the performance of OEM's traditional functions and those preparedness activities in the coordination of state emergency services.

The governor issued the executive order after consultation with House Speaker Mark Simmons, Senate President Gene Derfler, Superintendent of State Police Ronald C. Ruecker, and the Governor's Security Council. The change can be implemented with no additional budget. Oregon Emergency Management currently has a budget of approximately \$88 million, most of which is passed through to local government agencies, and has 34 employees.

Homeland Security Director Calls For Heightened Alert

Director of the Office of Homeland Security Tom Ridge announced today in a conference call to the nation's governors that he was calling for a heightened state of alert to the possibility of a terrorist attack through the holiday season. There was no specific threat to any Oregon location or any other location in the nation.

Ridge said he called for the heightened alert after intelligence sources detected an increased volume of information about the potential of a terrorist attack. He further noted that terrorist plots targeted for the holiday season had been detected in previous years.

As before, Governor Kitzhaber called on Oregonians to remain calm but vigilant in the face of the potential attacks.

Governor's Statement On December Revenue Forecast

"The revenue forecast released today demonstrates what many Oregonians know first-hand: that our economy has slowed significantly and that, consequently, the State will collect less revenue than originally anticipated.

Oregon has faced this challenge before and mastered it. Together, we shall face it again and find a way to weather this economic storm while maintaining the most important services for Oregonians.

I am working with legislative leaders of both parties and both chambers to produce a proposed rebalanced budget. I applaud the Legislature for creating committees and planning public hearings specifically to address this budget shortfall.

I will continue to reiterate my belief that we cannot simply cut budgets across the board. Budgets are an exercise in setting priorities and this rebalanced budget should reflect Oregonians' priorities.

The first step in this process will be to develop a budget that fully implements the size of cuts necessary. Only after we understand what services must be cut, and how deeply, can we have any meaningful discussion of new revenue and its role, if any, in cushioning the blow of these budget cuts."

Governor Says Judge's Salmon Decision Doesn't Diminish Need For Watershed Work

Oregon still needs to work at improving watersheds across the state and improving salmon and trout habitat, Governor John Kitzhaber said today despite the National Marine Fisheries Service's (NMFS) decision not to appeal a ruling by Judge Hogan which took Oregon Coastal Coho off the endangered species list.

"Taking coastal coho off the list ends federal coastal coho protection for now, but we still have many native salmon and trout populations in real trouble, including coastal coho," Kitzhaber said in response to the decision. "While I am disappointed by NMFS's decision not to appeal," said Kitzhaber, "I am pleased that NMFS has pledged greater support for state and local recovery efforts over the next three to five years and has committed to clarifying their view of hatchery policy."

Citing problems with water quality, water quantity, fish passage and aquatic habitats, Kitzhaber said that Oregon must continue with current restoration efforts under the Oregon Plan for Salmon and Watersheds. The Governor emphasized that while the Oregon Plan first addressed coho salmon, it was quickly expanded to address the deterioration of the health of many of our watersheds.

"There are many signs to validate these concerns - ESA listings are just one of them," he said. "We are also experiencing water quality and quantity problems in watersheds across Oregon. As a result of past development and land management decisions, we have blocked access to miles of fish habitat and have built miles of roads along streams, resulting in increased erosion and decreased water quality. At the same time, delisting coho does not provide a solution to improving weak stocks of a variety of species. Hatchery, harvest and hydro reforms are still needed and habitat restoration must occur for the long-term sustainability of recreational and commercial fisheries. "

"This is not a time to abandon our work to restore the health of our watersheds. We in Oregon and the Northwest appreciate the quality of the environment in which we live, play and earn a living. We are making progress - and we cannot quit until the job is done," Kitzhaber said.

Governor Appoints Terry Beyer To House District 42

Governor John Kitzhaber today appointed Terry Beyer to fill the vacant House District 42 seat. The appointment is effective immediately. Kitzhaber was required by law to make this appointment because the selection was not resolved within Lane County.

It is rare that the governor makes an appointment to the Legislature, and Gov. Kitzhaber sought and accepted applications from all those interested in the position. The governor personally interviewed three finalists.

"All three individuals were qualified to hold the office," Kitzhaber said. "And they all had a clear record of community service. What tipped the scale for Terry Beyer was her working knowledge of the legislative process, which will enable her to be a full contributor to next year's anticipated special session."

Terry Beyer served on the Springfield City Council from 1993 to 1999 and the Springfield Library Board from 1995-1999. She currently serves on the Springfield Budget Committee and the Springfield Education Foundation Board. Beyer also worked as a legislative assistant in every legislative assembly since 1991.

Beyer has filed to run for election as a Democrat to House District 42 in the 2002 election.

Governor Kitzhaber Announces Appointment of Sherman County Justice of the Peace

Governor Kitzhaber announced today that he has appointed Ronald M. McDermid as Sherman County Justice of the Peace. McDermid replaces Kate Martin who resigned August 31, 2001.

McDermid graduated from Oregon State University in 1980 with a Bachelor of Science degree in agriculture and resources economics, and has been a self-employed wheat rancher since 1981.

McDermid is presently chairman of the Fulton-Gordon Watershed Council; a Board Member of the Deschutes Resources Conservancy; and Chairman of the Sherman County Emergency Services Advisory Committee. McDermid is founder of the Sherman Junior Hoops Youth Basketball Program.

McDermid is married and has 2 children.

In order to retain this position, Mr. McDermid must stand for election in November 2002.

Governor's Statement On Latest National Alert

"Homeland Security Director Tom Ridge and Attorney General John Ashcroft have issued today an alert that credible intelligence has suggested the possibility of another terrorist attack in the United States or against U.S. interests abroad. Governor Ridge briefed governors today in a conference call prior to the alert.

As a result, we have put into effect our Emergency Broadcast Group, which will forward information to all county sheriffs' offices and 911 centers, as well as other emergency response agencies statewide. Further, we have been in contact with both our partners in the Federal Bureau of Investigation and the National Guard.

While there is no specific information to suggest that Oregon is at risk, we will continue with the increased security measures we have instituted since the attack on September 11. Those measures include re-assessment of security measures at vital public infrastructures and increased public safety presence at airports and other public facilities.

While these alerts are unsettling, they are also one of our best means of defense. I ask that Oregonians remain calm but vigilant in the face of this adversity."

Governor Outlines Process For Filling Vacant State Representative Seat

Governor John Kitzhaber today announced the process for filling a vacant Lane County State Representative seat. The Lane County Board of Commissioners has indicated to the governor that they will not choose any of the candidates put forward by the Lane County Democratic Party.

The authority of the Lane County Commission to appoint a representative to fill the vacancy expires at 5 p.m. on October 26.

The law governing appointments to the state House of Representatives by the governor opens the process to any Democrat 21 years of age or older who has resided in House District 42 for a year or more. Applicants must also be registered to vote in the district and must have been registered as Democrats as of March 29, 2001.

Interested residents of House District 42 who meet the requirements for appointment should call the Governor's Office of Executive Appointments at (503) 378-3123 to receive an application. Applications will be accepted until Tuesday, October 30 at 5 p.m. No applications will be accepted after that date.

House District 42 was vacated when Rep. Bill Morrisette was appointed to Senate District 21 to fill the vacancy created when Sen. Lee Beyer was appointed by the governor to the Public Utilities Commission.

The governor has until November 5 at 5 p.m. to announce his appointment.

Governor Outlines Federal Agenda

In a conference call with members and staff of the Oregon Congressional Delegation yesterday, Governor John Kitzhaber outlined his federal agenda for meeting Oregon's needs. Headlining his agenda was economic development, managing a recession and upgrading Oregon's security systems.

"Oregon is facing many critical issues," Kitzhaber said. "I have presented an agenda to our delegation that focuses on reviving Oregon's economy and helps us weather these tough economic times. I have great faith in our delegation to advance this agenda through Congress."

Specifically, the governor highlighted several areas targeted for federal economic assistance:

- **Community Development Block Grants.** Oregon now receives \$16 million annually in CDBG. This should continue and be enhanced.
- **National Fire Plan.** Congress has appropriated funds for the National Fire Plan. The local contractor preference should be continued, and dollars should be freed up for work to implement the plan as soon as possible.
- **Pacific Northwest Timber Assistance.** This would provide \$9.5 million for distressed communities through the US Forest Service's Rural Communities Assistance Program and the Oregon Old Growth Diversification Fund; an additional \$9 million is being requested.
- **Transportation Equity Act for the 21st Century (TEA-21) Funds.** The governor asked the delegation to support additional TEA-21 funding, which would could bring approximately \$60 million to Oregon.
- **High Speed Rail.** This would deliver \$80 million for Northwest corridor track improvements.

Kitzhaber also requested federal aviation assistance, re-authorization of Specialty Crop Assistance funds, Port of Portland improvements and at least a 2-year extension of the Production Tax Credit, which provides a 1.5 cent/kilowatt-hour credit for renewable energy production.

The governor also asked the delegation for federal assistance in managing the consequences of economic recession. This includes human services, dislocated worker benefits assistance, additional groundfish disaster outreach funds and accelerated small business loans.

Finally, the governor and the Congressional Delegation discussed federal assistance in meeting Oregon's security needs.

This includes:

- **Civil Support Team.** National Guard Weapons of Mass Destruction-Civil Support Teams have been deployed in 27 states. Funds should be directed to Oregon for deployment of a Civil Support Team in Oregon.
- **Homeland Security.** Oregon is responding to various federal and state requests for increasing domestic security resources. Oregon officials are assessing needs and will soon provide more detail as to specific requests. Federal financial assistance should be flexible.
- **Aviation.** The Oregon Aviation Department requests that the Federal Aviation Administration Airport Improvement program be funded again at a \$3.2 billion level. Recent direction from the federal government that National Guard troops can be used for airport security are helpful, but more resources are needed for commercial and general aviation security infrastructure improvements and personnel.
- **Energy Security Related Grants.** Oregon has unique needs in providing security for energy generation and transmission facilities. Funds should be made available to respond to identified security needs.

Report Shows Trouble Ahead For Baby Boom

Governor John Kitzhaber today released a report that shows tough times ahead for many baby boom generation retirees. The report, conducted by the Employee Benefits Research Institute (EBRI) and financed by the Milbank Memorial Fund, details how retirees, especially single women and men will have difficulty meeting their basic expenses of living due to a lack of retirement income.

"Not only do we have unprecedented numbers Oregonians retiring over the next 20 years, many will not have the resources to live independently on the combination of their retirement income and Social Security," Kitzhaber said. To avoid severe problems in the future, we will need to take action on a wide front, including finding ways to increase retirement income, and strengthen public and private care systems for the elderly."

Details of the report were presented to the Governor's Task Force on the Future of Services to People with Disabilities at its first meeting today. Dallas Salisbury, President and CEO of EBRI detailed the findings, which draw upon an unprecedented analysis of retirement plan information collected in Oregon. "This report for the first time in any state provides a credible picture of expected retirement income for Oregonians over the next two decades," Kitzhaber continued. "It both answers important questions highlights others that will have to be answered for us to make sound choices in these crucial issues."

Governor John Kitzhaber has announced the members of the Task Force on the Future of Services to Seniors and People with Disabilities. A news release outlining the task force membership is available on Gov. Kitzhaber's web site: ES-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html

The number of seniors and persons with disabilities has been growing rapidly," said Kitzhaber. "It is essential that Oregon prepare for the aging of the Baby Boomer generation and for the increasing numbers of people with disabilities. Our failure to do so will be costly and significantly reduce the quality of life for these individuals."

Governor Convenes Task Force On The Future Of Services To Seniors And People With Disabilities

Governor John Kitzhaber announced today the creation of a Task Force on the Future of Services to Seniors and People with Disabilities.

"The number of seniors and persons with disabilities has been growing rapidly," Kitzhaber said. "It is essential that Oregon prepare for the aging of the Baby Boomer generation and for the increasing numbers of people with disabilities. Our failure to do so will be costly and significantly reduce the quality of life for these individuals."

Information from the Governor's Office indicates that many individuals retiring over the next 25 years will not have access to sufficient financial resources to allow economic self-sufficiency throughout their lives.

Task Force members will focus on finance and cost containment issues, housing and insurance needs, chronic health problems, issues unique to rural and urban areas, transportation, workforce training and strategies to replace, modernize or update long term care facilities.

The 25-member Task Force, comprised of seniors, people with disabilities, policymakers and representatives from both private and non-profit organizations, will make recommendations to the governor and the Legislature on improvements to systems serving seniors and people with disabilities in their communities.

The Task Force's first meeting is Wednesday, Oct. 17. The group will meet monthly, scheduling additional meetings as needed. The Task Force will make its first report to the governor by Sept. 1, 2002.

The Task Force membership is as follows:

Rep. Alan Bates, D-Eagle Point

Earlene Berry, Adult Foster Home Providers, Country Manor

Sen. Kate Brown, D-Portland

Dr. Kenneth Brummel-Smith, Providence Elder Place & Center on Aging,

Patricia Budo, Providence Child Center

Rep. Janet Carlson, R-Salem

Sen. Bev Clarno, R-Bend

Meredith Cote, Office of the Long Term Care Ombudsman

Janine DeLaunay, Oregon Disabilities Commission

Barry Donenfeld, Mid-Valley Senior Services Agency, Salem

Robey Eldridge, Governor's Commission on Senior Services

David Fuks, Cedar Sinai Park

Mark Gibson, Governor's Office

Lydia Lissman, Oregon Department of Human Services
Phyllis Lissman, Advocate
Elizabeth McKinney, Alzheimer's Association,
Sen. Bill Morrisette, D-Lane
Anne Norton, Adams and Gray Home Care
Al Nunez, Financial Services
Bob Repine, Housing and Community Services Department
Sue Sakai, Governor's Commission on Senior Services
Dr. Clifford Singer, Oregon Health Sciences University
Michael Volpe, Consumer and Advocate
Terri Waldroff, Farmington Centers

Governor Announces State Measures On Security and Preparedness

At a news conference in Salem today, Governor John Kitzhaber discussed both existing security and preparedness procedures at the State, and new proposals to upgrade the State's ability to gather information and respond to emergencies.

"I am confident that our State Police, National Guard and public health agencies have the capabilities to deal with crises," Kitzhaber said. "But we are in a new world as of September 11, and it is time to put some additional resources and effort into security at the state level."

Specifically, Kitzhaber unveiled a new Oregon State Police (OSP) initiative called the Office of Public Safety and Security. The unit, established using existing positions within OSP, will be responsible for coordinating with the Oregon Attorney General's Office and the Federal Bureau of Investigation in the collection and analysis of intelligence information.

Secondly, OSP will be expanding the operations of its communications infrastructure and establishing an Operational Command Center that will be staffed 24 hours a day, seven days a week.

"These measures will help us both prevent possible acts of terror, domestic or otherwise, and will enable us to respond more quickly and appropriately to threats or incidents as they occur," Kitzhaber said.

In addition to actions by OSP, the governor announced that he would be lobbying the Department of Defense to provide the Oregon National Guard with a Civil Support Team. The Team would be specifically designed to respond to chemical and biological incidents. The closest existing team is in Renton, Washington.

"I believe it is critically important, given the existence in Oregon of facilities such as the Umatilla Depot, that Oregon has one of these teams," Kitzhaber said. "This is a priority on my federal agenda for assistance for our state."

Kitzhaber also reviewed actions taken by the State since September 11 which include:

- Establishment of an Oregon Anti-terrorism Task Force.
- Review of the Oregon Emergency Response System to help expedite communication among and between public safety agencies at the Federal, State, County and Municipal levels.
- Identification of critical assets such as dams, water supplies and power facilities, and review of their

security status.

Finally, Kitzhaber noted that he is confident in the State's ability to respond to acts of bioterrorism. "The United States has the greatest medical system in the world and Oregon doctors are top-notch," Kitzhaber said. "Our system of public health is well organized and has the capability to identify, contain and treat outbreaks of unusual diseases -- whether caused by man or nature. We will review all our public health procedures in light of the current Anthrax threat. But, both as governor and as a physician, I am very confident in our system of public health."

"I want Oregonians to know that today public safety is our most important job," Kitzhaber added. "I have worked daily with the men and women of the Oregon State Police, Oregon National Guard, Oregon Health Division and other State and local officials for the last seven years as governor. They are dedicated, well informed, well trained and well equipped. Should the need arise, I am confident they are ready."

Governor Creates Economic Strategy Advisory Group

Governor John Kitzhaber in a speech today to the Challenge of Change Conference in Seaside announced the formation of the Governor's Economic Strategy Advisory Group.

The Group's charge will be to provide a forum for the governor to interact with the private sector about Oregon's economy and develop a strategy for economic stimulus. The governor will also use the forum to inform the private sector about the state budget and impacts of budget cuts.

"Oregon's economy is clearly facing difficult times," Kitzhaber said. "Private-public partnership right now is of utmost importance for economic stimulus."

Brett Wilcox, President of Northwest Aluminum Company, will serve as Chair. The Advisory Group will be staffed by the Oregon Economic and Community Development Department.

The Advisory Group membership is as follows:

Private Sector Members

Donald Blair, Vice President/Chief Financial Officer of Nike; Member of Smart Growth Coalition

Sam Brooks, President of Sam Brooks & Associates; Member of Governor's Council of Small Business

Allyn Ford, President of Roseburg Forest Products Co.

Gerry Frank, Civic Leader; Tourism interests

Ray Guenther, Director of NW Regional Operations, Intel; Chair of Associated Oregon Industries

Rebecca Johnson, Associate Dean at OSU College of Forestry; Member of Governor's Council of Economic Advisors

David Marks, President of Marks Metal Technology

Suzi Mazzio, Community and Education Relations Manager of Boeing Portland; Vice Chair of Oregon Workforce Investment Board

Mike McArthur, Sherman County Judge; Agricultural and local government interests

Tim Nesbitt, President of Oregon AFL-CIO

Ralph Shaw, Managing General Partner of Shaw Venture Partners; Chair of Governor's Council of Economic Advisors

Ron Timpe, President and CEO of Standard Insurance Company; Member of Oregon Business Council

Brett Wilcox (Chair), President of Northwest Aluminum Company; Chair of Economic and Community Development Commission; Member of Oregon Business Council

Public Sector Members

Randall Edwards, State Treasurer

Mike Greenfield, Director of DAS

Bill Scott, Director of Economic and Community Development Department

Bill Wyatt, Executive Director of Port of Portland

Ex Officio Members

Tom Potiowsky, State Economist

Duncan Wyse, Executive Director of Oregon Business Council

State Issues Procedures For Mail-Handling

Governor Recommends Procedures for General Public, Private Sector Businesses

In response to recent reports of anthrax exposures, some of which appear to have involved mail, the Oregon Department of Administrative Services (DAS) today issued mail-handling procedures to all state agencies. The new procedures provide step-by-step instructions for both mail-handlers and their immediate supervisors on what to do with strange or suspicious letters or parcels.

DAS developed the procedures in consultation with the Oregon Health Division, Oregon State Police and the U.S. Postal Service. The procedures are based on recommendations from the FBI and Centers for Disease Control.

"We're taking a common-sense approach," said DAS Director Mike Greenfield. "We are encouraging employees not to overreact to media reports, but are highlighting sensible steps we can take to help protect employees."

"These procedures are valuable for other organizations, private businesses and even in the home as well," said Gov. John Kitzhaber. "Although Oregon has not received any specific threats, these procedures provide good guidelines and can be tailored to meet individual needs. I hope Oregonians take note."

Copies of the procedures can be found at:

<http://www.das.state.or.us/images/PROCEDURES.pdf>

Information on how to identify suspicious mail can be found at <http://www.fbi.gov> Additional information, with specific recommendations for handling possible anthrax contaminated mail, can be found at <http://www.bt.cdc.gov> and <http://www.usps.gov/news>

Governor Announces Staff Changes

Governor John Kitzhaber announced today the following staff changes effective immediately:

- Steve Marks, currently the Senior Policy Advisor, will become Chief of Staff to replace Bill Wyatt who is now Executive Director of the Port of Portland. Marks, who was raised in the Southern Oregon town of Sutherlin, is a graduate of the University of Oregon with a degree in Public Affairs. He also received his Masters degree in Public Policy and Management from Oregon in 1986. He has worked with Governor Kitzhaber since 1985, beginning his career during Kitzhaber's first session as Senate President.
- Katy Coba, currently the governor's advisor for economic development and international trade, will become Chief Policy Advisory. Coba, a native of Pendleton graduated cum laude and Phi Beta Kappa with a Bachelors degree in economics from Whitman College in Walla Walla, Washington. Ms. Coba's career in state government includes working as assistant director in both the Department of General Services and the Oregon Department of Agriculture. In 1994, she became administrator of the Agriculture Department's Marketing and Business Development Division. 1995, Coba was appointed to Governor John Kitzhaber's administration, originally managing executive appointments before she assumed her current duties.
- Daniel Santos, currently the Governor's Education Policy Coordinator, will become Chief Counsel, replacing Chip Lazenby who is now counsel for the Portland Development Commission. Santos, who has served the last three governors, is a graduate of Southern Oregon University and Willamette College of Law. Santos has previously worked on juvenile justice and community corrections issues, as well as assisting on legal counsel and citizen's representative matters during the administration's transition into office.

Governor Kitzhaber Outlines Steps To Address Budget Shortfall

Facing the certainty of a growing budget shortfall, Governor John Kitzhaber announced today plans to slow state spending and lay the groundwork for a special session to rebalance Oregon's \$12 billion biennial budget. Forecasts released in September showed a \$290 million projected decrease in state revenues and the forecast scheduled for release December 1 is expected to show further declines.

"We need to begin acting now to save money and initiate plans for budget reductions that are in line with state priorities," said Governor Kitzhaber. "Therefore, I am instructing state agencies to hold back two percent from all General Fund and Lottery Fund allotment plans."

The move will set aside more than \$240 million dollars and allow the legislature to consider how to reallocate those funds. At the same time, Governor Kitzhaber made it clear in a letter to all state agency directors that he would not be willing to accept across the board cuts as a solution to the state's budget shortfall. "Across the board cuts are a technical means to solve a problem," Kitzhaber wrote, "but the programs we provide and the citizens we serve are not numbers on a spreadsheet. Once the Legislature makes those choices, allotment plans will be readjusted to reflect those policy decisions. I expect those actions will not occur until after the release of the December 1st forecast."

Kitzhaber also instructed state agencies "to not just balance the budget for the remainder of this biennium, but to address basic structural issues that continue to haunt us. The deficit we are facing today for the remainder of the 2001-03 biennium is roughly \$300 million. The deficit the next Governor and Legislature face as they prepare a budget for the 2003-05 biennium is estimated at roughly \$700 million."

To address that issue, Kitzhaber instructed each agency financed with General Fund or Lottery Funds to develop two sets of budget reduction options. First, an administrative reduction plan to begin to accrue immediate savings where appropriate, and second a long-term, prioritized program reduction plan."

Finally Kitzhaber said he would be in constant contact over the course of the next two months with both Democratic and Republican leadership in the legislature to develop a rebalance plan. "I have had initial meetings with legislative leadership and have expressed my openness about how to rebalance the budget," Kitzhaber said. "I have made it clear that we should keep all options on the table with the exception of an across-the-board cut. It is increasingly certain that we will need a special session to rebalance the budget, but it is too early at this time to name a specific date or describe the best set of proposals."

Governor Names Jean Thorne To Lead Efforts To Expand Oregon Health Plan

Governor John Kitzhaber has named Jean Thorne as Project Director for the proposed expansion of the Oregon Health Plan (OHP). In this role, Thorne will lead a cross-agency team to secure federal waivers to allow further expansion of the OHP.

House Bill 2519, passed by the 2001 Legislature, requires the State to seek federal waivers to increase access to basic health care services provided through Medicaid, the Children's Health Insurance Program or subsidized private insurance for low-income, uninsured Oregonians.

Thorne previously served for eight years as the State Medicaid Director when Oregon obtained the initial federal waivers to implement the OHP.

Thorne has served on the governor's staff since 1995, currently serving as Education and Workforce Policy Adviser. She will continue in that role for the immediate future, primarily focusing on key issues in K-12 education.

"Jean has the experience and knowledge to lead the efforts of health care issues, of agencies and systems involved in providing health care coverage and of the federal government," Kitzhaber said. "I am pleased that she is taking on this leadership role to expand health-care access for low-income Oregonians."

Terrorist Attack Assistance Information Available On Governor's Web Site

Information on donations for recovery from last week's terrorist attacks the World Trade Center and the Pentagon is available on Gov. John Kitzhaber's web site:

www.governor.state.or.us

In addition, in response to a White House request to all governors for possible assistance, Kitzhaber announced that he has asked all state agencies to inventory all resources for assistance with recovery from the attacks. Oregon Emergency Management will coordinate this effort.

At this time, only governmental resources are being requested. Individuals, companies and organizations with offers of assistance should refer to the donation information on the Governor's Web Site.

Governor's Statement On Terrorist Attacks

This is a tragic day for the nation.

The horrible events unfolding in New York City and in the nation's capital are incomprehensible. Our hearts and prayers go out to the victims of this savage and unthinkable attack on America.

It is a time of shock and sorrow. It is also a time for calm and courage.

Let me first reassure Oregonians we have no intelligence from either federal or state sources suggesting any threat to our state or any Oregonian.

However, we will take every reasonable precaution to assure our safety. We have instituted a heightened level of security. Federal buildings and the Bonneville Power Administration offices have been closed.

And clearly, the Portland International Airport has been closed at the direction of the Federal Aviation Administration. Again, these are precautionary actions, not based on any intelligence reports of a threat.

Around the state, I have asked all state offices to remain open. The Oregon Capitol Building will remain open.

Fellow Oregonians, I urge you all to remain calm. There is no need for panic. From everything we know, Oregon is not at risk. Take a deep breath; find the courage to go on with your day, and focus your thoughts and prayers on the victims of these attacks and their families.

Governor Announces Appointment Of Oregon Supreme Court Justice

Governor John Kitzhaber today announced that he has appointed Tom Balmer to the Oregon Supreme Court. Balmer replaces Theodore Kulongoski, who resigned June 15, 2001.

Balmer was raised in Portland and attended Portland Public Schools. He received his B.A. from Oberlin College in 1974 and his J.D. from the University of Chicago Law School in 1977.

Balmer practiced law with firms in Boston and Washington, D.C., and served with the Antitrust Division of the U.S. Department of Justice before returning to Portland in 1982. He is currently Managing Partner of Ater Wynne LLP in Portland. Balmer served as Deputy Attorney General, under then-Attorney General Kulongoski, from 1993 to 1997.

In that position, he successfully defended Oregon's assisted suicide measure and handled a number of election and constitutional cases, including argument on behalf of the state in the U.S. Supreme Court.

Balmer also currently serves as a Board Member for the Classroom Law Project, Chamber Music Northwest, and the Portland Parks Foundation. He is past chair of Multnomah County Legal Aid Service.

Balmer is married to Mary Louise McClintock, a consultant on children and social services issues. They have two children.

In order to retain this position, Mr. Balmer must stand for election on May 21, 2002.

Governor Applauds Confirmation Of Roger Bassett To Board Of Higher Education

Governor John Kitzhaber today applauded the confirmation of his appointee, Roger Bassett, to the State Board of Higher Education. Bassett, currently retired, is the former director of the State Office of Community Colleges.

"Roger's experience working across institutional lines and building strong connections between community colleges and our state university system will serve Oregonians well," Kitzhaber said. "I firmly believe that the Oregon University System will benefit from his creative thinking and long record of experience with the entire continuum of education."

Governor Kitzhaber will be making another appointment to the Board in October of this year. Kitzhaber said he was considering a short list of candidates and focusing on their ability to think and act beyond the needs of the Oregon University System to influence and work closely with all levels of Oregon education; with those who seek a strong economy and work force for Oregon; and with those who would sustain and improve Oregon's natural and human environments."

"Our University System is at a crossroads," Kitzhaber added. "It is unlikely that the proportion of state aid for our universities will increase, given other pressures on the state budget. The Oregon University system must look outside the traditional state funding stream to grow and prosper, and must be more efficient with the state dollars it does receive."

"I am optimistic that these new appointments, along with the excellent members who already serve there, will make the most of this opportunity to bring all of higher education to a single view of how we can better offer and invest in a postsecondary opportunity for more Oregonians."

Statement Governor Kitzhaber

Loss Of Senior Trooper And Albany Police Officer And Injury Of Sergeant John Burrigh

"Our thoughts and prayers go out to the families of Oregon State Police Senior Trooper Maria Mignano and Albany police officer Jason Hoerauf who were tragically killed in the line of service last night while assisting a disabled motorist on Interstate 5 about eight miles south of Salem. Our hopes for a full and speedy recovery go out to their surviving colleague, Oregon State Police Sergeant John Burrigh, who was critically injured in the same accident.

This tragedy should remind us all of the fact that our police officers daily put themselves at risk for the sake our safety. It is an appropriate moment to pause and reflect on this selfless service, and give thanks to the men and women who literally put their lives on the line. Even as we mourn these fallen officers, let us celebrate the sacrifices their fellow officers make daily in the performance of their jobs."

Governor Appoints Fish and Wildlife Commission Chair

Governor John Kitzhaber today announced the appointment of John Esler as Chair of the Oregon Fish and Wildlife Commission. The appointment will be effective September 1. The governor received new appointment authority as a result of HB 3637. Esler will replace Paul McCracken, who has served as chair for the past two years.

"We are fortunate to have someone of John's caliber to step in and serve as Chair of the Commission during this important crossroads for the agency," said Kitzhaber. "John has considerable experience working on fish and wildlife issues both as a 20 year employee of Portland General Electric and a 3 year member of the Commission."

Esler currently serves as senior project manager in Power Supply at PGE, where he is responsible for the federal and state relicensing of several hydroelectric general facilities in Oregon. He was appointed to the Commission in 1998, representing the First Congressional District.

"I am honored to be selected by the governor to chair the Commission," said Esler. "I look forward to the challenges the agency faces, with growing concerns about fish and wildlife populations in Oregon and the habitat, harvest and hatchery issues that are vital to species recovery."

Governor Releases Final Vetoes

Governor John Kitzhaber today released his final list of vetoes. The bills the governor has vetoed are as follows:

- **Senate Bill 67**, which relates to taxation of capital gains.
- **Senate Bill 374**, which relates to disclosure requirements of Oregon Lottery vendors.
- **Senate Bill 502**, which relates to the speed limit.
- **Senate Bill 593**, which relates to phonics instruction.
- **House Bill 2497**, which relates to prescription drugs.
- **House Bill 2714**, which relates to dwellings on land zoned for farming.
- **House Bill 2981**, which relates to rural residential properties.
- **House Bill 3528**, which relates to a development in Harney County known as "The Narrows."
- **House Bill 3808**, which relates to federal migratory bird refuges.
- **House Bill 3809**, which relates to fish hatchery practices.
- **House Bill 3981**, which relates to the State of Oregon's Endangered Species Act.

Gov. Kitzhaber also exercised his line item veto authority to disapprove portions of the following bills:

- **Senate Bill 50** (emergency clause only). This action delays the effective date of the bill until January 1, 2002, allowing more time for the Oregon Department of Fish and Wildlife to move their headquarters to Salem.
- **Senate Bill 5533** (appropriations line item veto of Section 18). This action deletes a duplicate appropriation for county fairs.

With these 13 vetoes, Governor Kitzhaber has vetoed a total of 16 bills and issued two line item vetoes resulting from the 2001 session.

Copies of the veto letters are available on the governor's web site at: [/FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/governor/Bills01/veto.htm](http://FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/governor/Bills01/veto.htm)

**Governor Declares State of Emergency Due To Wildfires
Enables use of Oregon National Guard in fire suppression**

Oregon Governor John Kitzhaber today declared a state of emergency due to wildfires. The declaration will enable the governor to call up elements of the Oregon National Guard for use in firefighting.

Approximately 200 members of the Oregon National Guard will be available after completing a short refresher course because they were trained during the year 2000 fire season.

The declaration was necessary because heavy lightning strikes during the last three days have stretched existing fire fighting personnel and equipment to the limit.

Governor Releases List of Potential Vetoes

Governor John Kitzhaber today released a list of **potential** vetoes. The governor is under no obligation to veto these bills, but is required to provide five working-days notice of bills which might be vetoed. Governor Kitzhaber has until August 17, 2001 to sign or veto bills that reached his desk after the legislature's July 7, 2001 adjournment.

The bills on which the governor gave notice are as follows:

- Senate Bill 67 which relates to taxation of capital gains.
- Senate Bill 374 which relates to disclosure requirements of Oregon Lottery vendors.
- Senate Bill 502 which relates to the speed limit.
- Senate Bill 593 which relates to phonics instruction.
- House Bill 2497 which relates to prescription drugs.
- House Bill 2714 which relates to dwellings on land zoned for farming.
- House Bill 2801 which relates to collection of child support payments.
- House Bill 2981 which relates to rural residential properties.
- House Bill 3528 which relates to a development in Harney County known as "The Narrows."
- House Bill 3808 which relates to federal migratory bird refuges.
- House Bill 3809 which relates to fish hatchery practices.
- House Bill 3981 which relates to the State of Oregon's Endangered Species Act.

Governor Kitzhaber proposes to exercise his line item veto authority to disapprove portions of the following bills:

- Senate Bill 50 (emergency clause only). This action delays the effective date of the bill until January 1, 2002, allowing more time for the Oregon Department of Fish and Wildlife to move their headquarters to Salem.

Governor Signs Economic Development Funding Package

Governor John Kitzhaber signed House Bill 2275 into law today at a ceremony in the State Capitol in Salem. The bill authorizes the sale of bonds backed by Oregon Lottery proceeds and targets those bonds at economic and community development projects in rural Oregon. Most importantly, it designates \$150 million to create a sustainable, revolving loan fund, which will allow for up to \$50 million per biennium in grants and loans into perpetuity.

Also included in the lottery bonding package is \$28.8 million for deepening the Columbia River channel from Portland to Astoria and \$22.8 million for the Community Incentive Fund which helps rebuild mainstreets and community centers.

"Helping build economic strength and stability in Oregon's rural communities is our state's greatest economic development challenge," said Gov. Kitzhaber. "I worked hard with the legislature to come up with a rural economic investment program that would not only be large enough to have real impact on the ground, but would also be sustainable biennium after biennium."

Under the new program, low interest loans will be made to rural and distressed communities for infrastructure projects such as water and sewer development. Interest on the loans will help create the sustainable fund.

"The changes in the rural economy over the last 20 years have reduced the number of family-wage jobs in our smaller communities," Kitzhaber said. "This funding will help lay the foundation for economic growth and economic diversity throughout our state."

The legislation also continues the state's commitment to pay its share of deepening the Columbia River channel from 40 feet to 43 feet to accommodate larger, deeper draft vessels. "The Port of Portland is Oregon's port - it helps our farmers and business people compete globally. I am committed to keeping the Port of Portland competitive with other Western ports," said Kitzhaber.

Finally, the legislation commits another round of funding to the Community Incentive Fund, which was part of Gov. Kitzhaber's Oregon Livability Initiative, adopted during the 1999 legislative session. The fund has helped maintain viable downtowns and community centers in Oregon towns such as Pendleton, Astoria, Oakland and Medford.

Governor Signs Bills Advancing Medical, Technology Research And Technology Transfer

Governor John Kitzhaber signed into law today legislation and funding bills which greatly enhance Oregon's medical and technology research sectors. The governor signed the bills, which range from technology transfer policy to biomedical research funding, at a ceremony at Oregon Health and Science University.

"The 2001 legislative session will be remembered as one where we got the ball rolling on significant investments in technology and medical research and education," said Kitzhaber. "We are taking advantage of the incredible opportunity for medical advances offered by the fast-growing world of genetic research and we are putting a significant down payment on improving engineering education."

State Treasurer Randall Edwards, who joined Kitzhaber at the signing event and was instrumental in the bills' passage said: "This package of bills is a hallmark for the State of Oregon. With these new partnerships and the expansion of the Oregon Growth Account, we can help new businesses get started, create more jobs and boost the local economy."

Specifically, Gov. Kitzhaber signed Senate Bill 832 which dedicates approximately \$32 million per biennium of National Tobacco Settlement funding for the construction of facilities such as research labs which will take advantage of information generated by Human Genome Project. "This is a once in a century opportunity to position Oregon for the most important medical research projects of our era," said Kitzhaber.

Secondly, Kitzhaber signed Senate Bill 5524, the appropriations bill for the Oregon University System, which includes \$20 million to improve engineering education and increase the number of engineering graduates, and Senate Bill 5525, the Oregon University System Capital Construction Budget, which includes \$20 million for construction of a new building for engineering education. "Addressing the need for improved engineering education was one of my top education priorities for the 2001 session," said Kitzhaber. "Oregon's economy depends increasingly on the economy of the mind and this package of engineering programs will help us provide the workforce for that economy."

To help promote the transfer of knowledge from universities to businesses and spur job creation in Oregon companies, Kitzhaber also signed a package of four bills. They are:

Senate Bill 273 which creates the Oregon Council for Knowledge and Economic Development. The Council will help develop appropriate public policy to ensure Oregon's future economic growth and competitiveness.

Senate Bill 102 which creates the Higher Education Tech Transfer Account. This account will provide a short-term mechanism to allow universities to hold equity in the products and companies created by their research.

Senate Bill 101 which creates the Higher Education Tech Transfer Fund. This fund will use declared earnings from the Oregon Growth Account to help technology transfer offices bring academic discoveries into useful commercial application.

House Bill 3968 which merges the Oregon Resource and Technology Development Account into the Oregon Growth Account and enables the Oregon Growth Account to provide seed capital for new companies developed out of university research.

Governor Signs Practitioner-Managed Prescription Drug Plan And Oregon Health Plan Waiver Legislation

Governor John Kitzhaber, at a health care facility in Portland, today signed two pieces of legislation critical for the future of the Oregon Health Plan. Together, these bills will help control pharmaceutical costs and will provide additional flexibility in how the Oregon Health Plan utilizes state, federal and private dollars to serve uninsured Oregonians.

The first bill, SB 819, the Practitioner-managed Prescription Drug Plan, creates the Oregon Formulary. A formulary, which is common practice in most private health plans, establishes a priority list of which prescription drugs in a specific group of drugs the Oregon Health Plan will pay for. It was anticipated that without the addition of a formulary, the cost of prescription drugs in the Oregon Health Plan would go up 60 percent or \$126 million dollars in the next two years. The creation of a formulary for the Oregon Health Plan will help the state control the skyrocketing cost of prescription drugs.

"We established the Oregon Health Plan in 1989 to provide dependable access to quality health care for uninsured Oregonians," said Kitzhaber. "Pharmaceuticals are not only the fastest rising cost in the Oregon Health Plan but in all of state government. As such they threaten the sustainability of the Plan. The formulary will help ensure the survival of the Oregon Health Plan and the continued access to health care for thousands of Oregonians."

The second bill, HB 2519, directs the Department of Human Services to submit a waiver to the federal government to establish a new Oregon Health Plan benefit package for certain eligible clients up to 185 percent of the Federal Poverty Level. This will allow the state flexibility in designing a less comprehensive benefit package for adults who do not have disabilities. In addition, the state will seek federal matching funds for persons covered under the Family Health Insurance Assistance Program, which currently relies on state funds only. The savings from the new benefit package and the additional matching funds will expand coverage to 10,000 children and 40,000 adults who do not currently qualify for coverage under the Oregon Health Plan.

Governor Signs Oregon Children's Plan

Children, Legislators, Community Groups Join Kitzhaber at Ceremony

After a speech before hundreds of school principals and superintendents in Florence, Governor John Kitzhaber today signed a series of education bills. These bills will provide \$5.2 billion in funding for K-12 schools in Oregon, as well as implement Ballot Measure 1, which was approved overwhelmingly by voters in November 2000. The measure established that the Legislature must define what constitutes adequate funding for schools and report on the consequences if they are unable to fund schools at that level.

Specifically, Gov. Kitzhaber signed:

- **Senate Bill 5514**, which appropriates \$4.98 billion to K-12 schools in Oregon;
- **Senate Bill 5513**, which appropriates \$220 million to the School Improvement Fund and targeted at improving reading among third to fifth graders;
- **House Bill 2295**, which establishes in law the Quality Education Commission and legislative reporting requirements called for in Ballot Measure 1;
- **House Bill 2300**, which creates and funds the local option grant program described in Ballot Measure 1; and,
- **House Bill 2298**, which creates the School Improvement Fund.

"This school budget represents a significant victory for our state's children," said Kitzhaber. "It improves on the last K-12 budget and targets resources directly at improving reading in the early grades - one of the best things we can do to help kids succeed."

For the first time, Kitzhaber noted "the K-12 budget was based on some objective consideration of how much it actually costs to have good schools." The \$5.2 billion figure was recommended by the Quality Education Commission, which Kitzhaber established by Executive Order and is now established in statute.

"Since the passage of Ballot Measure 5, the Legislature has struggled with what constitutes an appropriate level of school funding," said Kitzhaber. "The process called for in Ballot Measure 1 and the tools created by the Legislature will help ensure that we have a thoughtful and informed consideration of this most important appropriation."

Ballot Measure 1 also called on the State to help fund local option levies of school districts with low property wealth. "I am proud that we were able to fund this new program to ensure that all school districts can afford a local option if they desire it," said Kitzhaber. HB 2300 provides approximately \$600,000 to aid low property value districts and sets up the

rules for which districts qualify.

Governor Signs Oregon Children's Plan

Children, Legislators, Community Groups Join Kitzhaber at Ceremony

Governor John Kitzhaber at a news conference today signed HB 3659, which creates the Oregon Children's Plan. The Oregon Children's Plan is a first of its kind program, designed to provide early help to children and parents. Kitzhaber was joined at the news conference by Sen. Charles Starr, Reps. Jackie Winters and Bruce Starr, and business and community leaders.

The Oregon Children's Plan will provide for voluntary screening of all first born children for both medical and social risks, and will increase services available to children and families through the State and counties. The program was funded by the Legislature at \$60 million for the next two years. Programs such as Healthy Start and Relief Nurseries will be expanded under the Oregon Children's Plan.

Passage of the Oregon Children's Plan was one of the governor's priorities for the 2001 Legislative session. "By signing HB 3659, Oregon is taking an historic step toward improving the lives of our youngest citizens," said Kitzhaber. "This legislation sets Oregon apart from the rest of the nation in terms of our vision, our commitment and our resolve toward helping children. This is what 'putting children first' really means."

HB 3659 will go into effect immediately. The program will be phased-in, with half of Oregon counties implementing the program immediately, and the other half up and running by February 2002. The Department of Human Services, the Oregon Commission on Children and Families and the Department of Education will jointly oversee the program. Approximately 25,000 children will receive some level of service over the biennium. Between 4-5,000 of those children will receive intensive services under the program.

For more information on the Oregon Children's Plan go to the governor's website at www.governor.state.or.us/governor/hhslp/ocp.htm.

Governor Proposes Klamath Basin Compromise

Governor John Kitzhaber released today the principles of a proposed compromise on allocation of water in the Klamath Basin between farmers, tribes and wildlife. Representatives of the State presented the proposal today as part of mediation between all the interests in the Basin. The mediation was convened by US District Court Judge Thomas Coffin in Eugene beginning in April of this year.

"I believe it is vital that we break the gridlock on this issue," Kitzhaber said. "This proposal recognizes that every party in the Basin has got to be willing to lose a little to win a lot. That win is certainty about the future of agriculture in the Klamath Basin and a significant commitment to habitat restoration for endangered species."

The State proposal consists of the following:

- Establish new minimum lake levels and river flows that allow for a minimum irrigation delivery out of Upper Klamath Lake of approximately 170,000 acre-feet.
- Base those minimum lake levels on the 2001 water year being the record year of drought, with precipitation to date (since October 1, 2000) being 50 percent of normal. To get 170,000 acre-feet for irrigators, the lake level would have to be able to drop to elevation 4,138' (from current projected 4,139.4') and downstream flows would have to be reduced by 300 cubic feet per second for 120 days.
- Share all gains above the minimums equally between the Lake, the River and irrigation so a "normal" water year would mean an irrigation delivery of approximately 340,000 acre-feet, with the remaining normal year shortage (approximately 90,000 acre-feet) being addressed through demand reduction and development of wells, which is currently in progress. The other normal year water would go to maintaining lake level and downstream flows at levels recommended in the 2001 biological opinion and toward water deliveries to the wildlife refuge.
- Develop new "reasonable and prudent alternatives" to support the agreement through broad scale, long-term actions to augment supply, reduce demand, enhance conservation/efficiency, restore habitat, screen canals/diversions and improve water quality.
- Monitor effectiveness and continue research and peer review of science to support future adaptive management.

"I realize this compromise will not make everybody happy," said Kitzhaber. "But I firmly believe it is something we can accomplish. I am very concerned that other efforts, such as trying to change the way the Endangered Species Act works or changing ownership of the Klamath Basin Project, offer little chance of succeeding -- certainly not within the next

few years. Instead, they will maintain the current stalemate and provide no certainty of access to water in the future for either irrigators or endangered species."

Governor Signs HB 3909 Establishing A Task Force On Tire Recycling

Governor John Kitzhaber signed HB 3909 on June 27 which created a 13-member task force on tire recycling. The task force is charged with the goal of finding sustainable market solutions for the recovery of resources contained in waste tires. It will deliver its recommendations to the appropriate interim legislative committee by September 30, 2002.

According to the Oregon Department of Environmental Quality, there has been a dramatic decline in the rate of tire recycling over the past few years. In 1995, 83 percent of tires were recycled, but by 1999 that number dropped to 33 percent. Tires that are not reused or recycled end up in landfills, wasting valuable resources. Greater value can be extracted from scrap tires through increased tire use prior to discard, retreads, recycled rubber products, rubberized paving surfaces, substitute for construction aggregate, and as a tire-derived fuel.

"The task force created by HB 3909 will develop a thoughtful, long-term solution to this problem," said Gov. Kitzhaber. "It is vital for the sake of our environment that we greatly increase the number of tires that are reused or recycled each year."

The task force will include representatives from state and local government, tire dealers, scrap tire end users, recyclers and other non-profit stakeholders.

Governor Seeks Help In Klamath Aid

Governor John Kitzhaber today wrote to U.S. Senate Majority Leader Tom Daschle (D-SD) requesting his assistance in ensuring that \$20 million for Klamath Basin disaster relief remained in the Fiscal Year 2001 Supplemental Appropriations bill.

"The fate of the Klamath Basin agriculture depends significantly on the federal government's ability to step forward with assistance for those hard-hit citizens," Kitzhaber wrote.

The full text of the letter is attached.

June 28, 2001

The Honorable Thomas A. Daschle
Senate Majority Leader
United States Senate
Washington, DC 20510

Dear Senator Daschle:

As the Senate considers the Fiscal Year 2001 Supplemental Appropriations bill, I would like to ask for your support for short-term relief for agricultural interests in the Klamath Basin of Oregon who are undergoing a severe dry season. The House of Representatives included \$20,000,000 in financial assistance for the agriculture community in its version of the bill and I ask for your help in gaining acceptance by the Senate.

Efforts are underway by the State of Oregon, and by others throughout the state, to address the desperate needs of the Klamath Basin community. The State is using existing funds and programs to assist the Klamath community and the Oregon legislature has recently appropriated \$2 million for development of alternative water sources. We have high hopes that these efforts will provide a useful amount of relief. However, these resources can address only a fraction of the whole need, and additional funds are necessary.

The U.S. Bureau of Reclamation has estimated the impact of the lack of water to be approximately \$250 million. This amount is well beyond what state, local and private relief efforts can contribute. The fate of the Klamath Basin agriculture depends significantly on the federal government's ability to step forward with assistance for those hard-hit citizens.

Thank you for your consideration of this request, and if there is any information you need please do not hesitate to call me.

Sincerely,

John A. Kitzhaber, M.D.

Governor Vetoes Redistricting Legislation

Governor John Kitzhaber today vetoed SB 500, the Legislature's congressional redistricting plan, and HB 2001, the Legislature's legislative redistricting plan.

The governor has said from the beginning of the legislative session that he would not sign redistricting plans that do not have bipartisan support.

"Throughout session, I have maintained that I would approve a redistricting plan that had broad support both from the membership and the leadership of this Legislative Assembly. Early in session, there were encouraging signs that all interested parties were working together on the legislative redistricting plan. However, the lack of process and public input and the stark partisan vote on HB 2001 highlights its shortcomings,"

the governor wrote in his HB 2001 veto message. He expressed similar concerns about SB 500.

**Testimony Submitted By
Oregon Governor John A. Kitzhaber, M.D
Before The
Senate Governmental Affairs Committee Regarding
The Role of the Federal Energy Regulatory Commission Associated with the
Restructuring of Energy Industries
June 20, 2001**

I appreciate the opportunity to offer my perspectives on the role of the Federal Energy Regulatory Commission (FERC) and, specifically, its response to the western power crisis.

Let me start with three interrelated facts about the western wholesale power market. One, we do not have a well-functioning market. Two, we do not have effective competition. Three, we do not have "just" and "reasonable" wholesale power rates. These are unassailable facts. These are facts acknowledged by the FERC through its own pronouncements. These are facts that demand effective, comprehensive action by the FERC and yet it has refused to intervene.

Last winter, I – along with my fellow Governors of California and Washington – first called on the FERC to impose cost-plus pricing or some other form of temporary price controls in the Western wholesale power markets. Our concern then, as now, is that the exorbitant, unlawful wholesale prices our utilities are paying to a handful of power marketers ripple through our economies straining household budgets, putting people out of work, and causing general business slowdown.

While FERC fiddles, we are seeing the effects of the monopolistic wholesale prices that have burdened the West. Businesses are shutting down or curtailing operations, laying off thousands of workers. Schools are cutting back on essential programs in order to pay for electricity. Low-income households are sacrificing basic necessities to pay higher energy bills. We face major setbacks in our efforts to revitalize fisheries due to the hard tradeoffs required in the current energy environment. And a four-fold increase in Bonneville Power Administration power rates looms that will cause even greater harm to our households, our businesses, and our economy. Without immediate pricing changes, the situation will only worsen.

FERC and the Bush Administration have attacked temporary price controls on three counts.

First, temporary wholesale power pricing reforms do not measure up to the Bush Administration's simplistic policy

criteria of "does it reduce demand or increase supply." In the words of Commissioner Massey, the Administration is "ignoring the elephant in the living room." Yes, we should be stimulating investments in energy efficiency and new supplies. But, we cannot close any supply gap fast enough to significantly temper the prices utilities are paying in the wholesale market today and will be paying in the near term. Supply is an issue but so is the fact that we also we have a serious, short-term price problem that needs to be addressed.

Second, temporary wholesale power pricing reforms will have a debilitating effect on the development of new supplies and on efforts to reduce demand. High prices can reflect scarcity of a good or they can reflect sheer market power by a few sellers. The two should not be confused. Crafted properly, temporary price controls will eliminate any incentive for the owners of existing facilities to withhold power from the market to maximize profits – which I believe has occurred. By doing so, that will bolster supplies not lessen them.

Further, wholesale power pricing reforms can be crafted that provide more than sufficient incentives to developers to build new power plants. Various workable proposals – including some from one of my state agencies – have been submitted to FERC for its consideration. All would provide a reasonable return for energy producers while providing needed short-term rate relief. It is incumbent on the FERC to examine and develop those proposals as quickly as it can.

In addition, the imposition of temporary cost-plus pricing or other pricing reforms will not hurt our efforts to conserve energy. Indeed, I think that the reverse is true. With the unprecedented run-up in wholesale prices, we have largely reduced demand in the Northwest by shutting down businesses, reducing household amenities, and slowing our economy and not through permanent investments to make our homes and businesses more energy efficient for the long haul.

Three, temporary price controls will not be temporary. This is the most disingenuous criticism. We seek rate stability until power supplies increase and functioning market conditions prevail and no longer. When that occurs, any form of price control will naturally wither away. Further, whatever FERC establishes, it obviously can change later.

For the long run, a competitive wholesale power market can yield benefits. But, if we cannot be assured that FERC will respond quickly and effectively to remedy serious market defects, then I believe that we must revisit the policy to promote open, competitive wholesale power markets. Our citizenry will demand it.

FERC has failed miserably in its handling of the western power situation. Its failure to act to moderate short-term prices has benefited the few at the expense of tens of millions of households and businesses in the West.

Sound public policy should serve the best interests of the most people – not the narrow interests of a few. Legislation is needed to do what the FERC will not do – protect Western consumers from the consequences of manifestly unjust and unreasonable wholesale power prices.

In addition to raising concerns about the handling of the western power crisis, I want to take this opportunity to address other FERC issues that the Committee should take under consideration.

I understand that FERC may be supporting proposals to preempt state siting authority for transmission lines. I believe this is unwise and untenable. States and local governments have siting jurisdiction for good reasons. They are the governments closest to the individuals affected by the impacts of large transmission and generation projects. They are in the best position to mitigate those impacts and consider a range of alternatives.

FERC should require transmission owners and new regional transmission institutions to develop and implement an integrated transmission and generation planning process. They should be required to consider alternatives to costly infrastructure such as efficiency, load management strategies, distributed generation, and new transmission technologies. And in order to provide incentives for rational, cost-effective, and environmentally sound decisions, FERC should implement Performance Based Ratemaking that specifically rewards transmission owners that provide more efficient and more reliable transmission service. Just rewarding monopoly transmission providers with higher rates of return and higher profits doesn't necessarily achieve these public interest goals.

FERC should require full disclosure of all transmission and generation information in real-time, or as close to real time

as is possible. Current Energy Information Agency (EIA) confidentiality policy is a major impediment to a workable, competitive wholesale market. It protects suppliers in a position to exercise market power but endangers consumers who are vulnerable to market power abuse. Markets only function efficiently and fairly when participants are fully informed of available supply and demand options.

Finally, on Monday FERC announced its plan to address the western power crisis. We are still reviewing the details of the FERC Order and will submit additional testimony to the Committee as soon as we have completed that review. Our initial review indicates that FERC now recognizes that the western power market is dysfunctional, and offers limited strategies, which in our view do not go far enough to deal with the severity of the problem. While the severe wholesale price spikes will be moderated by the plan, it will not ensure "just" and "reasonable" pricing on an on going basis.

Thank you for the opportunity to provide testimony on these important FERC issues.

**Drought Information Available
on Governor's Web Site**

Governor John Kitzhaber today unveiled a new "Drought Emergency Information" feature on the Governor's Office web site.

The site outlines state agency response to the drought and state agency contacts. Other State resources, such as information on well-drilling permits through the Oregon Water Resources Department and the Oregon Business Development Fund and the Revolving Loan Fund through the Department of Economic and Community Development, are also available.

The site also contains federal drought related web links, the latest county disaster request status, a drought map (both through Oregon Emergency Management), Governor's Executive Order disaster declarations, news releases and Governor's correspondence to the federal government.

The Governor's Office web site url is: www.governor.state.or.us

Governor Announces Appointment Of Oregon Tax Court Judge

Governor John Kitzhaber today announced that he has appointed Henry Breithaupt to the Oregon Tax Court. Breithaupt replaces the Honorable Carl N. Byers, who retired effective April 30, 2001. In order to retain this position, Mr. Breithaupt must stand for election in May, 2002.

Breithaupt received his B.A. degree from Pomona College in 1971 and his J.D. degree from the University of Oregon School of Law in 1975. He has been practicing law since 1975 and has been a member in Stoel Rives LLP since 1978. Breithaupt also practiced law at the Miller Nash law firm from 1975 to 1978.

Breithaupt currently serves as a Board Member with the DePaul Treatment Centers, Oregon Tax Research and Lutheran Family Service. Breithaupt is an Adjunct Professor at Northwestern School of Law and Coach of its National Tax Moot Court Team. He has spoken at numerous educational programs of the Oregon State Bar and the Oregon Society of Certified Public Accountants, with a special emphasis on state and local tax matters.

Since 1978 Breithaupt has provided pro bono legal services to a variety of charitable organizations on organizational and charitable exemption issues, which include the following entities: American Tinnitus Association; American Spina Bifida Association; New Song Russian Christian School of Music; Tongan Community Services; Portland Computer Training Institute; Center for the Study of Religion at Portland State University, and Portland Baroque Orchestra.

Breithaupt and his wife Mary have three children: Margaret 17, Paul 15 and Katherine 12.

Legislators And Community Groups Join Governor To Urge Passage Of Oregon Children's Plan

Governor John Kitzhaber was joined today at a news conference by state Republican and Democratic legislative leadership who have thrown their support behind the Oregon Children's Plan, SB 965. The Oregon Children's Plan would provide for voluntary screening of all first births in Oregon, for both medical and social risks, and would make services available statewide to children and families through community programs. The Oregon Senate is expected to vote on SB 965 as early as Thursday, June 7.

"The Oregon Children's Plan is good public policy -- it will benefit our communities, families and schools." said Kitzhaber. "I welcome the bipartisan support for this plan and I am confident that this will be the session where we go beyond the discussion of a problem and instead enact a solution."

The governor was joined by Sens. Charles Starr and Kate Brown, and Reps. Dan Gardner and Jackie Winters. Also in attendance were Liz Smith of Children First for Oregon and Ray Mathis of the Citizens Crime Commission. Other legislators and community organizations were also present.

More information on the Oregon Children's Plan is available on the governor's website at: ES-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/governor/hhslp/ocp.htm

GOVERNOR SUBMITS NEW APPOINTMENTS

Governor John Kitzhaber submitted the following names for appointment to various boards and commissions to the Oregon Senate for approval.

Among the nominees is Mary Olson, who is being nominated to fill the Clackamas County vacancy on the Port of Portland Commission. Olson, an investment banker, is currently President of Norris, Olson & Associates, Inc. She previously worked at U.S. Bank as Vice President of Corporate Banking. Upon confirmation, Ms. Olson will fill the vacancy left by Jerry Drummond of Canby, who resigned to take a seat on the Oregon Investment Council.

Governor Announces State Financial Assistance For Agriculture Drought Disaster

Governor John Kitzhaber and the Klamath County Commissioners announced today a \$500,000 award from the Oregon Economic and Community Development Department (OECDD). The funds will serve as seed money to establish a revolving loan fund to provide drought relief to farmers in Klamath County served by the Klamath Irrigation Project. The funds will be made available to farmers wanting to develop irrigation wells.

"This action is part of the State response to the needs identified at the recent Drought Emergency Information Open House at the Klamath County Fairgrounds," Kitzhaber said.

The \$500,000 grant will be used by Klamath County to loan to farmers to purchase and install agricultural wells, equipment and machinery as partial replacement for water not delivered from the Klamath Irrigation Project this year. Klamath County will administer the loan program, which will be available to cover up to 50 percent of the total project costs, not to exceed \$50,000. The terms of the loans will be five percent interest, over a 10 year period, with deferred payments for the first two years.

"The Klamath County Board of Commissioners is pleased to take this step toward helping our agriculture community," said Commissioner Al Switzer.

Further information regarding the loan program can be obtained from the South Central Oregon Economic District in Klamath Falls: 541-882-9600.

Paul Cleary, Director of the Oregon Water Resources Department (WRD) said the WRD will be able to issue emergency irrigation permits for usage of up to 50,000 acre feet total of ground water in the Basin. WRD has set up guidelines to process these permit applications in seven business days. To date, WRD has received 61 applications and approved 50 for emergency ground water permits in the Klamath Basin.

In addition, the governor announced that at least another \$1 million in the Oregon Business Development Fund would be made available for farm and business loans for drought relief efforts throughout the state.

The loans from the Oregon Business Development Fund can be used for any drought related problem, including developing wells, purchasing feed, providing working capital, or any other business, ranching or farming need. The loans are available to cover up to 40 percent of project costs. Loan repayments can be deferred for up to one year. Interest rates vary from approximately three to seven percent. They may be combined with loans from banks, private

lenders or local development groups.

OECD will also provide guarantees to Oregon banks to extend loans and lines of credit to help businesses, farmers and ranchers throughout Oregon survive the drought. Terms for bank loan guarantees are available from OECD.

For more information on the Oregon Business Development Fund and credit guarantees, call Mark Huston, OECD Business Finance Manager at 503-986-0165.

At the present time, six counties have been declared drought disasters by the governor: Klamath, Wasco, Jefferson, Crook, Lake and Hood River. Klamath has also been declared a USDA disaster area. In addition, a request from Gilliam County is being processed by the governor.

Governor Signs Consensus Bill On Patient Protection Issues

Governor John Kitzhaber today signed into law HB 3040, which addresses several key patient protection issues under health insurance plans in Oregon. HB 3040 was developed last year by a working group made up of industry, consumer group and purchaser representatives, and ultimately passed both chambers of the 2001 Legislature unanimously.

"Patient protection and patient rights are fundamental to the quality of health care," Kitzhaber said. "HB 3040 is an important step toward ensuring that certain people who have coverage can be confident that the system is truly responsive to their needs."

HB 3040 covers the following issues:

1. **External Review:** The bill creates an external review process for disputes between policyholders and insurers, regarding medical necessity and experimental procedures. Decisions reached through this process will be binding in most cases, and will include the right to sue a health plan in limited circumstances (see below).
2. **Continuity of Care:** The bill ensures that a policyholder undergoing a course of treatment will be entitled to continued care from his/her treatment provider under certain circumstances even after the provider has left the insurer's managed care network.
3. **Referrals to Specialists:** The bill requires health plans to have procedures for standing referrals to specialists, and to give policyholders a right to a second opinion regarding the need for a referral.
4. **Network Adequacy:** The bill directs the Department of Consumer & Business Services to convene an advisory group to help develop administrative rules for uniform indicators that HMOs and other network plans will use to report the scope and adequacy of their provider networks. The measure will also designate it an unfair trade practice for insurers to materially misrepresent certain aspects of their networks.
5. **Right to Sue:** As noted above, the bill provides for a limited right for policyholders to sue health plans in circumstances relating to compliance with an external review decision. The right will apply only when a health plan offers non-binding external review but then refuses to comply with the external review decision in a specific case. Health plans that agree to be bound by external review decisions won't be subject to new legal exposure, but may be liable for fines for failing to comply with their contracts.

Governor Meets With Brush College Elementary School Students

Governor John Kitzhaber today met with 4th grade students from Brush College Elementary School. The students were in the State Capitol to sing their new version of the 1920 state song "Oregon, My Oregon". The students were accompanied by their teacher Dave Price and by Toby Abraham-Rhine, who helped the class with the project.

Our Oregon

Land of the Douglas Fir tree, land of the wind and rains
Snow-capped majestic Cascades
Green fertile valley plains
From the mighty Columbia where the salmon run
To the falls of Klamath – my Oregon.

Land of the rose and beaver
Land of the sparkling shore
High mountain desert beauty, land where the eagles soar.
Rivers, lakes and cities reflect the rising sun
Promising a new day for my Oregon.

Hope for the weary migrant
Dream for the pioneers
Home of her Native Peoples struggling through the years
May we work together through the years to come
Sharing as her people our Oregon
Sharing as one people our Oregon.

(Rewritten by Toby Abraham-Rhine with input from the Brush College Community and edited by Room 19, copyright February 14, 2001)

State of Oregon Participating In Klamath County Drought Emergency Information Open House

On May 18-19, Klamath County will host a Drought Emergency Information Open House at the Klamath County Fairgrounds. Participating federal, state, and county agencies, local financial institutions, and local social service agencies will be there to share information and answer questions on programs and services their agencies provide. These agencies and organizations also will be listening to identify drought related needs that may not yet be addressed by existing programs.

A partial list of **State** agencies planning to participate includes Oregon Economic and Community Development Department, Oregon Water Resources Department, Oregon State Police Office of Emergency Management, Department of Forestry, Oregon Office of Energy, OSU Extension Service, Department of Agriculture, State Fire Marshal's Office, Employment Department, Education Department, and Housing and Community Services.

The meeting times and location is as follows:

When:

Friday May 18

Noon to 7 p.m.

And

Saturday May 19

9 a.m. to 2 p.m.

Where:

Klamath County Fairgrounds

Governor Nominates Jerry Drummond To Oregon Investment Council

Governor John Kitzhaber announced today that he has nominated Jerry Drummond, a retired mining executive, to the Oregon Investment Council for a four-year term. Drummond, who is currently a Port of Portland Commissioner, will resign from the Commission effective June 1, 2001. He had previously served on the Oregon Investment Council from 1987 to 1997.

"Jerry has made significant contribution during his two years at the Port of Portland Commission," said Kitzhaber. "We look forward to having him back on the Investment Council, helping guide this very important group."

Under state law, Drummond, who is a resident of Clackamas County, must be replaced on the Port Commission by another Clackamas County resident. Kitzhaber said he would nominate a replacement for Drummond in the next two weeks. Drummond replaces Randy Pozdena, a Portland economist, on the Investment Council.

Governor Kitzhaber Announces Appointment of Washington County Circuit Court Judge

Governor Kitzhaber today announced that he has appointed Keith R. Raines to the Washington County Circuit Court. Raines replaces the Honorable Jon B. Lund, who retired effective March 31, 2001.

Raines has served as a Pro Tem Judge in Washington County since July 2000. He received his B.A. degree from Lewis & Clark in 1972 and his J.D. degree from Lewis & Clark in 1976.

Raines currently serves on the State Lawyers Assistance Commission, Albina Ministerial Alliance Board, Albina Rotary Club Foundation Board, and the Hillsboro Birthright Board.

Raines has also served on the Oregon State Bar Judicial Administration Committee, Washington County Bar Supplemental Local Rules Committee, Multnomah Bar Association Court Liaison Committee, and the Multnomah Bar Association Alternative Dispute Resolution Committee.

Raines has three children; Elizabeth 17, Christo 14, and Thomas 13.

In order to retain this position, Mr. Raines must stand for election in November, 2002.

Oregon Children's Plan Testimony Senate Rules and Redistricting Committee

SB 965 may well be the most important initiative in the \$12 billion budget I have submitted to you this session. It gives our children the foundation to succeed. It gives real substance to the oft-used phrases: "Children are our most important resource" and "Let's put our children first". Second, it is important because of its potential impact on the cost and scope of state services in the future.

Let me start with a budgetary context for the issue you are considering today. Ten years after the passage of Ballot Measure 5, we are at the end of an era. During the 1990's state government assumed the major responsibility for funding primary and secondary schools. In 1989, the year before Measure 5, the K-12 budget was \$1.17 billion – or about 24 percent of the general fund. Today it is \$5.2 billion – or about 43 percent of the general fund.

In 1994 we passed Ballot Measure 11. In the last biennium before Measure 11, the budget for the Oregon Department of Correction was \$363 million. Today it has grown to \$863 million – and we have bonded an additional \$1 billion to finance prison construction.

In this same five-year time period our population grew by 600,000 people, and the number of children in our public school system increased by 60,000. There have been no general tax increases to offset these costs; in fact, over the last decade, measures have been passed to return \$1 billion to individuals and corporations through the kicker and cut the capital gains tax. And, last November, the voters approved another \$160 million tax cut with the passage of Ballot Measure 88.

Those days are over. Most likely we will be looking at flat, if not reduced, revenue next week. If it were not for the longest period of sustained economic growth on record, and the introduction of video poker, our state economy would have been devastated.

So, how do we survive? How do we have it all? How can we continue to invest in improving the quality of our schools, a growing prison population and the other rising costs of doing business when the economy – which made it all possible in the first place – is slowing?

The answer, in the absence of new revenue, is prevention.

SB 965 completes the comprehensive approach to prevention put in place by SB 555 in the 1999 Legislature. The Juvenile Crime Prevention and Alcohol & Drug components of SB 555 will help prevent older at-risk youth and their

families from entering the juvenile justice system, and lives of destruction. But it is not soon enough for some children and families. In many cases the pattern of behavior and risk factors is set much earlier in life, when the child is 5, or 3, or 3 months.

SB 965 will provide support to all children and families who need and want it. And, most importantly, it will lay the foundation to identify at risk children – before they even get into school, before they get into trouble – and it will provide them the support they and their families need to ensure successful and productive lives.

Preventing problems from occurring in the first place will be a better buy for society. Although there has been disagreement about the numbers, many studies show that dollars invested in prevention save in many more dollars in avoided costs later in life. And, common sense tells us that prevention is simply a better buy. The packet of information provided to you on SB 965 includes a summary of the research on cost savings. This kind of return on investment – in terms of our capacity to sustain the state budget into the future – is something we cannot afford not to do.

But while the budgetary case for the SB 965 is a compelling one, it pales in significance next to the human side of the equation.

If the headline in the Oregonian or Statesman Journal read: "Six out of ten Oregon children exposed to a potentially fatal, preventable disease", we would be shocked and outraged. And, rightly so.

Yet, this is not a hypothetical situation. Each year, we lose thousands of children to school failure, school drop out and subsequent involvement in the criminal justice system. Sixty percent of first births in Oregon today have at least one social or medical risk factor that puts them in jeopardy. Over forty percent of our children in the public school system are unable to fully take advantage of the learning experience due to these same risk factors.

The fact of the matter is that we know who these children are long before they veer off the road to success. There is a set of easily identifiable risk factors that have almost a linear correlation with school drop out and juvenile criminal activity later in life. These risk factors occur in the home and include: parents who are living at or below the federal poverty level or who abuse drugs or alcohol; parents who have been incarcerated in the criminal justice system or with a history of domestic violence; single parent households and teenage parents.

The fact that we know these risk factors, we know the children they affect, and yet we do nothing about it, makes no sense to me. Especially when we also know the kinds of programs and supports that have been proven to be effective in preventing these tragic outcomes and making these children and their families successful.

That is exactly what SB 965 is designed to do. It is an effort to first, provide all families with the information they need to raise healthy children; second to identify as early as possible children and families who would benefit from additional help – and who would voluntarily sign up to receive it; and third, to offer those children and families interested in participating in with the full range of supports they need to be successful.

SB 965 builds on the efforts of Healthy Start, Early Intervention and other programs by adding missing elements and linking them together into a comprehensive and coordinated system of supports. SB 965 includes: early problem identification; home visits and in-home supports; substance abuse and mental health treatment; community based programs such as relief nurseries, parent training and other assistance to parents; and early learning opportunities such as the Oregon Prekindergarten Program.

Participation is entirely voluntary, but in early pilot programs over 90% of families took advantage of the services offered.

I understand that SB 965 represents a shift in state priorities from after-the-fact intervention to front-end prevention and treatment. But it is an important shift and one that must be made – both because of the human consequences of failing to do so and because of the fiscal reality we will face for the rest of this decade.

I also understand this type of investment will not come easily. As you know, particularly those of you who serve on the Ways and Means Committee, all general fund dollars have constituencies attached to them. Fiscal limits mean that

priorities must be set, and my budget proposal to you includes cuts that also carry with them very real human consequences – cuts in public safety, cuts in human resources, and cuts in higher education. But, I am willing to defend these choices on the basis that putting an emphasis on prevention reflects a higher priority than paying more to mitigate problems after they have already developed.

I want to point out that the investment we have made for older children is maintained and rolled up in the budget. We are already investing in older children and youth. With SB 965 we are adding an investment on the early end and creating a continuum of support for children of all ages and their families.

To close, let me put the Oregon Children's Plan into the budget context again. The K-12 budget accounts for 43 percent of the general fund; higher education 7 percent; public safety 11 percent; the budget for senior citizens 4 percent. The proposed budget for the Oregon Children's Plan accounts for one half of one percent of the general fund. One half of one percent. And, SB 965 would only be available to first births, which represents only about 40% of Oregon's children. We should be offering these important services and protections to all of Oregon's children.

This is not a budget argument. It is about whether we have the courage to change our priorities, reflected by how we invest our resources. It is about whether we are willing to be accountable for the outcomes of the resources we invest, and the outcomes for the resources we fail to invest. This is about the depth of our commitment to give a voice to the voiceless. It is about really putting children first.

Governor Applauds Idaho Senator's Salmon Recovery Proposal

Governor John Kitzhaber today applauded the efforts of US Senator Mike Crapo (R-Idaho) to increase funding for salmon recovery efforts on the Columbia/Snake River System. Sen. Crapo proposed on Friday, May 4, 2001 to budget an additional \$400 million in the next fiscal year to implement salmon and habitat restoration plans as proposed by the National Marine Fisheries Service.

"Sen. Crapo's budget proposal recognizes the huge federal responsibility to help us here in the Northwest with salmon recovery in the Columbia Basin," said Kitzhaber. "We are fulfilling the obligations of federal laws such as the Endangered Species Act and honoring federal treaties with Northwest tribes. Meeting these burdens should not fall solely on the backs of Northwest utility ratepayers."

Specifically, Crapo proposed increasing salmon recovery budgets for the US Army Corp of Engineers, the National Marine Fisheries Service, the Bureau of Reclamation, the Natural Resource Conservation Service, the Environmental Protection Agency and the US Fish and Wildlife Service.

Kitzhaber had met with Crapo during his recent trip to Washington, D.C. "I truly believe this is a bipartisan issue. It is in everyone's interest to restore a healthy environment and healthy salmon runs. I am hopeful that this proposal will gain the support of the Administration and the entire Northwest Congressional delegation," said Kitzhaber.

Governor Changes Public Utility Commission Appointments

Governor John Kitzhaber announced today that he has altered his recent appointments to the Public Utility Commission.

Roy Hemingway, originally nominated to fill the post currently held by Roger Hamilton, will instead replace Commission Chair Ron Eachus immediately upon confirmation by the Oregon Senate.

Sen. Lee Beyer, originally nominated to fill the post currently held by Eachus, will instead replace Hamilton effective October 1, 2001. Hamilton will then join the staff of the Governor's Natural Resource Office.

The attached letter provides the context for the governor's decision.

Governor Appoints Jay Waldron Port of Portland Commission President

Governor John Kitzhaber announced today that he has appointed Jay Waldron to replace Bob Walsh as President of the Port of Portland Commission. The appointment will be effective immediately.

Waldron, who is a partner at the Portland law firm of Schwabe, Williamson & Wyatt specializing in environmental and energy law, has been on the Port Commission for two years. "I have great confidence that Jay will be able to help the Port of Portland tackle the significant challenges it faces in the coming years, including channel deepening, clean up of the Portland Harbor and seeking new air passenger connections to serve our state's growing business needs," Kitzhaber said. "I also want to thank Bob Walsh for his years of service to the Port and to the citizens of Oregon. He has helped lay the foundation for the Port to be successful in the future."

"I am honored by the governor's appointment and looking forward to doing the job," said Waldron. "I have the good fortune to follow in the footsteps of Bob Walsh who has overseen a period of tremendous achievement and growth at the Port. Even though he's returned to the private business, I know I will be tapping his knowledge and experience on a regular basis."

Waldron also announced that he will retain Cheryl Perrin as the Commission Vice President. "Cheryl has a great deal of experience in public life, as a Port Commissioner and as a business person. I will seek her guidance and make her an active partner in running the Commission."

Oregon's Recommendations for 2001 Operations of the Federal Columbia River Power System

This morning I would just like to briefly reprise the testimony I provided Wednesday to the Northwest Power Planning Council regarding operations of the Columbia River System in the coming year and comment some on actions that have occurred since then.

As we are all aware, this year is presenting challenges of historic proportions in the Columbia River Basin: low rainfall, low snow pack and run-off; high wholesale electricity prices and the potential for power shortages.

In the last month, both the council and the agencies here today delivered their plans for 2001 operations of the Columbia River System.

The agencies' plan is heavily weighted toward assuring, to the maximum extent possible, that the electricity demands of Northwest residents are satisfied this coming summer, fall and winter.

But I believe your plans fall short. I do not believe that your plans utilize all the tools at our disposal to continue our efforts to restore the health of the salmon and steelhead populations of the Columbia Basin. To me – and, I believe, to many people in the region as well -- this is unacceptable.

We have legal obligations under the Endangered Species Act, the Northwest Power Act and the Clean Water Act. We have federal treaty and trust responsibilities to the sovereign Indian tribes of the Pacific Northwest which must be met, not simply abandoned at the first sign of trouble. And the Northwest Power Act itself directs the BPA Administrator and other federal operating agencies to

"exercise such responsibilities consistent with the purposes of this Act and other applicable laws, to adequately protect, mitigate, and enhance fish and wildlife, including related spawning grounds and habitat, affected by such projects or facilities in a manner that provides equitable treatment for such fish and wildlife with the other purposes for which such system and facilities are managed and operated."

Instead of meeting these legal and moral obligations, consider where these plans would take the region in the next couple of years.

The good news is that we find that the Northwest would -- to an 80% probability -- have met all its energy needs.

But we also find that the Bonneville Power Administration (BPA) and the other federal agencies that operate the FCRPS -- to an even higher degree of probability -- would have done no salmon operations during the spring and summer of 2001 and little, if any, thereafter.

We find that BPA will have spent little or nothing on efforts necessary to mitigate the impacts of the curtailed salmon operations and the drought, including obtaining needed water from available reservoir storage.

BPA will have spent nothing to import electricity from outside the region, thereby expending precious water for generation that could have instead been used for salmon operations or reservoir storage.

BPA will have sent to Washington, D.C. money the region desperately needs to manage the looming crises of energy, water, salmon and finances, rather than diligently exhausting all available alternatives for addressing its treasury debt this year.

BPA will have raised rates paid by its Northwest customers somewhere between 68% and 248%.

And BPA will have reserves of at least \$700 million -- perhaps of more than \$1 billion.

This plan for electricity reliability -- as important as that is -- comes at an unnecessarily high cost to the Northwest's other important values.

I believe we can find a plan that is both more balanced and more comprehensive. Toward that end I present to you the following suggestions.

First, acknowledge the biological risk and fund its mitigation.

To the extent this crisis of energy, water and finance has sidetracked us from fully implementing salmon recovery this year, we must be candid in admitting the real biological impacts and uncertainty associated with our actions. In short, this will not be a bloodless coup. These impacts and uncertainties include increased mortality associated with transporting fish on barges and trucks and increased mortality from in-river migration due to exceedingly poor water conditions.

Beyond its mere acknowledgement, this biological risk must be fully incorporated into the management strategy we use for 2001 river operations. This crucial element is woefully under emphasized in the Council recommendations and entirely absent from the federal plan. The plan accounts for the risk of not meeting near-term power needs should run-off be less than expected, but gives no consideration to the foregone benefit to fish should run-off prove greater than expected.

Further, BPA and the other agencies that operate the hydrosystem must acknowledge their obligation to mitigate for the impacts of the drought -- including the reduction in spill -- and to provide the necessary funding to do so.

The Power Planning Council's recommendations are very explicit on the need to establish a mitigation fund and should be heeded by BPA and the other federal agencies. Unless BPA provides an explicit acknowledgement of its mitigation responsibility and a firm commitment to offer an appropriate level of mitigation funding, the result will be that BPA reaps a significant financial reward from the reduction of the spill program, while the region suffers a significant setback to its regional salmon recovery.

Therefore, I recommend the following:

First, regardless of the anticipated water conditions, BPA should set aside additional funds for immediate actions to aid

fisheries harmed by the drought and by the loss of spill. The specific set-aside amount should be negotiated by the BPA and the Council.

I acknowledge that BPA presented a mitigation plan to the Northwest Power Planning Council yesterday in Spokane. It was defeated when three of four states, including Oregon, voted against it.

BPA should come back with a plan that adequately acknowledges the need to mitigate for harm inflicted on all the basin's salmon – not just the listed species. And that plan must have adequate funding. With BPA reaping a financial benefit from spill curtailment valued at nearly \$1 billion, BPA's offer to spend \$10 million on mitigation for this region's losses is difficult to take seriously.

Second, we should continue to seek additional federal funds for fish recovery programs.

Third, we should be attempting to augment flow, both through leasing back irrigation water and through purchasing water from Idaho Power's Brownlee Reservoir.

Fourth, while we believe that the use of water volume forecasts are suitable triggers for emergency actions, a lower threshold should be set for May. That will increase the likelihood of spill in May when it is of the most benefit for fish.

Fifth, if water conditions or water forecasts exceed threshold targets, the excess water should be allocated in a way as to maximize the benefits to fish whether through spill, increased flows, increased generation or increased storage. All or part of the revenue from increased generation by BPA should go to the emergency mitigation fund.

Finally, the power planning council passed a much improved recommendation on spill, acknowledging the need to plan for how limited spill can be strategically utilized to help migrating salmon. Through development of this spill plan, the region has an important opportunity to think creatively about how, in this unique year, hydrosystem operations can be structured to meet load and assist migrating salmon, at least to some extent.

I urge BPA, NMFS and the other federal agencies to work with the council and the region to accomplish this important task.

The second major recommendation I offer is to purchase more power.

BPA should plan and budget for power purchases from outside the region, particularly during off-peak periods this spring. The Power Planning Council's recommendations are silent on this point, though the Council's power analysis conservatively assumes a small amount of imports will be available. The federal plan assumes no imports whatsoever.

BPA and others should continue to buy-back power from all available commercial sources, including irrigated agriculture. The buy-back program from agriculture – essentially paying irrigators not to pump – has been relatively successful, but could be made more successful with better planning. These purchases include in-stream protection for the water not pumped. Oregon has the statutory mechanism to provide such protection, and doing so will assure the water will remain in stream to benefit salmon and enhance electricity production.

The citizens of our region expect those in positions of authority to meet their responsibility to safeguard the two invaluable and intertwined benefits of the Columbia River: hydroelectricity and salmon. Success in meeting our short-term challenges in energy, water, finances, and salmon lies in remaining true to the transcendent values that make the Northwest a special place. Finding a place of accommodation -- and even synergy -- between salmon and electricity generation honors those values, and it must remain foremost in our minds and efforts.

The third recommendation I will make is one I have made in the past and that is that the BPA work with the federal treasury to reschedule its debt payment in this year of incredibly little water and incredibly high prices.

Money retained by BPA gives the region the flexibility it needs to confront this year's challenges in energy, water, salmon and finance. BPA has appropriately been working to meet its yearly treasury repayment by use of credits it has available under section 4(h)(10)© of the Northwest Power Act, and the contingency fund established under the 1995 Memorandum of Agreement governing BPA's fish and wildlife funding responsibilities.

Payment to the Treasury of any sums in excess of these two credits should be deferred – not forgiven --this year. The political risk of such an approach is minimal and speculative, certainly when compared to the real risks this region faces to its fish and wildlife recovery effort and electricity reliability. Similarly, the accusation that a deferral is evidence of mismanagement is easily rebutted when the region faces drought and skyrocketing wholesale electricity prices, particularly since the high prices are a direct result of a federal decision supported by the Bush Administration not to intervene in the dysfunctional Western power markets. More problematic is the charge that the region failed to seek a partial deferral, despite it meaning we risk not meeting clear legal obligations.

But beyond managing the short-term crisis that the next several months presents, we must learn from this crisis and plan for the long-term. This requires two additional actions.

First, we must have a comprehensive study that clearly delineates the economic assistance and mitigation that robust salmon recovery will require. Such a study has been left undone, in part because it has always been associated with removal of the four lower Snake River dams. But this year illustrates the fact that even under our current aggressive non-breaching recovery strategy, it is vitally important to know how and where to best provide economic assistance and mitigation funding.

Second, and most importantly, we must address some of the underlying systemic problems inherent in how we generate and market electricity on the Columbia River System.

The subscription process was intended to give Bonneville stability over the long run, by giving it assurance of a stable customer base. Subscription under the current circumstance has, instead, put Bonneville into the greatest financial instability in its 65-year history. This year, various entities – all with some right to federal power – have forced Bonneville to commit to the sale of more power than it can generate.

The region must come to agreement on how Bonneville is to distribute the scarce and cheap federal hydropower and the extent to which customers can place load on Bonneville. Bonneville is now governing by cobbling together new ad hoc solutions every five years to meet the minimum requirements of an outdated statute and to find some form of political acceptance from all the forces seeking its services. There has to be a better way. If there isn't we risk creating permanent instability with Bonneville, which will make it all the more vulnerable to those who want to end its service to Northwest ratepayers.

I have asked my staff to develop a proposal for what that other course might look like, and I will deliver it to the region by June 1, 2001.

I appreciate that all of you have a very difficult job of balancing interests. And I appreciate that you are trying to create that balance under extraordinarily difficult circumstances. Thank you for consideration of my opinions. I am optimistic that we can not only survive this crisis, but learn from it and improve the way we manage the Columbia River.

Governor Announces Prescription Drug Plan Endorsements

OHSU, AARP and National Alliance For The Mentally Ill Announce Support for Kitzhaber Oregon Health Plan Formulary Proposal

Governor John Kitzhaber was joined at a news conference today by Dr. Peter Kohler, President of Oregon Health Sciences University, Doris Minard of the National Alliance for the Mentally Ill and Lois Smith of the AARP to announce their support of the Oregon Health Plan formulary proposal and to dispel misleading information circulated by the pharmaceutical industry. The proposal, which would save the State approximately \$7 million next biennium, would help the Health Plan purchase best in class drugs for the least price.

"In an effort to protect their exorbitant profits, the drug companies have resorted to scare tactics and misinformation designed to frighten biotechnology researchers, senior citizens and those needing treatment for mental illness," Kitzhaber said.

Both Minard and Smith made the point that the continued stability and future of the Oregon Health Plan was very important to their membership and that the rising costs of pharmaceuticals was the most significant threat to the future of the plan. "This formulary is the best approach we have seen yet to control pharmaceutical costs and maintain the quality of care for persons with mental illness," said Minard. "I am confident that with close cooperation between the State and consumers, this approach will allow us to reach our mutually beneficial goals."

Dr. Peter Kohler took the opportunity to point out OHSU's support for the legislation. "OHSU is committed to providing health care to low-income and under-served populations across our state. We recognize that the Oregon Health Plan is critical to these efforts, and we support your goal of implementing a reasonable and flexible prescription drug formulary as one way of managing the costs of that system," Dr. Kohler wrote in a letter to Gov. Kitzhaber on April 20, 2001. At the news conference Kohler confirmed that the formulary would have no effect on OHSU's ability to maintain and expand its role as a biomedical research center, nor would the formulary have an impact on the biomedical industry in Oregon.

"There's a lot of misinformation out there about the formulary," Kitzhaber said. "But the fact of the matter is that it will not deprive senior citizens or the mentally ill of effective drugs, and it will not undercut the efforts of the biotechnology industry in this state."

Oregon's Recommendations for 2001 Operations of the Federal Columbia River Power System

This year is presenting challenges of historic proportions in the Columbia River Basin: low rainfall, low snow pack and run-off; high wholesale electricity prices and the potential for power shortage.

At the same time, we are seeing significantly higher salmon and steelhead runs, resulting from high flows in the Columbia River in the past few years and good ocean conditions -- as well as from the work the region has been doing to improve habitat conditions, hydro operations, and harvest and hatchery management throughout the Pacific Northwest.

On April 4, 2001, the Northwest Power Planning Council (NWPPC) issued its preliminary recommendations for 2001 operations of the Federal Columbia River Power System.

On April 13, 2001, the federal agencies delivered their plan for 2001 operations of the Columbia River System.

The Power Planning Council recommendations and the federal agencies' plan are heavily weighted toward assuring, to the maximum extent possible, that the electricity demands of Northwest residents are satisfied this coming summer, fall and winter. Of course, this is a very important goal.

But both the Council's efforts and those of the federal agencies fall short. While both plans provide electrical reliability, they fail to utilize all the tools at our disposal to continue our efforts to restore the health of the salmon and steelhead populations of the Columbia Basin. To me -- and, I believe, to many people in the region as well -- this is unacceptable.

We have legal obligations under the Endangered Species Act, the Northwest Power Act and the Clean Water Act. We have federal treaty and trust responsibilities to the sovereign Indian tribes of the Pacific Northwest which must be met, not simply abandoned at the first sign of trouble. And the Northwest Power Act itself directs the BPA Administrator and other federal operating agencies to

"exercise such responsibilities consistent with the purposes of this Act and other applicable laws, to adequately protect, mitigate, and enhance fish and wildlife, including related spawning grounds and habitat, affected by such projects or facilities in a manner that provides equitable treatment for such fish and wildlife with the other purposes for which such system and facilities are managed and operated."

Instead of meeting these legal and moral obligations, consider where these plans would take the region in the next couple of years.

The good news is that we find that the Northwest would -- to an 80% probability -- have met all its energy needs.

But we also find that the Bonneville Power Administration (BPA) and the other federal agencies that operate the FCRPS -- to an even higher degree of probability -- would have done no salmon operations during the spring and summer of 2001 and little, if any, thereafter.

We find that BPA will have spent little or nothing on efforts necessary to mitigate the impacts of the curtailed salmon operations and the drought, including obtaining needed water from available reservoir storage.

BPA will have spent nothing to import electricity from outside the region, thereby expending precious water for generation that could have instead been used for salmon operations or reservoir storage.

BPA will have sent to Washington, D.C. money the region desperately needs to manage the looming crises of energy, water, salmon and finances, rather than diligently exhausting all available alternatives for addressing its treasury debt this year.

BPA will have raised rates paid by its Northwest customers somewhere between 68% and 248%.

And BPA will have reserves of at least \$700 million -- perhaps of more than \$1 billion.

This plan for electricity reliability -- as important as that is -- comes at an unnecessarily high cost to the Northwest's other important values.

I believe we can find a plan that is both more balanced and more comprehensive. Toward that end I present to you the following suggestions.

First, acknowledge the biological risk and fund its mitigation.

To the extent this crisis of energy, water and finance has sidetracked us from fully implementing salmon recovery this year, we must be candid in admitting the real biological impacts and uncertainty associated with our actions. In short, this will not be a bloodless coup. These impacts and uncertainties include increased mortality associated with transporting fish on barges and trucks and increased mortality from in-river migration due to exceedingly poor water conditions.

Beyond its mere acknowledgement, this biological risk must be fully incorporated into the management strategy we use for 2001 river operations. This crucial element is woefully under emphasized in the Council recommendations and entirely absent from the federal plan. The plan accounts for the risk of not meeting near-term power needs should run-off be less than expected, but gives no consideration to the foregone benefit to fish should run-off prove greater than expected.

Further, BPA and the other agencies that operate the hydrosystem must acknowledge their obligation to mitigate for the impacts of the drought -- including the reduction in spill -- and to provide the necessary funding to do so.

The Power Planning Council's recommendations are very explicit on the need to establish a mitigation fund and should be heeded by BPA and the other federal agencies. Unless BPA provides an explicit acknowledgement of its mitigation responsibility and a firm commitment to offer an appropriate level of mitigation funding, the result will be that BPA reaps a significant financial reward from the reduction of the spill program, while the region suffers a significant setback to its regional salmon recovery.

Therefore, I recommend the following:

First, regardless of the anticipated water conditions, BPA should set aside additional funds for immediate actions to aid fisheries harmed by the drought and by the loss of spill. The specific set-aside amount should be negotiated by the BPA and the Council.

Second, we should continue to seek additional federal funds for fish recovery programs.

Third, we should be attempting to augment flow, both through leasing back irrigation water and through purchasing water from Idaho Power's Brownlee Reservoir

Fourth, while we believe that the use of water volume forecasts are suitable triggers for emergency actions, a lower threshold should be set for May. That will increase the likelihood of spill in May when it is of the most benefit for fish.

Finally, if water conditions or water forecasts exceed threshold targets, the excess water should be allocated in a way as to maximize the benefits to fish whether through spill, increased flows, increased generation or increased storage. All or part of the revenue from increased generation by BPA should go to the emergency mitigation fund.

The second major recommendation I offer is to purchase more power.

BPA should plan and budget for power purchases from outside the region, particularly during off-peak periods this spring. The Power Planning Council's recommendations are silent on this point, though the Council's power analysis conservatively assumes a small amount of imports will be available. The federal plan assumes no imports whatsoever.

BPA and others should continue to buy-back power from all available commercial sources, including irrigated agriculture. The buy-back program from agriculture – essentially paying irrigators not to pump – has been relatively successful, but could be made more successful with better planning. These purchases include in-stream protection for the water not pumped. Oregon has the statutory mechanism to provide such protection, and doing so will assure the water will remain in stream to benefit salmon and enhance electricity production.

The citizens of our region expect those in positions of authority to meet their responsibility to safeguard the two invaluable and intertwined benefits of the Columbia River: hydroelectricity and salmon. Success in meeting our short-term challenges in energy, water, finances, and salmon lies in remaining true to the transcendent values that make the Northwest a special place. Finding a place of accommodation -- and even synergy -- between salmon and electricity generation honors those values, and it must remain foremost in our minds and efforts.

But beyond managing the short-term crisis that the next several months presents, we must learn from this crisis and plan for the long-term. This requires two additional actions.

First, we must have a comprehensive study that clearly delineates the economic assistance and mitigation that robust salmon recovery will require. But this year illustrates the fact that even under our current aggressive non-breaching recovery strategy, it is vitally important to know how and where to best provide economic assistance and mitigation funding.

Second, we must address some of the underlying systemic problems inherent in how generate and markets electricity on the Columbia River System. These problems have, in part, contributed to the current crisis, as various entities – all with some right to federal power – force BPA to oversubscribe, resulting in shortages and higher prices overall. Then in years when market forces drive these same entities away from BPA and the federal power it sells, a distinct, but no less severe, crisis confronts our region. This cycle will repeat itself unless we choose another course. I have asked my staff to develop a proposal for what that other course might look like, and I will deliver it to the region by June 1, 2001.

GOVERNOR APPOINTS BOB MINK TO HEAD DHS

Governor John Kitzhaber on Tuesday named Bob Mink of Salem as director of the Oregon Department of Human Services, charging him with reshaping the

department to put more focus on clients. Mink, 53, has served as DHS interim director since Feb. 1. The appointment is subject to Senate confirmation.

"Reorganizing our human services system is critical to Oregonians who need help from the State," Kitzhaber said. "Bob Mink has shown he has the leadership qualities and management ability to lead the department through this change."

"I am honored to accept this appointment," Mink said.

Since last fall, DHS has been planning changes to give the department more focus on clients and communities, including moving from four separate field systems to one.

"Right now the system is fragmented and puts the burden squarely on our clients," Mink said. "We can remove the burden from people who are already under a great deal of stress by offering client-focused multi-service offices across the State."

Mink joined DHS in 1988, and became deputy director in 1992. The governor named him interim director following the January resignation of Gary Weeks, who joined the Baltimore-based Annie E. Casey Foundation. Mink, a 1974 graduate of Oregon State University, also holds a law degree (1978) from Willamette University.

GOVERNOR ANNOUNCES \$5 MILLION IN INCENTIVE FUNDS TO LOCAL PROJECTS

Governor John Kitzhaber today announced \$5 million in funding awards for community development projects across the state. This is the first distribution of money from the Community Incentive Fund established by the 1999 Legislature with lottery-backed bonds. The governor's 2001-03 budget proposes a \$35 million expansion of the Fund.

The Incentive Fund provides communities throughout Oregon with financing to help rehabilitate downtown buildings, enhance main streets and encourage mixed-use and other downtown development. It is estimated that the \$5 million in incentive funds will leverage an additional \$73 million in federal, state, local and private investments.

"The Community Incentive Fund helps build strong communities by providing the critical piece of financing for important projects," said Kitzhaber. "In essence, this fund represents a commitment to Oregon communities, to local economies and to the quality of life for all Oregonians".

Agency staff located in Salem and on the Regional Community Solutions Teams from Transportation, Economic and Community Development, Housing, Land Conservation and Development, and Environmental Quality worked together to move projects forward to the Incentive Fund Advisory Board for funding decisions. The projects receiving funding are geographically diverse and vary in size and scope.

The following projects will receive Incentive Funds:

Oakland Historic Washington School Renovation: \$200,000

- Renovation of an historic building in the center of Oakland to provide a one-stop family resource center, youth and senior center, and municipal offices.

Pendleton Security Apartments: \$98,376

- Rehabilitates a vintage 1920 apartment building to preserve affordable housing and help revitalize downtown.

Astoria Clatsop Community College: \$750,000

- Funds will purchase land to provide a downtown site for the community college.

John Day Grant County Solutions Project: \$85,000

- Rehabilitation of buildings to house county mental health and health departments and a telecommuting center.

Medford Urban Renewal: \$600,000

- Downtown mixed-use redevelopment project located in the heart of downtown that will include affordable housing.

The Dalles Commodore Building: \$500,000

- Re-development of an historic downtown building that ties into other downtown streetscape and riverfront projects that will include affordable housing and retail space.

Condon Bank Block Building (Frontier Learning Network): \$200,000

- A building renovation for the Frontier Learning Network to provide distance learning in the region.

Milwaukie Transit Oriented Development: \$900,000

- Development of an underground parking structure to allow a mixed-use development that will be a cornerstone of Milwaukie's downtown revitalization.

Lebanon Downtown Beautification: \$255,000

- Downtown revitalization project with a large impact on a distressed community that is losing downtown tenants.

Springfield Cultural District Project: \$500,000

- Funding to help complete a performing arts center, part of Springfield's downtown revitalization.

Bend Downtown Pedestrian Network: \$210,000

- Connects Bend's redeveloped mill site retail center and older neighborhoods to downtown Bend.

Lakeview Streetscape Project: \$160,267

- The Incentive Funds will add to the community support and ODOT downtown revitalization project underway by aiding with the replacement of water and sewer lines and various streetscape improvements.

Chiloquin Klamath Tribes Community Park: \$100,000

- Incentive Funds will create a community park that will be a gathering place for tribal and community members.

Baker City Armory Project: \$200,000

- Enhancement of the Baker City Armory to help in the expansion of the community college campus.

**For more information on the project awards, visit the Governor's Community Development website at:
<http://communitysolutions.state.or.us/funding.html>**

GOVERNOR NOMINATES SEN. LEE BEYER, ROY HEMMINGWAY TO PUBLIC UTILITY COMMISSION

Governor John Kitzhaber announced today two nominations to the Oregon Public Utility Commission (PUC): State Senator **Lee Beyer** (D-Springfield) and **Roy Hemmingway**, the governor's energy adviser. Both appointments are subject to Senate confirmation.

Sen. Beyer, who was elected to the Senate in 1998, will, pending confirmation, join the Commission January 1, 2002. Sen. Beyer, a graduate of the University of Oregon, was appointed to the Oregon House of Representatives in 1991 and served there until his election to the Senate. Sen. Beyer is also the executive director of the Eugene-Springfield Metro Partnership. He will replace Commissioner **Ron Eachus**, who has served on the PUC since 1987.

"Lee Beyer has had a distinguished career as a member of the Oregon House and Senate," Kitzhaber said. "He'll bring a wealth of knowledge, instinct and problem solving skills to the Commission."

Kitzhaber also thanked Commissioner Ron Eachus for his 14 years of service to Oregonians. "I've had the privilege to have Ron Eachus as a legislative colleague and to have him as a partner at the Public Utility Commission helping shape energy and telecommunications policy for the state," Kitzhaber said. "His leadership has helped expand telecommunications access throughout the state and has paved the way for a more efficient utility industry. All Oregonians owe him their thanks."

Hemmingway, 54, who currently serves as Salmon and Energy Policy Adviser to the governor, is being nominated to fill the position currently held by **Roger Hamilton**, whose term on the PUC has expired. Pending Hemmingway's confirmation, Hamilton, in turn, will join Gov. Kitzhaber's Natural Resources staff as a policy adviser.

Hemmingway, who has also overseen the Oregon Plan for Salmon and Watersheds, has served Gov. Kitzhaber since 1995. In addition, he was one of the original members of the Northwest Power Planning Council from 1981 to 1986, as well as Deputy Public Utility Commissioner and adviser to former Gov. Bob Straub. He holds a bachelor's degree from Stanford University and a law degree from Yale University.

The PUC is a three-member board, with one of the members serving as Chair. All members are appointed by the governor and confirmed by the Senate. Terms of service are four years and the positions are full-time.

GOVERNOR DECLARES DROUGHT EMERGENCY IN KLAMATH COUNTY

Governor John Kitzhaber issued an Executive Order today declaring a state of Drought Emergency in Klamath County. The governor had received a drought declaration request from the Klamath County Commission earlier in the month.

The declaration will begin the process of gaining federal aid for businesses and citizens in the county. In addition to the declaration, Gov. Kitzhaber has sent a letter to US Secretary of Agriculture Ann Veneman requesting her to "make a determination if losses to producers in Klamath County are sufficient to give this county a natural disaster declaration, making local producers, if they qualify, eligible for USDA assistance."

A copy of both the Executive Order and the letter to Sec. Veneman are attached.

GOVERNOR, LEGISLATORS JOIN TO PUSH ENERGY PACKAGE

Governor John Kitzhaber joined Sen. Lee Beyer (D-Springfield), Sen. Jason Atkinson (R-Jacksonville) and Rep. Bill Witt (R-Cedar Mill) today in unveiling an energy conservation and facility-siting package. The package would both direct energy conservation investments in state and public buildings and change energy facility siting processes to allow for quicker construction of new temporary and permanent power plants.

"This package of bills is the first step in charting a new energy future for Oregon," said Kitzhaber. "It will recommit our state to strong conservation practices as well as pave the way for an energy future founded on renewable resources."

The package consists of three main parts: speeding the process of adding new power supplies, investing in conservation as the cleanest, most environmentally sound way of finding more megawatts, and helping low-income Oregonians pay their rising energy bills.

"This has truly been a bipartisan effort," Kitzhaber said. "And, once again, Oregon is setting the pace for the rest of the region and the rest of the country in meeting complex public policy."

"Over the past decade energy use in the Northwest has increased 24 percent, while supply has expanded by only 3 percent. To avoid California-style shortages, we need to react quickly to increase our electricity supply, and this package will get us there," said Sen. Beyer.

"Getting more power in Oregon by this summer has been our bipartisan goal. These two bills will set Oregon apart as the Western leader in clean power supply generation and conservation," said Sen. Atkinson.

"These bills constitute a thoughtful, bipartisan approach to addressing critical issues involving Oregon energy policy. Passage of these bills will provide important direction to balance energy supply and consumer demand during the next several years, while also bringing needed assistance to low-income Oregonians," said Rep. Witt.

Siting Reform Package

This siting reform package proposes changes to the state's energy facility siting process to stimulate immediate electricity supplies and to speed longer-term investments in generation.

Highlights include:

- Exempt temporary power plants less than 100 megawatts from state siting review while requiring them to meet Oregon's standards for reducing emissions of carbon dioxide.
- Speed the development of environmentally-sound renewable power generation by exempting wind, solar and

geothermal power plants of up to 35 average megawatts from state siting review.

- Expedite the siting review process for demonstrably low-impact gas-fired power plants.

Energy Conservation Package

This energy conservation package proposes trimming the average yearly growth of electricity use in Oregon by at least half through effective conservation programs.

Highlights include:

- Direct \$10 million of lottery bonds for a conservation program that provides technical assistance and attractive financing for energy efficiency improvements in public and private buildings -- Oregon's most promising arena for achieving significant energy conservation quickly.
- Retain on schedule -- regardless of restructuring plans -- the three percent electricity "public purpose" charge to provide a stable, predictable source of funding for conservation and renewable resource investments.
- Continue the residential tax credit to provide incentives to households to buy energy-efficient appliances and install highly efficient space and water heating systems.
- Expand the business energy tax credit to provide enhanced incentives to small businesses to install energy-efficient lighting and heating/cooling systems.
- Require state agencies to conserve energy by 10 percent in existing buildings and by 20 percent in new buildings.

Low-Income Energy Assistance

Dedicate \$10 million annually for low-income electric bill payment assistance, and double federal funding for low-income energy assistance programs.

GOVERNOR DISCUSSES PENDING DROUGHT, CONSIDERS EMERGENCY DECLARATION IN KLAMATH COUNTY

Governor John Kitzhaber today discussed the pending drought conditions in Oregon and announced that he is currently considering a request of the Klamath County Board of Commissioners to declare a state of drought emergency for Klamath County.

"Winter is over, and for most of Oregon, the rains didn't come," said Kitzhaber, who was joined at the briefing by Paul Cleary, Director of Oregon's Water Resources Department (OWRD). "Throughout Oregon, we are facing the prospect of drought conditions."

Kitzhaber called on all Oregonians to be ready to conserve water in the coming weeks and months if the conditions continue. "I am asking that Oregonians pay close attention to their municipal water supplier and heed the calls for conservation when and if that becomes necessary," said Kitzhaber, noting that water availability conditions vary throughout the state. "This looming drought is also a reminder to continue to conserve energy," he added. "In Oregon, energy is water. So energy saved is water saved which can be used to help preserve salmon runs, grow crops this summer or produce electricity this fall or winter when we need it most."

Gov. Kitzhaber also has directed the State Drought Council to review and update the state drought plan which was adopted in 1993. His action follows the latest report of OWRD's Water Availability Committee. The committee, which prepares monthly technical reports on water conditions and forecasts, reports that most water basins in Oregon have substantially less water than normal, with conditions being worst in the Rogue and Klamath Basins in Southern Oregon, the Willamette Valley and the Oregon Coast.

In a separate but related act, Kitzhaber announced that he has received a letter from Klamath County Commissioners requesting assistance with drought conditions in that county. Kitzhaber said he would work with the Commissioners to quickly review the available options in both state and federal programs.

"We will be working with counties in the coming weeks to ensure that they know what services the state and federal government can help provide and how they can access them," said Kitzhaber. "Oregonians have demonstrated their capacity to work together to meet the energy shortage we are currently experiencing. I am positive that we can conquer any problems a drought may present."

GOVERNOR APPOINTS NEW MINORITY, WOMEN, EMERGING SMALL BUSINESS ADVOCATE

Governor John Kitzhaber announced today that he has appointed Lydia Muñiz to be the governor's new Advocate for Minority, Women and Emerging Small Business (MWESB). Muñiz, who is currently the Deputy Advocate, will replace the current Advocate, Al Nuñez, who is retiring. Muñiz will assume duties beginning April 1, 2001.

"I am very pleased to have someone of Lydia's expertise and experience heading this office," Kitzhaber said. "She has been a proven leader in making more business opportunities available to women and minorities -- an invaluable skill as Oregon's economy and population grows and diversifies."

Muñiz previously served in the Office of Minority Women & Emerging Small Business as Lead Certification Specialist, and since 1995 as the Project Manager of the Oregon Opportunity Register & Clearinghouse.

Muñiz holds a Certificate of Public Management from the Atkinson Graduate School of Management at Willamette University and is a founding member of the Scholarships for Oregon Latinos Board. She also currently serves on the Executive Board of the Chemeketa Community College Foundation and is involved with the Metropolitan Hispanic Chamber of Commerce, Oregon Native America Chamber of Commerce, Oregon Association of Minority Entrepreneurs, the Philippine Chamber of Commerce and numerous other professional associations.

GOVERNOR RELEASES RE-BALANCED BUDGET

Restores Funding for Higher Education, Senior Programs, Public Safety

In a re-balance of the state budget released today, Governor John Kitzhaber proposed restoring funding for higher education, senior citizen and public safety programs, as well as preventing any further cuts in budgets due to the \$100 million downturn in the state revenue forecast.

Kitzhaber has proposed a budget strategy that will pay debts during the current 1999-2001 budget, thus freeing up money for the coming 2001-2003 budget period, which begins July 1.

"I believe this is a significantly improved budget over what I was able to present in my original budget in December," said Kitzhaber. "Because of paying the federal retiree debt early, we can eliminate the impact of the recent \$100 million drop in projected state revenue, as well as restore funding to programs and services Oregonians have consistently and vocally supported."

In his rebalance proposal, the governor suggested improving funding for the following programs:

- **Nursing Care:** The re-balanced budget restores \$12.5 million to increase the number of senior citizens who can receive nursing care.
- **Oregon Project Independence:** The re-balanced budget provides \$6.8 million to restore up to 50 percent of Oregon Project Independence, which helps senior citizens stay in their homes as they age.
- **Oregon University System:** Increases funding by \$45 million, allowing the Oregon University System to offer the same level of service during the next biennium and \$7.5 million to increase funding for statewide public services.
- **Oregon State Police:** The re-balance provides \$9.7 million, which will allow the State Police to retain existing patrol and detective positions, which were previously cut, and increase patrol officers by 50 over the next two years.
- **Oregon Youth Authority:** The rebalance provides \$6.4 million to retain the Tillamook Boot Camp facility, which was previously targeted for closure under the original budget proposal.
- In addition, the proposed budget allocates an additional \$5 million to the **Emergency Fund** on the assumption that the current dry conditions will make for an expensive fire fighting season this summer.

"I believe this budget strategy is prudent and will be well supported by Oregonians," said Kitzhaber. "It allows us, even in the face of a revenue decline, to maintain services such as nursing home care and highway patrol, that everyone, regardless of political party, finds important."

A budget summary of new expenses and revenues is attached.

GOVERNOR ANNOUNCES COURT OF APPEALS APPOINTMENT

Governor Kitzhaber today announced that he has appointed David Schuman to the Oregon Court of Appeals. Schuman replaces the Honorable Paul DeMuniz, who left the Oregon Court of Appeals December 31, 2000 to join the Supreme Court.

Schuman was a Professor of Law at the University of Oregon Law School from 1987 through 1996. He then served as Deputy Attorney General under Attorney General Hardy Myers from 1997 to 2000 and is currently a Professor of Law at the University of Oregon Law School.

He received his B.A. degree from Stanford University in 1966, his Ph.D. degree in English from the University of Chicago 1974, and his J.D. degree from the University of Oregon in 1984.

Schuman has published numerous articles on State Constitutional Law and has a national reputation as a State Constitutional scholar.

Schuman has two children, Ben 21, Rebecca 24, and has been married to his wife Sharon, for 32 years.

In order to retain this position, Mr. Schuman must stand for election in November 2002.

GOVERNOR ANNOUNCES APPOINTMENTS OF MULTNOMAH COUNTY CIRCUIT COURT JUDGE

Governor Kitzhaber today announced that he has appointed Richard C. Baldwin and Michael McShane to the Multnomah County Circuit Court. Mr. Baldwin and Mr. McShane fill two vacancies created by the retirements of the Honorable William J. Keys and the Honorable Harl H. Hass.

Baldwin received his B.A. degree in philosophy from San Jose State University in 1970, and his J. D. degree from Northwestern School in 1976.

Baldwin has served as Executive Director of the Oregon Law Center for the past five years. He has been Chair of the Access to Justice for All Committee since 1998 and a Member of the Board of the Fair Housing Council of Oregon since 1993. Baldwin has just completed a term with the Board of Governors of the Oregon State Bar.

Baldwin has 2 children, Anna 22, and Andy 16, and has been married to his wife, Teresa, for 33 years.

McShane has been serving as a full time pro tem judge for the Multnomah County Circuit Court since 1998. Prior to serving as a pro tem judge, McShane worked for the Metropolitan Public Defenders Office for nine years. He received his B.A. degree in English from Gonzaga University in 1983, and his J. D. degree from Lewis & Clark College in 1988.

McShane is an active member with the Gus Solomon Chapter of American Inns of Court. He serves on the HIV Services Planning Council in Multnomah County. McShane is also an adoptive/foster parent.

In order to retain their positions, Mr. Baldwin and Mr. McShane must stand for election in November 2002.

GOVERNOR, STATE OFFICIALS TO VISIT ASIA

Trade Delegation Seeking Nonstop International Air Service

Governor John Kitzhaber will lead state and Port of Portland officials to Asia March 6-9 seeking new nonstop international air service for Portland International Airport.

The campaign to find new service is in response to Delta Air Lines' decision to end its flights from PDX to Japan April 1. Securing new service will be challenging and will take some time, as it took years to secure nonstop Delta service to Tokyo. Nonstop international air service for both passengers and cargo is important in order to allow Oregon and Southwest Washington businesses to continue competing in the international marketplace.

Before Delta established nonstop service to Asia, there were fewer than 30 Asian companies operating in this region. Today there are more than 150. Asian companies have invested more than \$5.5 billion in the Portland metropolitan area for facilities and infrastructure since Delta began service. In addition, 690 Oregon companies, employing more than 91,000, trade in Asia. Asia is Oregon's top trading partner with 56% of Oregon exports going to Asia.

"We're deeply committed to the Asian market, and our trip will reinforce how important international air service is to Oregon," Kitzhaber said. "The state, city, port and local business leaders are working diligently and creatively to secure this new service, as well as improve connections to other gateways."

The governor's trip is part of a multi-year campaign to attract new air service that directly links the Portland-Vancouver region with Asia. State and port officials estimate that new nonstop service to Asia could contribute at least \$185 million annually to the local economy.

GOVERNOR JOINS WIDE COALITION IN INTRODUCING PRESCRIPTION DRUG AFFORDABILITY ACT

Governor John Kitzhaber, flanked by representatives of business, labor, health care consumers, doctors and hospitals, joined Rep. Alan Bates, D.O. (D-Eagle Point) today in announcing the introduction of the Affordable Prescription Drug Act. The bill, similar to ones introduced by both Sen. Lee Beyer (D-Springfield) and Sen. Bev Clarno (R-Bend), will help the State control the skyrocketing cost of prescription drugs.

"The cost of prescription drugs in the Oregon Health Plan is going up 60 percent in the next two years. That's outrageous," Kitzhaber said. "No one can convince me that we are getting 60 percent better health. We have to put some reasonable, intelligent limits on prescription drug costs and prioritize what the State will pay for. There is no reason we can't be both more cost-effective and provide quality prescription drugs for Oregon Health Plan patients."

"When I write a prescription for an Oregon Health Plan patient it shouldn't cost the State more money for the same medication as it does a private insurance company," said Rep. Bates. "The Oregon Health Plan needs to start functioning like a private business. It's time for a preferred drug list just like all major insurance companies have."

The bill will create what is known as a "formulary." This formulary, which is common practice in most private health plans, establishes a priority list of which prescription drugs in a specific group of drugs the Oregon Health Plan would pay for.

Specifically, the bill would empower the existing Health Resources Commission to group drugs by their function and then create a "reference" drug for each of those groups based on best available information including peer-reviewed literature. The criteria for selecting the reference drug is that it is as effective as other drugs in the group for initial treatment and is more cost effective than other drugs in the group.

"We must be very judicious with the limited public dollars we have to provide health care," Kitzhaber said. "The creation of a State formulary will save millions of dollars and allow us to extend basic health care even further."

The Prescription Drug Affordability Act

- The Act would apply to certain specific groups of drugs identified by the Health Resources Commission (HRC), and would create a physician-driven exception procedure.
- The governor appoints the members of the HRC, and the HRC develops the formulary. The membership of the

HRC is specified as follows:

- Four physicians, including one public health physician, one health services researcher, one pharmacist, one hospital representative and two consumers.
- A reference drug will be selected by the HRC for each group of drugs based on peer reviewed and other literature and these reference drugs will make up the State's formulary. Criteria for selecting the reference drug is that it is as effective as other drugs in the group for initial treatment and is more cost effective than other drugs in the group.
- The formulary is for initial treatment, and includes all drugs in the group that the HRC determines are effective and cost the same or less than the reference drug.
- The exception process must allow the treating physician (or pharmacist with the concurrence of the treating physician) to make an exception to the formulary. When requested for one of the following reasons, the exception must be granted. An exception must be granted when a formulary drug:
 - Is contraindicated because of interaction with another drug
 - Is contraindicated because of other health conditions
 - Has been tried and failed
 - Has been tried and has unacceptable side effects
 - The patient has been stabilized on another drug and changing to the formulary drug poses an unacceptable risk or disruption
 - The patient cannot manage the method or frequency of administration of the formulary drug
- The Act imposes no copayments or cost sharing for formulary drugs or for exceptions to the formulary granted by the treating physician.
- In situations where the treating physician does not grant an exception to the formulary, but the patient still requests a non-formulary drug, cost sharing would be imposed. The amount of the copayment would be equal to the difference in cost between the reference drug and the drug requested by the patient. This method of cost sharing requires approval by the federal Health Care Financing Administration.

The formulary does not apply to inpatient hospital services or to managed care plans.

GOVERNOR NOMINATES BRUCE WARNER TO HEAD ODOT

Governor John Kitzhaber has nominated Bruce A. Warner to be the Director of the Oregon Department of Transportation. The nomination is subject to Senate confirmation.

Warner, 51, worked in ODOT previously as the Region 1 manager in the Portland Metro area from 1993 to 1997. He has extensive local government experience and has been involved in transportation issues for over 25 years. Prior to his ODOT work, he was the Director of Land Use and Transportation for Washington County and the City Engineer for Hillsboro. He is currently the Chief Operating Officer for Metro.

Kitzhaber selected Warner after consultation with the five-member Oregon Transportation Commission chaired by Steve Corey of Pendleton.

"I am very confident that Bruce Warner will hit the ground running," Kitzhaber said. "He knows the department and transportation issues facing the state," he said.

Transportation Commission Chair Steve Corey echoed the governor's confidence. "Bruce Warner is an outstanding choice, and the commission believes that Oregonians will be well served," Corey stated. "We appreciate the opportunity the governor gave us to participate in the selection of Bruce as nominee for director," he added.

Warner, who lives in Brightwood, will begin Senate confirmation hearings within the next few weeks. Warner's start date has yet to be determined.

The Department of Transportation employs approximately 4,800 people and works with a biennial budget of \$1.8 billion to manage the state's multi-modal transportation system.

SUSTAINABILITY WEB SITE LAUNCHED

The launch of a new state-sponsored web site will be a "meeting place" for government officials, community leaders, non-profit organizations, private businesses, educational institutions and citizens interested in creating a sustainable future for Oregon's community, economy, and environment.

www.OregonSolutions.net is a web site to support Governor Kitzhaber's 2000 executive order on solutions that use, develop and protect resources so Oregonians can meet their current needs while also providing for the needs of future generations.

The Oregon Solutions Web site is a clearinghouse of information and ideas promoting sustainable practices in government and private and non-profit business. The site, which had contributions from many of Oregon's business and community leaders, is designed to be a catalyst for action and a place for collaboration and information sharing. Visitors will have access to resources such as profiles of innovative leaders in Oregon as well as extensive listings of on-line organizations focusing on sustainability.

The site also features interactive on-line forums. John Haines, the Vice President of ShoreBank Pacific is the site's current interactive forum guest. Haines will respond to questions regarding banking and sustainable business until Feb. 18th. Future interactive guests include Dave Yudkin from Hotlips Pizza on sustainable food networks during the week of February 19th and Paul Oler from NewTech Electric on implementing sustainable practices in small companies during the week of February 26th.

Other highlights of the site include a Sustainability Learning Network, an on-line forum where visitors can share information and current issues related to sustainability, and an events calendar featuring information from organizations and individuals around the state to which visitors can post additional events.

The Oregon Solutions web site is just one of several state initiatives taken under the executive order to develop an understanding of what each of us can do to create the future we want for Oregon.

SPEECH CLARIFICATION

Governor John Kitzhaber will deliver a speech about the Oregon Children's Plan to the Portland City Club on Friday, February 9. This speech has been inaccurately described as a State of the State speech by various sources.

Instead of a State of the State speech this year, the governor delivered an opening address to the 2001 Legislature.

Remarks of Governor John Kitzhaber Energy Roundtable

When five of the Western Governors met in Denver six weeks ago, our goal was to take action that would get us past the immediate crisis of short supplies and high and unpredictable prices for electricity and natural gas. We adopted five proposals to deal with the current situation -- we have made good progress on the three items that called for state action, including conservation and convening this conference.

On January 9, nine western governors signed a joint Western States Short-term Energy Conservation Strategy called for at the Denver conference, and we have taken immediate steps to implement the elements of that strategy.

Governor Locke and I met with Governor Davis in Sacramento and shared our perspectives on how the electricity emergency had affected the Northwest states with insecure supplies and higher prices

It is important for all of us to recognize the extraordinary effort that Governor Davis is making to deal with the crisis in his state: to resolve the problems of the flawed deregulation scheme which he inherited; to strengthen the credit-worthiness of California's investor-owned utilities; and to urge Californians to reduce their consumption. I applaud Governor Davis for his leadership under most difficult circumstances.

While California works to solve the problems caused by its deregulation, each of our states has taken action to stimulate conservation in state government, business and homes. For the Pacific Northwest, this is more than just an effort for a few weeks, because with low rainfall this year in the Columbia Basin we may be short on electricity supplies well into next winter.

We in the western states are doing what we can to alleviate the problems caused by the immediate crisis. But the federal government must exercise its responsibility, as well. We are honored to have Secretary Abraham with us today and I would like to take this opportunity to share my thoughts on the federal side of this partnership.

I support electricity deregulation that produces market prices, but it is increasingly untenable for the federal government to continue to allow the monopolistic prices that have prevailed at the wholesale level this winter.

Many utilities in the Pacific Northwest are now raising their rates to consumers in percentages that defy comprehension. This represents a growing transfer of wealth from the citizens of the west to energy marketers -- a transfer that results in no greater assurance of future power supply.

Eight western governors -- five republicans and three democrats -- have called on the Federal Energy Regulatory Commission to implement a temporary cost plus pricing requirement. Controlling these power prices while more comprehensive solutions are developed is one very real and very practical step the federal government can take now and

I again urge them to do so.

In the long term we all know that additional generation is needed. In Oregon we have 1,300 megawatts of new generating capacity under construction and a further 1,600 megawatts under review. I am also supporting a limited exemption to Oregon's siting laws that will allow immediate, temporary additions to existing units without the usual siting permit process.

It is my expectation that this roundtable will further evaluate the obstacles to a timely increase in energy supply and develop a strategy to achieve this important element of our response.

While much of the new generation – at least in the Northwest -- will come from natural gas, it is important to make sure that this valuable source of energy is used at the highest efficiency in both generating electricity and in end uses.

As we proceed with the production side of the equation, let me state emphatically that there is no evidence that sacrificing environmental quality or despoiling pristine public lands is required to ensure our energy future. Even without opening up a single new acre of public land, it is hard to find an idle drilling rig for oil and natural gas in the West today. The higher prices in the marketplace have been sufficient to bring about this new activity.

Let me also state that, even as we work together to increase supply –the first and foremost item on this country's energy agenda must be to use energy wisely.

We in the United States consume twice as much energy per capita as Germany, a country with roughly the same living standard as ours. We use twice as much electricity per person as Western Europe and Japan -- and those countries produce a dollar of GNP with half to two-thirds of the electricity consumption that America uses. We in government at both the state and federal level must make energy efficiency our first priority – not just to use less but to get more out of the energy we do use ... including the new energy we are striving to secure.

A number of states in the West have adopted building codes that put energy saving measures in new homes and businesses. But many states are still operating with codes that require building owners to spend far more on energy than they would have spent if the buildings had been built using modern energy saving techniques. The federal government needs to be more aggressive in adopting standards for appliances and factory-built housing. It needs to be investing in more research in energy efficiency technology and assisting with the transfer of that technology into the economy. Beyond electricity, it needs to start treating SUV,s as the cars they are, instead of giving them a special lower standard for fuel efficiency. We must look at every corner of our economy for opportunities to use energy more sensibly. Here in the Northwest, the Northwest Power Planning Council, a public body, has determined that while we do need additional generation, we also have 2,400 megawatts of untapped energy efficiency investments. The competition in electricity markets makes the delivery of these investments more difficult, but we must find new means to do so.

We need to put in place rate structures that give consumers appropriate signals about the cost of energy and give them incentives to reduce use during times of greatest stress on our delivery systems.

Mr. Secretary, the current crisis offers us the best opportunity in thirty years to rethink our energy future. The old vision of our energy security – drilling and digging and burning – has served us well in the past and will be part of our transition to a new energy future. But these are the nineteenth and twentieth century solutions to our energy needs.

What we need to concentrate on is a twenty-first century vision: one that gets maximum usage from every valuable unit of energy, one that values a conserved unit of energy equal to a consumed one, a vision that promotes renewable resources over those that are being depleted, and a future that allows energy choices in distributed generation.

All these long-term strategies require a federal government that is willing to make commitments to research on new energy technologies and conservation, commitments to purchase emerging technologies, commitments to set appliance and motor vehicle efficiency standards, and commitments to provide funding and incentives for energy efficiency investments, green power, and distributed generation.

If our focus is on this new vision, Mr. Secretary, the twenty-first century West will have a vibrant economy with

sufficient energy supplies, and an environmental heritage we will be proud to pass on to our children.

STATE ENERGY CONSERVATION TO INTENSIFY

Media availability scheduled Monday, January 22

On Monday morning, January 22, staff from the Oregon Department of Administrative Services will finish cutting the wires on roughly half of the exterior lights on the Capitol Mall in Salem, begin removing non-essential building hallway lights, and take immediate and long-term steps to reduce other exterior and interior lighting in state facilities. The expectation is that these and other conservation measures will remain in effect for at least a year. The goal is to cut state government's energy consumption by at least ten percent.

News media interested in filming or photographing the wire-cutting process should meet at the Sprague Fountain near Center Street on the Mall at 10:00 a.m. Monday. A tour of energy-saving measures at a state facility will be offered immediately afterward.

"We cannot emphasize this enough," Governor Kitzhaber said. "While energy conservation always makes sense, now and for the coming months, it is absolutely critical for Oregon and the Northwest to reduce the amount of power we use. Although we have enough electricity to meet our day-to-day needs, we're currently operating with little or no margin of error -- a sudden cold snap or a power plant breakdown could easily push us into a power emergency."

Ten days ago, Governor Kitzhaber issued a conservation directive to state agencies, requiring them to take steps to reduce energy consumption at state facilities. Now, the governor has informed state agencies that additional measures will be implemented. Staff have been instructed to:

- Turn off or reduce overhead lights where fluorescent task lights will do.
- Replace incandescent task light bulbs with fluorescent bulbs.
- Reduce lighting in hallways, parking areas, and exterior spaces, consistent with essential safety requirements.
- Ensure that lights are turned off in areas that are not in use (i.e. conference rooms).

Experts say lighting accounts for 20 to 35 percent of office energy consumption. Other measures will include turning off the heat at 4 p.m. daily in state offices that close to the public at 5 p.m., and coordinating custodial services so that heat and lighting demands are minimized. In addition, state agencies with more than 100 employees will form conservation committees to assure that all feasible steps to reduce energy use are identified and implemented. The Department of Administrative Services will hold weekly meetings with agency facility coordinators to receive agency reports, share ideas, and coordinate conservation measures.

Previous state agency conservation measures ordered by the governor included removal of portable space heaters,

adjustment of heating controls and water heaters for minimum energy use, reduction of unnecessary lighting, and powering-down of office equipment (i.e. computers and/or computer monitors) when not in use for more than an hour. Staff have also been instructed to close window blinds at night to conserve heat.

**STATEMENT OF GOV. JOHN KITZHABER ON THE RESIGNATION OF OREGON
DEPARTMENT OF FISH AND WILDLIFE DIRECTOR JIM GREER**

"Jim Greer has made significant contributions to Oregon's fish and wildlife during his 25-year tenure as an employee -- and ultimately as Director -- of the Oregon Department of Fish and Wildlife.

"He has been an asset to this administration during a very challenging time for Oregon's fish and wildlife resource. He was a leader in implementing the Oregon Plan for Salmon and Watersheds while faced with difficult management challenges in the Department and significant fiscal constraints.

"Jim will be missed, but I am confident that he will continue to contribute to Oregon's fish, wildlife and to the people who value them."

KITZHABER, LOCKE, DAVIS TO DISCUSS ENERGY

Gov. John Kitzhaber and Washington Gov. Gary Locke will meet with California Gov. Gray Davis to discuss regional efforts to manage the West's energy problem on **Friday, January 12 in Sacramento, California**. The governors will discuss strategies to increase energy efficiency and reduce energy demand as well as regional pricing solutions.

The governors will hold a media availability at **1 p.m. in the Governor's Press Conference Room 1190** in the California State Capitol Building.

Media can call-in to the availability at: 1-800-432-2182; conference code: 385611. Access is on a first-come, first-served basis.

NOTE: Gov. Kitzhaber will be available to the media before leaving for California on Friday morning. Kitzhaber will be at the Salem Air Center (immediately south of Roscoe's Landing Restaurant) at the Salem Airport at 9:45 a.m.

GOVERNOR NAMES BOB MINK AS DHS INTERIM DIRECTOR

Governor John Kitzhaber announced today that he has named Bob Mink, Deputy Director of the Oregon Department of Human Services (DHS), as the department's Interim Director, effective February 1.

"Bob Mink is an effective leader who clearly communicates our vision for human services," Kitzhaber said. "He has been a champion for improving services to vulnerable Oregonians and has earned the respect of the agency and Oregonians."

Mink will succeed Gary Weeks, who will become director of human services reform for the Baltimore-based Annie E. Casey Foundation in February.

Mink, 53, joined state government in 1981. He was the department's deputy administrator for juvenile corrections before becoming deputy director in 1992. His current duties include managing a reorganization that seeks to streamline DHS and to make its services more accessible to those who need them.

He is a graduate of the Willamette University law school and of Oregon State University.

Oregon's human services agency has about 9,700 employees statewide and a \$3.75 billion annual budget.

GOVERNORS KITZHABER AND LOCKE RENEW CALL FOR ENERGY CONSERVATION

Citing a very tight energy supply situation for the winter, Govs. Gary Locke of Washington and John Kitzhaber of Oregon renewed their call today for citizens of the two states to conserve energy. At a news conference at Bonneville Dam, the two governors suggested specific actions that could be taken both by homeowners and businesses and committed both state governments to conservation plans.

The call comes a day after the Northwest Power Planning Council and the regional energy Emergency Response Team (ERT) concurred in a forecast that showed the Northwest could face an energy shortage in cold weather this winter, and face a potential shortage due to the relatively dry winter.

"We need to conserve now so we are prepared if the weather gets colder," said Gov. Kitzhaber.

"Oregonians and Washingtonians showed their community spirit last month when we were facing a shortage and cut consumption by more than 800 megawatts over a weekend. We need to make that kind of conservation standard operating procedure for the remainder of the winter," he added.

"The good habits we develop now can not only carry us through a precarious winter season, but we hope will serve as permanent changes in the way we use energy.

By avoiding waste, we can keep our energy bills more stable and help assure a sustainable level of power for both the short and long term. Things are changing, perhaps for the foreseeable future and adapting to that change now will make the transition that much smoother," Locke said.

The potential energy shortage has been caused by a number of factors, chief among them strong continued growth of both the western and northwestern economies and a slower than expected growth in electrical generating capacity. The situation has been made worse by an energy shortage in California. California normally exports power to the northwest during the winter but is unable to do so this winter.

Specifically, Govs. Locke and Kitzhaber asked homeowners to:

- 1. Lower water heating temperatures and use less hot water**
- 2. Lower space-heating temperatures**
- 3. Use less artificial lighting**

In addition to these immediate measures, the governors asked that homeowners make longer term investments in conservation such as:

1. Investing in energy efficient appliances when it's time to replace the old.
2. Switching out incandescent lighting with fluorescent lights.
3. Weatherizing their homes by contacting the utility that provides heat for a free energy audit to determine the best measures.
4. Find and seal all of the leaks in their homes such as entry/exit holes for piping, floor and ceiling cracks, door and window frames.

The governors asked business owners to:

- 1. Lower space-heating temperatures**
- 2. Use less artificial indoor lighting**
- 3. Turn off outdoor display lighting**
- 4. Turn off unused equipment**

In addition, both governors said they would implement plans to reduce state government energy consumption by taking many of the same measures, and called upon city and county governments to do the same.

For more information, access the Oregon Office of Energy's website (during off-peak hours, of course) at www.energy.state.or.us.

Governor Calls For Energy Summit

Oregon Governor John Kitzhaber today called on US Secretary of Energy Bill Richardson immediately to convene an energy summit in the West to address the region's growing energy crisis.

In a letter sent today, Kitzhaber wrote:

"If no region-wide action is taken soon, the (energy) situation threatens to escalate such that the whole West may be short of power throughout a cold and dry winter, and retail utilities may lack the financial resources to purchase needed supplies or to build the generation we all agree is necessary."

In addition, Kitzhaber wrote: "Events are overtaking us and we run the risk of becoming victims of a set of circumstances which are rapidly moving beyond our control."

Finally, Kitzhaber joined Washington Governor Gary Locke in supporting region-wide caps on the price of wholesale electricity for the short term.

The text of Kitzhaber's letter to [Secretary Richardson is attached.](#)

Northwest Governors Call For Energy Conservation During Cold Snap

Oregon Gov. John Kitzhaber and Washington Gov. Gary Locke today called upon citizens and businesses in those states to begin conserving electricity and natural gas in anticipation of a deep cold spell expected to arrive on the West Coast Monday.

"A number of factors are combining in the next few days that require us to ask people to begin conserving power immediately," said Gov. Locke. "Voluntary conservation today may mean we'll avoid disruptions when the cold weather arrives Monday."

"Energy conservation is always a good idea, and I ask Oregonians to be careful with their electricity use all winter – but especially next week – because of tight supplies and the level two warning called by the Regional Energy Emergency Response Team," Gov. Kitzhaber said. "Even just a simple act like turning off unnecessary lights makes a difference if everyone contributes."

"Bonneville Power Administration and Northwest utilities assure me that they are doing everything possible to make sure they have enough energy supplies to meet demand," Gov. Kitzhaber said.

Specifically, Gov. Kitzhaber called on Oregonians to do three things if doing so will not endanger anyone's health, safety or security:

1. Turn off all unnecessary lights and electrical equipment.
2. Turn down thermostats to 68 degrees during the day, 60 degrees at night and 55 degrees when you leave the house.
3. Reduce your use of hot water whenever possible, especially during the peak-use times of 6 a.m. to 9 a.m. and 5 p.m. to 8 p.m.

"Oregonians have proved in the past that they can come together to meet the challenge of extraordinary circumstances," said Gov. Kitzhaber. "This is one of our defining traits. I am confident we can get through this energy shortage together without undue burden. But it will take a conscious effort to conserve."

The current tight electricity supplies are a result of several factors. A robust West Coast economy has meant rapid growth in electricity use, and construction of new generation has not kept pace. Normally, the Northwest would import electricity from California during the winter, but this year fewer imports will be available. The power crisis in California last summer meant that generators there were run beyond normal use, and many of them are now down for repairs or are

unable to operate because they have reached their pollution limits.

For more information, access the Oregon Office of Energy's website (during off-peak hours, of course) at www.energy.state.or.us.

Governor Announces Investments In Rural Oregon

Governor John Kitzhaber announced today a comprehensive package of investments in rural Oregon that will be included in his 2001-2003 budget. The announcement was made at the "Alternatives in Agriculture: 101 Ways to Improve Farm Income" Agriculture Marketing Conference in Rufus, Oregon. The governor's complete 2001-2003 budget will be presented to the Legislature on Friday, December 1.

The governor described a series of investments that will aid Oregon's rural economy, stimulate infrastructure improvements and improve the quality of life in rural communities. "The prosperity of the last six years has not been shared evenly across Oregon," said Kitzhaber. "My budget proposal attempts to provide the foundation for a sustainable rural economy through targeted investments."

The governor highlighted the following investments totaling \$257.5 million:

- **Sewer and Water System Infrastructure** – Building on the Oregon Livability Initiative passed during the 1999 Legislative Session, this proposed budget contains \$196 million in lottery-backed bonds issued over a three-year period, which is expected to stimulate more than \$1 billion in state and local investments in community infrastructure.
- **The Community Incentive Fund** – \$35 million in lottery-backed bonds to provide communities throughout Oregon with incentives to rehabilitate downtown buildings, enhance sidewalks along main streets, encourage mixed-use development and take full advantage of important historical assets.
- **The Regional and Rural Investment Funds** – \$20 million in lottery funds to help counties with community development. This fund can be used to enhance local capacity as well as to provide the final piece of financing for important local projects.
- **Brand Oregon Marketing Campaign** – \$3 million in general fund dollars to establish a joint effort between the Oregon Department of Agriculture and Tourism Division of the OECD. This effort is aimed at increasing the sale of value-added Oregon natural resource products in select markets and to increase visitor expenditures from those markets. By leveraging a common marketing message between agriculture and tourism, we can significantly increase the potential for new domestic and foreign export markets for Oregon's natural resource products.
- **Columbia River Dredging Project** – \$28 million in lottery backed bonds to maintain affordable transportation of bulk commodities. At the same time, \$1.7 million of these funds will be used to improve the Lower Columbia

River Estuary Project for fish habitat.

The governor stated that these investments will be supported by \$3.5 million allocated to the Community Solutions Network. The \$3.5 million will fully fund the Community Solutions Teams, their regional coordinators and the Community Development Office. This will allow the State to take full advantage of the infrastructure investments mentioned above.

Governor Announces Comprehensive "Oregon Children's Plan"

Effort Aims to Identify and Help At-Risk Youth from Birth

Oregon Governor John Kitzhaber announced today a major new investment in identifying and assisting at-risk youth and their parents starting at birth. The new \$60 million investment in Oregon children, known as the Oregon Children's Plan, will provide for voluntary screening of all first born children for both medical and social risks and will increase services available to children and families through the State and counties.

Gov. Kitzhaber announced the plan, which will be part of his proposed 2001-2003 budget, today at Legacy Emanuel Childcare Center. He was joined by Richard Alexander, chair of the Citizens Crime Commission, which this year called for significant investments in young children. Representatives of the medical profession and public health officials also joined in endorsing the proposal.

"Sixty percent of Oregon children are born with risks that can affect their success in life," said Kitzhaber. "By identifying these risks early we can give Oregon children the opportunity to succeed in life, in school and avoid future problems such as drug addiction, school failure, delinquency or incarceration. Early investments in our children will benefit Oregon communities, families and schools."

The budget allocates \$60 million to the Oregon Children's Plan – \$28 million in new revenue and \$32 million redirected from other programs. The Oregon Children's Plan will screen all first births in Oregon for an identifiable set of risks that can negatively affect a child's life. Children who screen positively for one or more risks will be offered in-home and out-of-home services. Although participation in this program is voluntary, in an early pilot model of the Oregon Children's Plan conducted in seven counties, 93 percent of families elected to participate.

The Oregon Children's Plan will save taxpayers future expenditures by improving school performance, increasing access to health care providers and by reducing the cost of school failure, school drop out and involvement in the criminal justice system. A cost-benefit analysis of the early pilot model of the Oregon Children's Plan found that for every dollar invested, \$4.25 of costs were saved in other, more costly services.

The Oregon Children's Plan will fund programs in areas such as:

1. Prenatal/At-birth Screening

- Screen all first born Oregon children as early as possible for medical and psychosocial risks. Out of the 44,300 births each year in Oregon, 18,400 are first births. Screenings will take place during prenatal or

follow-up visits at medical clinics, hospitals or doctor's offices.

2. Coordinated Services

- Following a positive risk screen, community-based teams (such as doctors, educators and social workers) will match the child's risk with the most appropriate type of support and provider. It is estimated that 60 percent of families will have risks warranting additional support.

3. In-Home Support

- Each community will provide in-the-home services for children who have developmental disabilities or who are medically fragile, and families who have other medical or significant social risks. These services will be provided by nurses, social workers and other trained professionals.

4. Substance abuse and mental health treatment

- We will provide communities with the ability to access resources for mental health treatment for children and/or substance abuse treatment for their parents. It is estimated that all children and families participating in the Oregon Children's Plan who need this treatment will receive it.

5. Pre-school

- We want every child to have the chance to participate in an early learning setting or pre-school, such as Head Start/Oregon Prekindergarten Program. We currently enroll 50 percent of eligible children in these programs. The Oregon Children's Plan will expand the Oregon Prekindergarten Program to serve 60 percent of eligible children in the next biennium. In addition, we will work with the federal Head Start program to identify efficiencies that may lead to a greater enrollment by the end of the next biennium.

6. Community Programs

- The Oregon Children's Plan proposes to redirect the Great Start Program so that each county will have flexible funds to choose from a menu of programs -- such as relief nurseries, parent training and others -- that have been proven by research to be effective. These programs will help serve as the connection between home-based programs for the youngest, highest risk children and entry into school.

GOVERNOR'S MARKETPLACE 2000 SET FOR NOVEMBER 9

Governor John Kitzhaber announced today that the Governor's Marketplace 2000 will take place on November 9 at Chemeketa Community College in Salem from 7:30 a.m. to 5 p.m. This event is designed to help minority and women owned businesses have the information necessary to access state contracting opportunities. Registration information can be accessed at www.govmp.com

The daylong event offers a variety of morning workshops on navigating the contracting and procurement process as well as a noon discussion on Marketing Your Business. The afternoon schedule will offer an opportunity for attendees to make appointments with participating state agencies to discuss business opportunities and contracting processes with agency procurement/contracting staff.

"We recognize that there is still much work to be done in this regard and we want to be a part of removing barriers that might exist," said Governor Kitzhaber. Until all Oregonians are a part of the circle of prosperity, we will continue to work on this issue."

Key sponsors of the event include: Office of the Governor, Oregon Lottery, Employment Department, Department of Consumer & Business Services, Oregon State Police, Department of Human Services, Department of Corrections, Oregon Youth Authority, Oregon Department of Transportation, Department of Administrative Services and Oregon Housing & Community Services Department.

GOVERNOR SUBMITS NEW APPOINTMENTS

Governor John Kitzhaber has submitted the following names for appointments to state boards & commissions. Hearings will be held on November 8 and the full Senate will vote on Nov 16.

Board	First Name	Last Name	City
Advisory Council on Podiatry	Darrell	Prins	Lincoln City
Board of Directors of State Accident Insurance Fund Co	Felicia	Trader	Portland
Board of Examiners of Nursing Home Administrators	Raissa	Moore	Portland
Building Codes Structures Board	Steve	Tucker	Aumsville
Commission for Women	Suzan	Miller	Portland
Commission on Black Affairs	Suzzette	Allen	Pendleton
Commission on Black Affairs	Michelle	Neal	Portland
Commission on Black Affairs	DeBorah	Williams	Portland
Director, Oregon State Fair & Exposition Center	Katie	Cannon	Dallas
Dispute Resolution Commission	Celia	Nunez	Salem
Electrical and Elevator Board	Michael	Schweizer	Corvallis
Fair Dismissal Appeals Board	Kevin	Murphy	Salem
Fair Dismissal Appeals Board	Mary	Peterson	Hillsboro
Health Services Commission	Donalda	Dodson	Salem
Health Services Commission	Bryan	Sohl	Ashland
Lane Transit District Board	Hillary	Larsen-Wylie	Eugene
Lane Transit District Board	Virginia	Lauritsen	Springfield
Lane Transit District Board	Robert	Melnick	Eugene
Oregon Board of Accountancy	James	Gaffney	Portland

Oregon Board of Investigators	Jack	Yarbrough	Keizer
Oregon Disabilities Commission	Lee	Allison	Medford
Oregon Disabilities Commission	Gary	Boley	Sandy
Oregon Disabilities Commission	Lynn	Cameron	Turner
Oregon Disabilities Commission	Judith	Cunio	Salem
Oregon Disabilities Commission	Robert	Stevens	Bend
Oregon Government Standards and Practices Commission	John	Kopetski	Pendleton
Oregon Government Standards and Practices Commission	Di Lyn	Larsen-Hill	La Grande
Oregon International Port of Coos Bay	Jon	Barton	Coos Bay
Oregon State Board of Nursing	Mitchell	Boriskin	Eugene
Oregon State Board of Nursing	Cora	Smith	Portland
Oregon State Board of Nursing	Celina	Tobias	Medford
Oregon State Board of Nursing	Jennifer	Wagner	Eugene
Oregon State Lottery Commission	E.D. Debbs	Potts	Merlin
Oregon Transportation Commission	Gail	Achterman	Portland
Oregon Transportation Commission	Randall	Pape'	Eugene
Public Employees Benefit Board	Danny	Mielke	La Grande
Public Employees Benefit Board	Sheryl	Warren	Lake Oswego
State Board of Chiropractic Examiners	Janice	Nelson	Eugene
State Board of Psychologist Examiners	Susan	Latham	Salem
State Board of Tax Service Examiners	D. Sue	Church	Bandon
State Board of Tax Service Examiners	Joyce	Funkhouser	Fairview
State Fish and Wildlife Commission	Zane	Smith	Springfield
State Housing Council	Patricia	Moss	Bend
State Marine Board	Don	Christensen	Salem
State Parks and Recreation Commission	Robert	Green	Pacific City
State Parks and Recreation Commission	Elizabeth	McCool	Bend
Teacher Standards and Practices Commission	Aurora	Cedillo	Salem
Teacher Standards and Practices Commission	Jerry	Colonna	Redmond
Teacher Standards and Practices Commission	Susan	DeMarsh	Pendleton
Teacher Standards and Practices Commission	Jan	Miner	Gresham
Teacher Standards and Practices Commission	Larry	Mylnechuk	Lake Oswego
Teacher Standards and Practices Commission	Debra	Robinson	Portland
Trustees of the State Library	Charlotte	Herbert	Myrtle Creek
Wage and Hour Commission	Jeff	Anderson	Keizer
Workers' Compensation Management-Labor Advisory Committee	Ken	Allen	Portland

Governor Launches New Web Site

Governor John Kitzhaber today launched a new web site for the Governor's Office. The web site address will remain the same: www.governor.state.or.us. This web site replaces the previous site that was created shortly after the governor assumed office in January, 1995.

"More people are gaining access to the web and are using it as their primary means of gathering information," said Kitzhaber. "It is vital that we offer in-state and out-of-state visitors to our web site current information in a manner that is both accessible and promotes a positive image for the state."

Visitors to the Governor's Office web site can obtain information about the state budget, policy initiatives and legislative sessions, as well as press releases, speeches and photos. It also connects visitors to agencies within state government through a link to Oregon Online, the web site for the State of Oregon (www.state.or.us).

The new Governor's Office web site was created by the State of Oregon Publishing and Distribution Office. For more information about their web based services, contact, Peggy Schindler at (503) 378-3397 ext. 325 or Kathy Munsel at (503) 378-3397 ext. 338.

CHANGING OF THE GUARD IN NATURAL RESOURCES

Governor Kitzhaber announced today the resignation of his Assistant for Natural Resources, Paula Burgess, and named Louise Solliday to fill the position beginning November 1, 2000.

Ms. Burgess has served in the natural resource adviser's role since the beginning of the Kitzhaber Administration nearly six years ago. This position directs the Governor's Natural Resource Office, and coordinates among the dozen natural resource agencies. Burgess presided over the development of the Oregon Plan for Salmon and Watersheds, the Governor's Eastside Forest Health strategy, and day-to-day issue management among the State's natural resource agencies.

"Paula has done a great job for Oregon," Kitzhaber said. "This is a very demanding job, and she has done it superbly for six years. As much as I will miss working with her, I am glad she is staying in Oregon and will remain involved in natural resource issues." Burgess has accepted a position as special assistant to the Director for the Bureau of Land Management in Portland.

Ms. Solliday has served as Kitzhaber's Watershed Adviser for the last four years, working on a variety of natural resources issues, including legislative and budget issues. Most recently she led the Oregon Plan interagency teams and represented the State at the Lower Columbia River Estuary Program and For the Sake of the Salmon.

"Louise has the knowledge and ability to step into this position, given her involvement in many of the State's natural resource issues over the past four years as my Watershed Adviser," Kitzhaber said. "I anticipate a smooth transition."

GOVERNOR APPLAUDS DELTA AIRLINES PORTLAND-NEW YORK FLIGHT

Governor John Kitzhaber today welcomed news that Delta Airlines would maintain offering a nonstop flight from Portland to New York's JFK International Airport.

"I want to commend Delta for keeping this important flight to New York," Kitzhaber said. "Delta clearly understands the important role they play in Oregon's economy and I am very pleased that they are keeping this flight," the governor added.

"I have had very productive conversations with Delta CEO Leo Mullin about Delta's operation in Oregon. We have built a strong relationship with Delta and hope to extend it into the future," Kitzhaber said.

For more information on Delta's service to New York, contact Delta Corporate Communications at (404) 715-2554, or refer to its web site: **www.delta-air.com**

GOVERNOR RESPONDS TO DELTA AIRLINES ANNOUNCEMENT

Governor John Kitzhaber said today that he would continue to work hard to maintain Oregon's strong economic and cultural connections to Asia despite the announcement by Delta Airlines of its decision to end direct service from Portland to Tokyo and Nagoya, Japan.

"Oregon's connections with Asia predate this direct service and our relationship with Asia will survive its cancellation," said Kitzhaber. "I will work to continue the state's strong ties to Japan, South Korea, Taiwan and the People's Republic of China."

As an example, Kitzhaber pointed to Fukuoka, a Japanese city and prefecture that enjoyed non-stop air service to Portland until October, 1999. "In spite of the loss of the direct flight, our business relationship continues to grow and mature," the governor said.

Kitzhaber and state business leaders completed a trade mission to Japan in May, including a visit to the Prefecture of Fukuoka to meet with the Prefecture's Governor Aso. Governor Aso is scheduled to visit Oregon in October to continue building the business relationship with the state.

"I wish Delta were making a different announcement today," said Kitzhaber, "but I understand and respect the business decision they had to make and the competitive pressures that forced them to make it." Kitzhaber noted that recent bilateral trade agreements have made it possible for Delta and other carriers to fly to Asia directly from inland cities.

"This state has had and will continue to have a good relationship with Delta Airlines," said Kitzhaber. "I have been especially appreciative of the frankness of their Chief Executive Officer Leo Mullin and his willingness to work in the future to develop other Portland-based routes." Kitzhaber also said the state will continue to pursue other airlines – both passenger and cargo – to serve Asia from Oregon.

GOVERNOR'S STATEMENT ON RESIGNATION OF DEQ DIRECTOR LANGDON MARSH

Governor John Kitzhaber today issued the following statement on the decision of Department of Environmental Quality (DEQ) Director Langdon Marsh's decision to resign:

"Lang is a thoughtful and knowledgeable professional and I'll miss him very much. He has served Oregon well.

There have been several significant accomplishments under Lang's administration, in particular:

- The development of water quality plans for the recovery of polluted and impaired streams and rivers as part of the Oregon Plan;
- Green permits, which encourage industries to go beyond compliance with environmental standards to actively improve the environment, and;
- A variety of alternative compliance programs designed to help small businesses and cities address their share of air, water and toxics pollution.

DEQ is well positioned to make further progress, and because of Lang's leadership is poised for a good legislative session."

Kitzhaber indicated that he would work with Environmental Quality Commission (EQC) Chair Melinda Eden and the other members of the EQC to facilitate the hiring of a new Director, who will be in place prior to the next legislative session.

PUBLIC'S HELP NEEDED TO PREVENT FIRES IN OREGON

Extreme fire danger, declining fire fighting resources, the approach of hunting season and Labor Day weekend have statewide fire officials concerned about the potential for large fires in Oregon.

Overall, residents and forest users have been careful, but the Oregon Department of Forestry (ODF) has already recorded about 430 human-caused fires this year, compared with 416 last year at this time. Lightning has accounted for 119 fire starts this fire season.

"I appreciate that the people of Oregon have been vigilant when it comes to fire prevention. But, facing potentially one of the worst fire seasons in 50 years, everyone needs to exercise extreme caution in the forest and around their homes," Gov. John Kitzhaber said.

If conditions get worse, ODF's last resort is the "permit closure." That means all lands protected by ODF (private, state and western Oregon BLM lands) would be closed to public entry, except for landowners and residents. Closures are implemented to protect life, property and natural resources.

"We don't want closures to happen, so we're asking for the public's help in preventing human-caused fires. However, other factors we have to consider are the extremely dry conditions and the lack of fire fighting resources because of the fires in the rest of the West," ODF Deputy State Forester Roy Woo said. "Some of Oregon's private contract crews and engines are on fires in Idaho and Montana. Many of the firefighters will be returning to college soon. Even with all our efforts, conditions may get worse."

Underscoring the seriousness of the fire season, Gov. Kitzhaber recently signed a state of emergency declaration, calling up 400 members of the National Guard to train as firefighters. This is the first time the Oregon National Guard has been used in this capacity since 1996.

ODF districts, along with agencies such as the U.S. Forest Service and BLM, are already regulating activities including campfires, travel, smoking and chainsaw use in the forest because of extreme fire danger. Information about local restrictions is available from the appropriate agency. Some national forests post restrictions on their web sites. Forest users are asked to be careful with all forms of ignition, including vehicle catalytic converters.

Forecasters have described the potential for more large fires in Oregon to be above normal through at least Sept. 7. One drought index shows extreme to severe drought conditions in many parts of Oregon. Long-range forecasts are calling for continued above-normal temperatures.

For more information about local restrictions, hunters and recreationists should contact the closest Oregon Department of Forestry district office.

GOVERNOR CALLS UP NATIONAL GUARD TO TRAIN FOR WILDFIRE DUTY

Governor John Kitzhaber today declared a state of emergency due to the imminent threat of wildfires. The declaration, Executive Order No. 00-20, allows the governor to call up Oregon National Guard troops to train for duty as forest and rangeland firefighters.

“This has all the makings of a severe fire season in Oregon,” Kitzhaber said. “Combined with the extreme conditions around the West, it’s vital we be ready with additional firefighters should the need arise,” he said.

The Oregon National Guard said they are planning on calling up as many as 400 members of the guard over the next two weeks. The troops would be trained in a five-day course by Department of Forestry officials at Camp Rilea on the Oregon Coast.

This is the first time the National Guard will have been called up to fight fires since 1996 when Gov. Kitzhaber issued a similar declaration. “Speaking for all Oregonians, I am grateful that the men and women of the Oregon National Guard have given their time,” said Kitzhaber. “In the weeks ahead, we will rely on their help to protect the public safety from what could be a very bad fire season.”

The number of troops called for active duty and actually deployed will depend upon the severity of fires that develop in Oregon in the coming month. The cost of training the troops will be borne by the US Forest Service.

GOVERNOR COMMENTS ON NMFS BIOLOGIC OPINION

Governor John Kitzhaber today provided preliminary comments on the National Marine Fisheries Service (NMFS) draft biological opinion and recovery strategy for the Columbia River hydro system. "I commend NMFS for finally getting this long-awaited opinion into the open where it can be examined and debated," Kitzhaber said. "Furthermore, I recognize that this is a draft document -- a starting point, not an end point -- and that it will undergo a period of public comment and modification before it emerges in its final form."

While Kitzhaber noted that he had not yet had time to read the entire 400-page document in detail, a cursory review led him to conclude that some of the necessary elements of salmon recovery appeared to be in place.

Kitzhaber said he supports the draft recommendation for retooling Columbia River hatcheries so they can assist with the recovery and harvest opportunities, while not competing with the effort to rebuild wild stocks. He also said he supports the recommendation for a strong system of performance evaluation for the plan.

Kitzhaber commended the Clinton Administration for its overall approach to recovery, but also said that the draft biologic opinion fell short in several important areas. "The recommendations for hatcheries are strong and significant," the governor said, "but much more work is required in the areas of harvest, habitat and the hydropower system if this biologic opinion is to emerge as a credible road map to recovery."

With regards to harvest, Kitzhaber would like to see reductions in the Fall Chinook fishery and a bolder move toward selective fisheries. With regard to hydropower operations, Kitzhaber noted that the program appears to rely heavily on technological fixes and fish barging rather than on improving in-river conditions.

"If the Administration does not intend to consider dam breaching at this time, it must demonstrate a commitment to other meaningful modifications to the hydropower system that will improve in-river conditions," he said.

Finally, the governor said the proposed habitat improvements will require much more specificity and that the entire plan needs a funding strategy to be successful. "Without adequate funding, we will never restore the health of the Columbia River Basin ecosystem," Kitzhaber said. "Any credible recovery plan must have a detailed budget through which the Administration and Congress can demonstrate their commitment to the effort."

Kitzhaber and Idaho Gov. Dirk Kempthorne unveiled a four Northwest governor's agreement on measures to restore Columbia River salmon stocks on Tuesday, July 25. There is substantial overlap between the two documents.

Kitzhaber is committed to a more detailed review of the federal biologic opinion and basin recovery strategy over the

next two months. “I see an opportunity here to use the governors’ agreement and the federal plan to create a recovery strategy for the region that is greater than the sum of these parts,” Kitzhaber said.

**GOVERNORS AGREE ON KEY ELEMENTS OF
REGIONAL STRATEGY TO FISH RECOVERY**

Consistent federal and regional plans should be developed, in consultation with Indian tribes, by January 2001, the Governors say

Idaho Governor Dirk Kempthorne, Montana Governor Marc Racicot, Oregon Governor John Kitzhaber and Washington Governor Gary Locke today announced a historic agreement to begin to move the region toward recovery of salmon and steelhead in the Columbia River Basin.

“We believe that agreement on a regional approach, consisting of specific federal, state and regional plans that protect both our salmon and our communities, should be reached and accepted by federal and state officials in consultation with tribal leaders no later than January, 2001,” the governors wrote in a cover letter to the strategy document. “Reaching such agreement, as well as implementing the other recommendations in this document, will enable all of us, together, to begin to fulfill our respective roles and responsibilities and meet the challenge that lies ahead.”

The governors’ announcement coincides with the federal government’s release this week of its paper on recovery of salmon and steelhead in the Columbia River Basin listed under the Endangered Species Act (ESA) and a draft biological opinion on recovery of ESA-listed Snake River salmon. The governors said their recommendations constitute “useful advice and guidance” to federal and state decision-makers, not an alternative plan.

Among the governors’ specific recommendations:

Fish recovery goal: “The goal we suggest is protection and restoration of salmonids and other aquatic species to sustainable and harvestable levels meeting the requirements of the Endangered Species Act, the Clean Water Act, the Northwest Power Act and tribal rights under treaties and executive orders while taking into account the need to preserve a sound economy in the Pacific Northwest,” the governors wrote.

Intergovernmental coordination: Frustrated by the lack of effective cooperation between state and federal fish and

wildlife agencies on fish recovery, the governors recommend that the President designate one official in the region to oversee federal agency fish recovery efforts in the Columbia Basin and serve as the regular point of contact with state, local and tribal governments.

Habitat improvements: The governors endorse the concept of creating salmon sanctuaries to protect key fish habitats in accordance with state laws and acquiring water and habitat for fish from willing sellers.

Columbia River estuary: The governors believe that the federal government must immediately engage the states, tribes and local governments in implementing the National Estuary Program plan for the lower Columbia River estuary, including creation of salmon sanctuaries.

Predation by birds and mammals: The governors recommend that the U.S. Army Corps of Engineers, National Marine Fisheries Service and the U.S. Fish and Wildlife Service develop a long-term management plan to address predation by fish-eating birds and marine mammals. The attempt to relocate Caspian Terns within the Columbia River estuary was a good start, but not sufficient by itself, the governors said. The governors also support actions to improve the coordination among federal laws that protect fish-eating birds and marine mammals while also protecting the fish those birds and mammals eat.

Local involvement: The governors strongly endorse the concept of local planning for recovery of aquatic species. "This concept has the advantage of bringing together local and tribal governments with local citizens to develop and implement local recovery plans," the governors wrote.

Dam removal and modification: Recognizing that the federal government will not at this time recommend breaching the four federal dams on the lower Snake River, the governors said fish recovery efforts "must focus not only on currently accessible habitat, but also look for opportunities to increase the current level of habitat access with all dams remaining in place." The governors also recognize the importance of improving fish passage survival at dams, and in their recommendations commit each state to provide an annual list of priority fish passage projects to the Northwest Power Planning Council for proposed funding: "The list could include such things as screening diversions and replacing culverts, as well as removal of, or passage at, tributary dams, as is being done at Condit, Wapatox and Marmot dams," they wrote.

The governors also support further fish passage improvements at the mainstem Snake and Columbia dams: "We support further modifications to the configuration and operation of the hydrosystem where appropriate and necessary to benefit fish and so long as the modifications do not jeopardize the region's reliable electricity supply."

Fish harvest: The governors support continuing current levels of tribal ceremonial and subsistence harvest. For commercial and non-treaty sport fisheries, the governors recommend that harvest rates, gear and timing in the mainstem fisheries be consistent with ensuring survival of the species and providing for their eventual recovery when combined with recovery actions in other sectors, such as habitat improvements, hatchery reforms and passage improvements at dams.

Hatchery reforms: The governors support redirecting artificial production of fish in the Columbia Basin to continue producing fish for harvest while also using hatcheries to rebuild naturally spawning populations of salmon and steelhead. Specifically, the governors said they support the recommendations in the Northwest Power Planning Council's 1999 Artificial Production Review report to Congress.

Funding: The governors recognize that fish and wildlife recovery is expensive and that it is likely to become more expensive in the future. BPA ratepayers will have to pay more to address the impact of hydropower dams on fish and wildlife, the governors said, and "we endorse BPA's stated commitment to increase the amount of . . . dollars to support salmon recovery." In addition, the governors called upon Congress to similarly increase federal appropriations, in recognition of the fact that fish and wildlife of the Columbia Basin are national resources. The governors also said the region needs a strong program to ensure a far better accounting of spending on fish and wildlife recovery and called for an annual accountability report to document progress in this regard.

The governors presented their recommendations to the regional directors of the National Marine Fisheries Service, U.S.

Fish and Wildlife Service, U.S. Forest Service, Bureau of Reclamation and Bureau of Land Management, as well as to the administrator of the Bonneville Power Administration and the Chairman of the Northwest Power Planning Council. **KITZHABER, IDAHO GOV. KEMPTHORNE, TO
UNVEIL FOUR STATE SALMON STRATEGY**

Gov. John Kitzhaber and Idaho Gov. Dirk Kempthorne will announce a joint agreement between the four Northwest governors on a regional salmon recovery strategy on Tuesday, July 25.

Kitzhaber and Kempthorne will hold news conferences first in the Governor's Office in Boise, ID at 10:30 a.m. (Mountain Time), and then again in the **Governor's Ceremonial Office in Salem on Tuesday, July 25 at 1 p.m.** (Pacific Time) to make the announcement.

Washington Gov. Gary Locke is unable to attend the press conferences due to prior commitments, however, Larry Cassidy, Washington representative and current chairman of the Northwest Power Planning Council, will attend both press conferences. In addition, forest fires are requiring Gov. Marc Racicot to remain in Montana, but he will participate via speakerphone at the Boise news conference.

GOVERNOR SIGNS AGREEMENT

TO INCREASE PAYMENTS FOR OREGON'S CONSERVATION RESERVE ENHANCEMENT PROGRAM

Governor John Kitzhaber and Larry Mitchell, Deputy Administrator for the U.S. Farm Service Agency of the U.S. Department of Agriculture (USDA) signed an agreement that increases conservation payments under the Conservation Reserve Enhancement Program (CREP).

The amended agreement will encourage greater participation in the program by increasing landowner payments, both at sign-up and over the term of the contract. The amendment also adds some marginal pasture lands, and agricultural land adjacent to streams containing listed fish species other than salmonids to program eligibility.

During the first 18 months of availability of CREP in Oregon, a statewide steering committee identified a number of federal policy barriers that discouraged or prevented Oregon landowners from participation and reported these limitations to Gov. Kitzhaber.

In January 2000, Gov. Kitzhaber wrote USDA Secretary Dan Glickman, outlining the need to amend the original agreement in order to enhance landowner participation. The amendment addresses only a few of the reasons for non-participation outlined by the governor.

"This amendment moves us in the right direction," Kitzhaber said. "I am committed to working with Secretary Glickman to remove the remaining impediments to Oregonians' full participation in this program. The work that is going on in the field is excellent."

The Oregon CREP continues to hold promise for being an important tool for landowners to meet the requirements of the Clean Water Act and the Endangered Species Act, at a relatively small cost. This incentive-based approach is central to the Oregon Plan for Salmon and Watersheds. The program focuses on conservation practices such as riparian buffer, filter strip plantings and wetland restoration. Oregon has committed \$3 million to the first two years of the program, which, if successful, would help cooperative salmon recovery and watershed restoration efforts statewide.

GOVERNOR SUPPORTS STEENS AGREEMENT

In a news conference today with members of the Oregon Congressional Delegation and US Secretary of the Interior Bruce Babbitt, Governor John Kitzhaber announced his support for creation of a new Steens Mountain Cooperative Management and Protection Area that will include a 143,000 acre wilderness.

“This agreement will secure the future for a Steens Mountain free of development, so that our grandchildren can experience the same breathtaking landscape that we do today,” said Kitzhaber. “Just as importantly, it spells out clear guidelines and rules for grazing that will allow farming and ranching to continue in this special part of Oregon.”

The agreement, arrived at after 7 months of negotiations, will create a 143,000 acre wilderness that extends south to and includes Alvord Peak. Of this, 100,648 will be closed to grazing. The wilderness area lies inside a 500,000 acre Steens Mountain Cooperative Management and Protection Area. Further, the agreement closes 1.15 million acres to mining and geothermal development.

From here, the agreement will be drafted into legislation that will be introduced in the U.S. House of Representatives. “I will work to ensure that the agreements we have reached are represented in the legislation that Congress considers,” Kitzhaber said. “I fully expect that in the process of hearings on this legislation, we will be able to address outstanding concerns such as land exchanges or other issues,” Kitzhaber added.

A copy of “Elements for a Steens Mountain Protection Bill”, which details the agreement, is attached. It is also available on the Governor’s Web Page under the “press releases” menu: www.governor.state.or.us

FIRST LADY SHARON KITZHABER TO ATTEND CELEBRATION FOR STARS LATINO OUTREACH PROGRAM

Oregon First Lady Sharon Kitzhaber will attend a celebration on **Tuesday, July 11** for teens who participated in Estrellas, the first community-based STARS (Students Today Aren't Ready For Sex) program for Latino teens. The event will be held at **5:30 p.m.** at St. Luke's Parish-Rubis Hall, 417 Harrison Street in **Woodburn**. Families and community members are invited to join the 15 Estrellas graduates.

STARS is an abstinence-based teen pregnancy prevention program aimed at sixth and seventh graders. Estrellas, the new Latino outreach program is Spanish for "stars". Students attended classes for five weeks at Nuevo Amanecer, a housing development in Woodburn that is home to many Latino families. Like STARS, Estrellas trains teen mentors to deliver the message to their younger peers that "it's best for teens not to have sex."

"STARS is working to reduce teenage pregnancies in Oregon communities," Sharon Kitzhaber said. "Estrellas brings STARS' proven approach to teenage pregnancy prevention to the Latino community, which currently experiences the highest teenage pregnancy rate in the state."

GOVERNOR CONCURS WITH SUPERFUND LISTING

Oregon Governor John Kitzhaber gave his official concurrence Friday to an Environmental Protection Agency (EPA) proposal that a 6-mile segment of the lower Willamette River be placed on the National Priorities List for environmental cleanup. In his July 7 letter to EPA Administrator Carol Browner, Kitzhaber made clear that placement of the Portland Harbor portion of the river on the so-called Superfund list was not his first choice, but now appeared necessary to deal effectively with a century of industrial contamination deposited in river sediments.

Officials at EPA's Region 10 office in Seattle will now submit the listing proposal package for printing in the Federal Register in late July. A 60-day public comment period on the proposal begins upon publication.

In the letter, the governor noted that Oregon worked for more than two years to develop a state cleanup approach that would avoid a Superfund listing and justify a deferral to a state-led process. While the cleanup plan was strong, this effort failed when federal natural resource agencies and tribal interests were unable to reach agreement with public and private entities doing business in the harbor on handling financial liability for past natural resource damages caused by contamination.

"I had consistently maintained that it would be appropriate for EPA to list the Portland Harbor if natural resource and Tribal trust concerns were not adequately addressed," Kitzhaber wrote to Browner.

Even while agreeing to move forward with the listing proposal, Kitzhaber made clear that Oregon must still play a significant role in the harbor cleanup effort, "I believe the cleanup of Portland harbor will be more effective with a coordinated approach that utilizes the local knowledge and experience of Oregon and takes into account other important natural resource protection work that is already occurring," he wrote.

The governor, representatives of his office, and the Oregon Department of Environmental Quality have been in discussion with EPA about joint cleanup options since last April when EPA Region 10 Administrator Chuck Clarke first

sought Gov. Kitzhaber's concurrence with the listing proposal. "It is my understanding from conversations with Chuck Clarke that the Environmental Protection Agency will work jointly with the State on an expeditious cleanup and provide resources to assure our environmental goals for cleaning up the Harbor are met," Kitzhaber wrote.

To this end, the EPA listing proposal will also contain a "Statement of Principles" that describes both State and EPA roles and responsibilities in carrying out a complex environmental cleanup. These principles also support working with other interested parties, according to Kitzhaber. "Clearly, a successful and effective cleanup will also require involvement by, and understanding of the needs and issues of, the Tribes, the local community, the business community and local governments," Kitzhaber wrote.

This listing proposal is the latest step in a process that began in 1997 when DEQ and EPA conducted a joint study of river sediments within the Portland Harbor area. The study found concentrations of toxic materials including DDT and metals. Concentrations of some toxic materials were high enough to warrant classification as a Superfund site.

Full text of the governor's letter to EPA and the Guiding Principles for state/federal cooperation are available online at:

GOVERNOR ISSUES STATEMENT ON BRANDY STROEDER/OREGON HEALTH PLAN ISSUE

“This is a tragic situation for a young woman and her family. It is a tragedy brought about by the reality of limited public resources. When Oregon adopted the Oregon Health Plan eleven years ago, we made a conscious decision to allocate our limited resources based on an effort to provide basic health care services to as many of our citizens as possible, rather than on highly publicized individual cases.

This decision allowed us to reduce the number of children in Oregon without health insurance coverage from 21 percent to 7 percent. Without that decision, some of these children would have died -- from low birth weight, from untreated infections and from other preventable causes. The only difference is that these children would have died anonymously.

There are still 68,000 Oregon children with no health insurance coverage. Given the reality of limited public resources, the question before us is this: where should we spend our next health care dollar? Is it better to add coverage for expensive experimental procedures to those who are already on Medicaid? Or should we first extend coverage for basic care to those who currently have no coverage at all? This is a very difficult choice to make.

The Oregon Health Plan is based on a policy that seeks to provide all citizens with access to basic health care as a first priority. Notwithstanding this very real human tragedy, I still believe that this policy makes sense.”

GOVERNOR TO LEAD JAPAN TRADE MISSION

Governor John Kitzhaber will lead a trade mission to Japan beginning May 20 and returning May 29. The governor hopes to reconnect with Japanese businesses that have companies here in Oregon and reinforce the important relationship that exists between Oregon and Japan.

The governor will spend May 22-24 in Tokyo. During that time he will attend a dinner with Oregon Goodwill Ambassadors, including the chairman of Sony, the chairman of Fuji TV and the President of Waseda University. On May 23 he will attend a reception at Ambassador Foley's residence in Japan for business, trade and cultural contacts.

The governor will meet with a number of businesses, including Mitsubishi, Komatsu Silicon, Asahi Glass, Fujitsu, and Nippon Cargo Air. Kitzhaber will also travel to Kyushu where he will attend a tourism event and join a business forum with Kyushu businesses.

Kitzhaber will spend May 29 in Kyoto, and return to Oregon on May 30.

**GOVERNOR NOMINATES KAREN BRAZEAU
AS OREGON YOUTH AUTHORITY DIRECTOR**

Governor John Kitzhaber announced today the nomination of Karen Brazeau, Deputy Director of the Oregon Youth Authority (OYA), to fill the position of Director of that Agency. Former OYA Director Rick Hill announced his retirement March 2. As of June 1, Brazeau will assume the position of Acting Director with the OYA. Her name will be submitted to the Senate for hearings on June 14 and confirmation on June 22.

The OYA Director oversees the management of youth correction facilities, parole and probation services, community out-of-home care, and other OYA programs. The OYA is a relatively new state agency (established January 1, 1996) with a legislatively mandated mission to maintain public safety as well as provide opportunities for treatment, reformation and education of young offenders ages 12-25 who have been committed by either juvenile or adult courts to the state.

Brazeau began her career in state government in 1983. Prior to assuming the position of OYA Deputy Director in 1996, she worked at the state, federal and county level coordinating and developing programs for students with disabilities. As OYA Deputy Director, Brazeau shared with the Director all aspects of establishing and managing the Youth Authority. In addition, she developed a new information system and managed the construction of five secure facilities across the state.

“Karen brings experience and passion to this position,” said Kitzhaber. “Her desire to protect the public while creating opportunities for troubled youth to reform will serve this agency well.”

GOVERNOR NOMINATES PAUL CLEARY TO HEAD WATER RESOURCES DEPARTMENT

Governor John Kitzhaber announced today the nomination of Paul Cleary, Director of the Oregon Division of State Lands (DSL), to fill the position of Director of the Oregon Water Resources Department (WRD). Cleary will replace Martha Pagel, who will leave state service at the end of June to join the Portland-based law firm of Schwabe Williamson & Wyatt PC.

His name will be submitted to the Senate for hearings on June 14 and confirmation on June 22.

Cleary began his tenure as Director of DSL in 1995. Prior to that, Cleary served as the Deputy Director of the Wyoming State Land and Farm Loan Office. He also served as a Natural Resource Analyst to the governor of Wyoming from 1978 to 1987.

“Paul brings experience and dedication to this position,” said Kitzhaber. “His desire to protect public waters and provide leadership to long-term water management in Oregon will serve this agency well.”

GOVERNOR RECEIVES WORKERS' COMPENSATION SYSTEM RECOMMENDATIONS

Governor John Kitzhaber today received recommendations on steps that should be taken to improve the Oregon workers' compensation system. These take the form of a package of agreements reached by six key Oregon labor and management leaders with expertise in the system, and are the product of informal discussions begun at the governor's invitation in January. The attached letter outlines the package.

"Oregon's workers' compensation system is a national model of success by many measures," Kitzhaber said. "But to keep it that way we need to maintain the spirit of reform by monitoring the system and taking appropriate steps to ensure that both workers and employers are being treated fairly. I asked this group to meet informally because the heart of the workers' compensation system is a consensus between the labor and management constituencies they represent. The group's agreement gives us the means to keep that broader consensus intact as we move toward public action."

The governor noted that the group's agreement will now be crafted into a bill for consideration during the 2001 Legislative Session.

"We've got a strong workers' compensation system in Oregon," said Senate Majority Leader Gene Derfler. "That's good for workers and good for business in this state. The fact that these six labor and management leaders were able to reach agreement on what it will take to make the system even better tells me that we've still got the will and the common sense to keep our reforms on track next session."

The State's formal Management-Labor Advisory Committee will reconvene this fall to advise the governor and the Legislature on issues related to workers' compensation, including the details of implementing the attached agreement, as provided by statute. The governor disbanded the committee after the 1999 Legislative Session, but expects to name new members later this month, subject to Senate confirmation.

[Workers' Compensation System Agreements](#)
[Workers' Compensation Letter](#)

[Return to Press Releases](#)

[Return to Governor's Office](#)

Workers' Compensation System Agreements

May 9, 2000

The following agreements are based on the group's efforts to bring change to the workers' compensation system to:

- create fairer compensability standards and benefits for injured workers,
- provide for faster decisions that remove uncertainty about payment for medical treatment,
- provide more certainty to employers about future liability exposure, and
- create a less adversarial system for all.

Compensability Standards:

The group makes the following recommendations to remove problems with existing compensability standards so that workers who are injured on the job are allowed access to workers' compensation benefits.

1) Pre-existing Conditions

- Eliminate predisposition language.
- Change the burden of proof in an incident from worker to employer.
- Limit use of pre-existing conditions in an incident to only those previously diagnosed and/or treated, except when the pre-existing condition is arthritis. Legislative Counsel and a physician consultant will produce a sound definition of arthritis.

2) New Medical Condition Claims

Continue to accept new conditions that are related to or arise from the injury, continue to allow claim to be raised at any time and reopen the claim for processing of benefits subject to the following parameters:

- Worker must formally initiate new medical condition claim, as currently in statute.
- Within 5 years from the first notice of closure of the claim (within aggravation period), payment of TTD and PPD as appropriate.
- After 5 years from the first notice of closure of the claim (beyond aggravation period), claim subject to Board's Own Motion authority.

Benefits

The group recommends the following changes to more adequately compensate injured workers.

1) Reopening the Claim

Board's Own Motion authority is modified to include when a worker has to miss work as a result of treatment of a compensable condition with the following parameters:

- The condition is the reason the worker is not working.
- The treatment of the condition enables return to work.
- The treatment may be in lieu of hospitalization. Permanent disability may be awarded for new medical condition claims which arise after aggravation rights expire (after 5 years from first

notice of closure), under Board's Own Motion authority.

2) Temporary Total Disability (TTD) Compensation

- Move maximum TTD rate to 133% of Oregon average weekly wage.
- Provide TTD for workers with multiple jobs such that covered earnings from all subject employers are considered in determining time loss benefits or ensure the worker is entitled to the time loss benefits they are eligible for under current law, whichever is higher.
- TTD will then be based on covered earnings from all subject employers divided by the workers actual hours worked to produce an average hourly wage. This average hourly wage will be multiplied by actual hours worked per week not to exceed 40 hours a week to determine an average weekly wage. TTD rate will be then be based on existing TTD computation rules.
- Employer at injury responsible for time loss benefits equal to that portion related to the wage they pay and the remaining portion is paid for from the Worker Benefit Fund.

3) Remove the statutory sunset for permanent partial disability rates.

Faster Decisions

The group recommends the following changes in order to ensure workers get quicker access to medical treatment and physicians get paid for providing that treatment.

1) The period to accept or deny a claim is reduced from 90 days to 60 days.

2) Interim Medical Benefits

Assure payment for certain medical services rendered for non-MCO enrolled workers before acceptance or denial of a claim. These services are limited to:

- Diagnostic services.
- Medication necessary for pain relief.
- Medical services that are necessary to prevent further disability from occurring because of delaying these services to the worker.

If the ultimate disposition of the claim is that the claim is denied (not compensable), the insurer or self-insured employer shall be able to:

- recover payment through subrogation with a group health or private health carrier; and
- limit recovery of expenses for medical services from the worker to what is available now through garnishment of wages by the insurer or self insured employer.

Stability and Predictability

In addition to the changes noted above to medical condition claims, the group recommends the following changes in order to provide more certainty to employers regarding future liability exposure.

1) Employer Liability Act

Contributory negligence standard shall apply in all cases.

2) Remove the statutory sunset for the exclusive remedy provision.

Less Adversarial System

In order to promote a fairer, less adversarial system for all parties, the group recommends the following procedural changes.

1) Independent Medical Examinations

Independent Medical Examinations (IME) will be conducted in such a way to increase the opportunity for an impartial examination of the worker.

- The Department will maintain and manage a list of certified providers of IMEs, that is similar to the medical arbiter list.
- The Department will promulgate rules that outline the criteria, including medical qualifications, for inclusion, and remaining, on the IME provider list.
- When the carrier or self-insured employer decides to have an IME performed, they select 3 choices from the list maintained by the Department. Each choice may be an individual physician or a physician panel.
- The worker is provided the three choices by the insurer and selects the IME provider from the list of three.
- The carrier or self-insured employer sets the IME appointment.

2) Return to Work in Light Duty

The purpose of light duty is to expedite the worker's return to work for the benefit of all parties.

- The employee may refuse an offer of modified employment and still receive time loss benefits if the employment is not with the employer at injury or at a work site of the employer at injury.
- The employee may refuse an offer of modified employment and still receive time loss benefits if the employment requires travel that is more than 50 miles (one way) from where the worker was working at the time of injury; with the exception that the employee may not refuse an offer when the work site is within 50 miles of the worker's residence.
- The travel required to the work site is subject to the physician's agreement that the worker has the physical capacity to make the travel.
- Changes of shift or notices of changes of shift for light or modified duty offers must be consistent with the employer's existing, written shift change policy and/or collective bargaining agreement. An example of a shift change is day shift to swing shift, not merely a change in hours worked each day. If there is no written shift change policy or bargaining agreement provision covering shift changes, the worker may refuse the offer.

Change the reemployment assistance rules so that no assistance is provided for light or modified duty at alternative work sites.

3) Statement for the Record

If a worker elects, allow a deposition by the worker to be completed prior to completion of reconsideration process.

- Deposition will address the worker's condition at the time of claim closure.
- The deposition will be at no cost to the worker.
- The deposition process allows cross examination.
- The Department will promulgate rules that establish procedures for deposition.

[Back to Top](#)

May 9, 2000

The Honorable John A. Kitzhaber, M.D.

Governor of Oregon
State Capitol Building
Salem, Oregon 97310

Dear Governor Kitzhaber:

Late last year you invited the six of us to meet informally to review issues surrounding the state workers' compensation system. Our group took advantage of the opportunity you provided to engage in careful evaluation and frank discussion over the course of nine meetings. As the product of these discussions, we respectfully offer the attached package of measures that we agree should be taken to improve the system.

As you noted at our first meeting, it is now ten years since Oregon set in motion its landmark series of workers' compensation reforms. This process has yielded a remarkable turnaround in the system, with improved benefits for workers and tremendous savings for employers. At the same time, however, ten years' experience with the reformed system has given rise to significant criticism that must be addressed if the system is to maintain the support necessary for it to fulfill its fundamental mission.

The three management representatives and three labor representatives who constitute our group recognize the basic reality of the workers' compensation system: it is a compromise that seeks to balance certainty of fair benefits for workers injured on the job with certainty of fair and manageable costs for employers. Each of the members of our group, and the interests we represent, would modify or manage the system from different perspectives were the decision(s) ours to make alone.

With that in mind, we hope that you and the Oregon Legislature will view the attached measures as an integrated whole. Take out any given portion, and the consensus we have achieved and are committed to extending to our respective constituencies will unravel. As you have often noted, without consensus the political process stalls. In this case, that would clearly be harmful to Oregon workers and employers.

This agreement is designed to address current weaknesses in the workers' compensation system in several areas:

Compensability Standards. The group agreed to several recommendations related to pre-existing conditions and new medical condition claims. These recommendations seek to adjust compensability standards so that workers who are injured on the job are given reasonable access to workers' compensation benefits.

Benefits. The agreement offers a number of changes to the current system, including an increase to the upper limit of the temporary total disability benefit rate and a provision allowing benefits to be calculated based on a worker's multiple jobs where applicable. This will help make the system fairer for higher paid workers as well as for lower paid workers who hold multiple jobs.

Faster Decisions. The group recommends system changes related to payment of medical benefits before a claim is accepted or denied -- such as diagnostic services, pain medication, and treatment to prevent further disability -- and a reduction in the period to accept or deny a claim from 90 days to 60 days. The agreement also addresses cost recovery in cases where the claim is denied.

Predictability and Stability. The group recommends that in cases where an injured worker sues under the Employer Liability Act, the contributory negligence standard will apply. This will not affect benefits under the workers' compensation system. As noted above, we also recommend changes to the new medical condition claim standard to make the periods during which workers can file these claims more uniform with the rest of the system.

Adversarial System. The agreement includes a number of procedural changes aimed at reducing adversarial conflict within the system, including measures relating to independent medical examinations (IMEs) and the circumstances under which an injured employee may be returned to light-duty work.

For more detail on the agreements our group reached in each of the above areas, please see the attached.

In closing, we would like to thank you for recognizing that recent criticism of the workers' compensation system pointed to the need for an informal discussion process among the key labor and management constituencies we represent. This process gave us a better understanding of each others' perspectives and an opportunity to reach consensus on basic changes needed to improve the system. From this foundation we can offer you, the Management / Labor Advisory Committee, and the Oregon Legislature more effective support as you review our agreement and implement the measures necessary to make it a reality in workers' compensation law.

Sincerely,

Ken Allen,
AFSCME

GOVERNOR URGES SPEAKER TO JOIN

FIGHT AGAINST SIZEMORE BUDGET CUT INITIATIVE

In a letter to House Speaker Lynn Snodgrass, Governor John Kitzhaber today urged her to join him in defeating Bill Sizemore's proposed tax measure, which would cut the state budget by 30 percent next year, and 18 percent in the next biennial budget. Kitzhaber's letter was in response to a request from Snodgrass that the governor slow state spending in preparation for the potential passage of the Sizemore initiative in November.

"In seeking statewide office," Kitzhaber wrote, "you have a powerful forum and a unique opportunity to educate our citizens concerning the devastating impact that the passage of this measure would have on Oregon . . . I ask that you join me in working to defeat it."

While the Speaker's letter to the governor encouraged him to "request that all state agencies slow down their spending from now until the matter is resolved in November," Kitzhaber pointed out that more than 57 percent of the state budget is dedicated to education.

"The passage of this initiative will negatively impact our children for years to come," Kitzhaber wrote. "I believe that education is worth fighting for. I know that you feel the same way. We are not passive players in this election cycle -- nor can we afford to manage state government in reaction to the initiative process. To withhold state support from legislatively approved programs in anticipation of an initiative whose passage is uncertain is not good government," Kitzhaber added.

A copy of the governor's letter is attached.

-30-

May 4, 2000

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

Thank you for your recent letter regarding the initiative proposing full deductibility of federal income taxes. I share your concern about the devastating impact this initiative's passage would have on our state and its citizens. I do not believe, however, that it is prudent to react as proposed in your letter. We have another alternative: to work together to ensure that the measure does not pass in the first place.

With respect to the second point in your letter, agencies are now crafting their requested budgets for the 2001-2003 biennium. House Bill 3182 (1999) requires that each agency identify reductions and rank them based upon a cost benefit analysis. My budget recommendations will balance revenues and expenditures, as required by law, and depending on the outcome of the November general election, may incorporate some of the proposed reductions.

While your letter is focused on "state" programs, Ballot Measure 5 made primary and secondary education the single largest state program in the general fund. You must be aware that almost 43% of our General and Lottery Funds budget go directly to the State School Fund. All education, including Higher Education, consumes more than 57% of our State's General and Lottery Funds. The passage of this initiative will negatively impact our children for years to come. It puts at risk, for the current generation of school children, what you and I took for granted during our youth: a good public education.

We worked hard this past session to adequately fund education for our children and to enhance educational opportunities for all Oregonians. While I was disappointed in the Legislature's final decision with respect to the level of the state's K-12 support, I was encouraged by what appeared to be an increasing commitment to education on the part of many members of the assembly.

I believe that education is worth fighting for. I know that you feel the same way. We are not passive players in this election cycle – nor can we afford to manage state government in reaction to the initiative process. To withhold state support from legislatively approved programs in anticipation of an initiative whose passage is uncertain is not good government. I will work with the legislative leadership in planning a special session should the need arise, but I will not implement an initiative prior to its passage.

Madam Speaker, we were elected to lead, not follow. In seeking statewide office you have a powerful forum and a unique opportunity to educate our citizens concerning the devastating impact that the passage of this measure would have on Oregon. I too would like to eliminate any political posturing with respect to this initiative and, in that spirit, I ask that you join me in working to defeat it. Oregon needs all its leaders in this effort.

Sincerely,

John A. Kitzhaber, M.D.

WORKER SAFETY IMPROVEMENTS NEEDED AT CHEMICAL FACILITY

On September 15, 1999, workers at the Umatilla Chemical Agent Disposal Facility under construction in Eastern Oregon evacuated the facility after experiencing breathing difficulties. Symptoms included difficulty in breathing, tightness in the chest, irritated throat, and nausea. Some workers reported a metallic taste. Five employees were admitted to the hospital for further observation.

At the request of the Governor's Office, a multi-agency state team investigated the incident to evaluate worker safety, and deficiencies in response to the incident by the Army and their contractor, Raytheon Demilitarization Company.

State agencies involved in the investigation were: the Department of Environmental Quality, Oregon Emergency Management, Oregon Health Division and Oregon Occupational Safety and Health Administration (OSHA).

After six months of intense investigation, the multi-agency team concurred with the Army and Raytheon that worker illness was not caused by a release of chemical agent. The team noted, however, that the cause of the incident remains unknown.

In addition, the team identified 10 specific improvements which the Army and Raytheon need to make to remedy deficiencies in:

- Site evacuation and medical evaluation procedures;
- Communication between the Army and surrounding communities, medical facilities and the public;
- Communication between the Army, Raytheon and employees.

The agencies have advised the Army and Raytheon that these deficiencies need to be remedied by the end of calendar year 2000.

Copies of the full report can be obtained from Trisha Kirk or Wayne C. Thomas at the DEQ Hermiston Office (541) 567-8297.

The September 15, 1999, incident is not related to the accidental Alert Notification Siren activation that occurred on December 30, 1999. A separate evaluation of the Chemical Stockpile Emergency Preparedness Program (CSEPP) is currently underway and will be completed by May 1, 2000.

**GOVERNOR'S STATEMENT REGARDING THE MURDER
OF KIMBALL LEWIS' DOG, DONNER**

"I was saddened and horrified to learn of the terrible act of cruelty and malice committed against Kimball Lewis' dog, Donner. I count Kimball as a friend and as an asset to Oregon; a tireless worker for animal welfare.

That is why this act is especially tragic. No one should lose his or her pet in such a cruel way. But when it is done specifically to intimidate, it is an assault on all of us.

Understandably, Kimball is upset, angry and considering whether he wants to keep his post. I have spoken with him and urged that no matter what he does, he not leave his mission of compassion and caring for animals.

A memorial fund has been established in Donner's name at US Bank branches, the proceeds of which will help pay for animal abuse investigations. I have made a donation to this fund, and I urge Oregonians to contribute. It's a way you can help prevent cruelty to animals, remember a kind dog and remind a good man that we value him and his work."

GOVERNOR SUPPORTS SENATE VERSION OF

TIMBER PAYMENT LEGISLATION

Governor John Kitzhaber announced today that he supports passage of S 1608, as revised by the U.S. Senate Energy and Natural Resources Committee. The bill addresses payments to counties with federal forest land.

Kitzhaber had expressed concerns about earlier versions of the legislation because it continued to link levels of payment to counties to amounts of timber harvested. Further, Kitzhaber believed the earlier legislation did not contain a sufficient safety net should Congress fail to uphold its financial obligations and did not provide for stable funding to counties.

“Changes made by the Energy and Natural Resources Committee have focussed the bill on ecosystem restoration efforts and stabilized revenue to the counties,” Kitzhaber said.

“The new version of the bill also goes further toward separating payments from land management practices,” said Kitzhaber. “I would have preferred a complete separation, but I believe this represents a reasonable compromise and one that will provide significant benefits for Oregon.”

In addition, Kitzhaber noted in a letter to Sen. Ron Wyden (D-OR), the new version of the legislation includes critical changes to how local communities could use the federal funds. A copy of the letter is attached.

“The Senate Committee has done a reasonable job of crafting this compromise piece of legislation,” Kitzhaber said.

-30-

April 11, 2000

The Honorable Ron Wyden
United States Senator
516 Hart Building
Washington, D.C. 20510

Dear Senator Wyden:

I am writing to express my support for the version of S 1608 that passed out of the Senate Energy and Natural

Resources Committee last week on payments to counties. I believe it substantially reflects the principles I outlined in my letter to Agriculture Secretary Dan Glickman on March 30, 2000.

The bill stabilizes funding to counties, provides a safety net by assuring that payments are not dependent on annual appropriations from Congress, and separates payments from land management practices to a significant extent. As you know, I would have preferred a complete separation, but I believe this represents a reasonable compromise and one that will provide significant benefits for Oregon.

The bill includes the following key provisions that I think are necessary for it to be an effective long-term solution to this critical issue.

- The bill allows a portion of the funds to be used for projects that can benefit forest ecosystems and watersheds such as we are engaged in through our Eastside ecosystem restoration efforts.
- The bill requires consensus be achieved by local communities and environmental interests before forest stewardship projects can be proposed to the Forest Service or Bureau of Land Management.
- Any group can propose projects for funding under the bill. The bill also makes it clear that projects must be focused first on improving forest ecosystem health.
- The legislation also provides for cooperative projects between federal and state agencies, private and nonprofit entities, and landowners for protection, restoration and enhancement of fish and wildlife habitat.
- Receipts that may be derived from any forest stewardship project are placed into a national fund, helping to reduce incentives to create projects solely for commodity purposes.
- An important portion of the bill requires monitoring of projects for beneficial results and that payments for that monitoring come out of project funds.

I appreciate your hard work on this issue and I look forward to working with you as the bill makes its way through Conference Committee.

Best regards,

John A. Kitzhaber, M.D.

GOVERNOR ANNOUNCES PROGRESS ON INITIATIVE CAMPAIGN

Governor John Kitzhaber announced today progress in his campaign to place an initiative on the ballot to require the Oregon Legislature to adequately and equitably fund education. More than 25,000 signatures have been gathered for the initiative, the Accountability and Equity in School Funding Act, in the month of March.

Kitzhaber also announced that he had decided to pursue his school stability fund proposal through legislative means instead of through an initiative. A stability fund was considered by the last legislative session.

"I believe the work we have done developing this proposal and presenting it to education leaders around the state puts us in a good position to pass this in the next legislature," said Kitzhaber. "There is now a much stronger coalition of business leaders, educators and political leaders of both parties who will work for a stability fund in the next legislature."

"I think that is the best way to accomplish this particular task," he said, "because it gives us a chance to better debate what sources of revenue should be used to build the stability fund."

Kitzhaber said he would continue to work on qualifying the Accountability and Equity measure for the ballot. "I believe it is vital that we put the mandate to fund education adequately into our constitution. It's the only way we can hold the legislature accountable for its school budget decisions. This is something only Oregon voters can accomplish and I will continue to make the case to them."

State Superintendent of Public Instruction Stan Bunn a co-petitioner, indicated his continuing support for the Accountability and Equity measure. "It is critical that we have a rational basis for funding Oregon's schools. This initiative is a huge step in that direction," said Bunn.

Currently, Kitzhaber is working with a committee to help develop a methodology by which legislators could more rationally define how much funding constitutes an adequate school budget. The committee, the Quality Education Commission, is an outgrowth of an effort adopted last biennium.

The governor said he expected the initiative would have sufficient signatures to qualify for the ballot by June 1.

Finally, Kitzhaber said once it was certain the measure would qualify for the ballot, he would increase his effort on the campaign to defeat Bill Sizemore's proposed initiative to remove the cap on the deductibility of federal income taxes.

“This measure is an irresponsibly large budget cut of almost 30 percent this year and almost 20 percent in the next biennium. There’s no way we can responsibly cut that much out of our next budget,” said Kitzhaber. “What’s worse, almost none of the tax benefits go to average income Oregonians.”

FIRST LADY SHARON KITZHABER JOINS NATIONAL

EFFORT TO REDUCE UNDERAGE DRINKING

Press Briefing to be Held in Washington, D.C.

Oregon First Lady Sharon Kitzhaber will join governors' spouses from across the nation in Washington, D.C. on March 23-24 to launch a new national initiative highlighting the dangers of underage drinking. The initiative, Leadership to Keep Children Alcohol Free, is a multi-year, public-private partnership funded by the National Institute of Alcohol Abuse and Alcoholism (NIAAA) at the National Institutes on Health and The Robert Wood Johnson Foundation. Sharon Kitzhaber is one of four governors' spouses co-chairing this national initiative.

A press briefing will be held on Thursday, March 23 at 10 a.m. at the Four Seasons Hotel in Washington, D.C. at 2800 Pennsylvania Avenue, NW. Mrs. Kitzhaber will be joined at the press briefing by first ladies Hope Taft (Ohio), Michele Ridge (Pennsylvania), and Enoch Gordis, M.D., Director, National Institute on Alcohol Abuse and Alcoholism, and Joan Hollendonner, The Robert Wood Johnson Foundation.

"Alcohol use and abuse is the number one drug problem among Oregon youth and its use is on the rise," Sharon Kitzhaber said. "This initiative will draw attention to the problem of underage drinking and its devastating impact on families, communities and young people in Oregon and across the nation."

"Underage alcohol use is a significant threat to the health and safety of our children. It is time for us to come to grips with this widespread, devastating public health problem," noted Steven A. Schroeder, M.D., President and CEO of The Robert Wood Johnson Foundation, the nation's largest health philanthropy. "Mrs. Kitzhaber's commitment, together with more than 25 of her peers, to join with the national outreach program is a significant first step in our effort."

"Scientific evidence shows that the earlier children begin drinking the more likely they are to develop serious alcohol problems in their lifetime," says Enoch Gordis, M.D., Director of NIAAA. "To address this problem, we have turned to governors' spouses to help draw attention to this issue and to make prevention of underage drinking a national priority. Put simply, we [or our nation] can no longer ignore alcohol use by children."

The extent of alcohol consumption by children ages 9 to 15 is alarming, and preventing it must become a national priority. Consider these facts:

- Three million children ages 14 through 17 are regular drinkers who already have a confirmed alcohol problem.
- Twenty-four percent of eighth graders have used alcohol in the last 30 days.
- More than 100,000 12-13 year-olds binge drink every month.
- Ninth graders who drink are almost twice as likely to attempt suicide as those who don't.
- 40% of children who begin drinking before the age of 15 will become alcoholics at some point in their lives.

The two-day meeting on March 23-24 will examine the scope and nature of the problem, including the prevalence of alcohol use by 9 to 15 year-olds and its impact on children. It will also showcase promising activities that point the way toward effective interventions at the state and local level.

In addition to the more than 25 governors' spouses, the initiative is supported by a coalition of organizations interested in reducing underage drinking. The Leadership initiative seeks to both foster and sustain collaboration across this network and to bring groups together, state-by-state and community-by-community to respond to the problem of underage drinking.

GOVERNOR APPOINTS MENTAL HEALTH WORK GROUP

Governor John Kitzhaber's Mental Health Alignment Work Group convened for the first time February 2-4. The group was asked by the governor to make recommendations on how to best align existing programs, policies and resources into a statewide mental health system for children and adults. This September, the group expects to present the governor with their assessment of what steps need to be taken in order to fully implement such a system.

Recommendations for an aligned statewide mental health system must meet the following policy directives:

- Recommend a basic level of mental health support to be provided statewide;
- Be consistent with The Oregon Strategy for Social Support, including principles and role of state government;
- Ensure accountability for client outcomes and efficient use of resources;
- Use state dollars to ensure that the basic level of supports are available to all Oregonians of similar risk;
- Support all findings and recommendations with accurate data; and
- Address systemic problems before requesting additional resources.

The issues to be considered by this group will include: the limits of the mental health system, housing and other long-term community supports, corrections (juvenile and adult) as a default mental health system, mental health integration into the Oregon Health Plan (including role of public and private sector), disparity between adult and children's mental health, and responsibility for persons who suffer simultaneously from substance abuse and mental illness.

The following individuals have been appointed to the Oregon Strategy for Social Support Mental Health Alignment Work Group:

Work Group Member

Mark Gibson, Chair
Pam Curtis, Facilitator
Madeline Olson
Sheriff John O'Brien
Dr. Gary Field
Phil Cox
Gustavo Wilson
Phillip D. Chadsey
Doris Cameron-Minard
Don Leslie
Connie Powell

GOVERNOR CONDEMNS SUICIDE VIDEO

Statement of Gov. John Kitzhaber

I strongly condemn the production and circulation of a video by British Journalist Derek Humphry that depicts how to commit suicide.

The people of Oregon have elected to make available, under very limited and controlled circumstances, the choice of physician-assisted suicide. For the terminally ill, this is the most profound of decisions, taken in consultation with their family, physician, friends and faith. The video, by its very nature, trivializes this most serious of decisions and casts a cloud over Oregon's law.

Further, it is grossly irresponsible to produce a "how-to" tape on suicide, given its potential to influence the acts of those who are not of sound mind, especially troubled youth. Studies strongly indicate the presence of a "suicide contagion", in which youth suicide rates increase after suicides are dramatized or sensationalized in the media.

I have a tremendous respect for the First Amendment and freedom of expression, but it bears with it a commensurate responsibility. Hence, the following request is not made lightly. I ask that news outlets and cable providers not show the video and that news reporting of the tape be extremely judicious in the use of the tape as part of their coverage.

Finally, I ask that Mr. Humphry, the producer of the tape, stop its circulation. There is room in our public debate about health and end of life care to discuss physician-assisted suicide for the terminally ill. However, there is no room for reckless and irresponsible productions such as Mr. Humphry's "how-to" tape.

GOVERNOR APPOINTS INTERNET COMMISSION

Governor John Kitzhaber announced his appointments to the Oregon Internet Commission today. As created by House Bill 2804 in the 1999 legislative session, this Commission will review Oregon's Internet profile and position in the "new economy." The Commission will make recommendations on how best to encourage Internet commerce in Oregon, while at the same time delivering social and economic benefits to all Oregonians.

The Commission will focus on three main areas: Oregon's education and workforce training needs; how to ensure that no Oregonian is left behind; and how to ensure that all Oregon businesses have a fair chance in this new environment.

The governor appointed 11 members, 8 private sector and 3 public sector, plus one Ex-Officio member. The Legislature appointed 2 members from each chamber:

Private Sector:

Vince Chiappetta, Chair, Professor; Willamette University College of Law

Craig Berkman; Craig Berkman & Associates

Peter Bragdon, Asst. General Counsel; Columbia Sportswear

Greg Drew, President & CEO; 800.com

Bill Henningsgaard, VP Sales; Microsoft

Jim Johnson, Vice President; INTEL

Maggie Sanchez, Chief Operating Officer; Digital Mercury

Nancy Tait, VP Sales & Marketing; Bear Creek Corporation

Public Sector:

William H. Buckley, Manager of Business Industry Division; OECDD

Don Mazziotti, Chief Information Officer; State of Oregon

Hardy Meyers, Oregon Attorney General, (Ex-Officio member)

Diane Vines, Vice Chancellor; Oregon University System

Appointments by the Legislature:

Sen. Peter Courtney

Sen. Verne Duncan

Rep. Ryan Deckert

Rep. Jim Hill

GOVERNOR ANNOUNCES APPOINTMENTS TO RACIAL & ETHNIC HEALTH TASK FORCE

Governor John Kitzhaber has appointed 21 members to the Racial and Ethnic Health Task Force, created under Executive Order 99-07. They will begin work in February 2000. The task force was created after a work group found that access to health care and health outcomes vary in communities of color in Oregon. Task force members represent Oregon's diverse racial/ethnic backgrounds and diverse geographic regions. Members of the task force are:

At-large candidates:

Carmen Bauer, Executive Director, Centro Latino Americano

Ruby Haughton, Vice President of Corporate Affairs, Bank of America

Matt Hennessee, President & CEO, Quiktrak

David Houghton, Director, Disease Prevention & Control Division, Mult. Co.

Sunil Khanna, Associate Professor of Anthropology, Oregon State University

Floyd Martinez, Director, Behavioral Health Division, Mult. Co.

Robert Ryan, Prog. Coord., Tuality Healthcare, Counseling & Addiction Services

Legislators:

Senator Susan Castillo

Senator Avel Gordly

Senator Lenn Hannon

Senator David Nelson

Representative JoAnn Bowman

Representative Jackie Winters

Representatives from the following organizations:

Oregon Medical Association, Dr. Tom Jannise

Oregon Association of Hospitals and Health Systems, G. Kent Ballantyne

Conference of Local Health Officials, Kathleen Schwartz

Governor's Office, Mark Gibson

Commission on Asian Affairs, Dr. Bruce Bliatout

Commission on Black Affairs, Corliss McKeever

Commission on Hispanic Affairs, Dr. Dovie Treviño

Commission on Indian Services, Jackie Mercer

The Task Force will focus its work in six areas: access to treatment, alcohol and drug abuse, asthma, diabetes, HIV/AIDS, and lead poisoning. Work groups will be created around each area of concern and, based on their findings,

recommendations made to the governor and the legislature.

Gov. Kitzhaber has extended an invitation to those who have already expressed interest in the task force, to make their expertise available through the various work groups. The work groups will be formed following the first meeting of the task force. Anyone who is interested in participating or who has questions can call Jenny Lee, Office of Multicultural Health, Oregon Health Division at (503) 731-4582. Oregon Health Division's Office of Multicultural Health and the Office for Oregon Health Plan Policy and Research (OHPPR) will staff the task force.

The first meeting of the task force is scheduled for February 1, 2000 at 1 p.m. in Salem, at the State Capitol Building.

GOVERNOR ANNOUNCES AUTISM TASK FORCE APPOINTMENTS

Governor John Kitzhaber announced today appointments to the Autism Task Force. As created by Senate Bill 765 in the 1999 legislative session, this task force will review the Department of Education autism implementation plan and other relevant information. The task force will make legislative recommendations regarding educational services for children with autism, including but not limited to a state residential school for children with autism. The recommendations will include but are not limited to: potential funding sources; selected site or sites; scope of services provided, including consideration of age and severity of disability; and existing or proposed curricula.

The task force will file its report with the appropriate senate or joint interim education committee no later than July 1, 2000. The ten members of the task force are: The task force will file its report with the appropriate senate or joint interim education committee no later than July 1, 2000. The ten members of the task force are:

- Four representatives of parents of children with autism:

Stan Ash, Lake Oswego

Kirby Erickson, Grants Pass

Rick Potter, Bend

Therese Steward, Hillsboro

- One representative of the governing body of a school district:

Francis Charbonnier, McMinnville School District Board

- One representative of the Department of Education:

Steve Johnson, Associate Superintendent, Office of Special Education

- One representative of an education service district:

Mickey Upson, Umatilla-Morrow ESD

- One representative of a special education director of a school district:

Christine Moore, Beaverton School District

- One representative of a regional autism program:

Kathy Emerson, Central Oregon Regional Programs, Crook-Deschutes ESD

- One representative of the Legislative Assembly:

State Representative Jim Hill, Oregon House of Representatives

**GOVERNOR DIRECTS STATE POLICE TO
MONITOR CSEPP EVALUATION**

As a result of input from community members and local leaders, Governor John Kitzhaber has directed the Superintendent of State Police to monitor the independent evaluation of Oregon's Chemical Stockpile Emergency Preparedness Program (CSEPP) which the Federal Emergency Management Agency (FEMA) has agreed to sponsor and underwrite. The independent evaluation will be conducted by a private consultant over the next 35-40 days.

Superintendent of State Police Ron Ruecker has hired Jerry Russell, 51, a retired Major from the Oregon State Police (OSP), to monitor that evaluation. Mr. Russell had a 27-year career with the OSP and, prior to retirement, served as the Commander of the Operations Services Bureau.

Mr. Russell will be employed by the OSP as of January 24 and will remain an employee for the duration of the CSEPP evaluation. Mr. Russell will be stationed in the Hermiston-Umatilla area and will report regularly to Superintendent Ruecker on the evaluation's progress and findings. Superintendent Ruecker will brief the governor throughout the evaluation.

"We must be in a position to confidently assure the citizens of these communities that any safety concerns arising from the Umatilla Army Depot can be resolved," said Gov. Kitzhaber.

**APPOINTMENTS TO JOINT INTERIM TASK FORCE ON
CULTURAL DEVELOPMENT ANNOUNCED**

Governor John Kitzhaber, House Speaker Lynn Snodgrass and Senate President Brady Adams have announced their appointments to a Joint Interim Task Force on Cultural Development. Created by passage of HB 2005 during the 1999 legislative session, the nine-member body within the Department of Economic and Community Development will be representative of Oregon's arts, humanities, community development, education, heritage, historic preservation and tourism.

"This Task Force will begin to create a statewide strategy that can guide and increase public and private investment in Oregon's culture. The cultural policy agenda they will develop will help Oregonians see the connections between arts and culture and other pressing issues such as education and the environment. Culture, the arts and our heritage are some of the few things in our society that transcend geography, economics, gender, education and age. Without this kind of investment, this important attribute of Oregon's quality of life cannot prosper long-term," Kitzhaber said.

Pursuant to HB 2005, the Task Force will develop:

- (a) measurable benchmarks to ensure the preservation of Oregon's cultural heritage and to provide Oregonians with cultural opportunities throughout the state;
- (b) A structure or process to promote efficient and inventive collaborations among Oregon's arts, heritage, humanities and other organizations;
- (c) Operation and distribution guidelines for the Cultural Trust Fund Investment Account that will help to ensure long-term stability and accountability for Oregon's cultural organizations.

The Task Force will complete its work in time for the governor to use it in preparation of the 2001-2003 state budget. A full report will be made to the Legislature by January, 2001.

The members of the Task Force are:

(Appointed by Governor John Kitzhaber):

- George Bell, Lake Oswego, consultant and arts board member ;
- Bobbie Connor, Pendleton, executive director, Tamustalikt Cultural Center;
- Amy Cuddy, Ashland, member, Oregon Tourism Commission;
- Mike Lindberg, Portland, Chair, Oregon Arts Commission;

- Barbara Rommel, Portland, Superintendent, David Douglas School District;
- Barbara Sidway, Baker City, preservation developer and Chair, Oregon Heritage Commission;
- Charles Walker, Neskowin, former president, Linfield College and Chair, Oregon Council for the Humanities.

(Appointed by Senate President Brady Adams):

- State Senator Lee Beyer, Springfield

(Appointed by House Speaker Lynn Snodgrass):

- State Representative Ben Westlund, Bend

At their first public meeting, members of the Joint Interim Task Force elected Charles Walker of Neskowin the chair.

In addition, Governor Kitzhaber designated Portland poet and writer Kim Stafford, director of the Northwest Writing Institute of Lewis and Clark College, as a special advisor to the Task Force.

GOVERNOR NOMINATES NEW OREGON STATE POLICE SUPERINTENDENT

**Deputy Superintendent Ron Ruecker Chosen to Succeed
Superintendent LeRon Howland**

Governor John Kitzhaber announced today that he has chosen Oregon State Police Deputy Superintendent Ron Ruecker to succeed current Superintendent LeRon Howland upon Howland's December 31 retirement. Ruecker, 43, has been with the Oregon State Police since June, 1975 and has been Deputy Superintendent since October, 1999.

"Oregonians are fortunate to have someone of Ron's great experience and dedication as the leader of the Oregon State Police," said Kitzhaber. "He was one of three very qualified finalists. This was a difficult choice, but Ron's history with the department, commitment to work with local law enforcement, to diversity and to effective communications within the department and with all Oregonians made him the clear choice. Ron Ruecker is the right person to lead the Oregon State Police as they face the difficult challenges of protecting and providing for public safety of Oregonians."

Ruecker was selected after an extensive selection process undertaken by a panel formed by Kitzhaber. The panel consisted of: Ris Bradshaw, Clackamas County Sheriff; Kate Brown, Oregon State Senator; Dave Cook, Director, Oregon Department of Corrections; Reg Madsen, United States Marshal and Former Oregon State Police Superintendent; Keith Miller, OSP Trooper and member of the Oregon State Police Officers' Association Executive Committee; Ted Molinari, Public Representative; Dale Penn, Marion County District Attorney; Raul Ramirez, Marion County Sheriff; and Bob Tardiff, Newberg Chief of Police.

The other two finalists were Len Cooke, police chief of Porstmouth, Virginia and former police chief of Eugene, Oregon and Les Youngbar, police chief of Lake Oswego. Ruecker's nomination will be before the Oregon Senate's confirmation committee in mid February.

**GOVERNOR TO INTERVIEW THREE FINALISTS FOR STATE
POLICE SUPERINTENDENT**

Governor John Kitzhaber announced today that he would interview three finalists to replace retiring Superintendent of State Police LeRon Howland. The finalists the governor will interview are as follows:

Len Cooke, Chief of Police of Portsmouth, Virginia and former Chief of Police in Eugene, Oregon, 49, of Portsmouth, Virginia;

Ron Ruecker, Oregon State Police Deputy Superintendent, 43, of Wilsonville, Oregon;

Les Youngbar, Chief of Police of Lake Oswego, 43, of Lake Oswego, Oregon.

Gov. Kitzhaber will interview the finalists during the week of December 20. The successful candidate will be forwarded to the Oregon State Senate for confirmation at its next regularly scheduled meeting in February, 2000.

The finalists were recommended to the governor after a recruitment conducted by the Oregon State Police Superintendent Search Panel. The members of the panel are: Ris Bradshaw, Clackamas County Sheriff; Kate Brown, Oregon State Senator; Dave Cook, Director, Oregon Department of Corrections; Reg Madsen, United States Marshal and Former Oregon State Police Superintendent (OSP); Keith Miller, OSP Trooper and member of the Oregon State Police Officers' Association Executive Committee; Ted Molinari, Public Representative; Dale Penn, Marion County District Attorney; Raul Ramirez, Marion County Sheriff; and Bob Tardiff, Newberg Chief of Police.

GOVERNOR ANNOUNCES WATERSHED INFOLINE

Governor John Kitzhaber announced today Oregon's toll-free phone line, which provides information about watersheds, fish and restoration efforts: **888-854-8377**. "The Oregon Watershed InfoLine gives Oregonians access to the information they need to understand what watershed restoration is all about and how they can become involved," Kitzhaber said.

Materials currently available through the InfoLine include: information about the Willamette Restoration Initiative and the Oregon Plan for Salmon and Watersheds; the booklet "We All Live Downstream," from the Partners for a Clean Willamette; a series of "Ten Things You Can Do To Help" for specific groups such as gardeners, homeowners and farmers; "50 Ways to Love Your River," a booklet sponsored by the Oregon Environmental Council that describes how people living in the Willamette watershed can get involved; and contact information for local watershed councils and soil and water conservation districts. These publications, as well as answers to specific questions, can be obtained by calling the toll free number.

New information will be added to the InfoLine as it becomes available. This service will provide one-stop shopping for land and home owners, fishers and other outdoor enthusiasts, businesses, educators, local government officials and anyone that needs watershed restoration or contact information.

The InfoLine is jointly sponsored by the Willamette Restoration Initiative (WRI) and the Oregon Plan for Salmon and Watersheds (OPSW). Information is also available on two websites: www.oregonwri.org for WRI and www.oregon-plan.org/ for OPSW.

GOVERNOR TO PROPOSE ADDITIONAL HEALTH CARE FUNDS

New Plan Asks Emergency Board to Continue Outreach, Pay For Additional Participants

Governor John Kitzhaber announced today that he would ask the Legislative Emergency Board to provide an additional \$6.5 million for the Oregon Health Plan in order to fund new participants anticipated as a result of increased outreach efforts.

By the end of the biennium, the Oregon Health Plan will be covering almost 11,000 more beneficiaries as a result of targeted outreach efforts, including those funded by the Robert Wood Johnson Foundation.

“I have received requests from legislators and community leaders to continue this outreach effort to vulnerable populations such as homeless youth,” Kitzhaber said. “I am sympathetic to those requests and want to continue that outreach, but we can’t deceive ourselves. Healthcare costs money and as we enroll more people in the plan, we need to set the funding aside to pay for them.”

Kitzhaber said he would recommend continuing the outreach, but only if the Emergency Board set aside the funding necessary to meet the increased demands on the health plan.

The governor also said he would lead the fight with the federal Health Care Financing Administration (HCFA) about Oregon’s ability to manage what services are offered under the Oregon Health Plan. The current budget anticipates eliminating 10 medical procedures from the 574 procedures now covered. HCFA has indicated that it won’t accept the plan to remove those services.

“Without federal approval to move the line on what services are offered, we will be forced into a much more drastic course of action,” said Kitzhaber. “Instead of making minor adjustments in what services are offered, we will be forced to remove all coverage from literally thousands of Oregonians. That’s unacceptable to me and it ought to be unacceptable to the federal government.”

HEALTHY STREAMS PARTNERSHIP

MEMBERS APPOINTED

Governor John Kitzhaber, House Speaker Lynn Snodgrass and Senate President Brady Adams jointly appointed members of the Healthy Streams Partnership, a 21 member group which includes members of local watershed councils, soil and water conservation districts, industry, local governments, environmental interests and others who are directly involved in water quality improvement and watershed health.

The Healthy Streams Partnership will provide information on efforts to restore watershed health and fish runs from a local and regional perspective and recommend implementation changes directly to the Legislative Committee on Stream Restoration and Species Recovery. All meetings of the Healthy Streams Partnership will be open to the public and subject to public meeting notice requirements.

“The Healthy Streams Partnership provides a unique opportunity to address all of the factors impacting water quality in a collaborative and progressive manner,” said Governor Kitzhaber. “I look to the Partnership to develop a legacy and model of how to work together to improve and preserve the health and function of our watersheds for future generations.”

“The Healthy Streams Partnership represents some of the best that Oregon has to offer,” Speaker Snodgrass said. “I am extremely proud of the quality of this group and am excited about the work they will perform to help set the direction of local implementation of watershed health improvements in Oregon.”

“It is a privilege to have so many Oregonians who are willing to commit their time and effort to the Healthy Streams Partnership group,” stated Senate President Brady Adams. “By increasing the size of the committee this last legislative session, I believe we will have a broader spectrum of ideas and solutions as the implementation of the Oregon Plan for Salmon and Watersheds and other watershed restoration and improvement projects continue throughout the state.”

Members of the Healthy Streams Partnership include:

Richard Angstrom Jr., Oregon Concrete and Aggregate Producers Association;
Bill Arsenault, Oregon Small Woodland Association;
Mike Barlow, Oregon Association of Conservation Districts;
Debbie Boone, Necanicum Watershed Council;

Tracy Bosen, Umatilla Basin Watershed Council;
Jody Calica, Confederated Tribes of the Warm Springs;
Jacqueline Dingfelder, For the Sake of the Salmon;
Phil Donovan, Northwest Sportfishing Industry Association;
Dana Erickson, Long Tom Watershed Council;
Patricia Gainsforth, Deschutes Soil and Water Conservation District;
Lucie La Bonte, South Coast Watershed Council;
John Ledger, Associated Oregon Industries;
Bob McPheeters, Mayor of Tillamook;
Dave Moskowitz, Metro;
Fred Otley, Oregon Cattlemen's Association;
Jack Shipley, Applegate Partnership;
Richard Tecube, Coquille Indian Tribe;
Pete Test, Oregon Farm Bureau;
Ray Wilkeson, Oregon Forest Industries Council;
Terry Witt, Oregonians for Food and Shelter;
Tom Wolf, Oregon Council of Trout Unlimited.

GOVERNOR ANNOUNCES APPOINTMENTS TO FINANCIAL AID COMMISSION

Governor John Kitzhaber announced today his appointments to the Financial Aid Commission. Created by HB 2993, this commission will study financial support for post-secondary students. Mark Dodson, Senior Vice President at NW Natural, and Roger Bassett, retired Community College Commissioner, will serve as co-chairs of the commission.

“This commission represents an excellent opportunity to advance Oregon’s financial assistance agenda. I believe we can produce a report that not only makes the case for enhanced funding, but also provides a realistic and obtainable agenda resulting in more Oregonians getting greater financial assistance and greater access to a post-secondary education,” Kitzhaber said.

The commission will submit its report to the governor, the Emergency Board and the appropriate interim committees on education prior to October 1, 2000. The Commission shall study and make recommendations on the following:

- The balance between institutional and student financial support;
- The balance between need-based and merit-based student financial support; and
- Proposals to assist community college students achieve four-year degrees.

In addition to the commission membership outlined in HB 2993, the governor has asked that Patricia Aldworth, Executive Director of the Oregon Student Assistance Commission, serve as an ex-officio member. The members of the Commission are as follows:

- **Mark S. Dodson** (co-chair), Senior Vice President, NW Natural,
- **Roger Bassett** (co-chair), retired Oregon Community College Commissioner,
- **Sen. Avel Gordly** (appointed by the President of the Senate),
- **Sen. Eileen Qutub** (appointed by the President of the Senate),
- **Rep. Bill Morrisette** (appointed by the Speaker of the House),
- **Rep. Max Williams** (appointed by the Speaker of the House),
- **Faith Gabelnick**, President of Pacific University,
- **Lee Pelton**, President of Willamette University,
- **Daniel Bernstine**, President of Portland State University,
- **Stephen Reno**, President of Southern Oregon University,
- **Jon Carnahan**, President of Linn-Benton Community College,

- Kathy Campbell**, Financial Aid Director, Chemeketa Community College (designee of Chemeketa President Jerry Berger),
- **Lesley Hallick**, Vice President for Academic Affairs & Provost, Oregon Health Sciences University,
 - **Diane Tsukamaki**, Oregon Student Assistance Commission member,
 - **Ryan Dougherty**, George Fox University student,
 - **Matt Swanson**, University of Oregon student,
 - **Annie Engel**, Central Oregon Community College student,
 - **Dr. Don Romanaggi**, University of Portland Board of Trustees,
 - **Tom Imeson**, Oregon State Board of Higher Education,
 - **Larry Wright**, Clackamas Community College Board.

Ex-officio members:

- **Joe Cox**, Oregon University System Chancellor,
- **Cam Preus-Braly**, Commissioner for Community College Services,
- **Patricia Aldworth**, Oregon Student Assistance Commission Executive Director.

GOVERNOR, SUPERINTENDENT OF PUBLIC INSTRUCTION

ANNOUNCE QUALITY EDUCATION COMMISSION

Governor John Kitzhaber and Superintendent of Public Instruction Stan Bunn announced today the formation of the Quality Education Commission. Created by Executive Order (EO 99-16), this 11-member body will refine the Quality Education Model to help lawmakers establish the costs of providing education necessary for Oregon's children to meet the goals of the Education Act of the 21st Century.

Bill Thorndike, Jr., President of Medford Fabrication, will chair the Commission. Elaine Taylor, Superintendent of the McMinnville School District, will serve as Vice-Chair. Pursuant to the Executive Order, the Commission will complete its work in time for the governor to use it in preparation of the 2001-2003 state budget.

"This Commission will help bridge the gap between the high standards we have set for Oregon's students and the cost it actually takes to get them there," Kitzhaber said.

"The State is clear about what it expects schools to do to help students reach higher standards," said Superintendent Bunn. "It must be equally clear about what resources are needed to do the job," he added.

The goals of the Commission will be to:

- Identify key issues to address in further validating and refining the Quality Education Model;
- Solicit input from educators, education policy experts and others about the elements of the model;
- Solicit public input regarding educational priorities for use in developing the model;
- Make recommendations regarding model development based on research, data, public input and experience; and
- Communicate with stakeholders regarding model development.

The members of the Commission are as follows:

Bill Thorndike, Jr. (Chair), President, Medford Fabrication,
Elaine Taylor (Vice-Chair), Superintendent, McMinnville School District,
Yvonne Curtis, Principal, Terrebonne Elementary School,
Kathryn Firestone, President, Oregon PTA,
Ted Kulongoski, Associate Justice, Oregon Supreme Court,

Jerry Meyer, Chairman and CEO of Tektronix,
Randy Pozdena, Managing Director, Econorthwest Portland Office,
Darcy Rourk, Curriculum Director, Canby School District,
George Russell, Superintendent, Eugene School District,
James Sager, President, Oregon Education Association,
Duncan Wyse, President, Oregon Business Council.

GOVERNOR DENIES CASCADE LOCKS CASINO REQUEST

Governor John Kitzhaber announced today that he would not change his position concerning the location of tribal casinos and that he would continue to oppose locating a Warm Springs Tribal casino on off-reservation land in Cascade Locks.

In making the decision, Gov. Kitzhaber stressed his long-standing policy of trying to limit gambling in Oregon by constraining the growth of the Oregon Lottery, limiting tribal casinos to one per tribe and locating those facilities on reservation or trust land acquired before the passage of the Indian Gaming Regulatory Act in 1988. The site in Cascade Locks is not land that was in tribal ownership before this date.

In negotiations with other tribes around the state, Gov. Kitzhaber has opposed similar efforts to purchase off-reservation land and construct casinos. In his letter to Tribal Chairman Olney Patt Jr., Kitzhaber wrote: "If I were to make an exception to my often-stated policy concerning after-acquired lands, I would inevitably get similar requests from other tribes that also wish to find more favorable locations for their gambling operations."

The governor also wrote: "I recognize that the tribe has other options for development of gaming facilities. Each of those options has its own set of assets and problems. I will review each proposal on its own merits and within the context of my authority and responsibility as I did here."

GOVERNOR TO LEAD TRADE MISSION TO EUROPE

Governor John Kitzhaber will travel to Europe next week, leading three delegations from Oregon representing agriculture, biotechnology/high technology and tourism. Kitzhaber will meet with political and economic leaders to raise the profile of Oregon in Europe. He will leave for Europe on Monday, November 8 and return to Oregon on Thursday, November 18.

The governor will visit The Netherlands, Germany and England. He will be accompanied by Bill Scott, Director of the Oregon Economic and Community Development Dept. and Bruce Andrews, Director of Public Affairs and Corporate Marketing for the Port of Portland. Members of the three delegations include: Dr. Peter Kohler, President of OHSU, Jim Johnson, VP and Oregon Site Manager for Intel and Phil Ward, Oregon Dept. of Agriculture Director.

"Oregon has a great deal to offer our European partners from innovations in agriculture to bioscience and high technology," said Kitzhaber. "This is an opportunity to raise Oregon's profile and expand tourism, trade links and business opportunities in Europe."

Highlights of the governor's visit include: a tour of Nike's European headquarters and a reception in his honor at the new London Niketown, a meeting in Oosterhout, The Netherlands with Barenbrug Seed one of the world's largest suppliers of grass seed and a major contractor of Oregon grass seed growers, and interviews at the World Travel Market trade show in London. In addition, representatives of Oregon's information technology and biotechnology industries will be meeting with senior-level representatives in Hanover and Cambridge to encourage company partnering in research and development, technology transfer, and product distribution.

A detailed schedule of the governor's trip is as follows:

Wednesday, November 10

- The Netherlands
- Visit Nike's new European Headquarters in Hilversum
- Meet with Barenbrug Seed in Oosterhout

Thursday, November 11

- Hamburg, Germany

- Hold tourism-related interviews

Friday, November 12

- Hanover, State of Lower Saxony, Germany
- Visit the Parliament of the State of Lower Saxony, sister government to the Oregon State Legislature
- Finance Minister Heinrich Aller hosts lunch for Gov. Kitzhaber, Dr. Peter Kohler, President of OHSU and Jim Johnson, VP and Oregon Site Manager for Intel to discuss infotech and biotech partnerships between the two states
- Prime Minister Gerhard Glogowsky of Lower Saxony to host a reception

Saturday, November 13-

Sunday, November 14

- Weekend/No formal meetings

Monday, November 15

- Cambridge, England
- Sir Brian Corby, Chairman of the East of England Investment Agency will host lunch meeting at the University of Cambridge on sustainable development, infotech, bioscience and medical technology

Tuesday, November 16

- London, England
- Hold tourism-related interviews at Oregon's booth at the World Travel Market Trade Show
- Attend reception at London Niketown

Wednesday, November 17

- Travel to Oregon

Thursday, November 18

- Resume schedule in Oregon

CANDIDATE ADDED TO SECRETARY OF STATE SEARCH

Governor John Kitzhaber announced today that he has added Beaverton Mayor Rob Drake to the field of six Oregonians he will be interviewing this week to replace departing Secretary of State Phil Kiesling. Kitzhaber took the action after Mayor Drake expressed interest in the position late last week. Further, many community members contacted the Governor's Office to express their support for Drake.

Drake has been Mayor of Beaverton since 1993. Beaverton is the only city besides Portland to have a full-time mayor.

**GOVERNOR GRANTS EXECUTIVE CLEMENCY
TO CARILLO-LANDEROS, SCOTT**

Governor John Kitzhaber today announced that he has granted executive clemency to Hector Carillo-Landeros and LeRoy Denton Scott. Kitzhaber granted an unconditional pardon to Carillo-Landeros and commuted Scott's sentence.

Hector Carillo-Landeros was convicted in 1991 of Sex Abuse I after inappropriately touching a friend's 10-year-old daughter while intoxicated. Carillo-Landeros received a 36-month probationary sentence, which he served without incident while successfully completing sex offender treatment and alcohol abuse programs. Since 1994 Carillo-Landeros has been employed by the City of Jacksonville; his wife recently gave birth to their first child.

A Permanent Resident of the United States, Carillo-Landeros has lived in the United States since age 11. When Carillo-Landeros sought to apply for full citizenship in 1996, the Immigration and Naturalization Service began deportation proceedings against him based upon his conviction under a retroactive provision of the federal Illegal Immigration Reform and Immigrant Responsibility Act of 1996. Carillo-Landeros was deported in September, 1999. The Act specifically provides that a gubernatorial pardon prevents deportation and will allow Carillo-Landeros to legally re-enter the United States.

Carillo-Landeros' application was supported by his supervisor with the City of Jacksonville and the Mayor of Jacksonville, as well as a number of community residents and members of the statewide Hispanic community. In order to respond to concerns raised by the Jackson County District Attorney's Office, the governor has received assurances from Carillo-Landeros that he will continue to comply with the requirements of Oregon's sex offender registration law.

LeRoy Denton Scott was convicted of Burglary I in 1995 after entering a neighbor's property to retrieve goods he believed belonged to him. He received a 120-month sentence, and prior to the governor's commutation had a projected release date of April 30, 2003. Scott was the only inmate to cooperate with law enforcement and corrections officials following the murder of inmate Jackie Sharp at the Oregon State Penitentiary in December, 1996. Scott's testimony for the prosecution was crucial in obtaining a conviction of inmate John Zalme. As a result of his testimony, Scott placed his life in danger and is currently housed in an out-of-state correctional facility for purposes of his own safety.

Scott's application for a commutation was supported by the Marion County District Attorney's Office, which prosecuted the Zalme case, as well as the Josephine County District Attorney's Office, which prosecuted Scott on the underlying Burglary I charge. The governor's commutation establishes an April 30, 2001 release date for Scott, in keeping with his request that he receive a 20 percent reduction in sentence in exchange for his role in the Zalme trial. The commutation does not affect Scott's obligation to remain under post-prisoner supervision for six years following his release as part of

sentences for convictions related to the 1995 burglary conviction.

The governor declined to commute the sentence of Clifford Frey, currently serving a 70-month sentence for Sex Abuse I under Ballot Measure 11. While Frey's application was supported by the Multnomah County District Attorney's Office, Gov. Kitzhaber continues to believe the powers of executive clemency under the Oregon Constitution should be utilized only in extraordinary cases where the criminal justice system has failed or provides no adequate remedy for manifest injustice.

Mr. Frey was properly sentenced under Ballot Measure 11. The governor believes the utilization of his clemency powers to review such a sentence would cause him and future governors to function as a de facto appellate court in reviewing a number of future cases sentenced under Ballot Measure 11, a function he views as an improper displacement of judicial authority. The governor, who has supported changes to Ballot Measure 11 in the past, believes that the proper authority to change either Ballot Measure 11 crimes or sentences lies with the Legislature.

**GOVERNOR TO INTERVIEW SECRETARY
OF STATE CANDIDATES**

Governor John Kitzhaber announced today that he will be interviewing six candidates for the Secretary of State appointment on Tuesday, November 2 and Wednesday, November 3. The governor said he expects to make a decision by Friday, November 5.

The candidates the governor will interview are as follows:

Gail Achterman, Portland attorney and former natural resource policy adviser to Gov. Neil Goldschmidt;

Lee Beyer, State Senator from Eugene;

Bill Bradbury, former State Senator from Bandon and current President of For Sake of the Salmon.

Susan Castillo, State Senator from Eugene;

Peter Courtney, State Senator from Salem;

Bryan Johnston, former State Representative from Salem and current Dean of the Willamette University Atkinson Graduate School of Management.

GOVERNOR ANNOUNCES NEW MEMBERS FOR OREGON WATERSHED ENHANCEMENT BOARD

Governor John Kitzhaber announced today the addition of six new members to the Oregon Watershed Enhancement Board (OWEB).

"We have selected a group of highly qualified Oregonians with great knowledge and stature in Oregon," Kitzhaber said. "This board will help set the policies and make funding decisions so important to Oregon's local efforts to restore our watersheds."

The appointments are: Mark A. Suwyn, West Linn, Chairman and CEO of Louisiana Pacific Corp.; Bill Bradbury, Bandon, Director of For Sake of the Salmon and former Senate President; Jane O'Keefe, Adel, County Commissioner and rancher from Lake County; George Brown, Corvallis, retired Dean of the College of Forestry; Ron Nelson, Bend, Manager of the Central Oregon Irrigation District in Redmond; and Delores Pigsley, Salem, Tribal Chair of the Confederated Tribes of Siletz.

The Legislature established the small OWEB staff (formerly GWEB) as a separate agency, to be guided by the expanded citizen board. They added six new members to the board, requiring broad geographic distribution and staggering the four-year terms. The new appointments require Senate confirmation. Names will be submitted for confirmation to the Senate's December meeting.

Continuing to serve on the OWEB are representatives of five citizen boards and commissions: Pat Wortman from the Board of Agriculture, Mark Reeve from the Environmental Quality Commission, Susan Foster from the Fish and Wildlife Commission, Wayne Krieger from the Board of Forestry, and Nancy Leonard from the Water Resources Commission.

GOVERNOR ASKS HUNTERS TO TREAD LIGHTLY

Governor John Kitzhaber issued a Hunter Alert today asking hunters to respect road closures and to "tread lightly" on open forest roads during the upcoming hunting season. Many public and private forest roads have been closed or rehabilitated to reduce sediment getting into Oregon's rivers and streams as part of the Oregon Plan for Salmon and Watersheds. Excess sediment in streams can cause water quality problems and degrade habitat for salmon.

"Many hunters are planning their fall hunts in Oregon's forests. How hunters use forest roads can dramatically affect water quality -- clean water that our salmon need," Kitzhaber said. "The Oregon Plan for Salmon and Watersheds targets how we all work together to maintain and improve roads to keep sediment out of Oregon's rivers and streams. I am asking that hunters please do their part by staying on rock surfaced roads, following road use signs and respecting road closures. Please tread lightly and help restore Oregon's salmon. Be part of the solution."

STATE EFFORT LAUNCHED TO ELIMINATE RELEASE OF HORMONE-DISRUPTING CONTAMINANTS

Governor John Kitzhaber today signed Executive Order 99-13, which directs the Oregon Department of Environmental Quality (DEQ) to lead a statewide effort to eliminate the release of hormone-disrupting contaminants. Currently, such contaminants are not adequately addressed by pollution prevention measures and are believed to present human health and environmental risks.

Under the program, DEQ will coordinate efforts to identify, track and eventually eliminate the release of Persistent Bioaccumulative and Toxic pollutants (PBTs). PBTs comprise a broad range of contaminants that can include naturally occurring and synthetic chemicals used in industry and in the home.

"Oregon has been a leader in attacking environmental threats for many years. This approach will help us identify, track, and eliminate the release of these dangerous chemicals from Oregon's environment," Kitzhaber said.

DEQ, working with business representatives, citizens and state agencies, will collect information to identify which PBTs are released in Oregon, determine what activities generate PBTs and estimate the amounts of PBTs produced. DEQ will explore the use of technical assistance, education, economic incentives and other approaches to eliminate PBT releases. The agency will use results from these efforts to develop a range of approaches to eliminate PBT releases in Oregon by the year 2020.

PBTs are toxic and don't readily break down or decrease in potency after being released into the environment. Because they have a tendency to accumulate in the tissues of animals and plants, they can result in long-term risks even when released in small, legally permitted quantities. Hormonal disruption leads to birth defects, some cancers, and adverse effects on the nervous and reproductive systems. PBTs thus remain a concern long after they are used, generated as waste or released into the environment.

**GOVERNOR CLARIFIES POSITION ON PROPOSED
VIDEO POKER MEASURE**

An article in the Eugene Register-Guard of Tuesday, September 21, 1999 reported that Oregon Governor John Kitzhaber supports in concept a proposed initiative to eliminate video poker from the state's lottery offerings.

Today, Gov. Kitzhaber issued the following clarification of his comments:

"I want to take this opportunity to clarify my position regarding video poker. First, I am unequivocally opposed to the proposed initiative. While I believe it is important for Oregon to reduce its dependence on this source of revenue, the precipitous loss of resources, should this measure pass, would create a true budget crisis.

Revenues from the state lottery, including video poker, are currently being used for everything from education to gambling addiction treatment to economic development.

In the interview that led to these stories, I indicated that I could certainly support a measure that would phase out video poker over a six to eight year period. This would allow Oregonians the opportunity to find replacement revenue for a wide range of important state programs. This ballot measure does not do that and I will actively oppose it for that reason."

GOVERNOR SELECTS DAY ROAD PRISON SITE

Governor John Kitzhaber today accepted the recommendation of the Oregon Department of Corrections to site a women's correctional facility and intake center complex at the Day Road site.

The governor's actions follow a course prescribed in SB 686 (chapter 982, Oregon Laws 1999) which mandates a 30-day expedited super-siting process for a new state prison intake center and a new women's prison. The law also removed Dammasch State Hospital as a prison site. In accordance with SB 686, the governor issued an executive order (#EO-99-12) on August 20, 1999, commencing the process that led to today's decision.

The Legislature provided this extraordinary 30 day siting process because of the critical need for these correction facilities. The truncated timeline was adopted so that construction could begin in the spring with completion slated for April, 2002.

The \$171.7 million prison will initially house up to 324 minimum custody women, 432 medium custody women, 432 men and women in intake, and up to 64 inmates in special units (such as medical).

KITZHABER CALLS FOR NEW GOVERNANCE BODY FOR COLUMBIA RIVER FISH AND POWER

Regional Consensus Needed to Restore Environment, Preserve Affordable Electricity

In a speech before the Seattle City Club today, Oregon Governor John Kitzhaber proposed creating a new governance body for the Columbia River to replace the Northwest Power Planning Council. The new body would have an expanded membership to include tribes and the federal government and would have the authority to plan for both environmental restoration and power production.

Kitzhaber said that without developing a regional consensus on how to manage the Columbia River, the Northwest is in peril of losing the benefits of affordable power and the ability to address environmental issues in the Columbia Basin. In the speech, Kitzhaber called on the other three Northwest governors -- Gary Locke of Washington, Dirk Kempthorne of Idaho and Mark Racicot of Montana -- to develop a joint proposal to present to the Northwest Congressional Delegation before the end of the year.

That proposal would address what a new governing body would look like and would develop recommendations on the future of the Bonneville Power Administration (BPA).

"It's time to take the next step and create a regional body that will have the mission, membership and authority to deal with power issues and fish issues on the Columbia and the trade-offs between the two," said Kitzhaber.

Kitzhaber pointed out in the speech that if the Northwest region does not come together with a plan for managing the Columbia River, members of Congress might be able to force up power costs by making the BPA charge market rates for the electricity in the region. "This is equivalent to taking away the benefit of the Columbia River -- reliable, inexpensive power -- and doing nothing about the environmental costs of that system."

Kitzhaber said he was optimistic about the prospects of creating a new entity to manage power and environmental issues on the Columbia. "I think it will become increasingly clear that if we don't solve this problem, it will be solved for us by forces outside our region that don't necessarily have the best interests of the Northwest at heart," he said.

[A copy of Kitzhaber's speech is available here.](#)

GOVERNOR OUTLINES EDUCATION PROPOSALS

Initiative to Focus on Stability, Equity and Adequacy of Funding

In news conferences in Portland, Eugene and Medford, Governor John Kitzhaber announced today outlines of three proposals dealing with school funding that he will pursue through the initiative process for the November 2000 ballot.

“These proposals will begin to correct the problems with school finance that have evolved over the last decade as the state has replaced local school districts as the principal source of school funding,” Kitzhaber said. “Taken together they represent a significant change in the way we finance Oregon’s public primary and secondary schools.”

Kitzhaber said he would target mid-October for filing initiative petition language with the Secretary of State. In the interim, Kitzhaber said he would be working to perfect the proposals and determine whether they needed to constitute one, two or three separate ballot measures.

The three proposals are:

The School Stability Fund: The stabilization fund would be established as an account within the Common School Fund. It would initially be capitalized from three sources of revenue:

- A portion of the investment earnings from the Common School Fund. This could potentially amount to as much as \$50 million per biennium.
- The revenue stream from the Education Endowment Fund, established in 1995. This would mean that 15 percent of all lottery proceeds -- approximately \$80 million per biennium -- would go into the new stability fund.
- A portion of any future surplus income tax revenue. Options for doing this are still under consideration, however Kitzhaber noted that corporate and individual kicker revenues have exceeded \$1 billion over the last six years. “I firmly believe that if Oregon voters are given a reasonable proposal to save some portion of future surplus revenues to ensure quality schools, they will approve it,” Kitzhaber said.

The Equal Local Option: Kitzhaber said he will propose a constitutional amendment that directs the state to equalize, within limits, the tax effort of property-poor districts. In other words for a given tax effort -- for example 25 cents per \$1,000 of assessed value -- the Myrtle Creek School District could raise the same amount per pupil as could the Beaverton School District.

While the amount per pupil and Measure Five caps which are in existing law will remain in place, Kitzhaber said he would propose that local option elections for additional school finance can be passed by a majority of those voting.

Adequate Funding: This measure will seek to amend the Oregon Constitution to require the Legislature to provide funding adequate to meet the quality education goals established by law, or, if it fails to do so, to outline the reasons for this failure and the consequences in terms of meeting the goals.

This amendment will focus the budget debate on the adequacy of the K-12 appropriation to achieve the goals of the Education Act and will force the Legislature to be accountable for its appropriation.

Further, Kitzhaber said he would create, by Executive Order, The Commission on Quality Education which will continue work on the Quality Education Model. Prior to the 2001 session, this Commission will produce a refined model and the estimated cost needed to achieve the goals of the Education Act. This will serve as the Quality Education Benchmark for both the Governor's Recommended Budget and for the Legislature's appropriation for education.

"Adequacy, equity and stability. This proposal, if adopted, will fundamentally change how we develop and fund Oregon's education budget," Kitzhaber said.

GOVERNOR ISSUES VETOES

Governor John Kitzhaber today issued a list of 25 bills from the 1999 legislative session that he has vetoed. This list represents bills that were sent to the governor after the close of the legislative session, and on which the governor was required to give five days notice of a potential veto.

Kitzhaber said the vetoed bills, for example, presented threats to public safety, land use and the environment, tax fairness, worker protection, education and sound fiscal policy. "This legislature would have significantly changed the face of Oregon. I believe most of these bills are considerably out of touch with what Oregonians care about. I am hopeful that the next legislative session will be less contentious and partisan and that we will be able to do good work for the people of this state."

The governor previously vetoed 44 bills during the 1999 legislative session, bringing the total number of vetoes from the 1999 Legislature to 69.

Gov. Kitzhaber vetoed 52 bills from the 1995 Legislature and 43 bills from the 1997 Legislature.

The bills the governor vetoed are as follows:

Senate Bills

- [SB 115 relating to the regulation of alcoholic beverages.](#)
- [SB 428 relating to school district financing of community college classes.](#)
- [SB 497 relating to property tax exemptions for historic properties.](#)
- [SB 524 dealing with the process by which streets are vacated.](#)
- [SB 558 which allows increasing the speed limit on rural highways.](#)
- [SB 1061 relating to systems development charges for parks.](#)
- [SB 1275 relating to the "single sales factor" method of corporate taxation.](#)
- [SB 1296 which would allow the use of pilotless water skiing craft.](#)

House Bills

- [HB 2050 relating to the taxation of intangible assets.](#)

- [HB 2226 relating to child abuse reporting.](#)
- [HB 2633 which requires parental notification for abortions.](#)
- [HB 2637 which limits motor vehicle emissions testing for certain areas.](#)
- [HB 2700 which places a sunset on the Oregon Health Plan.](#)
- [HB 2793 which limits the minimum wage for restaurant employees.](#)
- [HB 2808 relating to the registration of sex offenders.](#)
- [HB 2875 relating to the hunting of cougars.](#)
- [HB 2942 relating to lottery appropriations for education.](#)
- [HB 2947 relating to charitable donation tax credits.](#)
- [HB 3049 relating to lawsuits of firearms manufacturers and dealers.](#)
- [HB 3054 relating to dog kennels on exclusive farm use zones and trespass liability.](#)
- [HB 3202 relating to pollution control tax credits.](#)
- [HB 3282 relating to the siting of churches on high value farm land.](#)
- [HB 3456 relating to environmental cleanup standards.](#)
- [HB 3605 relating to employee safety.](#)
- [HB 3607 relating to the violation of wage laws.](#)

Copies of the governor's veto messages will be available on the Governor's Office web site: www.governor.state.or.us by 12 pm or can be obtained by calling the Governor's Office.

GOVERNOR SIGNS COMPREHENSIVE JUVENILE CRIME PREVENTION LEGISLATION

Governor John Kitzhaber today signed SB 555, the juvenile crime prevention legislation. The bill was signed at the Mission Mill Museum in Salem where the Milbank Memorial Fund of New York and Educators for Social Responsibility (ESR) jointly released a case study of a model juvenile crime prevention program in Lincoln County, the Resolving Conflict Creatively Program (RCCP).

"This legislation is the culmination of a four year effort to enact a comprehensive juvenile crime prevention package in Oregon," Kitzhaber said. "It will guide expenditures of over \$50 million in state and federal funds and represents \$43 million of new state investments in youth ages 0-18. By any standard, this level of support represents a major success in our efforts to address juvenile crime."

The passage of this bill will enable Oregon's 36 counties to begin implementing the high-risk juvenile crime prevention plans presented to the governor earlier this year. The plans were developed by local children and families commissions, local public safety coordinating councils, alcohol and drug experts and various other local interests. Each plan was designed to serve the particular needs of high-risk youth in a community. Interventions range from after school programs to alcohol and drug treatment to additional detention services.

At the press conference, the Milbank Memorial Fund and ESR released a case study of the RCCP in Lincoln County. The program works to prevent juvenile violence and substance abuse in schools through conflict resolution training for young people. Linda Lantieri, Founding Director of RCCP said that "the program helps young people learn to deal with their anger differently and, as a result of the program, the majority of students in Lincoln County schools now report engaging in fewer fights, using fewer put-downs, and being more accepting of people with differences."

Daniel M. Fox, President of the Milbank Memorial Fund stated that "we commissioned this case study so that leaders in the public and private sectors and community members could learn from Lincoln County how best to put community-based violence prevention programs in place."

GOVERNOR ISSUES ADDITIONAL VETO NOTICES

Governor John Kitzhaber today issued notice of two potential vetoes. This notice is in addition to the list of **potential** vetoes the governor gave on August 17.

The governor is under no obligation to veto these bills but is required by the constitution to provide five working days notice of bills which might be vetoed. The governor has until September 3, 1999 to sign or veto bills that reached his desk after the Legislature's July 24 adjournment.

The bills are as follows:

SB 245 Relating to taxation and economic development.

HB 3292 Relating to motor carrier safety.

GOVERNOR ANNOUNCES NATURAL RESOURCE APPOINTMENTS

Governor John Kitzhaber announced today that he has appointed Geoff Huntington as Interim Executive Director for the Oregon Watershed Enhancement Board (OWEB), subject to Senate confirmation in October. In addition, he announced the appointment of Stephanie Hallock as Healthy Streams Partnership (HSP) Coordinator in the Governor's Natural Resources Office (GNRO).

Huntington is currently serving as Deputy Director of the Water Resources Department. He brings several years of experience in budgeting, fiscal management, and oversight of natural resource and water management programs to the position.

"Geoff brings the right mix of experience to fill this important new position at OWEB," Kitzhaber said. "He has a good understanding of the critical role OWEB plays in implementation of the Oregon Plan for Salmon and Watersheds and the particular importance of local efforts in restoring our watersheds."

Ken Bierly, current Program Manager for OWEB, will become OWEB's Deputy Director. The Governor expects to announce appointments to the OWEB Board in September.

Hallock is currently serving as Eastern Region Administrator for the Department of Environmental Quality, a position she has held since 1993. With a strong background in water quality issues and a track record of solving problems, Hallock will oversee and coordinate the water quality program within the Oregon Plan. She is expected to be on board on September 1.

"At a time when water quality planning in the state is heating up, having someone with Stephanie's experience to coordinate these efforts among agencies and with landowners is vital," Kitzhaber said.

GOVERNOR RELEASES LIST OF POTENTIAL VETOES

Governor John Kitzhaber today released a list of potential vetoes. The governor is under no obligation to veto these bills but is required by the constitution to provide five working days notice of bills which might be vetoed. The governor has until September 3, 1999 to sign or veto bills that reached his desk after the Legislature's July 24 adjournment.

The Bills on which the governor gave notice are as follows:

Senate Bills

- Senate Bill 82 relating to unitary assessments and financing of family law courts.
- Senate Bill 115 relating to the regulation of alcoholic beverages.
- Senate Bill 428 relating to school district financing of community college classes.
- Senate Bill 497 relating to property tax exemptions for historic properties.
- Senate Bill 524 dealing with the process by which streets are vacated.
- Senate Bill 558 which allows increasing the speed limit on rural highways.
- Senate Bill 874 relating to the taxation of Oregonians working overseas.
- Senate Bill 1061 relating to systems development charges for parks.
- Senate Bill 1275 relating to the "single sales factor" method of corporate taxation.
- Senate Bill 1296 which would allow the use of pilotless water skiing craft.
- Senate Bill 1304 which provides greater compensation for jurors.

House Bills

- House Bill 2050 relating to the taxation of intangible assets.
- House Bill 2226 relating to child abuse reporting.
- House Bill 2633 which requires parental notification for abortions.
- House Bill 2637 which limits motor vehicle emissions testing for certain areas
- House Bill 2700 which places a sunset on the Oregon Health Plan.
- House Bill 2753 which provides a local financing option for school districts.
- House Bill 2793 which limits the minimum wage for restaurant employees.
- House Bill 2808 relating to the registration of sex offenders.

- House Bill 2875 relating to the hunting of cougars.
- House Bill 2901 relating to property tax exemptions.
 - House Bill 2942 relating to lottery appropriations for education.
 - House Bill 2947 relating to charitable donation tax credits.
 - House Bill 3049 relating to lawsuits of firearms manufacturers and dealers.
 - House Bill 3054 relating to dog kennels on exclusive farm use zones and trespass liability.
 - House Bill 3202 relating to pollution control tax credits.
 - House Bill 3282 relating to the siting of churches on high value farm land.
 - House Bill 3304 relating to the forfeiture of vehicles.
 - House Bill 3456 relating to environmental cleanup standards.
 - House Bill 3605 relating to employee safety.
 - House Bill 3606 relating to pollution control tax credits.
 - House Bill 3607 relating to the violation of wage laws.

Once again, the governor is under no compulsion to veto bills because he has given notice of potential veto. As of the end of the session, Gov. Kitzhaber had vetoed 44 bills.

**WORKS BY SALEM RESIDENT LOGAN GRIDER
ON DISPLAY IN THE GOVERNOR'S OFFICE**

An exhibition featuring oil paintings by Salem-area artist Logan Grider will be on display in the Governor's Office through September 6. A reception will be held for the artist on August 19 from 4:30 to 6 pm. This display is part of the Art in the Governor's Office program.

Grider is a recent graduate of South Salem High School and will be attending The School of the Art Institute of Chicago in the fall. He has worked with a diverse range of media including paint, wood, stone, wire and glass. Grider describes his works as "rich with expression and movement".

Grider, the son of Capitol Visitor Services director Chane Griggs, has attended classes at the Pacific Northwest College of Art, South Salem High School, Oregon State University, as well as private art lessons with well-known Oregon artist James Kirk. He received the 1999 Salem Art Association Merit Award, the 1998 and 1999 Salem/Keizer High School Art Exhibition Outstanding Painting Award, and Honorable Mention in the 1997 Congressional Art Competition for High School students. Grider is also very active in the community and has volunteered nearly 200 hours working with children at McKinley Elementary School in Salem.

**GOVERNOR CALLS ON FEDERAL GOVERNMENT TO
RELEASE TOBACCO PREVENTION FUNDS**

As many as 3,000 Oregonians could be denied treatment for drug and alcohol problems if the federal government continues to withhold millions of dollars in grant funds, Gov. John Kitzhaber said today.

Kitzhaber said the federal Substance Abuse and Mental Health Services Administration (SAMSHA), part of the U.S. Department of Health and Human Services, continues to hold back approximately \$6 million of a grant to Oregon because of a dispute over the state's progress in reducing tobacco sales to minors.

"Oregon has made tremendous progress and continues its strong commitment to reducing tobacco use," Kitzhaber said. But because of a technical disagreement over Oregon's compliance with the federal government's tobacco-reduction requirements, SAMHSA is withholding a large part of Oregon's block grant."

Officials in the Office of Alcohol and Drug Abuse Programs (OADAP) say Oregon is meeting its goals for reducing minors' ability to buy tobacco. OADAP sponsors yearly "stings" in which youths, accompanied by Oregon State Police, attempt to buy tobacco products at stores throughout the state.

The operations are called Synar inspections after former Congressman Mike Synar of Oklahoma. States are required by the federal government to meet specific goals in reducing minors' access to tobacco.

The number of illegal sales to minors has dropped from 38.9 percent in 1995 to 19 percent this year, with data collection nearly complete from the current sting operations. The goal is a sales rate of less than 20 percent.

"We are meeting the federal requirements, and SAMHSA's interpretation of the state's compliance is inaccurate," Kitzhaber said. "The federal government set unreasonable targets for Oregon's progress, and now is penalizing us for our success."

Kitzhaber pointed out that Oregon has demonstrated a firm commitment to reducing youths' use of tobacco. For example, Oregon:

- Initiated the Synar inspections in 1994, a year ahead of the required schedule.
- Increased its cigarette tax from 30 cents to 68 cents a pack and dedicated percent of the revenue to tobacco prevention and education.
- Established active tobacco-free coalitions in all 36 counties and funded prevention and education programs in all nine Native American tribes.
- Implemented a statewide "quit line" and supports a public-awareness campaign that reached 76 percent of adults and 85 percent of teens.
- Initiated comprehensive tobacco prevention projects in 58 school districts reaching more than 170,000 students.

Kitzhaber said that if the grant money isn't received soon, there will be serious harm to Oregon's alcohol and drug treatment and prevention programs. He said detoxification and residential treatment facilities supported by OADAP with grant money could be forced to close for up to a year.

**GOVERNOR ANNOUNCES SCHEDULE
FOR DECISIONS ON LEGISLATION**

Governor John Kitzhaber today announced that under legislative rules, he has until September 3, 1999 to take action on all bills passed by the 1999 Legislature.

During this time, the governor must give five days notice on any bill that he -may veto. This notification, however, is only notice of a potential veto, and does not necessarily mean that he will veto bills on which he has given notice.

To date, the governor has vetoed 40 bills from the 1999 legislative session. A complete list of the status of all bills sent to the governor and all veto messages can be obtained on the governor's web site: www.governor.state.or.us or by calling the Governor's Office.

**GOVERNOR TO MEET WITH OREGON
GOODWILL AMBASSADORS**

Governor John Kitzhaber will meet with three Japanese "Oregon Goodwill Ambassadors" during a series of events on Sunday, July 11, 1999. The media is invited to cover their meeting at 1:15 p.m. at the 5th Avenue Suites Hotel in downtown Portland. The governor and Ambassadors will be available for a brief press conference at 1:45 p.m.

Oregon Goodwill Ambassadors, appointed by the governor, are six influential individuals who represent Japan's business, sports and entertainment industries and have a significant personal and or professional affiliation with Oregon. Each has agreed to work together to advise the governor on opportunities to strengthen the cultural, educational, and economic ties between the people of Oregon and Japan.

The program officially began in 1995, when Governor Kitzhaber designated Mr. Hisashi Hieda, president of Fuji Television Network, the first ambassador. Mr. Hieda began his relationship with Oregon in 1984 as the executive producer of the highly successful weekly Fuji program called "From Oregon with Love," and has continued to promote ties between Oregon and Japan with projects such as the siting of Tokyo International University's branch campus at Willamette University in Salem.

The other Ambassadors who will meet with the governor include Mr. Nobuyuki Idei, President of Sony Corporation, and Mr. Kiichi Nakai, one of the most widely respected and popular actors in Japanese television and cinema. Sony's founder, Akio Morita, first introduced Oregon to Japan's business community in the mid-1980s. Sony established a significant corporate presence in Oregon in 1994 with the opening of Sony Disc Manufacturing Corporation in Springfield.

GOVERNOR VETOES LEGISLATION THREATENING OREGON'S ENVIRONMENT

Governor John Kitzhaber announced today that he has vetoed three pieces of legislation that would do harm to Oregon's environment.

One of the bills, SB 474, relates to land use. The other two, SB 988 and SB 1166, relate to marine mammals and Outstanding Resource Water designation, respectively.

The governor also vetoed SB 849, which relates to highway access, and SB 5521, the budget for the Bureau of Labor and Industries.

Copies of all five veto messages are attached.

GOVERNOR VETOES ENGINEERING EDUCATION INVESTMENT FUND BUDGET

Governor John Kitzhaber announced today that he has vetoed HB 5060, the budget for the Oregon Engineering Education Investment Fund.

In vetoing this bill, the governor expressed his support for Oregon's growing high technology industry, but also said that he regrettably could not sign this bill because a final agreement on the state budget has not yet been reached. In particular, Kitzhaber expressed concern that the tobacco settlement revenue has been removed from current budget negotiations.

GOVERNOR VETOES HB 2657 AND HB 5055

Governor John Kitzhaber vetoed HB 2657 on June 28. HB 2657 would have preempted the ability of local governments to impose a construction excise tax on the construction of real property improvements or other land development.

Today, Gov. Kitzhaber vetoed HB 5055, the budget for the Oregon Youth Authority. In his veto message, the governor stated "I am vetoing the Oregon Youth Authority budget so that we can consider a comprehensive package of funding for children, youth and their families consistent with the expectations set in our negotiations of Senate Bill 555."

Copies of the governor's veto messages are attached.

GOVERNOR VETOES COMMISSION ON CHILDREN AND FAMILIES BUDGET

Governor John Kitzhaber today vetoed SB 5504, the budget for the Commission on Children and Families.

In his veto message, the governor stated "I cannot accept as adequate Oregon's investment in children and youth until other critical elements in that continuum are funded. I will continue to work with the legislature until we have adequately addressed the needs of not only the youngest of our children, but at-risk youth and their families as well."

A copy of the governor's veto message is attached

GOVERNOR RELEASES SALMON PROGRESS REPORT

Governor John Kitzhaber today released the second annual report of the Oregon Plan for Salmon and Watersheds. The annual report provides examples of progress and a candid assessment of the challenges to be addressed as the Oregon Plan gains momentum.

"The Oregon Plan is gaining momentum around the state as Oregonians take on the challenge of watershed stewardship," said Kitzhaber. "It has gained the support of the timber industry, farmers, ranchers, conservationists, fishermen, local governments, and urban and rural residents. I am extremely pleased with what we have accomplished in first two years of this collaborative effort."

The Oregon Plan for Salmon and Watersheds is an unprecedented effort to restore salmon populations and water quality in Oregon. Although based on existing state and federal regulations, the Oregon Plan's greatest asset is the promotion of locally-based voluntary commitments to improve watershed health. The premise of the Oregon Plan is that the recovery of species, particularly on private lands, requires the cooperative efforts of individual landowners, industry and government.

Highlights from the report include the following:

- Oregon is famous for beautiful rivers and lakes. However, some streams are no longer healthy for fish or people, and many of our salmon runs are in trouble. A number of fish species have received listings under the Endangered Species Act and water quality problems exist in parts of rivers throughout most of Oregon.
- The strength of the Oregon Plan is connecting neighbors to watershed restoration efforts in their communities. State and federal agencies, private landowners, local governments, and industries are working together for the first time to address issues ranging from fish passage to increasing streamflows.
- Today, 92 watershed councils and 45 soil and water conservation districts are engaging Oregonians and private landowners in the restoration of salmon and watershed health. To date, over 1,500 individual conservation plans to restore watershed health have been developed on agricultural lands, resulting in 360,000 acres of grazing management systems, 5,000 acres of restored riparian habitat, and one million tons of topsoil staying on farms

and out of streams.

- In 1998, about 300 culverts at road crossings were improved for fish passage on private and state forestland, opening 200 miles of streams for fish. Volunteers and landowners completed nearly 200 instream projects to improve fish production in 1998. Four hundred miles of roads on private forest industrial land and state forestlands were improved for slope stability and erosion control.
- There is no quick-fix for achieving and sustaining watershed health. Although the Oregon Plan is bringing Oregonians with different interests together to achieve a common goal, long-term success will require similar collaboration and commitment by future generations.

The 48 page annual report will be available at local watershed councils and local soil and water conservation districts, or by calling the Governor's Natural Resources Office at 503-378-3589 extension 821. The report will also be available in July on the Oregon Plan web site at www.oregon-plan.org.

GOVERNOR AUTHORIZES SPENDING FOR 100 NEW STATE TROOPERS

Governor John Kitzhaber today signed the Oregon State Police Budget, which authorizes \$165.5 million in general fund dollars, reversing an 18 year decline in funding for this state agency. The budget will add 100 new patrol positions and will increase the department's forensic and criminal identification services. Gov. Kitzhaber was joined at the signing ceremony by State Police Superintendent LeRon Howland, Senate President Brady Adams, House Speaker Lynn Snodgrass, Senator Lenn Hannon and Representative Kurt Schrader.

"There is no question that this effort will make the Oregon State Police a stronger organization," said Kitzhaber. "This budget will enable officers to respond more quickly to transportation and crime problems, and it will make our state highways safer for all those who travel for work or recreation."

Gov. Kitzhaber recognized the Oregon State Legislature, Supt. Howland, Jim Botwinis, President of the Oregon State Police Officer's Association and Lloyd Clodfelter of "Help our Troopers" for working in collaboration to pass this budget.

"This budget represents the beginning phase of restoring a greater level of patrol services to local communities," said Supt. Howland. "Once fully phased in, the new uniform patrol troopers will provide for an enhanced level of police response to local transportation safety and crime issues."

GOVERNOR SIGNS PACIFIC SALMON AGREEMENT

Governor John Kitzhaber today joined Washington Gov. Gary Locke, Pacific Salmon Commission Tribal Rep. Ted Strong, Special White House Rep. Lloyd Cutler and Canadian Fisheries and Ocean Minister David Anderson to sign the Pacific Salmon Agreement in Vancouver, British Columbia and Seattle, Washington.

The Pacific Salmon Agreement is the result of an intensive series of negotiations that have extended over several years. It has been submitted to the US and Canadian governments for formal approval.

"This agreement ushers in a new age of cooperation between the US and Canada in management of salmon stocks," said Gov. Kitzhaber. "It provides a firm basis for salmon recovery efforts in the region such as the Oregon Plan for Salmon and Watersheds. In short, this agreement is good news for salmon."

Key features of the agreement include:

- Establishment of "abundance based fishing regimes" for the major salmon intercepting fisheries in the US and Canada. In essence, larger catches will be allowed when abundance is higher and, importantly, catches will be significantly constrained in years when abundance is down.
- Creation of two bilaterally-managed regional funds. The funds would be used to improve fisheries management and aid recovery of weakened salmon stocks. Subject to the availability of appropriated funds, the US will contribute \$75 million and \$65 million to a northern and a southern fund respectively, over a four-year period.
- The agreement includes provisions to enhance bilateral cooperation, improve the scientific basis for salmon management, and apply institutional changes to the Pacific Salmon Commission.

GOVERNOR VETOES UMATILLA PRISON SITE BILL

Governor John Kitzhaber today vetoed Senate Bill 3, which would have sited a new intake center and women's correctional facility in Umatilla.

With this veto, the intake center and women's correctional facility will be sited at the Dammasch site in Wilsonville. Gov. Kitzhaber said in his veto message, however, that he remained hopeful that the Legislative leadership will allow consideration of new legislation that would site these facilities at the Day Road site in Wilsonville.

A copy of the governor's veto message is attached.

GOVERNOR PRAISES PASSAGE OF COLUMBIA RIVER GORGE COMMISSION BUDGET

Governor Kitzhaber today expressed his appreciation to Senator Ted Ferrioli and the members of the Ways and Means subcommittee on Natural Resources for their passage of the Columbia River Gorge Commission budget.

"I appreciate the hard work Senator Ferrioli has undertaken to bring together the many constituencies interested in this budget," Kitzhaber said. "While this budget differs somewhat from my proposed budget, it is solid and will allow the Commission to provide protection to the magnificent resources of the Gorge and services to its residents."

The Columbia River Gorge Compact with the State of Washington requires Oregon and Washington each to provide half of the funding for the Gorge Commission. Washington has already passed its half of the budget in its recently completed legislative session.

**GOVERNOR AND FEMA DIRECTOR JAMES LEE WITT SIGN
WILLAMETTE RIVER AGREEMENT**

Governor John Kitzhaber and Federal Emergency Management Agency (FEMA) Director James Lee Witt today signed a partnership agreement implementing the American Heritage River (AHR) program on the Willamette River. The Willamette was designated an AHR by Presidential Executive Order in July 1998. It is one of only 14 rivers nationwide to receive such a designation.

"This Memorandum of Agreement will ensure that the Willamette River continues to be the vital resource that we have relied on during our rich history," said Kitzhaber. "I welcome the spirit of collaboration embodied in this document, and I look forward to working in partnership with the federal government to bring national resources to bear on local problems and local needs."

"The Willamette River partnership represents a national model for local communities, states, and the federal government to work together to preserve our precious waterways," said FEMA Director Witt. "The actions taken by the Willamette Restoration Initiative will also help communities throughout the Willamette River Basin prevent future disasters."

The Memorandum of Agreement was signed by more than 20 federal agencies, OSU President Dr. Paul Risser, Chair of the Willamette Restoration Initiative (WRI), as well as Gov. Kitzhaber and Director Witt. By signing, each of these agencies agreed to work in a coordinated and collaborative manner to implement the AHR program and preserve the Willamette River as an economic, environmental and cultural resource in Oregon.

The WRI, established by Gov. Kitzhaber's Executive Order in 1998, will oversee the American Heritage Rivers Program on the Willamette. The AHR program will protect the Willamette through a "river navigator" -- a federally funded position devoted to helping communities along the river obtain additional resources for local needs, and assure cooperation from federal agencies.

Gov. Kitzhaber and Director Witt signed the Memorandum of Agreement at Salem's River Front Park. To close the ceremony, Aaron Wells, a 12 year-old attending Roosevelt Middle School in Eugene, read his poem entitled "Amazon Slough Watershed." Aaron is the 1999 recipient of the River of Words International Children's Environmental Poetry & Art Contest co-sponsored by the Library of Congress and the International Rivers Network. Aaron also received the State of Oregon Public Teachers Association 1999 Poetry Award for his poem "McKenzie River Paradise."

**GOVERNOR AND FEMA DIRECTOR JAMES LEE WITT TO
SIGN WILLAMETTE RIVER AGREEMENT**

Governor John Kitzhaber and Federal Emergency Management Agency (FEMA) Director James Lee Witt will sign a partnership agreement for implementing the American Heritage River (AHR) program on the Willamette River. The event will be held on Tuesday, May 25 at 11:30 a.m. at the River Front Park Amphitheater in Downtown Salem.

The Willamette River is one of only 14 rivers nation-wide designated an American Heritage River. This program will create a federally funded position that will match local, community-defined needs with available federal resources. Over 20 federal agencies will sign the agreement along with the Governor and James Lee Witt.

GOVERNOR SUBMITS NEW APPOINTMENTS

Governor John Kitzhaber submitted the following names for consideration by the Oregon Senate to various state boards and commissions. The Senate is expected to consider these appointments within the next month.

Among the appointments made was Gerry Richmond of Eugene to the State Board of Higher Education. Richmond is a Professor of Chemistry at the University of Oregon and also routinely trains graduate students employed in high technology companies in Oregon. Richmond is the first faculty member to be appointed to the Board.

Board	First Name	Last Name	City
Board of Boiler Rules	John	Endicott	Tualatin

**GOVERNOR AND SHARON KITZHABER TO
HONOR OUTSTANDING STARS TEEN LEADERS**

Governor Kitzhaber and Oregon's First Lady Sharon Kitzhaber will honor 230 STARS (Students Today Aren't Ready for Sex) teen leaders from eight counties across Oregon on May 21 at 4 p.m. The event will be held at the Hollywood Bowl, 4030 NE Halsey in Portland.

"This event celebrates the positive influences teen leaders can have on their peers," said Sharon Kitzhaber, a board member of the STARS Foundation. "This afternoon we honor these teen leaders and recognize their accomplishments."

Gov. Kitzhaber, joining his wife at the celebration, said "programs like STARS, that link young people with positive role models, are likely to keep them out of trouble and in school. This not only helps prevent teen pregnancy but can help stop the kind of teen violence that is plaguing our nation."

STARS is an abstinence-based teen pregnancy prevention program aimed at sixth and seventh graders taught by teen leaders who deliver the message "it's best for teens not to have sex." Teen leaders model positive, responsible attitudes and behaviors for younger adolescents. STARS is a public private partnership supported by the Multnomah County Health Department, Oregon Health Division, and the STARS Foundation. STARS is based on the Postponing Sexual Involvement curriculum developed at Grady Memorial Hospital in Atlanta. The curriculum focuses on skill building and providing teens with the tools to resist sex, alcohol, drugs, and criminal behavior.

The STARS Foundation is supported by individual, business, and foundation contributors. The teen leader celebration at Hollywood Bowl was paid for through a grant from the PacifiCorp Foundation.

May 3, 1999

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, OR 97310

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear Lynn and Brady:

I am writing concerning the higher education budget which I understand contains an appropriation of \$88.6 million above the Oregon University System base -- \$15.6 million more than I have included in my recommended budget. In addition, I understand you have recommended \$4.9 million for items requested by the engineering industry and the technology council and another \$2 million for statewide programs at Oregon State University in agriculture and forestry.

I am writing to request that you not send me this budget until we have had an opportunity to clarify the overall budget plan. I want to make it clear that I am conceptually in support of this additional investment, as I believe that OUS both needs and deserves it. In addition, I would support additional resources for enrollment growth in our community colleges.

However, until we have some agreement on the larger budget picture, it is not clear where these additional expenditures will come from. Therefore, I would like to suggest that you hold this budget for the time being.

Once the May revenue forecast has clarified the revenue picture, the bipartisan legislative leadership can discuss the higher education budget in the context of the larger budget picture. An alternative would be to simply hold the education budgets and determine how we will allocate our resources as part of an exit plan.

I feel that we must have some degree of budget integrity and that we should not be increasing our expenditures without some clear idea -- and hopefully agreement -- on where these resources will come from.

Sincerely,

John A. Kitzhaber, M.D.

April 30, 1999

Tom Imeson - Chair
State Board of Higher Education
c/o Pacificorp
825 NE Multnomah - Suite 2000
Portland, OR 97232

Dear Tom:

I am writing to clarify a number of issues surrounding the proposed Oregon University System (OUS) budget. As you know, I have been a strong supporter of higher education for over 20 years. In my first term as governor, I froze tuition and made modest progress in reversing what has amounted to a decade of disinvestment in our post-secondary institutions. In my 1999-2001 budget I have recommended another substantial investment toward that end.

I believe that today higher education is more important than ever -- not only for the individuals who earn a college degree, but also for the state's economy and for the quality of life we all enjoy. Oregon's colleges and universities are already valuable assets, but we will demand even more from them in the 21st Century. It was for these reasons that I initiated the process that led to the development of the new budget model for higher education. In my 1999-2001 recommended budget I have backed up my commitment with enough money to not only maintain the current service level, but also to add another \$73 million above the base to implement the new budget model.

The legislative leadership has recommended a figure of \$88.6 million above the base for the OUS, plus \$4.9 million for items requested by the Engineering Industry and Technology Council, and another \$2 million for statewide programs at Oregon State University in agriculture and forestry. As you know, I am considering whether or not to veto the appropriation bill authorizing this additional funding -- on the surface, a perplexing position for someone who has long been a supporter of higher education.

As a consequence, various OUS constituencies have contacted my office over the past two weeks with two requests: 1) to negotiate with the legislative leadership over the OUS budget number, and 2) to discuss "K-16" when talking about the need for additional revenue for education. The purpose of this letter is to clarify my position and to respond to these two points.

Negotiating with the Legislature

I am more than willing to negotiate with the legislature over this issue. However, there are two things you should note about the increased funding recommended by the leadership. First, while the leadership's proposal does recommend \$15.6 million more than what I have included in my budget, it also caps the investment in the higher education budget model at this level. In contrast, I have committed to fully funding the \$116 million level requested by OUS over a two biennia period. The \$73 million was the first investment and I have made a commitment to invest the additional \$43 million in the 2001 - 03 biennium to achieve a total investment of \$116 million. To settle for the short term increase recommended by the legislature -- at the expense of a larger investment over time -- seems to be both short-sighted and counter-productive.

Of greater concern to me, however, is the fact that while I have produced a balanced budget, the Republican leadership in the House and Senate has not. This raises serious questions concerning where the extra money proposed for OUS, statewide programs, and engineering initiatives will come from. Will part of this increase be funded by taking students off the Oregon Health Plan? Will we finance it by cutting child protective services? Will we reduce our efforts to stem the tide of juvenile violence? Will we take it out of the Head Start program?

These are not insignificant questions and if we expect an accountable budget process from our state government -- and assuming we are willing to hold ourselves to the same standard -- then the tradeoffs involved in balancing the budget must all be on the table at the same time.

For that reason, I have requested that the leadership not send me the OUS budget ([see attached letter](#)) -- or any other bills appropriating substantial increases above my recommended budget -- until the legislative leadership provides a balanced budget plan.

This last sentence is very important. I have not said that I am unwilling to negotiate. In fact, there is nothing I would rather do than increase my appropriation for the OUS and to provide resources necessary for enrollment growth in our community colleges. This leaves us with two choices. One option is for the legislative leadership to provide me with a balanced budget plan as the basis for negotiations at this point in the session. The alternative is to deal with higher education, community colleges and K-12 as part of the exit strategy. I'm willing to do either.

Let me be clear -- it is not that I don't believe we need additional investments in higher education. I do, however, I also believe that in order to develop an equitable budget plan across the continuum of education, we need both budget discipline and accountability.

The Education Continuum

I have never discussed increased funding for K-12 in a vacuum. In fact, in my speech on March 15, in which I recommended a K-12 funding level of \$4.95 billion -- I said the following: *"We must stop pitting one part of our school system against another. We must stop pretending that education starts with kindergarten and ends with high school graduation. We must face the fact that robbing early childhood programs and higher education in order to help fund K-12 is not an acceptable tradeoff. In effect we have been undermining the quality of our post-secondary institutions and making them too expensive for many high school graduates to attend -- and we can simply not afford to continue to do so."*

At my Portland City Club speech on April 16, I said the following: *"Most Oregonians agree that giving our children the education they need is in everyone's best interest. And I also think that there is general agreement that we need to increase our investment in our schools -- not only in primary and secondary schools, but in universities and community colleges as well. Whereas, I will speak mostly about primary and secondary education today, I want everyone to know that I will continue to push for increased funding for our colleges and universities."*

In short, I am well aware of the fact that we need substantial investments throughout the education continuum, and I will continue to be outspoken on this objective.

I think it is also important for you to recognize that the appropriation for K-12 in my recommended budget does not even maintain the current service level for our primary and secondary schools. My community college appropriation is at the current service level with no increase. Within the same budget, however, I have increased the OUS budget by \$73

million above current service level. I have also drawn a bright line concerning the \$73 million increase as the floor. I will do whatever is necessary to protect at least this level of funding. It is also important to note that the increased funding I have recommended for K-12 does not come at the expense of other parts of the education system.

As I have shared with you before, the worst thing for education in Oregon would be for the various elements of the continuum (Pre-K, K-12, community colleges, OUS) to begin fighting with each other over a finite resource. As the old saying goes, "United we stand, divided we fall."

I hope this clarifies my position on the issues raised by supporters of higher education and that it helps shed some light on the policy considerations which I must weigh. I realize that the dynamics of this particular legislative session are producing stress and discomfort among the OUS constituency. Much of that is beyond my control, but we can minimize it by keeping communication channels open and by keeping our eye on the long term goal. I look forward to working with you in the months ahead.

Sincerely,

John A. Kitzhaber, M.D.

GOVERNOR APPOINTS MEDFORD MAYOR LINDSAY BERRYMAN TO OREGON PROGRESS BOARD

Governor Kitzhaber announced today that he has appointed Lindsay Berryman to be the newest member of the Oregon Progress Board. The Progress Board is responsible for overseeing implementation of the state's strategic plan, Oregon Shines and measuring progress toward achieving the goals set out in the Oregon Benchmarks.

Lindsay Berryman was elected the first woman mayor of Medford, Oregon in November 1998. Lindsay previously served on the Medford City Council between 1980 and 1986 and held the position of Council President in 1983 and 1986. Most recently she was a member of the Medford Urban Renewal agency and has worked extensively on transportation issues within the city.

"Mayor Berryman will be a great asset to the Progress Board," Kitzhaber said. "To achieve the vision set out in Oregon Shines, Oregonians must work together to reach its goals. Lindsay knows what it takes to get things done at the community level."

Before becoming mayor, Berryman was owner and president of the Cookie Connection, Inc. in Medford. Her other professional experiences include owner/broker of L & B Associates, assistant director of the Winema Girl Scout Council and dispensing nurse with Jackson County Mental Health.

Berryman is presently a member of the boards of the Oregon Shakespeare Festival and American Leadership Forum, Oregon chapter. During her career she has received many honors including: National Award for Excellence in Volunteer Leadership, Midwest Center for Non-Profit Leadership; Woman of the Year, Zonta Club of Medford; Glen Jackson Award, Chamber of Commerce Award for Economic Development; and Rogue Valley Citizenship Award, Women Entrepreneurs of Oregon.

Berryman is a graduate of the James Ward Thorne School of Nursing at Northwestern University and also holds a Bachelor of Science degree in Business Administration from Southern Oregon University. She is married to Medford physician Jim Berryman, has three adult daughters and one grandchild. She fills the seat recently vacated by Patsy Smullin, owner of California Oregon Broadcasting, Inc. in Medford.

GOVERNOR EXPRESSES CONDOLENCES, SHOCK IN KILLING OF STATE PARK EMPLOYEE

Orders Flags Flown at Half-Staff Through Sundown, Wednesday April 28

Governor John Kitzhaber, on state business in Washington, D.C., released the following statement in regards to the fatal shooting today of Oregon State Park Ranger Danny Blumenthal at Oswald West State Park:

"I am deeply saddened and shocked by the killing of Oregon State Park Ranger Danny Blumenthal in Oswald West State Park today and at the wounding of his fellow Ranger John Kerwin.

We take for granted the safety of our roads, streets, parks and public places. We should not. They are made safe by dedicated employees -- whether they are corrections officers, police officers or park rangers.

On behalf of myself and all Oregonians, I extend my condolences to Mr. Blumenthal's family and my best wishes for a full and speedy recovery for Mr. Kerwin.

In recognition of Mr. Blumenthal's death in the line of duty, I have ordered that flags be flown at half-staff until sundown, Wednesday. I ask that all Oregonians take a moment to pause and reflect at the loss of Danny Blumenthal's life and at the daily risks taken by men and women in the cause of public safety."

GOVERNOR CREATES NEW CARISSA REVIEW COMMITTEE

Governor John Kitzhaber today announced the formation of a nine-member State New Carissa Review Committee. The committee will review issues surrounding the grounding of the New Carissa, examine local, state, and volunteer involvement and identify ways to improve oil spill planning, prevention and response by state and federal agencies. All nine members are appointed by the governor.

The members appointed to the committee are State Reps. Mike Lehman (Chair), (D-Coos Bay), Terry Thompson (D-Newport), State Sen. Veral Tarno (R-Coquille), Coos Bay Mayor Joanne Verger, Lincoln County Commissioner Jean Cowan, Jack McGowan, Executive Director, S.O.L.V., Allan Rumbaugh, General Manager, International Port of Coos Bay, Nick Furman, Executive Director, Dungeness Crab Commission, and Fran Recht, Program Manager, Pacific States Marine Fisheries Commission.

An initial organizational meeting will be held April 30 at the Hatfield Marine Science Center in Newport. A subsequent meeting with opportunity for public comment is being planned and will be held in May in Coos Bay.

**GOVERNOR, CHINESE AMBASSADOR ANNOUNCE
SUSTAINABLE DEVELOPMENT AGREEMENT**

Governor John Kitzhaber and Chinese Ambassador to the United States, Li Zhaoxing announced today the signing of a Memorandum of Understanding between the Chinese Ministry of Science and Technology and the State of Oregon to establish a China-U.S. Center for Sustainable Development. The memorandum was officially signed April 9, 1999 in Washington, D.C. by China's Director General of Rural and Social Development, Liu Yanhua, and Oregon's Director of Economic Development, Bill Scott.

The China-U.S. Center for Sustainable Development will facilitate exchanges between the People's Republic of China and the United States regarding sustainable development issues. Oregon is a leader in sustainable development practices, that being the integration of environmental, social and economic factors in making decisions impacting the future. China is making serious efforts to integrate environmental factors into its economic planning and has expressed a desire to learn from Oregon's expertise.

"Oregon has capabilities in a number of areas that can benefit China's efforts, such as grass seed for erosion control, forestry expertise and products for watershed management and sustainable yields, energy conservation and management capabilities, environmental technologies, transportation and communication products, services and technologies," Kitzhaber said.

Official witnesses to the signing were Oregon State Senator Mae Yih and China's Minister of Science and Technology, Zhu Lilan. Joining them for the ceremony at the National Academy of Science was the President of the Academy, Dr. Bruce Alberts.

GOVERNOR UNVEILS SCHEDULE, PRINCIPLES FOR SCHOOL FUNDING; PROPOSES ACCOUNTABILITY MEASURES

In speeches today before the Portland City Club and the statewide convention of the Oregon PTA in Springfield, Governor John Kitzhaber announced a timeline by which he would develop a school funding proposal and principles that would help shape that proposal. He also proposed new accountability measures for the state's primary and secondary school system.

Kitzhaber said he would unveil a school funding measure by August 1, 1999 and take steps to put that measure on the general election ballot for the year 2000. He said he would be guided by the principles of creating greater stability in school funding, maintaining Oregon's competitive business climate, and ensuring that any new money would be tied directly to activities that can be demonstrated to improve student performance.

Further, Kitzhaber made two proposals that would help increase the accountability of school districts:

- Introduce legislation creating a progressive series of interventions in school districts that fail to get 90 percent of their students to meet the standards of the Education Act for the 21st Century. Schools that do not show sufficient progress would be subject to reviews and performance audits by the Oregon Department of Education. "The goal is not to penalize schools and their students," said Kitzhaber. "The goal is to provide them with the assistance necessary to improve."
- Commit to work with legislators and educators this session to create greater accountability for spending decisions made at the 198 school districts in Oregon. Currently, Kitzhaber pointed out, there is a disconnect between spending decisions made at the local school district level and funding decisions made by the state legislature.

"Since 1991 when school funding became a state responsibility, there has been a growing disconnect between local decisions and state funding," said Kitzhaber. "We need to provide Oregon citizens greater assurances that their school dollars are being used wisely."

GOVERNOR ISSUES STATEMENT ON PERMIT EXTENSIONS FOR WATER RIGHTS ON STATE-OWNED LANDS

Governor John Kitzhaber issued the following statement today on the Oregon Water Resources Department's Proposed Final Orders (PFOs) on the Boeing Agricultural Industrial Company and Inland Land Co. Permit Extensions near Boardman, OR:

"I commend the Oregon Water Resources Department, the Oregon Department of Fish and Wildlife, Boeing and Inland Land for their collaborative efforts that the PFO issued today represents. I believe the PFO, with its important conditions that promote environmental stewardship, is a fair compromise for all parties.

Through the PFO, the State has granted Boeing and Inland a six year extension of time to develop their lands leased from the state beyond the otherwise applicable August 5, 1999 cutoff date. The multi-million dollar agricultural development will focus on the food crops that can be processed and packed in existing and future plants in Eastern Oregon.

In return for the extension, the PFO allows Boeing and Inland to develop only about half the acreage and use only about half the water that would otherwise be available to them for such development because of the presence of sensitive and threatened species.

Additionally, the PFO requires a significant amount of the water used for the new agricultural development to come from a nearby reservoir, thereby minimizing depletion of Columbia River flows during critical salmon migration periods. The water that does come from the Columbia River during these critical periods will be mitigated through the purchase of in-stream water rights, focusing on the Columbia River tributaries where the listed salmon spawn and rear. These water rights will be paid for out of a \$2 million fund the PFO requires Boeing and Inland to create.

Finally, approximately 15,000 acres of undisturbed shrub steppe habitat -- home to the threatened Washington ground squirrel and other important animal and plant species -- will be removed from the control of Boeing and Inland some 40 years before their lease rights end, and will immediately be made available for protection.

I see this as another example where, after years of accusations and litigation, the difficult problem of harmonizing the needs of the environment with the need for vibrant economies and communities has been collaboratively addressed. I believe this underscores the need for collaboration as an important tool in addressing our many future public policy challenges."

GOVERNOR CALLS ON REPUBLICAN LEADERSHIP TO BALANCE BUDGET

Governor John Kitzhaber called on Republican leadership today to present a balanced budget proposal demonstrating how they would fund schools and other state services.

"The legislative session is slipping away and we have yet to see a budget plan that balances," Kitzhaber said. "The Legislature is beginning to consider large budgets and they have shown no way to pay for them."

"I presented a balanced budget in December of 1998. I have re-balanced that budget and presented a way to finance a significant increase in funding for our children's schools," Kitzhaber said. "The Republican leadership in the House and the Senate need to do the same."

"Until that time, I will be forced to veto budgets that exceed my spending plan," Kitzhaber said. For example, Kitzhaber pointed out that the budget for the state's system of higher education was currently under consideration and outspent his own balanced budget proposal for higher education by \$27 million.

"The leadership has no idea where that money is going to come from. While I welcome the opportunity to consider investing even more in higher education, I cannot responsibly do so without knowing what the overall legislative budget plan is and where the trade-offs are."

GOVERNOR VETOES TIMBER TAX CUT BILL

Governor John Kitzhaber has vetoed HB 2452, a tax cut measure for the timber industry.

In an April 7 veto letter, Kitzhaber stated that the bill would have a \$1.9 million impact on schools at a time when the Legislature still has not produced a balanced budget plan. "This comes at a time in the legislative session when I have seen no indication that the legislative leadership has a balanced budget plan nor a way to pay for this and other tax expenditures which are under consideration," Kitzhaber wrote.

The governor also faulted the bill for not addressing the problem of owners switching property assessments on certain forestland prior to timber harvests, thus allowing them to avoid the "privilege tax." This could create an additional loss of revenue to schools, the extent of which is impossible to estimate because the bill does not identify how many acres of land this "switching" potential represents.

Kitzhaber also cited a related tax court case currently under review, the outcome of which could cause further revenue reductions.

Governor John Kitzhaber made the following remarks regarding HB 3197 at a press conference held today:

I'm here today to express my strong opposition to HB 3197. This bill is framed as a measure to prevent discrimination in employment, education, contracting and minority business development. Make no mistake about it -- it's real purpose is to prevent state government from moving forward to ensure that all Oregonians have equal access to meaningful jobs, a college education, and opportunities to contract or provide other business services.

Although racial and ethnic minorities have made some progress over the last decade, they continue to experience a quality of life far below the norm, as evidenced by rates of infant mortality, unemployment and incarceration significantly above state and national averages; and by life-expectancy and high school graduation rates below state and national averages. HB 3197 will further exacerbate those inequalities.

Shortly after becoming governor I signed Executive Order 96-38, because I was convinced that achieving gender and ethnic equity was unfinished business that must be completed. Therefore, today I reaffirm this administration's, and I believe this state's, commitment to the principle of race, ethnic and gender equity . . . and I will continue to implement non-discrimination and affirmative action policies where applicable.

I firmly believe that the principle of equal opportunity, embodied by affirmative action, is essential to guarantee all Oregonians equality in education, employment, contracting and opportunity to provide business services. The increasing diversity of Oregon's population demands that we renew and extend these efforts. By doing so, we will maintain our economic viability and provide a high quality of life for all our citizens. Let us not forget that this diverse population will carry the burden of Oregon's economic well-being.

American novelist James Agree once wrote that in every child who is born, no matter in what circumstances and no matter of what parents -- the potential of the human race is born again. Let us each do our part to ensure that the state of Oregon remains the best place in the world to live for each and every one

of our citizens.

I strongly oppose HB 3197 or any legislation that will undermine ensuring a fair and equal opportunity for employment, education, services, and business opportunities. Rather, we must continue to work to level the playing field of economic opportunity for all Oregonians.

GOVERNOR TO SPEAK AT SCHOOL TOUR KICK-OFF EVENTS IN GRESHAM, EUGENE

Governor John Kitzhaber will speak at kick-off events at Gresham High School and Roosevelt Middle School in Eugene on Thursday, April 1. These two events will kick-off fact-finding visits to local schools by the governor and state legislators on Friday, April 2.

The Gresham High School event runs from **5:30 to 6:30 p.m.** The governor will be joined by Superintendent of Public Instruction Stan Bunn, Secretary of State Phil Keisling and Senate Minority Leader Kate Brown. Gresham High School is located at 1200 N Main in Gresham.

The Roosevelt Middle School event runs from **7:30 to 8:30 p.m.** The governor will be joined again by Superintendent of Public Instruction Stan Bunn, as well as State Treasurer Jim Hill and House Minority Leader Kitty Piercy. Roosevelt Middle School is located at 680 E 24th in Eugene.

NEW CARISSA OWNERS SUPPORT REMOVAL OF STERN

Governor John Kitzhaber has received assurances from the owners of the New Carissa that they will proceed with plans to remove the ship's stern section from the North Spit off Coos Bay. These assurances were made in a March 25 letter in response to the governor's March 3 request that the owners take all necessary measures to remove the stern.

In a letter sent today to the owners of the New Carissa, Kitzhaber stated that,

"I am increasingly confident, based on your letter and progress to date, that the removal of the stern section will proceed with dispatch and a high degree of environmental care."

A copy of the letter is attached.

March 30, 1999

Green Atlas Shipping S.A., Panama
TMM Co., Ltd., Tokyo
c/o Robert I. Sanders
Wood Tatum Sanders & Murphy
1001 SW 5th Ave. Suite 1300
Portland, OR 97204

Re: M/V NEW CARISSA

Dear Mr. Sanders:

This responds to your letter dated March 25, 1999, submitted on behalf of the owner of the M/V NEW CARISSA,

Green Atlas Shipping S.A., Panama, and the manager of the vessel, TMM Co., Ltd., Tokyo.

In your letter, you assure me that Green Atlas Shipping will remove the stern section from the North Spit near Coos Bay as requested in my letter of March 3, 1999. I am encouraged and pleased with this commitment. Please convey my appreciation to your clients. I understand from the Oregon Department of Environmental Quality (DEQ) that a seaward removal is feasible, and that a request for bids will soon be issued to potential contractors for the work.

I am also encouraged that work is already underway to remove oil and hazardous substances remaining in the stern section. In my view, the stern removal work is necessary both to prevent further discharges of oil and to protect the environment and public health and safety from other hazards posed by the stern's presence.

You state that Green Atlas Shipping believes that a Letter of Undertaking (LOU) provided to the removal contractor to guarantee payment for the stern removal work should satisfy my March 3 request for financial assurance that the removal will be completed in an expeditious and satisfactory manner. I have requested DEQ, the Division of State Lands and the Oregon Department of Justice to evaluate whether an LOU, when considered with other actions of the responsible parties evidencing good faith, will provide such assurance.

I am increasingly confident, based on your letter and progress to date, that the removal of the stern section will proceed with dispatch and a high degree of environmental care.

Sincerely,

John A. Kitzhaber, M.D.

GOVERNOR CALLS ON LEGISLATIVE LEADERSHIP TO MAKE BUDGET DECISIONS

Governor John Kitzhaber today called on Senate President Brady Adams and House Speaker Lynn Snodgrass to start actually making tough budget decisions and criticized their plan for an early vote on tax measures as a "political ploy."

"While I do not believe that we can adequately fund our K-12 system at the \$4.95 billion level with the resources available in this budget," Kitzhaber said, "it is simply irresponsible to vote to increase taxes before going through the budgets to see what savings can be found."

"The legislative leadership needs to get serious about making the tough budget decisions around public safety and human services before they begin voting on taxes. To date, they have not seriously engaged in the budget process. We have been in session now almost two-and-a half-months and so far they have done nothing," Kitzhaber added. "They say they can produce a good school budget without new money. I'm still waiting for them to prove that -- and to prove that they can responsibly cut other budgets."

The governor called on members of the Legislature to reject any tax vote until after the May revenue forecast and until such time as the legislative leadership has produced a budget blueprint. "No one would be happier than I would if we could find a combination of increased revenue from the forecast and responsible cuts to provide the school budget I have called for. I doubt if it is possible, but I'm willing to find out. The only way to do so is for the leadership to stop posturing and start moving budgets."

On March 15, Kitzhaber proposed increasing spending for schools from \$4.55 billion to \$4.95 billion. To accomplish that, the governor proposed a number of revenue sources including using surplus tax revenue and a one-time surcharge to the corporate income tax rate.

"I take this tax issue very seriously and I ask the legislative leadership to do the same. I have proposed it because I believe it is the only way to pay for the good schools we all want. But I don't support voting on this issue until we know exactly how much we will need. To make that decision, this Legislature has got to get down to the business of making hard budget choices -- not engaging in political stunts."

STATE EMPLOYEES GIVE TONS OF FOOD
TO OREGON'S HUNGRY

Embracing this year's theme of the annual Governor's State Employees Food Drive, "Make A Difference In '99," state workers gave half a million pounds of food and \$300,000 for hungry Oregonians this year.

Dollars are converted to pounds to allow comparisons among agencies. Each dollar donated equals six pounds of food. At that rate, state workers donated 2.3 million pounds or 1,158 tons of food.

State staffs were very creative in their fund-raising efforts, donating their lunch and after work hours to take part in a variety of activities such as a jail and bail event, walkathons and flower, balloon and book sales.

The food drive was topped-off last week with an awards ceremony at the Capitol Building. Governor Kitzhaber presented certificates in fifteen categories to state agencies. Here are some of the outstanding efforts:

- Oregon State Police collected the most actual pounds of food -- a whopping 227 pounds per employee.
- Mental Health and Developmental Disabilities Division gave the largest cash contributions -- an average of \$61 per person.
- Oregon State Treasury donated the most pounds of food, including cash conversions, with an average of 472 pounds per employee -- the highest employee average.

The State Employees Food Drive is the single largest drive each year for the Oregon Food Bank. Donations are especially important this year as hunger relief agencies across the state report increased need and requests for help.

STATE SEEKING NOMINEES FOR GOVERNOR'S TASK
FORCE ON MINORITY-HEALTH ISSUES

Governor John Kitzhaber announced today that the State is seeking nominees for a 21-member task force on racial and ethnic health that will be named in early 1999.

Nominees should represent a racial or ethnic community and have an interest in health care. Particularly valuable will be experience with any of these six priority issues: health-care access, HIV/AIDS, diabetes, asthma, lead poisoning, and alcohol and other drug abuse.

Persons wishing to be considered for the task force should contact either Suganya Sockalingam, Multicultural Health Director for the State Health Division, at 800 Oregon St., NE, Portland 97232; or Bob DiPrete, Director of the Oregon Health Council, at 255 Capitol Street NE, Public Service Building 5th Floor, Salem 97310. Nominations will be accepted through April 15.

Creation of the task force was prompted by findings of a diverse work group that confirmed that racial and ethnic minorities' access to health care is inadequate to address their chronic health issues; that people of color and those who are not English speakers have difficulty obtaining health services; and that people of color frequently receive health care that is culturally inappropriate or insensitive.

Task force members will report annually to the governor and Legislature on the performance of state agencies responsible for addressing racial and ethnic health. The task force will be staffed by the State Health Division (Department of Human Resources), and the Office for Oregon Health Plan Policy and Research.

**STATEMENT OF GOVERNOR JOHN KITZHABER
REGARDING RECENT ENDANGERED SPECIES ACT LISTINGS**

Gov. Kitzhaber released the following statement today

"I am disappointed that more species have declined to a state that they merit listing under the Endangered Species Act, but the decision is not a surprise.

In anticipation of the listings, the State of Oregon has taken meaningful steps that will lessen the impact:

Over the last four years we have devised and implemented hundreds of measures in the Oregon Plan for Salmon and Watersheds. These measures have focused state and local agencies, as well as private industry, on how their activities affect salmon and steelhead across the state.

Further, Oregon is benefiting from the advice of an Independent Multidisciplinary Scientific Team charged with reviewing the effectiveness of our actions.

Step by step, we're continuing to build partnerships with stakeholders to implement the plan and increase voluntary participation of landowners and citizens. We have shown that with -- and without -- federal sanctions and assistance Oregonians can act to save salmon, trout, steelhead and the habitat they need to survive.

As a result of these steps, we have minimized the potential that the listing decision will cause immediate prohibitions or restrictions. These listings, however, emphasize the importance of all Oregonians doing their part to help with salmon recovery. This will result in changes in the way each and every one of us conducts our daily lives.

The long-term goal is to work as partners across the state. While these listings may increase federal activities in Oregon, the federal government under the Endangered Species Act does not have the tools by itself to restore these listed species. Effective change will come from a clear recognition that each of us has a part to play in the continued efforts to restore salmon and watershed health. We are committed to work together with federal agencies, the state legislature, and stakeholders in restoring Oregon's precious salmon stocks."

GOVERNOR PROPOSES HIGHER SCHOOL BUDGET

Commits to Long Term Solution for School Funding

In a speech at Salem-Keizer's Four Corners Elementary School today, Gov. John Kitzhaber announced that he would advocate for a \$4.95 billion K-12 appropriation for the 1999-2001 budget and released details to find the \$400 million necessary to reach that budget level.

"It is time to face the fact that we are not giving kids, teachers and parents the support they need to achieve the high standards of the Education Act for the 21st Century," said Kitzhaber. "I will work with the Legislature to meet this higher level of spending -- but I won't support it at the expense of other legitimate needs of Oregonians."

In his address, Kitzhaber cited the recently finished study by the Quality Education Council, headed by former House Speaker Lynn Lundquist, which called for a minimum of \$4.9 billion for the next two years. "I think this excellent piece of work begins to answer, in a credible fashion, the question of how much a good school system costs if we are going to ask children to achieve the highest academic standards in the country."

To raise the \$400 million, Kitzhaber proposed:

- Keeping \$190 million in projected surplus revenues commonly referred to as the Kicker.
- Increasing the contribution of the Common School Fund, a state managed trust fund for schools, by \$40 million.
- Using \$70 million in tobacco settlement revenues to fund the Oregon Health Plan and shifting the same amount from the health plan to schools.
- Raising the corporate income tax rate from 6.6 percent to approximately 7.6 percent to raise \$100 million. This tax would be sunsetted in two years.

Kitzhaber also committed to announce on April 9 before the Portland City Club a process by which he will pursue a long term solution for stable, equitable school finance.

**Governor John Kitzhaber issued this proclamation
today in honor of the sinking of the New Carissa**

GOVERNOR ISSUES NEW CARISSA PROCLAMATION

- WHEREAS:** The New Carissa ran aground off Coos Bay, Oregon on February 4, 1999, setting in motion one of the most frustrating, awe-inspiring events capturing the attention of the entire Northwest and the world; and
- WHEREAS:** The grounding of the New Carissa presented the threat of a catastrophic oil spill on the Oregon coast and spurred into action the best talent and expertise of the U.S. Coast Guard, the Oregon Department of Environmental Quality, the U.S. Navy and numerous other state and federal agencies; and
- WHEREAS:** At every stage of this event, Mother Nature matched wits and brute force with humankind's best efforts to rid Oregon's pristine beaches of that unsightly hulk of a ship; and
- WHEREAS:** The only thing more stubborn and uncooperative than Mother Nature was the New Carissa herself; and
- WHEREAS:** We burned her, we burned her again, then we broke her in half, dragged her out to sea, then dragged her through a hurricane, but to everyone's displeasure, she wound up back on Oregon's coast; and
- WHEREAS:** We dragged her out to sea again and unleashed the full power of the U.S. Navy on the New Carissa where, although unable to fire back, her stubbornness and fortitude required the use of 400 pounds of magnetically mounted directional explosives, 69 rounds from a 5-inch gun on the U.S. Navy Destroyer David R. Ray, and finally a Mark 48 torpedo from a Los Angeles class nuclear attack submarine the USS Bremerton to finally sink her.

NOW,

THEREFORE, I, John A. Kitzhaber, Governor of the State of Oregon, hereby proclaim March 11, 1999 to be
TWO THIRDS OF THE NEW CARISSA AT THE BOTTOM OF THE OCEAN DAY

in Oregon and encourage all citizens to join in this observance.

IN WITNESS WHEREOF, I hereunto set my hand
and cause the Great Seal of the State of Oregon to
be affixed. Done at the Capitol in the City of Salem
in the State of Oregon on this day, March 11, 1999.

GOVERNOR REQUESTS FINANCIAL ASSURANCE FOR REMOVAL OF NEW CARRISSA STERN

Governor John Kitzhaber today sent a letter to the owners and operators of the New Carrissa formally requesting that the stern section of the ship be removed, or if this is not possible due to environmental considerations, a long term and interim management plan be established. To this end, Kitzhaber has requested that the owners post a \$25 million bond that will cover the cost of evaluating the available options and assure the state that the stern section will be dealt with expeditiously.

In his letter, the governor expressed his appreciation for the efforts the ship's owners have taken to prevent further injury to Oregon's environment and economy. However, the governor stated that "I am still very concerned about the adverse impacts of the continued presence of the stern section on the state's coast."

The Oregon Department of Environmental Quality will continue to represent the state's interests in discussions with the ship's owners. Kitzhaber has directed the agency to pursue all means available to ensure that the stern section is removed, or if that proves impossible, appropriately managed, at the expense of the responsible entities.

GOVERNOR SUBMITS NEW APPOINTMENTS

Governor John Kitzhaber submitted the following names for consideration by the Oregon Sentate to various state boards and commissions. The Senate is expected to consider these appointments within the next month.

Among the names are Gerry Drummond of Canby, and Cheryl Perrin and Jay Waldron of Portland to the Port of Portland Board of Commissioners, Cindy Hanners of Eagle Creek to the Board of Parole and Post-Prison Supervision, and Anne Corcoran Briggs of Portland to the Land Use Board of Appeals.

Board	First Name	Last Name	City
Board of Commissioners of the Port of Portland	Gerry	Drummond	Canby
Board of Commissioners of the Port of Portland	Cheryl	Perrin	Portland
Board of Commissioners of the Port of Portland	Jay	Waldron	Portland
Board of Medical Examiners	Barbara	Gilbertson	Klamath Falls
Land Use Board of Appeals	Anne	Corcoran Briggs	Portland
Oregon Board of Dentistry	Eugene	Kelley	Portland
Oregon Government Standards and Practices Commission	Mike	Smith	Clackamas
Oregon Government Standards and Practices Commission	Katherine	Tennyson	Portland
Oregon Liquor Control Commission	Robert	Puentes	Salem
Public Employees Retirement Board	Steven	Bjerke	Pendleton
Public Employees Retirement Board	Glenn	Harrison	Albany
State Board of Parole and Post-Prison Supervision	Cindy	Hanners	Eagle Creek

State Parks and Recreation Commission	Nik	Blosser	Portland
Tri-Met Board	Kay	Stepp	Portland
Workers' Compensation Board	Jodie	Phillips Polich	Salem

STATE LAND BOARD INVITES REP. KING TO DISCUSS COMMON SCHOOL FUND

Governor John Kitzhaber announced today that the State Land Board, consisting of the Governor, Secretary of State and the Treasurer, has invited Rep. Al King (D, Springfield) to make a presentation to the Land Board regarding the distributions from the Common School Fund. Rep. King will make his presentation at the April 6 meeting of the Land Board when it will undertake its regularly scheduled annual review of the Common School Fund investment and performance and distribution policy.

Management of the Common School Fund is vested in the Land Board. Earnings from the fund are distributed for the benefit of schools. As trustees of the fund, the members of the Board have a fiduciary duty to distribute earnings in a manner that balances the needs of schoolchildren today with the anticipated needs of future generations of school children and without regard to the quantity of funding available from other sources.

GROWTH TASK FORCE PRESENTS FINDINGS TO GOVERNOR AND LEGISLATURE

Oregon's communities have different development challenges, but all share a common need for infrastructure dollars according to the report of the Task Force on Growth in Oregon. The Task Force, appointed by the governor in March 1998, presented their report to the governor and Legislature today.

"Oregon's population will continue to grow into the next century," said Gov. Kitzhaber in receiving the report. "Our challenge, simply put, is to maintain Oregon's unparalleled quality of life while the state continues to grow and prosper."

Key findings included in the report are:

- Communities in Oregon are diverse, and therefore, have different community development needs. Many high growth communities in the Willamette Valley, Central Oregon, and Southern Oregon are struggling to keep pace with the need to provide sewer, water, affordable housing, and transportation services to their growing populations. Some communities are searching for ways to slow growth altogether. Many smaller, rural communities in Eastern Oregon and the coast are distressed due to the loss of natural-resource based jobs and are searching for ways to maintain local services and create jobs.
- Communities throughout the state share a common need for infrastructure dollars to support local community development efforts. Regardless of how a community chooses to grow, it needs money to provide adequate public facilities and services for residents and businesses.
- Communities need to use incentives to foster the type of development they want. Rules and regulations only permit development, they do not make it happen. Many communities are finding that they need to offer incentives to stimulate the type of development they want.
- State agencies must better integrate their programs to respond to local needs. What works to enhance the quality of life in one community may be inadequate in another. State agencies should increase their efforts to coordinate their activities and programs with one another, consistent with the Community Solutions Team approach, in order to work collaboratively with communities.

The 14 Task Force members represented different geographic regions of the state, as well as public, private, and community interests. Gail Achterman, an attorney and Chair of 1000 Friends of Oregon's Board of Directors, chaired

the Task Force on Growth in Oregon.

A full text of the report is available on Gov. Kitzhaber's web page at www.governor.state.or.us.

GOVERNOR PROPOSES COMPROMISE ON PRISON SITING

Governor John Kitzhaber has made a four-point proposal to break the logjam on the siting of a women's correctional institute and intake center. The proposal recognizes the need to build the women's correctional institution and intake center in the metropolitan area and recognizes the Umatilla community's desire for greater economic development.

The proposal consists of four parts:

1. Legislatively "unsite" the Dammasch site in Wilsonville. Under the super-siting authority granted the governor in 1995, the Dammasch site is officially designated as the site for a women's correctional institution and the intake center for the corrections system. Removing this designation would make it possible to use the site for other purposes in the future.
2. Legislatively designate the "Day Road" site in Wilsonville as the site for the women's correctional institute and intake center. This legislative designation will help accelerate the construction process.
3. Advance the schedule to build a men's medium security facility at the current Umatilla site in 2007 by delaying construction at Junction City in Lane County and White City in Jackson County. Enough land is set aside to accommodate this expansion. Also, the prison would begin operating at approximately the same time the Umatilla Army Depot incinerator closes down. Hence, this will provide new employment opportunities as jobs are lost at the incinerator.
4. Legislatively transfer ownership of the Dammasch property back to the Oregon Department of Human Resources (DHR). This will ensure that any financial benefits of a sale of the property will accrue to DHR.

"I believe this is a reasonable compromise that both helps deliver jobs to the Umatilla Community at a time they will be needing them, and allows us to build the women's correctional institution and intake center in the metropolitan area, where it should be," Kitzhaber said. "I am hopeful the Legislature will find this a good compromise and we can move on to other important issues this session must consider."

GOVERNOR URGES REVISIONS
TO CHARTER SCHOOL BILL

Governor John Kitzhaber announced today that he does not support the current version of the charter school bill, Senate Bill 100. The Senate is scheduled to vote on the charter school bill tomorrow. SB 100 would establish a system of "charter" schools in Oregon -- schools that are publicly funded but operate with fewer state regulations than traditional public schools. The governor has expressed his willingness to sign a charter school bill if it reflects the guidelines that he provided Senate and House leadership last week.

"Charter schools have the potential to offer greater innovation and flexibility in K-12 education," Kitzhaber said. "However, I do not support a bill that I believe places our current system of public education at risk, or eliminates safeguards that are in place to protect our children," he added.

This is the third time the Oregon Legislature has taken up the issue of charter schools and Kitzhaber said he believes that it is time for a charter school bill to pass, "Oregonians clearly want a charter school bill and I believe that we should give them one."

Specifically, the governor disagreed with the following portions of the bill:

Granting Authority;
Teacher Certification; and
Collective Bargaining

Attached is the set of charter school principles that Governor Kitzhaber gave to Legislative Leadership.

-30-

CHARTER SCHOOL PRINCIPLES

Overall Position: Support charter school legislation that enhances the public school system by encouraging new,

innovative, and more flexible ways of educating children. No interest in weakening the public school system by converting schools nor by diverting public funds.

Granting Authority: Must apply first to the local school board. Allow for one level of appeal, to the State Board of Education.

Teacher Certification: Support licensure for all professional staff, pursuing greater use of the instructional resources from the community through the alternative forms of licensure available through TSPC (e.g. professional-technical license, license of accomplishment).

Collective Bargaining: Protect the collective bargaining rights of employees, although waivers may be requested of collective bargaining terms, to be negotiated through an expedited process.

Conversion of Private-Religious Schools: No conversion of private nor religious schools.

Standards and Assessments: The Oregon Education Act for the 21st Century standards and assessments must not be waived nor compromised.

Admission/Selection: Support equitable procedures and safeguards on student admission, assure that charter schools will protect nondiscrimination and equal educational opportunities, ensure against racial and ethnic segregation.

Funding: Oppose establishing a separate funding mechanism to fund charter schools directly from the state, maintaining local control. Support establishing a floor for per pupil funding that recognizes the responsibilities that the sponsoring district must retain, allowing for negotiation between the district and charter school above that floor.

Maximum and Minimums: Support the need for an appropriate floor number of students to assure that the program can provide a comprehensive educational program. Support setting caps or limits on the maximum amount of students and/or schools to better allow for a more deliberate and planned implementation, evaluation, and expansion of charter schools as well as to reduce possible negative impacts on the sponsoring district.

GOVERNOR RECEIVES JUVENILE CRIME PREVENTION PLANS

Governor John Kitzhaber received juvenile crime prevention plans from all 36 Oregon counties today from the Governor's Juvenile Crime Prevention Advisory Committee (JCPAC). The plans are in response to the governor's \$30 million budget recommendation to the Legislature for juvenile crime prevention.

Kitzhaber was joined by Gina Firman, Tillamook County Commissioner and JCPAC chair, Jim Torrey, Eugene Mayor and JCPAC vice-chair, Raul Ramirez, Marion County Sheriff and JCPAC member and Les Youngbar, Lake Oswego Police Chief and JCPAC member.

"These plans will take Oregon in a new direction for public safety," Kitzhaber said. "This reflects a commitment to prevention -- not just punishment -- and I'm very proud of the work within these plans. I am confident the Legislature will take note of the needs local communities have to keep our citizens safe and keep our kids out of crime," he added.

The individual plans from each county were developed by local children and families commissions, local public safety coordinating councils, alcohol and drug experts and various other local interests. The plans are designed to serve the particular needs of high-risk youth in their communities. The plans reflect the diversity of interventions ranging from after school programs to alcohol and drug treatment to additional detention services.

Plan summaries are available by calling the Juvenile Crime Prevention Advisory Committee at 378-5929

KITZHABER APPLAUDS PRESIDENTIAL SALMON INITIATIVE

Governor John Kitzhaber expressed his strong support and appreciation for President Clinton's \$100 million Pacific Coastal Salmon Initiative, which the President and Vice President Gore announced in a conference call today. Joining Gov. Kitzhaber on the call were Washington Gov. Gary Locke, Alaska Gov. Tony Knowles and California Gov. Gray Davis.

The proposed funding, which calls for an equal state match, would be part of the President's Fiscal Year 2000 budget, and would be targeted at watershed restoration and salmon recovery work in all the Pacific Coast states. It would also help monitor and evaluate salmon recovery efforts and refine watershed plans over time.

"I believe this initiative, along with the strong support shown by Oregonians and the Legislature, will significantly improve the health of our watersheds and the health of our salmon runs," Kitzhaber said. "With Oregon's salmon recovery plan already underway, Oregon will be in a great position to take advantage of this new funding," he added.

In addition to the \$100 million, the President will propose new money in federal agencies' budgets so that they have a greater capacity to provide technical assistance and consultation on conservation plans and initiatives.

**GOVERNOR ANNOUNCES NEW GENERAL
OF THE OREGON GUARD**

Governor John Kitzhaber announced today the selection of Brigadier General Alexander H. Burgin to be the Adjutant General of the Oregon National Guard. Burgin will assume the unexpired term of Major General Raymond F. Rees, who was named Vice-Chief of the National Guard Bureau in Washington, D.C. beginning in March. Burgin has served as a Deputy Commander in the Oregon National Guard, and will perform the duties of Assistant Adjutant General until Rees' departure.

"General Burgin is a tried and tested leader with an excellent record and a strong vision for the Oregon National Guard. He clearly possesses the ability to lead the Guard into the 21st Century," Kitzhaber said.

As Adjutant General, Burgin will head a state agency with nearly 1,600 state and federal full time employees and 8,500 traditional army and air guard members. Burgin will also represent Gov. Kitzhaber, commander-in-chief of the Oregon National Guard, in overseeing the training and readiness posture of all guard members and their equipment assigned to the State of Oregon.

Burgin previously worked for New York Life Insurance Company, where he became Administrative Manager of Operations for offices in Washington and Utah, moving to Medford, Oregon in 1973 and to Salem in 1979. He also served as General Manager of Operations for Key Investment Properties in Tualatin prior to assuming his duties at the Oregon Military Department.

Burgin is married to the former Linda Jean Fortier of Yakima, WA. They have three adult children: Heather, Meredith and Brian. Burgin has been active as a Little League coach, as well as officiating junior high and high school athletics for several years in the Salem area.

**GOVERNOR ANNOUNCES WITHDRAWAL
FROM ENDANGERED SPECIES LAWSUIT**

Governor John Kitzhaber announced today that Oregon is withdrawing from an appeal of a court decision that led to the listing of Oregon Coastal Coho as a threatened species. In June 1998, the Oregon District Court issued a ruling that forced the National Marine Fisheries Service (NMFS) to list Oregon Coastal Coho under the Endangered Species Act, despite a previous finding by NMFS that listing was not warranted, due in part to Oregon's efforts to protect salmon.

"As I looked at the lawsuit, I felt that we had already achieved much of what we set out to do in court," said Kitzhaber, referring to a recent letter from Terry Garcia, Assistant Secretary of the U.S. Department of Commerce. In that letter, Garcia said that the federal government will soon issue a national policy that will make it clear that the federal government will consider future and voluntary actions in deciding whether to list species as threatened or endangered. It was the federal court's unwillingness to consider future and voluntary actions that led to the ruling requiring coho to be listed. With the new federal policy, the District Court's ruling is not expected to set a precedent for future federal decisions.

"The federal government's willingness to look at future and voluntary actions in making listing decisions -- like those in the Oregon Plan for Salmon and Watersheds -- affirms that state conservation plans will continue to play an important role in determining what species are listed under the federal ESA," said Kitzhaber.

In addition, Kitzhaber cited as a reason for pulling out of the lawsuit the likelihood that Oregon Coastal Coho would remain listed by the federal government, even if Oregon prevailed in the appeal. "The current low numbers of coho make it unlikely that we will see coho taken off the threatened species list anytime soon. At this point we need to put our energies into restoring our watersheds and recovering salmon in a way that works for Oregon," Kitzhaber added.

PHIL WARD TAPPED TO BE NEW AGRICULTURE DIRECTOR

Governor John Kitzhaber announced today that he has nominated Phil Ward to be the new Director of the Oregon Department of Agriculture (ODA). The position requires Senate confirmation; the Oregon Senate is expected to consider Ward's nomination within the next month. If confirmed, Ward will replace Bruce Andrews, who left ODA in November 1998 to join the Port of Portland.

Ward, 44, is currently Executive Vice President of the Oregon Farm Bureau (OFB) and previously served as Assistant Director of ODA from 1989 to 1997. Ward also served at ODA as Assistant Administrator of the Soil and Water Conservation Division from 1986 to 1988 and as Special Assistant to the Director from 1984 to 1986. Previously, he worked as an Agriculture Instructor at both Central High School in Independence and Jefferson High School in Jefferson.

"Phil Ward will be a great asset to not only the Department of Agriculture, but also to the entire agricultural industry in Oregon," Kitzhaber said. "He understands the department and has been very active in promoting Oregon agriculture products abroad. He has also worked well with the agriculture industry in protecting and restoring Oregon's watersheds," the governor added.

While at the OFB, he was responsible for administering the activities of the state's largest private agricultural organization and helped garner the Bureau's support of the Oregon Plan for Salmon and Watersheds. In his previous roles at ODA, Ward was responsible for the agency's management in the absence of the Director, served as legislative coordinator, supervised four agency divisions, oversaw the implementation of long-term policies to protect land and water while allowing the agriculture industry to remain viable, and participated in overseas trade missions.

A resident of Independence, Oregon, Ward has both bachelor's and master's degrees in Agriculture from Oregon State University.

GOVERNOR CITES NEED FOR STABILIZATION FUND

Oregon needs to consider creating a budget stabilization fund in light of recent changes in the state's tax structure according to the final report of Governor John Kitzhaber's Tax Policy Committee. The Committee's chairman, Standard Insurance CEO Ron Timpe, presented the report to Gov. Kitzhaber at a Salem news conference today.

"It is high time for Oregon to adopt a stabilization fund, just like 45 other states have done," Kitzhaber said in receiving the report. "As it stands today, we are not ready to weather a recession without putting our kids at risk. I don't think Oregonians want us to sacrifice their children's education in the event of an economic downturn. It's our responsibility to be prepared."

The recommendation for a stabilization fund was chief among several the committee made. The report pointed out that with the passage of Ballot Measure 5 in 1990 and Ballot Measure 47 in 1996, Oregon has come to rely almost exclusively on income taxes to fund state services. Specifically, schools now receive more than 75 percent of their funding from the state income tax.

"The important question is how we pay for that stabilization fund and how we structure it. I will be working to develop a proposal with members of the Legislature, Treasurer Jim Hill and State Superintendent of Public Instruction Stan Bunn," Kitzhaber said.

"If we don't create a stabilization fund, we need to be honest about the fact that there is only one other avenue of taxation to make our tax system more stable and that's a sales tax." In other recommendations, the committee suggested:

- Rewriting the Pollution Control Tax Credit, which costs \$50 million per biennium, so that it encourages companies to exceed environmental regulations, rather than just subsidizing compliance with those regulations.
- Adopting a refundable Working Family Credit that could provide tax relief to as many as 17,000 Oregon families earning less than \$10 an hour.
- Creating a fertilizer and pesticide tax to be borne by both urban and agricultural users. This new tax would help distribute the cost of watershed enhancement beyond just the timber industry.

A full text of the report will be available via a link from Gov. Kitzhaber's web site: www.governor.state.or.us.

NEW STAFF MEMBER JOINS GOVERNOR'S PRESS TEAM

Susan Fletcher has joined the press staff for Governor John Kitzhaber as of December 7, 1998. Fletcher, a Portland resident, will become one of two deputy press secretaries on the governor's staff.

Fletcher's background includes an undergraduate degree in Political Science, a Master's Degree in Public Policy, and work experience in nonprofit program management. Most recently, Fletcher worked on media relations and scheduling for Gov. Kitzhaber's 1998 re-election campaign.

Bob Applegate will continue to be Gov. Kitzhaber's press secretary. Jon Coney, who has been on the governor's press staff since 1995, will be promoted to deputy press secretary.

The press department works with Oregon media to inform Oregonians about the governor's agenda and policy initiatives. Members of the media can contact any of the above staff members for information regarding the governor's position on specific policy issues.

GOVERNOR RELEASES 1999-2001 BUDGET PROPOSAL

Targets Education, Juvenile Crime Prevention, Livability

Governor John Kitzhaber released his proposed budget for the 1999-2001 biennium today targeting investments in the state's schools, colleges and universities, prevention of juvenile crime and preservation of Oregon's livability. The priorities will be met with no new revenue proposals by shifting funding inside the \$10.7 billion budget.

"This budget offers concrete proposals for meeting our challenges. It makes significant advances in our public schools, colleges, and universities. It breathes new life into our efforts to prevent juvenile crime. And it manages growth through important investments in transportation, housing, and land use," said Kitzhaber.

Kitzhaber outlined the following budget proposals in each of those three areas:

- ***Education***

An additional \$100 million, above the \$4.378 billion appropriation, to the School Improvement Fund. This fund will be used for programs that specifically help children meet the high standards of the Education Act of the 21st Century.

A proposal for a \$50 million bond fund to help pay for technology infrastructure in schools throughout the state.

A \$20 million fund to help distressed school districts that have operating costs higher than most other districts in the state.

An additional \$73 million for our community colleges and state universities. This will continue the freeze on in-state undergraduate tuition and help make the state university system more competitive and market-driven. It will also provide funding for forging closer partnerships between local community colleges and the state university system.

An increase of \$3.5 million to fund the expansion of Oregon pre-Kindergarten programs to reach 50 percent of all eligible children.

- ***Juvenile Crime Prevention***

\$30 million to create the High Risk Juvenile Crime Prevention Partnership. These funds, which will go to counties, will be targeted to address the needs of high risk children on a community-by-community basis.

\$20 million for alcohol and drug prevention programs.

\$7 million for early childhood intervention.

Oregon Livability Initiative

\$40 million in Lottery revenue bonds for sewer, water and community infrastructure grants and loans.

\$5 million for affordable housing.

\$25 million in Lottery revenue bonds to rebuild urban centers in communities of all sizes.

The Oregon Transportation Network includes \$14 million General Fund for High Speed Rail in the Willamette Valley and connecting busses to all regions of the state, and \$10 million in General Fund and \$10 million in federal funds for elderly and disabled transportation.

\$20 million in revenue bonds to buy highway rights-of-way for getting people safely on and off state highways.

\$30 million in revenue bonds to increase local street capacity so drivers can avoid busy intersections and heavily-traveled roads.

"I believe these are bi-partisan priorities -- important to Oregonians regardless of where they live or what party they belong to," said Kitzhaber. "Oregonians have made it clear that they want problems solved. That's what this budget does and I look forward to the constructive cooperation of the members of the House and the Senate during the 1999 session."

A copy of the Budget in Brief can be accessed on the web at www.governor.state.or.us

NATIONAL SURVEY RANKS OREGON FIRST IN AFRICAN AMERICAN APPOINTMENTS

For the second year in a row an independent national survey has ranked Oregon first among 50 states for its appointment of African Americans to top policy positions in state government.

"It is vital that our state government's workforce -- and especially its leaders -- reflect the diversity of Oregon's people," said Raleigh Lewis, director of Governor Kitzhaber's Office of Affirmative Action. "It is not only the right thing to do, it is essential to our success in serving Oregonians."

The 1998 study was issued recently by the Center for Women in Government at the State University of New York (SUNY) in Albany. The independent annual report examines how well women and minorities are represented among department heads and policy advisers appointed by governors in the 50 states.

"Oregon has proven itself a national leader," said Lewis. "For the second year in a row, we finished first among all states for our appointment of African Americans. And our ranking for female appointees rose from ninth to third in the nation."

The SUNY study bases its rankings on a formula that compares the percentage of policy leaders -- defined as state agency heads and senior advisers in governor's offices -- to the percentage of minorities in a state's population.

"In spite of Oregon's national success with African Americans and women, there is plenty of room for improvement," said Lewis. "Women and Latinos/Hispanics remain underrepresented in senior positions in Oregon state government, and we currently have no Asian Americans or Native Americans in these jobs."

GOVERNOR OPPOSES SENATE ACTION ON PRISON SITE

Governor John Kitzhaber in a letter to Senate President Brady Adams expressed his opposition to the Senate's selection of Umatilla as the location of a women's prison and intake center. The text of the letter is attached:

The Honorable Brady Adams
Senate President
State Capitol
Salem, Oregon 97310

Dear President Adams:

I appreciated the advance notice of the intention to recommend Umatilla as a site for the Women's Correction Facility and for the Oregon Department of Correction's Intake Facility. Upon further review of the information concerning this site, I am even more skeptical about it and I will firmly oppose the idea of switching the site of the two correctional facilities to eastern Oregon.

I oppose your request based on principles, convictions, and policy. Quite frankly, I feel that your offer to work with me to site these prison facilities is less than credible given my experience with Senate Republicans on prison siting.

Most importantly, however, I believe strongly that moving this prison to eastern Oregon is unfair, unworkable, and in the long term, unaffordable.

I will not make eastern Oregon the wasting ground for all of western Oregon's unwanted problems. It is unfortunate that eastern Oregon communities feel they must compete for prison facilities to finance necessary infrastructure for economic development. We should be creating economic development opportunities in eastern Oregon because it is a priority for us, not because it is a political priority of some Senate Republicans to move a prison from Wilsonville to Umatilla.

This prison siting philosophy that each region of the state should be responsible for a part of the prison siting burden is a central concept which the Senate Republican process has not appreciated. It was the idea of regional prison siting

equity, and only this idea, that protected eastern Oregon from being the dumping ground for the entire Ballot Measure 11 prison siting problem. Today, every region of Oregon is sharing in the prison siting burden with the noted exception of the Portland metropolitan area.

If I accepted the Umatilla recommendation, only the tri-county metropolitan area would not have a facility. That is simply not fair.

Further, moving the intake center to Umatilla creates a compelling cost argument to relocate the proposed Jackson County facility (and probably the proposed Lane County facility) to eastern Oregon as well. The fact remains that most inmates will still originate from west of the mountains, and sending them to Umatilla for intake then back to Lane and Jackson counties for incarceration makes no fiscal sense. I am not proposing we undertake such a relocation, but it serves as an example of the real danger of a prison siting process with a narrow focus and vision.

While cost alone is not a compelling factor, I believe your analysis fails to adequately examine increases in operational costs. In fact it is not at all clear that any savings will be achieved by siting at Umatilla. Changes in operational costs can be very significant, and small changes in operational costs will quickly wipe out any potential construction savings.

I understand the Senate Republican proposal to site the facilities at Umatilla might claim up to \$60 million dollars in construction savings over approximately a 26-year period. I also understand that the basic cost analysis has not attributed any significant increases for the relocation and/or replacement of the current Oregon City intake facility staff.

The salary cost for the new facilities in eastern Oregon, assuming you could recruit qualified staff, has not been significantly adjusted. For example the current estimated cost of 521 employees in Umatilla is about \$23.5 million annually. If you assume a six percent cost salary differential to attract the necessary qualified workforce, the cost is \$37 million dollars over 26 years (not adjusted for inflation).

I have not seen any evidence that suggest salary cost will be cheaper at a Umatilla facility. In fact, every indicator points to pressure which will result in increased salary cost, primarily because the workforce needs will not be met locally.

My final point of opposition is that the current Oregon House Leadership has been outspoken in its opposition to a special session after the election. I question whether there are the votes to pass this idea either in a special session or during the regular session. Therefore, I view this proposal as purely theoretical.

To summarize my position:

- I am opposed to a policy of making eastern Oregon the dumping ground for our state's felons;
- I am concerned that a qualified workforce is not available locally; and
- I do not have confidence that there are total cost savings if the prison facilities were moved to Umatilla. Even if the construction cost saving figures are relatively correct, the operational costs have not been adequately reviewed.

I remain committed to a course of action that will end this unnecessarily lengthy process and result in the construction of the women's prison and intake center in Wilsonville.

Sincerely,

John A. Kitzhaber, MD

COALITION FORMED TO ADDRESS PORTLAND HARBOR CLEAN-UP

**Governor Applauds Portland Harbor Group's Donation of \$500,000
for DEQ Sediment Study**

The Portland Harbor Group, a voluntary coalition of public and private entities concerned about the health and vitality of the Willamette River's Portland Harbor, announced today they would contribute \$500,000 to help the Oregon Department of Environmental Quality (DEQ) prepare a management plan for contaminated sediments located in the harbor area. The contribution comes as a part of a unique agreement between DEQ and the Portland Harbor Group that lays out the process DEQ will use to prepare the management plan.

"This is a great example of public/private cooperation and I congratulate these companies for coming forward to tackle this problem head-on," said Governor Kitzhaber. "The contaminated sediment in the Portland Harbor is an Oregon problem that will be addressed faster and more efficiently with an Oregon solution."

The purpose of the management plan is to develop and implement an effective, cooperative and efficient process for evaluation and, if necessary, remediation of contaminated sediments in the Portland Harbor. DEQ will prepare the plan over the next six months and will provide opportunities for the public and other interested parties to participate in its development. DEQ will also consult with the Environmental Protection Agency (EPA) and other affected state, local and federal agencies and officials as it prepares the plan.

A recent joint study by DEQ and EPA found that river sediments in a 5.5 mile reach between Swan and Sauvie islands have been contaminated by a century of industrial and shipping-related activities along the waterway.

The agreement paves the way for DEQ to be the lead agency in managing any necessary clean-up of the harbor, instead of having the harbor listed as a Superfund site by EPA. Rather, EPA has committed to delay any further decision on Superfund listing of the harbor until May 1999.

EPA Regional Administrator Chuck Clarke, in a letter to DEQ Director Langdon Marsh last week, acknowledged the public/private partnership developing in Oregon, and expressed interest in being part of the evolving effort. Clarke also said that EPA would postpone a decision until late next spring whether Portland Harbor sediment contamination should be recommended for Superfund designation.

The Portland Harbor Group includes the following entities:

Cascade General
City of Portland,
Bureau of Environmental
Services
Port of Portland
Time Oil

Tosco
Gunderson Inc.
NW Natural
Elf Atochem of North
America
GATX

GOVERNOR ASKS EMERGENCY BOARD NOT TO FUND SAVAGE RAPIDS PROJECTS

Governor John Kitzhaber today urged the Emergency Board not to suspend the rules to approve a request by Senate President Brady Adams to fund two projects related to operations of the Grants Pass Irrigation District (GPID) and the Savage Rapids Dam. The governor said the \$600,000 request was both premature, and possibly a violation of public contracting law.

The Senate President's \$600,000 funding request would be appropriated to the Governor's Watershed Enhancement Board (GWEB), and in turn, delivered to the GPID. The money is to fund a study by the GPID of sediment management (\$150,000), and to provide new fish screens at the dam (\$450,000).

In a letter to state Rep. Bob Montgomery, Chairman of the General Government Subcommittee of the Emergency Board, the governor wrote that given the pending negotiations between the National Marine Fisheries Service (NMFS) and the GPID on how best to mitigate the dam's damage to fish, building fish screens would be "unjustifiable."

"Even if screens were needed as an interim measure," Kitzhaber added, "General Fund dollars should not be committed until appropriate designs and funding plans have been developed and approved as part of a broader settlement agreement. If such screens do not meet NMFS approval, they will be worthless to the district and will represent a waste of state money."

Finally, part of the money would be earmarked to repay the Chair of the GPID's Board of Directors for work already done on a sedimentation study. Kitzhaber said this could be a violation of state public contracting law: "It would seem to me that before such action is taken, an Attorney General's opinion should be requested to clarify whether action by the Emergency Board or Grants Pass Irrigation District would be in violation of Oregon Law."

A copy of the letter to Rep. Montgomery is attached.

September 16, 1998

The Honorable Bob Montgomery, Chair
Emergency Board Subcommittees
General Government - Room H170
State Capitol Bldg.
Salem OR 97310

Dear Representative Montgomery:

I am writing to alert you to my very serious concerns about a funding proposal you may be requested to consider. The Senate President has informed me he intends to move for suspension of the Emergency Board's rules to allow consideration of his request for funding two projects related to operations of the Grants Pass Irrigation District and the Savage Rapids Dam.

As you may know, the dam is currently the subject of both state and federal litigation. Located on the Rogue River, the dam is a diversion structure for the irrigation district. It is not a storage facility or a hydro-electric facility. Pending federal litigation relates to whether the dam results in "take" of coastal coho salmon, which have been listed as "threatened" under the Endangered Species Act. Litigation in state courts, and through contested case proceedings before the Water Resources Commission, relates to the proposed cancellation of one of the district's two water rights allowing diversions from the Rogue River. The Water Resources Commission has proposed cancellation on the ground the district failed to follow through with a 1994 agreement to remove the dam and replace it with electric pumps for continuing water deliveries to the district's patrons. The agreement was based on findings in the water right permit that such action was necessary to protect fish and to ensure compliance with the state Scenic Waterway Act.

At the request of the district, formal negotiations were recently initiated among the district, the Water Resources Department and the National Marine Fisheries Service, to consider options for a "global settlement" of all pending disputes. These settlement discussions are still on-going; the next meeting is scheduled for September 30.

Despite the on-going negotiations, it is my understanding the Senate President intends to request Emergency Board action to appropriate \$600,000 to the Governor's Watershed Enhancement Board (GWEB), with instructions for GWEB to, in turn, deliver the money to the Grants Pass

The Honorable Bob Montgomery
September 16, 1998
Page 2

Irrigation District to pay for a study of sediment management in connection with possible dam removal, and to provide new fish screens. Such a maneuver would be completely contrary to the competitive process by which GWEB grant funds are made available to the public.

In addition, at least part of the money earmarked for the sedimentation study would be used to repay the Chair of the District's Board of Directors for work already done. This study could be a violation of state public contracting law. It would seem to me that before such action is taken, an Attorney General's opinion should be requested to clarify whether action by the Emergency Board or Grants Pass Irrigation District would be in violation of Oregon Law.

Furthermore, as described in the enclosed letter I sent to the Senate President on September 11, 1998, the two funding requests are contradictory, and clearly premature. Participants in the settlement negotiations have previously agreed to work together to try to obtain federal funding for the Bureau of Reclamation to conduct a sediment study. This

Emergency Board request was not initiated by the participants and would undercut their agreement to work with the Bureau of Reclamation.

It is also unjustifiable at this time to provide money for the construction of new fish screens at the dam. If dam removal is ultimately agreed upon as part of a settlement plan, the new fish screens would not be required. Even if screens were needed as an interim measure, General Fund dollars should not be committed until appropriate designs and funding plans have been developed and approved as part of a broader settlement agreement. If such screens do not meet NMFS approval, they will be worthless to the district and will represent a waste of state money.

It is my hope the Senate President will elect not to present this request to you at this time. I have advised him that I am prepared to work with him on a state funding request if and when a settlement agreement is reached among the affected parties. Until that time, for the reasons stated above and in my letter of September 11, 1998, I strongly urge you to withhold action.

Sincerely,

John A. Kitzhaber, M.D.

GOVERNOR UNVEILS EDUCATION AGENDA

Governor John Kitzhaber released his agenda for education in Oregon today in a speech to the American Electronics Association in Portland.

The executive summary of the policy paper outlining the governor's agenda is attached below. The complete policy paper and the governor's speech are also available on Governor Kitzhaber's Web Site: www.governor.state.or.us

THE KITZHABER EDUCATION AGENDA

EXECUTIVE SUMMARY

The aim of education has always been to prepare young people to shoulder the varied responsibilities of adult life. Yet the realities of today's world, as we approach the 21st Century, demand a number of fundamental changes not only in our system of public education, but in our attitudes toward that system as well. Among these are:

- that we regard our education system not as a collection of separate parts, but as an unbroken continuum stretching from early childhood and pre-Kindergarten through post-secondary training and life-long learning;
- that we require schools to deliver and students to achieve a much higher level of academic performance and demonstrable skills than has ever before been necessary;
- that we strive for the greatest possible degree of access to a superior, comprehensive education for every Oregon child
 - ensuring readiness to learn for our preschoolers;
 - providing appropriate remediation for students who are struggling;
 - removing financial and geographic barriers to post-secondary education; and
 - bringing higher education into line with the needs of today's students and today's marketplace;
- that we devise for the entire spectrum of public education in Oregon a funding mechanism which is marked by

both stability and accountability; and

- that we hold every single stakeholder in the education system strictly accountable for ensuring that all Oregonians are prepared to meet the social and economic demands which the new century will bring.

The following paper identifies the major challenges faced by Oregon's system of education, outlines our achievements to date in addressing those challenges, and proposes an agenda of further steps which must be taken if we are genuinely committed to assuring that our children will enter the next century equipped to succeed.

GOVERNOR RENEWS CALL FOR SPECIAL SESSION ON PRISON SITING

Governor Urges Action in Order to Save \$9 Million

Governor John Kitzhaber today repeated his willingness to call a special session for prison siting by the end of September as a Senate committee searching for an alternative site prepares to conclude its process. Kitzhaber said he would support a session to site a prison at Day Road or to expedite the financing at the Dammasch site.

By siting a prison during a special session of the Legislature at the end of this month, the state could save \$9 million that it would otherwise lose because of delay. "I hope that Senate leaders will see the wisdom of saving Oregonians \$9 million. We can't afford not to make this decision now."

If the Senate wants to choose an entirely new site, the resulting cost of the construction delay would be \$9 million because the entire 1999 construction season would be missed. Oregon has already invested two years and millions of dollars in a prison siting process that resulted in the governor siting five prisons and two work camps.

The Senate committee, chaired by Senator Eileen Qutub (R-Beaverton), has been examining the prison siting issue for six weeks, but has not yet found a site that could be available for construction early next year. "Wilsonville remains the only community that has filed a resolution of interest with the committee and has a workable site," said Kitzhaber.

Kitzhaber said that he did not believe any of the places the Senate committee was examining would work from either an operational cost or a staffing perspective. This facility would be staffed by approximately 465 corrections employees, which would create significant demands for housing, schools and medical facilities not available in isolated rural eastern Oregon communities. Further, siting the prison outside of the metropolitan area, as far away as the Oregon-Idaho border, would mean extremely high ongoing transportation costs.

Kitzhaber also said that he would support reenactment of the special taxation assessment on timber operators that funds the Oregon Plan for Salmon and Watersheds. When the National Marine Fisheries Service lists the coastal salmon, the tax, by law, will automatically be terminated. The timber industry supports the continuation of the tax to ensure continued funding of the Oregon Plan.

"With leadership from the Senate, the State could deal with these two pressing issues in a one-day special session before

October 1," Kitzhaber said. He called on Senate President Brady Adams and Senate majority leader Gene Derfler to make a special effort to persuade Senate members that it is important to save Oregon \$9 million and to deal with the salmon issue.

GOVERNOR NAMES WILLAMETTE RESTORATION INITIATIVE BOARD MEMBERS

Governor John Kitzhaber yesterday announced the membership of the Willamette Restoration Initiative Board at the opening of the Willamette Confluence '98 Conference at Willamette University. The Willamette Restoration Initiative is a public/private partnership that will build on the work of the Willamette Basin Task Force, which Governor Kitzhaber formed two years ago to research and highlight critical issues affecting the river's health.

Oregon State University President Paul Risser will chair the effort and Rick Bastasch will serve as Interim Director.

The current Board membership is listed below; other names are still pending at this time:

Paul Risser, President, OSU; Chair
Jeff Allen, Oregon Environmental Council
Dick Angstrom, formerly of Oregon Concrete and Aggregate Producers Association (ret)
Helen Berg, Mayor, Corvallis
Randy Berggren, Eugene Water and Electric Board
Mike Burton, Executive Director, METRO
Karla Chambers, Stahlbush Farms
Bill Gaffi, Manager, Unified Sewerage Agency
Hasso Hering, Editor, Albany Democrat-Herald
Jim Irvine, Conifer Group (a Portland metro-area development firm)
David Like, Smurfitt Corp./Association of Oregon Industries
Langdon Marsh, Director, DEQ
Jack McGowan, Executive Director, SOLV
John Miller, Willamette River Basin Task Force Chair
Cheryl Perrin, Port of Portland
Dwayne Pfenninger, All Sports Supply/NW Sportsfishing Industry Association
John Rossner, President, Oregon Farm Bureau
John Runyon, McKenzie Watershed Council
Dave Schmidt, Commissioner, Linn County/Association of Oregon Counties
Eric Sten, City of Portland, Commissioner
Sara Vickerman, Executive Director, Defenders of Wildlife
Rich Wininger, Weyerhaeuser
Duncan Wyse, Executive Director, Oregon Business Council

Elaine Zielinski, State Director, BLM

GOVERNOR ANNOUNCES APPOINTMENT OF SUPREME COURT JUSTICE

Governor John Kitzhaber announced today that he has appointed Oregon Court of Appeals Judge R. William Riggs to the Oregon Supreme Court. Riggs will fill the vacant position created by the appointment of Justice Susan Graber to the federal Court of Appeals for the Ninth Circuit.

Riggs is currently a candidate for this Supreme Court position in the November general election. However, the effective withdrawal of former State Rep. Bob Tiernan from the race left Riggs as the sole candidate and likely winner in November. Kitzhaber decided it was important to get the Court to full strength as quickly as possible.

"Judge Riggs brings a wealth of judicial experience to the Supreme Court," Kitzhaber said. "This appointment ensures a complete Court. Today's appointment will enable Justice Riggs to take his place on the bench and begin work on the important legal issues before the Court in its Fall term."

The Oregon Supreme Court begins its 1998 fall term September 9. Kitzhaber's action allows Riggs to assume his duties immediately.

A 1961 graduate of Portland State University, Riggs obtained his juris doctor degree from the University of Oregon Law School in 1968. He entered private practice with the Portland firm of Willner, Bennet & Leonard upon his graduation from law school, becoming a named partner in the firm in 1972. Riggs was appointed to the Circuit Court Bench for the Fourth Judicial District in Multnomah County in 1978, and was appointed to the Oregon Court of Appeals by Governor Goldschmidt in 1988, where he currently serves as a presiding judge for a panel of that court.

Riggs has been active in the Community Law Project and related endeavors aimed at exposing young adults to the legal system, serving as a judge in a number of mock trial competitions. Riggs was instrumental in the founding the Integra Corporation, a non-profit corporation devoted to the promotion of economic opportunities for minority men and women. He also had a long career as a senior officer in the Naval Reserve.

**GOVERNOR APPOINTS JUVENILE CRIME
PREVENTION ADVISORY COMMITTEE**

Pursuant to [Executive Order 98-09](#), Governor John Kitzhaber today appointed the Juvenile Crime Prevention Advisory Committee. This committee will review local juvenile crime prevention plans and recommend them to the governor for funding. It is expected to begin reviewing local plans in late September.

The governor will recommend \$30 million in his proposed budget for implementation of Oregon's High-Risk Juvenile Crime Prevention Partnership.

A list of the advisory committee is attached. For a copy of the executive order, call Leann Wilcox at (503) 378-5690.

**JUVENILE CRIME PREVENTION ADVISORY COMMITTEE
MEMBERSHIP LIST**

CHAIR:

Gina Firman, Chair
Tillamook County Commissioners
Position: County Commissioner

MEMBERS:

Chuck Bugge
Hood River County School District
Position: School Superintendent

Steve Carmichael
Dept. of Youth Services
Lane County
Position: Juvenile Director

David Cook, Director
Dept. of Corrections
Position: Governor's Designee

Major Lee Erickson

GOVERNOR TO PROCLAIM SEPTEMBER WILLAMETTE RIVER BASIN MONTH

Governor John Kitzhaber will sign a proclamation declaring September 1998 to be Willamette River Basin Month on Thursday, September 3 at 11:30 a.m. in the Governor's Ceremonial Office. The governor will be joined by John Miller, Chair of the Willamette River Basin Task Force, and other Task Force members.

The proclamation signing will kick-off Confluence 98 and a year-long public awareness campaign to promote community action toward a healthy Willamette River watershed. The Confluence 98 conference will take place September 13-15 at Willamette University, with the governor opening the conference and presenting the first annual Governor's Willamette Watershed Awards. For more information, call (503) 986-0080.

(503) 378-6169

Governor John Kitzhaber sent the following letter to Senate President Brady Adams today:

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear Brady:

I am writing to see if we might be able to find some accommodation for moving the important issue of prison siting forward. From similar experiences I had during the years that I served as Senate President, I have a personal appreciation for the problems you have within your caucus. For that reason, I want to assure you that my unwillingness to call a special session in November is not based on a desire to make this situation worse, but rather on two very practical considerations. The first consideration relates to the importance of not missing next year's construction season which could unnecessarily cost the taxpayers as much as \$9 million dollars. The second consideration relates to the reality of practical politics.

Let me deal first with the issue of construction costs. As you know, the women's prison and intake center has been sited at the Dammasch location in Wilsonville. Not only is the facility sited, but the state already owns the property and a substantial amount of engineering and architectural work has been completed. The Department of Corrections is prepared to begin immediate mobilization for construction as soon as the legislature resolves the lawsuit which challenged the Emergency Board's authority to approve a budget for construction at the Dammasch site.

This legislative action could be taken in a November special session or immediately upon convening the 1999 regular session. If your caucus has already decided to build the prison at the Dammasch site, one could make an argument for a November special session. My assumption, however, is that your caucus has not already decided on the Dammasch location and desires to look more carefully into the Day Road site. Unlike Dammasch, Day Road is not ready to go. Although the Emergency Board approved \$500,000 to carry out preliminary site analysis and environmental assessment, the site has not yet been acquired and cannot be acquired without legislative authorization. In addition, much of the engineering and architectural work must still be done.

The Department of Corrections has indicated that if the siting decision at Day Road is made any later than November 1, 1998 the department cannot guarantee that construction will not be delayed. Failing to make a decision on Day Road until next year would result in construction delays costing as much as \$9 million.

Should you decide on yet another site in the metropolitan area, the 1999 construction year will certainly be missed no matter when the siting decision is made. Having sited four medium security men's prisons, two work camps and five regional juvenile facilities using the supersiting process, I am not confident in the ability of a unicameral legislative committee to conduct a successful site search and I am thus unwilling to commit any additional energy or resources from the Executive Branch toward this process.

In addition, the leadership of the House of Representatives also appears unwilling to participate in additional site selection. Since this additional search activity is the only apparent reason for waiting until November for the aforementioned special session, it would seem prudent to dispense with the site selection phase of the committee's work plan.

This brings me to the consideration of practical politics. Any special session is difficult, but trying to deal with a contentious issue with a lame-duck legislature would be almost impossible. There may have been changes in leadership which will not take place until January 1999; some members will have lost in their bids for reelection; others will have retired. It is not a scenario that lends itself to management.

Furthermore, the Speaker of the House and his caucus are vocally opposed to a November session. I did not call the session in August due to strong opposition from your caucus. Surely you can understand why I would be reluctant to do so over the strong opposition of the Speaker.

It seems to me, however, that there is a cleaner and more certain way to both give your committee time to evaluate the two Wilsonville sites and, at the same time, fulfill our responsibility to implement Ballot Measure 11 without wasting any more of the taxpayers money. As a way to resolve the current impasse, let me suggest that your committee focus on the relative merits of the Day Road site and the current site at Dammasch. Furthermore, let me suggest that the committee strive to complete its work by early September. If you are agreeable to this, and with the concurrence of the Speaker and the Democratic legislative leadership, I would be willing to call a special session in mid-September to resolve this issue. I would also offer the assistance of the Executive Branch to facilitate this work.

Sincerely,

John A. Kitzhaber, M.D.

KITZHABER SAYS OREGON WILL IMPLEMENT SALMON RECOVERY DESPITE FEDERAL LISTING OF COASTAL COHO

In response to the listing of Oregon coastal coho by the National Marine Fisheries Service (NMFS) expected today, Governor John Kitzhaber announced that the state will proceed nonetheless with full implementation of the Oregon salmon recovery plan.

The listing came after District Court Magistrate Janice Stewart's decision that narrowly interpreted what state conservation efforts can be considered under the Endangered Species Act (ESA). Her decision left NMFS with little choice but to list coho as a threatened species under the ESA.

"The point of the Oregon Plan was never simply to avoid a listing, it was to help recover coastal coho. That's what our plan does and we are going to do everything we can to implement it," Kitzhaber said at a news conference where he was joined by representatives of environmental groups, the timber industry, agricultural and mining.

"A listing does not change the fact that Oregon's Plan for Salmon and Watersheds is the best way to recover these fish," said Kitzhaber. "We will proceed to demonstrate that state conservation efforts with locally developed solutions and voluntary contributions can work. And we will continue to work as cooperatively as possible with our federal partners."

The Oregon Plan for Salmon and Watersheds was developed over a two-year period, initially to restore coastal populations of coho and steelhead. The 1997 Legislature provided \$32 million to implement the plan.

Despite the listing today, there is still no federal plan to protect coastal salmon. "The federal government isn't equipped to recover salmon on private land under the Endangered Species Act," said Kitzhaber. "The Oregon Plan has thousands of landowners working together to make changes in their management practices to improve habitat for salmon. It is those actions that count in species recovery."

Unfortunately, today's decision will cost approximately \$6 million in lost Timber Harvest Tax funds, which were automatically repealed by a listing. However, industrial timber growers have voted to support reinstating the timber tax to provide funds despite the listing action by NMFS and Kitzhaber pledged his support to find funding in the upcoming legislative session.

"With this support, the success of the Oregon Plan for Salmon and Watersheds can go forward into the 21st century," Governor Kitzhaber said. "We will continue to look for federal dollars now that a listing has occurred, but the core support for the recovery plan will continue to come from Oregon."

GOVERNOR PRAISES DESIGNATION OF WILLAMETTE AS AMERICAN HERITAGE RIVER

Governor John Kitzhaber said today he welcomes the federal government's announcement that it is designating Oregon's Willamette River as one of the country's first American Heritage Rivers.

"This action comes at a critical time for the Willamette Valley," says Kitzhaber. "From the McKenzie to the Clackamas, every major tributary of the Willamette River Basin has water quality problems -- more than 1,500 miles in all. And our region's growing population, which is expected to double in the next 30 years, adds new pressures every day."

"Oregonians are already at work on a restoration plan for the Willamette River Basin that seeks a return to the clean water and healthy fish runs of the past," said Kitzhaber. "Achieving these goals will require the same kind of voluntary, cooperative efforts in the Willamette Valley that we pioneered with the Oregon Plan for Salmon and Watersheds."

"Designating the Willamette as an American Heritage River is an important contribution to this process," said Kitzhaber. "And naming a federal official to serve as a 'river navigator' for the Willamette is especially useful. This will help identify federal resources and coordinate federal action to support existing and future clean-up efforts."

"Like the Oregon Salmon Plan, the success of the American Heritage River program depends on grass roots involvement and participation," said Kitzhaber. "My staff and I will work hard in the months ahead to make sure that federal officials respond to local concerns and issues."

GOVERNOR'S STATEMENT ON SITING THE WILSONVILLE WOMEN'S PRISON AND INTAKE CENTER

Thank you for coming. I was surprised and shocked at the sudden reversal of the Republican leadership in the Senate in our efforts to finalize the prison siting process required by Ballot Measure 11. This represents a profound failure of leadership and raises serious questions of integrity.

I remind you I have already sited the women's prison facility and intake center at the Dammasch property in Wilsonville. That hasn't changed and it remains a viable site. The only reason we considered the Day Road site was because of the direct request of the entire Republican leadership in the Legislature. I quote from their Jan 30, 1998 letter to me concerning the siting of the women's prison and intake center.

That letter reads in part:

"We request that you: 1) give careful consideration to the suggestions brought forward by the citizens of the Wilsonville community for the women's prison and intake center, 2) in the event that an alternative site is viable, take the appropriate executive action to re-site this facility; and 3) to delay the April/May bond sale relative to the Dammasch site until an analysis of an alternative site can be completed."

And they closed, "As the ultimate authority for siting is in the executive office, we urge you to make every effort to be fully responsive to the needs and concerns of the Wilsonville community."

signed by:

Senator Brady Adams, President of the Senate
Senator Gene Derfler, Senate Majority Leader
Representative Lynn Lundquist, Speaker of the House
Representative Lynn Snodgrass, House Majority Leader

I have complied with the letter and spirit of this request and have cooperated with the leadership every step of the way. Until yesterday we had nothing but green lights.

Now at the eleventh hour -- after leading us through this long process and spending over a half million dollars of the taxpayers' money -- I am informed by the Senate President, with no advance warning, that he and his majority leader, Senator Derfler, are unable to find support within their own caucus to ratify the very site they asked for.

By this decision, the Senate Republican caucus has, in effect, endorsed the original Dammasch site. We have no choice

but to proceed because Oregonians should have no confidence that Senate leadership -- on their own -- has the courage or the ability to actually site a prison that Oregon desperately needs.

CORRECTIONAL FACILITIES SITED BY GOVERNOR JOHN KITZHABER

ADULT FACILITIES

12/96	Men's Medium Security Facility	Madras, Jefferson County
	Men's Medium Security Facility	Umatilla, Umatilla County
	Work Camp	Lakeview, Lake County
	Work Camp	Oakridge, Lane County
05/97	Intake Center and Women's Correctional Facility	Wilsonville, Clackamas County
06/97	Men's Medium Security Facility	Junction City, Lane County
	Men's Medium Security Facility	Stimpson Gulch, Jackson County

JUVENILE FACILITIES

10/95	Juvenile Corrections Facility	Warrenton, Clatsop County
		Grants Pass, Josephine County
		Albany, Linn County
		Prineville, Crook County
		Burns, Harney County

Testimony on S. 2111
The Honorable John A. Kitzhaber, M.D.
Governor of the State of Oregon
Senate Energy and Natural Resources Committee
Water and Power Subcommittee
July 14, 1998

Chairman Kyl, Senator Smith, members of the Subcommittee, I am John Kitzhaber, Governor of the State of Oregon. I appreciate the opportunity to testify on S. 2111, Senator Smith's bill dealing with agreements between the Bonneville Power Administration and states and Indian tribes. Before I go into my specific comments on S. 2111, I would like to inform you of some recent efforts to improve Columbia Basin governance, including what has come to be called the Three Sovereigns Process, which, I believe, is both the impetus for and subject of this bill.

In June of last year, I hosted a meeting in Portland of the other three Northwest governors; representatives of ten of the thirteen Columbia River Indian tribes; and representatives of the federal administration, including Katie McGinty, the President's chief environmental advisor, and Terry Garcia, Assistant Secretary of Commerce, overseeing the National Marine Fisheries Service.

The meeting revealed a general frustration with the lack of coordination among the region's governments for the decisions that each government was entrusted to make regarding the Columbia River and its hydropower system. Participants felt there had to be a better way. Out of this meeting, an effort was begun to create the Three Sovereigns Process.

There is much confusion about what the Three Sovereigns Process would and would not do. Let me clarify some points.

It is important to emphasize at the outset that the Three Sovereigns process does not grant any agency or new entity any new or different authority to make decisions. The Three Sovereigns Process is simply an attempt to achieve greater regional coordination by involving representatives of the federal, state and tribal governments in collaborative decision-making on a number of issues relating to Columbia River operations. The goal of the collaborative decision-making would be to develop a consensus recommendation, which could then be communicated to the agency with the actual decision-making authority on any particular issue.

This effort has involved more than a year of discussion and drafting, and a public comment period which included eight "town hall" meetings throughout the region to establish the structure and rules of the Three Sovereigns Process. The

latest contains a much more explicit and rigorous public involvement and outreach section, added in response to the significant concerns expressed by farmers, ranchers and other of the river's economic stakeholders that they lacked a meaningful role in the Three Sovereigns Process.

The four northwest governors believe that the region would benefit from the establishment of an inclusive forum to recommend consensus positions on Columbia River issues. They remain committed to carry on with the Three Sovereigns Process in good faith and to deliberate with the tribes and federal agencies after the close of the public comment period to determine the future of this effort.

At the same time the governors also believe that eventually a river governance framework may need to be legislated by the U.S. Congress and approved by state legislatures. Thus, concurrent with the Three Sovereigns discussions, the four Northwest governors have recently begun discussing developing such legislation that could be submitted to Congress.

Oregon's objectives in the Three Sovereigns Process, and in any legislated river governance structure, are the same:

- 1) to increase state involvement in Columbia River decision-making;
- 2) to more closely involve the Columbia Basin Indian tribes in those decisions;
- 3) to get the federal government to speak with one voice on Columbia River policy, where now they speak through the seven or more agencies with management responsibilities for the river and its ecosystem;
- 4) to ensure that those decisions will be made with a greater level of public involvement, visibility and accountability, and, finally;
- 5) to assure the public that the decisions about the Columbia are based on the fairest assessment possible of all the information available.

I find much that I agree with in S. 2111, because I believe it seeks to advance these same objectives. However, I do differ with several of the bill's specific provisions.

First, the definition of "memorandum of understanding" is confusing. Is it possible that an agreement between Bonneville and just one state or just one Indian tribe could trigger the requirements of the act, including the elaborate advisory committee? Might there be agreements under this broad definition that ought not to require such strict oversight?

Second, I differ with the bill's principal proposal that an advisory committee be established to provide for direct public involvement in decision-making. An advisory committee is only one of many ways to seek public involvement, and, in my opinion, it is not the most effective at getting meaningful input into decision-making. Advisory committees made up of "one of these" and "one of those" tend to lock in positions rather than reach for solutions.

On the other hand, consultative processes, for example, where multiple stakeholders within an interest group meet directly with decision-makers, allow for a broader segment of public views to be sampled in depth. I recommend more general language that would allow for a variety of public involvement mechanisms to meet our shared objective of assuring a meaningful public role in the decision-making process.

My final point of difference with S. 2111 pertains to timing. As I said earlier, governors Locke, Batt, Racicot, and I have begun a public process which may well result in Columbia River governance legislation being submitted to Congress. Given that process, I believe it is premature to establish a role for economic stakeholders and other members of the public through this bill. To avoid a piecemeal legislative approach, the public's role in Columbia River governance should await description within the context of a larger bill establishing an overall governance structure.

That concludes my testimony. Thank you again for this opportunity, and I would be happy to take any questions in the allowable time.

(503) 378-6169

Testimony of John A. Kitzhaber, M.D.
Governor, State of Oregon
before the
Subcommittee on the Constitution,
Committee on the Judiciary
United States House of Representatives
on
H.R. 4006

Chairman Canady, members of the Subcommittee, for the record my name is John Kitzhaber, Governor of the State of Oregon. I appreciate this opportunity to appear before you to offer the perspective of my state on H.R. 4006, the "Lethal Drug Abuse Prevention Act of 1998".

H.R. 4006 was introduced -- and this hearing is being conducted -- largely in response to statutory initiatives adopted by Oregon voters at two separate statewide elections.

The public policy issues surrounding H.R. 4006 are complex, serious and profound. On one level is the controversial and emotional policy debate surrounding the question of "physician assisted suicide." Equally complex and profound are the issues of the appropriate role of the federal government in regulating the practice of medicine and the fundamental principles on which our federal system of government was established under the U.S. Constitution.

First, Mr. Chairman, I would like to provide a brief history of Physician Assisted Suicide legislation in Oregon:

Oregon's constitution provides that, through the initiative process, the people can propose laws and amendments to the Constitution at an election independent of the Legislative Assembly.

On November 8, 1994, at a statewide general election, such an initiative was placed before the Oregon electorate. Known as Ballot Measure 16, the initiative allowed terminally ill adults to obtain prescription for lethal drugs. Ballot Measure 16 was approved with just over 51% of the vote.

After a federal court injunction induction stopped implementation of Ballot Measure 16, the Oregon Legislature referred to the voters a measure to repeal it. In a November 1997 special election the Oregon voters overwhelmingly rejected this effort to repeal "physician assisted suicide" by a margin of 60% to 40%.

I share this with you to emphasize that current Oregon law permitting physician suicide was not the result of administrative action by the Executive Branch nor was it a "mere" statute from the Legislative Branch. Rather it was

the result of the most democratic form of law-making available to the citizens of Oregon -- a direct vote of the people. At two statewide elections a clear majority of the Oregon electorate voted to permit physician assisted suicide as an option for terminally ill individuals.

Mr. Chairman, I would now like to offer a few observation on the consequences if H.R. 4006 becomes law. Notwithstanding my concerns relating to constitutional questions -- issues of federalism -- I view with great alarm, as a Governor and as a licensed physician, the policy implications in this bill.

With all due respect -- this legislation is an unprecedented intrusion of the federal government into the practice of medicine. Through the creation of the Medical Review Board on Pain Relief, H.R. 4006 gives the Attorney General substantial new power as it relates to pain management generally and end-of-life care specifically.

The Attorney General is given new powers to deny or revoke physicians' DEA registration (which would prohibit a physician from prescribing a controlled substance to control pain for any reason -- from a child with a broken leg to hospice care for the terminally ill) -- based solely on the subjective determination of the Medical Review Board.

These subjective standards for denial or revocation of DEA registration raise several serious concerns.

First, the denial standard is based on evidence of a physician's intentions -- which I believe may violate the exercise of free speech as guaranteed by the U.S. Constitution. For example, will the personal opinions of physicians on the issue of physician assisted suicide be used as "clear and convincing evidence of their medical intentions"?

And I can tell you as a physician with 15 years of care that this "intention" standard will have a chilling effect on the legitimate use of controlled substances to provide compassionate care to terminally ill individuals.

If H.R. 4006 were law today -- and given my efforts to implement the will of the majority of Oregon voters -- I would think twice before providing pain management to those who clearly need it for fear that my public views would be used as evidence of an intention to practice euthanasia under a different name.

Mr. Chairman, this is a blatantly subjective standard. It puts physicians at risk of denial or revocation of their DEA privileges based on the judgments of a federally created Medical Review Board -- which will second guess their purposes and intentions in those situations where death is foreseeable and inevitable -- but unintended.

I have listed additional concerns in my written testimony provided to the subcommittee -- particularly as it relates to the apparent contradiction -- between H.R. 4006 and the U.S. Supreme Court ruling *Vacco vs Quill*.

Mr. Chairman -- I believe that persons of good will can (and do) legitimately disagree on the merits of physician assisted suicide as a public policy.

I further believe that Congress has the right to restrict the use of federal funds pursuant to legislation such as the Assisted Suicide Funding Restrictions Act passed by Congress last year. But -- whether intended or not -- H.R. 4006, through its amendment to the Controlled Substances Act, displaces the states as the primary and historic regulators of the medical profession and supersedes a state's determination of what constitutes legitimate medical practice. Beside the events that have taken place in Oregon, I am aware of no justification fir this dramatic expansion of federal power and regulation which will adversely affect the practice of medicine not only in Oregon -- but in all 50 states.

But to me, the most disturbing aspect of H.R. 4006 is that it achieves its policy objective -- prohibiting states , through their constitutional processes, from permitting physician assisted suicide -- indirectly. It does not say to the American people, "Suicide at the end of life, assisted or otherwise, is not legally condoned in this country!" Rather, this bill (and its Senate companion, S. 2151) establishes a less-than-benign process of intimidation, threat and significant professional risk to practicing physicians attempting to alleviate the pain and suffering of terminally-ill patients.

If the actions of the people of Oregon -- at not one, but two -- statewide elections, are deemed by congress to be unconscionable; if in its collective wisdom, Congress rejects the earnest and profound debate about the morality,

legality, and practicality of physician assisted suicide that has occurred under Oregon's democratic form of government I urge you to debate then an explicit policy on physician assisted suicide. Don't use the artifice of an amendment the Controlled Substances Act to establish a precedent-setting intervention by the Federal government into the practice of medicine. Don't intimidate and put at risk physicians when your true objective is altering choices available to terminally ill patients.

Framing the issue from this perspective would, at least, engage the American public in a dialogue about the real issue. Whether you agree or disagree with Oregon's current policy, we have had an earnest and profound debate that has in my opinion enriched our democratic society and it is a debate that sooner or later this society must confront.

GOVERNOR NAMES SECOND GROUP ON TAX POLICY

Governor John Kitzhaber named a second group today to review Oregon's tax system and propose changes to be considered in the 1999 legislative session. The Tax Review Policy Committee will build on the analysis recently completed by the Governor's Technical Advisory Committee on Taxes.

To be headed by Standard Insurance Chief Executive Officer Ron Timpe, the group will specifically consider how to increase the stability of Oregon's tax system; how to use it to help people move from dependence on government support to independence; how to encourage workforce training and development and how to encourage meeting Oregonians' environmental goals.

The group also includes:

Craig Smith, Chief Financial Officer, Chemeketa Community College; Tim Nesbitt, Executive Director, Oregon State Council of Service Employees International Union; Cappy Eaton, League of Women Voters; Commissioner Beverly Stein, Chair, Multnomah County Commission; Michael Jordan, City Manager, Canby; Leon Smith, CEO, Albina Community Bank; W. Eugene Hallman, Attorney, Pendleton; Tony Van Vliet, Corvallis, former state legislator; Ron Parker, Willamina Lumber Co.; Harold Schild, CEO, Tillamook County Creamery Association; and Elizabeth Fujis, Rising Sun Farms, Phoenix, Or.

GOVERNOR SELECTS PRISON SITE

Asks Legislative Approval Soon in Order to Avoid Costly Delays

Governor John Kitzhaber announced today that he favors siting a new women's correctional facility and intake center at a site on Day Road near Wilsonville. To expedite the process, the governor will ask the Legislature to approve the site in a special session, thus avoiding \$725,000 in costs per month in construction delays and out-of-state prison space rental.

"The legislative leadership has expressed strong interest in an alternative site for this facility," said Kitzhaber. "After careful review, this site does have advantages over the Dammasch State Hospital site, including strong community support, a better transportation connection to Interstate 5 and the potential of bringing infrastructure to land targeted for industrial development. I'm asking the Legislature to join me in choosing this site."

Kitzhaber also praised City of Wilsonville officials for working constructively with the state to find an alternative site. "I have always wanted to work cooperatively with communities to find sites for correctional facilities that have local support," said Kitzhaber. "Wilsonville has become a cooperative partner in accomplishing this."

The Oregon Department of Corrections began a review of the site in March of this year after strong legislative support for finding an alternative to the initially proposed Dammasch State Hospital site in Wilsonville. Failing legislative action, Kitzhaber said the prison would be built on the original Dammasch site.

"Both sites are good sites, but Day Road is better from the perspective of strong community support and meeting community development objectives," said Kitzhaber.

The alternative site has been endorsed by the City of Wilsonville, The Wilsonville Chamber of Commerce and the West Linn-Wilsonville School District. Further, the development of the prison will help extend infrastructure such as water, sewer and roads, to land targeted for industrial development.

In a special session, the Legislature would need to pass a bill identifying the new site and provide funding to begin construction. Kitzhaber said he would call the special session between July 27 and August 7. "I will be working with legislative leadership until then to develop the support for this alternative site."

"As the Legislature asked, we have considered this site and found it a good place to put this correctional facility," said Kitzhaber. "Now, only the Legislature can make it happen."

The prison will have approximately 1,300 beds initially and will serve a dual purpose as the intake center for all inmates entering the corrections system and as a full custody women's prison.

STATE WILL NOT APPEAL FEDERAL RETIREE RULING

Governor John Kitzhaber and Attorney General Hardy Myers announced today that the State of Oregon would not appeal a recent Oregon Supreme Court opinion which held that federal retirees are entitled to receive a tax benefit equivalent to a benefit state retirees received. The opinion likely will result in federal retirees receiving refunds on at least a portion of the taxes they paid on their retirement benefits.

The subject of how to treat taxation of federal retirees' retirement benefits has been at issue since 1989, when the U.S. Supreme Court ruled that federal retirees cannot be taxed differently from state retirees. Previously, Oregon did not tax state retirees' benefits, but did tax the benefits of federal retirees. Since the U.S. Supreme Court ruling, the State of Oregon has made various attempts to treat the two different groups of retirees equally while still complying with the contractual obligation the State has with state retirees. The recent case held that, despite these efforts, the State has not yet achieved the equal treatment that federal law requires.

"This litigation has consumed much time and effort, and it's time to get on with settling this issue," said Kitzhaber. "We have been seeking a way to treat state and federal retirees equitably and this seems to be the way to do it."

"In light of the Oregon Supreme Court's opinion, it is highly unlikely that the U.S. Supreme Court would agree to review this case," Myers said. "Continuing the litigation would probably serve only to increase the liability of the State and delay final resolution of the issue of equal treatment of state and federal retirees."

The decision not to appeal means the Oregon Department of Revenue will begin a process to identify the amount of refunds and to whom they are due. Early estimates are that the State will need to pay out more than \$300 million in refunds.

GOVERNOR'S GROUP RELEASES TAX STUDY

Kitzhaber Begins Appointing Second Committee to Formulate Proposals

Governor John Kitzhaber's Technical Advisory Committee on Oregon's tax system released its report today. The committee, appointed in November 1997, was charged with reviewing the equity, stability and effectiveness of Oregon's tax system in the light of voter-mandated changes and changes in Oregon's economy and demographics.

"This committee did an excellent job," said Kitzhaber. "After reviewing their work, it is clear that our tax system would benefit from some adjustments. I plan to submit proposals to correct some of the deficiencies in our existing system next legislative session."

Kitzhaber today also began the process of appointing another group, to be headed by Ron Timpe, Chairman, President and CEO of Standard Insurance Co., to review the findings and propose specific legislative concepts for consideration in the 1999 Legislature.

"I am most interested in hearing proposals about how we can provide additional stability in our tax system, especially for school finance; how we help encourage investments in education and workforce development; and how to help lower income Oregonians move from dependence to independence," Kitzhaber said.

The committee noted that education funding is more dependent on state income taxes than ever before, and that while Oregon's economy may be more diverse than in the past, income taxes are still very sensitive to recession.

"I believe we must find a way to provide some sort of financial cushion for our public schools," said Kitzhaber. "We have had a very strong economy for the last five years, but it's not prudent to assume that will last forever."

The governor also noted that economic change has created the demand for a more highly trained workforce in all industries throughout the state. "One of the goals of our tax system should be to help us reach our goal of having a highly trained workforce -- especially by creating incentives for continued training and education," said Kitzhaber. "I think this is one of the most important things we can do for our state's rapidly changing economy."

Finally, Kitzhaber said he believed the state's tax system should encourage Oregonians who currently depend on state assistance to move toward self-sufficiency. "We need to ensure that Oregonians who increase their wages enough to leave welfare or other state assistance actually see an increase in their disposable income as well."

Among the Technical Advisory Committee's key findings were:

- The Oregon tax system has changed significantly over the past decade as a result of voter initiatives and the changing economy. The most important change is a shift in the relative importance of the property and income taxes, the two main taxes which account for approximately 75 percent of state and local tax revenues.
- While Oregon's economy is more diverse and stable than it was a decade ago, the revenue system is now more sensitive to changes in the economy. There is no experience with economic weakness or recession under the current mix of revenues and responsibilities, but it is likely that recession could have a large impact on the General Fund and, therefore, education funding. There is also no experience with an environment of higher inflation. It seems likely that local government revenue will grow more slowly than the economy, particularly in times of inflation. These issues lead the committee to identify revenue stability as the key policy issue for the tax system.
- The changing tax structure leads to a fundamentally altered relationship between state and local governments. Local government revenues are limited. Decisions made at the state level about local revenue sources, such as the property tax, directly affect local revenues. With local revenues declining, the state has increasing control over education funding.

GOVERNOR CRITICIZES LEGISLATURE'S REFUSAL TO FUND GORGE COMMISSION

Governor John Kitzhaber today expressed strong disappointment with the Legislative Emergency Board's vote not to honor its own commitment to match the State of Washington's allocation of \$94,000 to the Columbia River Gorge Commission. The Oregon Legislature had set aside \$75,000 during the 1997 session, to which Governor Kitzhaber agreed to add \$19,000 from the Strategic Reserve Fund. The Legislature's refusal to allocate the money means that it will not be available to the Gorge Commission, and that \$75,000 of Washington's commitment will be withdrawn.

The Gorge Commission's management has said that the funding cut will result in the lay-off of approximately one-fourth of its planning staff. Commission management states that this will delay evaluation of the Gorge management plan well into 1999 and could severely limit the Commission's ability to support county planning efforts.

"This action is extremely short-sighted and will undoubtedly lead to greater conflict in the Gorge and less effective protection of one of the Northwest's natural treasures," Kitzhaber said. "This not only undercuts the effectiveness of the Gorge Commission, but is also a vote against our local government partners," Kitzhaber added.

All three Oregon Gorge counties, Multnomah, Hood River and Wasco, had urged the Emergency Board to provide the promised allocation.

Kitzhaber said he still intends to honor his commitment of \$19,000 in Strategic Reserve Funds to the Gorge Commission, despite the Legislature's refusal to provide its portion.

**ASSOCIATION OF OREGON COUNTIES AND OREGON STATE
SHERIFFS' ASSOCIATION SUPPORT JUVENILE
CRIME PREVENTION PARTNERSHIP**

Members of the Association of Oregon Counties voted today to support a juvenile crime prevention partnership. Yesterday the Oregon State Sheriffs' Association also approved this plan. The Partnership has been developing for more than a year.

The High-Risk Juvenile Crime Prevention Partnership will target \$15 million a year to help counties prevent at-risk kids from committing crimes and help them provide community-based detention, shelter, treatment and graduated sanctions for juvenile offenders.

"I am pleased by the support of the counties for this partnership," Kitzhaber said. "I am convinced that, together, we can help kids from becoming criminals -- and help protect ourselves from becoming victims."

The governor also said that he would seek legislative leadership's support in improving and developing a fuller response to juvenile crime issues. "This only represents one small piece of the work that must be done to support our young people in Oregon's communities. I am hopeful the Legislature will join in this challenge."

The plan will work by:

Identifying who to serve

The State and Oregon's counties would target efforts on adolescent kids on the brink of failing who exhibit more than one of the following risk factors: school failure, substance abuse, dysfunctional families, anti-social behavior, or associating with gangs or others known to break the law.

Targeting funding

The State will allocate \$30 million between 1999 and 2001 for use by the counties to implement juvenile crime prevention plans and to provide community-based detention, shelter, treatment service, and graduated sanctions for juvenile offenders.

Promoting model strategies

There are many good ideas and proven approaches to helping prevent juvenile crime. The Partnership will seek to

promote these approaches by encouraging their adoption by counties. Such strategies include: Youth Conservation Corps-type programs, after school development programs, drug abuse intervention, and aggression reduction.

Creating a joint planning process

The counties and the state will cooperate in reviewing local plans for juvenile crime prevention by establishing the Juvenile Crime Prevention Advisory Committee. This committee will recommend plans to the governor for funding.

Being accountable for results

In order to understand how well plans are working at reducing juvenile crime, the High-Risk Juvenile Crime Prevention Partnership will establish interim outcomes and measurements such as recidivism and juvenile arrest rates per 1,000 youths.

**GOVERNOR KITZHABER'S STATEMENT
ON ASSISTED SUICIDE DECISION**

"Today's decision by the U.S. Department of Justice is welcome news. It ends once and for all any doubt about the right of Oregon physicians to prescribe controlled substances to patients who seek assistance in ending their lives under our state's Death with Dignity Act.

Oregonians have supported physician-assisted suicide twice in statewide elections. Oregon voters approved the law in 1994 and again in 1997, the last time by an overwhelming margin.

This was a tough call for Attorney General Janet Reno to make. I commend her for sticking to the facts in this case and not allowing political pressure to influence her judgment in this matter."

GOVERNOR'S STATEMENT ON COASTAL COHO DECISION
State to Appeal Magistrate's Ruling

I'm announcing today that the State of Oregon will appeal the recent U.S. Federal District Court decision on the Endangered Species Act (ESA) by Magistrate Stewart, and will furthermore request a stay of the Magistrate's order.

I want to make it clear that these actions by the State of Oregon do not reflect a disagreement with the objectives of the ESA. Rather, these actions reflect a deep concern about the implications of Magistrate Stewart's extremely narrow interpretation of the Act on our ability to actually achieve its objectives -- restoration of those species whose habitat includes substantial areas in private ownership.

Magistrate Stewart's interpretation, if allowed to stand, implies that the requirement under the ESA for federal agencies to consider state conservation plans means almost nothing; that state-led conservation efforts have no place under ESA; that conservation efforts by individuals count only if they are mandated by government; and that state and local regulatory actions count only if there are legal assurances that they will remain in place into the future (which is extremely difficult for states like Oregon that are constitutionally prohibited from taking actions to bind future legislatures).

In short, under this narrow interpretation, the objectives of ESA can only be met through federal regulation and federal enforcement which creates an enormous contradiction -- especially on private land. This is a critical point which deserves some elaboration.

The primary role of the federal government under the ESA is a regulatory one by which it can prevent landowners from engaging in activities that "take" a listed species. The federal government cannot require individuals to restore watersheds. Yet to restore coastal coho and many other species, restoration work on private land is essential. In Oregon, 65 percent of coho habitat is privately owned, thus ESA prohibitions alone will not result in the kind of restoration needed for recovery.

The only way such restoration work can be achieved is to involve private landowners in the decision-making and give them some ownership and investment in the work being done. And this, of course, is the heart of the Oregon Plan.

The point is that we cannot recover coastal coho unless private landowners take restoration actions that go well beyond avoiding "take." So the question becomes: by what means can we achieve these kinds of activities on private land? Simply listing species does not accomplish this, a fact demonstrated by the listing of Snake River chinook and sockeye. In the seven years since that listing, the National Marine Fisheries Service (NMFS) has taken no regulatory or

enforcement action on private land anywhere in the Snake River Basin.

The ESA was passed in 1973 to ". . . provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." With ecosystem conservation as the objective, application of the ESA through a listing is a means to that end -- not the end in itself.

The Endangered Species Act was enacted for a noble purpose -- a purpose in which I believe. But now, a quarter of a century later, we need to ask ourselves whether the traditional application of the Act by federal agencies is achieving that purpose. With more than 600 species now listed and dozens more proposed for listing -- and few species on the road to recovery -- it is clear that we need to be open to new approaches.

If the ESA can only be so narrowly interpreted that, in order to legally defend its application, we disadvantage the very species it was enacted to protect -- then there is a problem with the Act itself. We need to know the answer to this question if we are truly committed to the objectives of the ESA.

Again, my objection to Magistrate Stewart's decision is not about whether a listing is warranted on the Oregon coast. That is a decision made by the federal government according to statutory guidelines. Rather, my objection is to the implications of the Magistrate's narrow interpretation on our long term ability to save and restore species.

For these reasons, I have directed the State of Oregon to appeal Magistrate Stewart's decision and to request a stay of the Magistrate's order.

**STATEMENT BY GOVERNOR JOHN KITZHABER ON
THE THURSTON HIGH SCHOOL SHOOTING**

Governor John Kitzhaber gave the following statement in Springfield in the aftermath of the Thurston High School Shooting on Thursday, May 21, 1998:

"On behalf of my wife Sharon and I, we want to express our heartfelt sympathies to victims of this terrible tragedy today and to their families and to their friends. I have come down to get a detailed briefing to give me a better sense of how I can mobilize the State resources to assist the victims and their families, to assist the community and the school and the teachers and the students in the healing process and what we can do to help the local law enforcement efforts.

I would simply like to ask that all Oregonians take a moment from their busy schedules today to offer prayer in their own way to the victims and their families and their friends.

I would also like to ask that all Oregonians pause today from their busy schedules, and also in the days to come, to ask how we have failed as a society, and how such a tragic event could occur here in the heart of Oregon. Because the fact is, this is not just a school problem. This is a much larger issue. It happens in our schools. It happens in our streets and in our stores and in our neighborhoods and in our homes on an increasing frequency by our children.

And I think we need to ask ourselves, "What kind of despair drives children to this kind of violence? What lack of hope or sense of abandonment leads children to this kind of an act? What lack of opportunity -- what degree of frustration -- drives them to make this kind of terrible choice?" These are the kinds of questions we need to ask ourselves honestly and openly over the next few months and answer and resolve.

So I would ask that all Oregonians take time today, not just to watch the news coverage of this event, but to personally connect with the nature of this tragedy, and to ask ourselves what it implies for our community and for our children and for our future. And perhaps most importantly, what it implies about our own individual responsibility to assure that this kind of thing doesn't happen again in the state of Oregon.

But today, the primary charge is one of healing and one of mourning -- to try to reach out and offer support to the victims and their families and their friends. And I would ask that all of you do your part."

GOVERNOR RELEASES STATE OF SALMON REPORT

Governor John Kitzhaber released the first annual report on the state's efforts to save salmon and steelhead today, detailing where the Oregon Plan for Salmon and Watersheds is succeeding and where improvement is needed.

"The State of the Salmon Report is a very candid assessment of what's gone well over the past year and where we need to devote more energy in the coming year," Kitzhaber said. "However, given the scope of the Oregon Plan, I'm pleased with where we are overall."

The Oregon Plan for Salmon and Watersheds is a massive effort to restore dwindling coho salmon and steelhead populations in Oregon. It includes a strong voluntary, grassroots component -- built on our existing regulatory framework -- and based on the concept that recovery of species, particularly on private lands, requires the cooperative efforts of individual landowners, industry and government.

The plan was funded by the Oregon Legislature and timber interests and was accepted by the National Marine Fisheries Service last year to address declining populations of coho and steelhead on the Oregon coast. The State of the Salmon Report is a yearly requirement of the Oregon Plan.

Highlights from the report include the following:

1. The ocean off the coast of Oregon remains generally unfavorable to salmon. The numbers of coho returning to the northern Oregon coast in 1997 fell to an historic low, although returns to the Rogue River basin in southern Oregon improved slightly.
2. Thousands of people in cities, on farms and in forests are now involved in projects to restore fish runs. More than 1,200 projects have been completed by local groups working to restore rivers and streams. These projects include fencing of streams, culvert replacement, road repairs and improving the streams themselves to aid the passage of salmon.
3. Oregon now has 81 "watershed councils," local groups dedicated to improving the health of local watersheds. Forty-five soil and water conservation districts are also active in salmon restoration. Forest landowners have completed an inventory of streams and are now working to replace culverts, reduce sediment, improve the ability of fish to pass up and down a stream and are planting along stream banks.

The State of the Salmon Report also details needed improvements to the state's salmon restoration efforts. These include: enhanced partnerships between state and local governments, stakeholder groups and landowners; the creation of

a long-term plan for salmon restoration, and more effective working relationships between all levels of government.

A summary of the report is available by calling the Governor's Natural Resource Office at (503) 378-3589. The summary will also be available on the Oregon Plan web page at www.or-plan.org beginning approximately June 1.

The full report will be available on-line and in hard copy in a month.

GOVERNOR NOMINATES MIKE GREENFIELD TO HEAD DEPARTMENT OF CONSUMER AND BUSINESS SERVICES

Governor John Kitzhaber announced today that he has nominated Mike Greenfield of Salem to be Director of the Department of Consumer and Business Services (DCBS). Greenfield, who currently serves as Deputy Secretary of State to Phil Keisling, will replace Kerry Barnett, who vacated the position in January. The appointment will be considered by the Oregon Senate in June.

"Mike has the top-notch administrative and personal skills I want to see in this position," Kitzhaber said. "DCBS programs have an impact on virtually every business in Oregon and play a critical role in serving consumers and workers from all walks of life. Mike knows how to bring together the diverse interests needed to keep those programs successful," he added.

Greenfield has served as Deputy Secretary of State since 1991, and previously served as Legislative Administrator to the Legislature from 1986 to 1991. He also serves as the Chair of the Oregon Commission on Children and Families and as a Board Member of the Howard Street Charter School in Salem.

DCBS is the state's largest regulatory and consumer protection agency. The department regulates insurance, banking, securities, building codes, occupational safety and health, workers' compensation, real estate appraisers and energy. It also has consumer protection and education programs, and offices and ombudsmen to help consumers, injured workers and businesses. The DCBS director also serves as the state's insurance commissioner and superintendent of banks.

GOVERNOR RECOVERING FROM VIRUS, CANCELS EUROPEAN TRADE MISSION

Governor John Kitzhaber announced today that he would cancel his public schedule for the remainder of May, including his scheduled trade mission to Europe, to continue recovering from what his doctor believes is a viral infection, most likely contracted during his trip to China in March of this year.

Governor Kitzhaber is recovering slowly from the infection and is expected to make a full recovery given time and rest. The governor is currently doing some work from home and is in daily contact with his staff.

"I am sorry that I have had to cancel so much of my public schedule over the last couple of weeks," said Kitzhaber. "But I am trying to follow that old adage of 'physician, heal thyself.'"

GOVERNOR CREATES DAIRY TASK FORCE

Governor John Kitzhaber announced today that he is creating a task force to assist Oregon's dairy industry in dealing with new pressures brought about by lower farm milk prices, increasing environmental requirements, increasing production costs and reduced dairy farm expansion in Oregon. The task force will be made up of dairy farmers, processors, extension consumers and Oregon Department of Agriculture staff.

"The dairy industry is an important component of Oregon's diverse agriculture -- as food sources to Oregonians, and as an employer and a vital part of the Department of Agriculture's value-added strategy," Kitzhaber said. "I believe the long-term interest of all Oregonians will be served if steps are taken to understand the underlying problems facing this industry and propose workable solutions."

The task force will make its report with recommendations to the governor by December, 1998. The task force membership is as follows:

Dick Heathershaw, Cloverdale; John Rohner, Baker City; Bernie Faber, Salem; Marshall Christiansen, Turner; Jeff Cochran, Coquille; Merle Peters, McMinnville; Paul Arbuthnot, Portland; Mike Gamroth, Corvallis; Troy Downing, Tillamook; Lorna Youngs, Salem; Mary Anne Bauer, Portland; and Phil Ward, Salem.

GOVERNOR DENIES CLEMENCY APPLICATIONS

Governor John Kitzhaber announced today that he has denied clemency for four women: Carla Gold, Teresa Buob, Susan Pedro and Teresa Sanden-Maurer. The petitions for clemency were presented as a group to the governor last fall by the Clemency Project of Oregon. Project leaders claimed these women were victims of spousal abuse and that this abuse led directly to their criminal actions and imprisonment today. Governor Kitzhaber's denial of their requests comes within the 180-day deadline provided by Oregon law.

"While domestic abuse is a tragic reality for many families, we will not reduce its occurrence by condoning retaliatory violence," Kitzhaber said. "I have carefully reviewed the facts in these four cases and have concluded that in each the criminal justice system did not fail and that many mitigating circumstances were taken into account by the courts."

In denying clemency, Kitzhaber said that our society must do far more to aid women who are the victims of domestic violence. "Beyond enforcing existing laws and doing a better job of raising public awareness of this tragic problem, we must ensure that shelter care, early counseling and treatment are more readily available."

Details of the four cases are as follows:

Carla Gold

Gold was convicted of first-degree manslaughter in 1992 for the killing of her husband Clint Gold during an argument in their home at LaPine. Ms. Gold presented both battered spouse syndrome and the extreme emotional disturbance defenses during her trial.

Emergency room doctors, familiar with Gold due to frequent emergency-room visits unrelated to her conviction, testified at her trial that they noticed no signs of physical abuse during their examinations of her when she alleged abuse had occurred. Forensic evidence from the case indicates the victim was moving away from Ms. Gold at the time he was shot. The murder weapon was never recovered.

Gold was sentenced to 90 months in prison, and is due to be released in August 1998.

Theresa Buob (Lonegran)

Buob was convicted of conspiracy to commit murder in 1994 and sentenced to 80 months in prison after

accepting a plea bargain with prosecutors.

She placed a phone call to her victim in order to lure him to a local schoolyard where two accomplices, one of whom was a juvenile, proceeded to shoot the victim seven times. The victim lived.

Buob had obtained a temporary restraining order against the victim at some time prior to the shooting. However, on the evening in question there was no element of imminent danger or threat.

There is some evidence that Buob tried to withdraw from the conspiracy and that she never believed that her accomplices intended to kill the victim. However, these factors and her cooperation with prosecutors in convicting her accomplices were taken into account by the trial judge. Her two accomplices are serving sentences of life without possibility of parole and a 15-to-30-year sentence. Buob is due to be released in June 1999.

Teresa Sanden-Maurer

Sanden-Maurer was convicted of aggravated murder in 1987 and received a life sentence. She is due to be released in 2007.

During bitter divorce and custody proceedings, Sanden-Maurer promised a friend \$10,000 if he would arrange the murder of her husband, William Maurer. When the hired killer mistakenly shot a co-worker, Sanden-Maurer directed the friend to try to kill her husband again. Mr. Maurer was killed as he left his home for work one morning. His body was found by one of their two young sons.

While Mr. Maurer had been arrested for domestic abuse prior to the shooting, those charges were ultimately dismissed. However, her accomplices were prepared to testify that Sanden-Maurer's motive for the contract killing was custody of the two boys and property that originally belonged to her husband's family.

Early in her trial Sanden-Maurer entered a plea of guilty to avoid the death penalty. Her two sons are among the most vehement opponents to this clemency request.

Susan Pedro

Pedro was convicted of murdering her husband in the couple's home in Lincoln City in 1984; she received a life sentence and could be released as early as June 1999. Pedro has previously applied to Governor Roberts for clemency.

Throughout her trial, Pedro claimed that the shooting was committed by her 80-year-old father-in-law. He suffered at the time from advanced Alzheimer's Disease and was unable to recall or speak about the incident. Ballistics cleared Pedro's father-in-law.

In her application for clemency, Pedro now insists that she killed her husband because she feared that he was reaching a point in their abusive relationship where he would shortly kill her. However, the forensic evidence presented at the trial does not wholly support this contention.

The fatal bullet passed through a blanket pulled up over her husband's head while he lay in bed. The angle of the bullet would indicate that it entered from slightly behind his head. The crime scene photos do not promote the idea that her husband was in action or even conscious at the time the fatal shot was fired.

In addition, there is some evidence that Pedro had motives beyond any abuse that may have occurred between the couple. The victim may have planned to separate from Pedro. He had indicated to family members that it was his intention to disinherit her, that he was afraid of her and had secretly prepared a will disinheriting her.

Between the time of his death and her arrest, Pedro liquidated a substantial amount of the victim's \$1.2 million estate, including disposing of property and family heirlooms of some emotional value to the victim's family. The family subsequently secured a civil judgment for \$1.62 million against Pedro.

BRAND OREGON TOOL KIT FOR OREGON SMALL BUSINESSES AVAILABLE

Governor John Kitzhaber today unveiled the Brand Oregon Tool Kit, designed to help small businesses with their marketing strategies. This first edition of the Tool Kit, "Unlocking the Sales Power of Oregon's Mystique," was produced by the Oregon Economic Development Department (OEDD) and provides case histories of Oregon companies that are using Oregon's name and reputation in their marketing strategies.

"Consumers outside our borders recognize great value in the name Oregon, which symbolizes quality environmental stewardship. Oregon has become a brand and can be used by small businesses around the state to gain market position and improve their bottom line," Kitzhaber said.

The tool kit will be distributed to business resource centers and libraries for public access and then will be offered for sale at \$49.95 to cover the cost of printing, mailing and research.

"We are pleased to be able to offer this creative new tool to small Oregon businesses. Small and emerging businesses have told us repeatedly that marketing is one of their key needs," said Bill Scott, OEDD Director. "In the branding world, professionals have told us that Oregon can be considered a brand and help companies gain a competitive edge in the market," he added.

The governor also announced the availability of four marketing grants of \$5,000 each that will be awarded to groups of Oregon companies that will serve as pilots for incorporating Brand Oregon strategies to increase their competitiveness and bottom line.

Key supporters of the project include: Associated Oregon Industries, Oregon Entrepreneurs Forum, Portland Advertising Federation, The Performance Center, Oregon Tourism Commission and the Oregon Department of Agriculture.

ALTERNATIVE WILSONVILLE PRISON SITE TO RECEIVE ADDITIONAL REVIEW

Governor John Kitzhaber announced today that he has reached agreement with City of Wilsonville officials to further investigate an alternative site for a women's correctional facility and intake center currently slated to be sited at the former Dammasch Hospital site.

In a letter to Wilsonville Mayor Charlotte Lehan, Kitzhaber wrote "I propose that up to 90 days from today be taken to refine the analysis of the alternative site and to work to secure legal and infrastructure agreements that will make it possible to site a prison there."

Kitzhaber stressed that he did not come to the decision without serious concerns. "I am concerned about the fairness question to the landowners and neighbors most directly affected by the alternative site," Kitzhaber wrote. "I am concerned about our ability to secure this site in a given time period with at least as much, or greater, certainty than we have at the primary Dammasch site. I am concerned about cost, and to the extent such a change results in any increased cost, legislative leadership must recommend to me that such increases are acceptable."

Further, Kitzhaber said that he remains convinced that the existing Dammasch site remains a very good site for a prison and will proceed to build on that site if the alternative site proves unfeasible.

"However, I pride my administration as one that seeks community-based solutions and, because of this, and the impressive effort by the city to find a site agreeable to all, we will seek to even more fully consider the suggested alternative prison site in Wilsonville."

The alternative site identified by the city consists of approximately 130 acres on the north edge of the city of Wilsonville.

GOVERNOR CALLS FOR MOST QUALIFIED CANDIDATE IN TOP BPA JOB

In a letter to Energy Secretary Federico Peña, Governor John Kitzhaber requested that the federal government appoint the most qualified candidate available as Administrator of the Bonneville Power Administration (BPA). The job became vacant six months ago, and the governor stressed to Peña that he continues to believe the most qualified candidate to emerge in the past eight months is his Salmon and Energy adviser, Roy Hemmingway.

"Mr. Hemmingway was the only candidate in the initial list with both extensive knowledge of the energy and fish issues that beset Bonneville, and an ability to work within the complex political environment in which the agency must operate," said Kitzhaber.

Senator Patty Murray of Washington state asked the Department of Energy in February to withdraw Roy Hemmingway as a candidate for the job because of the concerns of public power constituencies in her home state. The Department of Energy did not withdraw his name, but gave Senator Murray six weeks to find a consensus candidate.

"I have been consistently clear that my objective is not the appointment of Roy Hemmingway per se, but the appointment of someone who shares the environmental values of the region, who has a strong knowledge of both power and salmon issues and who has the political savvy to be effective," said Kitzhaber. "However, Mr. Hemmingway remains the most qualified candidate before us for this appointment."

As one of Kitzhaber's top advisers, Hemmingway has been directly involved in issues that deal with the future of the BPA and the energy market in Oregon under deregulation. He was instrumental in initiating the four-state "Comprehensive Review of the Northwest Energy System," which will form the basis of a regional position on the future of the BPA and the Columbia River hydroelectric system. He also helped develop the "three sovereigns" process, an effort to provide a more effective forum for making decisions about the future of the Columbia River.

"At stake is a position of enormous importance to the future of the Northwest. It is important to our energy future and it is vital to the future of fish," Kitzhaber said.

Kitzhaber said that whoever the federal government appoints, he wants the decision to be based on merit, not on politics. "Whoever is appointed the next Administrator of the BPA, the decision must be made on the basis of the individual's qualifications and competence to do the job, not on the basis of a political litmus test," he said.

GOVERNOR PLEASED WITH STEELHEAD DECISION

Governor John Kitzhaber announced that he is pleased with the decision made today by the National Marine Fisheries Service (NMFS) not to list steelhead as an endangered species. Following a month delay of the decision, NMFS decided that steelhead in the Oregon Coast and Klamath Mountains evolutionarily significant units (ESU) warrant 'candidate species status' instead of the 'threatened' listing that was originally proposed. Steelhead in the Lower Columbia ESU were listed as threatened.

"Once again we have shown that the Endangered Species Act can work for states that are willing to take the lead in developing recovery plans for species in decline," said Kitzhaber. "This decision today affirms my belief that Oregonians are not only committed to recovery of salmon and steelhead throughout the state, but that we can make it happen."

Kitzhaber said that in the case of the Klamath Mountains ESU, which Oregon shares with California, the two states worked together to provide measures sufficient to recover steelhead across state boundaries. "It was vital that we work in partnership with California," said Kitzhaber. "Steelhead and other fish, unlike people, do not recognize boundaries drawn on maps."

Oregon has also been working on recovery strategies with the State of Washington on the Lower Columbia ESU, which includes area in both states. Although both governments, local communities and the private sector have worked hard to develop steelhead recovery measures for the Lower Columbia, a listing in the river was unavoidable due to low numbers of fish. However, both states will continue to perfect their recovery strategies for steelhead. At the same time, the states will determine how best to address the other declining stocks of chinook, chum, and steelhead that were proposed for listing two weeks ago.

Originally designed as a plan to save coastal coho, the Oregon Plan for Salmon and Watersheds was recently expanded to address declining steelhead populations. The original plan resulted in candidate species status for coho in the Oregon Coast ESU. Where coho was listed as threatened in the Klamath Mountain ESU, steelhead will not be listed.

**GOVERNOR, NATIONAL MARINE FISHERIES SERVICE OFFICIALS
TO DISCUSS STEELHEAD**

Governor John Kitzhaber will join National Marine Fisheries Service Director Rolland Schmitten and Regional Director Will Stelle in a news conference to announce the decision on whether five populations of steelhead warrant listing under the Endangered Species Act. The news conference will be held Friday, March 13 at 10 a.m. at the Rogue District Office of the Oregon Department of Fish and Wildlife, 1495 East Gregory Road, Central Point.

The news conference will be followed by a tour of Cascade Ranch, a private ranch that features extensive stream restoration. For more information on the media tour, contact Lu Anthony, Little Butte Creek Watershed Council Coordinator, at (541) 826-2908.

GOVERNOR SUBMITS NEW APPOINTMENTS

Governor John Kitzhaber has submitted several nominees to the state Senate to serve on various boards and commissions.

Among the individuals nominated were Eric Bloch of Portland to the Northwest Power Planning Council. Bloch has been nominated in place of Roy Hemmingway, who the governor nominated for the Power Planning Council in November, 1997 and is currently a candidate for Administrator of the Bonneville Power Administration. Governor Kitzhaber also nominated Gresham Police Chief Bernie Giusto to the Tri-Met Board of Directors.

The following names were submitted by the governor:

Board	First Name	Last Name	City
Board on Public Safety Standards and Training	Lynn Guenther	Hood River	
Board on Public Safety Standards and Training	Larry Hatch	Beaverton	
Building Codes Structures Board	James Coughlin	Astoria	
Building Codes Structures Board	Tricia Quigley	Coos Bay	
Coastal Salmon Restoration and Production Task Force	Dick Angstrom	Salem	
Coastal Salmon Restoration and Production Task Force	Alex Barkume	Hillsboro	
Coastal Salmon Restoration and Production Task Force	Dale Buck	Cloverdale	
Coastal Salmon Restoration and Production Task Force	James Denison	Toledo	
Coastal Salmon Restoration and Production Task Force	John McGhehey	Forest Grove	
Coastal Salmon Restoration and Production Task Force	Gregory Norton	Coos Bay	
Commission for the Blind	Ken Jernstedt	Hood River	
Commission on Asian Affairs	James Hanna	Portland	
Commission on Asian Affairs	Cynthia Mounts	Roseburg	
Commission on Asian Affairs	Janet Nishihara	Corvallis	
Commission on Hispanic Affairs	Francisca Johnson	Eugene	
Electrical and Elevator Board	Frank Regalado	Portland	
Human Resources Investment Council	Roger Bassett	Turner	

Human Resources Investment Council	Bill Bell	The Dalles
Human Resources Investment Council	Sam Brooks	Portland
Human Resources Investment Council	Bill Cardwell	Bend
Human Resources Investment Council	Bob Craft	Winston
Human Resources Investment Council	Irv Fletcher	Salem
Human Resources Investment Council	Gwyn Harvey	Beaverton
Human Resources Investment Council	Rick Henson	Portland
Human Resources Investment Council	Bill Hill	Sherwood
Human Resources Investment Council	Diane Lovell	Portland
Human Resources Investment Council	Eric Olson	Medford
Human Resources Investment Council	John Quiggle	Marylhurst
Human Resources Investment Council	Charlie Schuler	Salem
Human Resources Investment Council	Jeri Stark	Eugene
Oregon Board of Dentistry	Kris Hudson	Portland
Oregon Board of Dentistry	Jean Martin	Wilsonville
Oregon Board of Dentistry	Ellen Young	Astoria
Oregon Board of Maritime Pilots	Richard Lauer	Coos Bay
Oregon Government Standards and Practices Commission	Pam Folts	Corvallis
Oregon Government Standards and Practices Commission	Alice Schlenker	Lake Oswego
Oregon Government Standards and Practices Commission	John Schoon	Rickreall
Pacific Northwest Electric Power and Conservation Plan	Eric Bloch	Portland
State Apprenticeship and Training Council	Nicki Harrington	Pendleton
Tri-Met Board	Bernie Giusto	Gresham
Trustees of the State Library Board	Jim Edmunson	Eugene
Workers' Compensation Management- Labor Advisory Committee	Ken Allen	Salem
Workers' Compensation Management- Labor Advisory Committee	Ted Molinari	Dallas
Workers' Compensation Management- Labor Advisory Committee	Tim Pope	Portland
Workers' Compensation Management- Labor Advisory Committee	Joan Reese	Wilsonville
Workers' Compensation Management- Labor Advisory Committee	Bob Shiprack	Tualatin
Workers' Compensation Management- Labor Advisory Committee	Liz Shuler	Portland
Workers' Compensation Management- Labor Advisory Committee	Stephen Telfer	Portland
Workers' Compensation Management- Labor Advisory Committee	Lisa Trussell	Salem
Workers' Compensation Management- Labor Advisory Committee	Patrick West	Salem

GOVERNOR ANNOUNCES APPOINTMENT TO COURT OF APPEALS

Governor John Kitzhaber today announced the appointment of Robert Douglas Wollheim to the Oregon Court of Appeals to fill the vacancy created yesterday when Kitzhaber elevated Judge Susan Leeson to the Oregon Supreme Court.

A graduate of Portland State University, Wollheim obtained his law degree from the Northwestern School of Law at Lewis and Clark College in 1983. Wollheim began his career as a clerk with the Oregon Court of Appeals, and has practiced with the firm of Welch, Brunn, Green & Wollheim since 1984. His practice is concentrated in the area of workers' compensation and appellate advocacy. A past member of the Campaign For Equal Justice, Wollheim is a member of the Oregon Trial Lawyers' Association and currently serves on the Multnomah County Legal Aid Board of Directors and the Willamette Valley Law Project. Wollheim was the 1997 recipient of the Award of Merit from the Multnomah Bar Association.

"Bob Wollheim draws upon both a wealth of experience arguing before the Court of Appeals and a commitment to principled community involvement," said Kitzhaber, "and his appointment reflects the Court's tradition of efficiency and legal excellence."

GOVERNOR ANNOUNCES APPOINTMENT OF CIRCUIT COURT JUDGES

Governor Kitzhaber today announced the appointment of Martin Stone to the Coos County Circuit Court, Mary Ann Bearden to the Lane County Circuit Court, and Sidney Galton to the Multnomah County Circuit Court.

A native of Coos County, Martin E. Stone attended Willamette University, graduating with a BA in English in 1974; he attended law school at the University of Oregon and received his law degree in 1977. Stone has practiced with the firm of Stone Trew & Cyphers, located in Coquille, since 1978. In addition to his litigation and municipal practice, Stone has served as an arbitrator for various civil disputes, and is also involved in the Coquille Rotary Club, and the Coquille Chamber of Commerce. Stone is a past member of the Oregon State Bar Judicial Administration Committee, and the Oregon State Bar Litigation Committee.

Mary Ann Bearden received her undergraduate degree in English from Colorado State University in 1972, and received her law degree from the University of Oregon Law School in 1978. Bearden currently practices with the firm of Bearden & Weinstein in Eugene. Since 1994, she has served as a Municipal Court Associate Judge in Eugene. In addition to service on the Lane County Bar Board of Directors and the Eugene Joint Parks Committee, Bearden was awarded the 1995 President's Award from the Oregon Criminal Defense Lawyers Association.

A Portland native, Sidney A. Galton graduated from Stanford University in 1969 with a degree in political science; he received his law degree from the University of California, Berkeley, School of Law in 1972. Galton practiced with the firm of Galton, Popick & Scott from 1972 to 1981. Since 1982, Galton has served as an administrative law judge with the Worker's Compensation Board. A past member of the Oregon State Bar Board of Governors, the Portland Police Bureau Chief's Forum, and the Oregon Law Institute, Galton is a current member of Oregon State Bar's Judicial Administration Committee, the Multnomah Bar Association, and Oregon Women Lawyers. Galton is a past recipient of the President's Membership Service Award from the Oregon State Bar.

GOVERNOR ANNOUNCES APPOINTMENT OF SUPREME COURT JUSTICE

Governor John Kitzhaber announced today that he has appointed Susan Margaret Leeson to the Oregon Supreme Court. Leeson will fill the vacant position created by the resignation of Justice Edward Fadeley.

Leeson has served as a judge with the Oregon Court of Appeals since 1993. Prior to her appellate appointment, she was a professor of political science and an associate professor of law at Willamette University in Salem.

She began her legal career as a law clerk to the Hon. Alfred T. Goodwin with the United States Ninth Circuit Court of Appeals. She then served as a Tom C. Clark Judicial Fellow with the United States Supreme Court. Leeson has written extensively on many legal issues relating to constitutional law and dispute resolution.

A past member of the Oregon Law Institute, Leeson has also served on the Oregon Criminal Justice Council and the Marion-Polk Local Government Boundary Commission.

"Susan Leeson is an extremely capable and knowledgeable lawyer," Kitzhaber said. "I am very pleased to be able to appoint such a talented jurist to this position."

GOVERNOR APPOINTS ENVIRONMENTAL JUSTICE ADVISORY BOARD

Governor John Kitzhaber has appointed a group of 13 community leaders to evaluate steps by state agencies to ensure that environmental laws and regulations treat all Oregonians equitably.

"It is important that minority and low-income residents are involved in the development and implementation of the laws, policies, and regulations that affect them," said Kitzhaber.

An earlier citizen's task force suggested ways the state's natural resource agencies could address the concerns of minority and low-income communities. Under an executive order signed by Kitzhaber last August, these agencies must report annually to the board on their progress in implementing these recommendations. The first of these reports is due in less than six months.

Members of the Governor's Environmental Justice Advisory Board are as follows:

Maria Andrade, Attorney, Oregon Legal Services, Pendleton.

Richard B. Craig, Environmental Officer, Confederated Tribes of Warm Springs, Warm Springs.

James D. Hill, Tribal Attorney, Klamath Tribes of Oregon, Chiloquin.

Josiah Hill, III, President, Oregon Physicians for Social Responsibility., Portland.

Alan J. Hipolito, Director of Environmental Programs, Urban League of Portland, Portland.

Linda B. Lutz, Member, Oregon Environmental Council, Gresham.

Teresa A. Morse, Rancher, Enterprise.

Diane Schwartz, Trial Assistant, Squires & Lopez, Portland.

Sokhom Tauch, Executive Director, International Refugee Center of Oregon, Portland.

Angela Wilson, Co-Founder, Environmental Justice Action Group, Portland.

Terry Witt, Director, Oregonians for Food and Shelter, Salem.

Gayle S. Yamasaki, Director of Grant Development, Oregon Institute of Technology, Klamath Falls.

Executive Office Advisors

Beth Englander, Law Clerk, Eugene.

Robert W. Collin, Associate Professor of Environmental Studies, University of Oregon, Eugene.

GOVERNOR APPOINTS TASK FORCE ON GROWTH

Governor John Kitzhaber has appointed a group of 13 Oregonians to conduct a statewide study of the effects of growth.

"State and local policy-makers need independent information about how growth is affecting Oregon and what we can do about it," said Governor Kitzhaber. "This group will provide the facts communities need to make decisions about development."

The task force will hold five meetings between March and October. Its report to the governor and the Legislature will identify how growth affects communities, examine who pays for, and who benefits from, development, and evaluate tools communities may use to address growth and development issues.

Kitzhaber stressed that the task force will not determine whether growth is good or bad, or recommend how a community should respond to development. "My charge to the task force is simple: give us impartial data that can inform local debate on this topic."

Members of the Governor's Task Force on Growth are as follows:

CHAIR, Gail Achterman, *attorney, Chair of 1000 Friends of Oregon Board*

Dorothy Anderson, *Eugene Water and Electric Board, League of Women Voters*

Clark Balfour, *attorney, Special Districts Association Board*

Mayor Helen Berg, *City of Corvallis*

Mike Burton, *METRO Executive Officer*

Commissioner Jodi Eagan, *Jefferson County*

Tom Gilleece, *Vice President, U. S. Bank; President of Hermiston Development Corporation*

Commissioner Judie Hammerstad, *Clackamas County, METRO Policy Advisory Committee Chair*

Greg Kantor, *Vice President of Public Affairs, Northwest Natural; 1000 Friends of Oregon Board; Livable Oregon Board*

Mayor Vera Katz, *City of Portland*

Craig Modahl, **Oregon Site Materials and Services Manager, Intel**

Vern Palmer, *Palmer Homes, President of Board of Oregon Building Industry Association*

Jeff Rogers, *attorney, organized Alternatives for Growth Conference (October 1997)*

GOVERNOR SIGNS EXECUTIVE ORDER TO CUT AUTO USE BY STATE WORKERS

Governor John Kitzhaber today ordered state agencies in the Portland metro area to adopt workplace practices that reduce the use of automobiles by their employees.

"Traffic congestion is one of the biggest threats to Oregon's prosperity and quality of life," said Kitzhaber. "As a major employer, state government can ease the burden on our roads and highways by changing the way it does business in Multnomah, Washington and Clackamas counties."

"Even if we could afford new highways -- and we can't -- they won't solve the problem," said Kitzhaber. "Seattle and Los Angeles have already tried it and it didn't work."

Kitzhaber spoke at a transportation fair in Portland where he signed an executive order implementing the new policy. Specific changes required by the governor's order include:

- Requiring most state work sites with less than 50 people to join larger agencies in reducing single-driver commute trips by 10 percent.
- Allowing state employees to work a compressed schedule, telecommute, or use flextime.
- Ending most free parking for state workers in the tri-county area.
- Increasing the convenience of state services in order to reduce auto trips by the public.

Kitzhaber also directed the Department of Administrative Services to review existing policies and laws affecting the state workforce in order to end work place practices that encourage public employees to depend on the automobile.

"All of these changes will improve service to the public, lessen congestion, and reduce air pollution," said Kitzhaber. "They also give state workers and managers new choices about when you do your jobs and how you manage your employees."

Kitzhaber's executive order affects approximately 6,300 state workers at an estimated 135 work sites in the tri-county Portland area.

GOVERNOR ANNOUNCES CHINA TRIP

Governor Kitzhaber will take his first trip as governor to the People's Republic of China this month, as the head of an 11-member trade delegation from Oregon. While there, Kitzhaber will meet with political and economic leaders and promote business opportunities for Oregon companies. The governor, who is leaving for Asia on Thursday, February 26, will focus on increasing the trade links between the two countries, especially in the agriculture and high tech industries. He will also meet with airline representatives to discuss a direct China route from Portland.

The trade mission's specific destinations in China are Beijing, Shanghai, Fuzhou (the state capital of Oregon's sister state, Fujian), Ghangzhou and Hong Kong. Following the China visit, the governor and the delegation will spend several days in Japan before heading home on Tuesday, March 10.

"There are clearly opportunities for Oregon to do business with China, and that's what this trip is about," said Kitzhaber. "Pacific Rim markets -- including China -- are a big part of our economy, and we want to maintain and expand that trading base."

The state's delegation to China includes representatives from agriculture, timber, technology, banking and food products companies. Port of Portland and state economic development staff will also accompany the governor.

A more detailed schedule of the governor's trip to China follows.

Thursday, February 26

- Depart for Narita, Japan

Friday, February 27

- Arrive Japan

Saturday, February 28

- Arrive Beijing
- Signing of grass seed agreement with China (will allow the Oregon grass seed industry to experiment with varieties of grass)

Sunday, March 1

- Cultural activities

Monday, March 2

- US Embassy briefing
- Meetings with key political contacts, including the Mayor of Beijing and China's vice-premier of Agriculture
- Reception at US Ambassador's residence with political and trade contacts

Tuesday, March 3

- Arrive Shanghai
- Briefing with US Consulate staff
- Meet with US state representative offices' staff
- Reception for Oregon companies in China

Wednesday, March 4

- Arrive Fuzhou
- Attend receptions for Oregon companies and Chinese trade contacts
- Meet with Fujian state government officials
- Attend sister-state banquet

Thursday, March 5

- Arrive Guangzhou
- Meet with China Southern Airlines officials regarding direct service to/from Portland
- Luncheon with China Southern Airlines officials

Friday, March 6

- Arrive Hong Kong
- Breakfast with American Chamber of Commerce
- Meeting with Chinese Chamber of Commerce
- Meet with trade contacts

Reception at Consul General's residence

GOVERNOR ACCEPTS DELAY ON STEELHEAD DECISION

The National Marine Fisheries Service (NMFS) announced Monday its intent to defer listing decisions on steelhead stocks in Oregon, Washington, and California for several weeks. Decisions on three Evolutionarily Significant Units (ESUs) are pending in Oregon.

Oregon has developed a plan to recover steelhead, has funded that plan along the coast, and has put in place emergency fishing regulations. "A lot of credit goes to the people of Oregon, in particular those in southwest Oregon, who have agreed to do what it takes to recover steelhead," Kitzhaber said. "We believe we have a strategy in place on the coast that will lead to the recovery of steelhead."

The delay is being announced to give time for NMFS to resolve remaining issues with California. Oregon and California share one ESU, the Klamath Mountain Province. If California were to withdraw the measures it has proposed for the Klamath Mountain Province, then Oregon would face a threatened listing in the southwest part of the state.

"We're working closely with California because our fate is tied closely to theirs," Kitzhaber said.

The state recovery plan addresses other populations of steelhead in the state. The only other ESU ripe for decision this month, however, is the Lower Columbia ESU. NMFS has indicated that the state plan is not likely to be sufficient to avoid a listing in the Lower Columbia.

GOVERNOR SUPPORTS ADMINISTRATION POSITION ON FOREST ROADS

Oregon Governor John Kitzhaber said today that he supports the Clinton Administration's efforts to improve the road system on National Forest lands. The Administration's proposal calls for significant increases in road funding as well as for extensive decommissioning of unused and inadequately constructed roads.

"I believe the time is long overdue to make the necessary investments in the nation's forest road system," Kitzhaber said. "Poorly constructed and maintained roads are a significant factor adversely affecting ecosystem health and threatening habitat for sensitive species," said Kitzhaber.

The governor also voiced support for exempting lands covered by the Northwest Forest Plan from a proposed 18-month moratorium on new road construction.

"The Forest Plan is a scientifically credible strategy that is regional in scope and widely supported. It was carefully crafted as a compromise for protecting threatened and endangered species throughout western Oregon and Washington, while at the same time providing a stable supply of timber to local communities. We would be acting in bad faith if we did not honor that agreement," Kitzhaber said.

The moratorium has been proposed to allow for extensive study about the future uses of roadless lands. "Even though I do not believe a moratorium is appropriate for lands in the Northwest Forest Plan, I do not think this precludes those lands from being included in the study the Forest Service is beginning," said Kitzhaber.

The President's Forest Plan was developed by a group of scientists during the early 1990s to address the virtual shutdown of timber harvest from western Oregon forests in order to address concerns about protection of the Northern Spotted Owl.

Kitzhaber, who does not believe the building moratorium has any practical effect in eastern Oregon forests because of his 11-point Eastside Forest Health Plan, also emphasized that there are a number of important ecosystem restoration efforts underway in Eastern Oregon. "I work to ensure that any new roadless area policy will allow active management to move forward in areas that have been severely impacted by forest health problems as well as by historic timber management and fire suppression policies."

STATE ENTERS CASE ON SALMON PLAN

The Oregon Department of Justice filed a brief today in support of summary judgment in the case brought against the state's coastal salmon recovery plan. The case, Oregon Natural Resources Council v. Daley, challenged the federal Department of Commerce's finding that Oregon's salmon recovery plan was sufficient to prevent the coastal coho salmon from needing to be listed as threatened or endangered.

"We believe Oregon's Salmon and Watershed Restoration Plan has brought far more resources to bear on salmon recovery than any federal listing could do under the Endangered Species Act," said Governor Kitzhaber. "I am looking forward to a court ruling that will validate Oregon's approach to species recovery."

The Oregon Coastal Coho Recovery Plan was developed to focus state, local and private efforts on recovery of diminishing coho populations on the Oregon coast. It relies on strengthened regulatory efforts in forestry protection, water quality, and salmon harvest, as well as on the voluntary habitat restoration activities undertaken largely by local watershed associations.

"The Oregon Plan continues a strong state regulatory effort with the habitat recovery being undertaken by thousands of volunteers up and down the Oregon coast," said Kitzhaber. "It is the largest state-led species recovery effort ever attempted in America. We believe that it holds the best hope for salmon recovery. The federal government was right in giving Oregon the chance to show it has a better way to bring back the coho."

GOVERNOR APPOINTS HOUSING DIRECTOR

Governor John Kitzhaber today announced his appointment of State Representative Bob Repine of Grants Pass as the new Director of the Oregon Housing and Community Services Department.

"Bob's extensive experience makes him eminently qualified for this assignment," said the governor. "He is going to do a good job for Oregon's communities and for people and families with housing needs."

Repine, a Republican State Representative since 1988, has served on many legislative committees. He was chair of the Housing and Urban Development Committee and the Low Income Housing Committee. He was also co-chair of the Ways and Means Committee where he played a central role in helping the 1997 Legislative Assembly put together the final state budget. He is currently co-chair of the legislature's joint interim audit committee.

For more than 23 years Repine has managed his own construction company in Josephine County. From his Grants Pass home he has always been active in professional organizations, community affairs, volunteer service, and local government. He is past President of the Oregon State Homebuilder's Association at the county and state levels. He has been a local planning commissioner and on the board of numerous family and youth programs.

**GOVERNOR APPOINTS COHEN AS
COLUMBIA RIVER COORDINATOR**

Governor John Kitzhaber announced today that he has appointed Joyce Cohen to help coordinate Oregon state water quality issues for the Columbia River Basin.

Cohen recently retired as one of two Oregon representatives to the Northwest Power Planning Council, which coordinates federal and state energy and salmon recovery policies for four states in the Pacific Northwest. She will assume her new position as the Governor's Columbia River Water Quality Coordinator later this month.

"I'm delighted to have someone of Joyce Cohen's caliber to help in Oregon's efforts to improve our management of the Columbia River," said Kitzhaber. "Few people understand the Columbia River's water, fish, and energy issues as well as Joyce."

Besides representing Oregon on the Northwest Power Planning Council from 1994 to 1997, Cohen was an Oregon state legislator from 1979 to 1994. As a legislator, she earned a reputation for achievement, hard work and consensus-building in the areas of environment, energy, and land use. Her legislative assignments included the Senate Energy and Environment Committee, the Senate Agriculture and Natural Resources Committee, and the State Energy Policy Review Committee. Cohen also chaired the Judiciary and Trade and Economic Development committees.

In her new position, Cohen will act as the Governor's liaison to state, federal, and tribal governments, as well as the U.S. Congress and the private sector, on issues related to water quality, wetlands, estuaries, regulatory streamlining, and the protection of the scenic qualities of the Columbia Gorge.

GOVERNOR APPOINTS NEW OREGON TELECOMMUNICATIONS FORUM COUNCIL MEMBERSHIP

Governor John Kitzhaber announced today the new membership of the Oregon Telecommunications Forum Council (OTFC). The council will consist of 11 members, plus the governor, who chairs the council. There will be seven new members; four members of the original council will remain.

The OTFC was created in December 1995 to advise state government on telecommunications policy issues. Specifically, the OTFC develops telecommunications strategies for such issues as growth management, transportation, rural economic development, education and health care. The OTFC also works to ensure affordable access to telecommunications solutions for all Oregon communities.

The new membership is as follows:

Cathy Britain, La Grande, Director of RODEO-NET, a mental health telecommunications program.

Steve Caldwell, Portland, Vice President of Marketing, Transport Logic.

Pat Hickey, Portland, State Director for Public Policy, AT&T.

Joanne Hugi, Eugene, Director of the Office of University Computing, University of Oregon.

Larry Huss, Portland, Vice President -- Oregon, US West Communications.

Charles McHenry, Medford, Editor, Southern Oregon Magazine.

David Olson, Portland, Director of the Office of Cable Communications and Franchise Management, City of Portland.

The four current members of the OTFC who are remaining are as follows:

Jim Crowder, Portland, Vice President for Strategic Development, FirstPoint Communications.

Ben Doty, Newport, Telecommunications Manager, Central Lincoln PUD.

Joan Harding, Seaside, Distance Learning Coordinator, Jewell School.

Paula Manley, Beaverton, Executive Director, Tualatin Valley Community Access.

GOVERNOR EXPRESSES CONCERNS ABOUT UNION PACIFIC RAIL SERVICE PROBLEMS

Governor John Kitzhaber released a letter today that he sent to Richard K. Davidson, Chairman and Chief Executive Officer of the Union Pacific Corporation. In the letter, Gov. Kitzhaber admonishes Union Pacific not to forget Oregon when it comes to improving its greatly troubled service.

Rail car shortages have become chronic and Oregon forest products manufacturers have been particularly hard hit.

"I am writing to express my continuing concern with Union Pacific's service problems in Oregon," Gov. Kitzhaber wrote. "A transportation emergency still exists in the western part of the United States, and Oregon is no less affected now than it was two months ago."

A full copy of the letter is attached.

GOVERNOR PRESENTS STEELHEAD PLAN FOR FEDERAL REVIEW

Governor John Kitzhaber and representatives from Washington and California presented complementary steelhead restoration plans to National Marine Fisheries Service (NMFS) Regional Administrator Will Stelle today. The fisheries service must decide by February 9, 1998 whether five steelhead populations in the three states are endangered or threatened with extinction. NMFS and the states will work together to make the state plans the basis for steelhead restoration in the region.

"This region is committed to restoring fish populations, relying wherever we can on voluntary, grass roots action. We are anxious to continue our partnership with the federal government to achieve our restoration goals," said Governor Kitzhaber. "Oregonians are demonstrating how well this approach is working in our efforts to restore coastal coho. Today's three-state promise to bring back steelhead reaffirms the local resolve to create healthy, sustainable, productive watersheds throughout the region."

In February, NMFS will decide whether steelhead populations warrant listing in the lower Columbia region shared by Washington and Oregon, the Oregon Coast region, the Klamath Mountains Province shared by Oregon and California, and the Central Valley and Northern regions in California.

The three states have prepared restoration plans that give regional residents as much input as possible into restoration efforts. Oregon's steelhead plan takes the form of a first supplement to the Oregon Plan, now called the Oregon Plan for Salmon and Watersheds. Because Washington and California share several steelhead populations with Oregon, regional commitment to restoring steelhead is crucial to the viability of Oregon's steelhead effort.

"We will review these plans and information on stock status and work with the states for the benefit of Northwest salmon. We are highly supportive of this regional partnership," Will Stelle said.

The Oregon Plan for Salmon and Watersheds includes components focused on restoring coho salmon on the coast, improving water quality in streams throughout the state, and now restoring steelhead along the coast, and in the lower Columbia and upper Willamette rivers, and the Snake basin.

In April 1997, NMFS entered into an agreement with the State of Oregon to implement and strengthen the coastal coho restoration component of the Oregon Plan. Coho from Cape Blanco north to the Columbia River were not designated as

"threatened" or "endangered" species because of improved coho numbers in recent years and because the Oregon Plan contains important conservation actions that benefit coho. On the southern coast, the service listed coho salmon as "threatened" but agreed to support the harvest, hatchery, research and monitoring, and habitat restoration actions listed in the Oregon Plan.

The April decision made Oregon the first state to gain federal approval of a massive, locally-driven restoration effort.

The steelhead supplement to Oregon's plan extends most of the actions state, federal local government, watershed councils, industry and other partners are taking to restore coastal coho into steelhead habitat in Oregon. The supplement includes commitments from new partners in the steelhead regions -- including urban partners in the Willamette Valley -- and actions hydropower operators are agreeing to undertake.

The Oregon Plan for Salmon and Watersheds is the development of a watershed restoration strategy for all of Oregon that precludes the need for listings under the Endangered Species Act and the Clean Water Act.

TASK FORCE SAYS WILLAMETTE RIVER AT RISK Report Outlines Strategy for Action

The Willamette Basin Task Force presented its recommendations to Governor John Kitzhaber today at Champoeg State Park, concluding that the Willamette River and surrounding watershed are at risk unless coordinated action is taken. Appointed by Kitzhaber in June 1996, the 22-member task force produced over 100 recommendations, including the creation of a council to oversee efforts to restore water quality, wildlife and fish populations in and near the Willamette.

"The pressures of growth have begun again to threaten the Willamette, just as they did 30 years ago," said Kitzhaber. "But today, the threat is more complex. Today, the river is threatened by runoff from cities, farms and neighborhood lawns. We can't simply pass a law to clean up the Willamette -- we have to work together as a community."

Kitzhaber praised the work of task force members, who were drawn from agriculture, industry, local governments, academia and environmental groups. "This task force has produced a plan through consensus, not regulation. It's a great example of what needs to happen across the Willamette Valley if we're going to succeed in protecting this river," he said.

"The governor put the task force members in a room with our fingers taped together so we couldn't point at each other, and asked for an honest assessment and practical solutions. Our recommendations represent a blueprint that can help guide future action -- they are not a solution in and of themselves," said John Miller, a Salem resident and the task force chairperson.

Other recommendations in the task force report include increased monitoring of pollutants in and near the river, mandatory reporting of pesticide sales, review of new construction on Willamette flood plains, increased public education efforts to change behaviors and practices leading to the river's degradation. The report also recommends working with landowners to decrease polluted runoff into the river.

The governor will now ask state natural resource agencies to review the task force's work to determine what actions they can take to implement recommendations in the report. The report may generate proposals for the 1999 Oregon Legislature following an extensive review, and the task force is recommending that public hearings on the report be held throughout the Willamette Valley in coming months.

"The Willamette River has been a part of this valley for millennia," said Kitzhaber. "I know that Oregonians care about

the Willamette and about quality of life in this beautiful state. That's why I'm asking them to work with me and with each other to protect our river."

FEDERAL GRANT WILL HELP TEACH ABSTINENCE SKILLS TO OREGON CHILDREN

Oregon has received a federal grant of nearly a half million dollars to teach middle school students about abstinence, Governor John Kitzhaber announced today. The money, which comes from the federal Health Resources and Services Administration, will help fund the statewide program called "STARS"-- Students Today Aren't Ready for Sex. STARS is an abstinence-based teen pregnancy prevention program that uses high school mentors to teach middle school students the advantage of postponing sexual involvement.

"It's wonderful that the federal government has recognized the importance of the STARS message," said First Lady Sharon Kitzhaber, who has spearheaded the STARS program. "This will allow us to expand our efforts in more counties across the state, and help us teach more kids that postponing sex can give them a brighter future."

The grant money will help support the statewide implementation of STARS, which began as a demonstration project in Multnomah County in 1995. The addition of these funds will make STARS training available in 34 of Oregon's 36 counties by the end of 1998, reaching over 30,000 middle school students.

Oregon's grant, which totals \$460,076, is part of the Federal Abstinence Block Grant program. The grant will supplement STARS program funds already appropriated by the 1997 Legislature, and money donated from corporations and private foundations.

"About half of these new funds will go directly to local communities to implement STARS, which is Oregon's abstinence education program," says Dr. David Lane, STARS Program Director at the Oregon Health Division. "The rest of the money will be used for direct program costs, such as training the teen leaders."

The STARS program trains high school students to help sixth and seventh grade students identify pressures that lead them into sexual involvement and teaches them how to resist such pressures. The middle school students learn that health concerns, waiting until marriage, furthering their education, religious reasons and personal values are all important reasons for delaying sex. STARS is part of the Governor's Action Agenda to reduce teen pregnancy in Oregon, a comprehensive strategy designed to give children the skills and information they need to avoid pregnancy.

GOVERNOR ANNOUNCES 'RIGHT TO KNOW' TASK FORCE ON TOXIC SUBSTANCES

Governor Kitzhaber has appointed a task force to address the issue of "community right to know" laws, which govern the release of information about toxic substances to residents. The task force, which is made up of representatives from business, emergency services, the legislature, state and local governments, environmental groups and the general public, will review current reporting requirements for toxic substances and report their recommendations to the governor and legislature by January 1999.

"It is clear that Oregonians need to know about the kinds of toxic substances being used in their communities," said Governor Kitzhaber. "However, we need to balance that need with the effect on local businesses, as well as making sure that we are implementing these laws in the most effective way we can."

The Governor's Task Force on Community Right to Know will examine the current substance reporting requirements of federal, state and local governments. It will concentrate on determining if the current system is adequate, and if not, how toxic reporting requirements could be made more efficient and whether information provided to the public is adequate.

The task force members are as follows:

Sen. Jeannette Hamby, Hillsboro
Sen. Susan Castillo, Eugene
Rep. Lane Shetterly, Dallas
Rep. Mike Lehman, Coos Bay
John Ledger, Associated Oregon Industries, Salem

**GOVERNOR APPOINTS DIANNE MIDDLE AS
DIRECTOR OF NEW DEPARTMENT OF PUBLIC SAFETY STANDARDS AND TRAINING**

Gov. John Kitzhaber announced today that he has appointed Dianne Middle as the director of the new Department of Public Safety Standards and Training. The Department was created during the 1997 legislative session as part of a reorganization of the former Board of Public Safety Standards and Training.

Middle has served on the Oregon Board of Parole and Post-Prison Supervision since 1994, and has chaired the board since 1996. Middle has also served as a Deputy District Attorney for Marion County from 1989 to 1996, an Assistant Attorney General at the Oregon Department of Justice from 1987 to 1989, Deputy District Attorney for Columbia County from 1985 to 1987 and Deputy District Attorney for Multnomah County from 1984 to 1985.

Before becoming an attorney, Middle served as a patrol officer and later a detective specializing in crimes against persons in Fort Collins, Colorado. In 1978, she moved to Oregon and served as a patrol officer and crime prevention officer in St. Helens, Oregon.

"I am pleased to be able to appoint someone with the breadth and depth of law enforcement experience that Dianne brings to the table," said Gov. Kitzhaber. "Her excellent public service has earned her the respect of the law enforcement community throughout Oregon, and that will be crucial running the Department."

"I am a firm believer that respect for our criminal justice system begins with the contacts citizens have with the men and women in the public safety professions," said Middle. This is an exciting opportunity for me to help shape the quality of their training and level of professionalism."

Middle will assume her duties in mid December.

LEGISLATIVE LEADERSHIP, GOVERNOR CONCUR ON PLAN TO ADDRESS IMPLEMENTATION OF ASSISTED SUICIDE LAW

Legislators to Appoint Joint House/Senate Subcommittee

Governor John Kitzhaber and legislative leadership met today to discuss how to proceed with implementation of physician assisted suicide in the wake of Tuesday's reaffirmation of the law which was originally passed in 1994.

As a result of the meeting, Senate President Brady Adams and House Speaker Lynn Lundquist have decided to appoint a joint House/Senate subcommittee of the Judiciary Committee. The subcommittee will address the question of how best to implement the measure.

"Given the gravity of this issue, I am not comfortable with the use of a brief special session to address it," said House Speaker Lynn Lundquist. "I have confidence that a joint interim committee will be able to determine the best policy for implementation."

"The purpose of this committee is not to question the voters' decision," said Senate President Brady Adams, "but to create the best public policy possible for implementing the will of the people."

"We have a responsibility to implement this measure that Oregonians have overwhelmingly endorsed. I believe this is a prudent approach to achieve that objective," said Governor Kitzhaber. "I will work with this committee as will all the relevant state agencies to answer these important questions."

"We now can finally do what we should have done last session -- responsibly implement the voters' will," said House Democratic Leader Kitty Piercy.

"On matters of life and death and dignity, there is no room for partisan politics," said Senate Democratic Leader Cliff Trow. "We've made a good first step with this decision."

DRAFT STEELHEAD RESTORATION PLAN OUT FOR PUBLIC REVIEW

Governor John Kitzhaber has released the first draft supplement to the Oregon Plan for public review. The supplement focuses on restoring steelhead runs on the Oregon coast and in the lower and upper Columbia River, and steelhead and spring chinook runs in the upper Willamette. Landowners, local officials and other interested parties are encouraged to provide comments on the draft supplement and add conservation actions they can contribute to the restoration effort.

The Governor's Office is hosting community briefings in all affected areas, starting with the lower Columbia and Willamette basins to encourage new partners to participate in the Oregon Plan.

Briefings will be held on the coast in early 1998 and in northeastern Oregon in the spring of 1998. In those areas, Oregonians are already involved in restoration. On the coast, the current restoration focus is on coho, which are listed as "threatened" south of Cape Blanco, and cutthroat, which are listed as "endangered" in the Umpqua River basin. In northeastern Oregon, the restoration focus is on steelhead, listed as "threatened," and chinook salmon, listed as "endangered."

"This unprecedented collaborative effort requires the continued strong support of and participation by all Oregonians as we go one step further in restoring our watersheds," Kitzhaber said. "Many Oregonians on the coast and in northeastern Oregon have fully committed themselves to restoration. We hope to encourage more residents in the Willamette Valley and lower Columbia to join the effort, and then we will revisit those parts of the state where restoration is well underway. In the meantime, we hope all of the Oregon Plan partners will send comments on the draft supplement."

The Oregon Plan is a statewide approach to natural resource management that relies on voluntary efforts by all Oregonians to create healthy watersheds. First focused on putting together actions to restore coho salmon on the Oregon coast, partners are now expanding the plan to include the restoration of steelhead on the coast and in the lower Columbia. The National Marine Fisheries Service (NMFS) will decide whether to list steelhead as "threatened" in those areas on February 9, 1998. The plan is also being expanded to include steelhead in the Snake River basin, where the species has been listed as "threatened," and in the Willamette Valley.

Future supplements to the Oregon Plan will focus on other aquatic species, with the ultimate goal being a plan to restore and maintain the health of all of Oregon's watersheds.

The draft supplement on steelhead is available on the World Wide Web at <http://www.oregon-plan.org>. Hard copies are also available at the sites listed below. Comments will be taken through November 24, 1997, and should be directed to:

GOVERNOR'S STAFF MEMBER NAMED TO NATIONAL ENVIRONMENTAL JUSTICE PANEL

Governor Kitzhaber announced today that Annabelle Jaramillo, who works as the Citizens' Representative in the Governor's Office, has been named to the Environmental Protection Agency's National Environmental Justice Advisory Council (NEJAC). The council is charged with assisting federal government agencies in the development of environmental justice strategies.

"I am pleased to have an Oregonian like Annabelle represent the state on such important issues," said Kitzhaber. "Ensuring that minority and low-income communities are treated equally when it comes the environment is a priority of mine. Annabelle will be able to give federal agencies good advice on how we can all do that better."

Jaramillo's responsibilities in the Governor's Office include directing staff and volunteers to respond to citizen inquiries, complaints and requests. The recipient of bachelor's and master's degrees in biology from Portland State University, Jaramillo began her career as a research botanist at the US Forest Service. She has long been an advocate for Hispanic community issues at both the state and national levels.

Jaramillo has been honored before for her service to the state. In 1996, she was named Woman of the Year by National Image, Inc. She has also received the 1995 Western Region Government Hispanic Advocate of the Year by the US Hispanic Chamber of Commerce and was one of four 1994 Oregon Women of Achievement named by the Oregon Commission for Women.

Also serving on the NEJAC is Oregonian James Hill from the Klamath Tribe. He was appointed in 1996 and serves as the council's chair of the Indigenous Peoples Subcommittee.

GOVERNOR ANNOUNCES BOARDS AND COMMISSION NOMINATIONS

Powell Re-nominated For Port of Portland, Hemmingway Nominated for Northwest Power Planning Council

Governor John Kitzhaber released his list of 62 nominees for various boards and commissions today.

Among nominations of note, Kitzhaber re-nominated Portland business person Mike Powell to the Port of Portland Commission. Powell was voted down in September with several senators missing.

Kitzhaber also nominated Roy Hemmingway to serve on the Northwest Power Planning Council, replacing Joyce Cohen. Hemmingway was one of the original members of the Power Planning Council from 1981 to 1986 and currently serves as the governor's Salmon and Energy Adviser.

"Joyce Cohen has served an excellent term and represented the interests of the Oregon people well," said Kitzhaber. "Roy Hemmingway will not only build on her work, but also brings a tremendous knowledge of the complex issues surrounding energy deregulation. Since I believe the solution to Columbia River salmon will be closely connected to energy deregulation, Roy can serve as a key to build consensus on these issues in the region."

Kitzhaber also re-nominated Don McClave, president of the Portland Chamber of Commerce to the Tri-Met Board and Pendleton attorney Henry Lorenzen to the Fish & Wildlife Commission.

Further, Kitzhaber nominated four out of five members of the first Oregon Board of Investigators (BOI). The BOI was created under HB 2383 and will establish a licensing and registration system for investigators. It consists of five members appointed by the governor -- three investigators, one law enforcement representative and one public member. The governor is still seeking a public member of the board.

The other nominees are listed below:

Advisory Council on Podiatry	Darrell Prins, Lincoln City
Advisory Council on Podiatry	Jill Tanner, Wilsonville
Board of Boiler Rules	Stephen Frantz, Portland

Port of Portland	Michael Powell, Portland
Building Codes Structures Board	James Griffith, Portland
Building Codes Structures Board	Richard Rogers, Salem
Children's Ombudsman	Gin Denison, Salem
Commission for Women	Kim Knifong Schmalz, Salem
Commission for Women	Trina Miller, Salem
Commission for Women	Jacqueline Taylor, Astoria
Commission on Asian Affairs	Hongsa Chanthavong, Portland
Commission on Asian Affairs	Jagdish Grewal, Boring
Commission on Asian Affairs	Ty Ho, Portland
Commission on Asian Affairs	Peter Leung, Corvallis
Commission on Black Affairs	Dennis Payne, Portland
Commission on Hispanic Affairs	Trinidad Ortiz, Madras
Dispute Resolution Commission	Martha Pagel, Salem
Environmental Quality Commission	Mark Reeve, Portland
Fair Dismissal Appeals Board	Joshua Thomas, Aloha
Governing Board of the Department of Geology and Mineral Industries	Arleen Barnett, Portland
Lane Transit District Board	Kirk Bailey, Eugene
Lane Transit District Board	Robert Bennett, Eugene
Lane Transit District Board	David Kleger, Eugene
Oregon Board of Investigators	Bill Anton, Oregon City
Oregon Board of Investigators	Lila Ashenbrenner-Sadri, Hillsboro
Oregon Board of Investigators	Bruce Daily, Roseburg
Oregon Board of Investigators	Calvin Krosch, Bend
Oregon Criminal Justice Commission	Tom Lininger, Eugene
Oregon Disabilities Commission	Gary Boley, Sandy
Oregon Disabilities Commission	Lynn Cameron, Burns
Oregon Disabilities Commission	Judith Cunio, Salem
Oregon Disabilities Commission	Ryan Deckert, Beaverton
Oregon Disabilities Commission	Gary Kazen, Monmouth
Oregon Disabilities Commission	Robert Stevens, Bend
Oregon Investment Council	Warren Rosenfeld, Portland
Oregon State Fair Commission	Larry Aamold, Beaverton
Oregon State Fair Commission	Murray Fretz, Mosier
Oregon State Fair Commission	Martin Gage, Salem
Oregon State Veterinary Medical Examining Board	Vera R.P. Rogers, Days Creek
Pacific Northwest Electric Power and Conservation Planning Council	Roy Hemmingway, Portland
State Board of Chiropractic Examiners	Richard McCarthy, Cottage Grove

State Board of Chiropractic Examiners	Janice Nelson, Eugene
State Board of Forestry	David Gilbert, La Grande
State Board of Higher Education	Herb Aschkenasy, Albany
State Board of Higher Education	James Lussier, Bend
State Board of Higher Education	Kathryn Van Patten, Eugene
State Board of Higher Education	James Willis, Salem

GOVERNOR APPOINTS GROUP TO RESEARCH STATE TAX SYSTEM

Governor John Kitzhaber has appointed a group of eight Oregonians to make a detailed examination of the state's tax system. The group will examine issues such as distribution of the overall tax burden, the system's stability, and the incentives and disincentives in the tax system and how they match with the state's economic development goals.

"Our state's economy has changed radically over the last 15 years, our property tax system has changed, our school finance system has changed and we've made several incremental changes to our state's tax system," said Kitzhaber. "We need to take a comprehensive look at how we tax in Oregon and whether it is appropriate to make changes."

Kitzhaber stressed that the group was not discussing how to raise more money but rather arguing at how the money is raised. "While we may disagree about the wisdom of the two percent kicker, it would be difficult to argue that the current tax system is not bringing in an adequate level of revenue," said Kitzhaber. "So rather than an examination of the adequacy of the tax system, I am interested in knowing if we need to change our system in terms of fairness, stability and economic incentives."

Kitzhaber said he asked the group to meet over the next four months and analyze the state's tax system so that a larger group could use the information as the basis for proposing changes to the system. Those proposals would then be forwarded to the 1999 session of the Oregon Legislature for consideration.

The groups members are as follows:

- Chair: John Mitchell, Governor's Council of Economic Advisors; Chief Economist, U.S. Bank.
- Elizabeth Harchenko, Director, Department of Revenue.
- Duncan Wyse, Executive Director, Oregon Business Council.
- Gerald Kissler, Senior Vice Provost for Planning and Resources, University of Oregon.
- Bruce Weber, Program for Governmental Research and Education, Oregon State University.
- Gary Carlson, Executive Vice President, Associated Oregon Industries.
- Margaret Hallock, Labor Education & Research Center, University of Oregon
- Richard Munn, Former Director, Oregon Department of Revenue.

The group will be staffed by the Department of Administrative Services' Office of Economic Analysis, the Department

of Revenue's Revenue Research Section and the Progress Board. The group is expected to finish its work by April 15, 1998.

COMMUNITY BRIEFINGS TO BE HELD ON DRAFT STEELHEAD RESTORATION PLAN

Governor John Kitzhaber has announced a series of four community briefings on the first draft supplement to the Oregon Plan. The supplement focuses on restoring steelhead runs on the Oregon coast and in the lower Columbia River, and steelhead and spring chinook runs in the upper Willamette. Landowners, local officials and other interested parties are encouraged to attend the briefings, review the draft supplement and add to the supplement conservation actions they can contribute to the restoration effort.

The Oregon Plan is a statewide approach to natural resource management that relies on voluntary efforts by all Oregonians to create healthy watersheds. First focused on putting together actions to restore coho salmon on the Oregon coast, partners are now expanding the plan to include the restoration of steelhead on the coast and in the lower Columbia. The National Marine Fisheries Service (NMFS) will decide whether to list steelhead as "threatened" in those areas on February 9, 1998. Steelhead have been listed as "threatened" in the Snake River Basin.

"This unprecedented collaborative effort requires the continued strong support of and participation by all Oregonians as we go one step further in addressing threatened and endangered species," said Governor Kitzhaber. "With the Oregon Plan, we've developed a creative model to protect coastal coho and improve watershed health that emphasizes voluntary participation, flexibility and innovation. I'm hopeful that we can use this same locally-driven approach to recover steelhead."

The community briefings schedule is as follows:

Wednesday, Oct. 29 in Eugene: 6:30 to 8:30 p.m. at Harris Hall, Lane County Public Service Building, 125 E. 8th Ave.

Thursday, Oct. 30 in Astoria: 6:30 to 8:30 p.m. at Clatsop County Courthouse, Circuit Court Room, 749 Commercial.

Wednesday, Nov. 5 in Salem: 7 to 9 p.m. at Salem City Council Chambers, Salem Civic Center, 555 Liberty St. SE.

Thursday, Nov. 6 in Portland: 7 to 9 p.m. at Metro Council Chambers, 600 NE Grand St.

The community briefings will include a presentation on the draft steelhead supplement contents as well as opportunity for questions and comments.

Many of the state, federal and local partners who developed the coho restoration part of the Oregon Plan also worked on the steelhead supplement. The supplement expands the measures currently in place on the coast to the lower Columbia and upper Willamette. The supplement will also include measures hydropower operators are agreeing to undertake, and Washington is preparing a plan for their part of the lower Columbia.

This is the first supplement to the plan. Future supplements will focus and other aquatic species, with the ultimate goal being an aquatic conservation strategy for all of Oregon's watersheds.

Information on the Oregon Plan is now available on the World Wide Web at <http://www.das.state.or.us/salmon/>. Additional supplements to the Oregon Plan will be located at this site or a linked site. Call 503-378-8582 ext. 800 for the latest update on the Oregon Plan and supplement information.

GOVERNOR RECOMMENDS ELIMINATION OF PLANS FOR NEW HIGHWAY CONSTRUCTION

Governor John Kitzhaber today told the Oregon Transportation Commission that it should eliminate plans to spend up to \$500 million on new highway construction because of the Legislature's failure to pass a transportation package.

It makes no sense to design new roads, interchanges, and other facilities, no matter how badly they are needed, if we do not have the resources to maintain the roads we already have, Kitzhaber said. The Oregon Transportation Initiative identified maintenance and preservation as our highest priority. We need to do all we can to ensure our investment in the existing transportation system is protected and wisely managed.

The governor's recommendation affects 40 state transportation projects scheduled for construction in 2002 and 2003. The total cost of the work is estimated at up to \$500 million. A list of the affected projects is attached.

Kitzhaber made his recommendation in an attached letter to the Transportation Commission, which met today in Salem and Portland. The governor also said that if the Legislature does not approve a transportation bill in the next session, he will ask lawmakers to redirect funds set aside for new construction to preserving existing roads.

GOVERNOR RESPONDS TO CONGRESSMAN BOB SMITH'S FOREST HEALTH BILL

Governor John Kitzhaber submitted testimony yesterday on Bob Smith's proposed bill, "The Forest Recovery and Protection Act of 1997." The governor pointed to similarities in overarching goals, but expressed concerns with how the legislation proposes to achieve them.

"I was pleased to see that Chairman Smith and I continue to have common goals with respect to ecosystem health in the forests east of the Cascades and in the Intermountain West," Kitzhaber said. The governor described the overarching goal this way: "facilitate and provide incentives to enable the federal land management agencies to work with partners toward restoring the health of these ecosystems, consistent with good science, in a way that reduces the risk of catastrophic fire and can provide benefits to local communities."

In January the governor announced his 11-point strategy for restoring health in eastern Oregon ecosystems. "We have seen unprecedented support for our collaborative approach to addressing this critical environmental and economic issue," Kitzhaber said. "The 11-point strategy enjoys strong scientific and public support. We must take advantage of this broad policy agreement and move forward to restore the health of these forests, streams and watersheds."

"I feel stronger than ever about the importance of our making progress toward this goal. In eastern Oregon our forests continue to be well outside their historic condition. Decades of fire suppression, timber harvest and road building have left us with overstocked stands of young trees that are often the wrong species and are ripe for future insect outbreaks. In addition, these watersheds are plagued by degraded riparian habitat and the risk of wildlife. The current condition of many of our forests can not support the activities we once depended on them for, such as fiber for our communities, habitat for fish and wildlife, high-quality drinking water and recreation opportunities. It is now necessary for us to seek ways to invest in our forests to succeed at the long process of ecosystem restoration," Kitzhaber said in his written testimony.

The governor has been working for more than two years on an initiative to restore ecosystem health to eastern Oregon's forests. He has relied on input from a diverse panel of scientists as well as a citizen's advisory panel to shape the broad policy direction of his initiative. The U.S. Forest Service, through Chief Mike Dombeck and Region Six Forester Bob Williams, have embraced the strategy and asked the eastside foresters in Oregon to shape their program of operations to meet its intent. Dombeck spoke to the progress that is occurring on the ground, the range of restoration activities and the important and growing role of collaboration in both funding projects as well as building public support for them.

The governor praised Chairman Bob Smith for recognizing the need for additional funds in the legislation to finance needed treatments, but indicated concerns with its proposed sources and structure. He is particularly concerned that the new fund for the forest health treatments will be a revolving fund.

"Revolving funds are usually dependent on revenue-granting activities to keep the fund viable," Kitzhaber said. "Most of the needed treatments generate little if any revenue. We cannot fall back into the practice of heavy overstory removal to generate revenue, or the health of our forests will continue to decline." Instead, he offered to work with Congressman Smith and the Clinton Administration to identify and secure the funds necessary.

In addition, the governor registered concerns with the makeup of the proposed Scientific Advisory Panel, suggesting that the panel should be broadened from just foresters and forest scientists to include experts in aquatic ecology, hydrology, wildlife and fisheries.

Finally, Kitzhaber pointed to the need to restore confidence in the Forest Service.

"Having a group of respected foresters identify areas needing restoration does little to restore public confidence in our federal land managers if we do not have broad public acceptance for the type of management that will be applied to these prioritized areas," he said.

GOVERNOR KITZHABER PLEDGES SUPPORT TO GRANTS PASS IRRIGATION DISTRICT

Gov. John Kitzhaber pledged his support today for the Grants Pass Irrigation District's (GPID) efforts to remove Savage Rapids Dam. The GPID Board voted August 5 to resolve the long-standing fish passage problems at the dam by removing the dam and installing electric pumps that would take water directly from the river. The Savage Rapids Dam spans the Rogue River above Grants Pass.

"The Irrigation District Board is to be commended for taking the fish passage problems at the dam seriously and for taking the steps necessary for resolving those problems," Kitzhaber said. "The controversy over this dam has gone on long enough, and the losers have been the salmon and steelhead of the Rogue. It is time to take action to make the GPID water withdrawal facilities safe for fish."

The governor offered his support to assist the GPID in the following ways:

- Seeking federal funds for removal of the dam and installation of the electric pumps.
- Identifying other sources of funds if needed to make up any shortfall of federal funds.
- Ensuring that GPID receives the water withdrawal permits from the state Water Resources Department to meet the District's patrons' needs.
- Working with the National Marine Fisheries Service to make sure that GPID is not cited for a "taking" of threatened coastal coho salmon under the federal Endangered Species Act.
- Talking to electric companies to ensure the GPID gets the lowest cost power for the electric pumps that will replace the dam.

The governor acknowledged the work of the Savage Rapids Dam Strategic

Task Force, the majority report of which had recommended retaining the dam with substantial modifications to aid fish passage. However, the governor recognized the desire of the GPID to seek the lowest cost alternative for its patrons -- dam removal -- which will also run the lowest risk of trouble under the Endangered Species Act.

"Obtaining the additional funds for dam retention was a real problem for the District," the governor said, "and even with the expensive fish passage improvements the dam would continue to kill fish, including threatened coastal coho. It is perfectly understandable that the GPID Board would want to choose the least cost alternative with the fewest problems for fish -- dam removal."

GOVERNOR ISSUES FINAL VETOES

Governor John Kitzhaber issued his final vetoes of bills passed in the 1997 legislative session today, vetoing 26 bills. Of the 909 bills sent to Kitzhaber by legislators, the governor signed 868 and vetoed 43.

The following bills have been vetoed by Gov. Kitzhaber:

Changes in Oregon's Tax System

House Bill 2062

HB 2062 would have eliminated Oregon's tax on "intangible assets" for centrally-assessed utilities, airlines, railroads and telecommunications companies. The change would represent a shift of taxes to individual taxpayers. Further, the definition of "intangible assets" in the bill was too broad.

House Bill 3734

This bill would have reduced taxes for the timber industry by more than \$50 million per biennium and would have shifted the tax burden from timber companies to all other individual taxpayers.

Unfair to Certain Groups of Oregonians

House Bill 2222

This bill would have created criminal penalties for false statements by consumers in connection with an insurance claim but would have exempted insurance companies from criminal prosecution.

Unfairly Promotes Special Interests

Senate Bill 847

SB 847 would have retroactively reduced penalties for campaign reporting violations.

(more)

Threats to Health and Safety of Oregonians

House Bill 2454

This legislation would have eliminated the helmet requirement for motorcyclists over the age of 21.

House Bill 2585

HB 2585 would have cut funds available to the Boxing and Wrestling Commission. The Commission is responsible for enforcing health, safety and other regulations in the boxing and wrestling industries.

House Bill 2749

This bill would loosen restrictions on the release of records in child abuse cases. It could compromise investigations into child abuse and could result in records being released to suspected or actual abusers

House Bill 3310

This bill would have exempted a nursing home in Coos County from the requirement to demonstrate that the facility is needed. If built, it could result in state funds being drained away from effective senior citizen care programs to subsidize the nursing home.

Senate Bill 770

This bill would have weakened sentencing guidelines.

Senate Bill 966

This legislation would have shifted funds from Medicaid providers in high cost areas of the state to providers in areas where costs are lower.

Bills That Represent Bad Fiscal Policy

House Bill 2157

This legislation would have required the Department of Corrections to pay higher reimbursement rates for inmate medical care.

House Bill 2870

This legislation would have provided a \$4.8 million subsidy to the horse and dog racing industry.

Senate Bill 440

This bill would have made mail theft a state felony crime. While it represents good public safety policy, the legislature never appropriated the funds necessary to implement the law. Gov. Kitzhaber would have signed the bill into law had the legislature specifically appropriated funds to pay for both prosecution and incarceration costs.

(more)

Senate Bill 5523

These line items represent unnecessary or unwise spending:

- Section 3(a)(I) which provides \$100,000 for a children's advocate in the Office of Legislative Council. The enabling legislation for this position did not pass the Legislature.
- Section 9 which provides \$800,000 for the study of secondary lands. The enabling legislation for this program did not pass the Legislature.
- Section 3(a)(J) which provides \$900,000 to purchase a ship which would be used to create the Oregon Marine Academy.

Undermines Oregon's Democratic Processes

House Bill 2753

This bill would have pre-empted a local decision making process in favor of a single institution --Marist High School -- in Eugene.

Threats to Oregon's Land Use and Environmental Protections

Senate Bill 1

This legislation would have reduced the legal liability for loggers who harvest the wrong trees.

Senate Bill 379

This legislation would have allowed development in forest zones.

Senate Bill 470

This bill would have added new, unnecessary steps to local land use decision making.

Senate Bill 475

This bill would have added new, unnecessary steps in local land use decision making.

Other Bills

House Bill 2321

The governor vetoed the emergency clause of this bill, which will provide the Department of Justice adequate time to implement changes in the legal review process of state contracts mandated by the bill.

House Bill 2383

The governor vetoed the emergency clause of this bill. This will allow time to set up a process by which to appoint the board called for in the legislation.

(more)

House Bill 2948

HB 2948 would have created a costly and unnecessary office of administrative law hearings in state government

[House Bill 2920](#)

This bill was vetoed because companion legislation necessary to authorize the bill's increase in the fine for a charge of Minor in Possession of Alcohol failed to pass in the legislature.

[House Bill 3002](#)

HB 3002, which deals with the state's ability to enforce out-of-state restraining orders, also contained language that could have presented a legal problem.

GOVERNOR APPOINTS MEMBERS TO INTERIM WORKGROUP ON ECONOMIC DEVELOPMENT

Governor John Kitzhaber today appointed four members to serve on a 11-person workgroup on economic development in Oregon. The group, which will be chaired by Brett Wilcox, the Chair of the Economic Development Commission, will consider how best to implement the commission's strategic vision of an economic development effort focused on helping existing Oregon companies grow and be competitive in the national and international marketplace.

The commission articulated this vision in its 1995-97 biennial report entitled: "New Directions for Economic Development in Oregon." That report specifically calls on the Economic Development Department to shift its focus toward rural Oregon and toward aiding existing Oregon companies. The report also calls on the department to work in partnership with other state agencies -- such as the Oregon Department of Transportation and Department of Land Conservation and Development -- in helping communities develop.

The governor's appointees to the workgroup are:

- Katy Coba, Gov. Kitzhaber's Trade and Economic Development Adviser.
- Gretchen Pierce of Eugene, a former Economic Development Commissioner.
- Candace Bartow of Grants Pass, the chair of the regional strategies effort in Southern Oregon.
- Michael Sykes of St. Helens, an employee of the Port of St. Helens.

Other appointees to the workgroup are:

- Mike McArthur, Sherman County Judge, appointed by the Association of Oregon Counties.
- Mike Jordan, Canby City Administrator, appointed by the League of Oregon Cities.
- Jim Wilcox of the Dalles, a Realtor, appointed by the Senate President.
- Chuck Hoffman of Baker City, a doctor, appointed by the Speaker of the House.
- Senator John Lim of Gresham, representing the Oregon Senate.
- Rep. Ben Westlund of Tumalo, representing the Oregon House of Representatives.

The group will work for the next year and will issue its report to the governor and the Economic Development Commission by September, 1998.

AUGUST 8, 1997

GOVERNOR'S OFFICE: (503) 378-3111

GOVERNOR NAMES SEVEN POTENTIAL VETOES

Governor Kitzhaber announced seven more potential vetoes of bills passed by the 1997 Legislature, fulfilling the requirement to give notice five days before an actual veto. The governor said the majority of the bills he was listing for potential vetoes represented legislation with technical or legal problems.

After the adjournment of a legislative session, Article V, section 15b (4) of the Oregon Constitution requires the governor to publicly announce the possibility of a veto of a legislative measure at least five days before doing so. However, providing that notice does not require the governor to actually veto the bill.

The following list is advisory. The latest date for Governor Kitzhaber to give notification of a possible veto is August 10; he has until August 15 to actually veto measures from the 69th Legislative Assembly.

The following bills may be vetoed by the governor:

House Bill 2321

The governor gave notice that he may veto the emergency clause of this bill, which would provide the Department of Justice adequate time to implement changes in the legal review process of state contracts mandated by the bill.

House Bill 2383

This bill would establish a board to license private investigators.

House Bill 2749

This bill loosens restrictions on the release of records in child abuse cases. It could compromise investigations into child abuse and could result in records being released to suspected or actual abusers.

House Bill 2753

This bill would pre-empt a local decision making process in favor of a single institution --Marist High School -- in Eugene.

House Bill 2920

This bill has a potential legal problem; companion legislation necessary to authorize this bill's increase in the fine for a

charge of Minor in Possession of Alcohol failed to pass in the legislature.

[House Bill 3002](#)

HB 3002, which deals with the state's ability to enforce out-of-state restraining orders, also contains language that may present a legal problem.

[Senate Bill 1](#)

This legislation reduces the legal liability for loggers who harvest the wrong trees.

This list is available on the Governor's Office web site at www.governor.state.or.us. The web site also contains an [updated list of legislation](#) that has been signed or vetoed by the governor.

-30-

FOR IMMEDIATE RELEASE
AUGUST 8, 1997

GOVERNOR'S OFFICE: (503) 378-3111

GOVERNOR ISSUES VETOES

Governor John Kitzhaber today vetoed several bills passed by the Oregon Legislative Assembly. Kitzhaber said the bills represented policies that were unfair to certain groups, detrimental to Oregonians' health and safety, were bad for the environment, weakened Oregon's educational system and undermined the democratic process.

"I do not take these actions lightly," said Kitzhaber. "But these bills represent a fundamental philosophical disagreement and I can't in good conscience sign them into law."

The legislature sent the governor 909 bills. As of today, Gov. Kitzhaber has vetoed 17 of them and signed 798 into law.

The vetoed bills are:

Unfair to Certain Groups of Oregonians

Senate Bill 1205

This legislation would have allowed employers to fire certain workers for activities such as collectively meeting to discuss wages and working conditions.

Senate Bill 266

This legislation would have reduced a plaintiff's ability to collect a jury award.

Senate Bill 541

SB 541 would have circumvented the prison siting process which began with the 1995 Legislature.

Threats to Health and Safety of Oregonians

Senate Bill 953

This legislation would have expanded truck inspections to include state vehicles and new trucks, thus diverting limited inspection resources from older, higher risk vehicles.

Weakens Oregon's Education System

Senate Bill 494

This bill would have weakened educational standards for home schooled children. In addition, it would allow unlicensed teachers to give tests to disabled children.

Senate Bill 1198

This bill would have required the Department of Education to implement the Oregon Media Literacy Project, but provides no funding.

Undermines Oregon's Democratic Processes

Senate Bill 485

SB 485 would have limited who can represent the governor and state agencies at the Legislature. In vetoing the bill, Gov. Kitzhaber committed to drafting an executive order to address how state agencies interact with the Legislature.

Threats to Oregon's Land Use and Environmental Protections

House Bill 3455

HB 3455 would have exempted large diesel trucks from clean air laws.

This list is also available on the Governor's Office web site at www.governor.state.or.us. Copies of veto messages for each of these bills is also available through the web site, as is an [updated list of legislation](#) that has been signed or vetoed by the governor.

GOVERNOR RELEASES ADDITIONAL LIST OF POTENTIAL VETOES

Gov. John Kitzhaber announced today a list of 13 potential vetoes from the recently ended legislative session.

After the adjournment of a legislative session, Article V, section 15b (4) of the Oregon Constitution requires the governor to publicly announce the possibility of a veto of a legislative measure at least five days before doing so. However, providing that notice does not require the governor to actually veto the bill.

The following list is advisory and may be partial. Some bills appearing on this list ultimately may not be vetoed. Notification on other measures not appearing on this list will be given at least five days before the end of the 30-day period established under the Oregon Constitution. The latest date for Governor Kitzhaber to give notification of a possible veto is August 10; he has until August 15 to actually veto measures from the 69th Legislative Assembly.

The following bills *may* be vetoed by the governor:

House Bill 2433

This bill would change the laws regarding police searches of cars.

House Bill 3009

This bill would allow Oregon-based Internet gambling in Oregon.

House Bill 5051

The governor may exercise his line-item veto authority on the following expenditures in this bill:

- Section 4(7) and 15(2) which provide \$167,000 for opening a trade office in Shanghai, People's Republic of China.

Senate Bill 390

This bill would change the process by which the State of Oregon bids for projects.

Senate Bill 470

This bill adds new steps in local land use decision making.

Senate Bill 475

This bill adds new steps in local land use decision making.

Senate Bill 588

This bill expands the definition of Farm Use on Exclusive Farm Use zones. The bill will have a significant fiscal impact which was not addressed by the legislature.

Senate Bill 770

This bill weakens sentencing guidelines.

Senate Bill 1144

This bill would automatically change Oregon's tax code to reflect any changes in the federal tax code.

Senate Bill 1198

This bill would require the Department of Education to implement the Oregon Media Literacy Project, but provides no funding.

Senate Bill 5523

The governor may exercise his line-item veto authority on the following expenditures in this bill:

- Section 3(a)(I) which provides \$100,000 for a children's advocate in the Office of Legislative Council. The enabling legislation for this position did not pass the Legislature.
- Section 9 which provides \$800,000 for the study of secondary lands. The enabling legislation for this program did not pass the Legislature.
- Section 3(a)(J) which provides \$900,000 to purchase a ship which would be used to create the Oregon Marine Academy.

This list is also available on the Governor's Office web site at www.governor.state.or.us. The web site also contains an [updated list of legislation](#) that has been signed or vetoed by the governor.

GOVERNOR SIGNS YOUTH SUICIDE PREVENTION BILL

Governor Kitzhaber signed a bill today that will help the state prevent suicides among Oregon youth. Senate Bill 1129 provides funding for a youth suicide prevention coordinator and implements one of the recommendations of the Governor's Task Force on Youth Suicide Prevention. Kitzhaber signed the bill into law at a ceremony in the Governor's Ceremonial Office.

"Suicide is the second-leading cause of death among youth aged ten to 24," said Kitzhaber. "Today, we are taking the first steps toward a coordinated approach to suicide prevention among Oregon's young people."

The youth suicide coordinator will help implement the Task Force's 25 recommendations presented to the governor last January. The recommendations are focused in the areas of education, mental health, law enforcement, increased training for mental health professionals and the development of education materials for suicide prevention.

In addition to helping implement these recommendations, the coordinator will help develop a statewide strategic plan to address youth suicide, improve outreach to youth who are at risk for suicide, provide technical assistance to state and local agencies and coordinate efforts to establish prevention and intervention strategies.

Senate Bill 1129 appropriates \$137,925 for 1997-99 for the position, supplies, office space and other costs. Recruitment for the youth suicide prevention coordinator, who will work out of the Oregon Health Division, will begin in a few months.

GOVERNOR CREATES ENVIRONMENTAL JUSTICE CITIZEN ADVISORY BOARD

Governor John Kitzhaber today created by executive order the Oregon Environmental Justice Citizen Advisory Board. The 12-member board, which will be comprised of representatives from minority, low-income communities and environmental interests, will report to the governor on how the state can best enforce environmental justice.

Funding for the board will be provided through an environmental justice grant from the U.S. Environmental Protection Agency (EPA). The grant was secured with the help of state Sen. Avel Gordly.

The board will hear annual reports through 1999 from all state agencies that are connected with the issues of environmental justice. The board will then submit an annual report to the governor setting forth its view on agency progress on environmental justice.

The governor's executive order defines environmental justice as "the fair treatment and meaningful involvement of people of all colors, national origins, cultures, income levels, age, gender and educational level, in the development, implementation and enforcement of environmental laws, regulations and policies."

"Our commitment to achieving environmental justice in Oregon is strong, and we are eager to take the important first steps toward accomplishing that goal," said Governor Kitzhaber.

GOVERNOR VETOES BALLOT TITLE OF ASSISTED SUICIDE REFERRAL

Governor John Kitzhaber announced his veto today of House Bill 3502, which would dictate the exact wording of the ballot title for the re-referral of Measure 16 -- the assisted suicide law that Oregonians approved in 1994.

"Ballot measure titles are perhaps the single most critical factor in informing voters about the substance of measures on which they will be voting. Because of this, it is extremely important the titles be drafted carefully to fairly reflect the substance and consequences of the measure," wrote Kitzhaber in his veto message.

Kitzhaber went on in the message to write: "I am vetoing HB 3502 because it is unnecessary and unfair. It is unfair because advocates from both sides of this very volatile issue were not included in the drafting process. It is unnecessary because Oregon statutes establish a well-defined and objective process for drafting ballot titles for initiatives and referrals."

GOVERNOR'S OFFICE: (503) 378-3111

GOVERNOR ISSUES LIST OF POTENTIAL VETOES

Gov. John Kitzhaber announced today a list of 22 bills from the recently ended legislative session which he will consider for a veto.

After the adjournment of a legislative session, Article V, section 15b (4) of the Oregon Constitution requires the Governor to publicly announce the possibility of a veto of a legislative measure at least five days before doing so. However, providing that notice does not require the Governor to actually veto the bill.

The following list is advisory and may be partial. Some bills appearing on this list ultimately may not be vetoed. Notification on other measures not appearing on this list will be given at least five days before the end of the 30-day period established under the Oregon Constitution. The latest date for Governor Kitzhaber to give notification of a possible veto is August 10; he has until August 15 to actually veto measures from the 69th Legislative Assembly.

The following bills *may* be vetoed by the governor:

House Bill 2062

HB 2062 would eliminate Oregon's tax on "intangible assets" for utilities, airlines, railroads and telecommunications companies.

House Bill 2157

This legislation would require the Department of Corrections to pay higher reimbursement rates for inmate medical care.

House Bill 2222

This bill creates criminal penalties for false statements by consumers in connection with an insurance claim but exempts insurance companies from criminal prosecution.

House Bill 2454

This legislation would eliminate the helmet requirement for motorcyclists over the age of 21.

House Bill 2585

HB 2585 limits the funds available to the Boxing and Wrestling Commission.

House Bill 2870

This legislation would provide a \$4.8 million subsidy to the horse and dog racing industry.

House Bill 2948

HB 2948 would create an office of administrative law hearings in state government.

House Bill 3310

This bill would exempt a nursing home in Coos County from the requirement to demonstrate that the facility is needed.

House Bill 3455

HB 3455 would exempt large diesel trucks from clean air laws.

House Bill 3502

This bill dictates a ballot measure title and summary for a single measure on the November 1997 ballot, bypassing the established procedures of the Attorney General and the Oregon Supreme Court.

House Bill 3734

This bill would reduce taxes for the timber industry by \$50 million per biennium.

Senate Bill 266

This legislation reduces a plaintiff's ability to collect a jury award.

Senate Bill 379

This legislation would allow development in forest zones.

Senate Bill 440

SB 440 creates several new state crimes relating to the postal system.

Senate Bill 485

SB 485 would limit who can represent the Governor and state agencies at the Legislature.

Senate Bill 494

This bill would weaken educational standards for home schooled children. In addition, it would allow unlicensed teachers to give tests to disabled children.

Senate Bill 541

SB 541 circumvents the prison siting process which began with the 1995 Legislature.

Senate Bill 847

SB 847 would retroactively reduce penalties for campaign reporting violations.

Senate Bill 867

This bill expands the ability of school districts to self-insure.

Senate Bill 953

This legislation expands truck inspections to include state vehicles and new trucks.

Senate Bill 966

This legislation would shift funds from Medicaid providers in high cost areas of the state to providers in areas where costs are lower.

Senate Bill 1205

This legislation would allow certain workers to be fired for collectively meeting with their employer to discuss wages and working conditions.

This list is available on the Governor's Office web site at www.governor.state.or.us. The web site also contains an [updated list of legislation](#) that has been signed or vetoed by the governor.

**GOVERNOR TO BE IN METROPOLITAN AREA
FOR TRANSPORTATION EVENTS**

Governor John Kitzhaber will travel to the Portland metropolitan area Friday, July 18 for two events related to transportation. Those events are:

News Conference

10:45 a.m.

Southwest Corner of Sunnyside Interchange
On Interstate 205, adjacent to the Monarch Hotel

Governor Kitzhaber will be joined by Clackamas County Commissioner Ed Lindquist to discuss the effect of inadequate transportation financing on the metropolitan area's ability to manage growth and prevent traffic congestion.

DIRECTIONS:

From I-205, go west on Sunnyside Road, left on SE 93rd Avenue, then left to the Monarch Hotel (road is located directly behind the Red Robin Restaurant).

A map is available by calling the governor's press office.

Transportation Advisors Meeting

Noon

Oregon Department of Transportation Region One Headquarters
123 NW Flanders

Gov. Kitzhaber will meet with members of the Regional Advisory Committee on Transportation for the Portland metropolitan area which helped put together the transportation financing package recently turned down by the Oregon Senate.

GOVERNOR TO FOCUS ON TRANSPORTATION EVENTS

Governor John Kitzhaber will meet with members of the transportation advisory committee for the north coast and mid-Willamette Valley Thursday, July 17 from 9:15 to 9:45 a.m. The meeting will be held at the Willamette University Alumni Lounge, third floor of the Putnam Center, in **Salem**.

The advisory committee was one of five statewide that developed the recommendation for a transportation financing package that was turned down by the Oregon Senate in the final days of the legislative session.

In addition, Gov. Kitzhaber will join Rep. Lee Beyer and Transportation Commission member Susan Brody Thursday at 1 p.m. in **Eugene** at the Amtrak station, East 4th and Willamette, to discuss funding of high speed rail in the Willamette Valley and the continuing need for a transportation finance plan.

OREGON RECEIVES FEDERAL GRANT TO TEST EARTHQUAKE BUILDING STANDARDS

Thanks to a million-dollar grant from the Federal Emergency Management Agency (FEMA) to the Oregon Department of Geology and Mineral Industries, Oregon State University will become a national test site for earthquake-resistant building standards, Governor John Kitzhaber announced today.

FEMA has awarded \$1 million to design and test new construction techniques to protect historic buildings against earthquake damage. The grant will be used to design the remodeling of OSU's historic Weatherford Hall, which no longer meets standards suitable for residence halls.

"Seismic rehabilitation of existing buildings is one of Oregon's major public safety issues," said Governor Kitzhaber. "We are extremely pleased to have Oregon State chosen for this study. Oregon needs to be better prepared for a potentially damaging earthquake."

While older brick buildings such as Weatherford Hall are beautiful, they may pose a serious danger to people during an earthquake, Kitzhaber said. "Oregon has many buildings like Weatherford Hall that need our attention," he said. "It's not a matter of if an earthquake will occur, but when. The FEMA grant is a step in the right direction."

With guidance from Senator Mark Hatfield, the OSU site was selected because it is a land grant university, and located in Western Oregon near the Cascadia Subduction Zone, which places it at greater risk for a major earthquake.

As a result of legislation passed in 1995, Kitzhaber appointed the Oregon Seismic Rehabilitation Task Force to study Oregon's preparedness for a major earthquake. Although the task force's action plan and findings were considered by the 1997 Oregon Legislature, no legislation was passed.

The FEMA grant will provide "seed" money for a public-private renovation project to remodel the OSU landmark to house the university's international programs, faculty and students. Evaluation and design work will begin this summer.

STATEMENT OF GOVERNOR JOHN KITZHABER
Signing of House Bill 3643, Recriminalizing Marijuana

I am announcing that I have signed House Bill 3643, which will recriminalize possession of less than one ounce of marijuana -- moving it from a violation to a class C misdemeanor punishable by a maximum of 30 days in jail and a \$1,000 fine.

I have taken this action after much deliberation and with a good deal of reluctance. On one hand, at a time when juvenile drug use is a growing problem, it is important to reinforce our message to young people that the possession of drugs is against the law. On the other hand, based on discussions with law enforcement officials, it is estimated that approximately 80 percent of the cases will continue to be treated as violations. Thus, while a major symbolic change in our law, I believe that the individual impact of this legislation will be marginal.

Furthermore, the fact that most cases under this new law will still be treated as violations rather than as misdemeanors, leads me to believe that this measure has less to do with the possession of marijuana as it does with expanding the powers of search and seizure. Indeed, HB 3643 will provide law enforcement with an additional tool that may have potential benefits in terms of prosecuting persons who are involved in other more serious criminal activity.

The value of the measure, then, lies not in the "message" it sends to juveniles, but rather in the way our law enforcement agencies will deal with certain juveniles. The provision dealing with the suspension of a driver's license, for example, is not insignificant, nor is the opportunity for diversion.

The difficult question raised by this legislation -- and by other measures such as SB 936 and HB 2433 -- is the delicate balance between the public safety of our society at large and the civil liberties of its individual citizens. I am willing to give this legislation the benefit of the doubt, but I will direct the Criminal Justice Commission to closely monitor how it is being implemented and what effect it is having.

If this measure proves effective in reducing marijuana use or, perhaps more importantly, the incidence of more serious juvenile crime, then it should remain a part of our law enforcement arsenal. If, however, the measure proves to be ineffective -- or if it is used for such purposes as harassment rather than for legitimate law enforcement objectives -- then it should be repealed and we should return to current law.

In any event, we must all remember that law enforcement is only one part of the equation for improving public safety. In the long run, we cannot be successful unless we are also willing to put our resources behind efforts to resolve the conditions that lead to drug use in the first place: poverty, illiteracy and the lack of family and community support.

NEWS CONFERENCE

**GOVERNOR TO CALL FOR RENEWED PUSH ON
PERMANENT FUNDING FOR PARKS**

Governor John Kitzhaber will be joined by parks advocates on **Monday, June 16 at 1 p.m.** in the Governor's Ceremonial Office to promote passage of legislation that would provide stable, long-term funding for Oregon's parks.

Governor Kitzhaber believes the legislative leadership has not met its commitment to provide such a funding source for parks and that the parks system will remain at risk until such funding is provided.

GOVERNOR CONGRATULATES CONGRESSWOMAN FURSE ON AMENDMENT THAT AIDS OREGON HEALTH PLAN

Governor John Kitzhaber thanked Congresswoman Elizabeth Furse today for her efforts to secure for Oregon a key amendment to federal legislation that governs the Oregon Health Plan. Furse's amendment to the Medicaid Reconciliation Bill allows states that operate demonstration projects under federal waivers to continue those projects at the request of the governor. The Oregon Health Plan has operated under a federal waiver since February 1994.

"Congresswoman Furse's actions are an enormous help in our mission to provide cost-effective health care to low-income Oregonians under the Oregon Health Plan," said Kitzhaber. "I appreciate her efforts to make sure we can continue with that work."

The amendment Furse passed would extend, subject to approval by the federal Secretary of Health and Human Services, what are called "Section 1115" waivers for another three years, allowing states like Oregon to implement innovative changes in their Medicaid programs. Oregon's current waiver is set to expire at the end of 1998. Currently, twelve states including Oregon operate their own Medicaid programs under section 1115 waivers.

The federal government will continue to require that states treat all eligible applicants for Medicaid and that the quality of care not deteriorate. The Oregon Health Plan currently covers 340,000 Oregonians.

LANE AND JACKSON COUNTY PRISON SITES

Governor John Kitzhaber announced today that he is accepting the Corrections Facilities Siting Authority recommendations for prison sites in Lane and Jackson counties. The governor's decision means that a 1,600-bed medium and up to a 400-bed minimum security facility will be built on both the Milliron site in Junction City and on the Stimpson Gulch site in Medford. Construction on both sites is scheduled to begin in the spring of 2003.

"These two sites will serve the needs of Oregon's correctional system well," said Governor Kitzhaber. "I would like to thank the Facility Siting Authority, the local governments and the citizens who got involved and helped us through what are difficult and arduous decisions."

The governor's decision ends a 6-month selection process in both counties. In April, the Corrections Department recommended four sites in Jackson County and three in Lane County, and provided the Corrections Facility Siting Authority with a report on each site. The Siting Authority did an extensive review of each one and held a series of public hearings in each county. On May 23, they recommended Stimpson Gulch and Milliron to the governor.

The City of Medford had offered another site as an alternative to Stimpson Gulch to the state at no cost, but it was eliminated from the Siting Authority's recommendation list because of environmental and engineering concerns. The Whetstone Site in Jackson County had problems with electrical transmission lines, wetlands, standing water and the existence of a fifty-year-old dump site on the property.

The Jackson and Lane County prison sites are the last to be chosen in a series of seven planned correctional facilities. The state is constructing new prisons to deal with the expected influx of inmates due to convictions under 1994's Ballot Measure 11, which mandated longer prison terms for a number of crimes.

GOVERNOR'S OFFICE ANNOUNCES STUDENT INTERNSHIP OPPORTUNITY

Job Title: Legislative Intern

Salary Range: Volunteer

Start Date: June 2, 1997

End Date: August 1, 1997 (estimated)

The Office of the Governor is seeking an outstanding student for an eight-week internship in its legislative affairs section. This position is in Salem and reports to the Governor's Deputy Legislative Director.

Qualifications

- Strong interest in public policy, especially in the state legislature.
- Good organizational abilities, strong interpersonal skills, and careful attention to detail.
- Experience with Excel, Word, Schedule+, and MS Mail in a PC environment.
- Familiarity with office equipment, including copy and fax machines.

Duties

- Assist the Deputy Legislative Director in tracking the progress of bills enacted by the Legislature, coordinating review by the Governor's policy staff and state agency legislative coordinators, and forwarding recommendations for action to the Governor.
- Maintain files of all House and Senate bills.
- Help organize and staff bill-signing ceremonies for the Governor.
- Participate in the regular weekly meetings of the Governor's policy team, the thrice weekly meetings of the Governor's legislative team, and similar events with state legislative coordinators as appropriate.

Provide general administrative assistance to the legislative affairs section, including scheduling meetings and other support as appropriate.

To Apply

Send a resume and cover letter by May 30, 1997 to Mac Prichard, Deputy Legislative Director, #160 State Capitol, Salem, Oregon 97310. Questions? Call Mac at (503) 378-5540.

GOVERNOR URGES OREGONIANS TO VOTE

Governor John Kitzhaber today called on Oregonians to cast their ballots in the Tuesday, May 20 election. Various statewide and local measures are being considered in the mail ballot election.

"It's especially important for Oregonians to vote in this election because of the new 'double-majority' rule that became law along with Measure 47," said Kitzhaber. The double majority rule states that no financial measure can pass without both a majority of yes votes and a majority of registered voters having cast ballots in a jurisdiction unless the election is a regular general election.

"I think this is an undemocratic law that causes essentially minority rule and I support its repeal," said Kitzhaber. Since the inception of the double majority rule, various jurisdictions have passed bond measures by sizable majorities only to see them invalidated because less than 50 percent of the voters in the jurisdiction did not vote.

"If you don't vote on local fundraising measures, you are voting no," said Kitzhaber. "Don't let the apathetic win. Get out and vote."

Those who have not yet mailed their ballots may call their local county elections office to find out where ballots can be dropped off.

GOVERNOR SELECTS WILSONVILLE FOR WOMEN'S CORRECTIONAL FACILITY AND INTAKE CENTER

Governor John Kitzhaber announced today that he would accept the recommendations of his Correction Facility Siting Authority and selected the Dammasch site for a 1,100 bed women's correctional facility and intake center. The intake center will be the primary processing location for inmates entering the state's prison system.

"This has been a difficult and contentious process for everyone involved," said Kitzhaber. "But the Dammasch site will allow Oregonians to have an efficient correctional system in which the entire state will share in the burden of housing our inmates."

The site, formerly a mental hospital, was selected after a 10-month process. It was originally nominated by the siting authority in December, 1996. However, at the urging of local governments in the metropolitan area, Gov. Kitzhaber directed the siting authority to continue the process and examine other sites.

"There has been an exhaustive public process that has identified this site," said Kitzhaber. "I am confident that of the sites that were considered in the metropolitan area for this facility, this is the one that best fit all the criteria."

Kitzhaber said the Corrections Department would be working with members of the Wilsonville community to ensure that the facility would be built and operated with the community's concerns in mind. "I sympathize with those in the Wilsonville community who do not want a correctional facility in their area," said Kitzhaber. "But Oregonians have made it clear that we need to be tougher on criminals. This means building more prisons -- and every region of the state has to be able to accept the responsibility for this task."

The governor will receive recommendations from the siting authority later this month for facilities in Lane and Jackson counties.

State Helps Women And Minorities Participate In Prison-Building

Governor Kitzhaber and the state Department of Corrections are working to ensure that women- and minority-owned businesses and emerging small businesses have a chance to take part in the construction of new prison facilities across the state. Two informational meetings were held in the Portland area March 10 and 13, both designed to let these businesses know about the opportunities available in prison construction.

"What we are trying to do is remove the barriers that often exist for businesses that are owned by women and minorities," said Governor Kitzhaber. "We will continue to work with the Department of Corrections to try and let contractors know what's available in the upcoming months as the state breaks ground on new prison facilities."

As a result of the meetings held earlier this spring, two companies are competing as subcontractors for work relating to the construction of a prison in Umatilla later this year: Synergy Consulting Inc., a woman-owned business, and Arrow Masonry Inc., a minority-owned business.

"This gives an opportunity for small businesses to find out what's available," said Christine Chin-Ryan of Synergy Consulting Inc. "It doesn't guarantee we'll get work but it does give us the ability to market ourselves to specific contractors."

"It gives me a tremendous sense of encouragement to know that there are people working to create contracting opportunities for minority and woman-owned businesses in Oregon's construction industry," said Arrow Weinberger, owner of Arrow Masonry Inc.

As other prison sites are planned and go into the construction phase, more informational meetings will be held. Companies interested in taking part should call Al Núñez, the governor's Minority/Women and Emerging Small Business Advocate, at (503) 373-1224.

Governor Critical Of Republican Parks Approach

Governor John Kitzhaber released the following statement on the proposed park funding approach announced today by members of the Legislative Leadership:

"I believe the proposal on parks funding released today fails Oregonians. It will not keep parks open, it will not make them more affordable and will create no permanent, stable, long term funding for our parks system.

In fact, it threatens just the opposite. Under the provisions of this approach, more than 100 parks would be candidates for closure, many parks and open spaces would be auctioned off for private operation, fees and expenses would go up for average Oregonians seeking to use the parks and, after all this, the system would have the same financial instability that has driven it to the brink today.

Let's get back to basics: our parks and recreation system was created to preserve Oregon's special places and make them accessible for use by all Oregonians -- regardless of their income. Our parks system is a precious, priceless heritage. It is a cornerstone of Oregonians' quality of life.

But, under this scheme, the parks commission would be forced to sell off or close any park that did not meet the criteria set by legislative leadership -- including that they operate at no loss.

Well, that's not a public park system. It's a private park system.

The result would be the closing or privatization of virtually all of the parks in the current system, from Cape Blanco to Fort Astoria to Lake Owyhee. In those parks that were able to stay open, admission rates would increase, and in many cases, keep poorer Oregonians from entering.

Finally, the proposal from Republican leadership fails to deal with many of the problems the parks department is struggling with. Increasing costs like maintenance and operations are not covered by the bonding authority. Additionally, the desire of Oregonians to expand their parks and recreation system to meet increasing growth and demand is left completely unmet.

Oregonians deserve better than this. We need to face up to the simple issue that if we want to preserve the heritage of a quality, affordable park system, we need to find a long-term funding source. If we follow this

proposal, we will have a different park system in the coming years. It will be smaller, more expensive for Oregonians to use and littered with development. I am sure this is not what Oregonians want in a park system, and I will oppose it."

Governor Applauds Attorney General's Decision To Sue Tobacco Companies

Governor John Kitzhaber today expressed his strong support for Attorney General Hardy Myers' decision to file suit against six tobacco companies and related parties. "Attorney General Myers has taken a bold and appropriate step in joining this litigation. It will well serve the interest of Oregonians -- the interests of our children," said Kitzhaber.

The lawsuit will allege that tobacco companies have engaged in unlawful conduct by targeting children, including deceptive consumer practices and fraud. It will also seek to recover millions of dollars in state funds used to treat indigent Oregonians suffering from smoking related diseases.

"Smoking costs Oregonians a quarter of a billion dollars a year in medical expenses," said Kitzhaber. "Tobacco companies need to compensate states like Oregon which have picked up the cost of treating tobacco's victims."

"It's outrageous that these companies have been allowed to deliberately target youth and get them hooked on this highly addictive drug," continued Kitzhaber. "We should make sure they stop such unlawful practices and pay for damages caused by this conduct."

Governor Appoints Forum To Address Willamette Valley Quality Of Life

Governor John Kitzhaber met today for the first time with the Willamette Valley Livability Forum, a group that will advise communities, businesses and agencies on innovative ways to deal with the region's rapid population growth and development. At the meeting, which was attended by over 100 people, the governor introduced 12 Willamette Valley residents of diverse backgrounds who will act as an advisory board to the Forum. The volunteer citizen board members come from local and regional government, academia and area businesses.

"People in nearly every Oregon community are affected by growth today, especially those in the Willamette Valley," Kitzhaber said. "We've created the Livability Forum to be a grassroots, collaborative process for advising me and all other Oregonians how we can manage growth creatively and preserve our quality of life."

While the Livability Forum has no regulatory powers, it will function as an educational and advisory tool for citizens and governments on growth-related issues like economic development, transportation and preservation of the environment. It includes up to 70 members from across the Willamette Valley region, including representatives from private industry, local government, interest groups and state agencies.

Monday's meeting included discussion of an immediate, 18-month work plan for the Livability Forum, which included identifying growth-related issues, a research agenda, securing additional funding and the development of a 50-year growth plan for the Willamette Valley.

"The Willamette Valley is not a collection of separate counties, cities and towns with separate lives and agendas," Kitzhaber said. "People here have a common environment and will share a collective future. That's why the mission of the Livability Forum is so important."

The Forum's 13 advisory board members, who were appointed at the Forum's creation in December 1996, are:

Governor John Kitzhaber, Forum Chair, Salem Susan Brody, Forum Vice Chair and Oregon Transportation Commissioner, Eugene Mike Burton, Metro Executive Officer, Portland Jon Carnahan, President of Linn-Benton Community College, Albany Randy Franke, Marion County Commissioner, Salem Dave Frohnmayer, President of the University of Oregon, Eugene Gregg Kantor, NW Natural Gas Director of Public Affairs, Portland Craig Lomnicki, Mayor of Milwaukie Catherine Mater, Vice President of Mater Engineering, Corvallis Chuck

McLaran, Mayor of Albany John Miller, Chair of the Willamette River Basin Task Force, Salem Mike Propes, Polk County Commissioner, Dallas Jean Tate, President of Metropolitan Affordable Housing Corporation, Eugene

Christopher Burkett Photography Shown In Governor's Office

Governor John Kitzhaber announced that the Governor's Office will feature photography by Christopher Burkett from May 5 to June 6, 1997. This exhibit is part of the Art in the Governor's Office Program, an honors program of the Oregon Arts Commission and the Office of the Governor.

Christopher was born in Oregon in 1951, and grew up in the countryside outside of Corvallis. After high school, he had a brief stay at Oregon State University, and then traveled around the country. In 1971, he joined a Christian religious Order, where he remained until 1979. He left the Order in 1979 to pursue his photography, and was married to his wife, Ruth, in that same year. He now resides in Vernonia, Oregon.

Christopher learned the printing trade as a corollary to his photography, and to learn the offset printing process first hand and thus insure the best possible reproductions of his work. He ran large four-color printing presses for about nine years, and later operated computer-laser scanners, making four-color separations, for about five years. He now photographs primarily with an 8x10 view camera, with some work done in medium format.

In 1987, Christopher traveled and photographed for five months through the United States and Canada. In 1989, he again traveled and photographed for three months, as well as numerous shorter trips. In 1993, he finished renovating a building to use for his darkroom and work facilities, enabling him to produce prints 30"x40", or larger if need be. His work in the graphic arts field helped in the development of his advanced printing techniques, using multiple stage masking for Cibachrome printing.

In 1992, Henry Holt Company published the book, *Robert Frost Seasons*, which combines the poems of Robert Frost with photographs by Christopher Burkett.

GOVERNOR APPOINTS NEW REVENUE DEPARTMENT DIRECTOR

Governor John Kitzhaber today announced the appointment of Elizabeth Harchenko as the new Director of the Oregon Department of Revenue. She will begin work on May 12 as acting Director. Her appointment is subject to Senate confirmation. Elizabeth replaces Richard Munn who retired March 31 after serving 13 years in the post.

Harchenko is currently Special Counsel to Attorney General Hardy Myers. She has been with the Department of Justice since 1979, serving as a key advisor on tax policy, revenue, gaming, retirement and legislative issues. Her experience includes serving as Attorney-in-Charge of the Tax Section where she supervised the delivery of legal services to the Department of Revenue.

"Elizabeth brings both extensive experience and a high degree of professionalism to her work," said Kitzhaber. "I am pleased to have someone of her caliber take the helm at the Department of Revenue."

Harchenko is a graduate of Willamette University College of Law and a member of the Oregon State Bar. Her activities also include membership in the Oregon Women Lawyers, Willamette University College of Law Board of Visitors and Salem Rotary.

The Department's responsibilities include collecting state income taxes, corporate excise, inheritance and gift taxes, supervising the property tax system and assessing large industrial properties and Oregon forest and timberland.

JEAN THORNE TO JOIN EFFORTS TO IMPLEMENT OREGON SCHOOL IMPROVEMENT

Governor John Kitzhaber and State Superintendent of Public Instruction Norma Paulus announced the appointment of Jean Thorne to enhance efforts to implement the Oregon Educational Act for the 21st Century.

Thorne will assume a role recommended by the Governor's Task Force on School Improvement, which was asked to review strategies for implementing the Education Act. In its report, the Task Force called for establishment of a team of private and public sector staff to help implement Oregon's vision of school improvement.

"The Task Force believed that implementation of the Educational Act cannot be accomplished by the Oregon Department of Education alone," said Keith Thompson, Vice President and Oregon Site Manager of Intel, who chaired the Task Force. "It requires leadership and participation from a much wider range of stakeholders including the Department, the Oregon State System of Higher Education, the community colleges, local school districts and employers. I believe that direct participation of the Governor's Office in this effort will provide the strong base of involvement from all parties," Thompson said.

"Educators, the Governor's Office and the business community are working closely together to raise standards in all schools," said Superintendent Paulus. "The result will be a seamless K-16 school system in Oregon. I am thrilled the governor is willing to commit his time, energy and staff to assist us in this massive effort. Jean Thorne will be a great asset to us all," Paulus said.

As Oregon's Medicaid director from 1987-1995, Thorne was responsible for leading the implementation of Medicaid reform under the Oregon Health Plan. She also served as Acting Director of the Oregon Department of Human Resources and has held a number of other positions in state government since 1976. Thorne is currently serving on Governor Kitzhaber's staff as his federal policy adviser.

Thorne will lead the work of the team charged with assuring the success of the Certificates of Initial and Advanced Mastery.

Major priorities of this effort will include investing in preparation and continuing education of teachers, involving parents and communities in supporting Oregon students as they work toward the higher standards, and building partnerships between schools, businesses and communities.

"Jean brings a proven track record of leading statewide reform," Gov. Kitzhaber said. "She as the organizational skills and the ability to engage the variety of players needed for successful implementation of the Educational Act. Her experience with implementation of the Oregon Health Plan will provide a strong basis for helping to organize similar efforts in our educational system," Kitzhaber said.

Governor To Visit Public-Private Program To Promote Computer Donations For Schools

Governor Kitzhaber will meet with students, teachers, business executives and school officials involved with a unique public-private program that lets businesses donate used computers and other high-tech equipment to schools. The program, called "StRUT" (Students Recycling Used Technology), began at Forest Grove High School when Intel Corporation donated used equipment for classroom use. It is now available to many high schools across the state.

The StRUT program is planning on holding a "Donate Your Computer for Schools" campaign on April 25-26. Governor Kitzhaber will meet with Gervais School District students who are receiving computers from Salem's Eoff Electronics Company at the Willamette Education Service District building, 3400 Portland Road NE, at 1:15 p.m. on Tuesday, April 15.

Governor's Budget Plan Helps Schools, Returns Surplus Revenue and Cuts Spending Responsibly

In a briefing to the media, Governor John Kitzhaber provided details of his compromise budget plan and how he plans to fund an additional \$200 million for Oregon's schools. His revised budget plan, which has the backing of House and Senate Democrats, cuts \$150 million from his original budget proposed in December, 1996.

"I have said all along that schools cannot be funded by decimating the state's universities, closing libraries and parks, ignoring the educational needs of pre-kindergarten children and keeping sick Oregonians from getting health care," said Kitzhaber. "What I am talking about today is a budget that both supports K-12 education and invests in the other areas that help keep Oregon a wonderful place to live."

The budget cuts Kitzhaber outlined fall mainly in the budget of the Department of Corrections, where approximately \$87 million in savings can be found, mostly from a delay in construction on planned prisons and from a reduction in the inmate forecast.

Examples of other cuts include:

- \$4.1 million from improving access to Community Colleges.
- \$7 million from the proposed Oregon Health Plan Expansion.
- \$5 million from the Employee Compensation Package.
- \$5 million from the Department of Economic Development.

"What I and my Democratic colleagues want is a budget that freezes tuition at our universities and colleges, expands Head Start to give young children a chance at success, expands the Oregon Health plan as voters have mandated and provides more money for our schools," said Kitzhaber. "I think we've come up with a reasonable and prudent compromise, and I call on all legislators to support it."

The compromise budget uses approximately two-thirds of the corporate and personal kicker to fund education, while still returning the average kicker refund of about \$200 to middle income Oregonians. Currently, the entire kicker revenue available to state government is about \$444 million; the compromise budget would use \$290 million of that for schools. In addition, Kitzhaber has said K-12 education should have the first call on any additional revenue that results from the May revenue forecast.

Governor Announces Campaign to Prevent Teen Pregnancy

Governor John Kitzhaber unveiled the 1997 Oregon Action Agenda today, a comprehensive, statewide campaign to reduce teen pregnancy across the state. The announcement was made at North Salem High School, where the governor was joined by local teen pregnancy prevention experts, high school students and his wife Sharon.

"Teen pregnancy costs to Oregon are both personal and financial," said Kitzhaber. "There is a cost to teen parents and their children, who often experience diminished lives. There is also a cost borne by all of us, because teenage pregnancy costs the state \$200 million each year. That's money that could be spent on improving the lives of children in other ways -- on early education, protective care, prevention of domestic violence and health care."

The Oregon Action Agenda '97 was developed by a broad-based coalition and is built upon years of teen pregnancy prevention efforts throughout the state. The action agenda focuses on prevention strategies that include public education, decision-making skills and self-esteem, improved sex education curriculum, family planning services and STARS (Students Today Aren't Ready for Sex), an abstinence-based curriculum for middle-school age children.

An additional \$2 million was provided for in the Governor's budget to enhance current state and local teen pregnancy prevention programs. The Action Agenda will also help coordinate these efforts and deliver services more efficiently at both the state and local levels.

In Oregon, the pregnancy rate for females aged 10-17 was 18.9 per 1000 for the years 1990-95. The current benchmark for the year 2000 is 15.0 per 1000. In 1995, 8,283 Oregon teens became pregnant -- the equivalent of one out of every 25 women under the age of 20.

Kitzhaber stressed that improving communication between local and state governments and the public and private sectors was key to succeeding at teen pregnancy prevention.

"In developing the Oregon Action Agenda, we relied upon the expertise and knowledge of people at the local level -- people who interact with teenagers on a daily basis and who know what works and what doesn't work," he said. "All of us recognize that by working together we have a better chance to improve the lives of Oregon's kids."

Teen pregnancy costs Oregonians about \$200 million each year. It has been estimated that cutting the teen pregnancy

rate in half could save the state approximately \$85 million yearly.

Governor Signs Oregon Salmon Plan Legislation

Flanked by a bipartisan group of legislators, Governor John Kitzhaber signed the legislation enacting and funding the Oregon Coastal Salmon Restoration Plan Tuesday, paving the way for a large scale, voluntary public-private partnership designed to help save coastal salmon from extinction.

The three bills the governor signed were HB 5042, appropriating state money to implement the plan, HB 3700, which allows the state to collect money from anglers and the timber and aggregate industries to partially finance the recovery effort and SB 924, which allows legislative, scientific and stakeholder oversight of the plan.

"This is an historic day for the state," said Kitzhaber during a bill signing ceremony in his office. "Today, we are putting in place a plan that is cooperative and bi-partisan in the best Oregon tradition. I want to commend all the people who worked so hard to overcome their differences and who are responsible for crafting this plan: legislators, the timber, agriculture, ranching and fishing industries, environmentalists and concerned coastal residents."

"Within our grasp is the opportunity to set and follow our own course for recovering failing salmon runs," said House Speaker Lynn Lundquist. "This is a proud and historic day for all Oregonians."

Kitzhaber has requested that the Oregon plan be used as a recovery effort under the Endangered Species Act if the federal government decides to list the coho, a decision which is expected by April 25. Half the cost of the \$30 million plan, including a \$13 million voluntary contribution from the timber industry collected through increased timber harvest tax revenues, is contingent upon a "no list" decision in the north and central coastal region. If approved, the plan will be implemented in partnership with the Legislature, the National Marine Fisheries Service and Oregonians.

Part of the funding for the Oregon salmon plan will be used to fund the governor's Healthy Streams Partnership, a public-private program designed to improve water quality in streams across the state.

"Our goal is to return large numbers of coastal salmon to rivers and streams, and I firmly believe we can achieve that goal," said Kitzhaber.

**GOVERNOR TO DISCUSS SCHOOL BUDGET
WITH SALEM-KEIZER OFFICIALS**

Kitzhaber Also to Visit Advanced Physical Science Class

Governor John Kitzhaber will meet with Salem-Keizer School District Superintendent Homer Kearns and district senior staff to discuss his new budget proposal Thursday, March 20 from 10:30 to 11 a.m. in the library computer lab of the Judson Middle School, 4512 Jones Road, SE. Kitzhaber recently suggested a budget compromise that would increase funding to Oregon schools by another \$110 million.

Kitzhaber will also visit an advanced physical science class from 10 to 10:30 a.m. in room 112.

GOVERNOR PROPOSES COMPROMISE BUDGET PLAN

Plan Returns Portion of Kicker, Raises Additional \$200 Million for Schools, Targets Cut

In a speech to the Portland City Club today, Governor John Kitzhaber proposed a budget compromise that would give an additional \$200 million to Oregon schools and return a portion of the two percent kicker revenues to Oregonians. To help make the compromise possible, Kitzhaber said he would work with legislative leadership to find savings in his proposed budget.

"This compromise respects the Republicans' interest in returning a portion of the kicker revenues and finding cuts in my budget," said Kitzhaber. "It also allows us to pass a school funding budget that shields most school districts around the state from teacher layoffs and larger class sizes. I don't believe, that with our economy as strong as it is, that there is any excuse for doing less for schools."

Under Kitzhaber's plan, both the kicker revenue for corporations and individuals would be allocated to K-12 education, while earmarking a portion of those rebates to be returned to Oregon businesses and individuals. For example, on the individual kicker, all eligible Oregonians would receive a rebate up to the amount due to the average Oregon taxpayer. This means that those Oregonians who most need it will revive their full rebate.

"If there is a willingness to sign onto this compromise, I will go over every state budget line by line to find a way to make it work," Kitzhaber said.

Kitzhaber said that crafting a compromise that protects K-12 education and does not decimate other crucial services and programs was his bottom line.

"We cannot fund K-12 schools at the expense of pre-kindergartners and college students," he said. "And we cannot fund education in general at the expense of the rest of the vital services our state provides. I am not willing to sign up for any budget that does that."

STATEMENT OF GOVERNOR JOHN KITZHABER ON THE PROPOSED REPUBLICAN BUDGET

I am pleased that the Republican leadership has developed their budget outline. It means we can begin the process of working toward a budget agreement.

I have, however, some concerns.

First, I am not convinced that there are enough resources provided to our schools under this plan. I have not yet seen the specific information about how this affects individual school districts. I'm concerned that, with Oregon's economy healthier than it has ever been, we are considering a school budget that may still mean layoffs, larger class sizes and no investment in technology.

Second, it's hard to characterize this as a balanced budget when there remain \$86 million in unspecified cuts. Those kinds of cuts are easy to put on paper, but harder to actually find.

Third, Oregonians voted for a real expansion of the Oregon Health Plan -- not a token one. My proposal provides health care for working, tax-paying Oregonians who cannot afford it on their own. This budget proposal does not keep faith with what Oregonians voted for.

We have started a new phase in the budget process. I will work with both my Republican and Democratic colleagues to find a budget we can all support and do so in a fashion that will make Oregonians proud.

GOVERNOR RELEASES RECOMMENDATIONS TO ADDRESS DANGEROUS DEBRIS AVALANCHES

Governor John Kitzhaber released recommendations and proposals today to help prevent and respond to debris valance slides. Such slides have killed five Oregonians during the last winter.

The Governor's Debris Avalanche Action Plan sets forth specific recommendations and actions to be taken by the State and local governments to reduce the occurrence of these slides and reduce the risk to the public when these slides do occur.

"I firmly believe we can do a better job preventing these slides and protecting Oregonians from their effect," said Kitzhaber. "I will work to see that the recommendations I make today are implemented so that we are better prepared next winter."

Specifically, Kitzhaber proposed the following actions to be taken by state government:

Oregon Department of Forestry

- Recommend that the Board of Forestry require written plans for all harvest and road building activities on high risk sites. Written plans would delineate measures to be used to mitigate the risk of debris flows. Ensure that financial resources are available for identification of high risk sites.
- Recommend that the Board of Forestry require notice to landowners downslope and within a certain distance of harvest or road building operations on high risk sites.
- Defer clearcuts and road building in areas with a high risk of debris flows that threaten human lives until appropriate statutory and administrative changes have been made.

Oregon Department of Transportation (ODOT)

- Assess state highways for public safety hazards from debris avalanches and mudflows.
- Coordinate with the Oregon Department of Forestry (ODF) when timber harvest or road construction is planned above and within a certain distance of a state highway. The system will provide for timely input and recommendations from ODOT to ODF regarding forest road building and timber harvest.
- Increase road patrols during heavy precipitation periods.

Oregon Building Codes Division, Department of Consumer and Business Services

- Adopt appropriate portions of the uniform building code and examine ways in which structural, drainage and landscaping codes could be modified to reduce risk from landslides and to reduce factors that may contribute to landslides in developed areas. Appropriate focus should be on foundation standards, slope stabilization, and diversion barriers.

Oregon Department of Land Conservation and Development

- Review Goal Seven to determine whether it effectively addresses landslides and other natural hazards.
- Develop and distribute model local land use regulations that would restrict development in canyons and on debris avalanche fans.

Oregon Emergency Management Division

- Make the Governor's Interagency Hazard Mitigation Team (IHMT) a permanent body. Direct the team to establish regular meeting dates and revisit its recommendations relating to landslides.
- Recommend that local governments prepare debris avalanche action plans using the state hazard mitigation plan as a guide. The state will help identify federal funding for counties to help pay for this work. Encourage coordination with the Oregon Department of Geology and Mineral Industries (DOGAMI) for assessing geologic hazards.
- During intense storm events, act as lead agency in coordinating among appropriate state agencies on risk from landslides in both rural and urban areas.
- Coordinate with DOGAMI and the National Weather Service on an improved warning system. Consolidate weather, hazard, and situation information and make it accessible by all agencies in a timely manner.

Oregon State University and ODF

- Undertake hazard mapping designed to inform local governments, landowners and homeowners of the presence of factors that may contribute to debris flow avalanches. Among these could be precipitation, lithology, landform, land use classification, and slope.

DOGAMI

- Develop a coordinated public education campaign. Ensure that financial resources are available for an effective campaign.

Governor's Office

- Support legislation requiring full disclosure of known landslide history and available information on risk during all property transactions
- Support a thorough discussion of ways to lessen the inherent conflict between resource use of steep hazardous ground and residential or other developed uses.

GOVERNOR PROPOSES ADDITIONAL FORECAST REVENUE FOR SCHOOLS

Governor John Kitzhaber today proposed investing some \$150 million in new forecast revenue in K-12 education throughout the state -- raising the state contribution for schools from his proposed \$3.959 billion to \$4.109 billion. The March revenue forecast, released today, estimates an additional \$89 million in new revenue in the 1997-99 biennium and increases the 1995-97 "kicker" proceeds by \$61 million to \$444 million.

"When I put my budget proposal together in December, I did so on the best available information about our financial resources. Even under that budget, K-12 school funding was not adequate and many districts faced the prospect of teacher layoffs, larger class sizes, deferred capital investments. With this new forecast, however, we can begin to give our children the resources they need.

"With a strong economy and the income tax revenue it generates, there is no reason we should be looking at teacher layoffs and increasing class sizes," said Kitzhaber. "It is irresponsible to forgo more than \$400 million in revenue while our schools are suffering. I continue to believe that we should invest the proceeds of a strong economy in Oregon's future. The best way to do that is give our kids a world class education."

Governor Lauds Speaker, Timber Industry On Salmon Plan Financing Proposal

Governor John Kitzhaber released the following statement today regarding a proposal forwarded by House Speaker Lynn Lundquist and the Oregon Forest Industry Council to provide financing for the Oregon Salmon Restoration Plan:

"I congratulate the Speaker and forest landowners on taking leadership by proposing an increase in the harvest tax to help finance the Oregon Salmon Restoration Plan. Very few industries on the West Coast have taken the extraordinary action of volunteering to be taxed to restore salmon. This is a tremendous example of foresight and leadership and an exciting step forward for the salmon plan."

The salmon problem has been a long time in the making and will be a long time in repairing. And there are many parties who have contributed to the problem -- including agriculture, individuals, municipalities and other industries. I am hopeful that the bold step taken by the forest industry is followed by others. I am heartened by the fact that groups such as the Restoration and Enhancement Board, which is made up of the sports angling and commercial fishing industries, are willing to contribute \$1 million.

Again, I congratulate Speaker Lundquist on his leadership and forest landowners for their commitment."

LEGISLATURE TO REVIEW COHO SALMON PLAN

Governor Kitzhaber announced today that he will provide a second draft of the Oregon Salmon Restoration Plan to members of the Oregon Legislature for their review and consideration. The plan, which will be submitted to the National Marine Fisheries Service (NMFS) in final form in early March, is a collaborative effort designed to rebuild Oregon's coastal salmon stocks and preclude the need for a listing under the federal Endangered Species Act.

The House and Senate Water Policy Committees, headed by Rep. Ken Messerle and Sen. Veral Tarno, will hold hearings on the salmon plan February 24, 25, 26 and March 1.

"I am pleased to be working with Oregon legislators to finalize the Oregon Salmon Restoration Plan," said Kitzhaber. "It shows a recognition that we will only be able to save this species if our efforts are collaborative. Working together makes our case with the federal government that much stronger."

"We are dedicated to working together with the governor and our Democrat colleagues to come up with an Oregon Plan to save our salmon," said Senate President Brady Adams. "This issue has the highest priority."

"I am personally committed to building an Oregon plan for coho restoration that brings everyone into the process. The strength of the Oregon plan will be its reliance on partnerships. As elected officials we will craft the plan, but it will take long-term commitment from all Oregonians to achieve real success," said House Speaker Lynn Lundquist.

Based on public comment and NMFS feedback, a number of changes have been made to the plan since the release of the first draft last August. The most significant are:

- Establishing an independent science team to monitor the plan's progress on a yearly basis; Strengthening of private landowner commitments to habitat enhancement along key stream areas;
- Federal and state governments, private landowners, watershed councils, Soil and Water
- Conservation Districts and the Cooperative Extension Service and other Oregonians will work together to restore and monitor fish populations and habitat;
- Changes in the numbers of salmon to be harvested, based on spawning goals;
- Use of computer modeling to predict production expectations and the long term risk of species extinction;
- Federal agencies will work closely with local watershed councils and Soil and
- Water Conservation Districts to implement the plan, including providing some on-the-ground staff and funding;

A heightened involvement of local governments in plan design and implementation.

A listing decision on Oregon's coho salmon is expected by April 25. If NMFS accepts the Oregon Salmon Restoration Plan and decides not to list the coastal coho, the plan will be expanded later in the year to include steelhead and areas of the Columbia River.

GOVERNOR APPOINTS VERNE DUNCAN TO SENATE DISTRICT 12 SEAT

Governor John Kitzhaber announced today that he has appointed Verne Duncan of Milwaukie to the vacant Oregon Senate seat in Clackamas County's District 12. Duncan replaces former senator Bill Kennemer, who left to take a seat on the Clackamas County Board of Commissioners.

"I am pleased to be able to appoint someone of Verne Duncan's caliber to the Oregon Senate," said Kitzhaber. "His experience as an educator, as an elected official and as an active member of his community will be valuable to his constituents and to the state as a whole."

Duncan has had a long career as an educator, teaching elementary, secondary, undergraduate and graduate level students. He served in the Idaho House of Representatives from 1962 to 1965 and was elected Oregon State Superintendent of Public Instruction four times, serving from 1974 to 1986. Duncan currently serves as a professor emeritus at the University of Portland.

An Ounce of Prevention: Expanding the Oregon Health Plan

by John Kitzhaber, M.D.
Governor of Oregon

In 1989, Oregon embarked on a health care experiment called the Oregon Health Plan. Developed by a coalition of Oregon businesses, health care providers and consumers, it was designed to provide health care to Oregonians who couldn't afford health insurance. Along the way, the plan met with skepticism and criticism from many sides, and had to overcome strong opposition from the federal government. However, time has proved the skeptics wrong. In the past eight years, the Oregon Health Plan has become recognized as one of the most innovative reforms of health care in the world.

Today the Oregon Health Plan provides primary, preventive health care to more Oregonians than ever before. Many of them have jobs that do not provide health benefits, and although they are working, they cannot afford to purchase private insurance. Before the Oregon Health Plan, they would have gotten medical treatment from hospital emergency rooms, and only when very ill. Today, they can see a doctor when they need to.

Since the implementation of the Oregon Health Plan in 1990, the number of uninsured Oregonians has dropped from 18 to 11 percent. The uninsured rate for children has dropped from 21 percent to 8 percent. Hospital charity care -- the costs of which were previously shifted to businesses and consumers in the form of higher insurance rates -- is down 30 percent.

The plan enjoys the support of hospitals, doctors, non-profit organizations, labor, social service providers -- and most importantly, Oregon voters. In November, voters passed a ballot measure that levies 30 cents on a pack of cigarettes in order to maintain and expand the Oregon Health Plan. Voters did so despite an \$8 million campaign by the tobacco industry against the ballot measure.

Despite the support of voters, the expansion of the Oregon Health Plan is today in jeopardy -- not from the tobacco industry, but from the Oregon Legislature.

Some legislators have said they want to replace the state's general fund support for the Health Plan with cigarette tax money, and keep the plan at the same level, not expand it. That's a legislative bait-and-switch, and it's not fair to Oregon voters. I believe Oregonians should get what they asked for last November, and that the Oregon Health Plan should be expanded to provide more uninsured working Oregonians access to basic health care.

The Oregon Health Plan provides benefits to all of us. It helps keep health care costs down by providing primary care to people who otherwise would end up in hospital emergency rooms, much sicker than they need to be. It has helped thousands of Oregonians get off welfare and into a job. And, the Health Plan provides essential medical care to many rural Oregonians. For example, twenty percent of Josephine County residents get health care through the Oregon Health Plan.

Most importantly, the Oregon Health Plan has helped the state reduce the numbers of uninsured people living here, from 17 percent to 11 percent. But more than one out of ten Oregonians living without health insurance is still too many. The cigarette tax provides us with the opportunity to cover more men, women and children -- if we are able to use the resources the cigarette tax provides.

The Oregon Health Plan is no longer an experiment, but a nationally recognized, groundbreaking plan that has become a model for the country. In a time when one million Americans every year lose their medical coverage, Oregon is turning the tide and providing basic health care to more and more citizens. But unless we as Oregonians get involved, the Oregon Health Plan may not continue to be a success. Let your legislator know you care about the Oregon Health Plan. Tell them you want to use Oregon's cigarette tax money to expand access to health care through the Oregon Health Plan.

GOVERNOR ANNOUNCES HEALTH PLAN EXPANSION

Expanded Coverage Under the Oregon Health Plan Made Possible by Voter-Approved Tobacco Tax

Governor John Kitzhaber announced plans for expansion of the Oregon Health Plan today, approximately three months after Oregon voters approved an increase in tobacco taxes for that purpose. The expansion will focus on making health care affordable for working Oregonians -- especially families with young children.

"The Oregon Health Plan has been a success at helping Oregonians get access to basic health care," said Kitzhaber, who pioneered the plan when he was President of the Oregon Senate. "Over the last three years, more than 300,000 Oregonians have gained access to health care under it. With the expansion, we will be able to offer health care to another 43,000 Oregonians."

The plan for the expansion is the result of months of work by the Oregon Health Council, the group that helped formulate the original plan. Kitzhaber asked the group to reconvene in September, 1996 and formulate expansion of the plan. The chair of the council, Alan Yordy, detailed their recommendations for expansion today:

- Provide a sliding fee subsidy for working Oregonians who make less than 150 percent of the federal poverty level. The federal poverty level for a family of four in Oregon is approximately \$14,000. This sliding fee would enable them to buy currently offered health insurance products in the private market place. Generally, these Oregonians make too much money to be eligible for Medicaid, but not enough to be able to afford insurance.
- Expand current Medicaid coverage under the plan to include pregnant women and children under six years of age living in families with incomes under 185 percent of the federal poverty level.
- Include uninsured full-time college students who are eligible for Pell Grants in the Medicaid portion of the plan.

Kitzhaber noted that the expansion of the plan would have great benefits for rural Oregon. "The highest concentration of uninsured Oregonians, generally more than 15 percent, is in our rural areas of southern, central and eastern Oregon. We expect to see those percentages fall as we expand access using the tobacco tax proceeds."

Kitzhaber closed by promising to "work hard to see that Oregon voters get what they expected when they voted to increase their taxes -- a reasonable, well thought out expansion of health care coverage to deserving Oregonians."

GOVERNOR OUTLINES PROCESS FOR FILLING VACANT STATE SENATE SEAT

Governor Kitzhaber announced the process for filling a vacant Clackamas County state Senate seat today. The Clackamas County Board of Commissioners has indicated to the governor that they will not choose any of the candidates put forward last month by the Clackamas County Republican Central Committee.

The authority of the Clackamas County Commission to appoint a senator to fill the vacancy expires at 5:00 p.m. on February 4.

The law governing appointments to the state Senate by the governor opens the process to any Republican 21 years of age or older who has resided in the district for a year or more. Applicants must also be registered to vote in the senate district and must have been registered as Republicans as of July 9, 1996.

Interested residents of Senate District 12 who meet the requirements for appointment should call the Governor's Office of Executive Appointments at (503) 378-3123 to receive an application. Applications will be accepted between Monday, January 27 and Monday, February 7 at 5:00 p.m. No applications will be accepted after that date.

Governor Kitzhaber has until February 14 at 5:00 p.m. to announce his appointment.

DISASTER ASSISTANCE AVAILABLE FOR OREGON COUNTIES HIT HARD BY FLOODS

Responding to Governor John Kitzhaber's request, President Clinton has made disaster assistance available for victims of last month's flooding in Southern Oregon. The President announced today that residents in Jackson, Josephine and Klamath counties are eligible for individual assistance (help to individuals), while Jackson, Josephine and Lake counties will receive federal aid to help rebuild public infrastructure.

The aid includes grants and loans for temporary housing, repairing and replacing homes and other property and serious needs and expenses that resulted from flooding but are not covered by other assistance programs.

Governor Kitzhaber, who declared states of emergency in those Oregon counties and requested federal assistance from the President, was pleased that the aid will be forthcoming to residents and local and state government. "Having traveled in the southern part of this state following December's flood, I can attest to the great needs of many Oregonians for assistance to help them get back on their feet," he said. "I am pleased that the President and the federal government have been so responsive to our needs."

Flood victims in Jackson, Josephine and Klamath counties who may be eligible for assistance should call the toll-free registration line at **1-800-462-9029 (TTY 1-800-462-7585)**.

GOVERNOR INITIATES OUTSIDE REVIEW OF POLICE BOARD

Governor Kitzhaber has asked for an outside review of the Board of Public Safety Standards and Training after alleged anti-Semitic comments and harassment of a former corrections officer and an instructor. The review will be conducted by an impartial consultant outside state government, who will report to the state's Department of Administrative Services.

The governor said the seriousness of the allegations prompted the unusual step of an external examination. "These are very serious allegations, and taken together, represent a potential pattern that cannot be allowed in state government," he said.

Details of the review, including its duration and specific focus will be finalized by next week. The governor will determine what actions need to be taken following the completion of the review.

GOVERNOR REQUESTS PRESIDENTIAL DISASTER DECLARATION FOR THREE OREGON COUNTIES

Governor John Kitzhaber today asked President Clinton for a major disaster declaration for three counties in southern Oregon as a result of the late December floods. The governor asked that Jackson, Josephine and Lake counties be declared for infrastructure assistance to help in rebuilding and repairing damaged public facilities. The governor also asked the President for Human Services assistance to help residents in Jackson, Josephine and Klamath counties. Initial damage assessments for all counties hit by the Christmas Week Storm are estimated to be about \$77 million so far.

"For the second winter in a row, Oregon has been hit with very destructive winter storms with hundreds of damaged homes and businesses and severe damage to cities and counties state-wide," Kitzhaber said. "It is our hope the President will act quickly on our request, even though it closely follows a request for the first storm in November." That storm resulted in a federal declaration for infrastructure assistance to rebuild and restore damaged public facilities in Douglas, Coos and Lane Counties.

Kitzhaber praised the efforts of local volunteers throughout the state who come to the aid of their communities and neighbors during the recent storms. "Once again Oregonians have proved that they care for each other and feel deeply about the survival of the hometowns and counties. They are always on the front line when others need help."

Myra Thompson Lee, Director of Oregon Emergency Management, said that recovery and mitigation efforts are going forward in the expectation that the newest declaration will be granted. Federal representatives for the Federal Emergency Management Agency (FEMA) and the Small Business Administration (SBA) are already on hand and are assisting counties and cities, and home and business owners to begin the recovery effort.

Abby Kershaw, acting State Coordinating Officer of the Disaster Field Office in Salem, said that state inspectors are teamed with federal and local representatives as they visit the many damaged areas. Most of the preliminary damage assessment work is expected to be completed within the next two weeks. As assessments are completed, the governor may request that additional Oregon counties be declared.

GOVERNOR CALLS FOR PRESERVING OREGON'S QUALITY OF LIFE IN STATE OF STATE SPEECH

Kitzhaber Opens Legislative Session Asking for Bipartisan Approach to Schools, Transportation and Natural Resources

Governor John Kitzhaber, delivering his second State of the State speech at the opening ceremonies for the 69th Oregon Legislative Assembly, called upon legislators and Oregonians to take bold action to help keep Oregon's quality of life. Specifically, he proposed changes in the management of education, transportation and natural resources.

"Oregon is a special place. That's why we came here. That's why we stay here," said Kitzhaber. "We need to be bold, innovative and creative if we are going to address the problems that are slowly eroding the quality of life we cherish in this state."

The governor made a number of recommendations in the management of the state's K-12 education system to accompany his call for greater funding of the system. Citing the fact that the state now pays for the vast majority of K-12 education, Kitzhaber called for exploring a statewide salary schedule for teachers. The salary schedule would help create greater state control over the single largest expense of the K-12 system.

Further, Kitzhaber called for creating a system of incentive-based pay for teachers and administrators, removal of barriers to the hiring of instructional assistants and increased certification of teachers and administrators. "I believe these changes will help us create accountability in our school system and will help us improve the quality of education our kids receive."

Kitzhaber also called for changes in the financing and management of the state's transportation system in order to maintain the system and prevent congestion. Among the changes he proposed are: greater local control over planning of transportation improvements, the creation of a fund specifically targeted at the modernization of roads and highways and greater environmental controls on the building of new roads. The governor also cited the need to broaden transportation funding away from merely fuel taxes to include a small monthly fee charged to households, and the creation of a fee based on actual miles driven.

In the natural resource area, Kitzhaber renewed his call for increased work restoring Oregon's rivers and streams and aiding threatened salmon, steelhead and trout. He also asked Oregonians and members of the legislature to work with

him in finding a way to fund the state's park system.

Kitzhaber closed his State of the State address by asking for bipartisan support for the agenda he outlined. "This is not a Democratic agenda. This is not a Republican agenda. This is an Oregon agenda," said Kitzhaber.

A full text of the speech is available by calling the governor's office at 378-3111, or by accessing the governor's web page at www.governor.state.or.us

STATE, GRAND RONDE REACH HISTORIC AGREEMENT TO LIMIT GAMING, CREATE COMMUNITY BENEFIT FUND

Governor John Kitzhaber and Kathryn Harrison, Tribal Chair of the Confederated Tribes of Grand Ronde, signed an historic compact today that will limit the tribe to one casino and establish a community benefit fund equal to six percent of the casino's net revenues. Kitzhaber hailed the agreement as setting a new standard of cooperation between the state and tribal governments.

"This compact allows us to accomplish one of our main objectives with regards to tribal gaming in Oregon," Kitzhaber said. Kitzhaber also noted that this is the first time any tribal government in Oregon has agreed with the state to limit its right to expand beyond one casino. "The state and the tribe have agreed that they will operate only one casino. This is an important step toward ensuring that there is not a proliferation of tribal casinos throughout the state."

"Spirit Mountain Casino is a tool for the Grand Ronde Tribe to help it achieve self-sufficiency and reduce the need for taxpayer-funded programs, such as welfare," said Tribal Chair Kathryn Harrison. "During our struggle for Restoration, we said, 'We're fighting for our rightful place among the family of Indian nations. There won't be any surprises from us; we're open and above board; we won't embarrass you. By helping ourselves, we'll be helping the whole community.' Today, this historic agreement both recognizes the importance of our struggle for self-sufficiency and allows us to continue to make good on our word that we'll help the entire community."

The compact also breaks new ground in establishing a public investment fund, to be known as the Spirit Mountain Community Fund, equal to six percent of the Spirit Mountain Casino's annual net revenue. The fund would be approximately \$1.6 million for 1997, based on approximately \$26 million net revenues for 1996. The fund would be administered by an eight person board of trustees appointed jointly by the tribe and the governor.

The fund would be used to support projects and programs in education, health, public safety, the arts and environmental activities in communities in 11 northwest Oregon counties. Those counties are: Polk, Yamhill, Tillamook, Marion, Washington, Multnomah, Clackamas, Lane, Linn, Benton and Lincoln.

"I believe this is an important recognition on the part of the Grand Ronde that the Spirit Mountain Casino is a major institution in its community and has a role to play in promoting the health and prosperity of the larger community," said Kitzhaber.

In addition, the compact also allows the tribe to offer a wider variety of gaming and makes permanent the Oregon State Police's role in working with the Grand Ronde Gaming Commission in ensuring safety and integrity of games at the casino.

Copies of the complete compact are available by contacting the Governor's Office of Legal Counsel at (503) 378-3111.

SALMON RESTORATION PLAN COMMENTS AVAILABLE TO PUBLIC

Comments on a proposed coastal salmon restoration plan from a scientific peer review panel, federal agencies, industry and conservation organizations as well as members of the public have been received and compiled by Governor Kitzhaber and are now being made available at various public locations:

- Tillamook Library, 210 Ivy Avenue, Tillamook
- Hatfield Marine Science Center, 2030 Marine Science Drive, Newport
- Coos Bay Library, 525 Anderson, Coos Bay
- Ore. Dept. of Fish and Wildlife SW Region Office, 4192 N. Umpqua Hwy., Roseburg
- The Nature of Oregon Information Center, 800 NE Oregon, Suite 177, Portland
- Rogue Valley Council of Governments, 155 South 2nd St., Central Point
- Oregon State Library, Reference on 2nd floor, Capitol Mall, Salem

In addition, the comments will be available on the governor's home page at: www.governor.state.or.us

The Governor's Coastal Salmon Restoration Initiative is focused on preserving and restoring native coastal salmon populations and preventing the need for a federal threatened or endangered listing of coho salmon under the Endangered Species Act. A draft plan originally proposed in the fall was the subject of a series of community briefings in September and October.

Comments received from those briefings have been added to subsequent comments received from a scientific peer review panel, federal agencies, along with industry and conservation groups. All comments have been considered as the plan is currently being revised and improved.

A final draft plan will be submitted to the National Marine Fisheries Service (NMFS) in late February or early March with a final listing decision on coho salmon by NMFS due April 25.

GOVERNOR TO TOUR GORGE, SOUTHERN OREGON

Governor John Kitzhaber will visit slide damaged sections of Interstate 84 and flood damaged areas in southern Oregon on Friday, January 3.

The governor will be in the Cascade Locks area (milepost 41 on I-84) at approximately 9:30 a.m. to view slide damage. For the exact location, contact Ron Scheele at (503) 731-8263. After viewing the slide area, the governor will visit the Oregon Department of Transportation's maintenance shops in Cascade Locks to congratulate highway workers for their efforts in reopening the interstate.

Weather conditions permitting, the governor will also visit Ashland to view flood damage and meet with city and county officials. Governor Kitzhaber is tentatively scheduled to attend a meeting with city and county officials in the council chambers of Ashland City Hall (20 East Main Street) at 2:30 p.m. The governor will then tour flood damage in downtown Ashland.

Broadcast pool footage of the governor's flight to southern Oregon will be available from KGW TV. Contact Tom Fuller at (503) 585-2172.

THREE OREGON COUNTIES WILL GET FEDERAL FLOOD AID

Three counties hard hit by last month's flooding and bad weather will get federal disaster assistance, the Federal Emergency Management Agency (FEMA) announced today.

Governor Kitzhaber requested the aid for Coos, Douglas and Lane counties following a severe storm in November. The storm caused damage to public infrastructure and private property from high winds, flooding and landslides. Today, FEMA Director James Lee Witt announced that President Clinton had approved a disaster declaration for the three counties for damage that occurred between November 17 and December 11.

"Oregon has been hard hit by bad weather and flooding in recent years. I'm pleased that the federal government has recognized our need for assistance," said Kitzhaber. The declaration is the third issued for Oregon by the federal government in 1996.

The disaster declaration means local governments will be able to apply for federal funds to cover 75 percent of the cost of debris removal, emergency services and restoration of public property. Local disaster relief offices will be set up and opened by FEMA in January to assist local officials and citizens with claims for damage assistance.

STATEMENT OF PRINCIPLES FOR RESTRUCTURING THE ELECTRIC UTILITY INDUSTRY

Oregonians have benefited from electricity prices that are among the lowest in the nation. Nonetheless, the technological and market forces that are revamping the electric utility industry nationally will change the industry in Oregon as well. Legislation will very likely be introduced in the 1997 session to open the retail market for electricity to competition among electricity suppliers. If crafted with care, the move to the new competitive environment can benefit all consumers in the state without diminishing our environmental quality.

The overriding objectives of any comprehensive restructuring should be the following:

- **Achieve efficiencies in producing, delivering and using electricity to yield reductions in costs.**
- **Ensure the benefits of competition are shared by all electricity consumers.**
- **Protect Oregon's environmental quality.**
- **Maintain the reliability, safety and quality of electric service.**
- **Preserve the benefits of our low-cost resources for Oregon customers.**

Any efforts to restructure the electric industry in Oregon must adhere to the following principles:

Principle 1. All Oregonians must have the option to choose their electricity supplier and be provided the information necessary to make an informed choice.

While some customers may have opportunities to choose among electricity suppliers sooner than others, eventually the option to choose must be accorded to all customers. In order to benefit from a competitive market, customers will need reliable information about suppliers' prices and services as well as information on their sources of power supply and the environmental impacts of those sources. With good information, customers can make choices that are best for them.

Principle 2. All Oregonians must have access to basic electricity service at a reasonable price.

Some customers, particularly large-volume purchasers, will be more attractive to electricity suppliers than others, especially in the early stages of developing full-scale competition. Other customers could be left without a choice of supplier, or with only a choice that comes at a premium cost for basic service. Some regulation must be established to ensure everyone has the opportunity to receive basic electric service at a reasonable price. If individual customers,

whether businesses or households, wish to join together to take advantage of price discounts or special service options that would not otherwise be available to them in a competitive market, they should be able to do so, regardless of utility boundaries.

Principle 3. The competitive power sales market in Oregon must be a fair one.

Without an open market, Oregon consumers will not reap the full benefits of competition -- lower prices and a wider choice of services. In creating a fair and open market where electricity providers compete on equal footing, Oregon's utilities at a minimum should restructure their organizations to create independent business lines for power generation, sales, transmission and distribution. They should also set separate prices for power, delivery of power and any other electricity services they provide. Access to distribution lines must be priced to reflect solely the cost of delivering the power across those lines. Owners of distribution lines should be financially indifferent to who owns the power resources supplied to customers over their lines. Finally, any regulation of electric service or electricity suppliers established to achieve such aims as environmental protection, fair pricing, reliable service or consumer protection should apply equally to all electricity suppliers competing in the market.

Principle 4. Electricity service to Oregonians must remain reliable and safe.

The move to a more open and competitive power sales market should not jeopardize the dependable flow of power to Oregon homes and businesses. Therefore, the responsibility for planning, operating and maintaining the Northwest transmission system should reside with an independent, federally-regulated entity as many have proposed. For the distribution system, the owners of local distribution lines in Oregon should remain responsible for the safe and reliable delivery of power to retail customers and continue to be subject to regulation or local board oversight. If customers prefer to buy less reliable service because it is cheaper, they should be allowed to do so if that option does not reduce the reliability of service to other customers.

Principle 5. Conserving energy and developing renewable resources are essential in protecting Oregon's environment and sustaining a healthy economy and must continue to be adequately funded.

We have made great strides in achieving conservation and developing renewable resources -- in large part because of programs funded and run by the electric utilities. However, in an open market where electricity providers compete for sales, the pressure to cut costs and keep prices low will diminish their efforts. We must ensure sufficient funding to sustain a significant level of activity for conservation and renewable resources. The sources of funding and mechanisms for collecting funds should be appropriate for a competitive market and not create inequities among energy providers. At the same time, the responsibility for the design and delivery of conservation and renewable resource programs should reside with entities whose goal is to ensure their success.

Principle 6. Low-income Oregonians must have access to competitive markets, and the energy support services currently available to them must be maintained or enhanced.

Competitive markets could create an environment in which suppliers would charge premium prices to low-income customers for basic services, provide them less than adequate services or choose not to serve them at all. Before the move to competition is fully introduced, it must be ensured that low-income customers will not be redlined, but will receive an adequate supply of electricity at a reasonable price.

In addition, sufficient funding must be ensured to continue energy assistance and weatherization services for low-income households

Principle 7. Utilities should have a fair and reasonable opportunity to recover costs of previous commitments.

Under the current regulatory system, utilities have incurred costs because of their obligation to meet the electricity loads of all customers in their service territories. In a competitive market, some of those costs may be unrecoverable. Any policies which allow for recovery of stranded costs should provide incentives to utilities to reduce those costs, allow for an equitable sharing of those costs and not discourage competition.

Principle 8. Regulation must continue for products and services for which there is no effective competition.

For the transmission and distribution systems, which will remain natural monopolies, oversight and regulation must continue in order to ensure safe, efficient and reliable power delivery. For energy sales, oversight will be necessary to steer the course to effective competition and to protect consumers during the transition to a fully open market. Regulations will be needed to ensure utilities pass on any lower costs to consumers, to ensure new competitors are not unduly disadvantaged by existing utilities and to create a climate that encourages suppliers to compete for residential and small business sales.

Principle 9. Customers must be protected from any unfair or unscrupulous practices of their electric service providers.

In a free market, some suppliers may seek to gain competitive advantage by engaging in unethical practices. Consumer protection regulations should be established to prevent abuses, and every supplier competing in the open market should be registered by the state. In addition, suitable forums should be established where customers can air their concerns and receive prompt resolution of their complaints.

Principle 10. The restructuring of the electric utility industry must not unduly burden local governments.

Some Oregon cities rely heavily on the franchise fees paid by electric utilities to fund essential services. Without alternative sources of revenue, those cities face the loss of millions of dollars if customers choose power suppliers who are not required to pay such franchise fees. Before the shift to a competitive market, there must be in place new or revised sources of revenue for those cities.

Principle 11. Any exemptions to utilities from open access mandates must be balanced with restrictions on marketing outside their service territories and continuation of public purposes funding.

Any legislation should recognize that customer-owned utilities have local boards that are responsible to the citizen customers in their territory. However, if a utility is exempted from providing customer choice, it must not disrupt the competitive market by selling power or marketing energy services to retail customers outside its service territory. Further, it must share in the obligation to fund conservation, renewable resources, low-income programs and other public purposes.

GOVERNOR RECOMMENDS THREE OREGON HIGH SCHOOLS FOR PRESIDENTIAL INAUGURAL PARADE

Two Marching Band Units and a Dance Team will be Considered

Governor John Kitzhaber has forwarded the names of three Oregon high school programs to be considered by the Presidential Inaugural Committee for inclusion in the Inaugural Parade in Washington, D.C. on January 20. The Inaugural Committee asked the Governor for recommendations of marching bands, drill teams and other school programs appropriate for a parade.

The programs recommended by the Governor's Office are the marching band units from Grants Pass High School and Sprague High School in Salem and the dance and drill team from Philomath High School. Grants Pass and Sprague High Schools were identified by the Oregon Band Directors' Association as having outstanding band programs. Philomath High School's dance and drill team has won the Class 3A Large State Championship for the past two years.

"It's a pleasure to recommend such wonderful school programs for inclusion in the 53rd Inaugural Parade," said Kitzhaber. "My hope is that these schools, if chosen, decide to attend and are able to have a fun and educational experience in the nation's capital."

The Inaugural Committee will consider up to three entrants from each state and pick 20 to 25 parade participants from among those entrants. Parade participants will be announced in late December.

GOVERNOR ACTS ON PRISON RECOMMENDATIONS

Kitzhaber Accepts some Sites; Allows Communities to Propose Alternatives

Governor John Kitzhaber released his decision on new prison sites in Oregon today, approving four sites for the construction of new correctional facilities and asking the Corrections Facilities Siting Authority to do more work on three others.

Kitzhaber approved sites in Madras and Umatilla for the construction of new men's medium security prisons, and sites in Lakeview and Oakridge for two new work camps. The governor did not accept a proposed work camp site in Mitchell. Kitzhaber also did not accept proposed sites in Eugene, Medford and Wilsonville and instead issued executive orders creating a new 120-day process for consideration of alternative sites that have been proposed by the communities and any other appropriate sites in those areas.

"I believe that the sites proposed in the Eugene, Medford and Wilsonville areas are buildable and workable," said Kitzhaber, "but these prisons will be with us for a long time and I believe it is prudent to take the extra time to evaluate alternative sites. However, I want to make it clear that the question is not whether we will build prisons in or near Medford, Eugene and Portland, but where we will build in those areas."

Kitzhaber made it clear that the three previously recommended sites -- located at the former Dammasch Hospital in Wilsonville, at Roseburg Resources in Medford and at Meadow View in Eugene -- will be reconsidered along with any other alternatives. Kitzhaber added that he felt strongly that the Portland metropolitan area needed to share in the burden of the corrections system because the area produces more than 40 percent of the system's inmates. The women's facility and intake center also will operate most cost effectively in the metro area.

"While I am not accepting the recommended sites in these three areas, I will instruct the Department of Corrections to include the previous sites in the next round of nominations," said Kitzhaber. "The sites that were selected and ranked by the Authority last month meet the criteria the state outlined for new prison facilities."

To review additional sites, the governor will issue new executive orders for a women's prison and intake center to be located in either Clackamas, Multnomah or Washington counties, and two men's medium security prisons to be located in Jackson and Lane counties. The process will again follow the expedited siting law (ORS 421.611 through .630) and

the criteria adopted in administrative rule by the Department of Corrections.

The process will take approximately 120 days and will begin January 6, 1997 for the women's prison and intake center, and February 3 for the two men's medium security prison complexes in Jackson and Lane counties. The process for the women's prison and intake center will begin first because it is the facility most urgently needed in the corrections system.

"We want to work with communities to make sure we're making good decisions for everyone on where these prisons will be built, while at the same time fulfilling the mandate given to the state by the passage of Ballot Measure 11 in 1994," said Kitzhaber.

In addition to the prisons and work camps, the governor accepted the recommendations of the Siting Authority that expansions take place at three existing correctional facilities: Powder River Correctional Institution in Baker County, Shutter Creek Correctional Institution in Coos County and South Fork Forest Camp in Tillamook County.

GOVERNOR ASKS FOR NATIONAL DISASTER DECLARATION FOR THREE COUNTIES

Governor Kitzhaber will ask President Clinton to declare three flood-stricken Oregon counties federal disaster areas following a severe storm on November 17 and 18. The storm adversely affected Coos, Douglas and Lane counties, causing extensive damage to public infrastructure such as roads, bridges, drainages systems and culverts.

Kitzhaber will ask the President to make federal financial assistance available through the Federal Emergency Management agencies. If approved, such assistance will enable counties to repair and rebuild public facilities severely damaged by winds and flooding. Preliminary damage estimates indicate the potential cost of the storm could be \$3.4 million in the three affected counties.

"Once again, Oregon was hard hit by another storm that caused wind and flood damage," said Kitzhaber. "These three counties, in particular, need help to rebuild infrastructure -- especially transportation infrastructure -- so the local economy is not hurt."

The governor has also requested that the Small Business Administration declare Coos and Douglas counties disaster areas as a result of the storm, which would make low-interest loans available for qualified and uninsured individuals, families and businesses.

GOVERNOR CREATES COUNCIL ON DOMESTIC VIOLENCE

Governor John Kitzhaber signed an executive order today creating the Governor's Council on Domestic Violence. The Council will be charged with assessing statewide needs regarding domestic violence, develop goals to meet those needs and implementing strategies to prevent and reduce domestic violence.

The governor created the Council to implement the work of the Oregon Domestic Violence Council created in 1994, but the funding of which recently expired. That council developed a framework for state-wide response to domestic violence, as well as protocols for law enforcement, the judiciary, the educational system, local advocacy groups and health professionals.

Kitzhaber said this research must be put into action if Oregon is to respond effectively to domestic violence, "The effects of domestic violence are widespread, and failure to respond adequately to it threatens to impede Oregon's progress toward safe, livable communities."

The Council will consist of 11 members, including the chair, all appointed by the governor. It will issue a report to the governor by May 1, 1997 detailing its progress.

**GOVERNOR APPOINTS ACTING ADMINISTRATOR OF
OREGON HEALTH PLAN**

Governor John Kitzhaber announced today the appointment of Barney Speight as Acting Administrator of the Oregon Health Plan, effective December 9. Final appointment is subject to confirmation by the Senate in January.

Speight brings over 18 years of management experience in health care policy, delivery and finance in Oregon as well as on the national level. Speight most recently served as Vice President of Corporate Relations for The Benchmark Group, a Blue Cross/Blue Shield affiliate. Professional and community affiliations have included the Portland Metro Division of the American Heart Association, American Association of Health Plans and Oregon Association of Hospitals and Health Systems.

Kitzhaber praised Speight for his leadership in Oregon's health care industry: "Oregon is fortunate to have an individual with Barney's expertise, credibility and commitment join the leadership ranks of government. I know he will be a valuable contributor to the work ahead."

A photograph of Barney Speight is available for download on the Oregon Health Plan Administrator's web site: "www.das.state.or.us/ohpa/ohpa.htm"

GOVERNOR PROPOSES BUDGET TO INVEST IN OREGON'S FUTURE

Governor John Kitzhaber called on Oregonians to invest in the future of their state today as he announced his budget for 1997-99. The governor released his plans at a news conference today in Salem.

"We must make the investments today in basic institutions such as schools, roads and parks so that we can preserve our livability and opportunity for the future," said Kitzhaber in presenting the budget. "For the last six years, Oregon has been disinvesting: college is more expensive, parks are threatened with closure, school class sizes are getting bigger and salmon are disappearing. I think it's time to start rebuilding Oregon."

Key to the governor's plans is retaining extra revenue generated by Oregon's excellent economy and reinvesting it in schools -- from pre-kindergarten to K-12 through community colleges and the state system of higher education. The so-called "kicker" revenue would help offset the anticipated \$459 million loss to school funding caused by the passage of Ballot Measure 47. "When we are laying off teachers and pushing tuition through the roof, I think it's tough to argue that our state is really running a surplus," said Kitzhaber.

The kicker revenue will also be used to freeze tuition for resident undergraduates at Oregon state system colleges and universities, beef-up graduate engineering in the Portland-Metropolitan area, help retain faculty in the higher education system and expand the Head Start program to 50 percent of those eligible.

In transportation, Governor Kitzhaber committed to work with the legislature in coming up with a funding plan for Oregon's roads. The state advisory committee of the Oregon Transportation Initiative recommended after a year's study that Oregon's roads need approximately \$391 million more per biennium to keep up with maintenance, preservation and modernization.

Governor Kitzhaber also applauded efforts by both Republican and Democratic legislators to provide long term funding for the state's parks system. The governor proposed in his budget a \$30 million per biennium fund for state parks and a \$30 million per biennium fund for salmon and trout recovery which is part of his Healthy Streams Partnership.

"I believe there is strong bipartisan consensus on providing for our parks, for improving water quality and for restoration of endangered salmon and trout species. This is part of Oregon's heritage and I am confident that we can gain support for these important programs."

Other features of the Governor's Investment Budget include:

- Expanding the Oregon Health Plan to assist tens of thousands of working Oregonians who can't currently afford health insurance.
- Redirecting state economic development aid to rural communities.
- Expanding JOBS, the state's welfare to work program that has reduced welfare roles for the last four years.
- Adding 65 new uniformed troopers to the Oregon State Police.
- Building two new prisons required by Ballot Measure 11.
- Development of a coordinated statewide juvenile crime prevention strategy.

"We have a challenge to meet in Measure 47 and I have proposed a budget, which, through the use of the state's increased revenues, will be able to meet that challenge as it relates to schools," said Kitzhaber. "But this budget must also reverse the trend of disinvestment in our state. Tomorrow's Oregonians are relying on us today. In an era of unprecedented prosperity, we cannot let them down."

The governor's budget is described in greater detail in the Budget in Brief, which is available for free by calling (503) 378-3106. A copy of the complete budget, which is approximately 600 pages, is available by calling the same number. Requests may also be e-mailed to: oregon.info@state.or.us The Budget in Brief is also available on the governor's web page: www.governor.state.or.us

GOVERNOR TO RELEASE BUDGET DECEMBER 2

Governor John Kitzhaber will release his proposed 1997-99 budget on Monday, December 2 at 11 a.m. in Room 50 of the State Capitol Building. Copies of the budget and the budget in brief will be available in the Governor's Office at 9 a.m.

Jon Yunker, the Director of the Department of Administrative Services, will be available with other budget analysts beginning at 1 p.m., also in Room 50. Governor Kitzhaber will be available for individual interviews from 1:30 to 2:30 p.m. Interviews can be scheduled with the governor's press office.

Governor Orders Flags At Half Staff In Honor Of Air Force Reservists

Governor John Kitzhaber ordered flags at state buildings flown at half staff in honor of eight Oregonians and two Washingtonians presumed dead in the crash of their U.S. Air Force Reserve C-130 off the coast of Northern California. Bodies of two of the 10 have been recovered.

"This is a tragic loss," said Kitzhaber. "On behalf of all Oregonians, I extend my personal condolences to the families and friends of these brave airmen."

The crew was part of the U.S. Air Force Reserve's 304th Rescue Squadron. The Squadron has participated in search in rescue missions in Oregon and Washington such as searching for survivors in the aftermath of the 1980 eruption of Mount St. Helens and in the 1986 rescue of Oregon Episcopal School climbers lost in a blizzard on Mount Hood.

Flags will be flown at half staff through sunset, Wednesday, November 27.

GOVERNOR ANNOUNCES AGREEMENT DESIGNED TO CLEAN UP OREGON STREAMS

Governor John Kitzhaber announced today that environmentalists, ranchers, farmers and government agencies have agreed to work together on water quality problems in Oregon. The "Healthy Streams Partnership," which was signed in Salem today by representatives of industry, government and environmental organizations, is designed to restore streams suffering from pollution in rural areas, including the effects of farming and grazing.

"I am very pleased to have been able to sit at the table with all partners to this agreement and come to a workable solution," said Kitzhaber. "Today, we are signing a document that will provide a framework for restoring water quality in streams across the state."

The Healthy Streams Partnership will develop water-friendly agricultural practices for farmers using Oregon's existing water quality laws. Should the health of individual streams not improve, the state Department of Agriculture has the authority to investigate and apply sanctions to landowners. However, Kitzhaber hopes that this can be avoided through the partnership agreement.

Funding for research and restoration efforts under Healthy Streams Partnership will be included in the governor's budget, which will be submitted to the Legislature in early December. Kitzhaber will ask for \$5.8 million for staffing and \$20 to \$35 million for overall watershed enhancement efforts, including existing stream enhancement efforts undertaken by local watershed councils.

Parties to the agreement were pleased that they would be working together.

"This is a framework and a starting point," said Fred Otley, head of the Oregon Cattlemen's Association. "We're excited about how it's going to help the land and the water."

"Here in Oregon, we have one of the last great opportunities to have clean water and thriving fish runs in the face of a rapidly growing population," said Geoff Pampush, the head of Oregon Trout.

Kitzhaber noted that if the state failed to improve the health of many streams, the U.S. Environmental Protection Agency would assume responsibility for water quality management in Oregon.

"Clearly, this is a problem that we would prefer to solve here in Oregon, with all stakeholders involved, rather than have

to respond to federal regulations," he said. "And we have to remember, this is a problem that we all have a stake in, whether we live in cities, small towns or in the country. It's going to take all of us working together to solve it."

KITZHABER, LOCAL GOVERNMENTS CREATE GROUP TO CONSIDER MEASURE 47 IMPLEMENTATION

Governor John Kitzhaber and members of the local government community announced today the formation of a group that will propose legislation on how best to implement Ballot Measure 47. The Ballot Measure requires that local governments prioritize funding of public safety, and this group will examine what exactly constitutes "public safety" services.

The group will also examine three other questions which must be addressed to implement Ballot Measure 47. They are:

First, how will local governments distribute the revenue loss from Measure 47 among taxing districts? The group will determine the method local governments should use to decide how losses from Ballot Measure 47 are distributed, and the timing needed in the statutes so budgets can be adopted.

Second, how will local governments deal with levies outside the Measure 47 limit? The group will address how ballot statements are to be written, how elections are certified and how any challenge to a levy would be carried out.

Third, how will fees and charges be handled under the measure? The group will address what legal standards need to be adopted regarding fees and charges.

Members of the group include Multnomah County Commissioner Gary Hansen, Lincoln County Commissioner and incoming president of the Association of Oregon Counties Don Lindley, Lake Oswego Mayor Alice Schlenker and Baker City Mayor and incoming president of the League of Oregon Cities Larry Griffith. Lindley and Griffith will co-chair the group. Members representing special districts throughout Oregon will also be named to the group as well as private citizens.

Kitzhaber said he hoped the group would have draft legislation by the beginning of the 1997 legislative session.

GOVERNOR SUPPORTS EXTENDING DEADLINE FOR COASTAL COHO LISTING

Governor John Kitzhaber said today that he welcomed the National Marine Fisheries Service's (NMFS) decision to extend by six months its deadline for listing Oregon coastal coho stocks as a threatened species. NMFS announced today that because of areas of scientific disagreement it was invoking a six month extension of the listing deadline.

"The additional time will allow us to ensure that our Coastal Salmon Restoration Initiative is well-grounded scientifically," Kitzhaber said.

Oregon is preparing the Restoration Initiative for submission to NMFS as a strategy to help recover coastal coho. "We are currently undertaking a scientific peer review of the draft Coastal Salmon Restoration Initiative plan, and NMFS' decision will mean that we can incorporate the findings of that review in our final plan," Kitzhaber said. "I just want to make it clear that we are not undertaking this initiative as a way to prevent a listing -- but as a method we think will work best to help coho salmon recover on Oregon's coastal streams."

**GOVERNOR ANNOUNCES LEGISLATIVE MEMBERS
ADDED TO TRANSPORTATION FINANCE COMMITTEE**

Governor John Kitzhaber announced today the appointment of a bi-partisan legislative group to assist him in developing transportation finance alternatives. The group will work with the finance subcommittee of the Oregon Transportation Initiative, which is chaired by Fred Miller.

The legislators are: Sen. Ken Baker, Sen. Cliff Trow, Rep. John Watt and Rep. Lonnie Roberts. In addition to appointing these members, the governor intends to continue his work with Rep. Montgomery's transportation committee as well as other legislative committees that are operating in the interim in order to develop a bipartisan transportation solution for Oregon.

EXECUTIVE ORDER NO. EO - 96 - 38

AFFIRMATIVE ACTION: REVIEW AND RENEWAL

WHEREAS the State of Oregon has long recognized the need to eliminate the effects of past and present societal discrimination based on race, religion, national origin, age, sex, marital status, and physical or mental disabilities in which it has played a passive or active role,

WHEREAS past Governors and legislatures have pronounced policies aimed at remedying these historical wrongs,

WHEREAS the increasing diversity of Oregon's population demands that we renew and extend these efforts in order to maintain our economic viability and provide a high quality of life for all our citizens,

WHEREAS past programs involving quotas and strict numerical goals based on race or gender have not only created resentment, but have contributed to the impression of unequal opportunity for some Americans,

WHEREAS in the ensuing debate, the original purpose of prohibiting race and gender discrimination has become lost,

WHEREAS the United States Supreme Court has applied a strict scrutiny analysis to many local government programs designed to remedy past instances of societal discrimination,

WHEREAS states are now required to document specific instances of societal discrimination within geographic areas and in sectors of the workforce before implementing programs designed to affirm equal opportunity,

WHEREAS the Court has recently extended this analysis to invalidate federal programs aimed at assisting racial minorities,

WHEREAS it is fair to say that a wholesale assault on governmental actions to rectify past racial discrimination is under way at the federal level,

WHEREAS the State of Oregon remains committed to the principle of ethnic and gender equity and will continue to implement non-discrimination and affirmative action policies where applicable,

WHEREAS the need to provide greater opportunity for Oregon's ethnic and racial minorities is well documented,

WHEREAS certain of our racial minorities continue to experience a quality of life far below the societal norm, as evidenced by rates of infant-mortality, unemployment, and incarceration noticeably above state and national averages, and by life-expectancy and high school graduation rates noticeably below state and national averages,

WHEREAS these conditions will only worsen unless all our citizens are assured of a bona fide stake in Oregon's economic opportunity,

WHEREAS affirming our commitment to equal opportunity is a courageous investment we must make to provide that stake,

WHEREAS policies which affirm equal opportunity address other areas of long term concern to Oregonians, such as

Safety: Police forces which reflect the societal composition of the communities they serve help make Oregon a safer place for all citizens by providing a very real and personal example to members of minority groups of their stake in the state's safety efforts.

Education: If Oregon's children are to remain our greatest resource, the makeup of the teaching profession should reflect the societal composition of the students themselves, as teachers often serve as the role models at risk children so desperately need.

Vulnerable Citizens: If citizens from groups which have historically experienced discrimination are employed at all levels of the Oregon workforce, the State of Oregon will be better able to meet the needs of its vulnerable population in two ways. First, such employment implies a definition of "equal opportunity" that will consider every factor necessary to determine which applicants can best serve the policies and progress of the state. Second, vulnerable citizens who are contributing members of the workforce can become a bridge of opportunity for other citizens, similarly situated, who may lack the resources to attain the stability and quality of life most Oregonians take for granted;

WHEREAS new constitutional requirements may represent an obstacle to proponents of affirmative action, they in fact offer an opportunity to strengthen, from both a legal and public policy perspective, our policies and strategies for affirming equal opportunity,

WHEREAS new programs based on and designed in response to specific, documented instances of discrimination will withstand the emotional criticisms which have compelled other states to abandon the notion of affirming opportunity, and will provide a sound basis for similar programs in the future,

WHEREAS a recent study conducted by the City of Portland shows that many Oregonians remain burdened by a history of unequal opportunity,

WHEREAS these very citizens can offer gifts of diversity which reach beyond the traditional measures of merit,

WHEREAS to deny those gifts a place in the rich fabric of this state and this nation will only reinforce societal stereotypes and will ultimately harm us all, since in a very real sense, a de facto system of racial preference already exists for large segments of the majority population,

WHEREAS these issues are not new, nor will they be easily resolved,

WHEREAS if the idea of individual opportunity, so vital to the spirit of the nation, is to retain any meaning at all, it must find expression in a system which considers social as well as educational and qualitative factors,

WHEREAS restructured programs to affirm equal opportunity will accomplish what "affirmative action" has been accused of undermining, namely, leveling the playing field of economic opportunity for all Oregonians,

WHEREAS our history, our Constitution, and our commitment to human progress demand no less,

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED THAT:

1) All state agency directors and administrators of major divisions or institutions shall report to me the status and results of their affirmative action policies and programs. The reports shall be delivered to my Affirmative Action Director by February 1, 1997. The reports shall provide:

- a. The goals of each policy or program.
- b. The date it was last reviewed.
- c. A summary of its success or lack thereof.
- d. Any plans to change programs or policies to improve results.

2) All supervisory managers in all agencies shall have their affirmative action efforts and results evaluated as part of the evaluation of their job performance.

3) The departments of Transportation and Corrections shall work with my Advocate for Minority, Women, and Emerging Small Business and my Affirmative Action Director to increase minority and women representation in the construction activities of this state. They shall gather together key representatives of construction companies, the banking industry, and other key players in the economy to formulate a plan of voluntary efforts. The recent disparity study in the Portland area, transportation improvements, and the unprecedented expansion of prison construction now underway afford ideal opportunities to achieve fair and equal participation in our state's construction industries. My Advocate for Minority, Women, and Emerging Small Business shall direct and coordinate this effort for the state.

4) All state agency directors and administrators of major divisions or institutions shall report to me the status and results of their efforts to improve outreach efforts and increase contracting participation by non-traditional businesses. The reports shall be delivered to my Advocate for Minority, Women, and Emerging Small Business by September 1, 1997.

The reports shall provide:

- a. A summary of the efforts employed to assist minority, women, and emerging small businesses to qualify for contract opportunities generally.
- b. A summary of the efforts employed to increase the share of contract business for the agency that is provided by minority, women, and emerging small businesses and the results of those efforts.
- c. Any plans to change programs or policies to improve results.

Done this 15th day of October, 1996, at Salem, Oregon.

John A. Kitzhaber, M.D.

GOVERNOR

ATTEST:

Phil Keisling

GOVERNOR KITZHABER ACCEPTS HEALTH COUNCIL RECOMMENDATION AND DISCUSSES BALLOT MEASURES

Governor Kitzhaber accepted today the recommendation of the Oregon Health Council on the use of revenues from the proposed tobacco tax to expand access under the Oregon Health Plan. The Council advised the governor that access currently available through the Plan should be preserved, and that the priorities for expansion should be:

- First, young children and pregnant women up to 185% of federal poverty level, using federal funds already available without need of additional waivers;
- Second, all children up to 200% of federal poverty level;
- Third, adults up to 200% of federal poverty level;

The Council also recommended that the expansion target Oregonians without health coverage, and that participants should share in the cost of their coverage on an ability to pay basis. Subsidies would decline as income increases, and employment-based coverage would be used where available.

In presenting these recommendations to Governor Kitzhaber, Council Chair Alan Yordy noted that work done in preparing estimates for the Voter's Pamphlet shows that Ballot Measure 35 could increase Medicaid costs by \$35 million, and Ballot Measure 39 by \$17 million.

The governor accepted the Council's recommendations, and noted that he finds cause for concern in the estimated impact of Ballot Measures 35 and 39. "I want to take this opportunity to reaffirm my commitment to further expanding access to care for Oregonians currently without coverage and in need of basic, effective health care," Kitzhaber said.

Kitzhaber called for the defeat of Ballot Measures 35 and 39 on grounds that each would have a negative impact on efforts to extend access to health care. Kitzhaber stated that these measures would divert resources away from Oregon's commitment to investing wisely in access to health care and could increase costs substantially for employers and employees.

Governor Kitzhaber also urged the passage of Ballot Measure 44 as an effective means of generating revenue earmarked for making Oregon Health Plan coverage available to more lower-income working families who cannot afford health coverage on their own.

GOVERNOR TO EXTEND STATE OF EMERGENCY DUE TO CONTINUED FIRE DANGER

Upon recommendation from state fire officials, Governor John Kitzhaber announced today that he is extending the Declared State of Emergency due to the ongoing threat of wild fires. Representatives from the State Police, Oregon Emergency Management, the State Fire Marshal and the Oregon Department of Forestry concluded late last week that Oregon is still facing fire danger levels classified as High or Extreme and made the recommendation to Kitzhaber.

"This has been one of the worst fire seasons in recent years, and although it's October, weather forecasts and ground conditions indicate that we're not out of danger yet," Kitzhaber said.

The latest weekly fire protection briefing from the Department of Forestry cited special concern for the Fuel Moisture Levels classified as Extreme in eastern Oregon, and High in western Oregon. The briefing noted that dry weather conditions the last week of September produced a dry fuel bed in most areas, and the moisture recovery from that week's rainfall was sporadic and had quickly dried.

The Department of Forestry's briefing also noted that although weather forecasts showed a moderate wetting trend due to fog and showers for western Oregon, eastern Oregon conditions would likely remain static.

"Our fire fighting capabilities are still at full strength, and until Oregon receives significant relief from the weather, I think it's important to stay on alert and prevent any further potential property loss from wild fires," the governor said.

Kitzhaber also urged hunters and outdoor recreationalists to continue to exercise good fire safety judgment.

GOVERNOR OUTLINES PRIORITIES FOR ELECTION, UPCOMING LEGISLATIVE SESSION

Kitzhaber Calls Five-Point Program "Choosing Oregon's Future"

In a major policy speech before a convention of the Associated Oregon Industries, Governor John Kitzhaber today outlined his priorities for the coming election and for the 1997 legislative session which begins in January. Labeling his agenda "Choosing Oregon's Future," Kitzhaber stressed that Oregonians had pivotal choices in the upcoming elections and legislative session that affect education, transportation, the environment, public safety and health care.

"Oregonians are responsible for choosing the future of our state," said Kitzhaber. "I will argue vigorously for investments that help build our schools, roads and highways; investments that help bring health care to the poor and hope to at-risk youth; and investments that help restore our environment."

Kitzhaber said his immediate concern and attention would be focused on three priority ballot measures which could have long terms impacts on Oregon's quality of life: Ballot Measure 47, the property tax measure; Ballot Measure 44 which would help expand the Oregon Health Plan by increasing tobacco taxes and Ballot Measure 32, which would reaffirm the funding package for rural roads and light rail.

Kitzhaber repeated his opposition to Ballot Measure 47, saying it was a choice to continue to increase class sizes in the state's public schools and to increase the cost of higher education. "I believe this choice will ultimately give us poorer schools, not better ones. At a time when post-secondary education is increasingly important to a good job, and when we are trying to improve academic standards in our K-12 system, we can't afford this step backwards."

Kitzhaber also stressed his support for ballot measures 44 and 32. He said that the tobacco tax would help extend the Oregon Health Plan to more than 400,000 working men and women and their families who cannot afford health care. "This is a fair way to pay for extending this coverage and will help reduce the cost shift of uncompensated care onto Oregon's businesses," said Kitzhaber. With regards to measure 32, Kitzhaber stressed that the transportation and transit projects were "investments in our future prosperity and livability."

Kitzhaber laid out details of his agenda for the 1997 legislative session. One of his top priorities, he said, would be to review the law which automatically returns surplus personal and corporate income tax. "This law has a good intent -- to see that the state doesn't build up a big surplus," said Kitzhaber. "But the effect has been that Oregon is unable to invest

the proceeds of a good economy in the very things that help build the economy in the first place: quality transportation and education."

Kitzhaber said he would seek to have the expected surplus for the current biennium invested in the continuum of education ranging from pre-school to K-12 and beyond to post secondary education.

With regards to the other portions of his agenda, Kitzhaber said he would seek legislative support for increased funding for road maintenance, funding of coastal coho and stream restoration efforts, funding of juvenile crime prevention efforts and cost saving reforms to Ballot Measure 17, the prison work program.

"Choosing the future means making a set of choices that invests in the very things that have created the prosperity and quality of life that make Oregon special," said Kitzhaber. "I am confident Oregonians will make the choices necessary to keep our state a special place."

KITZHABER SAYS HATFIELD BILL SIGNIFICANTLY ALTERS OREGON NATURAL RESOURCE MANAGEMENT

Oregon Governor John Kitzhaber today warned that legislation introduced this week in the U.S. Senate could alter the state's ability to manage natural resources in much of Eastern Oregon.

Senator Hatfield is sponsoring the Senate bill, known as S. 2102. It addresses tribal rights to natural resources off the Warm Springs Reservation and nullifies the Warm Springs Treaty of 1865.

In a letter sent to Senator Hatfield today, the Governor wrote, "S. 2102 will effectively destroy 12 years of work on a negotiated settlement of Warm Springs water rights. Under the bill, the Tribe can potentially lay claim to major water reservations from the Deschutes, John Day, Hood, Clackamas, and possibly other rivers."

Kitzhaber went on to say, "Clearly, the Treaty of 1865 was not a proud moment in our nation's history and I make no attempt to defend it. However, this is an issue with huge ramifications for land management in Oregon. It deserves a thoughtful and open dialogue between all the affected parties. I stand ready to work with you and with the Tribe to seek a mutually acceptable solution to correct past injustices."

Kitzhaber said that he strongly opposes passage of S. 2102 without further dialogue about its effects on natural resource management in Oregon.

COMMUNITY BRIEFINGS SCHEDULED FOR DRAFT COASTAL SALMON RESTORATION PLAN

Governor Kitzhaber has announced a series of eight community briefings on a comprehensive and historic plan to restore populations of coastal salmon in Oregon. The public is invited and encouraged to attend the meeting in their local area.

The Governor's Coastal Salmon Restoration Initiative is focused on preserving and restoring native coastal salmon populations and preventing the need for a federal threatened or endangered listing of coho salmon under the Endangered Species Act. The draft plan, to be explained at each of the community briefings, is the culmination of several months effort by local, state, and federal agencies and groups.

A final version of the plan is expected to be submitted to the National Marine Fisheries Service (NMFS), which will decide whether or not to list coho salmon as threatened or endangered. It is the governor's hope that the specific actions and measures detailed in the plan will successfully restore populations of coastal salmon. Never before has such a wide scale effort taken place to achieve restoration of a species without a federal endangered species listing.

The community briefing schedule is as follows:

- Monday, September 23: Astoria, 7:00 p.m. at Astoria High School cafeteria, 1001 West Marine Drive
- Tuesday, September 24: Tillamook, 7:30 p.m. at City Hall, 710 Laurel
- Thursday, September 26: Newport, 7:00 p.m. at Hatfield Marine Science Center
- Monday, September 30: Coos Bay, 7:00 p.m. at City Library, 525 Anderson
- Tuesday, October 1: Grants Pass, 2:00 p.m. at Community Services Building, 317 NW "B" Street
- Thursday, October 3: Gold Beach, 7:00 p.m. at City Hall, 510 S. Ellensburg (Hwy. 101)
- Monday, October 7: Roseburg, 7:00 p.m. at Douglas County Church Annex, 1134 SE Douglas
- Thursday, October 17: Portland, 2:00 p.m. at Oregon Department of Fish and Wildlife, 2501 SW First Avenue

The community briefings will include a presentation of the draft plan contents as well as opportunities for questions and comments.

In addition, copies of the draft plan are now available for public access at several locations along the coast and in the

Rogue and Umpqua Basins. Single copies are available at most public libraries in the area as well as county commission offices, mayors' offices, OSU Extension offices, soil and water conservation district offices, State Forestry offices, DEQ regional offices, Oregon Department of Fish and Wildlife district offices, and Oregon State Parks planning offices. An internet version of the draft plan is also available and is located on the Governor's home page at:

[/FS-BRONZE.ARC1/WebSite/archives/governors/Kitzhaber/web_pages/index.html/governor.html](#)

Government agencies, organizations, and interested individuals who helped prepare the Coastal Salmon Restoration Initiative Plan hope this unprecedented scientific effort and commitment to action will offer federal officials an alternative to an Endangered Species Act listing for coho.

GOVERNOR KITZHABER TO STAY IN OREGON

Governor Cites Fire Concerns in Canceling Convention Appearance

Governor John Kitzhaber announced today that concerns about wildfires in the state would prevent him from traveling to Chicago to deliver an address to the Democratic National Convention. Kitzhaber was asked late last week to deliver a five minute speech on the environment to the delegates.

"The convention offered a great opportunity to talk about the environmental progress we are making in Oregon," Kitzhaber said.

"However, the fire situation has not improved significantly and I believe my first priority must be to assure that we are prepared to protect the lives and property of Oregonians."

Kitzhaber called up more than 600 members of the Oregon National Guard Tuesday to help fight fires. Oregon remains under a state of emergency due to the imminent threat of wildfires. Currently, more than 300,000 acres have been burned this season.

Kitzhaber is considering touring various fires and reviewing training of National Guard Members on Thursday.

GOVERNOR TO VISIT WARM SPRINGS FIRE

Kitzhaber to Meet With Tribal Officials

Governor John Kitzhaber will travel to Warm Springs today to meet with tribal officials as well as officials from Jefferson County to discuss their needs in the light of the now 65,000 acre Simnasho fire.

Kitzhaber will meet with the officials at approximately 1:30 p.m. in Warm Springs (the exact location will not be known till noon.) Kitzhaber will be accompanied by Superintendent of State Police LeRon Howland, Director of Oregon Emergency Management Myra Lee, State Fire Marshall Robert Panuccio.

EIGHT OREGON COUNTIES ELIGIBLE FOR EMERGENCY FARM ASSISTANCE

Farmers and ranchers in Wasco County and seven neighboring counties may be eligible for federal low-interest emergency loans to pay for losses stemming from severe cold temperatures last March. U.S. Secretary of Agriculture Dan Glickman announced the disaster assistance following a request by Governor John Kitzhaber last spring. During the late March cold snap, tree fruit orchards were particularly affected.

Under the declaration, Wasco County has been named a "primary disaster area". Also eligible are Clackamas, Gilliam, Hood River, Jefferson, Marion, Sherman and Wheeler counties.

Farmers and ranchers in all eight counties have eight months to apply for the loans to help cover part of their actual losses. To be eligible, they must have suffered at least a 30 percent loss of normal production in a single enterprise, be able to repay the loan and any other loans, be unable to obtain credit elsewhere, have adequate security, and have multi-peril crop insurance, if available. Local Farm Service Agency offices in each of the counties (Hood River County is combined with the Wasco County FSA office) can provide affected farmers and ranchers with further information.

GOVERNOR TO TOUR WHEELER POINT FIRE/CITY OF SPRAY

Gov. Kitzhaber to Meet With Local Officials About Relief Needs

With more than 116,000 acres burning and the state under an emergency declaration, Governor John Kitzhaber will fly to the Wheeler County town of Spray today to meet with city and county officials about relief needs. The Wheeler Point Fire, burning on approximately 20,000 acres North of Spray, has destroyed some structures and remains a threat to the town.

Kitzhaber declared a state of emergency for the entire state Monday afternoon in response to wildfires in nine counties. Weather and forest conditions suggest that there is a likelihood of more fires.

Kitzhaber, Superintendent of State Police LeRon Howland and Oregon Emergency Management Division Director Myra Lee will meet with Wheeler County and City of Spray officials at approximately 3:15 today at the Spray Elementary School.

GOVERNOR DECLARES STATE OF EMERGENCY

Governor John Kitzhaber declared a state of emergency today for all of Oregon due to the imminent threat of wildfire. The declaration will allow public safety agencies, including the Oregon National Guard, to move swiftly and efficiently in battling fires currently burning. All state resources will be coordinated by the Department of State Police through its Office of Emergency Management.

As of 11:00 a.m. Monday, fires were burning in nine counties, covering approximately 116,000 acres of state, federal and private land. Five of those fires required a declaration of the Conflagration Act, which allows the state to provide firefighters and equipment from other areas to assist local firefighting crews.

Gov. Kitzhaber noted in the emergency declaration that the ongoing potential for thunderstorms with lightning strikes and predominantly dry and hot weather patterns will continue in the near future. Because of these conditions, the emergency declaration will remain in effect until the threat is significantly relieved or the fire season ends.

Governor Kitzhaber's Statement On DMV Records On The Internet

Governor John Kitzhaber made the following statement regarding the DMV records available of the Internet:

"I share Oregonians' concern and frustration about the unprecedented access to motor vehicle registration information through the Internet.

All of the information available is public information and the law provides DMV no choice but to provide it to Mr. Nabil.

Clearly, however, instant access to this information to every Internet subscriber in the world is different than going down to the DMV office, requesting information and paying a fee for it.

I am concerned that this ease of access to people's addresses could be abused and could present a threat to an individual's safety.

I will investigate in the next legislative session whether and how we can change the public records law to deal with new technology and the instant access it creates.

Until that time, I can only request that Mr. Nabil remove the list from the Internet."

Governor Rejects Resignation Of Oregon Transportation Commissioner Stuart Foster

Foster To Remain On Commission At Governor's Request

Governor John Kitzhaber said today that he would not accept the resignation of Stuart E. Foster from the Oregon Transportation Commission. Foster, a partner in a Medford law firm, offered his resignation Tuesday, July 30 because of a perceived conflict of interest.

"I spoke with Stuart and I am satisfied that there is no significant conflict," said Kitzhaber. "I have the utmost confidence in Stuart's ability and talent. After speaking with him, he has agreed to stay on the commission."

"I strongly believe that Oregonians are well served by people of Stuart's caliber," continued Kitzhaber. "I work very hard to find Oregonians who are community leaders to serve on our many boards and commissions. Because they are involved in their communities, these leaders will occasionally encounter minor conflicts between their public and private roles. We have to be aware of these conflicts, but they shouldn't automatically disqualify leaders like Stuart Foster from serving."

Kitzhaber nominated Foster who began serving his term in September, 1995.

Governor Blasts Smith Campaign Ploy

Governor John Kitzhaber today criticized U.S. Senate candidate Gordon Smith for suggesting a special session of the Oregon Legislature to address education.

"This is an unfortunate campaign ploy that plays on the hopes and fears of Oregon students and teachers," said Kitzhaber of Smith's idea to appropriate \$32 million to schools. Smith called the funds a budget surplus.

"This money isn't surplus and Gordon Smith knows it," said Kitzhaber. "Oregon is facing a deficit of \$300 million or more in the next biennium. Spending this money now would just make that deficit worse. That's why Gordon Smith can't even convince members of his own party that this is a good idea. They'll be around to deal with the budget deficit. Gordon Smith won't."

"This doesn't mean there isn't a real issue to address with school funding. But the time and place to address it is in the next legislative session in the context of the 1997-99 budget," said Kitzhaber.

Kitzhaber asked Smith to demonstrate his leadership for schools by joining him in opposing Ballot Measure 47 which calls for the cutting and capping of property tax assessments. The initiative would significantly affect school finance all around the state.

GOVERNOR ANNOUNCES GOALS FOR OREGON'S TRANSPORTATION SYSTEM

Governor John Kitzhaber unveiled his goals for Oregon's transportation system today, including immediate actions to make the system more efficient and to preserve the state's livability and economic growth.

Kitzhaber's goals were developed from the work of five regional committees and one statewide committee that looked at varying transportation needs in different communities and came up with recommendations for improvement. There are five general principles Kitzhaber wants to apply to the construction of new roads and infrastructure and to the management of the state's current transportation system.

These goals are:

- making the system more efficient to make the most of existing resources;
- maintaining a basic level of mobility for every Oregonian;
- ensuring transportation projects work to preserve a community's quality of life and its potential for economic growth;
- developing a regional system for making transportation decisions that includes cooperation between the state, cities and counties; and
- addressing the transportation funding gap that currently exists at all levels of government.

"Our transportation system is one of our greatest assets, and the report by the State Advisory Committee has made it clear how we can better manage it," said Kitzhaber. "I want to make sure we spend our dollars wisely and that we consider the impacts that transportation projects have on our communities and neighborhoods, both in terms of quality of life and economic opportunity."

Kitzhaber asked his statewide committee to participate in four working groups to follow through on the State Advisory Committee recommendations and to develop potential legislation for the 1997 Oregon Legislature. The working groups will help develop consensus for a statewide package designed to address the state's transportation needs during the next legislative session.

The working groups will recommend a base system of transportation and efficiency measures to ensure continuous improvements in maintenance and prevention criteria for ensuring that transportation improvements are tied to livability

and options for increasing transportation funding.

Kitzhaber also outlined a number of immediate actions the state can take in the short term to improve transportation. These include improving maintenance and preservation efficiencies by one percent a year, controlling access to high-volume roads in order to reduce congestion caused by local traffic and managing congestion through the use of "intelligent transportation systems" (such as reader boards).

Kitzhaber stressed that even with efficiency measures, the gap between the cost of maintaining Oregon's road system and the amount of money available for that purpose continues to grow.

"It's clear that we must get agreement on what our transportation priorities are before we decide what we need to spend on those priorities," Kitzhaber said. "However, with the kind of population and economic growth that the state has been experiencing for the past several years, I believe new investments in transportation infrastructure are critical if we are to maintain livability and create jobs."

GOVERNOR ANNOUNCES TASK FORCES TO INCREASE ACCESS AND QUALITY IN HIGHER EDUCATION

Governor John Kitzhaber announced today that he has appointed two groups charged with improving Oregon's higher education system.

Kitzhaber has appointed members to the Governor's Task Force on College Access and to the Governor's Task Force on Education and the Economy. They are part of Kitzhaber's overall strategy for improving Oregon's postsecondary education system, which he outlined in a speech at the University of Oregon on May 30.

The College Access task force will focus on creating the capacity for increasing numbers of students in Oregon's postsecondary institutions, and assure that the opportunity for a postsecondary education is available and accessible.

"If our high school graduates are unable to attend a college or university because there isn't room or because of fiscal, geographic or cultural barriers, then no matter how well prepared they are, we cannot possibly produce a high-quality workforce for the 21st Century," said Kitzhaber.

The Education and the Economy task force will develop a strategic plan for linking Oregon's colleges and universities to the requirements of Oregon's employers, thereby helping Oregonians get better jobs and improving the regional economy.

"While it's important to ensure access and affordability, we can't stop there," Kitzhaber said. "We also need to make sure we're giving our graduates the kind of training and education they need -- and that Oregon employers are seeking."

Both task forces will deliver preliminary reports to Kitzhaber and the Legislature in time for the 1997 legislative session and final recommendations in the fall of 1997.

Task force members appointed by Kitzhaber are:

Governor's Task Force on College Access

Robert Bailey, President, Orchard View Farms, The Dalles (Chair)
George Richardson Jr., Manager of Federal and Local Government Affairs, Northwest Natural Gas, Portland
Steven Koblick, President, Reed College, Portland
James Lussier, President/CEO, St. Charles Medical Center, Bend

Gail McAllister, ranch owner, Burns
Richard Alexander, President/CEO, Viking Industries, Portland
April Waddy, student, Oregon State University, Corvallis
Melissa Watson, student, Portland Community College, Portland
Cory Curtis, student, Lewis & Clark College, Portland
David Mesirov, Director, Portland Public Schools Evening School, Portland
Chuck Brummel, President/CEO, Security Bank, Coos Bay

Governor's Task Force on Education and the Economy

John Lee, Regional Vice President, Providence Health System, Portland (Chair)
Gretchen Pierce, President, Holt & Associates, Eugene
Don Van Luvanee, President/CEO, Electro Scientific Industries, Portland
Barbara Karmel, President, The Reed Company, Portland
Randy Papé, President/CEO, The Papé Group, Eugene
Tom Imeson, Vice President, Pacificorp, Portland
Paul Bragdon, President, Oregon Graduate Institute, Portland
John Byrne, Retired President, Oregon State University, Corvallis
George Passadore, Executive Vice President, Wells Fargo & Company, Portland
Bill Williams, President/CEO, Bear Creek Corporation, Medford
Marilyn Beem, President, ORCOM, Bend
Sam Brooks, President, S. Brooks Associates, Portland
James Rivera, Director of Contracts, Advanced Data Concepts, Portland
Ann Rupe, Owner/Manager, Lane Title Insurance & Escrow Corporation, Ontario

**STATEMENT OF GOVERNOR JOHN KITZHABER RELATING TO
THE CHURCH ARSON FIRE IN PORTLAND**

"I am deeply troubled by this violent and hateful act. Arson is unacceptable. Arson against a place of worship is intolerable. Arson against members of our African American community -- or any community -- must be unanimously decried by Oregonians.

I have directed arson investigators from the State Police to lend all assistance necessary to the Portland Police Bureau and the Portland Fire Bureau in solving this crime. Today, I call on all Oregonians to help apprehend the people who committed this arson.

This arson is a blow to all Oregonians' sense of community. I ask Oregonians to help the members of the Immanuel Free Methodist Church congregation in restoring their church and in so doing, helping heal this terrible wound."

GOVERNOR ANNOUNCES EFFORT TO IMPROVE WILLAMETTE WATER QUALITY

Governor John Kitzhaber announced the formation of a task force today that will focus on the long-term health of the Willamette River. Kitzhaber charged the Willamette River Water Quality Task Force with examining potential water quality problems and devising recommendations on how these problems can be solved.

For years, the turnaround of the Willamette River was a great success story for Oregon and the entire country," Kitzhaber said. "In the 1960s and 1970s, Oregonians worked together to clean up a damaged river, dramatically reducing pollution. However, our recreational and industrial use of the river has increased, and it is clear we must now plan to prevent a return of the kind of degradation that can damage the river's health and water quality.

The task force members represent a wide variety of interests and areas, all with a stake in maintaining the water quality of the Willamette. After meeting as a group and gathering public comment for approximately a year and a half, they will deliver a final report on recommendations to the governor at the end of 1997.

Increased growth in the Willamette Valley -- Oregon's largest river basin -- has put more and more pressure on the river and its resources. While water quality remains fair, recent studies have pointed to environmental problems stemming from increased use.

Salem resident John Miller of Wildwood Inc. will chair the task force. Other members are:

Bill Chambers, Corvallis -- Stahlbush Island Farms

Dr. Loisa Silva M.D., Salem

Bill Gaffi, Hillsboro -- Unified Sewage Agency, Association of Clean Water Agencies

Stan Gregory, Corvallis -- Professor, Oregon State University

Mike Houck, Portland -- Wetlands Conservation Organization, Audubon Society

Mel Jackson, Eugene -- Professor, University of Oregon

Gayle Killiam, Portland -- Oregon Environmental Council

Dean Marriott, Portland -- City of Portland, Bureau of Environmental Services

Catherine Mater, Corvallis -- Mater Engineering

Frank Mauldin, Salem -- City of Salem

Jack McGowan -- SOLV Executive Director
Frank Morse, Tangent -- Morse Brothers Aggregate
John Nelson, Corvallis -- City of Corvallis
Terry Smith, Eugene -- City of Eugene
Barte Starker, Albany -- Starker Forest Products
J.B. Summers, Stayton -- Norpac Foods
Sara Vickerman, Portland -- Defenders of Wildlife
Bill Wessinger, Portland -- former Chair, Environmental Quality Commission

GOVERNOR SUPPORTS MORE PUBLIC COMMENT ON DESTRUCTION OF CHEMICAL WEAPONS

Governor John Kitzhaber announced today that he supports extending the public comment period on permits for the disposal of chemical weapons at the Umatilla Army Depot. The governor said his support for an extension came after DEQ Director Langdon Marsh recommended that the Environmental Quality Commission ask for more time to consider information on alternative technology and other matters related to permits for the eastern Oregon site.

Before an incinerator can be operated at the Umatilla Depot, the Environmental Quality Commission must first approve a permit regulating air quality and hazardous waste management at the site.

"The health and safety of Oregonians needs to take precedence in this situation," Kitzhaber said. "The Commission should take the time it needs to be certain that questions regarding the permits are answered to their satisfaction."

Marsh's recommendations came in a May 31 letter, and were drafted in response to health and safety questions raised by the governor earlier in the month. In his letter, Marsh said the public comment period would be extended through November 15, 1996, the date of a scheduled Environmental Quality Commission meeting. This timeline will enable the Commission to study carefully incineration alternatives, assess the risks of the alternatives and review the construction plan for the facility. A report on alternatives to incineration will be released by the National Academy of Sciences in August of this year.

The federal government has approved the construction of nine incineration facilities for destruction of chemical weapons. Two have been completed, one at Johnson Atoll in the South Pacific and the other in Tooele, Utah. The Tooele facility, which may be similar to the Umatilla facility, will proceed with trial burning of chemical agent this summer.

GOVERNORS ANNOUNCE SALMON CONSERVATION INITIATIVES

Sitka Agreements on Conservation Fund, Community Forums, Columbia River

The Governors of Alaska, Oregon and Washington today announced five initiatives to protect and enhance coastwide stocks of wild Pacific salmon. The initiatives stem from the "Principles of Cooperation" agreed to at a meeting of Govs. Tony Knowles, D-Alaska, Mike Lowry, D-Washington and John Kitzhaber, D-Oregon. W. Ron Allen, chairman of the Jamestown S'Klallam tribe also participated in the May 20 summit in the Southeast Alaska fishing port of Sitka.

I am confident that these actions will help us move toward intelligently and cooperatively managing our Pacific salmon resource," said Kitzhaber. "I want to reiterate my thanks to Govs. Knowles and Lowry for their leadership in putting the future of salmon first.

"The Sitka Principles recognize the importance of salmon to our people, the importance of habitat to the salmon, and the importance of an open, science-based process to manage this shared resource," Gov. Knowles said. "These initiatives address the need for stable funding, improved communications and specific actions to address problems on the Columbia River. At a time when some point only to disagreements over fishery management issues, these are concerns we can all agree need to be addressed. I believe this agreement can constitute a base from which we form a coastwide consensus to protect the salmon upon which we all depend."

The five Sitka Initiatives include:

Creation of the Pacific Salmon Fund - Dramatic actions are needed to restore and rebuild wild salmon populations in the Pacific northwest. While many organizations and programs are focusing on this problem, there is an inadequate and inconsistent source of funding to ensure success of this effort. The governors called on Congress to create a Pacific Salmon Fund to ensure stable funding for wild salmon restoration, enhancement and management. The fund will be administered to encourage partnership between public and private entities, including the states, Pacific Northwest Indian tribes, conservation groups and others.

Improved Communications - While salmon roam thousands of miles in their annual migration, crossing international boundaries at will, distance and political boundaries have hindered communications between people who share a common interest in this resource. This lack of communication leads to lack of understanding and unnecessary conflict. The governors called on their staffs to improve communications and understanding of concerns and actions being taken to address issues dealing with salmon management and conservation.

Designation of the Hanford Reach as a wild and scenic river - The Hanford Reach is the last free-flowing segment of the Columbia River and an important spawning habitat for far-north migrating chinook salmon. The 50 mile stretch has been protected from development because it is adjacent to the Hanford Nuclear reservation. The governors called for designation of the Hanford Reach under the Wild and Scenic Rivers Act to continue protection of the best remaining spawning habitat in the Columbia River basin, habitat that produces 80 percent of the river's wild, fall chinook.

Review of the effectiveness of Mitchell Act hatcheries - Enacted in the 1930's, the Mitchell Act called for the construction of hatcheries to mitigate the impacts of federal hydroelectric facilities on the Columbia River. Since then concerns have been raised over the impacts of hatchery fish on wild salmon survival, a failure to mitigate losses to upper river subsistence fisheries, and annual appropriation battles. The governors called for a formal review of the Mitchell Act operations to ensure they reflect current fishery management practices, and full and stable funding to implement the review's recommendations.

Restoration and protection of Columbia basin up-river salmon runs - Designation of Snake River chinook and sockeye salmon as endangered species is evidence of the dramatic decline of up-river returns to the Columbia River basin. Successful recovery of these runs will require coordinated actions affecting harvest, hatchery operations, habitat protection, and hydropower operations. While various approaches have been proposed to address this problem, the governors support an adaptive concept in support of the recovery of Columbia Basin salmon stocks.

Now formalized, the five Sitka Initiatives will be forwarded to the appropriate authorities, including Congress.

**STATEMENT BY GOVERNOR JOHN KITZHABER
REGARDING UNITED STATES SUPREME COURT DECISION
IN ROMER V. EVANS**

I applaud the United States Supreme Court for putting a halt to discrimination against our gay and lesbian citizens.

Today's decision is precisely what we sought in filing a 'friend of the court' brief -- that Oregonians, all Oregonians, enjoy equal protection under the law.

It is clear now that we are not talking about 'special rights' for a certain class of citizens. The Court found there is nothing special about equal protection. It means what it says.

Oregonians should take this opportunity presented to us today and bring to an end the attempts to divide our state and its citizens. Our collective efforts can and should be focused on solving our common problems.

GOVERNOR NAMES GROUPS TO ADDRESS EDUCATION FUNDING

Governor John Kitzhaber named two groups today to deliver recommendations to him to help address long and short-term education funding issues. Over the next three years, the first group will address the financial requirements for Oregon's K-12 system to meet the standards of the Oregon Education Act for the 21st Century. The second will examine the feasibility of a local funding option for school districts and make recommendations to the governor in the fall.

The first group will establish the financial relationship between what the state is spending on primary and secondary education and what the dollars are actually purchasing. "I want this group to ask the question: 'What do we want to buy with our educational dollar and what will it cost?'" said Kitzhaber.

"I believe it is the responsibility of the state to ensure that kids have access to the education they need to master the skills we have identified in the Education Act for the 21st Century," said Kitzhaber. "The real challenge is to determine exactly how much it costs to achieve this outcome."

Kitzhaber said he will chair the committee that will include the following members: state Superintendent of Public Instruction Norma Paulus, Fred Meyer Chief Financial Officer Ken Thrasher and Dr. Alan Bates.

Kitzhaber has asked the second group to report to him on the feasibility of creating a local funding option for local school districts that wanted to supplement existing funding. Kitzhaber laid out several principles to which a local option would have to adhere to gain his support, including that the option could not replace the state's obligation to provide every Oregon school child with a quality education and that the option must be defined and limited.

Further, Kitzhaber said he would not support a local option until the middle of the next biennium when all school districts will be funded at a statewide average level of per-student expenditures. "The adoption of a local option cannot set us back on the road to inequitable school funding," said Kitzhaber.

The group will be chaired by former state Rep. Tony Van Vliet. Also on the committee are Sho Dozono of Azumano Travel in Portland, former State Sen. Delna Jones of Aloha, Director of the Port of Portland Mike Thorne, Jan Oliver of Eugene, Sue Densmore of Medford, Chris Hudson of Portland and Elida Sifuentes of Woodburn.

Kitzhaber also reiterated his pledge to work with districts such as the Portland Public School District in the near-term to ensure that they would be able to use funds generated by local governments and the private sector to pay for education without having those funds counted against what the state is obligated to contribute.

GOVERNOR APPOINTS YOUTH SUICIDE PREVENTION TASK FORCE

Governor John Kitzhaber announced today the formation of a youth suicide task force. The task force will develop an Oregon-specific strategy for how to prevent suicide among youth ages ten to 24.

"The number of Oregon youth who commit suicide has increased six-fold in the past 30 years," Kitzhaber said. "Oregon Health Division statistics show that suicide was the number two killer of 10 to 19 year-olds in our state last year. Every time such a tragedy occurs, we lose the potential of a life cut short," he added.

The task force will identify and evaluate effective suicide prevention programs, recommend strategies to educate and involve the public and private sectors in suicide prevention, coordinate existing resources to support local suicide prevention efforts for at-risk youth, and recommend prevention measures for other demographic groups.

Kitzhaber has directed the task force to begin working immediately to provide a preliminary report by October 1, 1996. A final report of findings and recommendations will be presented to the governor and the legislature by January 1, 1997.

Laura Jeibmann, Executive Director of Metro Crisis Intervention Service in Portland will chair the group. Other members are:

Michael Acquines, Klamath County Children and Youth Services Commission
Kate Brown, State Representative
Linda Erwin, M.D., Trauma Physician, Emanuel Hospital, Portland
Len Hannon, State Senator
Charles Hinkle, Attorney, Stoel Rives, Portland
Sandra Jenkins, Ph. D., Portland
Jack Kennedy, Deputy Director, Ecumenical Ministries of Oregon
Linda Ludwig, Parent, Fossil
Judy Miller, Oregon Department of Education
Michael Poth, Captain, Corvallis Police
Bill Prows, US West Communications
Marianne Straumfjord, Corvallis

GOVERNOR MOURNS PASSING OF SENATOR BILL MCCOY

Governor John Kitzhaber released this statement today regarding his colleague Senator Bill McCoy, who died in Portland at 10:55 a.m. today.

"Senator McCoy's passing is a great loss to the State of Oregon and to me personally. I had the pleasure of working with Bill throughout my career as a legislator and as Governor, and knew him to be respected by everyone he worked with in the Capitol. Both Senator McCoy and his late wife Gladys served as exemplary role models for their community through their public service and commitment to their constituents.

"Senator McCoy was known for his long service and hard work on behalf of his constituents in North and Northeast Portland. He understood the issues important to working families and worked to preserve civil rights for all Oregonians. He also represented the Oregon Legislature on a national level through his work with the National Conference of State Legislatures.

"I have directed all flags at state buildings be flown at half-staff in honor of Senator McCoy and his years of service to Oregon. All of our thoughts and prayers go out to Senator McCoy's family during this difficult time and to all of the people whose lives he touched."

GOVERNOR'S SALMONBERRY RAILROAD PANEL INVITES TESTIMONY

The Salmonberry Railroad panel appointed by Governor Kitzhaber will be taking public testimony during April and May in Portland and Tillamook. The panel was commissioned to review the long-term viability of the railroad and the state's role in managing it. After concluding its work in mid-May, the panel will present recommendations for action to the governor.

The Salmonberry Railroad panel hearing times and sites are as follows:

Portland
Monday, April 22, 6:30 p.m.
Two World Trade Center
Plaza Conference Room
121 SW Salmon

Tillamook
Thursday, May 9, 6:30 p.m.
Department of Forestry
4907 East Third Street

Those submitting written testimony should send it to: The Salmonberry Panel, c/o Richard Forester, 1211 SW Fifth Avenue, Suite 2121, Portland, Oregon 97204, or fax it to (503) 241-0914. Written testimony will be accepted through Friday, May 10.

GOVERNOR LAYS OUT LONG AND SHORT-TERM EDUCATION FINANCE PROPOSALS

In a speech before the Portland Rotary Club today, Governor John Kitzhaber unveiled a plan to provide equitable, stable funding for primary and secondary public education throughout Oregon.

The key to the governor's proposal is a multi-year process to establish the financial relationship between what the state is spending on primary and secondary education and what the dollars are actually purchasing. "In all my years as a legislator and now as governor, we have always asked the question: 'How much should we spend on education?' That is not the right question. We have to ask instead: 'What do we want to buy, and what does that cost?'"

Kitzhaber said in his speech that the Education Act for the 21st Century provides the baseline for what we want to buy: an education sufficient to allow students meet rigorous standards known as the Certificates of Mastery.

"I believe it is the responsibility of the state to ensure that kids have access to the education they need to master the skills we have identified in the Education Act for the 21st Century," said Kitzhaber. "The real challenge is to determine exactly how much it costs to achieve this outcome."

Until that time, Kitzhaber endorsed creating a local funding option so that districts which wanted to fund education above and beyond what the state can currently afford would be able to do so. "I want to be clear that a local option is not a long-term answer to school funding," said Kitzhaber, "but it can help re-connect local citizens with their school districts and help them tailor education in individual communities, above and beyond what the state funds." Kitzhaber noted that a local funding plan may require legislative action and could not be implemented until after the 1997 session of the Oregon Legislature.

Kitzhaber also said he would work with districts such as the Portland Public School District in the near-term to ensure that they would be able to use funds generated by local governments and the private sector to pay for education without having those funds counted against what the state is obligated to contribute.

**GOVERNOR WILL SUPPORT FEDERAL BILL
TO PROTECT OPAL CREEK**

Governor John Kitzhaber announced today that he will support a congressional bill sponsored by Oregon Senator Mark Hatfield that will protect the Opal Creek and part of the Santiam River watershed.

"The watershed of the Little North Fork of the Santiam and the Opal Creek area stand as symbols of the great natural heritage of this state," said Kitzhaber. "I support this bill because the issue needs to be resolved for Oregonians, and it needs to be resolved in a way that protects the integrity of the watershed and the old growth forest, maintains recreational opportunities and provides for economic stability and employment opportunities for people who depend on the forest for a living."

The bill includes no land currently allocated for timber harvest in the Willamette National Forest. The governor praised Senator Hatfield for working with the state's economic development department to develop a stable economic base for the timber communities surrounding the proposed protected area.

"The potential of any new community development efforts for Mill City, Idanha, Gates, Mehama and Detroit is dependent to some extent on investments in infrastructure. I will work with Senator Hatfield to procure funding for infrastructure improvements, and to address the long-term needs of these communities," Kitzhaber said.

Kitzhaber said any strategy for protecting the Opal Creek/Little North Fork area had to meet three objectives: preservation of existing recreational opportunities, preservation of unfragmented old growth ecosystems and protection of the watershed, which supplies 17 percent of the City of Salem's drinking water.

GOVERNOR APPOINTS OREGON TILLAMOOK RAIL PANEL

Governor John Kitzhaber announced today the appointment of a panel to review the operation and the environmental impact of the Oregon Tillamook Railroad that runs along the Salmonberry River. The February floods caused considerable damage to the railroad, which serves Tillamook County. State agencies have worked with repair crews to minimize damage to winter steelhead, which are currently spawning in the river.

Governor Kitzhaber said the panel would conduct a full examination of potential long-term reconstruction, operation, and maintenance needs and costs; compatibility of railroad reconstruction and operation with stream and fishery protection objectives; alternatives available to meet local transportation and shipping needs; and impacts on shipping costs.

The members of the panel are:

Bryan Johnston, Chair - State Representative

John Hampton - Tillamook Lumber Co.

Harold Schild - Creamery Assn.

Tim Josi - State Representative

Geoff Pampush - Oregon Trout

Dick Schenkle - Retired RR Transportation Engineer

Toni Hatfield - Rockaway City Council

Willa Nelson - Pacific Rivers Council

"I am asking this bright group of individuals to find common ground. We are fortunate to have Rep. Bryan Johnston willing to serve as chair," Kitzhaber said.

"I want to ensure that the time is taken to properly assess all alternatives from both resource protection and regional transportation perspectives," said Kitzhaber. "I am seeking a solution that meets both the economic needs of Tillamook and the needs of the fishery resource."

GOVERNOR REMINDS OREGONIANS OF DISASTER RELIEF DEADLINE

Governor John Kitzhaber reminded Oregonians today that the deadline for the Federal Emergency Management Agency (FEMA) to accept applications for state/federal disaster assistance is April 11. Anyone who has experienced losses from the high winds, severe storms and flooding, which President Clinton declared a major disaster on February 9, is urged to apply for help.

The registration number is 1-800-462-9029, and is staffed from 8 a.m. to 6 p.m. Monday through Saturday.

Kitzhaber said it was important for those who suffered damage to register their claims with FEMA, "There may well be some citizens out there who are entitled to relief and either don't know it, or haven't requested it yet. We don't want anyone who may be entitled to miss the deadline," Kitzhaber said.

To date, almost 11,000 people have applied for disaster assistance. More than \$11.5 million has already been allocated for minor home repairs and assistance. The Small Business Administration has approved \$23 million to home owners and businesses through its long-term loan program.

Despite the closing of the application period on April 11, those already registered for state/federal disaster assistance and who are seeking additional help may continue to call the FEMA Helpline at 1-800-525-0321, Monday through Saturday, 8 a.m. to 6 p.m.

**GOVERNOR ASKS FOR REPORT ON WHETHER TO EXTEND
COMMENT PERIOD ON UMATILLA ARMY DEPOT DISPOSAL PLAN**

Governor John Kitzhaber announced today that he has asked Department of Environmental Quality (DEQ) Director Langdon Marsh to study whether to extend the public comment period for permits needed build a chemical weapons incinerator proposed for the Umatilla Army Depot.

Governor Kitzhaber asked Marsh for a recommendation by no late than June 1 as to whether the permitting process should be extended. The public comment period for the draft hazardous waste and air quality permits opens April 5 and is scheduled to close June 17, 1996.

Comments are being solicited by the Department of Environmental Quality and the Environmental Quality Commission (EQC) on the draft permits, on the risk assessment, and on the findings that the Commission must make before the hazardous waste permit can be issued. The public comment period will include several public meetings and hearings, as well as the opportunity to submit written comments

"Before we close that comment period, I want to be sure that we have access to all information which can be practically provided," said Kitzhaber. "We need to continue to move ahead with this project unless and until someone can demonstrate that there is a better way to destroy the weapons on-site. Leaving them there or moving them are not options -- both are far too dangerous."

Specifically, Governor Kitzhaber asked Marsh to:

- Ensure that all information about alternative technologies which might be utilized at Umatilla in lieu of incineration has been provided to the EQC to assist in making the findings they are required by statute to make before the hazardous waste permit is issued.
- Advise whether a report on alternatives scheduled for release by the Army in October, 1996 may contain information which might affect the options for disposal of agent and weapons at Umatilla.
- Provide the most current information possible about the status of all nine incineration facilities either built or proposed to be built to destroy the chemical weapons and nerve agent - how are they performing, where are they in the permitting and/or construction process, trial burns, etc.

- Advise if any congressional action has been taken or is pending which would change Federal law to, among other things, reduce the number of incinerators proposed or to allow movement of agent and/or weapons from one state to another, or to substitute other technologies as alternatives to incineration.

GOVERNOR APPOINTS ADVISORY PANEL TO REVIEW EASTSIDE FOREST HEALTH

Governor John Kitzhaber announced today that he is appointing a nine-member panel to promote the environmental health of forests and water in Eastern Oregon. The Eastside Forest Advisory Panel will advise the governor on ways to promote healthy forests and watersheds while at the same time reducing the risk of catastrophic fire and providing wood to communities.

Eastern Oregonians appointed to the panel are Dave Cash, editor of the Pendleton East Oregonian; Rep. Chuck Norris from Hermiston; Donald Sampson, Chair of the Confederated Tribes of the Umatilla; Galen Williams of Lostine; Tanya Wolf of Bend; Pat Wortman, Wallowa County Commissioner; Wayne Ludeman of Weyerhaeuser Corporation; Paul Dewey of Bend and Paul Oester of the OSU Extension Office in LaGrande.

Kitzhaber has asked the panel to report to him at least twice a year on practices and projects in Eastern Oregon by public and private landowners that are successful at promoting forest and aquatic health. The governor also wants the panel to provide him with recommendations on how federal, state and local government agencies can better assist in restoration efforts.

A year ago, Kitzhaber asked a group of 10 Northwest scientists to address issues relating to ecosystem and community health in Eastern Oregon. The result of the scientists' work, the Blue Mountain Forest Health Report, concluded that active management is desirable to improve the long-term health of Oregon forests and watersheds and to reduce the risk of fire.

The governor announced the panel today at a discussion about eastside forest health in Pendleton.

GOVERNOR RELEASES REPORT ON DMV COMPUTER AND ODOT MANAGEMENT PRACTICES

At a news conference in Salem today, Governor John Kitzhaber released a report he commissioned to review management practices at the Oregon Department of Transportation (ODOT) and its Driver and Motor Vehicle (DMV) Services Branch. The report addresses problems which lead to delays and cost overruns in the implementation of a new computer system.

In his news conference, Gov. Kitzhaber stressed three findings:

- After initial glitches, the computer system is currently working.
- The nine remaining software releases planned for the system should be reexamined to see whether they will deliver value for the general public.
- Both ODOT and DMV management must improve their cooperation and communication. A failure to communicate between ODOT and its DMV branch was one of the main reasons, according to the report, for the cost overruns and project delays.

"I will recommend to the Oregon Transportation Commission, ODOT and DMV that they focus on those parts of the computer system that will deliver the greatest improvement in service to the general public," said Kitzhaber. "After those are successfully implemented, then we should consider whether we want to make the investment it will take to add all the functions that this computer system was originally planned to have."

"Oregonians deserve better service and a computer system that works," said Kitzhaber. "I'm convinced that we are getting there and that the men and women who work at DMV are trying their best to improve service and get a computer system on line that works."

Finally, Kitzhaber said the new director being recruited for ODOT should focus their immediate attention on improving ODOT communication and cooperation with the DMV branch. "I firmly believe that had there been a better working relationship between the people who ran ODOT and the DMV branch it oversaw, many of the problems encountered in this project could have been better anticipated and hence avoided."

GOVERNOR ANNOUNCES STEPS TO AID SALMON BERRY RIVER

Oregon Governor John Kitzhaber announced today a series of steps to help control erosion and sedimentation damage on the Salmonberry River and address issues regarding the operation of the Oregon Tillamook Railroad. Recent floods have damaged the railroad and have threatened native steelhead runs.

"I want to ensure that the restoration and reclamation activities don't cause more damage than the flood, and that the time is taken to properly assess all alternatives from both resource protection and regional transportation perspectives," said Kitzhaber. "I am seeking a solution that meets both the economic needs of Tillamook and the needs of the fishery resource."

After working with officials from the railroad, environmental groups, State Representative Tim Josi, State Senator Joan Dukes and state agencies, Kitzhaber ordered the following short term actions which focus on protecting the stream and fishery resources from additional sedimentation due to exposed and unstable banks, slopes, and slides:

- Completing the instream work necessary to stabilize banks and slopes and to control erosion by Oregon Department of Fish and Wildlife's (ODFW) recommended April 1 instream work cutoff date. All such work will be coordinated with ODFW, Department of Environmental Quality and Division of State Lands.
- Requiring use of sediment fencing, straw bales, sediment traps and catch basins, water bars, hydroseeding with mulching and fiber netting erosion control blankets where appropriate to control runoff and erosion from future rain storms.
- Requiring diversion of small streams and drainage ditches away from active work locations when working at tributary crossings or in areas where ditches are carrying flowing water.
- Requiring placement of large boulders and large root wads with long trunks attached as part of the instream restoration to enhance fish habitat, with such work to be coordinated with ODFW. Other interested parties (e.g. Oregon Trout) will also be invited to participate in habitat restoration and enhancement projects.
- Temporary trackage will be allowed to be completed for access to and removal of equipment, and to use in resource stabilization and protection activities.

Over the long term, Gov. Kitzhaber wants to ensure that the railroad will be viable both economically and environmentally. Toward this end, further long-term railroad operation related repairs will be suspended until May 15,

1996, while short-term resource protection related activities will continue.

Between April 1 and May 15, a full examination will be conducted of potential long-term reconstruction, operation, and maintenance needs and costs; compatibility of railroad reconstruction and operation with stream and fishery protection objectives; alternatives available to meet local transportation and shipping needs; and impacts on shipping costs.

This examination will necessarily involve local officials, businesses, interest groups, citizens, and state, local, and federal agencies. The Governor will form a panel to review the issues, assess alternatives, solicit public input, and make recommendations on how to best meet the various needs.

While these issues are being examined, the Governor will direct Oregon Department of Transportation to facilitate an early opening of a restricted lane on Highway 6 to assist local shippers impacted by the rail line closure to meet critical shipping needs.

GOVERNOR FUNDS SALMON PROJECTS

Governor John Kitzhaber announced today that funding would be available for local watershed councils on the southern Oregon coast and for rearing Columbia River hatchery salmon, which were due to be released March 19 because of federal Mitchell Act budget reductions.

The \$231,000 for watershed councils will fund 14 watershed council coordinators in Coos, Curry, Douglas, Jackson and Josephine counties. These coordinators are key to the success of the governor's initiative to restore coastal salmon stocks.

"Local involvement and voluntary measures are vital to the salmon restoration initiative. Grassroots efforts under the leadership of watershed councils are important for developing and implementing habitat protection plans and maintaining local communication," Kitzhaber said. "This funding will help local communities have full involvement in planning for salmon restoration."

Funding for the Columbia River hatchery fish will be shared by the National Marine Fisheries Service, the Washington Department of Fisheries and the Oregon Department of Fish and Wildlife (ODFW). The funding will allow ODFW to continue rearing nine million fall Chinook until their scheduled Columbia River releases in April and May.

On February 5, ODFW released eight million fall Chinook as a result of Mitchell Act reductions, prior to Governor Kitzhaber providing \$65,000 in February to keep 13 million salmon from being released early and provide time to find additional funding.

The new funds will not prevent the planned closure of Gnat Creek or Klaskanine hatcheries or the Stayton rearing ponds as a result of the Mitchell Act budget reductions. Budget cuts in 1997 will reduce Oregon's Columbia River salmon rearing potential by 21 million salmon, or 58 percent.

GOVERNOR APPLAUDS ADMINISTRATION AGREEMENT ON OREGON WELFARE REFORM WAIVERS

Governor John Kitzhaber announced today that the state has reached an agreement with the U.S. Department of Health and Human Services (DHHS) to grant waivers necessary to implement innovative welfare reform initiatives enacted by the 1995 Legislature.

Kitzhaber applauded the granting of the waivers as another step in implementing the Oregon Option. The Oregon Option is an agreement between Oregon and the federal government to give the state flexibility in how it implements a variety of health and human service programs in exchange for specified outcomes.

The agreement was signed in early December, 1994 by Vice-President Al Gore, then-Governor Barbara Roberts and Governor-elect Kitzhaber.

"Oregon has clearly demonstrated its ability to fulfill its commitment to achieve specified outcomes," Kitzhaber said. "We have reduced our welfare rolls two years in a row by moving people from welfare to work and anticipate another 15 percent reduction over the next two years under the Oregon Option. These waivers are key to making this happen and the Administration's commitment demonstrates their willingness to be a partner in carrying out these cutting-edge reforms."

Governor Kitzhaber also applauded Oregon's Senate delegation, especially Sen. Mark Hatfield, who has consistently worked to ensure that these waivers were granted. "I am deeply appreciative of Sen. Hatfield's efforts," Kitzhaber said. "I am proud of the bi-partisan cooperation shown by both Sen. Hatfield and Sen. Ron Wyden in obtaining these waivers for Oregon."

Under the waivers, Oregon will be granted flexibility in implementing DHHS programs such as Aid to Families with Dependent Children (AFDC) and JOBS. In return, the State of Oregon commits to achieve specific outcomes such as reduction in welfare rolls and a reduction in the number of children living in poverty.

"We remain committed to moving people from dependence and into the workforce," Kitzhaber said. "Our agreement today advances our ability to do this and deliver the services Oregonians need in a cost-effective manner."

GOVERNOR PROVIDES NOTICE OF POTENTIAL VETOES

Governor John Kitzhaber provided notice today that he may veto two pieces of legislation passed by the Oregon Legislature during February's special session. Under Article 5, Section 15 of the Oregon Constitution, the governor must provide at least five working days' notice before he can veto a bill. He is not required to veto bills for which he has given notice.

The governor said he is considering a veto of two bills: Senate Bill 1167, which would have affected the workers' compensation package passed by the 1995 legislature, and Senate Bill 1160, which would have suspended the ability of local governments to apply a real estate transfer tax.

"While Senate Bill 1167 attempts to fix one of the unanticipated consequences of last session's legislation, it was drafted without a broad-based discussion that should have included everyone affected by the change," said Kitzhaber. "I strongly believe that any changes to our system should come from a collaborative working relationship between management and labor, and not from behind closed doors." Kitzhaber is currently in the process of appointing a joint management-labor committee to oversee changes to the workers' compensation system in Oregon.

Kitzhaber vetoed a bill similar to SB 1160 following the 1995 session because it crippled local government's ability to address growth pressures by taking away their ability to tax the transfer of real estate. He said he is considering a veto of the second real estate transfer tax bill for similar reasons.

"Should I veto this bill, it should not be misconstrued as advocacy for a real estate transfer tax," he said. "However, in an era of increased local control, I don't believe that we can take away one of the tools local communities use to deal with a number of issues, including growth. If we are to change the way a real estate transfer tax is applied in this state, there should be some discussion about a larger strategy between all levels of government, businesses and citizens."

Kitzhaber has until Friday, March 15 to veto the bills.

GOVERNOR ANNOUNCES LINE ITEM VETO

Governor John Kitzhaber announced today that he will veto the emergency clause portions of HB 3479 and HB 3480, the light rail funding package passed by the Oregon Legislature in special session earlier this month. The line item vetoes will not affect the portion of the bill which provides state funds for Portland's planned South-North light rail line.

The veto is necessary because the Oregon Constitution prohibits the use of an emergency clause in acts regulating taxation. An emergency clause allows legislation to take effect immediately upon the Governor's signature. Without the emergency clauses, HB 3479 and HB 3480 will become law 90 days after the end of the legislature's adjournment.

"This line item veto allows us to fix a minor problem in the light rail funding package," said Kitzhaber. "It in no way affects the outcome of the bills -- funding light rail and the rural transportation package -- both of which have broad bi-partisan support from members of the legislature."

Under the Oregon Constitution, the Governor is required to give at least five days notice of a possible veto when the legislature is not in session. The Governor has 30 working days to sign or veto legislation following the legislature's adjournment.

GOVERNOR ANNOUNCES TRANSPORTATION INITIATIVE

ODOT

(503) 731-8264

Governor John Kitzhaber officially launched his Transportation Initiative today, in an effort to address unprecedented demands on Oregon's transportation infrastructure and the growing threat to the livability and economic health of communities statewide. As part of the initiative, Kitzhaber is appointing citizens throughout the state to serve on five regional advisory committees and one statewide transportation committee.

The committees will develop short and long-term solutions to transportation problems engendered by state's rapid growth. Following a four-month statewide public outreach effort, the committees will present recommendations for action to the governor, the Oregon Transportation Commission and legislative leadership by mid-1996.

"We must ensure that our transportation system supports Oregon's vision for a high standard of livability as well as economic opportunity," Kitzhaber said. "Working with people in local communities will allow the state to develop regional and statewide solutions to our transportation problems."

Portland attorney and former Oregon governor Neil Goldschmidt will head the statewide advisory committee. Goldschmidt also served as US Secretary of Transportation in the Carter Administration. Portland General Corp. CEO Ken Harrison will head the Portland Metro advisory committee; Pendleton Grain Growers CEO Ed Balsiger will head the Eastern Oregon advisory committee; Rocking C Ranch owner Carol Whipple will head the Southern Oregon advisory committee; Brooks Resources President Mike Hollern will head the Central Oregon advisory committee; and Norpac, Inc. President Emeritus Art Christiansen will head the Northwestern Oregon advisory committee.

There are eight to 10 members on each regional advisory committee, and 12 to 15 members on the statewide advisory committee. In the next few months, there will be four to five meetings in the five geographical regions, plus seven to eight meetings of the statewide committee.

In addition to short-term recommendations, the committees are expected to develop a long-term action agenda that helps identify new, more economical approaches to managing and financing transportation and other infrastructure systems and related services.

The committees will follow a four-step path in developing recommendations for transportation and growth management:

1. Identify the issues and problems that are most critical to community and regional livability and economic opportunity;
2. Focus on transportation needs related to those issues, and put the spotlight on key gaps in the ability to meet those needs;
3. Examine what more can be done, in the absence of new resources, to close the gaps found; and
4. If resources are needed, identify equitable funding options that maintain a close link between benefits and cost responsibility.

The first regional advisory committee meetings begin the week of March 11-15. The public is welcome to attend.

(503) 378-6307

OREGON, WASHINGTON TO FUND FEDERAL SALMON OBLIGATION

Washington Governor Mike Lowry and Oregon Governor John Kitzhaber announced today that they will use state dollars to cover a federal shortfall in hatchery funding. The unprecedented action will keep 29 million fish from certain death following premature release into rivers and streams.

"Recent flooding in the Northwest has meant the loss of fish from both hatchery and natural stocks," said Kitzhaber. "It makes no sense to release the remaining fish into turbid, silt-filled waters now, knowing they will also be killed. Both Oregon and Washington must do everything that can be done to prevent this from happening."

The funding will not be enough to avoid closing a rearing pond and five hatcheries located in the two states, once this year's fish are released. These hatcheries are operated by Oregon and Washington under contract with the National Marine Fisheries Service as a part of the Mitchell Act program, which was passed by congress in 1938 to mitigate the effects of fish losses caused by Columbia River dams.

Funding under the Mitchell Act program was cut by nearly 20 percent last year, and similar cuts may continue in future federal budgets.

Governor Lowry expressed disappointment in the congressional decision not to fund the hatcheries. "The cuts in funding come at a time when salmon stocks are in serious trouble and the United States is having a hard time meeting our Pacific Salmon Treaty obligations. It is almost as if one hand doesn't know what the other hand is doing," Lowry said.

The National Marine Fisheries Service put both states on notice six months ago that Coastal Coho could be listed under the Endangered Species Act this summer. Oregon and Washington are trying to develop strategies to recover coastal salmon stocks prior to a listing under the Act.

Governor Lowry is seeking help from the Washington State Legislature to keep the young salmon from being prematurely released. His request for \$813,000 has been included in the Senate's 1995-97 supplemental budget proposal, but is not part of the House version. The fate of Lowry's funding request will likely be determined through a legislative

conference committee over the next couple of weeks.

With the Oregon Legislature not in session, finding funding in Oregon is more difficult. Kitzhaber said he intends to write a check for \$65,000 from the state's Strategic Reserve Fund to continue rearing the fish until March 15, allowing time to seek additional funds from other sources. Kitzhaber has also asked hatchery managers from the private sector to contribute their time and expertise, and is looking into using prison labor to keep the hatcheries open.

Without additional funding, the Washington hatcheries slated to close in March are: Grays River, Elochoman and Fallert Creek. The hatcheries that will close in Oregon are: the Klatskanie, Gnat Creek and the Stayton Rearing Pond.

Both governors regard short and long-term funding of the Mitchell Act program as an important federal obligation to the Northwest and to Canada in fulfillment of the Pacific Salmon Treaty. They will seek help from Northwest states, tribes, congress and the Clinton Administration to find a permanent solution to adequate funding for hatcheries and fish screening under the Mitchell Act program. "We will not be able to rebuild the fishery resources of the Columbia River Basin without adequate long-term Mitchell Act funding," Kitzhaber said.

FLOOD CLEANUP WITH FISH IN MIND

A Message from Governor Kitzhaber

The February 1996 flood has tested the spirit of many Oregonians. We will remember this as a time of volunteerism and cooperation. During the emergency effort, neighbors and friends pulled together in unprecedented ways and numbers throughout the state.

As we clean up and dry out, I'd like for everyone to be aware of a tremendous opportunity to actually help our fisheries and make a difference to the future of our salmon. Since the 1964 flood we have learned that some cleanup efforts damaged our stream systems. We have an opportunity as we clean up to improve fish habitat and fish passage and to avoid future road and culvert problems.

Here are some specific things we can do:

- **Large Woody Debris**

Leave large woody debris in streams where it poses no threat to structures such as bridges or houses. This debris actually creates pools which provide important fish habitat.

- **Heavy Equipment in Streams**

Avoid using bulldozers in streams or removing dirt from the banks. Stream straightening can lead to further losses of stream banks and leave us vulnerable to more flooding. Reconstruction decisions should be made after looking at the long term effects both to the stream and adjacent lands, and in the context of the whole river system.

- **Culverts**

Before replacing culverts, consider why the culvert gave way in the first place. Is it too small? Can fish passage be improved?

- **Debris Placement**

As you clean up from debris flows onto roads and developed areas, take care where the material is dumped. Placing additional unstable debris along the stream or in the flood plain can damage important habitat and increases the potential

for damage in the future.

I have asked my natural resource agencies to work with Oregonians and provide information and technical assistance to help flood cleanup with fish in mind. The following agencies have some specific information for cleanup efforts:

- The Department of Forestry has guidance for landowners who are considering road repairs after the flood. Please contact your Forest Practices forester for more information and assistance.
- The Division of State Lands has developed information about things you need to know before doing any work in the stream channel and the flood plain. Contact the Resource Coordinator for more information and assistance.
- The Department of Fish and Wildlife has field staff that can assist in identifying restoration efforts that are protective of aquatic resources. Contact the District Fisheries Biologist for assistance.
- The Department of Environmental Quality has staff that can assist you in identifying debris disposal sites for slide debris and flood damaged materials.

Thank you for your attention to these fish and habitat concerns as you clean up from this disaster.

The cooperative effort on the part of all Oregonians is greatly appreciated. As we work our way out of the flood damage, we are offered a unique opportunity to protect and even enhance our natural resources. What we do now will help to protect the next generation of Oregonians.

Governor Returns to Work

Diagnosis Means Full Recovery Expected in a Week

Governor John Kitzhaber returned to work today after three days of rest due to illness. Kitzhaber spent last Thursday night in Salem Hospital after he checked himself in around 6 p.m. because of chest pain. He was released from the hospital Friday morning after cardiac problems were ruled out.

The results of tests performed in the hospital reveal that Kitzhaber is suffering from an inflammation of the lower portion of his left lung. This condition, known as pleurisy, can produce severe chest pain which can mimic a heart attack. With rest and some minor interruptions of his schedule, Kitzhaber is expected to make a full recovery within a week.

"I'm glad to be back in my office today," said Kitzhaber. "There are a number of pressing issues to be dealt with -- including the beginning of clean-up and recovery from last week's damaging floods. I feel much better today and expect to be back in the saddle completely by next week."

GOVERNOR CALLS FOR PRIMARY & GENERAL ELECTION TO REPLACE WYDEN

Governor John Kitzhaber announced today that he has selected May 21, 1996, the same date as the normal primary election, for the general election date to replace Third District Congressman Ron Wyden. Because the election date will be more than 80 days after Wyden vacates his seat, Secretary of State Phil Kiesling will call a primary election for the seat and has announced that that election will be held April 2 and will be vote by mail.

Filing deadline for major party candidates will be February 2, and March 21 for minor parties and independent candidates.

Kitzhaber said there were two principle reasons for selecting the two-election process. "The first," he said, "is that Oregonians should be afforded the chance to vote for their representatives whenever practical." While the two-election process is more complex, Kitzhaber said he did not believe it was so complex as to be worth forgoing a primary.

Kitzhaber also said the two-election process offered a greater possibility of electing the same person for both filling the vacancy and filling the seat for the full 1997-99 term. If that were to be the case, the new Third District Representative would have greater seniority in the House of Representatives than other members of what is expected to be a large 1997 Freshman Congressional Class. "This seniority will mean greater clout for Oregon and amounts to a head start to our new Third District Member of Congress."

Special Election Timeline US Representative Vacancy

Two Elections

- Special Primary Election, April 2
 - Special Election, May 21 (polling place election held on same day as regular biennial primary election)
-

Date & Event

- **Feb. 6 (Tues)** Governor issues writ declaring special election day.

Secretary of State generates random alphabet order for candidates' names on special primary election ballot.

- **Feb. 12 (Mon)** Deadline for major political party candidates to file candidacy papers for special primary election.
- **Feb. 13 (Tues)** Secretary of State certifies special primary election ballot to county elections officials.
- **Feb. 17 (Sat)** Special primary election ballots mailed to longterm absent voters, overseas and military (paper ballot).
- **Mar. 12 (Tues)** Last day to register to vote in special primary election. Last day to change party affiliation for special primary election.
- **Mar. 18 (Mon)** Special primary election ballots mailed.
- **Mar. 21 (Thurs)** Deadline for minor party and independent candidates to file certificates of nomination for special election.
- **April 2 (Tues)** Special Primary Election Day.
- **April 3 (Wed)** Deadline for county elections officials to forward out-of-county special primary election ballots to appropriate county elections office.

- **April 5 (Fri)** County clerks file abstract of votes for special primary election with Secretary of State no later than noon.

Secretary of State certifies results of special primary election and issues proclamation no later than 5 p.m.

Secretary of State certifies special election ballot to county elections officials.

- **April 30 (Tues)** Last day to register to vote in special election.
- **May 21 (Tues)** Special Election Day (polling place election held on same day as regular biennial primary election).
- **June 10 (Mon)** County clerks file abstract of votes for special election with Secretary of State.
- **June 11 (Tues)** Secretary of State certifies results of special election and issues proclamation.

FEDERAL BUDGET CUTS FORCE EARLY RELEASE OF SALMON FINGERLINGS

Nearly eight million salmon fingerlings will be released prematurely from Bonneville Hatchery February 5 into the Columbia River. The releases are forced by federal budget cuts to hatcheries operated under contract by the Oregon Department of Fish and Wildlife.

The eight million fingerlings are only a portion of the nearly 21 million fingerlings Oregon hatchery managers will have to release early because of budget cuts to the federal Mitchell Act hatchery system. Additional releases will occur at Bonneville Hatchery and at Big Creek Hatchery, near Astoria, on February 15.

Without federal assistance, the State of Oregon does not have the fund to continue raising and feeding these fish, according to the Oregon Department of Fish and Wildlife and Governor John Kitzhaber's office.

Oregon's governor expressed disappointment on the eve of the releases, "We have worked with federal officials to get full hatchery program funding. We have sought compromise. We have looked at other alternative to early release. Time and money have simply run out," said Kitzhaber.

"Oregon is committed to restoring our salmon, but doing so requires the federal government to maintain its commitment as well. Forced, premature release of millions of young salmon sets back our effort and wastes previous investments," he said.

Mitchell Act funding compensates the Northwest for loss of fish habitat associated with the operation of some Columbia River dams and other federal water projects. Oregon and Washington fishery managers estimate that nearly \$11 million of income in the fishery industry will be lost as a result of hatchery program cuts in both states. In all, up to 39 million young Chinook could be released early in Oregon and Washington.

GOVERNOR OUTLINES STANDARDS

FOR LAND TRANSFER TO TRIBES

Governor John Kitzhaber outlined today the strict land management and environmental standards necessary to gain his support for the transfer of land to Oregon tribes. Kitzhaber, who has been evaluating a proposal by the Coquille Indian Tribe to receive over 59,000 acres of federal forest land in Coos County, said he will insist that any proposal involving the transfer of federal land meet requirements to protect the interests of the state, local citizens and the environment.

"I am particularly concerned about traditional public access to the land," and "protection of rights that adjacent landowners have come to expect," Kitzhaber said in a January 25 letter to Oregon Senator Mark Hatfield concerning the proposed transfer.

The Coquille Tribe's proposal involves land currently managed by the federal Bureau of Land Management. The tribe's proposal involves transferring land to the Bureau of Indian Affairs, which will manage it in trust for the tribe. The land would be designated an "adaptive management area" by the tribe under a forest management strategy put together by a diverse group of scientists. Adaptive management areas are areas where innovative management techniques can be used to meet both environmental and timber harvest goals.

"I am impressed with the tribe's proposed forest management strategy, and I do support their efforts to obtain economic self-sufficiency," said Kitzhaber. "However, my support for this proposal is dependent upon the ability of the State of Oregon and the tribe to agree on an enforceable agreement that preserves existing state interests in the areas of public

access, landowner rights and environmental protection," he added.

Two Oregon tribes have received transfers of federal land into trust status in recent years. The Siletz Tribe received 3,628 acres and the Grande Ronde Tribe received 9,811 acres. In addition, a number of other tribes have recently forwarded land transfer proposals.

Kitzhaber wrote in his letter that he had two general concerns, which he believed could only be addressed by the U.S. Congress. The first is the size of the transfer, an issue the Governor believes should be decided by Congress, not the state. Second, Kitzhaber pointed out that there are a number of other tribes in Oregon interested in acquiring lands. He believes that the federal government should review the cumulative impact of these proposed transfers and their effect on both state and national interests.

Kitzhaber noted that there was opposition to the proposal from many residents of the South Coast. "A great deal of care and caution would be needed in crafting the necessary legal framework under which a transfer could take place," he said.

KITZ RADIO

GOVERNOR BLASTS "SCARE-TACTIC" RADIO AD

Calls on Opponents to Stick to the Facts

Oregon Governor John Kitzhaber criticized radio advertising produced and purchased by opponents of the Partnership for Community Corrections as being "a blatant scare tactic with utter disregard for the facts."

The ad incorrectly states the number of inmates that will be affected by the plan and implies that there will be no jail space to house them.

"The ad is a complete fabrication," said Governor Kitzhaber. "The Partnership for Community Corrections will affect about 1,500 offenders and under the plan, we are building a jail cell for every one of them. No one will be let out of prison because of this plan. No one will be put out on the street because of this plan. The opponents are simply not sticking to the facts."

The Legislature will convene February 1 to consider funding for local jail construction needed to implement the Partnership. The Partnership was put together over the last year and has been endorsed by local law enforcement associations including the Association of Chiefs of Police, the District Attorneys Association and the Oregon Sheriff's Association.

"This Partnership is tough on criminals and takes the step to start preventing crime in the long term," said Kitzhaber. "This is a plan the Legislature should approve. It gives us the tools and the jail space needed to be tough on these criminals."

The Partnership has also been endorsed by the League of Oregon Cities and the Association of Oregon Counties.

GOVERNOR KITZHABER ESTABLISHES

JUVENILE CRIME PREVENTION TASK FORCE

Governor John Kitzhaber announced today the formation of the Governor's Task Force on Juvenile Crime Prevention. The 15-member task force will be headed by Oregon Attorney General Ted Kulongoski and involve local governments, families, churches, schools, community organizations, businesses and interested individuals in developing and implementing effective strategies for juvenile crime prevention.

Kitzhaber noted that the task force will identify ways the state can assist local communities in effectively preventing juvenile crime at the local level. "These crimes being committed by kids are occurring at the local level and the task force will find ways the state can act as a partner -- not as a director -- with local communities to help them with their crime prevention efforts," Kitzhaber said.

Kitzhaber also said that the task force is part of his overall public safety strategy for Oregon that combines punishment with crime prevention. "Certainly we must punish the most violent offenders, but we can't have an effective public safety system in Oregon until we can prevent crimes from occurring in the first place. To not focus on preventing crime is to accept the necessity of victims, and I don't believe that's what Oregonians want," he added.

The task force will coordinate its work with local Commissions on Children and Families and with local

Public Safety Coordinating Councils, established under the Partnership for Community Corrections (also known as Senate Bill 1145). Coordination of efforts in this area will allow for the development of a comprehensive juvenile crime prevention strategy for individual Oregon communities and the state as a whole.

The task force will also review and assess the implementation and effectiveness of Senate Bill 1, which passed the 1995 Legislature and enacted fundamental changes in the state's juvenile justice system into law.

Other task force members are:

State Representative Peter Courtney, State Senator Shirley Stull, University of Oregon Professor Hill Walker, Erma Vasquez (Oregon Youth Authority), Chief Pam Roskowski (Corvallis Police Dept.), Washington County Sheriff Jim Spinden, Jonathan Ater (Commission on Children and Families), Columbia County Juvenile Dept. Director Stan Mendenhall, Judge Roxanne Osborne (Klamath Falls), Gilliam County Commissioner Laura Pryor, Paul Lorenzini (Citizen's Crime Commission), St. Mary's Home for Boys Director Emma Dennis, Self Enhancement Inc. Director Tony Hobson and Lorenzo Poe.

GOVERNOR ANNOUNCES FUNDING, LEGISLATION NECESSARY FOR COMMUNITY CORRECTIONS PLAN

Proposal Endorsed by Local Governments and Major Law Enforcement Organizations

Governor John Kitzhaber announced today that he will request \$94.2 million in financing from the Oregon legislature to implement Senate Bill 1145, the Partnership for Community Corrections. Kitzhaber will request the funding during a special legislative session he has scheduled for Thursday, February 1.

Joined by representatives of local government and local law enforcement, Kitzhaber detailed where and how the \$94.2 million would be spent. The funding will primarily provide for the construction of approximately 1,486 jail beds in 21 different projects. When completed, the projects will serve 33 of Oregon's 36 counties.

The new county jail space will be used to implement the Partnership for Community Corrections, an innovative approach to community corrections created over the last year by state and local officials. Under the new approach, local law enforcement will be given responsibility for managing offenders sentenced to 12 months or less, and the state correctional system will be responsible for offenders sentenced to more than 12 months. In addition, the state has committed to provide operational funding to the counties to manage these offenders.

"This partnership is based on three principles," said Governor Kitzhaber, "local control, accountability and crime prevention. The partnership will give local communities greater control in how they manage offenders, will hold those offenders accountable and will begin the job of creating a community-based plan for crime prevention."

Kitzhaber stressed that the partnership was necessary to begin the job of actually reducing the incidence of crime in the long run, rather than merely assuring that it was punished after the fact.

"We have built thousands of state prison beds in Oregon over the last decade," said Kitzhaber. "Ironically, Oregonians feel no safer. What we need in this state is a public safety system -- not just a prison system. This is what the Partnership for Community Corrections will help create and I'm convinced that's why the leadership of local government and local law enforcement in Oregon strongly support this effort."

A list of the projects to be funded under the legislation is attached.

Highlights of the Governor's Legislation Construction Phase of the Partnership for Community Corrections

- Authorizes the allocation of \$94.2 million dollars in Certificate of Participation (COP) financing for each county corrections facility built to punish and incarcerate offenders sentenced to less than one year.
- Allows counties to rent beds from the Oregon Department of Corrections, or other jurisdictions, until local facilities and programs are in place for offenders affected by the Partnership for Community Corrections.
- Provides flexibility for the Oregon Department of Corrections to negotiate timelines with counties for the acceptance of these offenders.
- Provides flexibility for the Oregon Department of Corrections to approve changes to already approved projects (as requested by a county).
- Allows two or more counties to enter into a cooperative agreement to form a service district to construct and operate a regional corrections facility.
- Implements policies for cost-effective management of out of state prisoners.

SENATE BILL 1145 A PARTNERSHIP FOR COMMUNITY CORRECTIONS

Q. *Why is Senate Bill 1145 necessary?*

A. With the passage of Ballot Measure 11 in 1994, the focus of the state corrections system continues to shift to the long-term incarceration of violent criminals. The state has committed to building 4,700 new prison beds before the year 2000 to incarcerate these criminals.

Despite this increase, Measure 11 means state and local officials must be more efficient in managing and rehabilitating criminals. That's what Senate Bill 1145 enables.

Currently, counties send many parole, probation and post-prison supervision violators out of the county and into the state prison system. However, the average length of stay for these offenders is only four-and-one-half months.

Because their prison terms are so short, these offenders generally will not benefit from state prison rehabilitation and treatment programs -- they are not in prison long enough to complete them. Under Senate Bill 1145, they will stay in local communities where they can be managed by local officials and participate in programs that are most effective in reducing future criminal conduct -- instead of putting them on a bus and being cycled through a system not designed to handle them.

Q. *What does Senate Bill 1145 do?*

A. Senate Bill 1145 creates a new direction in Oregon public safety policy. Under SB 1145, local communities will have more resources as well as more control of local corrections activities. It puts offenders sentenced to less than one year (more than 90 percent of whom have committed property, drug or other crimes -- not violent crimes against people) under county supervision. SB 1145 also builds new jail beds, strengthens community corrections programs, creates a strong emphasis on crime prevention and establishes a mechanism to coordinate local public safety policies. Specifically, Senate Bill 1145:

Adds approximately \$29 million in additional state funds to the \$99 million budgeted for community corrections so local communities can build jails and work release centers, and expand drug and alcohol treatment programs. Of the \$29 million, \$5 million will leverage \$59 million in "certificates of participation" to finance local construction needs.

Creates Public Safety Coordinating Councils in each county to coordinate local public safety policies and activities. In

addition, the councils must develop a plan to prevent crime -- not just react to it after it happens.

Adds accountability to the criminal justice system. More than half of the offenders affected by SB 1145 have not committed a new crime, but have violated their parole, probation or post-prison supervision. Revocation is a local decision that sends offenders to state institutions. Under current law, almost 90 percent of the people revoked to prison have had two or fewer local sanctions before they are returned to prison. SB 1145 keeps these offenders at the county level, creating more incentive to better manage and control those offenders. Counties will be given more resources to sanction those offenders with hard beds and with effective programs to target the very problems that landed them in prison in the first place.

Q. *Who supports Senate Bill 1145?*

A. Senate Bill 1145 passed the 1995 legislature by a strong margin (73 yes to 12 no). Senate Bill 1145 has been endorsed by the the Oregon District Attorneys Association, the Oregon Association Chiefs of Police, the Association of Oregon Counties and the League of Oregon Cities. The Oregon State Sheriffs' Association meets this week and is expected to adopt a resolution supporting SB 1145.

Q. *Why do we need a special legislative session?*

A. As part of the law passed in June 1995, the legislative assembly needs to approve a budget bill to authorize state funding for construction of local jails, work release centers and alcohol and drug treatment facilities. To prepare for the special session, the state and counties have been working together to refine local construction proposals. The state will bring a funding proposal to the legislature for approval in a brief special session tentatively scheduled for early February 1996.

Q. *When does Senate Bill 1145 go into effect?*

A. Senate Bill 1145 became law upon signature by Governor Kitzhaber in June 1995. The provisions of the law transferring supervision of offenders sentenced to less than one year goes into effect on January 1, 1997. Governor Kitzhaber has promised the state will accept offenders subject to SB 1145 if local facilities are not built and ready to accept them in that timeframe.

Q. *Is the \$59 million planned for construction of local facilities enough?*

A. Governor Kitzhaber has acknowledged that the \$59 million appropriated by the legislature is not sufficient to fund construction of new local facilities needed for SB 1145 offenders. A selection committee, composed of local government officials, is reviewing funding applications and will determine the exact amount necessary to build facilities to manage SB 1145 offenders. Governor Kitzhaber will request full funding from the legislature in the special session.

Q. *How does SB 1145 fit in with creating a strong local public safety system?*

A. Senate Bill 1145 is a first step toward the vision of a local public safety system which has a full range of sanctions backed by local jail beds. As Oregon's sheriffs have testified, this is essential to making community programs work. It also provides the first round of state investments in local public safety programs, and provides resources that can be used to manage the entire local offenders population.

**GOVERNOR KITZHABER ANNOUNCES GRANTS
UNDER FEDERAL VIOLENCE AGAINST WOMEN ACT**

Governor John Kitzhaber announced today the awarding of approximately \$380,000 of federal grant money to domestic violence shelters and services, law enforcement and prosecutors. The funding was made part of the 1994 Crime Bill in an amendment sponsored by Oregon Congressman Ron Wyden.

"This funding is crucial to helping stop the cycle of violence and abuse women face in their own homes," said Kitzhaber.

The funding will be distributed as follows:

VICTIMS SERVICES

\$190,024 will go directly to victims services in seven regions in the state. This portion will be dedicated to existing domestic and sexual violence programs. The funds will be used in any or all of the following manners:

- Shelters for victims of domestic violence.
- Out-of-shelter services, such as case management, crisis teams and support to localities without shelters.

Advocates for victims within the legal system, including both criminal and civil cases.

Specifically, the following organizations will receive:

Region 1: Tillamook, Clatsop and Columbia Counties -- \$9,083 Tillamook Women's Crisis Service, Clatsop Women's Resource Center, Columbia Women's Resource Center.

Region 2: Multnomah, Clackamas and Washington Counties -- \$53,890

Bradley-Angle House, Community Advocates, Domestic Violence Resource Center, Portland Women's Crisis Line, Raphael House, YWCA Women's Resource Center, Volunteers of America Family Shelter, Salvation Army West

Women's and Children's Shelter, Clackamas Women's Services, Council for Prostitution Alternatives, Oregon Latina Association.

Region 3: Marion, Yamhill, Polk, Lincoln, Benton and Linn Counties -- \$28,048

Canyon Crisis Center (Mill City), Center Against Rape and Domestic Violence (Corvallis), Henderson House (McMinnville), Mid Valley Women's Crisis Service (Salem), SABLE House (Polk County), Women's Violence Intervention Program (Lincoln County).

Region 4: Coos and Lane County -- \$20,694

Womenspace (Eugene), Sexual Assault Support Service (Eugene), Suislaw Area Women's Center (Florence).

Region 5: Klamath County -- \$31,259

Klamath Crisis Center

Region 6: Wasco County -- \$25,976

Haven From Domestic Violence

Region 7: Malheur, Umatilla, Wallowa and Baker Counties -- \$21,074

Project Dove (Ontario), Shelter from the Storm (La Grande), Domestic Violence Services (Pendleton), Safe Harbor (Enterprise), May Day Inc. (Baker City).

PROSECUTION

This money is to be dedicated to victims advocacy and safety within the prosecution system. A total of \$95,012 was awarded to the following agencies to develop a victim assistance office within the District Attorney's Office or hire a Victims' Advocate:

Clackamas Co. DA - \$6000
Coos Co. DA - \$10,000 (partial funding)
Curry Co. DA - \$14,435
Deschutes Co. DA - \$15,000 (partial funding)
Harney Co. DA - \$5,000
Josephine Co. DA - \$19,986
Malheur Co. DA - \$10,000
Marion Co. DA - \$15,000 (partial funding)

LAW ENFORCEMENT

\$95,012 was also awarded to the following law enforcement agencies to train officers in handling domestic violence cases. The funding may also be used to create a victim advocacy office or hire a victim advocate to work within the law enforcement agency. The following agencies received an award:

Baker Co. - \$3500
Clatsop Co. - \$10,000 (partial funding)
Coquille Indian Tribe - \$5000 (partial funding)
Florence Police Dept. - \$16,000 (partial funding)
Lane Co. Sheriff's Office - \$20,000
Medford Police Dept. - \$10,000 (partial funding)
Washington Co. Sheriff's Office - \$20,000
Yamhill Co. Sheriff's Office - \$11,000 (partial funding)

Each of these grants is for a six month duration that will end in July 1996. At that time the 1996 Violence Against Women Act funds will begin and will operate for the full fiscal year of 1996.

TASK FORCE ON SAVAGE RAPIDS DAM APPOINTED

Governor John Kitzhaber and Senator Brady Adams announced joint appointments today to a task force that will make recommendations on the future of the Savage Rapids Dam outside Grants Pass. A list of the task force members is attached.

During its 1995 session, the Oregon Legislature passed SB 1006, which called for the appointment of the Savage Rapids Dam Strategic Task Force by the Governor, Senate President and Speaker of the House. SB 1006 gives the task force the responsibility to make recommendations on how to improve fish passage, water distribution and efficiency at the dam and within the Grants Pass Irrigation District, which owns and operates the dam. The task force will study fish passage at the dam as well as alternatives for water distribution to the district. A Technical Advisory Committee to the task force, as well as a chair for the task force will be named at a later date.

Built in 1921, the Savage Rapids Dam is located on the Rogue River, upstream from Grants Pass, on the Jackson-Josephine county line. It delivers water to the members of the irrigation district, who irrigate about 7,750 acres.

Savage Rapids Dam has been the subject of controversy for many years. The Oregon Water Resources Commission has required the Grants Pass Irrigation District to address issues related to the passage of adult and juvenile salmon and steelhead, and the amount of water withdrawn from the Rogue River. In 1994, the Water Resources Commission ordered the district to implement its plan to remove the dam and substitute electric pumping stations for the water-powered pumps by 2001. The district is required to file annual progress reports with the commission, detailing its efforts to comply with the commission's order.

The task force will make its report to the Governor and the Legislature. Until the task force completes its work, the requirement from the Water Resources Commission to remove the Savage Rapids Dam may not be carried out.

For further information, please contact: Doug Parrow, Water Resources Department, (503) 378-8455; Roy Hemmingway, Governor's Office, (503) 378-8582, or, Senator Brady Adams, (503) 986-1950 or (541) 479-3351.

SAVAGE RAPIDS DAM TASK FORCE

- Mayor Gordon Anderson, City of Grants Pass
- Mr. Dennis Becklin, ECS, Grants Pass
- Commissioner Fred Borngasser, Josephine County, Grants Pass
- Mr. Gordon Burns, Grants Pass
- Mr. Al Cook, Water Resources Dept., Grants Pass
- Mr. Mike Evenson, Oregon Dept. of Fish & Wildlife, Central Point

- Mr. Don Greenwood, Three Rivers Council, Grants Pass
- Commissioner Terry Hanscam, Curry County, Gold Beach
- Mayor Dennis Hitch, City of Rogue River
- Mr. Bob Hunter, Water Watch/Ferris & Hunter, Medford
- Commissioner Sue Kupillas, Jackson County, Medford
- Mr. Tom McMurray, Grants Pass Irrigation District
- Mr. Bernie Moore, Rogue Flyfishers, Medford
- Mr. Bob Rafolovich, Rogue Wilderness, Inc., Merlin
- Mr. Emerson Roller, Grants Pass
- Mayor Marlyn Schafer, City of Gold Beach
- Mr. Dale Smith, Grants Pass
- Mr. Lyle Woodcock, Cattlemen's Association/Farm Bureau, Grants Pass

GOVERNOR DECLARES

STATE OF EMERGENCY IN LANE COUNTY

Governor John Kitzhaber declared a state of emergency in Lane County today, saying that a levy below Dexter Dam was near failure due to recent heavy rainfall. The levy protects approximately 30-40 homes from the Willamette River.

"Because of the imminent danger, I have asked the Oregon National Guard to assess the situation and begin repairing the levy to eliminate the potential for a breach," said Kitzhaber. "The Guard will coordinate with the Army Corps of Engineers and Lane County, which will also participate in the repair operation. I have personally asked the Corps to provide supplemental assistance to the county and the state, which they have agreed to do."

Kitzhaber noted that while the levy has been "seriously weakened" in recent weeks by erosion from high releases of water through Dexter Dam by the Corps of Engineers, it has also suffered from a lack of maintenance over the years. The levy was built by the Corps of Engineers in the 1950s. There are many similar levies on waterways across the state.

"Clearly, this brings to light the larger issue of maintaining levies like this one in an era of diminishing resources," he said. "This emergency declaration is an unusual circumstance, because a threat of breach is imminent, and we must protect the security of citizens below Dexter Dam. However, I believe counties and property owners across Oregon need to work together to develop long-term maintenance plans for levies such as this one so we can avoid emergencies like this."

The Corps has had to release more water through Dexter Dam due to the region's heavy rains, which have eroded a portion of the levy near Pleasant Hill. The emergency repair plan being undertaken by the National Guard, the county and the Army Corps of Engineers is directed at fixing a particular portion of the levy crown.

EXECUTIVE ORDER NO. EO-95-21

DETERMINATION OF A STATE OF EMERGENCY

IN LANE COUNTY DUE TO IMMINENT THREAT OF A FAILING LEVY

Pursuant to ORS 401.055, I find that conditions threaten the levy in Lane County near Pleasant Hill below Dexter Dam. It is failing due to erosion and high releases of water by the U.S. Corps of Engineers to offset high inflows from heavy rains over the past several weeks. The levy crown is considered to be seriously weakened and in danger of imminent breach.

Insufficient maintenance, heavy releases from the Dexter Dam, and continuing rain may have contributed to additional damages to the levy system. Immediate repair of the levy and reconstruction of the levy crown is vital to the security, well-being, and health of the citizens in the affected area.

IT IS ORDERED AND DIRECTED:

The Oregon Department of State Police, Emergency Management Division shall, within the appropriate state and federal regulations, coordinate agencies of the State of Oregon and The Federal Government, specifically the Corps of Engineers, and the Oregon National Guard to provide essential assistance that is deemed necessary to assess, alleviate, or mitigate the imminent threat which is a direct result of existing conditions.

This declaration is specifically limited to the affected area related to the identified levy in Lane County.

This order was made by verbal proclamation at 9:25 p.m. the 28th day of December 1995, and signed this 29th day of December 1995.

GOVERNOR WILLING TO DISCUSS LAND TRANSFER AND EXCHANGE PROPOSALS

December 29, 1995

Emphasizing the need for strict environmental protections, Governor John Kitzhaber announced today his willingness to discuss the possible transfer of federal lands to state management. Among the conditions the Governor cited for any transfer were the need for an amendment to the Oregon Constitution governing management of the land, high standards for restoring populations of endangered or threatened species, and a prohibition on setting a minimum timber harvest level.

"If the state has a chance to acquire these resources and manage them as a legacy for future generations, I am open to exploring that possibility," said Kitzhaber. The Governor noted that Oregon has sold off much of its public lands over the last century and now has a much smaller base of state-owned lands than most western states.

"There are a number of transfer and exchange proposals for federal lands currently being debated, and I believe we have an obligation to determine whether they have merit," said Kitzhaber. Earlier this year, the Governor appointed a working group to study the possible transfer of federal lands to the state.

The Governor outlined his conditions for a transfer in a letter to Curry County Commissioner Rocky McVay, Chair of the Association of O & C Counties. The Association of O & C Counties had originally proposed that the state request transfer of some 2.3 million acres of federal land currently managed by the Bureau of Land Management. The lands comprise a checkerboard pattern over much of Western Oregon and were reacquired by the Federal government from the Oregon and California Railroad.

The lands, which are currently managed under the Northwest Forest Plan, have a projected harvest of 211 million board feet per year. Historic harvest levels from the lands have exceeded 1 billion board feet per year. As a result, many Western Oregon counties have seen sharp declines in their federal timber receipts as a result of reduced timber harvests.

The Governor made clear in his letter to McVay that he would not generally support transfer of lands that were in protected status, such as wilderness, wild and scenic river corridors, key watersheds and Late Successional Reserves. The final category was created under the Northwest Forest Plan and encompasses millions of acres of Oregon timberland with the goal of restoring the land to old growth forest.

"Any transfer must satisfy the public interest, benefit present and future generations of Oregonians, and provide sufficient ecosystem protection to assure healthy populations of species," said Kitzhaber.

Kitzhaber said that consideration of transfer options must take place in a full and open public process. "I would like to involve key representatives from the counties, the environmental community, the scientific community, industry and state and federal agencies in these discussions," he said.

JOHN A. KITZHABER

Governor

December 22, 1995

Commissioner Rocky McVay
Curry County
P O Box 746
Gold Beach OR 97444

Dear Commissioner McVay:

I reviewed the proposal put forward by the Association of O&C Counties to transfer O&C lands to state ownership, and I apologize for the delay in formulating a position. I recognize the importance of this issue to the O&C counties as well as to other state interests, and believe that it deserves careful and serious consideration.

I have watched timber harvest levels on federal lands decline markedly over the last few years as federal land managers redesign their land management goals and strategies to protect and enhance habitat for threatened and endangered species. I have been concerned that the drop in federal timber revenues has posed a particular hardship on O&C counties.

As you are aware, I asked that a working group be convened to examine the issues and implications of such a major land transfer. I believe the group was balanced in its makeup, reflecting industry, local government, state agency, and environmental concerns. After several months of study and discussion, the group found that it was impossible to take a position on the proposed transfer without making significant assumptions as to how the lands would be managed.

Based on what I have learned to date and findings of the working group, I believe that it could be in the state's interest to manage some of the O&C, public domain, or Coos Bay Wagon Road lands under certain conditions. In particular, it could be in Oregon's interest to manage lands that 1) are adjacent to existing state lands; 2) have significant acreages allocated to "matrix" management (available for timber harvest) under the federal plan; or 3) meet other specific objectives such as expansion of the state park system, the need to channel growth away from prime farm land, or the opportunity to achieve land management efficiencies and apply creative management strategies. I do not generally support state management of federal wilderness, wild and scenic rivers, research natural areas, key watersheds, late successional reserves, or other lands that did not meet the above criteria.

There are various mechanisms that might accomplish the state's goals in addition to transfer of title. We should consider transfer of management authorities and land exchanges similar to the Umpqua basin pilot project.

Regardless of the mechanism, I believe the state could manage some federal lands creatively -- at lower cost -- while maintaining a high level of species and ecosystem protection. State management of these lands would enable the demonstration of the principles and promise of forest and watershed management in areas with an intricate mixture of public and private land. It would also allow the application of the principles of adaptive management while adhering to the objectives of the Northwest Forest Plan. Oregon could be a laboratory for finding creative ways of managing forests and watersheds under multiple owners to meet multiple environmental and commodity goals. We could also provide lessons in ecosystem management of interest to a broader audience.

While I believe it could be in the state's interest to manage these lands, under certain conditions, I believe the conditions are too important to be left to chance. I would ask that consideration of this transfer be guided by the following principle: **It must satisfy the public interest, benefit present and future generations of Oregonians, and provide sufficient ecosystem protection to assure healthy populations of species.** To ensure that this principle is met, I

propose stipulations in the following areas:

1. A Constitutional amendment would lay out the state's responsibilities toward this land, including the following:
 - a. Principles of good stewardship and resource protection would guide the management of the land.
 - b. The harvest level would be guided by the principles of good stewardship, the need to protect and enhance non-timber resources, the scientific understanding of resource protection at the time, and the goal of providing resources for present and future generations of Oregonians. Minimum harvest levels could not be set in statute.
 - c. Although these lands could be exchanged, they could not be made available for sale.
2. Management of the land and its resources would complement federal land management efforts to ensure protection of fish and wildlife and sound management of forest resources.
3. The level of species protection on these lands must assure healthy populations, appropriate levels of habitat protection, and reflect the best science available.
4. The state would make a long-term commitment of the resources necessary to properly manage the land at the time of accepting the land.
5. The state would not subsidize administration, protection and management of these lands; all state expenses would be covered before disbursements could be made to local governments or other beneficiaries.
6. A citizen management authority would assure that the broad public interest is represented in the management of these lands.

I see the transfer of land or management responsibility as an enormous opportunity for Oregon, but only if we are committed to maintaining very high environmental standards, and condition the transfer on achieving them. I also believe that any transfer or exchange of public lands must have ample opportunity for public review, and would not support a transfer or exchange made without an open, public process.

I am willing to open a dialogue on these options with the Clinton Administration and would like to involve key representatives from the counties, the environmental community, the scientific community and state and federal agencies in these discussions. I would be happy to discuss this with you and other O&C county representatives at your convenience.

Sincerely,

John A. Kitzhaber, M.D.

LOTTERY REVENUES EXPECTED TO FALL
GOVERNOR MOVES TO SHIELD EDUCATION FROM IMPACT

**Kitzhaber Also Announces Task Force on Gaming
to be Headed by Attorney General Kulongoski**

Governor John Kitzhaber announced today that revenues from Oregon's lottery are expected to be down sharply -- some \$78.4 million from the estimate issued at the close of the 1995 Legislative Assembly. Kitzhaber said he would ask legislators to pass a bill in the planned February special session that would ensure K-12 and higher education would not lose any proportion of their lottery funding.

In addition, Kitzhaber announced that he is appointing a task force, to be headed by Attorney General Ted Kulongoski, which will study gambling in Oregon. Specifically, Kitzhaber has charged the task force with examining public policy, revenue and regulatory issues related to gambling in the state.

The task force will also have a special subcommittee to address issues currently facing the Oregon Lottery. The subcommittee will be chaired by Jon Yunker, Director of the Department of Administrative Services.

"Oregon should have a clear and strong public policy on the extent and regulation of gambling in our state," said Kitzhaber. "I am concerned by our increasing reliance on gambling proceeds to fund state government and what that will mean to both our financial stability and the sense of community involvement that has allowed us to succeed as a state."

The task force will issue a final report with findings and recommendations by June 1, 1996. The special subcommittee on Oregon Lottery revenue issues will issue its report by January 15, 1996.

MONDAY, NOVEMBER 6

Media Availability

12:45 p.m.

Gate D-11, Portland International Airport

Governor Kitzhaber will discuss his trip to Japan, Korea and Taiwan.

The Governor is traveling to Asia to meet with cultural and business leaders from three of the state's major trading partners to promote Oregon's industries and products, and to enhance business and tourism ties. This is Kitzhaber's first official international trip.

Governor Kitzhaber will be on his trade mission to Asia from November 6-19.

GOVERNOR'S MISSION TO ASIA WILL STRESS TRADE AND CULTURAL TIES

Governor John Kitzhaber's first international trip, scheduled for November 6 to 19, 1995, will promote Oregon's cultural, trade, tourism and investment relationships in Japan, Korea and Taiwan. During the trip, the Governor will seek to accomplish a number of specific goals, which include the expansion of Oregon's marine and air connections, additional investment and trade opportunities for Oregon businesses and promotion of the state's value-added food processing and wood products industries.

"I am pleased to be able to meet with cultural and business leaders from three of our major trading partners to promote Oregon's quality industries and products, and to talk about the state as a destination for new business and tourism," said Kitzhaber.

In Japan, the Governor's schedule includes meetings with the Japan External Trade Organization (JETRO), which is working closely with state government and Oregon trade associations to promote the export of high value-added wood and other products. The Governor will also meet with U.S. Embassy agricultural trade officials and with representatives of Tokyo's Tsukiji fish market to discuss new export and business opportunities for Oregon's fishing industry.

During his visit to Korea, the Governor will talk with members of the Korea-United States Economic Council (KUSEC), and will meet with representatives of Korean steamship and airline companies to discuss expansion of transportation connections. In Taiwan, the Governor will meet with steamship company representatives as well as the Import-Export Association of Taipei.

The Governor will also visit Oregon's sister states of Toyama, Japan and Chollanam-do, Korea.

Accompanying the Governor on his trip are State Senator John Lim, Chair of the Senate Trade and Economic Development Committee; Art Christiansen, Chair of the Governor's Food Processing Advisory Council; Junki Yoshida, a leader in the state's food processing industry and newly appointed Port of Portland Commissioner; Al Baker, Vice President of NORPAC Foods and President of the Pacific Northwest International Trade Association; Mike Thorne, Executive Director of the Port of Portland; Bruce Andrews, Director of the Oregon Department of Agriculture; Bill Scott, Director of the Oregon Economic Development Department; and Katy Coba, Special Assistant to the Governor for International Affairs.

A detailed schedule of the Governor's meetings will be released as the trip is finalized.

**GOVERNOR KITZHABER, INTERIOR SECRETARY BABBITT
ANNOUNCE APPROVAL OF HABITAT CONSERVATION
PLAN FOR ELLIOTT STATE FOREST**

Oregon Governor John Kitzhaber and US Secretary of the Interior Bruce Babbitt tomorrow will jointly announce the approval of a habitat conservation plan under the Federal Endangered Species Act for Oregon's Elliott State Forest in Coos and Douglas Counties.

Secretary Babbitt will meet with Governor Kitzhaber in Salem and attend a signing of the implementation agreement for the habitat conservation plan in the Governor's Ceremonial Office at 11 a.m. on Tuesday, October 3. The implementation agreement will be signed by agency officials involved in the approval process.

As part of the habitat conservation planning process, the Interior Department's US Fish and Wildlife Service will issue an incidental take permit to the Oregon Department of Forestry. Under the terms of the permit, the state will be able to "take" threatened northern spotted owls and marbled murrelets and their habitats during timber harvest operations. Through the habitat conservation plan, the state will mitigate for the loss of owls and murrelets by managing and enhancing habitat for these species and conducting continuing research and studies.

Under the Endangered Species Act, the "taking" of a listed threatened or endangered species -- killing, harming, or harassing a species, or altering habitat -- is prohibited without special authorization from the US Fish and Wildlife Service. Through a habitat conservation plan negotiated with the Service, however, an applicant may be issued a permit to "take" a listed species if the taking is part of a larger conservation plan that will not jeopardize the continued existence of the species and is incidental to otherwise legal land use activities.

"This habitat conservation agreement is a winner for the timber industry, fish and wildlife, local communities, and the state of Oregon," says Secretary Babbitt. "This Administration is fully committed to providing a viable timber economy while protecting fish and wildlife and the environment. On behalf of President Clinton, I am proud to be part of the state of Oregon's habitat conservation plan -- a model of forest management for future generations."

"This historic agreement exemplifies the importance of the state and federal governments working together to find a creative way to enable harvesting of timber while assuring that fish and wildlife habitats are protected," says Governor Kitzhaber.

The State Land Board, which consists of the Governor, Secretary of State, and State Treasurer, manages Common School Land, including most of the Elliott State Forest. Forest operations on these lands are handled by the Department of Forestry under a management agreement with the Land Board.

"Oregon continues to be a leader in helping to find solutions to difficult problems. This is an important step in the evolution of the state's forest planning process," says Secretary of State Phil Keisling.

"This approach to forest management is a creative and sensible approach. This is a landmark day for the state of Oregon," says Treasurer Jim Hill.

State Forester Jim Brown says, "The Department of Forestry's philosophy on this has been to get out in front and be a leader in finding innovative and creative ways to provide revenue for the Common School Fund and counties while providing habitat for fish and wildlife."

Brown notes that this application is the first in the nation from a state agency, and it is the first habitat conservation plan to comprehensively address the marbled murrelet.

The Department of Forestry, with the assistance of other state agencies and experts, began working on the Elliott State Forest long-range management plan almost three years ago. The plan was contingent, however, upon the approval of the incidental take permit application and habitat conservation plan. Timber harvest from the Elliott has slowed significantly since 1990 when healthy populations of northern spotted owls and marbled murrelets were discovered throughout the forest. The 93,000-acre Elliott is a second growth forest, not the classic old growth where these species are normally thought to occur.

The Elliott long-range management plan has received strong endorsement from a wide range of interests, including the timber industry and environmental community. A key part of the plan was an extensive public involvement process that included several public meetings and solicitation of public comment.

The incidental take permit and habitat conservation plan will be in effect for 60 years for the northern spotted owl and six years for the marbled murrelet. The commitment for habitat improvement activities will be in effect for 60 years.

PROPOSED FUNDING CUTS THREATEN

OREGON HEALTH PLAN

Governor John Kitzhaber said Wednesday that proposed Medicaid block grants up for congressional action this week could cost the state up to \$230 million in Oregon Health Plan funding in the next two years, thus threatening the continuation of the program which serves 130,000 Oregonians.

The governor said he based this estimate on an initial evaluation of the proposal received Tuesday.

The bill before the US House Commerce Committee is part of a cost-cutting proposal intended to reduce national Medicaid costs by \$182 billion over the next seven years. The committee is expected to take action by Friday.

"Oregon has a remarkable record of success on health care and welfare reform -- two issues on which Congress has made little progress," Kitzhaber said. "As we read the bill, Congress will severely punish Oregon for stepping up to the plate." Kitzhaber noted that the Oregon Health Plan is a contributor to Oregon's declining welfare caseloads.

In a letter to Oregon's congressional delegation, Kitzhaber estimates that Oregon will lose more than \$2.6 billion over the seven year time frame.

Oregon's Health Plan benefits all Oregonians as it reduces the cost-shifting of free services to insurance companies and private-pay patients, and reduces the need for charity care by hospitals. "During the Medicaid expansion's first 12 months, Oregon hospitals reported a 30 percent decline in charity care," Kitzhaber said.

Kitzhaber said Oregon is not trying to derail Congress's efforts to bring Medicaid spending under control. Instead, he said the state is asking that if federal fiscal year 1994 is used as the base year for figuring future growth and caps, then allowances should be made for states that have produced results in demonstration projects.

"With these spending cuts, it is unlikely that the Oregon Health Plan could survive," said Jean Thorne, state Medicaid director. "We entered into a partnership with the federal government for a five-year demonstration project and we are about to be more severely penalized than those states who have not pursued reform. This proposal penalizes Oregon for its ground-breaking work by retroactively allowing the state only the Medicaid increase nationally, which doesn't reflect the Oregon Health Plan's one-time startup cost in 1995," she added.

Approximately 130,000 people -- working Oregonians and their families -- whose incomes fall below the federal poverty level have been added to the Oregon Health Plan in 1995 as the state has pioneered a five year demonstration project. National and state policy makers will gain reliable data to help understand who benefits from such services, whether tax dollars can be saved and how to operate large public health care systems successfully.

The proposed bill as drafted would result in as much as a 15 percent immediate cut from Oregon's total Medicaid services. This could translate to a loss of health coverage for most of the working poor now covered by the Oregon Health Plan.

Oregon's record of reducing welfare caseloads results partly from the Oregon Health Plan. As welfare recipients transition into the work force, the Health Plan provides needed medical coverage for dependents. For many low-income families, without coverage by the Oregon Health Plan their only access to health care would be to return to welfare.

Kitzhaber said "We must not forget what we have accomplished in Oregon and what Congress could not. I'm dedicated to doing what it takes to preserve our health plan and the services it provides to Oregonians."

GOVERNOR KITZHABER ANNOUNCES OPPOSITION

TO CONGRESSIONAL ENVIRONMENTAL POLICY CHANGES

Flanked by business and environmental leaders from around the state, Governor John Kitzhaber announced his opposition to a number of environmental policy changes proposed by the current Congress in a news conference today. The Governor called the news conference to draw attention to pending congressional action that could impact Oregon's ability to protect wetlands, clean up toxic spills, protect water quality and continue cleaning up the Hanford Nuclear Reservation.

"Congress is considering actions that could permanently alter our ability to clean our air, to clean our water, to protect our forests and protect the diversity of wildlife in this state," said Kitzhaber. "These are not simple fine-tuning proposals. They are not budget-motivated savings. These proposals are specifically designed to weaken our environmental laws and make it more difficult to enforce the ones that remain."

Kitzhaber cited several examples of congressional changes that would hurt Oregonians quality of life. A proposed \$1.3 million dollar cut in funding for the National Marine Fisheries Service budget could close as many as six fish hatcheries in the Columbia River Basin; other cuts would mean the loss of \$4 million for wastewater treatment and \$27.1 million in funds dedicated to keeping drinking water safe. Another proposal would reduce funding for the Land and Water Conservation fund by one-quarter to one-half -- money that has been used to partially finance almost every park in Oregon.

The worst effect of these changes, Kitzhaber said, was the long-term weakening of hard-won environmental protections.

"Congress has set up a virtual environmental exemption bazaar, granting special interest after special interest exemption from the very environmental regulations that were established to protect the public interest," he said. Kitzhaber said he would work with other governors as well as travel to Washington D.C. to try and affect changes in environmental policy.

GOVERNOR SETS GENERAL ELECTION DATE --
CALLS FOR PRIMARY ELECTION

Governor John Kitzhaber announced today that he intended to call a general election to be held January 30, 1996 to replace Senator Bob Packwood. Because the date is more than 80 days after the October 1 resignation date of Sen. Packwood, state laws mandate that a primary election be used to select Republican and Democratic nominees. Secretary of State Phil Keisling simultaneously announced December 5 as the primary election date. In addition, Keisling announced that both elections would be mail ballot elections.

"This was a difficult decision which pitted the speed by which we could have a new senator in office against providing the greatest number of Oregonians with access to the electoral process," said Kitzhaber. "I gave serious consideration to the party nomination process. The strongest argument in favor of the party nomination process is that it would have resulted in a new senator in a shorter period of time. However, because of the date of Sen. Packwood's resignation, a replacement would not have been possible in time to meaningfully participate in the crucial budget votes which will happen over the next two months."

"I believe either process would give Oregonians a good choice for representation in the US Senate. But, ultimately, I believe that in this instance, with as much as three years remaining in Sen. Packwood's term, the value of giving Oregonians the chance to vote in the primary election outweighs the 45 to 60 days we would save by not having a primary."

Kitzhaber said that the primary-general election scenario would have two disadvantages, both unavoidable. "First, we will be without Senate representation for four months. Fortunately, approximately six weeks of that will likely be during a congressional recess. Second, members of our

congressional delegation will be campaigning in Oregon during a critical budget debate. I call upon those members not to forget that all Oregonians expect them to continue to represent us to the best of their ability in Washington, D.C."

Kitzhaber also noted that the process could have been accelerated and made less expensive if Sen. Packwood had immediately announced that his resignation would be effective before September 18. "Because of election timelines, it would have allowed a primary to be held November 7 in conjunction with already scheduled elections in all counties. This could have saved the people of Oregon up to \$500,000," said Kitzhaber.

In choosing a vote by mail election, Secretary of State Phil Keisling said "Fourteen years of experience proves how vote-by-mail opens the process to the greatest number of Oregonians. We have a unique opportunity with this special election to reaffirm one of democracy's most basic principles: that government is best which is governed by the most."

GOVERNOR ANNOUNCES COMPROMISE ON
LIGHT RAIL FUNDING

In a demonstration of renewed bi-partisanship, Governor John Kitzhaber announced today that a compromise on light rail funding had been reached with Republican leadership in the House of Representatives. The compromise provides for the state's share of funding for the Portland metropolitan area South/North light rail line and an equal amount of funding for rural transportation needs.

"I am very pleased to have been able to work with Republicans and Democrats in the House to bring this issue to closure," said Kitzhaber. "I believe a good bill was developed during the last days of the Legislature's special session, a bill that provides lottery money for much-needed expansion of projects that help manage growth and reduce congestion throughout the state."

The compromise package in Senate Bill 1156 includes revisions to four bills that Kitzhaber had earlier vetoed, dealing with animal feed lots, local pesticide regulations, cardlock gas stations and timber regulations.

The changes are consistent with the issues outlined in Kitzhaber's previously-released veto messages. Two bills that the Governor had vetoed, dealing with deterring coastal cormorants from eating hatchery-released salmon smolts and noise pollution regulations for shooting ranges, are included in the bill.

Two new issues were added to the compromise. Changes to systems development charges mean that local government charges are limited in order to provide an incentive for higher density development and reduced auto traffic along the light rail line. A regional problem-solving bill -- which the Governor introduced during the 1995 regular legislative session -- brings landowners, cities, counties and state agencies together to discuss land use problems and reach common solutions.

"The importance of this compromise to the future of transportation planning and growth management in Oregon cannot be understated," Kitzhaber said. "This is a win for the entire state."

SB 1156 passed in the House of Representatives late Thursday night and was expected to pass the Senate shortly thereafter.

=====

JOHN A. KITZHABER
Governor

SB 1156 Compromise Package

á \$375 million to fund the state's portion of the South/North light rail line in the Portland metropolitan area

á \$375 million for rural transportation needs outside the Portland metro area

Governor's required amendments to vetoed bills:

SB 889 Confined Animal Feeding Operations

Original bill would have required a \$250 deposit to make a second complaint against a dairy after one complaint was found to have no merit. It also set

civil penalties if a complaint against a dairy operation is unfounded.

Under SB 1156, the fine for repeated complaints was reduced to \$100, and the civil penalty provisions are eliminated.

HB 2612 Local Pesticide Regulation

Original bill would have stripped local governments of the ability to adopt their own rules relating to pesticide use.

SB 1156 adds a provision that requires the Department of Agriculture to review and approve requests from local government to implement more stringent pesticide regulations.

SB 927 Cardlock Gas Stations

Original bill would have allowed broad changes to the law regulating the dispensing of gasoline at unattended service stations.

SB 1156 will allow for a more narrow operation of cardlock stations where the nearest retail gas facility is seven miles away, a change from the current 10-mile standard.

SB 160 Forest Practices Act Revisions

Original bill would have made Board of Forestry rules subject to court challenge and would have limited the state's ability to regulate forest practices when those regulations were deemed to reduce the value of forest property by 10 percent or more.

SB 1156 would sunset these provisions after two years to allow evaluation by the Governor and Legislature before a permanent policy is placed in statute.

HB 3112 Shooting Ranges

SB 1156 bill grants shooting range owners immunity from civil or criminal liability based upon noise pollution allegations. The owner of the range must comply with the noise control laws that existed at the time of construction.

SB 707 Cormorant Control

SB 1156 appropriates \$50,000 to pay individuals to deter cormorants in estuaries and bays and deter from eating hatchery-released salmon smolts. Covers the coast between Cape Falcon and Cascade Head.

Additions to SB 1156:

System Development Charges

Local governments apply systems development charges on developers to pay for the increased costs of higher density. In SB 1156, these charges are limited in order to provide an incentive for transit-oriented development along the light rail line. This will assist in getting higher density development and reduce auto traffic.

Regional Problem-Solving

This sets up a pilot project that brings landowners, cities, counties and state agencies together to discuss land use problems in a given region.

The goals of the statewide land use planning program remain the same, but the process for reaching these goals can be implemented differently at the local level following agreement among all parties, including appropriate state agencies and LCDC.

This problem-solving process was introduced by the Governor during the 1995 regular legislative session.

GOVERNOR CALLS SPECIAL LEGISLATIVE SESSION
TO DECIDE ON FUNDING FOR LIGHT RAIL

Governor John Kitzhaber announced today that he has signed a proclamation calling for a special session of the Oregon Legislature, fulfilling his pledge to give legislators the opportunity to vote on the south-north light rail project. The special session begins on Friday, July 28.

"Light rail is of tremendous significance not just to Portland, but to Oregon as a whole," Kitzhaber said. "Good transportation planning for the metro region means that money can be saved for transportation projects around Oregon -- including rural areas."

Kitzhaber stressed that by calling the session, he was making good on a commitment made in June to the legislative leadership.

"Many members of the Legislature were unwilling to adjourn last month without some assurance that light rail would be dealt with. The Speaker of the House and the President of the Senate requested a special session for the light rail project. I made a firm commitment to them and to other

Republican legislators who felt that a project this important deserved a vote of the full Legislature," Kitzhaber said.

Kitzhaber said that the south-north light rail project deserves a open debate in the Legislature and a clear vote on its merits.

"In spite of the so-called Rule of 18, a solid majority of legislators in the House and Senate support light rail, and the project has strong support among Oregonians as well," he said. "We cannot allow a minority of 18 House members to kill this project without a vote. To do so would be to set a precedent that would undermine our democratic process."

An independent poll by Moore Information released today shows that a majority of registered voters statewide support light rail. Sixty-one percent of those surveyed said they approved of the plan to build the south-north light rail line, while 73 percent approve of light rail in general.

During the special session, the Legislature will determine whether to appropriate \$375 million from lottery funds to pay for the state's share of the project, which will leverage \$750 million in funding from the federal government. \$375 million will come from a property tax levy approved by 65 percent of voters in Clackamas, Washington and Multnomah counties last November.

GOVERNOR ANNOUNCES VETOES

Governor John Kitzhaber announced today that he has vetoed 52 bills passed by the 1995 Oregon Legislature. Today was the final deadline for the Governor to issue vetoes.

"I do not take my power to veto legislation lightly. I am using my veto because Oregonians do not want to undermine our tradition of reasonable environmental and land use protections, and they do not want laws that endanger their health and safety," Kitzhaber said. "In addition, I cannot in good conscience sign legislation into law that is unconstitutional and cannot be enforced."

Kitzhaber noted that many of the bills came to his desk because of the considerable effort of citizens, legislators and constituent groups. "A lot of people worked very hard to get to get their bills through the legislative session. My veto is not a denunciation of anyone's efforts -- it is simply reflective of my desire to sign into law policies that are good for all Oregonians. Further, had there been more time, I believe we could have reached compromise on some of these bills."

The Governor said that his veto of the vote by mail bill, SB 319, was not indicative of a lack of support for mail balloting. "I have supported the concept of vote by mail in the past, and I continue to do so. However, I believe that the best way to achieve vote by mail is to move in a deliberate manner. For this reason, I am open to working with the Secretary of State in the months ahead to develop legislation that will allow us to move gradually towards a vote by mail system."

Kitzhaber vetoed six bills prior to today's deadline. They were:

- HB 2118, relating to rulemaking, vetoed on May 25;
- HB 2895, relating to motor vehicle pollution control system inspection program, vetoed on June 7;
- SB 54, relating to relating to use of water of the state, vetoed on May 31;
- SB 252, relating to taxation, vetoed June 7;
- SB 329, relating to taxation, vetoed June 9;
- SB 600, relating to impacts of regulation on private real property, vetoed July 13.

The following bills are vetoed as of today:

House Bills:

- HB 2338, relating to synthetic opiates;
- HB 2438, relating to compensation of elected public officials;
- HB 2471, relating to water conservation;
- HB 2578, relating to motor carriers;
- HB 2612, relating to pesticides;
- HB 2754, relating to in-stream water rights;
- HB 2779, relating to enterprise zones;
- HB 2784, relating to firearms;
- HB 2861, relating to audits;
- HB 2902, relating to Department of Human Resources; prescribing an effective date;
- HB 3091, relating to ground water applications;
- HB 3112, relating to exemption from liability for noise pollution from shooting range; declaring an emergency;
- HB 3114, relating to employment agency licensing; declaring an emergency;
- HB 3124, relating to state agency coordination with land use planning;

--HB 3222, relating to local government; prescribing an effective date;
--HB 3340, relating to alternative medicine;
--HB 3348, relating to destination resorts;
--HB 3353, relating to uses allowed on rural lands;
--HB 3356, relating to marginal lands regulation;
--HB 3365, relating to compensation of state employees;
--HB 3384, relating to regulating cable television services; declaring an emergency;
--HB 3411, relating to racing facility activities; declaring an emergency;
--HB 3448, relating to Portland metropolitan area air quality maintenance plan;
--HB 3461, relating to the cultivation of shellfish; appropriating money;
--HB 5035, relating to lottery funds; declaring an emergency (line-item veto).

Senate Bills:

--SB 107, relating to judicial review; prescribing an effective date;
--SB 124, relating to motor carriers; prescribing an effective date;
--SB 160, relating to the Oregon Forest Practices Act;
--SB 238, relating to medical professions;
--SB 319, relating to elections by mail;
--SB 400, relating to audit duties of the Secretary of State;
--SB 467, relating to merger of school districts; declaring an emergency;
--SB 536, relating to voters pamphlets;
--SB 562, relating to retirement;
--SB 567, relating to administrative proceedings;
--SB 706, relating to electrical installations;
--SB 707, relating to protection of juvenile salmonids; appropriating money; declaring an emergency;
--SB 769, relating to state employee benefits;
--SB 889, relating to investigation of confined animal feeding operation;
--SB 927, relating to Class 1 flammable liquids;
--SB 950, relating to exempt rigid plastic containers;
--SB 964, relating to activities in exclusive farm zones;
--SB 1005, relating to water resources; declaring an emergency;
--SB 1083, relating to land use appeals;
--SB 1120, relating to obscenity;
--SB 1155, relating to repeal of employer mandate.

The following bills were on Kitzhaber's intent to veto list but were

not vetoed:

--HB 2689, relating to termination of parental rights;

--HB 3239, relating to common school grazing lands; declaring an emergency;

--SB 245, relating to decisions on land use applications by local governments;

--SB 696, relating to investment of state funds;

--SB 918, relating to psychology.

GOVERNOR KITZHABER SIGNS GROUNDBREAKING
PARENTAL RESPONSIBILITY ACTS

Governor John Kitzhaber signed national groundbreaking legislation today, House Bills 2883 and 2884, which will establish a state parental responsibility law. Kitzhaber was joined at the signing ceremony by bill sponsors Reps. Bryan Johnston (D-Salem) and Mike Lehman (D-Coos Bay). Also at the ceremony was Silverton, Oregon Mayor Ken Hector who was involved in adopting the local parental responsibility ordinance which formed the basis of the state law.

"Juvenile crime is the fast rising element of criminal behavior," said Kitzhaber. "It can only be addressed if we create two levels of accountability that are now lacking. First, we have to ensure that people -- especially young people -- receive sure, swift and appropriate sanctions when they commit a crime. Second, we need to create a level of accountability in the community for facing crime head-on. This is not a problem that can be shifted around. These bills tackle this second problem by creating a new level of accountability among parents for their children's behavior."

"I believe it is time to recognize that parents have a responsibility to raise their children in an appropriate manner and be accountable for their children up to a certain age," said Rep. Lehman. His statement was echoed by Rep. Johnston who said: "We want to reach these children before they are uncontrollable, before they can be tried as adults and before they become involved in what would be considered adult crimes."

The two bills would:

- Create an infraction of "Failure to Supervise a Child";
- Provide for restitution to victims not to exceed the amount of \$2,500;
- Apply to only children under 15;
- Create a series of sanctions, growing progressively severe;
- Creates a "probation contract" with parents when the child enters the juvenile court system, and,
- Allows charges to be dropped if the parent or legal guardian shows that reasonable efforts were made to supervise the child.

"I firmly believe this law will help us bring juvenile crime under control and get to kids and their parents early enough so that they children do not become mired in a life of crime," said Kitzhaber.

More details are available about the acts on the enclosed fact sheet.

=====

JOHN A. KITZHABER
Governor

WHAT THE PARENTAL RESPONSIBILITY ACT DOES:

1. Creates the infraction of "failure to supervise a child". Parents are

guilty of this offense if their child violates the juvenile code, violates a local curfew, or fails to attend school as required by law.

2. Applies only to children under 15.

3. If a child under 15 commits a criminal offense:

--On the first offense, the parent will receive a written notice of warning.

--On the second offense, the fine may be suspended in lieu of parent effectiveness training classes.

--On the third offense, the parent may be ordered to pay a fine up to \$1,000

4. Provides for restitution to victims not exceeding the amount of \$2,500.

5. When a child enters the juvenile court system, the act gives the court discretion to require a parent or legal guardian to enter in a probation contract with the court containing terms to which the parent or guardian must adhere as a condition of the child's probation.

--Requires the court to work with the parent to devise a supervision plan.

--Failure to fulfill the contract can result in a fine of up to \$1,000.

Does not apply to foster parents.

6. Charges will be dropped if the parent or legal guardian shows that he or she made reasonable efforts to supervise the child.

GOVERNOR KITZHABER VETOES SO CALLED
ECO-TAKE BILL -- SB 600

Calls Bill Significant Threat to Oregon's Quality of Life

At a news conference overlooking Portland's Washington Park Rose Garden today, Governor John Kitzhaber issued his sixth veto -- vetoing Senate Bill 600, the so-called Ecotake Act. Kitzhaber described the legislation as the single greatest threat to Oregon's environmental heritage and quality of life to come out of the 1995 legislative session.

The legislation would require private landowners to be compensated if the value of their land was reduced by more than 10 percent by government regulation. "The effect of the bill will be to make it impossible to implement any law or rule which protects Oregon's environment. In short, we would be trading narrow private interests at the expense of protecting our common heritage of a beautiful Oregon."

"No one disputes the need for a stable regulatory climate in which the

private sector can make long-term investments," Kitzhaber said. "No one argues with the need to balance private interests with public interests. But SB 600 is not the way to achieve these objectives," Kitzhaber added.

As an example of the kind of regulation which would have been prohibitively expensive to enact, Kitzhaber drew attention to the view from the Rose Garden of Mount Hood -- a view that is protected by City of Portland Regulation as part of its "viewshed" regulations. "We can all enjoy this view because it has been protected. No building can be built so as to obstruct it. There is no doubt that comes at a private cost. But the public benefit is overwhelming -- and it is overwhelmingly supported by Oregonians."

Kitzhaber was joined at the news conference by members of Oregon's Native American Tribes, members of the state's business community and representatives of various environmental organizations.

"This is not a matter of environmentalist versus landowner. I am vetoing SB 600 today because it would make it impossible to continue to move forward together as a state in preserving and protecting the natural heritage of our state that we all hold so dear. Those who believe Oregonians are willing to walk away from 30 years of thoughtful and successful environmental protection are simply wrong."

Kitzhaber said he would announce Friday the impending veto of other bills he considered to be bad for Oregon's environment. He closed the news conference by stressing that he was "willing to work with anyone to help make Oregon's environmental laws work better, but would not preside over their outright repeal."

=====

JOHN A. KITZHABER
Governor

July 13, 1995

The Honorable Gordon Smith
President of the Senate
State Capitol 233
Salem, Oregon 97310

Dear President Smith:

I am returning herewith enrolled SB 600, unsigned and disapproved.

Senate Bill 600 deals with an issue of profound importance to every Oregonian. The issue is not "compensation," "regulation," "certification," or any of the other abstract terms used in this complex bill. The issue that I refer to is Oregon's quality of life. If SB 600 were to take effect, that quality of life would decline -- abruptly and dramatically.

Senate Bill 600 is a prescription for paralysis. Its complexity and potential for litigation would paralyze state agencies and local governments. Its requirements for appraisals and handling of claims would be difficult and costly to administer. This bill would make it impossible for the state of Oregon and its cities and counties to adopt and administer laws and programs that protect Oregon's quality of life.

By looking at our past, we can see how SB 600 might affect our future. For example, if a bill like this had been in effect in 1973, we almost surely would have no statewide program for land use planning. Our lawmakers would have taken one look at the complexities and costs of compensation and the potential for litigation and quickly abandoned the idea of land use planning in Oregon.

In fact, if a law requiring compensation had been in place during the past three decades, most of Oregon's laws and programs for protecting our quality of life would never have come into being. We wouldn't have a Willamette River Greenway. We wouldn't have a Forest Practices Act. We wouldn't have a program to protect Oregon's scenic waterways. And we wouldn't have a strong state program to protect the coastal beaches and other unique resources that we enjoy today.

Senate Bill 600 would pit landowners and developers against the communities in which they live. It would have us adopt the "zero-sum game" as our model for managing land and resources. But SB 600 fails to recognize that

regulations also create value. It fails to recognize that much of the value in private property derives from laws that protect our lands and resources.

Senate Bill 600 suggests that every Oregonian can have all the benefits of living in a great state -- productive farmland, lush forests, clean water, and scenic rivers -- but bear none of the costs of caring for those resources. It suggests that if there are any costs for such care, "the government" will pay them. What that really means is that taxpayers -- you and I and our friends and families -- will pay. In its attempt to deal with one kind of "taking," SB 600 would create another. It would take public funds away from schools, police, and roads and give it to private landowners and developers.

Oregon today is widely acclaimed as a state with an outstanding quality of life, and rightfully so: this is indeed a wonderful place to live. But our high quality of life did not just happen. Rather it is the product of decisions made over several decades -- decisions to adopt strong environmental and land use laws. Those laws are the tools of stewardship.

If we are to maintain the quality of life that we cherish, then we must continue to apply and refine those tools.

In this time of rapid growth and increasing competition for land and resources, we need laws to help us build communities, not divide them. But this bill would divide Oregonians and thwart our efforts to build the future that we want. For those reasons, I have vetoed Senate Bill 600.

Sincerely,

John A. Kitzhaber

=====

JOHN A. KITZHABER

Governor

Senate Bill 600, On Compensation for "Ecotakes":

A Summary of Key Provisions

Senate Bill 600 requires state agencies and local governments to pay

landowners for certain costs resulting from environmental regulations defined as "ecotakes." The bill's requirements for such compensation apply only to regulations adopted after March 31, 1995.

The bill applies mainly to regulations involving natural resources covered by Statewide Planning Goal 5 -- open space, scenic areas, natural areas, wildlife habitats, wetlands, etc. The bill does not apply to regulations pertaining to most other goals, including Goal 3 (on agricultural lands), Goal 4 (on forest lands), and those dealing with coastal resources. It also does not apply to state and local regulations adopted in response to federal requirements.

SB 600 requires "regulating entities" (state and local agencies) to evaluate proposals for new environmental regulations to determine whether they are "ecotakes." For those that are, the agencies must publish notices advising property owners about the proposals and about the owners' rights to be compensated. After a regulation is enacted, owners of real property who feel they have suffered compensable losses may file claims for compensation.

A land owner may claim compensation if regulations cause a "loss in value" of at least \$10,000 or 10 percent of the market value of real property. Loss in value is measured through an appraisal comparing the value of a property before the regulation was applied to its value afterward. Compensation is paid in the form of tax credits. A successful claimant may receive payment for three costs:

1. the "compensable loss" of value in real property (the loss in value minus \$10,000 or 10 percent of the value of the property, whichever is less);
2. any fee paid to the regulating entity for filing a claim;
3. any costs for appraisals and attorney fees awarded by an arbitrator.

Claims for compensation are filed with the regulating entity. They must be filed within four years of the "ecotake's" enactment. An agency can respond to such a claim by exempting the claimant's property from the regulation, paying the amount claimed, or paying some lesser amount. A claimant must accept the agency's offer or enter into arbitration within 21 days.

SB 600 also requires compensation for exactions related to environmental regulations if the exactions are not "roughly proportional" to the problems they are intended to mitigate. Exactions include requirements to dedicate land, restrictions on use of property, and other conditions attached to permits.

GOVERNOR SIGNS LANDMARK COMMUNITY
CORRECTIONS LEGISLATION

Governor John Kitzhaber signed four pieces of legislation overhauling Oregon's criminal justice system today. SB 1145, SB 1, HB 2704 and HB 3349 became law in a ceremony attended by law enforcement officials, legislators, county commissioners and judges from around the state.

"Being tough on crime is not enough -- we have to be tough and smart if we want to prevent crime in the future," said Kitzhaber. "To truly make our communities safer, we need a comprehensive, integrated criminal justice system that maximizes our resources and gives local communities the tools they need to fight crime."

SB 1145, the Community Corrections Act, provides for a coordinated state/local criminal justice system. The state takes responsibility for offenders sentenced to 12 months or more, while counties will manage those convicted of lesser crimes.

"This gives local communities a say in the sanction, punishment and treatment of offenders," said Kitzhaber.

SB 1 creates a new department to deal with juvenile offenders. The Oregon Youth Authority will oversee maximum security facilities, "youth accountability" camps emphasizing a tough physical regimen, and minimum security residential facilities. The legislation also provides for tougher sentencing guidelines to make young offenders more accountable.

HB 2704 creates a new commission to oversee long-term planning of the criminal justice system statewide. The Criminal Justice Commission will work with local public safety bodies to coordinate on implementation of community corrections and crime prevention. HB 3349 allows the state to fully implement Ballot Measure 11, which was passed by voters last November.

GOVERNOR KITZHABER ANNOUNCES LIGHT RAIL
SPECIAL SESSION DATE

Kitzhaber targets July 28, 1995 for Special Session

Governor John Kitzhaber announced today that he would call a special session of the Legislature for July 28, 1995 to address the issue of state funding for North/South Light Rail in the Portland Metropolitan area. Kitzhaber said it was his intention to focus exclusively on the light rail funding issue.

"We will get the legislature to vote on light rail funding -- and I am confident we will get it passed," said Kitzhaber. "I have this confidence because of a growing knowledge and acceptance that this is not just a metro area project. Light rail is an Oregon project. It benefits us all."

Kitzhaber added that he believes light rail will help save transportation money that can then be invested in rural Oregon -- where there are also great transportation needs. He also said that the project will help keep the metro area ahead of the growth curve.

Kitzhaber called on legislators to "match the commitment of the the people of the metropolitan region who have voted in overwhelming numbers to support light rail. It is the responsibility of our legislators to match the vision of the voters of this region."

GOVERNOR KITZHABER ANNOUNCES

FUNDING FOR JUVENILE CRIME PREVENTION PROGRAMS

Governor John Kitzhaber today announced the allocation of \$170,000 in federal funds to two juvenile crime prevention programs in Portland. The money comes from Oregon's share of the Edward Byrne Memorial Grant Funds, which are part of the President Clinton's crime package.

The first program receiving the Byrne Grant money is the House of Umoja in Portland. The House of Umoja is a successful program targeting at-risk youth and provides gang-affected youth with an alternative to gang involvement. The House of Umoja will receive \$70,000 to fund beds for eight additional youths.

The second program receiving the Byrne Grant funds is the Crime Reduction Emphasizing Awareness Through Education Program (CREATE). CREATE is an education program providing junior high and high school students a structure linking school, family and community. This program is run by the Oregon State Police and will receive \$100,000.

"These programs are about teaching kids valuable life skills -- skills no one else may ever show them," Kitzhaber said. "They target kids who are at-risk before it's too late and before they've become involved in serious crime," he added.

The \$170,000 being allocated to these two programs comes on top of the more than \$5 million in Byrne Grant funds Kitzhaber has already allocated to 59 statewide programs dealing with juvenile and adult corrections, domestic violence, drug abuse prevention and treatment and local law enforcement improvements.

Kitzhaber also announced he will convene a three-day crime prevention forum in September. Kitzhaber said the forum will include leaders from around the state who work with at-risk youth as well as businesspeople and law enforcement officials. The forum will focus on creating a statewide strategy of juvenile crime prevention.

Budget Veto Press Statement
April 27, 1995

Governor Kitzhaber announced on April 27 that he would veto the budget proposed by the legislative leadership. His statement is as follows:

=====

GOOD MORNING AND THANK YOU FOR COMING.

I AM ANNOUNCING TODAY THAT I WILL VETO HOUSE BILL 5021 THE K THROUGH 12 FUNDING BILL. I DO NOT TAKE THIS ACTION BECAUSE WE ARE SPENDING TOO MUCH ON SCHOOLS. CLEARLY WE ARE NOT. I AM FORCED TO VETO THIS BUDGET NOT BECAUSE IT'S TOO MUCH FOR EDUCATION, BUT BECAUSE IT'S MORE MONEY THAN WE CAN AFFORD TO CUT FROM OTHER EQUALLY DESERVING OREGONIANS. IT IS SIMPLY TOO HIGH A PRICE TO PAY.

WHEN TAKEN BY ITSELF, SPENDING ANOTHER \$100 MILLION ON SCHOOLS IS UNQUESTIONABLY A GOOD IDEA. BUT TO APPROVE THIS BILL WOULD BE TO APPROVE THE REST OF THE BUDGET WHICH PAYS FOR IT -- A SERIES OF HORRIBLE BUDGET CHOICES THAT PITS KIDS AGAINST KIDS, SCHOOLS AGAINST ACCESS TO HEALTH CARE AND TEACHER PAY AGAINST STATE EMPLOYEES SALARIES. THIS IS NOT A BUDGET THAT IS GOOD FOR OREGONIANS.

LET ME BE CLEAR ABOUT THIS. THIS IS A DEBATE ABOUT KIDS -- BUT NOT JUST ABOUT KIDS IN SCHOOL. THIS IS ABOUT CHILDREN'S LIVES: THEIR COMMUNITIES, THEIR HEALTH AND THEIR FUTURES.

IT'S ABOUT KIDS WHO CAN'T FIND JOBS IN RURAL OREGON. IT'S ABOUT HERMISTON HAVING THE FUNDS TO BUILD THE INFRASTRUCTURE THAT WILL BRING IN WALMART WITH 400 NEW JOBS.

IT'S ABOUT KIDS BEING SAFE IN THEIR NEIGHBORHOODS AND COMMUNITIES. IT'S ABOUT TELLING A PRISON GUARD WORKING OVERTIME TO WATCH OVER CRIMINALS THAT WE ARE GOING TO CUT HIS PAY IN JULY.

AND IT'S ABOUT KEEPING OUR CHILDREN HEALTHY. IT'S ABOUT A 12-YEAR OLD GIRL WHO WON'T BE ABLE TO GET TREATMENT FOR STREP THROAT UNTIL IT DEVELOPS INTO PNEUMONIA -- BECAUSE SHE HAS TO WAIT THIRTY DAYS FOR ELIGIBILITY.

LET'S BE HONEST HERE. THIS BUDGET RAISES TAXES AND CUT SERVICES. WE HAVE THE RESPONSIBILITY TO LOOK AT NOT JUST WHAT WE ARE PAYING FOR, BUT ALSO AT WHAT WE ARE CUTTING. AND THIS BUDGET CUTS SERVICES THAT ARE IMPORTANT TO THE LIVES AND WELL-BEING OF ALL OUR CITIZENS.

///

[Return to Governor's Office](#)

Governor John Kitzhaber

Eugene Rotary

January 7, 2003

Thank you very much. It is good to be with you and I thank you for the opportunity to wrap up my speaking schedule as governor here in Eugene where I grew up.

I would like to talk to you about two things today. First, I want to discuss our current recession and, in particular, Ballot Measure 28 on which Oregonians will be voting in a special election just three weeks from today. Second, I would like to share with you some thoughts on the challenge of governance in this new century.

Let's start with Ballot Measure 28. For the first six and a half years of my administration, I was fortunate to preside over one of the most remarkable periods of economic growth in Oregon's history. I end my term in office presiding over the worst recession since 1982.

This past year has been a very difficult time for all of us. Thousands of Oregonians have been directly affected by the recession – losing their jobs, seeing their retirement savings decline, missing opportunities for themselves and their families. The economy continues to struggle – in Oregon and around the nation – and we appear on the verge of going to war with Iraq.

This is clearly a time for Oregonians to pull together – to help sustain each other and the larger Oregon community that we all share. And yet we find ourselves demoralized by the recession and divided over what to do about it – which brings me to the question of Ballot Measure 28.

I certainly appreciate the sacrifices that Oregonians have had to make over the past year. Faced with a \$2 billion revenue shortfall, your state government has made the same kind of difficult decisions, already cutting over \$700 million from the budget and currently implementing another \$200 million in reductions. These cuts will significantly reduce public services and will affect real people in very real ways.

Given this situation, it is tempting to dismiss Ballot Measure 28 as nothing more than a tax increase during a recession. Indeed, the ballot title adopted by the legislature was intentionally written to give Oregon voters just that impression – that the measure is only about taxes and has nothing to do with state services or with how we respond as a community to the challenges we currently face.

But to me Ballot Measure 28 represents an investment in Oregon's future – in our schools, in our workforce and in our public safety. It represents a commitment to continue caring for the vulnerable among us – the poor, the frail and the elderly. In short, Ballot Measure 28 is about who we are. It is about our values.

This measure should not be lightly dismissed as simply a discussion about a temporary income tax surcharge – although its opponents would have you believe so.

This is a question of the services that these revenues support and whether we believe that they are fundamentally important to who we are – to our perception of the Oregon community – whether these values are just as important in the hard times as in the good. I believe that they are.

First, Ballot Measure 28 represents an investment in our economy – a view shared by many business leaders throughout Oregon. In fact, that was the conclusion reached just last month when more than thirteen hundred leaders of business and industry from all over Oregon gathered in Portland at a Leadership Summit, called by Governor-Elect Ted Kulongoski and Senator Ron Wyden. They came to discuss Oregon's future.

In their final report, the business leaders recommended that the state of Oregon spend more on K-12 education, not less, in order to build a world-class system that prepares our young people for college. They recommended strengthening Oregon's investment in engineering programs and computer science programs, enabling our institutions of higher learning to produce the kind of highly skilled workers that we'll need as we progress through the 21st century.

They urged upgrading our investment in roads, highways, bridges, and other aspects of Oregon's infrastructure. In short, these business leaders stressed that a growing economy relies on high quality public services.

The people who attended the summit are real-world managers and CEOs—pragmatic, hard-nosed, hands-on business leaders. They are the people on whom Oregon's economy relies, the people who create jobs and prosperity. When talking about business, we should listen to them and heed their advice.

The key to economic recovery, they stressed, lies in better education, better infrastructure, better social services—the kinds of things that make a society livable and attractive. They also placed strong emphasis on the need to reform Oregon's system of financing these important programs, in order to guarantee adequate, stable funding through good times and bad.

The fact is that we cannot expect to recover our prosperity or our competitiveness if we let our system of education slide into mediocrity. We cannot expect to attract new investors to Oregon by letting our corrections system unravel, or by stripping our law enforcement agencies of their effectiveness. We cannot expect new businesses to relocate in Oregon if we allow our infrastructure to crumble and fray around the edges, or if we ignore the needs of the less fortunate and the vulnerable.

Given the stakes involved, this is a modest tax increase that, on average, will cost Oregonians \$9.50 per month – and sixty percent of taxpayers will pay less than that. I appreciate that this small temporary increase will be a sacrifice for some – but for many it represents an affordable and important investment in our Oregon community.

Rural Oregon, in particular, is vulnerable to further state budget reductions. In many rural communities, public employees constitute a significant part of the local payroll. In Umatilla County, for example, there are public school districts, a community college, and a state correctional institute. The failure of Ballot Measure 28 will impact all of these institutions with more layoffs, increased unemployment and further stress on the local economy – not to mention the loss of educational and public safety services.

Let me emphasize that Ballot Measure 28 is not the solution to our problems. The next legislature still needs to address the larger issue of creating a state financing system that is more stable and less reliant on the income tax. But, in the short term, the measure will help avoid more damage to vital public services. It will also reduce the political pressure to finance these services with accounting tricks and borrowing against the future – tactics used extensively by the last legislature and over my consistent opposition.

Over twenty years ago, under Governor Vic Atiyeh, Oregonians pulled together to help maintain important state services during our last recession by passing a temporary income tax surcharge. Measure 28 offers us the opportunity to pull together again.

Nobody is going to do this for us. This is our state and our future. To me this campaign is less about budget cuts and taxes as it is about what we want Oregon to be. It is about who we are as a people and as a community. It is about pulling together to meet a common challenge.

The passage of Ballot Measure 28 will help a lot of people. Some of them are your neighbors. Others you may never know. But they are all Oregonians. So before you make up your mind, take some time to understand the consequences

of this decision, give it some thought – and I hope you will conclude that this is an important investment for Oregon.

Regardless of what happens on January 28, however – whether this measure passes or fails – what has happened to Oregon over the past year calls into question the effectiveness of our governance structure itself, which is the second thing I want to discuss with you today.

I have always believed that our political system, and the governmental structure through which it acts, should serve as a vehicle by which citizens – acting collectively as a community – can secure the economic, social and environmental resources necessary for a good quality of life. This requires, first and foremost, that we recognize the interdependence between our economic, environmental and social needs – and that we find a balance between these often-competing values.

Furthermore, to accomplish this objective, the collective actions of the members of the community must be sustained over time. In other words, they must be sustainable – by which I mean that the use, development and protection of these resources must be managed in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to do the same.

Imagine, if you will, three overlapping circles – one representing our economic needs, one representing our environmental needs and one representing our social needs. The area where the three circles overlap is the area of sustainability – the area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements – these threads, which together weave the fabric of sustainability – are things we hold in common. They represent the common set of desires and aspirations that add value and quality to our lives. They are things we all want, regardless of where we live or what we do. They transcend political philosophy and party registration.

Achieving these elements of a good quality of life depends, to a large extent, on the ability of individuals to act together as a community and on a political system and governance structure, which facilitates this kind of collective action on behalf of a shared goal. In other words, a healthy, functioning community is necessary in order for the members of the community to secure their individual desires and aspirations.

If we recognize the interdependence of the economic, social and environmental aspects of a good quality of life – and that recognition is reflected in the way in which we seek to secure them – our sense of community will be strengthened and our chances of success increased. If, on the other hand, we view economic, environmental and social needs as separate, competing entities – mutually exclusive values, if you will – we create a politics of scarcity – a zero-sum situation in which there must always be a winner and a loser. And this zero-sum situation creates conflict and division that undermines our sense of community.

Unfortunately, this appears to be exactly what is happening today. Increasingly we see a politics of scarcity and conflict that creates winners and losers. Our political system, and the governance structure through which it acts, contributes to this problem by creating a sense of separateness rather than a sense of community.

Citizens are becoming alienated from their government – seeing it as something separate and apart from themselves. They view it with distrust, cynicism and outright hostility. This attitude is reflected in widespread apathy and low voter turnout. Politics in general, and politicians in particular, are viewed with disdain. Money and special interests have moved in to fill the vacuum left by a disengaged and disenchanting electorate. The result is a state fragmented by ideology and partisanship, unable to take effective action on any front and without any sense of community or common purpose.

That, I think, is an accurate description of where we are today in Oregon. The failure to resolve our budget crisis over five special sessions, the rancor and partisan gridlock, the use of borrowing and accounting schemes to push much of the problem into the future and a tax referral designed to fail by the very legislators who drafted its ballot title – these are all symptoms of a much deeper problem.

Dee Hock – founder and former CEO of VISA – describes this problem in his thought-provoking book *The Birth of the Chaordic Age*, as a massive institutional failure in both the public and private sectors. I simply call it a failure in governance – apparent inability of our public institutions to deal in a timely and effective manner with the problems confronting us as a nation and as a society. This is not so much a comment on the people who serve in public office as it is on the structure and organization in which they operate.

If you think about it, the primary tools of government – which have not changed much in well over a century – are law and regulation, enforcement and resource allocation. With these tools government does many things very well. It provides infrastructure that fosters private sector investment and economic activity – everything from railroads to highways to water and sewer systems to telecommunications. It enforces laws and incarcerates those who break them. It provides for the national defense and establishes health and safety regulations.

As our economic, social and environmental problems become increasingly complex, however, the limitations of this governance structure are becoming increasingly apparent. A system based on regulation and enforcement is designed to manage, rather than resolve, conflict between competing interests and therefore lacks the capacity to bring people together to actually solve problems. This is particularly true when the problems are complex and when the solutions require the participation of many people.

Let me use the issue of water quality to illustrate my point. In the 1970's the Willamette River had become polluted and then-Governor Tom McCall undertook an effort to clean it up. Thirty years ago, the water quality problem was caused primarily by point source pollution – discharge from pipes going into the river from paper mills, municipal sewage plants and other easily identifiable sources. Point source pollution lends itself to the traditional tools of government: regulation and enforcement. With these tools, McCall's effort to clean up the Willamette River was successful.

Today the water quality in the Willamette is again degraded. But today, the main source of the problem is “non-point” source pollution – in other words, runoff – not just from farms and fields, but from lawns, rooftops streets and highways. It is affected by what people put on their lawns and gardens in urban and suburban Oregon. It is affected by whether or not people wash their cars in their driveways and, if they do, whether they use biodegradable products.

Reducing non-point source pollution requires a long-term commitment to change behavior -- by hundreds of thousands of people living in the watershed – most of them living in the city. You cannot achieve that through regulation and enforcement. You cannot legislate a solution. You can only achieve it through a place-based consensus process in which people share a common stake in the problem and gain some ownership in the solution.

We are not talking about compelled behavior here. We are talking about people joining together because they care and want to make a difference. The local watershed councils – which lie at the heart of the Oregon Plan for Salmon and Watersheds – provide an example of this kind of place-based problem solving.

I submit to you that effectively addressing the issues of education, at-risk children and public safety will also require more than simply relying on the traditional tools of law, regulation, enforcement and resource allocation. Why? Because this system fosters no spirit of responsibility beyond narrow self interest. Furthermore, simply relying on “government” as we know it to solve these problems removes from the individual any sense of obligation to learn about the needs of their community. And the fact is that nowhere does our current political structure offer a place where people can come together to balance the needs of the larger community.

I am not suggesting that we start a revolution here – although Thomas Jefferson did say that “a little rebellion now and then is a good thing and as necessary in the political world as storms in the physical.” Or, as the late western writer Edward Abbey wrote: “Society is like a stew. If you don't stir it up from time to time the scum floats to the top.”

But if not a revolution, I am suggesting that there is, at the very least, a gap in our system of governance – a gap that must be filled if we hope to successfully meet the challenges that confront us. As our economic, social and environmental problems become increasingly complex, and as the consequences of failing to effectively address them become increasingly serious – we must have the wisdom and the courage to critically evaluate our current governance structure and the tools on which it has traditionally relied.

After serving 22 years in public office in Oregon – eight as President of the Senate and the last eight as governor – I am increasingly convinced that successfully addressing issues such as education, public safety, environmental stewardship and at-risk youth requires far more than just action by the legislature or the governor. It requires engaging citizens in a way that builds community and interdependence rather than conflict and separateness.

We are not talking about compelled behavior here. We are talking about involving citizens directly in the problem solving process – not just in a hearing room in Salem or through a political action committee – but in their community, in the place where they live. Where they have a tangible stake in the problem and can feel some ownership in the solution.

I believe that creating the place and the opportunity and the tools for this to occur is one of the central public policy challenges of the 21st century. And as a private citizen – just six days from now – I look forward to working with all of you to make sure this happens – at least here in Oregon.

Governor John Kitzhaber

Remarks to Gov. Bob Straub Memorial Service

December 18, 2002

Bob Straub was one of us. He cared about the people, loved a good joke, he loved to laugh. And he loved Oregon.

In my time here this afternoon, I would like to share with you two brief stories about Bob and a short reading -- all of which offer insights into who he was, what he gave us and why we love him.

Bob had a wonderful sense of perspective about things -- about what was really important. For example, while serving as governor, he regularly got into his car and drove home for lunch every day.

After eating his lunch, Bob usually lay down for a short nap -- a good policy for a governor, and I say that as a doctor. If I had a governor for a patient, this is what I would recommend.

After his nap, Bob would get into his car again and drive back to the Capitol.

Once a week, he held what today we call a "press availability," during which he met reporters for some good old-fashioned give-and-take. The trouble was that Bob's staff usually scheduled these events immediately after his nap, which meant that he often faced the press without any forewarning of what they might ask.

More than once, the reporters caught him totally cold on some late-breaking issue or crisis, simply because the governor hadn't yet received a briefing. And when this happened, he handled himself with a grace and humility that can serve as an example to all of us. It did not diminish him in anyone's eyes when he simply confessed -- as he did -- that he didn't know about something. He always promised to get to the bottom of the matter -- and he always did.

But he never rescheduled his naps.

I never saw Bob Straub flustered. He had a remarkable ability to draw on his deep reservoir of humor at just the right time and in just the right way. I witnessed this side of Bob on one of the first occasions that I met him when he was running for reelection in 1978 -- at the same time I was making my first run for the Legislature.

He was campaigning in Roseburg where one of the burning issues of the day involved the Mount Nebo goats. Mount Nebo is a big hill just west of I-5 and just south of the Roseburg exit. Mount Nebo was the home to a roving band of feral goats and the local media used them to forecast the weather. They would look out at Mount Nebo and if the goats were on top the weather was going to be fair. If they migrated down the slope, rain was coming.

The issue involved the fact that the goats enjoyed crossing the southbound lane of I-5 to graze on the grass in the median creating a potential traffic problem. Some genius on Bob's re-election campaign came up with the idea of building a fence around the mountain to keep the goats off the freeway. So, when the fence was finished -- timed, of course, for maximum political impact -- Bob arrived amidst much fanfare and media attention -- to dedicate his goat fence.

As he was delivering his stirring remarks about the fence and its monumental contribution to public safety, a goat

appeared and then another and wandered thoughtfully across the freeway and into the grass in the median. Bob looked up from his notes and -- without missing a beat -- said, "Looks like rain."

Bob Straub did not stop giving of himself when he left office. He and Pat worked hard on behalf of people with disabilities and they contributed their time and energy to an array of charities and good causes. They gave a beautiful piece of property that they owned for a city part in Salem.

They never stopped advocating for the least powerful and least influential among us -- for the poor and the infirm, for the handicapped and the disabled. Both in and out of office, Governor Bob Straub served as an example of what it means to be an Oregonian -- a man who cared about the land, his fellow human beings and the future of his state.

I am proud to have known him and honored to have followed in his footsteps.

I want to close my remarks today with a brief reading which, to me, describes Bob -- his enthusiasm for life, his wonder and his heart. This is from *Wind in the Willows* by Kenneth Grahame and is the passage describing the adventures of the Mole as he emerged from his burrow into the bright spring sunlight.

He thought his happiness was complete when, as he meandered aimlessly along, suddenly he stood by the edge of a full-fed river. Never in his life had he seen a river before - this sleek, sinuous, full-bodied animal, chasing and chuckling, gripping things with a gurgle and leaving them with a laugh, to fling itself on fresh playmates that shook themselves free, and were caught and held again. All was a-shake and a-shiver - glints and gleams and sparkles, rustle and swirl, chatter and bubble. The Mole was bewitched, entranced, fascinated. By the side of the river he trotted as one trots, when very small, by the side of a man who holds one spellbound by exciting stories; and when tired at last, he sat on the bank, while the river still chattered on to him, a babbling procession of the best stories in the world, sent from the heart of the earth to be told at last to the insatiable sea."

Thank you Bob -- for all you gave us, for the legacy and the memories and for that part of you which lies always in our hearts.

Governor John Kitzhaber

American College of Physicians

Eugene, Oregon

November 15, 2002

I would like to talk to you today about leadership – in particular, about the desperate need for physician leadership in changing the health care system in which we practice. Why should you care? You should care because our current system is unsustainable -- both financially and in terms of the health of the nation. Furthermore, it has brought about a widespread demoralization among physicians and a loss of our sense of mission.

And that is going to continue unless we are able to motivate physicians to reengage in the debate over the future of our health care system; to embrace a medical activism that is driven not by money -- but by a commitment to healing and by an outrage at a system that has become obsessed with the delivery of health care as an economic commodity at the expense of the pursuit of health as a social value.

I appreciate the difficulty in motivating this kind of activism in a profession that feels frustrated and disempowered by the "business" of medicine; and by an oppressive regulatory environment in which idealism has been stifled and primary care physicians, in particular, are asking themselves: "How much is my work worth? Does anybody care?"

Yet, that is precisely the task I shall undertake today. Over the past 24 years I have had the great good fortune to have practiced emergency medicine and to have served both in the legislature and as a governor.

My perspective on the health care system – and on leadership -- have been influenced by these experiences and I have come to appreciate, in a very personal way, the central leadership role that physicians must assume if we are to reclaim the American health care system and restore the mission to medicine.

The role of a leader, in my view, is to challenge people – not to please them or to make them comfortable. The role of leadership is not so much about solving problems for people as it is about helping to identify problems and motivating people to engage in finding solutions themselves.

Leadership requires that you be willing to take risks and that you be willing to lose. Indeed, one of the central problems with American politics today is that for many there is no issue or principle for which they are willing to lose an election.

You have an opportunity to change that -- if you are willing to provide the leadership necessary to challenge the very underpinnings of the system we know today.

Some of my conclusions -- and some of the proposals I will offer today -- are controversial and will cut against the grain of conventional political thinking, especially in our nation's capitol. But, to a large extent, it is conventional political thinking that has led to our current sorry state of affairs.

So I will consider my talk today to have been a success if you leave here at least a little bit unsettled; willing to rethink some of the aspects of our current system which most of us have come to take for granted; and willing to entertain the possibility of becoming a key part of a coalition committed to properly framing the looming debate over the future of the U.S. health care system.

And what are some of the things we take for granted? Let me give you just four examples today to illustrate my point:

cost shifting, Medicare and Medicaid, implicit subsidies and getting a health benefit from our health care.

Let's start with the problem of cost shifting, adverse selection and what I call "disproportionate sacrifice." Adverse selection is the widespread practice in the insurance industry of trying to avoid those individuals who cannot afford to pay while competing for those who can. Disproportionate sacrifice is the fact that some providers see more poor people than others. At the root of these problems lies the fact that we have no explicit public policy to finance care for the poor. That is, we lack of a true safety net.

Consider the fact that both public and private health care financing programs operate in the same undifferentiated competitive economic market system. For the poor to gain access in such a system they must have a way to pay for their care. But many citizens cannot afford to pay and often the reimbursement available for those who are eligible for public programs is well below that offered through private insurance.

In such a system -- with no clearly delineated responsibility concerning either who pays for the health care needs of the poor -- or who provides that care -- the market is left to make this determination. But economic markets are designed to turn a profit, not to foster social responsibility. As a consequence, nobody competes for the poor resulting in adverse selection and cost shifting.

The ability to cost shift serves as the pressure valve in the system. It also reduces accountability. Here is how it works. As we all know health care in America is not free. There is a cost associated with it - a growing cost - and most people rely on some "third party" to help cover that cost. The major third party payers in today's health care system are government (Medicare and Medicaid) and businesses (employment based coverage). Between these public and private arms of our health care financing system is a "coverage gap" representing those without any health insurance coverage.

The people in the gap have no payment source and many of them do not get primary or preventive care at all - or at best get it sporadically. When they get sick enough many use the emergency room and the costs incurred by those in the gap are shifted to the third party payers through incremental increases in their premiums or their bills.

Thus, we have historically achieved a form of "universal access" through implicit subsidies -- paid by government and employers -- to cover the cost of caring for the poor. However, because both third party payers face very real fiscal limits, this arrangement only works when costs are relatively low. Thus, when costs rise beyond a certain point, third party payers respond by trying to shift cost and economic risk somewhere else in the system. The operative word here is shift.

States -- which have the primary responsibility to care for the poor -- shift cost in two ways. First, they change income eligibility to reduce the number of people covered by Medicaid. This shifts cost to individuals who have no way to absorb it and amounts to implicit rationing. States also cut reimbursement rates that shifts cost to providers and shows up as uncompensated care. At some point, providers stop seeing -- or try to avoid seeing -- Medicaid patients which constitutes another form of implicit rationing.

Employers use essentially the same cost-shifting strategies -- dropping people from coverage and reducing provider reimbursement rates through discounted managed care contracts.

The result is a growing number of people in the coverage gap - many of whom will eventually use the emergency room to access the health care system, repeating the cycle. In short, our current system manages increases in cost by reducing access -- by saying "no" to coverage.

This cost shifting dynamic -- and the competitive environment in which it exists -- results in huge inequities in the amount of cost borne by different providers. That is, some providers care for more poor people than others. This "disproportional sacrifice" may be a matter of choice -- some providers have a stronger sense of "mission" than others -- or it may be the result of "geographic selection" based on where a given hospital or medical practice is located physically.

A market system with no one explicitly responsible for paying for the health care for the poor -- and with reimbursement in government sponsored programs less than that offered by commercial insurance -- encourages selection and increases

the “disproportionate sacrifice.”

This situation creates division and conflict among providers. Physicians are pitted against each other and against the hospitals. There is no sense of community and no sense of common purpose. No one has the capacity or the designated responsibility to fill the gaps in the system and what gets left out are those things that providers do not get paid for or for which they gain no competitive advantage.

Next is the problem posed by Medicare and Medicaid which have been accepted parts of the health care landscape for the past 37 years. Prior efforts to reform the system have taken place around these two programs with no serious challenge to the basic premises on which they are built. But unless we are willing to take this head on, we will severely restrict our options for both financing and structural change and almost certainly guarantee failure and a continuation of the status quo. Let us explore why.

In 1965 poverty among the elderly was twice that of the general population and older Americans faced a very real financial barrier in terms of timely access to health care. Medicare was enacted to address this problem. It is an entitlement program that begins at retirement, regardless of the financial means of the retiree and it is financed with a payroll tax imposed on all those who are working. Medicare provides coverage for acute care but not for prescription drugs or for long term care.

While all of this made sense in 1965, the world has changed dramatically since then -- Medicare has not. As a consequence, the policies that underlie this program are impossible to justify given the realities of today.

First, Medicare represents a huge intergenerational transfer of resources from the young to the old, from people who are working to people who are retired. Whereas 40 years ago the elderly represented one of the poorest segments of our society, today they represent one of the richest segments. Because Medicare is not means tested, however, retirees are entitled to publicly financed health care paid for, in part, by workers, many of whom cannot afford health care for themselves and their families.

Second, as health care costs continue to rise -- and as the number of retirees increases relative to the number of workers -- the funding stream for Medicare will become unsustainable.

Finally, while Medicare covers acute care (much of which is spent, often futilely, in the last few months of life) it covers neither prescription drugs -- the mainstay of managing chronic conditions -- nor long term care, both of which are necessary for older citizens to remain mobile, active and independent.

Medicaid, also enacted in 1965, was created to improve financial access to health care for certain categories of poor citizens. These categories, established by congress, include poor families with dependent children who are on welfare; the blind and disabled; the frail elderly in need of long-term care; and certain categories of pregnant women.

States, which administer the program, receive federal matching dollars up to a three-to-one ratio for each state dollar invested. The matching dollars, however, come with a host of federal regulations pertaining to benefit levels and eligibility. What limited flexibility states have to manage the cost of Medicaid -- short of simply dropping optional services like prescription drugs -- lies in determining the income eligibility level for the program and in setting provider reimbursement rates.

Medicaid -- like Medicare -- was enacted nearly 40 years ago and also reflects policies that are difficult to justify today. First, while Medicare provides an entitlement to publicly financed health care for all citizens over the age of 65, there is no such entitlement for the poor. Eligibility for Medicaid is based on “category,” not on financial need and thus many poor citizens are ineligible even though they may be deeply impoverished. In other words, our system makes a distinction between the “deserving poor” -- those who fit into a category; and the “undeserving poor” -- those who don’t. As a consequence, we lack a true safety net.

Second, inflexible federal regulations surrounding eligibility and benefit design force states into one-size-fits-all benefit packages and all-or-nothing eligibility decisions. When costs increase states have only two management tools available: (1) changing income eligibility requirements, and (2) cutting provider reimbursement rates. As we have seen, both

actions simply shift cost to individuals and providers creating further barriers to access.

The third problem involves the enormous implicit subsidies that help finance health care for some citizens at the expense of other citizens. The two most egregious implicit subsidies are found in Medicare and in the deductibility of health care costs from taxable income.

Since Medicare is not means tested, many financially secure retirees enjoy publicly subsidized health care. Furthermore, because Medicare is financed primarily by those who are working, we are confronted by the fact that poor working families without health insurance subsidize health care for wealthy retirees.

Furthermore, the current federal tax code also contains an implicit subsidy by which an employer can deduct -- from taxable income tax -- contributions made to cover employee health care costs. In addition, this contribution is not counted as part of the employee's taxable income -- amounting to a public subsidy for those with employment-based health insurance coverage. Yet all those paying income taxes contribute to this subsidy -- including those without workplace-based coverage who cannot afford health insurance for themselves and their families.

The fourth problem revolves around the question of what benefit we are actually getting for the dollars we spend on health care. The key word here is "benefit".

Today, a health care benefit is generally viewed as just another economic commodity. That is, something that is "covered" or paid for (usually by someone else). In terms of collective bargaining, for example, a benefit is viewed as an economic commodity ? just like wages, vacation time, or retirement.

To reform the health care system, however, we must take a broader view by putting "benefits" in the context of what we are trying to achieve -- that is, in the context of the objective of the health care system. I would argue that the objective of the health care system is health, rather than simply giving people access to health care. In other words, health care is a means to an end not an end in itself and has no intrinsic value outside its relationship to health - except as an economic commodity.

If we can agree that a health care benefit is "beneficial" only to the extent that it actually has value in terms of producing health then there is a lot we are spending money on now which would not qualify as a benefit. Let me offer two examples.

The first example involves prescription drugs which constitute the single fastest growing part of the health care budget. Although physicians can control the utilization of these drugs through what they prescribe, they are influenced by the massive direct advertising efforts of the pharmaceutical industry which create a market demand for a particular brand name with no clinical context in terms of other less expensive drugs which might be just as effective -- or even more effective.

A case in point: recently a young, member of my staff had some wrist pain and went to see his doctor. His doctor gave him a sample of Celebrex and a prescription for the same - to fill if the sample helped his wrist.

Now there is no evidence whatsoever to suggest that Celebrex (at \$75 per month) is any more effective than across the counter ibuprofen (at \$7 per month) in an otherwise healthy caucasian male with no history of gastrointestinal problems. But the difference here is \$68 dollars -- which did not provide a meaningful health benefit but contributed to the escalation in health care cost.

To return to our collective bargaining example, that \$68 is not worth bargaining your wages away for if you are an employee -- and it is not worth paying for if you are an employer.

This example illustrates the fact that different physicians may treat the same disease or injury in very different ways in terms of the utilization of resources, yet these variations may have no clear relationship to improved clinical outcomes.

Another example of the wide variation in physician practice patterns and utilization rates can be found in what is known as the "age adjusted per capita cost" in Medicare, or AAPCC. This represents the average amount spent each year per

Medicare beneficiary on a county-by-county basis. For example, the AAPCC in Dade County, Florida is \$834 while in Hennepin, County, Minnesota it is \$552. In the Bronx, New York, the AAPCC is \$811 while in Multnomah County, Oregon it is just over \$550. Yet, these huge variations in resource utilization are not correlated with improved outcomes. That is, seniors in Minnesota are just as healthy as seniors in Florida, but seniors in Florida are receiving nearly twice as much health care.

Now, I submit that any debate over the future of the U.S. health care system which sidesteps these issues, is not a serious debate at all – but one driven by polls and politics rather than by substance and purpose. Without taking these issues head on, the debate will almost certainly end in failure, resulting in a continuation of the status quo. And who could possibly defend the status quo?

To bring this point home, suppose we wanted to explicitly adopt the policy reflected by our current system and, to do so, we introduce it as a bill in the upcoming session of congress. Let's call it the HEALTH CARE EQUITY AND EMPOWERMENT ACT OF 2003. It might read something like this:

Preamble

There shall be no explicit policy objective adopted to guide the allocation of public health care resources.

Section I

(1) categories shall be established to differentiate between the "deserving poor" and the "undeserving poor."

(a) the "deserving poor" shall include women who are pregnant, families with dependent children, and those who are blind or disabled. Citizens in these categories shall be provided with publicly financed health care.

(b) the "undeserving poor" shall include poor women without children who are not pregnant and poor men. These citizens shall be denied publicly financed health care.

Section II

(1) all those who are over 65 years old shall be entitled to publicly financed health care, regardless of their income.

(2) employed citizens under the age of 65, regardless of whether they can afford health care for themselves and their families, shall be required to pay a portion of their taxes to purchase health care for wealthy citizens over the age of 65.

Section III

(1) all those with employment-based health insurance shall receive a public subsidy to help cover the cost.

(2) all citizens, including those who cannot afford health insurance, shall be required to subsidize the health care of those with employment-based coverage.

Section IV

(1) the criteria of financial need and ability to pay shall not be used to determine eligibility for a public subsidy.

(2) the relative effectiveness of various medical interventions in producing health shall not be considered in deciding which services will be paid for by public resources.

I doubt that anyone in this room – let alone in the United States Congress – could openly support the policy embraced by the HEALTH CARE EQUITY AND EMPOWERMENT ACT OF 2003. Yet these are exactly the policies that underlie the U.S. health care system. And these are exactly the policies that must be challenged if health care reform is to be driven by substance rather than by the polls.

So, in the interest of precipitating such a challenge – in the interest of goring a few sacred cows -- let me suggest four steps we might consider taking. These proposals – which are drawn, in part, from the Oregon Health Assessment Project – are intended to be provocative. But as the late American novelist Edward Abby used to say: “Society is like a stew. If you don't stir it up now and again, the scum floats to the top.”

First, let's explicitly segment the health care market to create three tiers: a safety net for those who do not have the ability to pay for their own care; a community-rated managed care tier; and a more self-directed and individually underwritten tier.

“We can't do that!” You say. We don't believe in different tiers in the American health care system. Well, guess what?

We've all endorsed multiple tiers for almost forty years. First, you've got poor people who aren't eligible for Medicaid. That's one tier. Then you have Medicaid for the deserving poor – and Medicare. That's two more tiers. And then you have a tier for those with employment-based coverage and another for people who can afford just about anything they want. We've got lots of tiers. I am simply saying let's be honest about it. Let's establish the tiers explicitly and base them on a policy we're willing to defend.

The safety net, in some respects, may be the most important tier because cost shifting, adverse selection and disproportionate sacrifice are all about how not to take care of the poor. So the safety net needs to be separate and distinct from the competitive economic market environment in which the other two tiers will continue to operate. Why? Because the safety net will not be a competitive model but rather a community-based model in which health care is viewed, not as an economic commodity, but rather as a means to achieve an important common social value – health.

All providers in a given community will participate in the safety net on an equal basis. That is, the cost and risk of providing this care will be shared equitably to reduce the problem of “disproportionate sacrifice”.

A solid evidence-based benefit will be offered under the safety net, choice of providers will more limited than in the other two tiers and care will be vigorously managed. This tier will also be explicitly financed with all members of society sharing in the cost – a point I will return to in a moment.

Segmenting the health care market will also give individuals both more choice and more responsibility. The community-based structure of the safety net will move away from our current centralized and paternalistic system to one that puts more resources and responsibility in the hands of the community. Both the community-rated tier and the individually underwritten tier will give individuals progressively more choice, responsibility and financial risk.

Next we will eliminate Medicare and Medicaid as we know them today and redesign our system for the poor and the elderly – who, by the way, are not necessarily the same.

First, we will eliminate categorical eligibility and make all citizens eligible for safety net -- including those currently on Medicare. And while all citizens will contribute to financing the safety net, those with more disposable income can choose to enroll in either the community-rated managed care tier or the individually underwritten tier.

Next, we will take the resources currently going to finance Medicare and redirect them. Why? First, because the financing scheme that supports Medicare today, is not sustainable. Second, because – contrary to the policy implicit in the program – people do not automatically become impoverished on the day they turn 65. Many retirees are perfectly capable of contributing more to the cost of their own health care and our policy should reflect that.

So some of these resources will be redirected to support the safety net. Since Medicare is financed through a payroll tax, redirecting some of this revenue will give the safety net the broad and equitable base of support it needs.

Second, an evidence-based supplemental benefit for seniors will be created and financed with the remainder of the resources from the payroll tax and by beneficiary premiums on a sliding scale based on ability to pay. Unlike the current Medicare benefit, this supplemental benefit will be specifically designed to address the needs of an aging population – including prescription drugs and long-term care.

Our next step will be to make the public subsidies in the current system explicit and, again, to base them on a defensible policy. Since we have already made the subsidy in Medicare explicit and redirected it to support the safety net and a supplemental benefit for seniors, we are left with the tax subsidy. We will make this subsidy explicit as well and then limit it to the cost of the basic package offered through the safety net.

Finally, we will establish a well-financed, publicly funded center which -- working closely with providers and relying on peer-reviewed research -- will develop an impressive body of best practices based on scientific evidence. This research will form the basis for both the safety net benefit and the supplemental benefit for the elderly. Efforts will be made to use this information throughout the health care system and physicians who practice in accordance with this evidence-based medicine will receive some indemnification for medical liability.

Now, if we make a committed effort to take just these four steps, it will – at the very least -- force the national debate to focus on the real underlying problems with our health care system. To force such a debate, however, will require the active participation of at least four key constituencies: physicians, the business community, organized labor, and the AARP.

Without this critical mass the political establishment in our nation's capitol is simply not going to take this on and we will see a continuation of the hollow, partisan debate that leads only to the next election, and not to a meaningful resolution of this pressing problem.

Let's be clear. The real challenge facing the United States congress is not passing a prescription drug benefit for those on Medicare. The challenge is to ask – and answer -- questions like:

- Why do these drugs cost so much in the first place?
- What health benefit are we getting for this enormous expenditure?
- Why has the congress has never demanded an accounting of why we should be paying so much more for Medicare in Florida and New York than in Oregon and Minnesota?

Our challenge is not to pass a “Bill of Rights” for people who are already enrolled in managed care plans.

- Our challenge is to ensure a floor of basic primary and preventive care for all Americans – including the over 40 million Americans who have no health insurance coverage at all.
- Our challenge is to base eligibility for a public subsidy on financial need, not on categories.
- Our challenge is to make the public subsidies in the system explicit and to base them on a policy we are willing to defend.

I want to make it clear that both Medicare and Medicaid have been enormously important programs which have benefited millions of Americans. It is not my purpose to precipitate political warfare between the young and the old, between those who are working and those who are retired, or between the rich and the poor. I would submit to you that the current system has already created such a conflict.

What I am proposing is that we end it – that we simply have the courage to view Medicare and Medicaid through the lens of the 21st Century and to openly acknowledge that these programs reflect a set of realities that no longer exists. I believe that by doing so we can actually improve care for the elderly and care for the young. We can maintain the health of our workforce and the health of our retired population. These are not mutually exclusive propositions – but the current arrangement forces us to view them that way.

To paraphrase G.K Chesterson – it isn't that we can't see the solution; it's that we can't see the problem. Having the honesty and the courage to call into question the basic inequities and contradictions in our current health care system – the things that we are not willing to openly defend – that is the challenge of medical leadership today.

Is it going to be easy? Absolutely not. It is going to be difficult; it is going to be uncomfortable; and its going to require that those of us in the medical profession start leading instead of just reacting. I appreciate that leadership is often seen as dangerous work. And it is. Leadership involves change. And change puts you in conflict with others. It means standing up and pushing back.

But even with all of its downsides, I submit to you that leadership beats simply accepting the status quo. It is far better than keeping our heads down and allowing ourselves to become victims. Because we are not victims. To be a victim is to acknowledge that there is nothing we can do to change our circumstances.

And I simply refuse to accept that. It is contrary to my entire life experience. After 24 often frustrating years in the political process, nothing -- absolutely nothing -- has happened to shake my faith in the ability of individuals, acting

from conviction and principle, to change the world in which we live.

And I can think of no organization better positioned than yours to reengage the medical profession in the coming debate over the American health care system -- not as apologists for the status quo, but as architects of a new future. As William Jennings Bryan pointed out: "Destiny is not a matter of chance, it is a matter of choice; it is not a thing to be waited for, it is a thing to be achieved."

I am committed to carrying this fight forward. I am here today to ask for your help.

Governor John Kitzhaber

Oregon Drug Conference

Portland, Oregon

October 11-12, 2002

Welcome to Oregon. And thank you to all of our international guests and faculty for making the journey to our great state and for each and every one of you for helping to make this conference such a success.

I would particularly like to thank the AARP and Bill Novelli for the support they have given to this conference – and my good friend Dan Fox, President of the Milbank Memorial Fund for the support of the Fund in making this gathering a reality.

Like many of you, I have been laboring in the vineyard of health policy for a long time. I cannot shake the feeling that we are on the verge of a day of reckoning in the U.S. health care system. Increasing costs and a struggling economy are exposing some of the worst fundamental flaws in our system – are beginning to force us to think seriously about the values that should guide it.

Will we continue as a nation to chase the dream of a fountain of youth by spending billions on more and more esoteric health care research? – or will we begin to use some of our considerable resources to better evaluate the benefit we receive from the services that are available today? Will we continue to allow the coverage differential between rich and poor to widen? – or will we find ways to make those services that are truly important to improving health more equitably available?

It is good to know that others have been leading the way in developing the research base required for us to better know what really works in our health care system and what does not. The Cochrane Collaboration is a great illustration of what is possible, and our efforts to bring logic to our drug purchases here in Oregon would have been much more difficult if they had not already begun the kind of research that gives us the best information for making these decisions.

From my short exposure to the collaboration's work, it is clear to me that we need both more of the analysis it does, and here in the U.S., we need to do more to support the kind of infrastructure that makes their work possible.

But I am getting ahead of myself. Let's look at the problem posed by the escalating cost of prescription drugs ? and why we should care. We should care, quite simply, because our current health care system responds to increased costs from any cause by reducing access. Let's take a moment to examine this dynamic.

As we all know health care in America is not free. There is a cost associated with it ? a growing cost ? and most people rely on some "third party" to help cover that cost. The major third party payers in today's health care system are government (Medicare and Medicaid) and businesses (employment based coverage). Between these public and private arms of our health care financing system is a "coverage cap" representing those without any health insurance coverage.

The people in the gap have no payment source and many of them do not get primary or preventive care at all ? or at best get it sporadically. When they get sick enough many use the emergency room and the costs incurred by those in the gap are shifted to the third party payers through incremental increases in their premiums or their bills.

Thus, we have historically achieved a form of "universal access" through implicit subsidies -- paid by government and employers -- to cover the cost of caring for the poor. However, because both third party payers face very real fiscal

limits, this arrangement only works when costs are relatively low. Thus, when costs rise beyond a certain point, third party payers respond by trying to shift cost and economic risk somewhere else in the system.

The operative word here is shift. The public sector does it by reducing income eligibility levels to reduce the number of people covered and by cutting provider reimbursement rates. The private sector does it by dropping people from coverage and by increasing out of pocket expenses for employees. The result is a growing number of people in the coverage gap ? many of whom will eventually use the emergency room to access the health care system, repeating the cycle.

In short, our current system manages increases in cost by reducing access. And since prescription drugs constitute one of the fastest growing cost in the health care system, they contribute to the access problem being experienced by an growing number of Americans. Let's take a moment and look at the magnitude of the cost increases we are talking about.

In the Oregon Health Plan for example the cost of prescription drugs increased by over 60% between the 1999-2001 biennium and the 2001-2003 biennium. We are seeing similar trends in the private sector as well. For example, until recently, prescription drugs were the major reason for private insurance premium increase. And in the commercial insurance available to high risk patients through Oregon's Medical Insurance Pool, drug costs now exceed physician costs and will soon exceed hospital costs. Cost increases of this magnitude are clearly unsustainable.

These dramatic increases are behind the politically popular effort by both parties to add a prescription drug benefit to Medicare. But, in my view, this debate is largely a hollow one because instead of simply asking how to finance this huge cost increase, we should be asking "why do these drugs cost so much in the first place?" and "what are we getting in terms of health?"

Let's start with the question of "Why?" The dramatic cost increase in prescription drugs can be traced to the 1997 decision by the Food and Drug Administration to repeal the ban on direct consumer advertising by the drug companies. As a consequence, the advertising budgets for the major pharmaceutical companies increased astronomically.

Last year for example, Merck, spent \$160 million dollars to advertise Vioxx ? which is \$35 million more than PepsiCo spent advertising Pepsi and \$14 million dollars more than Anheuser-Busch spent promoting Budweiser. In fact every one of today's seven most heavily advertised drugs is promoted by an advertising budget, each of which exceeds \$125 million dollars ? more than Nike's annual budget for promoting its athletic shoes.

Consumers – and physicians, to some extent -- are being seduced by this massive direct advertising unleashed by the pharmaceutical companies because it creates a market demand without a clinical context. That is, the advertising creates a market demand for a particular brand name drug without regard to the fact that there may be other less expensive drugs available which are equally or more effective.

At the same time physicians ? when confronted by patients who want a particular drug they've seen advertised on television ? have little objective research information on which to base their clinical decisions. In fact, the "research" they get is often marketing research produced by the drug companies and brought to them by their friendly pharmaceutical representatives -- who fill their cupboards with samples and take their staff out to NBA games.

But there is no questioning the fact that heavy direct to consumer advertising – coupled with little objective information by which to compare these new drugs with other drugs designed to treat the same condition – is an effective combination for the pharmaceutical industry. Annual cost increases for prescription drugs which were running 10-11% per year between 1995 and 1997 ? jumped to 13.4% in 1998; 16.9% in 1999; and 17.4% in 2000.

And this brings us to the question of what are we getting in terms of health. If we were getting a health benefit commensurate with this enormous increase in cost it might be justified -- but the fact is that we are not. And the key work here is "benefit". Today, "benefit" has become a word we use to generally mean something of economic value. That is, something that is "covered" or paid for (usually by someone else). In terms of collective bargaining, for example, a benefit is viewed as an economic commodity ? just like wages, vacation time, or retirement.

If we hope to control the rising cost of health care without sacrificing quality or access, we need to view a benefit as more than just an economic commodity. We need to place “benefits” in the context of what we are trying to achieve – that is, in the context of the objective of the health care system.

I would argue that the objective of the health care system is health, rather than simply giving people access to health care. In other words, health care is a means to an end not an end in itself and has no intrinsic value outside its relationship to health ? except as an economic commodity.

If we can agree that a health care benefit is “beneficial” only to the extent that it actually has value in terms of producing health then there is a lot we are spending money on now which would not qualify as a benefit. Let me give you an example.

Recently, a young, otherwise healthy member of my staff had some wrist pain and went to see his doctor. His doctor gave him a sample of Celebrex and a prescription for the same ? to fill if the sample helped his wrist.

Now there is no evidence, whatsoever to suggest that Celebrex (at \$75 per month) is any more effective than Ibuprofen (at \$7 per month) in an otherwise healthy Caucasian male with no history of gastrointestinal problems. The difference here is \$68 dollars -- which did not provide a meaningful health benefit but contributed to the escalation in health care cost.

Getting at this problem requires at least two things. First, we need good objective evidence-based analysis of the relative clinical effectiveness of prescription drugs. Second, physicians must use this information to guide their prescription writing practices and purchasers must use it to guide what they pay for.

Let’s start with the need for good objective evidence-based analysis of prescription drugs. To address this problem, the 2001 Oregon legislature passed SB 819, creating the “Practitioner-Managed Prescription Drug Program” which establishes a formulary for Medicaid (the Oregon Health Plan) through an open, public process conducted by the Oregon Health Resources Commission. The Commission was created by statute in 1991 and charged with developing a medical technology program to address the introduction, diffusion and utilization of medical technologies.

In the process established by SB 819, various classes of drugs are evaluated in terms of their relative clinical effectiveness using peer reviewed research. To be the preferred drug for the Oregon Health Plan, the drug must be as effective as any other drug in the class, but more cost effective.

The first four “classes” of drugs to be evaluated were:

- The non- steroidal anti-inflammatories – (Ibuprofen, Vioxx, Celebrex);
- The long acting opiate analgesics -- Oxycontin, Duragesic, morphine sulphate, methadone;
- The proton pump inhibitors for treating heartburn/acid reflux – Nexium, Prilosec, Protonix, Prevacid; and
- The statins for lowering cholesterol -- Lipitor, lovastatin (Mevacor), Zocor, Pravachol.

The evaluation of these four classes of drugs was started in September 2001 and completed in June of 2002. Once the Commission had evaluated the drugs based on relative clinical effectiveness, the information was given to the Office of Medical Assistance Programs (OMAP) which administers the Oregon Health Plan. OMAP then reviewed the cost information and selected the following “preferred drugs” in each of the first four classes:

The non-steroidal anti-inflammatories – Naproxen, ibuprofen, piroxican, salsalate

The long acting opiate analgesics – morphine sulfate LA, fentanyl

The proton pump inhibitors –Protonix, Prevacid, Aciphex

The statins – lovastatin, (Mevacor), Pravachol

You will notice that there is more than one preferred drug for each class. This is because we used the “Average Wholesale Price” (AWP) to determine the lowest cost drug. We felt that any drug that was equally effective and within five percent of the AWP deserved to be on the list.

We recognize that this is not a perfect system and represents a work in progress on which we can improve. The biggest problem we have is the fact that the state can never tell what it is paying for a given drug until months later when all of the various rebates have been calculated. It is also important to recognize that it is against federal law to make this pricing information public. Can you imagine how difficult it would be to purchase a car and not know how much you are actually paying until months later? Yet, that is exactly the kind of dysfunctional market in which prescription drugs are sold – a point I will elaborate on in a moment.

You will also notice that the lowest cost opiate analgesic – methadone – is not on the preferred list. This is because it is more difficult to manage than morphine and few practitioners are familiar to using it as an analgesic.

The Health Resources Commission is currently evaluating three additional classes of drugs: angiotension converting enzyme (ACE) inhibitors for treating hypertension, heart failure and kidney disease; triptans used to treat migraines; and estrogens used for hormone replacement. We expect this review to be completed within the next month.

Following the completion of these evaluations, the Commission is scheduled to begin work on five additional drug classes: beta blockers; calcium channel blockers; oral hypoglycemics; muscle relaxants; and drugs used for the treatment of urinary incontinence. We hope to have these evaluations done by next February or March.

It is worth pointing out that the passage of SB 819 in 2001 and the subsequent work of the Health Resources Commission have not been without controversy. In fact, the pharmaceutical industry – acting through its lobbying organization Pharma -- has vigorously opposed the entire effort from the start.

During our last legislative session Pharma hired 24 lobbyists – more than one for every four legislators -- to fight our legislation. In an attempt to mobilize opposition, they terrified the parents of children with bipolar disorder and schizophrenia by claiming that our bill would severely restrict access to newer mental health medications – even though mental health drugs are expressly exempt from the provisions of SB 819.

Pharma’s lobbying efforts were so strong that they captured the legislative leadership who prevented the bill from ever receiving a public hearing. Only because I promised to veto the budget for the Department of Human Services -- forcing the legislature to come back into special session -- did the bill finally reach the floor where it passed comfortably.

On the surface, the concept of peer-reviewed research on effectiveness to guide the use of prescription drugs seems reasonable. Why then does it strike such terror into the heart of the pharmaceutical industry? The reason is quite simple. What we have done in Oregon will force the drug companies to compete on the basis of cost for two drugs which are clinically equivalent.

Of course, that is exactly how Ford competes with Chevrolet ? and how Intel competes with Hewlett Packard. What a novel idea ? a functional marketplace. But, creating a functional market is exactly what the pharmaceutical companies are resisting. Their opposition to evidence-based analysis for prescription drugs is based on their fear of open head-to-head competition.

Right now prescription drugs operate in what is called an “asymmetric market” ? one in which the industry has more information than the consumer. Have you ever wondered why there are so few head-to-head comparisons between different prescription drugs designed to treat the same condition? There are two reasons. First, in order to gain FDA approval a new drug must be demonstrated to be more effective than a placebo -- not more effective than other drugs on the market to treat the same condition. Second, it is fair to say that the pharmaceutical industry has not embraced efforts to get federal appropriations to support research on head-to-head comparisons.

Can you imagine how difficult it would be for consumers to make decisions like purchasing cars or other products without the Consumer’s Report which provides the objective information needed to compare products. Such information is virtually absent from the prescription drug market. So, essentially, what we are doing here in Oregon is to create the

equivalent of Consumer's Report for prescription drugs.

Armed with this information consumers can make informed choices about which prescription medication to ask for. As educated, smart consumers they can ask their doctors to prescribe the most effective medication which, in many cases, may cost five, ten, or even fifty times less than the one being advertised on television. By the same token, physicians will now be armed with the kind of information necessary to make clinical choices based on both effectiveness and cost.

This has enormous implications for access. For example, if the cost of prescription drugs grew at the same rate as the consumer price index ? only as fast as the prices of other goods and services ? the Oregon Health Plan would save \$50 million dollars over the course of a biennium, enough money to provide coverage for an additional 18,000 to 20,000 thousand Oregonians.

As you can see, we are making good progress in terms of developing a solid foundation of objective evidence-based information on the relative clinical effectiveness of prescription drugs. The next question is whether or not this information will be used.

It is important to point out that our Practitioner Managed Prescription Drug Plan is just that ? a program in which clinical decisions rest firmly in the hands of practitioners. For example, a physician can make an exception and use other than the preferred drug if, in his or her clinical judgment, it is indicated. We have in no way substituted government rules for sound medical judgment. If the physician has a clinical reason for specifying a more expensive drug, the state will honor that decision and pay for that prescription under the Oregon Health Plan.

Nonetheless, we believe that physicians will, in fact, use the information being generated by the Health Resources Commission. While still preliminary, the results of the first two months of utilization data for long-acting opiates and the proton pump inhibitors are quite promising.

With a very user friendly substitution policy that allows the treating physician to go off of the formulary by writing "do not substitute" or simply "DNS" on the face of the prescription, we are still seeing a significant change in market share in the Oregon Health Plan.

Oxycontin prescriptions have dropped by 28%, while prescriptions for morphine sulfate LA (the preferred generic) have increased by 20%. For the proton pump inhibitors, the results are even more encouraging. Prescriptions for Prilosec and Nexium have dropped by 37% and 28% respectively while prescriptions for the preferred drug Protonix have increased by 21%.

While these results obviously cannot be generalized to the medical community in every state, I am proud to say that my colleagues here in Oregon, when given good objective research on which to base their use of prescription drugs, have responded by switching to equally effective but less expensive medications.

On the consumer side, we have had enormous support from the AARP and I again thank Mr. Novelli both for participating in this conference and for lending us so much help over the past year. As you may know, the national AARP has posted the information we are generating on their web site www.aarp.org/or and then click on the Drug Smart button.

Although this particular formulary applies only to the Oregon Health Plan, it is our hope that others in Oregon, and throughout the nation -- in both the public and private sectors -- will benefit from the information being produced by the Health Resources Commission. By simply logging on to these websites, someone on an Oregon Blue Cross policy in Klamath Falls, on Medicare in Florida or covered by an HMO Wichita, Kansas can access the evidence-based information which we are generating.

Using equally or more effective but less expensive drugs can help lower co-payments for countless people, as well as the costs paid by insurance companies. This will be invaluable for fixed-income seniors who currently must cover the entire cost of their own prescriptions. It can also help reduce the cost of doing business for employers throughout the country, making room for wage increases that often compete with health care costs in the total compensation package for many workers.

It is also important to recognize that the work we are doing prescription drugs is, and has always been, applicable to other services: like surgery, diagnostic tests and the medical device industry. Evidence-based medicine can help us reduce the wide variation in physician practice patterns. And it can help us identify the differences in outcomes at competing hospitals.

As we all know, cost increases are the enemy of access. The more costs rise, the fewer among us will be able to afford the care we need. A part of the battle to control costs will be to create a functional market for these products and services – a market based first on the effectiveness of an intervention and then on its relative price. It is not a magic bullet for what ails the U.S. health care system, but it is a crucial element that will be required to make our system an efficient and equitable vehicle by which to meet this basic human need.

Governor John Kitzhaber

Sustainable Forests

Willamette University - Salem, Oregon

September 25, 2002

Today I want to discuss the concept of sustainable forestry. By that I mean not just environmental and economic sustainability, but political sustainability as well. If we are willing to consider a new paradigm for the management of public forest lands, I believe we can move beyond the seemingly intractable conflict between the environmental community and the timber industry to a future of healthy thriving forests yielding clean water, diverse habitat and commercial wood products.

Clearly, we need a new paradigm to replace the one under which we have been operating since the late 19th century. On one side is the position bluntly articulated by George Coggins, a public land legal authority: "The public lands are public. They are the property of all of the people, not just those who live in their immediate vicinity. They are national assets, not local storehouses to be looted ...

At the other end of the spectrum is the "Sagebrush Rebellion" of the late 1970's and early 1980's, which held that all federal land was state property to do with as states pleased. The truth -- and the future of sustainable forestry -- lies somewhere in between these two positions.

I define sustainability as managing the use, development and protection of our economic, environmental and community resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to do the same. This definition requires that we recognize a larger truth: the interdependence between our economic, environmental and community needs -- and that we find a balance between these often competing values. Imagine, if you will, three overlapping circles -- one representing our economic needs, one representing our environmental needs and one representing our social or community needs. The area where the three circles overlap is the area of sustainability -- the area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements -- these threads, which together weave the fabric of sustainability -- are things we hold in common. They represent a common set of desires and aspirations that add value and quality to our lives. To me this relationship lies at the heart of sustainability -- and if we are to be successful in creating a truly sustainable forest management strategy, an awareness of this interdependence must constantly guide our work.

And yet, as our social, environmental and economic problems become more complex, our traditional governmental structures of law and regulation -- and the culture of our agencies -- increasingly fail to recognize this relationship and, in fact often get in the way of it -- creating conflict, polarization and lost opportunities instead of collaboration and a sense of community and of accomplishment.

Increasingly, we are viewing economic, environmental and community needs as separate, competing entities -- mutually exclusive values, if you will. Of course, this perspective undermines sustainability because it creates a politics of scarcity -- a zero-sum situation in which there must always be a winner and a loser.

We can see this disturbing trend unfolding in many ways: in the challenge of accommodating growth while maintaining livable communities and in the tension between sprawl and compact development. In the West, however, nothing better illustrates the politics of scarcity than the conflict between economic activity and long term environmental stewardship. To illustrate this point let me offer a brief history.

For hundreds of years, the forests of Eastern Oregon and much of the Intermountain West were blessed with huge stands of old growth pine covering millions of acres. For much of the last century, however, forest management policy was characterized by active fire suppression, widespread livestock grazing, the harvesting of valuable old growth pine, and a resistance to active management by conservation groups.

The legacy of these management practices -- especially on public lands -- are forests overstocked with stands of young fir and pine, the loss of older fire-resistant trees, thousands of acres of dead and dying timber infested with insects, and a high risk of catastrophic fire.

This situation has led to a significant reduction in watershed health and the destruction of habitat for sensitive species coupled with a catastrophic decline in employment for timber dependent communities. Yet efforts to address this widely recognized problem have been thwarted by the conflict between those who wish to harvest timber and those who wish to preserve it -- and by their distrust of each other and of the federal land management agencies themselves.

Each side in the debate operates from their own deeply entrenched positions, pointing at the other as the culprit. We saw this conflict erupt this past fire season with each side blaming the other for the vulnerable state of many of our western forests. This situation is a classic example of the black and white way in which the debate over the management of federal lands has historically been framed. And it offers a fitting backdrop for our discussion of sustainable forestry.

I believe that sustainable forest management rests on a foundation of six key building blocks, or principles: (1) Establishing a single overarching policy object which drives forest management plans; (2) Reframing the debate between commercial forestry and environmental stewardship; (3) Basing decisions on interdisciplinary science; (4) Managing at the landscape level; (5) Ensuring broad public involvement in and ownership of the management plan; and (6) Redefining the relationship with our federal partners.

When I took office in 1995 it was apparent that the status quo in the forests of Eastern Oregon was not serving anyone: not the industry, not the environment, not the rural communities. The challenge of getting beyond the gridlock depended first and foremost on finding a common policy objective that could bring the stakeholders together. And the policy objective we settled on was a healthy, functioning forest ecosystem -- with an emphasis on watershed health. This first principle -- a single overarching policy objective -- lies at the heart of the new paradigm for forest management.

Now, given the multiple values which are represented by our forests -- economic, environmental, recreational and aesthetic -- it is important to recognize that focusing on watershed health does not mean that we are elevating the importance of one value above another. Rather, it serves as a common denominator for all the values, and acts as a guidepost by which we can shape our management efforts in the context of the other values.

We cannot provide sustainable forest products, assure clean water and provide habitat for species unless we first have a healthy functioning ecosystem. The three legs upon which the strategy stands -- social, environmental and economic -- are all interwoven and are dependent first on a healthy, functioning forest ecosystem.

In March of 1995, using forest ecosystem health as the overarching policy objective, I appointed a panel of highly respected scientists from throughout the Northwest, including faculty from Oregon State University, the University of Washington and scientists from the private sector. They reached a remarkable consensus of opinion on what it would take to restore health to the forests of Eastern Oregon. Their recommendations were subsequently embodied in a broadly supported set of eleven guiding principles.

This "11-point plan" calls for using active management to promote ecosystem health, while avoiding areas of high public controversy. This is an important point. Since there is such a high level of distrust, we need to restore confidence in the U.S. Forest Service and other federal agencies and to demonstrate that active management can be accomplished in an environmentally sensitive manner.

Restoration treatments include understory and commercial thinning; road maintenance, closure and obliteration; prescribed burning; noxious weed treatment; and stream rehabilitation. It also emphasizes adaptive management through monitoring.

The objective of this management strategy is to improve the health of the forest ecosystem, including watershed health and habitat for forest species. At the same time, a by-product of many of the thinning treatments would be wood for local mills and value-added products to help stabilize rural communities. Thinning and prescribed burns would also reduce the risk of catastrophic fires that has increased significantly as forest health has deteriorated.

Beyond providing the foundation of an overarching policy objective, this Eastside strategy has helped reframe the debate between commercial forestry and environmental stewardship, the second principle of sustainable forestry. It accomplishes this by focusing on areas of broad agreement instead of conflict – by taking advantage of the “area of sustainability” where environmental, economic and community needs overlap.

In formulating the plan, we sought to move the debate from the question of “management versus no management” to a discussion of “how to manage” these lands. I suggest that by using good science and by focusing on reducing risk -- risk to the watershed, risk to sensitive species and risk to the local economy -- we can build public and scientific support for active forest management.

This approach is based on a strong underpinning of multidisciplinary science, the third principle of sustainable forestry. We use this science in a number of ways. On the federal lands, for example, we want to know what these systems historically were like to inform us as to what the watersheds need to function properly. For instance, we know that it is appropriate to mimic past fire regimes and thin forests at lower and mid-elevations but not the higher elevations. Historically, higher elevation forests burned infrequently, and when they did they did not have the low-intensity creeping fires -- they were stand-replacement fires.

Because of the importance we placed on restoring healthy, functioning watersheds, our work is also based on a commitment to management at the landscape level – the fourth principle of sustainable forestry. This principle acknowledges the fact that the ecologic “landscape” does not stop at political boundaries or at those based on ownership.

In fact, in June of 1999 the U.S. Forest Service approved the 3 million acre "Blue Mountain Demonstration Area," in eastern Oregon which has allowed us to move beyond the consideration of separate, individual projects to the consideration of an entire landscape which includes federal, state, tribal and private lands.

To meet the fifth principle -- ensuring broad public involvement in and ownership of the management plan -- we established an "Eastside Forest Health Advisory Panel," consisting of a diverse group of eastern Oregon citizens and stakeholders. This was a reflection of our recognition that just having the best science is not enough -- that we also needed to blend in the values of the local population if the plan is to be sustainable, especially from a political standpoint. The advisory panel worked to identify and prioritize local projects based on the plan.

In the first years, the Eastside Panel identified nearly 60 Forest Service and Bureau of Land Management projects that exemplified the 11-point plan. This offered a clear demonstration that it is possible to engage in broadly supported watershed and forest restoration work that both improves ecosystem health and provides some economic benefits to local communities.

Unfortunately, the volume of marketable timber flowing from this work has been less than we hoped. Some of this was due to unrealistic expectation. Some was due to poor market conditions. But much of the problem flows from the very structure and culture of the federal land management agencies themselves. And this brings us to the sixth principle of sustainable forestry: redefining the relationship with our federal partners.

The current federal governance structure has, in many cases, frustrated the very collaborative, community-based approaches to forest management which offer the most promise. Examples include the Applegate Partnership, the Quincy Library Group and the Grand Canyon Forest Trust.

All of these efforts were built on collaboration at the local level among people working together to solve shared problems on behalf of a shared place. All enjoyed initial enthusiasm and support from the federal land management agencies. And all have been frustrated to one degree or another by the unwillingness or inability of these same agencies

to allow the collaborators to make actual decisions on the ground.

Dan Kemmis, in his recently published book *This Sovereign Land*, characterizes the phenomenon as the inevitable collision between local collaborative problem-solving and the “procedural republic”—his term for the complex administrative processes that try to ensure that all stakeholders have equal access to federal decision makers.

As Kemmis puts it: “At the bottom of this difficulty lies the fact that the collaboration movement represents a form and philosophy of decision-making fundamentally different from the decision structure in which the land management agencies are embedded. One is an inherently decentralized, democratic form of governing; the other is inherently centralized and hierarchical. The effort to make something like collaborative stewardship an integral part of Forest Service operations, for example, cannot really succeed unless the agency is willing to turn some actual decision-making and management authority over to the people who are doing the collaboration.”

Kemmis, of course, describes the extreme – or, perhaps, the norm as we have known it in the past. Yet we have also experienced firsthand that another reality is possible. In the Blue Mountain Demonstration Area we have many examples of how local collaboration focused toward a common objective can help overcome barriers posed by NEPA, ESA consultation, contracting and a host of community issues.

Which brings us back to the issue of trust – the one absolutely necessary element for success -- trust among stakeholders and between stakeholders and the federal land management agencies. Trust is the foundation for the progress we have made over the past decade and is a cornerstone of our hope for the future.

Trust is of particular importance to achieve political sustainability. That is, to create a broad political constituency that will support and defend a given forest management strategy over time. Indeed, without political sustainability, the timber industry will never have the kind of predictability in timber supply so necessary to operating a successful business.

The debate currently raging in congress – ostensibly over the issue of forest health – is a prime example of how easily political sustainability can be sacrificed to the false hope of short term economic gain. To fully understand what is going on in congress – and what is really at stake -- we need to first put the debate into its proper context.

At the end of the terrible fire season of 2000 six western governors – including myself -- met with then-Secretary of the Interior Bruce Babbitt and Secretary of Agriculture Dan Glickman in Salt Lake City to discuss what might be done. The outline for action that emerged from that meeting was based largely on the principles of sustainable forestry developed for Eastern Oregon. The plan was built around a deceptively simple agreement: to focus on the one thing upon which the industry and the environmental community could agree – the need to improve forest health.

At the same time, we openly acknowledged that our efforts to improve forest health would not resolve the long standing and controversial issues of roadless areas, salvage logging, sufficiency language or the preservation of old growth forests. We knew that we would continue to debate these policies but agreed to do so in other forums and to separate them from the strategy to improve forest health. In other words, we agreed to stay within the “area of sustainability” where environmental, economic and community interests coincide.

Thus, harvest activities under the plan would have -- as their primary objective -- improving forest health as opposed to commercial logging. That is, trees would be removed based not on their commercial value, but rather on the ecological needs of the forest as dictated by good multidisciplinary science. In many cases, however, the by-products of thinning activities and fuel reductions would be wood products of commercial value. Furthermore, the plan makes it clear that the forest health treatments are to be done in a way which meets federal environmental laws.

From this modest beginning emerged the Ten-Year Comprehensive Strategy and Implementation Plan which was signed last May at a ceremony in Idaho by myself, several other western governors and Secretary of the Interior Gale Norton and Secretary of Agriculture Ann Vennemun representing the Bush Administration.

What has happened since then -- while predictable -- serves only to move us further away from our new vision of sustainable forestry and to reemphasize the need for a new paradigm. Last month President Bush visited Oregon to

review the 500,000 acre Biscuit Fire -- the largest in the nation this year. He used the occasion to announce his new Forest Health Initiative and to make vague references to the Northwest Forest Plan. And while the visit certainly served the important purpose of elevating the issue of forest policy to the national level, the president's plan deviates significantly from the Ten-Year Strategy which the administration had embraced just four months earlier.

What needs to be emphasized here is that the overarching policy objective of the forest management strategy that emerged from the meeting in Salt Lake City is not, in fact, the prevention of wildland fires. On the contrary, the objective is to improve forest ecosystem health. Wild fire is but one of many symptoms of the declining health of our forests. Other symptoms include insect infestations, the invasion of noxious weeds, overstocked stands of young pine and fir, a decline in water quality and the loss of habitat. Our objective is not to treat the symptoms, but rather to treat the cause. But by addressing the primary problem -- declining forest health -- we will also be addressing the symptoms, including the risk of catastrophic fire.

The Administration, however, has put the primary focus on the symptom of wild fire rather than on the larger issue of forest health. As a consequence -- in order to treat this symptom as promptly as possible -- the Administration proposes to exempt activities aimed at reducing fuel loads from environmental laws such as the National Environmental Policy Act and to severely limit public access to the courts.

Capitalizing on the legitimate concern over wildfire to justify circumventing federal environmental laws will not, in the end, improve overall forest health. On the contrary, it simply move us back to the old paradigm of forest management, repolarizes the debate and increases the likelihood that nothing will happen.

The problem with this approach is that it runs the risk of destroying the trust and the delicate consensus for action which has been so painstakingly achieved, and of undermining the local collaboration necessary to strategically invest in the health of our forest ecosystems over the long term.

That fact is that the principles underlying the Ten-Year Comprehensive Strategy and Implementation Plan represent the new paradigm of sustainable forestry. What would happen, for example, if -- instead of destroying trust and collaboration -- we were to build upon what we have achieved so far and apply these same principles to the Northwest Forest Plan?

Since its implementation in 1994, the plan has done a good job of protecting habitat for various sensitive species. Unfortunately, it has fallen far short of its goal of providing a stable and predictable supply of wood products. It is instructive to ask "why?"

On the positive side, the plan adheres to two of the most important principles of sustainable forestry. First, it did an excellent job of using an interdisciplinary team of respected scientists on which to build its foundation. Second, it met the test -- in fact it set the standard -- for a landscape-based approach to resource management. It was almost unheard of at the time, and still constitutes that largest ecosystem planning effort in the world.

On the other hand, however, the Northwest Forest Plan falls short in two important respects. First, it lacks a single overarching policy objective to drive the management strategy. Ecosystem restoration is not the primary goal of the plan. Instead the planning team had a diverse set of objectives. Among these were: protection of habitat for the Northern Spotted Owl, protection of riparian habitat, providing a predictable and sustainable level of timber sales, meeting requirements of federal environmental laws, and improving interagency coordination. The result was a plan -- based on sound science -- that became a political compromise.

The second shortcoming stems from the lack broad public involvement in and ownership of the management plan as it was developed. The Forest Plan was developed largely in a closed setting. To this day it lacks the "buy in" of the affected parties -- and thus does not have a constituency to come to its defense when it is challenged.

As a consequence, there is still a great deal of tension surrounding the plan. The Plan creates this tension by, on the one hand acknowledging that any additional harvest of old growth forests will further threaten sensitive species dependent on these forests, while on the other hand expecting this same old growth forest to provide 80 percent of the projected timber volume over the next twenty years. By trying to maintain parity between multiple goals the Plan is falls short of

adequately addressing any of them and is not politically sustainable over the long run.

If, however, we were to establish forest ecosystem health as the policy objective for management activities under the Northwest Forest Plan, thinning across the landscape -- including in Late Successional Reserves -- could at once promote the growth of older forest habitat and increase not only the volume but, just as importantly, the predictability of the timber flowing from these forests.

And having a single overarching policy objective would hold all of the stakeholders accountable. Trees would be removed based not on their commercial value, but rather on the ecological needs of the forest as dictated by good multidisciplinary science. By the same token, the environmental community could not arbitrarily set a diameter or age limit for harvest. They would be compelled, for example, to demonstrate the difference between a 20 inch tree and a 23 inch tree from the standpoint of forest ecosystem health. Both sides would be measured by the same yardstick.

For all this to occur, however, we must maintain the trust and local collaboration on which success depends. We must also be open to challenging the "procedural republic" -- the means by which we translate policy into meaningful action on the ground. I recognize that the stakeholders on both sides of this issue believe that they are engaged in a mighty struggle. And they are. The challenge is not to give up on the entrenched positions of your various constituencies. The challenge is to see beyond them -- to honestly recognize that both sides are clinging to a paradigm that no longer serves their interests or the interests of the broader American public.

There is no doubt but that the exploitation of public lands for private and community gain is an established part of western history. Indeed, the conservation movement in America can trace its roots to efforts in 1870 to prevent corporate interests from abusing homesteading laws -- passed to help settle the frontier -- in order to gain access to public lands for the extraction of natural resources. These were not sustainable land management practices.

But it is equally true that the current procedure-bound, litigious, cumbersome, glacial process that has engulfed federal land management agencies does not produce sustainable land management practices either. As evidence, look at the sad state of health the public forests throughout the Intermountain West. Or consider the fact that over 10 years after the listing of the Snake River Chinook under the Endangered Species Act, there is still no recovery plan in place.

It is no secret that I do not support the kind of sufficiency language that is being proposed by the Bush Administration. There are legitimate national interests to be served here. National environmental legislation -- like the Endangered Species Act and the Clean Water Act -- were enacted for a reason ... and a good reason: to secure the long term and sustainable health of the ecosystem we all share. I believe in the need for this strong framework of federal environmental laws and in having the ability to enforce them.

At the same time, however, I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the way in which we have traditionally applied them. For example, with over 1200 species listed -- the lengthy, complex and contentious process of actually developing recovery plans under the ESA will doom many of these species to extinction long before anything happens on the ground. Likewise, the processes that guide and shackle our federal land management agencies are leading to similar results in terms of the health of our forest ecosystems -- and the health of our natural resource dependent communities.

What I am suggesting to you today is that unless we address this fundamental problem -- not with our environmental laws themselves, but with the processes and procedures by which they are applied -- we will never achieve our goal of sustainable forestry. Likewise, if we undermine the trust and local collaboration that makes meaningful action possible, our forest management strategy will fail the test of political sustainability.

We need to get beyond this -- beyond the dogma; beyond the ideology and beyond the legal and political gridlock. And the only way we are going to do that, is to do it together ... to recognize that we have a common interest here. It is up to us and to us alone.

As William Jennings Bryan pointed out: "Destiny is not a matter of chance, it is a matter of choice; it is not a thing to be waited for, it is a thing to be achieved."

Thank you.

Governor John Kitzhaber

Governor's Live TV/Radio Veto Address

August 7, 2002

Good evening.

This is a crucial time for our state – we are facing a deep fiscal crisis compounded by one of the worst fire seasons in our history.

As you know, Oregon's dramatically reduced revenue has forced the legislature into three special sessions to balance the state's budget. In each session, the legislature has tried to deal with our financial crisis.

The most recent special session, however, produced two laws that I believe will not be good for Oregon's future – particularly in terms of securing adequate and sustainable funding for our schools over the long term. Today I have vetoed these two bills.

I believe that public education is the single most important service our state provides – and because I have such a great faith in Oregonians, I wanted this opportunity to share with you how I arrived at this difficult decision – a decision informed by the hundreds of citizens who have contacted me over the past four weeks.

The first bill in question authorizes Oregon to sell bonds backed by future revenue from our cigarette tax to help finance primary and secondary education for the next school year; and to repay this debt over the next six years. In short, the bill directs us to educate our children today by borrowing from their schools tomorrow.

The second bill authorizes an accounting maneuver which moves the due date of the final state payment to primary and secondary schools and community colleges from the current biennium into the next. This allows the state to realize a one-time "paper gain" of \$260 million by deferring the responsibility to make this payment to the next legislature. In other words, the bill shifts the due date, but not the money with which to actually make the payment.

This maneuver is not materially different from a corporation taking future projected profits and showing them on today's books in order to give the shareholders an inflated picture of the financial health of the business.

This bill would likewise be giving Oregonians – the shareholders of our system of public education – an inflated and inaccurate view of the true fiscal health of our schools.

These two bills – and particularly the second one – are symptomatic of what is wrong with politics today – avoiding difficult political choices and postponing action on important public needs.

This is not about Republicans and Democrats – this is about truth in government. The fact is that we cannot continue, in this state of ours, to support – or indeed to expect – public services that we are unwilling to pay for.

From the beginning of this fiscal crisis I have advocated for one bedrock policy: pay as you go. I also believe that we need additional permanent revenue to adequately fund education and other important state services – like public safety and caring for Oregon's vulnerable citizens.

And while there can be legitimate disagreement about the appropriate level of state services, one thing should be clear.

If these services are not important enough to our citizens to pay for with permanent, sustainable revenue – not by borrowing; not by accounting maneuvers – then we should cut them.

But not before we have asked Oregonians to decide.

No one believes that this legislation represents good public policy – not even those who enacted it. Yet, I am being urged to either sign it or to allow it to become law without my signature.

This apparent contradiction is based on the theory that this is as good as we can do. That we should just shrug our shoulders and give up. That we should accept as inevitable a decline in the quality of our schools and in the fabric of our communities.

I am simply unwilling to do that. You elected me to do what I think is best for Oregon. And it is not in Oregon's best interest to passively surrender to the notion that our state must slip into mediocrity – the notion that the people's representatives are incapable of dealing responsibly and courageously with the state's problems.

For these reasons, I have vetoed these two bills and will call the legislature into session on August 16 to consider my action.

The legislature can either override my vetoes – clearly endorsing a financing policy based on borrowing and questionable accounting practices – or it can reject this kind of financing by sustaining these vetoes. In either case, this decision requires one up-or-down vote in each chamber – something that can easily be done in one day.

Should my vetoes be overridden, then these difficult decisions will be pushed into the next biennium, leaving the next governor and the next legislature with a billion dollar deficit and another inevitable round of cuts to education and other state services.

However, should these vetoes be sustained – which I believe is the right decision for Oregon – I will ask the legislature to give Oregonians an opportunity to vote on sustainable funding for our schools in the November election.

The specifics of the revenue measure to be placed before you would be taken up in a special session called for early September when we will have to deal with what is projected to be another significant revenue shortfall – and possibly the need to find more money to pay for this terrible fire season.

In closing, let me say that I have not come to this decision lightly. But I believe that leadership is not about making people comfortable. It is about challenging them.

Tonight I challenge you to demand that we do better – to demand that Oregonians be given the opportunity to decide.

I challenge you to find the courage to meet the risks of an uncertain future over the false security of temporary funding schemes which will only prolong the slow, inevitable decay of our public schools.

I challenge you to stand up and help make Oregon all that it can be.

We owe this much to our children, to ourselves and to our common future.

Thank you and good night.

Governor John Kitzhaber

**Sustaining the Oregon Community
Speech to the Oregon AFL-CIO**

June 10, 2002

Today, Oregon stands at a crossroads. As you know, the June revenue forecast- in conjunction with the defeat of Ballot Measure 13 -- has left us with a projected shortfall of over \$870 million in the current biennium. In addition, the revenue forecast and tentative budget projection points to an additional deficit of over \$1.3 billion in the next biennium.

This situation presents us with two challenges. A short term challenge: the immediate revenue loss due to the recession - and a much more serious long term challenge: a structural budget deficit that preceded the recession and which will continue beyond it. In other words, our current level of state programs and services is not sustainable into the future based on the projected revenue forecast -- even when the economy has fully recovered.

This projected discrepancy between revenues and expenditures is due largely to a series of choices Oregonians made in the last decade - in particular, the fact that we cut taxes - through Ballot Measure 5, Ballot Measure 88 and the two-percent kicker -- but did not cut the programs and services supported by that revenue.

On Wednesday of this week I will call the legislature back into special session to address these challenges. What I would like to do today is to simply walk you through the options we have and the likely consequences of the choices we make.

Although I am sure that the news coverage of our first two special sessions left you with the impression that none of us could agree on anything, in reality there was - and remains - a broad consensus on the level of budget cuts. Or, to put it another way, there is broad consensus on the level of state services required to meet the legitimate needs of Oregonians.

Up through the first special session, the contemplated level of budget reductions was around \$450 million. In the second special session -- despite a declining revenue picture - the cut level remained essentially the same.

Although I expect additional cuts to be considered by the legislature when it convenes this week, members of both parties have recognized the serious consequences of further reductions. After all, over seventy percent of state income tax revenue is returned directly to Oregon communities - for public education, for health care, for economic development and for support of the frail elderly and other vulnerable citizens. There is a broad consensus that these services are vitally important to our communities as they struggle to weather and recover from the current recession.

My point is this: we have cut the budget about as deeply as we can - not only from the standpoint of good public policy, but from a political standpoint as well. What we have been debating is not budget cuts but rather how to pay for that portion of the budget we want to sustain.

This conclusion is further reinforced by the positions staked out by both gubernatorial candidates. Neither Kevin Mannix nor Ted Kulongoski have advocated additional cuts. On the contrary, both have articulated strategies - very different strategies, to be sure -- to pay for the current level of services.

And I would submit to you that even our current level of funding - already reduced by almost half a billion dollars - is not adequate to meet our expectations, particularly in the area of public education.

Consider the following:

- Tuition at Oregon's public universities has gone up over 80 percent in the last decade pricing many high school graduates out of a post-secondary education. And even those who can afford to attend carry an average debt burden of \$16,500 out the door with their diploma.
- Tuition at Oregon's community colleges has gone up over 125 percent since 1990 and next biennium, at our current funding level, there will be over 25,000 full time students who will not be able to attend a community college because of insufficient capacity. This is particularly troubling during a recession because community colleges provide the primary opportunity for workforce retraining.
- The Portland public school system now has the shortest school year in the nation, Condon has gone to four days a week. There are schools being closed in Portland, Baker City, Pendleton, Eugene and Fernridge. Oregon City has cut 21 teachers, Klamath Falls 16 and Roseburg four.

I submit to you that this situation is fundamentally inconsistent with what we all know to be true: that education is the single most important factor in creating and maintaining a competitive work force in the 21st century.

Which leads us back to our immediate challenge: a budget deficit of \$876 million for the last year of the current biennium, and a projected deficit of over \$1.3 billion for the 2003 - 2005 biennium.

Now, the approach to the revenue shortfall for this biennium depends on whether you believe it represents a one-time problem due to the current recession that will be resolved by a growing economy - or whether you believe it represents a more permanent structural deficit.

To date, the legislative leadership has been operating on the assumption that this is only a short term problem caused by the recession -- thus, their emphasis on borrowing and one-time revenue. Yet there is no evidence to support that assumption. On the contrary, the evidence points to a serious structural deficit that will not go away as the economy recovers.

- First, the June revenue forecast - which projected the \$1.3 billion deficit in the next biennium - assumes economic recovery.
- Second, to grow our way out of this problem - that is, to eliminate the 2003-05 deficit as a consequence of economic recovery - would require a job growth rate of between 5.5 and 8.5 percent per year over the next two years. That has never happened. In fact, only once in the past twenty years has Oregon had a job growth rate that exceeded five percent - and that was 5.1 percent in the mid-1990's.
- Furthermore, independent forecasting organizations like the DRI Wharton Econometric Forecasting Associates and the Western Blue Chip Economic Forecast projects job growth in Oregon for 2003 to be only 2.4% or less.

The fact is that we are not going to grow our way out of this problem. And our system of public education - which accounts for sixty cents of each tax dollar - will continue to be at risk until we add some permanent new revenue to the general fund.

Last week the House Speaker announced that he is willing to support a significant increase in the cigarette tax to help close the short

term budget deficit. While certain to change before Wednesday, the plan currently under discussion by the Republican leadership includes the following elements:

- Referring to the voters, in a September special election, an increase in the cigarette tax by 75 cents per pack which will generate \$109 million this biennium.
- An additional \$125 million in budget cuts - as yet unspecified.
- Disconnecting from the federal economic stimulus package which reduces cost in the current biennium by \$124 million.
- Applying the remaining \$82 million of unallocated revenue from the National Tobacco Settlement to the current budget.
- Drawing down the Emergency Fund and the state's already inadequate ending balance by a total of \$45 million.

- A one-time actuarial maneuver which moves the last K-12 school payment due this biennium into the next biennium, reducing costs for the current biennium by \$200 million.
- Re-referring to the voters - also in a September special election - a modified version of Ballot Measure 13 which would create a stabilization fund for schools and tap it for \$180 million.

This proposal would certainly resolve the short term budget problem - at least for now -- but raises some concerns. From a political standpoint, this plan is much closer to the position staked out by the Republican leadership than to that of the Democrats who have argued for a small income tax component to the solution and who have not been comfortable with tapping the stability fund for much more than \$100 million.

Furthermore, additional deep cuts are very problematic given the depth of the reductions we have already taken this biennium. And drawing down the ending balance is an invitation to return for a fourth special session this fall. As a consequence there may well be few Democratic votes for either the cuts or for the re-referral of Ballot Measure 13.

I tend to share these concerns. First of all, the voters just rejected a measure which would have removed \$220 million from the stability fund. Second, while I support an increase in the cigarette tax because it will help to reduce the number of young people who start smoking in the first place, the cigarette tax is regressive - and, let's face it, smokers did not cause this recession.

All of us have a responsibility to help see us through this difficult time. So if some additional revenue is needed, I believe the burden should be spread as broadly as possible.

Furthermore, I believe that it is important to craft a plan with broad bipartisan support if it hopes to gain acceptance by the voters. The situation calls for some kind of compromise plan that falls between my proposal of last week and the current Republican proposal. To me, this is our best hope to move beyond the rancor and partisanship that has marred the first two special sessions.

Adding a small income tax component to the solution would allow us to reduce the need for additional cuts, maintain our ending balance and limit the level appropriated from the new stabilization fund to the amount by which it grows each biennium.

If such a plan emerges from the discussions between the Republican and Democratic legislative leadership I would not only support it, but would aggressively seek votes to pass it in the legislature and actively campaign for it on the ballot.

While such a compromise plan would still leave a significant revenue shortfall for the next governor and the next legislature to deal with - it could emerge from the special session with solid bipartisan support. And that, in itself, would be a significant step in the right direction.

To those who say that any increase in taxes will cost jobs - I say that beyond a certain point, budget cuts can do the same thing. There are, after all, many Oregon communities - particularly in rural parts of the state - in which public employees comprise a significant part of the local workforce.

Take, for example, Pendleton and Ontario - each of which has a community college and a correctional facility in addition to their primary and secondary schools. In these communities the local economy depends to a large extent on the jobs provided by these institutions and on the public employees spending their money with local businesses.

Certainly, making deeper cuts in lieu of new revenue is an option - it is an alternative choice for balancing the budget. But make no mistake about it, it is also a choice for a different kind of Oregon than the one we know today.

It is, after all, our commitment to each other - to our children, to our workers, and to the vulnerable citizens in our society- that makes Oregon's definition of civic responsibility and quality of life different than that in Mississippi or Texas.

So to me, this is not as simple as a choice between budget cuts and raising taxes. It is about accountability and about Oregon's future. The accountability to step up to the plate and to pay for those state programs and services that we think

are important - not so much for ourselves, but for our children and for all those who come after us.

And while ducking this challenge may be the politically expedient course, it is not the road to our vision of the best-educated, best-trained workforce in the world. On the contrary, it is the road to mediocrity and I, for one, am not willing to go there.

I will continue to argue for a different road, for a different future - one that depends on our collective willingness to move beyond partisanship and ideology and to make these fundamental investments for the good of our Oregon community.

Governor John Kitzhaber

**Portland City Club
Portland, Oregon**

June 3, 2002

I had hoped to use this appearance before the Portland City Club to discuss the escalating cost of health care in general and the cost of prescription drugs in particular. Unfortunately, the state fiscal crisis has deepened and I feel compelled to spend some of my time today discussing our options and how best to proceed.

Nonetheless, I would like to take just a few moments to touch on the health care issue which is a growing burden in both the public and private sectors.

As you know, medical cost inflation has put many employers in the difficult position of having to either drop coverage for employees or to increase their share of the cost by increasing co-payments and deductibles. And from an employee standpoint, the cost of health care benefits is starting to squeeze out wage increases and other elements of the compensation package.

The key word here is "benefit" - a term that has come to mean something of economic value. That is, something that is "covered" or paid for (usually by someone else). In other words, we view health care as an economic commodity - just like wages, vacation time, or retirement. And therein lies one of the keys to controlling health care costs.

Let me ask you a question. What would you say is the objective of the health care system? Is the objective to give people access to health care? or is it to keep people healthy?

I say it is the latter. While providing access to health care is the objective of the delivery system, the objective of the health care system is health - improving, maintaining, and restoring health. In other words, health care is a means to an end not an end in itself. It has no intrinsic value outside its relationship to health.

My point is this -- instead of simply debating how to pay for the increased cost of health care, we should be asking, first: "why it costs so much in the first place?" and, second: "what are we getting for this expenditure in terms of health?" Prescription drugs -- which constitute the single fastest growing cost in the health care system - offer a prime example.

The dramatic cost increase in prescription drugs can be traced directly to the 1997 decision by the Food and Drug Administration to repeal the ban on direct consumer advertising by the drug companies.

As a consequence, the advertising budgets for the major pharmaceutical companies increased from \$75 billion dollars in 1997 to \$155 billion dollars in 2000. Today, every one of the seven most heavily advertised drugs is promoted by an advertising budget, each of which exceeds \$125 million dollars - more than Nike's annual budget for promoting its athletic shoes.

This creates a market demand for a particular brand name drug without any clinical context. That is, no way for the average consumer - or physician, for that matter - to know the relative clinical effectiveness or cost-effectiveness of these heavily advertised drugs.

Let me give you an example. A young, otherwise healthy member of my staff had some wrist pain recently and went to see his doctor. His doctor gave him a sample of Celebrex and a prescription for the same - to fill if the sample helped his

wrist. Celebrex, by the way, is one of the most heavily advertised anti-inflammatory prescription drugs on the market.

Now there is no evidence, whatsoever to suggest that Celebrex (at \$75 per month) is any more effective than across-the-counter Advil (at \$7 per month) in an otherwise healthy Caucasian male with no history of gastrointestinal problems. But the difference here is \$68 dollars -- which did not provide a meaningful health benefit, yet contributed to the escalation in health care cost.

Getting at this problem requires at least two things. First, we need good objective evidence-based analysis of the relative clinical effectiveness of prescription drugs. Second, physicians must use this information to guide their prescription writing practices and purchasers - private employers as well as state and local governments -- must use it to guide what they are willing to pay for.

Last year the Oregon legislature - over the strident objections of the pharmaceutical industry -- passed SB 819, which established a formulary for the Oregon Health Plan by which drugs of various classes are evaluated in terms of their relative clinical effectiveness. This review - based on peer-reviewed research -- is being conducted through an open, public process by the Oregon Health Resources Commission, chaired by Dr. Frank Baumeister - City Club Member and former President of the OMA.

One example of a "class" of drugs would be the anti-inflammatory drugs I just mentioned - which would include heavily advertised prescription drugs like Celebrex and Vioxx as well as across-the-counter drugs like Advil and aspirin. Other examples would be drugs to lower cholesterol (like Lipitor); and drugs to treat heartburn and ulcers (like Nexium - "the little purple pill" - and Prilosec).

To be the preferred drug for the Oregon Health Plan, the drug must be as effective as any other drug in the class, but more cost effective.

The reason the drug companies are so opposed to evidence-based analysis is because it will force them to compete on the basis of cost for two drugs which are clinically equivalent. Of course, that is exactly how Ford competes with Chevrolet - and how Intel competes with Hewlett Packard.

But creating this kind of functional market is exactly what the pharmaceutical companies are resisting because their huge profits depend on the fact that consumers have no information on head-to-head comparisons between different prescription drugs designed to treat the same condition.

In order to gain FDA approval a new drug must be demonstrated to be more effective than a placebo -- not more effective than other drugs on the market to treat the same condition. And the pharmaceutical industry has vigorously opposed federal funding to support research on head-to-head comparisons because it is the lack of this information which make their advertising so effective.

Can you imagine how difficult it would be for consumers to make decisions like purchasing cars or other products without the Consumer's Report which provides the objective information needed to compare products? Such information is absent from the prescription drug market. So, essentially, what we are doing here in Oregon is to create the equivalent of Consumer's Report for prescription drugs.

Armed with this information consumers, purchasers and physicians can choose the most effective medication which, in many cases, may cost five, ten, or even fifty times less than the one being advertised on television.

And what we are talking about here -- evidence- based analysis and value-based purchasing - are equally applicable to other stakeholders in the health care arena including physicians, hospitals and the medical device industry.

This has huge implications in terms of the escalation in health care costs - and I hope that I will have another opportunity - in the near future -- to address the City Club on this topic - and to go into the detail which the fiscal circumstances of our state prevent me from doing today.

With that, let me turn now to the challenges facing the upcoming special session of the legislature.

As you know, the revenue forecast announced last week - in conjunction with the defeat of Ballot Measure 13 -- has left us with a projected shortfall of over \$870 million in the current biennium. In addition, the revenue forecast and tentative budget projection points to an additional deficit of over \$1.3 billion deficit in the next biennium.

This situation presents us with two challenges. A short term challenge: the immediate revenue loss due to the recession - and a much more serious long term challenge: a structural budget deficit that preceded the recession and which will continue beyond it. In other words, our current level of state programs and services is not sustainable into the future based on the projected revenue forecast -- even when the economy has fully recovered.

This projected discrepancy between revenues and expenditures is due largely to a series of choices Oregonians made in the last decade - in particular, the fact that we cut taxes - through Ballot Measure 5, Ballot Measure 88 and the two-percent kicker -- but did not cut the programs and services supported by that revenue.

Within the next few weeks, I will call the legislature back into special session to address these challenges. What I would like to do today is to simply walk you through the options we have and the likely consequences of the choices we make.

Let me start by examining two decision tracks stemming from the question: is the state general fund adequate to meet our needs and expectations - particularly in the area of public education.

If the answer is "YES" it leads us to a second question: is the general fund too big? If the answer to this question is "YES" then the solution is to further cut the budget. If the answer is "NO" the solution is to maintain the current level of state services.

This is essentially where the legislature has ended up - trying to maintain the current level of state services.

Although I am sure that the news coverage of our first two special sessions left you with the impression that none of us could agree on anything, in reality there was - and remains - a broad consensus on the level budget cuts. Or, to put it another way, there is broad consensus on the level of state services required to meet the legitimate needs of Oregonians.

Up through the first special session, the contemplated level of budget reductions was around \$450 million. In the second special session -- despite a declining revenue picture - the cut level remained essentially the same.

Members of both parties have recognized the serious consequences of further reductions. After all, over seventy percent state income tax revenue is returned directly to Oregon communities - for public education, for health care, for economic development and for support of the frail elderly and other vulnerable citizens. There is a broad consensus that these services are vitally important to our communities as they struggle to weather and recover from the current recession.

My point is this: we have cut the budget about as deeply as we can - not only from the standpoint of good public policy, but from a political standpoint as well. What we have been debating is not budget cuts but rather how to pay for that portion of the budget we want to sustain.

This conclusion is further reinforced by the positions staked out by both gubernatorial candidates. Neither Kevin Mannix nor Ted Kulongoski have advocated additional cuts. On the contrary, both have articulated strategies - very different strategies, to be sure -- to pay for the current level of services.

Let's turn now to the second decision track. If the answer to the question: "is the state general fund adequate to meet our needs and expectations?" is "NO" then the solution is to not only to maintain the current level of services, but to increase funding beyond that.

Now, while I think that reasonable people can disagree on the answer to this first question, I would submit to you that the current level of funding is not adequate to support our expectations. As evidence to support this conclusion, I would point to the following:

- Tuition at Oregon's public universities has gone up over 80 percent in the last decade pricing many high school

graduates out of a post-secondary education. And even those who can afford to attend carry an average debt burden of \$16,500 out the door with their diploma.

- Tuition at Oregon's community colleges has gone up over 125 percent since 1990 and next biennium, at our current funding level, there will be over 25,000 full time students who will not be able to attend a community college because of insufficient capacity.
- The Portland public school system now has the shortest school year in the nation, Condon has gone to four days a week. There are school closures in Portland, Baker City, Pendleton, Eugene and Fernridge. Oregon City has cut 21 teachers, Klamath Falls 16 and Roseburg four.

I submit to you that this situation is fundamentally inconsistent with what we all know to be true: that education is the single most important factor in creating and maintaining a competitive work force in the 21st century.

In any event -- whether you want to maintain the current level of services or to increase funding - you are faced with the same basic problem: a budget deficit of \$876 million for the last year of the current biennium, and a projected deficit of over \$1.3 billion for the 2003 - 2005 biennium.

The approach to the revenue shortfall for this biennium depends on whether you believe it represents a one-time problem due to the current recession that will be resolved by a growing economy - or whether you believe it represents a more permanent structural deficit.

The legislative leadership has been operating on the assumption that this is only a short term problem caused by the recession -- thus, their emphasis on borrowing and one-time revenue. Yet there is no evidence to support that assumption. On the contrary, the evidence points to a serious structural deficit that will not go away as the economy recovers.

- First, the June revenue forecast - which projected the \$1.3 billion deficit in the next biennium - assumes economic recovery.
- Second, to grow our way out of this problem - that is, to eliminate the 2003-05 deficit as a consequence of economic recovery - would require a job growth rate of between 5.5 and 8.5 percent per year over the next two years. In the past twenty years, Oregon has only experienced one year in the mid-1990's when the job growth rate exceed five percent - and that was only 5.1 percent.
- Furthermore, the Western Blue Chip Economic Forecast projects job growth in Oregon for 2003 to be only 2.4% and the DRI-WEFA forecast projects an even lower growth rate.

The fact is that we are not going to grow our way out of this problem. And our system of public education - which accounts for sixty cents of each tax dollar - will continue to be at risk until we add some permanent new revenue to the general fund.

That is why I have called for a temporary modest increase in personal and corporate income taxes - dedicated to education - to stabilize our fiscal picture long enough for the next legislature to refer to the voters a proposal to reduce our reliance on the income tax and provide the long term, stable funding that our schools need and our future demands.

When considering this proposal, it is important to remember that \$133 million of the current deficit and \$250 million of the deficit in the next biennium stems from financing the income tax reduction enacted by the voters in Ballot Measure 88. In addition, this year Oregonians will also receive a check from the Bush tax cut.

My point is that for most Oregonians, this modest tax increase will be more than offset by the tax cuts enacted through Ballot Measure 88 and by the United States Congress.

It is also important to compare the potential economic impact of a modest, temporary tax increase with the economic impact of the alternatives - particularly further budget cuts.

First, there are many Oregon communities - particularly in rural parts of the state - in which public employees comprise a significant part of the workforce. In any community with a public school, a university or a prison, the local economy depends to some extent on the employees of those institutions spending their money with local businesses.

In addition, allowing our system of public education to further deteriorate will surely jeopardize our ability to attract new businesses to Oregon.

To put the furor over my proposal into perspective I would remind you of the young man with the \$70 a month Celebrex prescription I mentioned earlier. I find it ironic that we are so resistant so spending a few extra dollars a month to support the education of children here in Oregon - while we blithely spend hundred of dollars each month to boost the profits of multi-national drug companies. Something to think about.

Let me close by acknowledging that there are, in fact, ways to balance the budget for the remaining year of this biennium without a general tax increase. And, in the end, that may well be what the legislature chooses to do. But let's be clear - while it may be the politically expedient course, it is not the road to our vision of the best-educated, best-trained workforce in the world.

On the contrary, it is the road to mediocrity and I, for one, am not willing to go there. I will continue to argue for a different road, for a different future - one that depends on our collective willingness to move beyond partisanship and ideology and to make these fundamental investments for the good of our Oregon community.

Governor John Kitzhaber

**Address to the American Wind Energy Association
Portland, Oregon**

June 3, 2002

It's a pleasure to welcome you to Oregon, which I think is an especially appropriate setting for a gathering of the American Wind Energy Association.

First of all, we have a lot of wind here in Oregon, as many of you know. But just as important, we Oregonians believe in the wind. We believe in putting it to work in ways that those first pioneer builders of windmills never dreamed of. We believe in the promise that wind offers—a world in which the products of human hands don't foul the air or water, poison the soil, or cause the extinction of any species that shares this planet with us.

Here in Oregon, we have a vision of a future that maximizes the development and commercialization of wind energy technology, not only because of the obvious environmental advantages, but also because of the economic advantages. We believe that wind energy and its allied renewable energy technologies are the wave of the future—that these technologies are the key to a prosperous Oregon, a prosperous region, and a livable world in the years and decades ahead.

The message I want to bring you today is two-fold. The first part is a little self-serving, I'll admit, but it's sincere, and it has the force of public policy behind it. Oregon *wants* you. Oregon wants the wind energy industry *here*.

It's a natural fit, when you stop and think about it. Oregon's leadership in reasonable, workable environmental policy is legendary. All over the country, states have followed our lead with measures like the Bottle Bill, recycling, land use planning and efforts to restore watersheds.

Moreover, we've already made sizable investments in wind technology and production. A case in point is the Stateline Wind Generation Project, which straddles the Oregon-Washington border, just southwest of Walla Walla. Stateline—which is one of world's biggest wind plants—was dedicated just two months ago, and offers the ability to generate 300 megawatts of power, enough to supply 70,000 homes, or about a third of the houses in the city limits of Portland. Built, owned and operated by FPL Energy, the plant consists of more than 400 wind turbines. Marketing the output of these plants is the job of PacifiCorp Power Marketing. Many of you in this room had a hand in some aspect of this project, and to you I say, Thank-you on behalf of the people of Oregon and everyone who cares about the future of clean energy.

The Stateline Wind Project is a concrete example of our vision becoming real, a testament to the diligent efforts of private-sector planners and investors, the various state, local and federal agencies who had a hand in the permitting and regulation, and those members of Congress from throughout the region, whose support was critical to helping the dream materialize.

Stateline, of course, is not the only wind plant in Oregon. We have the Condon facilities, Phases I and II, which generate 25 megawatts apiece, the Klondike facility, which generates another 25 megawatts, and the Vansycle facility, which also generates 25 megawatts. We're proud of them all, and we expect many more to spring up in the years ahead.

I want to say a word about the Klondike project. To make the project reality, we used a process called Oregon Solutions, in which we convened all the interested parties—state, local and federal agencies, businesspeople, environmentalists and community representatives, and brought them into the process. With Oregon Solutions, the siting process took just four

months, beginning to end, instead of the 18 months it would have taken through conventional means. From the day the idea dawned, to the day it was built, the Klondike Wind Farm took just 10 months.

Last month, Vestas Wind Systems announced that it will establish a major manufacturing presence here in Portland, with a plant that will build up to 300 new wind state-of-the-art turbines a year. At full capacity, the plant will employ more than a 1,000 people, and will serve a growing and vital domestic market for wind power. Vestas will also locate its North American headquarters here in Portland, bringing in even more jobs. The recently retired managing director of Vestas, Johannes Poulsen, noted that Portland is optimal for the company's activities in this region, and he credited state government, local government, and Oregon's congressional delegation for their help in smoothing the way toward establishing this important new manufacturing facility.

My point is this: Oregon has done more than talk and pay lip service—we've *acted*. We've *invested*. We've established a growing base of technology, manufacturing and production that will serve as the foundation for the future growth of our wind-energy community. We're determined to join the ranks of world leadership in the promotion, development, and sale of wind technology, together with actual distribution of wind-generated electricity on the utility power grid.

My other message goes not only to those of you in this room, but also to anyone else who's listening—particularly the voters of America, the people who ultimately decide this nation's energy policy. That message is as simple and straightforward as it is critical to our national well-being. We need a change in energy policy that reflects a genuine commitment to renewable energy technologies and conservation. We need aggressive national leadership that recognizes the importance of developing systems of energy production and distribution to enable economic growth without compromising the integrity of our environment. Without that kind of leadership, we're headed for a dark and toxic future.

Like most of you, I applauded the approval by the U.S Senate of the federal Renewables Portfolio Standard, together with a full five-year extension of the production tax credit. The RPS portion of S. 517, the Senate version of the energy bill now under consideration in a conference committee, requires that an additional one percent of the nation's electricity must come from new renewable energy sources by the year 2005. It would also require that the percentage increase slowly each year thereafter, until renewable energy represents 10 percent of the national energy supply by 2020. Without question, the Senate energy bill will help increase the use of renewable sources by this nation's energy suppliers.

Unfortunately, other aspects of the new federal energy bill aren't as visionary or encouraging. Not only does the legislation further deregulate the energy industry at a time when steady, consumer-oriented guidance is in order, it also offers significant subsidies to promote the use of fossil fuels and nuclear power. Specifically, it contains a four-year subsidy of \$1.3 billion for relicensing nuclear power plants. It directs another \$1.8 billion to subsidize so-called "clean coal" technology. And it provides more than \$2 billion to promote on-shore and off-shore oil and gas production, including ultra-deepwater drilling.

The fact remains that if we are to maintain our free markets and continue our economic growth, we must bring clean energy online worldwide. And we cannot do this by continuing to subsidize and promote the reliance on burning carbon fuels. I acknowledge that fossil fuels and nuclear reactors are a necessary part of our energy picture today. But we can and must take forceful steps to start the transition from old, polluting fuels to renewable, clean sources of energy. One of the key steps in this transition is conservation.

Last fall, the Northwest Power Planning Council reported on the striking potential of a vigorous program of conserving electricity. Using a disciplined conservation program, the Pacific Northwest could conserve about 300 megawatts over three years, an amount equivalent to the output of a large natural gas power plant. Unquestionably, a conservation program of this kind would be good for the environment, because it would displace a gas-fired combustion turbine. But it would also be good for the economy, because it would improve the efficiency of energy use. Better efficiency means lower operating costs for businesses and industries, higher profits, more personal income and more jobs.

The kind of program we're talking about does not require enduring the cold of winter, temporary industrial shutdowns, or privation of any kind. It simply means using energy smarter—investing in more efficient lights, better insulation, more economical machines, and changing wasteful habits. If we employ the same kind of aggressive conservation strategy on

a national scale, we could substantially reduce the demand for gas coal-fired generators and nuclear reactors. And today more than ever we have reason to reduce our reliance on non-renewable energy sources, particularly oil and gas.

Thus, conservation is a strategy that compliments and strengthens the move toward renewable energy. By moderating the demand for dirty power, conservation counters the widely held assumption that only hydropower, carbon-fuel or nuclear technologies have sufficient capacity to meet the demands of today's growing international economy. Conservation will speed public recognition of the fact that renewable energy can do the job for America and the world.

Amory Lovins, one of America's foremost energy visionaries, tells us the issue is not foreign oil versus domestic oil. Rather, the issue involves the architecture of the energy system. A good system makes large-scale failures impossible and local failures relatively harmless. It uses less energy, and it uses energy more efficiently. It relies on resources that are dispersed, diverse and renewable. Therefore, our strategy for the future must include the aggressive use of conservation as a means of easing the transition to wind, hydrogen and solar energy. Using this strategy, we can achieve Lovins' vision of an energy system architecture that is diverse, efficient and not susceptible to large-scale failure.

We have accomplished much toward achieving that vision, and the growth of wind power throughout the world has been an important contributing factor. But we still have much to do. From industry's perspective, the question over the future of the production tax credit continues to loom, a question that we will press Congress to answer once and for all in the near future. We recognize the financial importance of the production tax credit to wind power, and we know that temporary extensions are temporary solutions at best.

In order reinforce Oregon's commitment to wind power, I'll undertake a policy initiative to establish a state production tax credit to help offset potential losses if Congress ever fails to extend the federal production tax credit in the future. Similarly, we'll examine leveling the playing field for renewable energy, making generation facilities that don't emit particulates eligible for the same tax credits that are available to those do emit particulates.

And be assured that Oregon will also do all it can to ensure fair and affordable access to transmission facilities for clean power. In the past, we've brought the means of transmissions to dams and nuclear power sites-we've proved that we can do the same for wind!

As we contemplate the challenges we face and the questions we must answer in order to achieve a sustainable world, it is clear that facilitating the transition from non-renewable energy to renewable energy will be a key to our success. I applaud for your leadership in this effort, and for your commitment to this cause. Thank-you again for coming to Portland. I hope you enjoy your stay, and return often.

Governor John Kitzhaber

**Sustaining the Oregon Community
Eugene Rotary Club**

May 28, 2002

Today Oregon stands at a crossroads. The new revenue forecast announced this morning reveals that state resources have declined by another \$550 million dollars. This -- combined with the failure of Ballot Measure 13 in last week's primary election, growing caseloads in the Department of Human Services, and the need to maintain our ending balance - has put our state budget out of balance by over \$870 million.

Even more disturbing is the projected decline in projected revenue for the 2003-2005 biennium. This - coupled with over \$500 million in one-time revenue we have already employed to help balance the current budget - means that the next Legislature, when it convenes in January, will be confronted with another budget deficit in excess of \$1.3 billion.

One could hardly imagine a more difficult situation. With nearly sixty cents out of every state tax dollar going to education - K-12, community colleges and the Oregon University System - at risk are the very underpinnings of our economy and, indeed, of our society. A good education is not only the key to a skilled workforce, but increasingly the key to social and civic success as well.

The challenge of filling this revenue gap is a daunting one - ripe with the opportunity for partisanship and ideological conflict. Yet that need not be the case - a thought which occurred to me as I stood, just last Thursday, with a small group of people in a forest clearing in Idaho.

With me were the governors of Idaho, Wyoming, and Montana; Secretary of the Interior Gale Norton, Secretary of Agriculture Ann Veneman, the Chief of the U.S. Forest Service - and an interesting mix of other people representing tribal interests, counties, the environmental community and the timber industry.

We had gathered to sign an historic agreement - the implementation document for the National Ten-Year Fire plan, designed to restore the health of our western forests, reduce the risk of catastrophic wildfire and provide wood to help sustain rural communities. The agreement was historic because it bridged the divide between environmentalists, industry and communities to focus on a common challenge: restoring the health of our forest ecosystems.

This remarkable consensus on a plan of action started to emerge after the terrible fire season of 2000. The scope, nature and intensity of these forest fires were not typical of what had historically occurred in the West. These fires were an indicator of declining forest health - dense stands of young trees, acres of dead and dying insect infested timber and few remaining large, old fire resistant trees. Other indicators of declining forest health were the loss of forest sensitive species and the economic collapse of small rural communities as the timber harvest off these forests declined.

Putting aside the contentious debates over roadless areas and salvage logging - these disparate stakeholders recognized their mutual interest in maintaining healthy forests, the common denominator from which all other beneficial uses flow: clean water, abundant timber, and healthy forest habitat.

This is not to suggest that we have resolved contentious issues like wilderness designation or old growth logging - we haven't. Those debates will continue. But for the time being we moved beyond them - because the urgency of the situation required we join in common cause; because we recognized that without restoring a healthy forest, we would have little to debate about in the first place.

This agreement was made all the more remarkable by the fact that it will take thirty years or longer to restore the health of these vast forests. Many of those gathered last week will not live to see that day - yet that did not make the investment any less important.

I suggest to you that we have arrived at a similar point here in Oregon.

The magnitude of our budget problem has outrun the kind of solutions we have debated in the first two special sessions. It is time for us to move beyond partisanship and ideology to do what is right for Oregon - to do what is needed to secure our common future.

I believe that it is our obligation - mine and that of the Legislature - to not only rebalance the current budget, but to do so in a way that will provide the next governor and Legislature with the resources necessary to provide stable funding for those services essential to Oregonians. It is not sufficient to merely patch together the current budget knowing full well that we are pushing the state toward another enormous fiscal cliff just a year from now.

Although I am sure that the news coverage of our first two special sessions left you with the impression that none of us could agree on anything, in reality there was - and remains - a broad consensus on the level budget cuts. Or, to put it another way, there is broad consensus on the level of state services required to meet the legitimate needs of Oregonians.

In the first special session, the Legislature cut the budget by \$450 million. In the second special session -- despite a declining revenue picture - the cut level remained essentially the same.

Members of both parties recognized the serious consequences of further reductions. Over 70 percent of the budget is returned directly to Oregon communities - for public education, for health care, for economic development and for support of the frail elderly and other vulnerable citizens. There is a broad consensus that these services are vitally important to our communities as they struggle to weather and recover from the current recession.

My point is this: we have cut the budget about as deeply as we can. What we have been debating is not budget cuts but rather how to pay for that portion of the budget we want to sustain. Specifically, we have been debating whether to rely solely on one-time revenue sources to balance the budget or whether to consider new revenues.

If our problem was simply limited to the current biennium, this debate would be less important. The reality, however, is that in addition to the relatively short term revenue loss due to the recession, we have a structural budget deficit that preceded the recession and which will continue beyond it. In other words, our current level of state programs and services is not sustainable into the future based on the projected revenue forecast -- even when the economy has fully recovered.

This projected discrepancy between revenues and expenditures is due largely to a series of choices Oregonians made in the last decade - in particular, the fact that we cut taxes but did not cut the programs and services supported by that revenue.

First, was the passage of Ballot Measure 5 in 1990 which capped school property taxes at \$5.00 a thousand but required the state General Fund to make up any revenue that had been lost to local school districts. This has amounted to a shift of over four and a half billion dollars per biennium onto the General Fund. Between 1990 and 1999 we granted nearly a billion and a half dollars of personal and corporate tax reductions through the 2 Percent Kicker. And in 2000 we approved Ballot Measure 88, which grants yet another state income tax cut to those who pay more than \$3,000 in federal taxes.

Since 1994 Oregon's population has increased by 600,000 and - more importantly, we have 60,000 more children in our public school system. Yet in 1994 we passed Ballot Measure 11 (the one strike and your out, public safety measure), which forced us to issue over a billion dollars in bonds - not for new schools, but for new prisons. And the ongoing operation of these new facilities will cost us even more.

We got away with these policies - expanding state programs and services while reducing taxes - because of the

unprecedented economic growth we experienced during the 1990's and because of the addition of video poker to the state lottery. These two factors masked the fact that our fiscal policy was unsustainable.

As a consequence, what we are faced with today is a system of public education that is far more dependent on the state general fund than it was a decade ago - and a state General Fund that is insufficient to adequately support our system of public education.

This is one of the central challenges facing Oregon today. Indeed, both nominees for governor have committed to securing "long term, stable funding for our schools. Today I would like to talk about what we need to do to accomplish that objective.

The only constitutional responsibility of the Legislature is to produce a balanced budget for the current biennium. And to date, those who want to use one-time revenue to fulfill this responsibility have largely prevailed. The new revenue forecast, however, makes it increasingly difficult to ignore the implications of our actions in this biennium on the budget for the next biennium.

If, as I believe, we are truly committed to long term, stable funding for our schools - then one year is certainly not long term and leaving a \$1.3 billion deficit is certainly not stable. Educating the next generation of Oregonians is not a one-year proposition. It requires a sustained effort - and it requires that public policy makers adopt an event horizon that is longer than a single budget cycle.

Let me suggest how we might proceed in a way that will not only meet our obligation to balance the current budget, but which will also give the next governor and the next Legislature the maximum flexibility to arrive at a long term solution.

To close the \$870 budget hole for the remaining year of this biennium, I propose that we take the following actions:

- First, apply the remaining \$80 million of unallocated revenue from the National Tobacco Settlement to the current budget.
- Second, either disconnect from the federal economic stimulus package, or delay its \$124 million fiscal impact so that it is spread out over several future biennia.
- Third, raise the cigarette tax by fifty cents per pack which will generate \$89 million this biennium.
- Fourth, put before the voters, in a September special election, the question of closing the remaining shortfall through a temporary adjustment of the personal and corporate income tax rates. I suggest that this rate increase be sunsetted on December 31, 2004.
- Finally, refer to the November ballot, the creation of an Education Stabilization Fund - similar to that proposed by Ballot Measure 13 - but do not tap the resources for the current budget. This would give the next Legislature a cushion of nearly \$300 million to help maintain school funding, if necessary, for the 2003-2005 biennium.

When combined with the \$450 million in budget cuts we have already made, these two tax increases will generate enough revenue to essentially eliminate the budget deficit in the upcoming biennium. Thus, funding will be stabilized at its current level over the next three years. This will give the next governor and the next Legislature - and, indeed, the Oregon people -- the opportunity to thoughtfully consider the structure of our tax system and the adequacy of the General Fund without being consumed by yet another budget crisis.

By sunseting the income tax increase at the end of 2004, the next legislative session will have to address, and act upon, two questions. First, is the current level of funding for public education sufficient to accomplish what we expect the system to deliver? And, second, how will that revenue be raised? The first question is a matter of adequacy, while the second is a matter of structure. It is important not to confuse the two.

Let me start with the issue of adequacy. There is growing evidence that our state budget is not adequate to meet the demands we have placed upon it. After a decade of unprecedented economic growth and prosperity we are watching the gradual dismantling of our system of public education.

The Portland school district now has the shortest school year in the nation while Condon has gone to four days a week. At the same time, every other industrialized nation with which we are competing is sending its students to school longer than we are here in Oregon. Our university system cannot pay enough to retain quality faculty members, we are cutting back on basic research, and increasingly Oregon high school graduates cannot afford to attend.

I submit to you that this situation is inconsistent with a state that pays lip service to the importance of education as the key element to a competitive work force of the 21st Century.

I believe that we need to permanently increase the size of our General Fund - both to make up for the revenue lost through Ballot Measure 5 -- and to realize our vision of giving Oregon the best educated and best trained workforce in the world. The Quality Education Model, which the Legislature used to determine the level of K-12 funding for this biennium -- supports this conclusion -- that our efforts are falling short of our objectives.

At the same time, an adequate budget must also reflect efforts to manage costs which reduce our ability to deliver public services. A clear example of this is our responsibility to find solutions to the growing cost of the Public Employees Retirement System (PERS). Toward that end I have appointed a Task Force on PERS - which I will chair - with the objective of providing the next Legislature and the next governor with clear information on the magnitude of the shortfall in the fund and with recommendations to improve the management of the system and to constrain costs.

I am also working to develop strategies to help reduce the rate of medical inflation - which, by the way, is a much larger cost to public employers than is the retirement system.

In short, the debate over the adequacy of our General Fund during the 2003 Legislative Session must be informed by any potential cost savings that can be realized by addressing legitimate problems in the PERS system, by reducing the rate of medical inflation, and from administrative savings.

Once the question of adequacy has been determined, then the next question involves the tax structure - that is, how should this revenue be raised? All too often when people say they want to "reform" the tax system, what they are really talking about is generating more revenue. There is nothing inadequate about our current income-tax based tax structure in terms of raising money - in fact, \$500 million per biennium can be raised with less than a one percent increase in the tax brackets. There may be other problems with our current tax structure -- and there are -- but adequacy is not one of them.

So one alternative for the next Legislature to consider would be to simply retain our current income tax-based system and to continue to capitalize a "rainy day" fund to ensure long term stability. Another alternative, of course, would be to broaden the tax base and to reduce the reliance on the income tax.

Whatever conclusions the next Legislature arrives at concerning Oregon's tax structure, the proposal I have offered today will require that a tax measure of some kind be placed before the voters in either November 2003 or November 2004, prior to the date on which the temporary income tax rate increase sunsets.

What I am suggesting today is "bridge financing," if you will - bridging the revenue shortfall for both this and next biennium in order to make clear, informed and accountable decisions about both the adequacy of our state revenue stream and the tax structure by which we will raise it.

I appreciate that the headline tomorrow will be limited to "Governor Proposes Tax Increase." I can live with that, but the issue is not as simple as such a headline implies. Certainly, making deeper cuts in lieu of new revenue is an option - it is an alternative choice for balancing the budget. But make no mistake about it, it is also a choice for a different kind of Oregon than the one we know today.

It is, after all, our commitment to each other - to education and to caring for our vulnerable citizens and our for natural

environment - that makes Oregon's definition of civic responsibility and quality of life different than that in Mississippi or Texas.

So to me, this is not as simple as a choice between budget cuts and raising taxes. It is about accountability. The accountability to step up to the plate and to pay for those state programs and services that we think are important - not so much for ourselves, but for our children and for all those who come after us.

When I was in Idaho last week, I described the National Ten-Year Fire Plan as an example of sustainability - an approach which recognizes the interdependence of our economic, environmental and community needs. I used the analogy of three overlapping circles - one representing our economic needs, one representing our environmental needs and one representing our social or community needs. The area where the three circles overlap is the area of sustainability -- the area where we find a balance between these often competing values.

It is in this area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other. These elements are things we hold in common -- they represent a common set of desires and aspirations that add value and quality to our lives. And it was this commonality - this sense of common purpose - which brought a disparate group of people together last week in a forest clearing in Idaho.

And the fact is, that all Oregonians want these same things as well, no matter where we live or what we do for a living. And our efforts to secure them has, at least in the past, been a joint undertaking that produced a kind of cohesiveness that has held us together and allowed us to act in concert for the good of the larger Oregon community. It is what has allowed us to see the wisdom of making investments today to sustain Oregon in the future.

It is time for us to renew that commitment to each other and to this shared place in which we live.

Let me close today with a brief story written by Kim Stafford, the son of Oregon's late poet laureate William Stafford. He writes about Oregon - this special place that gives us gifts everyday - and teaches us how to give back.

He reminds us that the things we cherish must be constantly renewed in ourselves and in our community - lest they slip from our grasp before we even know they are gone. This story is an apt metaphor for where we stand today.

Kim Stafford tells us that Oregon's story is "Lloyd Story." Lloyd Reynolds, the international citizen of Portland, spent his last days in pain, silent, unable to speak or to write, lying in his hospital bed. On his last day at home, as his wife scurried to pack his suitcase for the hospital, Lloyd made his way outside to the garden and there she found him on his knees, with a spoon, awkwardly planting flower bulbs. "Lloyd," she said, "you will never see these flowers bloom."

He smiled at her. "They are not for me," he said, "they are for you. The salmon coming home? They are for you. The calls of the wild geese? They are for you. The last old trees? They are for you and your children, to the seventh generation and beyond. They are all blooming into being for you."

Governor John Kitzhaber

Speech to Albertina Kerr Centers

May 15, 2002

This recognition is particularly rewarding because much of what I have spent my time and energy on over the last seven and a half years does not bring the kind of immediate tangible political victory or pay-off that modern politics demands. These efforts are truly investments that will pay off in the long term and for many years to come. Investments in our children and in their future.

What I would like to do today is to tell you three stories - all of them true - which, to me illustrate the importance of the kind of work represented by the Albertina Kerr Centers, by the Oregon Children's Plan and by the efforts of countless people throughout Oregon who refuse to surrender a single child to abuse, addiction, neglect and indifference.

If I were to ask you how we can best ensure that every child born in Oregon has the chance to be healthy, to be nurtured and to succeed - I think that most of you would respond by saying: education - that giving our children a good education with the chance to go to a college or a university is the single best way to help them succeed. And there would be much truth in that answer. As Edward Peabody pointed out, education is "a debt which the present owes to future generations."

Indeed, over the past decade the funding of education has been perhaps the most dominant political debate in Oregon. - and it remains so as we struggle through the current recession. And if, as I believe, the overall objective our educational system is to produce well-educated, successful Oregonians -- then education is a continuum and each segment is dependent upon the others.

Education is like a chain - the strength of which is determined by its weakest link and I am sure that - from a budget standpoint - each segment of our education community believes that theirs is the weakest link: our primary and secondary schools, community colleges and the Oregon University System.

I would submit to you, however, that -- even as I acknowledge the legitimacy of the funding needs in each of these important areas - the weakest link in the chain of our educational continuum is what happens to children even before they get to school. In our quest for school excellence, it is all too easy to forget the *children* - to ignore the fundamental fact that in order to improve our schools, a solid foundation must be laid beforehand.

We have failed to recognize that the family may be a more imperiled institution than the school, and that many of education's failures relate to problems that precede schooling -- even birth itself. We have focused on school outcomes, forgetting that if children do not have a good beginning -- if they are not well nurtured and loved during the first years of life -- it will be difficult, if not impossible to compensate fully for such deficits later on.

The difficult truth is that in Oregon today, over 40 percent of children are entering school unable to fully participate in the learning experience. These children are growing up without good health care, without supportive families, without the love they need to become successful, independent learners. Schools in turn are being asked to do what families and churches and communities have not been able to accomplish. And, if the schools fail along the line, we blame them, and the teachers, for not meeting our high expectations.

You asked me to address the question, "Human services: where do we go from here?" To me the answer is a simple one: we go back to the beginning, we go back to the children themselves. Human services, to me are a means to help move

people from dependence to independence - to give everyone the very best possible opportunity to succeed and to reach their full potential.

Where we get off the track, where we let kids fail, where we create huge remedial costs in our educational system and feed our criminal justice system - is where we ignore the warning signs of risk very early in life.

And the warning signs are clear, well documented and occur in the home: families with a history of substance abuse or domestic violence; involvement with the criminal justice system; families living below the federal poverty level; teen pregnancy. There is an almost linear correlation between these risk factors and subsequent educational failure, dropout and involvement in the juvenile justice system. There is also a well-documented set of services and supports that have been proven effective in keeping the children of these families on the road to success.

Which brings me to my first story - a true story that happened here in our own state - I have only changed the names to protect their privacy.

Susan was born into an abusive family. She was sexually and physically abused by her alcoholic father and fled from her home to the streets of Portland. Alone, homeless, looking for love and somewhere to belong, she continued to be victimized, abusing alcohol herself and becoming pregnant at 17.

Without any prenatal care or emotional support, she continued to use alcohol and drugs during her pregnancy. Giving birth to a child - surely one of life's greatest joys and greatest gifts - was, for Susan, a nightmare.

When her daughter Patty was born, she was both premature and suffering from fetal alcohol syndrome. Susan returned to the streets and today remains homeless, transient and addicted. At the young age of 19, any hope she might ever have had for a healthy nurturing life - a life of contribution, accomplishment and satisfaction - has all but evaporated.

Her daughter Patty is today a ward of the state. She has been diagnosed with depression and multiple mental disorders including Attention Deficit Disorder. Her original adoptive parents gave her up because of her severe mental disorders. She had 26 different foster placements before being admitted to a residential mental health facility where she now lives.

All of this happened before her tenth birthday.

I know of no yardstick that can measure the depth of this tragedy. The tragedy of mother who is still drug addicted and who will never know her daughter. The tragedy of a young girl who is severely mentally ill and who will live out her life in an institution. And the tragedy of knowing that we could have prevented this outcome - but failed to do so.

So - where do we go from here? We must simply stop turning our heads and looking away. We must make it our personal responsibility to do our part - no matter how small -- to ensure that all of our children have the support and nurturing they need to mature into successful citizens.

Yet doing so is easier said than done. As a society we tend to react in crisis, rather than taking the less dramatic steps and making the small sacrifices needed to prevent problems in the first place. We tend to treat symptoms, not causes. Which brings me to my second story.

When I was an intern in 1973 I watched a baby die. His name was Sam. He was born very prematurely to a young mother who had not seen a physician over the entire course of her pregnancy. Sam wasn't breathing when we delivered him in the emergency room, and we had to resuscitate him before transferring him to the neonatal intensive care unit where he died two days later. I can still remember standing by his incubator during that final hour, knowing what was going to happen and feeling depressed and helpless.

I remember what a quiet death it was. There was nobody there but his mother, a nurse and myself. Nobody else knew about Sam and his two-day struggle to live. He never made the papers or the evening news. It was an anonymous tragedy that touched the lives of no one but those in the room.

I remember Sam's death because it was one of the first that happened on my watch as an intern and because it offered

such a stark contrast to a second death I witnessed a few days later - that of a 90-year-old woman. She had lung cancer and was scheduled for surgery to remove her right lung. She had told me that she did not fear death, but she did fear the surgery. She didn't want any more pain. Well, she had the surgery and subsequently suffered a respiratory arrest and then a cardiac arrest. I rushed to the room -- along with another intern, a surgical resident, two nurses, and a respiratory therapist -- and we spent an hour in a frantic but unsuccessful attempt to save her life.

Sam died because we didn't know as much then as we do now about treating respiratory distress syndrome in newborns. But he also died because somehow nobody had made the token investment to get his mother the prenatal care that could have prevented his prematurity and low birthweight. The elderly woman died because she was ready to die. She recognized that but we couldn't. We had been trained to view death as a failure, not as a natural part of the life process.

Unlike baby Sam's passing, the last hour of her life was not quiet. We stuck tubes into her nose, throat, and bladder; needles into her veins. We pumped her full of drugs and shocked her repeatedly. We "failed," she died, and we ran up a posthumous bill of thousands of dollars to be picked up by her family or her estate.

I can still remember the contrast between the frenzied efforts of a roomful of people, with all their sophisticated equipment, to save someone at the very end of a long life, and the quiet and undramatic death of someone at the very beginning of life.

I remember the events but at the time I never saw the contradictions. I never considered whether the resuscitation of the elderly woman made sense -- whether the cost and the discomfort we brought to her was compassionate in the face of her underlying diagnosis of "terminal lung cancer." And I certainly never connected the money spent on her final hour with the money not spent on Sam and his mother during her pregnancy.

Thirteen years later, however, I would recall this experience and see it in a new light.

It was 1986. As President of the Oregon State Senate, I helped rebalance the budget by, among other things, changing the income eligibility requirements for the state-sponsored health care program. With no fanfare or controversy we dropped 4,300 poor Oregonians from health insurance coverage. I was struck by how easy it was - an accounting exercise, nothing more.

Five months later, back in my emergency room, I saw a number of the people who had lost coverage because of our decision. In most cases, they had delayed seeking treatment for minor problems -- because they were worried about paying the bills - and presented with much more serious and costly conditions. I distinctly remember a man who had suffered a massive stroke because he had no way to pay for the medication to control his blood pressure.

Think about it - a policy that says, in effect, we will pay to treat your stroke in the hospital but we will not help you get the medication that could prevent it in the first place. Does that make any sense at all? Of course not. It is neither compassionate, nor cost-effective. It is a waste of human potential and of limited public resources.

And there is little difference between that and ignoring the early warning signs of a three- year old child at risk; of failing to make the small investment that could help them succeed -- only to pay much more years later to support them in prison.

The overwhelming adoption of Ballot Measure 11 in 1994 is a case in point. It gives us the ability to lock up people after the fact - once a crime has been committed and a victim created - yet it does little to address the underlying reasons which lead young people into crime in the first place.

Yet that is all too often how we choose to allocate our resources. When given the choice to fund prenatal care or to resuscitate a 500 gram infant in the neonatal intensive care unit, the emotional and political imperative drives money into the hospital and out of prevention which could help prevent the low birth weight in the first place.

Likewise, when we perceive that crime is going up, our response is to hire more police and build more prisons, usually by reducing our investment in prevention, thus ensuring a steady stream of young Oregonians who will fail in school and end up in the criminal justice system.

Nothing illustrates this more than the current fiscal crisis facing our state. As you are all aware, Oregon is facing a revenue shortfall in this biennium of over a billion dollars due both to the recession and to Ballot Measure 5, Ballot Measure 11 and other choices we made in the 1990's. The Legislature has responded to this with over \$450 million in cuts and \$500 million in one-time revenue which will leave another looming budget hole for the next Legislature to deal with. Most of the focus of the cuts has been on the \$92 million reduction in the K-12 budget ... less than two percent.

Gone almost unnoticed is the 16 percent cut in the Oregon Children's Plan, a reduction in primary prevention that will ensure more children enter our school system, unable to take advantage of the learning experience, failing, dropping out, ending up on welfare or in prison. Continuing the cycle that wastes the promise of our children, mortgages our future and strains the limits of public resources.

Where do we go here in terms of human resources? We must constantly make those connections for ourselves and for others. We must not just pay lip service to prevention, we must practice it. Yet, in a political world increasingly dominated by sound-bites and the need for instant gratification, it is much easier to tell people what they want to hear - rather than what they need to hear. It is much easier -- and certainly more politically expedient -- to be "tough on crime" and to build prisons than it is to make the much smaller investment needed to keep our children out of the criminal justice system in the first place.

But these front-end investments - whether they involve public resources or the time and commitment of community members - don't produce immediate results, nor results which will capture the imagination of the media. In an age where network news plays to the lowest common denominator, a healthy, successful child is obviously not as newsworthy as the double life of Congressman Gary Condit ... But you know something? It is a lot more important.

The Oregon Children's Plan is important. The work you do at the Albertina Kerr Centers is important. The Oregon Mentoring Initiative is important. The fruits of our labor will not become apparent in the course of a single budget cycle - certainly not in the course of an election cycle. But they will come if we are insistent; if we remain committed to our cause - to the cause of our children.

I want to close this morning with a final brief story -- one written by Kim Stafford, the son of Oregon's late poet laureate William Stafford. He reminds us that the things we cherish must be constantly renewed in ourselves and in our community - and, in "Lloyd's Story" he expresses more eloquently than anything I could ever say, what our efforts are all about.

Lloyd Reynolds, the international citizen of Portland, spent his last days in pain, silent, unable to speak or to write, lying in his hospital bed. On his last day at home, as his wife scurried to pack his suitcase for the hospital, Lloyd made his way outside to the garden and there she found him on his knees, with a spoon, awkwardly planting flower bulbs. "Lloyd," she said, "you will never see these flowers bloom."

He smiled at her. "They are not for me," he said, "they are for you. The salmon coming home? They are for you. The calls of the wild geese? They are for you. The last old trees? They are for you and your children, to the seventh generation and beyond. They are all blooming into being for you.

As James Agee said: "In every child who is born, under no matter what circumstances, and of no matter what parents, the potentiality of the human race is born again."

Our challenge is to do our part to unlock that potential.

[Return to Governor's Office](#)

Governor John Kitzhaber

Speech to the American Fisheries Society
Spokane, Washington
April 30, 2002

As we sit here in the very heart of the Northwest - in what used to be known as the Oregon Territory - we can look back almost exactly 200 years to the day in 1803 when Lewis and Clark began their historic journey.

This remarkable human endeavor discovered, mapped and opened for settlement and development the vast natural treasures of the Pacific Northwest. It identified hundreds of plant and animal species and gave the outside world its first glimpse of the breathtaking vistas and powerful landscapes that define this special place.

At the same time, the expedition marked the beginning of a long, dark road for the Native Americans who befriended and assisted the Corps of Discovery. Many watersheds in the West have been developed and appropriated far beyond their capacity to sustain themselves. And of the 122 species of animals that Lewis and Clark documented, some forty percent have received some government designation as species of concern and two are extinct: the plains gray wolf and the Audubon's bighorn sheep.

The upcoming Bicentennial celebration of the Lewis and Clark expedition - which begins next January at Monticello, Jefferson's home in Virginia -- affords us a rare opportunity to reflect upon where we have come over the past two centuries; to consider what the opening of the West has meant, both the good and the bad; and, hopefully, to learn from our past mistakes in order to avoid them in the future.

I say hopefully because our window of opportunity for doing so is narrowing -- and nowhere is it narrowing faster than here in the Columbia River Basin. We have a diminishing opportunity to learn from our mistakes - and nothing illustrates that better than the chilling parallels between the current crisis in the Klamath River Basin and the troubled future of the Columbia.

Like many river basins in the West, the Klamath Basin, in Southeastern Oregon, is overappropriated. Demand exceeds supply and the current pattern of water allocation is simply unsustainable. And like many river basins in the West, the situation in the Klamath developed over many years through a series of actions - all of which made some sense at the time they were made.

In 1864 the federal government negotiated a treaty with the Klamath Tribes, creating a reservation and reserving to the Tribes hunting, fishing and gathering rights.

In 1877, Congress passed the Desert Land Act followed in 1902 by the Reclamation Act - setting the stage for the huge federal western water projects of the last century, one of the first of which was the Klamath Irrigation Project, developed by the Bureau of Reclamation in 1905.

Three years after the initiation of the Klamath Project, the Lower Klamath Lake National Wildlife Refuge was established - followed by the Clear Lake Wildlife Refuge in 1911 and the Tule Lake and Upper Klamath Lake Refuges in 1928.

By the time these refuges had been established, homesteaders and World War I veterans had begun to farm the Klamath Project which continued to expand until 1966.

Then, in 1973, Congress passed the Endangered Species Act (ESA). This landmark piece of legislation was the result of a growing concern over the impact of our economic development activities on the natural environment in which we lived.

Also in the 1970's the legal basis of the tribal treaty rights to hunting and fishing was clarified and strengthened through a series of court cases - most notably the 1979 ruling by the Ninth Circuit Court of Appeals that the Tribe's right to hunt and fish included the water necessary to support those rights.

In 1988, the Lost River and shortnose suckers were listed as endangered species. That was fourteen years ago. The droughts of 1992 and 1994 called attention to the importance of maintaining lake levels for sucker recovery. For the first time in the 90 year history of the Project, farmers saw cutbacks in water supply. Both lake levels and river flows were reduced to the lowest levels ever recorded. Still no action was taken to forestall this pending crisis.

In 1997, the Coho salmon was listed in the Lower Klamath River. But heavy snowfall in the basin in 1998 and 1999 produced enough water to cover all the competing demands - and to sustain the myth that all was well. Again, no action was taken.

But in 1999, the Ninth Circuit Court of Appeals ruled that the Bureau of Reclamation must meet ESA and tribal trust obligations in operating the Klamath Project. The stage was set for disaster - and it came this year, triggered by the worst drought in Oregon's history.

The result has been an economic, environmental and community disaster - leaving 200,000 acres of irrigated farmland without water; inadequate stream flows and lake levels to support endangered fish and wildlife; and a community torn by fear, doubt, unemployment and - increasingly - by anger, alienation, polarization and acts of civil disobedience.

That this crisis happened should surprise no one -- because we all saw it coming. We have been talking about the competing demands for water in the Klamath Basin for more than a decade - talking, but not acting. And therein lies the real tragedy -- not that we have exploited the Klamath Basin, we have exploited most of the river basins in the West - but that we all saw this crisis coming and chose to do nothing to mitigate it. It is a situation that was avoidable had we acted a decade ago.

I submit to you that we are headed for the same future here in the Columbia River Basin - an environmental, economic and a community crisis -- similar to what is playing out in the Klamath, except on a far larger scale. And the fundamental question before us is whether we are going to go the way of the Klamath here on the Columbia, or whether we will choose a different future. The question is whether we will be architects of our own destiny, or simply fall victim to the circumstances we have created.

If it is true that history repeats itself, then that is what we are witnessing today. Consider the parallels between the Klamath and the Columbia

In the late 1800's, the federal government established treaty and trust relationships with thirteen sovereign tribes of native Americans, living along the Columbia River -- reserving to them fishing and hunting rights in the basin.

Starting in 1938, however, with the construction of Bonneville, the Columbia River was forever altered. Over the course of the next three decades no fewer than twenty eight dams were constructed on the Columbia River system - twenty five on the mainstem and four on the lower Snake, the last of which - Little Goose - was completed in 1976.

Certainly, these twenty-nine dams - collectively known as the Federal Columbia River Power System - have been a tremendous asset to the region, blessing it with abundant, low-cost energy. Nearly half the Northwest's electric power comes from this source and at a price that is much lower than in any other area of the country. And by the time the dam construction debt to the U.S. treasury is paid off, the cost of providing hydropower could be half what it is today.

To a large extent, we have built the Northwest economy on this low cost power. Not only does it benefit individual households, it has allowed us to sustain industries that are highly energy dependent: food processing, pulp and paper,

aluminum and more recently high technology.

The dams have allowed irrigated agriculture to flourish in an otherwise arid basin - and they have given us a low-cost transportation route from the Pacific Ocean all the way to Lewiston, Idaho, more than 400 miles inland.

But, of course, there is a dark side to this story. The effect of these dams on the health of the Columbia River ecosystem and the fish and wildlife that depend upon it -- particularly salmon -- has been devastating.

The river just to the south of us is no longer a river -- it is a series of warm water lakes divided by huge concrete and steel barriers which impede fish passage and increase water temperatures and dissolved oxygen levels beyond those allowed under the Clean Water Act. Federal projects which violate federal laws.

Indeed, the situation, as it exists today, violates not only the Clean Water Act, but also two other federal laws: the Endangered Species Act and the Northwest Power Act. Furthermore, it makes a mockery of the solemn treaties entered into by the United States Government with the native American Tribes of the Pacific Northwest and puts in jeopardy the sustainability of both the ecosystem and the economy on which we all depend.

And, like the crisis in the Klamath, we have seen this coming. In 1980 - seven years after the passage of the ESA - Congress created the Northwest Power Planning Council which, among other things, was charged with developing a fish and wildlife program to protect, mitigate and enhance the fish and wildlife species that had been harmed by the Federal Power System. This constituted no less than an explicit recognition of the environmental damage caused by the dams and their operation.

Nonetheless, eleven years later, in 1991, the Snake River Chinook and Sockeye were listed under the ESA. A decade after the listing there is still no recovery plan for this embattled species. On the contrary, another twelve species of salmon, steelhead and bull trout have been listed.

In response to the Snake River listings, the National Marine Fisheries Service (NMFS) produced a biological opinion in 1993 - almost ten years ago -- that directed the Bonneville Power Administration, the Army Corps of Engineers and the Bureau of Reclamation on how to operate the system in a way which would not compromise fish. NMFS was subsequently sued by Oregon and Idaho on the grounds that the opinion was inadequate.

In 1994 Judge Marsh agreed, ruling that NMFS was more concerned with what the hydropower system could absorb without adversely affecting the economic interests on the river rather than with what the fish actually needed for survival.

In 1995 NMFS put some interim steps in place and promised to develop an opinion by 1999 on the operation of the hydroelectric system -- another five year delay. Predictably, public focus shifted to the question of breaching the dams - not the mainstream dams, but the earthen dams which provided the inland waterway from the Columbia to Lewiston Idaho.

I entered into that debate on February 18, 2000 in a speech to the Oregon chapter of the American Fisheries Society. The statement I made then is as valid now as it was twenty-six months ago - perhaps, even more so.

That fact is that if we look at the policy trade-offs involved -- at the other choices we must make if we choose to leave these dams intact -- breaching emerges as a responsible and cost-effective option. It is not the only option, but it is a responsible one that should not be disregarded out of hand.

Some will say that we have not done enough science. I say that we can always play that card as an excuse for inaction and as a justification for avoiding tough choices. But exactly what additional scientific experiment is necessary to demonstrate that it is easier for salmon to migrate in a free-flowing river than to negotiate a several hundred foot high concrete barrier?

Some will say that it is too expensive. I say, look at the other alternatives. There are similar -- if not greater -- costs associated with a non-breach strategy.

Some will say that it is too controversial. I say, what isn't? Who here thinks that it is not controversial to cut harvest levels? To change agricultural and timber practices on private land or to significantly augment flows?

That was over two years ago. The first, and most immediate, consequence of this statement was the loss of some of my political currency among certain economic stakeholders in the basin. The second consequence, however, was to put the question of dam breaching and salmon recovery squarely on the doorstep of the NW political establishment and to interject the issue into the 2000 presidential campaign.

Less than a month later, at the National Governor Association's annual meeting in Washington, D.C., I met with the governors of Washington, Idaho and Montana to discuss where we might find common ground on this issue. It became clear that the other three Northwest governors - for whom I have great respect -- held a different view. While they insisted that any recovery strategy must leave the dams intact, they expressed a willingness to intensify the efforts in other areas.

The result was a document released in July 2000 entitled *Recommendations of the Governors of Idaho, Montana, Oregon and Washington for the Protection and Restoration of Fish in the Columbia River Basin*. The introduction to the document stated that:

We are keenly aware of the extent to which breaching the four lower Snake River dams has become a polarizing and divisive issue. Regardless of the ultimate fate of the dams, the region must be prepared in the near term to recover salmon and meet its larger fish and wildlife restoration obligations by acting now in areas of agreement without resort to breaching the four dams on the lower Snake River. In order to succeed, the region must have the necessary tools including a clear and comprehensive plan, adequate time, and sufficient funding.

Two months later, during a campaign swing through the Northeast, then- candidate George W. Bush - wearing a salmon pin next to the Texas state logo - also pledged to save the salmon - and to save the dams.

In December 2000 - conveniently after the November presidential election - NMFS released its long-awaited biological opinion. This blueprint for ecosystem recovery in the Columbia River Basin - which, to a large extent, reflected the recommendations of the four governors - included three check points to assess whether the plan was accomplishing its objectives. These checkpoints are 2003, 2005 and 2008. If the plan is found to be failing to make progress on protecting and restoring salmon, stronger measures must be considered - the most obvious of which is the breaching of the lower Snake River Dams.

As next year is the first check point to assess the effectiveness of this aggressive non-breach strategy, it seems fitting to examine what progress has been made so far. Unfortunately, in the first year of this ten year effort, the federal government has failed to implement over seventy-five percent of the measures committed to in the plan.

- Specifically, of the commitments to improve dam passage, fewer than thirty percent have been completed.
- Less than twenty-five percent of the water quality improvements have been completed and the federal dams continue to operate in violation of the Clean Water Act.
- No action whatsoever has been taken on the harvest and hatchery commitments that are called for.

In short, the actions that were taken were those with little cost and even less political risk - things like trucking and barging salmon around the dams, putting fish screens on water diversions and studying avian predation above Bonneville dam. Left undone was anything with a substantial fiscal or political cost associated with it: the issue of water temperature and dissolved oxygen, meeting flow requirements and spill to aid downstream migration.

The *Salmon Report Card for 2001* - produced by Save Our Wild Salmon - documents the "massive failure" of the recovery effort to date and gives it an overall failing grade with the highest score a "D" for tributary, estuary and habitat restoration work. The conclusion:

Aggressive implementation did not occur in 2001. Aggressive implementation in 2002 will be difficult given the lack of funding that has been appropriated to implement the Salmon Plan. Yet the federal government still has time to renew its commitment, both financially and substantively ... [to meet] its legal and moral responsibilities to Northwest Native Tribes ... to uphold the law [and] protect this national treasure.

The federal government must honor the Salmon Plan and demonstrate its success, or be prepared to embrace lower Snake River dam removal ...

Now, for those who think that this report and its conclusion are merely the biased product of a subjective stakeholder in this debate, I suggest a brief examination of the federal funding commitment to implementing the plan for 2003 - the first checkpoint.

The federal caucus - the nine federal agencies with responsibility for carrying out the plan - concluded that full implementation in 2003 would require an annual budget in excess of \$900 million. The Bush Administration has requested \$506, only fifty-five percent of what is needed. Given that the 2001 and 2002 budgets to implement the plan were both under funded by fifty percent, we see a disturbing pattern emerging. And unless something changes dramatically in the near future, this rate of funding and effort will virtually ensure that we will not meet the targets next year or in 2005.

There are two theories about the current ecosystem recovery effort. The more cynical one is that it represents little more than a strategy to avoid the dam breaching issue, to maintain the status quo and to just hope that the problem will go away.

The second theory - and the one to which I have given the benefit of the doubt for the past two years - is that we are engaged in a sincere and committed effort to restore the ecosystem. That viewpoint, however, is becoming increasingly difficult to justify.

Without full funding of the recovery plan for 2003, without taking on the political difficult actions - ensuring adequate flows, for example, or modifying the operation of the dams to comply with the temperature and dissolved oxygen requirements of the Clean Water Act - the sincerity of this effort will be called into question.

As I pointed out two years ago -- we have to stop deluding ourselves into believing that our choices will be easier and cheaper if we just leave the dams alone. Our choices won't be easier. They'll be just as tough. Our costs might be lower, but only on the margin. And that is proving to be exactly the case.

In essence, the 2000 NMFS Biologic Opinion shifts the responsibility of recovery from the hydroelectric system to the other three "H's:" habitat, harvest and hatcheries. But if we do not adequately fund these efforts nor aggressively pursue their implementation, it should come as no surprise to the Northwest political establishment -- or the Administration -- that the focus will inevitably shift back to the dams - not just in the form of renewed calls for breaching, but in a flurry of lawsuits targeting the entire Federal Columbia River Power System.

It is already happening. As a former emergency room physician, I am as leery of lawsuits as one can get. Suing people has never been my tool of first choice. But as governor, I find myself involved in no less than three lawsuits on the Columbia: the lawsuit over the Biologic Opinion itself, the lawsuit over whether or not the dams have to comply with the Clean Water Act, and the lawsuit over whether fish and wildlife have receive equitable treatment as called for in the Northwest Power Act.

Is this really the future we want for this basin? Have we learned nothing from the Klamath? As William Jennings Bryan pointed out: "Destiny is not a matter of chance, it is a matter of choice. It is not a thing to be waited for, it is a thing to be achieved."

We have a choice to make. We have before us one last opportunity to deliver on a recovery plan which - at least on the surface - appears to have broad regional and national political support. To be credible, however, that support must be

translated into real action.

- Full funding for the Salmon Plan
- Aggressive implementation of all of its provisions
- And immediate funding for economic mitigation and engineering studies on dam removal in the event that the plan fails to achieve its objectives.

These actions are consistent with the four governors recommendations. They are consistent with the president's campaign pledge. They are consistent with the federal commitments to the Native American tribes of the Columbia River Indian tribes. They are consistent with federal law. But most of all, they are what this region needs and deserves to protect the health of the ecosystem in which we all live.

These environmental laws and treaties constitute both our connection with the past and our contract with the future. And at the heart of this debate lies one question that each of us must answer: are we willing to honor that contract? To me, this is not just about doing what the law requires -- it is about doing what we know to be right.

If we lose the wild salmon of the Pacific Northwest, then we have lost our watersheds and put at risk our future and that of our children and grandchildren. A highly degraded ecosystem -- which is where we are headed today - represents no less than a decision to mortgage the legacy with which we have been blessed and entrusted for our own short-term benefit. I believe that we are better than that.

Let me close this evening with a brief story written by Kim Stafford, the son of Oregon's late poet laureate William Stafford. He writes about Oregon - a special place that gives us gifts everyday, that teaches us how to give back and teaches us how to heal the divisions that have come with our own growth and prosperity. Although his focus is Oregon, his words ring true for all the special places we have chosen to live. This story, more eloquently than anything I could ever say, captures the importance of what we are about here in the magnificent river basin.

Kim Stafford tells us that Oregon's story is "Lloyd Story." Lloyd Reynolds, the international citizen of Portland, spent his last days in pain, silent, unable to speak or to write, lying in his hospital bed.

On his last day at home, as his wife scurried to pack his suitcase for the hospital, Lloyd made his way outside to the garden and there she found him on his knees, with a spoon, awkwardly planting flower bulbs. "Lloyd," she said, "you will never see these flowers bloom."

He smiled at her. "They are not for me," he said, "they are for you. The salmon coming home? They are for you. The calls of the wild geese? They are for you. The last old trees? They are for you and your children, to the seventh generation and beyond. They are all blooming into being for you."

Governor John Kitzhaber

Environmental Summit on the West II
Salt Lake City, UT
May 15, 2002

I was born and raised in the Northwest, one of the last best places on the North American continent -- where hope still burns bright and people still believe in hard work, individual strength and community spirit. It is a place where people cherish their quality of life. And over the years I have watched the Northwest grow and change.

As an outdoor enthusiast and advocate for wild places and free flowing rivers, I have witnessed the devastation of watersheds, salmon populations and other species brought about by the overzealous extraction of natural resources. As an emergency physician I have seen the equally shocking devastation of communities when these same industries collapse; and the human suffering that occurs when proud, hard-working people lose their jobs - substance abuse, domestic violence, the disintegration of families.

What I have come to realize is that all of these things are connected and interrelated. That to address any one of them we must address all of them. I have learned that the quality of life we so cherish is a multi-faceted jewel.

Enlibra is - first and foremost -- a philosophy and an approach which recognizes and builds on this realization.

Enlibra is an expression of *sustainability* - which I define as managing the use, development and protection of our economic, environmental and community resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to do the same.

This definition requires that we recognize a larger truth: the interdependence of our economic, environmental and community needs - and that we find a balance between these often competing values.

Imagine, if you will, three overlapping circles - one representing our economic needs, one representing our environmental needs and one representing our social or community needs. The area where the three circles overlap is the area of sustainability, the area of Enlibra - the area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements - these threads, which together weave the fabric of sustainability - are things we hold in common. They represent a common set of desires and aspirations that add value and quality to our lives. To me this relationship lies at the heart of sustainability - and at the heart of Enlibra

Yet, as our social, environmental and economic problems become more complex, we are increasingly viewing them as separate, competing entities - mutually exclusive values, if you will. This perspective undermines sustainability because it creates a politics of scarcity - a zero-sum situation in which there must always be a winner and a loser.

We can see this disturbing trend unfolding in many ways: in the challenge of accommodating growth while maintaining livable communities; in the tension between sprawl and compact development; and in the seemingly intractable conflict between economic activity and environmental stewardship.

This situation is evidence of the fact that our political system is reaching the limits of its capacity to meaningfully

respond to these complex challenges -- or, at the very least, that our politics have failed to adapt to meet these new challenges.

"Politics," of course, derives from the Greek word "polis," meaning "city" -- or in more modern terms, "community" -- a group of individuals functioning together as a whole for their mutual benefit. In its original sense, "politics" -- referred to those activities necessary to sustain a community -- composed of individuals whose views and needs would not invariably coincide yet who, from time to time, must necessarily subordinate some of their own personal desires for the larger good. The way in which this "larger good" was arrived at was a central point of contention during the drafting of the United States Constitution.

Thomas Jefferson argued for the "politics of engagement," in which people work together in a spirit of cooperation to find common ground and solve mutual problems. The Jeffersonian model rests on the conviction that people are essentially reasonable, and will work to achieve the common good if they can agree on or be brought to understand what it is.

James Madison, John Jay and Alexander Hamilton -- in the Federalist Papers - argued for a "politics of disengagement," wherein the common good is determined not as a result of cooperation among individuals, but rather as a result of external, top-down management.

It was this second view that more or less prevailed as our nation developed. Certainly it is what Americans today have come to expect from their government, and what they now most resent about it. But more importantly this model does not resolve conflict. This "third-party" management invariably produces "winners" and "losers," thus removing any incentive for individuals to cooperate. Nowhere does our current political structure offer a place where people can come together to balance the needs of the larger community.

The primary tools of government are laws, regulations and the allocation of resources. And with these tools government does many things very well. It provides infrastructure that fosters private sector investment and economic activity. It enforces laws and incarcerates those who break them. It provides for the national defense, establishes health and safety regulations and maintains a system of public education.

What government does not do very well, however, is to bring people together to solve problems - especially when the problems are complex, when they involve tension between environmental, economic and community values, and when the solutions require the participation of many people. Yet these are exactly the kinds of problems that must be resolved if, indeed, we are to create a sustainable future.

To do so, I believe that we must create a community-based governance structure, one that provides the place and the opportunity for people to come together to find sustainable solutions. Enlibra encompasses a set of principles by which to guide these efforts.

To illustrate this point, let me use our efforts in Oregon to improve forest health. Because of a decades of forest management policy characterized by active fire suppression and harvesting the valuable old growth pine, the forests of eastern Oregon have been transformed from their once healthy condition to their current sad state: overstocked stands of young fir and pine, thousands of acres of dead and dying timber infested with insects, and a high risk of catastrophic fire.

Thousands of miles of riparian areas have been damaged by harvest and grazing practices, road building and urbanization resulting in the decline of a number of species which depend on a healthy watershed. Similarly, as the forest health has declined and harvest has been significantly reduced, timber dependent communities have seen tragic declines in employment. Economic, environmental and community values are simultaneously at risk.

For that reason, we set about to find ways to both restore ecosystem health and provide wood to communities in an environmentally sound manner. This effort involved a panel of highly respected scientists from throughout the Northwest and - most significantly - a "forest health advisory committee," consisting of a diverse group of eastern

Oregon citizens and stakeholders. Their work led to a broadly supported set of principles for restoring ecosystem health.

The plan calls for active management to promote ecosystem health, guided by good science and careful monitoring. Restoration efforts include understory thinning and commercial thinning in overstocked stands; road maintenance, closure and obliteration; and prescribed burning. A by-product of many of the thinning treatments is wood for local mills to help stabilize these rural communities. Thinning also reduces the risk of catastrophic fires that has increased significantly as forest health has deteriorated.

The key to success lies in having a single, overarching policy objective driving the management plan, in this case: restoring watershed health. Why? Because a healthy watershed is the common building block from which all beneficial uses of the forest flow: clean water, a thriving forest, abundant timber, and healthy forest species. The three legs upon which the strategy stands - social, environmental and economic - are all interwoven and are dependent first on a healthy, functioning watershed.

Watershed health, then, is the area where the three circles overlap - the area of sustainability - the area of Enlibra - the area which defines the "common good" for this community-driven effort. The "place" that afforded the opportunity to recognize the common good is the forest health advisory committee.

We have made similar progress in our efforts to restore endangered salmon habitat throughout the state under the Endangered Species Act, the primary role of which is a traditional regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the wrong things but it provides no incentive for them to do the right thing.

While the ESA can prevent landowners from engaging in activities that result in a kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70% of coho salmon habitat in Oregon lies on privately owned land and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding take.

As a result, Oregon's effort to comply with the Endangered Species Act - called the Oregon Plan for Salmon and Watersheds -- was designed to involve, empower and incent private landowners to make voluntary commitments to watershed restoration and habitat restoration which go beyond what is required by federal, state and local regulation.

The primary tool with which we implement our efforts on the ground - the "place" where people come together to recognize the common good - is the local watershed council, made up of community members representing a broad range of stakeholders working together to solve a shared problem on behalf of a shared place and in a way that balances economic, environmental and community values.

We now have 93 watershed councils and 45 soil and water conservation districts across the state putting thousands of projects on the ground which improve salmon habitat, and watershed health.

My final example involves 1999 decision by then-Secretary of the Interior, Bruce Babbitt, to make Steens Mountain in southeastern Oregon a National Monument. Steens Mountain is a unique environment where alpine conditions exist in a desert landscape. The lakes, aspen groves, secret canyons and forgotten homesteads more than justified Babbitt's desire to protect this special place.

Predictably, however, the proposed designation as a National Monument created an intensely emotional reaction both from the people living on and around Steens Mountain, and from those who loved to come there and visit.

We quickly realized that debating whether or not to create a monument missed the point. The real question was "What is our common goal for this treasured landscape and what is the best tool to achieve it?"

By convening a working group of all the stakeholders - by creating a place to determine the common good, if you will - it became clear that the mutual objective was to keep this special place in its current condition into perpetuity. It also became clear that Monument designation was the wrong tool by which to achieve that objective in part because thirty percent of the Steens is in private ownership.

For decades private landowners had been good stewards -- working cooperatively with federal land managers to assure recreational and grazing access. A Monument designation would result in hundreds of miles of fences being built across the mountain. Grazing operations would likely become unprofitable, causing land to be sold for trophy homes on this coveted landscape. Exactly the wrong outcome.

By reframing the question from a polarized debate about a "Monument" to an effort to find common ground - to find the area of sustainability, if you will - the Steens Mountain Cooperative Management and Protection Act of 2000 was unanimously passed by Congress.

This case study in the power of Enlibra, protects 500,000 acres of Steens Mountain, including 170,000 of new wilderness. It also recognizes the importance of maintaining cooperative land management across ownerships to protect the ecological, social and economic integrity of the area.

I share this example with you to illustrate the importance of having a clear-eyed, honest understanding of what the real debate is about - about what is causing the tension and the perceived conflict between economic, environmental and community values. In this case, the debate was not over whether or not to have a Monument - but rather over how to protect the Steens as it exists today.

I would suggest to you that the debate over logging old growth may well fall into the same category. Isn't the real economic issue involved here how to maintain a sustainable supply of timber to our mills - not whether the logs are 80 years old or 300 years old?

In my own profession - medicine - we often confuse the debate over access to health care with the challenge of keeping people healthy. Health care is a means that end - it is not an end in itself. Health care has no intrinsic value beyond its relationship to health. Reframing the debate in this way allows us to ask the real question: what is the value of the health care we are paying for in terms of the health it produces?

As I said to you at the first Enlibra conference in Phoenix - Enlibra does not require that we abandon our entrenched positions - but it does require that we make the effort to see beyond them to seek the common ground - the area of sustainability - which can afford us the place and the opportunity to, in the words of Wallace Stegner, "outlive our origins and build a society to match our scenery."

[1] For a more complete discussion of this, see Daniel Kemmis, *Community and the Politics of Place* (Norman: University of Oklahoma Press, 1990), and Daniel Kemmis, *This Sovereign Land* (Washington: Island Press, 2001).

Governor John Kitzhaber

Environmental Design Conference
Seattle, Washington
April 5, 2002

It's a pleasure to be with you today, to participate in a conference with so many leaders committed to creating a sustainable world. I've come here today to discuss the role of government as a player in this movement, drawing upon my experience as the governor of a western state.

We are here because we recognize that our world is finite and that we don't have an inexhaustible supply of natural resources. We embraced the idea that the works of human beings need not scar the earth or kill off the nonhuman species who share it with us -- that we can actually build, work and live our lives in a way that makes the earth a better place.

I truly believe -- as I know many of you do -- that sustainability represents the next major stage in the evolution of human endeavor, the vision of a society where waste is a thing of the past, where the products of our enterprise do not poison the air, the soil and the water, cause sickness or inflict extinction. A society where economic prosperity, community livability and environmental stewardship are interdependent and synergistic -- not separate and in conflict.

I define *sustainability* as managing the use, development and protection of our resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to do the same.

When I say "resources," however, I'm talking about more than our economic resources -- the metals to be mined, the oil to be extracted, the capital to be accumulated, the profits to be made. I am also talking about our social resources -- like public education, affordable health care, and compassion and support for those who cannot provide for themselves. And I am also talking about environmental resources like wilderness, recreation and the majestic beauty and spirituality of our natural lands.

This definition requires that we recognize a larger truth: the interdependence between our economic, environmental and community needs -- and that we find a balance between these often competing values.

Imagine, if you will, three overlapping circles -- one representing our economic needs, one representing our environmental needs and one representing our social or community needs. The area where the three circles overlap is the area of sustainability -- the area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements -- these threads, which together weave the fabric of sustainability -- are things we hold in common. They represent a common set of desires and aspirations that add value and quality to our lives. To me this relationship lies at the heart of sustainability -- and if we are to be truly successful in creating a sustainable future, an awareness of this interdependence must guide all of our work.

I am aware that most of you here are involved in various aspects of environmental design in the built environment. What I want to do today is to provide a larger context for your individual contributions. I believe that sustainability results when the combined actions of planners, materials engineers, architects, and transportation engineers result in healthy places to live that have the density to support mass transportation, while retaining the spaces and the pace to

encourage community mental and physical health.

At the same time, the built environment exists in the context of the larger natural environment. Air sheds and watersheds do not recognize political boundaries nor those established by ownership. The same watershed, for example, may support a large metropolitan area with a high technology economy and a small rural town with a natural resource-based economy. The economic activity in both communities depends on – and can threaten – the health of a shared watershed.

In short, my vision of a sustainable future depends both on a quality built environment, and on a built environment that exists in harmony with the natural environment.

In Oregon, we in state government have approached sustainability on two different levels and in two different roles. The first is as a very large business, employer and consumer of resources.

The second is as a facilitator – a role in which we empower people by providing a setting – a “place,” if you will -- in which they can come together to build quality communities and to solve other shared, place-based problems. It is this second role -- which requires a change in perspective and a change in governance – on which I will focus most of my remarks today. First, however, let me briefly touch on the state’s role as a sustainable business.

Oregon is, in essence, a very big business, a developer and a very large employer. The state directs investment for economic development; sets the rules for where and how communities can grow; and establishes the parameters for environmental management. It also consumes reams of paper; builds offices, buys power, paves roads, and manages forests, parks and rangeland. All in all, state government leaves a fairly large footprint on the land.

In recognition of this fact, I signed an executive order in May 1999 directed at the internal operations of state government but also setting the larger goal of making Oregon a sustainable state within one generation. The executive order was also an effort to gain some credibility in meeting the challenge of sustainability, and to be an active partner with like-minded businesses and local governments.

And we have made significant progress.

The state has developed sustainable purchasing guidelines for paper, office furnishings, building materials and other product groups. We are now beginning to look at guidelines for food in state institutions.

We have created green building guidelines for all new state facilities including the use of recycled material, increased energy efficiency and on-site storm water treatment. These guidelines, consistent with national criteria, will be tested on the 120,000 square foot North Mall Building Project that will be under construction starting next month and will include construction site recycling.

Last year, more than 4 million square feet of state office buildings have, on average, reduced electric energy use by 21 percent. We also used an average of 37 percent less natural gas. These savings are the result of permanent reductions in lighting and changes in building operations.

The state printing plant has developed an environmental management system for their 130-person operation, and they are now seeking certification of the system to the ISO 14001 standard. When certified, they will be the first state agency in the nation to receive such certification.

This role of the state as a business – and the steps we are taking under the executive order – constitutes a traditional approach to sustainability: an effort to operate state government in a more environmentally friendly fashion, to reduce our consumption of resources, to leave a smaller footprint on the face of Oregon.

The second role -- that of a facilitator -- is less traditional, but I believe equally as important. It is based on a recognition that, in many ways, the very structure of government hinders the kind of creative thinking that supports sustainability as a policy and as a practice.

As I mentioned earlier, I believe that creating a sustainable future depends on our acute awareness of the interdependence between our economic, environmental and community needs. And yet, as our social, environmental and economic problems become more complex, our traditional governmental structures of law and regulation increasingly fail to recognize this relationship and, in fact often get in the way of it -- creating conflict and polarization instead of collaboration and a sense of community.

Increasingly, we are viewing economic, environmental and community needs as separate, competing entities – mutually exclusive values, if you will. Of course, this perspective undermines sustainability because it creates a politics of scarcity – a zero-sum situation in which there must always be a winner and a loser.

We can see this disturbing trend unfolding in many ways: in the challenge of accommodating growth while maintaining livable communities; in the tension between sprawl and compact development; and, particularly in the West, in the growing conflict between economic activity and environmental stewardship.

This disturbing situation is evidence of the fact that, as our social, environmental and economic problems become more complex, our political system is reaching the limits of its capacity to meaningfully respond -- or, at the very least, that our politics have failed to adapt to meet these new challenges.

Let us remember that the word “politics” derives from the Greek word “polis,” meaning “city” -- or in more modern terms, “community.” That is to say, a group of individuals functioning together as a whole for their mutual benefit. In its original sense, then, “politics” referred to those activities necessary to sustain a community -- composed of individuals whose views and needs would not invariably coincide.

Our political system – or perhaps more accurately, our system of governance – grew out of the recognition that there had to be some way to regulate the ways in which people interact, precisely because their views, needs and interests would not always coincide.

And of course this implies that individuals have an equally important duty: they have to recognize that their own personal welfare is inseparable from the welfare of the community as a whole, and they must be willing to act accordingly, even if it means subordinating some of their own personal desires for the larger good. The way in which this “larger good” was arrived at was a central point of contention during the drafting of the United States Constitution.

The first view was represented by Thomas Jefferson, who espoused what has been called the “politics of engagement,” a model in which people work together in a spirit of cooperation to find common ground and solve mutual problems.

The Jeffersonian model rests on the conviction that people are essentially reasonable, and will work to achieve the common good if they can agree on or be brought to understand what it is.

The second view was set forth in a series of documents known as the Federalist Papers, whose chief authors were James Madison, John Jay and Alexander Hamilton. In contrast to the Jeffersonian model, it embodies a “politics of disengagement,” wherein social stability is achieved not by cooperation among individuals, but by a careful balancing of private interests, one against the other.

This model assumes that individual interests will inevitably clash, and that the role of government is to minimize or control these conflicts in a way that produces the common good. But the common good in this case is not the result of cooperation among individuals seeking common ground. Rather, it is the result of external, top-down management.

It was this second view that more or less prevailed as our nation developed. Certainly it is what Americans today have come to expect from their government, and what they now most resent about it. But more importantly this model does not resolve conflict -- indeed it often tends to encourage conflict. It does not foster a spirit of community or a sense of responsibility beyond narrow self interest. By no means does it lead to sustainable solutions.

People feel no obligation to learn about the needs of their community. Rather, they rely on government (or the courts) to manage conflict between individuals. Yet this “third-party” management invariably produces “winners” and “losers,” thus removing any incentive for individuals to cooperate. Nowhere does our current political structure offer a place

where people can come together to balance the needs of the larger community.

I am not suggesting that we start a revolution here – although Thomas Jefferson did say that “a little rebellion now and then is a good thing and as necessary in the political world as storms in the physical.” Or, as the late western writer Edward Abbey wrote: “Society is like a stew. If you don’t stir it up from time to time the scum floats to the top. (I imagine this is the only time you will hear Thomas Jefferson and Edward Abbey quoted in the same breath).

But if not a revolution, I am suggesting that there is a gap in our system of governance -- a gap that has everything to do with our ability to create a sustainable future.

The primary tools of government are laws, regulations and the allocation of resources. And with these tools government does many things very well. It provides infrastructure that fosters private sector investment and economic activity – everything from railroads to highways to water and sewer systems to telecommunications. It enforces laws and incarcerates those who break them. It provides for the national defense, establishes health and safety regulations and maintains a system of public education.

What government does not do very well, however, is to bring people together to solve problems – especially when the problems are complex, when they involve tension between environmental, economic and community values, and when the solutions require the participation of many people. Yet these are exactly the kinds of problems that must be resolved if, indeed, we are to create a sustainable future.

To do so, I believe that we must create a community-based governance structure, one that provides the place and the opportunity for people to come together to find sustainable solutions.

To illustrate this point, let me use the inherent conflict between accommodating growth while maintaining livable communities. As my friend -- and former director of our state Department of Land Conservation and Development -- Dick Benner likes to point out: “There are two things Oregonians hate – sprawl and density.”

A large part of this problem flows from how public sector agencies have evolved over time, reflecting the Federalist view of government – that is, determining the “common good” not as the result of cooperation among individuals but, rather as the result of external, top-down management.

Public sector agencies tend to view their role narrowly, in the context of their particular mission. Nowhere is this more true than in those agencies which affect the built environment, if you will – that affect how communities develop physically. In Oregon those agencies are the Departments of Transportation, Housing, Economic Development, Land Use and Environmental Quality.

When I first took office in 1995, these agencies operated, to a large extent, in isolation from one another. The Department of Transportation, for example, viewed its mission almost exclusively as an engineering one: to design and build roads. The Department of Economic Development was focused on job creation and retention while the Housing Department saw the world in terms of the availability and affordability of housing stock. There was virtually no formal communication between these agencies and no awareness or consideration of the interconnectedness of individual agency decisions on the overall community.

If, for example, a large employer was recruited to a community with an inadequate housing supply – or the available housing was located a long way from the new jobs – a congestion problem would result from an increase in commuter traffic. A second consequence could be an increase in air pollution as people sit idling in their cars going to and from work.

Conversely, where a road is built – and how access to it is managed -- has an enormous effect on development patterns in a community.

The result of this lack of communication and coordination was a series of mutually undermining investments which saw the community, not as a whole, but as a series of unrelated problems: jobs, housing, transportation, etc. Furthermore, this disjointed approach undervalued the community itself because the decisions which affected it were made

unilaterally by the state agencies. Limited resources were wasted, livability was compromised, and conflict was inevitable.

To break down this silo mentality, enhance communication and reduce conflict, I created the Community Solutions Team comprised initially of the directors of these five community development agencies. The Community Solutions Team (CST) represents a new integrated way to plan and deliver development assistance to local communities and businesses. We meet on a regular basis, communicate openly and have changed the operational paradigm of the individual agencies from one of "running programs" to one of "solving problems."

For example, I directed the Transportation Commission to operate the department, not as a road building agency, but as a growth management agency. To further this goal I have required regular meetings between the Transportation Commission and the Land Conservation and Development Commission. The name of the Department of Economic Development was changed to the Oregon Economic and Community Development Department to emphasize its larger responsibility for overall community development beyond the narrower focus on job creation.

The CST works closely and as a partner with local communities and their political, civic and business leadership. All five agencies are now guided by the following common mission statement:

"The state shall strive to ensure that its programs and activities help build and maintain quality communities which have clean air and water, housing that is affordable to community residents, a balance of jobs and housing in proximity to one another, development patterns that minimize the cost of public services, and a mix of residential, commercial, industrial and institutional uses that supports a balanced transportation system."

In addition, individual actions by both state and local entities strive to remain consistent with a set of seven "Quality Development Objectives" developed collaboratively by the state, the Association of Oregon Counties and the League of Oregon Cities.

This approach recognizes that Oregon's communities are diverse and changing. High growth rates in some communities have challenged their ability to respond to traffic congestion, sprawl, commercial strip development, and the need for open space and affordable housing. Conversely, other communities -- especially those hard hit by downturns in the timber and agricultural industries -- need new jobs and new growth to maintain themselves.

The CST embodies an integrated, collaborative, community-based approach which represents a significant departure from the traditional governmental tools of law and regulation. It creates a place and an opportunity for citizens to develop and have ownership in solutions to shared problems on behalf of a shared place. It empowers citizens at the local level to find the common good in the way their communities develop. It focuses state and local resources to ensure a quality built environment in the place where they live.

The result is sustainable because the politics of scarcity are replaced with a collaborative integration and balancing of economic, environmental and community values. The zero sum mentality is replaced with win/win solutions

This approach to sustainable governance can extend beyond the built environment to the larger conflicts that surround the tension between natural resource extraction and long-term environmental stewardship. Perhaps nothing illustrates this better than our efforts to improve the health of the forest lands on the east side of Oregon - particularly the pine forests that have been ravaged by insects and disease.

Like much of the Intermountain West, the forests of Eastern Oregon were once blessed with huge stands of old growth pine covering millions of acres. For much of the last century, however, forest management policy has been characterized by active fire suppression and harvesting the valuable old growth pine. This transformed these forests to their present state: overstocked stands of young fir and pine, thousands of acres of dead and dying timber infested with insects, and a high risk of catastrophic fire.

Thousands of miles of riparian areas have been damaged by harvest and grazing practices, as well as by road building and urbanization. One result has been that a number of species which depend on a healthy watershed have suffered severe declines. Similarly, as the forest health has declined and harvest has been significantly reduced, timber

dependent communities have seen tragic declines in employment. This situation is not sustainable because environmental, economic and community values are simultaneously at risk.

For that reason, we set about to find ways to both restore ecosystem health and provide wood to communities in an environmentally sound manner. This effort involved a panel of highly respected scientists from throughout the Northwest and -- most significantly -- a "forest health advisory committee," consisting of a diverse group of eastern Oregon citizens and stakeholders. Their work led to a broadly supported set of principles for restoring ecosystem health.

The plan calls for active management to promote ecosystem health, guided by good science and careful monitoring. Restoration efforts include understory thinning and commercial thinning in overstocked stands; road maintenance, closure and obliteration; and prescribed burning. A by-product of many of the thinning treatments is wood for local mills to help stabilize these rural communities. Thinning also reduces the risk of catastrophic fires that has increased significantly as forest health has deteriorated.

The key to success lies in having a single, overarching policy objective driving the management plan, in this case: restoring watershed health. Why? Because a healthy watershed is the common building block from which all beneficial uses of the forest flow: clean water, a thriving forest, abundant timber, and healthy forest species. Furthermore, the health of a watershed can, to a large extent, be scientifically measured and monitored.

Focusing on watershed health does not mean that we are elevating the importance of one value above another. Rather, it is the common denominator for all the values and acts as a guidepost by which we can shape our active management efforts in the context of the other values.

In other words, we cannot provide sustainable forest products, ensure clean water and provide habitat for species unless we first have a healthy functioning ecosystem. The three legs upon which the strategy stands -- social, environmental and economic -- are all interwoven and are dependent first on a healthy, functioning watershed.

Watershed health, then, is the area where the three circles overlap -- the area of sustainability -- the area which defines the "common good" for this community-driven effort. The "place" that afforded the opportunity to recognize the common good is the forest health advisory committee.

We have made similar progress in our efforts to restore endangered salmon habitat throughout the state. The primary role of the federal government under the Endangered Species Act (ESA) is a traditional regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the wrong things but it provides no incentive for them to do the right thing.

This is particularly true on private lands. While the ESA can prevent landowners from engaging in activities that result in an intentional or unintentional kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70 percent of coho salmon habitat in Oregon lies on privately owned land and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding take.

As a result, Oregon's effort to comply with the Endangered Species Act -- called the Oregon Plan for Salmon and Watersheds -- was designed to involve, empower and incent private landowners to make voluntary commitments to watershed restoration and habitat restoration. The commitments are built on a solid foundation of federal, state and local regulation -- including harvest limits, Clean Water Act requirements, forest practice requirements, land use laws and state water law.

The primary tool with which we implement our efforts on the ground -- the "place" where people come together to recognize the common good -- is the local watershed council, made up of community members representing a broad range of stakeholders working together to implement a plan they helped develop to improve the health of their own watershed.

We now have 93 watershed councils across the state. They have put thousands of projects on the ground which improve water quality, salmon habitat, and overall watershed health. Again, people working together to solve a shared problem

on behalf of a shared place and in a way that balances economic, environmental and community values.

I want to close this morning with a brief story written by Kim Stafford, the son of Oregon's late poet laureate William Stafford. He writes about Oregon – a special place that gives us gifts everyday, that teaches us how to give back and teaches us how to heal the divisions that have come with our own growth and prosperity. Although his focus is Oregon, his words ring true for all the special places we have chosen to live. He reminds us that the things we cherish must be constantly renewed in ourselves and in our community – that they must be constantly tended lest they slip from our grasp before we even know they are gone. This story, more eloquently than anything I could ever say, captures what this sustainability movement is all about.

Kim Stafford tells us that Oregon's story is "Lloyd Story." Lloyd Reynolds, the international citizen of Portland, spent his last days in pain, silent, unable to speak or to write, lying in his hospital bed. On his last day at home, as his wife scurried to pack his suitcase for the hospital, Lloyd made his way outside to the garden and there she found him on his knees, with a spoon, awkwardly planting flower bulbs. "Lloyd," she said, "you will never see these flowers bloom."

He smiled at her. "They are not for me," he said, "they are for you. The salmon coming home? They are for you. The calls of the wild geese? They are for you. The last old trees? They are for you and your children, to the seventh generation and beyond. They are all blooming into being for you."

Governor John Kitzhaber

STATE OF THE STATE ADDRESS

February 1, 2002

It's a pleasure to be with you today, and a privilege to come before you one last time to deliver the annual State of the State.

I have had the opportunity to serve in this office during a period of unprecedented prosperity and, now, during a time of deep economic dislocation. To have been afforded the opportunity to serve at all has been a great honor and one for which I humbly thank you.

I can tell you that it is much easier to govern during good times than during bad times. But I can also tell you that it is the difficult times that provide the true test of our metal, of our character and of our values. And these are difficult times for Oregon the most difficult in the past 20 years. In fact, there are only five members of the current Legislature who served during the 1981-83 biennium when we struggled through our last recession.

Today's recession, although not as deep as the one two decades ago, is more serious because it has uncovered the fundamental flaw in a series of policy choices we made during the 1990s. And that is what I want to talk to you about today.

As you know, in the six years leading up to 2001, Oregon experienced record employment and economic growth. It was a good time to be governor -- a time of optimism, vision and action.

We began to implement the Education Act for the 21st Century, establishing high, outcome-based academic standards for our children. We expanded our community college system, created three new universities and changed the financing model for higher education.

Facing a growing conflict between the extraction of natural resources and long term environmental stewardship, we devised the Oregon Plan for Salmon and Watersheds, a program that unites the voluntary efforts of private landowners, industry, environmental groups and state agencies toward a common goal.

We expanded the Oregon Health Plan, giving hope to thousands of people, who -- through no fault of their own -- could not afford health care.

We crafted the Oregon Children's Plan to ensure that our children get the support and attention they need to succeed in school, stay drug-free and become healthy, productive adults.

The list goes on. We took the initiative in economic development, promoting Oregon business, international trade and enhancing our work force. The silicon forest grew and flourished as our economy diversified and we saw the creation of hundreds of thousands of new jobs.

But as 2001 dawned, we experienced the first inklings of misplaced faith in the durability of international markets. Cracks appeared in the foundations of those industries built on speculation and promise, rather than production. The value of equity stocks trembled, slipped, then nose-dived.

Companies started to lay off workers, first by the score and then by the hundreds, and then by the thousands, leaving

Oregon with the highest unemployment rate in America.

And therein, lies our short term challenge -- an \$830 million revenue shortfall due to our soaring unemployment rate and an increased demand for social services like welfare, food stamps and the Oregon Health Plan. I have called a special session of the Legislature for February 8 -- one week from today -- to address this budget deficit.

But that is only part of the picture, because we face a long term challenge as well -- less obvious, perhaps, but far more serious. That challenge lies in the fact that our current level of state programs and services is not sustainable into the future based on the projected revenue forecast. This projected discrepancy between revenues and expenditures is due largely to a series of choices Oregonians made in the last decade.

In retrospect -- if it was shortsighted to hitch our future to industries built on speculation, rather than production -- it was equally shortsighted to delude ourselves into thinking we could cut our taxes, but not the programs and services that they supported. And, yet, that is exactly what we did throughout the 1990s.

With Ballot Measure 5 we reduced our property taxes and shifted over \$4 billion a biennium onto the General Fund to finance education. We also cut our income taxes by nearly \$1.5 billion through the 2 Percent Kicker -- again, without reducing General Fund programs. On the contrary, we actually increased what we expected the State to pay for with the passage of Ballot Measure 11, which set Oregon down the road to a billion dollar prison construction program.

So the challenge facing Oregon today is not just as simple as rebalancing the budget for the remainder of this biennium. The challenge is to do so in a way that not only addresses the immediate revenue shortfall, but which also puts the state budget back on a sound and sustainable financial footing into the future.

The debate that is unfolding involves two fundamental questions. First, how deeply should we cut current programs and services to help rebalance the budget? And second, how should we pay for that portion of the budget that we want to preserve? The way in which we answer these two questions will have a profound impact on the kind of Oregon we leave for our children.

Let me start with the first question: how deeply should we cut current programs and services to help rebalance the budget? As we approach this question it is important to remember that, to a large extent, this is an exercise in values.

In the short term it is about how much we value our fellow Oregonians who -- through no fault of their own -- find themselves without employment. Let us not forget that over \$87 million of our revenue shortfall is due to the increased demand for public services by those who have been laid off. I can tell you from personal experience that our unemployment figures, as stark as they are, cannot begin to express the human hardship that ensues whenever an Oregonian loses their job.

During Oregon's last recession, I was a freshman member of the Oregon State Senate. I was also a practicing emergency physician in Douglas County where unemployment reached 22 percent. In my emergency room I saw first hand the human suffering that descends when proud people suddenly lose their jobs -- substance abuse, domestic violence, the disintegration of families. Theirs is a hardship we cannot ignore as we move forward to address the state's short term fiscal crisis.

In the long term, it is about the value we place on a strong system of public education -- primary, secondary and post-secondary. A system that gives all Oregonians, regardless of their background, ethnicity or economic status, an equal opportunity to master the skills and command the knowledge necessary to succeed in an information-driven economy.

It is about the value we place on ensuring that every child born in this state has the support, the nurturing and the adult attention necessary to fully participate in, and contribute to, the Oregon community.

It is about the value we place on compassion -- on providing a safety net for the most vulnerable among us: our children, particularly those at risk; the frail elderly; the poor who cannot afford health care for themselves and their families; those with disabilities or who suffer from mental disorders, who, if we do not extend them help as a society, will end up on our streets or in our jails.

I am not saying that there are not cuts that we can and should take -- there are. I am simply pointing out that this is not as simple as lining up numbers on a piece of paper. Behind the numbers are real people -- people with real lives and with hopes and dreams of their own. They are our neighbors, our employees, our children, and our grandparents. This is not an accounting exercise. This is an exercise in values.

Having spent a great deal of time working on this budget, I think that we can responsibly cut in the neighborhood of \$400 million -- not without consequence -- but without doing irreparable damage to the important public programs and services on which our social and economic health depends.

As a counterpoint to the legislative proposal to cut \$481 million I have proposed to reduce state programs and services by \$414 million -- and even that is pushing the envelope.

My budget reductions were guided by four principles:

First, to maintain our investment in education -- particularly primary and secondary education and undergraduate education in our post-secondary system.

Second, to maintain a safety net for our most vulnerable citizens.

Third, to maintain public safety.

Fourth, to maintain our investment in prevention.

These two budget reduction proposals -- although they are only \$67 million apart -- represent differences in both policy and priority. They represent different sets of values. Nonetheless, I believe that we can -- and will -- reach consensus on the budget reduction side of the equation. More problematic, however, is the question of how we pay for that part of the budget we intend to preserve -- which leads us into the long term challenge.

The legislative proposal uses 14 different revenue sources to generate \$348 million. I have strong objections to a number of these sources because they violate a very simple premise: pay as you go.

Two of these revenue sources tap into existing trust funds:

The Common School Fund, and

The Health Care Trust Fund created with tobacco settlement revenue.

These are trust funds -- with the operative word being trust. They were created to build a principle from which interest would be derived to provide long term sustainable funding for specific purposes.

The Health Care Trust Fund, for example, was established with the proceeds from the National Tobacco Settlement to provide a revenue source for health related purposes -- smoking prevention and cessation programs as well as providing health care coverage for the working poor. The Common School Fund was established when Oregon gained statehood in 1859. It has been building its principle for 143 years to provide an ongoing source of revenue for primary and secondary education.

To raid these trust funds in order to rebalance our current budget shortfall is irresponsible. Let's be clear. The only reason that these measures are being considered in the first place is to give political cover to legislators -- of both parties, I am sorry to say -- who do not have the courage to raise taxes nor the will to cut the programs that those taxes support.

Here is how the argument goes. If you are a Republican in the Legislature you want to stay in control next session. So you can't possibly vote to increase taxes or to make deep cuts in education or programs for seniors because you might lose the election. If you are a Democrat you want to win control -- so you can't possibly vote to increase taxes or to make deep cuts in education or programs for senior citizens because you might lose the election. So what do you do? You try to find a way to rebalance the budget without raising taxes or cutting too deeply. How? By raiding trust funds, by borrowing against the future, or through accounting tricks.

I approach this budget challenge on the basis of a very simple and straightforward premise:

If we want to preserve programs in the face of the budget deficit, we need to pay for them not by borrowing, not by raiding trust funds set up for other purposes, not through accounting maneuvers but with real revenue options.

And I have proposed some real revenue options:

- Repealing or at least delaying the implementation of Ballot Measure 88 a tax cut (that has not yet gone into effect) which will benefit primarily those at the upper end of the income scale;
- Increasing the current tax on tobacco by 30 cents per pack to help pay for health care;
- Increasing the beer and wine tax by 5 cents per drink to help pay for mental health and drug and alcohol treatment.

I would point out that I am not alone in my view that additional revenue is required to meet the legitimate needs of the state -- and that now is not the time to implement tax cuts. Four Republican governors -- including Governor Jeb Bush -- have recommended delaying tax cuts, while three Republican governors have actually called for tax increases. Others are considering them.

My proposal will not only bring us back into balance for this biennium -- and slightly increase our ending balance -- it will also reduce the projected revenue shortfall for the next biennium from \$1 billion down to less than \$250 million.

This proposal will preserve our commitment to education, to vulnerable citizens and to public safety -- and it will put the state budget back on a sound, sustainable footing without debt financing, without raiding existing trust funds and without resorting to accounting maneuvers.

By contrast, the legislative financing proposal is a continuation of the shortsighted policies of the 1990's by which we were able to delude ourselves into believing that we could cut our taxes yet still maintain -- and even expand -- state programs and services.

I am not just talking about Ballot Measure 5 and the 2 Percent Kicker -- I am talking about a mindset that recognized the need for additional resources in the state budget, but lacked the political will and fiscal discipline to pay for it with existing revenues.

In both the 1997 and 1999 sessions, for example, I argued that we should use some of the surplus revenue generated by our robust economy to help finance the K-12 budget. I lost that argument.

It wasn't that the Legislature disagreed with the need for more funding for education. They simply didn't want to vote to pay for it. Instead of using surplus revenue for this purpose, the Legislature allowed \$420 million to be rebated through the 2 Percent Kicker and then turned around sold \$277 million worth of lottery bonds to help finance K-12.

This money has now been spent but we will be paying the debt service on the bonds for the next 15 years at a cost of \$412 million -- nearly as much as was rebated through the Kicker.

I do not believe that it is responsible to continue these policies -- nor to rely on existing trust funds to blur the very real relationship between state programs and services and the revenue that supports them over time.

And I do not believe it is responsible to balance this budget by pushing payments due this biennium into the future -- in particular, the proposal under consideration to move the last K-12 payment into the next biennium. This amounts to an additional \$211 million cut in the K-12 budget in the current biennium with no guarantee that the next Legislature will come up with the payment.

In a very real sense, this puts education last and is a continuation of the practice of making difficult political choices someone else's problem.

We have an opportunity to end that practice, to be accountable to Oregonians for the dollars we spend -- and for the

programs and services those dollars can realistically support over time -- and to put our state's budget and finances back on a firm footing for the future.

I have been around long enough to appreciate the historic symmetry of our current situation. Ten years ago, amid the ruins of the July 1992 special session called by Governor Roberts to find General Fund replacement revenue for Ballot Measure 5, a joint press statement was issued. It said, among other things, that:

"we have no intention of leaving unaddressed the fiscal problems created by the passage of Ballot Measure 5 We do not question the necessity of replacement revenue to responsibly provide for the legitimate needs of our state. And while there remains some debate concerning the magnitude of the revenue needed and the way it should be allocated, we are committed to reaching a bipartisan and bicameral consensus on both issues and dealing with this problem in a timely and effective fashion."

The signators to this statement included myself, as Senate President, Speaker of the House Larry Campbell, then House Majority Leader (now U.S. congressman) Greg Walden, Representative (now state senator) Peter Courtney and Senate Majority Leader (now secretary of state) Bill Bradbury.

My point in sharing this with you is that there was a clear and bipartisan recognition that you cannot increase the demand on the General Fund to magnitude that Ballot Measure 5 did without providing additional revenue. Unfortunately, the agreement forged by the legislative leadership in 1992 was never implemented because the unsustainability of our fiscal policy was masked by a strong economy and video poker.

I am reminded of the passage by T. S. Eliot:

*We shall not cease from exploration
And the end of all our exploring
Will be to arrive where we started
And know the place for the first time.*

We have been here before and we have the opportunity to address what we recognized by failed to act upon ten years ago. My fellow Oregonians -- the challenge facing us today is not as simple as a choice between taxes and budget cuts. And we will do a great disservice to ourselves, to our children and to our own posterity if we allow the mindless ideology of the talk show host to be substituted for a thoughtful discussion of Oregon's future.

The challenge facing us today is one of accountability. The accountability to provide stable financing for those state programs and services that we think are important, that reflect our values, and that we want define us as Oregonians -- both now and in the future.

And if these programs and services aren't important enough to pay for -- without borrowing against the future, without accounting tricks, and without leaving the decision on how to fund them for someone else to make -- then we should cut them. It's that simple.

Cutting deeper is certainly an option -- it is one choice to rebalance the budget. But make no mistake about it, it is also a choice for a different kind of Oregon than the one we know today.

It is, after all, our commitment to each other -- to education and to caring for our vulnerable citizens and our natural environment -- that makes Oregon's definition of civic responsibility and quality of life different than that in Texas or some other state. That is important to me.

Two hundred years ago, Lewis and Clark had the undaunted courage to take up President Jefferson's challenge to go into the known in search of the Northwest Passage. At the end of their journey, they found Oregon this special and, to me, most wonderful place on earth.

Oregon is ours now our blessing and our responsibility. We too must find the courage and the will to ensure its bright

future.

Governor John Kitzhaber

Balancing the Budget, Stimulating the Economy

January 23, 2002

Let me start by announcing that I will call the Legislature into special session on February 8, 2002 to deal with the State's budget shortfall -- and to consider actions to stimulate and stabilize Oregon's economic picture. In anticipation of that task I will also lay out my proposal for dealing with both the revenue shortfall and the recession that has contributed to it.

As I indicated at my January 7 press conference when I presented the "all cuts" budget, we are facing both a short-term and a long-term challenge.

The short-term challenge is straightforward -- a revenue shortfall due primary to the fact that 38,000 Oregonians have lost their jobs over the past year. This problem has been compounded by an increased demand for social services like welfare, food stamps and the Oregon Health Plan.

The result: our general fund budget is out of balance by \$830 million.

The long-term challenge is equally serious - the fact that our current level of State programs and services is not sustainable into the future based on the projected revenue forecast. As you know --unless something changes -- the General Fund budget would be more than a billion dollars out of balance in the 2003-05 biennium and beyond.

This projected discrepancy between revenues and expenditures is due largely to a series of choices Oregonians made in the last decade - in particular, the fact that we cut taxes but did not cut the programs and services supported by that revenue.

Meeting the challenge facing Oregon, then, requires two things:

- First, we must do everything within our power to get our economy back on its feet.
- Second, we must rebalance our State budget in a way that not only solves the immediate revenue shortfall, but also closes the long-term gap between projected revenue and the cost of current programs and services.

ECONOMIC STIMULUS

Let me start with the economy by outlining the steps I will ask the Legislature to take in the special session -- as well as steps I will initiate myself -- to address three broad areas of economic stimulus:

- (1) Investments in infrastructure and communities;
- (2) Investments in people and businesses; and
- (3) Investments in budget and finance stability.

While some of these proposals are my own - others reflect recommendations that have been made by my *Economic Strategy Advisory Group* and by members of the Legislature.

Investments in Infrastructure and Communities

First, I will propose legislation to facilitate the sale of the \$200 million in lottery bonds approved last session for financing critical infrastructure projects. Because of pending litigation, the state has been unable to sell these bonds. To address this I will propose that we clarify in statute that the bonds are backed by the full faith and credit of the State of Oregon.

Second, I will propose legislation to clarify our state's commitment to fully fund -- with lottery bonds -- our share of the Columbia River channel deepening project -- a project vital to maintaining Oregon's international trade economy.

Third, I will propose the *Oregon Transportation Investment Act of 2002*, building on the successful transportation investment strategy approved by the last legislative session. As you recall, the legislature approved \$400 million in highway bonds backed by a small increase in vehicle title fees.

Last week, the Oregon Transportation Commission released this money to fund more than 130 road and bridge projects throughout Oregon.

The *Oregon Transportation Investment Act of 2002* will address an additional \$750 million in badly needed road repair and congestion needs and create more than 2,500 well-paying jobs.

Specifically, I will propose raising the auto registration fee by \$15 per year. Oregon is currently 50th among states in registration fees and this increase will still leave us at 45th.

This will generate \$60 to \$70 million per year:

- Half of this new revenue -- \$30 to \$35 million - will go to cities and counties to meet their critical transportation needs.
- The other half will be used to back \$350 million in bonds for road repair and improvement projects at the state level. These projects will be spread geographically throughout Oregon using the same process the OTC used to allocate the projects approved last week.

In addition, I will propose utilizing a portion (less than half) of the State's \$80 million annual commitment for bridge repair and construction to back \$300-400 million in bonds to meet the State's critical bridge repair needs.

With legislative approval, we can provide a real engine for economic recovery, take advantage of extremely attractive bond rates and build on the excellent policy established by the last Legislature.

Investments in People and Businesses

First, we must take steps to support our workforce. Toward that end, I will seek increased federal funds for extended benefits -- as well as flexibility in unemployment insurance dollars to provide health care coverage for unemployed workers and their families.

Second, I will continue to expand the marketing of Oregon for both tourism and business recruitment.

- This winter we will release the second phase of our ad campaign asking Oregonians to travel and vacation in Oregon.
- We have also developed -- and are implementing -- an aggressive, coordinated marketing campaign for business recruitment and retention.

Finally, to ensure that funds are available not only to market Oregon -- but also to provide direct assistance to expanding Oregon businesses and to businesses seeking to locate in our state -- I will propose increasing the Strategic Reserve

funds by \$3 million during the special session.

Investments in Budget and Finance Stability

I will propose to the special session the establishment of a School Stabilization Fund. This is not a new idea. I attempted to create such a fund through the initiative process in 2000 but had to abandon my efforts in order to spend time leading a campaign against Measures 91, 93 and 8. Last session I introduced HB 2299 to create a stabilization fund and Treasurer Edwards introduced HJR 33 toward the same end.

While there was widespread support for this idea last session, there was no final action. Therefore, during the special session I will submit another proposal - for referral to the voters - that will create and begin to capitalize a School Stabilization Fund.

Oregon is one of only three states without a budget stabilization fund of some kind. Every time the economic health of our state is reviewed by bond rating agencies, the lack of a stabilization fund is questioned. Such questions - combined with the current recession and the fundamental instability of our tax structure - should provide ample reason to take this prudent and long-overdue step.

The fund will be capitalized with:

- The 15 percent of the lottery funds that currently go to the Education Endowment Fund;
- Any future lottery revenue in excess of \$600 million, and
- A 1 percent real estate transfer tax - excluding the first \$100,000 of value.

If referred by the Legislature -- and approved by the voters -- these revenue sources will generate nearly \$230 million for the fund in the next biennium alone.

It is important that the resources in this fund be protected from the kind of short term appropriation currently being contemplated for the Common School Fund and the Health Care Trust Fund. Toward that end, the Education Stabilization Fund can only be accessed by a 3/5 vote of the Legislature and a referral to the voters.

In addition to these proposals I will be making further recommendations -- particularly around the question of state permitting -- after meeting with my *Economic Strategy Advisory Group*.

BALANCING THE BUDGET

First, I want to commend the bipartisan legislative leadership on the budget proposal they put forth last week. It represents an enormous effort and commitment and serves to advance the debate that will - I am confident - lead to a successful conclusion of our current fiscal challenge.

Having said that, I differ on two aspects of the legislative proposal:

- First on the depth of the cuts, and
- Second on the choice of revenue to bring the budget in to balance.

Let me start with the cuts.

My recommendation is to reduce the budget by \$414 million as opposed to the \$525 included in the legislative proposal. These are total cut figures and include the \$125 million in reductions expected to be made by the Emergency Board next week.

My budget reductions were guided by three principles:

- First, to maintain our investment in education - particularly primary and secondary education and undergraduate education in our post-secondary system.
- Second, to maintain a safety net for our most vulnerable citizens

- Third, to maintain public safety

Examples of some of the more significant differences between this proposal and the legislative proposal are as follows:

Education

- I have recommended a \$112 million cut in state support for schools in the K-12 system -- as opposed to a \$152 million cut in the legislative proposal.
- In our community colleges, I have focused on maintaining capacity and my proposal will support 1,500 more fulltime students than the legislative proposal.
- In higher education I have recommended no cuts in direct instruction for undergraduate education. I have also reduced the legislatively proposed cut to OHSU from \$33 million down to \$5 million.

Human Services

- To maximize support for self-sufficiency, I have reduced the legislatively proposed cuts in employment-related day care, cash assistance and in job training programs for the lowest income Oregonians.
- To maintain a safety net for vulnerable Oregonians, I have restored funding for the "safety net clinics" and for local public health prenatal and perinatal programs.
- To continue our commitment to ensure that all of our children have a chance to succeed - thus reducing school dropout rates and involvement in the criminal justice system - I have maintained the bulk of funding for the Oregon Children's Plan and have restored some funding to teen pregnancy prevention programs.

Public Safety

- The legislative proposal recommends eliminating 50 closed-custody beds in the Oregon Youth Authority and transferring young people in the custody of OYA to the adult prison system when they turn 21. I have rejected both of these proposals.
- In addition, I have not reduced the current number of sworn officers in the Oregon State Police, although I have recommended canceling the upcoming recruit school.

Notwithstanding these differences in policy and priority - the two budget proposals are only \$111 million apart and I remain confident that we can - and, indeed will - reach consensus on the budget reduction side of the equation.

More problematic, however, is the question of how we pay for that part of the budget we intend to preserve.

The legislative proposal uses 16 different revenue sources to generate \$320 million. I have strong objections to four of those sources which together account for over \$200 million of their proposed revenue.

Three of these revenue sources tap into existing trust funds:

- The Common School Fund,
- The Health Care Trust Fund created with tobacco settlement revenue, and
- The "public purposes" revenue in the Energy Trust Fund

The fourth revenue source is derived from using \$50 million of federal education funds to backfill the general fund budget. This amounts to a \$50 million reduction in state support for schools.

I approach this budget challenge on the basis of a very simple and straightforward premise:

If we want to preserve programs in the face of the budget deficit, we need to pay for them - not by borrowing, not by raiding trust funds set up for other purposes, not through accounting maneuvers - but with real revenue options.

I certainly do not object to using some one-time revenue to help rebalance. It makes sense, for example, to use the

"Medicare upper limit" revenue - it is available to use now and is not dedicated to any other purpose.

In addition to this resource - which totals \$131 million - I would accept \$50 from other legislatively proposed revenue options for a total of \$181 million in one-time revenue.

To close the remaining shortfall, I propose:

- Repealing Ballot Measure 88 - to help pay for education;
- Increasing the current tax on tobacco by 30 cents per pack - to help pay for health care;
- Increasing the beer and wine tax by 5 cents per drink - to help pay for mental health and drug and alcohol treatment.

In summary, then, I propose that we rebalance the 2001-03 budget with:

- \$414 million in cuts;
- \$181 million in one-time revenue, and
- \$244 in new revenue.

This would not only bring us back into balance for this biennium -- and slightly increase our ending balance -- it would also reduce the projected revenue shortfall for the next biennium from \$1 billion down to \$250 million.

This proposal will preserve our commitment to education, vulnerable citizens and public safety -- and put the state budget back on a sound, sustainable footing without debt financing, without raiding existing trust funds and without resorting to accounting maneuvers.

By contrast, the legislative proposal is a continuation of the shortsighted policies of the 1990's by which we were able to delude ourselves into believing that we could cut our taxes yet still maintain -- and even expand -- state programs and services. Let me refresh your memory:

- With Ballot Measure 5 we reduced our property taxes by over \$4 billion dollars and dramatically increased the obligation on the General Fund to finance education.
- We also cut our income taxes by nearly \$1.5 billion through the 2% Kicker - again, without reducing general fund programs.

This is not how the real world operates - certainly not how private business operates. There is no "free lunch."

If education and public safety and caring for the vulnerable are important to us -- we need to be willing to pay for them. If we are not willing to pay for them -- then we should stop pretending that they are important to us.

In both the 1997 and 1999 sessions, for example, I argued that we should use some of the surplus revenue generated by our good economy to help finance the K-12 budget.

Instead of using this source of revenue, however, the Legislature allowed \$420 million to be rebated through the 2% Kicker and then turned around sold \$277 million worth of lottery bonds to help finance K-12.

This money has now been spent but we will be paying the debt service on the bonds for the next 15 years at a cost of \$412 million - nearly as much as was rebated through the Kicker.

I do not believe that it is responsible to continue these policies - nor to rely on existing trust funds to blur the very real relationship between state programs and services and the revenue that supports them over time.

I do not believe it is responsible to backfill the K-12 budget with \$50 million in federal education funds. This amount to removing \$50 million from the classroom. If we want to cut classroom support by \$50 million, then we should do it explicitly because the result on instruction is the same.

And I do not believe it is responsible to balance this budget by pushing payments due this biennium into the next - in

particular the last K-12 payment. This amounts to an additional \$211 million cut in the K-12 budget in the current biennium with no guarantee that the next Legislature will come up with the payment.

In a very real sense, this puts education last and is a continuation of the practice of making difficult political choices someone else's problem.

We have an opportunity to end that practice, to be accountable to Oregonians for the dollars we spend and the programs and services those dollars can support, and to put our states budget and finances back on a firm footing for the future.

So what is the punch line here? What is the bottom line message I am trying to communicate today?

It's not about taxes - it's not even about cuts. It's about accountability. The accountability to step up to the plate and to pay for those state programs and services that we think are important.

And if they aren't important enough to pay for - without borrowing against the future, without accounting tricks, and without leaving the decision on how to fund them for someone else to make - then we should cut them. It's that simple.

Cutting deeper is certainly an option - it's a choice to balanced the budget. But make no mistake about it, it is also a choice for a different kind of Oregon than the one we know today.

It is, after all, our commitment to each other - to education and to caring for our vulnerable citizens and our natural environment - that makes Oregon's definition of civic responsibility and quality of life different than that in Mississippi or Texas.

If, in the end, the Legislature and the people choose to balance this budget with deeper cuts - while I will argue strongly against it - I won't get in the way.

What I will get in the way of is financing schemes that allow us to avoid the political and civic responsibility of paying for those things that are important to us as Oregonians.

[Return to Governor's Office](#)

Governor John Kitzhaber

National Health Policy Conference, Washington, DC

January 16, 2002

Let me begin with a simple statement. Substantive reform of the U.S. health care system is well within our ability to achieve - but it won't come easily. It requires a willingness on the part of each and every stakeholder to honestly evaluate their own contribution to the crisis in cost and access. Whether or not we have the collective will to do that remains to be seen - but to date that will has been lacking.

As all of us remember, health care was a central issue in the presidential election of 1992. All of the stakeholders were engaged in that ill-fated debate - but, to a large extent, only to protect their own narrow interests. Nothing was achieved and we have done little since then, lulled into complacency by the strong economy of the 1990's and by the short term cost savings produced by managed care for employers.

But the crisis in health care cost and access is once again gravitating to the center of the national political stage and I predict that it will be one of the major issues in the presidential election of 2004. That means that we will once again be afforded the opportunity to make reform of the health care system more than a topic of conversation. We will have the opportunity to make it a reality.

Over the past 24 years I have had the great good fortune to have practiced emergency medicine and to have served both in the legislature and as a governor. My perspective on the health care system has been influenced by these two roles and I have come to appreciate, in a very personal way, the distinction between the individual and society. This morning I would like to share with you what I have learned from this experience.

I offer these thoughts -- not as an advocate for the particular approach we have adopted in Oregon - but, rather, in the hope that the policies and principles we have been struggling with over the past decade can help inform the looming debate over the future of the U.S. health care system.

Indeed, my comments today must be viewed against the backdrop of that system. Some of my conclusions and proposals are controversial and cut against the grain of conventional political thinking - especially here in our nation's capitol. I would ask that you judged them by whether they are more logical, more equitable and more defensible than the status quo.

But I am getting ahead of my story ...

When I was an intern in 1973 I watched a baby die. His name was Sam. He was born very prematurely to a young mother who had not seen a physician over the entire course of her pregnancy. Sam wasn't breathing when we delivered him in the emergency room, and we had to resuscitate him before transferring him to the neonatal intensive care unit where he died two days later. I can still remember standing by his incubator during that final hour, knowing what was going to happen and feeling depressed and helpless.

I remember what a quiet death it was. There was nobody there but his mother and father, a nurse, and myself. Nobody else knew about Sam and his two-day struggle to live. He never made the papers or the evening news. It was an anonymous tragedy that touched the lives of no one but those in the room.

As few days later I witnessed a second death - that of a 90-year-old woman who had lung and was scheduled for surgery to remove her right lung. She had told me that she did not fear death, but she did fear the surgery. She didn't want any more pain. Well, she had the surgery and subsequently suffered a respiratory arrest and then a cardiac arrest. I rushed to the room -- along with another intern, a surgical resident, two nurses, and a respiratory therapist -- and we spent an hour in a frantic but unsuccessful attempt to save her life.

Unlike baby Sam's passing, the last hour of her life was not quiet. We stuck tubes into her nose, throat, and bladder; needles into her veins. We pumped her full of drugs and shocked her repeatedly. We "failed," she died, and we ran up a posthumous bill of thousands of dollars to be picked up by her family or her estate.

I can still remember the contrast between the frenzied efforts of a roomful of people, with all their sophisticated equipment, to save someone at the very end of a long life, and the quiet and undramatic death of someone at the very beginning of life.

I remember the events but at the time I never saw the contradictions. I never considered whether the resuscitation of the elderly woman made sense -- whether the cost and the discomfort we brought to her was compassionate in the face of her underlying diagnosis of "terminal lung cancer." And I certainly never connected the money spent on her final hour with the money not spent on Sam during his mother's pregnancy.

Thirteen years later, however, I would recall this experience and see it in a new light.

It was 1986. As President of the Oregon State Senate, I helped rebalance the budget by, among other things, changing the income eligibility requirements for the state-sponsored health care program. With no fanfare or controversy we dropped 4,300 poor Oregonians from health insurance coverage. I was struck by how easy it was - an accounting exercise, nothing more.

Five months later, back in my ER, I saw a number of the people who had lost coverage because of our decision. In most cases, they had delayed seeking treatment for minor problems -- because they were worried about paying the bills - and presented with much more serious and costly conditions. I distinctly remember a man who had suffered a massive stroke because he had no way to pay for the medication to control his blood pressure. I had come face to face with the human consequences of the our legislative "accounting exercise" five months earlier.

I began to ask myself questions. What kind of system would pay to treat someone's stroke in the hospital but not to manage their hypertension in the community? I found the answer to this - and other questions - embedded in the very foundation of the U.S. health care system itself.

As we all know, health care in America is not free. There is a cost associated with it and most of us rely on some "third party" to help cover that cost. The major third party payers in today's health care system are government and employers. But they don't cover everyone. Not all employers offer workplace-based coverage to their employees.

By the same token, not all those in financial need are covered by public programs. On the contrary, many who are quite well off financially receive publicly subsidized health care. While all those over the age of 65 -- regardless of their income -- are eligible for Medicare, we have no such policy concerning the poor.

In order to be eligible for publicly subsidized care, low income Americans must fit into congressionally designated categories such as "families with dependent children," or the "elderly, blind or disabled." Just being poor is not enough. Poor adults without children, for example, are not eligible, even though they may be deeply impoverished. This concept of categorical eligibility underlies the entire system.

So our health care financing system has two arms with a "coverage gap" in between. One arm represents the public

system, primarily Medicare and Medicaid. The other arm represents the private system, primarily employment-based coverage. The gap in between represents those without any health insurance coverage. These are people without a payment source.

Many of these people do not get primary or preventive care at all -- or at best get it sporadically. When they get sick enough, many use the emergency room for acute care that could have been avoided if they had had better financial access to primary care. And the health care costs incurred by those in the "gap" are shifted to the third party payers by incremental increases in their premiums or their bills.

Both of these third party payers face very real fiscal limits. Public resources, in particular, are limited because, quite simply, there is a limit to the level of taxation the public will tolerate. And since every dollar spent on health care is a dollar not available for education, transportation, or public safety, there is a limit to what the public sector can spend on health care.

So the major third party payers are understandably sensitive to cost increases -- albeit for different reasons -- and when costs rise beyond a certain point, they respond by trying to shift cost and economic risk somewhere else in the system.

At the state level - when faced with increased cost in the Medicaid program - legislators change income eligibility to reduce the number of people covered. This shifts cost to individuals who have no way to absorb it and amounts to the implicit rationing of people. And it is "all-or-nothing" rationing. Instead of giving everyone coverage for something, we give some people coverage for everything and others coverage for nothing. And the legislators who make the decision to change eligibility avoid any accountability for the health consequences of the people who lose coverage. That is exactly what we did in our 1986 decision to drop 4,300 poor Oregonians from coverage.

Legislators manipulate cost by cutting reimbursement rates which is a direct cost shift to providers and shows up as uncompensated care. At some point, providers stop seeing -- or try to avoid seeing -- Medicaid patients which constitutes another form of implicit rationing. Again, those who make the policy decisions that led to it escape any accountability for the consequences.

The result of this implicit rationing is a growing number of people in the coverage gap. And I mentioned, many of them eventually use the emergency room to access the health care system. The costs incurred are then shifted back onto the third party payers and the cycle repeats itself.

In short, our current system manages increases in cost by reducing access -- by saying "no" to coverage. But we do not say "no" directly -- we do it implicitly. We are not honest about it. We have not adopted an explicit policy that says that we won't pay to manage hypertension in the community, but we will pay to treat a massive stroke in the hospital ... that we won't provide all pregnant women with good prenatal care, but we will pay to resuscitate their premature infants. Yet this, in fact, is the unspoken policy of the U.S. health care system.

This point was brought home to me in 1987 when the legislature discontinued the Medicaid transplant program - potentially affective thirty individuals - in order to expand prenatal care and well-child care to 1,200 women and 1,800 children.

Although this was clearly an explicit rationing decision, it was both non-controversial and unreported - most likely because there was not a highly visible individual in need of a transplant at the time the legislature made it decision.

But in November, 1997, Coby Howard, a seven-year-old boy who had acute lymphoblastic leukemia, requested a bone marrow transplant. Although the child was covered by Medicaid, he was not eligible for the transplant under the new state policy. The family turned to private fundraising.

Throughout November I watched the drama unfolding in the media, which fanned public emotions to a fever pitch, while completely ignoring the larger policy issues involved.

I remembered baby Sam dying quietly before my eyes in the neonatal intensive care unit during my internship. The cause of his death was not as dramatic or as "newsworthy" as the failure to obtain an organ transplant - but it was made

no less tragic by the fact that it was not reported.

Coby Howard died in December of 1987, his supporters having failed to raise the needed money. No one can say whether a transplant would have saved him, for he was not in remission at the time, nor had his doctors located a marrow match. Nonetheless, the tragedy that befell little Coby was indeed a human tragedy. It was also a sensational human interest story, and both local and national media seized upon.

In the wake of this publicity, a motion was placed before the legislative Emergency Board to partially refund the transplant program for eight individuals in immediate need - a motion which I opposed. The media, of course, saw this as a debate about transplants. I saw it as a debate over the allocation of limited public health care resources.

To me, the question was not whether transplants have merit -- clearly they often do. Nor was it whether the legislature had sufficient resources to make the appropriation. It did. The question was simply this: If the state was going to invest more money in its health care budget, where should the next dollar go?

What was the policy that would lead us to fund transplants as opposed to further expanding the availability of prenatal care? Is one more important than the other? What was the policy that would lead us to offer transplants to eight individuals as opposed to nine, or to nineteen? Where was the equity in taking one group of poor Oregonians who were covered under Medicaid and giving them additional services on top of that, before we offered the basic Medicaid services to other equally needy Oregonians who currently were receiving nothing?

It became readily apparent that there was no policy. And while we could easily have funded another eight transplants, we had no way of knowing -- or being accountable for -- the consequences of not using that money to expand access to other individuals who were excluded from the system altogether.

After an emotional two-day debate, the Emergency Board rejected the motion but left unanswered the question of what policy objective should guide health care resource allocation decisions.

Should our objective be to guarantee all citizens access to health care? Or should it be to keep all citizens healthy? Certainly, the objective of the delivery system is to give people access to health care. But the objective of the health care system itself is health -- to restore, maintain or improve health.

Health care is a means to that end, not an end in itself. It has no intrinsic value - except as an economic commodity -- beyond its relationship to health. Unfortunately, the current system, to a large extent, views health care as just that -- an economic commodity.

Trying to achieve the objective of "health" using public requires an honest and acute awareness of the reality of fiscal limits. If, as I have argued, public resources are finite - and if all revenue cannot go to health care at the expense of everything else -- it follows that public sector health care budgets are also finite.

If this is true, then it also follows that people who depend solely on public revenue to pay for their health care will necessarily have some limits imposed on how much health care will be paid for. It is the responsibility of public policy makers to allocate these limited resources in a way which provides the most benefit to the most people. In other words, you cannot build a social resource allocation policy one individual at a time.

This fact was brought into sharp focus for me in the debate over whether to partially refund the transplant program. Whereas my commitment as a physician is to the individual patient, as a legislator (or as a governor), my commitment is to the larger community. As a physician, I am committed to treating my patient to whatever extent I deem necessary regardless of cost. As a governor, I cannot ignore cost and my commitment is to provide as much health care as possible for as many people as possible with the resources I have available.

The OHP represents the intersection of these two roles - that of a physician and of a publicly elected official. It is a direct challenge to the status quo - to the explicit federal policy of categorical eligibility and to the implicit federal policy of allocating public resources to benefit the few at the expense of the many.

At its heart, then, the OHP, is an effort to maximize the health produced by the allocation of limited public resources. To do so we sought to answer perhaps the single most fundamental question in the health care debate: who has the responsibility to pay for health care for the poor?

The federal government - with its policy of categorical eligibility - has never really answered this question. Medicare covers people in the category "over the age of 65" - regardless of their income; Medicaid covers certain categories of poor people; but we leave unanswered the question of who pays for the poor people who do not fit into a category. It is, to a large extent, the failure to explicitly answer and act on this question that drives the cost-shifting dynamic I have just described.

And without a clear public policy to address this question, the health care "market" will be left to make the determination. But market systems are designed to make profits, not to foster social responsibility. As long as there is a significant number of people unable to pay for health care, the market will try to avoid caring for them and will instead compete for those who can pay. Paying patients are seen as "market share," while those without a means to pay are viewed as liabilities.

If caring for the poor is, indeed, a public sector responsibility, then eligibility for public coverage should be based on financial need -- rather than on an arbitrary set of categories. In Oregon, we defined the "poor" in statute as all those with incomes 100 percent of the federal poverty level.

Having defined eligibility, the next question became how to allocate our resources in a way that produced the greatest health gain for those covered. The reality of fiscal limits makes choices inevitable. The question is whether we want to make them implicitly and by default - as we do in the current system - or whether we want to make them explicitly, in a way that is consistent with our stated policy objective.

In Oregon we have committed ourselves to making those choices explicitly -- by establishing priorities in an open public process based on a set of clear criteria -- and to assume accountability for the consequences of those choices.

To fulfill this commitment a Health Services Commission (HSC) was created, comprised of five primary care physicians, a public health nurse, a social worker and four consumers. The commission was charged with ranking medical condition/treatment pairs from the most important to the least important, in terms of the health produced, and judged by a consideration of clinical effectiveness and social values.

Starting with the 1991 legislative session -- and each session since then -- the HSC has presented the Oregon legislature with an updated prioritized list of health services accompanied by actuarial information which assigns a cost to provide each line (or condition/treatment pair) on the list.

The legislature is statutorily required to start at the top of the list and determine how much can be funded from available revenues and what additional revenues will be needed to fund an acceptable benefit level. In this way, not only is the benefit directly linked to the reality of fiscal limits, but the legislature is clearly and inescapably accountable not just for what it funds in the health care budget, but also for what it chooses not to fund.

The benefit package resulting from this process -- with its strong emphasis on primary and preventive care -- is eminently defensible. It covers virtually all preventive and screening services, as well as a number of important services not required by Medicaid including: dental services, hospice care and prescription drugs.

Since it was implemented in 1994, the health plan has been unequivocally good for Oregon. First and foremost, we saw a dramatic expansion of coverage, particularly for children. The number of uninsured children fell from 21 percent to 8 percent. Hospital charity care dropped 30-50 percent. We experienced a significant reduction in visits to emergency rooms, and a reduction in infants with low birth weights, because more pregnant women received good prenatal care.

Furthermore, between 1994 and 2000, the plan has brought more than \$1.5 billion of federal money into Oregon. These funds have played a crucial role in supporting the infrastructure of health care providers -- especially in rural Oregon - on which both state sponsored and commercially insured Oregonians depend.

This is not to say that our efforts have met with unqualified success -- they have not. We have faced - and continue to face - a number of challenges.

- For example, coverage itself does not ensure access. Many Oregonians who are eligible for the OHP do not have access to it because of other barriers related to geography, communication, transportation and culture - to mention a few.
- Parts of our delivery system are in chaos because of unequal risk sharing among physicians and hospitals and between physicians and hospitals.
- Federal inflexibility on benefit design and eligibility continues to force us into all-or-nothing coverage decisions and one-size-fits-all benefit packages and prevents us from using federal dollars to expand care to Oregonians based on their relative medical and financial vulnerability.

To address these problems we are applying for additional federal waivers and are trying to move to a community-based model for delivering care under the OHP. But whether or not the plan ultimately survives in this new decade, there are some important lessons from this ten-year experience which can, at the very least, help inform the pending national debate on health care.

First and foremost - as I stated earlier -- national reform efforts must be viewed against the backdrop of our current health care system. Failure to act is, in essence, an implicit endorsement of the status quo. And who could possibly defend what we have now?

To bring this point home, suppose we wanted to adopt the policy reflected by our current system and introduce it as a bill in the upcoming session of congress. Let's call it THE HEALTH CARE EQUITY AND EMPOWERMENT ACT of 2002. It might read something like this:

Preamble

There shall be no explicit policy objective adopted to guide the allocation of public health care resources.

Section I

(1) Categories shall be established to differentiate between the "deserving poor" and the "undeserving poor."

(a) The "deserving poor" shall include women who are pregnant, families with dependent children, and those who are blind or disabled. Citizens in these categories shall be provided with publicly financed health care.

(b) The "undeserving poor" shall include poor women who are not pregnant and poor men. These citizens shall be denied health care.

Section II

(1) All those who are over 65 years old shall be entitled to publicly financed health care, regardless of their income.

(2) Employed citizens under the age of 65, regardless of whether they can afford health care for themselves and their families, shall be required to pay a portion of their taxes to purchase health care for wealthy citizens over the age of 65.

Section III

(1) All citizens who can afford a private insurance policy shall be allowed to deduct the premium costs of that policy from their taxable income.

(2) All citizens, including those who cannot afford health insurance, shall be required to subsidize the health care of

those who can afford such insurance.

Section IV

(1) The criteria of financial need and ability to pay shall not be used to determine eligibility for a public subsidy.

(2) The relative effectiveness of various medical interventions in producing health shall not be considered in deciding which services will be paid for by public resources.

I doubt that anyone in this room - or in the United States Congress - could openly support the policy embraced by the Health Care Equity and Empowerment Act of 2002. Yet these are exactly the policies which underlie the U.S. health care system. And these are exactly the policies which must be addressed if health care reform is to be driven by substance rather than by the polls.

Let's be clear. Reforming our health care system is not about passing a prescription drug benefit for those on Medicare. It 's about asking - and answering -- questions like:

- Why do these drugs cost so much in the first place?
- Why should wealthy retirees receive publicly subsidized health care paid for, in part, by working families who cannot afford health insurance for themselves and their families?
- Why is the average annual per capita cost for Medicare \$763 in Dade County, Florida and only \$395 and in Hennepin County, Minnesota? Why is the AAPCC \$768 in Richmond County, New York and only \$406 Multnomah County, Oregon?
- Why has the U.S. Congress never demanded an accounting of why we should be paying twice as much for Medicare in Florida and New York as in Oregon and Minnesota?

Reforming our health care system is also not about passing a "Bill of Rights" for people who are already enrolled in managed care plans.

- It is about ensuring a floor of basic primary and preventive care for the over 40 million Americans who have no health insurance coverage at all.
- It is about basing eligibility for a public subsidy on financial need, not on categories.
- It is about making the public subsidies in the system explicit and limiting them to the cost of the basic benefit package that constitutes the floor.

Health care reform is about establishing priorities based on clinical effectiveness and applying limited public resources to those services which produce the greatest health gain those who depend on publicly subsidized health care.

- It is about creating the incentives and database necessary to standardize best practices and reduce the wide variation in physician practiced patterns.
- It is about using a reference-based process to require the pharmaceutical industry to compete on the basis of cost for drugs that are clinically equivalent.

Over the past few decades efforts to reform the U.S. health care system have been framed and limited by the concept of categorical eligibility. The debate has been characterized by a defense of those who are fortunate enough to fit into a category at the expense of those who are not.

Whether the category is "over the age of 65" or whether it is defined by Medicaid - powerful lobbies protect those within the categories, protecting subsidies for the wealthy at the expense of the poor; protecting the "deserving" poor from those who federal policy declares are "undeserving."

The Children's Defense Fund -- which has made great contributions to child health -- has a logo which offers an apt metaphor for the health care debate of the last few decades. The logo depicts - in a child's hand -- a child floating in a boat in the sea. Under it is written - also in a child's hand: "Dear Lord be good to me the sea is so wide and my boat is so small."

If we are to have a meaningful debate about reforming our health care system in this new decade we must frame it by making a few small changes to this picture. We need draw some children out in the water and add: "And lord, don't forget those of us who have no boat at all."

Several years before the enactment of Medicare and Medicaid, President Kennedy said: "The true test of our society is not whether we give more to those who already have enough, but whether we give enough to those who have too little." Nearly 40 years after his death, perhaps it is time for us to heed his words.

Governor John Kitzhaber

Port of Portland Commission

December 12, 2001

I appreciate this opportunity to discuss with you some issues of great importance to the economic future of our state and region. I'll start by stressing that international commerce is vital to Oregon, and that government at every level -- together with the private sector -- must work vigorously and proactively to strengthen and enhance that commerce.

After all, we're a trading state, and we've been a trading state since 1869, when the first load of Oregon wheat went to Liverpool, England, aboard the sailing ship, *Helen Angier*. Since then, trade has become part of Oregon's identity. Today, we export electronic goods, computers, industrial equipment, wood products, transportation equipment, grain, metals and chemicals, to name just a few. We're the 17th-largest exporting state in the country, and our exports have roughly doubled in less than a decade, to more than \$12 billion a year. Clearly, trade is as important to our economic future as it has been to our past.

The Port of Portland will play an important role in making that future a bright one. We can easily see its importance to our future in the present. Today, the Port's maritime operation exports more wheat than any other port in the nation. The Port ranks ninth in total tonnage, 15th as a container port, and number one as a gateway for imported cars. PDX serves more than 13 million passengers a year, with service on 31 carriers and 581 flights a day. The Port creates nearly a billion dollars a year in direct earnings to the workers of the region, and generates about \$3.5 billion in business for the private sector.

As you well know, many separate entities -- both public and private -- influence trade in a variety of ways. Some of these are federal agencies, others are state and local. Since 1996, 46 different organizations have sent representatives to the Oregon Trade Conferences held each spring and fall. While this much participation is heartening in one sense, it's sobering in another. With 46 entities influencing trade, we can't help but worry that we may sometimes work at cross purposes.

At the state level alone, we have the International Trade Commission, the International Trade Division of the Department of Economic and Community Development, the Department of Agriculture, and the Port of Portland, which I include because I consider it a resource of the entire state. With so many cooks in the kitchen, each working more or less independently, the issue of duplication of effort is a real concern.

We need a way to coordinate the activities and policies of the state-level agencies as they pursue trade objectives. In addition to coordinating with each other, they should coordinate with all the local and regional entities working in the arena. Put simply, we need to "work smarter." This means getting the best possible results from our efforts to promote trade and open new markets. It means eliminating duplicated efforts and covering all the bases when we launch an effort to lure foreign investors to Oregon.

I've asked the Department of Agriculture and the Department of Economic and Community Development to reach out to our partners in the private sector to determine where the problems are. The International Trade Commission has already reached out in an effort to learn from business owners what they want and need in order to expand international trade.

We've begun to examine the activities and concerns of the various state agencies and entities involved with trade to look for ways to improve coordination and communication among them. We're approaching the task with an open mind, with no foregone conclusions. If we find that structural changes are in order, we'll implement them. The important thing, in my view, is to promote trade policies and services that make sense for *all* Oregonians, that maximize the return on scarce resources.

A moment ago, I mentioned the importance of the Port of Portland to the economic future of the state. In fact, it is probably more accurate to refer to it as the "Port of Oregon." One of the challenges the Port faces is to recognize this broader role and to develop and communicate with a statewide constituency. Toward that end, as you know, I have appointed two people to this Commission who live and work outside the Portland metro area. In doing so, I wanted to underscore that much of the Port's business comes from manufacturers and growers throughout the entire region, and that businesses and individuals from all over the state use the Port's terminal facilities and Portland International Airport. The Port truly is a resource that's available to all of us, and all Oregonians have an interest in its activities and its future.

A second challenge is the way in which you conduct your business. I was glad to hear about Bill Wyatt's actions to open the Port's activities to public input and scrutiny. This new emphasis on openness will build public confidence in the Port and shore up public support. Communicating with the public and responding to their concerns are absolutely critical to the long-term success of the Port. This is the way to reinforce a partnership between business and other sectors throughout the state, one that can generate a helpful mutual awareness of each other's needs and concerns. This is the way to head off damaging conflicts and controversy, which often result from poor communication and the perception of closed proceedings behind closed doors.

This is especially important when dealing with controversial and environmentally sensitive issues like the Portland Harbor clean-up and deepening the Columbia River channel. Channel deepening, in particular -- if we are to be successful -- will depend on coalition-building with a broad range of stakeholders.

As you know, I've supported providing more than \$26 million in lottery-backed bonds for the channel-deepening project. Only by deepening the Columbia River channel can we accommodate the fully loaded new-generation deep-draft vessels that now dominate the shipping industry. In order to keep the Columbia channel as a vital resource to Oregon's economy, we must ensure that the ports along the channel remain competitive with other West Coast ports. Deepening the channel to accommodate the big ships would reinforce the position of the Port of Portland as a strong, vibrant regional port that offers a gateway to the world for the goods grown and manufactured throughout this region.

Viewed another way, *failure* to deepen the channel would jeopardize the viability and competitiveness of a system of ports that handles more than 30 million tons of imported cargo every year. Doing nothing would require our own container-shippers to use more distant ports, saddling them with extra shipping costs to the tune of \$60-plus million a year. We have more than a thousand growers and manufacturers in this region who rely on the Columbia channel for affordable access to global markets, and we would do them and ourselves a great disservice by weakening their ability to compete in those markets.

I see another benefit to the project -- a way to bridge the divide between rural and urban Oregon. In rural areas, the project will help keep transportation costs down for growers of agricultural products and makers of export goods. In cities like Portland, the project will help strengthen the more than 40,000 jobs that depend on seaport activity, not to mention the 59,000 jobs held by people who work for companies that ship cargo on the river. In other words, this is a cause in which the interests of rural and urban Oregonians converge, and that's important.

As you also know, however, my support for channel deepening is given with a keen concern for environmental issues. A project of this kind requires close attention to the possible impacts on fish and wildlife -- especially those listed under the Endangered Species Act. It requires attention to water quality and Oregon's Coastal Management Plan, as it relates

to the federal Coastal Zone Management Act.

I believe that deepening the Columbia channel can proceed in a way that meets the stringent state and federal standards on protecting fish, wildlife and water quality. I'm committed to resolving any and all environmental issues that might emerge as this project moves through the final stages of federal and state approval, and I'm committed to seeing it commence before I leave office.

My point to you is this -- in this day and age, the Port must pursue its economic objective and responsibilities with an acute awareness that they exist in the context of other values which are equally important to the public we serve. While international trade is an important symbol of Oregon's identity, so are fish and wildlife. So is our magnificent coastline, together with all its aesthetic and commercial values.

There is an opportunity here for the Port to provide unprecedented leadership for a sustainable solution -- conducting the channel deepening project in a way that results in a net gain for habitat, something that would be consistent with my ongoing efforts under the Oregon Plan for Salmon and Watersheds. That is certainly my objective and I will do all I can to work with you, our federal partners and the environmental community to make this outcome a reality.

Another critical challenge for the Port involves the need to reestablish nonstop passenger air service to Asia. I've followed the efforts of the International Air Service Committee with great interest, and I want to applaud the Committee and the Port for the progress you've made thus far. It's impossible to overemphasize the importance of reinstating direct air service for passengers, since Asian companies have invested more than \$5 billion in the Portland area alone. Nearly 700 Oregon companies trade in Asia, accounting for more than 90,000 jobs. Direct passenger service is an absolute *must*, if our trade partnership with Asia is continue to flourish and grow.

Last March, I led a delegation of state officials and Port representatives in a meeting with air carriers -- All Nippon Airways, Japan Airlines and Korean Air -- and we reinforced Oregon's commitment to trade with Asia. You can count on our continued efforts to drive home the importance of reinstating direct service to Asia, not only with Asia-based carriers, but also with US carriers.

Finally, I want to address one other matter that's been on all our minds since September 11, and that's the security and safety of our nation and our communities. I was pleased to learn that the Port's executive director Bill Wyatt has appointed a citizens' task force to examine security at PDX. With former Governor Neil Goldschmidt at the helm, I'm sure we can look forward to some strong, innovative measures to keep our airport safe (despite Bill's involvement). I can assure you that state government is both willing and eager to work with the Goldschmidt task force in coordinating efforts to achieve this goal.

Since September 11, we've taken steps at the state level to enhance the general security and public safety. In October, we formed the new Office of Public Safety and Security within the Oregon State Police, to coordinate intelligence-related activities with the state Attorney General, the federal Anti-Terrorism Task Force, the FBI's Joint Terrorism Task Force, the Military Department and local law enforcement agencies.

In order to ensure solid communications links, the Oregon State Police will open its new Operational Command Center in the spring of 2002 -- a major improvement to the communications infrastructure of statewide law enforcement and security.

We are taking a hard look at critical public assets like dams, water supplies and power-generating facilities in order to assess their vulnerability to terrorist attacks. The goal here is to anticipate a problem before it occurs, and take the proper action to make certain that it never does.

I've mentioned the security issue because it's vital to our well being as a state, both in the short term and the long term. Among the obvious concerns is the assurance that our homes are safe, as well as our schools, airports, water supplies and all the other working assets of our civilized society. Among the less obvious concerns, however, is the need to expand our economy, to reinforce and protect the businesses and jobs that make possible the kind of life we Oregonians so cherish. Without a safe, secure place to live and work, we cannot hope to build our economy, or to "Export Oregon." Without a safe, secure transportation system, we cannot hope to open up new international markets.

In closing, I just want to reiterate my support for your efforts to expand and diversify the region's and the state's economy. These are tough times - for every part of the state including the metropolitan area. Workers from Boeing to Fujitsu to small businesses throughout the region have borne the brunt of this economic downturn.

I want to let you know that as we go about the very difficult task of rebalancing our state budget to address the recession-caused revenue shortfall, I will do everything I can to protect those programs such as economic development and training funding which help stimulate the economy. This slump will turn around. And when it does, we need to be poised to help businesses grow, help workers train and help return prosperity to communities throughout the state.

Governor John Kitzhaber

OFIC Annual Meeting

October 22, 2001

Salishan

Good afternoon.

Thank you for the invitation to come speak to you today. I want to take this opportunity to discuss the recent Hogan decision and my concerns about its impact on the Oregon Plan for Salmon and Watersheds. I also want to discuss the future of this kind of collaborative problem-solving process in the context of our current relationship with our federal partners.

Let me start with the Hogan decision. I understand that earlier today you endorsed a recommendation from your Forest Management Policy Committee to carry through on the voluntary commitments you have made under the Oregon Plan, regardless of the ultimate outcome of the Hogan decision. I want to commend you and thank you for taking this position. OFIC and its members have been strong supporters of the Oregon Plan from its very beginning and I appreciate your continuing support today.

I am concerned about the potential consequences of the Hogan decision on the Oregon Plan and the willingness of Oregonians to continue working to improve watershed health across the state. As you know a major focus of my administration has been to encourage all Oregonians to work locally through watershed councils, soil and water conservation districts and others to address watershed health issues.

The Hogan Decision certainly complicates our work - and before I turn to the decision itself, and its potential consequences - it will be useful to step back and consider why we embarked on the Oregon Plan in the first place.

First and foremost, the Oregon Plan grew out of a concern over the deterioration of the health of many of our watersheds and of the species which depend on them. There are many signs to validate this concern that we are stretching our watersheds beyond their capacity -- ESA listings being but one of them. We are also experiencing water quality and water quantity problems in watersheds across Oregon. For example, as a result of development and land management decisions, we have blocked access to miles of habitat for many fish species and have built miles of roads along streams, resulting in increased erosion and decreased water quality.

In other words, the objective of the Oregon Plan is watershed health. The restoration of endangered fish populations is, to a large extent, a result of restoring the health of the watershed on which they depend. By the same token, a healthy, functioning watershed is the common building block from which all beneficial uses of a flow: clean water, a thriving forest, abundant timber, and healthy forest species.

We cannot provide sustainable forest products, assure clean water and provide habitat for species unless we first have a healthy functioning ecosystem. The three legs upon which sustainable forestry stands - social, environmental and economic - are all interwoven and are dependent first on a healthy, functioning watershed.

In addition, the Oregon Plan grew out of the conviction that watershed health could not be achieved without a collaborative process that involved private landowners and other stakeholders in the actual on-the-ground restoration work - not because they were forced to, but because they believed that it was the right thing to do.

I believe that the Hogan Decision could potentially undermine this basic philosophy. In addition, the decision has significant economic implications for future recreational and commercial fishing, as well as regulatory implications for a much broader landowner community.

As you know, shortly after the Hogan decision was issued I urged NMFS to appeal the decision and to conduct a rulemaking process to clarify the role of hatchery fish in recovery of salmonids under the ESA. I know that some may find my request for an appeal to be confusing - if not contradictory - since, in the early days of the Oregon Plan, we were trying to get a no list decision from NMFS based on the weight of the commitments in the Plan. Let me take this opportunity to clarify my thinking behind these requests.

First it is important to point out that the legal decision Judge Hogan made was fairly narrow. It was essentially the kind of argument only a lawyer can fully appreciate, and it went something like this: Basically, NMFS included hatchery fish when defining the coho runs they were considering. But they did not include hatchery fish when listing the coho as threatened. Judge Hogan rule, in essence, that hatchery fish must be considered in a consistent fashion. In other words, the decision has more to do with process than with science.

Whether the decision is appealed or not, I am concerned about its potential outcome. First and foremost, I am concerned that the decision will lead people to conclude that the solution to ESA listings or potential listings is to simply increase hatchery production. The problem with this strategy is that it will fail to achieve the goal of the ESA: to have sustainable fish and wildlife populations in their natural environments.

Second, I am concerned with the potential implications of a re-listing that included hatchery fish. Judge Hogan's decision puts us on the horns of a dilemma. If NMFS does a new status review and remakes the listing decision as ordered by the judge, it is likely that the new decision would list both wild and hatchery stocks. This would have two serious consequences.

First, it would have significant negative economic implications for our commercial and sports fishing industries which could no longer take hatchery fish. Second, it would have significant regulatory implications for private timberland owners who currently have only hatchery fish in the streams running through their property. These landowners are not currently affected by the listing of wild fish but a re-listing that included hatchery fish would make them subject to the take provisions of the ESA.

An appeal of the Hogan decision, however - if successful - could leave us with the status quo: a listing of wild fish only. I do not know whether the decision will be appealed - or whether such an appeal would be successful - but I wanted you to understand the dilemma that has been presented to us by the Hogan decision.

Finally, I am concerned that because of this decision Oregonians will think that the work we are doing to restore watershed health is less important or not necessary. The fact is that the water quality issues we face as a state will not diminish no matter what the legal outcome of the Hogan Decision. This is not the time to abandon our work to restore the health of our watersheds. We in Oregon and the Northwest appreciate the quality of the environment in which we live, play and earn a living. We are making progress -- and we cannot quit until the job is done.

One of the outcomes of this decision is that we may not be able to list wild fish under the ESA without also listing hatchery fish. That does not mean that many populations of wild fish are not on the brink of extinction. It does not mean we should stop trying to rebuild wild populations. And it certainly does not mean that we should stop our efforts to

restore the health of our watersheds.

So, again, I want to thank you for your willingness to stay the course and carry through on your Oregon Plan commitments regardless of the outcome of this case. Your leadership in this effort sets an example for all Oregonians of what the Oregon Plan is all about.

This is important because the Oregon Plan represents a collaborative effort through which a wide range of stakeholders have come together to improve the health of their natural environment. It provides a forum in which we can move beyond polarization and find a balance between environmental, economic and social values. The future viability of this kind of on-the-ground problem solving is threatened not only by the ambiguities of legal decisions like the one just rendered by Judge Hogan - but also by our current relationship with federal land management and natural resourced agencies.

Let me give you an example with which you are all familiar: the Eastside Forest Health Initiative - designed to restore the ecologic health of the public forests of eastern Oregon while providing wood to local mills in an environmentally sensitive manner. This initiative offers a working definition of environmental, economic and social sustainability.

Our effort began in 1995 when I appointed a panel of highly respected scientists from throughout the Northwest who reached a remarkable consensus of opinion on what it would take to restore health to the forests of Eastern Oregon. Their recommendations were embodied in a broadly supported set of eleven guiding principles.

This "11-point plan" calls for using active management to promote ecosystem health, while avoiding areas of high public controversy. Restoration treatments include understory and commercial thinning; road maintenance, closure and obliteration; prescribed burning; noxious weed treatment; and stream rehabilitation.

In the first years of the initiative nearly 60 Forest Service and Bureau of Land Management projects that exemplified the 11-point plan were identified. This offered a clear demonstration that it is possible to engage in broadly supported watershed and forest restoration work that both improves ecosystem health and provides some economic benefits to local communities.

Unfortunately, the volume of the wood flowing from this work has been much less than expected. This has been due to a combination of tough markets, the traditional size of these thinning treatments and the difficulty getting projects through ESA consultation and other federal procedures and processes.

As a consequence, the Eastside Forest Health Initiative has not, to date, fulfilled its promise of helping to stabilize local economies. Even mills that have made the investment to retool to take smaller diameter logs are struggling. Ochoco Forest Products - an early and enthusiastic supporter of the effort - withdrew its support early this year and later closed its mill in Prineville.

Joseph Forest Products in Joseph - retooled to take small trees off the Willowa-Whitman National Forest - may face the same fate. With the Wallowa-Whitman choked with overstocked stands of young pine and fir - and with the widely acknowledged need to thin out these stands to improve forest health and reduce the risk of catastrophic wildfires - the inability to connect the dots and get the wood to the mills has led to a growing frustration with the effort.

While we should not conclude at this point that the Eastside Forest Health Initiative is a failure -- it does appear to be following the course of other similar collaborative initiatives like the Applegate Partnership, the Quincy Library Group and the Grand Canyon Forest Trust.

All of these efforts are built on collaboration at the local level among people working together to solve shared problems on behalf of a shared place. All have enjoyed initial enthusiasm and support from the federal land management agencies. And all have been frustrated to one degree or another by the unwillingness or inability of these same agencies to allow the collaborators to actually make decisions on the ground.

Dan Kemmis, in his recently published book [This Sovereign Land](#), characterizes this phenomenon as the inevitable collision between local collaborative problem solving and the "procedural republic" - the complex administrative

processes which try to ensure that all stakeholders have equal access to federal decision makers.

As Kemmis puts it: "At the bottom of this difficulty lies the fact that the collaboration movement represents a form and philosophy of decision making fundamentally different from the decision structure in which the land management agencies are embedded. One is an inherently decentralized, democratic form of governing; the other is inherently centralized and hierarchical. The effort to make something like collaborative stewardship an integral part of Forest Service operations, for example, cannot really succeed unless the agency is willing to turn some actual decision-making and management authority over to the people who are doing the collaboration."

This gets us into the century old debate over the management of public lands in the West. On one side is the position bluntly articulated by George Coggins, a public land legal authority: "The public lands are public. They are the property of all of the people, not just those who live in their immediate vicinity. They are national assets, not local storehouses to be looted ... "

At the other end of the spectrum is the position represented by the "Sagebrush Rebellion" of the late 1970's and early 1980's which held that all federal land was state property to do with as states pleased.

The truth -- and the future of sustainable forestry -- lie somewhere in between these two positions.

There is no doubt but that the exploitation of public lands for private gain is an established part of western history. Indeed, the conservation movement in America can trace its roots to efforts in 1870 to prevent corporate interests from abusing homesteading laws - passed to help settle the frontier - in order to gain access to public lands for the extraction of natural resources. These were not sustainable land management practices.

But it is equally true that the current procedure-bound, litigious, cumbersome, glacial process that has engulfed federal land management agencies does not produce sustainable land management practices either. As evidence, look at the sad state of health the public forests of Eastern Oregon and, indeed, of the forests throughout the Intermountain West. Or consider the fact that 10 years after the listing of the Snake River Chinook under the Endangered Species Act, there is no recovery plan in place.

I do not support turning public lands over to local politics. There are legitimate national interests to be served. National environmental legislation - like the Endangered Species Act and the Clean Water Act - were enacted for a reason ... and a good reason: to secure the long term and sustainable health of the ecosystem we all share.

I believe in the need for this strong framework of federal environmental laws and in having the ability to enforce them. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the way in which we have traditionally applied them.

For example, with over 1000 species listed -- the lengthy, complex and contentious process of actually developing recovery plans under the ESA will doom many of these species to extinction long before anything happens on the ground. Likewise, the processes that guide and shackle our federal land management agencies are leading to similar results in terms of the health of our forest ecosystems.

What I am suggesting to you today is that unless we address this fundamental problem - not with our environmental laws themselves, but with the processes and procedures by which they are applied-we will never achieve our goal of sustainability for our forests or for our endangered species.

We are making an effort to address this problem through what I call the "Oregon Agreement" with the Bush administration. In early May I traveled to Washington DC to try to persuade our congressional delegation and the Administration to support an outcomes based approach to managing natural resources in Oregon. In addition to our delegation, I met with representatives from Interior, Agriculture and Commerce. I was joined on that trip by key stakeholder representatives, including Larry Giustina, representing timber interests. In addition, John Hampton has worked to open the doors to the Bush administration for us and continues to help work with the Oregon delegation on this effort.

The proposal was well received and we hope to begin the process of developing a formal MOU with the administration later this year or early next year that would include a set of principles and outcomes which the state and federal administration, among others share. We successfully used a similar process --called the Oregon Option -- to develop an outcomes based approach to social service issues in the mid 90s.

My hope is that we can use this approach to remove some of the barriers to fully implementing the Oregon Plan and the Eastside Forest Health Initiative. With five years of working on these two initiatives it has become clear that the very same laws established to protect and restore natural resources bring with them some processes and procedures that prevent the overall goal of watershed health from being achieved. It is with this in mind that we are pursuing the Oregon Agreement. I don't think I need to mention much more than ESA consultations and 404 permitting to this group for you to see the need for such an approach.

I want to thank you for your support so far on this effort and urge you to continue to work with my staff to make the Oregon Agreement a reality. I also ask for your support to help me protect the state agency funding for the Oregon Plan and Eastside Forest Health Initiative during the special session which I expect to call early next year to rebalance the state budget. It will be difficult to convince the Bush Administration to support the Oregon Agreement if the legislature does not keep the funding commitment for these important natural resource initiatives in place.

Finally, as my administration nears its end, I want to thank you for the solid working relationship we have developed over the past seven years. I believe we have made significant progress in the effort to maintain a viable forest products industry in Oregon while improving the health of our forest ecosystems. Clearly we still have much to do and I look forward to working with you during my remaining months in office because I believe that sustainable forests are a cornerstone of Oregon's future.

Governor John Kitzhaber

Sustainable Forests

October 18, 2001

Oregon State University

Good morning.

It is a pleasure to be here today with people who are on the cutting edge of the discussion about sustainable forests. I commend the Board of Forestry and the Department of Forestry for their leadership in this area.

Today I want to give you my own personal vision about sustainable forests to help facilitate this discussion. But first, what do we mean by "sustainable?"

I define sustainability as managing the use, development and protection of our environmental, social, and economic resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs. What is important to understand about this definition is that it requires that we recognize the interdependence between our environmental, economic and community needs - that we find a balance between these often-competing values.

Imagine, if you will, three overlapping circles - one representing our economic needs, one representing our environmental needs and one representing our social or community needs. The area where the three circles overlap is the area of sustainability - the area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other. These elements - these threads, which together weave the fabric of sustainability - are things we hold in common. They represent a common set of desires and aspirations that add value and quality to our lives.

Today, however - in ways both large and small - these threads are beginning to fray and unravel. Increasingly, we are viewing economic, environmental and community needs as separate, competing entities - mutually exclusive values, if you will. Of course, this perspective undermines sustainability because it creates a politics of scarcity - a zero-sum situation in which there must always be a winner and a loser.

We can see this unfolding in many ways: in the challenge of accommodating growth while maintaining livable communities; and in the tension between sprawl and development. Nowhere, however, is this more evident than in the conflict between natural resource extraction and environmental stewardship.

To find meaningful solutions, we must be willing to move beyond this zero-sum approach and conduct the debate on a higher plane. That is what sustainable forest management is all about and I believe that it can help move us beyond these conflicts.

I believe that sustainable forest management rests on a foundation of six key building blocks: (1) Establishing a single overarching policy object which drives forest management plans; (2) Reframing the debate between commercial forestry and environmental stewardship; (3) Basing decisions on interdisciplinary science; (4) Managing at the landscape level; (5) Ensuring broad public involvement in and ownership of the management plan; and (6) Redefining our relationship with our federal partners.

To illustrate these points I will use two examples from Oregon: the Eastside Forest Health Initiative and the management plan for the Tillamook-Clatsop State Forest.

Let's start with eastern Oregon where we have begun to put in place a new strategy for the restoration of ecological health in the public forests. This initiative -- which includes all the forests of eastern Oregon with particular emphasis on the three million acre Blue Mountain Demonstration Area -- offers a working definition of environmental, economic and social sustainability.

But first, a brief history. At the beginning of my administration, I started looking at what could be done to try to improve the health of the federal lands on the east side of Oregon -- particularly the pine forests that have been ravaged by insects and disease.

Historically, these federal forests were blessed with huge stands of old growth pine covering millions of acres. For much of the last century, however, forest management policy was characterized by active fire suppression and harvesting of valuable old growth pine

The legacy of past management on public lands is overstocked stands of young fir and pine, thousands of acres of dead and dying timber infested with insects, an absence of older forest habitat and a high risk of catastrophic fire.

The tragic outcome of these policies has been a significant reduction in watershed health and the destruction of habitat for sensitive species coupled with a catastrophic decline in employment for timber dependent communities.

What we were facing was political and legal gridlock while the health of the forest ecosystem, local timber mills and rural communities continued to decline. Each side in the debate operated from their deeply entrenched positions and pointed at the other as the culprit. The situation was a classic example of the black and white way in which the debate over the management of federal lands has historically been framed.

It became apparent that the status quo was not serving anyone: not the industry, not the environment, not the communities of Eastern Oregon. The challenge of getting beyond the gridlock depended on finding a common policy objective that could bring the stakeholders together. In this case, the objective was a healthy, functioning forest ecosystem - which became the underpinning and unifying principle of the forest health initiative.

To emphasize the importance of an overarching policy objective let me use the development of the management plan for the Tillamook-Clatsop State Forest in which the Department of Forestry was also striving to balance a range of important environmental, social and economic values through a strategy calling for five different types of stand structures across the landscape and over time. This "structure-based management" defined "stand targets" for the percentage of each stand structure which should, at any given time, comprise the landscape of these state forests.

Although this approach enjoyed some acceptance, the problem was that, while there was certainly a theoretical basis for the stand structure targets based on historic conditions in the forest, they were not precise and different stakeholders drew different conclusions about the plan.

The environmental community looked at the long-term impact of structure-based management and objected that there was no plan to create old growth forests. The industry looked ahead and determined that the proposed stand structure and harvest rotation would result in significantly less timber than would be available under a traditional commercial harvest protocol. This political tension - and the lack of broad ownership of the plan - threatened its long-term viability. It raised questions about its political sustainability.

In the end -- although the Board did adopt a structure-based strategy - it also acknowledged the necessity of an

overarching policy objective by citing the need to first protect the health of forested watersheds as one of the "key goals" of the plan and by calling for watershed assessments as a means to implementing structure based management. The objective they chose was watershed health. Why? Because a healthy watershed is the common building block from which all beneficial uses of the forest flow: clean water, a thriving forest, abundant timber, and healthy forest species. Furthermore, the health of a watershed can be to a large extent scientifically measured and monitored.

It is important to recognize that focusing on watershed health does not mean that we are elevating the importance of one value above another. Rather, it is the common denominator for all the values and acts as a guidepost by which we can shape our active management efforts in the context of the other values.

We cannot provide sustainable forest products, assure clean water and provide habitat for species unless we first have a healthy functioning ecosystem. The three legs upon which the strategy stands - social, environmental and economic - are all interwoven and are dependent first on a healthy, functioning watershed.

We arrived at a similar conclusion in our effort to find new ways to both restore the health of Eastside forest ecosystems and provide wood to communities in an environmentally sound manner. Our effort began in March of 1995 when I appointed a panel of highly respected scientists from throughout the Northwest. Faculty from Oregon State University, the University of Washington and the private sector reached a remarkable consensus of opinion on what it would take to restore health to the forests of Eastern Oregon. Their recommendations were embodied in a broadly supported set of eleven guiding principles.

This "11-point plan" calls for using active management to promote ecosystem health, while avoiding areas of high public controversy. Restoration treatments include understory and commercial thinning; road maintenance, closure and obliteration; prescribed burning; noxious weed treatment; and stream rehabilitation. It also emphasizes adaptive management through monitoring.

This eastside strategy has helped reframe the debate between commercial forestry and environmental stewardship by focusing on areas of broad agreement instead of conflict and thus taking advantage of the "area of sustainability" where environmental, economic and community needs overlap.

The objective of this management plan is to improve the health of the forest ecosystem, including watershed health and habitat for forest species. At the same time, a by-product of many of the thinning treatments would be wood for local mills and value-added products to help stabilize rural communities. Thinning and prescribed burns would also reduce the risk of catastrophic fires that has increased significantly as forest health has deteriorated.

Essentially, we moved the debate from the question of "management or no management" to a discussion of "how to manage" these lands. I suggest that by using good science and by focusing on reducing risk -- risk to the watershed, risk to sensitive species and risk to the local economy -- we can build public and scientific support for active forest management.

Our effort is based on a strong underpinning of multidisciplinary science which we use in a number of ways. On the federal lands, for example, we want to know what these systems historically were like to inform us as to what the watersheds need to function properly. For instance, we know that is appropriate to mimic past fire regimes and thin forests at lower and mid-elevations but not the higher elevations. Historically, higher elevation forests burned infrequently, and when they did they did not have the low-intensity creeping fires -- they were stand-replacement fires.

Because of the importance we placed on restoring healthy, functioning watersheds, our work is based on a commitment to management at the landscape level - recognizing that the ecologic "landscape" does not stop at political boundaries or at those based on ownership.

To learn how to do this across ownerships and land use types, in June of 1999 we set up the 3 million acre Blue Mountain Demonstration Project - with only about half of it in federal ownership. Within the demonstration area federal, state, local and tribal agencies are working with private landowners, environmentalists and community stakeholders with the shared objective of improving the health of both forest ecosystems and local economies.

In addition, we recognized that having the best science is not enough -- that we also needed to blend in the values of the local population if the plan is to be sustainable. As a consequence, we established an "eastside forest health advisory panel," consisting of a diverse group of eastern Oregon citizens and stakeholders who helped to develop the "eleven point plan" and then to identify and prioritize projects based on the plan.

In the first years, the eastside panel identified nearly 60 Forest Service and Bureau of Land Management projects that exemplified the 11-point plan. This offered a clear demonstration that it is possible to engage in broadly supported watershed and forest restoration work that both improves ecosystem health and provides some economic benefits to local communities.

Unfortunately, the volume of the wood flowing from this work has been much less than expected. This has been due to a combination of tough markets, the traditional size of these thinning treatments and the difficulty getting projects through ESA consultation and other federal procedures and processes.

As a consequence, the Eastside Forest Health Initiative has not, to date, fulfilled its promise of helping to stabilize local economies. Even mills that have made the investment to retool to take smaller diameter logs are struggling. Ochoco Forest Products - an early and enthusiastic supporter of the effort - withdrew its support last year and closed its mill in Prineville this past summer.

Joseph Forest Products in Joseph - retooled to take small trees off the Willowa-Whitman National Forest - may face the same fate. With the Wallowa-Whitman choked with overstocked stands of young pine and fir - and with the widely acknowledged need to thin out these stands to improve forest health and reduce the risk of catastrophic wildfires - the inability to connect the dots and get the wood to the mills has led to a growing frustration with the effort.

While we should not conclude at this point that the Eastside Forest Health Initiative is a failure -- it does appear to be following the course of other similar collaborative initiatives like the Applegate Partnership, the Quincy Library Group and the Grand Canyon Forest Trust.

All of these efforts are built on collaboration at the local level among people working together to solve shared problems on behalf of a shared place. All have enjoyed initial enthusiasm and support from the federal land management agencies. And all have been frustrated to one degree or another by the unwillingness or inability of these same agencies to allow the collaborators to actually make decisions on the ground.

Dan Kemmis, in his recently published book [This Sovereign Land](#), characterizes this phenomenon as the inevitable collision between local collaborative problem solving and the "procedural republic" - the complex administrative processes which try to ensure that all stakeholders have equal access to federal decision makers.

As Kemmis puts it: "At the bottom of this difficulty lies the fact that the collaboration movement represents a form and philosophy of decision making fundamentally different from the decision structure in which the land management agencies are embedded. One is an inherently decentralized, democratic form of governing; the other is inherently centralized and hierarchical. The effort to make something like collaborative stewardship an integral part of Forest Service operations, for example, cannot really succeed unless the agency is willing to turn some actual decision-making and management authority over to the people who are doing the collaboration."

This gets us into the century old debate over the management of public lands in the West. On one side is the position bluntly articulated by George Coggins, a public land legal authority: "The public lands are public. They are the property of all of the people, not just those who live in their immediate vicinity. They are national assets, not local storehouses to be looted ... "

At the other end of the spectrum is the position represented by the "Sagebrush Rebellion" of the late 1970's and early 1980's which held that all federal land was state property to do with as states pleased. The truth -- and the future of sustainable forestry -- lie somewhere in between these two positions.

There is no doubt but that the exploitation of public lands for private gain is an established part of western history. Indeed, the conservation movement in America can trace its roots to efforts in 1870 to prevent corporate interests from

abusing homesteading laws - passed to help settle the frontier - in order to gain access to public lands for the extraction of natural resources. These were not sustainable land management practices.

But it is equally true that the current procedure-bound, litigious, cumbersome, glacial process that has engulfed federal land management agencies does not produce sustainable land management practices either. As evidence, look at the sad state of health the public forests of Eastern Oregon and, indeed, of the forests throughout the Intermountain West. Or consider the fact that nearly 10 years after the listing of the Snake River Chinook under the Endangered Species Act, there is no recovery plan in place.

I do not support turning public lands over to local politics. There are legitimate national interests to be served. National environmental legislation - like the Endangered Species Act and the Clean Water Act - were enacted for a reason ... and a good reason: to secure the long term and sustainable health of the ecosystem we all share.

I believe in the need for this strong framework of federal environmental laws and in having the ability to enforce them. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the way in which we have traditionally applied them.

For example, with over 1000 species listed -- the lengthy, complex and contentious process of actually developing recovery plans under the ESA will doom many of these species to extinction long before anything happens on the ground. Likewise, the processes that guide and shackle our federal land management agencies are leading to similar results in terms of the health of our forest ecosystems.

What I am suggesting to you today is that unless we address this fundamental problem - not with our environmental laws themselves, but with the processes and procedures by which they are applied -- we will never achieve our goal of sustainability.

These six building blocks of sustainable forest management are within our grasp -- but fitting them into a solid foundation will require a new vision. The Board of Forestry has an opportunity to help create that vision through a public discussion about sustainability - and about concluding a new social contract among urban and rural Oregonians that contains social, environmental and economic components.

Unless Oregon can come to agreement on this vision we are destined to lose more of our forest to other uses - or to simply not manage them at all - and thus fail to realize all of the values they can potentially provide. Looking out at this great audience today - I am confident that will not happen.

Challenge of Change

October 16, 2001

Seaside, Oregon

Today, I'd like to reflect on this new world we have entered and how the state government is planning on coping with it.

I think we can all probably remember where we were on the morning of September 11 when we heard the news of the terrorist bombings. I was at Mahonia Hall, just back from a workout when I saw the news. I spent the rest of the day with my own version of a security council and every day since then have had some dealing with the security or economic ramifications of the terrorist attack.

In fact, the attack put a doubt in my mind as to whether I should leave the state for a long-planned six-day trade mission to Taiwan and Japan. I came close to canceling that trip on the theory that I didn't want to be gone as the nation contemplated war. But in the end I decided to go for two reasons:

First, paralysis is exactly what the terrorists want to accomplish - and I didn't want to be complicit in offering them any sense of victory.

Second, Oregon is a trading state. We are in the top ten states in terms of trade value per capita. And last year, we shipped \$12.5 billion in goods overseas, \$2 billion of that to Japan and another \$700 million to Taiwan.

Unfortunately, those numbers probably won't be as good for this year. Trade is down across the board with the surprising exception of the agricultural sector that showed a 16 percent jump in the first half of 2001.

But this seemed like all the more reason to make a sales call and I'm glad I went. Our Asian partners, sources we have cultivate for more than 20 years, were very appreciative of our trip, and I returned with two new Japanese businesses that will open their doors in Oregon over the next two months.

So the first thing I would say about the world after the terrorist attacks -- and after our nation's subsequent retaliation -- is that there is no stepping back from a global economy based on free trade and open markets. It is a large part of what has helped Oregon prosper over the last decade and we have an obligation as economic leaders to continue to pursue a global agenda for Oregon. In my remaining months in office, I fully intend to return to Asia, including China, one more time and am hopeful to make a second mission to Mexico as well.

We are a trading state and that must not change.

But clearly, the terrorist attacks have had an impact on our economy and have pushed an already slow economy further toward the brink. I know many of you are seeing that in your businesses and we are certainly seeing that at the state. We are now, regrettably, the state with the second highest unemployment rate and 50th in job growth.

Further, our September 2001 revenue forecast showed a \$280 million drop - or just over 2 percent. We expect to see another drop in revenue in the December forecast -- how much, we don't know.

However, we are beginning the process now of slowing our spending and producing plans for greater cuts as we move ahead, and I would not be surprised if I have to call a special session in January to rebalance our \$12 billion state budget.

But I can tell you, that I will not simply accept across the board cuts to balance the budget. And I can tell you that I will be specifically examining proposed cuts to determine their relative economic effects so that in the process of re-balancing the state budget we don't further suppress Oregon's economy. To accomplish that I will be involving the state's Council of Economic Advisors in the review of our re-balanced budget as plans proceed.

Let me give you an example. We have ongoing programs for workforce investment - much of it coordinated through our community colleges. Those programs are important in the respect that they position Oregon's workforce favorably against other states and provide the workforce such as health care workers which Oregon employers need now. I will work to preserve these training efforts so that we are ready to take advantage of economic growth when prosperity returns, as it surely will.

But most importantly, today I want to outline three specific actions I will be taking in the coming month to help spur Oregon's economy in whatever small way we can.

First, I have consulted with Bill Scott and the leadership of the Oregon Tourism Commission about how we can immediately step up our tourism marketing. We'll be speaking more about that toward the end of the week, but I am confident that we can put a good investment on the ground in tourism promotion over the next couple of months.

After all, tourism is a \$6 billion industry and one of Oregon's largest. It is also one of the few industries in Oregon that can have an immediate, positive impact on the state's bottom line. For every dollar the Commission spends on advertising, \$3.05 in state tax revenue and \$1.22 in local taxes are generated annually. We'll be working to both bring people in from all over the world - but working just as hard to keep Oregonians at home for their vacations.

Second, I have appointed a panel of 17 business, government and civic leaders to advise me on how we can best stimulate Oregon's economy in the short-run. The Panel will be chaired by Brett Wilcox, President of Northwest Aluminum and will be charged with bringing me ideas over the next six months.

I realize that it is very difficult for the state government to quickly stimulate an economy as large as ours. But it is incumbent upon us to look into our toolbox and see what we might be able to do. The tourism promotion package I mentioned is just one example of that.

Another example would be seeing if we could speed up the \$400 million we have approved for transportation funding. It's not going to spur and economic turnaround, but I would like to see us spend some of the money we have for improvements now while the economy is lagging, hopeful that we can give it a little nudge.

Finally, last week I initiated an effort to consolidate and coordinate an Oregon agenda for federal assistance. I believe President Bush appropriately has charted a course that will see an economic stimulus package passed by this Congress.

Right now, we don't know how much money is in that package, but, as a friend of mine is fond of saying, it's approximately a lot. Our mission is to be targeted and specific about where additional dollars could be most quickly and effectively used.

Let me give you a couple of examples:

We are optimistic that the Congress will put as much as much as \$22 billion into transportation investments which could put an additional \$60 million into Oregon for transit, surface transportation and rail investments. We are currently going through our lists of transportation projects to see which ones we can get on the ground quickly if in fact this money does materialize.

Second, we know that we can effectively move Community Development Block Grants from the federal government to local governments and hence into productive infrastructure investments fairly quickly. I will be working to ensure that well-established, productive programs such as this receive priority when Congress and the President consider how best to stimulate the economy.

But our "shopping list," if you will, will be more than just a list of where we can spend money. We will also go back to Washington D.C. seeking ways to stretch our existing dollars further - one example, trying to get relief from unfounded federal mandates.

I would appreciate any feedback from you on what should be on this federal agenda.

Finally, let me close by saying that our state has seen tough times before. Many of us were here in the early 1980s when we lost not only jobs, but actual population. I was in a special session (1982) that went for 37 days and we cut over \$500 million out of a \$3.4 billion budget.

But we fought back. We balanced our budget. We invested in workforce, trade development, transportation and education. And we transformed an Oregon economy from one dependent on natural resources to one that has diversity and strength.

Now that strength will be tested. So will our creativity and resolve. As that happens, I simply ask you to remember who we are and what we have accomplished together over the last 20 years. We'll make it , you can bet on that.

Governor John Kitzhaber

Memorial Ceremony

September 14, 2001

Salem, Oregon

Dear Friends, Fellow Oregonians

Lincoln said at Gettysburg "It is rather for us to be here dedicated to the great task remaining before us - that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion - that we here highly resolve that these dead shall not have died in vain."

That is the task of remembrance, to make meaning of tragedy; to honor the sacrifice of the lives of the innocents. What meaning we make as individuals, as a community and as a nation, it is too early to tell. How can we make sense of this - the senseless slaughter of people who were at one moment simply going about their daily lives and at the next, victims of a struggle we little understand.

But make sense we must, for this act of terrorism has changed our world.

My father served in World War II, as did many of our parents. They came home not only victorious, but determined to make that victory mean something. They did -- by helping spread freedom and democracy across the globe - a job that remains unfinished.

I ask of all of us to approach the coming struggle in the same vein. In honor of the memory of those who have died, we must ensure that our response to their death not only changes the world but changes the world for the better.

And, even as we support our President in identifying and holding accountable those who committed these acts, let us not confuse vengeance with justice; let us recognize that ultimately, our security lies in dissolving the hatred and healing the divisions that plague many parts of the world.

We must also, in their memory, deny terrorism victory. In a statement written yesterday in conjunction with colleagues of many faiths, the Reverend Jim Wallis wrote:

"We must not allow this terror to drive us away from being the people God has called us to be. We assert the vision of community, tolerance, compassion, justice, and the sacredness of human life, which lies at the heart of all our religious traditions. America must be a safe place for all our citizens in all their diversity."

My friends, my fellow Oregonians, we must take from this tragedy sorrow. We must build from it strength. We must take it as a moment to reaffirm our faith in our nation and in our democracy.

And we must take it as a moment to remember, in the honor of the dead, the power and strength we have as a

community - a power and strength we can put into service every day. This would be a fitting legacy and serve the task of remembrance to which we set ourselves today.

[Return to Governor's Office](#)

Governor John Kitzhaber
Speech to Sustainability Forum
September 7, 2001

In January of last year, I had the honor of addressing the 1999 Founders of the New Northwest as they were celebrated as leaders, as risk-takers ... as bold prophets of the new century -- showing us by example what it will take to create a sustainable future. People like John and Jane Emrick of Norm Thompson; Neil Kelly, Julie Lewis of Deja Shoes, Brenda Mallory of Keepers, Inc, Monty Montgomery and the Izak Walton League and the folks at St. Vincent De Paul of Lane County.

They are people who have taken to heart and put into action the mission statement of Sustainable Northwest: to build partnerships that strengthen local capacity to promote environmentally-sound economic development in communities of the Pacific Northwest.

Five months later I signed an executive order directed at state government, but setting the goal for Oregon to be a sustainable state within one generation. The executive order was directed at the internal operations of state government to see what was possible, to gain some credibility in meeting this challenge, and to be an active partner with like-minded businesses and local governments.

And we have made great progress.

The state has developed sustainable purchasing guidelines for paper, office furnishings, building materials and other product groups.

We have created green building guidelines for all new state facilities including the use of recycled material, increased energy efficiency and on-site storm water treatment.

The state printing plant has developed an environmental management system for their 130-person operation, and they are now seeking certification of the system to the ISO 14001 standard. When certified, they will be the first state agency in the nation to receive such certification.

These actions by state government represent progress -- as do the actions being taken by the private sector. They are important steps toward a more sustainable future -- but they also represent the recognition of a larger truth: the interdependence of our economic and environmental needs. To me this relationship lies at the heart of sustainability -- and if we are to be truly successful in creating a sustainable future, an awareness of this interdependence must guide all of our work.

And yet, as our social, environmental and economic problems become more complex, our traditional governmental structures of law and regulation increasingly fail to recognize this relationship and, in fact often get in the way of it -- creating conflict and polarization instead of collaboration and a sense of community. It is on this problem that I wish to focus today.

I define sustainability as managing the use, development and protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs. What is important to understand about this definition is that it requires that we recognize the interdependence between our environmental, economic and community needs -- that we find a balance between these often competing values.

Imagine, if you will, three overlapping circles -- one representing our economic needs, one representing our environmental needs and one representing our social or community needs. The area where the three circles overlap is the area of sustainability -- the area through which run all the elements of a good quality of life: a healthy, functioning natural environment; a strong economy with jobs and job security; and safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements - these threads, which together weave the fabric of sustainability - are things we hold in common. They represent a common set of desires and aspirations that add value and quality to our lives. And our efforts to secure them has, at least in the past, been a joint undertaking that produced a kind of cohesiveness built on the recognition that the personal welfare of the individual is inseparable from the welfare of the community as a whole.

Today, however -- in ways both large and small -- these threads are beginning to fray and unravel. We are losing that cohesiveness and sense of common purpose that held us together in the past and allowed us to act as a community -- that allowed us to sustain the balance between these element important to a good quality of life.

Increasingly, we are viewing economic, environmental and community needs as separate, competing entities - mutually exclusive values, if you will. Of course, this perspective undermines sustainability because it creates a politics of scarcity -- a zero-sum situation in which there must always be a winner and a loser.

We can see this unfolding in many ways: in the challenge of accommodating growth while maintaining livable communities; and in the tension between sprawl and development. Nowhere, however, is this more evident than in the growing conflict between economic activity and environmental stewardship.

The crisis unfolding in the Klamath Basin offers us a stark example of this trend carried to its logical conclusion: an economic, environmental and community disaster -- with 200,00 acres of irrigated farmland without water; inadequate stream flows and lake levels to support endangered fish and wildlife; and a community torn by fear, doubt, unemployment, anger, polarization and increasing acts of civil disobedience.

There are no winners today in the Klamath Basin -- and if nothing changes, the losses will continue far into the future. How could this have happened? How could we allow a situation to develop that simultaneously puts at risk our economic, environmental and community values? The answer is instructive carries with it both lessons and implications for our effort to achieve a sustainable Oregon.

The underlying problem in the Klamath Basin is an over-appropriated water supply where demand exceeds availability. It is a situation which developed over many years through a series of actions -- all of which made some sense at the time they were made.

In 1864 the federal government negotiated a treaty with the Klamath Tribes, creating a reservation and reserving to the Tribes hunting, fishing and gathering rights.

In 1902 Congress passed the Reclamation Act, setting the stage for the huge federal western water projects of the last century, one of the first of which was the Klamath Irrigation Project started in 1905. Between 1908 and 1928 Congress established four National wildlife refuges in the Klamath Basin - while homesteaders and World War I veterans began to farm the Klamath Project which continued to expand until 1966.

For the next 50 years peace reigned in the valley. The first hint of trouble came in 1973 when Congress passed the Endangered Species Act. This legislation, in a very real sense, grew out of a concern over sustainability - specifically, the impact of our industrial and urban activities on the natural environment in which we live.

In 1988, the Lost River and shortnose suckers were listed as endangered species -- the first explicit signal that the pattern of water allocation in the basin was not sustainable. During the droughts of 1992 and 1994 farmers saw cutbacks in water supply for the first time in the 90 year history of the Project. But no action was taken to forestall the pending crisis.

In 1997, the Coho salmon was listed in the Lower Klamath River. But heavy snowfall in the basin in 1998 and 1999 produced enough water to cover all the competing demands - and to perpetuate the myth that all was well. And again, no action was taken.

But in 1999, the Ninth Circuit Court of Appeals ruled that the Bureau of Reclamation must meet ESA and tribal trust obligations in operating the Klamath Project. The stage was set for disaster - and it came this year, triggered by the worst drought in Oregon's history with precipitation at only fifty percent of normal.

The question we should be asking ourselves about the situation in the Klamath Basin is this: why, if we all saw this coming, did we do nothing to forestall it? The answer is simple: none of the competing interests -- from irrigators to the tribes to the environmental community -- was willing to concede any part of their claim to work out a sustainable compromise. The politics of scarcity.

Instead, all the interests locked up in litigation and confrontation and nothing happened until we had the perfect storm of drought, ESA listings and tribal trust responsibilities. And now that the crisis is upon us, it is not going to be solved by a passing a new law or adopting a new regulation. And it is not going to be solved by a lawsuit -- no matter who files it. Both sides have the legal tools at their disposal to ensure that nothing happens. But lawsuits do not often create resolution - they create winners and losers, especially where water is concerned. And they do not put more water into the basin.

Clearly, the only sustainable solution in the Klamath Basin must necessarily be a mediated one -- one in which all parties are willing to put something on the table - the irrigators, the tribes and the environmental community. And yet the interests remain locked into their positions, failing to see the interdependence they share -- all continuing to suffer.

What we see in the Klamath Basin represents the fact that, as our social, environmental and economic problems become more complex, our political system is reaching the limits of its capacity to meaningfully respond -- or, at the very least, that our politics have failed to adapt to meet these new challenges.

Let us remember that the word "politics" derives from the Greek word "polis," meaning "city" -- or in more modern terms, "community." That is to say, a group of individuals functioning together as a whole for their mutual benefit. In its original sense, then, "politics" referred to those activities necessary to sustain a community -- composed of individuals whose views and needs would not invariably coincide.

Our political system - or perhaps more accurately, our system of governance - grew out of the recognition that there had to be some way to regulate the ways in which people interact, precisely because their views, needs and interests would not always coincide.

And of course this implies that individuals have an equally important duty: they have to recognize that their own personal welfare is inseparable from the welfare of the community as a whole, and they must be willing to act accordingly, even if it means subordinating some of their own personal desires for the larger good.

As our next speaker Dan Kemmis has so eloquently pointed out -- the way in which this "larger good" was arrived at was a central point of contention during the drafting of the United States Constitution.

The first view was represented by Thomas Jefferson, who espoused what has been called the "politics of engagement," a model in which people work together in a spirit of cooperation to find common ground and solve mutual problems.

The Jeffersonian model rests on the conviction that people are essentially reasonable, and will work to achieve the common good if they can agree on or be brought to understand what it is.

The second view was set forth in a set of documents known as the Federalist Papers, whose chief authors were James Madison, John Jay and Alexander Hamilton. In contrast to the Jeffersonian model, it embodies a "politics of disengagement," wherein social stability is achieved not by cooperation among individuals, but by a careful balancing of private interests, one against the other.

This model assumes that individual interests will inevitably clash, and that the role of government is to minimize or control these conflicts in a way that produces the common good. But the common good in this case is not the result of cooperation among individuals seeking common ground. Rather, it is the result of external, top-down management.

It was this second view that more or less prevailed as our nation developed. Certainly it is what Americans today have come to expect from their government, and what they now most resent about it. But more importantly - as we can see from the Klamath Basin -- this model does not resolve conflict -- indeed it often tends to encourage conflict. By no means does it foster a spirit of community or a sense of responsibility beyond narrow self interest.

People feel no obligation to learn about the needs of their community. Rather, they rely on government (or the courts) to manage conflict between individuals. Yet this "third-party" management invariably produces "winners" and "losers," thus removing any incentive for individuals to cooperate.

Thus, the focus of the debate in the Klamath Basin is on: Who will prevail in the courts? Who will prevail in Congress? Will the winner be the farmers of Klamath County or the environmentalists? Will the loser be the community of Klamath Falls or the Endangered Species Act? Nowhere does our current political structure offer a place where people can come together to balance the needs of the larger community.

I am not suggesting that we start a revolution here - although Thomas Jefferson did say that "...". What I am suggesting, however, is that there is a gap in our system of governance -- a gap that has everything to do with our ability to create a sustainable future.

The primary tools of government are laws, regulations and the allocation of resources. And with these tools government does many things very well. It provides infrastructure that fosters private sector investment and economic activity - everything from railroads to highways to water and sewer systems to telecommunications.

Government operates primarily through law and regulation . It enforces laws and incarcerates those who break them. It provides for the national defense, establishes health and safety regulations and maintains a system of public education.

What government does not do very well, however, is to bring people together to solve problems - especially when the problems are complex and the solutions require the participation of many people.

Watershed health is a case in point. In the past, the main threat to water quality has been point source pollution -- a problem that lent itself to government regulation. Today, however, the challenge is non-point source pollution -- runoff not only from agriculture and timberlands, but also from rooftops, driveways and yards in urban and suburban Oregon.

Reducing nonpoint-source pollution requires far more than simply passing laws and regulations. It requires a sustained environmental stewardship -- a long term commitment to change behavior -- by hundreds of thousands of people living in the watershed -- most of them living in the city. To accomplish this there must be a place to bring people together, to somehow see their common interest in assuming greater individual responsibility for water quality.

Likewise, to prevent development pressure and population growth from degrading our quality of life, there must be a place for state and local agencies, community leaders and business leaders to come together to ensure that investment are balanced and coordinated to produce livable communities.

Our ability to create such a place -- or places -- will largely determine our success in building a sustainable future. Let me give you some concrete examples of what may at first seem to be an abstract concept.

In Oregon, we have created a place to come together to improve water quality. It is called the watershed council -- created to fill a gap in our system of governance. Watershed Councils -- which form the heart of the Oregon Plan for

Salmon and Watersheds -- exist as a recognition of the fact that while government regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the wrong things but it provides no incentive for them to do the right thing.

Another example is the Community Solutions Team, which has created a place where people can come together to build livable communities.

I have recently begun to promote projects around the state which create this kind of place -- a place where people can come together to address problems through sustainable, community-based solutions which balance economic, environmental and community values. I call these projects Oregon Solutions and there are many examples.

The Metro Carbon Offsets project in which Nike, Intel, state and local agencies, the Climate Trust and the Oregon Environmental Council have developed a Carbon Bank to mitigate the effects of CO2 emissions.

The Sherman Wind Farm project in which an aluminum company, local ranchers, the Audobon Society and state and local agencies are developing a 25-megawatt wind power project.

The Wallowa County Sustainable Timber project in which a nonprofit in Enterprise is assisting local mills to utilize small dimension logs as a part of an effort to improve forest health and sustain family wage jobs.

A more complete list of these projects can be found on the web at Oregonsolutions.net.

And those of you gathered here today form the heart of this effort -- pioneering new ways to solve common problems and, in so doing, making progress toward building a sustainable future ...

The kind of progress that considers more than our own private interests, but understands that the welfare of others is vital to our own.

The kind of progress that does not regard compromise as weakness.

The kind of progress that sees diversity not as a threat, but as a treasure; an opportunity to enrich and strengthen the fabric of our society.

I thank you for your leadership -- and I offer you a new challenge.

What we are doing today is unique. Oregon is becoming the birthplace of a new way of conducting public business. We have built the foundation, and it is now time to build the structure that will give us a place to come together to solve the problems and seize the opportunities of today that our current government system cannot or will not address.

I need your help in creating a place that draws its strength from every individual, business organization and agency that steps forward to be part of creating a sustainable future for Oregon.

A place that links each of us with our community partners in collaborative problem solving rather than mortal combat.

A place that empowers citizen and business efforts to contribute to sustainable solutions rather than stifling them.

A place that rewards community efforts in self-governance rather than regulating them.

A place that is not based on Republican or Democratic party values but on community values.

A place focused on opportunities rather than mired in political and legal gridlock.

A place that restores our sense of community, our faith in ourselves - and in our ability to come together and shape our common future.

Should this new place be a building? A new collaborative body of citizens? A virtual network like Oregon Solutions?

And who should create this place? The government that has, in many ways failed? The private sector? The community? Or you?

These are the questions I ask you to focus on over the next few months. Because sustainability -- to be meaningful -- involves not only the recognition of the interdependence of our economic, environmental and community needs -- it requires a way to bring people together to balance these values in practical solutions to problems that are relevant to people at the community level.

Today in Oregon we are the beneficiaries of a proud heritage -- one that was created by those who came before us. To enjoy that heritage, without making the commitment to sustain it for future generations -- would be to forsake our roots and to forget what it means to be an Oregonian.

Our task today is to help create the new tools necessary to meet this challenge. And of one thing I am certain. If it cannot be done here in Oregon, it is unlikely to be done anywhere else.

Governor John Kitzhaber

A Tale of Two Rivers
National Conference of Trout Unlimited

August 16, 2000
Portland, Oregon

Good afternoon. We in Oregon are honored that Trout Unlimited has chosen Portland for its national convention.

We are also proud not only of our rugged and beautiful terrain, but of our efforts to restore and maintain the habitat that is essential to your organization's namesake - the trout - as well as the salmon and steelhead.

These species, the rivers and streams in which they dwell -- and the special places and broad vistas through which they flow - have the power to inspire us - to fill us with wonder and awe. And this sense of awe helps to define us.

In the Northwest, salmon hold a special meaning for us. They represent the power of history, the power of identity, the power of the past's promise to the future. But it is important to understand that the fight for the salmon is far more than just an effort to pull a species back from the brink of extinction. It is a struggle that speaks to the integrity of our commitments to the sovereign tribes of the Pacific Northwest and to the depth of our commitment to the wise stewardship of the natural wonder with which we have been blessed.

Because if our salmon runs are not healthy, then our watersheds are not healthy -- and if our watersheds are not healthy, then our ecosystem is not healthy - and if that is the case, then we have truly squandered our heritage and mortgaged our future.

Yet today we are on the verge of doing just that. To illustrate this point, let me tell you a tale of two watersheds - the Klamath and the Columbia.

Perhaps nothing more characterizes the future of the West than what is happening today in the Klamath Basin near Oregon's border with California. In the face of the worst drought in Oregon's history, it is abundantly clear that the waters of this basin are insufficient to meet the claims placed upon them by irrigation, wildlife refuges, species listed under the federal Endangered Species Act and commitment to the Klamath Tribes.

The result has been an economic, environmental and community disaster - leaving 200,000 acres of irrigated farmland without water; inadequate stream flows and lake levels to support endangered fish and wildlife; and a community torn by fear, doubt, unemployment and - increasingly - by anger, alienation, polarization and acts of civil disobedience.

There are no winners today in the Klamath Basin - and if nothing changes, the losses will continue far into the future.

Like many river basins in the West, the Klamath Basin is over-appropriated. Demand exceeds supply and the current pattern of water allocation is simply unsustainable. And like many river basins in the West, the situation in the Klamath developed over many years through a series of actions - all of which made some sense at the time they were made.

In 1864 the federal government negotiated a treaty with the Klamath Tribes, creating a reservation and reserving to the Tribes hunting, fishing and gathering rights.

In 1877, Congress passed the Desert Land Act followed in 1902 by the Reclamation Act - setting the stage for the huge federal western water projects of the last century, one of the first of which was the Klamath Irrigation Project, developed by the Bureau of Reclamation in 1905.

Three years after the initiation of the Klamath Project, the Lower Klamath Lake National Wildlife Refuge was established - followed by the Clear Lake Wildlife Refuge in 1911 and the Tule Lake and Upper Klamath Lake Refuges in 1928.

By the time these refuges had been established, homesteaders and World War I veterans had begun to farm the Klamath Project which continued to expand until 1966.

But in 1973, Congress passed the Endangered Species Act. This landmark piece of legislation was the result of a growing concern over the impact of our economic development activities on the natural environment in which we lived.

Also in the 1970's the legal basis of the tribal treaty rights to hunting and fishing was clarified and strengthened through a series of court cases - most the 1979 ruling by the Ninth Circuit Court of Appeals that the Tribe's right to hunt and fish included the water necessary to support those rights.

Then, in 1988, the Lost River and shortnose suckers were listed an endangered species. That was thirteen years ago. The droughts of 1992 and 1994 called attention to the importance of maintaining lake levels for sucker recovery. For the first time in the 90 year history of the Project, farmers saw cutbacks in water supply. Both lake levels and river flows were reduced to the lowest levels ever recorded. Still no action was taken to forestall this pending crisis.

In 1997, the Coho salmon was listed in the Lower Klamath River. But heavy snowfall in the basin in 1998 and 1999 produced enough water to cover all the competing demands - and to sustain the myth that all was well. Again, no action was taken.

But in 1999, the Ninth Circuit Court of Appeals ruled that the Bureau of Reclamation must meet ESA and tribal trust obligations in operating the Klamath Project. The stage was set for disaster - and it came this year, triggered by the worst drought in Oregon's history.

That this crisis happened should surprise no one -- because we all saw it coming. We have been talking about the competing demands for water in the Klamath Basin for more than a decade -- talking, but not acting. And no one, from irrigators to the tribes to the environmental community was willing to concede any part of their claim to work out a sustainable compromise.

Instead, all the interests locked up in litigation and confrontation and nothing happened until we had the perfect storm of drought, ESA listings and tribal trust responsibilities. Then one morning the people in the Klamath Basin woke up and 200,000 acres of irrigated farmland were without water.

It is a situation that was avoidable had we acted a decade ago. And now that the crisis is upon us, it is not going to be solved by a lawsuit - no matter who files it. Both sides have the legal tools at their disposal to ensure that nothing happens. But lawsuits do not often create resolution - they create winners and losers, especially where water is concerned. And they do not put more water in the basin.

No, the only sustainable solution in the Klamath Basin will be a mediated one in which all parties are willing to put

something on the table - irrigators, the tribes and the environmental community. Last month I made a proposal based on this concept.

It involves establishing sustainable minimum irrigation delivery out of Upper Klamath Lake, based on the 2001 water year. All precipitation gains above this minimum level would be equally shared between the lake, the river and irrigation.

It involves a permanent downsizing of Klamath Project - mitigated through increasing ground water production and reducing demand by buying out willing sellers.

It also involves commitments and resources for broad scale, long-term actions to further augment water supply and reduce demand; to enhance conservation and efficiency; to restore habitat, screen canals and diversions; and to improve water quality.

While the proposal has not yet been adopted -- neither has it been rejected. In any event, only through some kind of mediated agreement among the parties can the competing demands for water in the basin be rebalance in a way that can be sustained over time.

I submit to you that the Klamath Basin is but the tip of the iceberg. We are headed for the same future here in the Columbia River Basin -- an environmental crisis, an economic crisis and a community crisis -- similar to what is playing out in the Klamath, except on a far larger scale.

Many of you who flew in to Portland for this convention would have flown right down the Columbia River Gorge. Perhaps you were lucky enough to have clear weather and you could see the river on your approach.

But what you saw is no longer a river -- it is a series of warm water lakes divided by huge concrete and steel barriers which impede fish passage and increase water temperatures and dissolved oxygen levels beyond those allowed under the Clean Water Act. Federal projects which violate federal laws.

The history of how we arrived at this point closely parallels the history of the Klamath Basin. In the late 1800's, the federal government established treaty and trust relationships with thirteen sovereign tribes of native Americans, living along the Columbia River -- reserving to them fishing and hunting rights in the basin.

Starting in 1938, however - with the construction of Bonneville Dam -- the Columbia River was forever altered. Over the course of the next three decades no fewer than twenty eight dams were constructed on the Columbia River system -- four on the lower Snake, the last of which -- Little Goose -- was completed in 1976 and twenty five others on the Columbia and its tributaries.

These twenty-nine dams -- collectively known as the Federal Columbia River Power System -- have been a tremendous asset to the region, blessing it with abundant, low-cost energy. Nearly half the Northwest's electric power comes from this source and at a price that is much lower than in any other area of the country. And by the time the dam construction debt to the U.S. treasury is paid off, the cost of providing hydropower could be half what it is today.

To a large extent, we have built the Northwest economy on this low cost power. Not only does it benefit individual households, it has allowed us to sustain industries that are highly energy dependent: food processing, pulp and paper, aluminum and more recently high technology.

The dams have allowed irrigated agriculture to flourish in an otherwise arid basin - and they have given us a low-cost transportation route from the Pacific Ocean all the way to Lewiston, Idaho, more than 450 miles inland.

But, of course, there is a dark side to this story. The effect of these dams on the health of the Columbia River ecosystem and the fish and wildlife that depend upon it -- particularly salmon -- has been devastating. The situation, as it exists today, not only violates at least three federal laws - the Clean Water Act, the Endangered Species Act and the Northwest

Power Act - it makes a sham of the solemn treaties entered into by the United States Government with the native American Tribes of the Pacific Northwest and puts in jeopardy the sustainability of the ecosystem and the economy on which we all depend.

And, like the crisis in the Klamath, we have seen this coming. In 1980 - seven years after the passage of the ESA - Congress created the Northwest Power Planning Council which, among other things, was charged with developing a fish and wildlife program to protect, mitigate and enhance the fish and wildlife species that had been harmed by the Federal Power System. This constituted an explicit recognition of the environmental damage caused by the dams and their operation.

Nonetheless, eleven years later, in 1991, the Snake River Chinook was listed under the ESA. A decade after the listing there is still no recovery plan for this embattled species. On the contrary, another twelve species of salmon, steelhead and bull trout have been listed.

In response to these listings, NMFS produced a biological opinion in 1993 that directed the BPA, the Corps and the Bureau on how to operate the system in a way which would not compromise fish. NMFS was subsequently sued by Oregon and Idaho on the grounds that the opinion was inadequate. In 1994 Judge Marsh agreed, ruling that NMFS was more concerned with what the hydropower system could absorb without adversely affecting the economic interests on the river rather than with what the fish actually needed for survival.

In 1995 NMFS put some interim steps in place and promised to develop an opinion by 1999 on the operation of the hydroelectric system -- another five year delay. Predictably, public focus shifted to the question of breaching the dams -- not the mainstream dams, but the earthen dams which provided the inland waterway from the Columbia to Lewiston Idaho. I engaged in that debate and in a speech last year to the American Fisheries Society, I said:

"If we can move beyond the symbolism of the four Snake River dams -- and look at the policy trade-offs involved, at the other choices we must make if we choose to leave them intact -- breaching emerges as a responsible and cost-effective option. It is not the only option, but it is a responsible one that should not be disregarded out of hand.

Some will say that we have not done enough science. I say that we can always play that card as an excuse for inaction and as a justification for avoiding tough choices.

Some will say that it is too expensive. I say, look at the other alternatives. There are similar -- if not greater -- costs associated with a non-breach strategy.

Some will say that it is too controversial. I say, what isn't? Who here thinks that it is not controversial to cut harvest levels? To change agricultural and timber practices on private land to significantly augment flows?

There is no doubt in my mind that we can move ahead with salmon recovery without breaching the dams. All I am saying to you today is that we have to stop deluding ourselves into believing that our choices will be easier and cheaper if we just leave the dams alone.

I will work with the political leadership in the region in pursuing either path -- but we must choose. . . and act. Because in all of this, delay is the enemy."

That was eighteen months ago -- we did chose. My colleagues in the region - while they did not endorse breaching the dams -- did embrace a comprehensive non-breaching strategy, which we released in July of last year. The long awaited NMFS biologic opinion, finally released in December of 2000, recommended a similar strategy. We calculated that the cost to successfully implement this strategy would be an additional \$700 million a year above what was coming from the BPA.

President Bush, however, failed to include any increased funding for Columbia River ecosystem recovery in his FY

2001 budget. As a consequence, in May of this year the National Wildlife Federation sued NMFS on the grounds that not only was the latest biologic opinion inadequate to recover the listed species, the administration was not even implementing it. Once again, we are left with no meaningful strategy to restore the health of the Columbia River ecosystem - and edging closer to the fate suffered by the Klamath Basin.

The tragedy in the tale of these two watersheds is not that we exploited them. We exploited much of the West, yet when we began doing so, it could not rightly be called exploitation - because the bounty seemed without limit. And to be sure there were tangible benefits to the region.

No, the tragedy lies not so much in our past actions, but rather with our refusal to modify and mitigate them in the face of growing evidence of their cost to our natural environment.

In his book Salmon Without Rivers, Jum Likatowich, captures the essence of the dilemma.

"The salmon's problem is - at its root - a clash of two economies: the industrial and the natural... Eventually the industrial economy will also have to evolve a balanced relationship with the natural economy of the Pacific Northwest ... To remain productive, the industrial economy of the Northwest will have to back away from a conflict with the natural economy and seek ways to achieve a balance with it."

The challenge in the Columbia River Basin - as in the Klamath - is to develop an ecosystem recovery strategy that spreads the costs as broadly as possible. This does not have to be a zero sum equation nor a win-lose proposition -- and we must not allow it to be framed in that way.

I am well aware of the economic trade-offs inherent in restoring this regional ecosystem. The dams and the hydroelectric generating capacity in the Columbia River Basin have brought huge economic benefits to the region.

But this is not about sacrificing economic benefits for environmental health -- it is about working together as a region to have both. To quote Wallace Stegner, it is about "outliving our origins" and "building a society to match our scenery."

First, we must fully implement the aggressive - and admittedly expensive - non-breaching recovery strategy outlined by NMFS and the four NW governors. If that does not occur, we can only conclude that political rhetoric about saving the Northwest salmon is just that - rhetoric. If this nation can afford a trillion dollar tax cut, than surely it can afford to invest in the sustainability of the Columbia River Basin.

Second, we must adopt a new regional governance model for the Columbia - one that gives the region more input and control over the operation of the river ... in full compliance with the Clean Water Act and the Endangered Species Act. Why? Because the federal agencies have not been particularly good stewards of the resource. Look at the record.

In 1994, as I mentioned, federal District Court Judge Marsh ruled that NMFS was more concerned with what the hydropower system could absorb without adversely economic interests than with what the fish actually needed for survival.

During this year's energy crisis, the BPA - caught between low flows and high wholesale electricity prices - unilaterally chose power production over salmon, without the benefit of local consultation or the establishment of any clear standards to rationalize this choice.

And it took a federal court to force the U.S Army Corps of engineers to acknowledge that the Columbia hydropower system must be operated in compliance with the Clean Water Act - something the Corps had ignored for years.

What I propose will not be easy -- and I speak from experience. I have been swimming up this stream for the last six years. I have tried to alter the status quo and get this region thinking about the future of the Columbia River Hydropower System. I have tried to create a new governance model that would have greater regional input into the operation of the river. I have tried to move forward a process to consider the benefits of regional ownership of the federal system. And I have continued to push hard for adequate funding for salmon recovery.

To date, I don't have much to show for it and I will admit to you that it has been more than a little frustrating. With the end of my time as governor drawing near, it is also tempting to simply say: I have no time for missions impossible. But I also know that these issues will not go away - and neither will I.

I will continue to use every forum available to me in an effort to establish a better balance here in the Columbia River Basin. I will continue to push the federal government, the other Northwest states, agriculture and industry to be a part of that. And I will continue to push you, my friends, to do your part to create a sustainable future for this great river - and for all the rivers in this nation of ours.

As Tennyson wrote in Ulysses:

Tho' much is taken, much abides: and tho'
We are not now that strength which in old days
Moved earth and heaven; that which we are, we are;
One equal temper of heroic hearts,
Made weak by time and fate, but strong in will
To strive, to seek, to find, and not to yield.

Governor John Kitzhaber

Principals and Superintendents Institute

August 1, 2001

Well, it appears that this is getting to be a habit.

If memory serves, I have spoken to you for the last five years consecutively. Regardless, your attendance seems to be doing fine. And as long as you'll keep having me, I'll keep coming because you have in your hands and hearts the most important and compelling challenge in our society: the education of the next generation.

And, collectively, you have in your budgets almost half the dollars Oregonians send to their state government. For the past five years, I have spoken to the conference about the intersection of these two facts; attempting to marry education's large claim on the wealth of our state with its mission. I have spoken to you about the need to create a process by which we ensure that our children receive the resources they need to be well educated, while ensuring that we wisely allocate the scarce dollars in the state budget.

Because, as you know, we have in the past debated the "size" of the K-12 appropriation but not the "meaning" of the K-12 appropriation.

Over the past year, however, we have gained some important tools to change that dynamic -- through the voters' passage of Measure 1 in last November's election and the passage of a series of bills that I will be signing today.

We have now ended a legislative session that, despite funding constraints, was a good session for K-12 education -- and for the citizens of Oregon. It was a session that turned the corner on how we make our funding decisions for K-12 and, just as importantly, how we hold our schools accountable given those funding decisions.

We have taken a significant step -- but now we look to those of you in this room to show policymakers that this step towards performance-based funding is the right one. For it is the success you and your students show in the next two years that will be key to the willingness of state policymakers to continue down this road in 2003.

It is a different world than when I first spoke to your institute in 1997. When I joined you that year, fresh on the heels of a very difficult legislative session dominated by a largely unprincipled fight over school funding, I described what I saw as the failings of our school funding debate:

First, I pointed out what a lot you knew from the experiences in your own districts: that Measure 5 had created a disconnection between local voters and local school districts. It was clear back then that everyone wanted to be sure our schools had enough money, yet we did not have a way of determining how much was "enough".

Prior to Measure 5, we decided how much was enough in a very dynamic, locally-driven and locally-controlled budget and election process. At the end of the day, your local district patrons decided what was enough by voting on how much they were willing to pay. After Measure 5, that decision, for better or worse, moved to the legislature. Yet the State had no way of knowing, with any degree of accuracy, what it was actually paying for.

At the same time, while lawmakers had passed the Educational Act for the 21st Century establishing high standards for students and schools, no one ever put a price tag on that product. The school funding debate merely revolved around a series of calculations that told us whether a district was getting more or less state money than in the previous biennium. It may have told us what we needed from a *political* standpoint, but not from an *educational* standpoint.

That was certainly no way to make important decisions about what constitutes almost 45 percent of our state's budget – and about what supports are needed to prepare Oregon's young people for the future.

Now, four years later, I can stand before you and announce that those processes *have* changed. For the first time, lawmakers acted upon a K-12 budget with a better understanding of what it *was* buying and what it *could* buy.

In my year 2000 State of the State address, I discussed what ultimately became Ballot Measure 1. I said:

"This measure constitutionally requires the Legislature to provide funding adequate to meet the quality education goals established by law – and to explain how the legislatively adopted budget meets those goals. In short, this is about accountability. It will force the K-12 debate in Salem to take place not around large, abstract numbers -- \$5.8 billion, \$4.9 billion – but rather around what we want those dollars to achieve in the classroom to advance the goals of the Education Act."

Voters passed that measure. And this session, both the Legislature and I had a tool for beginning to make those determinations through the work of the Quality Education Commission.

The work of the Commission has been several years in the making:

In an April 1996 speech to the Portland Rotary, I issued this challenge:

"We must change the fundamental basis of the education funding debate in Salem from 'How much do we have to spend?' to 'What should we buy and how much does it cost?' And that is a much tougher question.

Some say this is simply too difficult to do. Some say that the process of defining a quality education will simply result in every education service, activity or topic of study being thrown into the definition. I simply don't accept that."

This challenge, issued over five years ago led to the creation of the Quality Education Task Force, which I chaired and which included people like Norma Paulus, Ken Thrasher, retired CEO of Fred Meyer, Jill Kirk, a current member of the State Board of Education, now State Representative Dr. Alan Bates and Dave Conley of the Oregon University System.

Our task force found that we first needed a comprehensive database that allowed us to see how schools were already utilizing their funds and what levels of performance they were achieving. Out of that grew the Database Initiative, which now provides an accessible array of such information at the school level.

This work was continued by the Legislative Council on Quality Education Funding, chaired by then-Speaker Lynn Lundquist, which made the first attempts to determine the level of funding needed to meet the quality education goals.

Our effort culminated with the work of the Quality Education Commission, which I established in 1999 under an Executive Order. The Commission was charged with validating and refining the model initially developed by the Legislative Council, utilizing national and state experts and public input. The Quality Education Model 2000 became the basis for the development of my recommended K-12 budget for 2001-03.

And now, through HB 2295 -- which I will sign today -- the Commission is established in statute as the body to create the "benchmark" against which the Governor and Legislature carry out their reporting responsibilities under Ballot Measure 1.

The Commission's work will continue to allow state policymakers to determine *what* is sufficient, what the *extent* of any insufficiency might be -- and perhaps most importantly -- what the *impact* of any insufficiency may be on the ability

of the state's system of public education to meet the quality goals established in law.

The Commission will update and refine its work every two years, being guided by research, data, professional judgement and public values. The model will be an ever-evolving way to identify best practices and the cost of those best practices in meeting these education goals.

Ballot Measure 1 provides for a new level of accountability on the part of state lawmakers. It requires a different kind of debate – one that discusses what levels of performance can and should be expected at various funding levels. It allows the public to hold state policymakers accountable both for what they *do* fund and what they *don't* fund.

So while we can all speak to funding education "adequately", this brings a new dimension to those pronouncements.

The work of the Quality Education Commission allowed me to issue a report accompanying my recommended budget. In it, I noted that schools were not, in fact, funded at a level sufficient to meet the quality goals established in law. The extent of the insufficiency was \$862 million. But I was also able to propose a phase-in of the model (as recommended by the Quality Education Commission), focusing on getting 90% of 3rd and 5th graders to the reading benchmarks in the next four years. The model also allowed me to outline expected performance (albeit in more general terms) for math performance at those grade levels and for performance at the 8th and 10th grade levels.

As you know, the Legislature stuck very closely to the level of funding proposed in my recommended budget for K-12. The Quality Education Model made it both easier to defend the K-12 budget and harder to cut the K-12 budget, because the number *meant* something -- notably expectations about student performance, especially at the elementary level.

And I want to take a moment to reflect upon what a great accomplishment this was for all of us. Remember back, if you will, to the 1995, 1997 and 1999 legislative sessions, which were literally ground to a halt because of the school funding battle. Both sides stood toe-to-toe, pointing fingers, expending time and energy over a K-12 budget figure – a number developed in a vacuum with no blueprint to show what it would actually buy or what effect it would have at the classroom level.

This last session we turned a corner and brought about a huge change in how the K-12 budget debate is framed and conducted. And with your help we can continue to build on this achievement far beyond the end of this administration. But to do so, we must recognize that there is a second side to the handshake on accountability – namely the accountability of schools to meet those performance expectations.

HB 2298, which I am also signing today, creates the School Improvement Fund. The stated purpose of the fund is to support activities directly related to increases in student achievement while still allowing school districts flexibility in determining the specific activities necessary to support students.

It creates a "menu" of allowable activities, such as class size reduction, professional development, increases in instructional time or additional instructional materials.

It requires districts -- prior to accessing their share of the funds -- to describe the activities for which the funds will be used and the targets for student achievement. It requires that the initial focus be on 3rd and 5th grade benchmarks, but allows districts already on their way to meeting those targets the flexibility to focus on other benchmarks.

It then requires the Department of Education to include those goals in its performance accountability system, reporting back to the Legislature on the progress districts are making towards the goals.

These two bills, together with Ballot Measure 1, create a powerful set of tools for accountability at all levels.

But beyond accountability, we have also taken some steps to improve equity in funding -- specifically in regard to local option levies.

Measure 1 also required the Legislature to establish a system of equalization grants for districts passing a local option. HB 2300, the third bill I will be signing today, establishes that system. Currently, three of the 14 districts that have

passed a local option levy will qualify for grants. But I also expect that the availability of such grants may become a powerful incentive for other districts with low property-wealth to pass a local option in the future, because the state will provide some level of matching grants.

And lastly today, I will be signing the two appropriation bills, SB 5513 and SB 5514, which provide a total of \$5.2 billion in state resources to our K-12 schools for the 2001-03 biennium. It is the number we started the session with; it is the number we ended the session with. But again, it is more than a number; it is a number with meaning and expectations behind it.

So what is your role as school leaders in continuing this transformation around school finance?

As you know, \$5.2 billion does not represent the full cost of implementing the Quality Education Model. Rather, it represents a down payment or first installment towards a funding system that will allow schools to meet all the goals established in the Education Act.

How far we are able to get in 2003 has a lot to do with other demands being put on the state General Fund budget, but it also will have much to do with the progress schools show in meeting the performance expectations accompanying that \$5.2 billion.

This is a huge undertaking, but you will not be going up this hill alone.

This session, we took another historic step – a step that recognizes that the ability of our youngest children to learn is not just a function of what happens between those children and educators. It is just as much a function of what happens at home – even before children start school. Making successful children requires not just good schools ... it requires the active involvement of parents and community members as well.

The Oregon Children's Plan, which I signed into law last Friday targets more resources for early intervention for at-risk children who may be exposed to one or more risk factors that could lead to trouble down the road – school failure, school drop-out or involvement in the criminal justice system. The Legislature funded this plan at \$60 million.

Although this may seem like a drop in the bucket when compared to the K-12 budget, I believe that this early investment will reap many times over its monetary face value in the future. We will be sending far more kids into our K-12 system who have had early help with learning or behavior problems. Many more first time parents (because they received help through the OCP) will be more able to help their own kids succeed in school and be in a better position to volunteer and even help other kids.

In my four legislative sessions as governor, (and seven as a legislator) I have worked hard to bring our children adequate funding for education. Together – at last -- we have created the tools to determine what is adequate and to ensure that it is spend accountably.

And I have tried to communicate to Oregonians that the success of our children is not up solely to teachers – it is all our responsibility – our responsibility to help the children and families who need it the most and to send children to our schools healthy and ready to learn.

And finally, I have always counted on your support, counsel and wisdom. Everyone in this room has helped make a hard job easier. As I finish today, I simply want to say thank you. The work we have been able to do together I will always remember as one of the most meaningful things I have participated in during my public career.

Thank you again.

Governor John Kitzhaber

**Willamette Valley:
Choices for the Future**

April 26, 2001

It's an honor to be here today with so many dedicated volunteer citizens who are working to shape the future. People who -- in the words of William Jennings Bryan -- realize that the future is not a matter of chance, it is a matter of choice.

This state of the Willamette Valley conference has brought together the various organizations working on the challenges facing the valley: the Willamette Valley Livability Forum, the 1000 Friends Alternative Futures Project, the Alternative Transportation Futures Project and the Willamette Restoration Initiative.

These efforts share one idea in common: action today can improve the quality of life in the Willamette Valley tomorrow.

Today, I want to discuss some of the actions I think we should take. But first I would like to say a word about Ballot Measure 7 and its implications on your work.

I last spoke to many of you on November 2, 2000, shortly before the election. And while the most dangerous ballot measures failed, Measure 7 -- the takings/compensation measure sponsored by Oregonians in Action -- passed.

Measure 7 meant a lot of different things to a lot of different people. But I think one thing is unmistakable: a majority of Oregonians said that our regulations were lacking fairness in that they did not provide compensation for the effects of that regulation.

At the same time a vast majority, when polled, said they did not believe that Measure 7 should be construed to allow the rollback of our land-use and environmental laws. That's good news, but the bottomline is that there is a growing concern with regulations -- a counter fatigue, if you will -- and this concern bears on our political ability to accomplish ever-greater levels of planning and action to protect our future.

For the time being, Measure 7 is on hold because of a constitutional problem unrelated to the basic issue of compensation for regulation. But I believe -- as do many members of the Legislature -- that we should present to voters an alternative that answers the concerns they have expressed while still maintaining our ability to plan and regulate for environmental quality.

My support for this effort is conditioned on three principles: fairness, environmental integrity and economic feasibility. Let me share a little about each of these principals.

First, compensation legislation must be fair to landowners, to taxpayers, and to all Oregonians. While we need to recognize that there is a legitimate claim to compensation when property is unfairly devalued, we must also be able to determine when a property has been devalued so as to deserve compensation, how much it will cost, and who will pay

for it.

Fairness must include looking at whether we are treating people differently. In my view it will be very difficult to design a fair system that applies retroactively. It will be difficult to pay claims based on past zoning decisions without creating perceived or real inequities between neighbors and community members.

This is not to say that there may be classes of past regulations that we decide we want to compensate. Those decisions, however, should be treated as policy decisions and debated on their merits -- specific policy by specific policy -- as opposed to a general policy of retroactive application of compensation ... and care must be taken to ensure that they do not create unfair or inconsistent treatment of Oregonians.

Compensation legislation must also be fair in the sense that it must maintain the balance between compensation and other broadly held values -- such as clean air and clean water. It is not fair to waive a regulation in order to compensate a landowner who has a larger social responsibility to not pollute the air we breathe, the water we drink, or to devalue a neighbor's land.

Which brings me to the second principle: we must address the compensation issue in a way that does not force a rollback of our current environmental or land use laws. This simply is not what Oregonians voted on last November.

There remains a strong public sentiment in this state to preserve farm and forest land, to protect residential zoning and neighborhood character, and to maintain health and safety regulations. Oregonians voted on compensation. And it is compensation that we must build into our system in a fair and equitable way that does not degrade our great state and the legacy we have inherited.

Third, we need to provide a way to finance compensation claims that does not force reductions in other important local or state services. This will be no easy task and we must draw heavily on our creativity. I recognize the difficulty of raising revenue in today's climate, but we must find a way to pay compensation that does not come at the expense of education, public safety or services to the vulnerable.

Finally, I want to recognize a problem that needs to be addressed either here or in some other forum, and that is the issue of how our regulatory systems are administered. In our efforts to make regulatory systems efficient, I believe we have lost some of the human element. In medical vernacular, this would be called our bedside manner. I believe we need to humanize our regulatory systems so that they are able to listen to landowners and bring common sense and understanding to their application on the ground.

I have focused on BM 7 because it should serve as a wake-up call -- an early warning sign that we need to do more to engage citizens in discussions about the trade-offs and choices necessary to secure our common future.

All of us have become too complacent. Oregon's great natural beauty seems vast and eternal. Most of us live in nice neighborhoods and enjoy our towns and cities. We live comfortable lives. Life is good here. We have come to believe that if we can just ignore those nagging signs that things are changing, we can go on with our good lives. We must stop deluding ourselves.

Those nagging signs appear as more cars on our roadways. Valley residents drove twice as many miles in 1995 as they did in 1975. If these trends continue -- and we don't have the resources to invest in major transportation improvements -- traffic congestion on the highways in the Willamette Valley will increase over 80 percent by 2050.

Those nagging signs appear as environmental degradation. At least 1,400 miles of streams in the Willamette Basin currently violate one or more state or federal water quality standards. The riparian environment has been particularly hard hit. In the past 150 years, 80 percent of streamside forests along the upper and lower Willamette River has been sacrificed to industrial and urban development, farming, and channel straightening.

Instead of ignoring these issues, we need to find a way to re-engage the public. If we leave these trends unchecked, our choices will become more limited and the quality future we envision will become uncertain.

I have often said I don't want to say to my son one day: "You should have seen this place 20 years ago." I am confident that I will never have to utter those words because I firmly believe that we can choose our future. But, to do that we are going to need to make some big changes in how we work together. The challenge we face today is no less than creating new government through which we can solve the vexing challenges presented by growth.

Population growth will push every system in the Valley, natural and manmade, to its sustainable limits and beyond, unless we are ready to act collectively. My message to you today is that we are not yet prepared to face this looming threat to our quality of life. We have managed reasonably well to this point but we can no longer simply rely on state and local governments to protect us from the fate suffered by our neighbors to the north and south.

The challenge of growth is more complex today than it has been in the past. This time we will have less room -- less physical space -- to accommodate all of our needs; less space to do all the things that are necessary to simultaneously sustain the economy, the environment and the health of our communities.

This means that we must literally find ways to integrate our economic, environmental and social needs into every decision we make. We must do this if we are to accommodate all of the elements of a high quality of life in a way that leaves a smaller footprint in the Willamette Valley.

What I am proposing is not that we throw out our old systems of creating and protecting our quality of life. Land use planning, environmental protection, economic development and human resource strategies are all necessary parts of our current governance system. But, they were not designed to actually integrate our economic, environmental and social needs. On the contrary they tend to separate these needs, and to address them in isolation as if they were not related.

Our challenge is to adopt a new community-based problem solving approach in which the state is an active partner with local governments, businesses, non-profits and citizens. I call this new approach Oregon Solutions and now embarking on several projects around the state to demonstrate that this new community-based problem-solving system can work. Three projects will be in the Willamette Valley.

In Springfield, Mayor Leiken is a leader in the Springfield Renaissance Corporation, a non-profit group involving a range of community interests working to revitalize the downtown. The city wants to create a cultural district, rehabilitate the Mill Race as a downtown amenity, and develop a bus rapid-transit system all designed to reinvigorate the city center.

To complement this effort, the state is doing its part -- with the involvement of our natural resource, community development, and social support agencies. This heightened involvement is at the heart of what I mean when I refer to an Oregon Solution. To me, an Oregon Solution is a locally driven-project -- designed to simultaneously improve the environment, the economy and the community -- in which the State becomes a full partner along with local government, the private sector, foundations, and most importantly citizens.

In Eugene, Mayor Torrey has also agreed to chair an Oregon Solutions Team to tackle stormwater runoff problems by engaging what he calls the "gang of four" -- made up of environmental groups, business associations, government agencies and citizens. His goal is to develop a community action plan rather than simply a government action. The result will be cleaner water for the entire Willamette watershed.

Portland City Commissioner Eric Sten will chair an Oregon Solutions Team to redevelop an old federal housing project from the 1950's into a vibrant community serving low and middle-income families -- using green building techniques for the new construction -- and creating a mixed use quality development that reduces the need for automobile use, thereby helping to reduce congestion and improve air quality.

It is my intent that we back up good plans with real dollars to keep our communities and mainstreets livable. Just last week we announced our first \$5 million in Community Incentive Funds for such projects. For example, in Oakland we will invest \$200,000 to renovate an historic school into a family resource center. We will invest \$900,000 in a mixed-use development in downtown Milwaukie; and another \$500,000 to complete a performing arts center to anchor Springfield's cultural district. Furthermore, my recommended budget proposes adding another \$35 million to the Community Incentive Fund in the next biennium.

In part, investments like these, which help preserve the core of communities, will help us in turn preserve the air, the land and the water of this precious valley. Place by place, person by person, business by business, community by community we will come together around projects that will contribute to a Willamette Valley that will be the envy of the world 20 years from today.

It is your charge today to make tough choices, to engage with your communities and make Oregon a better place. To fully quote William Jennings Bryan: "The future is not a matter of chance, it is a matter of choice. It is not a thing to be waited for, it is a thing to be achieved."

Governor John Kitzhaber

Investing in Oregon's Children Portland City Club

February 9, 2001

Today I want to talk to you about a single question: how we can ensure that every child born in Oregon has the chance to be healthy, to be nurtured and to succeed?

I think that most of us would respond by saying: education – that giving our children a good education with the chance to go to a college or a university is the single best way to help them succeed. And there would be much truth in that answer. "On the education of the young hangs the fate of nations," said Aristotle. And Edward Peabody called education "a debt which the present owes to future generations."

Indeed, over the past decade the funding of education has been perhaps the most dominant political debate in Oregon. Nearly sixty percent of the state general fund budget is dedicated to the three segments of our education system as we customarily define it: K-12, community colleges and Oregon's universities. The constituents for each segment descend upon Salem every two years to lobby for more money for their particular area as though each stood alone with no relationship to the others.

In fact, however, as I believe, the overall objective our educational system is to produce well-educated, successful Oregonians -- then education is a continuum and each segment is dependent upon the others. Without a strong primary and secondary school system, for example, it does not matter how good the post-secondary system is because students will not be prepared to take advantage of it. By the same token, without a strong and affordable system of community colleges and universities, high school graduates – no matter how well prepared – will not get the education they need to succeed in this new century.

Education is like a chain – the strength of which is determined by its weakest link. In the budget I have submitted to the legislature, I am sure that – from a budget standpoint – each segment of our education community believes that it is the weakest link. Higher education is mounting a campaign to get more money into the Oregon University System. The K-12 budget clearly does not include enough resources to ensure that all of our children meet the standards we have established in the Education Act for the 21st Century. And there are many unmet needs facing our community colleges.

I would submit to you, however that -- even as I acknowledge the legitimacy of the funding needs in each of these important areas – the weakest link in the chain of our educational continuum is what happens to children even before they get to school. The Oregon Children's Plan, which I have proposed this session, is an effort to strengthen that link and may well be the single most important initiative in the \$12 billion budget I have submitted to the legislature.

The Oregon Children's Plan is important for two reasons. First, it gives our children the foundation to succeed. It gives real substance to the often-used phrases: "Let's put our children first" and "Children are our most important resource." Second, it is important because of its potential impact on the cost and scope of state services in the future.

Today, I want to talk to you about both of these aspects of the Oregon Children's Plan and to urge you to help me make this proposal a reality. It is under consideration by the Oregon Legislature, competing for resources -- in a very tight budget -- with the powerful lobbies representing education, public safety, human resources and economic development. Very young children and their families have no lobby of the same magnitude.

For that reason, your help -- the support of some of Oregon's most thoughtful and influential citizens -- can make the difference between whether we embark on this new course or whether we settle for what we have today -- a society in which children are needlessly put at risk.

To understand the challenge before us, let me start by offering a budget context for the Oregon Children's Plan. Ten years after the passage of Ballot Measure 5, we are at the end of an era. During the 1990's state government assumed the major funding responsibility for primary and secondary schools. In 1989 -- the year before Measure 5 -- the K-12 budget was \$1.17 billion, or about 24 percent of the general fund. Today it is \$5.2 billion, or 43 percent of the general fund.

In 1994, as a result of Ballot Measure 11, Oregon adopted a "one strike and you're out" correction policy which caused our public safety budget to balloon. In the last biennium before Measure 11, 1993-95, Oregon's Correction Department budget was \$363 million. Today it has grown to \$863 million -- and we have bonded nearly \$1 billion to finance prison construction. During the same decade, Oregon's population grew by 600,000 and the number of children in our public school system increased by nearly 60,000.

There was no general tax increase in the last decade to help pay for the services demanded by a growing population or to defray the cost of the huge increase in state responsibility for education and public safety. On the contrary, we returned over \$1 billion to individuals and corporations through the two percent kicker, the legislature cut the capital gains tax and the voters approved another \$160 million tax cut with the passage of Ballot Measure 88 last November.

This chain of events would have bordered on the fiscally irresponsible -- except for two things: the longest period of sustained economic growth on record and the introduction and expansion of video poker. As a consequence, in every biennium since 1993-95, there has been more revenue available to the legislature at the end of the session than at the beginning. The 1993 legislature, for example, saw available revenue grow by \$130 million during the session. In 1995 it was \$213 million and nearly \$154 million in 1997.

Those days are over. The economy is slowing and we are left with the challenge of a state budget that cannot be sustained over time with the revenue we anticipate.

How, then, can we afford to provide the services our senior citizens need and deserve? Something this budget has not allowed me to do. How can we afford to maintain affordable access to colleges and universities, while improving their quality? Something this budget did not allow me to do. And how do we keep our public safety system strong? Again, something I do not feel I was able to do adequately in the budget I presented.

So, how do we survive? How do we have it all? How can we continue to invest in improving the quality of our schools, a growing prison population and the other rising costs of doing business when the economy -- which made it all possible in the first place -- is slowing?

The answer, in the absence of new revenue, is prevention -- making every effort to invest today in areas which will prevent expensive problems tomorrow. We have made two great investments in prevention the last decade: the Oregon Health Plan and the Juvenile Crime Prevention Plan that was adopted by the last legislative session.

The Oregon Health Plan has helped preserve the health and productivity of hundreds of thousands of Oregonians who otherwise would have had little or no health care. And the juvenile crime prevention plan will help prevent at risk teenagers from becoming Measure 11 felons. But even these two efforts often focus resources on problems after they have developed: people who are sick from preventable causes; children who have already dropped out of school.

That is why the Oregon Children's Plan is so important. It completes the circle and provides the foundation by identifying at risk children -- before they even get into school, before they get into trouble -- and providing them the

support they need to ensure their success.

Let me share with you some sobering statistics.

- Thirty Six percent of incarcerated adults, 35 percent of incarcerated youth and 14 percent of those receiving public assistance dropped out of school.
- Eighty-five percent of incarcerated youth and 77 percent of incarcerated adults suffer from an untreated drug abuse problem.

Preventing these problems from occurring in the first place can save millions of dollars in future years. For every dollar invested in this kind of early prevention, for example, over four dollars are saved in costs later in life. This kind of return on investment – in terms of our capacity to sustain the state budget into the future – this is something we cannot afford not to do.

But while the budgetary case for the Oregon Children's Plan is a compelling one, it pales next to the human side of the equation. We face a public health emergency in Oregon today – a silent crisis.

What would you think if the headline in tomorrow's newspaper ran: **SIX OUT OF TEN OREGON CHILDREN EXPOSED TO A POTENTIALLY FATAL PREVENTABLE DISEASE.**" You would be both shocked and outraged.

Yet this is not a hypothetical situation. Each year in Oregon we lose thousands of children to school failure, school drop out and subsequent involvement in the criminal justice system. Sixty percent of first-born children in Oregon today have at least one social or medical risk factor that puts them at jeopardy. Over forty percent of our children arrive at school unable to fully participate in the learning experience due to these same risk factors.

If there was a disease that affected this many children we would view it as an epidemic. We would muster our resources and meet the challenge aggressively. There would be no question. Well, this is an epidemic and its course is just as deadly sure – not from an infectious agent, but from drugs or alcohol or violence – and increasingly from our own neglect and indifference.

Let me tell you a tale of two children. These events happened here in our own state – and I have only changed the names to protect their privacy.

Susan was born into an abusive family. She was sexually and physically abused by her alcoholic father and fled from her home to the streets of Portland. Alone, homeless, looking for love and somewhere to belong, she continued to be victimized, abusing alcohol herself and becoming pregnant at 17.

Without any prenatal care or emotional support, she continued to use alcohol and drugs during her pregnancy. Giving birth to a child – surely one of life's greatest joys and greatest gifts – was, for Susan, a nightmare.

When her daughter Patty was born, she was both premature and suffering from fetal alcohol syndrome. Susan returned to the streets and today remains homeless, transient and addicted. At the young age of 19, any hope she might ever have had for a healthy nurturing life – a life of contribution, accomplishment and satisfaction – has all but evaporated.

Her daughter Patty is today a ward of the state. She has been diagnosed with depression and multiple mental disorders including Attention Deficit Disorder. Her original adoptive parents gave her up because of her severe mental disorders. She had 26 different foster placements before being admitted to a residential mental health facility where she now lives.

All of this happened before her tenth birthday.

I know of no yardstick that can measure the depth of this tragedy. The tragedy of mother who is still drug addicted and who will never know her daughter. The tragedy of a young girl who is severely mentally ill and who will live out her life in an institution. And the tragedy of knowing that we could have prevent this outcome – but failed to do so.

In 1999, there were over 1,100 cases in Oregon where parental rights were terminated due to circumstances like Susan's. In the same year, 18 children died in Oregon from parental neglect or abuse. This year will be no different.

Now, contrast Susan's story with that of Melissa -- a single mother of twins at age 17. She and her children had the good fortune to live in an area that had a system of home visitation and Melissa was seen by a public health nurse during her pregnancy. Nonetheless, having little contact with the father of her twins -- and with limited financial resources -- she faced an uphill struggle.

Melissa's twins were born early, one with low birth weight, making a stressful situation even more difficult. However, with the help of her family support worker and the public health nurse, this young mother has accomplished the following for herself and her children:

She has kept both children up to date on immunizations and health care. She has been reading to them since they were very young. She has stayed in contact with the public health nurse over concerns with the low birth weight child. She has been enrolled in the Oregon Health Plan, and connected with the Women, Infant and Children nutrition program.

She has returned to school to get her high school diploma and is exploring career options with her local community college. She has obtained her driver's license and, with the help of child support enforcement, is now receiving child support from the father.

In short, her children are healthy and well cared-for. She is on the road to making a life for herself and for her family. The Oregon Children's Plan is designed to turn stories like Susan's into stories like Melissa's.

The fact is that we know who these children are long before they veer off the road to success. We know that there is a set of easily identified risk factors which are closely correlated with school drop out and juvenile criminal activity later in life. These risk factors occur in the home and include: parents who are living at or below the federal poverty level or who abuse alcohol or drugs; parents who have been incarcerated in the criminal justice system or with a history of domestic violence; single parent households and teenage parents.

And -- just as important -- we know the kinds of programs and supports that have been proven to be effective in preventing these tragic outcomes and making these children and their families successful. To quote the *Citizen's Crime Commission KIDS Report* of June 2000: "We cannot afford to ignore programs and policies proven to work in reducing juvenile delinquency. The resources for these programs must be found. We must no longer give "lip service" to making children a priority: we must literally put our money where our mouth is."

That is exactly what the Oregon Children's Plan is designed to do. It is a \$66 million effort -- \$28 million in new revenue and \$38 million redirected from other programs -- to screen all first births in Oregon for the risks that can negatively affect a child's life. Children that screen positively for one or more risks will be offered in-home and out-of-home services. Although participation in this program is voluntary, in an early pilot model of the Oregon Children's Plan, 93 percent of families elected to participate.

This is a comprehensive and coordinated program that involves prenatal and at-birth screening; community based programs; home visits and in-home support; substance abuse and mental health treatment; relief nurseries, parent training and others assistance to parents; and early learning opportunities such as the Oregon Prekindergarten Program, which will be expanded to serve 60 percent of eligible children.

This represents a significant shift in state priorities from after-the-fact intervention to front-end prevention and treatment. It is an important shift and one that must be made -- both because of the human consequences of failing to invest in our youngest citizens and because of the fiscal reality we face. But it will not come easily.

Fiscal limits mean that priorities must be set and my proposed budget includes cuts that carry with them very real human consequences -- cuts in services to senior citizens, cuts in public safety, cuts in higher education. I am willing to defend these choices on the basis that putting an emphasis on prevention reflects a higher priority than paying more to mitigate problems after they have already developed.

Already, however, the legislature has restored some of the cuts in higher education, senior services and public safety – all of which need and deserve these resources – and all of which have powerful lobbies. Part of the plan to finance these restorations, however, includes cutting my proposed funding for the Oregon Children’s Plan by twenty percent. Where is the lobby for these children?

Let me put this into perspective. The K-12 budget accounts for 43 percent of the general fund; higher education 7 percent; public safety 11 percent; the budget for the senior citizens 4 percent. The proposed budget for the Oregon Children’s Plan accounts for one half of one percent of the general fund. One half of one percent. And I am only proposing to screen all first births, which represent only 18,000 of the over 44,000 births that take place in Oregon each year. If our children are our most valuable resource, we should be screening all births in Oregon – we should be offering these important services and protections to all of Oregon’s children.

If we want to reduce this to a simple fiscal argument, the case for fully funding the Oregon Children’s Plan – indeed enhancing it – is a compelling one. The state spent over \$134,000 on Susan and her daughter – and that does not include the ongoing costs of caring for Patty in the residential mental health facility, which will run \$97,000 per year for as long as she lives. What has been the return on that investment? A shattered family; a homeless, addicted mother; a young girl with severe mental disorders, destined to spend the rest of her life in an institution.

For the \$27,850 we invested in Melissa, however, the return was a functioning family; a mother working to get an education; and two children who are healthy and nurtured and have a chance for happy, successful lives.

But this is not just a budgetary argument. It is about whether we have the courage to change our priorities, reflected by how we invest our resources. It is about whether we are willing to be accountable. I am sure that there are many willing to take credit for Melissa’s success. Who among us – and who in the Legislature -- is willing to be accountable for Susan’s failure?

This is about the depth of our commitment to give a voice to the voiceless. It is about really putting children first.

As James Agee said: "In every child who is born, under no matter what circumstances, and of no matter what parents, the potentiality of the human race is born again." Only we can tap into that potential; only we can make this a reality – for our children and for our future.

The Oregon Children’s Plan gives us the tool. Whether we wield it or not, is up to us.

Governor John Kitzhaber

Speech to Seattle Rotary Club

February 7, 2001

Today there is perhaps no greater challenge to our region, to our states and to our way of life in the Pacific Northwest than the growing threat to two of the most valuable assets of our region: the health of our shared ecosystem and the reliable, low-cost supply of power produced by the federal dams on the Columbia River. And the common thread that runs through this challenge is energy.

First, we face an immediate energy crisis that has profound financial and environmental implications. Second, we are increasingly at risk of losing the benefits of our low-cost power to interests from outside the region. Third, we stand on the threshold of a national debate about our energy future – a debate which will affect the face of the American West for decades to come.

Today I will touch on each of these points -- but first let me offer a historical perspective.

The people of the Pacific Northwest -- and particularly the people of Oregon and Washington -- are bound together by a common history and a common destiny.

We share a common history of myth and legend which sparked great adventures of exploration from Captain Robert Gray's discovery of the mouth of the Columbia 1792, to Lewis and Clark and the triumphant arrival of the Corps of Discovery in the Pacific Northwest in 1806.

We share in the culture and rich tradition of the native American people who welcomed the first European settlers to this region.

We share a common commerce -- from the fur trade of the 19th century; to salmon, timber and agriculture; aero-science and information technology.

And what has made all this possible, what binds us together and, more than anything else, both sustains and defines us as a region is the Columbia River – The River of the West -- which inspired the search for the legendary Northwest Passage and led to the settlement of this last best corner of the continent.

As Northwesterners, our inheritance of this stunningly beautiful and bountiful landscape places on us a special responsibility to care for it. Just as we share the blessings of the Columbia River Basin, we also share its challenges.

The Columbia supports one of the most diverse ecosystems in North America -- birthplace of the salmon – and also the source of irrigated agriculture, transportation and hydroelectric power.

The twenty-nine federal dams collectively known as the Federal Columbia River Power System are a tremendous asset,

blessing the region with abundant, low-cost energy. Half of the Northwest's electric power comes from this source and at a price that is much lower than in any other area of the country.

To a large extent, we have built the Northwest economy on this low cost power. Not only does it benefit individual households, it has allowed us to sustain industries that are highly energy dependent: food processing, pulp and paper, aluminum and more recently high technology.

And as time goes on, the prices we pay for federal power in the Northwest will become even cheaper. Once the debt from the Washington Public Power Supply System is paid off in less than twenty years – and the dam construction debt to the U.S. treasury ten years after that – the cost of providing hydropower could be half what it is today.

But there is a dark side to this story. The effect of these dams on the health of the Columbia River ecosystem and the fish and wildlife that depend upon it -- particularly salmon -- has been devastating. Today we find thirteen populations of Columbia Basin salmon, steelhead and bull trout listed under the Endangered Species Act.

Why is this important? It is important not just because of what the salmon represent to the Pacific Northwest: the power of history, the power of identity, the power of the past's promise to the future. It is important because if our salmon runs are not healthy, then our watersheds are not healthy – and if our watersheds are not healthy, then we have truly squandered our heritage and mortgaged our future.

Ironically, the low-cost power from the same dams which have led to this environmental challenge, provides most of the funding for our regional efforts to restore the health of our shared ecosystem. In other words, the health of the Northwest economy and the health of the Columbia River Basin depend, to a large extent, on the low-cost power from the federal dams. Today, both our economy and our ecosystem are at risk.

First, we in the Northwest are currently facing the most severe energy emergency in over twenty years. Usually, wintertime rain and snow mean that the Northwest's hydro system can meet any wintertime power demand. But because of the dry weather, we have no power reserves. All winter we have feared a cold snap because for every 5 degrees the temperature is below normal, the Northwest demands an additional 1,000 megawatts of electricity -- the average consumption of the City of Seattle. So far we have been lucky -- and we are almost out of danger – but if we had seen sustained cold weather, rolling blackouts would have been inevitable.

But, as Seattlites well know, getting through this winter does not spell the end of the energy emergency. Any utility having to buy electricity this winter in the wholesale market has had to pay prices for which we have run out of adjectives. Skyrocketing, astounding, unprecedented, outrageous. The prices now being charged in the market are beyond belief, sometimes well over 200 times what utilities normally have paid, and averaging over five times the usual cost.

It is only so long before utilities which are buying high at wholesale and selling low at retail must adjust their rates. Seattle City Light last week enacted the second phase of what is nearly a 30 per cent rate increase. Tacoma has raised rates nearly 50%, Snohomish PUD by over 30% . Small public utilities in Oregon buying part of their power at market rates are facing a similar situation, as are some of the investor-owned utilities as well – such as Idaho Power and PacifiCorp, two utilities which serve parts of Oregon.

Let's be very clear about one point. Power prices are not so high because we need more power. While it is true that the new sources of power are needed and will be more expensive than our current sources -- they are not 200 times more expensive, or even close to five times more expensive. Nor are prices so high because of the cost of complying with environmental regulations.

Prices are high quite simply because of California's flawed effort at deregulation; because there is significant incentive for power producers -- especially in California -- to keep generation shut down in order to drive prices up; and because the federal government has essentially abandoned Washington, Oregon, California and other western states to the machinations of these power profiteers.

When California deregulated its electricity industry it only went halfway. It deregulated the wholesale side, but not the

retail side. Furthermore, it forced its utilities to sell off much of their own generating capacity which was then bought by power marketers. With control of the means of production, these marketers have driven up the price of power far beyond what it costs to generate. As a consequence California's two largest utilities are teetering on the brink of insolvency.

These high prices affect anyone in the region who must buy power on the wholesale market – from Seattle City Light, to Portland General Electric, to the Bonneville Power Administration (BPA) which operates the federal hydroelectric system on the Columbia River. The result is a huge transfer of wealth out of the economies of western states to the power marketers.

The federal government has the tools to bring these prices under control, and to bring more power into western power markets. The Federal Power Act confers authority on the Federal Energy Regulatory Commission (FERC) to make sure power prices are just and reasonable. Despite the very real damage being done to our economy and to our most vulnerable citizens by these prices; despite an appeal by eight western governors (three Democrats and five Republicans) FERC has refused to intervene – a position also reflected by the President.

Certainly, we in the region have a role to play. Governor Locke and I have implemented an aggressive energy conservation program here in the Pacific Northwest. And last month, nine western governors signed a joint Western States Short-term Energy Conservation Strategy and have taken immediate steps to implement the elements of that strategy.

California Governor Gray Davis has been equally aggressive in his efforts to resolve the problems of the flawed deregulation scheme which he inherited; to strengthen the credit-worthiness of California's investor-owned utilities; and to urge Californians to reduce their consumption.

Regrettably, we have seen no commensurate action from our federal partners. The Administration says it will not step in, on the theory that high prices will work to bring more power into the marketplace. But look at the evidence.

On the first day of Stage Three Emergency in California on January 11 --with critically low power reserves -- peak loads in the affected California area that day were expected to be a little under 33,500 megawatts. Yet on that same day, 15,000 megawatts of generation – more than one third of all the generating capacity in California – was off-line and supposedly unavailable to generate power. Now, I am not a power expert, but that number is many times higher than before deregulation. California has always had a surplus of power in the winter. The point is that the amount of generation not running in California cannot all be explained by short supplies of natural gas, mechanical breakdowns or needed maintenance.

Because California's deregulation forced utilities to sell most of their generation, those power plants are now owned by a small number of non-utility companies who sell the power back into the marketplace. It does not take a conspiracy theorist or an economist to figure out that if every company holds back some generation a shortage will result, and the price of electricity from the remaining generation will climb towards infinity. The suppliers make the most money by running something less than all their resources.

This is one situation where action to *lower* prices would actually have the effect of bringing more supply to the market place. If the federal government regulated the prices in the Western power market, as they did for 60 years before deregulation, suppliers could not drive prices up by withholding generation. To make the most money, a supplier would want to run all its generation.

The practical effect of the current federal energy policy is to hand the financial stability of our western state economies over to the companies – many headquartered, by the way, in Houston, Texas -- which own California generation; companies which, over the past few months, have all recorded enormous increases in profits: Enron, Dynegy, Reliant and Duke Energy.

This situation is not acceptable to me, it is not acceptable to Governor Locke – and I hope it is not acceptable to you. In a letter I sent today to President Bush, I again called for temporary cost plus pricing. Specifically, I called for the price of electricity to be set at the cost of production plus a generous profit margin.

Power priced in such a way would still offer a very lucrative incentive for investing in new production facilities. We would all pay more for power than we do today – but not the monopolistic prices that dominate the current wholesale market. I acknowledge that price caps are not a long term solution – but I do believe that the market needs to be stabilized in the short term, to give us the time to develop more comprehensive solutions including bringing more generating capacity on line and concluding long term contracts between power producers and California utilities.

But the financial crisis is only half of the picture. There is also an imminent environmental catastrophe facing the Northwest. Because of our dry winter, low stream flows in the Columbia have forced the Bonneville Power Administration to enter the market to buy power for its customers in the Northwest. After spending \$55 million in one week, Bonneville chose – with no public input –to run more water through the hydro system, so that it would not have to buy so much power. That is water that is supposed to be saved for next spring to help the juvenile salmon migrate to the ocean and to ensure that we have reservoirs that can stay high into the fall.

This is not just about salmon – it is about honoring the treaties concluded between the United States and the sovereign Indian tribes of the Northwest; it is about who we are as a people.

Our environmental laws and treaties constitute the means by which we connect our past, our present, and our future. And at the heart of this debate lies one question that each and every one of us must answer: are we willing to honor that connection? I believe that we are. I believe that the people of the Northwest are ready to meet this challenge -- and our goal must be nothing short of a healthy, functioning ecosystem in the Columbia Basin.

But the federal government has a role and a responsibility as well -- in particular to commit significant financial resources towards the recovery strategy. For twenty years the Bonneville Power Administration has been the primary funding source for salmon recovery with the dollars coming from the region's electricity ratepayers. But ratepayers cannot reasonably be expected to provide all of the funds needed to achieve the recovery of this ecosystem and the fish and wildlife that depend on it -- especially when our goals are to protect national resources and to honor national obligations.

Toward that end, today I have called upon the Director of the Office of Management and Budget to temporarily delay Bonneville's payments to the U.S Treasury to relieve that agency from solving its financial crisis by destroying this year's run of salmon.

During last year's campaign, President Bush, in a speech opposing dam breaching, pledged to save the Northwest salmon by other means. This is the first test of that resolve. The action I have called for is consistent with the president's campaign pledge. It is consistent with the federal commitments to the Columbia River Indian tribes. It is consistent with the provisions of the Endangered Species Act. But most of all, it is what this region needs and deserves to protect the health of the ecosystem in which we all live.

The second aspect of the challenge we face is the fact that we are increasingly at risk of losing the benefits of our low-cost power to interests from outside the region -- interests who believe that the power generated by the federal dams in the Columbia Basin is a national resource that should benefit all citizens. To be blunt, they view the current situation as the U.S. taxpayers subsidizing Northwest electricity rates.

This notion is not new. Over the past 15 years, other proposals to lay claim to the federal power have come before Congress. When I spoke to the Seattle City Club seventeen months ago, a bill had been introduced that would require BPA to sell federal power at a rate competitive with other wholesalers in the Northwest power market. That would mean our rates would go up and the resulting windfall would go to the federal government.

Former Senator Moynihan of New York, a sponsor of the bill, stated that "the discounted rates provided by public power are a benefit which goes to a relatively few recipients at a tremendous expense to the American taxpayers." Moynihan's bill was supported by a formal coalition of 114 representatives and 36 senators from the Midwest and Northeast. Interestingly enough, the newly appointed Secretary of Energy, Spencer Abraham – then U.S. Senator -- was a member of the coalition.

Until recently, the Northwest congressional delegation has always been in a position to successfully fend off those efforts -- but depending solely on the seniority of our delegation to protect us is a very tenuous proposition.

When Oregon lost Senators Bob Packwood and Mark Hatfield in the space of one year, Oregon went from having 56 years of senatorial experience to having none; from having the chairs of Finance and Appropriations to having none; moving from number one in Senate seniority among the states to number 50.

It can happen very fast. In this last election your Senator Slade Gorton was defeated. Whether you supported Gorton or now Senator Cantwell, the undeniable fact is that the Northwest is more vulnerable politically than it was a year ago. And the current energy crisis is going to focus more and more national attention on the assets of the Federal Columbia River Power System.

The only real protection we have against this growing threat is a unified position among the four Northwest States to gain more regional control over the benefits of the Bonneville Power Administration. Last Thursday we took an important first step toward that goal.

At a meeting in Portland, the governors of Washington, Oregon, Idaho and Montana agreed to direct our staffs to develop, within 60 days, recommendations regarding how best to protect the Columbia River Basin resources of salmon and hydropower, now and for the long term, for the people of the Pacific Northwest. We must make the development and implementation of this strategy a top priority for our region.

While we in the Northwest struggle with the immediate crisis of short electricity supplies and higher costs, while we work to retain the benefits of the Northwest hydro system, another debate is going on about our energy future and the role that the western United States will play in that future.

What appears to be emerging from the Administration is a policy, the primary feature of which, is opening more public lands for extraction of oil, natural gas, and coal. There has also been talk of relaxing environmental standards when they inhibit energy production.

There is no evidence that sacrificing environmental quality or despoiling pristine public lands is required to ensure our energy future. The Administration has not yet opened a single new acre of public land, yet it is hard to find an idle oil or gas drilling rig in the West today. The higher prices in the marketplace have been sufficient to bring about this new activity.

We all know that additional generation and new sources of power are needed. In Oregon we have 1,300 megawatts of new generating capacity under construction and a further 1,600 megawatts under review. But even as we work together to increase supply -- the first and foremost item on this country's energy agenda must be to use energy wisely.

We in the United States consume twice as much energy per capita as Germany, a country with roughly the same living standard as ours. We use twice as much electricity per person as Western Europe and Japan -- and those countries produce a dollar of GNP with half to two-thirds of the electricity consumption that America uses.

We must make energy efficiency our first priority -- not just to use less but to get more out of the energy we do use ... including the new energy we are striving to secure. Here in the Northwest alone, for example, the Northwest Power Planning Council has determined that we have 2,400 megawatts of untapped energy efficiency investments

My point to you today is that the current crisis offers us the best opportunity in thirty years to rethink our energy future. The old vision of our energy security -- drilling and digging and burning -- has served us well in the past and will be part of our transition to a new energy future. But these are the nineteenth and twentieth century solutions to our energy needs.

What we need to concentrate on is a twenty-first century vision: one that gets maximum usage from every valuable unit of energy, one that values a conserved unit of energy equal to a consumed one, a vision that promotes renewable

resources over those that are being depleted, and a future that allows energy choices in distributed generation.

All these long-term strategies require a federal government that is willing to make commitments to research on new energy technologies and conservation, commitments to purchase emerging technologies, commitments to set appliance and motor vehicle efficiency standards, and commitments to provide funding and incentives for energy efficiency investments, green power, and distributed generation.

If our focus is on this new vision, the twenty-first century West – and particularly the Pacific Northwest -- will have a vibrant economy with sufficient energy supplies, and an environmental heritage we will be proud to pass on to our children.

Governor John Kitzhaber

Opening Address 71st Legislative Session

January 8, 2001

Members of the Legislature, honored guests, fellow Oregonians.

We are joined here today in the home of Oregon's Democracy, inheritors of a precious tradition of self-governance and guardians of the society that generations of Oregonians have created.

We are joined here today to renew this tradition and to begin writing our own chapter in this 140 year history. For many of you, this will be the first chapter. For me, it will be the final.

So, I want to start today not by looking ahead to the next six months, but back at the last twenty-two years to share with you the things I have learned about legislating and governing in Oregon.

These are not lessons in public policy. They are lessons about how this place works when it works well. About how this Legislature works when we labor not in the interest of a political party, but in the interest of the people who sent us here, people who think of themselves first as parents, farmers, entrepreneurs, or teachers; people who are citizens first and only second, if at all, partisans.

The first lesson I have learned is that of civility -- of being able to disagree without being disagreeable. To learn to engage in a spirited debate about a controversial issue and to walk away friends. To learn to separate people from politics and personalities from policies.

No one in this chamber exemplifies this principle more than the Senator from Medford, my friend of twenty years, Lenn Hannon. Although we often agree, we have many areas of disagreement. Yet, when we served together in the Senate, Lenn would always walk over and tell me when he was going to vote against one of my bills -- which was often. And, just as often, after we had been on opposite sides of a heated debate, we would walk across the floor and shake hands and remind each other of our friendship and mutual respect.

The second lesson is that of acknowledgement. Everyone who comes here brings with them something of value and something to contribute: an idea, a perspective, a unique range of experience. And everyone who comes here deserves to be acknowledged for what they bring ... whether you always agree with it or not. To do so requires open-mindedness and humility; a willingness to believe that someone else might know more than you do; or even that you might be wrong. In my twenty-two years in this building, I have learned -- and grown -- at least as much from the debate of those who have opposed me as from the support of those who have agreed with my policies.

The third lesson is that of inclusiveness. The need to learn that policy is more important -- and ultimately more powerful -- than partisanship -- and to recognize the danger in isolating ourselves from each other on the basis of our party registration. There will be very few bills of consequence that will pass either chamber this session without at least some bipartisan support. We should begin with that premise and with the knowledge -- born out by history -- that the most far

reaching and long lasting accomplishments of the Oregon Legislature have been the result of a bipartisan effort.

SB 100, for example, which created our land use planning system, passed the House with 25 Democratic and 15 Republican votes. The Oregon Health Plan passed the Senate with 11 Democratic and 8 Republican votes and a 58-2 vote in the House. And in 1991, the Education Act for the 21st Century passed the Democrat-controlled Senate 26-1 and the Republican controlled House 53-5.

We will need these lessons -- and more -- to meet the challenge of this, the first legislative session of the new century. Why? Because this budget reflects not only the growth in our population and the growth in the State's responsibility to finance education, health care and public safety. It also reflects the growing discrepancy between the state budget and the revenue that supports it -- a trend that I believe will continue at least for the next two to three biennia.

I have presented to you and Oregonians a budget that, by necessity, reflects more cuts than enhancements -- a fact that will make your job more difficult, than it has been in a decade. Anyone who was elected after 1992 has never really had to cut a budget. In every biennium since 1993-95, there has been more revenue available to the Legislature at the end of the session than at the beginning. The 1993 Legislature, for example, saw available revenue grow by \$130 million during the session. In 1995 it was \$213 million and nearly \$154 million in 1997. In addition, between 1995 and 1999, we sent back to taxpayers over \$800 million in surplus revenue.

This session will be different. The economy is slowing and state revenue has been reduced by unanticipated lawsuits, a reduction of federal matching dollars and by the income tax cut adopted by the voters in Ballot Measure 88. As a result, this budget required difficult choices and the establishment of clear priorities.

My first priority is education, perhaps the single most important and far-reaching investment we can make in Oregon's future. Public education is the cornerstone of a progressive, democratic society. From grade school to graduate school to life-long learning, it is vital that Oregon's education system prepare all of our citizens for the challenges that they will face in the 21st Century.

This session we will begin to implement the Quality Education Model, and for the first time, the Oregon Legislature will debate a K-12 budget that is directly built around the outcomes expected in the classroom and what it costs to achieve those outcomes. We have also invested in engineering education, biotechnology research, enrollment growth in our community colleges and in expanding geographic access to post-secondary education.

And yet, within each of these important segments of our educational continuum there are legitimate unfunded needs and real cuts -- meaning that priorities will have to be established. Even so, this budget commits fully 57 percent of the General Fund to primary and secondary schools, community colleges and higher education.

My second priority is helping children. The significant investment we have been able to make in education cannot be sustained over time unless we are willing to take aggressive steps to reduce the number of children who enter school unable to fully engage in learning. For that reason, this budget calls the question of our overall priorities in terms of prevention.

Each year in Oregon, we lose thousands of our children to school failure, school drop out and subsequent involvement in the criminal justice system. Sixty percent of first-born children in Oregon today have at least one social or medical risk factor that puts them at jeopardy of this tragic future. Over forty percent of our children arrive at school unable to fully participate in the learning experience due to these same risk factors.

If there were a disease that affected this many children we would view it as an epidemic. We would muster our resources and meet the challenge aggressively. There would be no question. Well, this is an epidemic -- and its course is just as deadly sure -- not from an infectious agent, but from drugs or alcohol or violence ... from neglect and indifference.

This tragedy is due, in large part, to our failure to make adequate investments in our children in their earliest years. As a consequence, we pay for their failure, instead of benefiting from their success. We know who these children are long before they get into trouble. And we know the kinds of programs and supports that are effective in keeping them on the

path to success.

To quote the Citizen's Crime Commission KIDS Report of June 2000:

"We cannot afford to ignore programs and policies proven to work in reducing juvenile delinquency. The resources for these programs must be found. We must no longer give "lip service" to making children a priority: we must literally put our money where our mouth is."

This budget does just that. By creating the Oregon Children's Plan it will allow us to identify -- for all first births in Oregon -- a set of risk factors which are closely correlated with school drop out and juvenile criminal activity later in life; and, to make available a comprehensive set of services and supports that have been proven effective in addressing these problems.

To fund these initiatives in education and early childhood, however, I have been forced to propose real cuts in other important services -- cuts that carry with them very real human consequences. To the extent that fiscal limits make difficult decision inevitable I am willing to defend the choices I have made on the basis that putting an emphasis on prevention reflects a higher priority than paying more to mitigate problems after they have already developed. But someone gets left out.

As you debate this budget you will find that as you try to move more resources into higher education, for example, or human services or public safety -- all of which need and deserve them -- that you will have to take resources away from other areas which will result in human consequences of a different sort.

Let me share with you an experience I had during my medical internship in 1973 which, more than anything else, taught me about setting priorities and about the consequences of making budget decisions with limited resources. I hope it will be instructive in the work that faces you over the next few months.

In July of 1973 I watched a baby die. His name was Sam. He weighed less than three pounds when he was born and didn't really have a chance from the start. He was born prematurely to a young woman who had received no prenatal care over the entire course of her pregnancy. Sam wasn't breathing when we delivered him in the emergency room, and we had to resuscitate him before transferring him to the neonatal intensive care unit. I was part of his short life from the moment he was born to the moment of his death two days later. I can still remember standing by his incubator during that final hour, knowing what was going to happen and feeling depressed and helpless.

I remember what a quiet death it was. There was nobody there but his mother and father, a nurse, and myself. Nobody else knew about Sam and his two-day struggle to live. He never made the papers or the evening news. It was an anonymous tragedy that touched the lives of no one but those in the room.

I remember Sam's death because it was one of the first I had seen as an intern and because it offered such a sharp contrast to the second one I watched a few days later. The second involved a 90-year-old woman whose name was Gladys. Although she was not my patient, I had talked with her several times during the nights on call in the hospital. She had lung cancer and was scheduled for surgery to remove her right lung. She had told me that she did not fear death, but she did fear the surgery. She didn't want any more pain. I knew it was her when the emergency was called on the surgery floor. I rushed to the room -- along with another intern, a surgical resident, two nurses, and a respiratory therapist. She had suffered a respiratory arrest and then a cardiac arrest following her surgery and we spent an hour in a frantic attempt to save her life. We didn't -- but we tried hard.

Unlike baby Sam's passing, the last hour of her life was not quiet. We stuck tubes into her nose, throat, and bladder; needles into her veins. We pumped her full of drugs and shocked her repeatedly. We "failed," she died, and we ran up a huge bill to be picked up by her family or her estate.

Sam died because we didn't know as much then as we do now about treating respiratory distress syndrome in newborns. But he also died because somehow nobody had made the token investment to get his mother the prenatal care that could have prevented his prematurity and low birthweight. The elderly woman died because she was ready to die. She recognized that but we couldn't. We had been trained to view death as a failure, not as a natural part of the life process.

And we were responding to an immediate crisis -- something right in front of us. There was no visible crisis when Sam's mother did not get prenatal care -- but the failure to make that small investment of resources was just as fatal to her baby as the elderly woman's lung cancer was to her. And it probably could have saved his life -- unlike all the expensive technology we used, to no avail, on Gladys.

Why am I sharing this with you? I am sharing it because of the contrast between the frenzied efforts of a roomful of people, with all their sophisticated equipment, to save someone at the end of a very long life, and the quiet and undramatic death of someone at the very beginning of life. I am sharing it with you because of the connection between the money spent on Gladys in her final hour and the money not spent on Sam during his mother's pregnancy.

It is a metaphor for this budget and for what we are facing in Oregon today. It is a metaphor for the fact that that responding to an immediate crisis, while often easy politically, may not always reflect the best public policy. For the fact remains that a decision to fund one thing is always, and at the same time, a decision not to fund something else. Almost every program area in this budget can be legitimately criticized as inadequate -- unless compared to the unfunded needs in other program areas.

So, to the lessons of civility, acknowledgement and inclusiveness, I would add the lesson of accountability -- the willingness to take responsibility and credit not just for what we fund today, but also for the long term consequences of what we choose not to fund. Accountability teaches us to reject the political expediency that leads us to act only for the present -- and gives us the courage and the wisdom to make decisions that will secure the future for the next generation of Oregonians.

This budget represents my priorities which, in turn, are a reflection of my values. It reflects not only my priorities for education and for helping our children, but for investing in rural Oregon and its economy, for providing affordable health care to the citizens of this state, and for preserving our salmon runs and the quality of our natural environment.

Engraved in the marble flanking the front doors of this capitol is written:

A free state is formed and is maintained by the voluntary union of the whole people joined together under the same body of laws for the common welfare and the sharing of benefits justly apportioned.

I am confident that we can live up to the challenge implicit in those words: to make fair laws and to establish wise priorities with the limited dollars with which our fellow citizens have entrusted to us.

How we meet this challenge is up to us. For me, as I round the last bend, I pledge to do it with civility, acknowledging our legitimate differences, reaching out to include everyone I can, and willing to be held accountable for the consequences of my actions. It has worked before -- since 1859, in fact. I put my trust in you that it will work again.

Governor John Kitzhaber

Alternatives in Agriculture

November 28, 2000

Good morning.

It's a pleasure to be able to speak to you today at the close of your conference on "Alternatives in Agriculture."

Let me start by thanking Sherman County Commissioner and wheat farmer Mike McArthur for inviting me to participate. I have a tremendous amount of respect for him and the skill with which he handles his two very tough jobs of farmer and local elected official.

I am here today because I am convinced that rural Oregon and our agricultural economy represent one of the three paramount challenges before us as Oregonians today. The other two are maintaining a strong system of public education and ensuring that every child born in Oregon has the chance to succeed, regardless of their circumstances.

I will be focusing resources on both of those challenges in the budget I will unveil on Friday, December 1.

I will also be focusing resources on the challenge before you today: sustaining rural Oregon, an important element of which is stabilizing our natural resource-based industries.

I don't need to tell you that the prosperity of the last six years has not been shared evenly across Oregon. While urban areas have added tens of thousands of well-paying jobs in technology, many parts of rural Oregon have continued to experience low wages, high unemployment, the loss of business opportunities and the migration of their youth to other communities that offer more career choices

In the long term, this is a trend that is not sustainable without sacrificing the entire state's quality of life. Because, after almost six years in this office, I still believe that what binds us together as Oregonians is far greater and far stronger than those things that separate us. I still believe what I said in 1995 in my first inaugural address – "one state, one people, one destiny."

If we hope to keep Oregon together – to maintain the Oregon community – we cannot settle for two Oregons – we cannot settle for a state of rich and poor. Therefore, today I am announcing a series of proposed investments to both aid Oregon agriculture and to build infrastructure throughout rural Oregon.

Let's start with agriculture. Agriculture has been, and will continue to be, a cornerstone of Oregon's rural economy. Furthermore, agriculture is important to the entire state for a number of reasons. First, agriculture is important economically. Production agriculture contributed \$3.47 billion to the Oregon economy in 1998/99. Value added processing added another \$2 billion. Thus, total agricultural contribution to the Oregon economy in 1998/99 was \$5.5 billion. This is clearly an important element of our economic base.

Second, agriculture is important to what I refer to as "Oregon the place." One of the main objectives of our land-use planning program, for example, has been to maintain the land base for agriculture and forestry. Population growth and urbanization can threaten our natural resource-based industries and our efforts to protect these lands have helped to preserve not only these industries but also the open spaces and powerful rural landscapes that help define this place we call Oregon.

Third, agriculture contributes to the Oregon community. The farming way of life – the farming culture – contributes to who we are as Oregonians. It is a part of the fabric and heritage of the West, going back 150 years to those who founded our state. These people are fiercely independent, living close to the land, and proud solid member of their community. Their culture, the farming culture, is part of who we are.

We cannot afford to lose any of these values. Yet today much of agriculture is struggling. Of course there are some bright spots – the nursery and greenhouse industry for example. But many segments are struggling and others are in real trouble such as wheat, apples, mint and onions.

We have seen the bankruptcy of Agribiotech. We have seen the bankruptcy of Agripak and we have seen, for the first time since 1985, a reduction in farm production in the State of Oregon. So our challenge is to find ways to increase and maintain – or to sustain, if you will – a viable agricultural industry in Oregon. I fervently believe that we can do that. Not without effort, not without investment and not without opening our minds to new possibilities – to new practices, if you will. Let me wheat as an example.

As you know wheat is a major commodity produced in this part of the state and soft white wheat yields the best pastry flour in the world. Almost all of that wheat is exported as a bulk commodity into the international marketplace. Selling wheat into the international market for such a long time has set a pattern of behavior and activity which has helped define the wheat industry. The federal farm program has reinforced this pattern.

Yet the strong adherence to the practice of growing large amounts of wheat and of striving to increase the amount per acre of an unprocessed bulk commodity – is one of the main obstacles to maintaining the viability of the wheat industry in northeast Oregon. If we hitch the future of the wheat industry solely to the mass production of a raw product for export into the international market than I fear for the future of that industry.

The People's Republic of China, for example, with few environmental laws and few labor laws, has the capacity to raise a lot more wheat at a much lower price than we can ever hope to raise in northeast Oregon. Therefore, we need to be open to look at alternatives: taking whatever steps are necessary to add value; aggressively developing domestic markets as well as international markets; and considering other varieties of wheat – hard red wheat, for example – or even other potential crops such as rape seed, lupin or mustard.

Gilliam County Judge Laura Pryor, who many of you know, wrote in a recent paper about the agricultural economy of Eastern Oregon that the single greatest obstacle to finding solutions is the resistance of the local grower to objectively consider alternative practices.

The average grower will seriously discuss only those possibilities that are integral to the basic production of masses of raw product. That is not going to work in the long run. I want you to work with me on this. I believe that if we are willing to open our minds to new possibilities, if we are willing to make significant investments in research and technology, and if we are willing to work together as partners, then we can and will continue to have a healthy agricultural industry here and throughout Oregon with all the economic and cultural benefits that come with it.

In this budget I will propose to maintain a strong research and assistance program through Oregon State University and the extension service. I will also propose a new investment of \$3 million to help promote and market Oregon agriculture.

This \$3 million general fund investment, which I call the Brand Oregon Campaign, will be used to establish a joint effort between the Oregon Department of Agriculture and Tourism Division of the OECD. This effort is aimed at increasing the sale of value-added Oregon natural resource products in select markets and to increase visitor expenditures from those markets. By leveraging a common marketing message between agriculture and tourism, we can

significantly increase the potential for new domestic and foreign export markets for Oregon's natural resource products.

This is a long term effort and I am proposing funding for the first two years. I am confident, however, that it is an investment that will show strong returns and that whoever succeeds me as governor in 2003 will recognize the importance of the Brand Oregon Campaign and fund it into the future. I look forward to getting this budget approved by the legislature and working with the people in this room to make the marketing of Oregon agriculture a success.

Let me also say that my budget continues funding for the Oregon Plan for Salmon and Watersheds, a program that I believe is also viable for a sustainable agriculture industry.

The Oregon Plan rejects the notion that we must choose between environmental health and economic benefit and provides a framework within which we can work together to have both. It also affords us the opportunity to take the lead ourselves in meeting national environmental standards, to develop solutions at a regional level rather than having a solutions imposed upon us by the courts or by the balkanized arms of the federal government.

You all know that I strongly believe in our national environmental standards and a strong statutory framework to support and enforce them. I recognize the importance of regulation and access to the courts in achieving compliance with those standards. But I also believe – just as strongly – that there are limits to the effectiveness of this approach. Regulations can keep people from doing the wrong thing but they provide no incentives for people to do the right thing. I am convinced that we are not going to get beyond the current conflict between economic development and environmental stewardship until we view both values in the context of what I call "sustainability."

I define sustainability as managing the use, the development and the protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs. What is important to understand about this definition is that it requires that we simultaneously meet environmental, economic and community needs.

Imagine, if you will, three circles – one representing environmental needs, one representing economic needs and one representing social or community needs. The area where these three circles overlap is the area of sustainability. Historically, the debate between economic development and environmental stewardship has been cast in a way that views these three circles as separate unrelated entities. Thus the debate has been a zero sum debate – a debate that always involved a winner and a loser.

Our challenge is to understand that environmental and economic and community needs are interrelated and our efforts must be to increase the area where these three circles overlap. Therefore, we must pursue an approach that does not rely solely on regulation but rather one which involves private landowners, businesses and other citizens in the decision making process and which gives them both a stake in the problem and some investment and ownership in the solution.

That philosophy lies at the heart of both the Oregon Plan and the Healthy Streams Partnership and I ask for your continued support.

Let me now turn to the second element of my strategy: infrastructure. While agriculture and other natural resource industries will continue to be a cornerstone of the rural economy, we must also strive to broaden and diversify the economic base in rural Oregon. That means infrastructure: investments in roads, water and sewer systems, and telecommunications.

Remember that the history of economic development in the West, and in Oregon, is a history of private investment following public investment. Public investment in the railroads, the highways – and more recently in telecommunication infrastructure – provides the basis for private investment to stimulate new economic activity in rural Oregon. In short, rural Oregon must have adequate infrastructure if it is to diversify its economic base.

In the last legislative session I was able to win passage of virtually all of the elements of what I call the Oregon Livability Initiative. This involves the 21st Century Community Fund, capitalized with \$140 million of lottery and transportation bonds. These funds are reserved specifically for rebuilding rural and distressed urban economies. They are available for local street networks, for community infrastructure investments in sewer and water systems, to ensure

safe drinking water, to help revitalize downtowns and main streets as community centers, and to provide affordable housing.

In this budget, I will propose that we issue an additional \$196 million in lottery-backed bonds, over a three-year period, for road, water and sewer infrastructure. This investment is expected to stimulate more than \$1 billion in state and local investments in community infrastructure.

Because these funds are only in part need-based -- and are also backed by charges to pay for infrastructure -- our state revolving loan fund will accumulate a powerful base of capital for future investments in community infrastructure. At the end of a 10-year period, Oregon will be able to make infrastructure investments of \$75 million a biennium on a sustainable basis. This infrastructure investment will generate thousands of new jobs in Oregon's smaller communities, increasing personal income and general fund revenue by many millions of dollars -- more than offsetting the \$20 million in annual debt service on these bonds.

I will also ensure that this budget continues the investment we began two years ago in telecommunications. This budget will continue to support the \$120 million investment to bring broadband voice, data and video services to rural communities and businesses across Oregon, which was provided by SB 622, and passed by the 1999 Legislature.

To date, hundreds of schools have gained high speed Internet connections and more than 40 communities are slated to receive high speed Internet service in the next 18 months. The Oregon Economic and Community Development Department (OECD) will provide hands-on technical assistance and training to rural communities and businesses to encourage the use of this technology.

The State of Oregon will continue to leverage state investments -- through the Enterprise Network and other means -- to bring this technology to even more communities. In addition, the State will encourage competition in local services to stimulate the use of technology. The OECD will aggressively pursue the location (and relocation) to rural Oregon of businesses that need high speed Internet access but are not location-dependent.

Finally, the budget supports the Oregon Sustainability Initiative which has three components. First, to develop a partnership between Portland area businesses and rural communities to explore opportunities to expand Oregon-based businesses where jobs are most needed. Second, to examine state purchasing policies to give rural and distressed urban communities better opportunities to provide goods and services. Third, to explore options for transferring more state agency operations into rural communities

My proposed budget is just a starting place. It is a statement of the principles upon which I believe we should allocate the scarce resources Oregon taxpayers provide. I am here today to tell you that one of the principles I will fight for is bringing prosperity to rural Oregon. And you cannot accomplish without, at the same time, trying to help Oregon's agriculture industry.

Today let us recommit ourselves to that effort -- to rebuilding the Oregon Community, ONE Oregon Community -- from the Pacific Ocean to Ontario, from Boardman to Lakeview. I look forward to working with you over the remaining two years and beyond in a common cause to achieve this objective.

Governor John Kitzhaber

**"Building a Sustainable Future for Oregon"
Willamette Valley Livability Forum**

November 2, 2000

Good morning.

About two months ago I spoke to the Chataqua conference at South Western Oregon Community College where we attempted to answer the question, "Can we have it all: a healthy economy, a clean environment and great livability?" To put it another way, "How can we sustain those things that contribute to Oregon's exceptional quality of life in the face of unprecedented growth?"

I think it is very important to address this question to the Willamette Valley Livability Forum because the course that we set for ourselves here in the Valley will have impacts across the entire state in terms of economic prosperity, environmental health and livability.

I understand that you have developed some scenarios describing how the future will look if current growth trends continue. I applaud your effort. I believe we need to paint a picture for the public that connects our values on livable communities, a healthy environment and a strong economy. We need to identify a clear path for attaining these things.

I encourage all of you to help reach the public by sharing this information with your commissions, councils, organizations and groups. All of us need to spend time listening and sharing ideas about a sustainable future.

What does sustainability mean? I define sustainability as managing the use, the development and the protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs. What is important to understand about this definition is that it requires that we simultaneously meet environmental, economic and community needs.

Thus, to me, when we talk about sustainability, we are really talking about quality of life a combination of elements which, together, produce the richness of place and experience that we associate with Oregon.

These elements encompass more than the stunning beauty and powerful landscapes of our natural environment -- although these clearly help define us. They also encompass a strong economy with jobs and job security; and educational opportunities for our children and increasingly for adults of all ages as economic success becomes ever more closely linked to knowledge and information. And quality of life encompasses safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements are something we hold in common -- they represent a common set of desires and aspirations that add value and quality to our lives. All Oregonians want these same things, no matter where they live or what they do for a living. And our efforts to secure them has, at least in the past, been a joint undertaking that produced a kind of cohesiveness that has held us together and allowed us to act in concert for the good of the larger Oregon community.

To put it another way -- imagine Oregon as a fabric woven from threads which represent these varied elements of a good quality of life. If all the threads are present and balanced, the fabric is strong and rich. It is a fabric of high quality, if you will. But if any of these threads are missing -- anywhere is Oregon -- then the entire fabric is weakened and its quality is diminished.

Today, the threads of our quality of life are beginning to fray and unravel -- albeit for different reasons in different parts of the state. As a result, we are losing that cohesiveness and sense of common purpose that held us together in the past and allowed us to act as an Oregon community to meet the challenges that faced us.

Throughout Oregon, people are anxious and uncertain because the world is changing, because their lives are filled with change -- and because the landscape that has helped define them is changing as well. They perceive that they are losing something valuable -- that their quality of life is at risk and that they have little control over it.

There are three basic causes for what is happening around us: (1) globalization and the shift from a natural resource-based economy to an information-based economy; (2) the impact of meeting federal environmental standards, especially the Endangered Species Act and the Clean Water Act; and (3) the impact of growth on Oregon communities.

These things, which have taken place over the last 20 years, have affected all parts of Oregon -- albeit in different ways -- and have brought about a far-reaching reversal in the fortunes of urban and rural Oregon.

From 1980 to 1999, wood products employment in Oregon declined nearly 30 percent while high technology employment increased 102 percent. Twenty years ago there were 69,500 well-paying timber jobs in Oregon. Over 25,000 of those were lost during the recession of 1980-1982, a time during which Oregon added over 3,000 hi tech jobs.

While the wood products industry experienced a strong post-recession recovery, the 1990 listing of the Northern Spotted Owl under the ESA brought about a permanent loss of over 20,000 -- a loss occurring almost entirely in rural counties containing federal forests.

By contrast, the high technology industry -- predominantly in Portland and the Willamette Valley -- has grown by nearly 30,000 jobs since 1990 alone.

These events have had a significant impact on our quality of life.

In urban Oregon, economic expansion has brought with it abundant jobs, increasing incomes, more consumer choices and a wide array of public services. At the same time, however, there have been negative consequences to this economic success: dramatic population growth, sprawl, congestion, an overburdened public infrastructure and pollution.

In rural Oregon, by contrast, many communities face decline and stagnation. These communities face a different kind of threat to their livability -- to their quality of life: low wages, high unemployment, the loss of business opportunities and the migration of their youth to other communities that offer more career choices.

And in both urban and rural Oregon, the challenge of meeting the requirements of federal environmental laws is becoming a central issue. In some respects, rural Oregon has had more experience with this -- particularly the timber industry with the 1990 listing of the owl. But this is clearly a shared responsibility.

The point is that in both urban and rural Oregon, our quality of life is under siege. Community stability and cohesiveness is being threatened by economic expansion and too many people on the one hand, and by economic stagnation and the out-migration of youth on the other. And if we hope to "have it all" we will have to address two things: (1) two sets of different, but interrelated economic and growth-related issues, one set in urban Oregon and one set in rural Oregon; (2) recasting the environmental debate.

Rural Oregon

Let's start with that set of issues affecting primarily rural Oregon. The challenges in the non-metropolitan parts of the state are: (1) not enough public infrastructure to diversify the economy; (2) job loss and out-migration, especially of the young; and (3) continued reliance on natural resource industries which, in many cases, employ practices that contribute to the challenge of meeting the ESA and Clean Water Act.

In short, rural Oregon needs a more diversified and environmentally sustainable economic base which provides a wider range of job opportunities. To accomplish this will require some significant infrastructure investments and some fundamental changes in our natural resource industries.

Now, even while we work toward rural economic diversification, we must recognize that the natural resource industries will continue to be both a cornerstone of the rural economies and a major contributor to Oregon's economy as a whole. In 1998/99, for example, production agriculture and food processing contributed a total of \$5.5 billion to the Oregon economy. And the wood products industry in our state still employs 49,000 people.

While the natural resource industries will continue to be a cornerstone of the rural economy – it is equally important to broaden and diversify the rural economic base. That means infrastructure: investments in roads, water and sewer systems, and telecommunications. Indeed, I believe that giving rural Oregon access to broad band fiber optic cable will prove as important as was rural electrification in the first half of the last century. My administration is aggressively pursuing this objective through the Oregon Enterprise Network.

Urban Oregon

In urban Oregon the challenges are: (1) an overwhelmed public infrastructure from schools to roads to water and sewer systems; (2) increasingly severe traffic problems which reduce quality of life through congestion and decreased mobility, and affect economic viability by increasing transit time (and thus the cost) of products being moved by truck; (3) sprawl; and (4) serious non-point source pollution problems which erode watershed health and contribute to the challenge of meeting the ESA and Clean Water Act.

The rapid increase in population is probably the single most important contributing factor to both the overburdened infrastructure and the growing traffic problems being experienced in urban areas from Washington County, to Bend and Medford. And as long as Oregon has great livability and a strong economy, people will continue to come here.

And as long as there are more job opportunities in the urban parts of the state, those areas will absorb a disproportionate share of that growth.

Growth is a double-edged sword. On the one hand, it is associated with the economic benefits of a strong economy. On the other hand, it can erode livability by contributing to such things as sprawl, congestion and pollution.

There are several ways growth can be slowed, and even reversed. One way would be to put the economy in the tank. During the last recession, Oregon actually lost population. Another way would be to destroy our livability so that Oregon is no longer such a nice place to live. I don't think anyone would advocate for either of these approaches. That leaves two other options. One is to stop subsidizing growth and the other is to do a better job of managing growth.

On the surface, most people would probably say that we should not be subsidizing the very growth that is threatening Oregon's quality of life. But, in fact, we are. For example, every new house built in Oregon requires services: sewers, roads, fire and police protection and, in many cases, schools. None of these costs are fully paid by either the developer or the homebuyer. In fact, as my Task Force on Growth noted, growth exacerbates government revenue problems, it does not relieve them.

In addition, our tax policy encourages growth both through business subsidies and encouraging larger rather than smaller families.

I recognize that changing these policies that subsidize growth is a very controversial proposition, and I assume that we

are not yet ready to take these things on. Ultimately, however -- if we want to "have it all" -- I believe that we are going to have to come to terms with these questions. Our state has a finite "carrying capacity," if you will. We cannot forever absorb 40-50,000 new residents a year without losing part of what makes Oregon so special. We may not be ready to tackle these questions today, but let us not forget the words of the late writer Edward Abbey, "Growth for growth's sake is the ideology of the cancer cell."

This leaves us with the option of better managing the growth we are getting. To me this entails three things: revitalizing our downtowns and mainstreets, developing new strategies to deal with our transportation challenges, and rethinking our economic development policies.

Revitalizing Our Downtowns and Mainstreets. It is fair to say that there are two things Oregonians don't like (I mean other than a sales tax and self-service gas): they don't like sprawl and they don't like density. Well, we have to get over that. We all know that sprawl is not only expensive, but that it reduces our livability as well. While increasing density is less expensive, it too can reduce livability-- but it doesn't have to. Look at the Pearl district and Martin Luther King Blvd. in Portland and the emerging Springfield Renaissance effort to restore the Mill Pond for environmental health and mixed use housing.

Therefore, we must adopt policies that facilitate and encourage the revitalization of downtowns and mainstreets as community centers -- and that strengthen our neighborhoods. Policies that encourage and provide incentives for mixed-use development. Policies that provide a range of transportation and housing options so that people in our communities can be mobile without using their cars and can age in place in their own neighborhoods.

Transportation. We need to accept two realities with regard to transportation. First, the Highway Trust Fund is undercapitalized, and we are not going to get the new revenue that we need to address maintenance and preservation of our existing transportation infrastructure or capital construction projects.

The transportation funding package that was voted on in May was defeated by a margin of 88-12. And while there is now talk of AAA introducing a three cent gas tax increase next session, I for one, have no stomach to waste anymore time and energy on the intractable and self-serving debate between that organization and the truckers.

The second reality is that we cannot build our way out of our traffic problems. That is, money for new capital construction alone will not buy us the mobility and livability we desire. If you doubt this just look to Los Angeles or Atlanta, two cities that pursued that strategy. That means that we need to do a much better job of managing the demand side.

For example, creating incentives and/or disincentives that change how and when people use the transportation system. The Sunset highway between Portland and Hillsboro is a case in point. During the morning and evening commutes, it is three solid lanes of bumper-to-bumper traffic. At other times of the day two lanes or less could efficiently accommodate the traffic load. My point is that the problem on the Sunset is not a capacity problem, it is a timing problem. And if we don't have the resources to build another lane, then we need to more efficiently use the capacity we do have.

Other steps to deal with our transportation problems include better access management to protect the capacity of our state highways, in particular, which are designed to move people between cities. A lot of the highway capacity on I-5 at Wilsonville, Medford and Roseburg, for example, is taken up not by people travelling from California to Washington, but rather by people going from one end of town to another. To address this we need resources for these communities to develop frontage roads and street networks.

Finally, we need to encourage and finance transit and other transportation options. For instance, instead of paying \$30 million to add a lane to an area with heavy commuter traffic, we should consider a \$500,000 investment for commuter buses that could alleviate the need for the new lane in the first place.

Economic development. As we continue to attract new businesses to Oregon, and as our existing businesses continue to expand, we need to develop a strategic plan to direct some of that development away from high growth areas and into those areas that desperately need jobs and a more diversified economic base.

In the last legislative session I was able to win passage of virtually all of the elements of what I call the Oregon Livability Initiative. This involves the 21st Century Community Fund which is capitalized with \$140 million. These funds are reserved specifically for the kinds of things that can make a difference in both urban and rural Oregon. They are targeted for rebuilding rural and distressed urban economies; for local street networks; for community infrastructure investments in sewer and water systems; for providing community incentives to revitalize downtowns and main streets as community centers; and for affordable housing.

I will ask the next Legislature to use some of the capacity we still have to issue lottery backed bonds to make additional resources available for this purpose. If we took full advantage of the available bonding capacity we could issue \$200 million in bonds over a three-year period. This state commitment would stimulate over \$1 billion in investments in community infrastructure over the next 10 – 12 years, and we could accumulate a powerful base of capital for future investment. At the end of a 10-12 year period, Oregon would be able to make infrastructure investments of \$55 million a year on a sustainable basis.

To take full advantage of these infrastructure resources, however, we must be able to target them in a coordinate way that maximizes their impact. Toward that end, I created the Community Solutions Team with which many of you are familiar. It is made up of the heads of those five agencies that effect how communities develop physically: Transportation, Housing, Economic Development, Land Use and Environmental Quality.

There are now Community Solutions Teams in each region of the state operating with the motto: "solve problems – don't just run programs". These teams coordinate state resources to help solve problems which are defined by the community. Success depends not only on this kind of assistance and coordination from the state agencies, but even more on local community leadership with a clear vision of how they want to develop.

And I have asked the Community Solutions Team to work with this Forum to develop an investment strategy for the Willamette Valley. The strategy will provide a blueprint for public and private investments in communities throughout the Valley.

Environment

Finally, let me say something about our environment and about ensuring that Oregon continues to enjoy clean water and healthy ecosystems. Probably nothing is more closely associated with Oregon than its natural environment and its ethic of environmental stewardship. If we are to maintain that ethic as a legacy for the future than we must recognize the futility of relying solely on the traditional tools of regulation and litigation to advance the cause of environmental health. Take the issue of water quality as a case in point.

Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing the late Governor McCall when he led the effort to clean up Oregon's Willamette River in the 1970's. Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing nonpoint-source pollution -- perhaps the major challenge facing us on the Willamette River and throughout the West today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, and Eugene.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will be a long-term commitment to sustained environmental stewardship -- by millions of people living in the watershed.

The fact is that we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that call for, and result in, greater individual responsibility and accountability for our air, land and water.

You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts. You can only achieve that through a collaborative and cooperative process that engages thousands of people and gives them a stake in the problem and some degree of ownership in the solution. This is a role I believe the Willamette Valley Livability Forum can play.

We must also recognize that preserving and restoring ecosystem and watershed health is only an issue because of the growing conflict between economic interests and environmental interests. Therefore, our approach must be based on a policy that recognizes and balances a broad range of interests -- a broad range of values -- and that reduces polarization and increases collaboration.

That means two things. First, that those in the natural resource industries must be willing to examine their practices and be open to modifications that will reduce the impact of their economic activities on the natural environment. We are beginning to achieve this objective through the Oregon Plan for Salmon and Watersheds, the Healthy Streams Partnership, the Forest Practices Advisory Committee and through the development of the Willamette Restoration Initiative.

Second, success means that the rest of us must separate the people from the practices -- we must acknowledge the legitimacy of their need to earn a living and of their contribution to our state, even as we work to help them modify their practices. We must remember, for example, that the farming way of life -- the farming culture -- goes back over 150 years and is part of the fabric and heritage of the West. It is a part of who we are as Oregonians. Attacking people and their way of life creates resistance and little gain. Acknowledging people and their legitimacy and focusing on practices, however, can lead us to the future we desire.

Let me say in closing that the sum total of all these actions and policies -- if we are successful in achieving them -- amounts to nothing short of a sustainable Oregon. Imagine, if you will, three overlapping circles -- one representing economic needs, one representing environmental needs and one representing community or social needs. The area where the three circles overlap is the area of sustainability, the area of livability -- the area where all the threads of quality of life come together.

If we are to build a sustainable future for Oregon we must recognize that these three circles are not separate, unrelated entities. Rather they are the common desires and aspirations of all Oregonians and we must therefore strive to ensure that our efforts result in simultaneously meeting environmental, economic, and community needs throughout our state.

As a final note, I have to urge all of you to vote "no" on Ballot Measures 2 and 7. These measures are clearly designed to dismantle Oregon's cherished land use planning program. We cannot allow these measures to become law.

As William Jennings Bryan said: "Destiny is not a matter of chance, it is a matter of choice. It is not something to be waited for, it is something to be achieved." If we are willing to recommit ourselves to the Oregon community -- and to the proposition of "One state, one people, one destiny" -- then surely our future will be a sustainable one.

Governor John Kitzhaber

**"Building a Sustainable Future for Oregon"
Challenge of Change Conference**

October 26, 2000

Good afternoon. It is a pleasure to address this conference once again.

About two months ago I spoke to the Chataqua conference at South Western Oregon Community College where we attempted to answer the question, "Can we have it all: a healthy economy, a clean environment and great livability?" To put it another way, "How can we sustain those things that contribute to Oregon's exceptional quality of life in the face of unprecedented growth?"

What does sustainability mean? I define sustainability as managing the use, the development and the protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs. What is important to understand about this definition is that it requires that we simultaneously meet environmental, economic and community needs.

Thus, to me, when we talk about sustainability, we are really talking about quality of life a combination of elements which, together, produce the richness of place and experience that we associate with Oregon.

These elements encompass more than the stunning beauty and powerful landscapes of our natural environment -- although these clearly help define us. They also encompass a strong economy with jobs and job security; and educational opportunities for our children and increasingly for adults of all ages as economic success becomes ever more closely linked to knowledge and information. And quality of life encompasses safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements are something we hold in common -- they represent a common set of desires and aspirations that add value and quality to our lives. All Oregonians want these same things, no matter where they live or what they do for a living. And our efforts to secure them has, at least in the past, been a joint undertaking that produced a kind of cohesiveness that has held us together and allowed us to act in concert for the good of the larger Oregon community.

To put it another way -- imagine Oregon as a fabric woven from threads which represent these varied elements of a good quality of life. If all the threads are present and balanced, the fabric is strong and rich. It is a fabric of high quality, if you will. But if any of these threads are missing -- anywhere in Oregon -- then the entire fabric is weakened and its quality is diminished.

Today, the threads of our quality of life are beginning to fray and unravel -- albeit for different reasons in different parts of the state. As a result, we are losing that cohesiveness and sense of common purpose that held us together in the past and allowed us to act as an Oregon community to meet the challenges that faced us.

Throughout Oregon, people are anxious and uncertain because the world is changing, because their lives are filled with

change -- and because the landscape that has helped define them is changing as well. They perceive that they are losing something valuable -- that their quality of life is at risk and that they have little control over it.

There are three basic causes for what is happening around us: (1) globalization and the shift from a natural resource-based economy to an information-based economy; (2) the impact of meeting federal environmental standards, especially the Endangered Species Act and the Clean Water Act; and (3) the impact of growth on Oregon communities.

These things, which have taken place over the last 20 years, have affected all parts of Oregon -- albeit in different ways -- and have brought about a far reaching reversal in the fortunes of urban and rural Oregon.

From 1980 to 1999, wood products employment in Oregon declined nearly 30 percent while high technology employment increased 102 percent. Twenty years ago there were 69,500 well-paying timber jobs in Oregon. Over 25,000 of those were lost during the recession of 1980-1982, a time during which Oregon added over 3,000 hi tech jobs.

While the wood products industry experienced a strong post-recession recovery, the 1990 listing of the Northern Spotted Owl under the ESA brought about a permanent loss of over 20,000 -- a loss occurring almost entirely in rural counties containing federal forests. By contrast, the high technology industry -- predominantly in Portland and the Willamette Valley -- has grown by nearly 30,000 jobs since 1990 alone.

These events have had a significant impact on our quality of life.

In urban Oregon, economic expansion has brought with it abundant jobs, increasing incomes, more consumer choices and a wide array of public services. At the same time, however, there have been negative consequences to this economic success: dramatic population growth, sprawl, congestion, an overburdened public infrastructure and pollution.

In rural Oregon, by contrast, many communities face decline and stagnation. These communities face a different kind of threat to their livability -- to their quality of life: low wages, high unemployment, the loss of business opportunities and the migration of their youth to other communities that offer more career choices.

And in both urban and rural Oregon, the challenge of meeting the requirements of federal environmental laws is becoming a central issue. In some respects, rural Oregon has had more experience with this -- particularly the timber industry with the 1990 listing of the owl. But this is clearly a shared responsibility.

The point is that in both urban and rural Oregon, our quality of life is under siege. Community stability and cohesiveness is being threatened by economic expansion and too many people on the one hand, and by economic stagnation and the out-migration of youth on the other. And if we hope to "have it all" we will have to address two things: (1) two sets of different, but interrelated economic and growth-related issues, one set in urban Oregon and one set in rural Oregon; (2) recasting the environmental debate.

Rural Oregon

Let's start with that set of issues affecting primarily rural Oregon. The challenges in the non-metropolitan parts of the state are: (1) not enough public infrastructure to diversify the economy; (2) job loss and out-migration, especially of the young; and (3) continued reliance on natural resource industries which, in many cases, employ practices that contribute to the challenge of meeting the ESA and Clean Water Act.

In short, rural Oregon needs a more diversified and environmentally sustainable economic base which provides a wider range of job opportunities. To accomplish this will require some significant infrastructure investments and some fundamental changes in our natural resource industries.

Now, even while we work toward rural economic diversification, we must recognize that the natural resource industries will continue to be both a cornerstone of the rural economies and a major contributor to Oregon's economy as a whole. In 1998/99, for example, production agriculture and food processing contributed a total of \$5.5 billion to the Oregon

economy. And the wood products industry in our state still employs 49,000 people.

To maintain healthy natural resource industries in rural Oregon, however, these industries must recognize the impact of globalization on the markets which have historically supported them. For example, among the elements of the agriculture industry that are suffering the most today, are those who continue to grow bulk commodities like wheat.

Oregon soft white wheat yields the best pastry flour in the world and in the past almost 80 percent of it has been exported as a bulk commodity into the international market -- which has set a pattern of behavior that has helped define the wheat industry.

This mindset and the strong adherence to the practice of growing large amounts of unprocessed bulk commodities is one of the main obstacles to maintaining the viability of the wheat industry in Northeast Oregon. The People's Republic of China, for example, with few environmental and labor laws has the capacity to raise far more wheat at a much lower cost than we can.

Gilliam County Judge Laura Pryor, in a recent paper about the agricultural economy of eastern Oregon, wrote that the single greatest obstacle to finding solutions is the resistance of the local grower to objectively consider alternative practices. (This also applies to the environmental impact of these industries, a point I will touch on later).

Those elements of the agriculture industry that are doing well, by contrast, are largely those that add value through processing, pursue organic production or some other niche-marketing effort that differentiates their commodities. The nursery industry, which today is Oregon's number one commodity, offers an excellent example.

While the natural resource industries will continue to be a cornerstone of the rural economy – it is equally important to broaden and diversify the rural economic base. That means infrastructure: investments in roads, water and sewer systems, and telecommunications. Indeed, I believe that giving rural Oregon access to broad band fiber optic cable will prove as important as was rural electrification in the first half of the last century. My administration is aggressively pursuing this objective through the Oregon Enterprise Network.

Urban Oregon

In urban Oregon the challenges are: (1) an overwhelmed public infrastructure from schools to roads to water and sewer systems; (2) increasingly severe traffic problems which reduce quality of life through congestion and decreased mobility, and affect economic viability by increasing transit time (and thus the cost) of products being moved by truck; (3) sprawl; and (4) serious non-point source pollution problems which erode watershed health and contribute to the challenge of meeting the ESA and Clean Water Act.

The rapid increase in population is probably the single most important contributing factor to both the overburdened infrastructure and the growing traffic problems being experienced in urban areas from Washington County, to Bend and Medford. And as long as Oregon has great livability and a strong economy, people will continue to come here. And as long as there are more job opportunities in the urban parts of the state, those areas will absorb a disproportionate share of that growth.

Growth is a double-edged sword. On the one hand, it is associated with the economic benefits of a strong economy. On the other hand, it can erode livability by contributing to such things as sprawl, congestion and pollution.

There are several ways growth can be slowed, and even reversed. One way would be to put the economy in the tank. During the last recession, Oregon actually lost population. Another way would be to destroy our livability so that Oregon is no longer such a nice place to live. I don't think anyone would advocate for either of these approaches. That leaves two other options. One is to stop subsidizing growth and the other is to do a better job of managing growth.

On the surface, most people would probably say that we should not be subsidizing the very growth that is threatening Oregon's quality of life. But, in fact, we are. For example, every new house built in Oregon requires services: sewers,

roads, fire and police protection and, in many cases, schools. None of these costs are fully paid by either the developer or the home buyer. In fact, as my Task Force on Growth noted, growth exacerbates government revenue problems, it does not relieve them.

In addition, our tax policy encourages growth both through business subsidies and encouraging larger rather than smaller families.

I recognize that changing these policies that subsidize growth is a very controversial proposition, and I assume that we are not yet ready to take these things on. Ultimately, however -- if we want to "have it all" -- I believe that we are going to have to come to terms with these questions. Our state has a finite "carrying capacity," if you will. We cannot forever absorb 40-50,000 new residents a year without losing part of what makes Oregon so special. We may not be ready to tackle these questions today, but let us not forget the words of the late writer Edward Abbey, "Growth for growth's sake is the ideology of the cancer cell."

This leaves us with the option of better managing the growth we are getting. To me this entails three things: increasing density, developing new strategies to deal with our transportation challenges, and rethinking our economic development policies.

Increasing density. It is fair to say that there are two things Oregonians don't like (I mean other than a sales tax and self-service gas): they don't like sprawl and they don't like density. Well, we have to get over that. We all know that sprawl is not only expensive, but that it reduces our livability as well. While increasing density is less expensive, it too can reduce livability-- but it doesn't have to. Look at the Pearl district and Martin Luther King Blvd. in Portland and the conversion of the Old Mill Site in Bend.

Therefore, we must adopt policies that facilitate and encourage the revitalization of downtowns and mainstreets as community centers -- and that strengthen our neighborhoods. Policies that encourage and provide incentives for mixed-use development. Policies that provide a range of transportation and housing options so that people in our urban centers can be mobile without using their cars and can age in place in their own neighborhoods.

Transportation. It is no secret that I believe our Highway Trust Fund is undercapitalized. Not only are we falling behind not only in the maintenance and preservation of our existing transportation infrastructure, there is a crying need for additional resources for some strategic capital construction projects to relieve congestion and facilitate freight movement.

At the same time we need to accept two realities. The first one is that we are not going to get the kind of infusion of new revenue into the Trust Fund that we need to address these problems. The transportation funding package that was voted on in May was defeated by a margin of 88-12. And while there is now talk of AAA introducing a three cent gas tax increase next session, I for one, have no stomach to waste anymore time and energy on the intractable and self-serving debate between that organization and the truckers.

And even if we got a three cent increase, it would not even begin to address the unmet need. Furthermore, the gas tax itself is becoming less and less attractive as the primary source of highway funds for the 21st century. As cars grow ever more fuel efficient, each cent of gas tax will generate less and less revenue.

The second reality is that we cannot build our way out of our traffic problems. That is, money for new capital construction alone will not buy us the mobility and livability we desire. If you doubt this just look to Los Angeles or Atlanta, two cities that pursued that strategy. That means that we need to do a much better job of managing the demand side.

For example, creating incentives and/or disincentives that change how and when people use the transportation system. The Sunset highway between Portland and Hillsboro is a case in point. During the morning and evening commutes, it is three solid lanes of bumper-to-bumper traffic. At other times of the day two lanes or less could efficiently accommodate the traffic load. My point is that the problem on the Sunset is not a capacity problem, it is a timing problem. And if we don't have the resources to build another lane, then we need to more efficiently use the capacity we do have.

I know this is controversial -- my 1997 proposals for a vehicle miles traveled tax and for broadening the base for highway funding -- were dead on arrival. But traffic congestion is controversial too. And if we want to "have it all" we are going to have to make some difficult choices. Nobody is going to hand this to us.

Other steps to deal with our transportation problems include better access management to protect the capacity of our state highways, in particular, which are designed to move people between cities. Yet there are many instances of development patterns that allow municipalities to capture a portion of a state -- or even interstate -- highway for its mainstreet. A lot of the highway capacity on I-5 at Wilsonville, Medford and Roseburg, for example, is taken up not by people travelling from California to Washington, but rather by people going from one end of town to another. To address this we need resources for these communities to develop frontage roads and street networks.

Finally, we need to encourage and finance transit and other transportation options. I continue to believe that a portion of the Highway Trust Fund should be dedicated to this purpose. It makes no sense to have a dedicated fund that will provide \$30 million to add a lane to an area with heavy commuter traffic, but not \$500,000 for commuter buses that could alleviate the need for the new lane in the first place.

Economic development. As we continue to attract new businesses to Oregon, and as our existing businesses continue to expand, we need to develop a strategic plan to direct some of that development away from high growth areas (at least until the capacity of the infrastructure catches up with the demand) and into those areas that desperately need jobs and a more diversified economic base.

The one thing that is common to the challenges facing urban and rural Oregon is the need for money to invest in infrastructure and some way to ensure that these resources are invested wisely.

In the last legislative session I was able to win passage of virtually all of the elements of what I call the Oregon Livability Initiative. This involves the 21st Century Community Fund which is capitalized with \$140 million. These funds are reserved specifically for the kinds of things that can make a difference in both urban and rural Oregon. They are targeted for rebuilding rural and distressed urban economies; for local street networks; for community infrastructure investments in sewer and water systems; for providing community incentives to revitalize downtowns and main streets as community centers; and for affordable housing.

Because of the importance of targeted infrastructure investments to our livability and economic stability, I will ask the next Legislature to use some of the capacity we still have to issue lottery backed bonds to make additional resources available for this purpose. These resources would give us the ability to upgrade water and sewer systems to meet water quality standards; to make infrastructure investments in rural communities to foster economic diversification; and to provide gap financing to help revitalize downtowns.

To understand the potential magnitude here if, for example, we took full advantage of the available bonding capacity we could issue \$200 million in bonds over a three year period. This state commitment would stimulate over \$1 billion in state and local investments in community infrastructure over the next 10 – 12 years.

Because funds are only in part need based – but are also backed by charges to pay for infrastructure – our state revolving fund could accumulate a powerful base of capital for future investment in community infrastructure. At the end of a 10-12 year period, Oregon would be able to make infrastructure investments of \$55 million a year on a sustainable basis.

To take full advantage of these infrastructure resources, however, we must be able to target them in a coordinate way that maximizes their impact. Towards that end, I created the Community Solutions Team with which many of you are familiar. It is made up of the heads of those five agencies that effect how communities develop physically: Transportation, Housing, Economic Development, Land Use and Environmental Quality.

There are now Community Solutions Teams in each region of the state operating with the motto: "solve problems – don't just run programs". These teams coordinate state resources to help solve problems which are defined by the community. Success depends not only on this kind of assistance and coordination from the state agencies, but even more on local community leadership with a clear vision of how they want to develop -- leadership that is willing to make

some of the difficult tradeoffs involved with "having it all."

Environment

Finally, let me say something about our environment and about ensuring that Oregon continues to enjoy clean water and healthy ecosystems. Probably nothing is more closely associated with Oregon than its natural environment and its ethic of environmental stewardship. If we are to maintain that ethic as a legacy for the future than we must recognize the futility of relying solely on the traditional tools of regulation and litigation to advance the cause of environmental health. Take the issue of water quality as a case in point.

Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing the late Governor McCall when he led the effort to clean up Oregon's Willamette River in the 1970's. Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing nonpoint-source pollution -- perhaps the major challenge facing us on the Willamette River and throughout the West today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, Eugene and, yes, Coos Bay and Roseburg. This involves what people put on their lawns, whether or not they wash their cars in the driveway with detergent, and hundreds of other individual actions that contribute to the nonpoint source pollution load.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will a long term commitment to sustained environmental stewardship -- by millions of people living in the watershed -- most of them living in the city.

The fact is that we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that call for, and result in, greater individual responsibility and accountability for our air, land and water.

You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts. You can only achieve that through a collaborative and cooperative process that engages thousands of people and gives them a stake in the problem and some degree of ownership in the solution.

We must also recognize -- particularly in rural Oregon -- that preserving and restoring ecosystem and watershed health is only an issue because of the growing conflict between economic interests and environmental interests. Therefore, our approach must be based on a policy that recognizes and balances a broad range of interests -- a broad range of values -- and that reduces polarization and increases collaboration.

That means two things. First, that those in the natural resource industries must be willing to examine their practices and be open to modifications that will reduce the impact of their economic activities on the natural environment. We are beginning to achieve this objective through the Oregon Plan for Salmon and Watersheds, the Healthy Streams Partnership, the Forest Practices Advisory Committee and through the development of the Willamette Restoration Initiative.

Second, success means that the rests of us must separate the people from the practices -- we must acknowledge the legitimacy of their need to earn a living and of their contribution to our state, even as we work to help them modify their practices. We must remember, for example, that the farming way of life -- the farming culture -- goes back over 150 years and is part of the fabric and heritage of the West. It is a part of who we are as Oregonians. Attacking people and their way of life creates resistance and little gain. Acknowledging people and their legitimacy and focusing on practices, however, can lead us to the future we desire.

Let me say in closing that the sum total of all these actions and policies -- if we are successful in achieving them --

amounts to nothing short of a sustainable Oregon. Imagine, if you will, three overlapping circles -- one representing economic needs, one representing environmental needs and one representing community or social needs. The area where the three circles overlap is the area of sustainability, the area of livability -- the area where all the threads of quality of life come together.

If we are to build a sustainable future for Oregon we must recognize that these three circles are not separate, unrelated entities. Rather they are the common desires and aspirations of all Oregonians and we must therefore strive to ensure that our efforts result in simultaneously meeting environmental, economic, and community needs throughout our state.

As William Jennings Bryan said: "Destiny is not a matter of chance, it is a matter of choice. It is not something to be waited for, it is something to achieved." If we are willing to recommit ourselves to the Oregon community -- and to the proposition of "One state, one people, one destiny" -- than surely our future will be a sustainable one.

Governor John Kitzhaber

Resuscitating the Oregon Health Plan Foundation for Medical Excellence

October 25, 2000

Ten years ago, the State of Oregon undertook an innovative and controversial approach to universal coverage. In its early years, the OHP enjoyed broad, bipartisan support, a remarkable and refreshing solidarity among all the elements of the health care delivery system -- and a sense of empowerment and pride among physicians.

Today, however, the OHP finds itself at a crossroads. We have encountered federal inflexibility in benefit design and eligibility; frustration and disempowerment among physicians; a potential collapse of the managed care delivery system in some parts of Oregon; and a medical inflation rate that has outstripped increases in state reimbursement rates. The promise of universal coverage remains unfulfilled.

The decisions we make in the next three months -- and in the upcoming legislative session -- will largely determine the fate of this ten-year effort. Tonight I challenge all Oregonians to come together in a common cause to stabilize the OHP -- and to continue our march toward universal coverage. But to craft a solution we must first understand the problem -- we must rebuild trust and begin a dialogue. That is the purpose of my remarks here tonight -- to find that common ground on which we can rebuild and move forward together.

Let's start with the immediate challenge: that changing today's health care system is a daunting proposition. As complicated as the system has become, however, at its heart lies a rather straightforward dynamic that drives most of the individual decisions in one way or another. This dynamic becomes apparent if we view the health care system in the context of four questions: who is covered?, what is covered?, how much is covered?, and how is it paid for. In other words, the health care system revolves around four variables: eligibility, benefit, utilization and cost. Furthermore, there is a hydraulic relationship between these four variables. If you increase eligibility to cover more people, you will increase cost unless you reduce benefits and/or utilization. Likewise, if you increase benefits and/or utilization, you will increase cost unless you reduce eligibility.

As the cost of providing care has increased, all the elements of the delivery system -- physicians, hospitals and purchasers -- have sought strategies to avoid those costs by shifting them within the system. The two most common strategies employed by both public and private payers involve manipulating two of these four variables: eligibility and cost.

States -- as public payers -- employ these strategies in the context of the Medicaid program which was enacted in 1965. Medicaid is administered by the states which receive federal "matching" dollars for each state dollar that is spent. The current Oregon match rate is 60 percent -- that is, of every Medicaid dollar spent in Oregon, the federal government pays 60 cents and the state 40. In order to receive the federal match, however, states must comply with a host of federal regulations, including those which deal with eligibility and coverage.

Eligibility for Medicaid is based on "categories" established by congress -- for example, families with dependent

children who are on welfare; certain categories of pregnant women; the blind, the disabled, and frail elderly citizens.

If a state elects to participate in Medicaid, the federal matching dollars are available only for covering people in these categories. In addition, there are strict requirements pertaining to benefit levels and a set of mandated benefits that must be provided in order to secure federal matching dollars.

The availability of federal matching dollars, and the link between these dollars and federal requirements, gives Congress enormous leverage over the states and how they operate their Medicaid programs. What little flexibility states have is limited to setting income eligibility levels for those on welfare and to determining provider reimbursement rates.

Thus, historically, when states have faced revenue shortfalls, they have lowered income eligibility. This amounts to rationing people -- implicitly, yes --but rationing nonetheless. And it is "all-or-nothing" rationing. Instead of giving everyone coverage for something, we give some people coverage for everything and others coverage for nothing. And those who made the decision to change eligibility can avoid any accountability for the health consequences of the people who lose coverage.

The other strategy, manipulating cost, is fairly straightforward and usually takes the form of either directly reducing provider reimbursement rates or discontinuing payment for something physicians are still required to provide. This is a direct cost shift to providers and shows up as uncompensated care. At some point, providers stop seeing -- or try to avoid seeing -- Medicaid patients. This constitutes another form of implicit rationing and, again, those who made the policy decisions that led to it escape any accountability for the consequences.

In the end, costs are shifted, but not controlled, and there is a steady increase in the number of people who cannot afford to pay for their health care needs. When they get sick enough, they show up in the emergency room where they are treated for serious problems, in one of the most expensive care settings, late in the course of their disease process, when costs are higher and outcomes likely to be poorer. And the costs incurred are shifted back through the system, repeating the cycle.

The OHP was initially designed to break this cycle and, as you recall, the national controversy surrounding it, particularly in its early years, was a direct result of our efforts to eliminate implicit rationing -- our efforts to make these choices explicit. We sought to do so by first answering perhaps the single most fundamental question in the health care debate: who has the responsibility to pay for the health care for the poor? In fact, it is the failure to explicitly answer this question that drives the cost-shifting dynamic I mentioned earlier.

Oregon concluded that caring for the poor is a public sector responsibility and we defined that responsibility in statute at 100 percent of the federal poverty level (FPL). In short, we concluded that eligibility for public coverage should be based on financial need -- rather than on an arbitrary set of federal categories.

Of course this ran headlong into Medicaid eligibility policy because Oregon was proposing to cover everyone with an income below the FPL, not just those who met federal categorical requirements. This meant that in order to get federal matching dollars for the non-categorical citizens we intended to cover, Oregon would have to obtain a waiver from the federal Health Care Financing Administration (HCFA).

Having defined eligibility, we then openly acknowledged the reality of fiscal limits -- a reality based on the fact that there is a limit to the level of taxation the public will tolerate. And since all tax dollars cannot go to health care at the expense of education, public safety and other priorities, it follows that the public sector health care budget is finite.

It also follows that people who depend exclusively on this source of revenue to finance their health care will necessarily have some limits imposed on what will be paid for. In other words, health care rationing, in some form, is inevitable.

The reality of fiscal limits makes choices inevitable. In Oregon, we committed ourselves to making those choices explicit by establishing priorities -- in an open public process based on a set of clear and defensible criteria -- and we committed to assume accountability for the consequences of those choices. This principle lies at the heart of the philosophy behind the Oregon Health Plan and is what sets the Oregon process apart from other states.

The Health Services Commission (HSC) was created to carry out this prioritization process -- ranking medical condition/treatment pairs from the most important to the least important, in terms of the health produced, and judged by a consideration of clinical effectiveness and social values. Starting with the 1991 legislative session -- and each session since then -- the HSC has presented the Oregon legislature with an updated prioritized list of health services accompanied by actuarial information which assigns a cost to provide each line (or condition/treatment pair) on the list.

To ensure accountability for the hard choices brought about by the reality of limited resources, we established a clear separation between the prioritization process and the determination of the benefit level. While the HSC develops the priority list in an open and objective process, it does not determine the benefit level. That responsibility is left to the legislature.

The legislature is statutorily required to start at the top of the list and determine how much can be funded from available revenues and what additional revenues will be needed to fund an acceptable "basic" package. In this way, not only is the benefit directly linked to the reality of fiscal limits, but the legislature is clearly and inescapably accountable not just for what it funds in the health care budget, but also for what it chooses not to fund.

The way Oregon proposed to develop its benefit package also ran afoul of the Medicaid regulations pertaining to the mandated minimum benefit. Thus, the concept of a prioritized benefit package -- even one based on clinical effectiveness -- also required a waiver from HCFA.

When first enacted, the prioritization process -- and the explicit decisions about benefit level -- sparked a firestorm of national controversy and generated strong opposition to the Medicaid waiver needed to implement our plan. Indeed, Congressman Henry Waxman repeatedly referred to our effort as the "Oregon Medicaid rationing experiment." And this mis-representation of our objective had its effect. We first applied for the waiver in 1991, and it was denied by President Bush in 1992. It was not until March of 1993 that the waiver was finally approved by the Clinton Administration.

Given that controversy, it is interesting to note that our prioritized list and explicit decision-making process were largely responsible for much of our early success. In its six-year history, for example, the OHP produced a dramatic expansion of access, especially among children. The percent of children without health insurance dropped from 21 percent to fewer than 8 percent. There has been an increase in the number of women receiving prenatal care in the first trimester and a reduction in the incidence of low birth weight babies. In addition, annual hospital charity care declined by more than 30 percent and emergency room use declined by almost 10 percent.

So it is important to recognize that the crisis facing the OHP today is not due to the underlying principles on which it is built, but rather to two other factors. First, the failure of some parts of the delivery system to appreciate the unique nature of this population by applying a traditional market approach; and, second, federal inflexibility on benefit design and eligibility within the Medicaid program. Of course, our challenge has been exacerbated by the double-digit medical cost inflation that is affecting the private as well as the public side of the health care system.

Thus, to stabilize the OHP and continue to move toward universal coverage, each of these factors must be understood and addressed. Let's begin with the problems within our delivery system.

The OHP delivery system has evolved along two different paths: an organized community response and a traditional market competition model. The former has been quite successful, the latter largely a failure. In those parts of Oregon that have clung to a market model for the OHP, the managed care delivery system is in crisis. Unfortunately, these areas account for about 45 percent of the OHP population, putting the entire plan in jeopardy.

To understand the problem this has created, we must remember that OHP cannot be viewed outside the context of what is happening in the larger health care system within which it exists. The OHP was first implemented in 1994, just at the time that the move to managed care was hitting its full stride in Oregon. It was a time of intense market competition between physicians and physician groups. The OHP was caught up in this competitive environment, but did not cause it.

This competition -- which many did not survive -- has had a direct impact on managed care systems in general as well as on the OHP. In the OHP we are dealing with a group of citizens who, by and large, lack the resources to pay for their care. A traditional market approach does not work with them because, quite simply, the objective of market competition

is to make a profit, not to foster social responsibility.

If one player in the market has to take a disproportionate share of those who cannot pay, or who cannot pay as well as those who are commercially insured, they will be at a competitive disadvantage relative to the other players. Thus, all things being equal, nobody will compete for the poor. To use market terminology, paying patients are seen as a "market share" to be competed for, while non-paying patients are seen as "liabilities" to be avoided through selection.

However, if everyone shares equally in the cost and risk of caring for the OHP population, nobody is put at a competitive disadvantage in the health care marketplace. Unfortunately this has not been the case throughout Oregon.

In those communities where the competition has been the most intense -- and especially in those with more than one hospital -- there has been a disaggregation of large physician groups to much smaller ones. These smaller physician units, like any small business, are very risk-averse and are interested in the safest and most profitable line of business. They have less capacity to assume responsibility, risk and accountability -- especially when it is not being equally shared. As a result, access has been reduced and many emergency rooms have seen a significant increase in visits by Medicaid patients.

Competition between hospitals and health plans has further encouraged selection and the risk avoidance. Hospital-physician relationships are frayed, trust has been eroded and the climate for cooperation and collaboration in these communities has been severely compromised.

While physicians, hospitals and health plans have all borne risk as sectors of the health care delivery system, within those sectors, risk has not been equally shared -- among physicians, among hospitals or between physicians and hospitals.

Furthermore, there are some sectors of the system, such as the pharmaceutical industry, that have borne almost no risk whatsoever. Rather than assuming some risk for the expansion of care to the poor, this industry has consistently raised prices and driven up utilization through aggressive marketing and direct advertising.

In larger communities, a kind of geographic selection has exacerbated this situation. Hospitals and physician practices located in poor inner city areas, for example, may see a much higher percentage of OHP and indigent patients, than hospitals and practices located in more affluent areas.

This situation has prevented an organized community response and equitable risk sharing. An organized community response is based on the recognition that the medically indigent are a part of the community where they live and that the community cannot ultimately avoid assuming responsibility for their care. In other words, the community cannot avoid risk. Certainly the various elements of the delivery system can avoid risk through selection, but these people will ultimately show up in the emergency room and the costs incurred will be shifted back through the community.

Once there is recognition that risk cannot be avoided, the focus changes first to spreading risk equitably throughout the community among all the physicians and the hospital or hospitals involved; and second, to managing the risk. While managing risk is not generally view as attractive, once risk is acknowledged as unavoidable and is spread equitably, the table is set for the important explicit decisions that must be made in prioritizing the needs of individuals and populations. That is what managing care should really be about.

These organized efforts are different in each community, but they all share a set of common elements which are largely absent in the areas where the OHP is struggling. These elements include: (1) a high degree of trust and co-operation between physicians and hospitals; (2) a strong physician network that works in partnership with the hospital or hospitals in the community; and (3) an equitable sharing of cost and risk.

This experience has led us to the conclusion that an organized community response is a necessary element in delivering quality care to low income citizens and a cornerstone to achieving universal coverage.

While meeting the challenge of the delivery system is something we can do ourselves here in Oregon, if we so choose, addressing the question of the inflexibility of Medicaid policy will require action by the federal government. As I

mentioned, the central concept underlying the OHP is that -- given the reality of fiscal limits -- it is better to cover everyone for something, rather than covering some people for everything and some people for nothing. The objective was to eliminate implicit rationing, to shift the focus of the debate from who is covered to what is covered, and to directly link the benefit to the reality of fiscal limits. Instead of implicitly making a list of people and drawing a line, we would explicitly make a list of benefits and draw a line.

This effort, however, has been largely frustrated by federal policy -- in particular the lack of flexibility in benefit design and eligibility requirements. HCFA has repeatedly resisted -- or outright prohibited -- any movement of the line. Their hammer has been their ability to revoke our waiver and the significant federal matching dollars that come with it.

Let me emphasize, however, that this problem is far broader than simply "moving the line." Although we have been frustrated by HCFA's inflexibility on this issue -- we also recognize that beyond a certain point, moving the line becomes self-defeating, as people begin to show up in the emergency room to gain access to treatment which should rightly have been covered in the basic benefit. So the problem is not just with this inflexibility, but even more so with the almost religious adherence to a set of utterly inconsistent, and often illogical, policies created over the past 35 years.

As I mentioned earlier, one of the few areas of flexibility states have within the Medicaid program is to set the income eligibility level -- but there is no flexibility concerning the mandated minimum benefit level. Thus, federal policy requires states to maintain the benefit package even if the only way this can be done is to change eligibility for Medicaid so that fewer people are covered.

This irrational policy reflects the failure of the federal government to explicitly answer the question: "who has the responsibility to pay for the poor?" As I mentioned earlier, HCFA does not have a statutory responsibility to serve all poor Americans, but rather only certain entitled categories of poor Americans -- those who fall into certain categories. Other persons -- single and childless adult couples, for example -- do not qualify for coverage even though they too might be deeply impoverished.

Thus, federal policy has created a distinction between poor Americans: those who fit into a category ("categorical") and those who don't ("non-categorical"). The people in these groups may be equally impoverished, yet one group is entitled to care, the other not. In addition, the mandated minimum benefit package for categorically eligible excludes important services like prescription drugs and dental care which are optional.

In short, federal policy on both eligibility and benefit is narrow, serving certain impoverished populations, but not others; requiring certain benefits at any cost, but refusing to question whether these benefits are effective in improving health or whether the money it takes to provide them could be better spent.

For example, although our OHP-Medicaid benefit package is far more comprehensive than the statutory minimum (in fact, it costs 22 percent more than the minimum), we are not allowed to reduce the level of benefit as determined by our priority list by even so much as ten condition/treatment pairs in order to maintain coverage for a broader group of low income Oregonians. We could, however, cut all optional services from our benefit package, eliminating, for example, coverage for prescription drugs and dental care.

Similarly, we cannot provide the non-categorical eligibles in our Medicaid program a different benefit package than the categorical populations. We could, however, drop them from coverage altogether.

Taken together, these policies create an inflexible pattern of subsidies which force us into all or nothing coverage decisions -- and one size fits all benefit packages -- and which prevents us from using federal resources to help expand coverage to Oregonians based on a consideration of their relative financial and medical needs.

This experience has led us to the conclusion that achieving universal coverage will be almost impossible without either fundamental changes in the Medicaid program or far more flexibility than the Health Care Financing Administration (HCFA) has so far been willing to grant.

Finally, we are confronted with the challenge of medical inflation. Even if we are able to correct federal policy and share risk more equitably, we will continue to face an unsustainable system -- in both the public and private sectors --

unless we can also reduce the rate of medical inflation. There are many complex factors which underlie medical cost inflation, but they can be organized into four broad areas: consumers, providers, new technology and purchasers.

Direct advertising that bypasses the physician, for example, creates a consumer demand for particular services which may not reflect the best or most cost-effective therapy. In addition, "consumer choice" carries with it a significant cost that is often not appreciated in the current populist debate about "patient rights."

The wide variation in physician practice patterns contributes to overutilization -- as does the general resistance within the provider community to efforts aimed at measuring, reporting and comparing performance -- making it difficult to objectively determine value gained for dollars spent.

New medical technologies and pharmaceuticals carry with them a great potential benefit on an individual basis, but huge costs on a systemwide basis. Direct advertising of these new discoveries creates markets without a context for clinical judgement and cost-effectiveness.

Purchasers remain uninformed and largely unorganized, making it difficult for them to either judge the value gained for the dollars being spent on health care or to use their considerable market power to demand quality.

All of these stakeholders contribute in some way to this problem -- and all share in two common underlying and erroneous assumptions. First that health care is always synonymous with health; and second, that all medical interventions are of equal value and effectiveness. Successful cost containment depends on challenging these assumptions by recognizing that the objective of our health care system is health. That health care is a means to an end, not an end in itself, and that it must therefore be evaluated and funded -- at least with public dollars -- in a way that is consistent with this objective.

To stabilize the OHP and continue our progress toward universal coverage will involve short term, medium term and long term strategies.

In the short term, we must strive to make the transition from a commercial competitive delivery model to an organized community model with the following characteristics: (1) a successful partnership between physicians and hospitals; (2) the replacement of competition with collaboration; (3) the mutualization of risk among all providers in the community; (4) a single entity for managing and delivering care; (5) a solid physician network; (6) a commitment by hospitals to offer discounted rates to OHP patients and to support the physician network; and (7) an adequate claims payment system.

In addition, the state must work with our OHP contractors to simplify our administrative demands starting with encounter data and quality assurance requirements. We must also respond to the pressure brought about by unforeseen cost increases by providing a modest infusion of funding to help stabilize the doctors who provide the managed care that has been so effective in improving the lives of our OHP clients.

In the medium term, the state must be willing to accept additional risk for certain populations and/or services. We must also adjust capitation rates so that they compensate providers fairly.

The long term holds two challenges. First, we must openly challenge existing federal Medicaid policy and seek additional waivers in eligibility and benefit design that will allow us to develop benefit packages based on a consideration of the financial and medical needs of individuals and populations. We have the flexibility to use federal resources to expand coverage to Oregonians in a way that recognizes both the reality of fiscal limits and the need to make coverage choices based on the differences between the relative clinical effectiveness of various medical interventions.

This is the step that will connect the short- and mid-term strategies to a long-term vision of universal coverage in the state of Oregon. In this process, we must also raise the issue of the inequities in federal reimbursement -- the most egregious example of which is the AAPCC.

Second, we must work together to manage the unsustainable cost increases we are currently experiencing. For example,

physicians must bring to the table information about the relative effectiveness and appropriateness of various medical interventions in terms of the health produced. This information must be used to arrive at best practice guidelines with an initial focus on high variation, rare or extremely expensive procedures. Hospitals must work to reduce the cost of medical errors and to look for ways to regionalize rather than compete for tertiary services.

Consumers must be made aware of the cost of their individual health care decisions. More out-of-pocket cost must be associated with consumer choices which involve a greater expense without significantly greater effectiveness or efficacy. This must be approached with particular sensitivity in the OHP population, many of whom have little or no disposable income.

New technologies, particularly prescription drugs, must be evaluated in terms of cost, utilization and relative effectiveness. The Oregon Medicaid program is expected to experience a 60 percent increase in pharmaceutical costs between the current biennium and the next. This is neither sustainable nor can it be argued that we have seen anything close to a 60 percent increase in the health of this population.

Over the past year, we have tried to engage the pharmaceutical industry through an open public process, through private discussions and in other forums. We continue to wait for the industry to indicate any commitment to substantive reform or even a willingness to collaborate. In other states, impatience and frustration with this recalcitrance has led to confrontational solutions. We hope the pharmaceutical industry will consider Oregon differently.

Finally, purchasers must be organized to use their market power to obtain volume-based discounts and to ensure that there is a health benefit for the health care purchased. In addition, purchasers must use their combined political power to help secure additional federal waivers and to make the statutory changes necessary to control costs.

It is particularly important for the business community to recognize that it has a stake in the success or failure of the OHP. We are all in this together. If we fail to maintain this program, the cost of caring for these same people through the emergency room will not only be much higher, but it will be shifted to those employers offering health insurance and reflected in higher insurance premiums.

Of course, none of this is going to happen -- even with the most rational thought process -- unless we all decide it's time to do it. I think it's time. Since the Health Summit in Eugene I have met with over 100 of you, from all parts of the state. I am in contact with decision-makers in Eugene, Medford and Bend. I have met multiple times with Portland hospitals, health plans and physicians. In the next week I will be meeting with physicians in Salem and the mid-Willamette Valley. I am pressing all parties to commit to work together to stabilize the OHP and help us to improve it.

I have directed staff to begin the process of identifying strategies that would require Federal waivers. The grant recently awarded to us by HRSA will enable us to look at a variety of strategies in depth. I am asking that the Oregon Health Council and the Health Services Commission consider near term strategies to respond to current concerns regarding OHP benefit issues.

I have been following the debate regarding prescription drugs here in Oregon and in other states. I have directed state agencies involved in the OHP to use whatever public and private means available to identify meaningful strategies that the pharmaceutical industry would be willing to work with us on.

I have met with the Oregon Health Purchasers Coalition and plan to meet with a cross section of purchasers to assess their concerns and to urge them to engage in these issues. I am in contact with the legislative leadership and will expand on the legislative circle to gain bipartisan input and support for these initiatives.

I recognize that within each of the strategies I have outlined today, there is much room for disagreement. But there is also much room for compromise and creativity. Over the next three months, it is my intention to bring together a diverse group of stakeholders -- including legislative leadership of both parties -- to seek this common ground. It is my hope that this effort will provide the impetus needed to reenergize the health care debate in Oregon with a focus on those things we share, rather than on the areas over which we now seem divided.

In many ways things are discouraging today. The world has changed since we set out down this road ten years ago. But

we are not victims. To be a victim is to acknowledge that there is nothing we can do to change our circumstances. And I refuse to accept that. It is time for all of us -- but particularly for physicians -- to stop reacting and start leading. For unless we become part of the solution, we will continue to be victims of the problem.

Let us not forget that abandoning the OHP will not serve our common interests. On the contrary, it will take us back to 1993 -- before we had the federal waiver. Ninety thousand people will find themselves without health insurance coverage and we will lose more than \$400 million in federal funds from our health care system.

Without the OHP, those without a way to pay for their care will increase, not decrease. There will be less money in the system, not more. ER visits will increase and so will uncompensated care. Many hospitals will find themselves in trouble. Competition and risk-avoidance will increase; trust and cooperation would be further compromised. And we will become just another state with a health care system in disarray, a state without a plan, a state that has, by default, allowed its health care future to become a matter of chance, rather than a matter of choice.

Help me shape that future into something positive and enduring. The Oregon Health Plan is not my plan. It is yours. It is ours. It is something we built together a decade ago -- and it remains an unfinished chapter in Oregon's history. Take it. Shape it. Make it work in each of your communities and throughout the this state of ours.

As William Jennings Bryan pointed out: "Destiny is not a matter of chance, it is a matter of choice; it is not a thing to be waited for, it is a thing to be achieved."

Governor John Kitzhaber

Summit on the Oregon Health Plan Eugene, Oregon

September 13, 2000

Ten years ago, the State of Oregon undertook an innovative and controversial approach to universal coverage. This bold experiment -- which initially involved both an employer mandate and developing a basic benefit package through the prioritization of health services -- has met with both successes and failures.

Successes include: a dramatic expansion of coverage for low income Oregonians -- especially for children; improved health outcomes, and increased patient satisfaction. In addition, there was, at least initially, a remarkable and refreshing solidarity among all the elements of the health care delivery system -- and a sense of empowerment and pride among physicians.

Failures include the repeal of the employer mandate and a failure to achieve universal coverage; federal inflexibility in benefit design and eligibility; frustration and disempowerment among physicians; a potential collapse of the managed care delivery system in Medford, Portland and possibly in Eugene; and a medical inflation rate that has outstripped increases in state reimbursement rates.

Today the OHP is at a crossroads. The decisions we make in the next three months -- and in the upcoming legislative session -- will largely determine its fate. But what to do? The U.S. health care system consumes vast amounts of public and private resources, encompasses dozens of separate and often competing economic interests, and is encumbered by a bewildering and oppressive maze of administrative complexity. To policy makers in particular, it presents a mind-numbing and almost incomprehensible challenge.

Cost-Shifting, Cost-Avoidance

As complicated as the health care system has become, however, at its heart lies a rather straightforward dynamic that drives most of the individual decisions in one way or another. It is important that we share a common understanding of this dynamic as a prerequisite for charting a course for the OHP.

In a sense, the health care system can be viewed in the context of four questions: Who is covered? What is covered? How much is covered?; and How is it paid for? In other words, the health care system revolves around four variables: eligibility, benefit, utilization and cost. Furthermore, there is a hydraulic relationship between these four variables. If you increase eligibility to cover more people, you will increase cost unless you reduce benefits and/or utilization. Likewise, if you increase benefits and/or utilization, you will increase cost unless you reduce eligibility.

As the cost of providing care has increased, all the elements of the delivery system -- physicians, hospitals and purchasers -- have sought to avoid them by shifting them within the system. Public payers -- like the states and the federal government -- have traditionally employed two strategies which involve manipulating two of these four variables: eligibility and cost.

For example, one of the few areas of flexibility states have within the Medicaid program is to set the income eligibility level. Historically, when states have faced revenue shortfalls, they have lowered eligibility from say 60 percent of the federal poverty level (FPL) to 55 percent of the FPL.

What this amounts to is redefining the poor for accounting purposes. It also amounts to rationing people -- implicitly, yes -- but rationing nonetheless. And it is "all-or-nothing" rationing.

For example, someone with a family income of \$15,000 a year for a family of three might get coverage for all the benefits available in the Medicaid program, while someone with a family income of \$15,200 might get no coverage at all. And those who made the decision to change eligibility can avoid any accountability for the health consequences of the people who lose coverage.

The other strategy, manipulating cost, is fairly straightforward and usually takes the form of either directly reducing provider reimbursement rates or discontinuing payment for something physicians are still required to provide. This is a direct cost shift to providers and shows up as uncompensated care. And at some point, when providers are unable or unwilling to absorb anymore uncompensated care, they stop seeing -- or try to avoid seeing -- Medicaid patients. This constitutes another form of implicit rationing and, again, those who made the policy decisions that led to it escape any accountability for the consequences.

Interestingly, benefits are not usually reduced because that is seen as rationing -- a red flag in the health care debate -- and something we studiously deny is taking place. So instead of giving everyone coverage for something, we give some people coverage for everything and others coverage for nothing. Instead of explicitly making a list of benefits and drawing a line, we implicitly make a list of people and draw a line.

In the end, costs are shifted, but not controlled, and there is a steady increase in the number of people who cannot afford to pay for their health care needs. When they get sick enough, they show up in the emergency room where they are treated for serious problems, in one of the most expensive care settings, late in the course of their disease process, when costs are higher and outcomes likely to be poorer. And the costs incurred are shifted back through the system, repeating the cycle.

The Importance of Maintaining the OHP

As we grapple with how best to proceed here in Oregon, it is important to keep this dynamic in mind. It is equally important to appreciate that the OHP exists in the context of a much larger health care system, and that the problems in the larger system are reflected in the OHP, not the other way around. In other words, much of what concerns people about the OHP -- the lack of universal coverage, increasing costs, frustrated physicians, administrative complexity -- are consequences of the larger system itself. These things did not start with the OHP and will not go away if it is abolished.

On the contrary, what will go away is all that we have accomplished together over the past decade -- and what we have accomplished remains important for two reasons.

First, it is important to Oregon. The OHP is responsible for dramatically expanding insurance coverage for low income Oregonians -- especially for children. The number of children without health insurance has dropped from 21 percent to 8 percent. The OHP has brought in excess of \$1.5 billion in federal revenue into Oregon's health care system over the past 6 years -- revenue that we otherwise would not have received. Finally, OHP patients, and the state and federal dollars that follow them, are an important part of maintaining the provider infrastructure in both urban and rural Oregon.

Second, the OHP is important to the nation. Oregon is the only state in the country that has explicitly acknowledged the reality of fiscal limits and that has attempted to set priorities based on clinical effectiveness. This reality -- that medical technology and consumer demand will continue to outstrip the ability of the public sector to pay for it -- is a lesson that the nation must come to terms with if it hopes to expand coverage to the 45 million Americans who currently have none. Oregon is one of the few -- if not the only -- state positioned to force this issue back into the forefront of the national debate. If we let this slip through our fingers, we will never get back to this point again.

For these reasons, I believe that it is essential to take the OHP to the next level -- and to re-energize the broad-based, bipartisan coalition that set out down the road of health care reform in 1989 with the passage of SB 27. With all its warts and shortcomings the OHP is better than what we had and better than what we will surely return to.

OHP: Underlying Principles and Premises

A review of the basic principles and premises we embraced when we set out on this adventure ten years ago -- as well as how well we have adhered to them -- will, I believe, give us some insight not only into what has gone wrong, but with how to set things right.

First, and foremost, this state and the various stakeholders of its health care delivery system, answered the single most fundamental question in the health care debate: who has the responsibility to pay for health care for the poor? We concluded that it is a public sector responsibility -- a shared social responsibility -- and we defined that responsibility in statute at 100% of the FPL. In short, we concluded that eligibility for public coverage should be based on financial need -- not on a set of arbitrary federal categories.

Certainly we can argue about whether 100% FPL is the right eligibility level -- or definition of the poor -- should perhaps have been set at 200% of the FPL. But the point is this: Oregon defined the public sector responsibility in statute and we have stuck with that for ten years. We have not manipulated eligibility to manage costs and we have not rationed people (although changes in months of income and in the assets test have had some impact on our definition of poverty).

Second, Oregon was the first (and remains the only) state in the nation to come to terms with the reality of fiscal limits. We openly acknowledged that there is a limit to the amount of money the public sector can spend on health care -- in other words, that the public sector health care budget is ultimately finite.

Third, we recognized that if the public health care budget is limited, then those who depend solely on this source of revenue for their care will necessarily have some limits imposed as to what will be paid for. In short, we had the courage and honesty to recognize the inevitability of rationing and the need to make choices. And we committed ourselves to making those choices by establishing priorities based on a consideration of clinical effectiveness and social values, in an open process with broad public involvement and input. And we have held true to that as well over the entire life of the OHP.

The Health Services Commission (HSC) was created to carry out this prioritization process. Starting with the 1991 legislative session -- and each session since then -- the HSC has presented the legislature with an updated prioritized list of health services and actuarial information which assigns a cost to provide each line on the list.

Fourth, we committed ourselves to a high level of accountability for making the hard choices brought about by the reality of limited resources. We accomplished this by making a clear separation between the prioritization process and the determination of the benefit level. While the HSC develops the priority list, it does not determine the benefit package, a responsibility that is left to the legislature.

The legislature is statutorily required to start at the top of the list and determine how much can be funded from available revenues and what additional revenues will be needed to fund an acceptable "basic" package. In this way, not only is the benefit directly linked to the reality of fiscal limits, but the legislature is clearly and inescapably accountable not just for what it funds in the health care budget, but also for what it chooses not to fund.

Oregon has done an admirable job of adhering to these four principles over the life of the OHP. It is the fifth and sixth principles from which we have strayed -- and which have contributed to the problems we face today.

The fifth principle -- building on the first, which said we would not ration people -- was that we would also not shift costs to providers to balance the budget. Rather, we would not only maintain eligibility, but would also maintain a reasonable and actuarially determined rate of reimbursement for providers and make adjustments in the benefit level. Here we have failed -- in large part due to a lack of flexibility at the federal level, particularly in the areas of benefit design and eligibility.

Finally, in our sixth principle, we committed ourselves to the proposition that the process of expanding coverage to the poor would involve a partnership -- that is, that the cost and risk of covering this population would be shared equally by all parts of the delivery system. We agreed that the OHP was not just another line of business but, rather, was part of a

shared community responsibility to cover these people; that the public funds involved were a community resource, not just another revenue stream. In this commitment, we have also largely failed.

The Reasons for the Current Instability

I believe that our failure to adhere to these last two principles -- which are related -- has brought about many of the problems facing the OHP today. These problems, of course, are exacerbated by the double-digit medical inflation which affects the private system as well as the public. An examination of each of these areas can shed some light not only on how our problems developed, but also on how we might move to address them. Let's start with the failure to share risk.

1. Failure to share risk -- The OHP was envisioned and designed as a partnership in social responsibility rather than as simply a new line of business for the health care delivery system. This population of individuals are particularly vulnerable because of their low incomes and if we agree that providing for their basic health care needs is, indeed, a social responsibility, then the public resources appropriated for their care must be viewed as a community resource rather than simply as another revenue stream.

The cost and risk of the expansion has not, in fact been equally shared. While physicians, hospitals and health plans have all borne risk as sectors of the health care delivery system, within those sectors risk has not been equally shared -- among physicians, among hospitals, or between physicians and hospitals. Furthermore, there are some sectors of the system, such as the pharmaceutical industry, that have borne almost no risk whatsoever. Rather than assuming some risk for the expansion of care to the poor, this industry has consistently raised prices and driven up utilization through aggressive marketing and direct advertising aimed at maximizing profits for shareholders.

When the OHP was first implemented, there was a sense that this large social responsibility was being met. In retrospect, however, the broad provider participation and general satisfaction with the new system in its early years may have been due, in part, to the significant infusion of new revenue into the Oregon health care system (\$322 million in the first year) and the relatively flat rate of medical inflation.

In any event, by 1996 some cracks began to appear. As I pointed out, the OHP cannot be viewed outside the context of what is happening in the larger health care system within which it exists. The OHP was first implemented in 1994, just at the time that the move to managed care was hitting its full stride. It was a time of intense market competition between physicians and physician groups -- competition that many did not survive. The disaggregation of large physician groups to much smaller ones as a result of competition -- as well as the erosion of trust that this competition fostered -- had a direct impact on the OHP.

In Medford, for example, primary care physicians who were formerly organized in three large groups are now in 30-40 small business units. These smaller groups often lacked the organizational capacity and the expertise to bargain as effectively as the hospitals. One of the consequences of this was flagged by the OMA in 1997 in what was known as the "Henery Report" which concluded that hospitals were getting a disproportionate share of the capitation rate relative to physicians. While this conclusion was controversial, it revealed the underlying tension developing in the system.

Furthermore, like any small business, these smaller physician business units are very risk-adverse and interested in the safest and most profitable line of business. They understandably cannot take on the responsibility, risk and accountability that the larger physician groups were previously expected to take on -- especially when it is not being equally distributed.

As a result, some emergency rooms in Medford have noticed a significant increase in visits by Medicaid patients. The competitive pressures -- on both doctors and hospitals, have left many bruised relationships, and increased the level of distrust. The community now has few remaining options for OHP and is facing the disappearance of HMO type plans in the private market. The organizations that have survived are very cautious. Access has been reduced, costs have risen significantly and choice is limited. The community is suffering.

Portland is following essentially the same path as Medford, although it is not quite as far along. Nonetheless, the city

looks today like you might expect a community to look after a period of very intense market competition. Again, the most intense competition has occurred among physicians and physician groups. As in Medford, individual physicians have been left to return to much smaller business units with less capacity to assume responsibility, risk and accountability. Without an organization that physicians can trust in, decisions are made with short term financial stability -- not social responsibility -- in mind.

In addition, competition between hospitals in Portland has made it difficult to share community responsibility because it has encouraged selection and the avoidance of risk.. Hospital physician relationships are frayed and, as the community returns to the selection of patients and doctors based on geography, history and happenstance, trust has been eroded and the climate for cooperation and collaboration has been severely compromised. A siege mentality has descended on all the elements of the health care delivery system.

Although certainly different in many ways, both Medford and the Portland metropolitan area share some common features. These include intense competition among physicians, significant failures among physicians and physician groups, and competition among hospitals and insurers. This situation prevents an organized community response and equitable risk-sharing.

And an organized community response appears to be the most viable way to deliver care to this population. And an organized community response appears to be the most viable way to deliver care to this population. In particular the experience with direct OHP contractors who have emerged in many communities as well organizations which provide care for all of an OHP community is worth examining.

These organizations know that while an intermediary or funding source may change, OHP patients will remain part of their community -- an important part. Rather than avoiding risk these organizations can focus on spreading risk equitably in their communities among all physicians and the hospital or hospitals involved.

They can also focus on managing risk, a task I know is not seen as attractive. However once risk is acknowledged as unavoidable, and is spread equitably, the table is set for the important explicit decisions that must be made in prioritizing the needs of individuals and populations. That is what managing care should really be about.

This evolution is happening in Central Oregon, Coos Bay, Grants Pass, Linn/Benton County, Klamath Falls, Pendleton, Salem and, most recently I hope, in Eugene. One size does not fit every community and indeed every community I have mentioned is different. In every case though physicians are partnered successfully with hospitals, safety net operations are integrated to at least some degree and risk is spread more equitably while OHP patients continue to have reasonable access, choice and improving quality of care.

I know there are challenges in doing this in all of our communities. I believe there are leaders in Medford and Portland who potentially share this vision. I know that we will need to return to more fundamental issues if we are to make progress on the coast. I also know that the state will need to assume a larger role in sharing risk, assisting it's community partners and doing what it can to stabilize a community when it is prepared for this approach.

It can happen and it is happening in Oregon.

2. Federal policy constraints -- The other major factor that has contributed to the instability of the OHP is federal policy, in particular the lack of flexibility in benefit design and eligibility requirements. Our experience has led us to the conclusion that achieving universal coverage will be almost impossible without either fundamental changes in the Medicaid program, or far more flexibility than the Health Care Financing Administration (HCFA) has so far been willing to grant.

Let me emphasize that this problem is far broader than simply "moving the line." Although we have been frustrated by HCFA's inflexibility on this issue -- we also realize that beyond a certain point, moving the line becomes self-defeating, as people begin to show up in the emergency room to gain access to treatment which should have been covered in the basic benefit. So the problem is not just inflexibility, but also the almost religious adherence to a set of utterly inconsistent, and often illogical, policies, created over the past 35 years.

As I mentioned earlier, one of the few areas of flexibility states have within the Medicaid program is to set the income eligibility level -- but there is not flexibility concerning the mandated minimum benefit level. Thus, the federal position

today requires states to maintain the benefit package even if the only way this can be done is to change eligibility for Medicaid so that fewer people are eligible for coverage (and others are eliminated from coverage altogether).

This irrational policy reflects the failure of the federal government to explicitly answer the question: "who has the responsibility to pay for the poor? Thus, HCFA does not have a statutory responsibility to serve all poor Americans, but rather only certain entitled categories of poor Americans: persons on welfare assistance, low income children of certain ages, persons with disabilities, and the low income frail elderly. Other persons, single and childless adults couples, for example, do not qualify for coverage even though they too might be deeply impoverished.

Thus, federal policy has created a distinction between poor Americans: those who fit into a category ("categorical") and those who don't ("non-categorical"). The people in these groups may be equally impoverished, yet one group is entitled to care, the other not. In addition, for the majority of categorically eligible persons, there is a statutorily prescribed benefit package which excludes prescription drugs, dental care, and other important services.

In short, the federal perspective on both eligibility and benefit is a narrow one. It serves certain impoverished populations, but not others. It requires certain benefits at any cost, and allow states to add optional services as they can afford to -- but refuses to question whether the statutory benefit is effective in improving health or whether the money it takes to provide it could be better spent.

Oregon has found these categories and benefit requirements formidable barriers when we have attempted to use the federal resources available through Medicaid in a manner which creates a logical progression of subsidies for achieving universal coverage.

For example, even though our Medicaid benefit package is far more comprehensive than the statutory minimum (in fact, it costs 22% more than the minimum) we are not allowed to reduce the level of benefit as determined by our priority list by even so much as ten condition/treatment pairs in order to maintain coverage for a broader group of low income Oregonians.

We could, however, cut all optional services from our benefit package, eliminating, for example, coverage for prescription drugs and dental care. That is acceptable to HCFA. Similarly, we cannot provide the noncategorical eligibles in our Medicaid program a different benefit package than the categorical populations. We could however, drop them from coverage altogether.

A similar set of contradictory policies work against expanding and maintaining access to the Children's Health Insurance Program.

Taken together, these policies create an inflexible pattern of subsidies which force us into all or nothing coverage decisions -- and one size fits all benefit packages which prevents us from using federal resources to help expand coverage to Oregonians based on a consideration of their relative financial and medical needs.

3. Double-digit medical inflation -- These two factors -- failure to share risk and the inflexibility of federal benefit and eligibility policies -- lie at the heart of the current problems we are facing with the OHP. Both problems, however, have been exacerbated by the ten to twenty percent increases in medical costs being experienced, not just in Oregon, but throughout the United States. Even if we are able to share risk more equitably and correct federal policy, we will continue to face an unsustainable system unless we can also reduce the rate of medical inflation.

There are many complex factors which underlie medical cost inflation, but they can be organized into four broad areas: consumers, providers, new technology and purchasers.

Consumers -- Overutilization of medical services is increasingly driven by consumer demand. Direct advertising that bypasses the physician creates a demand for particular services which may not reflect the best or most cost-effective therapy. In addition, "consumer choice" carries with it a significant cost that is often not appreciated in the current populist debate about "patient rights."

Providers -- The wide variation in physician practices also contributes to overutilization. This variation is driven by

consumer demand, fear of litigation and a professional ethic that calls for doing everything possible for the individual as long as some benefit, no matter how slight, will result.

New technology -- Medical inflation is also being driven by the rapid advances in medical technology, including new prescription drug therapy. These new discoveries carry with them a great potential benefit on an individual basis, but huge costs on a systemwide basis. Direct advertising of these new technologies creates markets without a context for clinical judgment and cost-effectiveness.

Purchasers -- Purchasers remain uninformed with little knowledge of the value gained for the dollars being spent on health care. The lack of organization prevents them from using their considerable market power to demand quality and to ensure that the health care purchased actually has a health benefit.

In short, almost all the stakeholders in the health care system contribute in some way to medical cost inflation. And all share in common two underlying and erroneous assumptions: first, that health care is always synonymous with health; and, second, that all medical interventions are of equal value and effectiveness. We must challenge these assumptions.

The Solution: Elements of a Strategy

We have assembled here a broad and bipartisan group of individuals representing the legislature and all segments of the health care delivery system: consumers and purchasers, physicians and hospitals, insurers and health plans. It is unlikely we will see this kind of gathering again before the next session of the Oregon legislature convenes on January 8, 2001. This is a moment in time and one I hope we will use it to its fullest advantage.

We are not gathered here to craft a solution, but to understand a problem, to rebuild trust and to begin a dialogue. We are here to seek -- and hopefully to find -- that common ground on which we can rebuild and move forward together. In that spirit, let me suggest four things which I believe can form the foundation for such an effort:

First, a recommitment to the concept of a basic benefit package built around the prioritization of medical services. This process has served us well and gives us an open and accountable way to make the difficult choices necessitated by the reality of fiscal limits. It can certainly be improved upon -- and we should strive to do so -- but it offers us a rational framework for benefit design.

Second, a recommitment to the proposition that caring for the poor is a social responsibility and that the cost and risk of expansion must be equally shared. I recognize the challenges inherent in this principle, but I also believe that it is the only way that we will ultimately succeed. In spite of the chaos in some parts of the state, other areas have offered compelling evidence that the management of cost and the delivery of services under the OHP can be optimized through a community-based model which includes a cooperative relationship between doctors and hospitals.

Third, a recommitment to the goal of universal coverage, recognizing that to achieve that goal will require additional waivers from the federal government. Without this effort, the OHP will continue to be a Medicaid expansion only -- not a strategy to ensure that all Oregonians have coverage and access to affordable, quality health care. We were able to make the case for the waiver that enabled us to implement the OHP in 1994. If we are united, I believe that we can make that case again.

Finally, a recommitment to addressing the problem of rising costs. The current rate of medical inflation is unsustainable, yet to stem it will require a series of choices no less difficult than those we have faced in developing a basic benefit package. These choices are being made today by default, in a way that simply increases the number of the uninsured and has no real impact on medical inflation. I think we can do better than that.

The key to appropriate cost containment lies with consumers, purchasers and physicians. Consumers and purchasers must come together to create agreement on how to control costs while safe-guarding quality -- on how to garner the greatest value possible for the investments we make in health care. Physicians must bring to the table clinical information concerning the effectiveness and appropriateness of care.

Within each of these four commitments there is much room for disagreement --but also much room for compromise and

creativity. It is my hope that this summit will provide the impetus needed to reenergize the health care debate in Oregon with a focus on those things we share, rather than on the areas over which we now seem divided.

Abandoning the OHP will not serve our common interests. On the contrary, it will take us back to 1993 -- before we had the federal waiver. 90,000 people will find themselves without health insurance coverage and we will lose over \$400 million in federal funds from our health care system.

Without the OHP, those without a way to pay for their care will increase, not decrease. There will be less money in the system, not more. ER visits will increase and so will uncompensated care. Many hospitals will find themselves in trouble. Competition and risk-avoidance will increase; trust and cooperation would be further compromised. And we will become just another state with a health care system in disarray, a state without a plan, a state that has, by default, allowed its health care future to become a matter of chance, rather than a matter of choice. Oregon deserves better than that.

Governor John Kitzhaber

**Can we have it all:
A healthy economy, a clean environment, great livability?
Chataqua**

August 28, 2000

When we talk about a healthy economy, a clean environment and great livability we are really talking about quality of life which, to me, represents a combination of elements which, together, produce the richness of place and experience that we associate with Oregon.

These elements encompass more than the stunning beauty and powerful landscapes of our natural environment -- although these clearly help define us. They also encompass a strong economy with jobs and job security; and educational opportunities for our children and increasingly for adults of all ages as economic success becomes ever more closely linked to knowledge and information. And quality of life encompasses safe, secure communities where people have a sense of belonging and purpose and a commitment to each other.

These elements are something we hold in common -- they represent a common set of desires and aspirations that add value and quality to our lives. All Oregonians want these same things, no matter where they live or what they do for a living. And our efforts to secure them has, at least in the past, been a joint undertaking that produced a kind of cohesiveness that has held us together and allowed us to act in concert for the good of the larger Oregon community.

To put it another way -- imagine Oregon as a fabric woven from threads which represent these varied elements of a good quality of life. If all the threads are present and balanced, the fabric is strong and rich. It is a fabric of high quality, if you will. But if any of these threads are missing -- anywhere is Oregon -- then the entire fabric is weakened and its quality is diminished.

Today, the threads of our quality of life are beginning to fray and unravel -- albeit for different reasons in different parts of the state. As a result, we are losing that cohesiveness and sense of common purpose that held us together in the past and allowed us to act as an Oregon community to meet the challenges that faced us.

Throughout Oregon, people are anxious and uncertain because the world is changing, because their lives are filled with change -- and because the landscape that has helped define them is changing as well. They perceive that they are losing something valuable -- that their quality of life is at risk and that they have little control over it.

There are three basic causes for what is happening around us: (1) globalization and the shift from a natural resource-based economy to an information-based economy; (2) the impact of meeting federal environmental standards, especially the Endangered Species Act and the Clean Water Act; and (3) the impact of growth on Oregon communities.

These things, which have taken place over the last 20 years, have affected all parts of Oregon -- albeit in different ways -- and have brought about a far reaching reversal in the fortunes of urban and rural Oregon.

From 1980 to 1999, wood products employment in Oregon declined nearly 30 percent while high technology employment increased 102 percent. Twenty years ago there were 69,500 well-paying timber jobs in Oregon. Over 25,000 of those were lost during the recession of 1980-1982, a time during which Oregon added over 3,000 hi tech jobs.

While the wood products industry experienced a strong post-recession recovery, the 1990 listing of the Northern Spotted Owl under the ESA brought about a permanent loss of over 20,000 -- a loss occurring almost entirely in rural counties containing federal forests. By contrast, the high technology industry -- predominately in Portland and the Willamette Valley -- has grown by nearly 30,000 jobs since 1990 alone.

These events have had a significant impact on our quality of life.

In urban Oregon, economic expansion has brought with it abundant jobs, increasing incomes, more consumer choices and a wide array of public services. At the same time, however, there have been negative consequences to this economic success: dramatic population growth, sprawl, congestion, an overburdened public infrastructure and pollution.

In rural Oregon, by contrast, many communities face decline and stagnation. These communities face a different kind of threat to their livability -- to their quality of life: low wages, high unemployment, the loss of business opportunities and the migration of their youth to other communities that offer more career choices.

And in both urban and rural Oregon, the challenge of meeting the requirements of federal environmental laws is becoming a central issue. In some respects, rural Oregon has had more experience with this -- particularly the timber industry with the 1990 listing of the owl. But this is clearly a shared responsibility.

The point is that in both urban and rural Oregon, our quality of life is under siege. Community stability and cohesiveness is being threatened by economic expansion and too many people on the one hand, and by economic stagnation and the out-migration of youth on the other. And if we hope to "have it all" we will have to address three things: (1) two sets of different, but interrelated economic and growth-related issues, one set in urban Oregon and one set in rural Oregon; (2) recasting the environmental debate; and (3) recognizing our new budget reality and refocusing our priorities. (In the interest of time, I will touch only on the first two today, but would be happy to discuss the 3rd during the question and answer period.)

Rural Oregon

Let's start with that set of issues affecting primarily rural Oregon. The challenges in the non-metropolitan parts of the state are: (1) not enough public infrastructure to diversify the economy; (2) job loss and outmigration, especially of the young; and (3) continued reliance on natural resource industries which, in many cases, employ practices that contribute to the challenge of meeting the ESA and Clean Water Act.

In short, rural Oregon needs a more diversified and environmentally sustainable economic base which provides a wider range of job opportunities. To accomplish this will require some significant infrastructure investments and some fundamental changes in our natural resource industries.

Now, even while we work toward rural economic diversification, we must recognize that the natural resource industries will continue to be both a cornerstone of the rural economies and a major contributor to Oregon's economy as a whole. In 1998/99, for example, production agriculture and food processing contributed a total of \$5.5 billion to the Oregon economy. And the wood products industry in our state still employs 49,000 people.

To maintain healthy natural resource industries in rural Oregon, however, these industries must recognize the impact of globalization on the markets which have historically supported them. For example, among the elements of the agriculture industry that are suffering the most today, are those who continue to grow bulk commodities like wheat.

Oregon soft white wheat yields the best pastry flour in the world and in the past almost 80 percent of it has been exported as a bulk commodity into the international market -- which has set a pattern of behavior that has helped define the wheat industry.

This mindset and the strong adherence to the practice of growing large amounts of unprocessed bulk commodities is one of the main obstacles to maintaining the viability of the wheat industry in northeast Oregon. The People's Republic of China, for example, with few environmental and labor laws has the capacity to raise far more wheat at a much lower cost than we can.

Gilliam County Judge Laura Pryor, in a recent paper about the agricultural economy of eastern Oregon, wrote that the single greatest obstacle to finding solutions is the resistance of the local grower to objectively consider alternative practices. (This also applies to the environmental impact of these industries, a point I will touch on later).

Those elements of the agriculture industry that are doing well, by contrast, are largely those that add value through processing, pursue organic production or some other niche-marketing effort that differentiates their commodities. The nursery industry, which today is Oregon's number one commodity, offers an excellent example.

While the natural resource industries will continue to be a cornerstone of the rural economy – it is equally important to broaden and diversify the rural economic base. That means infrastructure: investments in roads, water and sewer systems, and telecommunications. Indeed, I believe that giving rural Oregon access to broad band fiber optic cable will prove as important as was rural electrification in the first half of the last century. My administration is aggressively pursuing this objective through the Oregon Enterprise Network.

Urban Oregon

In urban Oregon the challenges are: (1) an overwhelmed public infrastructure from schools to roads to water and sewer systems; (2) increasingly severe traffic problems which reduce quality of life through congestion and decreased mobility, and affect economic viability by increasing transit time (and thus the cost) of products being moved by truck; (3) sprawl; and (4) serious non-point source pollution problems which erode watershed health and contribute to the challenge of meeting the ESA and Clean Water Act.

The rapid increase in population is probably the single most important contributing factor to both the overburdened infrastructure and the growing traffic problems being experienced in urban areas from Washington County, to Bend and Medford. And as long as Oregon has great livability and a strong economy, people will continue to come here. And as long as there are more job opportunities in the urban parts of the state, those areas will absorb a disproportionate share of that growth.

Growth is a double-edged sword. On the one hand, it is associated with the economic benefits of a strong economy. On the other hand, it can erode livability by contributing to such things as sprawl, congestion and pollution.

There are several ways growth can be slowed, and even reversed. One way would be to put the economy in the tank. During the last recession, Oregon actually lost population. Another way would be to destroy our livability so that Oregon is no longer such a nice place to live. I don't think anyone would advocate for either of these approaches. That leaves two other options. One is to stop subsidizing growth and the other is to do a better job of managing growth.

On the surface, most people would probably say that we should not be subsidizing the very growth that is threatening Oregon's quality of life. But, in fact, we are. For example, every new house built in Oregon requires services: sewers, roads, fire and police protection and, in many cases, schools. None of these costs are fully paid by either the developer or the home buyer. In fact, as my Task Force on Growth noted, growth exacerbates government revenue problems, it does not relieve them.

In addition, our tax policy encourages growth both through business subsidies and encouraging larger rather than smaller families.

I recognize that changing these policies that subsidize growth is a very controversial proposition, and I assume that we are not yet ready to take these things on. Ultimately, however -- if we want to "have it all" -- I believe that we are going to have to come to terms with these questions. Our state has a finite "carrying capacity," if you will. We cannot forever absorb 40-50,000 new residents a year without losing part of what makes Oregon so special. We may not be ready to tackle these questions today, but let us not forget the words of the late writer Edward Abbey, "Growth for growth's

sake is the ideology of the cancer cell."

This leaves us with the option of better managing the growth we are getting. To me this entails three things: increasing density, developing new strategies to deal with our transportation challenges, and rethinking our economic development policies.

Increasing density. It is fair to say that there are two things Oregonians don't like (I mean other than a sales tax and self-service gas): they don't like sprawl and they don't like density. Well, we have to get over that. We all know that sprawl is not only expensive, but that it reduces our livability as well. While increasing density is less expensive, it too can reduce livability-- but it doesn't have to. Look at the Pearl district and Martin Luther King Blvd. in Portland and the conversion of the Old Mill Site in Bend.

Therefore, we must adopt policies that facilitate and encourage the revitalization of downtowns and mainstreets as community centers -- and that strengthen our neighborhoods. Policies that encourage and provide incentives for mixed-use development. Policies that provide a range of transportation and housing options so that people in our urban centers can be mobile without using their cars and can age in place in their own neighborhoods.

Transportation. It is no secret that I believe our Highway Trust Fund is undercapitalized. Not only are we falling behind not only in the maintenance and preservation of our existing transportation infrastructure, there is a crying need for additional resources for some strategic capital construction projects to relieve congestion and facilitate freight movement.

At the same time we need to accept two realities. The first one is that we are not going to get the kind of infusion of new revenue into the Trust Fund that we need to address these problems. The transportation funding package that was voted on in May was defeated by a margin of 88-12. And while there is now talk of AAA introducing a three cent gas tax increase next session, I for one, have no stomach to waste anymore time and energy on the intractable and self-serving debate between that organization and the truckers.

And even if we got a three cent increase, it would not even begin to address the unmet need. Furthermore, the gas tax itself is becoming less and less attractive as the primary source of highway funds for the 21st century. As cars grow ever more fuel efficient, each cent of gas tax will generate less and less revenue.

The second reality is that we cannot build our way out of our traffic problems. That is, money for new capital construction alone will not buy us the mobility and livability we desire. If you doubt this just look to Los Angeles or Atlanta, two cities that pursued that strategy. That means that we need to do a much better job of managing the demand side.

For example, creating incentives and/or disincentives that change how and when people use the transportation system. The Sunset highway between Portland and Hillsboro is a case in point. During the morning and evening commutes, it is three solid lanes of bumper-to-bumper traffic. At other times of the day two lanes or less could efficiently accommodate the traffic load. My point is that the problem on the Sunset is not a capacity problem, it is a timing problem. And if we don't have the resources to build another lane, then we need to more efficiently use the capacity we do have.

I know this is controversial -- my 1997 proposals for a vehicle miles traveled tax and for broadening the base for highway funding -- were dead on arrival. But traffic congestion is controversial too. And if we want to "have it all" we are going to have to make some difficult choices. Nobody is going to hand this to us.

Other steps to deal with our transportation problems include better access management to protect the capacity of our state highways, in particular, which are designed to move people between cities. Yet there are many instances of development patterns that allow municipalities to capture a portion of a state -- or even interstate -- highway for its mainstreet. A lot of the highway capacity on I-5 at Wilsonville, Medford and Roseburg, for example, is taken up not by people traveling from California to Washington, but rather by people going from one end of town to another. To address this we need resources for these communities to develop frontage roads and street networks.

Finally, we need to encourage and finance transit and other transportation options. I continue to believe that a portion of

the Highway Trust Fund should be dedicated to this purpose. It makes no sense to have a dedicated fund that will provide \$30 million to add a lane to an area with heavy commuter traffic, but not \$500,000 for commuter buses that could alleviate the need for the new lane in the first place.

Economic development. As we continue to attract new businesses to Oregon, and as our existing businesses continue to expand, we need to develop a strategic plan to direct some of that development away from high growth areas (at least until the capacity of the infrastructure catches up with the demand) and into those areas that desperately need jobs and a more diversified economic base.

The one thing that is common to the challenges facing urban and rural Oregon is the need for money to invest in infrastructure and some way to ensure that these resources are invested wisely.

In the last legislative session I was able to win passage of virtually all of the elements of what I call the Oregon Livability Initiative. This involves the 21st Century Community Fund which is capitalized with \$140 million. These funds are reserved specifically for the kinds of things that can make a difference in both urban and rural Oregon. They are targeted for rebuilding rural and distressed urban economies; for local street networks; for community infrastructure investments in sewer and water systems; for providing community incentives to revitalize downtowns and main streets as community centers; and for affordable housing.

Because of the importance of targeted infrastructure investments to our livability and economic stability, I will ask the next Legislature to use some of the capacity we still have to issue lottery backed bonds to make additional resources available for this purpose. These resources would give us the ability to upgrade water and sewer systems to meet water quality standards; to make infrastructure investments in rural communities to foster economic diversification; and to provide gap financing to help revitalize downtowns.

To understand the potential magnitude here if, for example, we took full advantage of the available bonding capacity we could issue \$200 million in bonds over a three year period. This state commitment would stimulate over \$1 billion in state and local investments in community infrastructure over the next 10 – 12 years.

Because funds are only in part need based – but are also backed by charges to pay for infrastructure – our state revolving fund could accumulate a powerful base of capital for future investment in community infrastructure. At the end of a 10-12 year period, Oregon would be able to make infrastructure investments of \$55 million a year on a sustainable basis.

To take full advantage of these infrastructure resources, however, we must be able to target them in a coordinate way that maximizes their impact. Towards that end, I created the Community Solutions Team with which many of you are familiar. It is made up of the heads of those five agencies that effect how communities develop physically: Transportation, Housing, Economic Development, Land Use and Environmental Quality.

There are now Community Solutions Teams in each region of the state operating with the motto: "solve problems – don't just run programs". These teams coordinate state resources to help solve problems which are defined by the community. Success depends not only on this kind of assistance and coordination from the state agencies, but even more on local community leadership with a clear vision of how they want to develop -- leadership that is willing to make some of the difficult tradeoffs involved with "having it all."

Environment

Finally, let me say something about our environment and about ensuring that Oregon continues to enjoy clean water and healthy ecosystems. Probably nothing is more closely associated with Oregon than its natural environment and its ethic of environmental stewardship. If we are to maintain that ethic as a legacy for the future than we must recognize the futility of relying solely on the traditional tools of regulation and litigation to advance the cause of environmental health. Take the issue of water quality as a case in point.

Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing the late Governor McCall when he led the effort to clean up Oregon's Willamette River in the 1970's.

Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing nonpoint-source pollution -- perhaps the major challenge facing us on the Willamette River and throughout the West today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, Eugene and, yes, Coos Bay and Roseburg. This involves what people put on their lawns, whether or not they wash their cars in the driveway with detergent, and hundreds of other individual actions that contribute to the nonpoint source pollution load.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will a long term commitment to sustained environmental stewardship -- by millions of people living in the watershed -- most of them living in the city.

The fact is that we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that call for, and result in, greater individual responsibility and accountability for our air, land and water.

You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts. You can only achieve that through a collaborative and cooperative process that engages thousands of people and gives them a stake in the problem and some degree of ownership in the solution.

We must also recognize -- particularly in rural Oregon -- that preserving and restoring ecosystem and watershed health is only an issue because of the growing conflict between economic interests and environmental interests. Therefore, our approach must be based on a policy that recognizes and balances a broad range of interests -- a broad range of values -- and that reduces polarization and increases collaboration.

That means two things. First, that those in the natural resource industries must be willing to examine their practices and be open to modifications that will reduce the impact of their economic activities on the natural environment. We are beginning to achieve this objective through the Oregon Plan for Salmon and Watersheds, the Healthy Streams Partnership, the Forest Practices Advisory Committee and through the development of the Willamette Restoration Initiative.

Second, success means that the rests of us must separate the people from the practices -- we must acknowledge the legitimacy of their need to earn a living and of their contribution to our state, even as we work to help them modify their practices. We must remember, for example, that the farming way of life -- the farming culture -- goes back over 150 years and is part of the fabric and heritage of the West. It is a part of who we are as Oregonians. Attacking people and their way of life creates resistance and little gain. Acknowledging people and their legitimacy and focusing on practices, however, can lead us to the future we desire.

Let me say in closing that the sum total of all these actions and policies -- if we are successful in achieving them -- amounts to nothing short of a sustainable Oregon. I define sustainability as managing the use, development, and protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs.

Imagine, if you will, three overlapping circles -- one representing economic needs, one representing environmental needs and one representing community or social needs. The area where the three circles overlap is the area of sustainability, the area of livability -- the area where all the threads of quality of life come together.

If we are to "have it all" we must recognize that these three circles are not separate, unrelated entities. Rather they are the common desires and aspirations of all Oregonians and we must therefore strive to ensure that our efforts result in simultaneously meeting environmental, economic, and community needs throughout our state.

As William Jennings Bryan said: "Destiny is not a matter of chance, it is a matter of choice. It is not something to be waited for, it is something to achieved." If we are willing to recommit ourselves to the Oregon community -- and to the

proposition of "One state, one people, one destiny" -- than surely we can "have it all."

[Return to Governor's Office](#)

Governor John Kitzhaber

**Building Oregon Communities
Pendleton, Oregon**

August 3, 2000

As many of you know, I gave a speech last February to the American Fisheries Society in Eugene about salmon recovery in the Columbia River Basin. In that speech I said that a recovery strategy which included breaching the Lower Snake River dams was one option which should be considered. I remember showing the draft of the speech to one of my staff, who after reading it said, "Well, there go your Round-Up tickets."

Be that as it may, I am glad to be back in Pendleton today to talk not only about the challenges presented to all Oregonians by federal environmental laws, but also about the economic challenges faced by much of rural Oregon and by Oregon's agricultural community and how together we can meet these challenges.

Because after almost six years in this office, I still believe that what binds us together as Oregonians is far greater and far stronger than those things that separate us. I still believe what I said in 1995 in my first inaugural address -- one state, one people, one destiny.

Now that might sound like high-flying rhetoric, but it expresses one of my most deeply held principles: that we as a state must equally share the burden of ensuring clean air, clean water and restoration of the Columbia River ecosystem and the salmon and people that depend on it. And that we must also equally share the benefits of prosperity by ensuring that our great economy is not just an urban phenomenon but is an Oregon phenomenon.

Neither of these things is happening today but I am convinced that together we can do something about it.

Let's start with the environmental challenges facing Oregon and the Pacific Northwest. Last week I flew to Boise where Idaho Governor Dirk Kempthorne and I, along with Governor Gary Locke of Washington and Governor Marc Racicot of Montana, announced a four-state agreement on how to recover salmon in the Columbia River Basin.

This agreement is significant for three reasons. First, it was created by two Democratic and two Republican governors over the span of the last five years. While this agreement needs additional detail it represents a comprehensive approach to ecosystem restoration and serves as a reminder to all of us that there exists broad common ground on which we can act as a region.

Second, it acknowledges that the regional solution to this challenge involves a balancing of shared values: the value of a healthy natural environment in which we all must live and the value of a strong economy and of jobs and job security.

The agreement rejects the notion that this is a choice between environmental health and economic benefits but rather

represents a commitment on the part of the northwest governors to work together as a region to have both.

Finally, the agreement reflects acknowledgement of the importance of our national environmental laws like the Clean Water Act and the Endangered Species Act -- as well as the importance of meeting our treaty obligations to the sovereign tribes of the Northwest.

The agreement recognizes that the question is not whether we comply with these laws and treaty obligations, but how we do so. Whether we will take the lead ourselves and own the solution as a region, or whether we will have a solution imposed upon us by the courts or by the balkanized arms of the federal government.

I strongly believe in national environmental standards and a statutory framework to support them. I recognize the importance of regulation and access to the courts and achieving compliance with those standards.

But I also believe just as strongly that there are limits to the effectiveness of this approach. Regulations can keep people from doing the wrong thing but they provide no incentives for people to do the right thing. We are going to get beyond the current conflict between economic development and environmental stewardship only when we view both values in the context of what I call sustainability.

I define sustainability as managing the use, the development and the protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs. What is important to understand about this definition is that it requires simultaneously meeting environmental, economic and community needs. Imagine three circles, one representing environmental needs, one representing economic needs and one representing social or community needs. The area where these three circles overlap is the area of sustainability.

Historically, the debate between economic development and environmental stewardship has been cast in a way that views these three circles as separate unrelated entities. Thus the debate was a zero sum debate. A debate that always involved a winner and a loser.

Our challenge is to understand that environmental and economic and community needs are interrelated and our efforts must be to increase the area where these three circles overlap.

Therefore, we must pursue an approach that does not rely solely on regulation but rather one which involves private landowners in the decision-making process and which gives them both a stake in the problem and some investment and ownership in the solution.

That is the philosophy that lies at the heart of the Oregon Plan for Salmon and Watershed Restoration. It is an approach in which we at the local level assume responsibility stream by stream, river by river, and watershed by watershed. And that is why the Oregon Plan for Salmon and Watershed Restoration has received broad bi-partisan support including funding over the last two legislative sessions. What we are attempting to do in the Columbia River Basin, at least in the context of the Four Governors' Agreement, is an extension of that philosophy and an extension of that approach.

I have invited representatives from six northeast Oregon watershed councils to attend today and I would like them to stand and be recognized. It is important for you to know that these people are the foot soldiers in Oregon of our efforts to restore and maintain healthy watersheds and they deserve our thanks and our support because it is through our watershed councils that I think we are ultimately going to be successful.

Not through regulation, although that has a role to play; not through litigation, although that occasionally may be necessary; but by empowering citizens in their local communities and by evoking the power of place and by making Oregonians full partners and full participants in the restoration activities that they have helped develop and are committed to and are important because they improve the very place where they live and raise their families.

Meeting our environmental challenges is by no means the only difficult issue facing Oregon -- and particularly rural Oregon.

I am referring specifically to our economy and to ensuring that our entire state benefits from a strong economy -- not just a part of the state.

Unfortunately, that is not happening today. The prosperity of the last six years has been focused disproportionately on urban Oregon. And while we must continue to support the economic base in Portland and in the Willamette Valley, we must take steps to extend that prosperity to Eastern Oregon, to Southern Oregon and to the Coast.

We need to recognize that in the last 20 years an important and far-reaching reversal has occurred in the fortunes of urban and rural Oregon.

Before the recession of the early 1980's rural Oregonians, on average, were wealthier than rural residents elsewhere in America. On the same token urban Oregonians, on average, were poorer than urban residents elsewhere in America.

Twenty years later this situation has completely reversed itself for two primary reasons. First, there has been a loss of relatively high paying natural resource jobs in rural Oregon causing incomes to fall below the national average. At the same time, in urban Oregon, and particularly in the tri-county area, incomes have gone up as we have added tens of thousands of well paying research, design, building and marketing jobs in the high-tech industry.

If we hope to keep Oregon together -- to maintain the Oregon community -- we cannot sustain this trend. We cannot settle for a state of rich and poor. Just as environmental stewardship is a shared responsibility, so is economic prosperity.

As I approach my last legislative session as Governor, I will be redoubling my commitment and my efforts to build the foundation for a socially, economically and environmentally sustainable rural Oregon. There are two fundamental elements to my approach: agriculture and infrastructure.

Let's start with agriculture. Agriculture has been, and will continue to be, a cornerstone of Oregon's rural economy. Furthermore, agriculture is important to the entire state for a number of reasons.

First, agriculture is important economically. Production agriculture contributed \$3.47 billion to the economy in 1998/99. Value added processing added another \$2 billion. Thus, the total agricultural contribution to the Oregon economy in 1998/99 was \$5.5 billion. This is clearly an important element of our economic base.

Second, agriculture is important to what I refer to as "Oregon the place." One of the main objectives of our land-use planning program has been to maintain the land base for agriculture and forestry. This is reflected in planning goals 3 and 4. Population growth and urbanization can threaten our natural resource based industries and our efforts to protect these lands have helped to preserve not only these industries but also the open spaces and powerful rural landscapes that help define this place we call Oregon.

Third, agriculture contributes to the Oregon community. The farming way of life -- the farming culture -- contributes to who we are as Oregonians. It is a part of the fabric and heritage of the West. Go back 150 years to those who founded our state, the fiercely independent, living close to the land, proud solid community members -- the farming culture is part of who we are.

We cannot afford to lose any of these values. Yet today much of agriculture is struggling.

Of course there are some bright spots -- the nursery and greenhouse industry, blueberries, wine grapes and hazelnuts. But many segments are struggling and others are in real trouble such as wheat, apples, mint and onions.

We have seen the bankruptcy of Agribiotech. We have seen the bankruptcy of Agripac and we have seen for the first time since 1985 a reduction in farm production in Oregon. So our challenge is to find ways to increase and maintain or to sustain, if you will, a viable agricultural industry in Oregon. I fervently believe that we can do that. Not without effort, not without investment and not without opening our minds to new possibilities. Let me just take wheat as an example.

As you all know it is a major commodity produced in this part of the state and soft white wheat yields the best pastry flour in the world. It is very important in making oriental noodles and flat breads and almost all of that wheat is exported as a bulk commodity into the international marketplace. Selling wheat into the international market for such a long time has set a pattern of behavior and activity which has helped define the wheat industry. The federal farm program has reinforced this pattern.

This mindset and the strong adherence to this practice of growing large amounts or increasing the amount per acre of an unprocessed bulk commodity is one of the main obstacles in maintaining the viability of the wheat industry in northeast Oregon. If we hitch the future of the wheat industry solely to mass production of a raw product for export into the international market then I fear for the future of that industry.

The People's Republic of China, for example, with few environmental laws and no labor laws, has the capacity to raise a lot more wheat at a much lower price than we can ever raise in northeast Oregon particularly when we are dealing in an international marketplace. So we need to be open, it seems to me, to look at alternatives. Taking whatever steps are necessary to add value. Aggressively developing domestic markets as well as international markets and considering other varieties of wheat and even other potential crops such as rapeseed for example.

Gilliam County Judge Laura Pryor, who many of you are familiar with, in a recent paper about the agricultural economy of Eastern Oregon wrote that the single greatest obstacle to finding solutions is the resistance of the local grower to objectively consider alternative practices.

The average grower will discuss seriously only those possibilities that are integral to the basic production of masses of raw product. I want you to work with me on this. I believe that if we are willing to open our minds to new possibilities, if we are willing to make significant investments in research and technology, and if we are willing to work together as partners, then we can and will continue to have a healthy agricultural industry here and throughout Oregon with all the economic and cultural benefits that come with it.

Let me now turn to the second element of my strategy: infrastructure. While agriculture and other natural resource industries continue to be a cornerstone of the rural economy -- we must also strive to broaden and diversify the economic base in rural Oregon. That means infrastructure: investments in roads, water and sewer systems, and telecommunications.

Remember that the history of economic development in the West, and in Oregon, is a history of private investment following public investment. Public investment in the railroads, the highways and more recently in telecommunication infrastructure provides the basis for private investment to stimulate new economic activity in rural Oregon. In short, rural Oregon must have adequate infrastructure if it is to diversify its economic base.

This will require two things. First, having the money to invest in infrastructure and second, ensuring that these resources are invested wisely. Let's start with the question of money for infrastructure.

In the last legislative session I was able to win passage of virtually all of the elements of what I call the Oregon Livability Initiative. This involves the 21st Century Community Fund that is capitalized with \$140 million. These funds are reserved specifically for rebuilding rural and distressed urban economies. They are available for local street networks, for community infrastructure investments in sewer and water systems, in ensuring safe drinking water, in providing community incentives to revitalize downtowns and main streets as community centers, and for affordable housing.

But we cannot stop here. Next session I will ask the Legislature to use some of the capacity we still have to issue lottery backed bonds to make additional resources available for infrastructure investments. These resources would give us the ability to bring wastewater and water systems up to water quality standards. They would give us the ability to make infrastructure investments in order to entice new businesses into a community. They can provide gap financing to help revitalize downtowns.

To understand the potential magnitude if, for example, we took full advantage of the available bonding capacity we could issue \$200 million in bonds over a three-year period. This state commitment would stimulate over \$1 billion in

state and local investments in community infrastructure over the next 10–12 years.

Because funds are only in part need based -- but are also backed by charges to pay for infrastructure -- our state revolving fund could accumulate a powerful base of capital for future investment in community infrastructure. At the end of a 10-12 year period, Oregon would be able to make infrastructure investments of \$55 million a year on a sustainable basis.

To take full advantage of these infrastructure resources, however, we must be able to target them in a coordinated way that maximizes their impact. Towards that end, I created the Community Solutions Team which is made up of the heads of those five agencies that effect how communities develop physically: Transportation, Housing, Economic Development, Land Use and Environmental Quality.

The Community Solutions Team motto is to “solve problems – not just run programs.” The Community Solutions Team was created to help solve problems that are defined by the community. I believe that it is imperative that when a community gets together to tackle a problem the state should meet that leadership with enthusiasm and with an attitude of “we are going to help this community succeed” -- rather than “here are five regulations with which you are not complying.”

The Community Solutions Team approach has met with great success and is involved in initiatives as diverse as the Pendleton downtown fire project, Oregon Trail Beef, the Boardman Convention Center, trying to locate a composition wood product manufacturing plant in Pilot Rock and in the expansion of the Tillamook dairy to Boardman.

During the last legislative session we were able to win funding for five regional Community Solution Teams – so now every region in Oregon has access to this kind of support and assistance.

But if we are going to retain agriculture and forestry as an important component of our economic base, and if we are going to wisely use infrastructure dollars to broaden and diversify rural economies and to revitalize rural communities, than the success ultimately is going to depend on you and on leadership that comes from the community.

It is going to require that rural communities throughout Oregon develop a very clear vision of what they want to be and that vision and that community leadership can't come from Salem. It has to come from the community. If the community doesn't have consensus and leadership about where they want to go and how they want to develop, then you are simply not going to get there regardless of how much infrastructure money is available.

This is a community that I think is on the leading edge of having a clear idea of who it is and where it wants to go. I want to do all I can to assist you in getting there. My goal as governor has been to create a government that can help you achieve that vision. I have fought to put in place funding so that you have access to the infrastructure dollars that you need. I fought to coordinate state agencies through the Community Solutions Team so that they will be partners to help ensure that those resources are coordinated and able to deliver the greatest return on your investments.

I have fought to put in place an approach to meet national and state environmental standards and laws in a way that not only recognizes the importance of economic and community needs but that makes individual Oregonians full partners and participants in developing and implementing strategies of environmental health.

So today let us recommit ourselves to rebuilding the Oregon community from the Pacific Ocean to Ontario, from Boardman to Lakeview. I look forward to working with you over the remaining two years and beyond in common cause to achieve this objective.

If I can sum up my message to you today it would be a message of hope. Hope that we have the wisdom to work together to restore the health of our environment. Hope that we have the tenacity to reinvent our natural resource based industries so that they are sustainable and competitive. Hope that we have the vision to invest in the foundation of wealth throughout Oregon and particularly in our rural communities. One people, one state, one destiny. That will only become a reality if we choose to make it so. Today I ask you to join me in making those words a cornerstone of Oregon's future.

Governor John Kitzhaber

**Oregon Environmental Council Speech
Eugene, Oregon**

June 22, 2000

Good morning.

I want to start by saying how much I appreciate the work your organization does. We are allies on many causes and only occasionally on opposite sides of an issue. And when we are, I appreciate the open and frank dialogue we share about our differences.

This morning, I want to spend my time with you tying together several threads that comprise my thinking about Oregon's environment and about how we proceed in this new century to preserve not only our environment but our quality of life as well.

There are three principles I will be talking about today. First, we must recognize the inherent tension that exists between economic development and long-term environmental stewardship. A sound economy is important to the West. So is the health of the natural environment in which we must all live. Therefore, environmental policy must be developed in a way that balances a broad range of interests -- a broad range of values -- and that reduces polarization and increases collaboration.

Second, we must recognize that as we enter the 21st Century, our environmental problems are becoming more complicated and more challenging -- and have complex economic and social interconnections. And while some environmental problems will still respond to the traditional tools of regulation and litigation, we are at a point in time where we need to be open to new tools, new perspectives and new approaches.

Third, we must recognize that environmental policy must be based on a commitment to sustainability -- which I define as managing the use, development, and protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs.

The work of the Willamette Restoration Initiative Board and the board's recent report, "Renewing Our Commitment" reflect these principles -- and I offer it as an example.

Let me start with the first principle: developing environmental policy which balances a broad range of interests or values and which reduces polarization and increases collaboration.

As many of you know, we have been working for the last two years to develop a restoration strategy for the Willamette River Basin as a new chapter to the Oregon Plan for Salmon and Watersheds. Unlike our ongoing coastal watershed restoration efforts, however, the Willamette Basin poses a particular challenge because it involves not only agriculture

and forest issues, but is also the home to most of Oregon's urban population. The issue is further complicated by hydroelectric facilities on some of the river's major tributaries.

In the past, the Willamette Basin was breath-takingly beautiful -- a valley whose glory was a meandering river with tributaries surrounded by diverse landscapes of wetlands, prairies, and forests. Fish were plentiful, and for thousands of years, Native Americans depended on the Willamette River for their physical and spiritual sustenance. The Willamette River was the River of Life. However, the 19th century settlement of the Willamette Basin and our subsequent use of the natural resources of the basin have taken a toll on the river and its landscape.

Hundreds of miles of riparian areas have been damaged by industrial activities, harvest and grazing practices, road building, urbanisation, and agricultural practices. Ironically, the long term results have not been good for anyone. On the one hand, a number of species that depend on a healthy watershed have suffered severe declines. On the other hand, natural resource based communities have seen declines in employment.

Rejecting the traditional tools of conflict and confrontation, the WRI Board set about to establish a restoration strategy for the basin that will both restore ecosystem health and preserve the economic vitality of the communities in the basin. This effort involved a board of highly respected citizens and stakeholders from the Willamette Basin. Their work led to a broadly supported set of 17 recommended actions for restoring the health of the Willamette Basin Ecosystem.

The WRI Board, working with my office, other local, state and federal agencies and with the private citizens of the Willamette Basin, is now engaged in adding details and identifying and filling in the gaps in the proposed strategy. Their final recommendations will be subject to extensive public review.

Undertaking such an effort to balance different values is an approach that is helping to recast the debate between economic development and environmental health. And it is not easy largely because this debate has historically been cast as a black and white one -- with stakeholders on opposite sides of the issue operating from deeply entrenched positions. For well over a century, it has been cast as an either or debate in which economic benefits are pitted against environmental health -- a debate in which there must always be a winner and a loser.

To recast the debate requires that management plans -- such as the one being proposed by the WRI -- be built on the foundation of a single, overarching policy objective, in this case, the restoration of watershed health.

It is important to point out that by focusing on protecting and restoring watershed health we are not elevating the importance of one particular value over another. Rather, the objective is to restore a healthy, productive and sustainable ecosystem that, over time and across the landscape, can provide a full range of social, economic, and environmental benefits.

Thus, having watershed health as the overarching policy objective does not place one value ahead of any other value because watershed health encompasses each of these other values. We cannot provide sustainable forest products, for example, assure clean water and provide habitat for species unless we first have a healthy functioning ecosystem. The three legs upon which the strategy stands -- social, environmental and economic -- are all interwoven and are all dependent first on a healthy functioning watershed.

Now, the second principle -- that we must be open to new tools, new perspectives and new approaches when tackling environmental challenges -- is also reflected in the Oregon Plan, of which the WRI is a major chapter. To illustrate this principle, let me offer a bit of history.

Shortly after my first election in 1994, the National Marine Fishery Service gave notice of a possible listing of our coastal coho salmon. Having lived through the polarizing aftermath of the 1990 listing of the Northern Spotted Owl, I began to look for a different way to comply with the Endangered Species Act -- not just to avoid another divisive natural resource war (although that is an important objective in itself), but because I did not believe that relying solely on this act would ultimately save the salmon.

We must remember that the primary role of the federal government under the ESA is a regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the

wrong things but it provides no incentive for them to do the right thing.

So while the ESA can prevent landowners from engaging in activities that result in an intentional or unintentional kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70 percent of coho salmon habitat in Oregon lies on privately owned land and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding take.

As a result, the Oregon Plan for Salmon and Watersheds was designed to involve, empower and encourage private landowners to make voluntary commitments to watershed restoration and habitat restoration. And it works. Over the past three years these voluntary efforts have:

- Taken more than 400 stream miles off the EPA list of streams out of compliance with the Clean Water Act;
- Reopened over 430 miles of habitat by replacing culverts which were impeding fish passage;
- Decommissioned or upgraded over 1470 miles of roads to reduce erosion, and;
- fenced more than 400 miles of stream to improve riparian areas.

This represents far more on the ground progress than could ever have been compelled by the regulatory aspects of the Endangered Species Act alone.

The ESA was passed in 1973 to "... provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." With ecosystem conservation as the objective, application of the ESA is a means to that end -- not the end in itself. Therefore, the question we need to ask ourselves is not whether we should prevent a species from being pushed into extinction -- I think all of us would answer "yes" to that question. Rather, the question we should be asking is whether our traditional tools are the most effective way to achieve that end.

The Endangered Species Act was enacted for a noble purpose. I still believe in that purpose. But now, over a quarter of a century later, we need to have the courage to ask ourselves whether the traditional application of the Act by NMFS is achieving that purpose. With more than 1000 species now listed and dozens more proposed for listing -- and few species on the road to recovery -- it is clear to me that we need to be open to new approaches.

If the federal agencies insist on clinging rigidly to the existing lengthy, complex and contentious process of developing recovery plans under the ESA, they will doom many of these species to extinction long before anything happens on the ground.

The Willamette River Basin poses the same challenge because of its large urban population and the private ownership of much of the valley. Thus, to be effective, we must recognize the futility of relying solely on the traditional tools of regulation and litigation to advance the cause of environmental health.

I believe we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that calls for, and result in, greater individual responsibility and accountability for our air, land and water.

Take the issue of water quality as a case in point.

Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing the late Governor McCall when he led the effort to clean up Oregon's Willamette River in the 1970's. Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing nonpoint-source pollution -- perhaps the major challenge facing us on the Willamette River and throughout the West today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber

land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, Eugene and, indeed all of urban Oregon. This involves what people put on their lawns, whether or not they wash their cars in the driveway with detergent, and hundreds of other individual actions that contribute to the nonpoint source pollution load.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will require sustained environmental stewardship -- a long term commitment to change behavior -- by millions of people living in the watershed -- most of them living in the city.

You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts. You can only achieve that through a collaborative and cooperative process that engages thousands of people and gives them a stake in the problem and some degree of ownership in the solution. And that is exactly the process of the Willamette Restoration Initiative -- a process that I believe will ultimately lead to restoration of the Willamette Basin ecosystem.

Finally, let me expand briefly on my third principle: a commitment to sustainability. As I mentioned, I define sustainability as managing the use, development, and protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs.

What is important to understand here is that this definition requires simultaneously meeting environmental, economic, and community needs. Imagine, if you will, three overlapping circles -- one representing economic needs, one representing environmental needs and one representing community or social needs. The area where the three circles overlap is the area of sustainability. Historically, the debate between environmental and economic interests has been cast in a way that views these three circles as separate, unrelated entities. Our challenge in the 21 century is to understand that environmental, economic and community needs are interrelated and we must manage them with this in mind.

Toward that end, I signed an executive order last month which commits the state of Oregon to achieving sustainability in its operations within one generation. I have also lent my voice of support to organizations and businesses who are pursuing this same goal.

I recognize that the term "sustainability" is in vogue today -- almost a cliché -- and it means different things to different people.

But Oregon writer Kim Stafford, in an essay published in 1996, eloquently captures the sense and the spirit of what sustainability means.

Lloyd Reynolds, the international citizen of Portland, spent his last days in pain, silent, unable to speak or to write, lying in his hospital bed. On his last day at home, as his wife scurried to pack his suitcase for the hospital, Lloyd made his way outside to the garden, and there she found him on his knees, with a spoon, awkwardly planting flower bulbs.

"Lloyd, she said, "you will never see these flowers bloom."

He smiled at her. "They are not for me," he said, "they are for you."

The salmon coming home? They are for you. The calls of wild geese? They are for you. The last old trees? They are for you and your children, to the seventh generation and beyond. They are all blooming into being for you.

This definition of sustainability is a joint as well as an individual responsibility. And part of our challenge is to communicate over and over again that sustainability begins at home as much as it is a set of practices an organization can and should undertake, it is also a frame of mind that says "my individual decisions have environmental consequence and I must strive to act in accordance with that fact. To leave a small footprint."

This is a very exciting time, as we stand at the beginning of a new century. The date is both a moment on the calendar

and a metaphor for change, for a new beginning. We have come so far together in improving and sustaining the environment in this state. And yet, today, the challenges grow more difficult and the debate seems louder and more entrenched.

Let us not allow Oregon to become a victim of this conflict. Rather, let us pledge to seize this moment and pursue new methods and new tools to advance the cause of environmental health. And let us do so not only in the spirit of natural preservation, but in the spirit of sustaining our community and our common ground.

Let me make it clear that I do not reject or discredit the tools of the past, nor do I take lightly the significant gains they have achieved. I believe that we will always need a solid framework of environmental laws and regulations. We will always need access to the courts. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically re-evaluate the effectiveness of our tools and the way in which we have traditionally applied them.

What I am suggesting to you today is that the longstanding debate between economic development and environmental stewardship does not have to be a contentious, win-lose, zero-sum game.

It is not about sacrificing economic benefits for environmental health -- it is about working together to have both. It may be too much to expect the stakeholders in this struggle to abandon entirely their entrenched positions. But it is imperative that they make the effort to see beyond them. The Willamette Restoration Initiative is a sterling example of such an effort.

As William Jennings Bryan pointed out: "Destiny is not a matter of chance, it is a matter of choice; it is not a thing to be waited for, it is a thing to be achieved.

The Oregon Environmental Council -- and you, its business supporters -- are uniquely poised to shape Oregon' destiny in this new century. It is your opportunity to, as Wallace Stegner wrote, "outlive our origins" and "build a society to match our scenery."

Governor John Kitzhaber

Federal Land Management Speech Boise, Idaho

June 1, 2000

The objective of this conference is to provide some guidance for the next Administration concerning the management of public lands in the West. This is a worthwhile and timely exercise and must begin with a recognition of three things.

First, we must recognize that the reason the management of public lands is an issue is primarily because of the growing conflict between economic interests and environmental interests over how they are managed and what they are managed for. Therefore, management must be based on a policy that balances a broad range of interests -- a broad range of values -- and that reduces polarization and increases collaboration.

Second, we must recognize that as we enter the 21st Century, our environmental problems are becoming more complicated and more challenging -- and have complex economic and social interconnections. And while some environmental problems will still respond to the traditional tools of regulation and litigation, we are at a point in time where we need to be open to new tools, new perspectives and new approaches.

Third, we must recognize that the management of public lands must be based on a commitment to sustainability. I define sustainability as managing the use, development, and protection of our natural, social and environmental resources in a way and at a rate that enables people to meet their current needs without compromising the ability of future generations to meet their needs

It is important to understand that this definition requires simultaneously meeting environmental, economic, and community needs. Imagine, if you will, three overlapping circles -- one representing economic needs, one representing environmental needs and one representing community or social needs. The area where the three circles overlap is the area of sustainability. Historically, the debate over public land management has been cast in a way that views these three circles as separate, unrelated entities. Our challenge in the 21 century is to understand that environmental, economic and community needs are interrelated and we must manage them with this in mind.

Let's begin our discussion with the federal lands which comprise a significant portion of the land west of the 100th meridian. It is here where we are witnessing a growing conflict between economic and environmental interests. This is not new. There has always been a tension in the West -- between economic development and the powerful landscapes that define this region -- between the extraction of natural resources and concern over long term environmental protection.

For decades, the western economy has depended, to a large extent, on the extraction of natural resources from federal lands. Timber harvest, irrigated agriculture, grazing and mining have provided jobs for millions of westerners and have brought significant economic benefits to the region and to its people.

The rivers and streams that link federal land to private land have contributed to the natural resource-based economy of the West through federal policy that has both encouraged and subsidized their development -- from the Desert Land Act

of 1877, to the Newlands Reclamation Act of 1902, to the huge federal western water projects of the last century. The publicly financed hydroelectric system on the Columbia and Snake rivers, for example, has brought to the Pacific Northwest some of the cheapest power in the country, irrigated agriculture and a low-cost transportation route all from the Pacific Ocean all the way to Lewiston Idaho, over 800 miles inland.

At the same time, this single-minded pursuit of economic development and natural resource extraction has come at a substantial cost -- one that we are only now beginning to appreciate. The growing number of threatened and endangered species in the region -- as well as the thousands of stream miles with severely compromised water quality -- is evidence of the fact that we have reached, if not exceeded, the carrying capacity of our ecosystem.

A sound economy is important to the West. So is the health of the natural environment in which we all must live. The collision between these two equally legitimate values has led to an escalating conflict. People have taken sides -- taken stakes, if you will. We call them stakeholders and their primary battle grounds have been the United States Congress, state legislatures, and the courts.

The 1990 listing of the Northern Spotted Owl under the Endangered Species Act illustrates how this conflict is being played out across the West. The listing, and the subsequent court orders to back it up, led to a dramatic reduction in timber harvest off the national forests of Oregon and other western states. And although the debate ultimately led to the Northwest Forest Plan, the polarization literally tore communities apart and left scars in parts of rural Oregon that have yet to heal.

Thus, one of the primary objectives of federal land management in the West must be to reduce this kind of polarization and to arrive at a sustainable balance between environmental and economic interests in a way that builds community, rather than disrupts it. And that can only be done by an Administration committed to involving Western stakeholders in a meaningful dialog about shared objectives and sustainable solutions.

I recognize that this is not an insignificant challenge because the debate over the management of federal lands has historically been a black and white one -- with stakeholders on opposite sides of the issue operating from deeply entrenched positions. For well over a century, it has been cast as an either or debate in which economic benefits are pitted against environmental health -- a debate in which there must always be a winner and a loser.

It has to a large extent become a debate about symbols -- the lower Snake River dams being a case in point. To the environmental community -- a symbol of the subjugation of a great river and the degradation of an ecosystem. To the economic stakeholders -- a symbol of the regional economic benefits brought about by the Columbia River hydroelectric system. To find meaningful solutions, however, we must be willing to move beyond symbolism and conduct debate on a higher plane.

To recast this debate, federal land management in the West must be built on the foundation of a single, overarching policy objective which drives the management plan. I would argue that this policy objective should be watershed or ecosystem health.

Let me illustrate this concept with a timely example from my own state: forest health. Five years ago, we started looking at what could be done to try to improve the health of the federal lands on the east side of Oregon - particularly the pine forests that have been ravaged by insects and disease.

Like much of the rest of the Intermountain West, the federal forests of Eastern Oregon were once blessed with huge stands of old growth pine covering millions of acres. For much of the last century, however, forest management policy was characterized by active fire suppression and harvesting of valuable old growth pine. This transformed these forests to their present state: overstocked stands of young fir and pine, thousands of acres of dead and dying timber infested with insects, and a high risk of catastrophic fire.

Thousands of miles of riparian areas have been damaged by harvest and grazing practices, as well as by road building and urbanization. On the one hand, a number of species that depend on a healthy watershed have suffered severe declines. On the other hand, timber dependent communities have seen tragic declines in employment.

Rejecting the traditional tools of conflict and confrontation, we set about to find ways to both restore ecosystem health

and provide wood to communities in an environmentally sound manner. This effort involved a panel of highly respected scientists from throughout the Northwest and a "forest health advisory committee," consisting of a diverse group of eastern Oregon citizens and stakeholders. Their work led to a broadly supported set of eleven guiding principles for restoring ecosystem health.

In a nutshell, this "11-point plan" calls for using active management to promote ecosystem health, while avoiding areas of high public controversy. It also emphasizes learning from our efforts through monitoring. Restoration treatments include understory thinning and commercial thinning; road maintenance, closure and obliteration; prescribed burning; noxious weed treatment and prevention measures; and riparian planting and stream rehabilitation. A by-product of many of the thinning treatments is wood for local mills to help stabilize these rural communities. Thinning also reduces the risk of catastrophic fires that have increased significantly as forest health has deteriorated.

The eastside panel, working with my office and other state agencies, then started visiting project sites on Forest Service and the Bureau of Land Management land and identified nearly 60 Forest Service and Bureau of Land Management projects that exemplify the 11-point plan. This offers a clear demonstration that it is possible to engage in broadly-supported watershed and forest restoration work that both improves ecosystem health and provides economic benefits to local communities. In balancing different values, this approach is helping to recast the debate over federal land management in the West.

I want to emphasize that the key to our success lies in having a single, overarching policy objective driving the management plan, in this case: restoring watershed health. After all, a healthy watershed is the fundamental building block from which all beneficial uses of our forest flow: clean water, a thriving forest, abundant timber, and healthy populations of species.

It is also important to point out that by focusing on protecting and restoring watershed health we are not elevating the importance of one particular value over another. Rather, our objective is to restore a healthy, productive and sustainable forest ecosystems that, over time and across the landscape, can provide a full range of social, economic, and environmental benefits.

Having watershed health as the overarching policy objective does not place one value ahead of any value because watershed health encompasses each of these other values. We cannot provide sustainable forest products, for example, assure clean water and provide habitat for species unless we first have a healthy functioning ecosystem. The three legs upon which the strategy stands -- social, environmental and economic -- are all interwoven and are dependent first on a healthy functioning watershed.

We have recently expanded our effort by moving beyond the consideration of separate, individual projects to a consideration of how we can integrate restoration projects within an entire watershed. Approved by the U.S. Forest Service in June of last year, the "Blue Mountain Demonstration Project," in eastern Oregon covers almost 3 million acres and includes federal, state, tribal and private lands. Federal, state, and local tribal agencies are working with private land owners, environmentalists and community stakeholders with the shared objective of improving the health of forest ecosystems and local economies.

Again, success depends on defining a common policy objective that unifies, rather than divides the interests -- one which provides a common denominator that serves to balance the competing values.

Now, while the management of federal lands themselves is an issue of vital importance to the West, so are the federal policies which affect the management of private lands. Chief among these are the policies used to implement and enforce such federal environmental laws as the Endangered Species Act and the Clean Water Act.

Since meeting the requirement of these laws cannot be achieved on public land alone -- but must necessarily involve private lands as well -- how these laws are implemented by the federal government must be included in any discussion of federal land management. Let me illustrate this point by using another Oregon example, in this case involving the Endangered Species Act.

Shortly after my first election in 1994, the National Marine Fishery Service gave notice of a possible listing of our

coastal coho salmon. Having lived through the polarizing aftermath of the 1990 listing of the Northern Spotted Owl, I began to look for a different way to comply with the Endangered Species Act – not just to avoid another divisive natural resource war (although that is an important objective in itself), but because I did not believe that relying solely on this act would ultimately save the salmon.

We must remember that the primary role of the federal government under the ESA is a regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the wrong things but it provides no incentive for them to do the right thing.

So while the ESA can prevent landowners from engaging in activities that result in an intentional or unintentional kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70% of coho salmon habitat in Oregon lies on privately owned land and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding take.

As a result, Oregon's effort to comply with the Endangered Species Act – called the Oregon Plan for Salmon and Watersheds -- was designed to involve, empower and incent private landowners to make voluntary commitments to watershed restoration and habitat restoration. The commitments are built on a solid foundation of federal, state and local regulation - including harvest limits, Clean Water Act requirements, forest practice requirements, land use laws and state water law.

The primary tool with which we implement our efforts on the ground is the local watershed council -- made up of community members representing a broad range of stakeholders working together to implement a plan they helped develop to improve the health of their own watershed.

And it works. Over the past three years these voluntary efforts have:

- taken more than 400 stream miles off the EPA list of streams out of compliance with the Clean Water Act,
- reopened over 430 miles of habitat by replacing culverts which were impeding fish passage;
- decommissioned or upgraded over 1470 miles of roads to reduce erosion, and;
- fenced more than 400 miles of stream to improve riparian areas.

This represents far more on the ground progress than could ever have been completed by the regulatory aspects of the Endangered Species Act alone.

Working with private landowners is fundamentally different than working with public agencies -- especially in the West – and it is critically important that federal policy reflect an understanding of this. In my 18 years of involvement in western state politics, I have experienced over and over again the fact that an approach which involves private landowners in the decision-making -- which gives them some ownership and investment in the work being done -- has a greater and more immediate positive impact on the resource than simply applying regulations that tell them what to do. Telling people what to do with their land in the West is an explosive proposition. Ask any western governor.

The point is that we cannot recover the coastal coho unless private landowners take restoration actions that go well beyond the "avoidance of take." So the question becomes: by what means can we achieve these kinds of activities on private lands? Simply listing a species does not accomplish this, a fact demonstrated by the Snake River Chinook which were listed under the ESA in 1992. In the intervening eight years the National Marine Fisheries Service has taken virtually no action to compel a change in management practices on private land anywhere in the basin.

The ESA was passed in 1973 to "... provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." With ecosystem conservation as the objective, application of the ESA is a means to that end -- not the end in itself. Therefore, the question we need to ask ourselves is not whether we should prevent a species from being pushed into extinction -- I think all of us would answer "no" to that question. Rather, the

question we should be asking is whether our traditional tools are the most effective way to achieve that end

The Endangered Species Act was enacted for a noble purpose. I still believe in that purpose. But now, over a quarter of a century later, we need to have the courage to ask ourselves whether the traditional application of the Act by NMFS is achieving that purpose. With more than 1000 species now listed and dozens more proposed for listing -- and few species on the road to recovery -- it is clear to me that we need to be open to new approaches. If the federal agencies insist on clinging rigidly to the existing lengthy, complex and contentious process of developing recovery plans under the ESA, they will doom many of these species to extinction before anything happens on the ground.

To avoid that outcome, we must recognize the futility of relying solely on the traditional tools of regulation and litigation to advance the cause of environmental health. Take the issue of water quality as a case in point.

Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing the late Governor McCall when he led the effort to clean up Oregon's Willamette River in the 1970's. Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing nonpoint-source pollution -- perhaps the major challenge facing us on the Willamette River and throughout the West today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, Eugene and, indeed all of urban Oregon. This involves what people put on their lawns, whether or not they wash their cars in the driveway with detergent, and hundreds of other individual actions that contribute to the nonpoint source pollution load.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will require sustained environmental stewardship -- a long term commitment to change behavior -- by millions of people living in the watershed -- most of them living in the city.

I believe we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that calls for, and result in, greater individual responsibility and accountability for our air, land and water.

You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts. You can only achieve that through a collaborative and cooperative process that engages thousands of people and gives them a stake in the problem and some degree of ownership in the solution.

It was this belief, coupled with personal experience in seeing it work, that inspired me and Governor Leavitt from Utah, to extract a common set of principles that describe this approach to environmental management. We call these eight principles Enlibra -- a hybrid Latin word, coined by Governor Leavitt -- which means "to move toward balance.

In the first principle, for example, "National Standards, Neighborhood Solutions" -- Enlibra recognizes the importance of national environmental standards -- and of the need to be able to enforce them -- but urges flexibility and the empowerment of other levels of government to develop approaches that meet or exceed those standards without set federal prescriptions.

Enlibra also calls for good science. It calls for a good understanding of the broad costs and benefits of various strategies, including those to society. It calls for a recognition of the power of incentives and of the importance of collaboration. It calls for a focus on results; and for looking at the scope of the problem along natural boundaries, not artificial political ones. And, finally, Enlibra recognizes that people need to understand their connection to the environment and their stewardship responsibilities if we are to enjoy not only environmental, but also social and economic health.

Let me make it clear that I do not reject or discredit the tools of the past, nor do I take lightly the significant gains they have achieved. I believe that we will always need a solid framework of environmental laws and regulations. We will

always need access to the courts. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the way in which we have traditionally applied them.

What I am suggesting to you today is that federal land management and the implementation of federal environmental laws in the West does not have to be a contentious, win-lose, zero-sum game.

This is not about sacrificing economic benefits for environmental health -- it is about working together as a region to have both. It is about striking a victory for regionalism over parochialism. To quote Wallace Stegner, it is about "outliving our origins" and "building a society to match our scenery."

It may be too much to expect the stakeholders in this struggle over land management to abandon their entrenched positions. But it is imperative that they make the effort to see beyond them. The next administration can help us by adopting land management policies that unify rather than divide constituencies; by embracing sustainability as central objective; and by being open to new and innovative approaches to achieving federal environmental standards.

In the end, however, we need to come together ourselves as western states and as a region. As William Jennings Bryan pointed out: "Destiny is not a matter of chance, it is a matter of choice; it is not a thing to be waited for, it is a thing to be achieved.

I invite all of you -- but particularly the next administration -- to join me on this journey.

Governor John Kitzhaber
Sustainable Agriculture Conference Speech
March 7, 2000

It's an honor to have a chance to speak to this Western Sustainable Agricultural Conference today. To those of you who hail from beyond our borders -- let me welcome you to Oregon. To all of you, let me offer my admiration and support for your leadership in the area of sustainable agriculture.

My remarks will be brief this morning, but I would like to share with you several broad thoughts that I hope will inform your work at this conference over the next few days.

The word "sustainability" is en vogue today. It means different things to different people. So let me take a moment and share with you what I mean by this term.

To many, the sustainability movement is about conducting a business, or a government, or, indeed, our individual lives in a way that, over the long haul, reduces the impact of our activities on our natural environment. It sustains clean air and clean water and does not deplete our natural resources.

The mission statement of Sustainable Northwest takes a different tact. This organization is dedicated to helping businesses become sustainable. It's mission statement reads: "To build partnerships that strengthen local capacity to promote environmentally sound economic development in communities of the Pacific Northwest."

I agree with both definitions. But, I add an additional perspective when it comes to agriculture and forestry. And, I draw it from the definition of "to sustain" found in Webster's Dictionary: "(1) to keep an existence; to keep up; to maintain or prolong."

Given this definition, the fundamental question that we must consider is this: How do we "keep an existence; maintain and prolong" our agricultural industry? Without an agricultural industry, we can't have sustainable agriculture. And, increasingly, without sustainable agriculture, we can't have an agricultural industry.

Let me start by making a couple of observations. First, the agricultural industry plays a very important role in Oregon in a number of ways.

It is important economically. Oregon production agriculture contributed \$3.47 billion to Oregon's economy in 1998/99. Value added processing added another \$2 billion. Thus, the total agricultural contribution to Oregon's economy in 1998/99 was \$5.5 billion. Agriculture is, and will continue to be, a key element in Oregon's economy

Second, agriculture to, what I will call "Oregon, the Place." One of the main objectives of our land use planning program is to maintain the land base for agriculture and forestry. This is reflected in planning goals 3 and 4. Population growth and urbanization can threaten our natural resource based industries. Our efforts in this state to protect these lands have helped preserve not only these industries, but also the open spaces and powerful rural landscapes that help define this place we call Oregon.

Third, agriculture contributes to the Oregon community. The farming way of life -- the farming culture -- contributes to who we are as Oregonians, with roots going back to the Pioneers who founded our state more than 150 years ago. Fiercely independent, living close to the land, proud, good community members -- the farming culture is part of who we are.

We cannot afford to lose any of these values.

This brings us to my second observation: That much of agriculture is struggling today. Of course, there are some bright spots. The Oregon nursery and greenhouse industry had its eighth consecutive excellent year. In 1999, this segment experienced a new record high sales total of over \$453 million. Blueberries, cherries, wine grapes, hazelnuts and Christmas trees also had a great year in 1999.

Other segments of the agricultural economy, however, are either struggling (pears, hops, processed vegetables) or, although holding their own, are not making money (potatoes, cattle, dairy).

Finally, some segments of the agricultural economy are in real trouble. This would include wheat, apples, cranberries, strawberries, onions and mint.

We have also seen the bankruptcy of Agribiotech in spite of a good year for most grass seed varieties. This casts a cloud over the future of the grass seed industry just as we are opening the doors of The People's Republic of China to grass seed exports from Oregon.

In addition, we've seen the bankruptcy of Agripac and watched farm production recently drop in Oregon for the first time since 1985.

What does all this tell us? What does it mean that some segments of Oregon's agricultural economy are doing well, some are struggling and some are in real trouble? To me, it tells us that one of the strengths of Oregon agriculture is its diversity.

We have over 250 commercial agriculture commodities. It is very important for Oregon to continue to foster and promote that diversity for two reasons. First, because it helps hold the overall industry together. Second, because in marketing agricultural products around the world, diversity and quality are among our greatest advantages.

So, how do we sustain our agricultural industry in Oregon -- both those segments that are doing well and those segments that are struggling? I suppose there are many answers to that question, but let me offer two for your consideration today.

First, we must continue to promote sustainable agriculture as a strategy for the future. By that, I do mean conducting agricultural operations in a way that reduces and minimizes the impact of those activities on our natural environment -- especially on water quality.

I encourage this not just because it is environmentally sound -- but because it is, or certainly can be, economically sound as well. For example, technology has allowed us to use agricultural inputs in a smarter fashion than we have before. This gives us a better understanding of nutrient management so that we can be more precise about what we use. The result? Less fertilizer -- which means better economics and healthier environment. I'm sure you can find many parallels to this example.

To move in this direction, we must continue to invest in agricultural research. We must continue to develop markets for the products of sustainable agriculture. And, we must provide incentives and additional help for certain segments of our agriculture industry to make this difficult, but promising transition.

Second, we need a unified strategy on how to meet the requirements of federal environmental legislation like the Clean Water Act. This must be done in a way that does not disadvantage our agricultural industry but, rather, gives it some stake in the problem and some ownership in the solution.

Senate Bill 1010 and Oregon's Healthy Streams Partnership offer a case in point. For those of you outside of Oregon, let me give you a brief description of this effort.

In 1996, Oregon agriculture faced a ballot measure (BM 38) the so-called, "Clean Streams Initiative". This was a very onerous, punitive, and litigious effort to improve water quality. I opposed this measure because I thought it would hurt agriculture and because I did not believe that it would improve water quality. Why? Because most of the action resulting from the ballot measure would have taken place in the court room, rather than on the ground where the resource could actually realize some benefit.

At the same time, however, I called on leaders of Oregon agriculture to work with me to develop a better way to comply with the Clean Water Act. Clearly, clean water is in everyone's interest. The result was the Healthy Streams Partnership which is based on Senate Bill 1010 (passed in 1993). It uses a flexible, outcomes based approach to meet water quality standards. It has enforcement provisions, but involves and respects individual landowners and is administered through the Oregon Department of Agriculture.

We have made some significant progress through this effort, although, not without controversy. But, throughout the months, the leaders of the Oregon agricultural community have remained supportive of this approach and I applaud their commitment and their vision. We cannot be successful without them.

But, after all, part of sustainable agriculture is sustaining water quality. And, I remain convinced that we can develop solutions here in Oregon that work better for us -- and make more real progress on the ground -- than solutions based solely on federal regulations or those enforced through ballot measures.

Let me close with one thought. Agriculture is going through a change. Change is always difficult and often frightening. In this, change is being driven by technology, the globalization of our economy, population growth and by a growing public concern over the state of our environment. There's nothing we can do to stop this. The question is whether we can swing aboard this horse and actually help direct where its headed.

I predict that Oregon agriculture will weather this change, but to do so, we must be willing to do two things. First, we must be willing to evaluate our agricultural practices. That's really what sustainable agriculture is all about. That is what you are doing on a daily basis. The problem is that critics often confuse the people with the practices -- or deliberately paint with the same dark brush. But, to attack farmers and the farming culture is to attack our own roots as Oregonians. It makes no sense, it is divisive, it is inappropriate and ineffective, and it should not be tolerated in this important public policy debate.

At the same time, however, agriculture must be willing to look at its own practices and must be willing to change them when necessary. And, when you stop to think about it, this is not a new concept.

For example, we used to think that there was nothing wrong with planting the same crop in the same field year after year. Now we know that, for some commodities, rotating crops helps break the cycle of pests and disease. It helps keep soil fertile by not exhausting the nutrients. What did we do when we discovered this question mark? We changed our practices.

I am simply suggesting that we continue to be open to that -- especially to the modification of those agricultural practices that reduce the impact on our environment. By the same token, the rest of us need to work with you to make these new practices economically viable.

Finally, agriculture must build bridges with urban and suburban Oregon. I believe that the greatest threat to agriculture today is not federal regulation, it is not onerous ballot measures, and it is not lawsuits. The greatest threat to Oregon agriculture today is demographics.

There are nearly 50,000 people moving to Oregon each year. Most of them come from cities and suburbs. Many don't understand the farming culture. They are unaware of the contribution you make and don't know what you need to survive. For many, farmland and forest land are seen as recreational opportunities and development opportunities -- not as a vital part of Oregon's economy and a vital part of Oregon's way of life.

To counter that, we must build bridges. We must work together and try to understand each other. We must reach out to each other and find solutions that are mutually supportive.

Let me conclude with a quote from Wallace Stegner's small book, [The Sound of Mountain Music](#). This passage frames, as well as anything else, the challenge that faces agriculture in the West and, indeed, the challenge that faces all of us who call this region home.

“One cannot be pessimistic about the West. This is the native home of hope. When it learns that cooperation, not rugged individualism, is the quality that most characterizes it and preserves it, then it will have achieved itself and outlived its origins. Then it has a chance to create a society to match its scenery.”

Governor John Kitzhaber

Sustainable Products Training Speech

March 7, 2000

Good morning and thank you for having me here today.

I am heartened to see all of you here today, getting involved in and committed to the concept of sustainability.

Today, I want to speak to you about what I think that word means, not as the CEO of a large enterprise -- the State of Oregon -- but as someone who has been involved in environmental issues since he dipped his toe into the world of politics in 1978.

And I want to speak to you today as a father of a two-year old because I never want to reach the day when I turn to my son and say "as beautiful as Oregon is today, you should have seen it 20 years ago."

We are together at a moment of great opportunity, at the beginning of this new decade, this new century and this new millennium. It is a moment of opportunity because it is increasingly evident that we must change the way we do business or we will slowly but surely exhaust the air, land and water which sustains us.

It is a moment of opportunity because this awareness is matched by an era of prosperity, technological change and global competitiveness. Prosperity and technology give us the wealth and the tools to change the way we do business and global competitiveness supplies the market imperative to accomplish the essence of sustainability: do more with less.

I want to talk a little today about how I view that from the perspective Oregon governor and what we as a state are doing to match your commitment to sustainability.

But first, I want to make a broader statement about sustainability and leave you with two important ideas regarding this concept.

First, the adoption of sustainable practices by business and government will do as much and possibly more for environmental quality in the next 30 years as the Clean Water Act, the Clean Air Act and the Endangered Species Act did in the last 30 years.

Second, this has nothing to do with why you should adopt sustainable business practices.

Instead, we should all be interested in sustainability because it is efficient, economic and profitable. The fact that it will deliver an environmental benefit to society at large is a fortunate consequence.

Let me spend a minute on sustainability as it relates to the environment and share with you why I think sustainability can have a significant impact on environmental quality.

Over the last 30 years, I believe we have picked the low fruit, if you will, of environmental remediation. We have done the easy things. We have gone to the paper mills and the steel mills and the aluminum mills and radically reduced their contributions to air and water pollution.

And we have gone to municipalities and helped them change their sewage treatment practices and radically cut pollution from our cities and towns into our rivers and lakes.

In short, we have gone to what is known in the business as “point source” pollution and very successfully reduced it.

What we have not been so successful at is going to the “non-point source” polluter and getting them to reduce their impact on air, land and water.

Who is the “non-point source polluter?” That’s you and me.

And our actions, our choices, our decisions about use of resources are the next great unconquered territory in environmental policy.

Let me give you an example from right here in Oregon of how our environmental challenge has changed from compelling corporate or municipal behavior to one of encouraging individual behavior.

Thirty years ago, our state decided to clean up the Willamette River. We did a great job, and the benefit to people, animals and to our quality of life cannot be underestimated. But we did most of it by changing the law and hence the practices of cities, towns and private business.

Today, we face again a water quality challenge on the Willamette River. We must improve the water quality to make it more hospitable to fish and to preserve it as a resource for human consumption.

But, we cannot fall back on the old tools of regulation. We must, instead, begin the process of changing the behavior of millions of people:

We must help farmers change their practices so as to reduce pesticide, herbicide and animal waste runoff into streams -- and do so in a way that doesn’t put them out of business.

We must work with cities and counties and other governments as the plan and implement development policies so that we do not cause undue runoff into the streams of the Willamette Basin.

And we must work with individual Oregonians and convince them that it does make a difference what they put on their lawns and gardens.

We must, in essence, carry a message of sustainability to people in our state in their everyday lives. Because, we won’t succeed at sustaining Oregon as a great place to live simply by promulgating environmental regulations. Instead, we will keep this a great place to live by convincing Oregonians that the accumulation of actions by millions of people will make a difference. It will make a difference in how clean our air is. It will make a difference in how clean our water is. And it will make a difference in how -- and how much -- we use our limited supply of land.

Therefore, when I talk about sustainability, it is not some vague concept, but the core principal in of environmental policy for the next generation.

But that’s just me. What about you?

I am encouraging you to learn about and adopt principles of sustainability in your business because they will create an environmental benefit for our state and for coming generations. But, there is more.

I firmly believe that sustainability will be successful not because it is environmentally sound, but because it is economically sound.

That is why I have my staff working on an executive order to bring sustainability principles to the operation of state government. As an organization, we employ more than 40,000 people, have an annual budget of around \$5 billion, manage properties all over the state and develop projects such as prisons and roads. We leave a pretty big footprint.

The challenge I have made to my bureaucracy is this: Make the state of Oregon a leader in sustainability. If we are successful, we will be saving taxpayers' money and saving the environment for our children and grandchildren.

You have the same opportunities at your businesses. I urge you to pursue them.

Let me leave you with this idea: sustainability is not just some new age, West Coast concept. It is a smart way of doing business -- one demanded by an ever more competitive global economy.

And it is the guiding principle of environmental policy for the next 30 years.

We've got our work cut out for us, so I'll let you get back to the seminar. Good luck to all of you.

Governor John Kitzhaber

American Fisheries Society Speech

February 18, 2000

Good Afternoon. It's an honor to appear before the American Fisheries Society which, for years, has provided such distinguished service in the cause of sustainable fisheries management.

It is also quite fitting that a public official, such as myself, should appear before a group of scientists in what may be seen as a symbolic "hand-off" regarding a challenge of great importance to all of us here -- and, indeed, to all of the citizens throughout the Northwest.

That challenge is to restore a healthy ecosystem to the Columbia River Basin and recover the salmon of the Columbia -- once the greatest runs on the face of the earth.

Like all significant environmental challenges, our response here must be a combination of good science and good public policy.

And my reference to a "hand-off" is a recognition that you -- as fisheries scientists -- have done your job.

You have provided the science that the region needs to begin to address our Columbia Basin challenge.

That is not to say that the science is perfect, or that we now know all that we will ever need to know, to inform our efforts. But we will never have perfectly accurate or complete science and we can no longer use that as an excuse for inaction.

There are those who continue to believe that science will give us the answer. It won't. What science can give us is a range of options, each of which carries varying degrees of economic and ecological risk. Science can describe the risks inherent in various policy options -- not eliminate them.

In the end, the answer will be a political one -- informed by good science -- but based on a set of values and on the degree of economic and ecological risks the region is willing to accept. It is time that we shoulder our responsibilities and develop a blueprint for action.

To do so, we must engage the citizens of the Northwest. Engage them in making clear what is at stake in the Columbia Basin and what our goal must be in response to this challenge. Engaging them concerning the alternatives we have to achieve that goal. Engaging them in describing the trade-offs inherent in each option. And that will require an unprecedented level of political leadership and collaboration throughout the region.

Let's start by discussing what is at stake in the Columbia Basin. In a very real sense, the stakes can be summed up in the following questions:

- Will we, as a region, act to save the salmon or let them go extinct?

- Will we, as a region, meet the requirements of the Endangered Species Act, the Clean Water Act, and the Northwest Power Act?
- Will we, as a region, meet our sacred obligations -- the treaties between the people of the United States and the sovereign Indian tribes of the Northwest?

To me there is but one answer to these questions -- we must. We must save our wild salmon; we must strive to meet the standards of our federal environmental statutes and the Northwest Power Act; we must honor our obligations to the tribes.

In short, we must restore a healthy, functioning ecosystem to the Columbia Basin. Only then will we have hope of restoring abundant runs of salmon and the clean, cool water that for centuries characterized the Columbia River. To me, this is not just about doing what the law requires -- it is about doing what we know to be right.

A functioning ecosystem -- one that can provide for the needs of both humans and animals -- demonstrates our willingness to live our lives in a sustainable fashion; a willingness to take the legacy we have been handed and to pass it on to the next generation of westerners.

But if our salmon runs are not healthy, then our watersheds are not healthy. And if our watersheds are not healthy, then we are putting at risk our future and that of our children and grandchildren. A highly degraded ecosystem -- which is where we are headed today -- represents a decision to mortgage the legacy with which we have been blessed for our own short-term benefit. I believe that we are better than that.

These environmental laws and treaties -- which seem at once so arcane and so detailed -- constitute the means by which we seek to connect our past, our present, and our future. And at the heart of this debate lies one question that each and every one of us must answer: are we willing to honor that connection?

I believe that we are. I believe that the people of the Northwest are ready to meet this challenge -- and our goal must be nothing short of a functioning ecosystem in the Columbia Basin. We must accept no less.

That brings us to the question of the alternatives available to achieve our goal and the trade-offs that are involved. The recently unveiled multi-species framework process -- spearheaded by the Northwest Power Planning Council -- illustrates the choices before us more clearly than perhaps any other study.

As you know, the framework analyzed a range of seven alternatives that might achieve the goal of ecosystem restoration and salmon recovery. Each alternative addresses, in varying degrees, the damage to the ecosystem caused by the so-called "4-H's": the hydroelectric system, harvest policies, habitat restoration and hatchery practices.

At one end of the range is Alternative One, which essentially returns the river to a free-flowing natural state. This alternative involves breaching the four Lower Snake River dams and also breaching McNary Dam and John Day Dam on the mainstem. It involves intensive habitat restoration on both public and private land, the elimination of hatchery production; and the curtailment of all salmon harvest except tribal harvest.

At the other end of the range is Alternative Seven, which essentially manages the river to maximize economic benefits. This option includes increased power production, increased irrigation, and increased fishing under scientific management.

Alternative One offers the least environmental risk in terms of the ecosystem and salmon restoration, but the greatest human risk in terms of the economic impact on the region. Alternative Seven, on the other hand, offers the least human risk, but the greatest environmental risk.

The alternatives between One and Seven fall somewhere along this risk spectrum with alternatives Three through Five having the greatest balance between environmental and economic risk.

An examination of the differences between Alternative Three and Alternative Five best illustrates the choices that face us as a region. Both alternatives yield significantly greater salmon returns than the status quo and of approximately the same magnitude. Alternative Three yields 2.8 times more salmon than current returns. Alternative Five produces 2.5 times more salmon than current returns. (The range runs from 1.5 times current returns in Alternative Seven to 2.9 times in Alternative Two).

Both Alternative Three and Alternative Five amend harvest and hatchery practices and involve habitat restoration activities. The chief differences between these two alternatives lie in how they address the hydrosystem, the intensity of habitat restoration activities and the nature of harvest and hatchery policies.

Let's start with the most controversial difference between Alternative Three and Alternative Five -- dam breaching. Alternative Five is a breaching strategy involving the four Lower Snake River dams. Alternative Five can be characterized as an "everything but breaching strategy".

Dam breaching has acquired a life of its own in the Northwest -- dominating the political debate, the news stories, and the editorials -- almost to the exclusion of everything else. It is important, therefore, that we put this issue into context and bring it into perspective.

Dam breaching alone -- while it will certainly help some runs of salmon -- will not necessarily restore them. Regardless of whether we choose a breaching strategy (such as Alternative Three) or a non-breaching strategy (such as Alternative Five) we must also come to terms with other steps that will be necessary:

- The hydroelectric system

All dams on the Columbia and Snake Rivers (whether any are breached or not) must operate in a way that addresses dissolved gas and temperature problems and which comply with the Clean Water Act.

We must increase flows to help fish move downstream.

Where appropriate, we must improve fish passage by using bypass collectors and turbine screens. And, as turbines are scheduled for replacement, they must be upgraded with so-called "fish-friendly" turbines.

- Habitat

We must move aggressively to restore degraded habitat. While some progress has been made, our ongoing water management and agricultural practices, urban uses, and timber harvests continue to add sediment and other pollutants to rivers and streams. This raises water temperature and dries up critical spawning and rearing habitat.

To reverse this will require a coordinated and cooperative effort between state, federal, and tribal governments and private landowners to develop and implement a comprehensive program for habitat protection and restoration. This effort must be based both on incentives for action and on enforcement of our existing regulatory framework.

- Hatcheries

We have come to understand that the historic promise of hatcheries to replace natural production lost to economic development has been largely a myth. The tools of artificial production must be immediately recast to meet this new challenge.

Hatcheries that are used to supplement and restore threatened and endangered salmon stocks must be operated on a

scale, and in a manner, that reflects the essentially experimental nature of this undertaking.

Further, hatcheries used to augment fishing should, in both mission and location, move away from mainstream fisheries that impact listed and other weak stocks in favor of terminal fisheries located in the mouth and tributaries of the Columbia River.

- Harvest

Over the past decades, harvest rates have been steadily decreased to a point where, today, harvest occurs only at a fraction of historic levels.

In fact, for many of the wild salmon stocks -- such as the spring and summer Chinook and Sockeye -- no in-river harvest has occurred for over three decades.

Northwest Native Americans have been especially hurt by these reductions. Salmon fishing for them is more than just an activity or even a way of life -- it is truly spiritual.

Yet, further reductions must be achieved in fall Chinook if we are to achieve our goal. Yet, in spite of these recovery strategies (all of which must be undertaken in some degree), the public debate remains stalled on the question of whether or not to breach the four dams on the Lower Snake River. You would think, given all the focus on this issue, that breaching is the “silver bullet” that alone could allow us to reach the goal of a functioning ecosystem and abundant salmon runs. It is not a silver bullet.

You know, and I know, that breaching the Snake River dams alone will not get the job done. To say that breaching alone will save the salmon is as much a fallacy as saying that you cannot save them without breaching.

Why then all the focus on dam breaching? The answer lies in the fact that the breaching debate has become a debate that is more about symbols than about solutions.

On the environmental side, dams are symbols of man’s subjugation of the mighty Columbia River and of the ecological degradation that has flowed from that subjugation. And thus, removal of the dams becomes an end in itself -- set apart from the effect on overall salmon recovery or watershed health.

On the other side, dams are symbols of the economic benefits which have flowed from the taming of the Columbia River. And thus, their removal threatens the economic interests because it legitimizes a discussion of the environmental cost with which these economic benefits have been purchased.

So if removing the four Lower Snake River dams is not a “silver bullet”, and should not be an end in itself, what is its importance? The answer lies within the numerous scientific studies undertaken over the past several years for the purpose of informing our efforts to recover salmon, steelhead and other fish and wildlife in the Columbia Basin.

While partisans and the press dwell on the differences in these studies, the conclusions and information that are common to virtually all of them are very significant. This information includes the fact that:

- Any successful effort to recover salmon and restore a functioning ecosystem must address not only the harm caused by the hydrosystem -- but also the harm caused by a degraded habitat, unscientific hatchery practices, and outdated harvest policies.
- Removing the four Lower Snake River dams is, at least for the Snake River salmon listed under the Endangered Species Act, the single most beneficial action we can take.
- If we don’t remove the four Lower Snake River dams, we will need to do more and with greater intensity in the

areas of hatcheries, habitat and harvest to achieve the ecosystem restoration and salmon recovery we seek.

Again, let me use Alternative Three and Alternative Five to illustrate this point. While Alternative Five does not breach the dams, it does a number of other things which are not contemplated under Alternative Three. For example, Alternative Five requires intensive habitat restoration efforts not just on public land, but on private land as well.

Furthermore, it requires not just continuing the current moratorium on the issuance of new water rights in the basin -- it contemplates an actual reduction in existing water rights.

In other words, the tradeoff for maintaining the four Lower Snake River dams is an increased responsibility for habitat restoration by private landowners and a reduction in existing water rights in the region.

Other studies, such as the federal government's "All H" paper, suggests additional trade-offs. For example, to recover the Snake River Fall Chinook without removing dams would require a 50-75 percent additional reduction in ocean and river harvest from the already historic low current levels. Furthermore, the use of an additional one million acre-feet of water to augment Spring and Summer flows would probably be necessary.

It is also important to point out that while both alternatives yield about the same number of Chinook -- the philosophy that underpins the means by which they reach that end are very different.

The philosophy behind Alternative Three is to benefit salmon by recreating a more normative and resilient ecosystem capable of functioning without a significant amount of human technologic support. It also removes dams to restore almost 140 miles of free-flowing river for better spawning, rearing and migration conditions.

Alternative Five goes in the opposite direction -- calling for an increased reliance on hatcheries and on sophisticated dam passage technologies in lieu of a return to a more naturally functioning ecosystem.

The difference is not insignificant because Alternative Three produces almost two-thirds more natural fish than Alternative Five. The importance of this lies in the fact that one of the purposes of our effort is to satisfy the Endangered Species Act, which determines recovery based on the number of natural fish.

My point is this: if we can move beyond the symbolism of the four Snake River dams -- and look at the policy trade-offs involved, at the other choices we must make if we choose to leave them intact -- breaching emerges as a responsible and cost-effective option. It is not the only option, but it is a responsible one that should not be disregarded out of hand.

Some will say that we have not done enough science. I say that we can always play that card as an excuse for inaction and as a justification for avoiding tough choices. But exactly what additional scientific experiment is necessary to demonstrate that it is easier for salmon to migrate in a free-flowing river than to negotiate a several hundred foot high concrete barrier?

Some will say that it is too expensive. I say, look at the other alternatives. There are similar -- if not greater -- costs associated with a non-breach strategy.

Some will say that it is too controversial. I say, what isn't? Who here thinks that it is not controversial to cut harvest levels? To change agricultural and timber practices on private land to significantly augment flows?

There is no doubt in my mind that we can move ahead with salmon recovery without breaching the dams. All I am saying to you today is that we have to stop deluding ourselves into believing that our choices will be easier and cheaper if we just leave the dams alone.

Our choices won't be easier. They'll be just as tough. Our costs might be lower, but only on the margin.

The regional challenge here is to develop an ecosystem recovery strategy that spreads the costs as broadly as possible -- so that no one economic interest bears a disproportionate burden. And these costs must involve not only the cost of the

recovery strategy itself, but also the cost of mitigating -- to the greatest extent possible -- the economic consequences, whatever they may be: from increased regional power rates, to harvest reductions, to transportation alternatives, to covering the increased cost of pumping for irrigation, to the job loss at various ports along the river.

This does not have to be a zero sum equation. This does not have to be a win-lose proposition and we must not allow it to be framed in that way.

I am well aware of the economic trade-offs inherent in restoring this regional ecosystem. The dams and the hydroelectric generating capacity in the Columbia River Basin have brought huge economic benefits to the region: low cost power, irrigated agriculture, jobs, transportation and much more.

This is not about sacrificing economic benefits for environmental health -- it is about working together as a region to have both. It is about striking a victory for regionalism over parochialism. To quote Wallace Stegner, it is about "outliving our origins" and "building a society to match our scenery."

I believe that one way to accomplish that and to equitably spread the economic burden is to build a recovery strategy that includes breaching the four Lower Snake River dams. I also appreciate that my position on this issue is, at least at present, a lonely one among the Northwest political establishment.

The other governors of the Northwest -- for whom I have enormous respect -- hold a different view. If my colleagues in the region insist that any recovery strategy must leave the dams intact, I can work with that as well, as long as we are prepared and willing to intensify our efforts in other areas:

- Going the extra mile in habitat restoration on both public and private land.
- Radically limiting harvest in both ocean and river.
- Totally restructuring how we operate our hatcheries.
- Changing the way we run the entire hydrosystem from Grand Coulee to Bonneville.

I will work with the political leadership in the region in pursuing either path -- but we must choose. . . and act. Because in all of this, delay is the enemy.

The federal government in particular must both take a position on a course of action and provide a significant contribution of financial resources towards the recovery strategy.

For twenty years the Bonneville Power Administration has been the primary funding source for salmon recovery with the dollars coming from the region's electricity ratepayers. But ratepayers cannot reasonably be expected to provide all of the funds needed to achieve the recovery of this ecosystem and the fish and wildlife that depend on it -- especially when our goals are to protect national resources and to honor national obligations.

Therefore, the federal government must provide substantial additional funds for a Columbia River Basin restoration effort. To date we have not seen the level of commitment needed to succeed. For all our hard-fought efforts last year, Oregon received only \$9 million from the federal government for coastal salmon restoration. That won't make it for the basin.

I call on this administration to demonstrate its commitment for Columbia River ecosystem restoration in the President's fiscal year 2001 budget. I call on the Northwest Congressional Delegation to take the lead in assuring that Congress appropriates the dollars needed this year.

It is time to act. We have the federal caucus "All H Paper". We have the Army Corps of Engineer's Environmental Impact Statement. We have the Northwest Power Planning Council's multi-species framework process. It is now time for the region to step up to the plate and make some choices.

To quote Theodore Roosevelt, one of the greatest environmental stewards to serve as President of the United States: “In any moment of decision, the best thing you can do is the right thing. The worst thing you can do is nothing.”

Delay is not some benign and prudent placeholder. It is a choice to abandon the Columbia River ecosystem.

The salmon can't wait. The Independent Scientific Advisory Board -- created to advise the National Marine Fisheries Service and the Northwest Power Planning Council -- has concluded that the risk of extinction (even in the next ten years) is substantial.

The people can't wait. The uncertainty of not knowing when, if ever, the region will begin a science-based recovery effort, with a clear goal stated at the outset -- the uncertainty of not knowing what role the various stakeholders will play in this effort -- is distracting, and ultimately destructive to the good will and energy upon which a successful recovery strategy must depend.

If salmon extinctions occur, it will not be the first time in our history and probably not the last. But it will be the first time a species has been allowed to become extinct in Oregon and in the Northwest -- in the face of strong evidence of how that fate might be avoided.

My choice is to reject the guiltless complacency that has permitted this drift toward extinction and to simply do what needs to be done.

I ask you in the Northwest Region to make the same choice. I ask you embrace this vision I have of a Pacific Northwest that remains ecological, spiritually, and, yes, economically and politically, intact.

Together, we can make this a reality.

Governor John Kitzhaber

State of the State

January 21, 2000

Today I want to talk to you about Oregon's future. In particular, I want to talk about two of the most central challenges facing our state as we enter the new century: improving our system of public education and increasing the number of Oregonians with access to healthcare.

Beyond that, however, I want to discuss a larger and perhaps more fundamental issue as a way of providing some context for these specific challenges. Because I have deep concerns about Oregon's future -- fostered, ironically, by the very prosperity and quality of life with which we begin the 21st Century.

To quote Dickens -- "It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness..." To my mind, this opening line from "A Tale of Two Cities" describes Oregon in the year 2000.

It is the best of times because the economy is so good. We have record low unemployment. There is no crisis on the horizon that commands public attention. There is no sense of urgency. And we continue to enjoy this incredible natural environment, from our beaches to the Cascades to the high desert, from the Columbia Basin to this Willamette Valley to Crater Lake on down to the Rogue River.

It is the worst of times because our very prosperity has created a kind of complacency. It is masking our need, not only for each other, but for our government which provides us with those things we cannot provide for ourselves individually.

It is a subtle thing, yet one that can have a profound and long-term impact on this state of ours.

When we talk about Oregon's greatness, we always talk about our public beaches. We talk about our land use planning program and our protected farm and forestlands and open spaces. And that has given this state more options, more choices in how we grow and develop than probably any other state in America. We talk about our parks system. We talk about the Bottle Bill.

All of these things are, indeed, part of the Oregon heritage, the Oregon ethic, the "Oregon Mystique" as Gov. Tom McCall referred to it. It is a spirit of community building and preserving this special place, this home of ours. It is a spirit and an ethic that defines us as much as the powerful landscapes that surround us.

I don't want to lose that. I don't want to lose it for myself. I don't want to lose it for my family and I don't want to lose it especially for my son.

I don't think anyone here wants to lose it. It is part of who we are here. It is why we came to Oregon. It is why we stay here.

But consider this. Since 1990 we have welcomed almost half a million new Oregonians -- since 1975 over a million of new Oregonians.

In other words, nearly a third of our population arrived here, or were born here after all these things that we cherish and point to had been put in place. Responsible civic involvement and foresighted leadership in both the public and private sector and progressive action by the Oregon State Legislature created the very heritage that we point to with such pride.

We tend to assume that all Oregonians share this ethic of community responsibility, of civic action and of environmental stewardship. I am not sure we can make that assumption.

For people who moved into it, or for many people who were born into it, I think it is very easy to take for granted the gifts that we have in this state. For people who didn't have to struggle and fight for these things, I think it is easy to undervalue what we have here.

My father, for example, was a child of the Great Depression. At age 16 he was going to high school and working six hours a day, seven days a week for 12 ½ cents an hour to help pay the family rent.

He served in WWII. He got a college education under the GI Bill. He became a university professor and he retired after a successful teaching career at the University of Oregon. To this day, he values and appreciates what he has far more than do many members of my generation.

The point is that this Oregon ethic, this heritage that we point to so proudly, this quality of life that we enjoy in this state, this booming economy -- didn't just happen. These things are not inherent in the soil and the water. They didn't come with the place. Although I think the place helped to inspire them.

The fact is, that these things that we cherish about Oregon have to be constantly renewed in ourselves and in our community. And bringing our citizens to recognize that is a major challenge. Bringing them to see that if we continue to do no more than point to a heritage built by others -- and do nothing ourselves to nurture and renew that heritage for the future -- then we run the substantial risk of seeing both our quality of life and our good economy slip from our grasp.

There are many words to describe this challenge -- this commitment to do what is necessary to ensure that what is good about Oregon remains good. One word is sustainability.

As many of you may know, I plan to issue an executive order in March to make state government a leader in the fight to sustain our environment and quality of life in the face of a growing population.

What I am suggesting to you today is that the same kind of effort will be needed if we are to sustain the other things we value about Oregon -- one of which is our system of public education.

Public education is the cornerstone of a progressive, democratic society. And when I say public education I am referring to the entire educational continuum from kindergarten to post-secondary education to lifelong learning.

We will not build a 21st Century economy with high school graduates alone and this community in particular must extend its vocal support of education beyond primary and secondary schools -- as important as they are -- to include our post-secondary system as well.

From grade school to grad school, we must be willing to do more than pay lip service to public education. We must be willing to back that rhetoric with action. Let's start with K-12.

As you may know -- along with Superintendent of Public Instruction Stan Bunn and Standard Insurance President Ron Timpe -- I have filed two initiatives to improve the stability, equity and adequacy of funding for schools.

The first measure -- the Stability in School Funding Act -- creates a fund to maintain school budgets in the event of an economic downturn. We know that sooner or later this economy is going to slow down and we cannot afford to simply stop educating a generation of children because of a fluctuation in our economy.

This fund will be capitalized with four existing sources of revenue: 15 percent of lottery proceeds, 25 percent of the National Tobacco Settlement, interest earnings from the Common School Fund, and half of future surplus tax revenue with the other half being rebated.

I expect that some will criticize how we propose to pay for the stability fund. But I challenge anyone to make the argument that we do not need financial reserves for perhaps the single most important public service we provide -- educating the next generation of Oregonians.

The second measure -- the Accountability and Equity in School Funding Act -- does two things.

First, it ensures that quality education is not an accident of geography by correcting a serious flaw in the local option law passed by the last Legislature.

By requiring the Legislature to equalize the revenue generated by the local option between property poor and property rich districts, it gives a child living in Coos Bay or Fossil the same educational opportunities as a child living in Lake Oswego or Beaverton.

Second, this measure constitutionally requires the Legislature to provide funding adequate to meet the quality education goals established by law -- and to explain how the legislatively adopted budget meets those goals. In short, this is about accountability.

It will force the K-12 debate in Salem to take place not around large, abstract numbers -- \$5.8 billion, \$4.9 billion -- but rather around what we want those dollars to achieve in the classroom to advance the goals of the Education Act.

Both initiatives are now ready for signature gathering and I ask for your active support to not only get these measures before the voters, but to ensure their passage in the November general election.

I will also forward two proposals to help improve the training and development of Oregon's teachers.

The first proposal aims at increasing the number of Oregon teachers certified by the National Board for Professional Teaching Standards. This highly respected certification process results in better-trained teachers who are a resource not only to our children, but to others in their profession as well.

To accomplish that, my next budget will provide funding sufficient to pay for the certification of 500 Oregon teachers by 2003. In addition, I will propose that these teachers receive a bonus if they are successfully certified.

The second proposal addresses the growing problem of teacher retention. Nationally, only 20 percent of the teachers who enter their first year of teaching are still teaching after three years.

In urban districts, close to half of new teachers leave the profession during their first five years.

For many, this exodus reflects the fact that they didn't get the support they needed as they moved from students to classroom teachers.

Therefore, in my next budget, I will propose funding for a mentor program that will allow school districts to use some of the time of their best, most experienced teachers to help new teachers transition into the classroom.

This will not only make for better-trained, higher quality teachers; it will also help us reap the rewards of the substantial investment we as a society are making to train teachers.

Finally, just as we invest in teachers, so must we invest in our school buildings themselves. Oregon is facing a staggering accumulation of capital construction and deferred maintenance needs in our schools, colleges and universities.

To address this, I will propose a state-backed bond fund for construction and maintenance. We cannot continue to

provide quality education in a rundown, crumbling infrastructure -- and we cannot accommodate enrollment growth and reduce class size without new capacity. My proposal will address both.

In addition to these investments in our primary and secondary system, we must also invest in our universities and community colleges.

First, we must help Oregon's community colleges serve their growing population of students.

For many Oregonians, our community colleges are the front door to better jobs and better futures. They are not only the community resource needed to keep professional skills up to date, but are often the first step toward a four-year degree.

Yet the last legislative session provided no increase in funding to cover the dramatic enrollment growth faced by our community colleges. This is not acceptable and my next budget will include resources to begin to address the increasing enrollment at these vital centers of learning.

Second, I propose that we move aggressively to expand geographic access to four year degrees throughout Oregon. Central Oregon Community College -- both because it lies in our state's fastest growing region, and because it is already offering expanded courses -- is the logical place to begin this bold effort.

In a different era, we might simply move to create a central Oregon university. But today we can and must choose a different path, taking advantage of the Oregon University System's innovative University Center, which brokers four-year degrees and which has been operating in Bend since 1995.

Last year, through this program, 100 students living in central Oregon earned degrees from six different institutions without leaving the Central Oregon Community College campus. Using satellite-based instruction and the Internet -- coupled with a strong community college presence and solid community support -- we should be able to quadruple that number.

To advance this cause, I will direct the Oregon Board of Higher Education to develop a proposal and a budget to build on this partnership and expand -- on a stable and permanent basis -- four-year degree offerings in Bend as a prototype for other community colleges across the state.

Third, I believe our university system must expand its technology offerings to meet the demand for these disciplines in the future.

In the previous century, Oregon invested heavily in its schools of agriculture and forestry -- our economic mainstays.

Today -- while still offering support to our traditional natural resource-based industries -- we must make a similar commitment to the economic mainstay of the 21st Century; technology.

Therefore, I will propose a program to both double engineering graduates from Oregon institutions in the next five years and to create a tier one engineering school within the borders of this state by the year 2010. As a part of this effort I will expect a substantial private contribution from Oregon's technology industry to match the public commitment to meet this objective.

But let me add that our technology future is not electronics alone. Therefore, I will direct the Board of Higher Education to examine how Oregon can take advantage of the growing bio-science sector as an integral part of our economic base in the future.

One more thing on the education front: I ask you to join me the week of April 24-28 in going back to school. Working with the statewide organization for schools, I will be headed back to spend some time in the classroom -- hopefully at my alma mater South Eugene -- if they are willing to overlook the decidedly pedestrian GPA that I carried away with my diploma.

The fact is that more than 75 percent of Oregon adults have no children in public schools -- and yet have a huge stake in

successfully educating the next generation.

I am convinced that the simple act of seeing the state of our schools, the challenges faced by teachers and the tough curriculum we ask our students to master will create a larger base of support for the enterprise of public education.

I applaud this effort and would like two of its founders, Don and Denise Frisbee, to stand. Thank you both for your hard work on this great project. If anybody wants to find out more about the Statewide Organization for Schools, the Frisbees will be glad to help you.

As we move forward to meet the challenge of educating our citizens, we must also make a similar commitment to their health.

Oregon has been a national leader in this area with the passage and implementation of the Oregon Health Plan. We set out to ensure access to a basic level of care for all Oregonians and we have made substantial progress toward that goal.

We have lowered the percent of Oregonians without health insurance from 18 percent in 1994 to 10 percent in 2000. Among children the progress has been even more dramatic, dropping from 21 percent uninsured to just over seven percent.

At the same time, the cost of providing quality care under the plan remains one of the lowest in the nation.

Expenditure growth in the Oregon Health Plan has been 22 percent less than the growth of health expenditures nationally.

Yet, in spite of that progress, one out of ten Oregonians, more than 300,000 people, are still without health insurance coverage -- more than 66,000 of them are children. That is simply indefensible.

So today, I ask you to join me in recommitting ourselves to make Oregon the first state in the nation with universal health insurance coverage.

Why is this important?

First, because it is the right thing to do. The fact is that uninsured Americans receive less care than to those with insurance, they receive that care later, and they are four times more likely to require hospitalization and emergency room care.

Second, because increasing cost threatens all of us. This is not a problem restricted to the Oregon Health Plan alone -- as some in the Legislature would have us believe. This is a challenge facing both the public and the private sectors because we will never be able to manage overall costs as long as there is a large segment of the population without insurance coverage.

Why? Because those without coverage ultimately get care. When they get sick enough they show up in the emergency room -- one of the most expensive care settings -- where they are treated late in the course of their illness, when costs are higher and outcomes poorer.

And the costs incurred are simply shifted back through the system and reflected in the premium increases being experienced by government, business and individuals.

This is one of the reasons that private sector premium costs are increasing 12 to 20 percent per year, a trend that is clearly unsustainable over time

Thus, what I will be proposing to the 2001 Legislature will address not only the uninsured, but the entire structure of our health care system. And while it is beyond the scope of this speech to lay out the details of my proposal, it will be based on the following principles:

First, we must move toward a system of universal coverage.

Second, the government must define the floor -- that is the minimum (basic) level of care provided to all citizens.

Third, because some individuals cannot afford to purchase coverage, the government must provide subsidies to make insurance affordable to all citizens.

Fourth, all subsidies must be explicit -- and public subsidies must be based on ability to pay and restricted to the cost of purchasing the basic level of care.

Finally, the respective responsibilities of governments, businesses and individuals must be clearly and explicitly defined.

In addition to these guiding principles, the proposal will make use of the state's purchasing power as a major payer in the health care system -- and, if at all possible, in collaboration with private sector payers -- to target and reduce runaway cost centers such as prescription drugs.

Oregon is uniquely qualified to develop such a proposal. Our experience in dealing with the financial limits of the health care system and with setting priorities, give us the knowledge and the discipline to once again lead the nation.

To build the public support needed for this proposal to become a reality, I will ask the Oregon Health Council to conduct a series of town-hall meetings throughout the state to examine and debate these concepts.

In addition, I will convene an Oregon Health Policy Summit in order to discuss these issues with legislators and other public and private sector leaders throughout Oregon.

The recommendations flowing from these efforts will form the basis of legislation for the 2001 legislative session.

For any of these efforts to go forward, however, we must defeat Bill Sizemore's initiative to remove the cap on the deductibility of federal income tax from state income tax.

If this measure is passed, it will result in a \$1.6 billion reduction in the state revenue for the next biennium -- 15 percent of the General Fund.

Worse still, it is retroactive to January 1, 2000 which means we will be faced with a billion dollar deficit in the current biennium.

If we let this happen -- reflect for a moment on what it says about our priorities and our values as Oregonians.

- Do we really believe that our schools have 15 percent more than they need to educate the workforce and the citizens of the 21st Century?
- Is it acceptable that 66,000 Oregon children have no financial access to health care?
- Are we willing to walk away from children at risk? To stop investing in our environment?

These things are not a part of Oregon's heritage; they are not a part of Oregon's ethic; and they should not be a part of Oregon's future -- and I intend to debate Mr. Sizemore on these very points.

Let us also remember that these issues will not be decided by the Legislative Assembly, but directly by you, the voters of Oregon. The course that our state takes over the next decade is going to be settled even before the Legislature convenes in 2001.

My friends, our challenge today goes well beyond the specific issues of education and health care and environmental stewardship. It transcends our efforts to finance our transportation system, to reduce juvenile crime and to maintain a strong economy.

Our challenge lies in the growing public disconnect between the vision of a livable, prosperous Oregon on the one hand, and the investment and the collective personal effort it takes to get us there -- and keep us there -- on the other.

If we cannot re-engage Oregonians in this task, we stand to lose a great deal.

And again, our very success makes this challenge more difficult. It is not dissimilar to the challenge I have faced as a doctor trying to make the case that if you smoke too many cigarettes, drink to excess and eat a high fat diet, you are going to have some serious heart problems down the road.

Try telling that to a 21 year-old college student who takes his good health for granted.

Likewise, we have enjoyed this good economy and this exceptional quality of life for so long that we take it for granted. We really don't believe that we have to do anything to maintain it.

But all the prosperity in the world will not preserve our special quality of life if we do not share a common vision for Oregon -- and a commitment to sustain it.

In the final analysis, we need each other more than we need our provincial interests. What we desperately need is a victory for community over individual self-interest. And that starts right here in this room.

This is not just a question of what we can expect from our government. It is a question of what we will demand of ourselves. Both long term and new Oregonians must work together in common cause to secure the future of our state.

There are simply too many people on the sidelines. Our voter turnouts are depressingly low. Charles Keating once said, "My interest is in the future, because I will spend the rest of my life there."

That statement is particularly true for our younger voters, yet in last year's primary, only six percent of those 18 to 34 years old voted. Only six percent -- while every day the future they will live in is being decided initiative-by-initiative and legislative session-by-legislative session.

That is not a formula for a sustainable Oregon.

Your job and mine is no less than to rekindle both the spirit and the consensus that has marked this state's proud past -- a vision and a commitment to Oregon that has given us a robust economy, a remarkable quality of life and a whole host of options for how we grow and develop into the future.

We need to recommit ourselves to that vision and shoulder our responsibility to do what is necessary to move it closer to its full potential.

So the question before us today is larger than whether we can sustain our quality of life and our economy.

The question is whether we are willing to invest the time and energy to rebuild the Oregon community. Because the fate of the first question rests on the answer to the second.

It has less to do with government as it does with commitment to place.

If we do no more than continue to point proudly to a heritage that someone else created, without making the commitment ourselves to sustain that heritage and that ethic for future generations, than we have surely forsaken our roots and forgotten what it means to be an Oregonian.

I call on each and every one of you to reject that path and to reclaim Oregon for ourselves and for the future.

Let me close with a quote from Wallace Stegner's small book "The Sound of Mountain Water." He wrote this about the West in general, but I think as much as anything it frames the challenge that we Oregonians face in the 21st Century.

It reads: "One cannot be pessimistic about the West. This is the native home of hope. When it fully learns that

cooperation not rugged individualism is the quality that most characterizes and preserves it, then it will have achieved itself and outlived its origins. Then it has a chance to create a society to match its scenery."

No less than that is our goal.

Governor John Kitzhaber

U of O Convocation

January 19, 2000

Good afternoon. It's a pleasure to be here to help kick off this school year (a little belatedly, since the original convocation had to be postponed) and at the same time to join you in celebrating Martin Luther King Day. I'd also like to take this opportunity to say how delighted I am that President Frohnmeyer is back in the saddle. His leadership and the innumerable contributions he has made to the State of Oregon over the years are both beyond question and beyond measure.

Let me begin by saying that although the University of Oregon is not my Alma Mater, I have close personal ties to this school. My father was on the faculty for many years. My mother also taught here for a time. My sister received her doctorate here and my nephew recently graduated from the U of O Law School.

Also, when I was in high school, I worked here one summer setting sprinklers for the grounds crew -- where I learned, among other things, that most of the buildings on the campus were connected by a system of larger underground steam tunnels.

And actually (a little known fact) I attended the U of O my freshman year -- where I was known as the "terror of Bean Hall" due, in part, to my knowledge of these steam tunnels and the various creative projects to which I applied that knowledge.

I might add that if anyone had told me then that someday in the distant future I'd be addressing a Convocation as Governor of Oregon, I'd have thought it was a joke -- and so would a lot of other people. Some still do. So it is a very real honor to be here today.

I suppose there is something symbolic about the fact that this particular academic year bridges not only two centuries but two millennia. Yet as the German writer Thomas Mann once pointed out, time itself has no divisions to mark its passage; rather, it is we humans who divide it into segments and attach significance to them.

What I'd like to explore with you this afternoon is just that: our very human habit of establishing artificial demarcations to separate one thing from another. We do it with time, we do it with our education system, and regrettably we also do it with regard to each other.

On one level this is an understandable effort to assert control over a bewildering environment -- an environment that becomes more and more bewildering as we move forward in an age of sophisticated technology and limitless, unfiltered information.

On another level, I've come to believe that this very human tendency may blind us to the common denominators which are, in the final analysis, far more important than the differences.

Education is a good example. Up until recently we have tended to view our education system in segments: preschool,

elementary school, high school, college, graduate study. What we have not focused on is the necessary connection between the parts.

It's true that for the past several years here in Oregon the focus has centered on our primary and secondary schools: the new higher academic standards we are now holding them to and our struggle to provide them with adequate, equitable funding. In the process, it may seem that higher education has been eclipsed, but I want to assure you today that I have never for one moment forgotten the vital importance of its role.

Education is in fact a continuum, where each part builds on what has gone before, and lays the foundation for what will come after. The entire spectrum of education must be a seamless sequence of steps, all driving toward one end: the betterment of the individual and of society.

It is the whole that gives meaning and validity to the parts, and the whole is greater than the sum of its parts. Yet each part still plays a critical role, without which the entire structure would collapse. So let me focus for a moment on one of those essential parts, namely higher education.

Today, more than ever before, our individual and collective future depends on education after high school, whatever form it may take. Here again we have tended to make artificial -- even adversarial -- distinctions.

We differentiate between community colleges and four-year colleges and universities; between public and private institutions; between professional schools, continuing education, and lifelong learning. Such distinctions are not only artificial; they are detrimental, because they obscure the fact that each of these aspects of post-secondary education has exactly the same goal: to produce better people capable of creating a better world.

Why else are we here?

Yet today, our post-secondary institutions -- all of them -- face a number of challenges.

First, as we're all aware, today's economy is intensely competitive. This means that the demand for higher education is growing almost faster than we can keep up with it. More employers will be demanding more highly skilled employees and more students will want to enroll -- and need to enroll -- in post-secondary institutions in order to gain those skills.

Second, meeting these demands does not come without a price-tag. As we're all aware, funding for higher education -- at least here in Oregon -- has lagged far behind demand for longer than I care to think about. If you consider that in a capitalistic society, what we value is what we're willing to spend money on, then the chronic underfunding of higher education in this state is nothing less than a disgrace.

And although we made a substantial increase in funding for the Oregon University System during the last legislative session, the fiscal challenges facing higher education in Oregon have not been laid to rest.

In the meantime, there are things we can do -- and things we are doing. This is neither the time nor the place for a detailed discussion of educational policy, but I will say this. The goals of higher education -- and of education in general -- are too critical to be put "on the back burner" while bureaucrats and administrators and legislators fiddle around with how to run programs. Every day, every hour, every minute that this kind of political debate goes on, some child's education could be taking a step forward -- or taking a step backward, or just not taking a step at all. That is not acceptable, and I don't believe we can afford that kind of delay.

What we need to be focusing on is not how to run programs, but how to solve problems, or rather, how to meet challenges. What challenges am I talking about?

For one, there's the challenge of access. How do we expand our post-secondary capacity in order to serve the needs of an ever-increasing student body and a more diverse student body? How do we help students overcome the financial, geographic, and cultural barriers that stand in the way of achieving a good college education?

There is also the challenge of quality. How do we manage to attract and retain the caliber of professionals who can give

these students the kind of education they need? How can we encourage greater investment in research and development, which is one of the keys to economic success in the 21st century?

And then there's the challenge of responsiveness: how do we ascertain and meet the demands of the marketplace our students will enter, and how do we give them the tools they will need in order to succeed?

For better or for worse, we no longer live in a world where colleges and universities can dictate, in academic isolation, what a student needs to know in order to be called "educated." In today's world, success -- without exaggeration I might even say survival -- depends on what employers need and what they are willing to pay for. For better or for worse, that's the way things are. And the challenge is for our post-secondary schools to respond to that reality, without abdicating their responsibility to what has always been called "higher learning."

I do not underestimate the difficulty in meeting these challenges, but neither do I shrink from them. I believe they can and will be met. We are now in the process of rethinking our whole approach to education, from pre-Kindergarten through college and university. We are attempting to link education to the economy -- to address workforce needs, research needs, and the overarching need for a continuously educable populace with not only the necessary job skills, but also the humane outcomes of a good liberal education.

The University of Oregon is an active participant in this whole process. Despite the funding cutbacks of recent years, it has moved steadily forward. It has been listed as one of the nation's "best buys" for those seeking a college education. A 1997 study ranked it sixth in the nation among "rising" public universities. It has one of the nation's best university computer networks. It ranks fifth among the nation's college and universities in producing Peace Corps volunteers. There is no question in my mind that your choice to study or to work here or to send your children here is a good one.

Thirty-four years ago when I entered college, right here on this campus, a college education was considered a privilege. Today it is still a privilege, but it has also increasingly become a necessity. As the novelist H.G. Wells wrote in the early 20th century: "The history of society is rapidly becoming a race between education and catastrophe." That statement is more true today than at any other time in our history.

An education becomes the permanent, personal possession of every man or woman who earns one, and it is perhaps the one thing in life that no one can ever take away from you, once you have it. And it is more than just a "meal ticker." Yes, it provides economic security but it should also open the gates of vision.

In what was perhaps his greatest speech, Martin Luther King, Jr., whose birthday we celebrate today, outlined a vision - a dream -- of a world where people could learn to respect one another's differences and live together in harmony.

If there is one thought -- or vision or dream, if you will -- that I would leave you with today, it is this: to remember that we are all here for the same reason, and that what we share is greater and more important than the ways in which we differ. And that brings me to my final point.

The University of Oregon -- like most others across the nation -- has an increasingly diverse student body. I'm aware that last spring this campus experienced some potentially unpleasant diversity issues, and I want to commend the school, the students, and the administration for taking swift steps to deal with this. I understand that the summer internship program was a success, and I am confident that these efforts will continue.

But I think we need to remember that diversity takes many forms. Even those who belong to the so-called cultural and ethnic majority are themselves a diverse group. You all come from different backgrounds and different places. Some of you are recent high school graduates, while others are older students returning to school to continue or extend your education or to prepare for a different career. And we all have different interests and different goals and different opinions. In other words, we are all individuals.

We must honor and respect our differences, whatever form they may take. They enrich our lives and enlarge our perspective. But we are also all human, and we must not lose sight of what we share.

I've already mentioned our tendency to divide time into segments and attach isolated significance to the parts. We've

done the same thing in our approach to education. And when we single out those who are culturally or ethnically different, and treat them differently because they are different, we're doing exactly the same thing with each other: making superficial distinctions. And that is the most dangerous distinction of all, because it blinds us to the great underlying bond of our common humanity. If education teaches one thing above all others, it should certainly be that.

What really matters is not where we came from but where we are going. Again in the words of Martin Luther King, Jr., "we cannot walk alone."

Though we have now walked across the threshold of a new century and a new millennium, what really matters is not when we live, but how we live. Wherever it may fall in the calendar of years, what matters is how we use the time that is given to us.

And it is education that holds the key to using it well. By unlocking human potential, it helps us look beyond the world we are living in toward a vision of the world we'd like to live in -- and it gives us the tools for getting there.

In that sense, American educator James B. Conant was right when he said, "Whoever sets foot inside a university walks on hallowed ground." It is for us today to uphold that tradition.

Governor John Kitzhaber

Minority Summit 2000

January 14, 2000

It is a privilege to have been asked to provide opening remarks for this Minority Summit 2000. I am encouraged to see so many of you here today. To me, it shows a willingness to do whatever it takes to meet one of the greatest challenges facing our society as we cross the threshold of the 21st century. Because diversity and inclusiveness in the workplace is among the priorities of my administration, the goals of this Summit both reinforce and complement what my Office of Affirmative Action is trying to do.

The American poet Walt Whitman once wrote, "Not until the sun excludes you will I exclude you." Those are words we should all take to heart. But it is a lesson not easily learned.

I say that because one hundred years later, Martin Luther King, Jr. stood before a crowd of 100,000 people and voiced a dream: a dream of a world where people would be judged by the content of their character and not by the color of their skin -- a dream that one day ALL our citizens -- however diverse -- would be able to work together and accept each other as equals.

Since then we have come a long way toward realizing that dream. Today American minorities occupy positions of leadership in every walk of life and are some of our most respected community members. But despite the progress we have made, we have not come far enough.

We all know that our communities are becoming more and more diverse -- a trend we can expect to continue as we move forward in this new millennium. African Americans, Asian Americans, Native Americans, and our growing Hispanic residents all bring with them a cultural diversity which can enrich our lives and enlarge our perspective.

They have contributed to our communities in many positive ways, despite the legal and social obstacles they still too frequently encounter. Yet despite the progress we have made, the sinister shadow of intolerance, discrimination, racism, and hostility still hangs over us.

Across the nation, attacks on affirmative action are occurring with alarming frequency . . . in the form of California's Proposition 187, the initiative restricting immigration; in the form of Washington State's Measure 1-200, California's Proposition 209, and similar efforts in Michigan and Florida -- efforts to abolish all forms of affirmative action; and in the form of court rulings that some affirmative action programs conflict with today's interpretation of the law.

If the idea of individual opportunity -- EQUAL opportunity -- is to retain any meaning at all, it must find expression in a system that is culturally diverse and inclusive.

This means, among other things, learning to work in a non-blaming environment where all employees can reach their full potential.

It means examining our own programs and businesses to detect the presence of minority bias, however inadvertent, and finding ways to address it.

It means fostering greater awareness of and sensitivity to minority issues.

It means empowering people and acquiring the knowledge and skills that will enable us to live and work in a diverse culture.

And the benefits of taking these proactive steps will accrue to ALL of us:

- by giving us a chance to gain new ideas;
- by helping employers attract the best candidates when filling vacancies;
- by getting better performance from ALL employees;
- and above all, by reminding us what makes us truly human.

We have to remember that diversity takes many forms. Even those who belong to the so-called cultural and ethnic majority are themselves a diverse group.

They too come from different backgrounds and different places. And all of us -- majority and minority alike -- have different interests and different goals and different opinions.

In other words, we are all individuals.

We must honor and respect our differences, whatever form they may take, for the gifts of diversity reach beyond the traditional measures of merit, and they must always have a place in the rich fabric of our communities and our world. But we are also all human, and what we share is greater and in the long run more important than how we differ.

While he was sitting in a jail cell in Birmingham, Alabama -- himself the victim of racial discrimination -- Martin Luther King wrote, "We are caught in an inescapable net of mutuality, tied in a single garment of destiny. Whatever affects one directly, affects all indirectly."

In other words, our lives and our fates are bound together. Whenever one person is denied equal opportunity or is subjected to discriminatory treatment, that is one person too many, and all of us are the poorer for it.

Why? Because making superficial or prejudicial distinctions based on our differences blinds us to the great underlying bond of our common humanity and robs us of what we can gain from living and working together on equal footing and in harmony.

This is not something that government or legislation alone can accomplish. It requires first and foremost a change in attitude, and that must come not from the "top" but from the "bottom. In other words, it must begin with individuals. We can never achieve genuine inclusiveness which honors and draws strength from diversity without the firm commitment and active participation of people like you -- individuals who care, individuals who believe that unless this is a good place for ALL of us to work, it won't be a good place for ANY of us to work.

The outcome measures which this Summit aims to establish will set the course for a vital aspect of our future. In light of that, I want to offer you my encouragement and assure you of my support.

Thank you again for inviting me to be here today.

Governor John Kitzhaber

**Transportation Speech
Welches, Oregon**

January 14, 2000

Thank you for the opportunity to address this group as you struggle with the question of how to establish a collaborative regional transportation policy. What I would like to add to your deliberations today are some thoughts regarding several of the obstacles that are preventing you from achieving your objective, and how we might overcome them. I will approach this from a broad, big-picture perspective and leave details for our question and answer opportunity after my remarks.

Before I do, however, to a larger and more fundamental issue as a way of providing some context for the challenge you are undertaking – because I believe that, ironically, one of the greatest obstacle to your success is Oregon’s booming economy itself.

To quote Dickens – “ It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness...” To my mind, this opening line from A Tale of Two Cities applies perfectly to Oregon in the year 2000.

It is the best of times because the economy is so good. We have record low unemployment. There is no crisis on the horizon that commands public attention. There is no sense of urgency. And we continue to enjoy this incredible natural environment, from our beaches to the Cascades to the high desert, from the Columbia Basin to this Willamette Valley to Crater Lake on down to the Rogue River.

It is the worst of times because our very prosperity has created a kind of complacency. It is masking our need, not only for each other, but for our government which provides us with those things we cannot provide for ourselves individually – not the least of which is a transportation system. It is a subtle thing, yet one that can have a profound and long-term impact on this state of ours.

When we talk about Oregon’s greatness, we always talk about our public beaches. We talk about our land use planning program and its protected farm and forestlands and open spaces. And that has given this state more options, more choices in how we grow and develop than probably any other state in America. We talk about our parks system. We talk about the bottle bill. Some talk about our excellent transportation system and about legends like Glenn Jackson who helped make it happen.

All of these things are, indeed, part of the Oregon heritage. The Oregon ethic, the Oregon mystique as McCall referred to it. It is a spirit of community building and preserving this special place, this home of ours. It is a spirit and an ethic that defines us as much as the powerful landscapes it surrounds.

I don’t want to lose that. I don’t want to lose it for myself. I don’t want to lose it for my family and I don’t want to lose it especially for my son.

I don't think anyone here wants to lose it. It is part of who we are here. It is why we came to Oregon. It is why we stay here.

But I think we are at risk of losing all this – and here's why. Since 1990 we have welcomed almost half a million new Oregonians -- since 1975 over a million of new Oregonians.

In other words, nearly a third of our population arrived here, or were born here after all these things that we cherish and point to had been created. After responsible civic leadership and foresighted leadership in both the public and private sector and progressive action by the Oregon State Legislature created the very heritage that we point to with such pride.

I think we tend to assume that all Oregonians share this ethic of community responsibility and of civic action and of environmental stewardship. I am not sure we can make that assumption.

For people who moved into it, or for many people who were born into it, I think it is very easy to take for granted the gifts that we have in this state. For people who didn't have to struggle and fight for these things, I think it is easy to undervalue what we have here.

My father, for example, was a child of the great depression. At age 16 he was going to High School and working six hours a day, seven days a week for 12 ½ cents an hour to help pay the family rent.

He served in WWII. He got a college education under the GI bill. He became a university professor and he retired after a successful teaching career at the University of Oregon. To this day, he values and appreciates what he has far more than do many members of my generation.

The point that I am trying to make is that this Oregon ethic, this heritage that we so proudly point to and refer to, this quality of life that we enjoy in this state, this booming economy -- didn't just happen. These things are not inherent in the soil and the water. They didn't come with the place. Although I think the place helped to inspire them.

The fact is, that these things that we cherish about Oregon have to be constantly renewed in ourselves and in our community. So breaking through the complacency is a major challenge. We must bring people to see that if we continue to do no more than point to a heritage built by others – and do nothing ourselves to nurture and renew that heritage for the future – then we run the substantial risk of seeing both our quality of life and our good economy slip away.

To avoid that outcome we need to be very clear on not only what we want, but what we need to do today to secure it. So what do we want? Let's start with the need for a common vision.

I was asked to share my vision for transportation in the Portland region. But a transportation vision -- a regional transportation policy -- cannot exist in isolation. Rather, it must be developed within the context of a larger community vision. After all, our transportation system is a means to an end, not an end in itself. The end is to support our economy by moving people and products efficiently from place to place. The end is to increase the mobility of our citizens in a way that enhances community livability and quality of life.

Furthermore, these ends -- of supporting our economy and enhancing our quality of life, are not just a functions of the roads themselves. For example, we can have the best roads in the world from an engineering standpoint, but if we put jobs on one side of town and housing on the other side, we will overload the system, create traffic problems, and erode quality of life. Access management is another example. No matter how good our roads from a physical standpoint, if we allow various towns to capture a section of a state highway as a local mainstreet, we will delay transit and undermine our economy.

The point is that we don't start with a transportation policy. We start with a community vision and then develop our transportation policy to serve that vision – which means that it must be developed in the context of a variety of other decisions concerning housing, land use and economic development.

I think we already have a community vision, and it isn't new. In fact, it was born 30 years ago when we first enacted

Oregon's land use planning program. And that vision went something like this: A state of wide green open spaces with abundant farm and forest land. Compact development inside an urban growth boundary set in the beautiful landscape of the region – development that integrated our human habitation with the natural place we have inherited. Vibrant downtowns and mainstreets where our citizens could find their housing, retail, recreational, cultural and community needs met in a way that made them feel connected to one another as Oregonians. In short, a vision which valued both quality of life and a strong sense of community.

That is still my vision for Oregon in general and for the Portland metro area in particular. And I don't think I am alone. This vision is one of those things we point to with pride inside the state and that people outside the state point to with envy. We memorialized the vision in our comprehensive plans, all of which have a 20 year planning horizon. Portland's downtown is a child of this vision, as is East/West Light Rail. Metro, too, flowed from this vision as an effort to coordinate its implementation across the region.

But that was 30 years ago. And Oregon was a different place. There were fewer of us then. Our economy was natural resource-based. And there was not only a broader sense of civic responsibility, but a widespread view of government as an essential partner in resolving common problems.

Today, things are different. There are a lot more of us for one thing – more than 3 million at last count. Our economy now relies as much on technology and tourism as it does timber and agriculture. Transportation is much more important because of our growing export economy which involves moving products through the Port of Portland to world markets. There is a diminishing sense of community and, unlike 30 years ago, our political institutions are held in disrepute.

So the vision remains the same, but the environment in which we are trying to realize it, is much different than in the past. There is a public disconnect between the vision of a livable and prosperous Oregon on the one hand, and the investment it takes to get us there -- and keep us there -- on the other. We must make the case that without infrastructure investments, we will maintain neither our quality of life or our robust economy.

And again, our very success makes this challenge more difficult. It is not dissimilar to the challenge I have faced as a doctor trying to make the case that if you smoke too many cigarettes, drink to excess and eat a high fat diet, you are going to have some serious heart problems down the road. Try telling that to a 21 year old college student who takes his good health for granted.

Likewise, we have enjoyed this good economy and this exceptional quality of life for so long that we take it for granted. We really don't believe that we have to do anything to maintain it . A case in point: in the face of unprecedented growth, we have failed to pass a gas tax increase in Oregon for over a decade. That is not the formula for keeping what we have.

So our challenge is an educational one as much as anything. First, we need to redefine the terms of the debate. Right now the debate is being defined by two groups. One the one hand are those who want to shrink government and who view infrastructure investments as just more wasteful governmental spending. On the other hand are those who want to limit growth and who believe that "if you build it they will come."

As long as those are the terms of the debate, we are not going to prevail. So we need a coordinated effort to cast this debate in terms of our economic vitality and of the livability of our communities. We need to show how our transportation system supports both a robust economy and a high quality of life. And we need a very wide range of community leaders -- from diverse backgrounds -- moving this message in an aggressive and coordinated manner.

Second, this region must make common cause with the rest of Oregon: the Willamette Valley, the Coast, Southern, Central and Eastern Oregon. The reason is simple: funding for transportation infrastructure will continue to be contingent on the legislature -- and most likely on statewide referendums like the one we face in May . And, at least for the next legislative session – perhaps longer – the legislature will be dominated by those from rural Oregon.

It will be difficult for this region to fund infrastructure on its own. That means we must put Metropolitan area transportation and funding needs in the context of statewide needs. Truck routes through Portland, for example, are to a large extent state and interstate highways which connect cities within Oregon and connect Oregon to other states.

We have took a first halting step toward this goal when we were able to pass out of the legislature in its dying days a transportation finance package that will be good for all of Oregon. But everyone in this room knows it wasn't easy. And everybody in this room knows that we must defend that package against an ill-considered assault by the AAA. It will be a tough fight. As you may have noticed, Oregonians are not exactly in a taxing mood.

But a campaign is always a teachable moment. And there is going to be an enormous amount of money spent on this campaign to influence how Oregonians view this issue. It offers the opportunity to move the message that infrastructure is important to both our economy and to quality, livable communities -- and that that the investment must be made statewide, not just in the Metropolitan area. We need to make sure that this happens.

Finally, this region must get its own house together. And that means recommitting yourselves to working through and resolving your differences.

And there are differences, right here in this room. There are differences over the question of how and where we grow. There are differences over whether and how we expand the urban growth boundary. There are differences over priorities in terms of where the next investment should go.

These differences are not new. They have always existed. What is new is that there are more people, less money and a growing public imperative for coordinated action. All the money in the world will not preserve the quality of life in this region if you do not share a common community vision. And the hard fact is that, in the final analysis, you need each other more than you need your provincial interests. What we desperately need is a victory for regionalism over parochialism. And that starts right here in this room.

This group represents some of the best this region has to offer. Your job - and mine - is no less than rekindling both the spirit and the consensus that existed 30 years ago when we started down this road together. The vision that guided us then - managing growth in a way that fosters a strong economy and protects what is special about Oregon - has given us both a remarkable quality of life and a whole host of options for how we grow and develop. We need to recommit ourselves to that vision and shoulder our responsibility to do what is necessary to move it closer to its full potential.

So the question before you today, really, is larger than just how to create a regional transportation policy. The question is whether you are willing to invest the time and energy to rebuild the Oregon community. Because the fate of the first question rests on the answer to the second.

If we do no more than continue to point proudly to a heritage that someone else created, without making the commitment ourselves to sustain that heritage and that ethic for future generations, than we have surely forsaken our roots and forgotten what it means to be an Oregonian.

Governor John Kitzhaber

Founders of the New Northwest Speech

January 11, 2000

I am honored to be here tonight to address this esteemed group of leaders and to pay homage to the people in the room who have been selected as Founders of the New Northwest. Actions speak louder than words and your actions are literally changing the face of the Northwest. You are leaders showing the rest of the nation and the rest of the region how we can live in greater harmony with our environment.

Not only are you leaders -- you are risk-takers . . . bold prophets of the new century. You have seen the signs telling us that we must make some significant changes in the way we live individually and collectively if we want to sustain life and our quality of life. You have taken to heart and put into action the mission statement of Sustainable Northwest: to build partnerships that strengthen local capacity to promote environmentally-sound economic development in communities of the Pacific Northwest.

That is no small challenge -- because not only is Oregon prospering, it is also changing. It is growing rapidly -- more people, more roads, more buildings, more fragmentation and destruction of habitat, more declining species, more conflict. There is a growing sense that what defined us in the last century is slipping away.

Think about it. When we talk about Oregon's greatness, we always talk about our public beaches. We talk about our land use planning program and its protected farm and forestlands and open spaces. And that has given this state more options, more choices in how we grow and develop than probably any other state in America. We talk about our parks system. We talk about the bottle bill.

And all of these things are a part of the Oregon heritage, the Oregon ethic, the Oregon mystique as Gov. Tom McCall referred to it. It is a spirit of community building and of preserving this special place, this home of ours. It is a spirit and an ethic that I think defines us as much as the powerful landscapes that surround us.

I don't want to lose that. I don't want to lose it for myself. I don't want to lose it for my family and I don't want to lose it especially for my son. And I know that no one here wants to lose it. It is part of who we are here. It is why we came to Oregon. It is why we stay here.

But, consider this. Since 1990 we have welcomed almost half a million new Oregonians -- since 1975 over a million of new Oregonians.

In other words, nearly a third of our population arrived here, or were born here after all these things that we cherish and point to had been created. After responsible civic involvement and foresighted leadership -- in both the public and private sector -- and progressive action by the Oregon State Legislature created the very heritage that we point to with such pride.

I think we tend to assume that all Oregonians share this ethic of community responsibility and of civic action and of environmental stewardship. I am not sure we can make that assumption.

For people who moved into it, or for many people who were born into it, I think it is very easy to take for granted the gifts that we have in this state. For people who didn't have to struggle and fight for these things, I think it is easy to undervalue what we have here.

My father, for example, was a child of the great depression. At age 16 he was going to High School and working six hours a day, seven days a week for 12 ½ cents an hour to help pay the family rent.

He served in WWII. He got a college education under the GI bill. He became a university professor and he retired after a successful teaching career at the University of Oregon. To this day, he values and appreciates what he has far more than do many members of my generation.

The point that I am trying to make is that this Oregon ethic, this heritage that we so proudly point to and refer to, this quality of life that we enjoy in this state didn't just happen. It is not inherent in the soil and the water. It didn't come with the place. Although I think the place helped to inspire it.

The fact is, that these things that we cherish about Oregon have to be constantly renewed in ourselves and in our community. They have to be constantly tended and nurtured, lest they slip from our grasp -- quietly before we are even aware they are gone.

But this organization -- with its guiding principals -- is the antidote for what otherwise might be a grim picture. This Organization -- Sustainable Northwest -- is a living example of what is emerging as a new shared doctrine of environmental management. And it is this new perspective, this new approach, that I would like to discuss here tonight.

One of the things that has become increasingly clear to me is that our environmental problems are becoming more complex and challenging. They also have complex economic and social interconnections. And while some environmental problems will still respond to the traditional tools of regulation and litigation, I believe we are at a point in time where we need to develop new tools, new perspectives, and new approaches to deal with the growth that besets us and the environmental challenges and conflicts that come with it.

Take the issue of water quality as a case in point. Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing Governor McCall when he led the effort to clean up the Willamette River in the 1970's. Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing non-point-source pollution -- perhaps the major challenge facing us on the Willamette River today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, Eugene and, indeed all of urban Oregon. This involves what people put on their lawns, whether or not they wash their cars in the driveway with detergent, and hundreds of other individual actions that contribute to the non-point source pollution load.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will require sustained environmental stewardship -- a long term commitment to change behavior -- by millions of people living in the watershed -- most of them living in the city.

I believe we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that calls for, and result in, greater individual responsibility and accountability for our air, land and water. You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts.

You can only achieve that through a collaborative and cooperative process that engages thousands of Oregonians and gives them a stake in the problem and some degree of ownership in the solution.

This concept -- which lies at the heart of sustainability -- is embodied in a set of principles developed by me and Governor Mike Leavitt of Utah to describe the common elements found in such success stories as the Oregon Plan for

Salmon and Watershed Restoration. We call this set of principles Enlibra -- a hybrid Latin word coined by Governor Leavitt -- which mean "to move toward balance."

Enlibra emphasizes the importance of many of the elements that are informing and motivating your own decisions to pursue sustainable products, practices or behaviors.

It calls for good science. It calls for a good understanding of the broad costs and benefits of various strategies, including those to society. It calls for a recognition of the power of incentives and of the importance of collaboration. It calls for a focus on results; and for looking at the scope of the problem along natural boundaries, not artificial political ones.

Enlibra also recognizes that people need to understand their connection to the environment and their stewardship responsibilities if we are to enjoy not only environmental, but also social and economic health. Finally, it urges flexibility in how we meet national environmental standards to allow for locally-developed solutions.

Hopefully, by articulating what we have in mind with Enlibra, we can help our institutions and governments empower the kinds of efforts that you are undertaking at a local level. I also believe that by using this approach to solve complex problems, we will gain the buy-in and ownership by individual citizens which is necessary for long-term sustainable environmental stewardship.

And I can tell you that it works. While still evolving, the Oregon Plan for Salmon and Watershed Restoration has yielded tangible results that illustrate the potential of this approach. Over the past three years we have:

- Taken more than 400 stream miles off the EPA list of streams out of compliance with the Clean Water Act;
- Reopened over 430 miles of habitat by replacing culverts which were impeding fish passage;
- Recommissioned or upgraded over 1,470 miles of roads to reduce erosion, and;
- Fenced more than 400 miles of stream to improve riparian areas.

Around the state, a diverse and curious group of ranchers, farmers, loggers environmentalist and community members are putting your ideas of sustainability to work. And I am dedicated to making sure this continues to happen and that our salmon and watershed restoration efforts do not end with this administration.

I am also dedicated to making the state government itself a leader in sustainability.

Toward that end, I am in the process of developing an executive order on sustainability for the state of Oregon. Why? Because the state of Oregon is, in essence, a huge developer and a very large employer. The state directs investment for economic development; sets the rules for where and how communities can grow; and establishes the parameters for environmental management. It also consumes reams of paper; builds offices, buys power, paves roads, and manages forests and rangeland.

Does all this happen with the overarching goal of fostering sustainable economic growth that is respectful of both our environment and our communities? I cannot tell you that it does ... but I should be able to.

My commitment to you this evening is to produce and implement an executive order that makes Oregon State Government a leader in sustainability. Furthermore, I will take this concept to the Western Governor's Association and promote it state by state.

After all, you are leading by example -- transforming ideas into reality and showing the way; taking the risks because it is the right thing to do for our collective future -- not just for personal gain. You should expect no less from me or from your state government.

You are showing the rest of us how we can make progress toward building a just, sustainable, and compassionate world.

You are pioneering new ways to solve common problems -- sometimes bringing us back to us fundamental truths and

practices -- but also integrating these with new innovations that together respond to the challenges of growth and change facing Oregon and the Pacific Northwest.

You are demonstrating new ways of living that are accessible and inspirational to many, not just to a few; that will benefit tomorrow's children, not just ourselves today; and that will send ripples of hope through an endless succession of days, touching the lives of those who come after us.

As I look out into this room of leaders -- across such a broad range of talent -- I want to thank you for daring to be different -- for daring to make a difference. I want to thank you for demonstrating a new kind of progress -- the kind we too often only talk and read about, and too seldom translate into action.

The kind of progress that considers more than our own private interests, but understands that the welfare of others is vital to our own.

The kind of progress that does not regard compromise as weakness.

The kind of progress that sees diversity not as a threat, but as a treasure; an opportunity to enrich and strengthen the fabric of our society.

The kind of progress that values timeless principles over transient popularity -- principles like truth and honor and courage and compassion and service and sacrifice.

And cannot overemphasize how important this is.

Because if we do no more than continue to point proudly to a heritage that someone else created -- without making the commitment to sustain that heritage and that ethic for future generations -- than we have surely forsaken our roots and forgotten what it means to be an Oregonian.

What you are doing gives Oregonians a tangible way to fulfill that commitment. To renew and replenish the Oregon ethic in themselves and in their communities.

You are both examples and catalysts. Your inspiration and achievements have proved a powerful tool in making sustainability tangible to a growing audience. You demonstrate that the possibility for a bright future exists.

You give us hope as well as direction -- and for this, I thank you.

And for this, the citizens of Oregon and the Northwest should give you thanks.

Not only for what you have done. But also, because your examples give us a way to talk about the idea of sustainability. It adds meat to the bones. It gives us a way to teach the concept -- a way to spread the word.

I will be an active partner in this. I will do my best to make the state government a living example of sustainability. And I look forward to being here next year to celebrate and promote not only the idea of sustainable development, but its actual examples in the community: You, the Founders of the New Northwest.

Thank you.

Governor John Kitzhaber

The Oregon Approach to Environmental Problems

January 6, 2000

From Science to Public Action:

The Oregon Approach to Environmental Problems

January 6, 2000

Oregon State University

Today I want to talk to you about the Oregon Plan for Salmon and Watershed Restoration, or as it is more widely referred to, simply the Oregon Plan. I also want to examine the principles on which it is based because they form what I believe is the backbone of a new environmental approach in Oregon and potentially represent a model of environmental problem solving for the West.

But first, a little context.

Over the weekend as we entered the new millennium, I was struck by how connected we have truly become. With so much global focus on this one event, we could truly feel how we are part of a whole. We could feel our common humanity and shared sense of hope for the future as each time zone, each country, brought in the new millennium over the airwaves into our homes.

Here in Oregon, I was struck by our good fortune. We are living in good times. And we still live in one of the most beautiful places on earth. The people of this state have had great courage and foresight to provide for us the quality of life we enjoy today.

And though I am still filled with a great sense of hope, I know we only need to look below the surface to discover the challenges still before us.

We are growing rapidly – more people, more roads, more buildings, more fragmentation and destruction of habitat, declining species and their diversity, more conflict. There is a growing sense that what has defined us is slipping away.

In particular, salmon -- one of our great icons here in the Northwest is in trouble. If, as Norman Maclean says, "eventually all things merge into one and a river runs through it," then salmon swim through it – twice. What better indicator of our collective health.

And with all of the declining salmon runs, I believe it is safe to say we may be in trouble. If the salmon runs are not healthy, then our watersheds are not healthy -- and if our watersheds are not healthy, we have lost our collective connection and sense of stewardship responsibility to the land and to each other. Then we have truly mortgaged the future. I do not intend to leave that as my legacy.

There's no question in my mind that our environmental problems are becoming more complex and challenging. They also have complex economic and social interconnections. And while some environmental problems will still respond to our traditional tools of regulation and litigation, I believe we are at a point in time where we need to develop new tools,

new perspectives, and new approaches to deal with the growth that besets us and the environmental challenges and conflicts that come with it.

Take the issue of water quality as a case in point. Problems of point source pollution, for example, lend themselves well to a regulatory approach. That was really the challenge facing Governor McCall when he led the effort to clean up the Willamette River in the 1970's. Municipal sewage discharge points and pipes carrying industrial effluent can be identified, regulated, fined or shut down. But reducing nonpoint-source pollution -- perhaps the major challenge facing us on the Willamette River today -- is a different question entirely.

It involves not only runoff from agricultural lands carry pesticides and other chemicals; not only runoff from timber land carrying silt into our streams; but also runoff from roads and lawns and driveways and roof tops in Portland, Salem, Albany, Eugene and, indeed all of urban Oregon. This involves what people put on their lawns, whether or not they wash their cars in the driveway with detergent, and hundreds of other individual actions that contribute to the nonpoint source pollution load.

There is no law or regulation that will miraculously change the behavior of hundreds of thousands of urban and suburban Oregonians. Rather, it will require sustained environmental stewardship -- a long term commitment to change behavior -- by millions of people living in the watershed -- most of them living in the city.

I believe we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that calls for, and result in, greater individual responsibility and accountability for our air, land and water. You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts.

You can only achieve that through a collaborative and cooperative process that engages thousands of Oregonians and gives them a stake in the problem and some degree of ownership in the solution.

This kind of collaboration is not new to Oregon. Some 60 years ago, catastrophic fires destroyed hundreds of thousands of acres of forest -- an event we now call the Tillamook Burn. It took a generation to replant the forest, but it was done, tree-by-tree by volunteers and by school children. You'd be surprised how many people you meet in Oregon today -- in fact I bet there's a couple of you in the audience -- who took a school field trip to help replant the Tillamook Burn.

It was the same kind of broad-based collaborative effort that cleaned up the Willamette River in the 1970's under the administration of Governor Tom McCall. It was this community sense of environmental responsibility that let us to make our beaches public and to pass returnable bottle bill which has made littering tantamount to betraying your roots as an Oregonian.

With that kind history of cooperation and community response to environmental challenges, the consequences of the listing of the Northern Spotted Owl in 1990 were especially traumatic to Oregonians. The polarization tore communities apart and left scars in parts of rural Oregon that have yet to heal.

As a consequence, when -- shortly after my election in 1994 -- the National Marine Fishery Service gave notice of a possible listing of our coastal coho salmon, I began to look for a way to address the problem that would not result in another divisive natural resource war.

On the other hand, I was then, and remain now, deeply committed to the survival of our salmon runs. There is an almost mythic connection with Salmon among the people who live in the Pacific Northwest. It is a powerful connection that cannot be overestimated -- the power of history, the power of identity, the power of the past's promise to the future.

It is this deep sense of connection and common purpose that has fueled the Oregon Plan for Salmon and Watershed Restoration. I suspect that there are many here in this audience that are playing a role, if not a significant role, in this historic effort. And it is historic for a few reasons.

First, it is historic because of the level of effort and voluntary commitment to our common goal of restoring our salmon and watersheds and the scale at which it is happening. This is happening by individual property owners, watershed

councils, scientists, industry folks, environmentalists and communities across the state. It is not a partisan effort. It is an Oregon effort. (This could be further expanded.)

Second, it is historic because it is demonstrating to the nation a new way of tackling and making progress on complex and formerly intractable problems. In fact, our approach was one of a handful of success stories in the West that inspired me and Governor Leavitt from Utah, to extract the common principles that have guided us in our success.

We called this collective set of principles Enlibra -- A hybrid Latin word, coined by Governor Leavitt -- which means "to move toward balance." I will elaborate on these principles in a moment, but first let me turn to the Oregon Plan itself. It illustrates the limitations we face in our existing laws, the need for new tools, and the power of coming together in a new way.

It is important to recognize that the objective of the Oregon Plan has never been to avoid a listing under the Endangered Species Act. Rather, the objective has been -- and continues to be -- to make the greatest progress possible in restoring species and restoring watersheds.

It is also important to recognize that relying solely on the ESA to recover salmon in Oregon would not only have triggered another divisive battle, but would ultimately fail to recover salmon.

We need to remember that the primary role of the federal government under the ESA is a regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the wrong things but it provides no incentive for them to do the right thing.

So while the ESA can prevent landowners from engaging in activities that result in an intentional or unintentional kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70% of coho habitat lies in private ownership and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding take.

And in my 20 years of involvement in western state politics, I have experienced over and over again the fact that an approach which involves private landowners in the decision-making -- which gives them some ownership and investment in the work being done -- has a greater and more immediate positive impact on the resource than simply applying regulations that tell them what to do. Telling people what to do with their land in the West is an explosive proposition

As a result, the Oregon Plan was designed to involve, empower and incent private landowners to make voluntary commitments to watershed restoration and habitat restoration. The commitments are built on a solid foundation of federal, state and local regulation -- including harvest limits, Clean Water Act requirements, forest practice requirements, land use laws, state water law, and so forth.

But the increment that will make a difference in how quickly and successfully we recover salmon and watersheds comes largely from the voluntary commitments by landowners and communities working alone or through their local watershed councils.

These efforts do not have to wait for long federal planning processes to be completed. They can begin right away. I have observed that when there is a compelling goal, people can change their relationship to the land and to each other quite quickly. This is significant.

We have been engaged in this experiment in new governance and new relationships with each other and with the land for five years. It is more than a government program. Rather, it is a statewide, bipartisan commitment to restore our runs of salmon, steelhead and trout -- and the watersheds in which they spawn. And it is an experiment in implementing the provisions of the ESA that is at once sensitive to local needs and more effective in actually making habitat improvements happen on the ground.

We have results we can be very proud of in our watersheds and in our communities. Let me use some of these successes to illustrate the Enlibra principles on which the plan is based.

National Standards, Neighborhood Solutions.

This principle recognizes the appropriateness of national standards, but also of empowering other levels of government to come up with solutions that meet or exceed those standards without set federal prescriptions.

The Clean Water Act, the Clean Air Act and the Endangered Species Act are examples of national standards designed to protect the collective environmental values of the nations – but they do not, in themselves, constitute a blueprint for success. The blueprint arises when it reflects a local community's desire to create environmental health – not just a private interest's desire to avoid violating regulations. This kind of local buy-in underpins the success of the Oregon Plan. And the buy-in is based on the flexibility to pursue local solutions in the effort to meet national standards.

Collaboration, Not Polarization

This principle recognizes the importance of using collaborative processes to break down barriers and to find common solutions. It recognizes that we are reaching the limits of regulation and litigation to achieve our environmental goals.

For example, starting in 1994, the Coquille Watershed Association brought together loggers, farmers, environmentalists, fishing interests and governmental agencies to identify the factors endangering salmon in this southwest Oregon river basin.

Over 300 landowners have participated in projects which have resulted in 80 miles of stream bank fenced, 22 culverts replaced to improve fish passage, 200 instream structures built – and 10 displaced timber workers and fishers employed year round.

Reward Results, Not Programs

This recognizes the importance of moving to a performance-based system. We need to solve problems, not just run programs. The Oregon Plan, for example, is not a program as much as a series of commitments by federal, state and local agencies and private interests to address watershed health through actions that can show measurable results. In other words, the objective is not simply to have a program to fend off the federal government with an endless series of workshops and meeting. The objective is to get something done on the ground.

Monitoring, which is an essential part of the Oregon Plan, has already demonstrated that more than:

- 400 stream miles taken off the EPA list of streams out of compliance with the Clean Water Act
- 430 miles spawning habitat reopened through culvert removal;
- 1470 miles of road decommissioned or upgraded to reduce erosion; and
- 400 miles of stream bank fenced to improve riparian health.

It is these kinds of measurable improvements – which will restore salmon and improve watershed health – that are rewarded by the Oregon Plan.

Science for Facts, Process for Priorities

This principle recognizes the importance of good science to well-informed decision-making. It also recognizes that there is often some degree of uncertainty in the science and that difficult policy decisions cannot always await science to provide a clear and unambiguous direction. For example, the lack of "perfect" science on the Columbia has been used by a variety of interests to thwart any meaningful action at all.

When science is ambiguous, a public process must be used to set priorities and make subject decisions informed by the best objective data gathering available. The lack of perfect science should not be used as a justification for paralysis.

I want to take a moment here to acknowledge the significant contribution made by many scientists here at OSU, some of whom may be in this room. You have contributed some of the best science there is to this effort and it has helped us make difficult decisions.

Markets Before Mandates

This principle recognizes that economic incentives can often garner the good will necessary to achieve sustained efforts at environmental problem-solving that go beyond the reach of regulation or litigation.

The Oregon Plan offers a range of economic incentives which lead to faster compliance and in a more efficient, cost-effective manner than pure regulation. In addition, we have found that economic incentives can encourage changes in management and behavior that go beyond what is required by law.

Change a Heart, Change a Nation

This principle recognizes that individuals must be brought to understand their relationship to the environment and their stewardship responsibilities. If this happens broadly at the individual level, it can have a profound impact at the state and even national level.

Thus, education and outreach are very important parts of the Oregon Plan. If people understand the connection between their daily decisions and impacts on the environment, they will respond. Furthermore, if they can be provided with an enriching opportunity to actually help improve the environment, the experience is likely to stay with them.

Recognition of Benefits and Costs

This principle recognizes that decisions must be fully informed with an understanding of the environmental costs and benefits of various actions. Had we done this historically, our watersheds might not be as stressed as they are today. In terms of environmental problem-solving, informed decisions can help us to shape options and to ensure an equitable distribution of the burden.

Solutions Transcend Political Boundaries

This principle recognizes that environmental problems – watersheds and airsheds, for example – do not respect arbitrary political lines drawn on a map. This means that solutions will require common cause and collaboration, at the very least, on a regional basis.

These are the principles that underlie the Oregon Plan for Salmon and Watershed Restoration. They also represent the foundation for a new way to look at environmental problem-solving -- a new perspective, a new tool and a new approach.

Let me say again, however, that by embracing the concept of a new shared doctrine for environmental management, I am not rejecting or discrediting the tools of the past. I believe in the need for a strong framework of federal environmental laws, I believe in the need to have the ability to enforce them, and I believe in access to the courts. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the way in which we have traditionally applied them.

I recognize that the environmental debate is peopled by a vast range of stakeholders engaged in a mighty struggle. The challenge is not for the various constituencies to give up on their entrenched positions. It is to see beyond them. If we can recreate a forest in Oregon, then we can recreate watersheds. If we can find peace in Northern Ireland, then surely we can find peace in the West

As Wallace Stegner wrote in *The Sound of Mountain Water*:

"...one cannot be pessimistic about the West. This is the native home of hope. When it fully learns that cooperation, not rugged individualism, is the quality that most characterizes and preserves it, then it will have achieved itself and outlived its origins. Then it has a chance to create a society to match its scenery."

That is what we are trying to do here in Oregon. At stake is more than salmon and watersheds. At stake is whether this new approach -- with its strong foundation in science and in respect for communities -- will be accepted and help us solve the environmental challenges of the new century. At stake is whether we can find a way to pursue our individual and often conflicting objectives that builds community rather than disrupts it.

And if this is to come to pass, it will take your support and cooperation.

Governor John Kitzhaber

Washington County Public Affairs Speech

November 1, 1999

It is a pleasure to be here before the Washington County Public Affairs Forum to discuss my ideas for strengthening our system of school finance.

Before I start, however, I feel it is fair to warn you: In a recent editorial Steve Forester, of the Daily Astorian, wrote: "No one would fall in love with John Kitzhaber's speaking, as one might with Gov. McCall's."

So, now is your chance to head for the doors or grab that last cup of coffee. Because, I'm here to talk about ideas and while I can't promise that this will be entertaining, I can promise it will be informative.

And it will be simple: My speech today is really about three things: Stability, Adequacy and Equity.

Stability, Adequacy and Equity. You will hear me say those three words over and over again for the next year. Because stability, adequacy and equity are the three challenges for school funding. And the two initiatives I am working to put on the ballot address those challenges. I will share with you some of the "how" in a minute.

First, I want to talk with you about the "why?" Why bother to pursue these changes to the way we pay for schools? What's wrong with how we do it today? And if we fail to make changes, what's really at stake?

The fact of the matter is that Oregon's students are doing well in school. On statewide tests, Oregon students continue to show improvement. In national and international comparisons, Oregon's students rank consistently well. And teachers and administrators are, by and large, doing a good job of teaching to higher standards in a changing world.

But that is no reason to be complacent.

That is no reason to sit on our hands and hope for the best.

Because there are clear and identifiable problems with how we pay for schools -- problems that we have the resources and intelligence to solve.

And those problems are, not surprisingly: stability, adequacy and equity.

Let me tackle them one at a time -- stability first.

The most important change in state government and school finance in the last decade is fallout from 1990's Ballot Measure 5. Whether you supported it or opposed it -- or were even in the state when it was voted on -- the indisputable fact is that it shifted the responsibility for paying for schools from local property taxes to the state income tax.

The level of school funding used to be decided locally, in local levy elections. It wasn't a perfect system, but, being based on property taxes, it provided a very stable source of revenue for our schools. Roughly 70 percent of school

funding came from local district patrons and 30 percent from the Legislature.

Measure 5 turned that equation on its head. Now, more than 70 percent of your schools funding comes from the state income tax and the level of funding is decided by the Legislature.

This isn't a perfect system either. It has its pluses and minuses. But the biggest problem I see with it is Stability. Income taxes are simply not as stable as property taxes. And when, not if, we have an economic downturn, we'll be looking at either raising taxes to keep schools in good shape or we'll be looking at severely cutting school funding.

Now, I feel a little like a doctor warning about eating too much fat or smoking too many cigarettes. Those are bad practices which could someday result in poor health. But, it's pretty tough to convince a 25-year-old of that.

Similarly, it's pretty tough these days to get Oregonians worried about a recession or economic slowdown. We haven't really seen one in this decade.

But who here is planning their personal or business finances on the assumption of never-ending good times? Probably not very many of you. My bet is that prudent people are using prosperity as an opportunity to save, invest and be prepared for leaner times.

With luck, those leaner times are far away. But I refuse to run this state on the assumption of good luck. I refuse to tell you and your children that the best we can do for stable school funding is to knock on wood, cross our fingers, carry a rabbit's foot and hope for a continued strong economy.

Instead, in conjunction with State Superintendent of Public Instruction Stan Bunn and Standard Insurance President Ron Timpe, both Republicans, I have filed a bipartisan initiative to create a school stability fund.

This initiative, the Stability in School Funding Act, creates a Stabilization Fund made up of four existing revenue sources: 15 percent of lottery funds, a portion of Common School Fund earnings, 25 percent of the National Tobacco Settlement, and -- through the establishment of an "invest and return" policy -- half of any future excess state revenues with the other half being refunded.

There are airtight controls on accessing the Stabilization Fund. The fund can solely be used for shortfalls in the education budget and will be capped at 10 percent of the state's general fund. It will automatically back the two-year budget for K-12 when there is a resource deficit of 2 percent or greater. For the Legislature to use it in the development of a future budget, will require the approval of the people of Oregon in a public vote to ratify the use of the fund. In other words, this proposal directly places the power to use the School Stabilization Fund with the people.

I can guarantee you, people will find ways to argue about how we should accomplish this. But I challenge anyone to deny that we should not save for the event of an economic downturn. I challenge anyone to make the argument that financial reserves are not necessary for the single most important public service we provide -- the education of our children.

A stability fund is plain, simple, straight-forward common sense. The next year of campaigning will make that abundantly clear and I am optimistic that Oregonians will support it at the polls.

I am also confident that they will see the need for the second amendment I am proposing which addresses the adequacy of school funding and the equity of school funding among the approximately 200 school districts in Oregon.

But, again, let me spend time first on why this is important before I describe how this measure would work. Let me start by talking about equity.

It's a simple concept. A child in Beaverton should have access to the same quality education as a child in Bend. Quality of education should not be an accident of geography. The state has an obligation to ensure this equity, and, over the last decade, we have substantially equalized spending levels between districts.

In the last legislative session, we took the step to allow school districts a local option to supplement property taxes with funding the State provides.

I signed that bill with some reluctance. Because, frankly, if you are a property rich district like Portland, Eugene or Corvallis, a local property tax option is probably affordable.

But if you live in a property poor rural community -- which so much of our great state is now and will continue to be -- then you probably can't afford a local property tax increase.

So, we stand the chance now of re-opening the quality gap between urban and rural school districts. We can't let that happen.

That's why the second initiative I have proposed, the Accountability and Equity in School Funding Act, will require the legislature to help equalize differences between wealthy and poor districts that enact local option measures to support schools. This will ensure that in every corner of Oregon, regardless of the wealth of a given district, the local taxpayer investment will provide similar benefits for local schools.

This measure also addresses the concept of Adequacy. The question we must begin to answer at the legislature is "How much is enough money to pay for schools?"

Today, in the Legislature, the debate is about large, obscure numbers -- \$5.1 billion, \$4.81 billion -- and not about what those dollars mean to student performance. We need to change this debate if we are going to improve education in Oregon.

We must move the budget discussion in Salem from one of big numbers to a debate that focuses on the tangible benefits and changes those dollars can bring to the classrooms and to the students. In short, we need to understand what we are buying.

For example, in elementary school we should be talking about achieving:

- Class size with one teacher for every 20 students.
- All day kindergarten.
- Specialists for arts, music, physical education, second language, and counseling.
- Additional time and focus on students having trouble meeting standards.
- Adequate school maintenance (so instructional funds are not diverted from the classroom).

In middle schools, we also should look for additional changes.

- Slightly higher class size with one teacher for every 29 students.
- An additional teacher or two to provide more options in math, English, and science.
- Summer school for students having trouble reaching the standards.
- And, in these changing and uncertain times in the development of our young people, one counselor for every 250 students.

In high school, we should add many of the same changes including:

- School to work coordinators.
- Adequate campus security.
- And alternative programs for special need students.

These are the kind of tangible improvements to our elementary, middle, and high schools that the Legislature should debating and not merely some large number in a vacuum.

We need to give the Legislature a mission and a mandate to focus on the quality of education. By so doing, we can reconnect education funding with what happens in the classroom.

Today, the Legislature needs to act more like a local school board with a high concern for education quality and fiscal accountability rather than like a disconnected political body arguing about the dollars going into the budget. This can be done -- and this second initiative I will describe provides this new direction and mandate.

The first constitutional amendment, boiled down to its essence, provides the direction I have been talking about. It says that the Legislature must provide sufficient funding to meet the quality education goals established by law -- and that the Legislature must explain how the funding provided meets or does not meet these goals. Simply put, this is about accountability.

This measure provides the direction necessary for the Legislature to produce a high quality product. It does not require (or call) for millions of new dollars. Rather it requires that we understand how we are spending our dollars and what we are getting -- or not getting -- for that investment.

Today I am asking you for your support for these measures and to be a part of this positive vision. Early next year I need your help to get the signatures to qualify them for the ballot, and next fall we need your active and visible support for adequate, equitable, and stable school funding.

You are the shareholders in this corporation of Oregon. It is your government, your business, and your money. As the CEO, I'm advising that we do what other businesses are doing: invest to protect our future by creating a stability fund for schools; create the tools to hold the Legislature accountable for adequate school funding and, finally, ensure that we maintain equity in funding for all Oregon schools.

I said it at the start. I'll say it at the end: Stability, Adequacy, Equity. These are the things our schools need -- these are the things our students need. Over the next year, I'll be working to get your support for the initiatives that will make this vision a reality.

Let me leave you with one thought: sure, these initiatives are about money. And they are about changing the way we do business when it comes to school finance. But they are mostly about our children, our grandchildren, nieces, nephews and cousins. They are about the children we send to school everyday.

These initiatives say to the children of Oregon -- "we'll give you the best shot possible to succeed." That's what we were given. We owe no less to this generation.

Governor John Kitzhaber

**Minority Overrepresentation
Summit Speech**

October 20, 1999

Thank you for participating in this Summit. I'm glad to see so many of you here -- individual Oregonians whose professions bring them into contact with troubled youth and whose commitment to helping these kids is beyond question.

I'd also like to extend a special welcome to Emily Martin, who will be our next speaker.

Emily is a national expert on minority issues and juvenile crime prevention. She has served as Deputy Director of the Midwest Regional Office of Community Relations for the US Department of Justice and Citizen Participation Advisor for the Model Cities Administration at HUD. Currently she is Director of Training and Technical Assistance for cultural competency issues for the US Office of Juvenile Justice and Delinquency Prevention.

We are honored to have Emily with us today.

The fact that we are gathered now for the third year in a row is encouraging. It tells me that we are serious about meeting the challenge of minority over-representation in our juvenile justice system. But it also tells me that, in spite of the progress we have made in the last couple of years, we all know that there is still a long road ahead of us. Let me take just a moment to review where we started and how far we have come so that we can see where we need to go from here.

First of all, none of us can fail to recognize either the problem we are here to address, or the threat it poses to our future. We all agree that juvenile crime is far too high. We all agree that when ANY child becomes involved in criminal activity, that is one child too many. But we also agree that the disproportionate number of minority youth who drift -- or who are driven -- into lives of crime reflects an unfortunate and unacceptable racial imbalance. That is why we're here for the third year in a row, and the question we face is -- what are we going to do about it?

We all know that there is a predictable chain of circumstances that leads kids into trouble with the law. The road to trouble may begin in the home -- sometimes even at birth, with the social or economic or ethnic slot into which a child is born. The trouble may begin at school, for a variety of reasons. If it is not arrested there, it soon it spills over into the neighborhood and the larger community, until it draws the involvement of law enforcement, the courts and the correctional system. Along the way, counselors and various church and social service groups may become involved, and certainly the lives of innocent citizens are affected when they fall victim to juvenile crime.

We all know the risk factors: poverty, unstable family backgrounds, domestic violence, substance abuse, negative peer associations, and school failure and drop-out. We also know which children are at risk. But there are two critical facts here that we cannot afford to ignore -- if we are serious about laying this issue to rest.

First, whatever the circumstances into which these children are born, they are still CHILDREN -- children we brought into being, children with the same inherent potential as any other child, children who deserve the same opportunities as any other child.

And second, the chain of circumstances that funnels these kids into the juvenile justice system is a chain that CAN be

broken -- at any point along the way. There are things we can and must do to reach out to these children. The kids we heard from this morning make that powerfully clear.

The groups represented here today touch the lives of these troubled kids at various points along the road, or at various links in the chain. When that happens, we all try to do the job we're called upon to do, and I firmly believe we try to do our best.

But if that alone were the answer -- if doing our best when our lives and theirs intersect were the whole solution -- then there would be no reason for us to be meeting here for the third year in a row to address a problem that is not yet resolved. WE HAVE TO DO MORE.

When I convened this Summit for the first time two years ago, each group made a voluntary commitment to take proactive steps toward finding and achieving a solution. The first stage of our strategy involved looking inward -- each part of the system examining its own programs and policies to detect the presence of minority bias, however inadvertent, to foster greater awareness of and sensitivity to minority issues, and to increase cultural competency, and expand minority hiring practices.

Last year we agreed that the next step was to begin looking outward -- by starting to develop programs that would actually help minority youth turn their lives around. In this area, some progress has been made:

- Minority youth as a group were not over-represented in the arrest population in 1998;
- The percentage of minority youth in the OYA closed custody population has declined slightly; and
- Asian and Hispanic youth were under-represented in the arrest population.

Later today we will be paying tribute to some of the people who have made significant headway toward achieving our goal, and I ask that you stay to help celebrate and recognize those accomplishments.

But much remains to be done. As I said to you a year ago, as long as young people of color are over-represented among our children at risk, as long as they are disproportionately present at every stage of the juvenile justice process -- and despite our best efforts they still are -- then we still have a long way to go. So what is the next step?

Let me mention some of the things my administration is trying to contribute towards a solution.

- We have appropriated \$20 million specifically ear-marked for juvenile crime prevention. And, we have required a plan that shows culturally appropriate services will be delivered in order to access these dollars. We have also established a team of experts in cultural issues who stand ready to assist you in your efforts to reduce over-representation.
- We are working on an initiative that would establish a statewide mentoring program which would involve churches, social service agencies, businesses and community members in reaching out to troubled kids on a one-to-one basis. I'm aware that such programs already exist in various Oregon communities, and these efforts are commendable. But this problem is so immense and so threatening to our future that it cannot be approached in a patch-work manner. We desperately need a consistent, statewide program with clear accountability.
- The proposals I am advancing for school funding will also contribute to a solution. As long as many of our schools are struggling just to maintain the status quo, they will have few resources to devote to children with special needs for children at risk. Adequate, stable and equitable funding for our primary and secondary schools will be a step towards ensuring that ALL our students -- and especially those whose minority status places them greater risk -- will have an equal opportunity to succeed.

I believe these steps will help, but they are not enough. Even the steps each of you are taking in your own particular part of the system won't be enough unless we find some way to consolidate our efforts. Acting separately, we can never hope to reduce the terrible epidemic of juvenile crime, or to reverse the shameful over-representation of minority youth in our juvenile justice system. That is a point I tried to make a year ago and it still needs to happen.

This is not a problem we can effectively deal with as a loosely affiliated group of interested parties, however sincere our efforts. It is not a problem that can be attacked piecemeal. Only if we fully understand each others' roles, only if we figure out how we can connect our efforts and work in concert, rather than separately, will we gain any appreciable foothold.

I do not pretend that we face an easy task or that we will resolve this issue overnight. But neither will I pretend that this is not a matter of great urgency. Every day, while we sit here trying to figure out what OUR next step should be, some new child takes his or her first step down the wrong road, or is somehow pushed by circumstances into doing so. That's why we must seek ways to collaborate -- ways for the various parts of the system to work together to help these kids either from getting involved in the first place or from penetrating the system any further.

- For example, the relationship between District Attorneys and defense attorneys is normally an adversarial one; they are engaged in a win-lose proposition, one side trying to convict, the other trying to defend. Instead, they might work together to find the best way to help the child involved to prevent further penetration into the system.
- As another example, judges have wide discretion in terms of sentencing, but incarceration is not the only option and in fact may in the long run be detrimental not only to the child but to society at large. Other possibilities might be treatment for mental or emotional disorders or substance abuse, ordering family members or social service agencies to become actively involved in a child's rehabilitation, and then providing adequate monitoring to see that the order is carried out.
- Law enforcement can contribute more than just arresting juvenile defenders. Law enforcement groups are already establishing after-school programs for at-risk students in many of our communities and this is something that should be encouraged across the state.
- Businesses and community members can get involved in reaching out to kids who need support and encouragement -- by mentoring, by offering productive work opportunities, or simply by being visible role models as responsible, successful, law-abiding citizens.

The point is that as long as we continue to view the whole spectrum of the juvenile justice system -- which truly begins with the home and ends with jail -- as a collection of separate parts, our success will surely be limited. And I say that's not acceptable.

If a chain of events leads minority youth to cross the line of the law, then we must form a chain of our own -- a chain of prevention. But as long as there are disconnected links in that chain, too many children -- especially too many minority children -- will surely slip through the cracks. And I say that's not acceptable.

We can do better than that. And we **MUST**.

When I try to think of how to explain this challenge in a way that will stick, I remember that Greek warriors locked their shields to form a strong line of defense against an advancing enemy. As long as they fought separately, some of the enemy always got through. But once the shield-line was locked, victory was almost always assured.

I don't think I exaggerate in saying that today we too face an enemy -- an enemy that threatens the very fabric of our society, an enemy that endangers not only the lives of our young people, but of innocent people as well. An enemy that must somehow be stopped. But no matter how hard we try, no matter how strong our resolve, we'll never accomplish that if we continue to fight separately.

Please don't misunderstand me. I recognize and appreciate and applaud what you have done over the last two years. And you have done a lot. You have taken the first critical steps in this battle. You have recognized the enemy. You have outlined a strategy. Now, together, we must put it into action.

There are chains that bind and chains that protect. Just as there is a chain of circumstances that entraps minority youth

and leads them into trouble, so there is a chain of defense that could prevent this from happening.

We need to "lock the shield-line." And we already have the shields -- compassion, comprehension, commitment. If to these we add CONNECTION -- if we work together to break the chains that bind our minority children to a future without hope, we will be much closer to ensuring that each and every one of these children is given an equal opportunity to succeed.

Even while we honor and respect the cultural identity of our growing minority populations, we must remember that they are part of us. They enrich our lives and enlarge our perspective. We owe it not only to them but to ourselves to give them the rights most of us take for granted: life, liberty, and the pursuit of happiness. No less than that should be our goal.

Once again I thank you for your efforts and your commitment, and urge you to continue the work you have begun.

Governor John Kitzhaber

Comments to the Seattle City Club

September 17, 1999

It is a great honor to speak to you today about an issue of enormous regional significance: the challenge of maintaining for future generations two invaluable and interrelated assets of the Pacific Northwest -- both associated with the Columbia River. The first is the health of our shared ecosystem -- the heart of the natural wonder that helps define those of us fortunate enough to live in this region. The second is the reliable, low-cost supply of power produced for the Northwest by federal dams on the Columbia River.

If there is one thing I want you to take away from my talk today, it is this: that we are at grave risk of losing these assets; that the one cannot be saved without saving the other; and that neither can be saved without bold, decisive action taken by the region as a whole. Let me touch on each of these issues in turn.

The most visible sign of our ecosystem's decline is the plight of Northwest salmon. We have an almost mythic connection with salmon. They represent the power of history, the power of identity, the power of the past's promise to the future. But beyond that, if salmon runs are not healthy, then our watersheds are not healthy -- and if our watersheds are not healthy, we have truly mortgaged the future.

Yet, today, we find 11 populations of Columbia Basin salmon, steelhead and bull trout listed as threatened or endangered under the Endangered Species Act. For some of these species, it is too late. For others, their depressed numbers point to a very uncertain future.

The reasons for this decline are many, but primary among them are past harvest practices, hatchery policies, habitat degradation and the impact of the Columbia hydropower system on water quantity, water quality and fish passage. Harvest, hatcheries, habitat and hydro -- these are the 4 H's of recovery, all of which must be addressed if we are to both save our salmon and maintain the integrity of the Columbia Basin ecosystem.

Yet our record to date has been disappointing. In the last 16 years, we have spent more than \$3 billion dollars on an effort that now employs 2,000 people. And while we may have kept some populations from slipping over the brink of extinction, no runs in the basin are clearly on their way to recovery. This effort, started with high hopes, has foundered on a fundamental lack of agreement:

A lack of agreement on the objective of the recovery effort, lack of agreement on sound science, lack of agreement on a common plan of action and a lack of agreement on who is accountable for expenditures.

It is not difficult to see how that lack of agreement arose. The Columbia River is our own answer to the Balkans. It is controlled by two nations, four states and 13 sovereign tribes. There are seven major federal agencies that have jurisdiction in the basin. They have different statutory missions with virtually no requirement for coordinated action and no way to resolve conflicts between themselves.

A case in point. Today, water quality standards established under the Clean Water Act are routinely violated in the Columbia and Snake Rivers. Data developed by the federal government itself demonstrates that federal dams are

contributing to this problem.

Last spring, a lawsuit was filed in U.S. District Court in Portland to bring the federal dams into compliance with the Clean Water Act. At issue is whether the actions of the agencies of the federal government are subject to the same federal laws and standards under which states must abide. In this case, whether the Army Corps of Engineers must operate the federal dams in compliance with the standards of the Clean Water Act.

I believe the federal government must play by the same rules as everyone else.

For this reason, Oregon will file an amicus brief in this legal action to ensure that the federal government shoulder its share of the responsibility for cleaning up the Columbia River.

But even if the federal government could speak with one clear voice in the basin, the state and tribal governments in the region have their own separate objectives and policies that also impact the esthetic and economic benefits of the Columbia.

And even if we had agreement on how to proceed and good science to guide our decisions, we have no effective regional body through which we can act collectively.

Until recently, there was not even a regional forum at which all these governmental entities were represented. Membership on the Northwest Power Planning Council -- our only existing regional governmental entity -- is restricted to the four states. There is no formal representation for the Columbia River tribes or for the federal government, nor can the Council compel coordinated action by federal agencies. For that reason, the Power Planning Council -- as it is currently structured -- will never be the body that can forge and execute a regional agreement on what is to be done on the Columbia.

And although all these entities are represented on the recently created Columbia Basin Forum -- which I strongly support and which can contribute to the consensus we seek -- the Forum, like the Power Council, lacks the statutory authority to actually implement a plan.

This fragmentation of decision-making authority -- and the resulting loss of accountability -- is one of the major obstacles to meaningful action.

On the power side, the federal dams of the Columbia and Snake rivers are a tremendous asset, blessing the region with abundant, low-cost power. Half of the Northwest's electric power comes from this source and at a price that is much lower than in any other area of the country.

And as time goes on, the prices we pay for federal power in the Northwest will become even cheaper. Once the debt from the Washington Public Power Supply System is paid off in less than 20 years -- and the dam construction debt to the U.S. Treasury is paid off 10 years after that -- the cost of providing hydropower could be half of what it is today.

In short, this is an increasingly valuable resource our region cannot afford to lose -- yet like the salmon, its future too is uncertain. People outside the region are increasingly voicing the belief that power generated by the federal dams in the Columbia Basin is a national resource that should benefit all citizens. To be blunt, they view the current situation as the U.S. taxpayers subsidizing Northwest electricity rates.

This notion is not new. It surfaced in the early 1980s during the Reagan administration, when Budget Director David Stockman proposed to sell all the federal dams outright to the highest bidders, and use the proceeds to help balance the federal budget.

Over the past 15 years, other proposals to lay claim to the federal power have come before Congress. To date, our Northwest delegation has always been in the position to successfully fend off those efforts. But that may not always be the case -- and let me tell you how fast it can happen.

When Oregon lost Senators Bob Packwood and Mark Hatfield in the space of one year, we went from having 56 years

of senatorial experience to having none -- from number one in Senate seniority among the states to number 50.

This year there are again bills before Congress that would require BPA to sell federal power at a rate competitive with other wholesalers in the Northwest power market. That would mean our rates would go up and the resulting windfall would go to the federal government.

Senator Moynihan of New York, a sponsor of one of the bills, has stated "the discounted rates provided by public power are a benefit which goes to a relatively few recipients at a tremendous expense to the American taxpayer." Moynihan's bill is supported by a formal coalition of 114 representatives and 36 senators from the Northeast and Midwest.

Although no bills are likely to pass this session of Congress, momentum is building. The chance of some bill passing in Congress continues to grow.

And it will continue to grow in part because the electricity industry is moving from a heavily regulated market towards one that is open and competitive. Some question why the government is selling electricity and, in effect, locking out private competitors.

There are also questions of fairness. Why should some businesses have an edge over others solely because of their access to federal power?

As power markets become more competitive, the Bonneville Power Administration -- as a federally subsidized, cost-based system -- will stick out more and more. And the only way we are going to fend off those who want to sell the dams or force the BPA to sell power at market rates is to build a regional consensus.

We ignore this problem at our own peril. The stakes are huge. Pricing federal power at market would amount to at least a half billion dollar annual loss to our region. Our loss is the federal government's gain. Pricing federal power at market rates would bring the U.S. Treasury a considerable amount of money year after year.

Our defense of the Columbia River hydrosystem is further weakened because too many people in the Northwest are indifferent to whether we lose this source of low-cost power. The reason is simple: they do not have access to it. In fact, 60 percent of Northwesterners have no priority access to the power sold by the Bonneville Power Administration, because they are served by investor-owned electric companies.

This disparity will grow. A region where most of the customers get no federal power or only what BPA chooses to allocate is not one that can defend itself against powerful outside interests.

So, not only does the Northwest face the loss of our salmon runs and the further degradation of our regional ecosystem, the low cost power that has benefited our region for decades is also at risk.

These two challenges and their solutions are inseparably linked.

Changing the operation of federal dams to help fish or mitigate water quality problems affects the amount and cost of power produced as well as other economic stakeholders in the basin, from barging to agriculture. Furthermore, the sale of power from the federal system provides the main source of funding for fish and wildlife recovery in the basin.

If the Northwest does not propose a regional solution for fish and power, these issues will be decided for us. They will be decided by a Congress that is more interested in the value of our power than in the health of our environment. Further, if we do not present a four-state united front in Congress, the Bonneville Power Administration is also at significant risk.

To arrive at a unified regional position will require two important steps -- neither of them easy, both of them crucial.

First, we need a new regional governance structure for the Columbia Basin to replace the Northwest Power Planning Council. This new entity must have the proper mission, representation and authority to develop and implement a comprehensive plan that addresses not only fish and wildlife recovery and regional power needs, but also the trade-offs

between the two.

I have been working closely with Governor Racicot of Montana to develop a set of principles to guide the creation of such a structure. The proposal envisions a regional entity that includes appropriate representation for the state and tribal governments of the Columbia Basin, for the federal government, and for Canada.

The comprehensive plan developed by this new body would specifically address hydropower operations, as well as habitat, hatchery and harvest practices, as they relate to fish and wildlife restoration.

The plan would be required to meet the requirements of the Endangered Species Act, the Clean Water Act, and other state and federal environmental statutes, state water rights, and Indian treaty and trust obligations.

The plan, and all work undertaken by the new body, would also be required to be scientifically-based, economically sound, and appropriately sensitive to culture and history.

The plan would meet these standards with a composition of strategies and measures that reflect and build upon the region's values and preferences.

If the region's comprehensive plan meets all the relevant standards, then the federal agencies whose activities affect the basin's fish and wildlife would be required to implement the plan by tailoring their activities to be consistent with it.

Second -- in addition to the establishment of a new Columbia Basin governance structure -- we must also present a regional consensus on how to recast the BPA in light of a competitive power market.

This consensus must address at least three issues.

First, how BPA will sell its power in a competitive marketplace that is in keeping with the fact that it is a federal agency, not a private competitor. Bonneville cannot expect to act as an entrepreneur making profits at the expense of risk-taking, tax-paying private entities.

Second, how to prevent BPA from using its transmission system monopoly to keep competitors out of the Northwest power market. There are simply too many opportunities for BPA to take advantage of its transmission monopoly.

Third, how to achieve greater regional control over, and accountability for, the actions of BPA.

I am intrigued by proposals that have surfaced recently for the Northwest to "buy" the BPA, essentially to ensure that the benefits of the power systems accrue to our region into the future. In fact, your governor, Gary Locke, has argued that such an idea should be seriously considered by the four northwest states and by the electricity industry, both private and public. I agree.

Proposals of this magnitude -- on both fish and power -- will be controversial. Both Gov. Locke and Gov. Kempthorne of Idaho -- who have been active participants in these discussions -- have raised legitimate questions about the new Columbia Basin governance proposal that Gov. Racicot and I have developed.

And while these questions merit serious examination, I believe that without changes of this kind, we will cede control of the destiny of the Pacific Northwest to interests outside the region. That is simply not acceptable to me.

If we are to build the kind of regional consensus needed to move forward on both fish and power -- and, thus, to protect our common long term interests -- we must exert leadership within the Northwest to change what is essentially a parochial mind-set.

There are two things we can do to further this objective and to create a climate more conducive to united action.

First, we must act as not just as economic interests but as common residents of a remarkable region: the great Pacific Northwest that possesses qualities that are worth fighting for. And we can only do that together.

Certainly, all of us have economic interests -- and the sheer number of those interests affected by changes in the management of the Columbia River Basin is stunning: agriculture, recreation, aluminum smelters, barge companies, ports, utilities (both public and private) and the residential customers who depend on them. In other words, all of us.

Clearly, we must address the concerns of the economic stakeholders in any proposed plan and the costs of doing so must be clearly identified and incorporated as a part of implementation. But there is no reason that we cannot do this together. And if we do not do it together, we will all lose in the long run.

The current political posturing over dam breaching is a case in point. Some in Congress and in the region have stated unequivocally that "dam breaching is off the table." By implication, then, the burden of fish and wildlife recovery must be shouldered by someone else. Yet those who have taken this position do not say whether that somebody is the timber industry, the aluminum industry, sportsfishing or some other economic stakeholder.

Similarly, on the power side, access to low-cost federal power pits state against state, customer against customer, and utility against utility.

If we allow this kind of politics to continue -- politics driven solely by subsets of the economic interests in the region, with little consideration for the larger regional interest -- we will sacrifice our ability to secure the environmental integrity of the Columbia Basin for this and future generations.

These fights will worsen over time unless we look for solutions that unite the region, rather than divide it.

Such solutions may seem beyond our grasp today, but they are not entirely beyond our vision. We have but to commit ourselves to finding them. As Robert Browning wrote in 1855: "A man's reach should exceed his grasp, or what's a heaven for?"

In that vein, I propose the following:

First, that the four Northwest Governors convene, as soon as possible, to build on the dialog we have already begun, with the objective of developing a proposal for a new regional governance structure for the Columbia Basin -- including consideration of acquiring the BPA and its assets.

Second, that this new governance entity be vested with the proper mission, representation and authority to develop and implement a comprehensive plan that addresses not only fish and wildlife recovery and regional power needs, but also the trade-offs between the two.

And, third, that this proposal be taken -- before the end of the year -- to the Northwest delegation for consideration by the United States Congress.

I recognize that meeting this challenge will be difficult -- riddled with many opportunities to take the easy, but not the right path. Our success will depend, in large part, on our willingness to move beyond parochial concerns to a broader appreciation of regional interest. I believe that we are up to the task.

Let me conclude by saying again that we are faced with a two-pronged challenge of enormous regional significance and implication. We cannot resolve the fish and wildlife issues without resolving the power issues. We cannot resolve the power issues without resolving the fish and wildlife issues. And, we cannot resolve either unless we can score a victory for regionalism over parochialism.

At stake is our future. As turn of the century essayist G.K. Chesterton pointed out, the future is a matter of choice, not a matter of chance. I believe that. Our choice is whether we will be victims of someone else's future or whether we will be masters of our own destiny.

The choice is ours.

Governor John Kitzhaber

Society of American Foresters

September 13, 1999

Welcome to Oregon. We are honored to have the annual meeting of the Society of American Foresters here in Portland.

As I'm sure you are aware, management of this nation's forestlands and the practice of forestry are in the public spotlight as never before. You can hardly pick up a newspaper without reading about a controversial timber sale, a successful habitat restoration project, a court injunction, or a mill closure. In this light I think it is especially fortunate that the SAF chose to come to Oregon this year -- because in this state we have taken a different approach to resource management -- and I am hopeful there are some things we have learned that are worth sharing.

To residents of many other states, Oregon seems like an idyllic place. But trouble is brewing in paradise. Land management practices over the last century have changed the face of the state. In eastern Oregon, the exclusion of fire, removal of old growth pine, and overgrazing have all combined to tip the natural balance and threaten the ecological stability of millions of acres of forests. Conversion of native grasslands to agricultural uses and harvesting of old growth forests has destroyed habitat that many sensitive species depend upon for their survival.

In my 14 years in the State Legislature and five years as Governor I have focused on natural resource issues. In that time I have learned a few things -- one of which is that forestry has the power to change the world, to make it a better place for the creatures that populate this planet.

The Society of American Foresters can be and should be a leader in that effort. How can SAF do that? I won't pretend to know the answer to that question, but I can tell you about some things we've tried in Oregon and you can decide if they would be useful in furthering your natural resource objectives.

We've tried to follow a few key principles in shaping our approaches to natural resources here in Oregon.

First, Begin by using the best interdisciplinary science available. Solicit input from your colleagues in fisheries, landscape ecology, and hydrology. Do so with an open mind and avoid the temptation to listen only to the scientists who agree with you.

Secondly use a landscape-level perspective. Rather than continuing to manage on a project by project basis, look instead at how all the pieces fit together. I am aware that the SAF has supported this strategy for some time and I am probably preaching to the choir. This landscape approach will encourage consideration of what else is happening in the watershed. Considering factors such as sensitive, threatened or endangered species, community health, risk of fire and management on neighboring ownerships are critical in forest planning if we are to do what is best for forests and the communities that depend upon them.

The third step is to make land management decisions with the underlying objective of restoring ecosystem health. There are few, if any managed watersheds that couldn't benefit from some level of ecosystem restoration. Managing toward a goal of watershed restoration means considering the whole ecosystem -- and designing treatments that will lead to healthier streams, forests and fish and wildlife habitat. It means considering the natural processes that govern the

landscape such as historic composition of the forest and the frequency of fire and other disturbance.

Fourth: solicit community involvement in the decisions that affect your watersheds. By working with local affected interests, we not only build public trust, but we also make better decisions.

Our eastern Oregon forest restoration effort is a good example of using the four principles I just outlined to make significant progress in forest policy. The State has taken a very active role in shaping how federal lands are managed within the state. We've established an excellent partnership with the Forest Service under former Regional Forester Bob Williams, acting Regional Forester Nancy Greybeal, and Oregon BLM Director Elaine Zielinski.

What we have done is to advocate for managing the forest with a goal of ecosystem restoration. In eastern Oregon, where management activities have moved forests well away from their historic condition, we have supported using active management to improve watershed health. Using prescribed fire, thinning from below, road obliteration and riparian restoration, we have identified a strategy that, over the long term, will improve the health of these forests and streams while providing wood products to rural communities dependent on them. Forest Service Chief Mike Dombeck recently designated three million acres of northeast Oregon as a "Demonstration Area" where these principles will be employed.

Our eastside strategy began with the science. In early 1995 I appointed a panel of ten respected scientists to examine the question of how we could improve the health of the forests of northwest Oregon while protecting environmental values such as runs of salmon on the endangered species list. The Panel was diverse in its perspective, yet it came back with a set of consensus recommendations. Those recommendations have formed the basis for four years of work on the issue.

We have promoted a landscape approach to forest management in the Blue Mountain Demonstration Area. The Demonstration includes Forest Service land, BLM land, state land, grazing land, towns, cities, streams, rivers, wilderness areas, municipal watersheds, and critical fish and wildlife habitat. One of the key tenets of the effort will be planning across these boundaries.

The third principle -- managing toward a goal of restoring healthy ecosystems -- has been the underlying standard of our eastside forest effort. By focusing first on what healthy forests, streams and watersheds should look like in the Blue Mountains, we have been able to identify management strategies that will move these ecosystems toward a healthier state. We have assembled an 11-point strategy that has guided restoration efforts over the last two and a half years and is based on these ideas.

And finally, the role of community involvement. Following the completion of the science report, I appointed a panel of nine respected eastern Oregon citizens to provide me with advice on eastside forest health issues. The panel has played an important role over the last few years because relying on sound science alone is not enough. The science needs to be blended with citizen values if it is going to mean anything.

Early in the process we learned that a lack of trust in the federal land management agencies was going to be a big problem. We have addressed this issue head on is by concentrating the active forest management in areas where there is relatively low controversy -- where there is broad public support for treatments. By focusing first on areas where the public supports these efforts, we have made tremendous strides in restoring trust in the federal land management agencies, and in the ability of forest science itself to improve ecosystem health.

By using these four principles in eastern Oregon I think we have positioned ourselves for some significant progress over the next few years.

In western Oregon, the state has been an active supporter of the President's Forest Plan. I believe that scientifically-based and regional scale planning is the appropriate approach to managing these huge areas of forestland. Although the plan is far from perfect, we should not forget that it ended the gridlock that ruled federal forests in the Northwest six years ago.

Forest management under the plan has the potential to be an excellent laboratory for demonstrating how a combination

of active management and a reserve based system might be able to improve habitat for sensitive species. The state has supported active management designed to benefit riparian habitat, and advocates for thinning in Late Successional Reserves where intended to promote the growth of older forest habitat. Unfortunately implementation of active management in these areas has been constrained by sometimes unwieldy paperwork requirements and a hesitation to “take the risk.”

Lets look at how development of the Northwest Forest Plan fits with our four principles. Clearly the plan did an excellent job of using an interdisciplinary team of respected scientists on which to build its foundation. Wildlife biologists, and forests scientists worked together over months to design a plan that would achieve the goals laid out by the President.

The Plan also met the test – in fact it set the standard – for a landscape-based approach to resource management. It was almost unheard of at the time, and still constitutes that largest ecosystem planning effort in the world. By setting aside artificial forest by forest boundaries and instead focusing on the entire range of certain sensitive species, the planning team put together a plan that has withstood scientific scrutiny over six years.

The President’s Forest Plan, however, falls short of meeting the other two standards I have highlighted today. The Plan has not had ecosystem restoration as its primary goal. Instead the planning team had a diverse set of objectives. Among these were: protection of habitat for the Northern Spotted Owl, protection of riparian habitat, providing a predictable and sustainable level of timber sales, meeting requirements of federal environmental laws, and improving interagency coordination. The result was a plan -- based on sound science -- that became a political compromise.

Although things are much calmer in the woods and in the communities than they were seven years ago, there is still a great deal of tension surrounding the plan. The Plan creates this tension by, on the one hand acknowledging that any additional harvest of old growth forests will further threaten sensitive species dependent on these forests, while on the other hand expecting this same old growth forest to provide 80 percent of the projected timber volume over the next twenty years. By trying to maintain parity between multiple goals the Plan is constantly vulnerable to ebbs and flows in public priorities.

I’m not suggesting we throw the Plan out. Instead I’m suggesting that when the time is right to revise the plan, we should work to make its forest management strategies more consistent with watershed health objectives, natural disturbance regimes and historic ecosystem processes.

With respect to community involvement, the fourth principle, it is well known that the Forest Plan was developed in a closed setting. To this day it lacks the “buy in” of the affected parties – and thus the Plan doesn’t have a constituency to come to its defense when it is challenged.

I want to conclude with a word of caution to consider over the next few days as you enjoy what Oregon has to offer. As I have said, I am a strong supporter of active management to return our forests to a healthy condition. At the same time, I am not completely confident that this is the right approach -- that we have figured it out once and for all.

Thank you very much for listening. I do believe that forestry can make the world a better place, and the people in this room are the ones to do it. We have learned a few lessons in Oregon, and I ask you to consider whether they might be helpful in your efforts.

Governor John Kitzhaber

**STABLE, EQUAL, ADEQUATE:
THE KITZHABER EDUCATION INITIATIVES**

September 9, 1999

We all recognize the importance of education to our state's future -- to our economy and to our society. That is why, in 1991, we enacted the Education Act for the 21st Century and established new higher academic standards for our schools. We adopted these high standards for a reason -- because that is what will be demanded of our children by the real world and the real economy into which they will be graduating. This is a world that we created and we have the responsibility to ensure that our children have the skills and the knowledge not just to succeed, but to excel.

And we are making progress toward our goal as demonstrated by the test scores released last week. But those scores also show how far we still have to go -- and if we are truly committed to giving all of Oregon's children the quality education they need and deserve, then we must also commit to providing stable funding for our schools that is adequate to meet this challenge.

I am here today to discuss how, together, we can accomplish that. My effort is built around three proposed constitutional amendments to address the adequacy, equity and stability of school funding.

First is the issue of adequacy.

As you know, the debate over long-term, stable funding for our schools is not a new one. The solution has generally been sought through various efforts to overhaul our tax system. And I have viewed the solution in those terms myself in the past. But, contrary to conventional wisdom, I have come to see that tax reform and adequate school funding are not one and the same thing.

Over the past year I have convened two distinguished panels -- chaired by John Mitchell and Ron Timpe -- to examine Oregon's tax structure. They raised concerns over the stability of the system during a recession and over how the tax burden is distributed. They raised questions about the impact of the current tax structure on our economic, social and environmental objectives. But they did not find anything wrong with our system's ability to produce revenue. In other words, there is nothing inherently inadequate about the current tax system. Adequacy is not a function of tax structure, but rather a function of political will.

I come to you today on the heels of a legislative session that had within its grasp the means to fully fund schools -- and chose not to. This is a legislative failure -- a failure of legislative leadership -- not a failure of our tax system.

So while there are many valid reasons to restructure Oregon's tax system -- and while many of these reasons should be pursued -- restructuring the tax system will not, in itself, produce adequate funding for our schools. Adequate funding will come only when the people of Oregon, through their elected representatives, are willing to back their stated commitment to the goals of the Education Act with the financial resources to achieve them.

That is not what the recently adjourned legislature did. Rather, it engaged in a deeply political debate around large

numbers with virtually no thoughtful discussion about the relationship between the funding level and the ability to meet the quality educational goals enacted in 1991. There was no accountability. And while it could be argued that the Legislature met its constitutional requirement to provide a "uniform, common system of schools"-- that is not good enough in 1999.

So my first ballot initiative will seek to amend the Oregon Constitution to require the Legislature to provide funding adequate to meet the quality education goals established by law; or, if it fails to do so, to outline the reasons for this failure and the consequences in terms of meeting the goals.

This amendment will focus the budget debate on the adequacy of the K-12 appropriation to achieve the goals of the Education Act and will force the Legislature to be accountable for its appropriation.

This is not a K-12 "schools first" amendment. Rather it is a constitutional mandate that will create real accountability around the question of adequate school funding. And since the amendment speaks to "educational goals established by law," it opens the door for the introduction next session of a statutory definition of the goals of the other parts of our education continuum: community colleges and higher education.

In preparation for the 2001 Legislative Session, I will create, by Executive Order, The Commission on Quality Education which will continue work on the Quality Education Model. Prior to the session, this Commission will produce a refined model and the estimated cost needed to achieve the goals of the Education Act. This will serve as the Quality Education Benchmark for both the Governor's Recommended Budget and for the legislative appropriation for K-12. It is my intention to introduce legislation to establish this commission by law for future biennia and to expand its charge to deal with post-secondary education as well.

My second ballot initiative will address the issue of equity.

As you know, last week I signed into law an option for districts to raise a limited amount of money locally for their schools. I did so with two reservations. First, that a local option might be viewed as relieving the Legislature of its responsibility for school funding. Nothing could be farther from the truth -- and I want to assure you that I would not have signed the local option bill had I not been planning to propose a constitutional amendment that clarified the legislative responsibility for providing adequate school funding. And I fully expect that those districts planning to exercise this new local option take a lead role in making sure that this constitutional amendment is approved.

My second concern with the local option was that it is not, in reality, an option for many property-poor districts which would have to tax themselves at a very high rate to generate the same amount of money per student that property-rich districts could raise at a much lower rate.

To address this problem of equity, I will propose a second constitutional amendment that directs the state to equalize, within limits, the tax effort of property-poor districts. In other words for given tax effort -- say 25 cents per \$1,000 of assessed value -- the Myrtle Creek School District could raise the same amount per pupil as could the Beaverton School District.

While the amount per pupil and Measure Five caps which are in existing law will remain in place, I will propose that local option elections for additional school finance can be passed by a majority of those voting.

My third ballot initiative deals with the problem of stability -- with the fact that we have no cushion against the effect on our schools of a cyclical economy.

It is clear that when this state experiences its next recession -- and eventually it will -- we will have no choice but to raise taxes to keep our schools running, or to make deep cuts in the educational budget. It is equally clear that the commitment to educate our children to world class standards cannot be abandoned because of economic circumstances.

We cannot afford to compromise the success of a generation of Oregon children during the next recession. A well-capitalized, tightly-restricted reserve fund would ensure stability in our school funding. We have the resources in this economy to create such a fund, my tax committee endorsed the concept, and it would be irresponsible not to proceed.

I will propose that the stabilization fund be established as a sub-account within the Common School Fund to maximize investment earning opportunities -- and that it be initially capitalized from three sources of revenue. First, I propose that a portion of the investment earnings from the Common School Fund be obligated to the stabilization fund. This could potentially amount to as much as \$50 million per biennium.

Second, I propose directing the revenue stream for the Education Endowment Fund, established in 1995, into the stability fund. This would mean that 15 percent of all lottery proceeds -- approximately \$80 million per biennium -- would go into the new fund. These two sources of revenue alone will provide at least \$130 million per biennium toward school stabilization.

Adding to this revenue stream, I will also propose directing a portion of any future surplus income tax revenue into the stability fund. I am still considering options on how to structure this part of the proposal, but, over the last three biennia, corporate and individual kicker revenues have exceeded \$1 billion. I firmly believe that if Oregon voters are given a reasonable proposal to save some portion of future surplus revenues to ensure quality schools, they will approve it.

This constitutional measure will also ensure that the fund can only be used to respond to revenue losses from a downturn in the economy and that it is capped at a percentage of the total state budget.

Adequacy, equity and stability. This proposal, if adopted, will fundamentally change how we develop and fund Oregon's education budget. First, it will clarify the Legislature's responsibility to provide adequate funding for schools. It will ensure that the budget is built around an effort to achieve specific quality education goals and will require the school system to justify the dollars being spent against those goals. It will force the Legislature to be accountable for the relationship between its education appropriation and the ability of Oregon students to achieve the standards we have set for them.

Second, this proposal reflects the fact that we rely primarily on state income taxes for school funding, and thus, prudence demands that we create a savings account to stabilize revenue during future downturns in the economy.

Finally, this proposal creates the opportunity for some additional revenue for schools -- and will help reconnect citizens with their schools -- through a limited local option. With state support for property-poor districts, it ensures that all districts have an equal opportunity to exercise this option, thus maintaining the equal funding that the law and common sense demands.

Between now and the middle of October I will develop the specific language for these proposals and present them as ballot measures to the Secretary of State.

In closing, I want to emphasize -- what most Oregonians already recognize: that we have good schools in Oregon. Teachers, administrators, parents and students are making admirable educational progress in a less than perfect environment. And, even though we have not reached the goals we have set for the year 2000, our schools are better for having set out to meet those goals ... and we are making steady progress toward them.

What I am proposing today will ensure that we continue to make progress and do not leave anyone behind. What I am proposing is the next step in the evolution that our school system has been undergoing for the past decade. I will start today to make the case to Oregonians that these are reasonable and prudent proposals that will make our system of school finance more stable, preserve its equity, and create the conditions for a school funding debate based on what it takes to achieve, for all Oregon students, the high standards on which we have pinned our future.

Thank you.

[Return to Governor's Office](#)

Governor John Kitzhaber
Confederation of Oregon School Administrators
August 4, 1999

It is good to be in the room with the people who will be administering the expenditure of roughly half of our state's general fund -- the superintendents and principals of Oregon's schools. Today I want to discuss two things -- one short-term and one long-term. First, I want to put the recently adjourned legislative session into context. Second, I want to discuss ways in which we can improve school finance and stability into the next century.

Let's start with the 70th legislative assembly which adjourned only 11 days ago. This legislature set itself apart in three distinctive ways. First, it was the third longest in Oregon's history. Second, it was by far the most divisive and the most partisan of the ten sessions in which I have participated. Third, it fell considerably short of the challenge I set forth in my speech of March 15 when I called for a \$4.95 billion K-12 budget.

Now, in the immediate post-session period, the political spinmasters are out in force trying to sell their version of the 70th legislature in general -- and of the school funding debate in particular -- to the public and to the Oregon education community. I am aware of the accusations -- accusations being parroted by some members of this organization -- that we could have had another \$50 million for schools -- if the governor had not insisted we spend it on fish. So let's talk for a moment about the overall budget -- and the add-back list approved on the last day of the session.

Was there an add-back list? Yes, there was -- there is one every session. Did it reflect \$64 million dollars of my priorities and those of other democrats? Again -- yes. And almost to the dollar, these priorities reflected programs that had been in my original budget and which had been eliminated by the Ways and Means Committee. Finally -- and perhaps most importantly -- do I apologize to you or to anyone else? Absolutely not.

Why? Let me remind you of two points I made in my March 15 speech. First, I said that we must stop pitting one part of our school system against another. We must stop pretending that our education system starts in kindergarten and ends with high school graduation. We must face the fact that robbing early childhood programs and higher education in order to help fund K-12 is not an acceptable tradeoff.

We must recognize that the success of our schools depends on whether our children are healthy, well-fed and ready to learn when they arrive at kindergarten. And today, more than ever, we must recognize the importance of education beyond high school in community colleges and universities.

Second, I pointed out that we must stop pitting our schools against other important values like health care, keeping our children out of crime, meeting the needs of our elderly citizens -- and, yes, protecting for future generations our natural environment, clean water, healthy ecosystems -- Oregon's legacy of livability.

We managed to get an additional \$260 million more into our K-12 system over what was recommended in my original budget -- that is reflected in the \$4.81 billion budget the legislature approved. It is a lot of money -- but I think it fell short of the \$400 million more I believe we needed -- and which we clearly could have afforded.

As I also pointed out in March, we do not have enough revenue in this budget to adequately provide for the education of our children without making unacceptable trade offs that will devastate other important services that Oregonians value

and need. To address that fact I made additional cuts in March -- sparing only the education budgets.

I also proposed, at one time or another, using the kicker for schools, raising the corporate income tax -- and, finally -- using a portion of the \$180 million in tobacco settlement revenue that the state expects over the course of this biennium.

And those who are pushing the "fish versus children" spin on the session -- people like Rep. Max Williams of Beaverton, Rep. Jim Hill of Hillsboro, and Rep. Rob Patridge of Medford -- all opposed investing the kicker in schools, all opposed raising the corporate income tax for schools, and all opposed using any portion of the tobacco settlement revenue for schools -- and all went so far as to refer the tobacco settlement to the voters to ensure that none of it went to K-12.

And what did they support? All supported referring a measure to the voters that would raise the amount of federal income tax that could be deducted from state taxes -- a measure that, if adopted, would reduce general fund revenues next biennium by \$158 million and by nearly a quarter of a billion dollars by 2003-05. And they all supported the \$4.81 billion budget.

At the end of the day, my friends ... the fact is that if Mr. Williams and Mr. Hill and others like them in the majority party don't like the level of funding that this legislature approved ... they shouldn't have voted for it. The money was there -- and it was there without pitting children against children, children against the elderly, or children against the sick. Those kinds of tradeoffs are unnecessary, irresponsible -- and I will not support them.

But the fact remains that the 70th Legislature came up short in our K-12 budget. \$4.81 billion is not an insignificant budget. For many schools it will maintain the status quo. But for some it will mean significant cuts. And for most it will mean very little additional progress toward achieving the goals of the Education Act -- and that is not good enough.

We adopted these new, higher standards for a reason -- because that is what will be demanded of our children by the real world and the real economy into which they will be graduating. Because we want our children to be successful. But we cannot expect them to be successful -- we cannot expect them to achieve these standards -- if we are unwilling to adequately fund the educational system on which their success depends.

And that brings me to the question of a long term strategy -- which I had intended to be in a position to announce by August first. But before you spend any more time in breathless anticipation, let me tell you that I am not here to make that announcement today. The legislature has gotten off schedule and I am off schedule as well.

But the objectives of a long-term strategy remain the same. First, to increase the stability of school funding. Second, to provide more accountability by giving the state greater authority to control costs at the district level. Third, to return to school districts some greater degree of autonomy to raise revenue at the local level. And, finally, to add balance and equity to the overall tax system.

By the time school starts next month, I will provide you with the details of that strategy, including those elements which I feel should be on the general election ballot in 2000.

Today, I want to talk about the issue of adequacy -- the issue of how we can meet the challenge of ensuring that the revenue available to our schools is adequate to achieve the goals of the Education Act.

As I mentioned, from your standpoint, the most important thing that happened in Salem in the last seven months was this: with over \$150 million in surplus "kicker" revenue in the budget -- and with \$180 million in tobacco settlement revenue headed our way, we left the K-12 system \$140 million short of an adequate funding level.

It is not overly dramatic to say that the next legislative election will be a referendum on that decision -- and I have been saying recently, only partly in jest, that a key part of my long-term funding strategy for schools is to elect a democratic legislature in 2000.

It is also not overly dramatic to say that the single greatest political challenge before you today is the fact that while a majority of Oregonians support schools, they also believe that no new taxes are necessary to run them, that government

has plenty of money already and that they don't trust that new money will go into the classroom.

That attitude -- right or wrong -- is the political foundation that allowed the legislative leadership to adopt what I consider to be a significant underfunding of our schools for the next two years. And it is that attitude that defines the reality of what will and will not be possible in terms of a long-term strategy.

And if we don't figure out why so many Oregonians hold this attitude -- and how we can change it -- then we can expect school funding to remain a topic often-discussed but never resolved. In my view there are three major challenges that must be addressed in a comprehensive manner before the beginning of the next legislative session if we hope to successfully make the case for adequate school funding -- both to the legislature and to the general public.

First is the challenge of governance brought about by the fact that the individuals with the authority to spend money in the K-12 system are not the individuals responsible for raising the money. We imagined a lot of fallout from Measure 5 in 1990 -- but few imagined a situation where the state would provide over 80 percent of all school funding, but that spending decisions would be made by 198 locally elected school districts. It is as if the state government now has 198 new departments with completely independent agency heads, acting with autonomy on their individual budgets.

I believe the public intuitively understands this -- and thus any strategy for increasing or stabilizing school revenue must acknowledge and address the disconnection that Measure 5 created between our state funded school system and its local governance mechanism.

Second is the challenge of defining adequacy. For as long as I have been in public life, we have been faced with the daunting task of trying to ensure that schools were adequately funded. To the best of my knowledge, we have never succeeded -- in part because we have never been able to define "adequate." Again, if we are to convince Oregonians that we need a significant increase in school funding, we must be able to demonstrate and dramatize the difference those dollars will make on student performance.

Third is the challenge of re-engaging the community in the life of the school. Today there are fewer and fewer incentives -- and more and more obstacles -- to a community being involved with its school. Money is no longer raised locally for schools; fewer members of the community actually have children in school; and parents and other adults are pushed to the limit by two career families, and by ever more demanding careers. And, of course, the social context in which education takes place is far different than it has been in the past. Families are under more stress, there is a higher divorce rate and more children are being born to unwed mothers.

Now, while these are significant challenges, I am not pessimistic about our ability to meet them. On the contrary, we have already made a good start.

For example, the challenge of governance -- or "accountability" -- was debated in the recent legislative session. There is, in fact, a growing recognition of the problem, but not yet a consensus on how to address it. Senator Bryant of Bend advanced a proposal that would have essentially placed a salary cap on teachers -- in a de-facto end of collective bargaining. I sought a different solution to the issue of financial accountability between the state and local school districts.

I proposed a system under which the state would develop an "allowable annual growth factor" which would both inform school districts in making their budget decisions and create a higher level of accountability for the trade-offs required to live within this expenditure level.

The point is that we ignore this governance challenge at our own peril. Without recognizing and addressing the altered relationship between the state and local school districts, we will not be able to successfully argue for adequate school funding before the legislature, nor make a compelling case to the public.

Let me emphasize that the imperative to address this issue does not flow from a distrust of local school districts, school board members, administrators or teachers. Rather, it is a reflection of the simple fact that when we decide to spend income tax dollars in the classroom, we are also deciding not to spend them on the elderly, the poor, the ill or other vulnerable or at-risk Oregonians. And it is in the best interest of education to be able to demonstrate to skeptical

legislators that school districts are living within the means of state allocations, all of which now compete with the K-12 budget. My pledge is to be a partner -- not an adversary -- in creating this type of financial accountability.

Concerning the challenge of defining adequacy, we have already come a long way. As you know, the first iteration of the Quality Education Model was completed earlier this year. It represents the first effort to create a rational, data-driven model of what it should cost to educate our children -- in particular, what it should cost to achieve the objective of the Education Act. It was this model that provided us with the justification for the \$4.95 billion budget level.

Admittedly, the model in its current form is still rough, and largely unfamiliar to the public. But it is a significant start and represents the bold beginning of an objective process for determining the level of school funding necessary to meet our educational objectives.

I will soon recreate the former "Speakers Council" through Executive Order and I have obtained a \$300,000 line item in the legislatively approved budget to continue the work of refining and expanding the Quality Education Model. It is my intention to aggressively promote this model to the public and to establish it as the financial measuring tool for what constitutes adequate funding.

In addition, the legislatively adopted budget contains \$7 million to expand our database pilot project statewide which will allow us to compare expenditures between districts and between schools in the same district. This database, in conjunction with the Quality Education Model, will put us in an increasingly strong position to objectively define "adequate" school funding and I will use both for guidance in putting together my budget for the 2001-2003 biennium.

Finally, let me touch on the challenge of increasing community involvement with the schools. One of the most damaging consequences of Ballot Measure 5 was the loss of the local levy election which was an effective tool for engaging the citizens of a district in what was happening in their schools. It also afforded citizens in a given district some degree of local control. As you know, I have on my desk HB 2753 which would allow a "local option" and bring back the possibility of local levy elections -- at least on a limited basis.

On the surface this would seem to be a good thing to do -- yet I remain undecided on the bill's fate and am leaning toward a veto. Why? For three reasons. First, because it is not, in fact, an option for many districts. In property poor districts across Oregon, the local option is simply not a realistic possibility because it would mean unacceptably large increases in property taxes.

Second, because it took us nearly a decade to equalize per pupil spending and I am concerned about the specter of returning to an era of "good schools for wealthy communities" and "poor schools for poor communities."

And third, I am concerned that over time wealthier districts may well become disinterested in the statewide public school funding debate -- and the issue of adequate funding for our schools must mean adequate funding for all of our schools. And to achieve that will require the combined efforts of all of us.

I will remain open on the fate of HB 2753 until I have heard from the proponents, but I am leaning toward a veto for the reasons I just outlined.

In summary, we could have done better for education in the 70th Legislature. But we failed to do so. We failed in large part because of the fact that, although a majority of Oregonians support schools, they also believe that no new taxes are necessary to run them, that government has plenty of money already and that they don't trust that new money will go into the classroom.

And it was that attitude that formed the political foundation that enabled the legislative leadership to adopt an inadequate level of funding for our schools. And it is that attitude that defines the reality of what will and will not be possible in terms of a long term strategy -- a strategy that I will announce next month.

So our challenge, in addition to advancing a long-term strategy for school finance in Oregon, is to confront and address those underlying factors which lead to the contradictory view that education must be supported, but not by increasing overall revenues. I believe that the three central factors involve the issue of governance, the difficulty in defining

"adequacy," and the need for greater community involvement in our schools.

And, perhaps most important of all, as we move forward together to meet the challenges before us, let us never forget that our mission, our goals, our hopes and aspirations, are not driven by large numbers, or budget debates, or union fights -- they are driven by a commitment to children and to helping them succeed. I know that you know that. It is what you do -- and despite a level of public skepticism, most people think schools, and especially the teachers in the classroom are doing a good job. So do I.

Our job -- mine as governor, yours as leaders of your profession -- is to help those teachers by giving them the tools they need, and the thanks they deserve.

From me to you, I don't forget for a minute how hard your jobs are. Let's move forward together to make Oregon's schools the best in the country.

Governor John Kitzhaber

McNary High School Graduation Speech

June 11, 1999

It's a privilege to be here tonight to share this very special occasion with you. Graduation is traditionally a time of celebration -- for what you have achieved -- and a time of optimism -- for the future you are about to encounter. And yet there is no denying that the future you are about to plunge into holds some serious challenges.

It has been 34 years since I stood in your place and received my diploma from South Eugene High School. Since then a lot has happened -- both in my own life and in the world we live in.

Like you, I stood on the threshold of adulthood, ready to leave home and make my own way in the world. Like you, I was elated at having successfully completed the first leg of my journey through life. And like you, I was full of hopes and dreams, goals and aspirations. While I looked back with a little sadness that one part of my life was now over, I also looked ahead with eagerness and could hardly wait to strike out into unknown territory -- a yet untrodden road.

But unlike you, the world I entered at the age of 18 was very different from the world you will face. In many ways it was a much simpler world -- and a much safer and saner world.

In those days, the idea of the Internet would have been considered science fiction. In those days, no one had even heard of AIDS. In those days, parents never questioned that when they sent their children out the door, to school or to play, that they would be safe.

At the same time, the world in which I came of age was an era of intense political unrest. Between 1963 and 1965, America witnessed the assassinations of four major public figures. Our National Guard fired on and killed students at an American University. There were plenty of social "drop-outs" -- people who didn't like the way things were going and chose to live their own lives apart from the mainstream -- the "flower children" and the hippies -- if you've seen "Forest Gump" you know what I'm talking about.

But here's the important point: while they may have dropped out, they didn't strike back. There was clearly an undercurrent of dissatisfaction with government and with society, but nowhere did we feel or see the undercurrent of alienation and rage that today erupts from time to time with devastating consequences. Certainly there was violence involved with the Civil Rights movement. There was violence connected with the Vietnam War protests. But NOT the senseless and wanton destruction of life and property for no apparent reason -- violence not in defense of some ideal, but violence for its own sake.

My point is this: in the world of yesterday, people's actions -- good or bad -- were generally motivated by some larger principle. I'm not sure that can be said today.

And yet the message I want to convey to you tonight is a message of hope -- a firm conviction that each of you, in your own individual way and by your own voluntary contributions, is capable of changing the world for the better.

That conviction has guided my own actions for the past 30 years, and to explain how I arrived at it let me share a personal story -- about some things that happened to me when I was about your age and which changed the course of my life.

It may surprise some people to learn that for the first two decades of my life I was completely apolitical. In fact, politics bored me and I couldn't imagine myself ever developing an interest in it. After I graduated from high school I went to Dartmouth College, where I spent quite a lot of my time pursuing activities that were not entirely academic. Nor were they political, even though it was an era of intense student activism.

The Civil Rights Movement was in full swing. The war was raging in Vietnam, and the draft was hanging over our heads. But if anyone had suggested to me then that I might someday run for office, much less be a governor, I would have thought it was joke, and so would a lot of other people.

Then suddenly, in the spring of 1968, my junior year, everything changed.

On April 4, Martin Luther King, Jr. was shot down in Memphis, followed in June by the assassination of Robert Kennedy. These two deaths made a profound impact on me. Here were two men -- regardless of how you viewed their policies -- acting on their own individual beliefs, but working within the system, and who were making a huge difference.

Martin Luther King was conducting "sit-ins" in segregated restaurants for which he was arrested and for which he expected to be arrested. He believed in the rule of law and he believed that those who broke the law, including himself, should bear the consequences. But he had the courage to break the laws which he felt were unjust in order to highlight the issue of racial discrimination. He believed in the system and worked within the system and, in so doing, changed the course of American history.

Robert Kennedy was campaigning for the democratic presidential nomination on an anti-war platform. He strongly opposed sending thousands of young men, many of them too young to vote, halfway around the world to fight and die for a murky policy they'd had no voice in developing. And he was working within the system to change that.

I'm not sure what it was about the events of that spring or about these two deaths that affected me so deeply. Perhaps it was simply because I was young and naive and idealistic. I know I felt as though a vision of a better world had died with these two men -- both of whom believed in the power of our public institutions to effect positive social change. In any case, it was from the moment that Robert Kennedy died in Los Angeles that I knew I wanted to hold elective office -- that I wanted to make a difference, and do it by working, as an individual, within our democratic system, and for something larger than my own individual satisfaction or benefit.

Ten years after the events of that fateful spring, while practicing emergency medicine in Roseburg, I won a seat in the Oregon House of Representatives. That was in 1978 -- twenty years ago -- and I have been active in politics ever since.

Yet in the intervening years, I've watched something happening not only to our system of public enterprise, but also to our concept of individualism. And I think it's largely a matter of perspective.

While King and Kennedy clearly understood the relationship between individual effort and the effectiveness of our public institutions, today that view is not very popular. It's true that in the years since Vietnam, we have been repeatedly disillusioned -- by Watergate, by Iran-Contra, and most recently by the attempt to impeach the American president and all the degrading particulars that surrounded it.

As a result, the individual has become distanced, even alienated from the system of government that has served us so well for more than two hundred years, which has survived a civil war, two world wars, and a world-rocking Depression.

We are dangerously close to abandoning our political heritage -- a heritage deeply rooted in common goals and concerted action -- and enshrining it its place the individual -- as a self-serving free agent with no ties and no responsibilities to the larger whole.

And an even greater danger is that this attitude not only alienates us from our public institutions; it also alienates us from each other and fragments our communities. Working with each other has taken a back seat to competing against each other.

Yes, individualism -- of a certain sort -- is part of our heritage. When this country was being settled, and people were physically separated from each other by huge distances, independence and self-reliance were not only virtues -- they were essential to survival. But today's world isn't like that any more.

Today we find ourselves in much closer physical proximity with others -- packed together in housing complexes, crowding into classrooms, bumping up against each other in shopping malls, passing within a few feet of each other in our cars.

But at the same time we are more disconnected than at any other time in our history. And perhaps the greatest casualty has been our sense of community.

We shop at mega-outlets on the edge of town, rather than at a neighborhood market -- of which there are very few left. And while schools were once the hub of a community, now the increasing number of alternative schools, as well as a more mobile population mean that kids don't grow up together as they once did, and their parents hardly know each other.

At a time in our history when working together is absolutely essential, we have erected physical and psychological barriers that keep us apart and we are losing our sense of community.

At a time in our history when kids need more guidance and more support than ever before, we are losing our sense of family.

At a time in our history when more than ever we need our public institutions to function as they were originally intended to, we are withdrawing from them, abandoning them. And I assure you that is not the answer.

The answers are both personal and political. We must change ourselves first, and our own priorities; but after that we must look outward, beyond ourselves. Because we live in the larger society, and what happens to it will inevitably affect us.

President Eisenhower once reminded us that "Politics should be the part-time profession of every citizen." He was right. I believe there are things worth fighting for, and this is one of them.

Of course there are things that have gone wrong in the public sector. This is not a perfect world. But speaking as a doctor, I can tell you that, when you diagnose an illness, it's not much help to prescribe death as a cure.

And I can also tell you that if you don't like the way the tide of government is flowing, the answer is not to stay out of the water and sit safely on the shore. That kind of safety is temporary, at best, and it will betray you in the end. The only real answer is to plunge in, grapple with the tide, take a few risks, and turn risk into victory.

Democracy, as Winston Churchill once said, is the worst form of government ever devised by man -- except for all the others. It can work. It has worked. And the only reason it might stop working is if individual citizens refuse to make it work. I hope we're not going to let that happen.

But the future lies with you. As you worked your way through high school, a great part of the emphasis was put on your ability to get jobs in the world of the 21st Century. Naturally, that is important. But remember, too, that you are not only the workforce of the future, expected to fuel the economy that will make everything else possible. You are also the citizens of the future -- in whose hands lies the success or failure of our form of government. And most important of all, you are the parents of the generation that will one day take your place. I urge you to pledge here tonight that the world in which YOUR children graduate will be better than the one we live in today.

Think for a minute how lucky we are. We live in a nation where each individual has the freedom and the power to shape his or her own future -- and through that the future of the world. In the whole course of history, no other nation has offered any comparable opportunity. Don't waste it. Make the most of it. And when my own son stands where you are -- in about the year 2015 -- I hope I'll have the satisfaction of knowing that those of you gathered here tonight have

helped to give him the gift of a society that is free and stable and secure.

I'm sure I can count on you. Let me offer you my sincere congratulations and my best wishes for a happy and successful future.

Governor John Kitzhaber

OUR SCHOOLS

Eugene/Springfield Kiwanis

May 19, 1999

Good Afternoon. It's a pleasure to be here in the Eugene-Springfield community -- a community in part built on the foundation of our state's thirst for learning.

My mother and father are both a part of that community, having spent the majority of their working years in schools -- my mother in elementary and secondary schools and my father teaching English at the university level, including here at the University of Oregon.

If you think working with a legislature controlled by the opposing party is tough, try explaining a bad grade in my house.

I may joke about it, but I can tell you, my parents gave me the greatest gift: a love of learning. And it is about learning -- and the opportunities we are affording our children -- that I want to speak today.

As you know, we are in what I would optimistically describe as the home stretch of our biennial legislative session. There is much work left to be done and most importantly, we must approve a blueprint for funding our schools to serve the 550,000 students in Oregon grade schools and high schools -- as well as for those in our community colleges and universities.

Yesterday, as you know, I proposed a way to invest the \$4.95 billion I believe we need for our K-12 system over the next two years -- as well as increased funding for higher education -- without raising taxes and without using the kicker. To do so will require some bonding as well as using more money from the tobacco suit settlement -- neither of which I would ordinarily support, nor which represent the best policy options. But since the legislative leadership is adamantly opposed to any new revenue or to using the kicker, then this offers the next best way to provide adequate funding for our schools.

But the real challenge lies ahead of us -- not during this particular legislative session. The real challenge involves finding a long-term, stable funding source for our schools. So that providing for our children's education doesn't have to be a contentious debate in every legislative session. So that our schools can plan beyond a two year period -- and know what revenue they will have to work with.

Although most of us are focused on this legislative session, today I would like to ask that we cast our eyes forward and think about the greater challenge of creating the schools our children deserve and paying for them fairly and equitably.

This is the task I have committed to for the next 18 months. As I announced in March, I will place on the November 2000 general election ballot, a measure to provide adequate and stable funding for our children's education. I would not be doing this if I did not believe that it was absolutely necessary -- and the best thing for Oregon and for our future.

We have to recognize that our world is more complex, more diverse, more technology-oriented, more knowledge-based

and more competitive than ever before. It is a different state, a different country and a different world than the one you and I grew up in.

That means that our children and grandchildren are growing up in a demanding time -- more demanding than we could have ever imagined only a generation ago. And I'd venture to guess that there isn't a person in this audience who doesn't intuitively understand that. Let me give you just three examples.
