First, when we were in our teens, what was the likelihood that we would hear another language spoken in our neighborhood, in our grocery store or in our schools? Not much -- which was a good thing given my lack of skill in foreign languages.

But today, other languages abound as our culture becomes more diverse. It's not uncommon to have schools and school districts where several languages are spoken. And it is not uncommon to need to speak a second language at your workplace. For instance, given the time I have spent promoting trade with the Pacific Rim -- I would be so far ahead if I could speak Japanese. And so would Oregon.

Second, what was the likelihood -- when we were growing up -- that our parents would change jobs, let alone change careers? Not likely at all. But today, your children and grandchildren will change jobs several times -- and will probably change careers more than once. If they are not lifelong learners, they are at risk of not keeping pace in their chosen fields.

Finally, how many here believe that your children can find economic and social success on the basis of a high school diploma alone? Twenty years ago that was the case -- but not anymore.

When I was first elected to the Legislature from Douglas County in 1978, kids at Roseburg High could drop out of school in the tenth or eleventh grade -- and get high-paying jobs in the woods or in the mills, with good benefits and with the reasonable expectation that they would hold those jobs for the rest of their lives.

Those days are gone forever.

The reality is that today our children need to have greater skills than were demanded of us. Our economy and our culture is more global, more diverse and -- above all -- more competitive.

Today you might well work for a German-held company alongside a fellow worker who was born in Taiwan, educated in England and has just transferred in from California. The products you make may be shipped to Mexico and assembled for final sale anywhere in the world.

As I have traveled the world -- and as I have traveled our state -- I am more convinced than ever that we must do all in our power to help the next generation of Oregonians be prepared for this world.

That means schools that aren't just OK. It means schools that are excellent. We have good schools in Oregon. But they are going to have to be better.

It means schools with textbooks that are new and up to date. Not textbooks that still refer to Reaganomics or show the Soviet Union dominating the map of Asia.

It means schools where learning a second language is an expectation -- not a luxury.

It means schools with the latest generation of computers -- not museum models.

It means schools where the day doesn't necessarily end with the last period, but where there are a number of after-school activities, from sports to speech to drama to science -- whatever it takes to keep young minds engaged in learning.

And it means schools where those children who are struggling get the extra time they need -- get the personal attention

from the teacher -- that they need to understand and to learn.

That is the kind of school we need to give our children if they are going to be prepared to meet the challenge of their future.

Our parents did no less for us.

I was ten years old when Sputnik went into space -- one of the first things I ever saw on our family's first television. I remember sitting with my mother on a white hook rug in our house in Lawrence, Kansas watching wide-eyed as the first man-made object entered orbit around the Earth. Something most of us today take for granted. The launch and safe return of a space shuttle rarely even makes front page news.

I imagine that many in this room recall that launch and the subsequent response of our nation to promote math and science education. It worked. It worked on me. I became fascinated by science -- from launching crickets and mice in model rockets to biology.

And my school -- South Eugene High School -- made the time for me to conduct experiments and investigations much too gruesome to discuss over lunch. And I got the time and encouragement to pursue this interest from not just one teacher, but many. It was this foundation of encouragement which helped me become to become a doctor.

Our grandparents did no less for our parents.

My father, and millions like him, went to war, won, and returned home. They returned home not only to the thanks of a nation -- but to the GI Bill and the opportunity of a lifetime: a college education. They returned home to become the most educated generation in American history -- and to build the nation and the society and the prosperity that has benefited each and every one of us.

So question to you today is simple: what will be the legacy we leave to our children, and to our grandchildren? Right now, it is not a very bright one.

In the last four weeks, I have been to eight communities around the state, toured schools and heard from dozens of school superintendents, students, teachers and parents from nearly 30 school districts. Last week in Salem, I saw a school that's still using first generation Macintosh computers and can't afford to fix its roofs.

In Ontario, the only way you can do lab experiments is simulate them on the computer because there is simply not enough physical space for conventional labs. But there aren't enough computers in the computer science program to accommodate student demand, so students are turned away from computer classes.

In Vale, Oregon, social studies texts are 15 years old -- and even these must be shared between three classes so instead of one child one book, it's three children one book. In Redmond, some reading books date from 1948.

In Portland, some students are unable to get into science classes because they are oversubscribed and many middle school students are trying to learn algebra in classes of 35, 40 and more.

In Burnt River and Union, they've cut schools back to four days a week to save on heating costs.

And all over the state, schools have cut counselors -- forcing the job onto teachers, cutting into instructional time for the rest of the students in the classroom. We've cut music classes. We've cut after school activities in middle schools, leaving many students with a large block of unstructured and unsupervised time. It should come as no surprise that the highest percent of juvenile crime occurs between 3 and 7 p.m.

In short we've asked schools to teach to higher standards demanded by today's more competitive world -- and asked our children to meet those standards -- but not given them the tools to succeed.

Instead, we've done just the opposite. Across Oregon, schools are hanging on, making do, patching things together and

trying to give kids the best education they can. But we can't continue this duct tape and bailing wire approach forever.

We may limp through this session with an acceptable level of funding for the next two years, but we can't continue this crisis budgeting when the schools face constant uncertainty and can't plan curriculum for more than two years into the future.

That's why I will spend the next year working to develop a school finance proposal for you to consider in the November 2000 general election. Because if we are to do better for our children, it will simply take more. More time, more effort, and yes, more money.

But I do not want to leave you today with the impression that money is the only answer. It's an important part -- but it is only a part. There are two other things we must do. First, we must pursue greater accountability and change the way we conduct the business of education in Oregon. Second, we must reconnect citizens with their schools.

We all know that since the passage of Ballot Measure 5 school funding has become the Legislature's responsibility. No longer are the funding decisions made by the local school district which involved the citizens through periodic levy elections. Today, the Legislature acts like a giant, biennial school board that makes the decisions about how much to spend -- decisions that not only determine the local school budget, but also drive the rest of the state budget from public safety to economic development to the Oregon Health Plan.

For that reason we need to establish greater levels of accountability for how the school districts spend this money and for the results we expect to get from it in terms of student achievement.

I promise you -- any new money for education will come only with new levels of accountability. I think there is no one in this room that would disagree with that, and few people in local school districts. Our challenge is to put these accountability measures in place without usurping legitimate and useful local control. I will be working toward that objective over the next year.

The issues of funding and accountability can be addressed through legislation or as a part of a ballot measure as matters of policy. What can't be legislated, however, is parental involvement and community involvement in our schools.

Just a show of hands: who has gone to their neighborhood school this year?

Another show of hands: how many of you have volunteered at a school in the last year?

Finally, how many have attended a meeting of your local school board, to gain a better understanding of the challenges our schools and our children are facing today?

Clearly, many of you are already personally involved in the day-to-day operations of our schools, and for that I commend and thank you. But the educational success of our children in the 21st Century will take more than the active involvement of just a few. It will take the combined commitment and involvement of ALL of us.

So I call on all of you -- on all Oregon citizens -- to go to your school. Call your district office. Ask how you can help. Volunteer for a day. Because unless it is clear that the people themselves stand squarely behind what we are asking our schools to deliver and our students to achieve, we cannot create the kind of future we all would like to see.

In the early years of this century, H.G. Wells wrote, "Our history is becoming more and more a race between education and catastrophe." Today those words are more true than Wells could ever have imagined. Yet we are not without hope, because the future can be as bright as we choose to make it.

I believe in the Oregon people. I always have. And I cannot believe we will choose to cast our children headlong into catastrophe. Instead, I have every confidence that, together, we will do everything in our power to ensure their success -- by doing everything we can to provide them with an education second to none and thus equip them for the world they will inherit.

If each of us does our part, then we will surely succeed.

Governor John Kitzhaber

Democratizing Environmental Policy:

Setting the Agenda

April 28, 1999

It is a great honor to be speaking to this distinguished audience on a topic I consider vitally important.

This Summit takes as its starting point the indisputable link between the quality of our environment and the quality of our lives. Because of that link, we all have a stake in setting the priorities that will ultimately shape environmental policy. And we should all be equal and active partners in that process.

The issues you will be discussing today and tomorrow all bear on restoring, improving, and caring for the tangible body of our nation -- on defining our shared environmental objectives, and finding the most effective ways of achieving them.

On the basis of my own experience, I believe this will require an approach that engages not only all levels of government, but every business, every homeowner, every landowner -- virtually every citizen.

In short, it will require a new environmental ethic, one which stresses partnership rather than polarity, and replaces the politics of confrontation with the politics of community.

We are learning, at least in my part of the country -- and hopefully not too late -- that if the West is to remain in Wallace Stegner's words, "the native home of hope" -- then we must develop new tools and new approaches to deal with the growth that besets us and the environmental challenges and conflicts that come with it.

At the same time, I want to make it clear that while I am convinced that a new and more collaborative approach is needed, I do not reject the tools of the past, nor take lightly the significant gains they have achieved.

Sometimes conflict is a necessary prerequisite for collaboration. In fact, much of the progress we have made on behalf of our natural environment in the last few decades has been the result of conflict -- which is a point worth noting.

There has long been a tension in this nation between the need for economic development and the need to preserve the powerful and various landscapes that define this land of ours -- between the extraction of natural resources and a concern over long-term environmental stewardship.

For decades economic development and natural resource extraction were pursued with a single-mindedness that has left scars upon the land. At the same time, these same activities brought with them significant economic benefits to the region and to its people and helped make our country one of the richest and most powerful on earth.

Not surprisingly, this collision of legitimate values led to an escalating conflict. The primary battlegrounds have been the U.S. Congress, state legislatures, city council chambers, and the courts.

Yet this very conflict led to the passage of such significant environmental legislation as the Clean Air Act, the Clean Water Act, and the Endangered Species Act. And court battles over the implementation of these laws generated a wave of more holistic and regional planning on federal lands.

Indeed, I have employed the tools of confrontation and litigation myself to block the operation of the Winchester Hydroelectric Project on the North Umpqua River near Roseburg, Oregon. Without the use of these traditional tools, the turbines would still be operating and chewing up the steelhead run. As it is, this remains one of the few projects in the nation that had a FERC license and was generating power and was subsequently shut down and the turbines removed.

So my point in promoting a more cooperative approach to a better environment is not to reject or discredit the tools of the past. I believe in the need for a strong framework of federal environmental laws, in the need to enforce them, and in access to the courts. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the ways in which we have traditionally applied them.

Let me give you an example from my home state. Nearly four years ago I began working with Oregonians to develop a plan to restore Oregon's watersheds. The plan has been in place for two years now, and has become more than just a government program. It has become a statewide, bipartisan commitment across all of Oregon to restore our salmon, our clean water, and return our watersheds to healthy systems.

This kind of collaboration is not new to Oregon. Some sixty years ago, catastrophic fires destroyed hundreds of thousands of acres of forest in Northwest Oregon. Known as the Tillamook Burn, this land came into state ownership. It took a generation to replant the forest, but it was done -- tree by tree -- by volunteers and by school kids. You'd be surprised how many people you can still meet today who once took a school field trip to help replant the Tillamook Burn.

It was the same kind of broad-based collaborative effort that cleaned up the Willamette River in the 1970's under the administration of Governor Tom McCall. It was this community sense of environmental responsibility that allowed us to declare our beaches public, and to pass a returnable bottle bill which made littering tantamount to betraying your roots as an Oregonian.

With that kind of history of cooperation and community response to environmental challenge, the consequences of the listing of the Northern Spotted Owl in 1990 were especially traumatic to Oregonians. The end result of this debate was a pretty good federal forest plan that made allocations and established reserves across 23 million acres. But the intervening polarization literally tore communities apart and left scars in parts of rural Oregon that have yet to heal.

As a consequence, when -- shortly after my election in 1994 -- the National Marine Fishery Service gave notice of a possible listing of our coastal coho salmon, I began to look for a better way. In my view, the community that calls itself Oregon could not afford another divisive natural resource war.

On the other hand I was, and remain, deeply committed to the survival of our salmon runs. There is an almost mythic connection with salmon among the people who live in the Pacific Northwest. It is a powerful connection that cannot be overestimated -- the power of history, the power of identity, the power of the past's promise to the future. But even beyond that, if the salmon runs are not healthy, then our watersheds are not healthy -- and if our watersheds are not healthy then we have truly mortgaged the future. I do not intend to leave that as my legacy.

Thus, it is important to recognize that the objective of the Oregon Plan has never been to avoid a listing under the Endangered Species Act. Rather, the objective has been -- and continues to be -- to make the greatest progress possible in restoring species and restoring watersheds.

It is also important to recognize that relying solely on the ESA to recover salmon in Oregon would not only have triggered another divisive battle, but would ultimately fail to recover the fish.

We need to remember that the primary role of the federal government under the ESA is a regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the wrong things but it provides no incentive for them to do the right thing.

So while the ESA can prevent landowners from engaging in activities that result in an intentional or unintentional kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70 percent of coho habitat lies in private ownership and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding a take.

And in my 20 years of involvement in western state politics, I have experienced over and over again the fact that an approach which involves private landowners in the decision-making -- which gives them some ownership and investment in the work being done -- has a greater and more immediate positive impact on the resource than simply applying regulations that tell them what to do. Telling people what to do with their land in the West is an explosive proposition

As a result, the Oregon Plan was designed to involve, empower and provide incentives for private landowners to make voluntary commitments to watershed restoration and habitat restoration. The commitments are built on a solid foundation of federal, state and local regulation -- including harvest limits, Clean Water Act requirements, forest practice requirements, land use laws, state water law, and so forth.

But the increment that will make a difference in how quickly and successfully we recover salmon and watersheds comes largely from the voluntary commitments by landowners and communities working alone or through their local watershed councils.

While skeptics of the Plan have underrated some of these voluntary actions, they are significant. The timber industry has committed to make \$130 million in road improvements on logging roads and culvert replacement over the next 10 years, not to mention agreeing to a harvest tax to provide \$13.5 million in direct on-the-ground projects. This far beyond anything that could be legally compelled under the ESA. Furthermore, the Legislature has offered strong bipartisan support with the appropriation of another \$32 million to support the plan.

Perhaps most exciting of all, however, is that this effort is beginning to change the environmental ethic in our state. The Oregon Business Council has become involved, and over 80 local watershed councils have put in place more 1,200 on-the-ground projects in the last two years. And the enthusiasm continues to grow, despite a court-mandated ESA listing based on pre-Oregon Plan data.

It is this local cooperative effort to restore our watersheds that helps build the kind of grassroots support needed for long-term environmental stewardship. It makes people more aware of the environmental consequences of their own actions on their own land.

In my view, that is what Democratizing Environmental Policy should be about. It is about recognizing the fact that with over 1,000 species listed -- the lengthy, complex and contentious process of actually developing recovery plans under the ESA and our other tools will doom many of these species to extinction long before anything happens on the ground. Quite frankly, we don't have the time.

As we approach the 21st Century our environmental problems are becoming more complex and I believe it will be increasingly important to gain this kind of buy-in, ownership and support from individual citizens.

Problems of point-source pollution, for example, lend themselves well to a regulatory approach. But reducing non-point-source pollution -- one of the major challenges facing us on the Willamette River in Oregon and throughout the West -- will require far more than simply passing laws and regulations. It will require sustained environmental stewardship -- a long term commitment to change behavior -- by hundreds of thousands of people living in the watershed -- most of them living in the city.

Again, that is not to say that there is no longer a place for the more traditional tools of regulation and litigation. We will always need an underlying framework of environmental law and regulation. We will always need access to the courts.

But we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that call for, and result in, greater individual responsibility and accountability for our air, land, water, and our neighborhoods. You cannot achieve that through

regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts.

You can only achieve it through the kind of cooperation and collaboration I have just described.

If I may leave you with one thought, it is simply this: that we cannot underestimate the importance of community or the power of place in shaping the future of this country. In spite of our areas of disagreement, we share a common heritage and will surely leave a common legacy.

Yet as our population increases, as we become more ethnically and culturally diverse, as growth continues to alter our landscapes and bring into question the limits of our resources -- we are facing challenges we have never before had to deal with.

We should never forget that it is the rare bounty and unrivaled beauty and unique quality of life that this country has to offer that have drawn people here from every corner of the world. And if we lose that quality of place -- that livability - - we lose not only our identity, but our heritage as well.

I recognize that we are all stakeholders in a mighty struggle, and that our positions will often be at variance. But we can be partners as well, if we keep our eyes focused on the broad values that transcend our differences.

The challenge is not to resign ourselves to the entrenched positions of various constituencies. It is to see beyond them. If we can recreate a forest in Oregon, we can recreate a watershed. And if we can do it in Oregon, we can do it anywhere.

Let me close by returning to the Wallace Stegner quote I cited earlier -- it is from "The Sound of Mountain Water." It was written about the West in particular, but I think it is applicable to our nation as a whole.

It reads in full "...one cannot be pessimistic about the West. This is the native home of hope. When it fully learns that cooperation, not rugged individualism, is the quality that most characterizes and preserves it, then it will have achieved itself and outlived its origins. Then it has a chance to create a society to match its scenery."

No less than that is our goal -- to create a new environmental ethic for the 21st Century.

Governor John Kitzhaber

Portland City Club/ Oregon PTA Speech

April 16, 1999

Good afternoon.

Last month I outlined both a short term and a long term strategy for meeting the challenge of educating Oregon's children. Today I would like to elaborate on both strategies.

Clearly, most of the controversy to date has centered on my short-term proposal to raise additional revenue for our schools. But if we allow this debate to be framed simply in terms of whether or not we raise taxes, we will have missed the real issue -- which is this: what will it take to provide our children with the education they need to succeed in the workplace and as members of our society?

This is the most central question before Oregonians today -- because unless our children -- not just some of them, but all of them -- receive the best education possible, they will not be prepared to compete for jobs in the 21st Century. And when our children fail in school, all of us suffer. There is, as you know, a high correlation between school failure, juvenile crime and poverty.

I am not suggesting that we view our schools as simply job training centers and employment agencies. A good education gives us the perspective, the judgment, and the values to be good citizens -- but certainly success in the workplace is one of the goals of our school system.

Most Oregonians agree that giving our children the education they need is in everyone's best interest. And I also think there is general agreement that we need to invest more money in our schools -- not only primary and secondary schools, but community colleges and universities as well.

Whereas I will speak mostly about our primary and secondary schools today, I want everyone to know that I will continue to push for improved resources for our state's colleges and universities.

Because the world is changing and how we fund and run our schools -- from kindergarten to Ph.D. -- must change with it. Let me give you an example.

In 1978, when I was first elected to the Legislature from Roseburg, kids could drop out of high school in the tenth or eleventh grade and get a well-paying job in the woods or in the mill with good benefits and with the expectation that they would hold that job for the rest of their working life. Those days are gone forever.

Technology is now a bigger employer in Oregon than timber and has been for a couple of years. This trend will increase, not disappear. And it's not only technology. The most rapidly growing parts of our economy are in professional services, health care, telecommunications and other knowledge-based industries. In today's economy you are more likely to create value with your mind than with your hands.

To prepare a child for this kind of world will take an education system that is both different and better than the one Oregon has today. That's why we passed the Education Act for the 21st Century -- to change our schools to reflect the

needs and demands of a new, more diverse global culture and economy.

But we have been falling short.

Our dollars have not followed our rhetoric. In fact, just the opposite. Since passage of this landmark education act, class sizes have increased, not decreased. Electives and after school activities have been cut. And many schools have outdated textbooks; many are not wired to the Internet and some have only one computer for every 88 children.

It is not that our schools are bad. They aren't. Children are still graduating and, on average, kids in Oregon still test well against the nation and the world. What I am here to tell you today is that we can do a lot better.

The fact is that the world is becoming more competitive, more challenging, more demanding -- and our schools are not changing fast enough to keep up with it. On the contrary, they are getting stretched thinner and thinner as we ask them to do more, but provide them less with which to do it.

At Beaverton High School, for example, program offerings have been cut by nearly a third since 1990 while enrollment has increased by 26 percent.

And at many middle schools, children are trying to learn algebra in classes of 34-35 students. Think about what that means. In an hour period, if there is 30 minutes of instruction, each child will have less than one minute for personal attention from the instructor.

A 15-year old girl told me two weeks ago that if you can't get your question answered in class, your best hope is to call a friend when you get home and hope that they can answer it for you. This may not be dramatic -- or newsworthy -- but it is unfair to our children and it shouldn't be acceptable to us.

It's not acceptable to me. And that is why I have recommended an additional \$400 million in education funding over the next two years to address this problem. The \$400 million figure I have recommended -- for a total school budget of \$4.95 billion -- was not just pulled out of a hat. It is based on a long term study undertaken by business leaders, educators, parents and legislators -- a study which identifies the components of a good school and builds a budget around them.

But if this debate is only about money, we are doing ourselves a disservice. This debate should be about the kinds of schools we want for our kids -- the kind most of us attended when we were children. So let me take a moment to tell you what those schools should look like -- what we will be buying with the investment I have recommended.

The schools we are trying to create will eventually have smaller classes. We are putting a down payment on the goal of having 20 children for each teacher in our elementary schools. We will move toward full days of kindergarten, not half days. We will provide enough staff to give extra time to children who are having difficulty. We will make sure that every elementary school provides art, PE, music or foreign languages.

In middle schools and high schools, we will lower class sizes to no more than 29 students per teacher, and provide at least one counselor for every 250 students. At all levels, we will improve access to computers and up-to-date textbooks -- and provide additional instructional time for students not meeting the high standards we have set.

If Oregonians want to know what it is we are buying for the extra dollars I have proposed it is simply this: time. We are buying greater time and personal attention for each child in an Oregon public school. More adult supervision. More counseling. More computer time. More attention to those who need it.

Time and individual attention. That is what we need to give the children in our schools if they are going to be prepared to meet not only the economic challenges of the next millennium, but the social challenges as well.

It is important to note that the legislative leadership also believes that more money is needed for our schools. The point is that the debate in Salem is not about whether to increase school funding -- but by how much, and how to pay for it.

I believe that in order to reach the \$4.95 billion funding level -- without unacceptable cuts in other state programs -- we will need additional revenue. The legislative leadership disagrees, although they have not, to date, produced any plan that shows how they propose to resolve this dilemma.

But let me make it clear again that I am not willing to pit one part of our school system against another or to pretend that our education system starts in kindergarten and ends with high school graduation. We must face the fact that robbing early childhood programs and higher education in order to help fund K-12 is not an acceptable tradeoff.

And by the same token, I am not willing to pit our schools against other important values like health care, keeping our children out of crime, making college affordable, meeting the needs of our elderly citizens, or helping rural communities grow.

If -- as the Senate President and the Speaker of the House claim -- we can significantly increase school funding without devastating other parts of the budget -- no one will be happier than I. But I will remain skeptical until they are willing to release a plan which shows Oregonians how the increase in the school budget will be paid for. I urge them to do so.

Now, I wouldn't be asking for this additional investment unless I could guarantee to Oregonians that these dollars will be going directly into the classroom and that they will produce real results in terms of student performance. This isn't "business as usual" plus \$400 million. It is \$400 million for which we will expect tangible results and a high level of accountability.

Let me just take a moment to repeat what I have said before: We will not make our schools better with money alone. I believe we need additional investments in our schools, but we won't reach our goals without additional parental and community involvement. That kind of involvement cannot be legislated or bought.

What we can do however, is increase the accountability of our school system. To accomplish this, I will make three proposals to the Legislature.

First, I will propose that these resources be explicitly tied to those activities which have a proven track record for increasing student achievement. This goal will be achieved through the legislation I introduced at the beginning of the session to create the "School Improvement Fund."

This system will still allow locally-elected school boards to determine the specific funding priorities for their own districts, but will require them to choose from a "menu" of activities such as reducing class size, readiness to learn, providing extra time for students who are having trouble, alternative learning opportunities and professional development.

Second, we should set a goal of having at least 90 percent of our students meet the higher standards of the Education Act over time. Before receiving the additional resources, each school district must submit an application showing how it intends to spend the money and what its improvement goals are. In the 1999-2001 biennium, the goal for each school will be to get at least 90 percent of third graders to standards, or to show significant progress toward that goal -- and to show improvement at other grades as well.

Schools that do not show sufficient progress will be subject to a series of progressive interventions designed to improve performance. The goal is not to penalize schools and their students, but to provide them with the assistance necessary to improve.

However, if schools still fail to show sufficient progress, students may be given the right to transfer to another school with transportation guaranteed, or the district may be required to contract for programs. If a district is unable or unwilling to institute these requirements, the district may be dissolved and annexed to neighboring districts. The goal is to ensure that we never have to do that and that our students excel.

In other words, while I believe we need to invest more money in our schools, I also believe that Oregonians need and deserve to know that the schools will be held strictly accountable for how these resources are spent and for the results that are produced. We are not simply giving them additional dollars, but demanding that those dollars be focused in

such a way that student achievement is demonstrably improved.

Finally, we must deal with the problem created by moving school funding responsibilities to the state while leaving governance decisions at the local level. Previously, school money was raised locally and spent locally -- there was a clear line of accountability.

Today, however, the state provides on average 80 percent of school funding. However, this money is spent by 198 locally-elected school boards. When local school boards take actions which increase costs beyond what has been anticipated in the state budget, pressure is put -- not on the board members -- but on state legislators to provide whatever additional revenue may be necessary to cover those costs. In other words, those spending the money are not responsible for raising it.

This arrangement could potentially make it very difficult for the state to control the growth of the school budget over time. If we are going to significantly increase our investment in schools, then we must, at the same time, address this problem.

There is currently legislation in Salem which addresses this issue, but I believe it goes too far. I am committed to working with the sponsors of that bill and the education community to reach a compromise which provides a new level of accountability for school costs.

This brings us to the question of the long term strategy. While the additional \$400 million investment -- and the accountability measures that are tied to it -- will stabilize our K-12 system over the next two years, this is only an interim step. We are still left with the most important question -- that of securing stable, long term funding for our schools. This will involve some modification in our tax system to address its adequacy as well as its stability and balance.

As we do that, I want Oregonians to know that we will not pursue a tax policy which undercuts our basic economic strengths. We must ensure that Oregon's climate for business is not undermined; that businesses large and small can continue to grow, provide jobs, minimize the need for public subsidies and thus deliver the revenues for education and other essential services.

I am not complacent about our economic base. The long term success of our state's businesses is vital to reaching our goals for education -- just as a strong education system is vital for the success of our businesses. Hence, whatever measures we put on the ballot for school funding must increase and stabilize revenues for education while not putting Oregon at a competitive disadvantage.

This effort will be informed and assisted by the work of two task forces I appointed to review our tax system -- chaired by John Mitchell and Ron Tempe. They have produced a comprehensive overview as well as a series of recommendations and I will be using this information as the basis for a series of individual meetings with business, community and education leaders throughout Oregon.

I expect to produce a school funding proposal no later than August 1 of this year and then spend two months meeting with Oregonians to get input and comment. Then I will begin the task of collecting signatures to put this measure on the November 2000 ballot.

As soon as the legislative session adjourns, I will form a political action committee to raise the funds necessary to educate Oregonians on this school finance proposal.

To the greatest extent possible -- and hopefully within the same ballot title -- I will seek to tie any new revenue to the kinds of objective, identifiable investments that have a high impact on student achievement. And the one single thing I will ensure for our children with new dollars is time. Time with teachers, time with counselors, time for the students who are falling behind to work with adults; time so that they don't become discouraged and drop out.

I am acutely aware that many have been down this road before. And all have failed to gain a consensus among Oregonians about how to pay for our schools. But today, three things are fundamentally different in public education.

First, we have clear, high standards for our schools to teach and our children to learn -- standards demanded by an increasingly competitive world.

Second, we have an objective assessment of what it costs to pay for this kind of education.

Finally, we will have in place tough new measures of accountability for controlling costs and for improving student performance.

So I am here today to reiterate my commitment to our public schools -- and also my commitment to back that rhetoric with resources. Because good schools carry a price tag -- and the bottom line is that we get what we pay for.

If we continue on the path we have been following, we will be choosing to deny thousands of young Oregonians an equal opportunity to become productive, responsible adults. I refuse to believe that is a choice we really want to make.

Perhaps more than any other endeavor, education demands foresight and long-range planning. It's a long, drawn-out process -- it takes twelve years or more to educate a child and the effects of an under-performing school system are not immediately apparent. But make no mistake about it, they are very real and very devastating and often irreversible.

I ask you to believe that I would not be making these proposals if I did not believe that this is the best thing for Oregon. The seeds we sow today will determine the crop we reap tomorrow. I ask you to bear that in mind as you weigh the merits of my proposal.

In the balance hangs the future of our children -- and the future of our state.

Governor John Kitzhaber

School Funding Remarks

March 15, 1999

No matter how old you are, I think everyone shares a special feeling and warm memories being inside a school. It was here that the foundations of our future were laid. And our own children's future is bound up in the time they spend here, the things they learn here, the friends they make here.

Today, I want to talk to you about that future. Because our state is beginning the difficult process of creating a school budget -- one that will say a lot about the kind of schools our children will have, about the number of teachers they will learn from, and about the quality of education they will receive.

This debate will also say a lot about our values as Oregonians, about our commitment to our children, and about our willingness to give them the education they need -- and that they deserve.

For years the debate over school budgets has been in terms of what we can afford with the resources available. I am here today to re-frame the debate about public education in Oregon -- by suggesting that the real issue here is not what we think we can afford, but what we are willing to do for our children's future -- and for the future of this state -- for both the short term and the long term. I am here to ask that we face the facts.

The short term fact is that we do not have enough revenue in this budget to adequately provide for the education of our children without making unacceptable trade offs that will devastate other important services that Oregonians value and need.

The long term fact is that we have a tax system that lacks the adequacy, the stability and the balance to meet the varied needs this state will experience in the next century.

First, the short term. During this legislative session -- we must address three specific challenges.

First, we must be willing to recast the debate -- to ask not just what kind of education we can afford with the resources available in this budget -- but, more importantly, what do we need to give our children for the kind of education they deserve.

Second, we must stop pitting one part of our school system against another. We must stop pretending that our education system starts in kindergarten and ends with high school graduation. We must face the fact that robbing early childhood programs and higher education in order to help fund K-12 is not an acceptable tradeoff.

Today, we must recognize that the success of our schools depends on whether our children are healthy, well-fed and ready to learn when they arrive at Kindergarten. And today, more than ever, we must recognize the importance of education beyond high school in community colleges and universities.

Third, we must stop pitting our schools against other important values like health care, keeping our children out of

crime, making college affordable, meeting the needs of our elderly citizens, or helping rural communities grow.

For too long, we have looked at our schools and asked "what can we afford" -- regardless of whether that was enough.

Well, today, we have a much better idea than ever before about what it takes to make our children successful. We know that the high academic standards we are now asking our schools to deliver and our students to achieve are clearly and explicitly designed to help our children meet the social and economic challenges of the 21st Century. And if we value our children's future, then we need to act on that knowledge during this legislative session.

First, I believe we must commit no less than \$4.95 billion from the state to our schools in the next two years. We must face the fact that less than that will not allow us to meet the goals of the Education Act for the 21st Century. Instead, it will suggest a willingness to continue a decade-long decline in the quality of public education. Is that a value we want to express?

Second, we must face the fact that we cannot provide the revenue to meet that budget goal with what is available today. And that means that we are going to need some modest, temporary tax increases. If we choose to invest the two percent kicker in our schools as we did in 1991 and 1993 we will need less -- if we don't we will need more.

So my proposal to secure the revenue necessary to achieve a \$4.95 billion K-12 budget is as follows:

First, to invest the kicker in our school budget.

Second, to increase the contribution from the Common School Fund by at least \$40 million.

Third, direct \$70 million from the tobacco settlement to the Oregon Health Plan and use the general fund savings for schools.

Fourth, I propose a one time two percent increase in the tax rate on corporate income from 6.6 to 8.8 percent. This tax increase should be sun-setted in two years and replaced with a more comprehensive reform of our tax system -- a point I will return to in a moment.

Let me say that my revenue proposals for schools are a starting point -- I am willing to consider other options. But I am strongly committed to securing the revenue necessary to achieve our goal. The May forecast may make our job easier -- and I hope it is -- but I do not believe that it will eliminate the need for new revenue.

Finally, let me make it clear that I will not sign a budget for our schools until such time as the legislature demonstrates that it can reach an acceptable level of funding for our K-12 system without devastating the rest of the services Oregonians rely on from the State.

It is time to face the fact that we cannot continue to do what we have been doing since 1990, when paying for schools became the primary responsibility of state government. Since then, we have been involved in what can best be described as a death by a thousand cuts. Just look around you today.

All across the state, schools are laying off teachers, cutting programs, and increasing class size. One recent study demonstrates that our state has on average the fourth-highest class sizes in the country.

All across Oregon schools are deferring routine maintenance and repair of buildings. Roofs are leaking, heating and air conditioning are wearing out and infrastructure is crumbling. This does not enhance the learning environment and in some cases could even jeopardize our children's safety. Is this really what we want?

After school programs, often including sports, are being eliminated in schools across the state. It is no coincidence that juvenile crime has risen at the same time that availability of after school programs has decreased. Is this what we want?

But perhaps the most insidious fact is that we have secured what amounts to an inadequate primary and secondary school budget at the expense of other important investments.

Since the state assumed responsibility for paying for K-12, college tuition has increased by over 80 percent -- until we froze it last year. In effect, we have undermined the quality of our post-secondary institutions and made them too expensive for many Oregon high school graduates to attend.

We have also reduced our ability to reach out to children who are at risk -- eliminating school counselors, cutting back on early childhood intervention, and on programs designed to help teens who are getting into trouble -- creating no response to our young teens who are getting into trouble. In effect, we have given up on a generation of young Oregonians -- and acquiesced to a rising level of school failure, school dropout, juvenile crime and violence.

Are these the values we want to endorse? Do we believe that a high school education alone will allow our children to succeed in the next century? Do we care whether or not our children can get a top quality college education here in Oregon? Do we care about keeping troubled teens from turning to lives of crime, or about helping at-risk children become successful and productive citizens?

Well, I care -- and I think that most Oregonians do as well.

The fact is that we have been keeping our K-12 system afloat -- and just barely afloat -- at the expense of programs that could make a real difference in our children's future.

But oddly, no one will admit this. It is time that we all stand up and face the truth. And the truth of our budget is this: we are willing to deny one child health care so that another has schools which are barely adequate. We are willing to turn our backs on a generation of children who are at risk and straying toward lives of crime so that we can have barely adequate schools. We are willing to tolerate a situation where, increasingly, only the wealthy can afford to go to college so that we can have a barely adequate school budget.

These are unacceptable tradeoffs and we cannot keep making them. I appeal to all Oregonians not to let this happen -- to our children, to our state or to our future.

Eight years after we cut property taxes with Measure 5, four years after we embarked on a billion dollar prison-building effort with Measure 11, and two years after we cut property taxes again with Measure 47 and 50 -- it is time to face the fact that the status quo is not working for us. On the contrary, it is undermining our highest aspirations as Oregonians.

The short term proposal I have outlined today will begin to turn that around. It will stabilize our resources, and will refocus the debate toward what is ultimately far more important -- a long term solution that will serve our state and all of our citizens in the new millennium.

This must necessarily involve some fundamental structural changes in Oregon's tax system. I will begin work on this immediately and will announce more details on how I plan to in my April 9 speech to the Portland City Club. But I will tell you now that this work will be guided by four goals.

First, to make our tax system -- and thus the funding of our schools -- more stable by broadening the tax base;

Second, to add balance to the tax system and redress inequities that have been created over the past 20 years;

Third, to return to school districts some greater degree of autonomy to raise revenue at the local level; and

Fourth, to provide more accountability by giving the state greater authority to control costs at the district level.

It is my intention to bring this plan forward as an initiative on the 2000 general election ballot. Between now and then, I will devote my energy, the good will I have built up in this state, and all the resources of this office to provide the leadership necessary to ensure our ultimate success.

We all know that every administration since Tom McCall has tried to develop long term, adequate, stable funding for our schools. And every administration since Tom McCall has failed to gain the consensus necessary to do so.

I believe that in large part that failure was the result of not being able to answer the three essential questions that underlie any budget decision: "What do we want to buy?" -- "How much does it cost?" and "Are we willing to pay for it?"

Now, for the first time, we have the information necessary to answer the first two questions.

The Education Act for the 21st Century tells us what we want to buy: an education for every Oregon child that will allow them to achieve the certificates of initial and advanced mastery -- an education that will ensure their success in society and in the workplace.

The Quality Education Model gives us a method for calculating how much such an education costs. While still rough, this model is based on valid assumptions that suggest over the next two years \$4.95 billion will be required to keep the commitments we made to our children when we passed the Education Act.

At this level we would fully implement the Quality Education Model for grades K-3 for the next biennium. This level of commitment could support class sizes of 20, staffing for elementary specialists such as art, music and second language, and adequate instructional support such as technology and computers.

In addition, this funding level would allow us to make investments at all grade levels in the areas of professional development and additional instructional time for students not meeting the standards.

That is what we will be able to buy at this higher funding level.

And that brings us to the third question -- "Are we willing to pay for it?" The answer to this question is not a matter of data or information. It is a matter of values -- a matter of will. Never before have we been in a position to make such an explicit and accountable choice. While we have endorsed and supported the goals of the Education Act, we have never been confronted so clearly with whether we are actually willing to back up this rhetoric with resources. Either we are, or we aren't. It is a simple question of "yes" or "no."

For myself, as I mentioned earlier, I endorse a short term funding level of \$4.95 billion and will fight for it this legislative session.

There are those who will say that this is impossible to achieve in a "zero sum" budget. That our hands are tied. That whatever revenue is currently available will just have to be enough and the consequences be damned.

I simply refuse to accept that.

The truth is that this is not a "zero-sum" game, unless our lack of courage and commitment makes it one. This does not have to be a choice between inadequate schools, unaffordable universities, and at risk children. And we cannot afford to make it one.

On the contrary, this is simply a matter of political will. We can give our children good schools for the next two years without unacceptable tradeoffs if we are willing to raise state revenue by just a few percentage points.

I think our children are worth it. And I think Oregon is worth it.

Will this be easy? No. Will it involve some sacrifice? Of course it will. But our greatest victories as Oregonians have not been won by seeking the easy way out or by shirking our responsibilities.

The fact is that if we continue on the path we have been following for the last several years, we will do a grave -- I believe irreparable -- disservice to our children and to the future of this state.

I ask you to believe that I would not be making these recommendations if I were not completely convinced that this is the best thing for Oregon -- and the only way we can assure a better future for all of us.

As we stand here today, the better Oregon we want lies just beyond our grasp. Help me reach just that much further --

and we will never regret what we have done.

Governor John Kitzhaber

Oregon Logging Conference Speech

February 26, 1999

Good morning and thank you for having me here today.

Before I start today, I just want to thank your association's support of the work Gov. Leavitt of Utah and I have done on creating a blueprint for environmental consensus -- a blueprint we call Enlibra.

I just want to say a couple of words about that blue print.

First, I didn't come up with the name. It's too short for a hardened policy guy like me and it's in Latin, which, after years of medical school and residency, still makes me cringe.

Second, your support of the concept, and its implicit assumption there can be environmental win-wins, is very important. We need to continue to communicate that message throughout natural resource industries and throughout our environmental community as well.

As many of you know, I worked as an emergency room doctor in Roseburg. During that time, I came to know a good many loggers and their families. (good place for the "Splinter" story.) And for fourteen years I represented Douglas County in the Oregon Legislature. So in a way I feel my ties to the logging community go back a long ways. But this is the first time I've spoken to this group and I'm very glad to have the opportunity.

Let me begin by sharing a small piece of personal philosophy with you -- something that not only guides me as I carry out the duties of my office, but which has guided my efforts all my life. If anyone were to ask me what I see as my main goal as governor, I would say that it is to hand this state over to my successor -- and to future generations -- in better shape than it was in when I first took office. In a way, I think that's a goal we all share. Why else are we here, if not to make the world a better place?

There are a lot of gifts that go along with living in Oregon. But it's not our job just to TAKE; we need to GIVE something in return. And I think that message has a special relevance to those of you gathered here today.

Logging involves both taking and giving. You take the trees, but you do so in order to GIVE -- to provide for your families, and to provide society with a much-needed commodity. It seems a simple enough exchange, one we all engage in one way or another. Yet for you, and for all of us, the picture has become more complicated in recent years.

The fact is that in the late years of the 20th Century we have finally come up against the reality of limits. In the days of westward expansion, that thought was unimaginable. The West had no limits. Its riches were infinite. Whatever we took, whatever we did, would make no difference; there would always be more.

Now we know that the gifts we once took for granted do carry a price: the price of wise stewardship. Now we know that it is possible to pollute our rivers and streams, to destroy wildlife habitat, to endanger species -- even to drive them into extinction. And we know that at some point we will pass the point of no return. At some point, it will no longer be

possible to give back what we have taken. And that is a point I am determined not to reach. Because if we do ever get there, then giving and taking will become academic questions. There will be nothing left to take and therefore nothing to give back.

That is a future none of us wants to contemplate. The question is, what can we do?

Well, the fact is that we are already doing a number of things. For example, the Oregon Plan for Salmon & Watersheds has been in operation now since 1997. And it is working. Why? Because it relies not on regulations and restrictions, which have always been the traditional approach to environmental protection, but rather on the cooperative and voluntary efforts of private landowners all across Oregon. These folks are working in concert with state government to modify their attitudes and practices in ways that will restore watershed health and fish habitat. If dreams and visions are never achieved through regulations, and The Oregon Plan is founded on the recognition that cooperation, not coercion, is the key to reaching our goal.

The logging community is at the front-line of this effort. And when I say the logging community, I don't mean the corporate executives or the legislators whose decisions affect timber interests. I mean YOU -- the people on the ground. It's true that the Oregon Plan seeks broad changes across all sectors of our community. But the plain truth is that you people here today, together with your colleagues around the state, are in a position to make a huge impact on watershed health. No one dictates to you the exact nature of the on-the-ground decisions you make on a day-to-day basis, yet the cumulative effect of those decisions can make or break the Oregon Plan.

The truth is that you have a wide latitude for making discretionary decisions about where and how to cut. At the same time, I know that you care for the land. I know you understand the critical importance of restoring healthy runs of salmon, steelhead and trout, and the importance of making educated choices that promote rather than degrade the health of our watersheds. If you keep that goal constantly in mind as you carry out your work, it will be an enormous contribution toward our ultimate success, and I know we can count on you to do just that.

What else are we doing? Well, we now have a group, the Forest Practice Advisory Committee, that is studying whether there are areas where the Forest Practices Act might be improved. I think we can all agree that the Act itself is one of the strongest in the nation and that it has served us well. But that doesn't mean there isn't room for improvement, and we are looking at three areas in particular: the protection of small streams, minimizing the adverse effects of landslides, and the issue of cumulative effects. The Forest Practices Advisory Committee is a very balanced group, and I am looking forward to studying its recommendations. Tom Hirons of Lyons is representing timber operators at the conference.

With regard to the 1999 legislative session, you're probably aware that the two-year moratorium on the clear-cutting of steep slopes is due to expire, and legislation is in the works to extend the moratorium. I want to tell you that I support an approach that relies on the concept of shared responsibility. This would affect the harvesting decisions of upslope landowners and the home-building decisions of downslope landowners, and would require county zoning authorities to avoid hazardous areas when deciding where to site structures.

In fact, the whole idea of shared responsibility is critical to watershed restoration. This is not just an issue for loggers or ranchers or people in rural parts of the state. It is an issue for EVERYONE, because no matter who you are or where you live or what you do for a living, you are in a watershed and the cumulative effects of the actions of hundreds of thousands of Oregonians all over the state -- including those who live in urban centers -- affect our water quality and the overall health of our watersheds.

Gone are the days when we could arrest the problem by plugging up a couple of industrial or municipal discharge pipes. The greatest challenge today is non-point-source pollution. Or, as those English-speaking members of the audience would say, run-off.

And we all contribute to it. For that reason, I will not let any one group become the scapegoat for this problem. And I will not let any one group defer its responsibility for helping solve the problem. So when we ask the logging community to do its part, rest assured that we are asking no less of others. Our commitment is to distribute fairly

throughout the state the burden of improving water quality and restoring salmon species. If we each do our part, the burden will not be too heavy for anyone to bear. If we each do our part, we will surely succeed in passing on to future generations a state which is even better than the one we live in today. Again, regulations alone are not the answer. We must get at the heart of the problem by changing attitudes and practices. And make no mistake: it is a shared responsibility.

The final point I want to make is this. I know that the logging community was among the hardest hit by the recession of the '80s, and for a number of years since then you have continued to suffer economic losses, largely due to changes in federal forest management policy. I also know you have felt caught in the middle between the demands of environmentalists and those of the corporate timber industry. And as we --and the rest of the nation and the world -- move toward a predominantly information-driven economy, as opposed to one that is predominantly labor-driven, those who make their living in the woods may be experiencing a sense of uncertainty about the future.

In view of all that, I want to take this opportunity to assure you of two things. First, natural resource protection and healthy economic growth are not mutually exclusive. It is not a matter of choosing one or the other. It is possible to have both, and here in Oregon we have demonstrated that we know how to accomplish that.

Second, while a large part of our current economic expansion is due to the new high-tech industries, the fact is that our natural resource industries will continue to be a cornerstone of Oregon's economy. Here in Oregon we still grow trees better than anyone else in the world, and without your contributions we wouldn't have lumber for our homes, paper for our fax machines, or boxes to transport our high-tech equipment from factory to office.

But your contributions can reach even beyond that practical level. Because you work so closely with the land, because you care for the land, because you care what happens to it and to our watersheds, because you are in an almost unique position to make a major difference, you are also in a position to lead, to teach by example that wise stewardship of our rich natural heritage is the responsibility of each and every one of us.

[Return to Governor's Office](#)

Governor John Kitzhaber

Oregon Conference (Education) Speech

February 5 1999

It's a great pleasure to be with you today. As you're aware, education is among my top priorities, and before I turn to the thoughts I'd like to share with you today, I'd like to take a moment to acknowledge some of those in attendance and the roles you play.

I know that many of you here today are involved in the field of Special Education. I don't need to tell anyone how important your work is, given the growing number of children whose education must be individually structured. This is a time-consuming and often frustrating task, particularly in light of the federal restrictions and guidelines you must operate under, and I'd like to commend your efforts and your dedication.

I'd also like to acknowledge those of you connected with Schools of Education and educational research, since in a very real sense it can be said that "the buck stops" with you. The quality of education we offer our children in the classroom depends on how well you do your job, so I'd also like to pay tribute to you and the work you're committed to.

As for those of you who work in the trenches -- in the day-to-day delivery of education to our children -- teachers and district administrators -- your job is so critical to our future that I'm not sure it can be adequately acknowledged -- except by saying that the debt we owe you is a very great one.

What I'd like to do now is to touch on two topics -- issues which will both affect and involve all of you in one way or another in the coming years. The first has to do with charter schools; the second, with ways of keeping kids healthy in every respect -- and thus able to take advantage of the educational opportunities we offer.

As you know, the charter school movement is fairly recent. It began less than a decade ago and it has gained considerable momentum in recent years. I believe that around 30 states currently permit charter schools. So far, Oregon is not one of them, but the 1999 legislature is already working on charter school legislation. I thought this might be a good opportunity to clarify my own position.

The whole concept of charter schools has much to recommend it. These schools can offer a wider range of choices to parents and students, they can allow for greater creativity and flexibility in the ways we deliver education to our children. But at the same time, the whole idea must be considered with care. Charter schools have the potential to enrich and enhance our system of public education. They must never be conceived or implemented in a way that undermines or weakens that system.

One of my most firmly held beliefs is my belief not just in education, but in public education, because in my view it represents the best chance we have of ensuring equal opportunity for all our children. That's a tradition that reaches back nearly four centuries, when the Massachusetts Bay Colony passed the first public education law on this continent, requiring that every child must be taught how to read.

Since then, although we have come from different backgrounds, from different countries, from different cultures, from different sides of the track, by and large over the years we have shared a common experience of public schools. Public

education is a tradition that has served America well. It has kept us free, it has kept us united, and while there may be ways to improve upon it, this is no time to abandon it.

My fear is that if we allow our education system to be splintered into an interest-based set of private schools, the kids who need the most help will just fall through the cracks. For them, equal opportunity will be a promise unfulfilled, and they deserve more than that. We as a society deserve more than that. And that's why I believe in public schools, publicly funded, available and open to all, and of the very highest quality.

It is my hope that charter schools can be part of that picture. But I do have some concerns.

In a word, it all boils down to accountability: accountability to our children, accountability to the taxpayers, accountability to the future. Let me elaborate.

First of all, our public schools are a microcosm of the world in which our children will have to live and function after they graduate. To educate them in an environment that misrepresents the make-up of that world would do them a grave disservice. Instead, we are accountable to give them an experience that conforms to reality. For that reason, I believe that charter schools must include the same cross-section of society we find in our public schools. I cannot support any form of selectivity based on such criteria as race, ethnicity, economic position, or academic ability.

Second, we are also accountable to see that every child has equal access to an education of the very highest quality. That means, whatever school these kids attend, they must have qualified teachers, a curriculum that fits the demands of the 21st Century, and an assessment process that ensures their mastery of that curriculum.

This is what we are requiring of Oregon's public schools, under the Educational Act for the 21st Century. Charter schools must be held to the same standard. The standards and assessments of the Educational Act must not be waived nor compromised. Charter school curriculum, however it is conceived and delivered, must address the standards.

And we must be assured that charter school professional staff is fully competent in every respect. Let me make it clear that I recognize the value of drawing on community resources to enhance and expand the educational opportunities we can offer our children, and there are alternative forms of licensure available through TSPC. We can and should take greater advantage of these, but the bottom line is that there must be a "gatekeeper." And the taxpayers need to be assured that the education they are paying for is of the highest quality.

Finally, given the continuing difficulties in providing an acceptable level of state funding for public education in Oregon, the funding mechanism for charter schools must be dealt with in a way that does not divert public resources from our K-12 schools. I support the concept of local control over charter schools, with authority over and accountability for such schools resting with local school boards, and I therefore oppose any direct funding by the state. There are a number of alternatives available and I am more than willing to work with the proponents of charter school legislation to reach some kind of agreement on an appropriate funding source.

Let me turn now to my second point: ensuring that all our children are in a position to take advantage of the educational opportunities we offer them. And to me that means doing something to stem the terrible tide of juvenile violence in Oregon. Let me clear: this is not just a law enforcement issue. It is not even really just a juvenile crime issue. Its implications are far broader than that.

I am convinced that juvenile crime is a symptom -- a symptom of trouble that touches the very roots of our society. We have to treat the symptom, yes, and that is a law enforcement issue. But we will never eradicate the epidemic of juvenile crime unless we are prepared to treat the causes. And that will take the active involvement of every one of us who comes into contact with troubled youth.

This message should have a special relevance for educators. From the time they are five until the time they are eighteen, our children spend the majority of time under your care and supervision. You are in a better position than most of us to pinpoint which kids are headed for trouble, since there is a very clear correlation between school failure and involvement in criminal activity. Today about 9.4 percent of all Oregon students are at risk of failure in school. That's far too many children to turn our backs on. But what can we do about it?

Largely, I think, it's a matter of revising our priorities. The state juvenile corrections budget has doubled in just the last three years, and projected costs to house violent and chronic juvenile offenders reach into the hundreds of millions of dollars. Wouldn't it be better -- for all of us -- to see that the next dollar we spend on public safety goes toward keeping a child from walking through the front door of a prison, rather than toward a cell to lock him up in? Again, it's a matter of priorities.

It's a matter of expanding early childhood programs that will help kids enter school physically and emotionally healthy and ready to learn.

It's a matter of intervening with troubled families through community-based programs BEFORE children are damaged beyond repair.

It's a matter of stemming the tide of domestic abuse, since it is in the home that patterns of violent behavior are passed from one generation to the next.

It's a matter of coming to grips with the enormous problem of substance abuse, which takes lives and ruins lives and provides endless fodder for our court and correctional systems.

And it's a matter of bringing our schools into the loop of juvenile crime prevention planning, and of giving them the resources they need to ensure that ALL students have a chance for educational success. We intend to allow local school districts some flexibility in the use of additional state education dollars, so they can better support students who are at risk of school failure -- this would include special needs funding, teacher training, and providing counselors in schools. We will also improve the lines of communication between school districts and juvenile departments, so that students needing help can get it through community-based programs.

What we need, in other words, is a comprehensive, integrated approach to treating both the symptoms AND the underlying causes of juvenile crime. In that effort schools must play a major role. Troubled children are not only a problem in themselves; they disrupt the learning environment for other students as well. And when any child turns down the wrong path, ALL of us pay the price, often for years to come. I hope I can count on your support in this.

Let me say in closing that no one has a heavier responsibility than those of you entrusted with the education of our children. Aristotle once said that on the education of youth hangs the fate of nations. He was right. With the children who sit in our classrooms today lies the shape of the 21st Century, and what they will make of it depends very largely upon you. I want you to know that I recognize and honor your efforts and that you have my full and continuing support.

Governor John Kitzhaber

Willamette University "Last Lecture"

February 3, 1999

Thank you very much for inviting me to participate in Willamette's "Last Lecture" Series. This is an interesting concept: What would I say if this were the last time I would ever speak in public? -- with the topic entirely up to me.

Well, first of all, I want you to know that I never aspired to be a public speaker, though I seem to have done quite a lot of it in the last few years -- and maybe some people would like this to be my last appearance before a captive audience. But since I'm now in my final term as governor, it's nice to know that I can say whatever I want without having to worry about the next election.

There are a number of things I could talk about -- if this were my last opportunity -- things I consider important, like whitewater rafting or fly fishing, or living with a very busy 15-month-old child. But it will probably surprise no one to hear that, instead, I want to read you a civics lesson.

I don't intend to spoil your digestion by getting too serious at lunchtime, but I'd like to give you a couple of things to think about, based on my own experience. They have to do with the role of the individual in today's world and the relationship which I think needs to exist between individuals and the larger community if we hope to preserve the essence and not just the trappings of American democracy.

And I hope you will take away with you a stronger realization that individual citizens -- acting as individuals but within the context of our political institutions -- can help to shape the future in a positive way.

Let me begin with a personal story -- about some things that happened to me when I was about your age and which changed the course of my life.

It may surprise some people to learn that for the first two decades of my life I was completely apolitical. In fact, politics bored me and I couldn't imagine myself ever developing an interest in it. After I graduated from high school I went to Dartmouth College, where I spent quite a lot of my time pursuing activities that were not entirely academic. Nor were they political, even though it was an era of intense student activism.

The Civil Rights Movement was in full swing. The war was raging in Vietnam, and the draft was hanging over our heads. But if anyone had suggested to me then that I might someday run for office, much less be a governor, I would have thought it was joke, and so would a lot of other people.

Then suddenly, in the spring of 1968, my junior year, everything changed.

On April 4, Martin Luther King, Jr. was shot down in Memphis, followed in June by the assassination of Robert Kennedy. These two deaths made a profound impact on me. Here were two men -- regardless of how you viewed their policies -- acting on their own individual beliefs, but working within the system, and who were making a huge difference.

Martin Luther King was conducting "sit-ins" in segregated restaurants for which he was arrested and for which he

expected to be arrested. He believed in the rule of law and he believed that those who broke the law, including himself, should bear the consequences. But he had the courage to break the laws which he felt were unjust in order to highlight the issue of racial discrimination. He believed in the system and worked within the system and, in so doing, changed the course of American history.

Robert Kennedy was campaigning for the democratic presidential nomination on an anti-war platform. He strongly opposed sending thousands of young men, many of them too young to vote, halfway around the world to fight and die for a murky policy they'd had no voice in developing. And he was working within the system to change that.

I'm not sure what it was about the events of that spring or about these two deaths that affected me so deeply. Perhaps it was simply because I was young and naive and idealistic. I know I felt as though a vision of a better world had died with these two men -- both of whom believed in the power of our public institutions to effect positive social change. In any case, it was from the moment that Robert Kennedy died in Los Angeles that I knew I wanted to hold elective office -- that I wanted to make a difference, and do it by working, as an individual, within our democratic system, and for something larger than my own individual satisfaction or benefit.

Ten years after the events of that fateful spring, while practicing emergency medicine in Roseburg, I won a seat in the Oregon House of Representatives. That was in 1978 -- twenty years ago -- and I have been active in politics ever since.

Yet in the intervening years, I've watched something happening not only to our system of public enterprise, but also to our concept of individualism. And I think it's largely a matter of perspective.

While King and Kennedy clearly understood the relationship between individual effort and the effectiveness of our public institutions, today that view is not very popular. It's true that in the years since Vietnam, we have been repeatedly disillusioned -- by Watergate, by Iran-Contra, and by the drama -- I might almost say "melodrama," except for what's at stake -- which is now unfolding in our nation's capital.

As a result, the individual has become distanced, even alienated from the system of government that has served us so well for more than two hundred years, which has survived a civil war, two world wars, and a world-rocking Depression.

We are dangerously close to abandoning our political heritage -- a heritage deeply rooted in common goals and concerted action -- and enshrining it its place the individual -- as a self-serving free agent with no ties and no responsibilities to the larger whole.

Think about it. How many people today see government as a mere waster of individual wealth? How many people today believe the best thing government can do is simply to get out of the way so that individuals can accumulate more money and keep more money and spend more money -- on themselves? How many people concentrate their best energies on getting something out of society, rather than on giving something to society?

And an even greater danger is that this attitude not only alienates us from our public institutions; it also alienates us from each other and fragments our communities. Working with each other has taken a back seat to competing against each other.

Yes, individualism -- of a certain sort -- is part of our heritage. When this country was being settled, and people were physically separated from each other by huge distances, independence and self-reliance were not only virtues -- they were essential to survival. But today's world isn't like that any more.

Today we find ourselves in much closer physical proximity with others -- packed together in housing complexes, crowding into classrooms, bumping up against each other in shopping malls, passing within a few feet of each other in our cars.

But at the same time we are more disconnected than at any other time in our history. And perhaps the greatest casualty has been our sense of community. We deliberately isolate ourselves from each other. We live behind six-foot fences. We walk from the garage directly into the house, and never see our neighbors.

We shop at mega-outlets on the edge of town, rather than at a neighborhood market -- of which there are very few left. And while schools were once the hub of a community, now the increasing number of alternative schools, as well as a more mobile population mean that kids don't grow up together as they once did, and their parents hardly know each other.

At a time in our history when working together is absolutely essential, we have erected physical and psychological barriers that keep us apart and we are losing our sense of community.

At a time in our history when more than ever we need our public institutions to function as they were originally intended to, we are withdrawing from them, abandoning them. And I assure you that is not the answer.

It was President Eisenhower who reminded us that "Politics should be the part-time profession of every citizen." He was right. The governmental institutions and legislative processes available to all those who live in a democratic society will only be as effective as we make them.

Of course there are things that have gone wrong in the public sector. This is not a perfect world. But speaking as a doctor, I can tell you that, when you diagnose an illness, it's not much help to prescribe death as a cure.

And I can also tell you that if you don't like the way the tide of government is flowing, the answer is not to stay out of the water and sit safely on the shore. That kind of safety is temporary, at best, and it will betray you in the end. The only real answer is to plunge in, grapple with the tide, take a few risks, and turn risk into victory.

Democracy, as Winston Churchill once said, is the worst form of government ever devised by man -- except for all the others. It can work. It has worked. And the only reason it might stop working is if individual citizens refuse to make it work. I hope we're not going to let that happen.

And I guess that's my final word -- getting back (finally) to the original topic. If this were the last time I'd ever speak in public, I'd voice my hope -- and my confidence -- that the young citizens of the new century will show the world once again what American democracy at its best can be.

Governor John Kitzhaber

Erosion Control Conference Speech

January 28, 1999

Good morning and thank you for having me here today.

I want to start today by thanking Dennis Derby and the Department of Environmental Quality for turning what was an unfortunate incident into a constructive opportunity not only for your industry but for our state and local governments as well.

When I saw that I was scheduled to be at an erosion control conference, I assumed I'd be meeting with members of my staff to talk about the status of support in the Legislature for my various proposals.

The session is, in fact, one big exercise in controlling erosion.

So, I come before you today as someone who has had much experience, but little success, in erosion control.

Now, to the topic at hand.

The reason I wanted to come today is that this issue -- controlling erosion from new and existing buildings -- crosses some of the biggest challenges our state faces today. I would like to talk about two: first, how do we grow more compactly within the urban growth boundary without losing the consensus that sprawl is bad and hence threatening the entire land use system; second, how do we distribute fairly throughout the state the burden of improving water quality and restoring salmon species.

Preserving the land use system and improving water quality have not until recently been thought of as urban issues. The conventional wisdom was that if you lived in urban Oregon you were a strong supporter of the land use system and that the people who really had to change their behavior to improve water quality were farmers and foresters.

Now the tables have turned.

I believe the biggest threat to our land use system -- and hence, one of the greatest threats to our environmental quality throughout the state -- is from urban Oregon.

I believe that the greatest unaddressed water quality issue in Oregon has to do with the cumulative effects of the actions of the hundreds of thousands of Oregonians in urban Oregon.

And the home-building industry lies squarely in the intersection of these two issues.

Notice I say intersection. Others, not me, may say crosshairs.

Let me expand on my first point and suggest how we can work together to make your job easier and make the land use system work to deliver quality communities.

In the past five years, the land use system with its demand for an urban growth boundary -- and hence, implicitly, its demand for more efficient, compact development of our available land -- has come to actually mean something to people who live in our state's cities -- primarily Portland.

That's because, after a decade of growth, we are having to squarely face the question of where and how we grow. I believe we have wisely chosen to expand our urban growth boundary slowly and to push for greater development inside the boundary.

And there's the rub. For years, the traditional proponents of land use viewed it as a system to preserve farm and forest land. Now they realize that that act of preservation isn't free

It means there might be a fourplex on your street. It means there might be tenants in the granny flat next door. And it means that hilly lot that's been vacant for the past twenty years might suddenly sprout a half dozen row homes.

This is new. This is different. This is frightening. But the specter of compact development is much worse than the reality. In reality, if Portland and the Metro area develop according to Metro's 2040 plan, the metropolitan area will -- at 4,385 people per square mile -- be 1/3 as dense as San Francisco is today and two-thirds as dense as Seattle.

The alternative to more efficient, compact development is worse. The alternative to compact development is sprawl onto the farms and forest that lie at the edge of town. And that alternative carries a far greater environmental price tag than developing inside the UGB.

That's why I am particularly interested in creating incentives for compact development. That's why I have proposed the Oregon Livability Initiative which would fund such incentives.

And that's why I am interested in helping your industry overcome obstacles to urban development -- obstacles such as - - and here's where I tie it all together -- erosion.

Now, I must admit, I am not an erosion expert, as hard as that may be to believe. But my commitment to you, for all the reasons I've just gone over, is to be open-minded and innovative in helping you meet the challenge of developing difficult, erosion prone lots.

To that end, I understand this association is interested in pursuing the concept of regional detention basins as a way to address the erosion problem. I just want to tell you that conceptually I support that and want to work with you to see if this idea can be implemented.

Because to me, ideas like that, which create the ability to pursue quality, compact urban development are all part of the mix that is necessary if we are going to win the battle of growing while maintaining our quality of life.

And as much as we policy types want to theorize about technology and development trends and how they affect community and quality of life and civic participation, it is the actual built environment that we live in, that we drive through, that we walk around and that we work in. That is the bedrock of a neighborhood, a district, a town or a city.

And if politicians and planners say "build compactly; reinforce existing communities; don't sprawl; use land efficiently" and then we don't help make it politically and environmentally possible, then what's the point?

This is not just a rhetorical question. It is the challenge you are wisely trying to address today at this conference.

Now, let me throw one more curve at you.

And that is: in the coming months and years, as we bear the burden of changing practices so that we can clean our rivers and restore habitat, more and more of that burden will shift from rural Oregon to urban Oregon.

I believe members of your industry understand this.

But here is my warning: if the water quality challenge becomes a contest of what farmers can do to home builders or

what home builders can do to foresters or what foresters and do fishermen -- we will surely lose.

My commitment is to help ensure that the burden of meeting water quality demands will not fall disproportionately on any one group. But more importantly, I will work to educate Oregonians, especially those in urban areas, that we all must do our share if we are to clean up, for example, the Willamette River.

Gone are the days when we could pick the low fruit of stopping pollution by plugging up a couple of industrial or municipal discharge pipes. Now the challenge is non-point source pollution. Or, as those English speaking members of the audience know it, runoff.

And we all create it. Not just homebuilders, who are visible; but homeowners who aren't -- yet whose roofs, driveways and lawns all contribute their share of the problem. I promise you, I will not let any one group become the scapegoat for this problem. And I will not let any one group defer its responsibility for helping solve the problem.

Part of what I will be proposing to further that goal of fairness is an urban watershed program. I hope to be kicking this off some time in February in Eugene.

The concept is simple. Watershed Councils exist all over the state -- but rarely in metropolitan areas. The problem is that no matter where you are, you are in a watershed. To assume that because you live downtown, or in a suburb or in an urban neighborhood you are not part of a watershed is just plain wrong.

I think urban watershed councils could help foster a sense of responsibility for the impact urbanites have on water quality. And I think it could be a great teaching opportunity for children in our schools.

But, that is a long term education project.

Today, you are faced with a difficult challenge. How to build where it's tough to build, where neighbors often don't want you and where environmental regulation present expensive obstacles. Trust me, I wouldn't trade places with you.

But I will try and help. Because, ultimately, our success as a community in meeting our intertwined challenges of growth and environmental preservation, is tied to your success as business people.

Thank you again for this opportunity to speak.

[Return to Governor's Office](#)

Governor John Kitzhaber

Inaugural Address

January 11, 1999

Members of the Legislature, Members of the Judiciary, Fellow Oregonians:

We convene today to celebrate our biennial exercise of democracy and I renew my oath to serve as your governor. We convene today in common commitment to those citizens who have found us worthy of leadership.

I can think of no greater honor than to have your trust, faith and confidence in leading our state for the next four years. And I can think of no more worthwhile task than rewarding that faith by working together with this legislature to meet our fundamental challenges: good schools; quality of life; healthy, successful children; and, perhaps most important of all, re-creating that sense of community and common purpose which is our heritage -- and which has made possible all that we have accomplished as Oregonians.

As we gather here today, I find myself reflecting on the sobering implications of this moment -- for me personally -- and for this state and nation politically. Personally, this will be my last oath of office as governor of the State of Oregon.

Politically, we gather in the shadow of a trial to impeach our President. These events create a moment in time from which we can look ahead and consider what is happening to civic life in our country and its implications for our future -- and from which we can look back and remember why the public enterprise makes sense in the first place.

Like most Oregonians and most Americans, I believe that what is going on in our nation's capital is a debate that is only partly about our President's personal failings or his fitness for office. To a large extent it is a debate about partisanship -- partisanship on both sides of the aisle.

This partisanship reflects the fact that politics has moved from the use of power for the public good to the gathering of power for its own sake. The accumulation of power at any cost.

Gone from our national discourse is that element of politics that actually means something to people -- what to do with power once it is obtained. Gone is the basic agreement that politics is a process by which challenges are defined and met; a process by which communities -- from local, to state, to national -- can create a vision of their own future and put in place a plan to achieve it. Gone is the belief that government is a tool by which we can achieve our common aspirations.

Instead, we are left with a partisanship -- not only in the political sense -- but in the civic sense as well. A partisanship and an attitude that has alienated citizens from their government and from one another -- that has degraded our public institutions, that has swept aside community, and has enshrined the individual in its place.

We are left with the view that all government can do is waste money . . . that government's proper rule is to simply get out of the way so that individuals can make more money and keep more money; that there is no social problem that cannot be solved by a judicious application of personal wealth . . . that no overarching sense of community is needed or, in fact, desired.

And this self-serving attitude offers predictable answers to our greatest challenges.

If you think there is too much crime . . . Buy a security system. Live in a gated community. Buy a gun.

If you don't like our public schools . . . Abandon them. Send your kids to a private school and let those who can't afford to do so fend for themselves.

If you want clean air and water . . . Move to the country. Make pollution someone else's problem.

But individual wealth alone cannot shield us from the fallout of a society that cannot educate all of its children, or keep them from crime, or make them successful, or clean its water and its air.

Don't misunderstand me -- I believe in creating wealth. And I support an individual's right to do with it what they will. But private wealth will never become a substitute for community.

Here in this chamber, we are surrounded by the names of pioneers. They did not buy their way here. They had resources, to be sure. But their migration was made possible only by joining together, by pooling those resources, by becoming a community. Then -- and only then -- would they take the risk of a lifetime; only then could they cross the Great Plains and the Shining Mountains to create the land in which we now abide. That has always been the Oregon way -- and we are its beneficiaries.

Our greatest challenge today is to preserve that way -- to recognize it for what it is: a touchstone -- a past we can invoke to inform our present. We must recreate the politics of community -- the politics of progress -- and bury the politics of partisanship. If we can do so, no dream lies beyond our grasp.

Our greatest challenge is to make our system of government work here in Oregon even as our national government veers recklessly toward the brink in Washington, D.C.

Our greatest challenge is to demonstrate that in this state we can still come together with open minds -- and in a spirit of compromise, to forward a common public agenda.

The history of this state is the history of just this kind of cooperation. Our true heritage lies in our ability to join together to create a place -- and a culture that helps define that place. We must not let that spirit vanish from Oregon and I pledge to work with every member of this assembly to help ensure that it doesn't.

As I begin my last term as governor -- and as we convene the 70th Legislative Assembly -- let me share with you some lessons I have learned from my 20 years in public service which I believe may have some relevance to this session and to the public enterprise.

First, good ideas take time. The Oregon Health Plan was first enacted in 1989 but was not fully implemented until 1993. The Oregon Plan for Salmon and Watershed Restoration, the Education Act for the 21st Century -- these are works in progress that will take numerous legislative sessions to fully implement, yet which will reap benefits for generations to come.

This means that we must have clear goals and the patience and consistency to see them realized. It means that we must have the capacity to compromise as long as we continue to move toward our goals.

As Governor Tom McCall said in his second inaugural: Compromise indeed is bad for the spirit if it limits one's ideas or goals. At the same time, if we renounce realism and gradualism, we may -- paradoxically -- be frustrated in our ideals, and see the realization of our goals delayed.

Second, there has always been partisanship -- but in the past it has been adversarial, not antagonistic. It was played out with civility and collegiality in a debate over different goals and visions, or -- more frequently -- over different approaches to realizing common goals and visions.

We owe it to ourselves, to Oregonians and to the integrity of this public institution -- the government of this state -- to conduct ourselves and our debate with this same level of civility. We must have the capacity and the maturity to separate politics from personalities -- to never allow disagreements on matters of policy be reflected in the kind of character assassination that has dominated the national debate over the past month.

Third, what Oregonians expect from us is that we get things done. Oregonians recognize that the major issues with which we must deal -- things like education, transportation, public safety, growth and sound environmental stewardship -- these issues are not partisan in nature. They affect all Oregonians regardless of where they live, what they do, how much they earn, or what party they belong to. And Oregonians expect us to deal with them. They don't expect that we always agree, but they expect us to be constructive and sincere in addressing the common challenges that face our state.

I have spent much of the last four years -- and the last year in particular -- defining these challenges and proposing possible solutions. This Oregon Challenge -- as I have referred to it over the past year -- calls for definitive action in at least three broad areas crucial to Oregon's future.

One of these challenges involves our system of public education, from pre-kindergarten through higher education and lifelong learning. Nothing is more important or more central to our future than meeting the obligation to educate -- and to keep educating -- the next generation of Oregonians.

We have the means to do so. The question is -- do we also have the will? We stand on the threshold of a new century, and the doors of opportunity are open wide. Our challenge is to equip our children -- all our children -- to walk through them. Let us pledge ourselves to that.

A second great challenge involves preventing crime, especially among juveniles. How we meet this challenge will send a message to the future as to what we really value.

The massive expansion of our prison system shows very clearly that we value punishment. But don't we also value our children enough to keep them out of prison in the first place? Don't we value our families, our neighbors and friends enough to keep them from falling victim to crime? Our challenge is to make a commitment to prevention that is at least as strong as the commitment we have made to punishment. Let us pledge ourselves to do that.

A third great challenge involves planning and managing growth in a way that will actually make a positive difference in how this state develops over the next twenty years. Oregon is bound to attract growth, simply because of what it is. Yet growth is a double-edged sword.

Handled right, it can offer a path to a bright and prosperous future. Handled wrong, it will slice to shreds everything that makes living here worthwhile. And if that happens -- if we lose the qualities and attributes that define Oregon itself -- we will lose not only our future, but our very identity. Our challenge is to find a way to accommodate growth without sacrificing the special quality of place that makes our state unique. Let us pledge ourselves to do that as well.

This is the Oregon Challenge -- and tomorrow we will take up our task of meeting it.

And while I am firmly convinced that resolving these issues is central to our future, I do not presume that the specific proposals I have suggested are the only way to do so. I have no doubt that we will debate these ideas and others in the coming months. But I also know that Oregonians will properly hold us accountable for reaching -- or not reaching -- agreement on how to move forward.

If we are to be successful in this endeavor, we must recreate the sense of common purpose which has long been the foundation of the community we call Oregon. The nation has often looked to us for inspiration in responsible government, for decency in public affairs, for civil personal relationships and for a respect for the natural world.

These are the virtues that build a community. These are the virtues that have built our state. We must never underestimate the importance -- indeed the necessity -- of community and the power of place in shaping Oregon's future. For in spite of our differences and our areas of disagreement, we share a common history, a common heritage and we will surely leave a common legacy.

Yet as the stain of rancor and partisanship spreads westward from our nation's capitol, as our population increases, as we become more ethnically and culturally diverse, as growth begins to alter our landscape and bring into question the limits of our resources -- we are beginning to lose this shared sense of ourselves as Oregonians.

We are losing our sense of common history and common purpose -- our sense of connection and of community which has bound us together.

And if we lose this connection with one another, this spirit of community and commitment to place -- then we will lose not only our identity, but our heritage as well. We cannot, we must not --and we will not allow that to happen.

So today, as we begin the last legislative session of the 20th Century -- let us heed well the words of Wallace Stegner from the Sound of Mountain Water. Words written about the West, but clearly inspired by Oregon.

...one cannot be pessimistic about the West. This is the native home of hope. When it fully learns that cooperation, not rugged individualism, is the quality that most characterizes and preserves it, then it will have achieved itself and outlived its origins. Then it has a chance to create a society to match its scenery."

No less than that is our goal. One state, one people, one destiny.

[Return to Speeches](#)

[Return to Governor's Office](#)

Governor John Kitzhaber

WGA Enlibra Speech

December 4, 1998

Standing here tonight in this incredible setting, I am reminded again why so many people are drawn to the West. The West is a place of special places like this canyon -- places that are not only beautiful, but which have the power to inspire and fill us with wonder and awe.

This sense of awe defines the West. We are touched by its landscapes and shaped by its ruggedness.

But the West is growing. More people, more roads, more buildings, more conflict -- and a growing sense that what has defined us as a region is slipping away.

We are learning -- hopefully not too late -- that if the West is to remain in Wallace Stegner's words, "the native home of hope" -- then we must develop new tools and new approaches to deal with the growth that besets us and the environmental challenges and conflicts that come with it.

And that is the purpose of this conference -- to explore the possibility of developing a new shared doctrine for environmental management -- a new perspective, new tools and a new approach. And I want to thank all who have agreed to participate in this exercise. I realize that there are many here who come from quite opposite but equally entrenched positions concerning environmental issues. And I am also aware that there remains much skepticism about this effort. I ask only that you keep your minds and hearts open to the possibility of a different way of pursuing our individual objectives in a way that builds community rather than disrupts it.

At the same time I want to make it clear that, while I am convinced that a new more collaborative and less confrontational approach is needed, I do not reject the tools of the past, nor take lightly the significant gains they have achieved.

Sometimes conflict is a necessary prerequisite for collaboration. In fact, much of the progress we have made on behalf of our natural environment in the last few decades has been the result of conflict and confrontation -- which is a point worth noting.

There has always been a tension in the West -- between economic development and the powerful landscapes that define this region -- between the extraction of natural resources and concern over long-term environmental stewardship.

And for decades economic development and natural resource extraction in the West were pursued with a single-mindedness that has left scars upon the land. At the same time, these same activities brought with them significant economic benefits to the region and to its people. Not surprisingly, this collision of legitimate values led to an escalating conflict. People took stakes in both sides of this debate. We call them stakeholders today and many are represented here this evening. The primary battlegrounds were the U.S. Congress, state legislatures and the courts.

The conflict between stakeholders led to the passage of such significant environmental legislation as the Clean Air Act

in 1970, the Clean Water Act in 1973 and the Endangered Species Act in 1973. Court battles over the implementation of this legislation -- in particular the Endangered Species Act, led to a wave of regional and more holistic planning on federal lands, beginning with the Northwest Forest Plan. The listing of the Delta Smelt led to a major clean up effort in San Francisco Bay.

Indeed, I have employed the tools of confrontation and litigation myself to block the operation of the Winchester Hydroelectric Project on the North Umpqua River near Roseburg, Oregon. Without the use of these traditional tools, the turbines would still be operating -- chewing up the North Umpqua steelhead run. As it is, this remains one of the few projects in the country that had a FERC license and was generating power and was subsequently shut down and the turbines removed.

So my point, in embracing the concept of a shared doctrine for environmental management is not to reject or discredit the tools of the past. I believe in the need for a strong framework of federal environmental laws, I believe in the need to have the ability to enforce them, and I believe in access to the courts. But I also believe -- just as strongly -- that we need to have both the wisdom and the courage to periodically reevaluate the effectiveness of our tools and the way in which we have traditionally applied them.

Let me give you an example -- the Oregon Plan for Salmon and Watersheds. This effort, now more than two years old, has become far more than just a government program -- it has become a statewide, bipartisan commitment in Oregon to restore our runs of Coastal Coho and the watersheds in which they spawn.

This kind of collaboration is not new to Oregon. Some sixty years ago, catastrophic fires destroyed hundreds of thousands of acres of forest in Northwest Oregon. Known as the Tillamook Burn, this land came into state ownership. It took a generation to replant the forest, but it was done, tree-by tree by volunteers and by school kids. You'd be surprised how many people you meet in Oregon today that took a school field trip to help replant the Tillamook Burn.

It was the same kind of broad-based collaborative effort that cleaned up the Willamette River in the 1970's under the administration of Governor Tom McCall. It was this community sense of environmental responsibility that let us to make our beaches public and to pass returnable bottle bill which has made littering tantamount to betraying your roots as an Oregonian.

With that kind of history of cooperation and community response to environmental challenges, the consequences of the listing of the Northern Spotted Owl in 1990 were especially traumatic to Oregonians. And although the end result of this debate was the Northwest Forest Plan, the intervening polarization literally tore communities apart and left scars in parts of rural Oregon that have yet to heal.

As a consequence, when -- shortly after my election in 1994 -- the National Marine Fishery Service gave notice of a possible listing of our coastal coho salmon, I began to look for a better way. In my view, the community that calls itself Oregon could not afford another divisive natural resource war.

On the other hand I was, and remain, deeply committed to the survival of our salmon runs. There is an almost mythic connection with Salmon among the people who live in the Pacific Northwest. It is a powerful connection that cannot be overestimated -- the power of history, the power of identity, the power of the past's promise to the future. But even beyond that, if the salmon runs are not healthy, then our watersheds are not healthy -- and if our watersheds are not healthy then we have truly mortgaged the future. I do not intend to leave that as my legacy.

Thus, it is important to recognize that the objective of the Oregon Plan has never been to avoid a listing under the Endangered Species Act. Rather, the objective has been -- and continues to be -- to make the greatest progress possible in restoring species and restoring watersheds.

I also important to recognize that relying solely on the ESA to recover salmon in Oregon would not only have triggered another divisive battle, but would ultimately fail to recover salmon.

We need to remember that the primary role of the federal government under the ESA is a regulatory one. And while regulation has an important role to play, there are limits to its effectiveness. Regulation can keep people from doing the

wrong things but it provides no incentive for them to do the right thing.

So while the ESA can prevent landowners from engaging in activities that result in an intentional or unintentional kill, or "take," of a listed species -- it cannot compel them to do more. Yet 60-70 percent of coho habitat lies in private ownership and therefore, recovery will only occur if private landowners undertake restoration activities that go well beyond simply avoiding take.

And in my 20 years of involvement in western state politics, I have experienced over and over again the fact that an approach which involves private landowners in the decision-making -- which gives them some ownership and investment in the work being done -- has a greater and more immediate positive impact on the resource than simply applying regulations that tell them what to do. Telling people what to do with their land in the West is an explosive proposition.

As a result, the Oregon Plan was designed to involve, empower and incent private landowners to make voluntary commitments to watershed restoration and habitat restoration. The commitments are built on a solid foundation of federal, state and local regulation -- including harvest limits, Clean Water Act requirements, forest practice requirements, land use laws, state water law, and so forth.

But the increment that will make a difference in how quickly and successfully we recover salmon and watersheds comes largely from the voluntary commitments by landowners and communities working alone or through their local watershed councils.

While skeptics of the Plan have underrated some of these voluntary actions, they are significant. The timber industry has committed to make \$130 million in road improvements on logging roads and culvert replacement over the next 10 years, not to mention agreeing to a harvest tax to provide \$13.5 million in direct on-the-ground projects. This is far beyond anything that could be legally compelled under the ESA. Furthermore, the Oregon Legislature has offered strong bipartisan support with the appropriation of another \$32 million to support the plan.

Perhaps most exciting of all, however, is how this effort is beginning to change the environmental ethic in our state. The Oregon Business Council has become involved, and over 80 local watershed councils have put in place more 1,200 on-the-ground projects in the last two years. And the enthusiasm continues to grow, despite a court-mandated ESA listing based on pre-Oregon Plan data.

And it is this local cooperative effort to restore watersheds that helps build the kind of grassroots support needed for long-term environmental stewardship. It makes people more aware of the environmental consequences of their action on their land.

And that, to me, is what Enlibra is all about. It is about recognizing the fact that with over 1000 species listed -- the lengthy, complex and contentious process of actually developing recovery plans under the ESA and our other tools will doom many of these species to extinction long before anything happens on the ground. Quite frankly, we don't have the time.

As we approach the 21st Century our environmental problems are becoming more complex and I believe it will be increasingly important to gain this kind of buy-in, ownership and support from individual citizens. Problems of point source pollution, for example, lend themselves well to a regulatory approach. But reducing nonpoint-source pollution -- one of the major challenges facing us on the Willamette River in Oregon and throughout the West -- will require far more than simply passing laws and regulations. It will require sustained environmental stewardship -- a long-term commitment to change behavior -- by hundreds of thousands of people living in the watershed -- most of them living in the city.

That is not to say that there is no longer a place for the more traditional tools of regulation and litigation. We will always need an underlying framework of environmental law and regulation. We will always need recourse to the courts.

But we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that call for, and result in, greater individual

responsibility and accountability for our air, land and water. You cannot achieve that through regulation; you cannot achieve that through confrontation; you cannot achieve that through the courts.

You can only achieve that through the kind of cooperation and collaboration that the concept of Enlibra seeks to represent.

If I may leave you with one thought, it is simply this: that we cannot underestimate the importance of community or the power of place in shaping the future of the West. In spite of our areas of disagreement, we share a common heritage and will surely leave a common legacy.

Yet as our population increases, as we become more ethnically and culturally diverse, as growth begins to alter our landscape and bring into question the limits of our resources -- we are facing new challenges in knowing who we are as westerners .

We are losing our sense of common purpose and of connection and of community, which have been part of the glue that binds us together as a region and that keeps us from cracking apart into dozens of separate pieces.

Yet that is exactly what is happening -- and that, above all else, is what we must reverse. We must never forget that the West is more than just a special place -- it is a special place to live.

It is the rare quality of life that this region has to offer that has attracted people here from across the nation and around the world. This place is somewhere people want to be.

And if we lose that quality of pace -- that livability -- we essentially lose not only our identity, but our heritage as well.

I recognize that you are all stakeholders in a mighty struggle. The challenge is not to give up on the entrenched positions of your various constituencies. It is to see beyond them. If we can recreate a forest in Oregon, then we can recreate watersheds. If we can find peace in Northern Ireland and in the Middle East, then surely we can find peace in the West

Let me close by returning to the Wallace Stegner quote I cited earlier -- it is from *The Sound of Mountain Water*.

It reads in full "...one cannot be pessimistic about the West. This is the native home of hope. When it fully learns that cooperation, not rugged individualism, is the quality that most characterizes and preserves it, then it will have achieved itself and outlived its origins. Then it has a chance to create a society to match its scenery."

No less than that is our goal. Thank you.

Governor John Kitzhaber

Housing & Human Investment Conference Speech

October 19, 1998

It's a pleasure to participate in this very important conference, whose focus is so vital to our future -- that is, addressing Oregon's unprecedented crisis in the availability of low-income affordable housing.

Winston Churchill once said that it is the duty of society as a whole to "erect balustrades upon the stairway of life" to prevent our most vulnerable citizens from falling into the abyss of dependence, despair, or destructive behavior. I believe that is true not only at the state level, but at the community level as well. And one of the most critical balustrades people need to lean on for support as they climb the stairway of life is adequate shelter.

We all know that people whose basic human needs are not met are in no position to even think about being productive, contributing members of society. We know that insufficient housing has been linked with public health risks, substance abuse, and crimes against people and property. None of these is good for our communities.

Yet today, far too many of our vulnerable low-income citizens are living in unsafe housing, sharing housing with other families, making frequent moves, and even becoming homeless. The most recent aarp survey indicates that older americans wish to "age in place" and yet, older residents are making premature moves to assisted living centers because their current housing is too large and demands too much time and money to maintain, and their current neighborhoods provide no other options. Statistics indicate that divorced mothers with children are often forced by financial necessity to sell the family house, severing children's ties to neighborhood and school -- which are important associations in the prevention of risky behavior -- and relocate often to housing that has little accommodation for them.

Historically, lower income Oregonians have counted on inexpensive housing as a way to balance their budgets. But by 1996, 45 percent of low income home owners and 60 percent of low income renters did not have affordable housing. What that means is that most minimum wage workers and welfare recipients are at serious risk of being unable to obtain acceptable shelter, unless they have some kind of subsidy. And right now in Oregon there is a severe shortage of subsidized housing available.

In 1996, 26,600 Oregon households were waiting for assisted housing -- a total of 75,103 Oregonians. Annual shelter counts indicate that between 7,000 and 10,000 households are homeless in Oregon on any given night. Meanwhile, reforms occurring at the federal level will only make things worse -- for example, hud's decision to close out expiring use permits., And the likelihood that the next congress will pass new section 8 eligibility restrictions.

The widening gap between income growth and housing costs has also contributed to the problem. Yet Oregon's strong economy makes this an opportune time to stabilize affordable housing in distressed areas and for at-risk populations.

I'm sure you know the statistics better than I do. But what I do know is that the current housing crisis is intolerable and unacceptable and it has very far-reaching implications for all of us. In fact, it has a direct or indirect bearing on

everything else we want to accomplish as a state.

The goals which lie at the heart of the Oregon challenge -- a superior education for every Oregon child, a reduction in juvenile crime, managing growth in a way that safeguards our quality of life -- all of these are potentially threatened by the housing crisis.

How can we expect a child to learn whose "home" is a fifth-wheel with no running water and no cooking facilities? How can we expect to teach a child who attends four or five different schools a year because her family's inability to pay rent causes repeated evictions?

How can we expect children to have the kind of stable home life that is so essential to reducing juvenile crime when they don't have a home at all, or have only a series of temporary homes, or a home that is unfit for human habitation?

How can we manage growth unless we provide affordable housing inside the urban growth boundaries, where most low-income people need to work? Many of these folks are moving from the welfare rolls to the workforce. How can we expect them to make that transition successfully without decent, affordable housing located near their jobs?

If meeting the Oregon challenge is important to our future -- and I believe it is -- then we cannot leave the housing crisis unaddressed. The work you people are engaged in is clearly a step in the right direction, and your efforts certainly deserve praise. But we all know that much remains to be done.

One of the main objectives of my administration is to improve Oregon's social and economic health in ways that will be sustainable over time. I believe that the most fundamental way to accomplish that goal is by investing in people -- by helping individual Oregonians to become as self-sufficient and productive as possible. The long-term health and stability of our communities depends upon it.

At last year's conference, you heard a presentation on the Oregon strategy for social support, and I understand that tomorrow you will be getting an update. So it might be helpful if I took a moment to review the principles underlying the Oregon strategy.

First, we recognize that not all citizens are equally productive and self-sufficient, and that many of them must rely -- temporarily or permanently -- on some form of support from others.

We have identified 26 core social supports which are most critical to achieving independence and productivity. One of these is adequate, affordable housing. For that reason, investments which would increase housing opportunities for high-risk, cost-burdened Oregonians would be a simultaneous investment in their independence and productivity.

Think about it. If these people didn't have to worry about where they would live or how they would pay for it, they would have much greater freedom to turn their energies elsewhere -- to add to their education and employability, to raise their children well, to contribute to their communities.

That is the ultimate goal of the Oregon strategy for social support. At the same time, we believe it is a shared responsibility among state and local, public and private partners, including individual Oregonians. Just as this is a problem which affects us all, so we must all be part of the solution. This is not something state government alone can accomplish.

What we're looking at, then, is a major shift in the way many state agencies fulfill their roles and responsibilities. In the past, the state has been widely and actively involved in providing direct services to those in need.

Under the new approach, the state would provide fewer direct services and would instead partner with communities in the design and delivery of the core social supports. The rationale is that because such services affect individual lives, they will be most effective if they are provided directly by local community organizations, which are more in touch with individual needs than the state could possibly be.

Let me turn now to some of the steps we are taking at the state level to address the housing crisis. This will also give

me the opportunity to announce some new and very promising partnerships.

First, we are making some internal changes within state government. We are assessing the work of all agencies that deal with housing needs of low-income Oregonians with a view toward eliminating redundancies and improving efficiency. I am also directing those agencies to use housing supports more strategically to increase the stock of low-income housing. Right now, some supports that target housing needs of low-income clients provide temporary rather than permanent relief. I am directing those agencies to explore whether some housing supports would be better targeted toward permanent solutions.

Another possibility involves finding ways to increase density in established residential neighborhoods, rather than looking to new developments, which are often at some distance from the workplace. While existing neighborhoods have tended to resist such a step, on the assumption that it will result in neighborhood decline, studies indicate that that is not necessarily the case.

In fact, greater diversity in a neighborhood, with increased density as a by-product, can be beneficial. It often builds a sense of community, by responding to today's wide range of household types, and by accommodating the varied social, economic, and physical needs of residents across the life-span.

Re-zoning to allow for multi-family dwellings and scaling down minimum lot size requirements so that property owners could subdivide and add a second dwelling are some of the possibilities. There is evidence from older neighborhoods that creative modification or downsizing of living space enables residents to remain productive community members.

Such steps would allow older Oregonians to stay in their own neighborhoods, in smaller homes, rather than being forced into retirement communities where they have no ties. Divorced mothers might avoid having to uproot their children by moving away to find cheaper housing.

We believe this is something worth considering, although let me emphasize that such changes must always be community-driven, not mandated top-down. But, we should find ways to encourage local communities to be more creative in fostering opportunities to increase the supply of affordable housing. And we will.

We are also exploring creative ways to expand the housing trust fund. For example, we might offer trust fund recipients the option of taking a loan, rather than a grant. We might raise the cap of the housing tax credit program. We might remove some of the restrictions on the trust fund's corpus investments. And although it is too early to make a firm dollar commitment, we are exploring the possibility of providing some funding in the budget to help capitalize the housing trust fund.

As for partnerships, we are initiating a public/private liaison to address the problem of expiring use affordability. We will use our interest and loan capability to do a guaranteed take on the units in question, which will allow us to extend their use as low income affordable units for another 30 years or so.

We are also establishing a partnership with us bank and the portland development commission which will provide funding for a pilot project that will help low-income home buyers with their mortgage payment for up to 4 years. At the end of that time, buyers will be expected to make their own payments, but this will get them started. If the pilot project is successful, it will be implemented statewide in my budget for the 2001-2003 biennium.

Finally, I am very pleased to announce a new partnership between Oregon's housing and community services department and Fannie Mae, the nation's largest source of home mortgage funds. Fannie Mae will be making us a \$1 million loan as a pre-development fund to build affordable housing. This is a very important and very encouraging state-federal partnership, and I will be formally signing papers of agreement later today.

In closing, let me re-emphasize how important I believe this issue is.

Housing is among the most essential "balustrades on the stairway of life." There are others, of course -- adequate childcare for working parents, alternative educational opportunities for disadvantaged students, early intervention with youth who may be leaning toward criminal activity. Yet decent housing is certainly near, if not at, the top of the list.

If it is true that the health of our communities depends on the integrity of our homes, then an obvious prerequisite is that people have homes -- homes that are both affordable and fit to live in.

Ensuring that they have that is an investment in people, and an investment in our future.

I want to express my personal appreciation to all of you for the work you are doing, and I assure you of my full support.

[Return to Governor's Office](#)

Governor John Kitzhaber
PSU Conference on Columbia River Governance
October 15, 1998

Good Morning and thank you for having me here today.

I'm pleased to be on the same dais with Sen. Mark Hatfield. Without the Senator's work, we would be decades behind in the arduous task of recovering fish and wildlife in the Columbia River Basin.

His pioneering work and leadership has brought us to the point we are today, where we can begin to debate how to change and improve the governance structure for the Columbia River.

When Congress enacted the Northwest Power Act in 1980 under the Senator's leadership, the Northwest Power Planning Council was created to develop a plan to mitigate for fish and wildlife losses caused by dams.

Then when Snake River sockeye salmon were listed as an endangered species in 1991 and were followed by Chinook in 1992, the Endangered Species Act obligated the National Marine Fisheries Service to develop a recovery plan.

But herein lies the problem: In neither instance has a plan been created that meets what I consider to be the criteria for success: comprehensive, grounded in science, economically sound, culturally and socially sensitive, and created by the region in a fair and inclusive process.

Without such a plan, problems have persisted and, in some instances, have gotten worse:

Environmental degradation in the Columbia Basin has continued, measured in diminishing survivals of already listed salmon stocks, and in the listing or potential listing of additional species, such as steelhead and bull trout.

Further, "grass roots" local recovery efforts have been increasingly marginalized in favor of an entirely "top down" federal effort. This has added to public frustration and cynicism, and has swamped regional recovery perspectives in a sea of federal agency process and mandates.

Continuation of the environmental and species decline and uncertainty about the future have caused the region's states, Indian tribes, and private interests to mistrust one another, and ironically, to compete with one another for influence in the federal recovery process which they unanimously disparage.

Our failure to achieve a regional plan that is comprehensive, grounded in science, economically sound, culturally and socially sensitive, and is fairly and inclusively created by the region, is really a failure of the region to have in place a system of regional governance up to the task.

Our current regional governance structure —the Northwest Power Planning Council — has failed to deliver, not because of a lack of effort on the part of the well intentioned and serious people involved in the Council's work. Rather, the Council has failed because it lacks three things that, individually and in combination, are necessary to craft and

implement a regional plan calculated to succeed: the proper mission; the proper representation; and the proper authority.

The proper mission of our new regional governance structure must be nothing less than to create and see implemented the plan for recovery of fish and wildlife in the Columbia Basin through restoring the environment. As I said earlier in my remarks, the plan must be achieved collaboratively and must be scientifically grounded, economically sound, and culturally and socially sensitive.

Proper representation must include the Basin's states and Indian tribes. To improve collaboration and coordination, there should also be a role for the federal government, and perhaps even for Canada. The public must also have a direct and well-established role in the processes and decisions of the regional governance structure.

Finally, the proper authority of a new regional governance structure must be broad enough to create the plan and make sure that it is actually implemented. This authority must include the ability to influence management of the hydrosystem, fish harvest, hatcheries, and habitat.

For the past year, the region's states, tribes, and private interests have worked with the federal government to bring about this long-overdue, improved regional governance and decision making.

The effort grew out of a meeting I hosted in Portland in June of 1997 for the Governors of Washington, Idaho and Montana, the heads of the Columbia Basin's thirteen federally-recognized Indian tribes, and several high level federal officials. All parties at the meeting recognized that the lack of a comprehensive and well-conceived plan had left the region with little more than a "laundry list" of recovery efforts and measures that were, at best, uncoordinated, and, at worst, sometimes unproven and inconsistent.

For months, we worked to achieve the better governance structure through the "Three Sovereigns Process," which was focused on a consensus structure to be created through a Memorandum of Agreement among the states, tribes and federal agencies.

That structure is now called the Columbia River Basin Forum, and currently the draft Memorandum of Agreement that would create the Forum is under review by the parties.

The Forum would be an improvement over current regional governance, because its mission and representation are improved. Its mission would be to consider and address all factors affecting Columbia Basin fish and wildlife and related habitat. It includes direct representation for the states, tribes and federal agencies, with additional representation for the public provided through well-described outreach and involvement processes.

The other significant positive attribute of the Forum is that because it requires no legislation to create it, it would be immediately available as a means for the region to collaborate on pressing issues, first and foremost of which is the NMFS 1999 decision on hydrosystem reconfiguration.

On the other hand, the major lacking of the Forum is that because it is not legislated and therefore allows all the various federal, state, and tribal agencies currently with decision making authority to retain that authority, the Forum would have no greater authority to plan or implement a regional plan than does current regional governance.

But even with its mission simply to have all parties discuss issues, and with its authority only to issue consensus recommendations, we should not underestimate the regional benefits from the Forum in terms of trust and relationship building, and greater coordination. Nor should we underrate the potential power of a regional consensus recommendation to influence an agency's decision. For these reasons I continue to support creation of the Columbia River Basin Forum as soon as possible.

Because some parties were unsatisfied with the Forum, the governors of Washington, Montana, Idaho and I have initiated a public discussion to determine what a better long-term structure might be. That process is well underway.

I met with the other three governors most recently on October 5 in Boise. We have established an aggressive schedule for ourselves and our staffs to work through the issues of mission, representation and authority and, if possible, to find

the common ground on those issues that could translate into draft legislation to be submitted to Congress.

In closing, let me say a few words about the notion of vesting a regional body with real authority to meaningfully guide the management of an ecosystem as diverse and as significant as the Columbia River Basin.

Authorizing a regional body will no doubt be the most controversial aspect of the new governance structure we seek. But controversy can be a good thing, to the extent it motivates all of us to think critically, and to ask and seek answers to the tough questions. Let me pose two such questions, and provide my answers.

First, will a regional governance structure with real authority mean a relaxation of federal environmental laws? No, the authority given the region must be to meet the highest standards of federal environmental laws, not authority to ignore or otherwise deviate from those laws.

Second, if the standards to be met will remain unchanged, why does it matter whether the authority rests in the region or in Washington, D.C.? The answer to this question is really at the heart of the Oregon Plan for Salmon and Watersheds. The Oregon Plan has unequivocally demonstrated how regional authority, and the "bottom-up", collaborative approaches that regional authority can promote, truly empowered people to assume the roles and responsibilities of environmental stewardship.

And finally, we should not forget that with authority come two other things: responsibility to exercise the authority properly and accountability for what we do or fail to do.

Because right now, it is difficult to hold anyone accountable for work in the Columbia. We have not made the politics or the costs of recovering salmon explicit. That is the ultimate goal of the process we have embarked upon.

For too long, we have labored under the assumption that we can recover salmon without incurring political or economic costs. We can't.

The bottom line is that effective salmon recovery, based on sound science, is going to cost somebody something. What we haven't done is figure out who or how much.

Until we do that, we cannot really make an accountable decision.

Until we do that, we cannot really know what salmon recovery costs.

Until we do that, we cannot really make progress on saving salmon.

A new regional governance structure of the type I've discussed with you today is, in my judgment, the only real way to make this progress. I invite you to join me in working on this significant effort, and, together, make a difference for the generations that will inherit this great river and the fish and wildlife that call it home.

Governor John Kitzhaber
Minority Over-representation Speech
October 14, 1998

Before I begin, let me take just a moment to recognize the special contribution of one of our participants -- Lonnie Jackson, who currently manages OYA's Office of Minority Services. His recent book, Gangbusters, not only offers valuable insights into gang behavior, but also presents a number of intervention strategies. It's something we can all learn from, and I'd be honored, Lonnie, to have you autograph my copy.

I am delighted to welcome so many of you back to this second Summit on Minority Over-representation in Oregon's Juvenile Justice System. When we met a year ago, you made voluntarily commitments to take proactive steps toward correcting what is essentially an unfortunate and unacceptable racial imbalance.

I want to commend the work you have done over the past year to carry out those commitments -- things like . . .

- Increasing the awareness and sensitivity of your colleagues and staffs to minority issues and the possibility of bias, even if it's inadvertent;
- Establishing programs to increase cultural competency; and
- Expanding minority hiring practices.

This is important work which must continue. Much of it has involved looking inward, by examining your own programs and policies. Obviously, this is a necessary first step. But today it's time to take the next step and look outward, by starting to develop programs that will actually help minority youth turn their lives around. Some of your groups have already started that process, for example by developing extra learning opportunities for minority students, or by trying to ensure that minority families who seek help from social service agencies get the kind of help they need.

Later on today I'll be meeting with your groups to talk about what your next steps should be. And as an introduction to that part of the Summit, I'd like to consider the whole problem of minority over-representation from a different angle -- actually from a broader perspective.

Thirty five years ago, Martin Luther King, Jr. stood before a crowd of 100,000 people and voiced a dream: a dream of a world where people would be judged by the content of their characters and not by the color of their skin.

Since then, we have come a long way toward realizing that dream. Today American minorities occupy positions of leadership in every walk of life and are some of our most respected community members. Yet we have not come far enough.

Because in order to be fairly judged by the content of your character, you have to stay on the right side of the law. Otherwise, you are judged -- and rightly -- by your actions. And sometimes -- wrongly -- by the color of your skin.

That's why I say that, in spite of the progress we have made, we have not come far enough. As long as young people of color are over-represented among our children at risk, as long as they are disproportionately present at every stage of the juvenile justice process -- from arrest through incarceration -- then we have not come far enough. We have not done enough to give them what every child deserves: an equal opportunity to become a productive, law-abiding adult. Nor have we done enough to protect those who fall victim to the crimes committed by these kids.

No child asks to be born. That's our choice, not theirs. But once they are, it is our responsibility -- as individuals and as a society -- to see that they have every possible opportunity to grow up well, and to develop their characters in positive ways, so that they in their turn can help make this a better world.

Unfortunately, not all of our choices have had that effect. It is very clear to me that some of our choices have diminished our children's opportunities rather than expanding them.

One of these choices is our failure -- for whatever reason -- to intervene with many of our troubled youth before it's too late, before they get into trouble with the law, before they ruin their lives and the lives of others.

Instead, we have chosen to focus on punishing these kids after they cross the line. Since I took office we have doubled the state juvenile corrections capacity by building five regional facilities and two youth accountability camps. It is estimated that we will spend \$1 billion by the year 2005 on the Oregon Youth Authority -- the state agency which now has jurisdiction over youthful offenders -- in other words, the kids we failed to help in time, the ones who have to be locked up.

Unless something changes, we can expect in the next two years to see a 19 percent increase in the number of youngsters who become involved in our juvenile justice system, and a lot of this has to do with changing demographic trends.

We all know that Oregon's population is becoming more and more diverse. African Americans, Asian Americans, Native Americans, and our growing Hispanic residents all bring with them a cultural diversity which can enrich our lives and enlarge our perspective. But there is a downside as well -- not only for the minorities themselves, but for all Oregonians. These people -- and especially their youth -- have a much higher than average chance of becoming involved with the wrong side of the law.

This may reflect a bias in one or more parts of our justice system, and to the extent that that's the case, it has to be dealt with. Many of the commitments made at last year's Summit had that goal. But even that is not enough. We must address the factors which drive our minority youth into trouble in the first place. We must address the social conditions which propel kids to cross the line of the law. That must be our focus this year, even while our other efforts continue.

Let us be clear. This is not just a law enforcement issue. And it is not even really just a juvenile crime issue. Its implications are far broader than that, and they threaten the entire fabric of our society -- and of our future.

I am convinced that juvenile crime -- whether it involves majority or minority youth -- is a symptom. We have to treat the symptom, yes. People who break the law -- whatever their age and whatever their ethnic background -- must be held strictly accountable.

But we will never eradicate the epidemic of juvenile crime or even reduce it significantly unless we are prepared to treat the causes. And that will take the active involvement of every one of us who comes into contact with troubled youth.

We all know what the causes are: poverty; unstable family backgrounds which include a history of domestic violence, substance abuse, and criminal records among other family members; negative peer associations; and school failure and drop-out. We know exactly which kids are at risk. They live in our communities. They go to school with our children. And we also know that these characteristic risk factors appear to be especially prevalent among minority youth.

But the question I want to put to you is this: How can we possibly say that children with these strikes against them have an equal opportunity to mature into responsible adults? To turn our backs on these kids, to intervene only after they have turned in the direction of crime -- that to me is a crime in itself -- a crime committed by us as a society against our children and our future.

I'm not willing to stand aside and just watch that happen. Neither are you. That's why we're here today.

And we know what to do. It's simply a matter of revising our priorities. It's a matter of seeing that the next dollar we spend on public safety goes toward keeping a child from walking through the front door of a prison, rather than toward a cell to lock him up in.

It's a matter of expanding early childhood programs that will help kids enter school physically and emotionally healthy and ready to learn.

It's a matter of intervening with troubled families through community-based programs BEFORE children are damaged beyond repair.

It's a matter of bringing our schools into the loop of juvenile crime prevention planning, and of giving them the resources they need to ensure that ALL students have a chance for educational success.

It's a matter of stemming the tide of domestic abuse, since it is in the home that patterns of violent behavior are passed from one generation to the next.

And it's a matter of coming to grips with the enormous problem of substance abuse, which takes lives and ruins lives and provides endless fodder for our court and correctional systems.

We can do better than that. We must do better than that.

And, with your help, and the help of other dedicated Oregonians, we WILL do better than that.

Our children -- ALL of them, majority and minority alike-- are our pledge to the future. They transmit our values, our hopes, our highest aspirations to a time we will not live to see. But they will also transmit our mistakes, our errors of judgment. If I had my way, these would be few and far between. And there is no need to repeat them.

The bottom line is that children are our responsibility. That they are here at all is because of us. And we know we have the ability and the means to ensure that they make the right choices.

In closing, let me refer once more to Martin Luther King -- obviously one of my own personal heroes. While he sat in a jail cell in Birmingham, Alabama -- himself the victim of racial discrimination -- he wrote that we are all "caught in an inescapable net of mutuality." In other words, our lives and our fates, for better or for worse, are bound together -- by our choices. That goes for the young people whose crimes reverberate throughout society. And it also goes for us, who are in a position to craft a solution.

Acting separately, we can never hope to reduce the terrible epidemic of juvenile crime, or to reverse the shameful over-representation of minority youth in our juvenile justice system. But if we work together, then I believe we will ultimately succeed.

Let me thank you again for your efforts so far, and encourage you to take the next steps. I can assure you of my full support.

Governor John Kitzhaber

Governor Kitzhaber's Education Agenda

September 15, 1998

Good morning. It's a pleasure to be with you again and to join the AEA in considering not just the role of education in our lives but more importantly, some of the things we can do together to ensure that the education we offer to Oregonians of all ages will prepare them to meet the demands of today's world.

In the early years of this century, the American novelist H. G. Wells wrote, "Human history is becoming more and more a race between education and catastrophe."

Wells could not have foreseen the vast social, economic and technological changes that have brought us to the very brink of the 21st century. And yet his words are even more true today than when he wrote them.

We all know that there is an inseparable link between the quality of our education systems and the quality of our future. No one would argue otherwise. But the real question is -- what are we prepared to do about it? Because if we genuinely intend to take charge of our own destiny, then we must back our words with action.

That's what I'd like to focus on this morning -- some of the things I am proposing for the entire spectrum of education in Oregon, and for which I hope I will have your support.

But before I come to that, I'd like to share with you my own personal credo about education -- some of the things I most strongly believe -- because they form the basis for the actions I am convinced we must take -- together.

First of all, I believe in education. I was very fortunate to grow up in a family of teachers who never let me forget that education was in fact the key which alone could open not only the doors of opportunity, but also the gates of vision.

Not every child -- either then or now -- is as lucky as I was. But fortunately, this nation has from its very beginnings been committed to making a public education available to every child.

We may come from diverse backgrounds; from different countries; from different cultures; from different sides of the track. But by and large over the years we have shared a common experience of public schools.

That's the second thing I believe in: not just education, but public education, because in my view, it is the best chance we have of ensuring equal opportunity for all our children.

My fear is that if our education system is splintered into an interest-based set of private schools, the kids who need the most help will just fall through the cracks. They will not have an equal opportunity to become the next generation of doctors, scientists, writers, and thinkers -- or our next generation of leaders.

We cannot allow that to happen. And that's why I believe in public schools, publicly funded, available and open to all, and of the very highest quality.

Third, I believe that education has both an extrinsic and an intrinsic value. Obviously, it paves the way to economic security. But we must remember that in addition to being members of the workforce, we are also parents and citizens of a free society. Our schools are much more than mere job-training centers and employment agencies. They prepare us not only to make a living--but to live, in the best possible sense. We must never forget that.

Finally, I believe that education is in fact a cradle-to-grave proposition -- not a collection of separate parts, but a continuum, where each segment must build on what has gone before, and lay the foundation for what will follow. If our children aren't healthy and ready to learn when they get to school, it won't matter how superior our K-12 programs are. If our high school graduates are unable to attend a college or university because there isn't room or because of fiscal, geographic, or cultural barriers, then no matter how well prepared they are, we cannot possibly produce a high-quality workforce for the 21st Century. And because today's reality is that people can expect to change jobs and even careers more often than ever before, the availability of life-long learning is an absolute necessity.

These are some of the things I believe about education. They have shaped my priorities and guided my decisions during the entire time I have served as governor. I am now asking for the privilege of serving for another four years, and one of the main reasons is my determination to meet the challenges which face our education system, because I believe that our very future hangs in the balance.

What are these challenges?

There's the challenge of ensuring that our young children enter school healthy and ready to learn.

There's the challenge of ensuring that our primary and secondary students achieve real mastery of the basics and are also able to apply what they have learned to real-life situations.

And there's the challenge of creating greater financial and geographic access to post-secondary learning for all Oregonians, and the challenge of increasing the responsiveness of our post-secondary institutions to the needs of students and their potential employers, and of improving the opportunities for life-long learning.

Now let me just briefly outline some of my proposals for meeting these challenges. In some cases these are a matter of continuing work we are already engaged in, or of taking the next steps in a process we have already begun.

First -- the challenge inherent in the early childhood years. It's no secret that children from disadvantaged backgrounds not only come to schools with problems of their own, but they can disrupt the learning environment for other students as well. It is therefore imperative that we find ways to nip these problems in the bud -- before they begin to erode educational opportunity for everyone.

And we have already made a strong beginning. The Oregon Pre-Kindergarten program, which provides early education and support services to preschoolers from low-income families, now covers 47 percent of all eligible children and our goal is to expand that coverage to meet the benchmark of 50 percent during the next biennium.

We have also expanded health care coverage to children up to 170 percent of the federal poverty level. Our Early Intervention and Special Education programs now serve an additional 1900 children with identified disabilities. And through the Oregon Healthy Start program we are providing support and counseling for new parents in an effort to intervene and change behaviors before problems develop.

In the upcoming biennium we will continue to improve the effectiveness, coordination, and scope of our early childhood programs. In particular, we will explore creative uses of available funds and will employ "best practices" to serve more children and families in need and to help ensure that when these children reach school age they are genuinely ready to learn.

Second -- the challenge posed by primary and secondary education. We know that success in the 21st century will require both a wider range of knowledge and a higher level of skills than has ever before been necessary. As recently as ten years ago it was possible to drop out of high school and still get a good job working in the timber industry, for example.

Those days are gone forever. There are fewer and fewer low-skill jobs that pay enough to support a family. Even a high school diploma, which can still be earned with a "D-" GPA in classes totaling 22 credits, is no longer any assurance of success.

No, today's students must actually master the basics, meet high academic standards, and above all be able to apply what they have learned.

The Educational Act for the 21st Century is a means to that end, and we are now engaged in a comprehensive process of school transformation that will help students -- all students, not just the gifted few -- rise to these expectations.

Over the next four years I propose to continue that process through personal leadership in working with school boards, administrators, teachers and parents in implementing the Act. I will work to help the public understand the changes we are making and why they are so vital to our children's future.

At my request, the Association of School Superintendents has developed a list of factors that are most likely to improve student performance -- such as reduced class size, professional development, readiness to learn, remediation, alternative learning, and improved technology. This list was confirmed in my meetings around the state with school and community leaders.

I am now working with the superintendents, along with the OEA, COSA, OSBA and the Oregon Business Council, to develop a proposal which uses the superintendents' findings as a basis for setting targets which school districts will be expected to meet in terms of improvements in student performance.

I am proposing that in the coming biennium any additional funding for K-12 schools -- that is, over and above the base allocation -- must go towards those activities that can be expected to result in increased student performance. In that way both the schools and the legislature can be held accountable.

Let me add that I will also provide support for the development of tools that will help us better identify the strengths and weakness of individual students, as well as support for filling the most critical projected teacher shortage areas. We have already funded the development of a consolidated data base on a pilot-project basis which will allow us to begin comparing expenditures among Oregon school districts and examine their activities and outcomes. the next step is to expand that data base to include all school districts in the state and will allow for further research into the connections between activities, outcomes, and costs.

Third -- the challenge of post-secondary education. I should say "challenges," because in fact there are several. For one thing, we are making a number of internal changes in the State System of Higher Education in an effort to increase effectiveness and accountability.

Today higher education is truly a buyer-defined market, wherein buyers -- which means students and their potential employers -- are demanding programs that fit their needs. Yet up until now the Oregon University system's tendency to focus on central authority has prevented it from focusing as much as is now necessary on the requirements of the customer.

I have directed the State Board of Higher Education to address these issues. And I have also charged the Board to develop a new financing system that will allow tuition to follow the student, which will make institutions more responsive to the market and allow state policymakers to make explicit decisions regarding what the state should and should not subsidize.

But for your purposes in particular, I want to stress my personal commitment to a superior, home-grown Oregon workforce.

It is unacceptable for our high school graduates to have to go out-of-state to attend college because there isn't room here or they can't afford it or they can't get the courses they need. It is unacceptable for our high-tech industries to have to go out-of-state to find qualified employees. It is unacceptable to saddle our children with a debt burden of \$20,000, so that

they have to spend a good number of their working years paying off the loans that allowed them to get a college degree and a good job in the first place.

The challenge is to change all that, and here are some of the things I propose to do.

We will continue the 1997 freeze on college tuition, which had nearly doubled between 1990 and 1996. We will continue to increase the availability of distance learning, made possible by new technologies, so that geography is no longer a barrier to earning a college degree. We will continue to expand the availability of on-site customized training to Oregon employers and their employees through our colleges and universities -- something which is essential to continuing education and lifelong learning.

In addition, I propose to establish a state scholarship loan program for High School graduates who achieve the Certificate of Initial Mastery and to explore the possibility of establishing need-based grants for students who earn a CIM and also meet financial need criteria.

Let me say again that we will continue to move toward making our post-secondary institutions more accessible, more flexible, more accountable, and above all more responsive to the needs of Oregon industries and Oregon employers.

In closing, I want make it clear that I do not underestimate the difficulty of meeting these challenges. But I can tell you in no uncertain terms that we will not back away from them on my watch. We will go forward, whatever it takes, and we must go forward together.

What I mean is that the economic outlook for the coming biennium does not look quite as promising as it did a while back, and right now we are working very hard to re-prioritize within the existing budget. At the same time I cannot emphasize strongly enough that the proposals I have just outlined for strengthening and updating the whole continuum of our education system are extremely critical to our future. I believe we can get there, but I can't do it alone. I can't do it without broad public support.

If you are serious about wanting -- about needing -- a first-class workforce for the 21st century, then you must do your part. None of this will happen unless you step up to the plate and put your support behind these programs and these changes, and unless you make it clear to the 1999 Legislature where you stand.

It's time to challenge some old assumptions -- the assumption that you can get something for nothing, that hard choices can be avoided or postponed, that there are easy answers to difficult problems, that someone else will take care of things for you, that actions by individuals can't make a difference.

Today I challenge YOU to make a difference. Because this campaign and the upcoming election are not just about choosing a governor or a legislature. They're about choosing our future.

That future will be a losing race between education and catastrophe only if we refuse to do what we must do. I pledge to do my part, and I hope I can count on your support.

Governor John Kitzhaber

Willamette River Basin Speech

May 5, 1998

Thank you for inviting me to speak this afternoon. Today I want to talk about the current condition of the Willamette River Basin, a condition which represents a very real and urgent threat to our quality of life. I want to focus on what we can do about it -- in fact, what we must do, if we are to restore the health of this mighty, life-giving river system for future generations.

The watershed of the Willamette includes some of the most fertile land in the United States, and produces a broad range of high-value agricultural products. The valley is also the hub of the state's population and economy, accounting for 69 percent of the state's population and 75 percent of the state's employment.

The Willamette River -- its tributaries, its fish habitat, the opportunities it offers for commerce, agriculture, industry, and recreation -- symbolizes, in a way, the quality of life people associate with Oregon. If we lose this part of our heritage, we will lose something irreplaceable and I cannot believe that anyone wants to see that happen. Yet that is the way we are headed. And we have been there before.

In the 1930's, the lack of oxygen in the Willamette River could kill a fish in a matter of minutes and long stretches of the river were virtually lifeless, leading to a public outcry and the first major steps to improve the water quality of protect public health.

By 1970, however, growth pressures again threatened water quality in the valley. Once more an initiative to clean the Willamette River energized the state and served as the centerpiece of a major civic movement toward greater environmental sensitivity. Led by Governor Tom McCall, Oregonians came together to reduce pollution from cities and large industries, to manage and plan for growth in the valley and to establish a "Greenway" along the Willamette.

The images of 20 or 40 years ago -- pipes dumping industrial waste and municipal sewage directly into the river, fish dying within minutes of exposure -- are, thankfully, behind us. However, protecting our environment is not something we can simply do and walk away from; it requires constant vigilance. Today, the Willamette faces threats every bit as serious as it did in Tom McCall's day. But these new threats are far more complex.

More than 1,500 miles of the Willamette River and its tributaries do not meet national water quality standards. Hazardous dioxins, PCBs, and pesticides threaten the use of drinking water supplies. Dangerous amounts of mercury and other toxics result in routine warnings against eating bass and squawfish.

In short, the Willamette River is slowly dying. The cause is not a single grievous wound inflicted by a handful of big polluters, but a thousand cuts inflicted by tens of thousands of individuals just like you and me.

Runoff from cities, farms, and lawns -- often known as non-point source pollution -- is pouring dangerous chemicals into the river. Construction in flood plains and riparian zones is destroying native habitat and crippling the Willamette River's capacity to regulate itself and to support fish and wildlife. And the region's growing population, which is expected to double in the next 30 years, is adding new pressures every day.

To begin to address this pending crisis, I appointed the Willamette River Basin Task Force in June, 1996. Its charge: to examine potential water quality problems and develop recommendations on how they can be solved. Chaired by John Miller, this was a broad-based group including representation from many sectors including industry, agriculture, conservationists, environmentalists, scientists, urban representatives, educators and utilities.

The Task Force report, issued in December, 1997, contains a blueprint for improving water quality in the Willamette Basin. But as we were beginning to plan for its implementation, we got another wake-up call.

In March of this year, the National Marine Fisheries Service (NMFS) announced it would seek federal protection for steelhead trout in the lower Columbia River which included the Willamette up to Oregon City. In the near future, NMFS is also expected to seek protection for chum and Chinook salmon in the lower Columbia and for steelhead and Chinook in the Willamette above the falls at Oregon City. This means that within a year, the entire Willamette River Basin -- from Portland to Eugene and from the west Cascades to the west Coast Range could be under Endangered Species Act listings.

These are unprecedented actions. They represent one of the first applications of the 25-year-old Endangered Species Act in a major American city. Portland is now one of the few large urban area in the entire nation with waters inside its city limits through which an endangered species migrates. The additional listings will affect an area that is home to nearly 70 percent of the state's population.

For many years, many people in urban Oregon have believed that the Endangered Species Act was something that happened in rural Oregon and had an impact only on those involved in the natural resource industries. That is no longer true. The Endangered Species Act is coming to the city.

I can put it no more plainly than by saying that we are drifting toward disaster -- unless we take action NOW. I'm not just talking about losing the river; I'm talking about losing control over our own destiny. Because if we ourselves don't act, and act soon, someone else will, probably in the federal courts.

The issue here is not whether there will be Endangered Species Act listings in the Willamette River Basin -- that has already happened and more will come -- the issues is who will be responsible for developing the recovery plan -- Oregonians or the federal courts?

To me, we will achieve more for the watershed and for the fish if Oregonians develop and implement a plan in which they have ownership. It is this local cooperative effort to restore watersheds that helps build the kind of grassroots support needed for long-term environmental stewardship. It makes people more aware of the environmental consequences of their action on their land.

As we approach the 21st Century our environmental problems are becoming more complex and I believe it will be increasingly important to gain this kind of buy-in, ownership and support from individual citizens. Problems of point source pollution, for example (the major issue in the last river clean up in the 1970s), lend themselves well to a regulatory approach -- and that is exactly what Governor McCall did. But reducing non-point-source pollution -- one of the major challenges facing us on the Willamette River today -- will require far more than simply passing laws and regulations. It will require sustained environmental stewardship -- a long term commitment to change behavior -- by hundreds of thousands of people living in the watershed. Either we all own part of cleaning up the Willamette, or it won't happen.

That is not to say that there is no longer a place for the more traditional tools of regulation and litigation. We will always need an underlying framework of environmental law and regulation. We will always need recourse to the courts. And I am well-aware of the important role that litigation has played in advancing environmental quality over the last decade.

But we are entering a new era of environmental politics -- an era where the very nature and complexity of the problems we face challenge us to seek new strategies for success -- particularly those that call for, and result in, greater individual responsibility and accountability for our air, land and water. And that is what I am offering you today.

During the last month I have met with more than 125 leaders throughout the Willamette Valley -- local and state elected officials, city managers, representatives from agricultural, conservation and business groups. I wanted to discuss with them the threats hanging over the Willamette River Basin and to consider how we might respond.

What did I learn from these discussions?

I learned that there is tremendous uncertainty about how the Endangered Species Act will affect the Willamette Valley and its economy. Already community leaders are concerned about what federal environmental laws may or may not require and how they might affect the cost of housing, electricity, and drinking water.

I learned that local leaders and officials don't want to wait for the federal courts to force a clean-up of the Willamette River. They are ready to act now. Indeed a large number of efforts are already under way, ranging from Portland's \$700 million sewer reconstruction to the Clean Water Works to the Healthy Streams Partnership.

But perhaps most importantly, I learned that these people and the organizations they represent know that they cannot restore the River Basin by themselves. They want to work together, and in fact they believe their success depends on it, but at the moment there is no structure in place that would enable us to mount a concerted, collaborative effort.

So that is where I believe we need to begin. We need a plan to improve the water quality of the Willamette River Basin and rebuild its fish runs. To succeed, such a plan must help communities comply with federal environmental laws -- especially the Endangered Species Act and the Clean Water Act -- it must build on existing local and regional efforts, and it must promote collective action.

But it must also do more than that. Restoring the health of the Willamette will require those of us who make this region our home to change the way we live and work in ways both large and small. It will require change at the personal level.

That is a challenge which is primarily cultural -- not regulatory. It requires no less than a new environmental ethic. In fact, visions are never achieved through rules, regulations and restrictions alone. They can only be reached through positive, proactive steps. And that kind of action is most likely to happen when a community makes it a priority, not when some outside party makes it a mandate.

And, we already have a model for that kind of approach, in the Oregon Plan for Salmon and Watershed Restoration which was adopted last year by the Legislature to restore salmon and steelhead in coastal streams.

The central idea behind the Oregon Plan is this: that we can accomplish more through education and cooperation than through a top-down, federally mandated approach. The Oregon Plan therefore relies on grass-roots efforts by watershed councils, voluntary measures by agricultural and timber industries, as well as by individual private landowners, and better enforcement of existing regulations.

I believe the same spirit must guide our efforts to restore and revitalize the Willamette Watershed. And I believe there are three steps we can and must take immediately.

First, we need respected citizen leaders who can oversee the preparation of a Willamette Restoration Plan. They must have excellent communication and collaboration skills and a strong commitment to improving the region's environmental health.

As a matter of fact, such a group already exists -- the Willamette River Basin Task Force. I believe that this task force -- if reorganized to broaden its membership in conjunction with efforts underway by the business community -- could easily serve as a board of directors for the preparation of a Willamette Restoration Plan.

Second, we need a highly qualified staff of technical experts, probably a dozen people in all, who can evaluate the Basin's current environmental problems, assess existing efforts to solve them, and propose strategies to plug the gaps. And this staff must know how to work with a wide range of interest groups and stakeholders.

Again, we are fortunate to have such people right here in Oregon in local, state and federal agencies, at our colleges and

universities, and in the private sector. We must assemble them into a technical team over the next four to six weeks.

Third, we need to find a way to pay for Phase I -- the initial development of the plan itself. Resources will be needed for staff salaries, office space, and equipment. We must also begin thinking of how to fund Phase II -- the plan's actual implementation.

Last week I was in Washington, D.C., where I met with several cabinet members and representatives of a number of federal departments, including the Department of the Interior (which oversees US Fish and Wildlife and BLM), the Department of Energy, the Department of Commerce (which oversees the NMFS), the Department of Agriculture (which oversees the US Forest Service) and the Environmental Protection Agency. I also met with officials from the Office of Budget Management.

As a consequence, I am pleased to announce today that the federal government has pledged to be a partner in our effort to restore the Willamette River Basin to health, and has committed \$1 million to Phase I between now and March of 1999.

What we have is an opportunity -- and federal support -- to develop a state-led recovery and restoration plan. We cannot afford to wait. By next spring, federal regulators are required to begin making decisions about the steps they will impose to restore this region's fish runs. During the same period, our legislature will be considering the state budget for the next two years, including any requests for state-funded recovery programs for the Willamette Basin. That means we must have Phase I of a Willamette Restoration Plan ready by March at the latest.

That's a tight deadline for a big job. Can we do it? Our record suggests that we can. Already we have produced a statewide program to bring Oregon's rivers and streams into compliance with the Clean Water Act. We have also drafted two major fish recovery plans for the Oregon coast.

It's true that the problems facing the Willamette are more difficult and complex than those of the Oregon Coast. In addition to agriculture and forestry issues there are hydroelectric power and flood control dams on tributaries, erosion and channelization issues, as well as an urban component. It's also true that what we do here -- or fail to do -- will have a far greater impact on a much larger number of Oregonians. And it's true that preparing a restoration plan for the Willamette River Basin is only a first step. It will take years to reverse the harm caused by 150 years of diking, damming, and development.

But this will not be the first time Oregonians have tackled what seemed an almost impossible challenge -- and come out on the winning side. Many of us here this afternoon are old enough to remember what the Willamette River was like in the 1960s, when it served as a sewer for paper mill wastes and raw sewage. We also remember how Governor Tom McCall energized Oregonians to end that pollution, manage and plan for growth in the Valley, and establish a greenway along the Willamette.

We've done it before, and we can do it again. Not because the Endangered Species Act and the Clean Water Act require it -- although they do. Not because federal courts can compel it -- although they can. But, rather, because it is the right thing to do -- for Oregon, for ourselves and, most importantly, for our children.

The Willamette River Basin is an integral part the "Oregon Mystique." It is a very special part of our heritage. It is bound up in our identity as Oregonians. As such, it deserves every ounce of effort we can put forth to ensure that we transmit it as a fitting legacy for the generations to come.

I hope I can count on your support in meeting this challenge.

Governor John Kitzhaber

Senate Bill 100 Birthday Speech

May 1, 1998

Good evening.

It is always good to speak at a birthday which isn't your own.

And it's always good to be surrounded by your friends in a celebration of something so undeniably Oregon in its essence -- our statewide system of land use planning.

I realize most of you in the room have heard me speak a number of times about land use planning. You know I am a solid supporter and that I have been unwavering in my willingness to fight bad bills in the Legislature and veto them if they come my way.

So, tonight I don't want to spend too much time going over the glories of land use planning. Instead I just want to share two observations with you about our land use planning system.

The first is that we cannot rest on our laurels.

It is certain that the law we celebrate tonight has helped preserve farm and forest land. It has helped contain sprawl and it has helped focus growth and promote compact development.

But -- not to put too fine a point on it -- if this law is so effective, how did we ever get to the point that the entire Stafford area is a suburb with five-acre lots?

How did we get to the point that a huge Ware-mart distribution center was allowed to be sited on some of the best farmland in the world west of the freeway at Woodburn ?

And how did we get to the point that jobs and affordable housing are separated by several miles, creating additional pressure on our roads?

It seems to me that these are all situations that 25 years ago, we had hoped to be able to avoid, and we haven't. Now, don't get me wrong. I do not think land use has failed. But I do want to give you a wake up call: with the pressure of population and economic growth, we will have to work even harder than in the last 25 years to make sure that land use planning means something on the ground.

And we will have to continue to innovate to protect the landscape we cherish here in Oregon. I have become increasingly convinced during my first term that we need to take new and bolder measures to protect Oregon's special places -- especially the Oregon coast.

If I am fortunate enough to be granted a second term, I will focus a great deal of energy on this task. I do not want to finish my time as governor only to discover that our Oregon coast has become overbuilt, locked up and inaccessible. I do not want to leave office only to discover that our special places have become special resorts.

The second thing I want to tell you is that the biggest threats to our land use system are not from its opponents, but from its friends.

Let me offer you a comparison.

Just last month, the National Marine Fisheries Service listed steelhead as endangered in the Lower Columbia River -- which includes the Willamette in downtown Portland. What this means is that for the first time, the endangered species act will be implemented in an urban area.

Throughout its history, the ESA has always been something that happened in the country, not the city. And it has always been something that happened to farmers and foresters, not to urbanites.

With this new listing, that will change. And the challenge will be to maintain the support the ESA enjoys in the city as the people in the city and suburbs begin to pay the price for protecting fish and restoring watersheds.

We face the same challenge with land use planning.

It is not too far a stretch to say that for most of the life, land use planning in Oregon has been something which has primarily affected largely rural Oregonians, placing new restrictions on how farm and forest can be managed and developed.

Now, with surging growth and pressure to expand urban growth boundaries, land use planning is coming to town -- to the city. It's coming in terms of the need for more compact development and in terms of mixed use development. People on 15,000 square foot lots in the suburbs are waking up the fact that they might have an apartment complex in their neighborhood.

And they aren't always taking it well.

But our job is to work to keep our friends with us. We must make sure we maintain the consensus that land use planning is the best tool we have to ensure that our natural resources are not wasted as we grow and develop.

We must work to make sure that people understand that the same principles that make it important not to pave over farmland make it important to have more compact and intelligent development on urban and suburban land. In short, we have to make the case to our neighbors that wise land use is not just something that other people have to do, it is something we all have to do.

As we pause tonight to look back at our successes, let us take from them the courage and strength to fight the next battles. Let us renew our commitment to the wise stewardship that is the essence of land use planning. And let us bring this commitment forward as we forge the next 25 years.

Thank you.

Governor John Kitzhaber

PTA Speech

May 1, 1998

It's a pleasure to be here today and to share even a short time with members of a group to whom we owe a great deal. The PTA is one of the best examples I can find of a working partnership -- people with different perspectives and backgrounds joined together in a common cause: namely, preparing our children to inherit the world.

And there is no challenge greater or more vital to our future. In the most general sense, I see the PTA as among our most effective tools for maintaining community consensus about the value of public education -- an institution that goes back to the very beginnings of American history and one which I wholeheartedly support.

More specifically, I also see the PTA as a critical link in our chain of efforts to secure for every Oregon child -- anywhere in the state -- an education that will prepare them to succeed in the 21st century. I say a "chain" because meeting this challenge is not just a job for schools. Rather, it will require the joint efforts of all of us -- teachers, parents, students, government, private sector business and industry -- in fact, a partnership in the truest sense of the word.

I'd like to focus my remarks today on the two major challenges facing Oregon's public education system -- namely, how we pay for schools and how we help our kids meet the high standards we have set for them.

But before I go any further, I want to emphasize that just because we are now engaged raising standards does not mean that our schools have been substandard. It simply means that the world has changed.

Educating children has always been important. In a simpler world, that was a simpler task.

But I think we all recognize that success in the 21st Century will require both a wider range of knowledge and a higher level of skills than has ever before been necessary.

How much will it cost to reach those higher skills? How much is enough? Well, the answer to that question has changed radically since 1990.

Before the passage of Ballot Measure 5, when school districts were primarily funded by local property tax levies, "enough" was what the local voters decided they were willing to pay. They were directly involved in school funding decisions and determined what they wanted for the students in their district.

Because of this local funding mechanism, there was a reasonably good match -- though not always a perfect one -- between what district patrons were paying and what they were getting for their money. But today, with the passage of Ballot Measures 5 and 47, the major funding obligation for schools has shifted from the local districts to the State.

And although the State now provides the money, it is not involved in local spending decisions, and it has no way of knowing how the money it allocates to schools is being spent.

In other words, the system lacks accountability. We have no real way to hold the schools accountable because we have

no way of connecting actual expenditures with outcomes. And we have no way to hold the Legislature accountable, because we have no way to directly link their budget decisions to what happens to our children. I think we have to accept that state funding of primary and secondary education in Oregon is here to stay, at least in the near term -- I don't see that changing.

What we do have to change is the accountability factor. We must develop a more accountable connection between what school districts do and how the state funds them. In other words, we need to ask -- and answer -- the question: What do we want to be buying with our education dollars?

And that brings me to the topic of school reform.

Today, thanks to the Educational Act for the 21st Century, we have a much clearer idea than ever before of what we want to buy -- of the outcome we are looking for: a quality education for every Oregon child, which translates into the Certificates of Initial and Advanced Mastery. But identifying the product we're after is only the first step. We also have to figure out how to get there.

The school funding debate in the 1999 legislative session can -- and must -- be far more focused than in the past. It should not be merely a debate over the dollar amount of a lump sum for K-12 education. Rather, it should involve specific appropriations which are necessary to implement the Education Act. We must be certain that the money we put into our K-12 system is tied clearly and tangibly to improved student performance. That is the only way to ensure accountability -- in the Legislature and in the classroom.

Now, that may sound like just a lot of budget management talk. But it is much more than that. What I will be proposing in the next budget is a fundamental change in the relationship between the state and local school districts.

Specifically, I will be proposing that we tie some state dollars to specific programs that are shown to have a high impact in helping students reach the new standards we have set.

Students, teachers, parents and administrators throughout the state have told me the following approaches are both important and effective:

- alternative learning methodologies for below-standard students;

- extra days or time for students performing below standards;

- more time in the building for teachers to learn and plan collaboratively;

- better preparation of incoming teachers;

- a need for increased social service partnerships to address the special needs of certain children;

- more resources for assessment;

- more vocational classes and skill centers;

- smaller class size -- especially in the early grades and in high school math and science classes;

- expansion of early childhood programs to ensure that children are ready to learn when they enter school;

- more and better technology in the schools.

I am not claiming that this is the entire answer to the challenges we face, but I do believe it is a step in the right direction. And there is yet another reason why we need to continue to move toward increased accountability.

When primary and secondary education was paid for by property tax revenues -- it may have been inequitable, it may

have been uneven from district to district -- but at least it was a relatively stable funding source.

The income tax -- which is now the primary source of K-12 funding -- is not. It is not stable because it is directly tied to the economy. We have been able to move from one funding source to the other without disruption largely because of the current economic boom.

But when -- not if, but when -- our economy slows down, our educational system will suffer a significant loss of revenue, and the problems we now have will seem small by comparison. It is therefore critical that we continue working toward a stable source of school funding.

But to achieve that goal, we will first have to do a better job of demonstrating that the tax dollars we invest in our K-12 schools are genuinely buying an education of the very highest quality. That's the direction we've been moving in over the last several years. We must continue on that road, and I count on the support of organizations like the PTA.

Before I close, let me mention a third area of challenge -- one which has received less attention than school finance and school transformation, but one which clearly impacts education.

I'm speaking of juvenile crime prevention, which is one of my highest priorities. We know that the kids who get involved in the criminal justice system have very clear risk factors and exhibit very clear warning signs -- things like school failure and drop-out, a history of domestic abuse and substance abuse, hanging out with the wrong crowd.

As it turns out, these are, in many cases, the very children who are having the most difficulty in achieving the new academic standards. They are often the same kids who disrupt the learning environment, making it more difficult for teachers to teach and for other students to learn.

And if they fail and drop out, they will place enormous burdens on other aspects of society. For example, school drop-outs account for 36 percent of incarcerated adults, 35 percent of incarcerated youth, and 14 percent of individuals receiving public assistance. Unemployment rates for high school dropouts are more than double the rates for high school graduates.

In response to Ballot Measure 11, this state has committed to spend more than \$1 billion over the next 10 years building 13,000 new jail and prison beds -- but we have invested virtually nothing to keep our children out of them. Between 1993 and 1997 public safety spending in Oregon went up 66 percent. During the same period of time state spending on higher education actually went down.

This is neither balanced, nor sustainable. Spending on prisons is reducing our ability to invest in education and education is one of the keys to reducing crime in the first place. People with an education today have better job opportunities, more economic security, and more hope for the future.

I am not suggesting that we don't need jails and prisons. We do -- and we have built them in Oregon. Now it is for Oregonians to demand of their legislature an investment in prevention that is at least as serious as the investment we are making in punishment. The next dollar this state spends on public safety must go toward keeping a child from walking through the front door of a prison, rather than toward a cell to lock him up in. And that brings me back to primary and secondary education.

The Educational Act for the 21st Century, with its emphasis on mastery for all children -- whatever their pace, however long it takes them -- is a laudable goal, but one we will not achieve by continuing to do things the same way.

Let me give you an example of what I am talking about. Earlier this week I visited a program in Forest Grove called the "Cascade Education Corp." It was an alternative education program for kids who are not making it in high school -- kids who are skipping class, who are failing their courses, who are disruptive, who are having trouble staying focused. Most of these kids are headed for suspension, expulsion or dropping out. And we know from experience that many of them would end up in the criminal justice system.

To get into the Cascade Education Corps, however, they must commit to getting a high school diploma. In this program

they still spend every other week day (Monday, Wednesday, Friday one week and Tuesday, Thursday the next week) in the public schools taking four courses. On the alternative days they work outdoors on watershed restoration projects and other types of community service.

They are given a positive incentive to complete high school. They learn discipline, cooperation and responsibility in a very structured program. They develop a group of positive peer relations, a sense of camaraderie, and significant improvement in their self esteem.

In short, they acquire the very tools they need to succeed in school and stay out of trouble with the law. They develop the basis for becoming good and productive citizens.

I believe that if we can continue to find creative ways to deal with these young people -- if we can target these at risk kids before they drop out and get into real trouble, if we are willing to make the investments that will help them become productive, law abiding adults -- then we have gone a long way toward helping meet the goals of the Education Act.

These kinds of preventive strategies amount to an indirect investment in education. At the same time, by reducing the instances of juvenile crime, we will save millions of dollars that can, in turn, be invested directly into education.

I look for your support in helping me advance this agenda in the next legislative session.

Investments in public safety -- specifically in juvenile crime prevention -- would also yield positive results for our schools. It would be an indirect investment in education, you might say. But in a more direct sense, if we can find ways to target these at-risk kids before they get into trouble, if we can make the investments that will help them become productive, law-abiding adults -- that's money we won't have to spend on locking them up when they commit a crime -- money which would then be available to invest elsewhere -- for instance, in education.

In closing, I'd like to reaffirm my support for Oregon's teachers, and to acknowledge their huge contributions to the process of school transformation. You are truly on the front line of reform, and without your efforts and your dedication we could never succeed.

I'd also like to thank the parents here today. Your willingness to take an active part in your children's education and to be closely involved with your local schools is an example for all of us.

That, too, will be a vital component of our future success. Education is, in fact, a debt owed by the present to the future, and our future can be as promising as we choose to make it. As we approach the 21st Century, the doors of opportunity stand wide. We must equip our children to walk through them. That is what this is all about.

Governor John Kitzhaber

Oregon Arts Summit

April 17, 1998

As a politician I can tell you the work I do is rarely seen or understood as art. And I am clearly not an authority on the arts, culture, and heritage -- other than perhaps my own.

Instead, I live, eat, and breath in an environment where the principal objective is to bring people together from all over Oregon and find common purpose. This is the art of politics and governing and I'm still only a journeyman at it.

Our worlds meet at this summit today because my goal, your goal -- our goal -- is to begin the creation of a statewide effort that can increase public and private investment in Oregon's arts, culture, and heritage.

Why? Because without it, I do not believe these important attributes to our quality of life can prosper here in Oregon. And let me tell you why.

In 1996, a record number of Oregonians -- almost 3 million audience members -- attended about 11,000 public arts events in our state. That's a lot of people and a lot of tickets.

But box office revenues alone aren't enough for Oregon's arts, culture and heritage organizations to carry out their missions. Charging audience members the actual cost of mounting a performance, putting on an exhibit, or organizing a festival would mean that only the very wealthy could attend. It also would end programs that bring performers, shows, and events into our schools, our neighborhoods, and throughout rural Oregon.

Even though Oregon's arts and culture groups have been extremely successful in selling tickets and generating contributions from private source -- which are at an all time high -- just 40 percent of the funds used to support cultural events in Oregon come from unearned income. This is far lower than the national average of 55 percent.

Depending so heavily on earned income like ticket sales causes several problems. First, it makes a group vulnerable to unexpected developments, such as bad weather. Second, it often leads to the kinds of deficits that forced the closure this winter of the Portland Repertory Theater, one of only three fully professional theaters in Oregon.

In the meantime, state funding for the arts today is at the same level it was in 1993. And in spite of tremendous increases, private funding for all Oregon non-profits remains mired in the bottom fifth of all states nationally.

That's a tragedy because the arts and culture bring Oregonians together.

The arts and culture transcend geography, economics, gender, age and education. They inspire, educate and unify at a time when our society seems to be increasingly divided.

Artists live and work in communities across Oregon -- not just in our metropolitan areas. You can find art being created and enjoyed in our schools and our universities, in small shops and large galleries.

Culture and the arts in Oregon are also good for our economy, our schools, and our communities.

A 1996 study found that Oregon had almost 20,000 arts workers who earned \$480 million annually, while those employed by non-profit organizations paid more than \$1.5 million in state taxes. And those figures don't include spending by cultural institutions.

In addition employers in all parts of the economy value the skills possessed by artists and creative workers. In fact, a 1997 study by the J. Paul Getty Trust concluded that arts education is critical to the development of the highly prized "knowledge workers" that are so vital to global economic success. Here's what the Getty Trust report had to say on the subject:

"arts education . . . builds such thinking skills as analysis, synthesis, evaluation, and critical judgment. It nourishes imagination and creativity . . . it develops collaborative and teamwork skills, technological competencies, flexible thinking and an appreciation for diversity. "

The arts have an equally impressive effect on the scholastic performance of students. A review of 1993 SAT results concluded that music students received much higher verbal and math scores than students without arts experience.

The arts can also build and strengthen communities by encouraging growth and redevelopment in Oregon's cities and towns. In Baker City, for example, a team of artists and designers are working with community leaders, residents, and others to transform an area near the Powder River into park land. Their work is not only bringing a new green space to the heart of Baker City, it is also expected to enliven and revitalize adjoining neighborhoods.

So given all the benefits the arts and culture offer, why have investments in Oregon lagged so far behind other states?

I think there are three other reasons for the relatively low levels of public and private support.

First, most partnerships between arts and cultural organizations -- and there are many such partnerships across Oregon -- usually occur locally, not on a statewide basis, and never on behalf of statewide goals.

Second, arts and cultural organizations aren't taking full advantage of opportunities for collaboration with business, education, tourism, and government.

Third, Oregon's arts, cultural, and heritage institutions have never had a unified plan that sets statewide priorities. That has made it difficult for potential investors -- both private philanthropists and public lawmakers -- to invest thoughtfully for Oregon's future.

Recent legislative sessions in Salem offer a perfect example of how these issues have frustrated attempts to increase public funding for culture and the arts. Organizations have usually lobbied alone and asked for individual appropriations. Forced to sort out the competing demands, lawmakers have made decisions on a case-by-case basis without fully understanding the economic, educational, and other benefits.

One of the greatest challenges, then, is to somehow better and more broadly demonstrate how culture and the arts can continue to make Oregon a better place to live. Let me briefly share an example of this with you that I have discussed at some length with Mike Lindberg.

With the recent listing Endangered Species Act listing of steelhead in the lower Columbia -- and the expected listing of steelhead and chinook in the Willamette above Oregon City -- the most urbanized part of our state is faced with a huge environmental challenge -- and an equally great opportunity.

To restore the health of these fish runs, we must restore the health of the Willamette River watershed. And to do so we must recognize that much of the pollution in the river today comes not from industrial discharge pipes but rather from what people put on their lawns and down their storm drains. Biologists call this non-point source pollution -- you and I know it as run-off.

To clean it up will require far more than simply passing laws and regulations. It will require sustained environmental stewardship -- a long term commitment to change behavior -- by hundreds of thousands of people living in the

watershed. In short, we need to change the environmental ethic -- the way in which people see themselves in relation to their environment. Either we all own part of cleaning up the Willamette, or it won't happen.

And one of the best ways to change the environmental ethic is through culture and the arts. Music, paintings, sculpture and song -- can all connect people to their environment and give them a greater appreciation of their role in its stewardship. Mason Williams, who many of you may know, has put together a wonderful "River Concert" which is a powerful example of this concept.

The culture and the heritage of the Northwest and the Oregon Territory are rich in examples of the interdependence of humans and their watersheds. [Chief Seattle]

This is but one example how to put our heritage, culture and the arts into a broader context. I know that there are more and the challenge of this summit is to do just that -- and to knit these various strategies into a coherent whole.

In fact, I would say that the most important work you can do today is to begin the creation of a statewide strategy that can guide and increase public and private investment in Oregon's arts, culture, and heritage.

It's a difficult job. Writing such a plan means setting priorities among yourselves and it means increased accountability for all of you. But it also offers our best chance to increase Oregon's investment in arts, culture, and heritage.

Many Oregonians have laid the foundation for this kind of planning. The Oregon Arts Commission recently reviewed strategic plans and policy documents produced by 20 different groups. The Commission found support among most of the organizations for 12 different goals, ranging from education to partnership.

To build on these efforts, I propose to appoint a special Governor's task force. This group would work with you to create a policy framework for Oregon's arts, culture, and heritage. It will give you a chance to establish your own agenda, your own priorities, and your own opportunities for collaboration.

As I indicated, to be successful, the task force -- and all of you here today -- must focus on how the arts and culture can continue to make Oregon a better place to live. Of course, the task force must have statewide representation and enjoy bipartisan support. It also requires the unity of all arts, cultural, and heritage groups, not only in vision and goals, but agreement on how to move ahead. And it must help Oregonians see the connections between arts and culture and other pressing issues, such as the environment, education, public safety, and growth.

Without this kind of planning, it will be difficult for us to make the case to the legislature in January for increased state funding of arts, culture, and heritage. It will be equally difficult for legislators to make that case to their constituents. But with a statewide strategy for arts, culture, and heritage, we are likely to have much greater success than in the past.

Preparing such a plan is a tall order. But I'm confident that you can accomplish it. I look forward to working with you to develop a policy for culture, heritage and the arts is integrated, comprehensive and which improves our quality of life here in Oregon.

Thank you.

Governor John Kitzhaber

AOI Workforce Conference Speech
April 15, 1998

Thank you for that kind introduction. It's a pleasure to be here. I also want to commend AOI for its leadership in organizing this conference.

Today, I would like to discuss three points about Oregon's economy and how our state develops its workforce.

First, the rapid change in our economy and the new demands it is making on our workforce.

Second, the state of the current workforce development system and what the state is doing to improve it.

Third, the need for partnerships between government and the private sector and for additional investments in our education system.

Let's begin with Oregon's economy.

These are good times for some parts of the state. Incomes are up and unemployment is down in the most populous sections of Oregon. In fact, the Willamette Valley is experiencing the tightest labor market in decades.

Help wanted signs are everywhere in portland, its suburbs, and other cities and towns up and down the I-5 corridor. Some employers even offer bonuses to fill these positions.

That's the good news.

But there's bad news as well. Oregon's economic growth is spotty. There are large sections of the state with high unemployment and lots of workers in need of retraining to both recruit and retain new industries.

Meanwhile, a growing number of businesses in those areas that are economically healthy are looking for workers out-of-state, or are unhappy about the local workers they do hire.

Everyone here knows what I'm talking about. Too many of our state's high school graduates haven't mastered the basics -- reading, writing, and arithmetic -- or don't have experience in the work place.

The situation isn't much better in the technical and professional fields. Employers report that some Oregon university and community college graduates have received out-of-date training and lack critical communication and team work skills.

Oregon's "skills gap" isn't limited to recent graduates. An entire generation of Oregonians now in their 40s and 50s entered the work force when you could find a well-paying family-wage job that required few skills and lasted until retirement.

Those days are long gone and the good jobs they created are disappearing. These workers need training to acquire new skills and new abilities.

What's behind these changes?

Oregon's economy and its workplaces have undergone a profound transformation in the last 15 years. Whether the employer is a high technology manufacturing company or a wood products business, economic success now rests on workers who are inventive and productive.

More change is on the way. New technology is everywhere and more and more workers can expect to be called on to come up with the ideas and make the decisions that help their organizations succeed.

Many Oregonians are responding to these challenges by taking on new roles and responsibilities.

Smart employers are now spending substantial resources on training. The reason is obvious: in many industries, the skills required for a job five years ago and less are now obsolete.

Successful workers are either improving their skills or looking for opportunities to do so. They understand that there is no such thing as a job for life, not even for a governor.

Educators and students are recognizing they can't ignore the needs of the workplace. Teachers are making connections between their curricula and the real world and offering students the higher academics, the latest technical instruction and the critical thinking skills necessary for life-long learning.

State government is changing, too. It now plays a more important role in connecting the needs of our state's workplaces to workforce training, thanks in part to two landmark laws enacted in the 1990s which are transforming how we educate and train Oregonians.

The first, the Educational Act for the 21st Century, set tough new academic standards for Oregon's K-12 students and required them to gain the kind of practical experience which employers find valuable.

The second, the workforce quality act, called for action to make Oregon's workforce second to none in the nation and in the world.

But state government must do more, especially with its existing workforce development system. Built primarily at the federal level over the last 30 years, this system has two problems.

First, it is fragmented. Most programs target specific individuals and groups rather than workers in general. Moreover, responsibility for these services is divided among different public agencies. As a result, many workers don't receive the services they need. Second, it is designed largely to serve two groups: unemployed adults and students who have never held a job. Few public dollars are set aside to serve people who already have jobs even though these workers must also develop new skills.

Let me tell you what I am doing as governor to make sure Oregon's workforce development system meets the changing needs of the workplace.

First, I have worked with business, educators, and other stakeholders to increase their ownership and involvement in making the kinds of changes necessary to fully implement the education act.

Second, I have established a governor's workforce policy cabinet, made up of state agency directors involved in workforce programs, to better coordinate our policies and programs in this area.

Third, I have placed increased emphasis on the importance of locally based strategies led by our regional workforce committees. And the private sector chairs of these committees meet regularly with my workforce policy cabinet to discuss local issues.

Partnerships between public agencies and private employers are the key to the success of these and other workforce development efforts. There are many examples of such partnerships in Oregon. Let me give you three.

First, the Professional Services Association has collaborated with Portland State University to make sure graduates have the critical communications skills these employers need. One of the first results of this effort is a new psu course for future architects, accountants, and other professionals called romancing the customer.

Second, the Oregon business council has created worksite 21 to help employers establish school-to-work partnerships. Worksite 21 specializes in work-based learning opportunities for primary and secondary students that provide valuable exposure to careers and the workplace.

Third, private employers and public agencies in southern Oregon have created an innovative office in the Rogue Valley Mall which provides easy access to information on regional education, health care, and job opportunities. Known as the education and resource center, it offers students, employers, and workers one location for education, business and community services.

These new partnerships and the new roles assumed by employers, workers, educators, and state government are important steps in creating the well-trained work force Oregon needs to compete with other states and around the world.

But these changes also require stable funding and new investments, especially in education. During the last year I have had a group of economists and tax experts working on a comprehensive review of Oregon's tax system. Earlier this spring the group began work on a draft report which makes two points I believe today's conference needs to address.

The first is that we face an important threat to education funding in Oregon. The income tax is now the primary source of K-12 education funding. Say what you will about property taxes, but they were a stable source of funding and the income tax is not. We have accomplished this transition between the two sources of money without disruption in large part because of the current economic boom. Let me paraphrase a key passage from the draft report on this point:

Oregon has become significantly dependent upon the income tax at an unusual time in the business cycle. We have had a very long expansion and rapid gains in personal income. The stability of the revenue flow to the government sector has declined, but we have not been through a period of weakness with this system.

Clearly, we must find ways to increase stability for our educational system. Because when, not if, our economy slows down, our educational system will suffer a significant loss in funding.

It used to be said about the Oregon economy that when the nation caught a cold, Oregon caught the flu. It can now be said about Oregon schools that when our economy catches a cold, it's our schools that will catch the flu.

The second point the draft report makes is that there is very little connection between our tax code and the goal of workforce training and development. I challenge each of you to think creatively about how we might change our tax system to further the goal we have set for ourselves of having a workforce second to none in the country and the world.

The tax review group's final report will appear later this month and I look forward to receiving your suggestions and your ideas.

Funding an educational system that develops the kind of workforce for tomorrow that employers say they want is good for the employers bottom line -- but it takes public investments as well.

Education funding is again likely to be one of the toughest questions the Legislature will tackle when it meets in January. And it is vitally important to anyone who cares about preparing tomorrow's workforce.

If employers want to stop paying for remedial training the school system must change and it is changing. This won't stop the need for employers to invest in training -- but it will focus employer resources on providing the technical training that we know will be a part of today's and tomorrow's economy.

I realize there are many Oregonians who are skeptical about the needs of our public schools and our public institutions of higher learning. Let me tell you what steps I have taken to address these concerns.

This winter and spring I have met with hundreds of community leaders, teachers, and students for a better understanding of what our state education dollars are buying, especially as we begin to introduce the new education standards. I have been impressed by the enthusiasm and good work being done in so many classrooms across the state.

But it is also clear to me that we need to find new ways to link state funds to improvements in student performance. I want to see us adopt an education budget that is adequate and that holds schools accountable for results.

We face different challenges in higher education. We must continue to reverse our decade-long public disinvestment in Oregon's public universities and colleges which now receive just 20 percent of their budgets from the state's general fund.

But these institutions also must change. During the last year, I have convened two task forces that have explored how to make public universities and colleges more accessible and responsive and we are now implementing many of the recommendations.

But I can't do these things alone. I need your help.

I need you to develop coalitions with other employers to better define your workplace needs.

I need you to partner with individual schools to provide school-to-work opportunities for the many students that need them.

I need you to get involved in your regional workforce committees to offer your leadership on workforce development issues at the local level.

But most importantly . . .

I need you to support an adequate and accountable budget for K-12 schools and new investments in Oregon's higher education system.

Our schools, universities, and colleges are a vital part of our efforts to develop our state's workforce. Their financial health is critical to the financial health of Oregon's economy and its businesses. Without new investments in education, the workforce problems we face today -- shortages of well-trained workers, a lack of opportunities for retraining, and curriculums that are out-of-touch with the workplace -- will only become worse.

I don't want to see a shortage of skilled workers force Oregon businesses to choose between meeting their bottom line and remaining in their home state.

I don't want to see mass departures by employers force Oregon workers with high skills to take low-wage, low-skill jobs because there is nothing else left.

I don't want to see disinvestments in education force Oregon students to enroll in universities and colleges in other states in order to receive an affordable education.

And it doesn't have to happen. We know what it takes to build the world's best educated work force in the country and in the world, one that is second to none.

We know that Oregon needs an efficient, streamlined workforce development system that meets the needs of its customers, not the bureaucracy.

We know that Oregon needs partnerships between the private and public sectors that give students, as well as business and education leaders, opportunities to understand each others needs.

And perhaps most importantly . . .

We know that Oregon needs public schools, colleges, and universities that both prepare students for an increasingly complex workplace and for a life time of learning.

We've begun to move ahead in each of these areas. And by making adequate -- and accountable -- investments in education, we can create and maintain the workforce Oregon needs to compete globally.

Thank you.

Governor John Kitzhaber

Governor's Address to the Willamette Valley Livability Forum

April 10, 1998

Good Afternoon.

I want to start by sincerely thanking all of you for the time and effort you give to what I believe to be one of our most pressing issues: maintaining our livability; specifically, the livability of the Willamette Valley.

Oregonians across the state are concerned about growth. Our growing population is partly responsible for our current economic vitality, but it also puts additional strains on our transportation system, our schools, our sewer and water systems, our natural resources, and, oddly enough, on our sense of community.

In fact, growth presents an interesting and in some ways frightening paradox. As more and more people come to Oregon, we find ourselves in much closer physical proximity with others -- packed together in housing complexes, crowded into classrooms, bumping up against each other in shopping malls, passing by each other in our cars. Even in Oregon it is becoming more and more difficult to find places where there aren't other people -- a lot of other people.

So in one way, we are closer and more connected than ever before.

But at the same time -- and this is the paradox -- we are more disconnected than at any other time in our history. And perhaps the greatest casualty has been our sense of community. We deliberately and intentionally (or so it seems) isolate ourselves from each other. We live behind six-foot fences. We walk from the garage directly into the house, with no opportunity to exchange a word with our neighbors. Waving to someone from inside your car is not the same as exchanging a few words on the sidewalk. It does not encourage a sense of community.

We don't sit on our front porches. Indeed most of us don't even have front porches. We shop at mega-outlets on the edge of town, rather than at a neighborhood market -- most of which have become a thing of the past. And while schools were once the hub of a community, now the increasing number of alternative schools, as well as a more mobile population mean that kids don't grow up together as they once did, and their parents hardly know each other.

At a time in our history when working together is absolutely essential, we have erected physical and psychological barriers that keep us apart.

This separation extends even into government and poses a problem there as well. We have to recognize that the government system we inherited was designed for simpler times. In the past it was both efficient and effective to assign certain problems to particular agencies, and for each agency to "do its own thing," without encroaching on or having to worry about what another agency was doing. The same was more or less true for the different levels of government and for both the public and private sectors.

Today such a scenario is no longer realistic and it is certainly not the best way to solve complex public policy problems -- or to help build strong communities.

When I took office just over three years ago I brought with me a vision for Oregon's communities -- a vision that placed

our cities and towns in Oregon's pristine environment in a way that did not detract from, but rather complemented this wonderful place.

My vision is for communities that don't sprawl across our landscape; for communities which protect our valuable farm, forest lands and natural resources. I want communities that provide affordable housing for all our citizens. I want communities that have well-maintained streets and roads. I want communities that have active downtowns and centers that are vibrant, alive and safe.

And I want communities that hold a job for everyone who wants and needs to work. I want the industries and offices that provide those jobs to be located near housing that is affordable and available to the people that work there. I want the new growth we're experiencing to be designed and located in a way that helps us achieve these goals. The new growth must occur in a way that balances our communities, rather than in a way that undermines them.

You know Oregonians don't want to be forced into working in one town and living in another because that's the only place they can find an affordable home. Oregonians don't want their cities' transportation arteries clogged by congestion. Oregonians don't want farm, forest and natural resources paved over with sprawling low density development.

And having spent the last three years talking with Oregonians, I can tell you they don't want to pay the exorbitant cost that it takes to serve low-density sprawl with sewer and water facilities. They don't want to pay the cost of building by-passes around strip-commercial development along state highways or the cost of expanding a highway between cities to accommodate commuters.

Oregonians want balanced quality communities they can work, play and afford to live in. Every development plan, policy and most important every public investment we make must contribute to our goal.

Those of you here today represent the state agencies, local governments, private sector and community leaders upon whose shoulders this task falls. If we are to be successful we must work together because these community development challenges and opportunities require coordinated work.

State and local government has a special challenge. When I took office I found that our state community development agencies, transportation, land use, housing economic development and environmental quality simply did not coordinate with one another. I found that those separate state agencies weren't even designed to work together.

It hasn't been easy to change agency cultures that are designed to run programs in isolation, but we are making real progress. The Community Solutions Team which is made up of the Directors of the five community development agencies meets every two weeks and has focused our work. We now have field teams in every region of the state including the Willamette Valley that are working together to achieve state and community goals. This same level of cross-disciplinary work must also occur with regional and local governments as well.

The reason we're beginning to succeed is because we have focused on solving problems rather than running programs. In case it isn't apparent to you this has been a major change in state agency mind set.

In times long past, transportation, land use, housing, economic development and environmental quality programs could be -- and were -- carried out independently. In today's world the stakes are higher, the problems are much more complex and interrelated and we don't have sufficient public funds to afford making mistakes. Every investment we make has to count and we cannot afford to let our state investments undermine each other or a community's goals.

To do this must all adopt a different approach, One based on a concept of partnership and shared responsibility, One which encourages creativity and innovation and is characterized by collaboration.

The Willamette Valley Livability Forum will play a key role in working with communities to help define a livable future for the Willamette Valley. Because you represent a broad cross-section of valley residents, and because you have the power to bring together larger groups to chart a course for our future, you can provide the leadership that can bring us together. You will be surveying valley residents and documenting the trends affecting every community in this valley

when you produce the State of the Valley Report this fall. Through your efforts you can motivate people to be actively engaged in protecting the very qualities that brought us all here in the first place. I wish you well and offer all the assistance I can to help you on your way.

Democracy Forum Speech

April 08, 1998

It's a privilege to join you tonight and help you launch this Forum. Its purpose -- to encourage a thoughtful consideration of the future of American Democracy -- is something with which I feel a very deep and personal connection, and not only because I've spent the last 20 years in government.

So let me take a few moments to share with you how my interest in politics came about, because the road that brought me to the office I now hold is in a way the best illustration of what I believe about our form of government.

First of all, I was fortunate to grow up in a home where civic involvement was a fact of life. As far back as I can remember, my mother was an active member of the League of Women Voters, and from her I acquired a concept of democracy much closer to that of our Founding Fathers than what often passes for democracy today. I'm talking about ideal democracy, a system based on the informed consent of the governed, and on an unwavering faith in the capacity of humans to sustain such a system -- in other words, on the belief that individuals can make a difference.

And I saw that belief modeled. I can still remember standing beside my parents when I was only about five years old, while they sent a telegram to President Truman strongly urging him not to use the atomic bomb on Korea. I don't think it occurred to them that their voice might not be heard. They just knew it was something they had to do.

But in spite of all that, I grew up not being particularly interested in politics. I know there are students in the audience this evening, and like many of you, I went to college to prepare for a career. My goal was to become a bio-engineer and design artificial organs. Despite my upbringing, and despite the fact that the world around me was coming apart, my eyes were focused on my own personal future.

Then in 1968, a year before I graduated, that bubble burst. Within three months of each other, Martin Luther King, Jr. and Robert Kennedy were both assassinated. And I think it was the combined shock of these two incidents that changed both my outlook and my life.

What was it about these two men that made their deaths so tragic? The answer is that both were dedicated to working within the democratic process to bring about change. They did not oppose government in principle. They did not oppose law, or deny the need for laws, or dispute that those who broke the law should be punished. But they were also dedicated to the principle of nonviolent civil disobedience to protest and draw attention to what they believed was wrong and unjust . . . and that takes something we don't see a lot of today: courage.

All of a sudden it seemed both shallow and irresponsible to view my education -- or my life -- only in terms of my own personal security and interest. Suddenly I wanted to do more than that. I wanted to make a difference in the world. And the avenue I eventually chose was politics.

The '60s, when I came of age, was an era now famous (or infamous) for the rise of subcultures, alternative lifestyles, attempts to seek change by withdrawing from society -- or through violence. Between 1963 and 1968, Americans witnessed the assassinations of four major public figures. There were riots in Los Angeles and violence at the 1968 Democratic National Convention in Chicago. In those years we forgot a fundamental truth: if the process doesn't work,

it's because people aren't making it work.

The violent deaths of Kennedy and King -- but more especially their lives and their actions -- reminded me that in this nation and under our form of government as it was intended there are other ways -- better ways -- to bring about change -- if one has the courage and the patience and the wisdom to seek them.

Today we need to remind ourselves again of that truth, because in many important respects I believe we have strayed from the original concept of American Democracy. The growing influence of money and the media on our decision-making process has bred a sense of personal powerlessness -- and apathy. When people doubt whether they can make a difference, they often choose to do nothing. It is not uncommon in this state to see voter turnouts of well under 50 percent.

There is also a growing sense of social irresponsibility -- a lack of independent critical judgment. I recall hearing of a student in one of our community colleges who, when asked to defend one of his statements, said, "Well, I know it's true because I saw it on TV" That's pretty frightening, when you stop to think about what it implies.

So while our government is still based on the consent of the governed (those of us who bother to vote) -- that consent is not always informed. During my own campaign four years ago I learned that a staggering number of voters make up their minds on the basis of about 2 minutes of televised political ads.

To my mind these trends pose a greater threat to the future of American Democracy -- and to our future as a nation and a free people -- than all the other threats combined.

Yet I am not without hope. There are ways to reverse this trend. One of them is education. The Educational Act for the 21st Century, with its strong emphasis on independent critical thinking, is certainly a step in the right direction.

Another is groups like this one, since the first step in solving any problem is to recognize and understand where we are now and how we got here. And if the product of the Union County Forum on Democracy can somehow be translated into action, with tangible results, you will have made a solid contribution to revitalizing both the ideals and the practical process to which we owe the greatest blessings of a free society.

Yet a third step is to find ways to make government itself more accountable, to reconnect it with the people, and to rebuild public trust in public institutions. Government must become again a power for enlightened social change, instead of a protector of the status quo. It must do more than run programs; it must solve problems. The people have a right to expect that, and it's been one of my highest priorities over the last three-and-a-half years. But it also has implications for individual citizens, because in a democracy, government is the people.

But somehow we forget that and want to hold everyone accountable but ourselves. We blame our government yet fail to participate in it. We don't vote, or when we do, we are too often swayed by candidates whose eyes are on the next election, not on the next generation. Too often we listen to those who tell us what we want to hear, instead of what we need to hear: the truth. We elect and re-elect candidates who respond to every short-term fluctuation in public mood, and only rarely to the long-term public interest.

It is true that today our society is in a state of flux, and the changes we are undergoing have the effect of driving people apart, rather than drawing them together. One of these is the growing diversity of our population, especially here in Oregon. We are no longer a "melting pot." We take pride in our differences, champion our own causes, push our own agendas. We nurture an "us vs. them" mentality, and too often regard one another as competitors, rather than compatriots. As a result, it is more difficult today than ever before to reach consensus on a common public interest. But unless we do so, our form of government will indeed be in jeopardy.

I am not willing to accept that future and I imagine that you aren't either -- or you wouldn't be here participating in this Forum. But it is not enough to understand or to see clearly. We must also be willing to act. And I can think of no challenge greater, no challenge more pressing, more noble, or more important to our future, than that posed by the apathy of the electorate, the paralysis of our institutions, and the surrender of community values and individual social responsibility to expediency and short-term personal gain.

Meeting this challenge will be the most fundamental test of the moral fabric of this nation. In 1743, the French philosopher Jean-Jacques Rousseau wrote:

Born as I was, the citizen of a free state and a member of its sovereign body, the very right to vote imposes on me the duty to instruct myself in public affairs, however little influence my voice may have in them.

225 years later, Robert Kennedy was to echo this same belief, but to reaffirm the power of the individual to make a difference, when he said in a speech before students in South Africa:

Few will have the greatness to bend history itself, but each of us can work to change a small portion of events, and in the total of all those acts will be written the history of this generation. Each time a man stands up for an ideal, or acts to improve the lot of others, or strikes out against injustice, he sends forth a tiny ripple of hope, and crossing each other from a million different centers of energy and daring, those ripples build a current that can sweep down the mightiest walls of oppression and resistance.

When I entered politics 20 years ago, I was young, naive and idealistic. Today I am neither young nor naive -- but I am still idealistic. In the intervening years nothing -- absolutely nothing -- has shaken my steadfast belief in the ability of individuals, acting from conviction and courage, to change for the better the world in which we live.

As long as we believe that, and as long as we act on that belief by using to the fullest extent the freedoms our form of government has given us, the spirit of American Democracy will surely prevail.

I hope that the work of this Forum will lead you to the same conclusion, and I thank you very much for inviting me to participate.

Governor John Kitzhaber

4th Annual Domestic Violence Conference Speech

April 2, 1998

It's a pleasure to have been asked, for the fourth year in a row, to participate in this conference. Since I've already addressed this group three times, I'm not sure I have anything new to say. But it gives me an opportunity to publicly and strongly reaffirm my personal commitment to addressing a problem so deadly and so pervasive that it is nothing less than a disgrace to a civilized society.

I remember that when I spoke at your first annual conference, I tried to explain why I find domestic violence so appalling. It's because I see it as an aberration. While violence of any sort is intolerable, there are still places where we shouldn't be surprised to find it -- in the war-torn countries of the middle east, under bridges at night, in the dark alleys of our cities. But when it happens in the home -- the one place of all places which should stand for security, safety, support, and freedom from fear -- that breaches the most fundamental principles of civilization.

Today I continue to be appalled by the suffering and death caused by ongoing acts of violence that occur every day, every hour, every minute -- in our homes.

Like you, I continue to be outraged that the most basic and cherished rights -- the right to be safe, the right to be free from terror, the right to live -- are stamped on every single day--in people's own homes, by members of their own families -- and that too few of us seem to notice -- or care.

We see the aftermath -- in our hospitals and schools and workplaces -- but there's always the question of whether what we suspect is really true. Somehow it's easier to look the other way. Yet every time we turn away from the evidence or even the suspicion of domestic violence, we become its accomplices.

One of the greatest services this conference and its participants have performed over the past four years is to help change the prevailing attitudes that allow domestic violence not only to continue, but to escalate. The contributions of professionals like yourselves are invaluable. Not only do you deal with both victims and perpetrators of domestic violence, you are in a position to lead the way toward raising public awareness and ultimately changing public attitudes, so that this will no longer be a crime we overlook and even tolerate -- simply because it happens in the privacy of the home.

That's the good news. At the same time, the very fact that this conference has been steadily gaining momentum and recognition shows that the problem of domestic violence is still very much with us and that your work has only just begun. For example, in Multnomah county alone, the number of domestic violence-related homicides increased by 60 percent from 1996 to 1997.

Your first order of business was to raise awareness: to make people acknowledge the deadly but too often silent crime of domestic violence, and that must be an ongoing effort. But now that you've laid the groundwork, you are ready to move from awareness to action, and I understand that this year's agenda is more solution-oriented. However, both approaches -- both awareness and action -- are essential. As I've said here before, we must first open our eyes and our ears -- our minds and our hearts, because as long as we refuse to see and hear and understand and feel the full force of this

epidemic, we cannot hope to heal.

I believe that as a society, we are finally beginning to hear, and that is due to efforts like yours. As for healing, we continue to seek better tools for dealing with domestic violence after the fact -- help and support for victims, intervention for perpetrators who choose to change, severe sanctions for those who are not. So let me take a few minutes to outline some of the things my administration has been working on this last year.

Last summer I signed into law HB 3112, which focuses on identifying domestic violence victims and helping them obtain services and treatment. I also signed SB 301 which strengthens Oregon's full faith and credit provision for foreign protection orders, so that victims of domestic violence who come to Oregon from other states will continue to be protected from their abuser.

My council on domestic violence has been conducting public hearings around the state to get citizen input about the problem of domestic violence as it manifests itself in different localities. Local domestic violence councils are being formed to address the problem in particular communities.

The domestic violence council is also conducting a statewide needs assessment which will estimate service needs of victims, identify gaps in services, and highlight current innovative and beneficial approaches. This assessment is scheduled to begin this month and be completed by June of 1999.

Attorney General Myers has been working to consolidate efforts to address domestic violence, and legislative proposals are currently being drafted in such areas as:

- Clarifying the existing mandatory arrest statute to increase its consistent implementation among Oregon law enforcement agencies;
- Modifying the family abuse prevention act to ensure better enforcement of restraining orders; and
- Modeling a law after a current California statute that makes it a felony to destroy a telephonic device. This is especially critical to victims in rural areas, where the telephone is the only way to summon help.

In addition, the state office of Services to Children and Families is in the middle of its second training grant to enhance collaboration between domestic violence advocates and child abuse. It is also in the process of developing a curriculum dealing with the intersection of domestic violence and child abuse. Those working on the curriculum envision it as a community self-study guide which will define best practices and outline steps that can be taken to address these two related issues.

These are just a few of the things we have been doing at the state level, and clearly much remains to be done. But I believe we have made a strong start, and I promise that our efforts will not only continue, but accelerate and expand.

Before I wind this up, I'd like to say a few words about my own personal perspective on the subject of domestic violence.

I've spoken before about my seventeen years as an emergency room physician and about the countless victims of domestic violence I treated during that time.

Last year I was able to add a new dimension to my perspective as doctor and as governor, when my sister's family adopted a child who for his first eight years had been the victim of domestic abuse.

I think it was then I fully realized that what I'd seen in the emergency room was only the tip of the iceberg, and that the unseen scars of domestic violence are far more deadly -- both to the victims and to society.

Yet today I can report that in the last year my newest nephew has made remarkable progress toward learning a new set of values and behaviors, which shows that healing is possible.

It's possible, yes. But why should it be necessary? Isn't the best solution is to prevent domestic violence from happening in the first place?

In my State of the State speech last January, I referred to American writer James Agee, who said that in every child who is born, no matter of what parents and no matter in what circumstances, the potential of the human race is born again. But when you stop to think about it, that statement can be read in two ways. Humans have great potential for good -- but also the potential for its opposite. They are capable of achieving great things, but they are also capable of committing the most unspeakable atrocities.

Domestic violence is among the worst of these. But it doesn't just come out of nowhere. It has a beginning. And we must somehow keep trying to stem it at its source, which means starting at the beginning, with our children. It means teaching them nonviolence, not merely as a strategy, but as a way of life. And let it be clear: the social and monetary costs of failing to do so cannot be measured.

If a child is beaten by his parents, he may end up in prison, hurting innocent victims and spending tax dollars that could be used instead for parks, for roads, for kindergartens, for universities.

If a child is sexually abused, she is more likely to become a teen mother without the resources to be an effective parent, creating another potential abuser in her child.

Worst of all, many of these children end up dead, which ends their potential altogether. I take no pride in the fact that here in Oregon, we have the second highest per capita rate of child abuse deaths in the nation. We have one of the highest rates of children in foster care. And in the last fifteen years, the number of cases being handled by the state's Services to Children and Families has doubled.

I find that totally unacceptable. But it is not something government alone can solve. It will take the combined efforts of all of us. Your own efforts, your dedication to this cause, your determination to address every aspect of domestic violence with all the means at your disposal, sets a worthy example and is clearly a step in the right direction.

Another step in the right direction is the "Hands are not for Hurting" project, which I know is not directly a part of this Conference, but is certainly a companion to it. Throughout Oregon, and even beyond our borders, school children are voluntarily pledging not to use their hands -- or their words -- to hurt themselves or others.

The program is now being introduced into hospital obstetrics wards, where new parents are given the opportunity to make the same pledge: to raise their children in an atmosphere of nonviolence which they themselves will model. In fact, as some of you know, my wife and I may have been the first new parents in Oregon to make that pledge, and Sharon and I consider it an honor to lead the way in this respect.

Children are our greatest resource. They are also our most accurate record. Not only do they carry within them the shape of tomorrow, they also bear witness to our own values and choices. They are the living messages we send to a time we won't be around to see. So it's our responsibility to see that they are nurtured in infancy, protected and trained during childhood, and guided through adolescence, so that they will emerge as positive, productive adults capable of making the world a better place.

We must continue to raise public awareness of domestic violence. We must continue to provide support for its victims -- whoever they may be. But unless we can somehow reach children and set their feet on a path which precludes violence of any kind, the scourge of domestic violence will never end.

Martin Luther King, Jr., writing about the effects of nonviolence, said:

"The nonviolent approach does not immediately change the heart of the oppressor. It first does something to the hearts and souls of those committed to it. It gives them new self-respect; it calls up resources of strength and courage that they did not know they had. Finally it reaches the opponent and so stirs his conscience that reconciliation becomes a reality."

That is the kind of future world I hope we may someday attain. And with the continued efforts of people like you, I

believe it is possible to get there.

Thank you for inviting me to be here this morning and let me assure you of my ongoing support.

[Return to Governor's Office](#)

Governor John Kitzhaber

Women in Transportation Speech

February 11, 1998

I want to thank you for asking me to be here today. It's a pleasure to spend even a brief time with a group which is dedicated to some of the things I consider most critical to Oregon's future.

Our transportation system is important for a variety of reasons. Without it we couldn't get to work or to school. We would lack easy access to the special places which are part of Oregon's natural heritage. And we could not move our products to the outside markets on which our economy depends.

But in spite of all that, today it is no longer feasible to consider transportation in isolation from the other key elements that help create livable communities. Like those other elements -- such as economic development, environmental quality, and good housing -- transportation is really about people, and the reason we want quality communities is because they are important to the people who live in them.

So today I'd like to do two things. First, I want to take this opportunity to re-emphasize my own specific goals for transportation in Oregon. Second, I want to talk about some of the ways we can all contribute to building and maintaining the kind of communities where we'd like to live and work and play and raise our families.

First, let's look at my goals -- and at why I think they're important.

No one knows better than you that transportation issues are tied to the broader issue of growth, and that both transportation and growth are tied to our vision of livable communities and a high quality of life.

I know you wouldn't be here today if you weren't concerned about the dual transportation problems facing Oregon today: the need to maintain our existing roadways, and the need to reduce the traffic congestion created by huge increases in population and in vehicle miles traveled.

But in light of the failure to pass a transportation funding package during the last legislative session, we have had to make a hard choice -- either to maintain and preserve our existing roadways, or to building new roads to accommodate growth. We have chosen the former, because it makes no sense to allow our existing investment to deteriorate.

But even if we did have adequate funding for expansion, the plain fact is that we cannot build enough roads to avoid congestion. As fast as we build them, they will fill up. Instead, we must change how and when we use the transportation system, and there are a number of creative steps we can take even in the absence of funding.

Congestion is caused by when and how much certain people drive. Rush-hour congestion could be dramatically reduced -- without raising taxes to build more lanes -- if more people used car pools or took the bus. It could be even further reduced if employers promoted alternatives to standard work hours and business practices-- for example, telecommuting, flextime, a compressed work week -- or if they offered incentives such as subsidized public transit passes.

Because I believe that the state, as a major employer, has a duty to do its part to reduce the traffic load, I have just today signed an Executive Order directing all state agencies to adopt measures which will reduce their auto trip rate by at least ten percent within the next year.

There are also a number of other creative avenues we can explore. I intend to do so, and I am counting on your help. But the fact remains that at some point we are going to have to make a substantial investment in Oregon's transportation system. Just because adequate funding is currently unavailable does not mean that our transportation needs will go away. Rather, they will keep growing, and I will present to the next legislature a transportation funding plan that not only restores Oregon roads to an acceptable level of maintenance, but also provides options for dealing with congestion.

These are some of the broad transportation issues we face. But there's another aspect I'd also like to touch on today, and that is the role of transportation in community development.

I think that is a critical topic, because the fact is that right now both the livability of our communities and the sense of community that binds us together as neighbors and as Oregonians is in jeopardy. And again, one major reason is the current and anticipated growth in our population.

So let's look for a moment at growth. I believe that it is what we might call a "given." As long as Oregon has a thriving economy and remains a good place to live, people are going to keep coming here.

But Oregonians are deeply concerned about growth and its impact on their quality of life, and rightly so. I've said before to other audiences, growth is a double-edged sword. In the long term, it will be good or bad depending on how it is dealt with. Handled right, it will cleave a path to long-term, balanced prosperity -- both social and economic. Handled wrong, I can promise you it will slice to shreds the very qualities that make this state what it is.

Certainly our growing population is partly responsible for our current economic vitality, but it also puts additional strains on our transportation system, our schools, our sewer and water systems, our natural resources, and, oddly enough, on our sense of community.

In fact, growth presents an interesting and in some ways frightening paradox. As more and more people come to Oregon, we find ourselves in much closer physical proximity with others -- packed together in housing complexes, crowded into classrooms, bumping up against each other in shopping malls, passing by each other in our cars. Even in Oregon it is becoming more and more difficult to find places where there aren't other people -- a lot of other people.

So in one way, we are closer and more connected than ever before.

But at the same time -- and this is the paradox -- we are more disconnected than at any other time in our history. And perhaps the greatest casualty has been our sense of community. We deliberately and intentionally (or so it seems) isolate ourselves from each other. We live behind six-foot fences. We walk from the garage directly into the house, with no opportunity to exchange a word with our neighbors. Waving to someone from inside your car is not the same as exchanging a few words on the sidewalk. It does not encourage a sense of community.

We don't sit on our front porches. Indeed most of us don't even have front porches. We shop at mega-outlets on the edge of town, rather than at a neighborhood market -- most of which have become a thing of the past. And while schools were once the hub of a community, now the increasing number of alternative schools, as well as a more mobile population mean that kids don't grow up together as they once did, and their parents hardly know each other.

At a time in our history when working together is absolutely essential, we have erected physical and psychological barriers that keep us apart.

This separation extends even into government and poses a problem there as well. We have to recognize that the system we inherited was designed for simpler times. In the past it was both efficient and effective to assign certain problems to particular agencies, and for each agency to "do its own thing," without encroaching on or having to worry about what another agency was doing. The same was more or less true for the different levels of government and for both the public and private sectors.

Today such a scenario is no longer realistic and it is certainly not the best way to solve complex public policy problems -- or to build strong communities.

Let us be clear: today it is not enough simply to run programs; we have to solve problems. And to do so, we must adopt a different approach: one based on a concept of partnership and shared responsibility; one which encourages creativity and innovation; one characterized by collaboration in working toward a shared vision of the future.

To begin with, we have to recognize that in the looming 21st Century, nothing exists in isolation. Everything and everyone are connected. We will ignore that fact to our peril.

Transportation -- which is the major interest of this particular group -- offers a good case in point. The choices we make regarding transportation will automatically affect other things like economic development, neighborhoods, and the environment. In short, such choices will inevitably impact our communities.

Maintaining our existing roads, dealing with congestion, and approving a balanced transportation funding package are all important and, in my view, necessary. But if we are to maintain the livability of our communities, we must do even more. We must integrate the elements that contribute to healthy communities, and work together to solve problems creatively.

Let me give you an example -- an example of a problem created by a past choice that did not take into account its broader impact. And then I want to describe how that problem is now being solved -- in an integrated and creative way.

Sixteen years ago, a median and turn lanes were added to Portland's Martin Luther King, Jr. Boulevard in an effort to improve traffic movements through the Northeast section of the city. That goal was achieved. But the surrounding neighborhood suffered badly. When curbside parking was eliminated, local businesses lost customers. As traffic speed and volume increased, middle-class housing began to disappear. Deserted lots became

cluttered with debris. Crime rates rose.

The point is that trying to solve a transportation problem -- or a housing problem or a land use problem or an environmental problem -- without considering who or what else might be affected, is almost a guarantee of more and bigger problems on down the line.

In order to avoid that kind of thing in the future, the State has formed a Community Solutions Team, composed of representatives from five state agencies which have some relation to community development: Economic Development, Land Conservation and Development, Transportation, Environmental Quality, and Housing. The Team's goal is to coordinate efforts and investments among all these agencies to avoid conflict and to ensure that communities where growth is occurring are prepared to accommodate it.

The Community Solutions Team has been working with communities around the state to ascertain local needs--which will differ from one community to another--and to coordinate investments in areas which will meet those needs. The Martin Luther King Boulevard Project is one of its success stories.

Working together with local residents, businesses, non-profit agencies, and regional and local government agencies, the Community Solutions Team has helped launch an effort to revitalize the MLK Boulevard as a community main street.

Portions of the median have been removed, some turn lanes eliminated, and curbside parking reinstated on a trial basis, to check for impact on traffic safety. Environmental clean-up efforts will allow redevelopment of vacant Brownfield sites. Other transportation improvements (e.g., streetlights, transit shelters, consolidation of driveways) will create a district that is easily accessed by all modes of transportation. Housing projects will bring quality affordable new housing within reach of more residents and provide new customers for local businesses. Programs to build strong, locally owned businesses will provide needed services for the community and economic benefits to the area's residents.

When this project is completed, MLK Boulevard will be more than a thoroughfare that speeds motorists from one place to another. Instead, it will once again serve the neighborhood that surrounds it. It will be a vital part of a community,

created by a spirit of community.

I believe we need to bring a spirit of community to bear on the other major challenges we face. I am convinced that only by breaking down the barriers which keep us apart and by seeing ourselves as a community where all the parts work together can we meet those challenges successfully. Transportation is one of those parts, and this is a rich opportunity for the leadership and vision and creativity of groups like the Women in Transportation Seminar, Institute of Traffic Engineers and the Society of Women Engineers.

So let me just say in closing that I value the work you have done in the past, and I hope we can count on your continued efforts to work with other members of the Oregon community and keep this state the very best place in the world to live.

Governor John Kitzhaber

Hispanic Chamber of Commerce Speech

January 27, 1998

Buenos Dias. Estoy muy feliz de estar aqui.

I'm glad to have the opportunity to recognize the many contributions the Hispanic Chamber of Commerce has made to the enrichment of this state, not only as business men and women, but as members of the Oregon community. The energy, talent, and unique perspective you have shared so generously have helped make Oregon a better place. And for that I thank you.

But even while we celebrate your achievements, we must recognize the challenges that are still before you -- actually before all of us. Because your success is bound up in the success of Oregon as a whole, and vice versa.

You all know that Hispanics, as Oregon's fastest growing minority population, play a vital role in our social and economic health. I'd like to take a moment or two to share some of the things we in state government and in my administration are doing to support your efforts and to further your goals.

To begin with, my administration has taken a number of steps to support Hispanic and other minority businesses. By an Executive Order which I signed in October of 1996, I have required all state agency directors and administrators of major divisions or institutions to improve outreach efforts and increase contracting participation by non-traditional businesses.

As a result, the Oregon Department of Transportation has initiated a program for emerging small businesses, setting aside about \$4 million for bidding on specific ODOT state contracts.

The Department of Human Resources has a program that will award extra points to emerging small businesses that bid on their contracts.

The Oregon State Library is working on a program that will award extra points to bidders that demonstrate an adherence to Affirmative Action Policy.

Both the Department of Corrections and the Housing and Community Services Department have very aggressive contracting programs for minorities and women.

And the Department of Administrative Services has developed a tracking system that will help us monitor the number and dollar amounts of state contracting that go to minority, women and emerging small businesses.

These are just a few of the steps we are taking in support of Hispanic and other minority business efforts. At the same time, we all recognize that while many Hispanics have achieved remarkable success, others still face serious obstacles. Even though Oregon's economy is booming right now, there are still too many who stand outside the circle of prosperity, who lack equal opportunity, and who suffer unequal treatment.

I want to assure you that my administration is committed to addressing the needs of Hispanics and other Oregonians who may be struggling to gain a stable economic footing, provide for their families, and become self-sufficient, contributing members of our society.

But I also want to emphasize my firm conviction that real solutions to the challenges we face cannot be engineered by state government alone. Instead, they require state leadership matched by community involvement and individual responsibility.

The state can build and operate prisons, but it cannot make our communities truly safe unless those within the community become actively involved in helping to prevent crimes before they happen.

The state can fund schools and set academic standards, but it cannot ensure that students achieve those standards unless communities, businesses and individual citizens become actively involved in the education of our youth.

So with that in mind, let me turn now to some of the broader policies my administration is working on which will have an important bearing on our Hispanic population. I'm thinking particularly of our efforts in juvenile crime prevention and in educational reform. I want to describe what we in state government are doing to provide leadership and also what I believe should be expected of you.

First of all, it is no secret that minority youth are enormously over-represented in our juvenile justice system. Hispanics, for example, represent only 4 percent of Oregon's youth, yet they account for 16 percent of Measure 11 charges and 20 percent of Measure 11 sentences. To me, there is something badly wrong with that picture.

Obviously this is a complex problem with many contributing causes. But we do know some things for certain. We know that poverty, substance abuse, school failure, child abuse and negative peer association are among the factors that place young people of any race at risk of becoming involved in criminal activity.

And we also know that whenever any child turns down the wrong road, the repercussions impact every one of us. Therefore, each of us bears some responsibility to see that all our children become good adults.

To accomplish that we must ensure that our public safety system balances punishment with prevention.

There is no question but that we have achieved the punishment side. Three years ago, in an effort to reduce crime in Oregon, voters passed Ballot Measure 11. In response we will spend more than \$1 billion in the next 10 years building 13,000 new jail and prison beds and hundreds of millions more to operate them.

We have complied with the provisions of Ballot Measure 11. Over the last year I have sited five prisons and three work camps. Not easy choices, although necessary ones. But now it is time to re-focus our efforts on the *prevention* of crime.

I am not suggesting that we don't need jails and prisons. We do. But we must couple the single-minded determination to make sure criminals are punished with an equal determination to prevent the commission of crimes in the first place. It is time for Oregonians to demand of their legislature a commitment to prevention that is at least as serious as the commitment we have made to punishment. And the most effective way to do that will be to target at risk kids to keep them from becoming entrapped in the criminal justice system in the first place.

We know who these kids are. We know the major risk factors associated with children who are likely to get into trouble. We know, for example, that a 15-year old who both uses drugs and has dropped out of school has better than even chance of breaking the law, creating a victim and ending up in our prison system. In the process, lives are wrecked and dollars are wasted *housing* a criminal instead of *saving a child*.

To address this I am proposing the following:

First, that we have a coordinated state and county approach to reach these young people. Today, tragically -- even though we know who they are -- we address them only in a patchwork way. Instead, we must focus our efforts where we know they will have an immediate impact. My goal is to make certain that every community in Oregon has an active and comprehensive plan to help these at risk kids -- and the resources to carry it out.

Second, I will provide technical assistance from the wide variety of state agencies involved in public safety, to help communities create the plans that work best for them. We have already identified fourteen specific strategies: from

truancy centers -- to a street workers program -- to substance abuse intervention.

There is not a "one-size-fits-all" response to this problem. Each community is different and reducing juvenile crime is more effective when a community has made it a priority than when the state has made it a mandate. In the next budget I will focus the resources of state government to plan, organize and fund proven community-based strategies to help keep kids out of crime.

But its going to take more than money. It will take individual community members reaching out and helping to families and especially children at risk. Without that ingredient, it will be very difficult to stop these kids from hurting others and, equally important, to keep them from ruining and wasting their own lives.

As for reducing risk factors, perhaps the most important step we can take is to give our children -- and that especially includes our disadvantaged children, for whom it may be a greater struggle -- the best education possible. That is what we are trying to accomplish with our program of school transformation. Our goal is to give every Oregon student the opportunity to succeed. That may sound like a fairly abstract goal, but again there are some things we know.

We know that success in the 21st century will require both a wider range of knowledge and a higher level of skills than has ever before been necessary.

We also know that those with insufficient skills will face a future of limited career prospects, low income, and unemployment. We know that these are the very conditions that tend to weaken families and communities. And we know that the high school drop-out rate for Oregon's minority students is far too high. For Hispanics in particular it is more than twice the state average, and it has actually increased from 12.5 percent in 1991-92 to 16.5 percent in 1995-96.

So to ensure that every student graduating from an Oregon high school has mastered the tools he or she will need to survive and succeed in our changing world, we are in the process of revising what we teach, how we teach it, and how we determine whether students have met the new, higher standards. And I can assure you that special attention is being given to the needs of minority students, a large number of whom are Hispanic. But here too, we need more than state leadership. We also need direct involvement by individual community members.

Shortly after I finish this speech, I'll be going to Southeast Portland with city commissioner Jim Francesconi to meet with Hispanic kids, teachers and parents. They will share with me their challenges and how they are meeting them.

My staff told them I would be speaking to you and asked a middle school councilor the single most important thing I could ask you to do for school children -- Hispanic or not. She said simply: come to the school and tutor -- help the kids who are falling behind.

But as business people you have another unique opportunity to help.

You can help kids learn the value of work by, whenever practical, getting young people into your workplace. Even if you can't employ them, there might be the opportunity for them to intern and therefore gain confidence and experience in the world outside school and their neighborhood. Most importantly you make it possible for kids to see school as relevant -- something that they can use to make a difference in their life. And making school relevant is one of the most important things you can do to keep kids in school, keep them from dropping out and getting into trouble.

I also believe it is important for us to keep an open mind about how we deliver an education to a child. Not all kids are the same. But we tend to try and put them all through the same system. Maybe that's not the best way to do it. Maybe there are some kids to whom we need to offer alternative schools so that we can keep them interested and involved.

But the fact is that unless problems like crime and education become not just state problems, but community problems -- unless individual Oregonians work together as a community -- we are not going to meet our challenges and achieve the kind of future we all hope to have. And that is an option I cannot accept.

In closing, let me assure you again that my administration is making a solid effort to support our growing Hispanic community. I am committed to that course because I understand that your welfare is vital to the welfare of our collective

future, and we intend to do our part.

At the same time, I urge you to continue your own important work toward improving conditions and increasing opportunities for your community. I also urge you to remember that even while you retain your own unique identity, there are many issues which transcend ethnic boundaries -- issues on which we must all work together as Oregonians.

Like Dr. Martin Luther King, Jr., whose birthday we celebrated this month, we all share a dream of the kind of future we want to create, a future in which every member of the Oregon community can participate. But while dreams can inspire our actions, only actions can achieve our dreams. You can count on my active support, and I hope I can count on yours.

Governor John Kitzhaber

Speech to the Eugene City Club

January 23, 1998

I'm pleased to be able to join you today to discuss the challenges facing Oregon as we approach the dawn of a new century. We start 1998 in a very strong position.

Our economy is strong and diverse. Incomes are rising and unemployment is low.

More Oregonians today have health care than ever before. The number of children without health insurance has dropped from 21 percent to less than eight percent.

We have dramatically reduced the number of Oregonians on welfare.

We established high academic standards for students in our primary and secondary schools and have embarked on an ambitious effort to make our universities more responsive to the realities of the 21st century.

And we have launched an historic endeavor to restore watersheds across the state based on the commitment of thousands of Oregonians who have volunteered to work on their local streams and rivers.

All of these accomplishments point to a future for Oregon that we can feel good about. But as I pointed out in my State of the State address last week, none of them could have been accomplished by government alone; they required individual responsibility and community involvement as well.

Yet today this sense of community and shared responsibility is giving way to a widening breach among individual citizens and between Oregonians and their government -- a growing tendency to think not in terms of community, but in terms of "us vs. them" -- a growing unwillingness to see our problems as shared responsibilities, but rather to look to someone or something else both for scapegoats and solutions.

I want you to remember that as I discuss in some detail several of the challenges that lie ahead. I want you to remember that Oregon has always worked best and accomplished most when it has functioned not as a collection of separate people or groups or interests or institutions, but as one community -- diverse, but united in pursuit of common goals.

I want you to remember that unless problems like crime and education and growth and protecting our environment become not just state problems, but community problems -- unless individual Oregonians work together as a community -- we are not going to achieve the kind of future we all hope to have.

Last Friday in my State of the State address, I outlined a vision for what that future would look like.

A future of healthy children growing up safe and with a strong sense of self-worth. Children who are ready to learn.

A future of schools where teachers have time to deal with each student as an individual with particular needs -- and where classrooms have good textbooks and up-to-date technology.

A future where the roads are in good repair and not clogged with congestion. A future with public parks and public

libraries, with unpolluted streams and with mountains and forests that look pretty much the way they did when we were young

A future where children won't have to be checked for concealed weapons at school and where they won't be tempted to use drugs or to join gangs in order to attain social acceptance. A future where all our children will receive the kind of education that will make them successful in both the workplace and in our society.

That is the kind of future I believe we all want to build for our children -- it is a shared vision. And achieving it is a shared responsibility.

To get there we need to address a number of challenges in at least four broad areas: education, public safety, growth management and protecting our environment. Today I want to spend some time on two of these in particular: education and public safety. Why these two?" Because they are related not only as part of our vision, but because expenditures for public safety are beginning to cut into our ability to meet our educational objectives and I believe that education is perhaps the single most important investment we can make in our future.

In education we are facing two major challenges. First, ensuring that our children meet the high academic standards we have established in the Education Act for the 21st Century. Second, ensuring that our universities are not only accessible to all Oregonians who need a post-secondary education -- but also that they are responsive to the needs of both the student and the economic marketplace.

Concerning the Education Act, I recognize the magnitude of change that is being proposed, but I also believe that it is absolutely necessary if our children are to succeed in the information - driven workforce of the next century. Our immediate challenge is to build a K-12 budget for the next biennium that supports student achievement toward the standards.

This challenge is complicated by the fact that Ballot Measure 5 shifted responsibility for school funding from the local to the state level. Before the passage of Ballot Measure 5 70 percent of school funding came from the local district. Citizens in the district could determine how much was necessary to support their schools. Today, however, -- thanks to Ballot Measure 5 -- 80 percent of school funding comes from the state which means that now the legislature must determine what is adequate to fund our primary and secondary schools.

Up until now, the school funding debate in Salem has revolved around a series of computer runs that show whether a district is getting more or less than it did the previous year. Adequacy has been defined as what was spent last year plus and increase for inflation and enrollment growth. But this tells us very little about how those dollars are being spent in the classroom -- and almost nothing about whether they actually contribute to student performance.

The next budget, however, must be built around some assumptions on what different investment levels mean in terms of student achievement. Adequacy must be defined not simply by what was spent last year plus inflation -- but by what it takes for our students to meet the high standards we have established.

I am addressing this in two ways. First, through the development of the database proposed in my 1997 budget and approved by the legislature which, over time, will allow us to link activities in the classroom with outcomes -- as well as the cost of those activities. Second, through an extensive series of meetings I am conducting across the state with parents, teachers, administrators and community leaders to better understand the challenges to implementing the Education Act at the local level.

Working closely with school superintendents, I will use this information to begin to build a 1999 budget that can be defended with both the legislature and the public -- a budget we can be confident will move us toward the goals of high student achievement.

While the immediate challenge for K-12 is developing the next budget, the long term challenge relates to the stability of the funding for primary and secondary education. As you know, stability relates to how tax revenues change in response to changes in the economy. A stable revenue system is one in which revenue grows at about the same rate despite changes in the economy's growth rate. A tax system is considered unstable if fluctuations in the economy's growth rate

trigger larger percentage fluctuations in revenue.

I am concerned that Oregon's overall revenue system is more unstable now than it was in 1980. Although Oregon's economy is considered more stable than it was 15 years ago, the revenue system itself is now more sensitive to changes in the economy. The primary reason for the change is the growing share of tax revenue that comes from relatively unstable income taxes and the declining share that comes from more stable property taxes.

The implications of this for K-12 and for the Education Act cannot be understated: education funding is increasingly unstable. As I just mentioned, Measure 5 and Measure 50 have made K-12 school budgets highly dependent on relatively unstable income taxes. This means that unanticipated shortfalls are more likely to affect primary and secondary education.

Thus, increasing the stability of general fund revenues must also be a priority if we are indeed committed to helping our children achieve the high academic standards that will ensure their success in the next century. There are a number of ways in which this could be accomplished: establishing a reserve fund that would be available to education during periods of unanticipated revenue shortfalls; diversifying the revenue system so that it consists of a number of different revenue sources that have some degree of independence from one another; or by altering income taxes in a way that makes them less sensitive to economic conditions.

It is my intention to build a consensus in Oregon around the changes necessary in our tax code to ensure a long term stable funding source for our public school system. I will develop a package of recommendations to the next Legislative Assembly to achieve this objective.

The second challenge in education is ensuring that our universities are not only accessible to all Oregonians -- but also that they are responsive to the needs of both the student and the economic marketplace.

By "student marketplace" I mean not just the young person who graduates from South Eugene High School and wants to go to Oregon State University, but any Oregonian who needs a post-secondary education -- from the displaced millworker to the engineer who needs additional training because of the changing world of high technology.

By "economic marketplace" I mean the business community; those who hire the graduates of our post-secondary institutions. Today we know that many Oregon employers are having difficulty filling skilled high-wage positions with Oregonians. Instead, highly educated newcomers are taking these jobs because we have been unable to produce an adequate supply of Oregon graduates for these markets.

Let me say at this point that I am not entirely comfortable using terms like the "student marketplace" and the "economic marketplace" in the same breath with "higher education." Certainly the system does serve the needs of students and of employers. But a higher education is much more than that.

It becomes the personal possession of each man and woman who achieves one, and it bears both tangible and intangible fruit. It prepares us not only to make a living -- but to live, in the best possible sense. It provides economic security even as it opens the gates of vision.

Let me be clear, that our efforts to bring education into line with today's economic and technological realities does not mean that our post-secondary schools are merely job training centers and employment agencies. In addition to being members of the workforce, we are also parents and citizens of a free society, with a duty to preserve and transmit the perspective, the judgment, and the values that flow from a liberal education.

I assure you that I have not, and will not, lose sight of the intrinsic value of a liberal arts education. Indeed, it is one of the values that I am committed to preserving.

Having said that, I firmly believe that the most vital challenge to our system of higher education today is the diminishing ability of our colleges and universities to survive in a rapidly changing education market.

This should not be viewed as an indictment of the current system. We have a good system that has served Oregonians

well. But the world in which that system operates is changing rapidly and we must change to accommodate it if we hope to preserve our system and the important values it embodies.

To respond to these changes we must shift the focus of higher education in three critical areas:

First, we must shift the focus of the agenda from the needs of the institutions in the system to the needs and opportunities in the broader economic and student marketplace.

Second, we must shift the budgetary focus from system discipline and an effort to equitably allocate resources among the institutions to targeted investments and institutional allocations that reflect the needs in the student and economic marketplace.

Third, we must shift the management focus from the needs of the institutions and presidents to the needs of the student and economic marketplace.

To re-focus the system in this direction, I have directed the Board of Higher Education to do the following:

- Provide greater flexibility for individual institutions to offer new programs to meet the demand in the student and economic marketplace. (Allow tuition and public dollars to follow the student.
- Establish a budget process with an explicit allocation of resources, with subsidies made openly and based on clear policy decisions, and with specific strategic allocations for the outcomes the Board decides the system should produce.
- Strategically determine the specific outcomes that the system should produce to meet the needs of the state as a whole, and explicitly allocate resources to support these outcomes in the budget and enter into performance contracts with institutions to deliver those outcomes.

In addition, to make education more accessible to all Oregonians, I believe that higher ed, our community colleges and our private institutions must all be viewed as part of a common post-secondary capacity. Toward that end, I am also recommending that we:

- achieve complete program transferability among community colleges and universities, as well as facilitating transferability issues with private and out-of-state schools; and
- establish one entity that is responsible for overall program certification.

These, then, are our challenges in the area of education. And meeting these challenges are directly related to how we address the issue of public safety. Three years ago, in an effort to reduce crime in Oregon, voters passed Ballot Measure 11. In response we will spend more than \$1 billion in the next 10 years building 13,000 new jail and prison beds and hundreds of millions more to operate them. Public safety spending in Oregon went up 66 percent between 1993 and 1997. During the same period of time state spending on higher education actually went down.

What is wrong with this picture? It's not balanced, that's what's wrong . Spending on prisons is reducing our ability to invest in education and that is simply not sustainable. Education is one of the keys to reducing crime in the first place. People with an education today have better job opportunities, more economic security, and more hope for the future.

I am not suggesting that we don't need jails and prisons. We do. But we must couple the single-minded determination to make sure criminals are punished with an equal determination to prevent the commission of crimes in the first place. And that is where we have fallen down as a state.

We have complied with the provisions of Ballot Measure 11. Over the last year I have sited five prisons and three work camps. Not easy choices, but necessary ones. Now it is time to re-focus our efforts on the prevention of crime. It is time for Oregonians to demand of their legislature an investment in prevention that is at least as serious as the investment we are making in punishment. And the most effective way to do that will be to target at risk kids to keep them from becoming entrapped in the criminal justice system in the first place.

We know who these kids are. There are several major risk factors associated with children who are likely to get into

trouble, including: substance abuse, school failure, child abuse and negative peer association.

What I am proposing is the following:

First, since we know who these kids are, we must have a coordinated state and county approach to reach them. Today, tragically -- even though we know they are on the edge becoming involved in crime -- we address them only in a patchwork way. Instead, we must focus our efforts where we know they will have an immediate impact.

Let me give you an example:

Assume you know a 15-year old who both uses drugs and has dropped out of school. We know that there's a better than even chance that this person is going to end up breaking the law, creating a victim and ending up in our prison system. In the process, lives are wrecked and dollars are wasted housing a criminal instead of saving a child.

The question is: what are we doing for this person today?

In some communities, we are doing a lot. Here in Eugene, you have community-based programs like Looking Glass -- which I will visit later today -- that finds at risk kids and offers them help.

But this is the exception, not the rule. My goal is to make certain that every community in Oregon has an active and comprehensive plan to help these kids -- and the resources to carry it out.

Second, I will provide technical assistance from the wide variety of state agencies involved in public safety, to help communities create the plans that work best for them.

We have already identified fourteen specific strategies: from truancy centers -- to a street workers program -- to substance abuse intervention.

There is not a "one-size-fits-all" response to this problem. Each community is different and reducing juvenile crime is more effective when a community has made it a priority than when the state has made it a mandate.

In the next budget I will focus the resources of state government to plan, organize and fund proven community-based strategies to help keep kids out of crime.

Finally, we have to face the fact that law enforcement and crime prevention go hand in hand. For too long, we have been shifting the state's responsibility for patrolling our roads and highways to local law enforcement that would otherwise be present in the neighborhoods and communities they are sworn to protect.

Today, we have more people traveling more miles on state highways and at higher speeds than ever before. Yet there are fewer state patrol officers today than there were almost two decades ago. In 1979 there were 530 patrol troopers. Today, there are only 355.

I believe that it is time for the state to begin meeting its obligation to provide patrol coverage of state highways. More troopers means better local law enforcement and a strong tool for identifying and intervening with the kids who are on the edge. To do that, I am working with both local law enforcement and our state police to build a proposal for the 1999-2001 budget that will fill the gaps we know exist.

Meeting the high standards of the Education Act, tending to our system of post-secondary education, reducing juvenile crime: these are among the greatest challenges facing Oregon in 1998. To meet them, we cannot afford to simply look at our present prosperity and reckon that the future doesn't need tending. Because that is not the case.

Our great inheritance -- a beautiful state with a distinguished history of civic involvement and civic accomplishment -- was made possible by men and women who did not take the future for granted.

It was made possible by people who never questioned the principle that individuals with ideas can make a difference.

It was made possible by Oregonians who had the determination to put those ideas into practice.

And it was made possible by people who loved Oregon enough to get involved -- to take responsibility for meeting the challenges before our state -- and in so doing, met them.

I refuse to believe that those people no longer exist. I refuse to believe that Oregonians today are unwilling to help children learn, unwilling to keep children from turning to lives of crime.

Instead, I believe that we are as capable today as we have ever been of solving our problems and meeting our challenges. I believe that the spirit of community which made Oregon great burns as brightly today as it ever has. And that if we work together, no dream will lie beyond our grasp.

American novelist James Agee once wrote that in every child who is born, no matter in what circumstances and no matter of what parents -- the potential of the human race is born again. Let us each do our part to ensure that the state of Oregon and the community of Oregon remain, for us and for our children, the best place in the world to live.

Governor John Kitzhaber

State of the State Speech

"Restoring the Oregon Community"

January 16, 1998

I'm pleased to be able to join you today to discuss the state of the state.

Due to a recent change in my life, I have had a lot of time in the relative quiet of the middle of the night to think about that very topic. And because of that change, better known as my son Logan, I have more cause than ever to think not just about the state of the state, but about the future of the state.

For as long as I can remember, I have had a deep personal commitment to Oregon. For the past two decades I have served this state in public office. But until I became a father, I'm not sure I fully realized the staggering responsibility I have -- not only as governor, and not only as a parent, but as a member of the Oregon community -- to contribute to and help create the kind of state I want my son to grow up in.

It is a responsibility we all have. And I believe we are starting from a position of strength.

One of the things that has always defined Oregon has been our ability to do great things -- to lead the way, to find new approaches. And the reason is that we Oregonians have historically viewed our problems as shared responsibilities. We have worked together to find solutions.

Somewhere within each of us -- flickering maybe, but not extinguished -- there burns a sense of community which has enabled us to achieve things that others might have called impossible. The landmarks of our recent history -- the Oregon Beach Bill, the Oregon Bottle Bill, the Oregon Health Plan, and now the Oregon Salmon and Watershed Restoration Plan -- all reflect the deepest values and the highest priorities -- not of government, but of the people collectively. The values and priorities of the Oregon community.

When I look around the state today at some of the things we have accomplished, I do see many signs of a bright future.

Our economy is strong and diverse. Incomes are rising and unemployment is low.

More Oregonians today have health care than ever before. The number of children without health insurance has dropped from 21 percent to less than eight percent.

We have dramatically reduced the number of Oregonians on welfare.

And we have launched an historic endeavor to restore watersheds across the state based on the commitment of thousands of Oregonians who have volunteered to work on their local streams and rivers.

All of these accomplishments point to a future for Oregon's children that we can feel good about. None of them could

have been accomplished by government alone; they required individual responsibility and community involvement as well.

But as remarkable as they are, they are only part of the picture. Many challenges remain.

The challenge of helping our students achieve the high academic standards we have set for them.

The challenge of reducing juvenile crime.

The challenge of managing growth in a way that preserves our exceptional quality of life.

The challenge of continuing to restore streams and watersheds throughout the state, including the Willamette River.

I believe we can meet all of these challenges -- if we approach them the way we have tackled problems in the past. And the fact is, we know what works.

We know that Oregon has always worked best and accomplished most when it has functioned not as a collection of separate people or groups or interests or institutions, but as one community -- diverse, but united in pursuit of common goals.

Yet today, like a cloud on the bright horizon of our future, this sense of community and shared responsibility is giving way to a widening breach among individual citizens and between Oregonians and their government -- a growing tendency to think not in terms of community, but in terms of "us vs. them" -- a growing unwillingness to see our problems as shared responsibilities.

On a number of issues vital to our future I believe individuals have become disengaged -- in the hope that their government can solve problems without them.

Juvenile crime offers a concrete example. It clearly is a state problem -- and a very serious one. But it is also a community problem, because these crimes affect the lives of individual citizens -- our own neighbors, friends and families.

Three years ago, in an effort to address this problem, Oregonians passed Ballot Measure 11. In response, we will spend more than \$1 billion in the next 10 years just building 13,000 new jail and prison beds. We will spend millions more running them.

Yet despite this enormous expenditure of public funds -- which has come primarily out of education -- Oregon is not, in fact, a safer place. In Portland alone last year there was a record number of gang-related homicides.

This irony was brought home to me a couple weeks ago by a juvenile homicide in Boston which made the national news. Why would a juvenile homicide in Boston make the national news? Because it was the first gun-related killing of a juvenile in Boston in 29 months. Twenty-nine months -- almost two and a half years. By comparison, in the last two years alone there have been six gun-related juvenile murders in Portland.

While we've been building prisons, Boston police have been teaming up with social service agencies, community groups, churches, and neighborhoods to target and directly intervene with at-risk kids and offer them alternatives to lives of crime. While jails and prisons are certainly necessary, it is equally necessary to prevent crimes before they happen -- and that takes the kind of community involvement we are seeing in Boston.

I share this with you because it highlights what we already know here in Oregon -- that real solutions require not only state leadership, but community involvement and individual responsibility. We cannot simply hand problems off to the state. Because that is another way of saying, "this is no longer my responsibility." But Oregon's challenges are our responsibilities -- individually and collectively.

Oregonians should know, better than anyone else, that unless problems like crime and education and growth and

protecting our environment become not just state problems, but community problems -- unless individual Oregonians work together as a community -- we are not going to achieve the kind of future we all hope to have.

And I do believe that we share a common vision of the future -- not something abstract and intangible, but something involving real conditions that touch the everyday lives of real people -- especially our children.

Speaking for myself -- not only as governor, but as an Oregonian, and now as a father -- I can describe for you the vision of the state I want for my son Logan and for every child in Oregon.

I want our children to be able to spend their early years in an environment where they can be healthy and safe -- an environment that fosters a sense of security and self-worth, and that opens their minds to what's best in the world -- the wonder and beauty of nature and of books, laughter, family, friends, and strong but simple values like compassion and responsibility.

When they enter school, I want them to be ready to learn.

I want them to go to schools where the teachers have time to deal with each student as an individual with particular needs. I want classrooms with good textbooks and up-to-date technology. I want courses in art and music, and vocational courses for those who are interested.

I want my son and his fellow students to travel to and from school on roads that are safe because they are in good repair and not clogged with congestion.

I want them to be able to visit parks and public libraries, to fish in unpolluted streams and hike in mountains and forests that look pretty much the way they did when I was young.

When they enter high school, I want my son and his friends to be ready to achieve the high performance standards we have set for them. I want them to go to schools where they won't have to be checked for concealed weapons and where they won't be tempted to use drugs or to join gangs in order to attain social acceptance. And when they graduate, I want them to have all the tools they will need to move on, whether to a job or to college.

That is the kind of future I want for my son and for every Oregon child. And I believe it is a shared vision, something all of us want.

How can we get there? Not expecting someone else to do it for us, but only by rekindling the sense of community and individual responsibility that have illuminated our past and which alone can light our future.

We know what we want. We know what works. It is only a question of each of us -- as members of the diverse, caring, creative and energetic community we call Oregon -- doing our part.

So now let me turn to four of the major challenges we will face in making our vision a reality: achieving high educational standards, managing growth, reducing juvenile crime and preserving the quality of our environment. I want to describe what I will do to provide leadership in these areas, and what I expect of you in terms of community involvement and individual responsibility.

First, our vision includes a future where all Oregon children have equal access to an education that will prepare them to succeed in the 21st Century. The new, higher educational standards we have established put us on that path. But success will take more than high standards and adequate funding. It will also require that we reconnect our communities to their schools -- something we lost when Ballot Measure 5 turned the problem of school funding over to state government.

Our challenge is to restore that involvement and ownership. As a citizen, I intend to lead by example, regularly spending time reading to children in the classroom, mentoring or serving as a classroom volunteer.

I have already started an extensive series meetings throughout Oregon with parents, teachers, community leaders and school administrators -- to find ways to help people get involved with their schools. I am looking for programs and

strategies that have worked.

I am asking what the schools need tomorrow that they don't have today to help our children meet the standards and I intend to use this information to create a link between the next budget and student performance.

I challenge all of you to make a similar commitment to these youngest of Oregonians. Get into schools, communicate directly with the teachers and administrators and be actively involved in your child's education. Whether you have children in school or not, try to find ways to expose students to the workplace so they can connect what they are learning with the real world outside the classroom. And I call on all Oregonians, to reach out to those children whose parents may be working two jobs just to keep food on the table, who don't have time to read to their kids or help them with their homework or give them proper guidance.

Because educating our children is a shared responsibility.

Second, our vision includes a future of congestion-free roadways, of open spaces and balanced, quality communities. Success will depend on managing growth in a way that preserves our exceptional quality of life. And that will require both state leadership and community involvement. Let me give you an example.

Corvallis, like the tri-county area, is currently grappling with the problems created by success: a growing number of jobs and people to fill those jobs -- but no place in the community for those people to live. I recently met with community leaders in Corvallis who told me that increasingly people are living in nearby Lebanon and Albany where the affordable housing is located. These towns are now filling up with people who work in Corvallis. The result is a forced commute to the workplace, congested roads and pressure to spend millions of dollars on highway improvements -- millions which, by the way, we don't have.

I believe this and similar problems around the state could be avoided if communities looked beyond their boundaries and thought about growth as a regional issue. I am not talking about creating another level of government. But I am simply suggesting that we need to create some appropriate forum for regions to plan cooperatively for growth.

I am already working to bring regions together to solve the problems that growth is bringing us.

In this region you already have a forum to do this -- Metro -- which recognizes that you don't have three separate counties up here as much as you have a common metropolitan area, and that you cannot plan for and manage growth without coordinated, region-wide decisions.

I realize that Metro has come under fire from some quarters -- and no one will argue that its governmental functions cannot be improved. I urge you to make Metro work better, yes ... but do not throw out this landmark effort to plan for and shape your own future.

I sympathize with the desire to preserve neighborhoods and we must support neighborhood efforts to maintain and restore their sense of community. But we must also understand that ultimately our community is much larger than our immediate neighborhood. Growth must be addressed as a neighborhood, city, county and a regional issue. It is a shared responsibility.

Third, our vision includes a future where Oregon citizens are safe -- in their homes, on the streets, and in our schools. The state government can build and operate prisons, and it is doing so, but we won't be truly safe until Oregonians are willing to demand of their legislature an investment in prevention that is at least as serious as the investment we are making in punishment.

Nor will our communities ever be truly safe unless those within the community reach out and help support families and especially children at risk -- unless they participate not only in neighborhood watch but also in the boys and girls club. Make no mistake: the social problems our neglected and deprived kids bring to school have an impact on every other child and on our entire education system and our whole society.

In the coming year I will make the support of community-based juvenile crime prevention my top public safety priority.

And if we could spend just a fraction of what we spend on punishment, helping kids who need help the most, then I am convinced we can begin to turn the tide of juvenile crime. We will stop these kids from hurting others, but equally important we will keep them from ruining and wasting their own lives.

We know who these high risk kids are. And we all know what will happen to them -- and to us -- if they are ignored. And I am convinced that caring and intervention at the community level can do what no government program can ever hope to accomplish. This too is a shared responsibility.

Fourth, our vision includes a natural environment marked by clean waterways and healthy fish habitat. I will spend the next year working to make the Oregon Salmon and Watershed Restoration Plan a success. I will also lead the effort to restore the health of the Willamette River by implementing the recommendations of the Willamette River Basin Task Force.

Both efforts are based on a philosophy which I deeply embrace -- that we can accomplish more for our environment -- and for our sense of community -- by helping people do the right thing than by simply punishing them for their past practices; that we will accomplish more for a watershed when a community has made it a priority than when the state has made it a mandate.

As people lucky enough to live in this beautiful state, you must also play your part by managing your life in a way that minimizes adverse impacts on the environment.

If you live by a stream, allow plants to grow beside it. Reduce erosion. Reduce your use of yard fertilizers and pesticides. Watch what you put down the sink or into the storm drain.

Become a participant in your local watershed council or soil and water conservation district. Work with the appropriate agency to develop and implement a management plan for your basin and your farm.

Recycle. Conserve water. Conserve energy. Reduce waste.

Protecting and preserving our environment is a shared responsibility. I believe that if each of us does our part no one's burden will be too heavy to bear. And the rewards will belong to us all.

Clearly I am asking much of Oregonians. But much is needed. The easy path is to look at our present prosperity and reckon that the future doesn't need tending. But that is not the case -- just as you cannot bring into the world a healthy, normal child and just assume that his or her future is assured, with no more effort or responsibility on your part.

The same applies to Oregon. Our great inheritance -- a beautiful state with a distinguished history of civic involvement and civic accomplishment -- was made possible by men and women who did not take the future for granted.

It was made possible by people who never questioned the principle that individuals with ideas can make a difference.

It was made possible by Oregonians who had the determination to put those ideas into practice.

And it was made possible by people who loved Oregon enough to get involved -- to take responsibility for meeting the challenges before our state -- and in so doing, met them.

I refuse to believe that those people no longer exist. I refuse to believe that Oregonians today are unwilling to help children learn, unwilling to keep children from turning to lives of crime, unwilling to help our communities grow well, unwilling to keep our streams and rivers clean.

Instead, I believe that we are as capable today as we have ever been of solving our problems and meeting our challenges. I believe that the spirit of community which made Oregon great burns as brightly today as it ever has. And that if we work together, no dream will lie beyond our grasp.

American novelist James Agee once wrote that in every child who is born, no matter in what circumstances and no

matter of what parents -- the potential of the human race is born again. Let us each do our part to ensure that the state of Oregon and the community of Oregon remain, for us and for our children, the best place in the world to live.

Governor John Kitzhaber

Response To Task Force Reports On Higher Education And The Economy And College Access
December 23, 1997

Higher Education and the Economy

College Access

I appreciate this opportunity to provide you with my thoughts on the report *on Higher Education and the Economy*, as well as the other valuable report on post-secondary education issues submitted by the *College Access Task Force*.

As I begin, let me first reaffirm my commitment to our system of higher education. Both my parents are retired professors from the University of Oregon and I myself am a product of the public school system and the University of Oregon Medical School. I know the value of the system.

Throughout my comments today, I will be talking about the student marketplace and the economic marketplace -- the customers of the system, if you will. And certainly the system does serve the needs of students and of employers.

But a higher education is much more than that. It becomes the personal possession of each man and woman who achieves one, and it bears both tangible and intangible fruit. It prepares us not only to make a living -- but to live, in the best possible sense. It provides economic security even as it opens the gates of vision.

Let me be clear, that our efforts to bring education into line with today's economic and technological realities does not mean that our post-secondary schools are merely job training centers and employment agencies. In addition to being members of the workforce, we are also parents and citizens of a free society, with a duty to preserve and transmit the perspective, the judgment, and the values that flow from a liberal education.

I assure you that I have not, and will not, lose sight of the intrinsic value of a liberal arts education. Indeed, it is one of the values that I am committed to preserving.

Let me also ask you to keep two additional points in mind as I make my comments today.

First, I remain committed to full access to our post-secondary system for any qualified Oregon student. Whatever changes may be needed to the system must be consistent with my resolve to achieve full coverage. I remain committed to Principle 3 of the College Access Task Force: *(Full Coverage) No one is left out by reason of geography, economic, racial or ethnic background, time constraints, or avoidable logistical problems.* I recognize that this may mean that

certain programs or even institutions will require some degree of subsidy.

Second, I have no intention of closing any school nor of letting any institution fail. Certainly the actions I believe we must take will, in some cases, require changes in institutions, both at the community college and university levels, as well as possible partnerships with other post-secondary entities. But this is not about the closure or failure of institutions. In fact, that is the very reason I have undertaken this task -- to avoid such an outcome.

I firmly believe that the most vital challenge to our system of higher education today is the ability of our colleges and universities to survive in a rapidly changing education market. I am convinced that unless we meet that challenge, some of our institutions will fail -- not because of the change we are undertaking today, but because we failed to master the change which is all around us.

I want to make it clear that I am not criticizing the current system. We have a good system that has served Oregonians well. But the world in which that system operates is changing rapidly and we must change to accommodate it if we hope to preserve our system and the important values it embodies. I would remind you that our primary and secondary education system is going through a similar transformation initiated by the 1991 Education Act for the 21st Century.

As Herb Aschkenasy commented at the July 18 Board meeting: *"...it should be understood that this isn't criticism of the past, it's not that we did something wrong yesterday. The world changes and we've got to change with it and what worked yesterday isn't good enough for tomorrow."*

Let me share some examples of the changes which are driving us.

1. Changes in state government finance and priority

- Property tax limitations -- With the passage of Ballot Measures 5 and 50, the state has become the principle funder of primary and secondary education, an appropriation that now represents nearly half of the general fund. This has both increased our dependence on the income tax and increased competition for income tax dollars within the general fund. Higher education has not done well in that competition. In 1990 15 percent of the general fund was committed to higher education and 30 percent to primary and secondary education. Today only seven percent of the general fund goes to higher education and 47 percent to K-12.
- Public safety mandates -- The passage of Ballot Measures 11 and 17 have imposed large unfunded mandates to build more prisons and establish an inmate work program. Since 1994 public safety spending has increased by 60%. This has forced us to move income tax dollars out of education at all levels and into the construction and operation of prisons. More ballot measures of this kind -- unfunded mandates for new crimes and new prisons -- are expected next fall.

2. Changes in the "education marketplace"

I have an aversion to using the word "marketplace" in conjunction with higher education because it is not, in my view, just another commodity. But I also recognize that there are consumers of the product offered by post-secondary institutions and we need a way to talk about them.

The education marketplace -- By this I mean the Oregon State System of Higher Education (OSSHE) as well as community colleges, private institutions and other entities that also deliver post-secondary educational opportunities in the state.

The student marketplace -- By this I mean not just the young person who graduates from South Eugene High School and wants to go to Oregon State University, but any Oregonian who needs a post-secondary education -- from the displaced millworker to the engineer who needs additional training because of the changing world of high technology. More and more people are recognizing the importance (and, indeed, the economic value) of a post-secondary education. Many of them can pay and there is a market for them.

The economic marketplace -- By this I mean the business community; those who hire the graduates of our post-secondary institutions. Today we know that many Oregon employers are having difficulty filling skilled high-wage positions with Oregonians. Instead, highly educated newcomers are taking these jobs because we have been unable to produce an adequate supply of Oregon graduates for these markets.

3. Changes in how higher education is delivered

There has been a significant increase in new entities -- like the University of Phoenix, the Western Governor's University and the internet -- which are, in a real sense, competing for students. If our own post-secondary systems do not focus on becoming more customer-centered and competitive, some time in the not too distant future we will be greatly displaced by these other entities that are focused on the needs of students and of employers.

I believe that these two Task Force reports - *Higher Education and the Economy*, and *College Access* -- provide an excellent framework to begin a dialogue on how to provide more Oregonians, and indeed all Oregonians, greater access to an enriching post-secondary education, and how to meet the challenges of the sweeping changes that confront us.

When I spoke to the Board last July, I noted that by reversing the trend of higher education budget cuts that has marked the 1990's, we had turned the corner and set a new direction. I still believe that is true. But we all need to recognize that this increase in funding was only incremental and occurred in a period of exceptional economic growth. We still have a long way to go.

For that reason, I emphasized three areas where I believe we need to change our focus: agenda, budget and management. The two Task Force reports -- *Higher Education and the Economy*, and *College Access* -- provide many excellent and provocative ideas and recommendations, some of which advance the policy direction I described to the Board in July. I wish to submit those particular ideas and recommendations to you today for action.

AGENDA-- *shift the agenda focus from the needs of the system institutions to the needs and opportunities in the broader economic and educational marketplace.*

Currently, the Board spends an inordinate amount of time micromanaging course offerings at various institutions -- assigning to certain schools "rights" to particular geographic areas or curriculum. This is a cumbersome process which does not allow either individual schools or the overall system to respond in a timely fashion to student or employer needs.

- **Recommendation:** Provide greater flexibility for individual institutions to offer new programs to meet the demand in the student and economic marketplace.

The Chancellor should operate more as an "opportunity broker" rather than a "paper checker."

BUDGET -- *shift the budgetary focus from system discipline and an effort to equitably allocate resources among the institutions to targeted investments and institutional allocations that reflect the student and economic marketplace.*

The existing budget process is ponderous and favors funding existing programs rather than providing incentives to develop programs that may better meet market need. In addition, the budget process is not explicit. It is difficult to tell what specific programs are being purchased and how much the same program may cost at different institutions. Subsidies are also implicit and hidden which prevents a debate over the reasons for and merits of the subsidies.

- **Recommendation:** Allow tuition and public dollars to follow the student.

- **Recommendation:** Establish a budget process with an explicit allocation of resources, with subsidies made openly and based on clear policy decisions, and with specific strategic allocations for the outcomes the Board decides the system should produce.

- **Recommendation:** The budget process should strive to comply with Principle 1 of the College Access Task Force: *(Leverage) - The state should, whenever possible, invest in post-secondary education in a way that elicits other sources of funds as well.*

MANAGEMENT -- *shift the management focus from the needs of the institutions and presidents to the needs of the public and economic marketplaces as espoused by the Board.*

Indeed, this direction is consistent with Principle 4 of the College Access Task Force: *(Public Confidence) - Public higher education is provided in a way that merits and receives the full confidence of Oregonians.*

- **Recommendation:** The Board should strategically determine the specific outcomes that the system should produce (to meet the needs of the state as a whole), explicitly allocate resources to support these outcomes in the budget and enter into performance contracts with institutions to deliver those outcomes.

The Issue of "Institutional Autonomy" (Changing the rules)

I am not suggesting that we discard the rules which govern the system, but rather that the rules be changed to reflect the realities of the late 20th century. We must retain the central authority of the State Board of Higher Education -- I believe in a "system" -- but, at the same time, the individual institutions must be given greater autonomy in at least three areas:

- (1) In exemption from various state agency rules, such as procurement. Some of this was addressed by SB 271 of the 1995 session, but additional steps should be explored.

- (2) In determining which programs they wish to offer -- as long as those programs meet certification standards for quality.

- (3) In competing for -- and executing -- performance contracts with the Board for delivering specific outcomes.

Additional Recommendations

One of the findings of the Task Force was that our governance structure has become "compartmentalized." We currently govern universities and community colleges separately and rarely recognize the resources represented by private schools. We need to begin to view the OSSHE institutions, our community colleges and our private schools as part of a common post-secondary capacity available to serve the needs of Oregonians.

This finding is consistent with Principle 6 of the College Access Task Force: *(Seamlessness) There are no unnecessary obstacles either to student entrance to the post-secondary system or to their progress through it even though this complex system is made up of several kinds of Oregon institutions and, increasingly, out-of state and foreign institutions as well.*

To move in this direction, I support the following:

- **Recommendation:** Achieve complete program transferability among community colleges and universities, as well as facilitating transferability issues with private and out-of-state schools.

- **Recommendation:** Establish one entity that is responsible for overall program certification (this is an essential pre-requisite to increasing competition within the system).
- **Recommendation:** Think through the concept of a single budgetary and governance structure, at least for public post-secondary education, to better target scarce public resources.

The above three recommendations can -- and should -- be applied to the public system. To apply them to the private system (which I believe has merit) raises a series of thorny questions concerning tuition policy and competition. I am not suggesting that we rush to a conclusion on this matter, but I am strongly urging that we put it on the table for a serious examination and discussion.

I realize that these proposals are causing considerable anxiety -- particularly the recommendation that we create a separate entity to oversee implementation. Let me put those fears to rest. There are issues here exclusive to the state system of higher education that you are in the best position to address and for which you are directly responsible.

However, there are also issues which involve community colleges and private institutions. These issues are extremely important and we need to discuss how that coordination should take place. I have not yet determined how best to achieve this objective and would ask the Board, the community colleges and the private institutions to work with me toward that end.

In the meantime, I ask that this Board immediately begin work on the two challenges they can most effectively address: (1) providing greater flexibility for individual institutions to offer new programs to meet the demand in the student and economic marketplaces; and (2) creating a new budget model in which public dollars follow the student and which makes our subsidy decisions explicit instead of implicit. Furthermore, I want to understand the effects of this model on the system because we cannot make these changes in a vacuum, divorced from their real consequences.

Let me close by saying that I know these changes will not happen without the full engagement of this Board and our other partners. Last session we worked together to improve the financial condition of our higher education institutions. We reversed a decade of disinvestment.

But we all know that achieving the changes we are now contemplating will require continued investments -- that's a given. And I believe these investments can best be secured by ensuring the delivery of a high quality post-secondary educational experience in an environment where the forces of change dictate the need for flexibility.

We would not be here today if our system of higher education was operating in a stable environment. The long-term financial health of the entire system is jeopardized by these forces of change. Unless we work together to change the rules our state system operates under the system itself will be the victim of our inability to innovate. We know the status-quo is not the answer.

I am not naive. I've seen the higher education "reform" efforts of many of my predecessors fall to a system that will endure long after we are gone. But the conditions we face today are fundamentally different from those we face 20 or even 10 years ago.

It is not my intention to pit my will against the will of this system -- although I would not shrink from doing so if I felt it was unavoidable. I support the system and want it see it endure into the future. This Board must have the courage and the strength of will to make it so and to face the very real challenges that lie ahead.

The recommendations I have proposed must be tested against the ramifications they will have. They are not perfected, ready-to-implement ideas. But I my experience, it has been the willingness to engage and debate new ideas -- rather than shrinking from them -- that has formed the basis for our best public policy innovations. And that, after all, is what our institutions of higher education teach us.

I can assure you that the Oregon Health Plan didn't spring to life in a day -- nor will this transition. But if we believe that we must innovate or fail, then we will innovate -- not recklessly and not with abandon, but through deliberation and with determination. And we must do so with a commitment that everyone -- OSSHE, our community colleges, our private institutions and, most importantly, the students we all seek to serve, will move forward together.

I recognize that change is neither easy nor comfortable -- but it is often necessary. It is necessary now. Getting ready for this presentation I was reminded of something I heard at the WGA meeting last year when we were discussing how to change the system of higher education. It went something like this:

"Come and look into the abyss," I said.

And they said, "No, we are afraid."

"Come and look into the abyss," I said.

And they said, "No, we are afraid."

"Come and look into the abyss," I said.

And they came.... and I pushed them in.

.... and they Soared.

[Return to Speeches](#)

[Return to Governor's Office](#)

Governor John Kitzhaber

Oregon State Sheriffs' Association

December 2, 1997

I'm pleased to have this opportunity to speak with you about public safety policy in Oregon. But first I want to take a moment to give respect and honor to the four law enforcement officers who lost their lives in service of our citizens.

It has been a difficult year for the "law enforcement family." Our fallen officers served us well and are deeply missed. All Oregonians owe these officers and their families our heartfelt condolences. But for random chance or the intentions of evil, these officers would be with us today. These are risks officers face, by choice, every day. In their honor, and in your service, together we will continue to work to support the safety of our officers in the field.

Keeping the public safe is, I believe, one of government's fundamental responsibilities. Today, I'd like to spend our time together thinking about the next steps we need to take to improve public safety in Oregon. Because, next November, it is likely Oregonians will be asked once again to shift even more money from the prevention account to the punishment account.

The question I want to put to you today is where should we make our next public safety investment? Is it time to build still more prisons or is it time to commit ourselves to the prevention of crime?

To answer that, I want to take a brief look at what we have done in Oregon over the last several years.

Ten years ago, Oregon was emerging from a severe recession and we had not built new prisons in decades. Less than half of convicted felons served any time in jail or prison. Those sent to prison served only one-quarter of the sentence imposed by a judge because overcrowding forced the Parole Board to release inmates early.

As a result, in the late 1980s we used a new sentencing system to reserve more of our prison space for violent offenders and drug dealers and we added more than 3,000 prison beds. By 1994, more than two-thirds of convicted felons served time in jail or prison.

In the last three years, we have seen an even more dramatic commitment of resources to our corrections and criminal justice system with the passage of Ballot Measure 11, which has imposed some of the toughest sanctions in the country.

And we have given prosecutors and law enforcement officers more power to catch and convict criminals. These changes include re-criminalizing possession of marijuana, which expands the ability of police to search suspects; greater police authority to stop people they suspect are about to commit a crime as well as to conduct searches for weapons in traffic and other stops; extending the period of time in which prosecutors can file charges against suspected child sex abusers, and removing the requirement that police obtain court orders to use body wires in drug felony cases.

But it takes money to make these new sanctions and powers to work. And between 1993 and 1997, state spending on public safety increased by 66 percent.

Where did this money go? Much of it paid for the construction and operation of new prisons.

Since I took office in January of 1995, we have added or sited 13,000 new beds in our state's corrections system. During this same time period, we took a bold step to deal with juvenile crime by creating the Oregon Youth Authority and spending \$76 million for juvenile correction facilities. And in a 1996 special session, Republican Representative Ray Baum and Democratic Representative Peter Courtney received my support for HB 3488, a bipartisan effort to increase the sentences for chronic property offenders that is expected to put nearly 700 criminals in state prisons.

Even as we built the new prisons and began the work programs required by Ballot Measures 11 and 17, I worked with local government and law enforcement to create the Community Corrections Partnership Act. Passed in 1995, this law is restructuring the relationship between state and county corrections and bringing real sanctions and treatment to those sentenced to less than 12 months.

It is also bringing new resources to the local level -- \$29 million dollars in 1995 -- and after I called a special session of the legislature in 1996 -- \$94 million for the construction of county jails and alcohol and drug treatment facilities. We followed up this commitment in 1997 by establishing a \$7.5 million dollar reserve to help any local jurisdiction with these needs.

And the Community Corrections Partnership Act is promoting the exchange of information and ideas through Local Public Safety Coordinating Councils. Made up of law enforcement and justice system officers as well as public members, these councils are powerful forums for the coordination of local public safety policy.

The Community Corrections Partnership Act would not have happened without the strong support of local law enforcement. I want to take this opportunity to thank the Oregon Sheriffs Association for its support of this model effort to improve public safety.

In short, over the past three years Oregon has mounted an impressive effort to combat crime and respond to citizen concerns about their safety. And it's working. Our efforts, along with a strong economic growth, are combining to lower our rates of reported crime.

And in the process we have been innovative, as exemplified by Oregon sheriffs and state police being recognized by the International Association Chiefs of Police. For their cooperative work, both Lane County and Jackson County received semi-finalist Webber Seavey Awards for quality and performance in law enforcement. This is a high honor and deserves recognition.

This brings us back to the original question, what is it we should do next? What is it that we can do that will even further increase the safety and well being of Oregonians?

For some, the answer to this question is to create new crimes, increase prison sentences and build more state prisons. We can choose to do this, but given our recent and rapid expansion of our overall prison system, I do not believe this is wise from either a financial or policy point of view.

New sanctions and new prison beds is not being hard on crime, it is being hard on criminals. This is not just a semantic distinction. It is a fundamental philosophical divide. On the one side you have a single-minded determination to make sure criminals are punished. On the other -- the one I am trying to describe -- you have to couple that with a determination to prevent the commission of crimes in the first place.

To address this, I propose that we take an alternative course, and the premise of this course is that local communities, not state prison beds, should be the focus of our next public safety investments.

This means rejecting, for the time being, the newly-proposed ballot measures that will add to Ballot Measure 11 sentences which are already among the longest in the nation. We should reject this approach for what it represents -- a

rather expensive and limited tool that deals with crime after it happens. This does not mean we are doing nothing in this regard. We already have in place and have funded property crimes legislation that is projected to take 700 property offenders off the street once it reaches its full implementation.

As public safety's leadership you know that you will be asked to support a prospective ballot measure increasing Measure 11 sentences and requiring mandatory prison sentences for repeat burglars and car thieves. Before you take a position on this, I hope you will ask yourself the following questions:

- Do we need to increase Measure 11 sentences?
- Do I have enough jail beds to meet the requirements of Measure 40?
- Is this the best way to spend state public safety dollars or is there a better way to address the needs of public safety?

I believe there is a better way.

Rather than take the drastic and unnecessary step of further extending property crime sentences at this time, I believe we need to focus on four areas of public safety investment:

- Targeting high risk juveniles
- Increasing the number of law enforcement officers
- Focusing on sheriffs and local police, and
- Improving public safety information systems.

In other words, we need to focus on prevention and the reduction of victimization -- instead of simply locking up more criminals why don't we actually stop some crime itself? Let me touch briefly on these four areas.

First, we must target high-risk juveniles to keep them out of criminal activity and, if we fail there, get them out of a life of crime through swift and certain sanctions.

Focusing on these young individuals goes directly to the public concern over property crime. Oregon has the third highest property crime rate in the nation for juveniles, costing an estimated \$250 dollars for every man, woman, and child in our state. By preventing juvenile crime, we are addressing a major portion of the property crime problem.

We must also improve the capacity of our juvenile detention and shelter care system. That is why I am working with juvenile directors across Oregon and the Oregon Youth Authority to detail a policy that allows us to make this needed investment.

The second element of a plan to improve community safety involves increasing the number of law enforcement officers in our communities. For the state, this means providing additional State Police troopers.

Today, there are more drivers, driving more miles at higher speeds than ever before. Unfortunately, we've let the number of patrol troopers drop from 530 in 1979 to 355 today. That's unacceptable. We need to reverse this trend and adequately staff our state police.

More troopers mean more help for you in local law enforcement. Through Cooperative Policing Agreements, state police can actually meet obligations for coverage of state highways, freeing local resources to be assigned to other needed areas.

Third, we need to focus on our local police and you, our county sheriffs.

With the passage of Ballot Measures 47 and 50, we have seen reductions in local public safety services, despite the fact they were to receive protection from budget cuts. Well, I can tell you with certainty that there have been reductions made though I cannot assess the overall effect. What we need is a complete local and state assessment of public safety system gaps.

The local community is the front line and local government in many cases is the initial public safety contact for first time offenders.

If you are concerned about crime in your community, vote against a statewide property crimes measure that shifts more money to the state level and vote for more support of your local juvenile department, police, sheriff and corrections systems. Keep your crime fighting dollars at home and focused on your community's specific problems.

There is a fourth and final thing which we must do to improve our public safety systems. We need improved public safety information systems and program effectiveness data. We especially need this information because policy makers are always driven to spend time and money solving crises instead of preventing them.

Because make no mistake about it, it is easier to stir public opinion in favor of harsher sentences and new prisons -- as long as they're not in your backyard -- than it is to invest in preventing crime. Across the board, it is always easier to intervene in a crisis than to takes steps to prevent one. But, quite frankly, it takes more political courage and more vision to raise the banner of prevention.

Yet, that is precisely our challenge in public safety today: to realize that our principal chore after a decade of harsher sentences and prison construction is to balance those expenditures with an equally serious commitment to prevention.

It won't be easy. The emotional and political imperative always favors a debate about punishment -- but in Oregon punishment is a given. It is going to happen and we have committed the resources to do it. But you know and I know that the biggest gains in public safety are to be made in keeping kids out of crime in the first place -- and if they get into crime, getting them out as quickly as possible. I will not concede one inch of the opportunity we have to preserve the lives of youth and to reduce the number of citizens who become the victims of crime.

I look forward to continuing that work with you and your members.

**Oregon Council for Hispanic Advancement Conference Speech
November 20, 1997**

Buenos Dias, mis amigos. Gracias por su invitacion.

It is a pleasure to see so many of you here. Let me begin by commending you on the great strides you have made toward advancing the interests of those you represent. I'd also like to recognize the many contributions Oregon's Hispanic population has made to the enrichment of this state. The energy, talent, and unique perspective you have shared have helped make Oregon a better place. And I believe that the greater part of your potential is still untapped.

But even while we celebrate your achievements, we must recognize the challenges that are still before you -- actually before all of us. Because your success is bound up in the success of Oregon as a whole, and vice versa.

The theme of this thirteenth annual OCHA conference -- Superando las Diferencias -- bridging the gap -- speaks of your determination to overcome the remaining obstacles. I'd like to take a moment or two to share some of the things we in state government and in my administration are doing to support your efforts and to further your goals.

To begin with, we recognize that many Hispanics are at a disadvantage in the work place. We are strongly committed to protecting worker rights and we have firmly resisted attempts to weaken those rights.

For example, in the last Legislature, we were successful in defeating a bill that would have made unacceptable changes in our minimum wage law. Had the bill passed, it would have seriously affected the livelihood of many of our Hispanic farmworkers.

I also vetoed legislation that would have prevented workers not covered by bargaining unit agreements from collectively questioning changes in their pay.

And on August 1 of this year I signed an Executive Order establishing an environmental justice citizen advisory board. This mandate gives people of all colors and ethnic groups the opportunity to participate in developing and enforcing policies on environmental issues in which they have a stake -- things such as exposure to water pollution and household pollutants like lead and asbestos, farmworker exposure to pesticides, and cleanup of contaminated sites.

We must never forget that anything that harms one group of our people will ultimately harm us all. Even though Oregon's economy is booming right now, there are still too many who stand outside the circle of prosperity and who suffer unequal treatment in a variety of contexts. That's why my administration is committed to addressing the needs of Hispanic and other Oregonians who may be struggling to gain a stable economic footing and provide for their families.

Hispanics are the largest and fastest growing minority population in Oregon. The number of Hispanics in Oregon has

increased at a rate four times greater than our general population growth. Despite this growth, Hispanics have not traditionally benefited from the economic development and growth programs in the state. A large number of Latinos are under-employed and under-represented in administrative and management occupations.

Like many of you, OCHA continues to work on bridging this gap. Most recently, OCHA applied for an Oregon Economic Development Department grant to fund a leadership program to help Latinos make the transition from entry or production level jobs to supervision and management. With Oregon's robust economy, this training will not only ensure that Latinos have access to higher skills and higher level jobs, but will also assist companies in developing the critically needed additional management capacity.

Well, I'm here today to tell OCHA, . . . Si se puede, . . . it can be done! I am pleased to announce that I have approved the OCHA leadership grant.

Let me now turn briefly to some of the broader policies my administration is working on which will have an important bearing on our Hispanic population. I'm thinking particularly of our efforts in juvenile crime prevention and in educational reform.

It is no secret that minority youth are enormously over-represented in our juvenile justice system. Hispanics, for example, represent only 4 percent of Oregon's youth, yet they account for 16 percent of Measure 11 charges and 20 percent of Measure 11 sentences. I say there is something badly wrong with that picture.

Obviously this is a complex problem with many contributing causes. But we do know some things for certain. We know that poverty, substance abuse and school failure are among the factors that place young people of any race at risk of becoming involved in criminal activity. And we know that minority populations, because of the economic and social obstacles they face, are more likely to come from backgrounds where these conditions prevail.

But we also know that when any child turns down the wrong road, the repercussions impact every one of us. Therefore each of us bears some responsibility for ensuring that all our children become good adults.

What we need is a coordinated, comprehensive, collaborative effort aimed at reducing the known risk factors and at eliminating or adjusting policies and practices that may adversely affect minority youth, even unintentionally. And we are taking a number of steps in that direction.

To begin with, I'd like to announce a new state partnership between the Commission on Children and Families and OCHA. Together they will be expanding "Straight Shooting -- the Youth Photo Project" across the state. This project puts camera into the hands of at-risk youth, pairs them with professional photographer mentors to teach them the skills of photography and lets them explore their world using the camera to document it.

Another step is the work the Oregon Youth Authority is doing to assess and document the language and cultural needs of the population it serves, and is establishing programs and services to meet those needs. It is also working to ensure that all materials are culturally appropriate and available in minority languages, and it is hiring bilingual and bicultural staff and providing cultural education to other OYA staff.

As for reducing risk factors, perhaps the most important step we can take is to give our children -- and that especially includes our minority children, for whom it may be a greater struggle -- the best education possible. That is what we are trying to accomplish with our program of school transformation. Our goal is to give every Oregon student the opportunity to succeed. That may sound like a fairly abstract goal, but again there are some things we know.

We know that success in the 21st Century will require both a wider range of knowledge and a higher level of skills than has ever before been necessary. We also know that these with insufficient skills will face a future of limited career prospects, low income and unemployment. And we know that these are the very conditions that tend to weaken families and communities.

So to ensure that every student graduating from an Oregon high school has mastered the tools he or she will need to survive and succeed in our changing world, we are in the process of revising what we teach, how we teach it and how

we determine whether students have met the new, higher standards. And I can assure you that special attention is being given to the needs of the minority students, a large number of whom are Hispanic.

All of these are ways in which we are trying to support our growing Hispanic community. We are committed to that course because we understand that your welfare is vital to the welfare of our collective future, and we intend to do our part.

In closing, let me urge you to continue your own important work toward improving conditions and increasing opportunities for the men, women and children you represent. I urge you to remember, too, that even while you retain your own unique identity, there are many issues which transcend ethnic boundaries -- issues on which we must all work together as Oregonians. They are mutual challenges requiring mutual effort. But if we meet them together, I'm convinced the result will be mutual benefit. You can count on my support, and I hope I can count on yours.

Governor John Kitzhaber

**Bi-State Speech
November 20, 1997**

I have a confession. I am not a native Oregonian. I was actually born in Washington, and I spent the first few years of my life there -- first in Pullman, and then in Seattle.

Today my parents still have a cabin on Orcas Island in the San Juans. We spent every summer there while I was growing up. In a way it is as much a part of our lives as this state, where we actually live.

I share this with you because it forms the foundation for what I want to say to you today. My close personal connection with both Oregon and Washington has helped me see that while they are in fact two separate states, they actually form a region, bound together by common features, values and interests. What we lack is a common understanding of how we cross artificial political boundaries to solve our shared problems.

After all, we share an airshed and a watershed. We have mutual interests in transportation, trade, and hydroelectric power. The western part of both states is undergoing enormous growth in both population and economy, but in neither state has this growth and economic opportunity extended equally to the eastern sections.

Together we share a common history. It was exactly 192 years ago this month that Lewis and Clark reached the mouth of the Columbia -- the river we both share -- and thus stretched the national vision to the very rim of this continent.

But we share more than a history. Both states are rich in natural resources. Both have a stunning variety of landscapes and offer a wide range of recreational pursuits.

And in both states there is a connection between our rare natural endowments and our livability, which includes our current prosperity. Former Oregon Governor Tom McCall may have put it best when he said, "Health, economic strength, recreation--in fact, the entire outlook and image of the state [and region] -- are tied inseparably to environment."

In fact, it is this combination of natural beauty, quality of life, and economic opportunity that has made the Oregon-Washington region a magnet for people from across the nation and around the world. Because the Northwest is more than just a place. It's a place to live -- a place where the quality of people's lives is created and enhanced by its unique physical attributes.

All of these things join our two states together and as a region set us apart from other sections of the nation. They form a shared identity. But just as we have in common many interests and values, we also face some common challenges. Among these are the dilemmas posed by rapid growth in our economies and populations, and the issues surrounding the Columbia River -- particularly the issues of hydro-electric power and of salmon.

What I want to stress today is the vital necessity of thinking -- and of acting -- together as a bi-state region, and creating and nurturing the structure for us to act regionally. Why is that so critical?

This is critical because today's world is far more complex than at any other time in history.

This is critical because experience shows that fragmented approaches will almost certainly create more problems than they solve.

Finally, this is critical because Oregon and Washington are so closely bound together, economically and culturally, that whatever affects one part of this Northwest region will inevitably affect it all.

Sixty years ago, in a speech before the Portland City Club, Lewis Mumford said that we in this region have a basis for civilization on its highest scale, and he asked us to consider whether we were worthy -- whether we had enough intelligence, imagination, and cooperation among us to make the best use of our opportunities. I believe that he recognized that the boundless promise of this land where we live . . . its rare beauty, its enormous potential, its unique livability . . . carries a price: the price of good stewardship.

Today, six decades later, the world has changed dramatically. Yet our broad duty of stewardship remains. The Northwest is still the best place in the world to live. It is still attracting people from every corner of the earth, in part because those who went before us cherished this place, guarded its gifts, protected its quality. We must do the same, but in the face of far greater challenges.

We must learn how to steward a landscape and a set of natural and community relationships that cross the Columbia River and our state lines.

We can't maintain half a watershed, half an airshed or half a community and still hope to see salmon in our streams, mountains out our windows, and good jobs, efficient transportation, and adequate housing for our citizens. We must learn how to steward whole places -- a region -- and that requires new working relationships that link our two states.

This will be a challenge, because we have a governmental structure today that draws lines across this place -- state lines, county lines, city lines. And within these lines, we have created institutions and bureaucracies that are failing to meet the challenge of stewardship, the duty to maintain our landscapes and natural systems and to build healthy, balanced communities. To preserve our special quality of place, we must develop a new way of governing -- one which rejects artificial boundaries and focuses on shared objectives.

Let me give some examples of challenges that cross state boundaries. First, Metro area growth. For years, Clark County has functioned as the "relief valve" for the Portland Metro area, adding population and growing into a sprawling bedroom community. But although it has been steadily producing more houses, it has not equally produced more jobs. And that presents a concern not only for Washington, but for Oregon as well.

In fact, both states have an interest in seeing additional job growth in Clark County. A growing economy can increase the capacity of that community to meet its needs as its population expands. At the same time, more jobs closer to Clark County's growing population would help relieve stress on the region's bridges and roads.

In short, I believe we must work more closely on regional planning in this shared metropolitan area.

Second, we share the Columbia River -- its power, its beauty, its fish and its challenges. People on both sides of the river share an interest in low-cost power, as well as an interest in water -- water to irrigate the basin lands, to provide a healthy habitat for our endangered salmon, to provide recreational opportunities and to furnish drinking water for communities.

But these values are at risk if the Northwest does not reach consensus on a regional solution to the management of the Columbia River. Because if we cannot come together as a region then Congress will decide these issues for us when it takes up the issue of energy deregulation next year.

If that happens, we are very likely to lose not only low-cost power -- and even control over the region's power supply -- but also a secure, dedicated funding source for salmon recovery. I believe we must work together to save both the salmon and the public benefits of the Columbia River hydro system.

Third, not only do we share the challenges of managing the river, but we share the challenge of managing the fabulous landscape that constitutes the Columbia River Gorge.

In meeting that challenge I believe we have created a model of regional bi-state cooperation. The Columbia River Gorge Commission, which was created by an act of Congress 11 years ago, shows what two states can do together to protect and enhance a resource while providing for the needs of local communities and their residents. It can play a critical leadership role in ensuring that local communities along the Gorge have the flexibility they need in order to define their individual community visions within the context of broader regional interests.

While these are obvious examples of shared interests, I believe we also need to develop an explicit, well-articulated vision for the bi-state region as a whole -- one that reflects our shared values and interests. I don't mean that such a vision should be developed in Salem and Olympia and then dictated to people at the local level. I haven't spent 20 years in politics without learning that this approach does not stand the test of time.

This vision must start at the community level. And if all the players, from the community level up, participate in crafting a regional vision, it is much more likely that the visions Oregonians and Washingtonians have for their own communities will be consistent and not in conflict with the broader regional objectives and priorities.

Because even while we move toward a regional mode of thinking, we must remember that regions are made up of individual communities and that anything done or decided at the regional level is bound to have local impact. And we must also recognize two additional facts.

First, not all communities have the same priorities. The needs of Portland will differ from those of Lakeview or Bend, just as the needs of Seattle will differ from those of Yakima or Spokane. This is yet another reason to allow our communities the flexibility to shape their own vision of their local future.

And second, we must recognize the human tendency to resist solutions imposed from without. That means that the success of any broad venture will hinge on some sense of local ownership.

As an example, I can point to the acknowledged success of Oregon's Coastal Salmon Restoration Initiative, which involves thousands of private landowners in a voluntary, long-term effort to restore watersheds and fish habitat on a farm-by-farm, woodlot-by-woodlot basis. These landowners have come to see that in serving the wider interests of the state, they are serving their own interests as well. The salmon initiative models the mutual benefits of a cooperative, public-private partnership, which combines state leadership and local ownership.

And that, I believe, is the key if our bi-state region is to successfully meet the challenges it faces. Communities must define their own visions, but within the context of the overarching regional one.

We must involve all stakeholders in a process which will clearly identify those issues that are important not just to Oregon or to Washington, but to the region as a whole. We must work to reach consensus on the best ways to address those issues. And because those issues impact individual citizens residing in localities throughout our two states, we must find ways to help communities achieve their own visions in a way that is consistent with the broader interests of the region. I am convinced that without a regional approach to regional issues, it will be impossible to preserve our quality of life and retain control over the shape of our future. At the same time, without community buy-in, it will be impossible to ensure the long-term success of regional choices. Regional leadership . . . local ownership. Both are essential.

As Dr. Martin Luther King, Jr. so aptly put it, "We are caught in an inescapable network of mutuality, tied in a single garment of destiny." If we as a region hope to retain control over our collective destiny, we must move forward together, or we will not move forward at all.

Governor John Kitzhaber

**Citizens Crime Commission Speech
November 19, 1997**

I'm pleased to have this opportunity to speak with the Citizens Crime Commission about public safety policy in Oregon because your leadership will be critical to the future of this state.

Keeping the public safe is, I believe, one of government's fundamental responsibilities.

Our police forces and sheriffs, our judiciary system, and the corrections system all are necessary in our efforts to apprehend, convict, punish, and rehabilitate those members of society who break our laws. They are just as important as the role of our social support services and citizen efforts to prevent crime. Both are needed.

Today, I'd like to spend our time together thinking about the next steps we need to take to improve public safety in Oregon. Because, next November, it is likely Oregonians will be asked once again to shift even more money from the prevention account to the punishment account. The question I want to put to this commission and to this community today is where should we make our next public safety investment? Is it time to build still more prisons or is it time to commit ourselves to the prevention of crime?

To answer that, I want to take a brief look at what we have done in Oregon over the last several years.

Ten years ago, in 1986, as Oregon was emerging from a severe recession, we had not built new prisons in decades. Less than half of convicted felons served any time in jail or prison. Those sent to prison served only one-quarter of the sentence imposed by a judge because prison overcrowding forced the Parole Board to release inmates early.

By 1994, more than two-thirds of convicted felons served time in jail or prison. We had added more than 3,000 beds to our prison system. As a result -- in the late 1980s -- we used a new sentencing system -- sentencing guidelines -- to reserve more of our prison space for violent offenders and drug dealers.

Since 1994, we have seen an even more dramatic commitment of resources to our corrections and criminal justice system with the passage of Ballot Measure 11. Now, more than ever, criminals are being punished, especially violent criminals who have committed destructive acts against other individuals.

This is not to say that our work is complete, but Oregon now has some of the toughest sanctions in the nation with the "one strike and you're out" policy of Measure 11. And we have given prosecutors and law enforcement officers more power to catch and convict criminals.

- Re-criminalizing possession of marijuana, which expands the ability of police to search suspects.
- Expand police authority to stop people they suspect are about to commit a crime, and expand authority to conduct

searches for weapons in traffic and other stops.

- Extend the period of time in which prosecutors can file charges against suspected child sex abusers.
- Remove the requirement that police obtain court orders to use body wires in drug felony cases.

In 1995 and again in 1997, I proposed budgets to support Ballot Measure 11 and implementation of Ballot Measure 17, the inmate work program. In 1995 we funded building another 2,500 prison beds in Ontario and started work on siting another 1,500 bed facility. Between those two sessions, I sited five regional prison facilities, two work camps, and three prison expansions. These actions will result in an increase of 5,000 state prison beds by the year 2005, at which time our expected prison population will be more than 13,000.

Even as we moved ahead to implement Ballot Measures 11 and 17, I worked with local government and law enforcement on a major restructuring of the relationship between state and county corrections. Called the Community Corrections Partnership Act, it was passed in 1995 and was targeted at bringing real sanctions and treatment to those sentenced to less than 12 months.

Along with this new focus on community corrections came an additional \$29 million dollars to make it work. I called a special session of the legislature in February 1996 to approve construction plans for local facilities backed by \$94 million for both local jails and intensive alcohol and drug treatment facilities to serve Oregon counties.

This effort will add about 1,500 beds to our local jail systems and results in new capacity for alcohol and drug treatment. For instance, Multnomah County will be adding 480 beds, 150 of which are designated for alcohol and drug treatment. This expansion of our local jail system is a new resource that will benefit public safety by providing what every effective public safety system requires -- an available jail bed to back up community treatment programs.

We followed up this commitment to local corrections in our 1997 budget and established a \$7.5 million dollar reserve to help any local jurisdiction meet their needs. This entire effort was possible because of the strong support of local law enforcement, but I also want to take this opportunity to thank the Citizens Crime Commission for its support of this model effort to improve public safety.

What we have accomplished together is both remarkable and challenging, and our work is only partially complete because this fundamental change has made our community corrections problems visible and it has made local deficiencies apparent. This is good because we have a framework in which to address -- not ignore -- these problems.

In that same February 1996 special session, Republican Representative Ray Baum and Democratic Representative Peter Courtney teamed up and received my support for a bipartisan effort to increase the sentences for chronic property offenders.

House Bill 3488, passed in 1996, addresses the property crimes most important to our metropolitan areas, burglary and vehicle theft. This new property offenders law, which had the support of Multnomah County District Attorney Michael Shrunck, went into effect only five months ago.

Property crime offenders are now facing increased sentences because of it but it has not been in place long enough to yet have its expected impact on property crimes.

By 2005 this law is expected to account for nearly 700 criminals being incarcerated by the state.

During this same time period, our support of strong public safety systems was broader than increased sentences for our adult criminal population. We took a bold step to deal with juvenile crime by creating the Oregon Youth Authority in 1995. In October 1995, I sited five new regional juvenile correction facilities and one youth accountability camp. In 1997 I budgeted \$42 million for construction of these facilities and \$32.6 million for operation.

Lastly, the Community Corrections Partnership Act, which I mentioned earlier, required the creation of Local Public Safety Coordinating Councils, and all 36 counties now have a council or are a part of a multi-county public safety coordinating council. Made up of all relevant law enforcement and justice system officers as well as public members,

these councils are powerful forums for the coordination of local public safety policy.

In short, over the past two and a half years we have mounted an impressive effort to combat crime and respond to citizen concerns about their safety. For example, between 1993 and 1997, state spending on public safety has increased by 66 percent. Now our efforts, along with a strong economic growth, are combining to lower our rates of reported crime.

This brings us back to the original question, what is it we should do next? What is it that we can do that will even further increase the safety and well being of Oregonians?

For some, the answer to this question is to continue to create new crimes and to continue to increase prison sentences and build more state prisons. We can choose to do this, but given our recent and rapid expansion of our overall prison system, I do not believe this is wise from either a financial or policy point of view.

If we want to create new crimes and build prisons, we know how to do it. But the fundamental purpose of our public safety system is not to provide beds, meals, and work for an ever-growing criminal population. Our fundamental purpose is to ensure the safety of people.

New sanctions and new prison beds is not being hard on crime, it's being hard on criminals. This is not just a semantic distinction. It is a fundamental philosophical divide. On the one side you have a single-minded determination to make sure criminals are punished. On the other -- the one I am trying to describe -- you have to couple that with a determination to prevent the commission of crimes in the first place.

Our current path accepts the creation of new victims by placing the highest priority and commitment of resources with the criminal. Given the choice, most Oregonians would prefer to never be victims of crime. I know I would.

To address this, I propose that we take an alternative course, and the premise of this course is that local communities, not state prison beds, should be the focus of our next public safety investments. What flows from this simple idea is that no system of public safety will be sound unless it has a strong and effective prevention component at the local level.

This means rejecting, for the time being, the newly-proposed measures that will add to Ballot Measure 11 sentences which are already among the longest in the nation. We should reject this approach for what it represents -- a rather expensive and limited tool that deals with crime after it happens. This does not mean we are doing nothing in this regard. We already have in place and have funded property crimes legislation that is projected to take 700 property offenders off the street once it reaches it full implementation.

Rather than take the drastic and unnecessary step of further extending property crime sentences at this time, we need to focus on four areas of public safety investment:

- Targeting high risk juveniles
- Increasing the number of law enforcement officers
- Focusing on sheriffs and local police, and
- Improving public safety information systems.

In other words, we need to focus on prevention and the reduction of victimization -- instead of simply locking up more criminals why don't we actually stop some crime itself? Let me touch briefly on these four areas.

First, we must target high-risk juveniles to keep them out of criminal activity and, if we fail there, get them out of a life of crime as quickly as possible by ensuring, without fail, appropriate sanctions that are swift and certain.

We know that we can in fact turn youth away from crime, avoiding the waste of a young person's talent and contribution to society, avoiding the cost of their incarceration, and most importantly, stopping the creation of new victims of crime.

In addition, focusing on these young individuals goes directly to the public concern over property crime. Oregon has the third highest property crime rate in the nation for juveniles, costing an estimated \$250 dollars for every man, woman, and child in Oregon. By actively focusing on juvenile crime prevention, we are addressing a major portion of the property crime problem in Oregon.

Further, our system for juvenile detention and shelter care lacks adequate capacity. That is why I am working with juvenile directors across Oregon and the Oregon Youth Authority to detail a policy that allows us to make this needed investment.

The second element of a plan to improve community safety involves increasing the number of law enforcement officers in our communities. For the state, this means providing additional State Police troopers.

More troopers means more help for local law enforcement. For example, through Cooperative Policing Agreements, state police can agree with a county sheriff to patrol specific rural highways. This allows the reassignment of local resources to other needed areas.

Our state police help keep our roads and highways safe. Today, there are more drivers, driving more miles at higher speeds than ever before. Unfortunately, we've let the number of patrol troopers drop from 530 in 1979 to 355 today. That's unacceptable. We need to reverse this trend and adequately staff our state police. It is a critical investment for citizen safety.

Third, we need to focus on our local police and sheriffs.

With the passage of Ballot Measures 47 and 50, we have seen reductions in local public safety services, despite the fact they were to receive protection from budget cuts. Well, I can tell you with certainty that there have been reductions made though I cannot assess the overall effect.

What we need is a complete local and state assessment of public safety system gaps.

The local community is the front line and local government in many cases is the initial public safety contact for first time offenders. When local public safety breaks down, it reverberates throughout our state. If the first time a criminal comes in contact with the law they are released early from jail or supervision or treatment, the entire system has failed because it is not accountable.

If you are concerned about crime in your community, vote against a statewide property crimes measure that shifts more money to the state level and vote for more support of your local juvenile department, police, sheriff and corrections systems. Make local investments in the systems that can identify and serve high risk juveniles. Keep your crime fighting dollars at home and focused on your community's specific problems.

There is a fourth and final thing which we must do to improve our public safety systems. It is something I am proud to say this commission is on the forefront of doing. We need improved public safety information systems and program effectiveness data to be part of our public decision making.

The Citizens Crime Commission, through its sponsorship of the Effective Incarceration Project, is making an important contribution to the creation of a public safety system that makes sense. Citizens should be armed with broadly reviewed, credible data about the cost and rates of incarceration, about the reality of the rates of crime, about what those rates mean regarding their personal risk. This will allow smart choices about spending our limited crime fighting dollars.

We especially need this information because policy makers are always driven to spend time and money solving crises instead of preventing them.

I am aware of recent negative press focused on this Commission's actions to broaden public understanding about our corrections system. To these few and shrill voices I ask: "Who better than the Citizens Crime Commission." My answer is that there is no better nor more objective voice. This Commission supports strong action to keep citizens safe and there is no question about the credentials of the people who have banded together here to make Oregon a safer place.

Victims organizations and prosecutors have an effective ally in this Commission. To suggest that this Commission or this administration is on a crusade to repeal mandatory sentencing laws -- or is pushing an agenda of deincarceration is not only incredulous -- but flies in the face of the facts. Since 1986 we have funded and/or sited 16,700 additional adult/juvenile beds in our corrections system -- over 13,000 of those since I took office. What is clear is that this Commission is focused on the broad concerns of citizens and not locked into a narrow self-serving view of public safety.

And we have to be concerned about the whole system and we have to have good information to target all of our efforts well, and no one, myself included -- including this Commission -- has wavered from the a commitment to punish all violent criminals. The service that this citizen's commission is providing is a healthy one that is contributing to a safe Oregon.

But, make no mistake about it, it's easier to stir public opinion in favor of harsher sentences and new prisons -- as long as they're not in your backyard -- than it is to invest in preventing crime. Across the board, it is always easier to intervene in a crisis than to takes steps to prevent one. But, quite frankly, it takes more political courage and more vision to raise the banner of prevention.

Yet, that is precisely our challenge in public safety today: to realize that our principal chore after a decade of harsher sentences and prison construction is to balance those expenditures with an equally serious commitment to prevention.

It won't be easy. The emotional and political imperative always favors a debate about punishment -- but in Oregon punishment is a given. It is going to happen and we have committed the resources to do it. But you know and I know that the biggest gains in public safety are to be made in keeping kids out of crime in the first place -- and if they get into crime, getting them out as quickly as possible. I will not concede one inch of the opportunity we have to preserve the lives of youth and to reduce the number of citizens who become the victims crime.

I look forward to continuing that work with you and with this excellent commission.

Governor John Kitzhaber

Eugene Rotary Speech (Child Abuse Prevention)

November 18, 1997

Thank you for having me here today. Theodore Roosevelt once said, "Far and away the best prize that life has to offer is the chance to work hard at work worth doing." That is how I would describe your fundraising work on behalf of children in need, and it's a pleasure to help you celebrate your success. In fact, there are few efforts I can think of that are more critical.

Children are our greatest resource -- and our most accurate record. Not only do they carry within them the shape of tomorrow, they also bear witness to our own values and choices. They are the living messages we send to a time we won't be around to see. So it's our responsibility to nurture them in infancy, to protect and train them in childhood, to guide them through adolescence, and to turn them into positive, productive adults capable of making the world a better place.

For the most part we do that. But not always. Too many children today suffer abuse and neglect at the hands of those on whom they depend for care and shelter, for guidance and support.

When you stop to consider that humans are the only members of the animal kingdom that inflict wanton cruelty on their young -- well, that says something I don't even like to think about. And yet, I must. We all must. Because today, in a society that likes to call itself "civilized," child abuse and neglect continue to escalate, and Oregon is no exception.

Oregon has the second highest per capita rate of child abuse deaths in the nation. We have one of the highest rates of children in foster care.

In the last 15 years, the number of cases being handled by the state's services to children and families has doubled, while the number of caseworkers has increased by only 35 percent.

Worse yet, the kinds of cases that the state deals with have become much more complex. Instead of straightforward abuse reports, caseworkers must also grapple with parents who have problems with drugs or alcohol, or who have criminal histories.

But it's not only what we're doing to our kids that I find appalling; it's what we're doing to ourselves, collectively. When we harm a child, or when we allow a child to be harmed and do nothing, we harm everyone else.

For example, abused and neglected kids fail in school at a higher rate than the rest of their classmates, making a teacher's job more difficult and taking time and resources away from the rest of the class -- and the kids in that class suffer.

Kids who are abused or neglected also use drugs and commit crimes at a much higher rate than the general population,

costing taxpayers money to keep them in prison -- and causing suffering to their innocent victims.

These kids find it harder to hold down a steady job when they enter the workforce, costing more money for social support as we try to help them become productive members of society.

And perhaps the worst consequence is that kids who are abused and neglected will more likely than not repeat the cycle of abuse with their own kids.

This is a situation we cannot ignore or tolerate. And we must address it from two angles.

First, we must do a better job of getting kids out of abusive environments and giving them some sort of stability. Let me share with you some of the things the state is doing to accomplish that.

As you may have heard, we are in the process of increasing the number of caseworkers available to investigate and intervene in suspected cases of abuse -- up 160 caseworkers from two years ago. That's still fewer people per capita than we had in the early 1980s, but it is a start.

It will make the difference in a number of cases that weren't being investigated in the past because services to children and families only had the staff to respond to the very worst reports.

Now, the state will be able to respond to more cases in a shorter period of time, and they will have more resources to deal with the very complex problems facing today's families. Problems that don't just encompass child abuse, but also criminal behavior, incarceration, poverty and drugs and alcohol.

I believe foster care, when used properly, is a stopgap measure for the most severe cases of abuse and neglect -- a safe haven for kids, a chance to break the cycle of abuse and give them time to heal.

But foster care was never designed to be a long-term solution. Over the last few years, without the resources to match kids with a permanent home, we've had a system that shuttled kids from place to place. It's not a beneficial situation for kids who've already been traumatized, and who need stability as well as safety.

That's why this year, we've added 29 adoption workers to speed up the adoption process. Our goal is to double the number of foster children finding permanent homes in the next 5 years.

It's a goal that I sincerely hope we can reach -- in fact, I'd like to do better.

Making the child welfare system more efficient is also the goal of bipartisan legislation passed during the 1997 session called the "best interests of the child" bill.

This bill -- which, in a manner unusual for the legislative process, garnered support from all parts of the political spectrum -- calls upon state government and judges to move kids through the child welfare system as quickly as possible once allegations of abuse have been substantiated.

We want to either remedy the situation in these kids' homes, or move them to a new, permanent home as quickly as possible, which means thinking about kids first and everyone else second. That's what this legislation asks people in the system to start doing.

But protecting our children involves more than just reacting after the fact. Certainly we must do that, but we must do much, much more. And let me tell you why.

During the 17 years I practiced emergency medicine, I saw and treated more victims of child abuse than I can count. Today I realize that what I saw in the emergency room was only the tip of the iceberg. The unseen scars of abuse and neglect are far more deadly -- to the victims and to society.

I've come to see that in a very personal way, because a member of my family has recently adopted a child who spent the first 8 years of his life in a violent and abuse setting. He was beaten, we went hungry and homeless, he didn't go to

school. What I saw in the emergency room I saw from the standpoint of a medical professional, and that was shocking enough. Now, as a parent myself, I am more appalled than I can tell you that anyone could treat a child that way.

Left where he was, this child would almost certainly have ended up either in the criminal justice system or dead. But though his physical safety is now assured, he is still a child at risk.. What happened to him in his early years continues to affect his behavior. For him, and for many thousands of children like him, it will take years of hard work to heal the inner scars and teach a new set of values and behaviors.

My point is this: the reality of abuse and neglect goes far beyond the broken and battered bodies. Its emotional and psychological impact lingers on, like the aftermath of some deadly disease. And make no mistake: these scars remain contagious, they can still infect those who bear them, they can still spread the disease of abuse and neglect to the next generation.

That's why it's not enough just to remove kids from bad homes and to place them in good ones. We have to find better ways to keep abuse and neglect from happening in the first place. That is why we're trying to accomplish with a new effort called the "community safety net." This is a collaborative approach in which local and state agencies and organizations try to target families at risk before a report of abuse or neglect is substantiated.

These at risk families could be anyone's family, given the wrong circumstances. They are families under stress -- from the loss of a job, marital problems, drug or alcohol abuse -- but they do not meet the legal requirements for intervention by the state on behalf of children.

Before we started this effort, these families tended to fall through the cracks of the existing system. Now, we are trying to leverage available resources in a given community by getting different government agencies and private non-profits to come together to solve problems. This way, we can provide services which may prevent abuse and neglect from happening in the first place.

For example, a family in distress might get referred to drug and alcohol counseling at a local community treatment center. Or, they might find out how to get short-term financial support during an economic crisis, such as the loss of a job. They might be visited at home by social workers who want to help them cope with whatever problem they face.

By coordinating our services among and between agencies and non-profits, we hope to be more effective at preventing abuse and neglect.

All of these steps will help. It's more than we've been doing. But ultimate success will depend on more public awareness, more public responsibility, more public involvement. Someone once said that all that is necessary for evil to flourish is for good men and women to do nothing.

Remember, that every time we turn away from the evidence or even the suspicion of abuse or neglect, we become their accomplices.

Remember that this isn't about somebody else's children -- it's about your children and mine. It's about our families, our communities, our state, and our future.

If a child doesn't do well in school because he or she is hungry, her classmates suffer too.

If a child is beaten by his parents, he may end up in prison, hurting innocent victims and spending tax dollars that could be used instead for parks, for roads, for Kindergartens, for universities.

If a child is sexually abused, she is more likely to become a teen mother without the resources to be an effective parent, creating another potential abuser in her child.

This is a problem so pervasive and so complex that government alone cannot solve it. It will take the combined efforts of all of us. Your own efforts, your dedication to this cause sets a worth example.

All of us hope that one day child abuse and neglect as a blot on our society will be a thing of the past. But human progress is neither automatic nor inevitable. It takes work and, as President Kennedy once reminded us, "Here on earth God's work must truly be our own."

Let me offer my appreciation for all your hard work, and assure you of my support.

Governor John Kitzhaber

Willamette Livability Forum

October 30, 1997

I am very excited by the ideas I have heard during the last 30 minutes. I am also impressed by the enormous amount of work done since our last meeting. The elements of a vision for the Willamette Valley are really beginning to come together.

I also want to thank everyone for the time and effort you have put into this process. Special thanks to Pacific Power and Light, Northwest Natural Gas, and Pacific General and Electric for making this gathering possible. And also thanks to the League of Oregon Cities and Association of Oregon Counties, Universities, Metro, and Council of Governments for finding money in their very tight budgets to support this effort.

I can't tell you how invigorating it is to see so many groups represented this afternoon. If this group can't make a difference in the future of the valley, no one can. The key for all of us will be to channel this power to make a difference in the future of the Willamette Valley.

We have plenty of work ahead of us in order to protect the region's quality of life. And I think our state's experience in the last 25 years demonstrates that managing growth is the right approach to the challenges that lie ahead.

I realize that others disagree. Several weeks ago hundreds of Oregonians advocating a "no-growth" approach held a conference in Portland. They argued that the best way to protect Oregon's quality of life is not to manage growth, but rather to stop growth altogether.

And while I have some sympathy with this viewpoint -- we would all like to roll back the clock to a simpler and less crowded time -- the fact is, that a successful no-growth strategy may well jeopardize the very values we seek to preserve. Because I don't know of any part of the country that has successfully stopped growth except when these places became wastelands from the standpoint of employment or livability.

So one successful strategy to stop growth would be to put the economy in the tank. We know that works.

Think back to the terrible recession Oregon experienced from 1979 to 1983. This was a time when our economy not only failed to grow, it actually shrank. 95,000 jobs disappeared between 1979 and 1982. That's nine percent of all the jobs in the state.

The unemployment rate rose from 6.7 percent in 1979 to 12.5 percent in 1983.

And a net total of 60,000 Oregonians moved to other states between 1980 and 1985.

A successful no-growth strategy, to be sure. But let's look beyond the statistics. Let's remember what daily life in our state was like in those no-growth days.

For sale signs were everywhere. Neighborhood stores and businesses shut down, never to reopen. Employers that remained solvent lost their best and brightest workers to other states that offered better opportunities.

The recession of the 1980s put enormous personal pressure on Oregon's people. Those who lost their jobs or their businesses often lost their self-respect, too. As an emergency room physician in Roseburg during that period I saw the personal toll of double digit unemployment: alcoholism, domestic violence and the disintegration of marriages and families.

So that's one way to stop growth -- destroy the economy. Yet I doubt if that's a strategy any of us would consciously choose.

What's another strategy?

Well, a severe recession isn't the only successful formula for stopping growth. There is another way to do the job. We can simply allow growth to occur unchecked and unmanaged.

That hasn't traditionally been the Oregon way, but other places have followed this course. One of the greatest periods of migration to Oregon from California occurred not in the early 1990s during that state's last recession, but in the late 1970s, a time of terrific economic expansion for California.

To know why Californians were fleeing their state in droves in those days you simply had to visit Orange County. It was, and for the most part remains, a place that has steadfastly rejected the growth management methods we have pioneered here in Oregon.

We all know what happened to Orange County and the rest of Southern California. Californians created sprawling suburbs massive traffic congestion and severe air pollution. They developed their open spaces and destroyed their quality of life.

Fed up with smog, congestion, and endless commutes, tens of thousands left Orange County and other parts of Southern California, in spite of a healthy economy of the late 1970s. These immigrants took with them their energy, their businesses, and their capital, the seeds of any community's future economic success. More than 20 years later many of the older suburbs these ex-Californians left behind are still in decline.

So the other way to stop growth is to make Oregon a place where no one wants to live. It does work. Southern California taught us that. But this is not the path for Oregon either.

That hasn't been the Oregon way in the past and because of efforts of groups like the Willamette Valley Livability Forum, it will not be the way of the future.

Achieving the vision you outlined this morning, however, will take more than growth management tools. It will require the leadership, the commitment, and the cooperation of everyone in this room. It also will demand that government -- federal, state, and local -- changes the way it does business.

As most of us know, government usually doesn't work across institutional barriers very well. I think there are two reasons for this.

First, we often rely on systems designed to solve the problems of 10, 20 or even 30 years ago. The world has changed, but too many government systems remain the same.

Second, we usually employ a fragmented approach to problem-solving that either ignores or is unaware of what other entities, both public and private, are doing in the same area.

In short, we have done a poor job of adapting and integrating public services. Why does this matter to those of us who want to improve the quality of life in the Willamette Valley for future generations?

Look around the room. Many of you have grappled with regional growth management issues for years from the perspective of your own business, agency, or organization. You know from personal experience that the Willamette Valley's problems cannot be solved by one individual or organization working alone. Instead, everyone must work in a collaborative fashion that builds consensus among all parties.

Government in the Willamette Valley must do the same. It will not be easy to accomplish this. I can tell you as this year's ceo of the 44,000 person organization called the State of Oregon, turf is alive and well. However, we are making progress.

We began by forming the community solutions team. This group meets with me or my staff every two weeks and consists of the directors of the state's five community development agencies: the departments of Transportation, Economic Development, Land Conservation and Development, Housing, and Environmental Quality.

The community solutions team has a clear charge: to integrate the programs of their five agencies in order to build the kinds of quality communities such as the ones imagined in this morning's vision.

Breaking down barriers between public agencies is important, but it is not the only answer. Government also needs to stop issuing edicts and instead empower collaborative decision-making.

We have much work ahead in this area and I am committed to changing the way government does business.

I am asking all of you to make similar commitments on behalf of your agencies, businesses and interest groups. Your challenge today is to take the vision you are helping to create and make it happen in your own communities. In the next several months we will engage the public and constituent groups in a formal review of your excellent work.

But to move the vision from a plan to a reality will take your continued leadership and commitment. There are three things you can do to help in the months ahead:

First, establish a real communication link between the work you are doing here and your constituent group. Make sure your members, constituents, or neighbors understand the work you are doing.

Second, be a voice for the concerns and issues raised within your community. We need to hear from everyone as we move forward.

Finally, function as a catalyst for change within your community. Spread the word about how our individual actions are contributing to the very trends that will ruin our quality of life in the Willamette Valley.

Here in Oregon we are not afraid of the future. Your participation in the forum is symbolic of your commitment to help shape the future instead of reacting to it. Your vision of the Willamette Valley rejects the polarized dead-end worlds offered by anti-growth advocates and those who build only suburban sprawl.

You know that ending growth will destroy our quality of life.

You know that failing to prepare for growth will harm our livability.

And you know that success in realizing today's vision will depend on working with neighbors and communities throughout the Willamette Valley.

Many difficult challenges lie before us. However, the good work you have done in the last year has built the foundation for tomorrow's Willamette Valley. I look forward to helping you make your vision a reality.

Thank you.

It is now my pleasure to introduce John Miller, who chairs the Willamette River Basin Task Force.

John and his group have done a tremendous amount of work over the last 18 months to assess water quality and quantity

issues in the Willamette River Basin and to recommend how to fix these problems.

I consider this task force a model for how to get an in-depth look at specific issues facing the Willamette Valley. I am pleased that John is working closely with the Willamette Livability Forum. One of the challenges we face in the months ahead is deciding how to bring all of these efforts together so that the value of the whole is greater than the sum of its parts.

In that light, John is here today to share his work with you and learn your perspective on it. Please join me in welcoming John Miller.

[Return to Speeches](#)

[Return to Governor's Office](#)

Governor John Kitzhaber

Corvallis Rotary

October 30, 1997

It is a pleasure to be in Corvallis again in the heart of the Willamette Valley. As I made the trip here from Salem I was reminded why so many of us consider this area one of the prettiest in the world.

During much of the drive I saw productive farms, orchards, and ranches in all directions. Overlooking it all was a spectacular skyline crowned by Mt. Hood.

But there is another side to the Willamette Valley. And I'm afraid everyone here knows it too well.

These days sections of Interstate 5 are regularly jammed with commuters and truck traffic. Big box stores with acres of parked cars are under construction on some of the best farm land on earth. New homes and strip development now sprawl in rural areas where forests once stood.

This contrast between the pastoral and the suburban in the Willamette Valley is familiar to everyone here. There have been tremendous changes in the last 30, 20, and even five years in how we live, work, and move through the valley.

Consider these facts:

The population of the Willamette increased by 500,000 between 1970 and 1990.

The number of urban acres in the valley jumped from 240,000 in 1970 to 460,000, a 91 percent increase.

The daily number of vehicle miles traveled by automobiles leapt from 22.6 million in 1970 to 42.5 million in 1990, an 88 percent increase.

More changes are on the way. During the next 15 years the Willamette Valley will add 700,000 residents, 270,000 acres of additional urban development, and 18.5 million more vehicle miles traveled.

Oregon's quality of life is at risk here -- no question. And we have plenty of work ahead of us in order to protect it. I believe our state's experience in the last 25 years demonstrates that managing growth is the only approach to successfully meet the challenges that lie ahead.

I realize that others disagree. Several weeks ago hundreds of Oregonians advocating a "no-growth" approach held a conference in Portland. They argued that the best way to protect Oregon's quality of life is not to manage growth, but rather to stop growth altogether.

And while I have some sympathy with this viewpoint -- we would all like to roll back the clock to a simpler and less crowded time -- the fact is, that a successful no-growth strategy may well jeopardize the very values we seek to

preserve. Because I don't know of any part of the country that has successfully stopped growth except when these places became wastelands from the standpoint of employment or livability.

So one successful strategy to stop growth would be to put the economy in the tank. We know that works.

Think back to the terrible recession Oregon experienced from 1979 to 1983. This was a time when our economy not only failed to grow, it actually shrank. 95,000 jobs disappeared between 1979 and 1982. That's nine percent of all the jobs in the state.

The unemployment rate rose from 6.7 percent in 1979 to 12.5 percent in 1983.

And a net total of 60,000 Oregonians moved to other states between 1980 and 1985.

A successful no-growth strategy, to be sure. But let's look beyond the statistics. Let's remember what daily life in our state was like in those no-growth days.

For sale signs were everywhere. Neighborhood stores and businesses shut down, never to reopen. Employers that remained solvent lost their best and brightest workers to other states that offered better opportunities.

The recession of the 1980s put enormous personal pressure on Oregon's people. Those who lost their jobs or their businesses often lost their self-respect, too. As an emergency room physician in Roseburg during that period I saw the personal toll of double digit unemployment: alcoholism, domestic violence and the disintegration of marriages and families.

So that's one way to stop growth -- destroy the economy. Yet I doubt if that's a strategy any of us would consciously choose.

What's another strategy?

Well, a severe recession isn't the only successful formula for stopping growth. There is another way to do the job. We can simply allow growth to occur unchecked and unmanaged.

That hasn't traditionally been the Oregon way, but other places have followed this course. One of the greatest periods of migration to Oregon from California occurred not in the early 1990s during that state's last recession, but in the late 1970s, a time of terrific economic expansion for California.

To know why Californians were fleeing their state in droves in those days you simply had to visit Orange County. It was, and for the most part remains, a place that has steadfastly rejected the growth management methods we have pioneered here in Oregon.

We all know what happened to Orange County and the rest of southern California. Californians created sprawling suburbs massive traffic congestion and severe air pollution. They developed their open spaces and destroyed their quality of life.

Fed up with smog, congestion, and endless commutes, tens of thousands left Orange County and other parts of southern California, in spite of a healthy economy of the late 1970s. These immigrants took with them their energy, their businesses, and their capital, the seeds of any community's future economic success. More than 20 years later many of the older suburbs these ex-Californians left behind are still in decline.

So the other way to stop growth is to make Oregon a place where no one wants to live. It does work. Southern California taught us that. But this is not the path for Oregon either.

We need to recognize that people will continue to come to Oregon as long as we have a good economy and a high quality of life -- both of which we want to preserve. The only way to do that is to manage our growth. And Oregonians know how to do that better than anyone else.

We have led the rest of the country in pioneering tools for growth management. We have the experience right here at home.

In Oregon, we know that you need to build housing where the jobs are in order to prevent our highways and roads filling up with commuter traffic.

In Oregon, we know that you need to control commercial access to traffic bypasses in order to protect our investment in these highways.

In Oregon, we know that you need to invest in good roads, first rate schools, and the other infrastructure that promotes livability.

In short, we know that in order to protect our quality of life we must integrate our economic development decisions with our land use decisions and with our decisions in housing and transportation.

Here in Oregon we must continue to look to the future. Instead, we must recommit what I call quality communities. Communities that are in balance. Communities that have good jobs, affordable housing, decent schools, efficient transportation, a clean environment, and a vision for how the community will grow and develop and a strategy to realize that vision.

Today at the OSU campus more than 100 business, community, and government leaders are participating in an a conference sponsored by the Willamette Valley Livability Forum that will protect and create quality communities in Oregon. Their goal is to help valley communities understand how to channel growth in a way that maximizes the benefits and minimizes the cost. To do this we need to help valley communities build and implement a vision for how this area will grow in the next 50 years.

The vision of the Willamette Valley in 2050 is an exciting one. The landscape is made up of compact cities, working farms and forests, nestled in open spaces and natural areas. Residents take great pride in their communities as safe, healthy, and vibrant places where children and families can learn, grow, and thrive. A robust regional economy provides employment opportunities and affordable housing.

The leaders who are participating in the Willamette Livability Forum have stepped forward and decided to help us shape the future instead of reacting to events created by others. They want to avoid the polarization fostered by both those who oppose growth and those who favor growth no matter what the cost to the community.

Instead, the participants in the Willamette Livability Forum are determined to help plan a place we can be proud to pass on to our children.

The fact is that ending growth will destroy our quality of life just as severely as failing to prepare for growth will harm our livability.

If we are to keep Oregon the special place it is, we must work together as neighbors and communities throughout the Willamette Valley and around the state to manage the growth that is taking place around us.

Only through vision, cooperation and wise investment can we succeed. And we should settle for nothing short of success.

Thank you.

[Return to Governor's Office](#)

Governor John Kitzhaber

OEDD Annual Conference

October 21, 1997

When I spoke to you two years ago in Newport, I suggested that economic developers would need to think about new challenges and new directions. Today you are undertaking the hard work of redesigning our programs and partnerships to make sure that they serve Oregon well in the 21st Century. We are making these changes for one simple reason: the challenges that our economic development efforts faced in the early 1980s are not the same as those we face today in the late 1990s.

In the 1980s, with unemployment in double digits and the state's job base and population shrinking, any job, anywhere, at any cost, was not a bad idea. Our state's lack of industrial diversity required us to look outside Oregon for major investments in high-tech facilities to balance our economy and get our momentum restarted.

We succeeded beyond anyone's expectations. These days Oregon has a dynamic, diversified economy that generates great jobs in many parts of our state.

There are exceptions, of course. Big parts of eastern, southern and coastal Oregon create few high-paying jobs. These communities need our help in attracting the right kind of investment.

But the strong economy in the remainder of Oregon has brought new challenges -- growing housing costs, overcrowded schools, traffic congestion, labor shortages -- that threaten our state's quality of life.

The economic development commission recognized this dilemma in its recent report: *New Directions for Economic Development in Oregon*. I hope everyone here today will join me in implementing this new direction in the coming year. This morning I want to share a couple of the principles that I think should guide that work.

If the modern, technology driven, internationally-minded economy has taught us anything, it is that successful organizations must be able to adapt quickly. They must be nimble. They must be able to recognize the need to change and accomplish that change quickly.

Just as importantly, today's successful company flattens hierarchy, drives decision making down to the rank and file, shrinks middle management and severely punishes anyone that puts turf before productivity.

If there is one criticism of government -- state, local or federal -- it is that we are not able to adapt quickly. We aren't nimble. In a world where businesses from tiny to huge are in a constant process of reinvention, government has not been able to keep pace. Hence, we find government institutions trying to solve the problems of 10, 20 or even 30 years ago as we implement systems designed for another time.

And we don't reach across our institutional barriers very well. I can tell you as this year's CEO of the 44,000 person organization called the State of Oregon, turf is alive and well and it is standing in the way of our ability to serve Oregonians.

With that in mind, I would like to share my vision of how we should change our approach in economic development from one of merely helping create employment to one of fostering quality communities.

First, let me define what it is I mean by quality community. To me it is a community that is in balance. A community that provides good jobs for its workforce; has affordable and well-located housing; has decent schools for its children; has an efficient transportation system that provides transportation choices; possesses sewer and water systems that support our communities and maintain a clean environment; and has a vision for its future to manage growth and development as well as a plan to deliver it.

We have a strong record of identifying the kind of state we wish to live in. Our state land use goals, the Oregon transportation plan and *New Directions for Economic Development in Oregon* all are documents that set out a vision for Oregon and each is viewed as a model for the nation.

It is my view, however, that we have fallen short in our implementation of those visions for the state.

That is in part because we have taken a fragmented approach to that implementation. The department of transportation cannot achieve its own goals, much less our community development goals without working with our land use, economic development, housing, and environmental quality agencies, as well as local governments. Each of these entities exists in the same complex community environment that makes unilateral action for success impossible.

Hence, the first principle is that our economic development efforts must break down the barriers between state agencies -- especially the community development agencies of housing, land use, transportation, environmental quality and economic development.

Let me just give you some examples of how these community developments are tied together.

If we open new manufacturing facilities in areas without adequate housing we create a transportation problem as people are forced to commute long distances to their place of work.

If we build a by-pass for through traffic and allow commercial development there we not only waste transportation funds when we later construct another by-pass, but we also degrade our cities and towns through strip development.

If we allow low density housing in areas more suited to industry we force business to settle for second-rate sites that are more expensive for a community to serve.

If we fail to invest in sewer, water and other infrastructure in rural communities we cannot attract the job producing business they need to achieve a balanced community.

The point is that to be successful in achieving high quality communities, we must work together with integrated action plans. That process needs to start with our own state agencies.

State agencies do not have a long history of working together. Historically, they have coordinated their efforts but only superficially. It is time we move to true program integration.

State government has started down by forming the community solutions team. This group meets with me or my staff every two weeks and consists of the directors of the state's five community development agencies: the departments of transportation, economic development, land conservation and development, housing, and environmental quality.

The community solutions team has a clear charge: to integrate the programs of their five agencies in order to work in concert toward building high quality communities. We have had some success and have learned a lot in pilot efforts in Malheur County and on Portland's Martin Luther King Boulevard.

Another step we have taken to integrate our work at the state is a set of quality development objectives which we can make available for your use. A third tool is the formation of a community development office to assist in policy coordination within the state's community development agencies. This office should be up and running by the end of the year.

The second principle of community development I want to emphasize is empowering collaborative decision making.

Let me give you two examples of agencies that are pursuing efforts to do this.

In the area of land use, the regional problem solving process has brought state agencies together with local governments as well as private interests to solve selected land use problems. It is a collaborative process based on bringing state and local interests together to develop creative solutions.

The department of transportation's uses a similar approach in the regional decision process it developed through the Oregon transportation initiative. It is bring the state and local and private players to the table in order to work together and make investment decisions together.

These efforts, based in part on the experience of many of you involved in the regional strategies and rural investment fund programs, represent a new approach to governing. But we must go much further. Your challenge will be to take the goals and direction established in new direction for economic development in Oregon and make it happen on the ground.

In order to do that I have asked the economic development commission and the interim work group to work with state agencies, local government , as well as regional workforce committees and other private sector partners, in ways that have never been undertaken and have been resisted by the structural walls that were created years ago. These groups have the broad representation and the quality of people to develop the system that can deliver a high quality of life to Oregon.

How might this effort make a difference in the daily lives of our communities? I believe it can create an Oregon very different from today.

A future in which a handful of state programs replace the dozens we have now.

A future in which teams of local, private, state and federal partners work together to help communities and regions take charge of where it is going.

A future in which we direct state and federal resources to critical priorities with a minimum of fuss and paperwork.

The truth is we cannot afford to do what we have done in the past. Oregonians will not stand for it. We have to show that we are not doing business as usual

I cannot do this alone. I need your help. With your assistance, we can show: that economic and community development and workforce and resource management organizations can change; that government can be nimble; that we won't let turf and fear of change stand in the way of quality communities, better jobs and a cleaner environment.

Thank you.

Governor John Kitzhaber

Minority Over-Representation Summit Speech

October 15, 1997

Before I begin my formal remarks, I want to thank two of Oregon's best legislators --Representative Margaret Carter and Senator Avel Gordly. Without them, we wouldn't be here today.

Representative Carter is known throughout Oregon. During her legislative career, she has changed her community -- and our state -- for the better in countless ways.

Margaret, I think I speak for everyone when I tell you how much we value your tenacity, your commitment to youth, and your advocacy for social justice. You will be sorely missed in the Oregon Legislature.

Senator Avel Gordly also deserves our thanks and appreciation. She is a tireless champion for Oregon's young people. Senator Gordly played a crucial part in the design of my administration's strategy to prevent juvenile crime. She also initiated conversations last year that led directly to today's summit.

Everyone here today is concerned about juvenile crime in Oregon. We can debate about why it takes place, but the facts are clear:

- In 1995, juveniles committed more than one out of four of all Oregon crimes.
- Juvenile arrests are up in two-thirds of Oregon counties in the past year -- and in virtually every county since 1990.
- Oregon's rate of property crime by juveniles remains 74 percent above the national average.

Addressing these problems is a top priority for my administration. Last year we proposed a comprehensive strategy to prevent juvenile crime. Our approach has four elements:

First, it focuses on community-based strategies for youth at highest levels of risk.

Second, it coordinates existing efforts at state and local levels.

Third, it holds the juvenile justice system accountable for achieving results.

And finally, it commits to reinvesting the resulting savings into prevention efforts.

With the help of Senator Gordly, Representative Carter, and many of you in the audience, I expect us to implement Oregon's juvenile crime prevention strategy in the months ahead.

One of the biggest challenges we face, though, is tackling the problem of over-representation of minority youth in our justice system.

Oregon needs a coordinated and comprehensive effort to decrease the problem of disproportionality in our state's juvenile justice system. Without such an undertaking we cannot reduce the involvement of youth -- and especially youth of color -- in our juvenile justice system.

This is not a new issue for most of us. It is widely acknowledged across the nation -- by professionals and advocates alike -- that youth of color become involved in the juvenile justice system at rates far exceeding their proportion in the population. There are no shortage of studies that demonstrate this. Let me cite three of the most recent:

- The Oregon supreme court's 1994 Peterson Report documented a large number of complaints about racial and ethnic issues in our state's judiciary, law enforcement, and the juvenile justice system, ranging from overt discrimination and bias to unintentional differential treatment.
- A 1996 task chaired by then-Oregon Attorney General Ted Kulongoski established that minority youth are more likely to become involved in the juvenile justice system than their non-minority counterparts.
- A 1997 report by the California Judicial Council Advisory Committee on Racial and Ethnic Bias found that minority youth were over-represented in both delinquency and dependency cases.

If that is not enough, I recommend you look in the conference packet you received this morning. You will find a chart that shows statistically how minority youth in Oregon are over-represented at specific stages of our juvenile justice system. Consider these facts from the chart:

- If you are Asian American, you represent 2.4 percent of Oregon's youth, but you account for 4 percent of Measure 11 charges and 10 percent of Measure 11 sentences.
- If you are Native American, you represent 1.3 percent of Oregon's youth, but you represent 3.2 percent of offenders at Maclaren and 8 percent of those at Hillcrest.
- If you are African-American, you represent 1.6 percent of Oregon's youth, but you account for 11 percent of Measure 11 charges and 8 percent of Measure 11 sentences.
- If you are Hispanic, you represent over 4 percent of Oregon's youth, but account 16 percent of Measure 11 charges and 20 percent of Measure 11 sentences.

Why is this happening?

We know that the risks that increase the likelihood our youth will enter the juvenile justice system are the same, regardless of race or ethnicity. These include substance abuse, school failure, family history of criminal behavior or substance abuse, and poor family environments.

And just as crime has many contributing causes, no one factor can account for the over-representation of minority youth. It is a systemic problem -- the result of a collection of interdependent decisions, services and treatments -- both before and during a youth's involvement in the justice system.

Nor is solving this problem is the responsibility of any one person or organization. Instead, it is a collective responsibility.

Let me tell you about some of the work we have done at the Oregon Youth Authority to meet our responsibilities. We have a long way to go, but OYA is making good progress. Some of the recent steps this state agency has taken to reduce minority over-representation include:

- Assessing and documenting language and cultural needs and establishing programs and special services to address them.
- Ensuring that all materials are culturally appropriate and available in minority languages.
- Hiring bilingual and bicultural staff and providing cultural education to other OYA staff
- Improving mental health assessments and treatment of mental and emotional health disorders.
- Adding cultural sensitivity to all annual staff performance appraisals.

But OYA can't solve this problem alone. We all must all play a part. That is why I have asked people from many different walks of life here today.

Today I ask you to review how you and your profession can contribute to a solution. Each one of us has a critical but different role. We are all involved in at least one, and sometimes many, critical points of decision in the lives of Oregon's at-risk youth.

This afternoon you will gather in small groups with peers from your profession. Your charge is simple: identify and commit yourselves and the organization you represent to take one step this year to reduce minority over-representation in the juvenile justice system.

In order to spur your thinking, let me suggest five things any organization might do to address this problem:

First, develop guidelines that help you implement existing laws and policies equitably.

Second, assess whether your policies and practices adversely affect youth of color, even unintentionally or inadvertently;

Third, expand your cultural knowledge, adjust your existing services accordingly, and support these changes by hiring persons with the same language and culture as the youth you serve.

Fourth, examine whether decisions made at critical points in your system keep youth from engaging in further problem behaviors.

Finally, recognize that over-representation is the result of a complex set of interrelated risks and decisions and adjust your organization's approach to reduce these risks.

As I said before, this is a collective responsibility, so let me make a commitment to you. In the coming year, I will do three things to reduce minority over-representation in Oregon's juvenile justice system.

First, I will encourage and support plans to increase the cultural competence of all state agencies and the services they provide.

Second, I will ensure that my staff act as a resource as you improve your part of the system;

And finally, I will reconvene this group in one year to assess our progress and identify the next steps we must take.

We must all be part of the solution. Today, I challenge you to join this process. Without your willingness to work on this problem, nothing will change and every single one of us is critical in making the changes that are needed.

I believe we share a common vision -- to develop supportive environments for the healthy growth and development of Oregon's youth. But we cannot frame the over-representation problem as another symptom. Instead, we must accept our collective responsibility for the process which creates over-representation.

We can work together to develop a coordinated system of policies, structures and behaviors that help minority youth and their families develop assets and coping mechanisms -- assets that can offset the risks we know will make it more likely they will end up in the juvenile justice system. With your help, Oregon can create a coordinated and comprehensive strategy to reduce over-representation of minority youth in our justice system.

Thank you.

Governor John Kitzhaber

Associated Oregon Industries

October 10, 1997

Thank you, Richard. It's a pleasure to be here again with you and your members.

Most of us travel frequently around the country on business. It doesn't take too many trips to learn that Oregon is fixed in the national consciousness as a place that produces innovative ideas and risk-taking leaders. Time and time again we have broken new ground in transportation, health care, education, environmental protection, and the workforce.

We finished our principal interstate highway first as other states struggled to plan and construct their own sections of this national system of roads.

We expanded health insurance coverage through the Oregon Health Plan as access to health care services shrank in other states.

We set tough new standards for our school children through the Education in the 21st Century Act as student performance declined in other states.

We established a pioneering land use system that has protected our forests and farms as other states sacrificed agricultural land to urban sprawl.

We reformed our workers compensation system and reduced insurance costs for Oregon businesses eight years in a row as similar rates rose in other states.

Each of these efforts has had a positive effect on the daily lives of countless Oregonians and our quality of life. None of them have been easy. All have demanded innovation and calculated risks.

One of the secrets to our success is leadership. No matter what group they might represent, our state's leaders, especially in our business community, have focused on problem-solving, not partisanship. This is one Oregon tradition, however, that is in jeopardy.

In recent months, the political atmosphere has begun to change in our state. There is an ideological purity that is new to Oregon. This is a troubling trend that threatens our quality of life and our national reputation for innovation.

Let me give you an example of what I am talking about. Everyone here knows how important a good transportation network is to our prosperity and our quality of life. We also know that our highways, roads, and bridges are falling apart.

Consider these facts from a national survey of the Surface Transportation Policy Project:

Oregon drivers spend \$51 million annually repairing damage to their cars caused by crumbling urban highways.

Oregon ranks 11th in the nation in the Pothole Index, an independent survey that measures the percentage of urban highway miles in immediate need of repair.

In three Oregon metro areas -- Portland, Salem, and Medford -- more than one-fifth of all highways are in poor or mediocre condition.

Meanwhile, Oregon's population is exploding -- we added 55,000 new residents last year alone and close to 300,000 since 1990 -- even as the average number of miles Oregonians drive increases year after year.

Two years ago I created a citizens task force, the Oregon Transportation Initiative, to examine these problems and find some answers. The effort was led by former governor and U.S. Transportation Secretary Neil Goldschmidt, and included some of Oregon's top business leaders such as Ken Harrison, CEO of PGE, Art Christianson, retired CEO of Norpac, Mike Holleran, former Chair of the Oregon Transportation Commission and President of Brooks Resources, Carol Whipple, a southern Oregon rancher and timber operator, Mike Burrel of Burrel Forest Products, and Ed Balsiger, General Manager of Pendleton Grain Growers and current President of AOI.

The proposals of the Oregon Transportation Initiative, which I submitted to the Legislature earlier this year, firmly reflected our state's tradition of innovation and nonpartisan leadership.

They challenged the idea that we can build our way out of congestion by doing what Seattle or Los Angeles did -- adding more and more freeway lanes.

They challenged the belief that we can afford to ignore the dangerous and expensive deterioration of our highways, roads, and bridges.

They challenged the notion that decisions about Oregon's transportation needs can be made without the involvement of regional and local communities.

The proposals of the Oregon Transportation Initiative constituted a new way of doing business.

They called for the maintenance and expansion of our transportation system in a way that promotes economic opportunity while preserving our special quality of life.

They called for broadening the base of transportation funding in order to help keep the gas tax down and reduce the growing backlog of poorly maintained highways, roads, and bridges.

And they called for regional decision making instead of the one-size-fits-all directives historically handed down from Salem.

We all know what happened to Oregon Transportation Initiative. It was passed twice by the House of Representatives with bipartisan votes approaching a two-thirds majority. It was supported by the Speaker, the Majority Leader and the Democratic Leadership. Yet, In the final days of the 1997 legislative session a small coterie of ultraconservatives in the state Senate decided to block approval of any transportation package until a charter school bill passed. As a result, for the sixth year in a row the Oregon Legislature failed to pass a transportation bill.

Meanwhile, our state's transportation problems remain. New residents continue to move here, traffic congestion becomes worse with every passing day, and the number of miles of decaying asphalt keeps growing. Putting off these problems only drives up the final cost of fixing them.

Parties have been, and always will be, a part of politics. But in Oregon we used to take a different approach. Republicans and Democrats once could put aside their ideological differences to concentrate on solving big problems, not only in transportation, but in other areas, too.

I am afraid that happens less and less in Oregon today. There are exceptions, of course, the most notable of which is the speedy bipartisan enactment last spring of the Oregon Salmon Plan.

But in general, the political atmosphere in Salem is at the highest level of partisanship and stridency that I have seen in my 20 years of public service. Issues such as transportation, once firmly part of the political center on which liberals and conservatives could agree, are now considered ideological litmus tests by some state Senators and Representatives.

The first casualties in such a poisonous environment are innovation and risk-taking. Leaders, both in politics and in the business community, become less willing to take chances.

That's unfortunate because that kind of leadership has been a key ingredient in the biggest legislative accomplishments of the last 25 years. Think back for a moment in the context of today's political environment to some of those achievements and the risks they required.

Could we build some of the first and the best interstate highways in the country, which took millions of dollars of new state investment, in today's political environment?

The answer is no.

Could we create the Oregon Health Plan, which required us to make tough choices about medical care, in today's political environment?

The answer is no.

Could we enact the Education Act for the 21st Century, which set demanding new standards for our schools and our children, in today's political environment?

The answer is no.

Could we pass Senate Bill 100, which protected forests and farms, in today's political environment?

The answer is no.

Could we adopt 1990's workers compensation reform, which changed the way we do business, in today's political environment?

The answer is no.

Could we adopt the Bottle Bill, which led the nation in recycling, in today's political environment?

The answer is no.

Could we protect our state's beaches, which Governor Oswald West did in the first decade of this century, in today's political environment?

The answer is no.

Each of these accomplishments required pragmatism, risk-taking, and collaboration. Those qualities are less and less valued in today's Oregon Legislature. Instead, what matters more, especially in the Senate, is ideology and partisanship.

Let me be clear about this. My purpose today is not to attack the Oregon Republican party or its members in our state's Legislature. This is not about political parties.

In fact, in the 1998 Legislative elections I will urge voters to support a number of Republican lawmakers, including Representative Bob Montgomery from Cascade Locks, and Senators Jeannette Hamby of Hillsboro and Lenn Hannon from Ashland.

If this decision upsets the Oregon Democratic party, so be it. The fact remains that I know from firsthand experience that Republican Representative Montgomery, and Republican Senators Hamby and Hannon, are effective lawmakers with the best interests of Oregon at heart. Our state Legislature would be a poorer -- and much less productive -- institution without them.

The work done by these three state Republican legislators and many of their colleagues in the Republican party represent one of Oregon's best political traditions: working with colleagues on both sides of the legislative aisle to get things done. Think for a moment about a few of Oregon's past House Speakers and Senate Presidents who worked with their political opponents to create the achievements of the last 25 years which I described earlier.

Senate President John Burns, a Democrat, governed with a bipartisan coalition. One of Burns's Democratic successors, Debs Potts, regularly worked closely with Republicans. And before pursuing a career in Congress, Republican Bob Smith built excellent relationships with Democrats when he served as House Speaker.

Oregon's national political leaders have shown the same willingness to put their state before their party. Yes, Senator Gordon Smith is a Republican, but like Senators Wayne Morse and Mark Hatfield before him, he has not allowed partisanship to stand in the way of finding solutions to Oregon's problems.

I want to see that same spirit return to Oregon's state Legislature. I believe that moderates of both political stripes -- Democrat and Republican -- can rebuild the Legislature's political center. Business, especially as represented by AOI, has an essential role to play in this effort.

But let me speak frankly for a moment. I am concerned about the mixed message AOI and other business groups are sending about the results of this last Legislative session, especially in the area of transportation.

In the final days of the legislative session AOI worked on behalf of the transportation bill. You and your leaders understood not only the economic benefits to business, but more importantly, what a vital investment this legislation would make in our state's quality of life.

However, AOI's recently published Legislative Review gives some of its highest marks to the very lawmakers who held transportation legislation hostage to their ideological demands for a school charter law. These are the same individuals who orchestrated the rejection -- without debate -- of Michael Powell's reappointment to the Port of Portland -- the day after he received the Glenn L. Jackson award for business and civic leadership from the Oregon Enterprise Forum.

Oregon can't afford more of this partisan gridlock. We face too many important problems, not only in transportation, but also in health care, education, the environment, and in the workplace.

With AOI's help, we can rebuild the kind of centrist consensus in Oregon politics necessary to solve our problems in transportation and other crucial areas.

How can you help? There are three things you as business leaders can do.

First, express your disappointment to the Senate President over the Legislature's failure to approve a transportation package.

Second, make sure your current state Representative and Senator know that you are fed up with ideological game playing in the Oregon Legislature.

Finally, support and work for legislative candidates in 1998 -- Democrats or Republicans -- who value Oregon over ideology.

With your support, we can elect a state Legislature of Democrats and Republicans that will put Oregon first, not conservative or liberal ideology.

With those kinds of lawmakers in Salem, we can pass a transportation bill that will begin to reverse the grievous neglect

of our state's roads, highways, and bridges. We can concentrate again on issues that threaten our state's special quality of life and its reputation for innovation. We can also return to one of the Oregon Legislature's proudest political traditions: solving our state's real problems, not its partisan squabbles.

Thank you.

Governor John Kitzhaber

**A Plan for Breaking the Deadlock on
the Columbia River**

Portland City Club

October 3, 1997

In the last 16 years, the people of the Northwest have spent more than \$3 billion dollars on an effort that now employs 2,000 people and has shown few results.

No, it's not a Stealth Bomber. Instead, it is our effort to restore threatened and endangered salmon runs on the Columbia River. This effort, started with high hopes, has foundered on a fundamental lack of agreement:

A lack of agreement on the objective of the recovery effort, lack of agreement on sound science, lack of agreement on a common plan of action and a lack of agreement on who is accountable for expenditures.

It is not difficult to see how that lack of agreement arose. The Columbia River is our own answer to the Balkans. It is controlled in various fashions by two nations, four states and 13 sovereign tribes.

But even with that backdrop, I suggest today that we cannot give up on the salmon simply because we have not yet succeeded in providing them much help.

We must break through the futility of the last 15 years to come up with new approaches and new ideas for preserving wild salmon in the Columbia. Today, I will tell you why I believe we have this opportunity -- why now is the time to act. Then, I will propose a way in which we can break this problem into a more manageable framework.

First, why I think we need to act now -- together as a region.

If the Northwest does not propose a regional solution for salmon recovery, quite simply, the issue will be decided for us. It will be decided by Congress in its looming debate on energy deregulation.

In Congress, if we do not present a four-state united front, the BPA -- our region's legacy of affordable power and our principal source of funding for salmon recovery -- is at significant risk.

That's why I believe that when Congress takes up energy deregulation legislation next year, the Northwest must be ready with a package that deals with the problems of Bonneville and the Columbia River. That package must include:

First, a plan for how BPA will sell its power in a competitive marketplace that is in keeping with the fact that it is a federal agency, not a private competitor.

Second, legislation that will prevent BPA from using its transmission system monopoly to keep competitors out of the Northwest power market.

Third, a cost control plan for BPA including a mechanism for collecting any costs that Bonneville cannot recover in selling power in the marketplace.

Fourth, an agreement on how Columbia River fish recovery costs will be paid in the future.

And finally, a new decision-making structure for governing the Columbia River and planning what fish recovery actions must be taken. That's no simple task. But inherent in everything I say today is the assumption that we who live in the Northwest must find a new way to manage the Columbia.

Because, make no mistake about it, the rest of the country does not have our interests at heart. Congress may well decide deregulation in a way that does not retain low-cost power in the region -- does not even maintain control over power within the region -- and does not recover fish.

I believe this is the looming threat that can bring us together as a region. The alternative -- one of losing the public benefits of the BPA and a secure dedicated stream of funding for salmon recovery -- is very unattractive, and to me it is unacceptable.

Let me tell you why I think we can act together, as a region, now.

I believe that we have broadly-shared interests within the region today. We share the desire for low-cost power, we share the desire for water to irrigate the basin lands, provide drinking water for communities and recreational opportunities for our citizens -- and we share a desire to recover fish.

I am joined by three other governors in this region that are willing and able to work together. In fact, we have met together no less than four times in the last two years. In addition, we have a federal administration that will listen to us. And we have Indian tribes that are willing to sit down at the table and look for solutions.

In June, I hosted a meeting here in Portland of the four governors, 10 of the 13 Columbia River Indian tribes, and representatives of the federal government, including Katie McGinty, head of the White House Council on Environmental Quality, and Terry Garcia, Assistant Secretary of Commerce. At this meeting we started an unprecedented process of open communication between the three sovereigns in the region.

My goal is to keep control of Columbia River power generation in the Northwest, and to keep power costs as low as possible. At the same time, we need to lay out the real costs of fish recovery and -- as a society -- make clear, responsible and accountable decisions about the recovery of Northwest salmon.

We can get together as a region and propose a Northwest solution that addresses both power and fish, or we can cede the initiative and our future to those outside the region.

So the time to act is now. But what do we do first?

I propose that we, as a region, adopt a plan of action that will deal with discrete, manageable portions of the problem. Specifically, let me discuss some ideas regarding, harvest policies, hatchery practices, habitat restoration and, finally, river governance.

First, let me address harvest policies and hatchery practices together.

Because, taken together, they reveal one of the paradoxes on the Columbia River: the conflict between the endangered species act and federal responsibilities to the tribes under treaty agreements.

The tribes have harvest as their primary interest and are less concerned with whether they harvest native fish or hatchery fish than with ensuring that their treaty rights are honored.

On the other hand, the standard under the ESA is to restore a "sustainable" population of fish -- which may not mean a harvestable population. Furthermore, the things that might increase the number of fish for harvest -- such as more hatcheries -- may be bad for endangered species.

This problem results from two federal mandates -- honoring treaty rights and enforcing the endangered species act -- which may be mutually exclusive.

The first step in moving toward a consensus on hatchery practices and harvest restrictions is to resolve this paradox. To do so, I propose appointing a staff-level workgroup -- including the tribes, the four states and the federal government -- to develop proposals to resolve the "ESA- Treaty Rights" conflicts.

Second, let me address the issue of habitat restoration.

There is no reason why we cannot develop a freshwater habitat plan that is similar to the Oregon Salmon Plan. In fact, with the steelhead listings in the Northwest -- and if Washington and Idaho adopt salmon recovery plans of their own that are similar to, and coordinated with, the Oregon Plan -- we may be on our way.

We already have a process to develop a recovery effort using the Oregon plan as a model. What we need is a way to prioritize the habitat restoration work, both because of limited funds and because of the "cost-benefit" ratio of the investments. That is, for a given investment, some watersheds and stocks may yield a greater "recovery return" than others.

In November 1995, Bill Bradbury, a former Oregon State Senator and now President of an organization called "For the Sake of the Salmon," put together a Handbook for Prioritizing Watershed Restoration to Aid Recovery of Native Salmon. In the preface, Bradbury writes: "the challenge is to target all these expenditures to the most important efforts first. The opportunity is to actually make a difference for the salmon. We can only do that if we pay attention to the biology -- not the politics, not the agency turf -- but rather prioritizing our efforts based on the biology of the salmon, which very quickly leads us to the biology of healthy watersheds."

Bradbury is right: the key here is watersheds. If we are able to restore watershed health, then we do not need to deal with each and every species within the watershed with a separate recovery plan. One watershed plan will address all the species. Furthermore, using the local watershed council approach will get the citizen ownership necessary for long term success.

Finally, let me tackle perhaps the most contentious issue on the Columbia River. We call it simply "river governance."

Behind that simple name lies a complicated problem involving a number of factors, including:

- A Columbia River ecosystem that has been altered by hydroelectric development.
- The lack of clear MUCH empirical science on which to base a recovery plan.
- The sheer number of economic stakeholders impacted by recovery strategies, including: agriculture, recreation, aluminum smelters, barge companies, ports and utilities. Each stakeholder is an advocate for or against a particular action (draw downs, increased spill, dam removal, barging, hatcheries, etc.) Based on how it will impact them economically. These competing interests have effectively blocked any serious discussion of a solution to the problem.
- And then there is the need for consensus among 18 separate governmental entities (U.S. government, Canada, four states and 13 tribes).
- There is the lack of coordination among seven federal and regional agencies that each have some jurisdiction over the Columbia.
- And finally there is the lack of accountability for how restoration dollars are being spent.

To deal with this complex issue of river governance, at least four steps will be required:

First, we must create a new forum of state, federal and tribal representatives to decide Columbia River issues. This forum may be a modification of the existing Northwest Regional Power Planning Council, or it may be a new entity. In

any event, it must include participation of the four states, tribal interests and the federal government -- and it must have real authority to make decisions on the allocation of resources and the coordination of activities in the Columbia River Basin.

Second, we must clearly identify the objective of a recovery plan. That should be simple, but it has proved elusive. To me the objective must be not only a "sustainable" population, but also a harvestable population at least for the tribes and preferably for the commercial and sports fishing industries as well.

Third, we must develop a consensus on the science on which to base the recovery plan. I will seek agreement with my three colleague governors on the extent of scientific consensus and the basis for developing additional needed scientific knowledge about sSalmon and the Columbia -- with the recognition that it will be evolving and that the plan will have to be modified and updated based on new data.

Finally, we must identify the economic stakeholders, acknowledge and validate their concerns, and make the costs and politics of recovering salmon explicit. The economic stakeholders are the interests that drive recovery politics in the four states and in the region. We will not succeed by belittling these interests on the river. We must address the concerns of the economic stakeholders in any proposed plan and the costs of doing so must be clearly identified and incorporated as a part of implementation.

I believe this point is the crux of the issue for our salmon, for our river, and for the Bonneville Power Administration for too long, we have labored under the assumption that we can recover salmon without incurring political or economic costs. We can't.

The bottom line is that effective salmon recovery, based on sound science, is going to cost everybody something. What we haven't done is figure out who or how much.

Until we do that, we cannot really make an accountable decision.

Until we do that, we cannot really know what salmon recovery will cost.

Until we do that, we cannot really make progress on saving salmon.

While the recovery plan must be based on sound science, the implementation of that plan will be based on practical politics driven by economics. It is time we acknowledged that.

It is time, in short, that we get on with the work of saving salmon. Not because someone is telling us to, not because it's a federal mandate, but because, in our hearts, we know it is the right thing to do.

To be in the Northwest is, in some visceral way, to be connected to these marvelous creatures. Whether your family has been here 10,000 years or just 10 days, I believe Northwesterners identify salmon as the symbol of a healthy environment and the symbol of our region's abundance.

And if we lose wild salmon, we will lose so much more than the fish.

It will be certain then that we are losing the battle to keep our watersheds healthy -- and that salmon are just the first to go.

And it would be certain that we are failing in the challenge to reach across political and cultural boundaries and join in a common cause.

We simply cannot permit this to happen. Today, I am committing myself to making a difference for Columbia River salmon. I am asking every one of you to make the same commitment.

Eventually it will take sacrifice -- individually and regionally. But if shared, the load will be bearable. The choice before us is clear: either we as a society choose to make sacrifices -- or choose to sacrifice salmon. I do not believe we will

choose the latter path.

Governor John Kitzhaber

"Building a Consensus for Environmental Innovation"

Oregon Environmental Council

Forum for Business and the Environment

September 23, 1997

Good morning and thank you for having me here today.

It's an honor to be able to kick off your 1997-98 season of your forum for business and the environment. I heartily applaud your effort to bring together the business and environmental communities to find a common ground.

Today, I'd like to spend my time with you talking about the Oregon Plan -- sometimes known as the Salmon Plan -- and how the lessons learned in creating it might help us with another major environmental challenge: The Willamette River.

Let me start by telling you a little about the Oregon Plan.

As many of you know, the federal government was considering listing several runs of coho salmon on our coastal streams as endangered.

What I feared and what many others feared was that if these salmon were listed as endangered, we would be right back in the type of pitched battle over the environment that we saw in the listing of the spotted owl. I did not believe then and I do not believe now that we can afford this type of conflict over our salmon runs.

We cannot afford it, because the fish do not have the time for us to litigate. Already, stocks of winter steelhead, for example, which numbered 10 to 15 thousand in the 1980s have declined to as few as two thousand today. They will disappear entirely from the Willamette if we continue to argue about who is responsible for recovery.

And we cannot afford this type of conflict because, as a state, we can not continue to be torn in half by issues of how we manage our environment.

That's why I started two years ago to put together a voluntary, collaborative effort, based on sound science, that would address salmon recovery from a watershed perspective.

It had all the hallmarks of success. Neither environmentalists or business interests liked it.

Slowly but surely however, the concept of a voluntary, cooperative effort which would restore watersheds on a farm-by-farm, dairy-by-dairy, woodlot-by-woodlot basis began to take hold. And it did for one simple reason: It was clearly and demonstrably the best and quickest way to improve the habitat of coho salmon.

The alternative was a federal listing and subsequent attempts by federal regulators to change land management practices among the more than 10,000 private landowners up and down our coast. Something in my experience told me that kind of approach would not be very successful.

Now, don't get me wrong. There is plenty in the Oregon plan that isn't voluntary. But its uniqueness is this: we will be able to accomplish more through education of and cooperation with landowners than we would through a top-down, federally mandated approach. To their credit, the federal government recognized this and have given us the green light to move forward with this effort.

I am hopeful that we can use this same approach of collective, voluntary action to move ahead on what I see as one of the major environmental challenges before the state: the Willamette River. Nowhere are the challenges of a healthy environment as complex as they are in the Willamette Watershed.

The watershed of the Willamette includes some of the most fertile land in the United States, and produces a broad range of high-value agricultural products. The Valley is also the hub of the state's population and economy, accounting for 69 percent of the state's population and 75 percent of the state's employment.

In the 1930s, the lack of oxygen in the Willamette River could kill fish in a matter of minutes and long stretches of the river were virtually lifeless, leading to a public outcry and the first major steps to improve water quality and protect public health.

By 1970, however, growth pressures again threatened water quality in the Valley. Once more, an initiative to clean the Willamette River energized the state and served as the centerpiece of a major civic movement toward greater environmental sensitivity. Led by Governor Tom McCall, Oregonians came together to reduce pollution from cities and large industries, to manage and plan for growth in the Valley, and to establish a "greenway" along the Willamette.

The images of twenty or forty years ago -- pipes dumping industrial waste and municipal sewage directly into the river, fish dying within minutes of exposure -- are, thankfully, behind us.

However, protecting our environment is not something we can simply do and walk away from; it requires constant vigilance. Today, the Willamette faces threats every bit as serious as it did in Tom McCall's day. These new threats are far more complex, but every bit as serious.

Today, I am asking for all Oregonians to renew their commitment to a clean Willamette River. Because the Willamette is not dying of a single grievous wound, rather, it is suffering the death of a thousand cuts.

Let me describe the threat.

Within the next 20 years, the Willamette Valley is expected to gain at least 700,000 new residents -- the equivalent of adding six cities the size of Eugene or Salem. We can accommodate these new Oregonians in our existing cities and towns and reap a more vibrant economy -- or we can allow sprawl to consume our farmland and traffic congestion to overwhelm our roads.

At stake is not only our farmland and the viability of our transportation system, but the health of the Willamette River and its tributaries also. Sprawl means roads, driveways, parking lots and roofs. In a word, runoff.

Some of you know it better as "non-point source pollution." If so, you've been in this business too long.

But you and I know that large industrial facilities along the Willamette are not the threat to water quality that non-point sources are.

This wide range of contaminants, from sediment to motor oil to fertilizers and pesticides, are carried to the river by stormwater or groundwater. These non-point source pollutants are often difficult to capture, monitor, and treat. And, increasingly, they appear to be the source of the rivers most dangerous pollutants.

We know what the threats are, and we know that we must act soon to preserve the Willamette for future generations. And we know that we can't do that the way we used to. We can't do it by addressing only sewage treatment and other major point sources of pollution.

Instead, we face the same challenge that I believe we faced on the coast: restoring watershed health by changing the habits and practices of literally thousands of people. Only, in this case, there are millions of people.

I believe that Oregonians have the creative spirit, and the will, to surmount these challenges. If we bring Oregonians of different interests and backgrounds together, help them establish clear goals and a strong sense of purpose, I believe they will forge solutions to our most pressing problems.

To help establish these common goals, I have participated in creating three groups to look at both the river and how we manage growth in the valley.

The first, created in February of 1996, was the Willamette Valley Livability Forum -- a voluntary, cooperative effort to bring together the business community, private citizens, and the many efforts of local, state, and federal government to understand and shape the development of the Valley.

The Forum is an organizing body that will need advice and guidance from groups specifically working on some of the critical issues facing the valley such as watershed health, land use, transportation and the economy.

That is in part why I appointed the Willamette River Basin Task Force a 22-member task force representing many different interests in the Willamette basin such as the OEC, Weyerhaeuser, and Norpac Foods to address the problems identified by the Willamette Study and to propose policy changes that could help improve the health of the river.

I have been extremely impressed by the diligence of this group, chaired by John Miller, and the fact that this very diverse set of individuals will produce by December a set of clear and cogent recommendations for improving water quality in the Willamette River. It is my belief that their work will help lead us into a new era of restoration of the health of the Willamette River.

Finally, in May of 1996, then Washington Governor Mike Lowry and I jointly appointed 31 members to the Management Committee of the Lower Columbia River Estuary Program. This group is charged with the development of a management plan for the lower Columbia River, including the area where the Willamette empties into the Columbia near Portland. This management plan should produce specific recommendations and enforceable provisions to restore the health of the estuary.

I am confident these groups will address the tough issues and will give us solid sets of recommendations and ideas about how to preserve the Willamette River and this special valley so many Oregonians call home.

But the real question is: What do we do with those recommendations?

How we answer that question for the lower Columbia and the Willamette Valley has major implications for our future. Will we pool our resources and expertise, and cooperatively chart the course for restoring the health of our natural systems in the Lower Columbia and in the Valley?

Or will we sit back while the Endangered Species Act listings of the upper Columbia march down to the ocean, and then argue for years over whose responsibility it is to restore fish and whether the science is convincing enough to tell us what to do!

The effort to restore our watersheds is well underway in the Valley. We have 24 watershed councils working with people in their communities to improve water quality and address the limiting factors for fish. We have landowners rebuilding wetlands and off-channel rearing for fish. We have Enron/PGE promising to invest \$1 million a year for the next 10 years in watershed restoration.

We have the Timber Industry voluntarily funding improvements to roads and culverts far in excess of the levels required by law. And we have government beginning to work together -- at all levels -- in a way it never has before.

By this time I hope you are all asking: But what does that have to do with me? What can I do as a city dweller, Christmas tree grower, a mill worker, a grass seed farmer, and board member of a utility, a city councilor, an angler, or

a teacher?

If you are a farmer, I ask you to work with your extension agent, your Soil and Water Conservation District or the State Department of Agriculture to conserve soil and reduce the water you need for irrigation, and clean up the runoff that flows back into the Willamette.

If you are an angler, I ask for your understanding that your harvest of hatchery fish in the lower Willamette or in some tributary streams may be reduced or curtailed until the wild populations can be restored.

If you are a forester, I ask you to carry out the significant commitments your industry has made in the Oregon Plan such as repairing old roads that block fish passages or deliver sediment to streams that buries the spawning gravel.

If you are an electricity producer, consider "fish-friendly" investments to improve fish passage, increase stream flows, and reduce water temperature.

If you live in a city, I ask you to do something as simple as turn off the water while you brush your teeth, to recycle everything that you can, and limit your use of fertilizers and pesticides on your lawn, be aware that washing your car with non-biodegradable detergent in your driveway adds to the pollution of the Willamette River.

In summary, I ask you do three things:

First I ask you to pledge yourselves to be part of the solution, not part of the problem. We do not have time -- the fish do not have time -- for protracted bickering and finger pointing. That will gain us nothing but endangered fish and federal control of our resource management decisions. Failure to act is a choice to relinquish control over our destiny to others is not an option.

Second, I ask you to help me make sure that all Oregonians share responsibility for solving these problems. Each of us plays a vital role.

Third, I ask you to work with me and other concerned Oregonians to find creative solutions to our problems. I know that heavy-handed regulations are not the best way to restore the Willamette and protect our fish. Voluntary measures, economic incentives, flexibility, and innovation can be far more effective. And we need to implement the carefully developed recommendations of groups like the Willamette River Basin Task Force and the Livability Forum.

Let me conclude on a positive note, Consider this . . . In spite of the number of people in the Willamette Valley today, we still have:

- Cities that drink the water pulled directly from the Willamette River.
- A native run of wild spring Chinook salmon that migrates through the Port of Portland, Oregon's busiest industrial shipping port.
- A native run of wild winter steelhead, unlike any other in the state, that migrates to traditional spawning areas in the Cascades east of Salem, Albany, and Corvallis.
- Individuals, groups and community leaders that are willing to sit down together and solve their problems.

That is a heritage worth protecting.

Governor John Kitzhaber

Comments to Oregon Board of Forestry Governor John Kitzhaber

September 3, 1997

Thank you for setting aside the time to hear my comments. It has been too long since I have addressed the Board. I want to talk about a number of broad policy issues and then I would like to hear from you. Before I start, I would like to give my sincere thanks for the time you have devoted to your duties as members of the Board of Forestry. I know you all have many other obligations and pastimes that you would prefer being engaged in. Thank you.

The forests of the state provide a wide array of benefits to the people of Oregon. Among these are municipal drinking water supplies, timber products, habitat for species, recreation and aesthetic values.

The forest products industry has been and remains one of the key elements of the state's economy. In many rural communities, particularly in eastern Oregon, the processing of forest products contributes significantly to the economic lifeblood of the community. Over the last five or six years, the state has seen a dramatic change in the flow of wood products. The shift away from federal lands as a major source of timber supply has resulted in disruption for many communities and families, and put increased pressure on non-federal lands to provide the wood products to meet our society's demands.

With the shift in emphasis on federal forestland toward protection of biodiversity, private forests now form the foundation of our present and future timber supply base. We need to provide a regulatory climate that encourages investment in private lands, and we need to encourage and reward private sector stewardship of forest, wildlife and aquatic resources. I am very proud of our Coastal Salmon Initiative and its reliance on voluntary and cooperative measures to restore sensitive salmon stocks.

The last decade has seen an unprecedented acquisition of scientific knowledge regarding ecosystem processes and the role that forest ecosystems play in the health of watersheds. We have learned about the habitat requirements for aquatic species, for amphibians that occupy riparian areas, and for wildlife species throughout the forest. This knowledge has been gained through the research of scientists from the Forest Service, Oregon State University and countless other institutions. I will continue to support research into forestry and forest ecosystems, and will use scientific knowledge whenever I can to guide my policy decisions. I think we all need to recognize that we will be bombarded with new knowledge at an ever increasing rate, and I urge the Board to seek and embrace this knowledge, and make the changes necessary in its guidance to landowners and the Department of Forestry in their management of forestlands in the state.

In my remarks to you, I would like to address some of the critical forestry issues facing the state today. Among these are our efforts to promote ecosystem health on our eastside forests, the President's Northwest Forest Plan, landslides and debris torrents, state forest policy, and the Memorandum of Agreement with the National Marine Fisheries Service implementing our coastal salmon plan.

Eastside Forest Policy

One of the major initiatives of my Administration has been my effort to identify broadly supported solutions to the problems we have seen with the management of our eastside forests and to provide guidance to our federal land managers.

Large areas of Eastern Oregon are suffering from a decline in ecosystem health, largely attributable to past land management practices including the removal of overstory trees, the building of an excessive road network, and the suppression of fire. The result has been a disruption in watershed function, as well as an increased risk of catastrophic fire. Many timber dependent communities have suffered significant declines in employment and revenue from timber harvest on public lands.

I have put forward a proposal to restore ecosystem health to the public forests and watersheds of Eastern Oregon. The proposal is contained in an 11-point strategy whose goal is to focus land management efforts on the restoration of forest health. Supported by consensus recommendations from a diverse team of scientists, the proposal relies on active management as a means for improving ecosystem health, while at the same time reducing fire danger and providing commodities to local communities. The strategy also calls for thinning dense forest stands while leaving larger trees in an effort to move the forest toward its historic condition. One of the cornerstones of the proposal is that federal land managers should avoid operating in controversial areas, such as in roadless or old growth areas, and instead focus on treatments that enjoy broad popular support. In this way, the federal agencies can establish a track record of success that will restore the public support so critical to the success of their efforts.

As you know, this proposal has received a tremendous response and continues to enjoy very broad support. The environmental community continues to lend its support, despite the proposal's emphasis on active management. The timber industry and local governments remain supportive, although they are hopeful of an increase in the production of sawtimber in the near term. Forest Service Chief Mike Dombeck and Regional Forester Bob Williams have been instrumental in helping individual Eastside forests to adopt the strategy. We should all be pleased, as well, that the Eastside Ecosystem Project has generated much outstanding scientific information that will help shape our forest management policies in the future.

One of the challenges that remains ahead for this effort, however, is assuring adequate funding to implement the treatments. In some cases this can be provided by assuring that timber sales make economic sense. The future wood supply from this part of the state will be largely in trees ten to twenty inches in diameter. Eastside mills have shown a willingness to accommodate logs of this size and the Forest Service should provide estimates of the supply of sawtimber likely to come from these forests over the next few years. Where the value of the timber cannot pay for the array of treatments needed, Congress should provide the necessary funding to assure appropriate stewardship of federal lands.

It is imperative that we remain vigilant in our efforts restore these ecosystems. We will need to work with the federal land managers to institute long term monitoring efforts, and I intend to meet regularly with Regional Forester Bob Williams, as well as with representatives from the timber industry and conservation groups to assess progress.

We are currently working with the Regional Forest Service office to identify model projects that best demonstrate the 11-point strategy. I plan to arrange a tour of these sites for the Oregon Congressional Delegation later this fall, and will invite you all to attend.

Northwest Forest Plan

I support the President's Northwest Forest Plan – it broke the legal log jam and provided a comprehensive conservation strategy that enables us to address future resource issues such as the threatened Coho stock. It did come at a high price, though, as it has resulted in huge reductions in federal timber sales in Western Oregon. I have and will continue to push the Forest Service and Bureau of Land Management to meet their projected timber harvest volumes and their other plan objectives, including monitoring and watershed analyses.

I believe, however, that there are some areas where the Plan could stand some scrutiny. Most prominent among these is the question of what level of flexibility might be desirable for management within riparian areas. The current riparian reserves were intended as default boundaries that could be modified after watershed analyses had been completed. Now that much of the watershed work is finished, I think it might be appropriate to take a second look at the scope of these

reserves.

I support the concept of Late Successional Reserves. The LSRs form the foundation of the Forest Plan by assuring that large areas of public forest will maintain the characteristics of older forest structure and the associated habitat critical to so many species. I understand that limiting active management within so much of the remaining original forest of the Pacific Northwest is controversial. I believe, however, that the time has come to recognize that we don't have all the answers. We do not always know what is best for the forest and it may be wise to preserve our options by deferring management in many of these older stands. I do want to emphasize, though, that a number of these reserves are in drier climates where frequent fires were a natural part of the ecosystem. I ask that the Forest Service consider employing active management to reduce unnatural fuel buildups in these areas.

Landslides and Debris Torrents

I would like to commend the Board of Forestry for its responsive and effective work to address the threat of landslides and debris torrents. I think we were all shocked by the tragic deaths last November, and we must not forget that the threat from these and similar events will remain with us forever. Results from studies indicate that clearcut harvest tend to increase the rate of debris torrents, at least in the short run. We have a responsibility as a state to examine what actions are necessary to reduce the risk from these events. Senate Bill 1211 creates a Task Force on Landslides and Public Safety charged with developing proposed solutions for dealing with the risks to public safety associated with landslides. I ask that the Board review the report from the Task Force and consider actions that the report may recommend.

State Forests

Forest lands under control of the State Land Board and the Board of Forestry can provide a critical piece of the forestry puzzle in the state. These lands have a different history and different objectives than do private lands or federally controlled lands. I would like to see these lands meet the statutory and Constitutional obligations under which they were established, while at the same time serving as a model of exemplary forest management. I would cite the Elliott State Forest as a model of how active management can be used to achieve multiple values.

With respect to species protection on public land, I believe that federal lands should provide this protection wherever possible. Where there is little federal land available, state lands may have to accept more responsibility to meet the expectations of the Federal Endangered Species Act. We need to be able to point to state lands as shining examples of wise and farsighted forest management.

The Board is currently considering a rule to establish the purpose of state lands. As you are aware, I have concerns about the proposed rule. I want to make it clear that sharing these concerns with you is not intended to interfere with the work of the Board. Developing administrative rules is what you were appointed to do. As Governor, my role is to share with you my vision and priorities for the management of the state's natural resources.

I think we can all be proud of the current conditions within the Tillamook and Clatsop State Forests and thank the Department for its progressive stewardship. We all know, however, that at the same time these forests are starting to produce trees of commercially valuable size, the population of the state is growing at a tremendous rate. The citizens of Northwest Oregon, including the Portland metropolitan area, will be relying on these state lands to meet their recreational needs at an ever increasing rate.

I am hopeful that if a "purpose" rule is adopted it will reflect a few basic principles:

- It must be consistent with our efforts under the Coastal Salmon Recovery Initiative to protect and restore aquatic habitat on Oregon forestlands
- It must call for a balancing of various resource objectives
- It must enjoy broad public acceptance and credibility as a framework for addressing the changing role of these forests and for managing the land for the benefit of present and future generations of Oregonians.

As you know, the public hearings were very well attended and provided a demonstration of how much Oregonians care

about the management of these lands. I encourage you to consider all comments you receive on this issue, both in person and in written form, and carefully evaluate the content of the input as you deliberate on this critical and sensitive issue. I ask that the Board work to identify an administrative rule and management plan that is satisfactory to the public and the interest groups involved in the issue.

The streams of Northwest Oregon provide some of the best habitat for a number of sensitive anadromous fish stocks. And most significantly, Northwest Oregon is perhaps a unique area in the state, in that there are no federal lands that might be managed to provide species habitat unavailable on adjacent lands. Outside of the Tillamook and Clatsop State Forests, the remainder of the region is in private hands, and has been almost completely converted to young stands of trees. I would ask the Board to consider, as it shapes the purpose rule and designs the eventual forest management plan, that there are no opportunities to provide significant habitat for species dependent on late and old forest structure outside of the state forest lands. I believe the state can demonstrate how active management can produce these structures while achieving an abundant supply of timber. The future of forestry depends on its ability to show it can contribute to ecological goals while at the same time meeting economic goals. Oregon can lead the way.

The MOA with NMFS

I have greatly appreciated your and the Department's support in developing the Salmon Plan. I have been particularly pleased that forest landowners have stepped up to the plate with their extensive voluntary contributions and their willingness to tax themselves to provide the bulk of the funding for watershed improvements. Without the willing participation of landowners and the public, the Salmon Plan will never realize our goals.

As part of gaining the National Marine Fisheries Service's approval of the Oregon Plan, we negotiated a Memorandum of Agreement. This MOA spells out several forest practices issues related to the adequacy of riparian buffers on medium, small and non-fish bearing streams, risks to aquatic functions of activities in landslide prone areas, and management of cumulative effects.

Over the next two years, it is important that the Board of Forestry objectively consider these issues. I support the collaborative effort that is being developed among the Governor's Office, Board of Forestry, stakeholders, and state and federal agencies to address these issues. While further effort will be required to finalize this process, the progress has been good. Following me will be Geoff Pampush of Oregon Trout and Ward Armstrong with OFIC who will share a proposal for this collaborative effort.

As the Board considers the role of forest lands and its programs in aiding salmon recovery, I hope you will keep the following goals in mind:

- Successfully recovering the Oregon Coastal Coho and restoring our watersheds to healthy conditions;
- Having Oregonians continue to take the lead to achieve recovery of the Oregon Coastal Coho;
- Maintaining habitat necessary for sustaining salmonids through regulatory programs, while restoration and maintenance of habitat for recovery of salmonids should emphasize where possible non-regulatory alternatives;
- Ensuring that the plan and MOA be instituted in an equitable fashion giving the needs of salmon using a common sense approach;
- Focusing investments where the greatest benefit would be achieved;
- Basing policy decisions on sound scientific input; and
- Monitoring conditions and taking future actions as warranted.

Conclusion

In conclusion I would like to emphasize that these are times like no other with respect to forest policy. We are witnessing an explosion of scientific information that must be integrated into our forest policy. While science can help forge new policies, we must recognize that the need for these new policies is often driven not by science, but by ecological, economic and social issues, especially the identification of species and ecosystems that need protection. At the same time we are seeing an unprecedented interest in everything having to do with forest management. We must be sensitive and responsive to the needs and desires of the public. Sometimes their opinions aren't scientifically based, but

they always matter. Our ability to do our respective jobs and our very credibility depend on listening to the citizens of this state.

Governor John Kitzhaber

Superintendents' Leadership Institute Speech

August 6, 1997

Six years ago, the Oregon Legislature, with strong bipartisan support, passed the Educational Act for the 21st Century. That Act was a pledge: a pledge to give Oregon children an education of the very highest quality -- a pledge which has been sustained through three successive legislatures.

I am here today to reaffirm my commitment to the vision embodied in this Act, and to assure you of my support as you work to translate vision into reality.

The whole concept of school reform introduces a new set of challenges -- for you , for teachers and for students, but also for me and others in state government -- AND FOR OUR COMMUNITIES. That's what I want to focus on today.

The changes we have initiated are a response to the rapidly changing world we live in. But more importantly, they recognize what former Governor Neil Goldschmidt called the Circle of Prosperity. Let me quote from "Oregon Shines," the strategy developed by Governor Goldschmidt which describes how the Circle of Prosperity works:

"The community is the main supplier of business. It provides workforce, land, schools, street, water, and government services. Business, in turn, provides a strong economic base, jobs, goods, services, and tax revenues. When these sectors -- public and private -- support each other the economy will prosper."

That's what we're trying to do with the Educational Act for the 21st Century: maintain and invest in the capacity of our schools. Because education is one indispensable part of the Circle of Prosperity.

Now, obviously, this puts a tremendous responsibility on you for guiding these changes at the local level. But let me make it clear that this is NOT just a job for superintendents. It's a job for ALL of us. The Circle of Prosperity will remain intact only as long as it is supported by a Circle of Cooperation: a network of mutual support and mutual effort leading in the end to mutual benefit.

I know that many of you have felt that this kind of support is lacking. You feel that you've gone out on a limb with school improvement and that you're just hanging there, being battered by constant criticism, and that you aren't getting enough positive, visible leadership from state political and educational leaders. I believe those are valid concerns and I want to assure you that I recognize them.

But I also believe they can be addressed. This conference, for example, is a step in the right direction. And there are other steps we can and will take. Let me tell you what I think some of them are -- first from my end of things, and then from yours.

As I see it, one of my major responsibilities as governor is to generate political support for both changing our schools and financing our schools. During the recent legislative session I fought to secure an adequate level of school funding.

And I was only partially successful. As superintendents, you know that better than anyone. Funding our schools, funding education for our kids, shouldn't be such a battle, but it always is, every two years, for as long as I can remember, and it's only gotten worse after Ballot Measure 5.

It's because, up until now, we've never been able to demonstrate to the public exactly what our educational dollars are buying. Almost 50 percent of the state's budget now goes to primary and secondary education.

But we have no way of showing what we're getting for that huge expenditure.

Some people say that before schools ask for more money, they need to significantly improve the quality of education. Others say that before schools can improve the quality of education, they need more money. That is a debate that goes absolutely nowhere.

What we need to be asking ourselves is, What can we do NOW to move beyond this biennial gridlock and keep faith with the children whose education has been entrusted to us? There are two things. One involves school finance and the other involves public expectations. Let's start with finance.

There are three fundamental questions involved with any spending decision: (1) what do we want to buy? (2) how much does it cost? and (3) how do we pay for it?

For as long as I have been in state government, the school finance debate has focused almost exclusively on the third question: how do we pay for it? But if we are to achieve the goal of long term stable financing for our schools, the other questions must be answered first.

In theory, everyone wants to be sure our schools have enough resources; but how much does that cost? -- how much is "enough"?

Before the passage of Ballot Measure 5, when school districts were primarily funded by local property tax levies, "enough" was what the local voters decided they were willing to pay. And because of this local funding mechanism, there was a reasonably good match -- though not a perfect one -- between what district patrons were paying and what they were getting for their money.

Today, as you know, that scenario has changed. Ballot Measure 5 shifted the major funding obligation for schools from local districts to the State. Although the State now provides the money, it is disenfranchised from spending decisions. Those are made on a district-by-district basis by more than 200 locally-elected school boards. Thus the State has no way of knowing, with any degree of accuracy, what it is actually paying for.

Thus, the school finance debate in Salem continues to revolve around a series of calculations that tell us whether a district gets more or less state money than in the previous biennium. That may tell us what we need to spend from a political standpoint, but it tells us little from an educational standpoint. We know how much we spend, but not what we are buying for that expenditure.

Today, thanks to the Educational Act for the 21st Century, we have a much clearer idea than ever before of what we WANT to buy: a quality education for every Oregon child, which translates into the Certificates of Initial and Advanced Mastery.

But until we know what the real costs are of delivering that product, we cannot possibly know how much is enough. Nor -- and this is a very important point -- do we have any way to ensure accountability on the part of either the school system or the Legislature.

I have no way to hold the you as superintendents accountable, because we have no way of connecting actual expenditures with outcomes.

You and I have no way to hold the legislature accountable, because we have no way to directly link their budget decisions to what happens to our children.

But I'll tell you something: Oregonians will hold all of us accountable for making sure this vast some of money -- \$4.2 Billion in the last budget -- actually means a good education for their children.

That is where we need to start, and in fact we've already started.

Our Quality of Education Task Force has begun collecting the data necessary to link our state educational dollars to our desired outcomes. It is a process of isolating the components that go into a quality education and attaching a dollar figure to them -- the same process we used in developing the Oregon Health Plan. And I cannot overemphasize the importance of this effort -- both to school transformation and to school finance.

As you know, 1999 will mark the first legislative session after the implementation of the new standards. The first test results using the new, higher standards will be released this fall. We all expect a substantial number of students to fall short of these new standards. That will undoubtedly fuel an effort in some quarters to either lower the standards or to repeal the Education Act altogether. If we hope to go forward, the K-12 allocation in the next biennium must be built on the cost necessary to deliver the CIM and the CAM. This will accomplish two things.

First, it will answer the second question; how much does it cost? It will give a context to the school finance debate. For example, if we can demonstrate to the legislature how much it will cost to get say, 75 percent of our students to the level of the CIM, we can hold them accountable in a way that is impossible today.

If current revenue allows a budget that only gets to 75 percent of the students, the legislature can be held accountable for what happens to the other 25 percent. The debate, instead of being based on more money alone, will be based on a clear policy choice -- is 75 percent good enough? If not, how much more will it take to get to 85 percent? Or to 90 percent. And where will this money come from?.

Second, by linking expenditures to outcomes in the classroom, we will have a way to hold the system accountable for delivering on the outcomes. In other words, we will be able to show Oregonians, in a way that is impossible today, what they are getting for their tax dollars that are committed to primary and secondary education.

The data collection process that is now underway is designed to accomplish two things. First, to generate a data base and a new chart of accounts that not only links expenditures to outcomes, but which also allows us to compare the expenditures and outcomes between districts and even between schools within a district. Obviously, this information will not be available a year from now when I must begin to prepare the 1999-2001 budget. For that reason, the project will also examine 20 -25 school districts to generate information on which to make some initial assumptions about the cost of meeting the new standards. I plan to build my budget based on these assumptions and to use the data base to validate those assumptions or to give us direction on how they need to be modified.

Accountability in the legislature and accountability in the classroom. These, in my view, are the two essential ingredients necessary to secure long-term stable funding for our schools. We will know what we want to buy and how much it costs. The only remaining question will be how we pay for it. And at that point, we will finally be in a position to talk meaningfully about developing a funding source for schools that is both adequate and stable. That's what I see as my role in all of this -- getting us to that point and leading the finance debate itself. Now -- what about yours?

Your role in all of this has to do not only with helping develop the new accounting information I just mentioned, but also with public expectations. The Education Act, coupled with the shift to a state-funded system has finally given us the opportunity -- if we have the wisdom and the courage to seize it -- to ensure that students, teachers, administrators, and parents are held accountable based on what a student demonstrably learns -- not on how long they attend school.

Although it has been six years since the Education Act became law, it's implementation to date has been largely an insiders game -- the development of the content and assessment standards by the State Board of Education, the establishment of site councils, etc. The larger public -- and specifically many parents and community leaders -- are not aware of what these new standards mean. Yet this fall, when the first test scores are released, the consequences will become very public -- and very controversial. It is expected that as many as 60 percent of students will not meet the 10th grade standards.

Very little has been done to prepare parents or community leaders for this shock. And unless we do so, we will put the entire effort at risk. Let me use an analogy. To become a competent airplane pilot, there is a certain amount of information that needs to be mastered. It may take 40 hours for some people, and 75 hours for others. But the knowledge and skill required remains constant. What varies is the time it takes to achieve it.

If I cannot demonstrate competency on my check ride, my instructor will not "pass" me to obtain my private license. And I am certain that my parents, although disappointed that I did not pass, would not want me to obtain a private license if I was not competent to fly. In other words, my inability to pass the check ride would not be viewed as a failure, but rather as an indication that I needed to spend more time in order to achieve the mastery needed to be a pilot.

Now compare that with our current school system where a failing grade is viewed as something negative and carries with it a certain stigma. We have a long way to go to change this viewpoint into something more akin to my flying example. Failing to pass the math exam for the CIM, for example, must not be viewed as a failure, but rather as an indicator that more time needs to be spent in study. It also will give us an indication not only of which students need more help, but also of which schools seem to be doing the best job -- information that will help us apply best teaching techniques across the system.

In the final analysis, funding hinges on public support; and public support depends on the accountability I mentioned earlier -- the ability to demonstrate we're delivering value for investment. The public wants to know, and deserves to know, that if we put more money into schools, we're getting a better education in return. And the public must understand why these new standards will achieve both more quality and more accountability.

You play a critical role in generating both educational quality and community support. You must demonstrate to your communities (as well as to policy makers) that your schools are taking steps to improve performance, and you must provide leadership and support to the educators charged with making this happen. Let me just note a few things you can do in each of these areas.

First, in the area of community outreach and communication:

- You can provide information to the public about the POSITIVE steps schools are taking to identify and address problem areas, and you can find ways to involve school administrators, teachers, parents, and other community members in this process.
- You can identify areas of progress and celebrate them publicly. That means recognizing those who are working together to make strides in improving performance.
- You can establish a climate wherein schools again become the centers of their communities. Draw the community -- not just the parents -- into the school. Involve them in ways that foster a sense of community ownership and responsibility and pride. If our neighbors and friends can actually EXPERIENCE the school, they are much more likely to support the school's funding needs.

Next, in the area of providing leadership and support for your staffs:

- You can provide your district administrators with training in change management, so they can support their personnel in facing the challenges of educational reform. The tone you and your administrators set in involving and supporting teachers throughout the reform process is going to make all the difference.
- You can also help your administrators establish ways for staff to work together in aligning curriculum, both across schools and throughout the grades. This can only be achieved through collaboration among all your teachers, under your leadership.
- Finally, and even in the absence of additional funding, you can determine how the resources you DO have (both time and money) can be redirected to support school transformation.

These are some of the things you can do, and I don't exaggerate when I say there's a sense of urgency about doing them. Otherwise, when 1999 rolls around, we will be in the same position we've always been in -- unable to get consensus on the investments we need to make. That's why your leadership is so critical. It's your job to help our school personnel make the sometimes difficult changes the Educational Act requires. It's also your job to help our communities understand that we are serious about increasing performance and that we intend to hold ourselves accountable, just as

we intend to hold students accountable, for meeting higher standards.

I want to assure you that you have my unqualified support. But we have to do this TOGETHER. The people of Oregon do not want to see -- nor do they deserve to see -- another chapter in the biennial wrangle over school funding. I know you share that feeling, and so do I. But if we each do our parts, I'm convinced that we can lay this issue to rest once and for all -- so that we can move forward to meet the other pressing challenges that lie ahead, and keep the Circle of Prosperity intact for the 21st Century.

May 12, 1997

HIGHER EDUCATION CONFERENCE SPEECH

Thank you very much for inviting me to speak to you today. I am encouraged to see so many of you here. I take it as evidence of your interest in school reform and your commitment not only to help post-secondary education adjust to the changes that are occurring in all levels of our public education system, but also to play a part in guiding them.

Before I turn specifically to the challenges facing post-secondary education in today's world, I want to talk for a minute about institutions, because I think it will clarify what has happened to education and what needs to be done and why.

I think of human institutions as structures, sort of like a house, built to serve the needs of particular people in particular times. For a while, the people can move comfortably between the house and the broader world, because there is a kind of harmony between the two. But times change, and institutions by their nature tend to be inflexible. So people begin to leave and look elsewhere. The house is still standing, and it may still look fine from the outside, but in reality it is only an empty shell.

Time and again through history that has happened to human institutions -- to governments, to religions, to economic systems. They fall out of sync with changing times. And the reason we're here today is that we refuse to let that happen to the education system in Oregon. I'm not talking about pulling it down and starting over --because it still rests on a firm foundation: a commitment to students, a commitment to excellence, and a commitment to the extrinsic and intrinsic value of learning. I'm talking about "remodeling the house," to bring it up-to-date, and into line with today's realities.

The Educational Act for the 21st Century, which mandates a rethinking and restructuring of our K-12 programs, is the first step -- the fountainhead from which other changes are flowing.

We have to remember that our education system in its entirety is just that: a system -- not a series of separate segments, with no clear connection except chronology. Rather, it is a continuum, an unbroken chain stretching from pre-Kindergarten through higher education and lifelong learning. For that reason, a change in one part of the system will naturally affect other parts, and that is exactly what is happening today.

The changes taking place in our primary and secondary schools do have a number of implications for post-secondary education. Perhaps the most important one is that the students who continue their schooling beyond high school will be different from students in the past and they will have different skills and needs. If our colleges and universities are to take advantage of those skills and meet those needs, they must first understand how today's students are different.

It seems to me that the greatest change we are aiming at through school reform is a shift from quantity to quality in education. In the past, we tended to think of a "high school education" in terms of twelve years in the classroom. That mindset is reflected, for example, in job application forms that ask you how many years of school you have had. The more pertinent question for today's world -- and the one we are now explicitly asking -- is, what have you learned and what can you do with that learning? Students who hold the Certificates of Initial and Advanced Mastery will have a very clear answer to that question. They will have proof not only of what they have learned, but also that they are able to

apply it in the real world. And the standards they are required to meet in order to achieve the CIM and CAM are deliberately and undeniably higher than in the past, because today's fiercely competitive and rapidly changing world demands a higher level of skills and a higher degree of proficiency.

At the same time, we are preparing today's students to be not only members of the workforce, but also parents, and citizens of a free society, with a duty to preserve and transmit the perspective, the judgment, and the values that flow from a liberal education. Thus the need to bring education into line with today's economic realities does not imply that our post-secondary schools should become nothing more than job training centers and employment agencies. Today's students will expect much more than that.

Post-secondary institutions and faculty must recognize that the students who walk through your doors will be different from the students you have served up until now. I don't mean that they will be brighter or more motivated; we've always had plenty of bright, motivated students. But the students who have earned the CIM and CAM will have come from a different academic background, and because of that, they will have different expectations, skills, and needs. They will be used to knowing exactly what is expected of them. They will have a more consistent skill level, and they will be used to demonstrating their skills and engaging in hands-on projects.

Incidentally, you may have noticed that the first examples of student work resulting from teaching to standards in high schools are on display here at this conference. This work comes from 30 PASS partnership high schools around the state, and high school teachers will be available at the exhibit to talk about the positive effect this new approach has had on student performance. The exhibit, I think, makes "standards" more than just a word we throw around; it makes them real -- something with a tangible, visible outcome.

The question now for Oregon's post-secondary schools is, what do you have to do, what changes and adjustments will you have to make, in order to accommodate changing student needs, skills and expectations?

Well, as a matter of fact, there are all sorts of things you can do. Let me just touch briefly on a few that seem to me most important, and I know that some of these you are already doing.

I know that for the last three-and-a-half years, you have been working to bring your admissions standards into line with the proficiency-based background of your incoming students. The CIM and CAM reflect a different kind of qualification for advanced learning from the traditional GPA and SAT scores, which were the traditional admissions standards for years. Today, your successful work on the PASS and PREP projects is an outstanding example of innovation, foresight, and a willingness to adapt. Moreover, the development of proficiency-based college entrance standards gives the CIM and CAM more legitimacy in the eyes of educators, because it is an endorsement of performance-based learning.

Another necessary change will be to more clearly and closely link the post-secondary curriculum requirements to the demands of the real world into which your students will eventually move. This is not to undervalue the core requirements of a broad, liberal education, which I firmly believe are as important as ever, if not more so. But the fact is that today's students must also be equipped to compete in a global economy and a high tech environment. To do this, it is more critical than ever before that they be able to apply their learnings to the world they're going to be living and working in.

And while I know your academic standards have always been high, I believe they can and must be higher still, not only to ensure that you can accommodate the calibre of your incoming students, but also to ensure that your graduating seniors can cope with and survive in the world of the twenty-first century, both economically and socially. In addition, standards must not only be high, they must be consistent -- in other words, comparable among all levels of post-secondary education. An "A" in Biology, for example, should represent the same skill level regardless of whether it comes from a four-year school or from a community college.

For the post-secondary students of today and tomorrow, interdisciplinary studies will also be critical. More and more we are recognizing the connections that exist among various fields of learning. Couple that with the amount and diversity of information available through the internet, and it becomes clear that in-depth training in one narrow field is no longer a sure formula for success. Today's college students must know more about more areas than was ever necessary -- or even

possible -- in the past. Our post-secondary curricula must take that into account as well.

As for meeting particular student needs, one of the premises underlying the K-12 reforms is the recognition that different students progress at different rates. That is equally true of post-secondary students, and it is just as important at that level to provide some program flexibility -- for example, by offering accelerated baccalaureates for those students who qualify.

So far I have focused on changes that are taking place or that need to take place within your institutions. But post-secondary schools can also have an important outreach impact on our K-12 system. You can provide invaluable assistance to Oregon high schools in developing and implementing programs that will lead to the Certificate of Advanced Mastery. In fact, our universities and community colleges should take an active interest in such projects, since the outcomes will directly impact their own programs. Working with primary and secondary teachers in state content organizations, offering courses on content to high school teachers, meeting with teachers to score student work in order to develop consensus on standards -- these are all examples of the kind of outreach I'm talking about.

Another area in which you can make a very important difference is teacher preparation. There is no way we can upgrade our K-12 program and raise student performance standards statewide unless our primary and secondary teachers are even better prepared than they already are, unless they too are held to higher standards, and unless they engage in continuing professional development. To my mind, every single one of our post-secondary institutions has a responsibility to participate in improving teacher performance in our K-12 system, because you very clearly have a stake in the outcome. I cannot urge you strongly enough to become more involved in this extremely important aspect of education.

Now let me say just a few words about the implications of school reform for faculty.

The CIM/CAM students will expect and be prepared for an active, rather than a passive learning experience. This will mean putting more responsibility on the students themselves and allowing them the flexibility to move through the undergraduate program more rapidly, if they are able to do so. Professors must therefore be adept at assessing individual student needs and capabilities. And because the whole idea behind educational reform is a proficiency-based approach, professors must also have clear, explicit standards against which to measure student performance.

Now, I suspect some of you are waiting to raise the question of funding for higher education. I know that's a sore point, and rightly so. I have said repeatedly that the underinvestment by the state of Oregon in its post-secondary schools -- even before Ballot Measure 5 -- is nothing less than a disgrace. My administration recognizes the need and we are working on it. But the point I want to make today is that you don't have to wait for additional funding in order to move forward with some of the changes I've just outlined. There are ways to reallocate existing resources. There are ways to redesign existing programs. I have every confidence that you will find them. In fact, the newly formed campus-based Implications Teams, of which many of you are members, are beginning to identify some of the specific changes our post-secondary schools must make in response to reforms occurring at the primary and secondary level, and to suggest some ways to implement those changes.

The work before you -- before us, I should say -- presents great challenges, but it also offers enormous opportunities. My administration is firmly committed to reinvesting in post-secondary education, and there is also support in the legislature. It is clear that the future of this state, economically, socially, and in terms of our overall quality of life, depends on that reinvestment. In turn, post-secondary education can and must become a high "value added" institution, both to its students and to the state as a whole -- its businesses, its public schools, and its citizens.

An education becomes the permanent personal possession of each man and woman who achieves one, and it bears both tangible and intangible fruit. It provides economic security even as it opens the gates of vision. It prepares us not only to make a living -- but to live, in the best possible sense. For that reason, the importance of your role and of the gifts you transmit to future generations cannot be measured. Education will never fail us. We must not fail education. As I said earlier, institutions are human-made. What we have made, we can change. That is why we're here: to revitalize our education system and "remodel the house" for the twenty-first century.

Thank you very much.

Governor John Kitzhaber

Oregon Police Officers Association Speech

May 2, 1997

It's a pleasure to be with you this evening and to join you in recognizing those of your members who have distinguished themselves in this last year by performance above and beyond the call of duty. I also believe that the service given by each and every one of you is worthy of recognition. Your daily contributions, in small ways and large, help keep us safe, and for that, it's impossible to thank you adequately.

Out of all public services, providing for our safety is perhaps the most critical. If we are not safe, then little else matters. We cannot enjoy or take advantage of our education, economic opportunity, transportation or environment when our lives and property are in danger.

That's why your role is so vitally important.

And in fact today Oregonians are becoming safer. In the last 10 years, and especially since 1994, we have taken a number of steps to make Oregon a safer place to live.

Ten years ago, prison overcrowding was a serious problem. Less than half of convicted felons served any time in jail or prison, and those who did served only one-quarter of their sentences. But by 1994, we had added more than 3,000 new prison beds, and more than two-thirds of convicted felons were serving time.

In the last three years, we have begun implementing Ballot Measure 11, which will add thousands of new prison beds to our correctional system. We have funding in place for 500 new beds for serious juvenile offenders -- about double the capacity we now have at Maclaren and Hillcrest.

We have established the Oregon criminal justice commission. We are focusing our attention on improving BPSST. And we have created local public safety coordinating councils as required by SB 1145. These councils are an important step toward building a criminal justice system which is better coordinated and which closely involves local community members in addressing not only sanctions, but the even more important issue of prevention.

But building prisons and locking people up is the easy part of a public safety program. The greatest challenge lies in preventing crime before it happens. That is one of the greatest services you perform -- to get there before someone becomes a victim. It is also a place where community involvement is essential.

The point is, we've come a long way toward ensuring that the Oregon people feel safe and are safe in their homes, on the streets, and in their communities. But there are still challenges ahead of us. Some of these are external. They involve conditions in society that continue to pose a threat to public safety. Others are internal -- involving law enforcement itself.

We need to recognize that despite the outstandingly high quality of Oregon law enforcement, there is a blemish on its credibility. I'm referring to the limited religious-based discrimination at BPSST and several publicized controversies surrounding local police departments, large and small. How much of this is perception and how much is reality is not

the point. The point is that we need to solve it and move on.

It is absolutely essential that our citizens have faith in the integrity of those charged with protecting their lives and property.

That is why I initiated an investigation of BPSST, and I am working with the board and all concerned law enforcement to correct the difficulties that have been identified. I believe this is a healthy process and that it will have positive results.

As for external challenges, one which is of great concern to me is that we're seeing an alarming over-representation of minorities -- especially juveniles -- in arrests, prosecutions, and convictions. This is not to say that everyone should not be held to the same standard of lawful conduct. But clearly there are social conditions -- poverty, a sense of isolation, educational and language barriers, discrimination in some cases -- which create this dynamic. I think we must all be aware of these conditions and we must work together to resolve it.

Law enforcement in particular must respond to the increasing diversity of our population. There is no question that Oregon is rapidly becoming a multi-cultural state, and training in that area is going to be essential.

We must also step up our commitment to the highest quality of overall training for our police officers. This is among the most important aspects of your role. It can save your life, it can save the lives of those you protect, and it can help you keep the peace in enormously difficult situations.

And I believe we must provide more opportunities for women to have a role in law enforcement.

I also believe we can do a better job of integrating operations among the different levels of law enforcement. You all have the same objective, and the fact is that what people care about is having an officer there when they need one -- whether it's a local police officer or a county sheriff or the state police.

I know that cooperative policing agreements have been controversial in some jurisdictions, but it is vitally important that we find ways to use our combined resources as efficiently as possible. This idea originated with the public safety policy and planning council when it was under Attorney General Ted Kulongoski and which I now chair.

All levels of law enforcement contributed to this effort and all levels of law enforcement must help carry it out. I am convinced that cooperative policing will give us both budgetary benefits and a higher quality of service overall.

We have before us a remarkable opportunity to develop a better partnership between state, county and city law enforcement. The fact is that crimes are committed in counties and cities, programs to address and prevent crime are located in counties and in cities, and people are paroled or put on probation in counties and cities.

So this is something that affects all Oregonians in a very local and personal way, and it is best dealt with through the coordinated and cooperative efforts of law enforcement at all levels. We must constantly bear in mind that we're dealing not with a collection of separate agencies and departments and programs but with a system where all the parts are connected.

The final point I want to make is that leadership for the work that lies ahead must come from law enforcement itself, and I am confident that it will.

You are police officers. Your success is a key benchmark of Oregon's health. Your work touches the lives of all Oregonians, and embraces the values we all share: commitment, compassion, and courage.

Ernest Hemingway once said that courage was "grace under pressure." I think that well describes the contributions of "Oregon's finest," and especially of those who will be honored tonight with the Dale Morris Award, the Medals of Honor and Valor, the Non-Criminal Lifesaving Award, and the Public Service Award.

It is an honor for me to be with you on this occasion.

EDUCATION SPEECH

Salem Rotary

W. H. Auden once said that in our society, the sign that we value something is that we are willing to pay for it. In general, I agree with that statement. But when I try to apply it to our schools, I run up against a paradox.

On one I hand, I know for a fact that Oregonians do value education, and that they want the very best for their children. On the other hand, it is also a fact that today our schools are shrinking their staffs, deferring maintenance, and unable to afford new computer technology. How can we explain that? And how, given this apparent contradiction, can we provide the best possible education for Oregon's children?

That is what I want to talk about today -- and I want to offer a broad perspective -- the Big Picture -- particularly in regard to school funding.

The current debate in the legislature centers on the question of coming up with the money necessary to fund Oregon's K-12 schools for the '97-99 biennium, given the need to replace the money that will be lost as a result of Measure 47, and given other important programs and services the state also has an obligation to pay for.

What we are really arguing about, then, is how much we should put into our primary and secondary school system and where that money will come from. The Republican leadership initially proposed putting \$4.050 billion into schools and paying for it from existing revenues and by making deep cuts in other important state programs. I believe we need considerably more money in K-12 (a point I will elaborate on later) and since I am not willing to decimate other state services like human resources and public safety, I have proposed using some of the two percent kicker to fund schools.

To understand this debate, let's remember that there are really three key questions involved in any budgetary decision. First, what do we want to buy? Second, how much will it cost? And finally, where will we get the money? You and I make these decisions all the time in our daily lives. For example, suppose what you want to buy is a trip to Hawaii -- or a new house. *Before* you ask where the money will come from you *have* to ask how much you are going to need. Think about it. One of the most American of all questions is the question -- *how much?*

Now, let's apply this to our educational system. Today, thanks to the Education Act for the 21st Century, we have a much clearer idea than ever before about what we want to buy. We want to buy for our children a certain level of competence -- a certain level of mastery -- that will ensure that they can succeed from both a social and economic standpoint. This translates into the certificates of initial mastery (the CIM) and the certificate of advanced mastery (the CAM).

The next question, then, is how much will it cost? How much is enough? And the fact is that in 1997 we simply do not know. Before the passage of Ballot Measure 5, when school districts were primarily funded by local property tax levies, "enough" was what the local voters decided they were willing to pay. They were directly involved in school funding decisions and determined what they wanted for the students in their district.

Because of this local funding mechanism, there was a reasonably good match -- though not a perfect one -- between what district patrons were paying and what they were getting for their money. Superintendents and building administrators, because of their close involvement with the day-to-day operations of their schools, knew with some accuracy what the costs were and where the money was needed and where it was going.

But today, with the passage of Ballot Measures 5 and 47, the major funding obligation for schools has shifted from the local districts to the state. And although the State now provides the money, it is not involved in local spending decisions, and it has no way of knowing how the money it allocates to schools is being spent. In short, the State does not know, with any degree of accuracy, what it is actually paying for, or if the money is being well spent, or even whether what it is spending is enough.

Today, even though we have now identified the product we want, there is still no basis, other than a political one, for determining what per-student expenditure the state should provide to secure it -- because we do not know the real costs of delivering the CIM and CAM. What we need is the information necessary to link our state educational dollars to results in the classroom.

To accomplish that I established, in April of last year, the Quality Education Task Force. It's *mission* is to define the educational system's financial requirements to meet the standards for a quality education as specified in the Oregon Education Act for the 21st Century. It's *charge* is to analyze the current financial information systems used by primary and secondary education to determine what changes are necessary to link state financing to student performance.

We project that by 1999, we will have the information we need to answer the question -- *how much is enough?* That is, we will know how much the next legislature must appropriate for the 1999 biennium to provide Oregon students in grades K-12 with a Quality Education.

But that doesn't help us today. While it's true that we do not *yet* know how much is enough, we do have a fairly good idea of how much is *not* enough. If you look at almost any district in the state, it is very clear that what the schools are trying to operate on today is not enough. Not enough for what? Not enough to deliver the kind of quality education that we as a state have committed ourselves to provide for our children.

You cannot have a quality education when you can't afford new textbooks.

Let me share as an example two textbooks currently being used in Columbia School District 5J. One is an 8th grade American History Textbook published in 1986. According to this textbook Ronald Reagan is President. The other book, a 5th grade American History Text, was written in 1983 and updated in 1986. In short, if you are in this school district, there has been no American History for the past decade. For the 5th graders, there has been no history since they were born. This is indefensible.

Further, you can't have a quality education when class size keeps growing. You can't have a quality education when you have to eliminate or scale back electives like music, art, and foreign languages. And there is no way you can have a quality education that will adequately prepare students for the workforce of the next century when you can't afford to buy computers or to train teachers to teach kids how to use them.

Dr. Bill Korach, Superintendent in Lake Oswego said recently that our schools are fast approaching a level of mediocrity that will be very difficult to recover from. I think it's safe to say that you usually get what you pay for. The initial budget offered by the legislative leadership for funding K-12 would pay for exactly the kind of mediocrity Dr. Korach was referring to.

Here in Salem-Keizer it would mean some teacher lay-offs, further increases in class size, and a reduction in course offerings. Let me make it very clear that that's not a step I'm willing to take -- not in the midst of perhaps the strongest economy this state has enjoyed in years.

My question to you, and to the Republican leadership and to all Oregonians, is this: if we can't afford to pay for our schools now, when Oregon is riding high on a tide of prosperity, when will we be able to afford it?

We need to recognize that our system is in transition -- from a time-based to a performance-based system; from a locally funded to a state-funded system. While we are making this transition, we cannot afford to let our school districts fall apart. We are close to being able to demonstrate to Oregonians how much it costs to give our children the quality education they deserve. We need to make sure that our school districts are not so damaged that they are unable to take advantage of it.

Toward that end, I have proposed that we put into K-12 an additional \$200 million above the figure in my original investment budget -- \$110 million more than the Republican proposal -- for a total appropriation of \$4.16 billion. This would mean an additional \$3.4 million for Salem-Keizer. I should also say that I view this level as a floor that will need to go up further with the May revenue forecast to ensure that we minimize damage to our school districts over the next two years.

To help finance this investment, I have identified \$150 million in cuts from my original budget.

I don't want anybody to think this was easy. To do it, involves budget reductions that will effect Oregonians in other ways. Nonetheless, I am willing to do it in a effort to, at a minimum, keep our schools from being further harmed.

These cuts, plus an increase in the March revenue forecast, reduces the amount of new revenue needed to balance the budget. That leaves us with two options. First, we could invest a part of the two percent kicker in education and rebate the rest. This would mean that all eligible Oregonians would receive an income tax rebate -- 70% of Oregonians would receive their full kicker rebate, while those with higher incomes would receive somewhat less. This still seems to me to be a reasonable approach.

But let me make this crystal clear. The issue here is not the two percent kicker -- the issue is adequately funding our educational system over the next two years without destroying the rest of state government. If the Republican leadership wants to raise the revenue from some other source I will work with them to do so. In fact, this week we have had some very productive conversations along these lines.

The responsibility to make this happen lies with the Legislature. I cannot stress strongly enough that if you want to see better funding for your schools, you need to contact your legislative delegation. And here in Salem, that is a powerful one.

Sen. Gene Derfler is the Senate Majority Leader and in a position to make a real difference in this debate. Sen. Shirley Stull is Majority Whip and, again, an influential member of the Senate. Sen. Marilyn Shannon could be considered a swing vote in getting the resources we need for local education.

The House delegation of Peter Courtney, Bryan Johnston and Tom Whelan are very supportive of adequate educational funding, but I know they are always appreciative of hearing from you.

My objective -- quite simply -- is to get our schools through the next two years without unduly jeopardizing other important programs like human resources, public safety and economic development. If the legislative leadership does not want to invest a part of the kicker -- as we did in 1991 and 1993 -- I will work with them to find alternative sources of revenue

But all of us need to recognize that the revenue in this budget -- wherever it ultimately comes from -- will not solve the long-term problem of school funding. At best it is a bridge. We need to fundamentally restructure how we pay for K-12 education in Oregon. And since K-12 education now constitutes nearly 45 percent of the state budget, this means that we must fundamentally restructure our tax system. *That will be the paramount challenge of the 1999 legislative session.*

We cannot hope to prepare our children for the 21st Century if school funding in Oregon is in a state of perpetual crisis. The problem of long term, stable school funding was a bitterly debated and unresolved issue during the entire time I served in the Legislature. It is still unresolved today. And I believe that it will remain unresolved until we are able to say just how much a quality education costs. Only then will we be in a position to talk meaningfully about how to pay for it -- *and* to develop a funding source for schools that is both adequate and stable.

To solve the problem of long term, stable school funding, we have to be able to look beyond a two year event horizon. It is true that Oregon budgets two years at a time. But the decisions we make today must build the foundation for the decisions we make tomorrow. In other words, we need a strategic vision that links the decisions of this biennium with the decisions of the next. The debate we are having today is not an isolated two-year budget balancing exercise. It is laying the groundwork for the future ... and it is imperative that we view it in that context.

So let me summarize the steps that I believe we must take between now and the turn of the century of ensure that our children have the best education available anywhere in the world -- to ensure that we meet the Oregon Benchmark of having the best educated and trained workforce in America by the year 2000 and equal to any in the world by 2010.

First, we must provide a 1997-99 funding level for K-12, which -- *at a minimum* --prevents any further cuts. We cannot accept a budget which makes schools worse.

Second, we must fully implement the Education Act for the 21st Century. This means that the additional funding for this biennium must be tied to increased academic standards. In other words, school districts must commit to a number of things, including the development of plans for implementing the CIM and the CAM; and providing training time for teachers to align their curriculum to the new standards and to learn the new assessment systems. Individual districts and the state must work together to develop a comprehensive plan showing how each district will address the needs of students who do not meet the new standards. Progress on these areas must be reported annually to the Legislature, the governor and the Board of Education.

Third, the state must move forward in defining the long-term financial requirements to meet the standards set by the Legislature for a Quality Education as specified the Oregon Education Act for the 21st Century. As I have mentioned earlier, schools are now a state funded responsibility and the State needs the tools to evaluate school performance. The Quality Education Task Force has described the kind of information that will be needed to establish baseline costs for delivering the CIM and the CAM. To get this information, the Legislature must fund the \$3 million I have requested to set up a statewide accounting system that will link state financing to student performance.

Finally, prior to the 1999 legislative session, the state must put forward a tax restructuring proposal to support the long-term financial requirements of our educational system.

I am prepared to support these four steps because I believe that this path will lead to a consensus on those essential questions of what do we want to buy, how much does it cost, and where do we find the money.

Before I close, let me add a final word about *accountability*. All of us expect -- and should receive -- accountability for how our tax dollars are being spent. Since a growing portion of our tax dollars are being spent on education, we can rightfully demand an accounting of how those dollars are being spent and what we are getting for that expenditure.

What I have proposed for implementing the Education Act for the 21st Century -- for linking our education budget with results in the classroom -- will give us the most important measure of accountability. It will give us *system accountability* -- that is, it will show us what we are buying with our tax dollars.

But there is another level of accountability. The accountability of the individual classroom teacher and of the individual principle and administrator. This kind of accountability is the focal point of SB 650 -- the so-called "Education Accountability and Efficiency Act."

While I will not support this bill in its current form, there are some issues that need to be addressed. I believe that there is a problem -- or at least a perceived problem -- with the tenure law as it is currently constructed. There are also legitimate issues involving seniority, continuing professional development, and licensure. These are issues of accountability that we can and will address.

But in doing so, we must remember that most Oregon teachers are highly dedicated, highly skilled, and hard-working professionals. Most teach because they care about our children; they do not teach solely to make a living. We should be proud and grateful of their service and of their willingness to dedicate their lives to the training and development of our young people.

Today we are asking them to do more: we are asking them to implement the Education Act of the 21st Century -- to change and improve performance for students in Oregon's classrooms. And we will not accomplish that if our teachers feel attacked or undervalued. The front-line teachers are not the problem in our school. Rather, teachers are crucial to the solutions we seek.

And I have no doubt that Oregon's teachers will rise to meet the new challenge of leading our efforts to raise accountability and performance standards in our schools.

In closing, I'd like to go back to where I started. We must keep before us at all times the larger context in which these other issues are being debated. In the world of legislative politics it's sometimes easy to lose sight of the Big Picture. I can remember in 1986 voting to balance the state budget by, among other things, cutting 3,800 people from state health insurance coverage.

For me, at the time -- and I suspect for my colleagues as well -- it was just an accounting exercise. But when some of those people began to show up in my emergency room in very bad shape because they had lost their insurance coverage as a result of a legislative decision made months earlier -- I saw very clearly the human consequences of budgetary choices.

I've never forgotten that lesson.

We all need to remember, in our discussions of school funding, that this is not just an accounting exercise. It is not just about revenues and expenditures and balancing budgets. It's about people; it's about children and about what we owe them.

Education is, in fact, a debt owed by the present to the future, and our future can be as promising as we choose to make it. As we approach the 21st Century, the doors of opportunity stand wide. We must equip our children to walk through them. That is what this is all about.

Governor John Kitzhaber

ONPA Speech
March 27, 1997

Thank you for inviting me to be here today.

I've always been advised to not pick arguments with people who buy ink by the barrel and paper by the ton. So, I won't be talking about your legislative agenda today.

Just kidding, I'll be glad to answer questions about your legislative agenda. But what I want to focus on today is Oregon's greatest heritage, and hopefully our greatest legacy: our environment.

Let me share with you a story about just how strongly Oregonians feel about their environment and sense of place.

During the election, not unlike other politicians, I hired a pollster who not only did polls, but also did focus groups. I watched a video of one of these. What was most striking to me was when he asked people what they liked about Oregon. And to a person, they responded passionately about Oregon's environment. He told me that every group he has ever interviewed in Oregon is the same: Everyone has a deep and passionate love of their state and that love is tied to the quality of our environment.

I'm not surprised. It doesn't seem to matter which side of the environmental debate you feel you are on, you probably still love our public beaches, our parks and the variety of natural and rural splendor that grace our state.

That is why I'd like to take this opportunity to talk to you today about a series of bills which has been introduced into this legislative session. These bills represent a serious assault on our land use and environmental laws and I am going to be working to stop them. I am absolutely committed to resist any efforts to weaken the strong framework of environmental and land use. Laws that have helped keep this state a great place to live. It is little different from the last session of the legislature where I was forced to play defense and stop a number of unacceptable bills.

It's not a role I relish, but it is definitely one I am willing to play. Because, I'm not much different from those Oregonians I watched in the focus groups: I have a deep personal passion for outdoor Oregon and I will use the power of this office to defend it.

That shouldn't come as a surprise to anyone. It's part of what has motivated my life in politics and it is part of what defined my first session as governor.

So today, I want to let you know some of the principles I will use in determining my position on both land use and environmental legislation as it comes through this legislative session.

But first, let me step back for a moment and create a context for this discussion. After all, I am dealing with newspaper people, and you all can handle a little complexity.

I believe we are dealing in this legislative session with the interplay between growth and livability -- two subjects which

have historically been of vital concern to Oregonians.

One of the first people to draw public attention to the relationship between growth and livability was Governor Tom McCall. Even though he is often associated with the "Welcome to Oregon -- come visit but don't stay" attitude of the 1970s, in fact he rejected the notion that a healthy economy and a healthy environment are mutually exclusive. On the contrary, he understood very clearly that the two go hand-in-hand. In his first inaugural address he said:

"Health, economic strength, recreation -- in fact, the entire outlook and image of the state -- are tied inseparably to environment."

Today, when we face challenges Governor McCall could not have foreseen, we would do well to remember his words.

Our population is exploding -- our economy is expanding and diversifying at an unprecedented rate. We need to understand that one of the main reasons for our current growth is that people like what Oregon has to offer: a matchless natural environment, a quality of life that is getting harder and harder to find these days, and the kind of communities where people want to live and work and play and raise their families.

This is not an accident.

I firmly believe that the state we live in today is the result not of chance, but of choice -- it's the result of wisdom and foresight and careful planning. With the passage in 1973 of SB 100, which established our framework of land use laws, Oregon committed itself to a far-reaching vision -- a sense of duty to those who will inherit this land after us, and a concern for the broad public good, rather than a narrow range of special interests.

These laws have served us well over the years.

- They have, to a large extent, contained growth inside defined urban growth boundaries, thus preventing the sprawl and congestion we see in other parts of the country.
- They protect two of our most important industries -- agriculture and timber products -- by ensuring that they have an adequate land base, free from encroachment and from inappropriate commercial or residential development.
- And in protecting our farm and forest lands, we are at the same time protecting our economy.

But as I said earlier, today these laws are being challenged -- first as a result of attempts to encourage growth at the expense of quality of life, and second as a result of attempts to discourage growth in order to protect quality of life.

Both of these are understandable reactions to the growth we are currently experiencing. Economic prosperity has been good for Oregon as a whole, and certainly for the parts of the state where it is actually occurring; it is natural to want it to continue. It is equally natural to want to preserve the qualities that make Oregon one of the best places in the world to live.

But I would argue that both positions are off-balance -- and short-sighted. They assume that our economy and our environment have no connection -- that they are mutually exclusive; that it's a matter of either one or the other. I disagree. In fact, because I believe these positions misrepresent the real choices before us, and pose a serious threat to our future. To counter that threat, we need to do three things.

First, we have to accept growth as a "given." That does not necessarily mean that we need to encourage growth -- but we do need to recognize that it is going to continue. So the challenge is to plan for and channel growth so that farm and forest lands outside urban growth boundaries remain intact, and so that communities can build the right kind of development within urban growth boundaries. One way to do that is by removing obstacles and providing incentives to the kind of quality growth we want to encourage.

Second, we have to accept that as we move from a predominantly resource-based economy to a more diverse economy, there are local and regional differences across the state which are far more pronounced than they were in 1973. Our land use laws need to be implemented in a way that takes that into account and I believe we can do that without doing violence to the land use system as a whole.

Finally, we need to clarify the relationship between state government and local communities. We need to foster state-local partnerships that will preserve a broad state-wide vision while at the same time helping different regions and localities meet their own individual economic and environmental needs.

With those broad objectives in mind, let me outline the land use principles I am committed to defend, not as ends in themselves, but as means for achieving a common goal: quality communities, economic prosperity, and a high quality of life.

The first of those principles is that I am committed to preserving the general oversight function of the Land Conservation and Development Commission.

For example, I will oppose legislation such as House Bill 2924 which would regionalize the commission into four areas in what I believe is a misguided attempt to address regional differences.

I recognize the importance of accommodating local/regional needs -- and our "Regional Problem Solving" program accomplishes just that. But I also believe that something is needed to hold the land use planning system together at top, to ensure that it is applied statewide in a way that is consistent and comprehensive. We must ensure that in addition to meeting local needs, the land use framework also serves the broad interests of all Oregonians and the long-term interests of the state.

Second, I am committed to protecting our agricultural and forest industries, which will always be important to Oregon's economy.

Hence I will oppose legislation such as House Bill 2756 which would allow counties to adopt an exception for land based on market demand for rural housing rather than the value of the land for agricultural production. That's basically a way to carve up farm land into small acre mini-estates.

I will also oppose bills such as Senate Bill 641 which would do away with the \$80,000 income test for permitting housing on exclusive farm use land. Again, it would lead to the divvying up of large farm tracts into many estates. And the thing to remember is this: once farm land is lost to development -- it is pretty much lost forever.

Finally, I am committed to pursuing a non-regulatory approach to making these existing laws more sensitive to local and regional issues, and to the realities of today. Again, regional problem solving is based on this concept. My entire experience in government assures me that in the long run, cooperation will achieve far more than coercion. The strong support for Coastal Salmon Recovery Plan demonstrates the power of this approach.

At same time, I want to make it very clear that I am committed to the fundamental soundness of our land use program. These laws have already withstood three attempts to repeal them at the ballot box. I think that says something about their value. Therefore I cannot justify revoking or even weakening any part of the basic framework.

In the simplest terms, I stand committed to land use planning, because without it we cannot hope to preserve Oregon's unique qualities for future generations. That has always been an over-arching vision of the Oregon people, and in my two years as governor, and in my travels around the state, nothing has made me believe that that vision has changed.

But the challenge we face extends beyond land use issues.

Many of Oregon's environmental laws are also being challenged -- in such areas as instream water rights, navigability, and proposed takings bills.

Let me give you what I think is the most egregious example: Senate Joint Resolutions 12 and 16. Both of these resolutions -- which would place issues on the ballot -- deal with the seemingly simple issue of takings. If a government regulation causes the value of your land to decrease, the government would need to compensate you.

Seems simple. But it isn't. Look at the other side. If government regulation adds value to your land -- do you compensate the state, city or county?

Perhaps more importantly, one landowner's economic interest may be at odds with another. For example, if I own a large timber tract and cut trees all the way down to the riparian zone -- resulting in siltation that kills salmon runs -- should I compensate the fisherman in the coastal community downstream? If the government tells me not to cut as many trees in order to protect salmon -- should I be compensated? Or, as I believe, is it part of the overall environmental fairness to which we are all obligated.

These are difficult and vexing issues. But I want to let you know, that I oppose these attempts to essentially stifle environmental protection under the veil of private property. There is a way to address legitimate concerns about takings. But neither of these resolutions offers a way to do that.

Senate Bill 967 is another disturbing example of shortsighted public policy -- in this instance dealing with water policy. This bill would prevent the transfer or lease of water rights for instream use. What is especially surprising is that this legislation runs counter to the purposes of the salmon restoration plan and healthy stream partnership which we just passed into law this week. It doesn't make sense to, on the one hand, invest heavily in stream restoration and water quality planning and, on the other hand, pursue policies such as this that would totally undermine the work.

Today, Oregonians want the same balance they have always wanted: a sound economic base and a livable, high quality environment. We still want to preserve Oregon as a place where the quality of people's lives is created and enhanced by its unique physical attributes. In short, we want, in different ways, both growth and livability. I believe our current system of land use and environmental laws is one of the most effective tools we have for achieving those goals.

My commitment is simple: to make these laws work for the protection of our quality of life -- and to make them work fairly, equitably and efficiently. Anyone who has a way to make our existing environmental and land use laws work better has my attention. But let me close this speech on this note: I will oppose attempts to diminish or destroy the strong environmental protections that have helped keep Oregon a great place to live. I believe we owe that much to the generations who will come after us.

Governor John Kitzhaber
March 14, 1997

Portland City Club Speech

Good afternoon.

Let me just start by saying what an honor it is to be able to speak here again at the Portland City Club, an organization that I think typifies that famous quote on the side of the Skidmore Fountain: "good citizens are the riches of a city."

Your organization has often led the way in exploring and promoting innovative public policy. In that way, you typify Oregon. And this club is a welcome, thoughtful forum in what has become the soundbite ridden world of modern politics.

I feel particularly at home here, because one of my failings is that eight-second soundbite -- for the 45-second television story -- which compresses years of work, months of negotiation, and billions in spending -- into 20 choice words, pithily delivered in an even, well modulated tone.

Well, I'm going to make my friends in the press work to find that soundbite today, because I want to spend some time talking about our state's budget and propose a way we can take a big step forward in improving our entire continuum of education, keep our commitment to providing health care and human services to the vulnerable in our state and return surplus income tax revenues to those who need them the most.

But first, I want to add a little perspective to the biennial budget debate.

To do that, let me quote Dickens: "It was the best of times. It was the worst of times."

That's how I feel about Oregon today. Rarely has Oregon been as prosperous as it is in 1997. Yet fifteen years ago that was not the case. We were a state in a deep depression. Unemployment was above 20 percent in my Douglas County senate district. People were leaving Oregon. There was simply no opportunity at home.

Today it's different. Unemployment is low. Job growth and income growth are high. The biggest economic problem facing this part of the state is a labor shortage. There is no other way to put: Oregon is on a roll. *It is the best of times.*

But what about our public institutions? What about our schools? Our universities and community colleges? Our libraries? Our parks?

In an era of expanding prosperity, are we taking care of the very public investments that helped create that prosperity? I don't think we are.

Our funding for the state's schools has not kept pace with inflation, with the growth in students, with the need for technology or, perhaps most importantly, with our very own demand for higher standards of performance from students. Ironically, we are asking more than ever of our students -- and our teachers -- and giving them less to work with.

Our universities have seen tuition explode and course offerings falter.

One-third of our parks are ready to close. Perhaps we can keep them open in this budget cycle, but I have seen no legislative plan that will provide them with a long term stable source of funding or that will begin to deal with millions of dollars in deferred maintenance.

In short, in an era of private wealth, we are experiencing public poverty. In fact, as you view the entire terrain of public services, the only one not ill-funded is our state prison system. *Surely, the worst of times.*

This is not a sustainable course. This is a course which slowly erodes the foundation of our quality of life. Worse, it is a breach of faith with the generations which bestowed our Oregon on us -- a failure to care for a precious heritage.

That is why last December I proposed what I call an "investment budget." I want to acknowledge that even in this budget, funding for K-12 is inadequate. However, I proposed then as much as I responsibly thought possible given the budget forecast before me at that time.

Nonetheless, this budget was -- and still is -- a budget that begins to turn the corner on a half decade of neglect.

It provides funds to improve the entire continuum of education -- from pre-kindergarten to post graduate.

It moves us ahead in K-12 funding

My investment budget

- freezes tuition
- creates a graduate engineering program in the metropolitan area
- provides funds for technology at grade schools and high schools, and
- moves head start funding to a level which will serve 50 percent of the children now eligible.

My budget also calls for new revenues:

- to fund salmon restoration and improve water quality
- to permanently fund parks, and
- to maintain our transportation system.

And my budget also calls for expanding the Oregon Health Plan to 43,000 people -- most of them working Oregonians - - who pay taxes which support other people's health care, but who cannot afford coverage for themselves and their families.

But, as the old saying goes, "the governor proposes and the legislature disposes. And there is a reason that saying is so old: because it's so true.

I was informed by the leadership of the legislature that my budget was "dead on arrival." Well, being an emergency room doctor in my real life, I have never quite accepted "dead on arrival" as an actual a diagnosis. It runs counter to my training and to my experience -- even in the legislature.

Instead, the Republican leadership has released a budget which I can most charitably characterize as disappointing.

Before I go into my specific objections about this budget, let me sound one positive note: the Oregon Salmon Restoration Plan. I have been heartened by the strong bipartisan support for this Oregon approach to species restoration. I particularly want to complement house speaker **Lynn Lundquist** for his leadership in helping gain support for this plan in the legislature.

I wish I could report agreement on the rest of the Republican budget priorities. But I cannot.

Let me touch on perhaps the four most glaring deficiencies.

First, in the area of education, the leadership budget is a failure. It fails not only K-12, but the entire continuum of education.

Their budget eliminates entirely my head start funding package. This means that thousands of kids who would otherwise be eligible for this successful pre-school program -- who would otherwise be better prepared for their K-12 experience -- will not have that advantage -- these kids will not get a "head start."

The leadership budget cuts in half funding for the graduate engineering program in Oregon, ignoring a remedy to one of the most acknowledged problems in our state's higher education system: that many of the good jobs our economy is turning out are not going to Oregonians because we are not training enough engineers and technicians. Surely, we can do better.

The Republican budget also eliminates funding for two of the most basic investments in the future: first, the training necessary for teachers to implement the Education Act for the 21st Century and, second, the ability to purchase computer technology for our grade schools and high schools.

But this is not the worst feature of their budget. The worst feature is a K-12 appropriation which is insufficient to meet the needs of Oregon's primary and secondary schools as we approach the 21st Century. It is an appropriation that will result in significant teacher layoffs in many districts, larger class sizes, no music, no art, no computers -- in short, it reduces the chance that our kids will succeed in the ever more competitive world outside of high school . . . and I say that is unacceptable.

And it is particularly unacceptable in an economy like the one we are enjoying today.

My question is this: if we can't afford these common sense investments in our education system now, when our economy is strong and growing, when can we afford them?

The second major deficiency in the leadership budget is the level of funding for the Oregon Health Plan.

Last November, Oregonians voted overwhelmingly to increase the cigarette tax for the purpose of maintaining and expanding the Oregon Health Plan. The tax will raise approximately \$140 million every two years.

I have proposed using half of that for maintaining the existing health plan by replacing a sunseting cigarette tax -- and the other half to expand the plan to lower income working Oregonians.

My proposal would bring health care within the reach of another 43,000 people, lowering our uninsured rate to only 8 percent of the population.

The leadership budget, on the other hand, proposes using less than \$15 million of that new money for expansion, bringing health care to only about 11,000 people.

This is unacceptable -- it constitutes a breach of faith with the voters of Oregon and I will do all I can to resist it.

The Republican budget is also silent on an area where I expected, quite frankly, more leadership -- a stable, long term funding source for operating and maintaining our parks system. As of today, there is no such plan.

I have suggested a beverage container tax which would have accomplish this purpose -- as well as funding the Oregon Salmon Plan and improving water quality in our streams. This proposal too was pronounced "dead on arrival."

I want you to know that this is an important issue to me and, I believe to all Oregonians -- and I am not going to give up on it until there is another proposal on the table -- so far, I haven't heard it or seen it -- but it is an issue this legislature cannot ignore.

Finally, this budget isn't really balanced at all. It relies on almost \$87 million in unspecified, to-be-named-later, cuts. Well, let me tell you from personal experience, it's a lot easier to put those cuts on paper than it is to actually find them

and get the votes to pass them.

Given the cuts already proposed in this budget, most of the \$87 million will come from programs in human resources, economic development, public safety and other important areas.

In other words, the leadership has not yet fully shared with Oregonians what services they will cut to balance the budget.

In short, the leadership budget fails Oregonians:

It underfunds our entire continuum of education.

It breaks faith with the voters' desire to expand health care coverage.

It proposes \$87 million in unspecified program cuts.

And it stands silent on how to help our parks.

Nonetheless, I am grateful that the Republican leadership has finally put forth a budget that reflects their priorities and which will allow us to proceed with moving the session along.

And while I do not agree with the priorities reflected in this document, as Abraham Lincoln said: "He has the right to criticize, who has the heart to help."

. . . That is, criticism -- in order to be constructive -- must be accompanied by specific alternatives.

In that spirit, today I want to propose a middle path -- a compromise approach that recognizes and attempts to honor the Republican position on both budget cuts and returning the two percent kicker -- but which still makes the investments crucial to Oregon's future.

I am hopeful that this proposal will be viewed in the spirit in which it is offered: not as a partisan approach but as an Oregon approach -- one that seeks common ground and a common vision of Oregon's future.

I want to stress that this proposal remains true to my fundamental principles concerning the budget: that while we all agree that additional resources are necessary for K-12, we must achieve that objective in a balanced manner.

In short, we cannot fund the K-12 portion of education at the expense of pre-school and post secondary education -- and we cannot fund education in general at the expense of the rest of the vital services our state provides.

Let me repeat -- we cannot fund the K-12 portion of education at the expense of pre-school and post secondary education -- and we cannot fund education in general at the expense of the rest of the vital services our state provides.

I want you to know that this is a bedrock principle of mine. And while I will work with you to increase the size of the pie, whatever budget we ultimately adopt this session must reflect a balanced allocation of resources among a number of areas including, but not limited to, education.

With that understanding, I propose first that we put into K-12 an additional \$200 million above the figure in my investment budget -- \$110 million more than the Republican proposal -- for a total appropriation of \$4.16 billion.

To help finance this investment, I will do my part.

I will work with the Republican leadership in the legislature and my democratic colleagues to find acceptable cuts in my proposed investment budget.

Second, I propose that all eligible Oregonians receive a kicker rebate up to a cap, which reflects the amount due to the average Oregon taxpayer. This means that those Oregonians who most need it will receive their full rebate. While the

majority of the corporate kicker will also be invested in education, I will propose a modest business rebate as well.

Now let me go into some details.

First: K-12. As you know, my original budget recommended just under \$4 billion for primary and secondary education. The Republican leadership has been quick to point out that this is over a 12 percent increase from the current funding level and, therefore, that schools are adequately funded.

But we need to recognize that this appropriation contains the money needed to replace the property tax revenue lost to schools by the passage of Ballot Measure 47.

When this money is backed out, the net increase for K-12 is less than one percent and thus, many districts -- including this one still face serious teacher layoffs.

Nonetheless, this was as much as I thought responsibly possible last December -- given Ballot Measure 47, given the December revenue forecast and given the other pressing demands on the state general fund.

Today, however, because of the new revenue forecast -- and because of my willingness to go back into my proposed budget and help to find acceptable cuts -- I believe that we can allocate another \$200 million to K-12. What does this mean?

First, it means that the vast majority of Oregon school districts will not be facing teacher lay-offs and increased class sizes.

Second, it means that we will meet our equity target.

But it also means that a few districts -- including this one -- will still not be made whole. Clearly, they will be much better off than they would have without the additional \$200 million -- (Portland, for example, will get almost \$100 more per student than they would under the current Republican proposal). But they will still face cuts that may not be acceptable to their constituents.

To these districts I say this: my compromise proposal produces a balanced budget *without* committing any funds from the May revenue forecast. If our economy continues to perform -- and there is no indication that it won't -- there will be additional revenue available in May and I will work with you to ensure that those resources are committed to K-12.

With regards to cuts, I will step up to the plate. I am willing to discuss a reevaluation of the scope of some of my proposed investments -- and I am willing to look at how we can responsibly save money in our corrections program. New forecasts in prison population, for example, suggest we may be able to realize significant savings this biennium by delaying work on one of our new prisons.

The point is that if there is a willingness on the part of the legislative leadership to reach this compromise, then I will go over every budget -- line by line -- to find a way to make it work.

My compromise proposal for the Two Percent Kicker involves two components.

First -- committing the majority of the corporate kicker to education is justified not only by the need in our education budget but also by the fact that the business community has realized a disproportionate level of property tax relief under Ballot Measures 5 and 47.

Nonetheless, I believe it is important to provide a modest rebate to business as well.

The second part of my kicker proposal involves the personal kicker. I propose that all eligible Oregonians receive a personal kicker rebate of up to \$223 which reflects the amount due to the average Oregon taxpayer. Again, this approach recognizes both the need in our education budget, but also the fact that many lower income Oregonians need their kicker rebate to help them get by.

In short, what I am saying to you today, is that we are within striking distance of a budget that will keep our K-12 system whole, maintain our commitment to pre-kindergarten and post-secondary education, adequately fund the Oregon Health Plan and other crucial elements of our general fund budget (from human resources to economic development to public safety to natural resources) *and* return income tax revenues to those who need them the most.

As you know, I believe it is important to invest the proceeds of a strong economy in the infrastructure on which that economic growth depends -- on things like education, transportation and sound environmental stewardship.

We have the financial ability to do that today. But we also need the political consensus to make it happen. What I am proposing today offers the basis for building such a consensus.

In closing let me say that as the budget debate unfolds over the next few months, I would ask all of you to remember that this is not just a debate about numbers and percentages -- it is a debate about people . . . about Oregonians and about our quality of life.

It is a debate about whether some working Oregonians will have access to health care for themselves and for their families; about whether we will offer compassion and support to the frail and vulnerable citizens in our state.

It is a debate about whether kids will have class sizes small enough in which to learn; about whether they will have up to date books and access to the technology so important in today's world.

It is a debate about whether Oregon high school graduates will be able to afford to go to an Oregon college or university; about whether Oregonians will land the good jobs that this economy is turning out.

It is about adequate housing; about safe neighborhoods; and about reducing traffic congestion.

It is about preserving one of the nation's great park systems; about clean streams; and about saving the salmon.

In short, this is not an impersonal accounting exercise -- It is about Oregon's future.

. . . About our will -- and indeed our responsibility -- to defend and to pass on to the next generation that unique *quality of place* that makes Oregon so special to us all.

Governor John Kitzhaber
February 4, 1997

AARP Legislative Council Speech

It is an honor to speak to this group today, particularly since in exactly 29 days I will be eligible for membership . . . In the meantime, I would like to share with you some words of substance and leave you with some food for thought.

To begin with, I'd like to ask you to try to expand your vision beyond the specific charge of your association -- to look beyond your strong and focused advocacy for senior citizens and to try, at least for a time, to take a broader social view. Today I want us to consider how, in a society of limits, we can balance the needs of our elderly with those of our children and with the needs of those who remain in the workforce.

I believe it is critical that we do so because, as Martin Luther King, Jr., so wisely reminded us, in today's world anything that affects one person directly affects all of us indirectly. And that is especially true of the American health care system. Let me tell you how I learned that lesson from personal experience as a physician.

Twenty-four years ago, at the very beginning of my internship, I watched a baby die -- a little boy weighing less than three pounds whose name was Sam. Sam was born prematurely in the emergency room and then transferred to the neonatal intensive care unit where he died two days later. His mother was poor and had not once seen a physician during her pregnancy. I can still remember standing silent by his incubator during that final hour, knowing what was going to happen, and knowing too that I was powerless to prevent it.

Not long after Sam died I witnessed another death that I still clearly remember -- that of Gladys, a 90-year-old woman with lung cancer who had gone into cardiac arrest following surgery to remove her right lung -- surgery she hadn't really wanted. When the code was called on the surgery floor, I rushed to the room -- along with another intern, a surgical resident, two nurses, and a respiratory therapist and the six of us spent an hour in a frantic but unsuccessful attempt to save her life. And unlike baby Sam's passing, the last hour of Gladys' life was not quiet.

We stuck tubes into her nose, throat, and bladder; needles into her veins. We pumped her full of drugs and shocked her repeatedly. But we "failed," she died, and we ran up a posthumous bill of thousands to be picked up by her family or her estate.

Sam died because we didn't know as much then as we do now about treating respiratory distress syndrome in newborns. But he also died because somehow nobody had made the token investment to get his mother the prenatal care that could have prevented his prematurity and low birthweight. Gladys died because she was ready to die. She recognized that but we couldn't. We had been trained to view death as a failure, not as a natural part of the life process.

Today as I stand here I can still remember the frenzied efforts of a roomful of people, with all their sophisticated equipment, to save someone at the very end of a long life, and the quiet and undramatic death of someone at the very beginning of life. But at the time I never connected the money spent on Gladys' final hour with the money not spent on Sam during his mother's pregnancy. And yet the connection was there.

I tell this story because it illustrates the very human consequences of the growing competition for funds between the old and the young. Throughout history, societies have been judged by how they care for their children and how they care for their elderly. Until recently it has been hard to conceive that these two objectives could ever be in conflict.

Yet as we come to grips with the reality of fiscal limits, this is exactly the situation that is developing, and it is not difficult to discover the reasons. In fact this situation was created by a combination of factors, but let me focus on the two which are most relevant to seniors: the rise of modern medical technology, and the structure of Medicare.

Among the many benefits of modern medicine is increased longevity. But it is, quite frankly, a benefit with a price attached. On one hand, people have more time to enjoy the fruits of their labor after retirement. On the other, they are more likely to be afflicted with health problems which can result in staggering costs and which often create a need for long-term care. This situation can sour the years of retirement not only for individuals, but for their families, who may be driven into poverty by medical and institutional bills. This problem affects not only those on low and fixed incomes, but those on comfortable and modest retirement incomes as well.

At the same time, the program designed to provide health care for elderly Americans is no longer meeting their needs. Medicare and Medicaid were enacted in 1965 in response to the findings of President Johnson's Task Force on Health that the elderly and children in poor families faced the most serious barriers to gaining access to health care. In 1965 these barriers were primarily financial and that is still true of impoverished children. It is no longer true of the elderly as a group.

In 1965, when the incidence of poverty among the elderly was twice that of the general population, subsidized health care for seniors made sense. Today, however, the incidence of poverty among Americans over 65 is only ten percent -- almost four percent lower than the incidence of poverty in the general population. Yet our health care policy continues to treat them as if they were uniformly in need of publicly subsidized health care.

That means that a 66-year-old couple, retired on \$100,000 a year, gets publicly subsidized health care through Medicare, while their children, both working to bring in a combined family income of \$35,000 a year, are unable to afford health insurance for themselves, yet pay \$351 a year in FICA taxes to support health care benefits for their wealthy parents. I submit that that makes no sense.

In 1965, because life expectancy was less than 70 years and because many of the medications available today had not yet been developed, the need for chronic and long-term care for the elderly was minimal. Today, with life expectancy approaching 77 and a tremendous growth in the number of those living much longer, long-term care and prescription drugs for chronic conditions are among those services most desperately required, yet Medicare covers neither. And when the cost of these services drives senior citizens into poverty, they become eligible for Medicaid, where their needs compete directly with the needs of poor children. I submit that that makes no sense.

And there is yet another flaw in the system -- one which goes beyond questions of inequity and ineffectiveness.

To understand that flaw, we must recall that social programs are funded through general taxes paid by those who are working. 30 years ago, those over 65 constituted 9.6 percent of the population. Today they account for nearly 13 percent, a number expected to rise to 18.5 percent by 2025. In 1940 there were 159 workers supporting each Social Security beneficiary. By 1950 that number had dropped to 16.5, and today there are only 3.7 workers supporting each beneficiary.

If the workforce is shrinking relative to the retired population, and if Medicare and Social Security depend on that workforce for funding, then the only way those programs can be sustained is if the workforce is increasingly productive. Yet our health care system is structured to have just the opposite effect.

As health care costs have escalated (for reasons I don't have time to go into here), third-party insurers have attempted to shield themselves from what has become an enormous financial liability. The most common method has been to reduce coverage or to drop people from coverage altogether.

Today there are over 40 million Americans in a growing "coverage gap." Over 70 percent of them are working families

and their children. The working families in the insurance gap are the very Americans who will constitute a large part of the shrinking workforce of tomorrow -- a workforce we will expect to fuel the economy and pay for a growing retired population. And yet we deny them access to the primary and preventive care they must have to remain healthy and productive.

We are witnessing a huge resource shift from the poor to the rich, from the young to the old, from workers to those who are retired, and it amounts to mortgaging our own future. And make no mistake about it, those who are working do subsidize those who are retired. For example, the average man, retired in 1985 paid just over \$13,000 into the system but will draw out \$44,800 in benefits -- a subsidy of \$31,000.

It is astounding that in 30 years no one has seriously re-evaluated either the Medicare eligibility standards, or the covered benefits in light of the changes in the financial circumstances and actual health needs of this population. Nor did anyone apparently foresee that expanded access to health care, coupled with technological advances, would increase longevity and consequently the number of people placing demands on the system.

In the last several years, under mounting pressure to reduce the federal deficit and balance the budget, the cost of the Medicare program has become a subject of public debate. I have watched this debate over the years. I find it significant that in the recent presidential campaign, there was much talk about balancing the budget but in a way that "protected" Medicare. I understand that the conventional wisdom dictates that you don't mess with Medicare because of the voting power of senior citizens. But I want to suggest to you this morning that to defend Medicare as it is currently structured is not in the best interest of your constituents and is certainly not in the best interest of our society.

In the debate over "protecting" Medicare, we are defending a system designed almost a third of a century ago which still reflects the world as it was in 1965. In 1965 Medicare made sense. In 1997 it does not. It does not, in fact, offer the services that an aging population really needs, it is too expensive, it pits wealthy retirees against poor children and pregnant women, and it contributes to a decline in the productivity of a workforce that is essential to the fiscal integrity of the program itself.

What we need to do is to redefine the terms of the debate. Instead of fighting to preserve an expensive, inequitable, ineffective system designed to meet the needs of a world gone by, we need to step back and ask ourselves exactly what we are trying to accomplish.

I take it as self-evident that the objective of a health care system is not merely to provide health care -- the objective is HEALTH. As a physician, I can tell you that health care is not necessarily synonymous with health, nor are all medical interventions of equal value and effectiveness in producing health. A huge portion of the Medicare budget is spent on people in the last 30 days of life and it is estimated that over 50 percent of ICU costs are expended on nonsurvivors. By no stretch of the imagination could these expenditures be said to be effective or to produce health. Health care costs continue to escalate, yet a massive expense in the current system is on ineffective, futile care. Gladys was a case in point.

The question is, what can we do about it? As Abraham Lincoln once said: "He has the right to criticize, who has the heart to help." I wouldn't have pointed out these problems to you if I wasn't ready to offer a solution, then let me tell you what we have done in Oregon. While this may not be the answer, it can offer us some insights into how we might proceed at the national level. The Oregon approach involves the Oregon Health Plan and a long term care program built around home and community based-care. Let me briefly describe each in turn.

The Oregon Health Plan, implemented in three years ago this month, offers a benefit package arrived at by prioritizing health services on the basis of their effectiveness. Because of time constraints, I will not describe in detail the process we use to define our benefit package. I would be happy to answer any questions about it later. But let me say that it is done by a Health Services Commission and involves an open and highly accountable process.

Specific services and treatments are prioritized according to their clinical effectiveness and on the basis of social values developed through an extensive series of townhall meetings across the state.

The first priority list -- which is updated every two years -- consisted of 709 condition/treatment pairs (appendectomy

for acute appendicitis, bone marrow transplant for leukemia, etc.).

Services near the top of the list were those for acute fatal conditions where treatment prevents death and returns the individual to their previous health state (such as an appendectomy for appendicitis). Because of the high value placed on prevention by those participating in the community outreach process, the category of maternity care (including prenatal, natal, and postpartum care) and that of preventive care for children ranked very high. Also ranked high, because of the social value placed on compassion, was hospice care. At the bottom of the list were categories of services for self-limiting conditions, futile care, and services that had little or no effect on health status.

The final priority list was given to an independent actuarial firm which determined the cost of delivering each element on the list through capitated managed care. The list and its accompanying actuarial data were given to the legislature.

Since the legislature is statutorily prohibited from altering the order of the priorities as established by the Health Services Commission, it was required to start at the top of the list and determine how much could be funded from available revenues and what additional revenues would be needed to fund an acceptable "basic" package. In this way, the question "what is covered?" was directly linked to the reality of fiscal limits.

As a result of this accountable and explicit process, the Legislature reached consensus on a benefit package, with a strong emphasis on primary and preventive care. It is eminently defensible. It covers the initial evaluation for all conditions, all preventive and screening services, dental services, hospice care, prescription drugs, routine physicals, mammograms, most transplants, and physical and occupational therapy.

This benefit package applies to our entire Medicaid population -- including seniors and the disabled -- with the strong support of Oregon's senior lobby. It also forms the standard for numerous private sector policies.

Of equal importance is Oregon's long-term care program. In 1981 Oregon became the first state in the nation to obtain a federal waiver that allowed us to use Medicaid dollars on community-based care, instead of only on institutional care, which is far more expensive and, in many cases, far less compassionate. We have essentially recognized that in most cases, long-term care is not a medical problem -- it is a social problem. It usually involves people who have lost the ability to perform the activities of daily living; feeding, dressing, housekeeping. Therefore, we have developed a system of community based support that ranges from home nursing to housekeeping to meals-on-wheels.

Today in Oregon, because we pay for what works, we have not only dramatically reduced costs, we have also dramatically expanded access. Two to three people can receive community-based care for the cost of one person in a nursing facility. As a result in Oregon today, there are fewer people in nursing homes than there were ten years ago, despite a significant increase in the elderly population.

And since the Oregon Health Plan went into effect two years ago, we have extended coverage to 325,000 additional people. Since the early 1990s the rate of uninsured has dropped from 17 percent to 11 percent. The rate of uninsured children has dropped from 21 percent to eight percent. Our Medicaid costs per person are 10 percent below the national average.

What does that tell you? It tells you that a system which meets the real health care needs of our citizens, whatever their age, is not only possible, it is also preferable. We do not need to undermine the health, and thus the productivity of the workforce in order to provide health care to the elderly or to children.

Where Medicare is concerned, the dollars currently expended on futile, ineffective care, and the dollars currently expended on those who can pay more themselves can, and in my opinion, should be reallocated to provide appropriate and effective acute care, prescription drugs for treatment of chronic afflictions, and compassionate, community-based long-term care. And ability to pay should be the criterion for coverage.

Only under those conditions can we craft a system that makes sense -- in 1997. It is imperative that we do so. Intergenerational conflict will only get in the way, because whatever our age, we are bound together in what Martin Luther King, Jr. called an "inescapable network of mutuality." Only by focusing on our common goals can we hope to succeed, and AARP can lead the way.

Governor John Kitzhaber

**Testimony -- House Agriculture Committee
January 16, 1997**

Mr. Chairman, members of the Committee, thank you for the opportunity to testify on eastside ecosystem health issues.

Today I bring you a message of hope and opportunity. Almost two years ago we began a process to assess the needs of eastside forests, streams and watersheds and the communities that depend on them. Over that time a number of citizens, scientists and government officials have worked tirelessly to produce recommendations to land managers on ways to improve ecosystem health. Today I would like to announce two major achievements of these efforts.

First, we have identified a forest management strategy that will help restore ecosystem health while protecting forest resources, critical habitat for endangered salmon stocks, and the integrity of eastside watersheds.

Second, and perhaps more significantly, we have brought together a diverse group of interests, from timber purchasers to environmentalists, who share common objectives and who endorse such a proposed strategy for eastside forests.

Before I describe our proposal, I think it would be useful to outline the history of our efforts to address ecosystem health problems faced by forests east of the cascades.

Oregon, and much of the inland Northwest, was blessed with huge stands of old growth pine covering millions of acres when Europeans arrived during the last century. Over the past 80 years, forest management policy, characterized by active fire suppression and harvesting of valuable old growth pine, has transformed these forests to their present state. Today we are left with overstocked stands of young fir and pine, thousands of acres of dead and dying timber infested with insects, and an unacceptable risk of catastrophic fire. Thousands of miles of riparian areas have been damaged by harvest and grazing practices, as well as by roading and urbanization. In addition, timber dependent communities that were established to support lumber mills have seen tragic declines in employment.

Early in my administration I established four goals to guide our efforts to restore ecosystem health to eastside forests. These are:

1. Restore the health of the forests themselves
2. Restore the health of riparian systems and watersheds
3. Provide wood to local communities
4. Reduce the risk of catastrophic fire

In the spring of 1995, I appointed a diverse group of highly respected scientists from throughout the Northwest to make recommendations on ways to restore ecosystem health and provide wood to communities in an environmentally sound manner. That panel achieved something that was nothing short of remarkable -- a true consensus among the scientists on what needs to be done to improve the health of the forests, streams and watersheds of the eastside. Dr. Norm Johnson,

chair of that panel, will testify before you today and describe his group's recommendations.

Last spring I appointed an eastside forest advisory panel, consisting of a very diverse group of eastern Oregon community leaders to make recommendations to me on ways the U.S. Forest Service might implement the findings of the scientific panel. Under the able leadership of Dave Cash, the panel has visited numerous sites throughout eastern Oregon and has recently issued its first set of recommendations. A number of the panel members are present in the audience today.

Over the last two months members of my staff, joined by various eastern Oregon stakeholders, have met with forest supervisors to learn about their goals for the land and about the constraints under which they must operate. I have been uniformly impressed with the professionalism and dedication to the health of the forests exhibited by these federal land managers.

As a result of this almost two years of work, I am able to present here a broadly supported proposal for restoring ecosystem health. The basis of the proposal is that

There are key areas of agreement where we can move ahead now to restore ecosystem health and provide wood to local communities without threatening non-timber resources.

The key elements of the eleven point proposal are attached to my testimony. I would like to highlight a few of them here.

We need to use **active management** to treat stands that are overstocked, or have been inappropriately converted from pine to fir. Understory thinning and commercial thinning are key components to this strategy.

At the same time, we need **to avoid activities in controversial areas**, such as roadless areas and old growth stands. If the Forest Service continues to push for timber harvest in areas where there is not broad support for doing so, there is a risk that the entire ecosystem health effort will be derailed. That is unacceptable. The Forest Service needs to first establish a track record of success to show it can in fact employ active management techniques that actually restore forest health, while protecting other critical non-timber resources, such as fish habitat, water quality and wildlife habitat.

Learning from our efforts through **monitoring** is critical to the success of this proposal. One of the tragedies of the continuing debate over federal forest policy is the tremendous amount of public trust and confidence in the Forest Service that has been lost over the last five years. For this agency to be an effective manager of fully half the forest land in this state, it must have broad public support. Now is the time to rebuild that support. Effective monitoring by the agency of the impact of its land management treatments on key forest resources is the first place to start. The agency must demonstrate to the public that its actions are having the intended effect. This was the principle recommendation of the citizens panel that I appointed to study this issue.

It is also important that we offer **cost effective timber sales**. Where the proceeds from the sale of timber associated with a treatment strategy are not enough to pay for the work needed, the Forest Service should have access to money to fund the project. The sale should not be "sweetened" by the addition of valuable old growth timber that science tells us needs to be left behind for wildlife or improved stand structure.

Restoration of riparian areas and watersheds will take money. I would ask congress to change the way it allocates funds to the Forest Service so that money is available to do the work needed without depending on a profits from a timber sale.

One of the greatest benefits of this strategy will be the reduction in risk from catastrophic wildfire. By thinning out overstocked stands and returning the forest to its historic range of variability, we can reduce the frequency of huge stand replacement fires. Although smaller fires will continue to be an important part of the ecosystem. I hope your committee will consider the benefits of investing in the proactive fire prevention measures embodied in our proposal and perhaps avoid the budget busting costs of stopping a 100,000 acre wildfire.

Three people who have been essential in developing this broadly supported plan will be testifying later in this hearing.

They are Dr. Norman Johnson from Oregon State University, Paul Dewey, a citizen of Bend who has been very active in forest conservation efforts, and Pat Wortman, a Wallowa County Commissioner. Wallowa County is heavily timber dependent. I would commend their testimony to you.

In conclusion I want to emphasize that for any ecosystem health effort to succeed it must enjoy broad acceptance. You have before you today an action plan that has high credibility with the scientific community and is supported by many community leaders -- both on the environmental and resource utilization side. Implementation of this proposal does **not** require changing the federal laws governing land management. What it does take is a clear vision by federal land managers and the will to implement that vision.

Thank you for the opportunity to testify.

**Proposed consensus approach
to Eastside ecosystem health restoration**

Governor John Kitzhaber

1. There are broad areas of potential agreement about goals for restoration of ecosystem health to the forests of Eastern Oregon.
2. Ecosystem health includes the health of forests, streams, and watersheds.
3. Ecosystem health may be improved through active management in overstocked stands which have suffered from fire exclusion and highgrading of large trees.
4. Thinning of small diameter green trees is an important component of active management for forest health and will help make sales economically viable.
5. Plan and implement operations first in less controversial areas. In the short run, avoid operating in roadless areas, near fish habitat and old growth areas.
6. For ecosystem health restoration activities to truly succeed, monitoring and learning from these efforts is essential. The Forest Service and the research community, Congress, the Administration and the Governor's Office should join together in assuring that we learn from the management strategy employed to restore ecosystem health. Monitoring actual results will be critical to justifying ongoing active management.
7. Cumulative effects analysis should include all ownerships within a watershed, where possible. This may be accomplished by working with local watershed councils.
8. Active management includes more than cutting trees. Riparian area planting, reforestation, road obliteration and stream rehabilitation are all key components.
9. Use of low impact cost effective, equipment is an important element in effective restoration. The Forest Service, federal government and the state should provide incentives that encourage the use of such equipment.
10. Timber salvage may be an important component of ecosystem health restoration and fuel reduction strategies to the extent that it promotes ecosystem health goals.
11. Where the costs of ecosystem health restoration efforts are not paid for by timber sale proceeds, funds should be made available to finance these activities on a priority basis.

Governor John Kitzhaber

The State of the State Keeping Oregon's Quality of Life

January 13, 1997

A year ago when I delivered my first state of the state speech, I was fairly new to this job. But every day I learn more, and I can say that the experiences of the past year have shed new light on the state of the state -- and on the mood of its citizens.

Through windstorm, fire and flood -- I have had the opportunity to witness firsthand the courage, the selflessness and the deep sense of community that still permeates this state of ours. And my heart goes out to those in Keizer, Ashland, Talent, on Sauvie Island -- who are even now struggling to recover from the recent flood.

You know, if I ask Oregonians -- and I have -- about how they view their state, about why they love this place and why they are proud to be Oregonians, they will always come back to quality of life.

In many ways that is a vague term because it means something different to everyone.

For some it is standing on the beach watching the sunset. For others it is standing on a mountain watching the sunrise. For some it is not being held up in traffic and for others it is being in a state that is on the cutting edge of high technology. For some it is good schools and for others it is the ability to still work the land as ranchers, loggers or fishermen.

It is what Governor Tom McCall spoke of as the "Oregon mystique."

It has something to do with the place itself -- its natural beauty, its abundance of natural resources, its variety of landscape.

It has something to do with us -- our reverence for the land and open spaces that makes us skeptical of growth even while we welcome prosperity.

Whatever it is, whatever its components, Oregon has some quality that we cannot define but that we all recognize. It's why we're here. It's why we chose to come. It's why we choose to stay.

But when I talk to people around the state today, they are afraid -- there is a lot of anxiety out there, a lot of uncertainty because the world is changing -- their lives are filled with change. They perceive that they are losing something; that their quality of life -- however they define it -- is at risk and that they have little control over it.

I feel it. We all feel it in ways large and small.

The change from a natural resource-based economy to a high tech, information-based economy. A global marketplace. The growing number of people who are under-unemployed -- and people with good jobs who don't know how long they

will have them because of the changes taking place around them. The plight of the salmon. Traffic congestion. Concern over the educational system.

Whatever it is, our lives are filled with changed and something important is at risk.

My goal -- our common goal -- is to keep Oregon's special quality of life, in all its different forms -- to preserve it in the midst of the change happening around us and to us.

Today, I want to share with you what I believe we must do to accomplish that. I will focus on three areas: education, transportation and natural resources. And I need your help because we collectively have to think a little differently about these problems than we have in the past.

This is more than the traditional debate about changing government -- it is also about changing us. And I tell you with all certainty that unless we begin to do things differently, we *will* lose that quality of place that makes Oregon so special.

We will wake up a decade hence, wondering what happened to our universities, to our high schools and to our grade schools; wondering how it was that good roads became bad roads and how easy commutes became traffic jams. We will wake up asking "How did we let the salmon become extinct?"

This is not the future we want, nor one we need to accept. But we will need to innovate. We will need to be creative -- and bold. We will need to approach old problems with new ideas, and new problems with flexibility and an open mind.

Quite literally, we will need to blaze a new trail.

Everyone knows that part of the change I am suggesting will require more money in all these areas. But I cannot stress strongly enough that if we are to keep Oregon's quality of life, money alone will not solve the problem. We must fundamentally change the way we think and the way we do business.

That is the challenge I lay before you today: Can we change and adapt to meet the demands of growth? I believe we can. I believe we must.

I have been accused of being a policy wonk. I stand before you guilty as charged.

But I also want to tell you that schools, roads and a healthy environment are more than just public policy issues for me. I love this state.

I was educated in Oregon's schools; my nieces and nephews are in Oregon schools today.

I learned to drive on Oregon roads and like all of you I still rely on them to get where I need to go.

And I can't imagine my life without access to our rivers, mountains, beaches and deserts.

But today thousands of Oregon children, including my nephews, attend schools where the quality of the educational program is threatened by budget shortfalls. Today, traffic jams are becoming commonplace -- not just in Portland but in Bend, Medford and Eugene. And today more than 60 of our state parks are in danger of being closed, while one of Oregon's most vivid symbols -- our salmon -- is dangerously close to extinction.

These are problems that money alone will not solve. Quite simply, if we want to save our schools, our streams and our streets, we must change the way government works -- and we must change how we view ourselves and each other.

The fact is that in the areas of education, transportation, and natural resources, our government institutions are not working very well. This is due, in part to the fact that, they were designed to deal with problems that existed ten, twenty or even thirty years ago. Times have changed. Priorities have changed. And government must change as well.

I want to stress that the problem is not with public workers, it is with the systems in which they work. Government programs designed to address yesterday's problems are programs that won't work and need to be changed in ways to

help public employees work smarter and more productively.

For example, the Department of Transportation was designed to build roads, and they've done a good job. *But today we need more than that. Today we need to manage growth and congestion, and the Department must change accordingly.*

For example, the Department of Fish and Wildlife was designed, in part, to oversee recreational hunting and fishing. But today we need more than that. *Today species protection is among our highest priorities, and the Department must change accordingly.*

As for our school system, it was set up to operate in a world where there was no advanced technology, no global marketplace, and where it was reasonable to assume that education had an end point, and that teachers, once certified, had all the tools they would ever need to do their job. *That world is gone forever, and our education system must change accordingly.*

In the last two years, I have heard from many Oregonians that government simply doesn't work. They are frustrated by what they see. I want to acknowledge that point of view. In many ways, government is not working. But the answer is not to give up on government. A self-governing society that gives up on government is essentially giving up on itself. The answer is to change government and make it a partner in keeping our quality of life. It's not a question of *more* government or *less* government; it's a question of *better* government.

And, in the final analysis, it is not something government can do for us. It is something that we must do for ourselves by making our government a tool with which to build the future we want.

To accomplish that, here are the changes I will propose for the coming legislative session.

First -- in education: We tend to forget in our discussion about schools that it's not about taxes, unions, administrators or district consolidation. It's about our children. It's about giving kids the best possible shot at success. Let's not forget that.

I believe we do need to put more resources into our schools and colleges to make them better and more affordable. But that increased investment must also be accompanied by increased accountability.

The Education Act for the 21st Century provides us with the basis for quality. The missing piece is accountability.

I believe it is time we take steps to encourage better quality and to provide greater financial accountability in our schools.

Until recently, our K-12 schools were locally funded and the state's responsibility was simply to provide what help it could. Today, as a result of Ballot Measures 5 and 47, the state pays for the vast majority of K-12 education.

Clearly teachers are the chief resource in our school system and we must respect and support their work and pay them salaries that reflect their tremendous responsibilities. But it is also important that the decisions on salaries are made by the same level of government that makes the funding decisions.

For that reason, I believe it is time to consider seriously establishing a statewide teacher salary schedule so that there is better control and accountability for the single largest cost of education.

I will also seek to institute a system of performance-based incentives for teachers and administrators. I will propose that we apply such incentives at the district level -- perhaps at the building level -- to increase accountability for positive results and to reward excellence.

I will propose that we require as much of administrators and teachers as we do of students: that they be able to demonstrate that they have learned and can teach effectively under the Education Act for the 21st Century *and* that we provide them with the necessary tools to achieve that objective.

Though our state is blessed with many excellent teachers, we must also insure that school managers possess the will and the ability to require and support excellence in the performance of every classroom teacher.

Finally, I will ask to remove barriers to the use of teachers' assistants, volunteers and experts in the community -- not as a way to try and reduce the number of teachers, but as a way to provide them with additional help and tools in the classroom.

I stand ready to work with the leadership of the legislature, teachers, parents and school districts across the state to achieve new levels of cooperation and accountability -- bearing in mind that our ultimate goal is to give every Oregon student an education second to none. Our children deserve no less.

Our children also deserve to inherit an Oregon with parks, forests, beaches and fish. They deserve to inherit a healthy environment -- not one in decline.

To do that, we must do things differently. We must move beyond conflict to cooperation if we are to keep this vital part of our quality of life.

Some of my most rewarding moments in the last two years have been meeting ranchers, farmers, fishermen, timber workers and environmentalists. These are the very people who have spent decades picketing one another and are now working together to restore streams -- to restore salmon runs one creek at a time.

For all those who believe that our natural resource industries, our farmers and ranchers and the environmental community have nothing in common -- you are wrong. In watershed councils throughout the state they are working together to literally change the face of Oregon.

I propose we build on this by creating a natural resource investment account. It will help restore Oregon's streams to health. It will help farmers and ranchers to be better stewards of the streams on their property. But most importantly, it will give our salmon, trout and steelhead a fighting chance at dodging extinction.

If we succeed in this most ambitious undertaking we do more than save a species -- we help preserve a way of life for thousands of farmers, fishermen and others who make their living off the land.

The account will also give us the ability to rebuild and retain one of the nation's great parks systems. I, for one, am not willing to stand by and let a park's system a century in the building, dwindle over the course of a decade.

Finally -- transportation: We all agree that a good transportation system is essential to our prosperity and our quality of life. Further, we all know that Oregon's population is exploding -- 55,000 new Oregonians last year alone and close to 300,000 since 1990. This puts a growing strain on our roads, transit and highways.

Clearly, some additional resources will be necessary to address this problem, but once again, money alone is not the answer. Money alone won't buy quality of life and will not buy our way out of congestion in the long run.

It's time we challenged the belief that the answer to our transportation problems is simply more money for more roads. It's time we challenged the idea that says we can build our way out of congestion by adding more freeway lanes. That didn't work in Seattle or Los Angeles and it isn't going to work in Oregon.

Instead, any work to expand our transportation system must be done in a way that preserves quality of life while still maintaining economic opportunity. And our efforts must be regionalized, taking into account specific needs that will differ from one part of the state to another, replacing the one-size-fits-all directives historically handed down from Salem. What we're talking about is a new way of making decisions, a new way of doing business.

With the exception of possible indexing, I am *not* proposing an increase in the gas tax which would have very little long term impact on traffic congestion. Instead, I am proposing a new way to raise money for our roads which I believe will help us manage growth more effectively.

First, is to broaden the base of transportation funding to all those who benefit from roads -- not just those who directly use them. This would help keep the gas tax down and would create a fund which could be used in part for transit.

Second, I am proposing that we begin to move toward a system where motorists actually pay based on how many miles they drive -- not just how much gas they use. I believe this will give people the incentives they need to explore alternatives to driving or to drive in different ways.

The fact is that not only is our population growing, but more Oregonians are driving more often and further than ever before. We can't raise enough money to build enough roads to prevent congestion. That is a fact.

The answer lies less in money than it does in changing how and when we use our transportation system. If we hope to preserve our special quality of life, we need to connect highway funding to highway use. We need to make it easier for people to use their cars less.

I believe state government can be a leader in this. I have directed the Department of Administrative Services to bring to me by May 1, a comprehensive plan to reduce the state's share of traffic congestion in the Portland area. Such a plan might consider such things as telecommuting and flex-time work. As a large employer, I believe the state can and must help lead the way toward more creative workplace management that will reduce the burden on our roads.

In conclusion, I believe Oregonians support a common agenda: they want good schools, clean streams, and a transportation system that will help keep Oregon's special quality of life.

Furthermore, I believe there is little disagreement between me and the legislature concerning the importance of taking bold action in these areas. However, there is some disagreement on how to accomplish these goals.

None of these initiatives is free; all of them will cost something. My responsibility in putting together a budget is to suggest ways to pay for them. I have done that. But if the legislature is willing to meet the same objectives by different means, they will find me a ready and willing partner.

Because this is not a Democratic agenda. This is not a Republican agenda. This is an Oregon agenda -- the priorities Oregonians have shared with me over the last two years.

Of course there will be differences between Democrats and Republicans, between House and Senate, between the governor and the Legislature. Beyond those inevitable differences, lie the answers -- but only for those willing to set aside good politics in pursuit of good policy for the people of this state.

The compromises *can* be reached, but only by those willing to serve the state and her citizens -- not by those who serve only their party or personal agenda.

The solutions *will* be found, because we will search together, exercising wisdom, compassion, and a disregard for political expediency.

Sixty-five years ago, President Roosevelt said, "The nation needs, and unless I mistake its temper, the nation demands bold, innovative action. It is common sense to take an approach and try it. If it doesn't work, try another, but for God's sake try something."

That is the approach I am committed to taking, because unless we begin to do things differently -- unless we redefine the terms of the debate over these issues -- we *will* lose that quality of place that makes Oregon so special.

Of course there is a risk involved. But it is a far greater risk to keep doing things the old way. Because at stake is Oregon itself -- it's heart, its soul -- the Oregon we all love -- the place we have chosen to call home. And I for one am not willing to risk losing it.

This is a challenge I cannot meet alone. I will need help and cooperation.

Today I ask each and every one of you to help me make Oregon what we want it to be . . . to join me in blazing a new Oregon Trail -- and to help preserve the Oregon mystique bright and untarnished into the 21st Century.

Governor John Kitzhaber

Oregon Rural Electric Cooperatives Association Speech

December 5, 1996

It is a pleasure to be with you this morning. Oregon's electric cooperatives have a long history of service to the public that can serve as a model for many other institutions. You are the lifeline to the modern economy for thousands of Oregonians who live in rural areas. Without you, the quality of life in rural Oregon would be seriously degraded.

I want to talk with you today about change -- the change that is occurring in the electricity industry that will affect all of us here today, and virtually all Oregonians.

Not long ago, the electricity industry was called the electric utility industry, because the only participants were utilities that had responsibility for retail customers as well. Beginning slowly about twenty years ago, other kinds of businesses entered the field as generators, and now there are marketers, brokers, futures traders, and demand aggregators, as well as independent generators.

Much of this change has occurred outside of our control, either coming out of Washington, D.C., or as a result of market forces. Today, however, I want to talk about the change that is within our control -- that can happen as a result of state or regional action.

First, about what we must do as a region. Last January, I set up with Governors Lowry, Batt and Racicot the comprehensive review of the regional energy system. While the comprehensive review is having its last deliberations today, I believe it will do what it was charged to do: give us a blueprint for action to create the northwest electrical system for the next century. The other governors and I are scheduled to receive the final report next week in Spokane.

The most important of the areas where the comprehensive review is recommending action is on the future of the Bonneville Power Administration. Today, Bonneville is in a position we never imagined it would be in: its costs being near or above the price of power available in the marketplace. As a result, many utilities and other customers are considering leaving BPA as their primary supplier.

Yet, regional control over these federal assets is of great importance to the Northwest. In the future, when market prices do go up, as they are expected to do, and when the WPPSS bonds are paid off, Bonneville power at cost will almost certainly be again the best bargain in the national power market. We want as many northwest consumers as possible to be able to be beneficiaries of this low-cost power in the future.

But we will lose this bonanza if we do not take action now. We must as a region take responsibility for Bonneville's costs today or expect to lose this resource for tomorrow. Those who have wanted for decades to get their hands on the Northwest's power supply will not lose this opportunity if BPA goes into financial crisis.

Whether the solution requires legislation or just administrative action, we must give Bonneville's utility customers incentive to stay with Bonneville and cover its costs. If that is what the comprehensive review gives to me next week, I will endorse it wholeheartedly and work hard for its implementation. Nothing is as important to the Northwest as being

able to continue to have long-term access to the benefits of the federal hydro-power system.

Now, let me turn to state energy issues that are before me as governor. I expect that legislation will be introduced in the legislature next month that will require some degree of choice of electricity suppliers for retail customers. Given PGE's recent pledge to allow all their retail customers to choose suppliers, and PacifiCorp's experiments along the same line, this legislation might simply formalize what will soon be a reality for most customers in Oregon.

Many people are concerned about the speed with which this switch to retail open access is taking place. However, we must keep in mind that competition for retail customers is the foundation of the American free enterprise system. Nothing does more to ensure that customers receive high quality products at the lowest possible price than does the pressure of competition.

However, the move to competition must be done with care. Many aspects of the electricity business -- transmission and distribution -- will remain natural monopolies in need of oversight and regulation. The public values we have come to expect from the electricity industry will need to be preserved. And the high levels of reliability and quality of service cannot be compromised by competition at any level.

While I expect others to introduce open access legislation, I will not be introducing legislation of my own. Today I am announcing a set of principles that I believe should be incorporated in open access legislation in order to receive my signature.

These principles in quick summary are:

- Every Oregonian must eventually have the option to choose their electricity supplier.
- Every Oregonian must have access to electricity service at a reasonable price.
- The competitive power market in Oregon must be fair to all.
- Electricity service must remain reliable and safe, above all.
- Funding of conservation and renewable resources must continue in a way that is appropriate to the competitive market.
- Low income Oregonians must have equal access, and low income energy support should not be jeopardized by competition.
- Utilities should have opportunity to recover costs of previous commitments.
- Regulation must continue for products for which there is no effective competition, such as transmission.
- Customers should be protected from anti-competitive behavior.
- Local government franchise fees and other revenues must be protected.
- Any exemptions from open access mandates (for instance, for consumer-owned utilities) must be balanced with restrictions on marketing outside their service territories and continuation of public purposes funding.

You will notice that I left one important principle related to public power until the last. Public power agencies are not like investor-owned utilities. Public and consumer owned utilities exist solely for the benefit of their consumers and have governed themselves successfully for decades. The state must give some deference to this method of service that many Oregonians have chosen.

While I will not take a position on whether the public power agencies that serve 25 percent of Oregonians must grant open access to their systems on the same timetable as others, I believe that we must create a level playing field for competition. Public power agencies should not sell outside their service boundaries if they do not let others do the same within theirs.

In addition, continuing to require funding from investor-owned utility customers for public benefits such as conservation and renewable resources is not fair if public power agencies are exempt from this requirement. I will be looking to the legislature to address these issues fairly.

Electricity has been the lifeblood of the Oregon economy since the 1930s. Done right, we can continue to have electricity prices lower than most of the nation, while maintaining high reliability and a high degree of control of our electricity system. Competition should mean more choices for customers and lower prices for all.

The next several years will be challenging to all of us as the electricity industry evolves into an uncertain future. I look forward to working with all of you in the interesting days ahead.

Governor John Kitzhaber

**Portland Chamber of Commerce
November 20, 1996**

Thank you for the opportunity to speak to you today. My general message this morning is by now familiar. It's about change . . . and choice . . . and the bearing these have on Oregon's future.

But before I begin, I want to remind you of something I've been saying for the past year: that the great economy we're enjoying today and our great quality of life didn't just happen. They are the result of investments and choices that we have made over the past twenty years -- the choice to invest in a land use planning program to give us the tools to manage growth without eroding our quality of life; the choice to invest in our transportation system and our educational system. Those choices and investments created the economy and quality of life that we enjoy today.

But over the past six years we have been making a different set of choices. Since 1990, and largely by default, we have adopted a policy of dis-investment in Oregon. I say by default because no one stood up and said, "Let's lay off teachers and increase class size and close parks." But in fact that is what we chose to do.

Let me give you just three examples of the kinds of choices I'm talking about. First there is Ballot Measure Five, which was passed in 1990 as a response to high property taxes. It capped property tax rates and restricted the amount of revenue that could go to fund local schools, and required the state to make up the difference. But -- it provided no funding source. As a result, the state has had to transfer \$3.1 billion from other programs inside the General Fund to make up the lost property tax revenues. Because the state was able to come up with replacement dollars, Measure Five did not appear to have a dramatic impact on schools.

But its impact on other programs has been severe. For example, spending on higher education has dropped from 14 percent of the state budget in 1990 to a projected eight percent in 1997, while tuition has gone up 80 percent in the last six years. That's a dis-investment in our future.

Then there was Ballot Measure 11 passed in 1994. This requires the incarceration of certain violent felons, which means adding some 9,000 new prison beds. Again, there was no funding source. As a result, the state has embarked on a \$1 billion prison construction program, paid for by taking money out of higher education and education at all levels and re-directing it to corrections. In other words, taking money out of the very programs that can keep kids out of prison in the first place in order to lock them up after they've committed a crime. And that's a dis-investment in our future.

The third example is the Two Percent Kicker law, passed in 1979. It stipulates that when actual revenues exceed forecasts by more than two percent, the unanticipated revenues are automatically rebated to the taxpayers. The idea is to prevent the state from building itself up in good times beyond the point where it can sustain itself in bad times, which is a good objective. But from a practical standpoint, it prevents us from reinvesting the proceeds of a good economy into the infrastructure that made economic growth possible in the first place.

This biennium, in the midst of perhaps the biggest industrial expansion in Oregon's history, we rebated \$330 million to the taxpayers, while increasing college tuition (again), laying off teachers and increasing class size, and contemplating

the closure of some 60 parks for lack of operating funds. And that represents another huge dis-investment in our future.

We need to keep this pattern of dis-investment in mind as we try to put Ballot Measure 47 into context. The sponsors of Ballot Measure 47 claim that it will have no negative impacts, just as Ballot Measure Five had no negative impacts -- or so they claim. That simply is not true. As I've just indicated, state funding for Oregon's system of higher education has dropped alarmingly and tuition has skyrocketed since 1990 as a direct result of Ballot Measure Five.

Why should we care? To answer that question, let me tell you a tale of two states -- Washington and Oregon. Both face a 20 percent increase in enrollment in their colleges and universities over the next eight years. To prepare for this increase, Washington has earmarked \$14 million in new state money for increased faculty and facilities. Millions more have been invested in an education/communication network, in libraries, and in financial aid. Oregon, on the other hand, has lost \$100 million out of the higher education system since 1990 and last year sent \$330 million back to the taxpayers.

The point is that Ballot Measure 5 may not have had a highly visible effect, but it has forced an insidious dis-investment in our basic educational infrastructure which will be critical if we hope to be competitive in the 21st century. Measure 47 potentially poses the same threat to our future -- a slow eroding of our ability to make long-term investments -- UNLESS we adopt a different approach. And that's what I want to talk about this morning.

Martin Luther King, Jr. once said: "The ultimate measure of a man -- or of a society -- is not where they stand in times of comfort and convenience, but where they stand in times of challenge and controversy." I believe that, and although I do not underestimate the difficulties before us, I'm not here to preach doom and despair. Rather, I'm here to promote optimism and to predict success.

One reason for optimism became evident on November 5. In an election with an unprecedented number of initiatives on the ballot, Oregonians demonstrated that they are discerning and thoughtful and properly skeptical by rejecting a large number of measures that made no sense. But they also approved Ballot Measure 47.

Because the vote was so close, I think we need to ask what the voters were really saying, and we also need to ask what we're going to do about it. I want to consider each of these questions in turn, and particularly the role of state government in meeting this new challenge.

First, what did the vote mean? To begin with, it was a very close vote, which means to me that Oregonians are frustrated by increased property values and by the subsequent increase in property taxes. The concept of a property tax cap obviously appealed to many voters. At the same time, many voters were clearly concerned about a property tax cut because despite the claims of the measure's sponsors, they realized that you can't get something for nothing. That's why the measure didn't pass by a larger margin.

Over the last six months, in many parts of this state, I've repeatedly said that choices always involve tradeoffs. A choice for something is also a choice against something else. Unfortunately, campaign rhetoric does not always make that clear.

Ballot Measure Five was a choice to limit property tax rates. But it was also a choice to limit the amount of revenue available to fund our primary and secondary educational system. Ultimately, it was a choice to lay off teachers, cut course offerings, and increase class size. At the same time, as I explained earlier, it was a choice to raise college tuition and erode support for higher education. That was the trade-off involved with supporting Measure Five, but the sponsors did not present this half of the choice during the campaign.

The same is true of Ballot Measure 11. The choice to lock up violent criminals was also a choice to spend \$1 billion over the next decade on prison construction rather than on schools or infrastructure. A choice to build prisons is also a choice to site them somewhere, but now no one wants that to happen in their county. These were the tradeoffs of Ballot Measure 11, but again, the sponsors never presented this half of the choice.

The fact is, you can't just make half a choice. When the sponsors of Measure 47 asked, "Do you want your property taxes cut and capped?" 52 percent of the voters answered "Yes!" But the other half of the question should have been,

"What are you willing to do without in exchange for lower property taxes?"

Because the fact is that revenue translates into programs and services -- programs and services that citizens depend on. A reduction in revenue equals a reduction in services. And whatever else voters intended, that is the practical and immediate result of Ballot Measure 47.

Having said that, the next question is, "What do we do now? How will we meet this challenge?" Well, first it's important to recognize that Measure 47 has no direct impact on the state budget because the state doesn't levy a property tax. The direct impact will fall on that portion of our school system that is funded by local property taxes and on the city and county services and special districts that depend on the property tax. In the next two years, schools will lose about \$450 million dollars and city and county governments and special districts will lose around \$560 million.

The state does have a general responsibility to protect those programs and services that are essential to our present and future well-being. So the real question today is, "To what extent can the state replace this lost revenue and how will it be distributed?"

But remember that when we talk about using General Fund dollars to replace revenue lost to Ballot Measure 47, we must do so in the context of the impact on other budgets, like human resources, economic development, higher education and natural resources -- areas that represent important long-term investments in Oregon's future.

Clearly the state's first responsibility is to schools, especially since Measure Five moved school finance from a local, levy-driven system to a state-driven system. Our constitution also requires us to provide a uniform education to our students.

Before Measure 47 passed, I proposed using revenue from the Two Percent Kicker to invest all along the education continuum. To expand Headstart, to continue our commitment to the Education Act for the 21st Century and to high academic standards. To a tuition freeze for resident undergraduates. To stabilize salaries and retain the best faculty in our colleges and universities. To address the demand of quality graduate engineering courses. And to continue the work of linking our K-12 budget to results in the classroom. I still intend to do that. We are not going to go backward. We are going to begin to re-invest in our educational system. And we will be helped in doing this, at least this biennium, by a strong economy and by a significant increase in the forecast we expect tomorrow.

The state does not have the same obligation to fund local services. These are, by definition, a local responsibility. But they are important, and cities and counties are indispensable partners with the state in providing public safety, health services, economic development, and transportation.

With that in mind, I have taken the following steps to assist our local partners:

- First, 48 hours after the election, I initiated a conference call with the leadership of the Association of Oregon Counties and the League of Oregon Cities.
- Second, we have created a taskforce to develop implementing legislation for Ballot Measure 47. This taskforce will look at how to allocate the loses and how to define public safety and other technical questions.
- Third, I have offered the staff of the Department of Revenue to provide technical assistance to this task force and have asked the State Attorney General to offer his assistance as well.
- Fourth, I have requested the legislative leadership to move this piece of legislation through as a first order of business when the legislature convenes in January.
- Fifth, I will attempt to protect state-local revenue sharing in my upcoming budget.
- And sixth, I will do all I can to protect existing revenue-raising sources for local government.

Now let's turn to how I will approach my 1997 budget in the context of Measure 47. Notwithstanding this new challenge, I do not believe we can afford to abandon the set of investment priorities we have been discussing over the past six months: education, transportation, health care, public safety, and watershed health. We cannot afford to continue the policy of dis-investment we have been pursuing for the last six years and I have no intention of doing so.

My budget will make investments all along the education continuum from pre-Kindergarten through higher education

and lifelong learning. We will implement the recommendations of the Oregon Transportation Initiative that were announced last week. And notwithstanding the defeat of Ballot Measure 32, the roads and rails measure, we still have the responsibility to develop a way to construct and pay for a mass transit system in the tri-county area and in other growing parts of Oregon.

We will significantly expand the Oregon Health Plan. We will move forward on a coordinated effort to prevent juvenile crime. And we will continue to pursue our Salmon Restoration Strategy and our commitment to achieve the statewide water quality standards I announced two days ago.

These were my priorities before November 5, and they remain my priorities today. They were important yesterday and they are important today. They are important for Oregonians tomorrow and for our collective future. I do not intend to abandon my personal belief that our ability to carry our current economic prosperity and quality of life into the 21st Century depends on the investments and choices we are willing to make today. Ballot Measure 47 did not change any of that.

But we must understand that Ballot Measure 47 was a setback. K-12 budgets especially will be hurt in the short term. Before the election I had hoped to continue to move toward equalization and to provide assistance to flat-funded districts such as Portland. Now, those revenues, plus much of the increased November forecast, must go to make up the \$450 million loss of Ballot Measure 47.

The extent to which we can equalize, the extent to which we can help flat-funded districts, will depend to a large extent on our revenue growth in the March and May forecasts. Our strong economy is clearly going to be a help in meeting this challenge. It has helped us deal with the implementation of Ballot Measure Five and Ballot Measure 11. But we can't rely on exceeding our revenue projections every biennium. We can't bank our future solely on the anticipation of good times. If we were to have a recession at some point in the near future, we'd be looking at some real trouble. We have to plan ahead, and that is all the more reason we cannot back away from the kind of long-term investments I just outlined.

The greatest hazard awaiting us in the 1997 Legislative Session will be the enormous pressure we're going to feel to pull money out of our investment budget in order to backfill the immediate problems created by Measure 47. There will also be tremendous pressure to continue to move toward equalization and to do provide some relief for flat-funded school districts -- again at the expense of long-term investments. Our greatest challenge will be to find a way to do both -- to address present needs without sacrificing our future well-being.

Because this I believe: that our future absolutely depends on the investments we make today. Investments in our educational system to produce the workforce for the 21st Century. Investments in our physical infrastructure to ensure continued economic growth and to help us maintain our quality of life.

My budget, which I will present on December 2, reflects these priorities and the importance of maintaining some level of investment in them while at the same time responding as responsibly as possible to the immediate problems created by Ballot Measure 47. To move this agenda I will need your help, and I ask for your support. All of you here have a stake in Oregon's future. Therefore you also have a stake in the choices we make today.

Let me make this absolutely clear: I am not willing -- nor should you be -- to compromise the long-term future of this state through short-sighted reactions to a temporary setback -- for that is all Measure 47 amounts to. It is a turn in the road. It is not the end of the road. It presents a serious challenge, yes; but it will be permanently destructive only if we fail to keep it in perspective. As Martin Luther King, Jr. once said, "There are times when we must accept finite disappointment; but we must never lose infinite hope."

Thank you.

[Return to Speeches](#)

[Return to Governor's Office](#)

Governor John Kitzhaber

Choosing Oregon's Future

Thank you very much for the opportunity to be here today. What I would like to do this morning is talk to you about choosing Oregon's future. About the choices that we face in the November election and in the 1997 legislative session that will shape what Oregon looks like; choices which will determine Oregon's future in the 21st Century.

As we all know, today Oregon is doing quite well economically. We enjoy an excellent quality of life.

Since the Oregon Shines document -- the economic strategy for the Pacific Century -- that many of you worked on -- was first published in 1987, we have achieved many of our objectives.

In economic diversification, our professional and white collar workforce is the third fastest growing in the nation.

We have lowered business costs through our workers' compensation reform. As you know last week I announced that this is the seventh straight year that we have seen a reduction in workers' compensation premiums.

The Association of Oregon Industries worked with me on the Oregon Health Plan which has reduced the cost shift by bringing 130,000 Oregonians into our Medicaid program.

We're growing quality jobs. Oregon's wages in 1993 were only 89.8 percent of the national average. Today they're 94.6 percent of the national average.

We achieved, I think, an international frame of mind. We have, now, direct flights between Oregon and the Asian continent. We have, starting November 1, a direct service to Europe and our European exports have gone up 135 percent in the last five years.

I think all of you deserve congratulations for your role in achieving these economic objectives that we laid out almost a decade ago.

But there's still some areas of concern that I think we need to recognize. There's unevenness of the economic turnaround in parts of the state -- particularly those dependent on natural resources that aren't enjoying the kind of economic comeback that we're seeing in more urban parts of the state.

There are continuing social problems in the face of this tremendous and robust economy. There are the pressures of growth and the concern people have about the impact of growth on their quality of life. There's a question of whether or not Oregonians will have the ability to qualify for the good jobs that this economy is turning out. And there are growing concerns about a dis-investment in our infrastructure.

What this means is that although we have a great economy today, there is still a fairly high level of insecurity about where individuals fit into that economy.

Our challenge in 1996, is not to make the economy work, it's clearly doing that.

Rather our challenge is to keep it working and to ensure that all Oregonians in all parts of the state enjoy the benefits of that growing economy. Our challenge is to ensure that the good jobs we're developing go primarily to Oregonians and that we are able to manage growth in a way that preserves our economic opportunity as well as our quality of life.

How do we achieve that? What are the choices that we must make to secure that future?

First, we need to understand that where we are today didn't just happen. Our economic prosperity today and our quality of life are due to vision -- vision like the Oregon Shines document -- and to choices and investments that we've made in the last twenty-five years.

Twenty-five years ago we adopted a comprehensive land use planning program which, in spite of its controversy, ensures that Oregon still has choices about where and how we want to grow and the tools to manage an influx of 50,000 new Oregonians a year while still maintaining our quality of life. Very few states in this nation can claim that today.

Throughout the 1970's and 1980's we supported our transportation system -- through gradual increases in highway user taxes -- because we understood the importance of a transportation system to move goods to market and to move people to work and to school.

We supported our educational system. As recently as 1990, we spent 14 percent of our general fund on higher education. The result of this vision and this planning and these investments and these choices, is a robust economy and the great quality of life that Oregon enjoys today.

But since 1990, we've been making a different set of choices. Largely by default, we have adopted a policy of disinvestment.

Nobody stood up and said let's close parks and raise tuition.

Let's let our highway deteriorate.

Let's raise class sizes.

But that's exactly what's happening across this state today. It's happened because Oregonians have been making half choices. They've been making choices and looking at only one side of them and not the consequences.

Let me give you just four examples of what I'm talking about.

Both the 1993 and 1995 legislative sessions refused to consider an increase in the gas tax or any highway user tax to capitalize the highway trust fund -- the fund that provides the resources to maintain and build our highway system.

As a result, this fund has been flat-funded for almost four years and we're rapidly reaching a point where we can't maintain the investment that we've made in the existing road system, let alone add capacity to manage growth.

So, the choice was not to raise the gas tax. That was a choice -- apparently a politically popular choice. But, it was also a choice not to do anything about our deteriorating transportation infrastructure.

In 1990, the voters passed Ballot Measure 5 in response to a very real concern about property taxes. Ballot Measure 5, as you recall, limits the amount of money that can go from the property tax to local school districts to \$5 per thousand of assessed value. And, it provided that the state has to make up that lost revenue.

But, it provided no funding source.

As a result, since 1991, the state general fund has absorbed \$3.2 billion in revenue that it's taken out of human resource programs and higher education and transferred to local school districts.

That's why tuition has gone up 80 percent in Oregon since 1990. That's why our spending on higher education has dropped from 14 percent in 1990 to only 8 percent next year.

This comes at a time when everyone acknowledges the importance of a post-secondary education in being a productive worker in the 21st Century. Again, a choice. It was a choice to cap property taxes, but it was also a choice to dis-invest in education and in human resource programs.

Then Ballot Measure 11 in 1994, to lock up certain types of violent felons. A good objective and one we all agree with, but again there was no funding source. As a result, the state is having to build over 9,000 new prison beds at a cost of \$1 billion out of the general fund over the next ten years -- and a lot more money, long term, to operate those prisons.

We're funding that by pulling money out of education at all levels and out of human resource programs and putting that into bricks and mortar. In other words, we're taking money out of the very programs that could keep kids out of the criminal justice system so we'll have a place to put them when, not surprisingly, they run afoul of the law.

Again, a choice. A choice to build prisons and also a choice to dis-invest in human service programs and in education.

The final example is the two percent kicker law which was passed in 1978. The way this law works is as follows: at the end of each legislative session, the legislature projects how much money is going to be brought in under the existing tax system and we balance our budget to that.

If a robust economy brings in more than two percent above that projection, all of that money is rebated to personal and corporate taxpayers.

The objective of the kicker law was to keep the state from building itself up in good times to the point that it couldn't support itself in bad times; which is a reasonable objective. The practical effect of the kicker, however, is to keep the state from re-investing the proceeds of a growing economy in the infrastructure on which that economic growth depends.

In fact, the analogy would be a large company, like Intel, passing a corporate policy that says they can't invest any profits in plant improvement, in equipment, or in workforce development. And there isn't a successful private industry in the late 1990's that can succeed with that kind of corporate policy.

In fact, the Oregon Shines document in 1987, recommended that the surplus kicker be re-directed into the budget to manage the consequences of growth. That's not what we have done.

This year, in the middle of perhaps the biggest industrial expansion in this state's history, we are rebating \$330 million to taxpayers while at the same time raising tuition again, increasing class sizes and laying off teachers throughout the State of Oregon, considering the closure of 60 parks because of lack of operating revenue.

You have to ask yourself "What is wrong with that picture?" What's wrong with that picture is that although we are doing well, we are not making the choices and the investments needed to sustain our economic growth and our quality of life.

So, in 1996, Oregon finds itself at a crossroads. Our challenge, really, is choosing Oregon's future and what kind of future will we choose? We have the opportunity to make that choice in the November election and in the 1997-99 legislative budget.

I will be bringing to the Legislature a five point agenda: education, transportation, health care, public safety, and watershed health -- which includes our coastal coho salmon restoration efforts, our clean streams effort and eastside forest health. This five-point agenda involves choosing Oregon's future.

I will propose and advocate for choices which I believe will allow us to continue our economic prosperity and to continue to maintain our quality of life into the 21st Century.

Let me use the top three priority items to illustrate the choices that we face: education, transportation, and health care.

In education, I believe that within the context of the next legislative budget, we can invest throughout the education continuum, by which I mean pre-kindergarten, K-12, post-secondary, and lifelong learning opportunities.

We can expand Headstart from the current 29 percent of eligible kids up to the 40-50 percent range. In K-12, we can deal with the problems of flat-funded districts like Portland without abandoning our commitment to move toward equalization. We can continue our efforts to fully implement the Education Act for the 21st Century, and we can continue our efforts to do a better job of linking our budget to the outcomes we expect in our school districts.

In post-secondary education, we can move toward a tuition freeze to ensure that Oregon high school graduates can afford to go to an Oregon post-secondary institution. We can stabilize the quality of our teaching faculties. We can deal with the question of geographic access, the displaced millworker in Roseburg who needs retraining and can't afford the time to travel to Eugene. We can bring the products of our higher educational system onto the campuses of our community colleges with existing technology.

And finally, we can do a better job of connecting the product of our post-secondary system with our economy. Not just graduate engineering programs for the Portland Tri-County area, but the needs of a growing agricultural food processing industry as well.

We can do all those things if we are willing to make two choices. One in November involves the defeat of Ballot Measure 47, the so-called "cut and cap" property measure which would take over \$250 million out of school districts and at least that much out of the ability of cities and counties to provide local services.

The second choice is to re-direct the kicker. When I talk about the kicker, I'm talking about the entire two percent kicker, corporate portion as well as the individual portion. Not to repeal it, but to re-direct it into our educational system.

I recognize that the issue of the kicker is controversial and I simply ask that you remain flexible, you remain willing to involve yourselves in a debate about this and the choices and the investments that are involved.

The second priority is transportation and that, too involves two choices. One at the ballot, one during the session. At the ballot it involves passing Ballot Measure 32, the "roads and rails" measure that provides resources to complete the Portland light rail project and provides dollars for roads and rail projects in rural Oregon. This is important because it provides us with a non-gas tax related revenue source for the 21st Century.

The second choice is to adopt the recommendations of the Oregon Transportation Initiative that we've been working on for almost a year, chaired by former governor Neil Goldschmidt. This will require an increase in highway user fees and it will help us to maintain our existing infrastructure.

There will be recommendations to make the system more efficient. Recommendations to move decision making to the regional level, to maintain and preserve our base system, and to use our transportation system as a tool, not just to build roads, but to manage growth in a way that preserves economic opportunity and quality of life.

Transportation -- two choices -- passing Measure 32 and supporting the Oregon Transportation Initiative in the upcoming legislative session.

The third priority area is health care -- expanding the Oregon Health Plan.

As you know, the Oregon Health Plan has expanded coverage to over 130,000 Oregonians. But there are still 400,000 Oregonians, most of them workers and their dependents who don't have access to basic health care services.

To make that expansion requires the passage of Ballot Measure 44, which I know your association has endorsed, to raise the tobacco tax to expand coverage to those below 200 percent of the federal poverty level.

Why is this important? Well, first of all, a healthy workforce is a productive workforce. Second, the more we can

expand coverage, the more we reduce the cost share from the uninsured onto the private sector -- helping us reduce the cost further of doing business in the state of Oregon.

Third, it's important for our welfare-to-work program. In the first four months of this year we have reduced our welfare rolls by 15 percent which reduces the cost to government and increases the number of people in the workforce who are paying taxes.

This is due in large part to the fact that people under the Oregon Health Plan can now go out and get a job without losing health care benefits for themselves and for their families. Further expansion of the health care program is important to continue that move from welfare to work. And finally, raising the cost of tobacco products is perhaps the most effective way to keep young people from beginning to smoke in the first place.

These are the choices that I believe we must make. But whatever we choose, we have got to make whole choices and that, quite frankly, is not how ballot measures in particular have been presented to us over the last six years.

Ballot Measure 5, Ballot Measure 11, and now Ballot Measure 47. Do you want your property taxes cut? Yes. Do you want to lock up violent criminals? Of course. Do you want your property taxes cut some more? Yes.

But the yes has to be tempered by the consequences of that vote. By the trade-off. The other half of the question is, "What are we willing to do without?" What are we willing to do without to lower our property taxes? What are we willing to do without to build a billion dollars worth of prisons?

What we're really talking about here is accountability. We should not just expect accountability, we should demand it. We should demand that of our governor, we should demand it of our legislators, and we should demand it of each other.

We need to make it clear and explicit that a choice against Ballot Measure 44, the tobacco tax, is also a choice to allow 400,000 Oregonians to continue to go without health care coverage. To undermine our welfare-to-work efforts and to continue the cost shift onto the business community.

We need to make it clear and explicit that a choice against Ballot Measure 32, the roads and rail measure, and against the transportation initiative and against its funding source, is a choice to allow our transportation infrastructure to continue to deteriorate. To allow the congestion and gridlock to grow around Portland, and in Bend, and in Medford, and on the road between Salem and the coast.

We need to make it clear and explicit that a choice against a responsible modification of the 2 percent kicker is a choice not to invest the proceeds of the Oregon economy in the infrastructure on which that economic growth depends.

And, we need to make it clear and explicit that a choice for Ballot Measure 47, the new property tax limitation measure, is a choice to continue to raise tuition, a choice to continue to lay off teachers and increase class size, and a choice to continue to dis-invest in our future.

Anyone who tells you that there is no trade-off involved here, that these choices involve no sacrifices and no consequences, that you can get something for nothing, is not telling you the truth and has not been living in the same state as the rest of us for the past six years.

Let me make it clear that the world is not going to end if we don't choose to make these decisions. Schools are not going to collapse immediately if we choose to pass Ballot Measure 47, but there will be a consequence and we must be willing to be accountable for it.

I for one refuse to stand by and watch while this great state moves slowly, admittedly, but surely I promise you, toward what Churchill called a stairway to defeat.

As I paraphrase Churchill, we are descending a stairway that leads to a dark gulf. It is a fine broad stairway in the beginning, but after a bit the carpet wears and a little further on there are only flagstones, and further on still these break beneath our feet.

Well, that's not the path that we want this state to follow. I think all of us have to make sure that the choices we make from now on, lead this state up to where our visions are within our reach. Together we can choose a future for this state that will take us into the 21st Century -- united, with a high quality of life, with the kind of economic prosperity we enjoy today.

Thank you.

[Return to Speeches](#)

[Return to Governor's Office](#)

Governor John Kitzhaber

**EUGENE CITY CLUB SPEECH
AUGUST 9, 1996**

I appreciate very much the opportunity to be here again and I'd like to take the next 20 minutes and talk to you about my agenda for my remaining years as governor.

It's not so much a political agenda as it is something very personal to me. It involves a number of specific things that I believe we must do if we're going to ensure that Oregon remains one of the best places in the world to live.

I also must tell you that I come here today with a growing sense of urgency. Even though we appear to be doing well as a state, I believe we are on a path that will ultimately sacrifice the very qualities that makes Oregon so special.

When I ran for governor I was convinced of two things. The first was that Oregonians, wherever they live, or work, or go to school, regardless of their political leanings or their ethnic background, all share a common vision of what they want this state to be and what they want their communities to be. The second conviction was that the choices that we've been making in recent years are leading us away rather than toward that vision.

The first conviction -- that we all share a common vision -- is one that has been reinforced over and over again for me in the last 18 months as I have traveled to virtually every part of this state.

Wherever I go people tell me the same thing. They want good schools and good roads and good jobs. They want safe, livable communities. They want a clean environment and they want to be able to reach out a hand to vulnerable citizens -- whether those are kids or the frail elderly.

So, there is, in fact, a common agenda -- a common set of values in Oregon communities -- as much as partisan politics would try to obscure that fact. It is I believe an agenda that we have to address.

The second conviction that recent choices promise to destroy the very things that make Oregon worth living in is less obvious.

It's less obvious because Oregon is doing so well economically. How could we possibly be making the wrong decisions when we're doing so well?

What we need to understand is that the economic prosperity, and to some degree the quality of life that we enjoy today, are due, in large part, to choices and investments that we made over the past 20 to 25 years.

I think the evidence speaks for itself. In the late 1960's, about 25 years ago, we passed a comprehensive land use planning program. That program has guaranteed that we still have choices about where and how we grow, and has armed us with the tools to manage an influx of 50,000 people a year in a way that does not destroy our quality of life. There are very few states in this country that can say that today.

Throughout the 1970s and 1980s we supported our transportation system through progressive increases in highway user

taxes. We did that because we understood that our economy depends on a transportation system to move goods to market, to move people to work and to school.

We also supported our educational system. As recently as 1990 we were spending 14 percent of the General Fund on higher education. Today we're spending eight percent.

When I was growing up and when I entered public office, we knew what we valued in this state. We made the choices and investments necessary to secure it and we were also honest enough with ourselves to recognize that if we failed to make those investments and those choices, that we would put what we valued at risk.

In other words, we understood the connection between investment and prosperity. The individual who probably articulated best the nature of that connection was former Governor Neil Goldschmidt in a document called Oregon Shines. He called this connection the circle of prosperity and I want to read you just one paragraph from that document.

"The community is the main supplier of business. It provides workforce, land, schools, street, water, and government services. Business, in turn, provides a strong economic base, jobs, goods, services, and tax revenues. When these sectors -- public and private -- support each other the economy will prosper and the principle way they can best support one another is for each to maintain and invest in its own capacity."

It is critical that Oregon return to the circle of prosperity by making those investments in people, in community services and in facilities that will provide a base for long-term business growth.

Well, until about six years ago, that's exactly what we did here in Oregon. We invested. We invested in public services. We invested in facilities and in people. In a real sense we invested in our future. And the result is the economic prosperity that we are enjoying in 1996.

But, over the past six years we've been making a different set of choices. Since 1990, in this state, we have been following a policy of dis-investment.

We did it by default.

Nobody stood up and said "Let's build prisons and close parks."

Nobody stood up and said, "Let's increase tuition 80 percent over the next six years and see what happens."

Nobody said, "Let's lay off teachers and increase class size."

But, that is exactly what's happening today in Oregon.

Let me site just four examples of these kinds of choices that we have simply have got to stop making. They are the depletion of the Highway Trust Fund, Ballot Measure Five passed in 1990, Ballot Measures 11 & 17 passed in 1994, and the so-called two percent "kicker" law.

First, in both the 1993 and 1995 legislative sessions, the legislature refused to increase highway user taxes. The result is that the Highway Trust Fund that maintains our existing highway system has been flat-funded for almost four years. So, we are rapidly reaching a point where we don't have the ability to maintain our existing transportation infrastructure, let alone expand it to accommodate growth.

In 1990, voters passed Ballot Measure Five, admittedly, because of a very real problem with property taxes. Now, as you recall, Ballot Measure Five limits the amount of property tax that can go to local school districts to \$5 per thousand of assessed value and it requires the state to make up revenue lost to local school districts.

But, the other side of the coin is that there was no funding source associated with this Ballot Measure. So, the state has been drawing money out of higher education, community colleges, human resources, natural resources, and redirecting them into K-12 education.

Since 1991, we have had to absorb \$3.2 billion of lost property tax revenue at the local level inside the state budget. That's why spending on higher education has gone from 14 percent of the state budget in 1990 to eight percent in 1996. That's why tuition has gone up 80 percent in the last six years. There was a choice and a trade-off involved with voting for Measure Five, but I don't think Oregonians understood the nature of that choice at the time they cast that ballot.

In 1994 we passed Ballot Measure 11 and Ballot Measure 17. They have the same basic problem. Ballot Measure 11 requires mandatory minimum sentences for certain violent offenders who ought to be locked up, no question about it. Measure 17 requires that all inmates work.

Those are both good objectives and we are going to implement them. But, again the catch was that there was no funding source involved. So, the state is having to invest over \$1 billion in the next 10 years constructing another 9,000 prison beds and a lot more money after that to operate them. The cost of implementing the inmate work program this biennium is \$23 million.

So, the bottom line is that this is another unfunded mandate and we have to pay for it by shifting funds out of education at all levels and human resources and into prisons. In other words, out of those programs that could keep people out of the criminal justice system in the first place, in order to lock them up after they've committed the crime. Another trade off. Not one I think most people understood when they voted for Ballot Measure 11 and Ballot Measure 17.

Finally, let's look at the two percent kicker law, which was passed in 1979.

How the "kicker" law works is as follows: The way we put our budget together in Oregon is we make a revenue forecast at the end of the legislative session -- how much money we think the current tax system is going to bring in. If a good economy brings in more than two percent over that forecast, all that money is rebated to the citizens through the kicker.

The idea of the kicker was to prevent the state from building itself up in good times beyond the point where it could sustain itself in bad times, which is a good objective. But, the fact is that the kicker, from a practical standpoint, prevents us from reinvesting the proceeds of a good economy into the infrastructure that made that economic growth possible in the first place.

The analogy would be a private sector business that adopts a policy that says we can't spend any of our profits on workforce development or plant and equipment. I defy you to point to a successful business that operates under that principle in 1996 in this state or any other state.

But, here in the state of Oregon, this biennium, we rebated \$330 million through the kicker law while at the same time, raising tuition (again), laying off teachers and raising class sizes in districts throughout Oregon, and risking the closure of more than 60 parks.

What is wrong with this picture? In the midst of perhaps the biggest industrial expansion in this state's history, instead of taking the steps to sustain and extend it, we are taking steps that is clearly going to short circuit it. That is not the Oregon that I'm used to and this is not the kind of thinking or the kinds of decisions that made this a great state.

The Oregon people have a long history of predominately sound choices. It's part of who we are and how we got here. It's a part of our tradition. It's a part of our heritage. And, if I have anything to say about it, it is also going to be a part of our legacy. I think that's my responsibility as governor.

But, I strongly believe that if we want to do that, we have got to choose a new direction. So, what I'm asking you to do today is to join me in embracing a different set of priorities and a different set of choices.

I have a concrete set of proposals that are built around five priorities: education, transportation, health care, public safety, and watershed health. Those are the areas and the issues that Oregon communities hold in common.

I want to take just a moment and go over them but, before I do I want to say that these proposals do not require a broad general tax increase. They will require some targeted user taxes, which I'll talk to you about in a moment.

But, the point is, this is not a debate about new taxes. This is a debate about different priorities and it's a debate about different choices, particularly when it comes to ballot measures. Most of all it is a debate about being accountable.

The first priority is what I call the Education Continuum -- a recognition that we have to make investments all the way from Pre-Kindergarten, through K-12, to higher education, to post-secondary education, to lifelong learning so that every student and every Oregonian has the tools to become and remain a successful citizen of the 21st century.

To do that we have to do three things. First, we have to re-examine our Pre-Kindergarten programs and increase capacity so more kids are ready to learn when they get to kindergarten.

Second, we have to strengthen our K-12 programs by fully implementing the Education Act for the 21st Century. Second, determining how much it costs to deliver that product or that outcome in each district around the state -- changing the definition of equity from per pupil expenditure to an outcome, and dealing with the problem of flat-funded districts without abandoning our commitment to equity.

And finally, we have to strengthen our commitment to post-secondary education by reducing barriers to access, whether those are financial -- i.e. tuition -- or capacity, or geographic. We have to maintain the quality of our faculty and we have to make a better connection between post-secondary education and the workforce needs of Oregon industry and business.

The second priority is transportation -- that means implementing the Oregon Transportation Initiative that we've been working on since January.

I'm not going to detail that now, but I would be happy to answer questions about it. I want to simply say that it's not just about building roads, it is about fundamentally changing how we view our transportation system -- from a way to lay concrete to a means to improve community livability and economic opportunity. In other words, creating jobs, managing growth without sacrificing our quality of life. This priority will require an increase in highway user taxes.

The third priority is health care -- expanding the Oregon Health Plan through the tobacco tax that will be on the ballot in November.

This is important for three reasons. First, by expanding coverage you reduce the cost shift to the uninsured onto the business community. So, you reduce a very real cost of doing business.

Second, it's necessary to continue our very successful Welfare-To-Work Program. We have reduced welfare roles 15 percent in the first four months of this year, largely because low-income people can now get a job and not lose health care benefits for themselves and their kids. The more people you move off welfare into the workforce, the more you reduce government expenditures and the more people you have to pay back into the system.

And finally, it is very clear that increasing the cost of tobacco is one of the most effective ways to reduce the incidence of smoking among juveniles.

The fourth priority is public safety -- that involves focusing on juvenile crime prevention and keeping kids out of the system in the first place.

It also involves reducing the cost of incarceration -- that is, trying to reduce the cost of building and operating prisons for those people who get into the system.

Finally, it means re-evaluating Ballot Measures 11 and 17 -- not to circumvent the will of the voters, but to see whether we can do it in a way that's more effective and cost effective.

Let me give you one example. Today, under Ballot Measure 11, two 15-year-olds, with no previous arrests, steal a skateboard. They each get five years in prison. The last three years in an adult prison. So, at 20, after three years in the adult pen, you boot them back out into society with no high school education.

I would submit that there is a cheaper and better way to have a swift, certain sanction for those kids in the community that wouldn't cost us as much and would give a much higher likelihood that they wouldn't do it again. That's the kind of thing I'm talking about.

The last priority is watershed health. That involves, essentially, clean streams, water quality issues, it involves forest health and it involves our efforts to recover our native runs of salmon and steelhead.

So, in the simplest of terms, this agenda is a strategy to increase investment in education, transportation and watersheds by reducing the cost of public safety and welfare and by asking Oregonians for more resources. I want to make it clear again that what I'm not talking about is a major, general tax increase in 1997 -- I am talking about changing our priorities.

I am talking about being accountable and I'm talking about some targeted user taxes -- an increase in highway user taxes to fund our transportation system and the tobacco tax to expand the Oregon Health Plan.

The two percent kicker is not a new tax. It is money that's brought in under the existing tax system. I'm not proposing that we repeal it. I'm proposing that we modify it so that we can invest the proceeds of a growing economy in the infrastructure on which that economy depends.

I think our greatest challenge, for the rest of this year and through the next session, is to demonstrate to Oregonians that in order to achieve this common vision that you can find throughout the state in communities all over Oregon, we have to embrace a different set of priorities, make a different set of choices and provide some additional resources. To pretend otherwise would be dishonest and I think we've had enough of that.

Instead, I plan to use the next budget process and, quite frankly, the forum of this office, to try to make those choices as clear and as explicit as I possibly can. Because I believe that if the choices are presented clearly and honestly that Oregonians and the Oregon Legislature will make the right choices.

Now, this election cycle, we have yet another set of critical choices coming toward us, including Ballot Measure 47, the so-called "cut and cap" measure -- another property tax limitation measure. We have to understand what that choice means.

I can guarantee you that that is not how the proponents are going to present it. They will present it as a half choice just like Ballot Measure Five and Ballot Measure 11 before it. Do you want your property taxes cut? Yes. Do you want to lock up violent criminals? Of course. Do you want your property taxes cut some more? Yes!

But, that's only half the picture. The "yes," -- the choice for the measure -- has to be balanced with the consequences and impact on other priorities and other programs; because the other half of the question is, "What is the trade off?" What are we willing to do without in order to lower our property taxes? What are willing to do without in order to build a billion dollars worth of prisons?

We must demand accountability. Not only of our governor and our legislature, but we have to demand accountability of each other. We have to make it clear and explicit that a choice against the Oregon Transportation Initiative, and its funding measure, is a choice for continuing to allow our infrastructure to deteriorate. It's a choice for the kind of gridlock on the road between Salem and Lincoln City. That's the choice.

We have to make it clear and explicit that a choice against responsible modification of the two percent kicker is a choice to continue not to invest the proceeds of a good economy in the infrastructure on which that economic growth depends.

We have to make it clear and explicit that a choice against the tobacco tax is a choice to continue to allow 400,000 Oregonians to go without health insurance with all the social and economic consequences that flow from that.

And, we have to make it clear and explicit between now and November that a choice for Ballot Measure 47, the "cut and cap" measure, is a choice to continue to lay off teachers, a choice to continue to increase class size, a choice to continue to raise tuition, it is a choice to continue to dis-invest in the future of this state.

And, anyone who tells you that there is no choice involved, that there's no trade off, and that you can in fact get something for nothing hasn't been living in the same state that I've been living in for the last 30 years.

But, the choices I have outlined for you today are the real choices. Those are the real choices that we have before us. We have to have the courage and the will to talk about those choices to Oregonians and to the legislature in 1997. To do so, we have got to be willing to challenge the seductive, but utterly irresponsible promise that you can have something for nothing.

For six years we have quietly avoided a direct challenge to that viewpoint. We have disregarded the policies and the programs on which our current prosperity rests: our educational system, our transportation system, those programs that make our workforce healthy and productive.

How long do you think this prosperity can last without the foundation that supports it? How long is it going to be before we're going to take a stand? How long is it going to be before we hold ourselves accountable?

I don't think I exaggerate when I say this is a fight for the heart and soul of Oregon. It's a fight about our values. It's a fight about our future. It's a fight about our legacy. And, it's a fight we cannot win unless we are willing to make honest choices. Unless we are willing to recognize that all choices involve trade-offs. A choice to fund one thing is at the same time a choice to not fund something else. We have to be willing to be accountable. Not only for what we choose to do, but also for what we choose not to do.

Let me just close by saying that the world's not going to end if we continue to dis-invest. The schools aren't going to collapse immediately if Ballot Measure 47 passes in November. But, there will be a consequence.

I refuse to stand by and watch this great state walk slowly, admittedly, but surely, I promise you toward what Winston Churchill once described as the stairway to defeat. To paraphrase Churchill, "We've been descending a stairway that leads to a dark gulf. It is a fine broad stairway at the beginning, but after a bit the carpet wears. A little further there are only flagstones -- a little further on still, these break beneath your feet."

That's not the stairway I want to see us take in Oregon. Instead, from now on, all of us, have to make sure that however steep the climb, however sharp the turnings, however narrow the way, the staircase that we take leads us up for our visions that are within reach. I can't do this by myself. But, together we can do it and I am counting on your support.

Thank you.

Governor John Kitzhaber

Transportation Initiative/SAC Report Remarks

Let's get started here this morning. As many of you know, earlier this month, the State Advisory Committee produced a report which was a compilation of the collected wisdom of the State Advisory Committee and also five regional advisory committees. They had been working for about six months assessing community concerns and needs in the area of transportation, livability, and economic opportunity. They have crafted these into ideas and recommendations on how we can improve the way we move people and products in the State of Oregon.

One of the most important and compelling findings of this report is that we have to cease viewing the transportation system as merely something to move people or products from Point A to Point B and begin to look at this rather, in a much larger context. Not just about roads and bridges, but about a system that impacts our economy, the way we live in our communities, the way we manage growth.

I am very pleased with the recommendations in the report and with the tremendous level of consensus that was produced throughout the state in the development of this document. It allows me to set out an action plan to improve and change our transportation system and establish some goals for our system that will carry us into the 21st Century.

There are four elements of the report that I want to touch on briefly today. The first is the importance of efficiency measures. It is very clear that we didn't want just a list of highway projects when we embarked on this adventure, we wanted some understanding of the funding gap between what we needed and what we had, and then we wanted the committees to try and find out how we could narrow that gap through the use of efficiency measures. It is clear there are a number of improvements we can make in order to make our transportation dollars that we do have go further. And that's the first order of business before we talk about funding.

Today, I am directing the Oregon Department of Transportation, in cooperation with their local partners, to undertake a strategy that will obtain an annual, ongoing system-wide 1 percent annual efficiency improvement in the cost of preservation and maintenance of our highway system. I am also asking the cities and counties to work towards finding alternatives to using high-cost, high-volume roads as routes for local traffic, thus recapturing some capacity of our existing highway system.

I am also asking ODOT to speed up the use of Intelligent Transportation Management. An example of which would be the reader boards you see around the metropolitan area that tell people when there is congestion or a wreck and can, as a result, reduce travel time and reduce congestion.

These are just a few of the action items we'll be taking immediately. I will be asking the State Advisory Committee to develop a work group to more fully flush out the efficiency measures that can be taken both by the state and by the city and county governments.

The second element I want to touch on is the concept of a base system. There is a growing realization that we have to stop viewing our transportation system as a highway owned by the state, and one owned by a city, and one owned by a county. These are artificial distinctions when you are actually using the highway. So there is a desire to define some

base transportation system and make the preservation and maintenance of that base system the highest priority for any additional resources we bring into the system.

The third is a very exciting concept, and that's the concept of using livability and economic opportunity criteria for future expansion. That is, if we are going to add capacity to the highway system, we should do that based on some criteria so that expansion meets certain objectives. A very good example would be a community that builds a bypass. One criteria may be strict access management, so that bypass continues to serve as a bypass and doesn't become just another strip development, creating all the congestion that it was built to prevent.

The final area I want to touch on is the concept of regional decision making. The committee felt that it was very, very important to recognize that decisions affecting our transportation system can't be made in isolation in Salem, or in any other community around the state. Because we have such an inter-linked and inter-dependent system, we have to develop some regional way to make decisions, particularly when we are expanding capacity that serves both the local and regional interests, but also the statewide interest.

So we will be establishing four working groups. One to deal with the efficiency measures, one to work on defining a base system, one to look at the development of livability criteria and regional decision making, and finally, one to look at funding options.

I want to close by making it very clear that although there will be a funding gap between our current needs and what we have today, we believe we can significantly narrow that gap by the application of efficiency measures. We are going to be looking at the development of some additional resources and how that would be structured to deal, at the very least, with the preservation and maintenance of the base system.

Governor John Kitzhaber

Oregon Business Council Speech
Critical Choices for Oregon's Communities

July 17, 1996

I'd like to describe my agenda for the next year and why that agenda is important for Oregonians, why it's important to you, and what we all have to do to achieve it.

When I ran for governor I was convinced of two things. I was convinced that Oregonians have a common agenda-- that there is in fact an Oregon Community Agenda. And secondly, that the choices we've been making in the recent past are leading us away from our ability to achieve this agenda.

That viewpoint has been confirmed and reconfirmed for me over the last 18 months as I have traveled to every part of this state. No matter where I go, people tell me the same things: they all want good schools, good roads, good jobs, safe, livable communities, they want a clean environment, and they want to be able to take care of vulnerable citizens.

Now the way those common aspirations, or common concerns, manifest themselves is different from one part of the state to the next. So, the way we develop solutions has to be different.

For example, the transportation challenges in Beaverton are different than the transportation challenges in Coos Bay. Public safety challenges in Woodburn are not the same as those in Burns. And clearly, the educational challenges in Portland are different than those in Madras.

But, the fact is these six areas constitute the basis for a common vision for Oregon and provide the foundation for common action. My priorities are essentially drawn from these areas of common concern. Before I describe my policy priorities, it's important to us to understand why they are important.

We all recognize that Oregon is doing well economically. Our challenge is to continue this economic prosperity, is to make sure that all parts of the state and all individuals in the state benefit from this economic prosperity and it is to maintain our quality of life.

The first thing we have to recognize is that the quality of life that we enjoy today and the economic prosperity that we are enjoying today didn't just happen. They are, to a large extent, the result of policy decisions and investments made over the past 20 years or so.

For example, 25 years ago we created our comprehensive state land use planning program which has guaranteed that we still have choices as to where we want to grow and how we want to grow. We've been armed with tools to manage growth in a way that does not deprive us of either quality of life or of economic opportunities.

Throughout the 1970s and 1980s, Oregonians supported the transportation system through progressive increases in the highway user fees.

We also supported our educational system. People need to remember that even in the depths of the recession in the early

1980s, under the leadership of Governor Atiyeh, the legislature enacted an income tax surcharge in order to maintain investments in our vital public services, including education, without a referral to the voters and with very little controversy.

What we're really talking about here is the connection between investment and prosperity. This connection between investment and prosperity was described probably best by former Governor Goldschmidt in the document called *Oregon Shines*. I want to read to you the basic statement from that document. It reads:

"The economic strategy proposed here recognizes the vital circle of interdependence between healthy communities and a prosperous private sector. The community is the main supplier of business. It provides workforce, land, schools, streets, water, and government services. Business, in turn, provides a strong economic base. Jobs, goods, services, and tax revenues. When these sectors, public and private, support each other, the economy will prosper. The principle way each of these sectors can best support one another is for each to maintain and reinvest in its own capacity. It is critical that Oregon return to this circle of prosperity by making the investments in people, community services, and facilities that will provide a base for long term business growth."

Well, until the last five or six years, that's exactly what Oregon did. We invested in our public services, we invested in our facilities and we made investments in our people and the result is the economic prosperity we're enjoying today.

But, over the last six years we have failed to do that. Since 1990, we have had a defacto policy of dis-investment in Oregon. Four examples of that are the depletion of the Highway Trust Fund, Ballot Measure 5, Ballot Measure 11, and the so-called two percent kicker.

Let me just take a moment and describe those so you can see this picture more clearly.

In both the 1993 and 1995 sessions, the Oregon Legislature refused to pass an increase in highway user fees. As a result, the Highway Trust Fund has essentially been flat-funded now going on four years and we are rapidly approaching the point where we will not have the resources to maintain the existing system, let alone, add capacity in order to manage growth. It's a very, very dangerous situation.

Ballot Measure 5 in 1990 represents another disinvestment policy. Measure 5, as you recall, caps the amount of money from the local property tax that can go to schools at \$5 per \$1,000 of assessed value and requires the legislature to make up any lost revenue because of the measure.

So, as a result there's been a progressive shift inside Oregon's budget. That shift has come out of higher education, human resources, and natural resources, and into K-12 education. Since 1991, the state has absorbed \$3.2 billion of lost local property tax revenue which has constituted this huge internal shift.

In 1994, the voters passed Ballot Measure 11 which prescribes mandatory, minimum sentences for a whole host of felony crimes, including those crimes committed by 15, 16, and 17 year olds. Because there is no funding source associated with this measure, it has necessitated the building of 9,000 new prison beds over the next ten years at a cost of over \$1 billion. In order to finance that we're seeing a shift out of education, human resources, and natural resources, and into public safety.

Finally, we have the two percent kicker that was passed in 1979 and first "kicked" in the 83-85 biennium. It was designed to prevent the state from building up a budget surplus -- what some of us like to call the beginning balance.

Essentially, this law says that if the revenue forecast on which the budget is predicated is exceeded by actual revenues by more than two percent, then the entire new revenue that has been generated, kicks back to people and businesses.

What this amounts to is, essentially, a policy that says the state cannot reinvest the proceeds of a growing economy in the infrastructure of which that economy has been built.

And that would be analogous to private sector corporation adopting a corporate policy that says you can't take a portion of your profits and reinvest them in workforce or plant equipment. There just simply isn't a successful business in

America that operates on that principle.

Since 1983, we have rebated over \$870 million through this two percent kicker. \$330 million this biennium. A biennium which we are contemplating the closure of 63 parks because of lack of operating revenues, laying off teachers in the Portland School District and jacking up tuition again, putting a higher education out of the financial reach of a large number of Oregon students.

In the midst of this huge economic boom, we have a policy that is basically sucking resources out of the infrastructure of which our economy has been built.

So, our challenge today, and I think my responsibility as your governor, is to try to turn this around.

If we're going to turn it around it means we've got to embrace a different set of priorities and we've got to make a different set of choices. And the priorities I'm going to suggest to you will do just that. I believe that they will reverse this policy of dis-investment and they will reconnect or heal this circle of prosperity described in the *Oregon Shines* document.

Before I describe my agenda, however, I just want to stress that we can accomplish it without a general tax increase. I will be asking Oregonians to support a cigarette tax to help fund the Oregon Health Plan and to support greater transportation user fees. With those exceptions, we can accomplish this agenda within existing resources, if we are willing to change priorities in the state's budget.

There are really four elements to these policy priorities.

The first is the *education continuum* -- the need to make investments for pre-kindergarten through K-12 to post-secondary education to life long learning to ensure that each student has the tools necessary to succeed and be a successful part of the workforce of the 21st century.

There are four elements to this continuum. One is an examination of our pre-kindergarten program to see how we can expand capacity for Headstart type purposes --both through the General Fund contribution and for getting the private sector to do more of those services on campus.

The next portion has to do with K-12. That involves a local funding option, to deal with short term problems faced by districts like Portland and secondly, an effort to determine how much it costs, on a district by district basis, to give children the certificates of initial and advanced mastery.

In other words, how much does it cost to implement the Education Act for the 21st Century? That's the piece that will go into play in the 97-99 biennium.

The third component has to do with higher education. It involves looking at access, reducing financial barriers to access, geographic barriers to access, expanding capacity to meet the large number of high school graduates we expect to enter our system in the next five years, maintaining faculty quality, and, finally, doing a better job of connecting the product of our post-secondary system to the workforce needs of Oregon business and industry.

The second element is *public safety*.

My agenda will involve a focused effort on juvenile crime prevention to reduce the need to build all these prison beds and an evaluation of both Measure 11 and Measure 17 to see if there's a way that we can implement the will of the voters, but in a way that doesn't cost us as much, and, therefore, shifts some of those resources internally out of public safety and into the education category.

The third policy priority is *expansion of the Oregon Health Plan*.

This is very important in terms of removing or reducing the cost shift that currently the business community bears for those who are uninsured and it's also a key element of our successful welfare-to-work program under the Oregon

Option in which we are moving people off of welfare and into the workforce. Partly, because they can now go into that workforce and raise their wages without losing their health care benefits for themselves and for their children.

And the final piece of this, is my *transportation initiative*.

The fact of the matter is this involves, not simply a strategy to build more roads, but how do we fundamentally change the way we view our highway system. It prescribes that we begin to view it as a means to an end -- not an end in itself. The end being maintaining economic opportunity and livability on a regional basis.

This will clearly involve some additional resources, but we're starting with efficiency measure. We're starting with thinking smart, planning smart. But, there will also be some unmet capital need that will have to be addressed.

In short, the strategy is to increase our investments in transportation and in education by reducing our expenditures in public safety and in welfare and by asking Oregonians for more resources.

The challenge we face, between now and the next legislative session, is to demonstrate to Oregonians that in order to achieve our vision and to sustain our current economic well-being, we have to choose a different set of priorities and we are going to need some additional resources.

Now, I plan to use the budget and the electoral process as a tool to frame these choices. Because I believe that if the choices are framed correctly, legislators and Oregonians will make the right choices. So, what we're presenting to people are the real choices that are before us.

That's the lie of Ballot Measure 5 and the lie of Ballot Measure 11 and, quite frankly, the lie of the two percent kicker. It is a half of a choice. Do you want your property taxes capped? Yes! Do you want violent criminals locked up? Yes! But, the yes has to be tempered with the implications in terms of other priorities and other budgets.

We have to demand accountability. We have to make it explicit and clear that a choice against the Transportation Initiative and its funding mechanism is at the same time a choice to allow our current transportation infrastructure to deteriorate and a willingness to assume the economic consequences of that deterioration.

We have to make it explicit and clear that a choice against modification of the two percent kicker is a choice to refuse to invest the proceeds of a growing economy into the infrastructure on which that growth is predicated.

We have to make it clear and explicit that a choice against responsible modifications of Ballot Measure 11 and Ballot Measure 17 is a choice to continue to lay off teachers in the Portland School District -- a choice to continue to increase tuitions in our colleges and our universities.

These are the real choices that we have to have the courage and the willingness to present to Oregonians and to the legislature.

But, as we embark upon this, we have to recognize that it's not going to be an easy or a popular message. It's going to be a message that's made more difficult by the simplistic and unaccountable rhetoric of the architects of our current disinvestment policy. I'm talking about the people who have been preying on the fears and frustrations of Oregonians, who have been exploiting our differences, who have been offering half truths and deceptive solutions, but at the same time offering absolutely nothing to bring us together, to build on our common aspirations or to secure our common future.

I am tired of seeing this state cowed by people who have absolutely nothing positive to offer. I think it's time that we take these people and that philosophy head on. The philosophy that you can have something for nothing. The philosophy that doesn't give people clear choices and doesn't hold itself accountable enough to talk about the consequences of the choices we are making. That's the challenge that we have to take on. I can't do it by myself. I'm counting on your help in the months ahead.

[Return to Speeches](#)

[Return to Governor's Office](#)

Governor John Kitzhaber

BLM Speech

It's a pleasure to join you in celebrating the 50th anniversary of the Bureau of Land Management. For half a century now, the BLM has been entrusted with the management of much of our public lands -- surely one of America's most precious assets.

In your work to preserve and maintain what Governor Tom McCall spoke of as "this great birthright of our people," you give us something whose value is beyond measure.

Your work has a special significance here in Oregon, where our natural world is so much a part of who we are. I have personally been a beneficiary of your efforts. The hours I've spent fishing and rafting in rivers untouched by civilization, climbing our mountains, hiking and camping in our forests or in the high desert have given me, over the years, a sense of peace and harmony I cannot begin to describe.

As I said, BLM's work has special significance here in Oregon, where our natural world is so much a part of who we are. And because the natural world is a part of who we are, we -- the public -- are quick to offer you advice on why you should cut more timber, and why you shouldn't, on why you should raise your grazing fees, or why you should allow grazing of additional lands.

That is our job, as the public. Healthy, open, public debate is good. And your job is to sort the wheat from the chaff, apply your professional scientific and management expertise, follow our laws and make the best possible decision.

Of course, that doesn't make BLM's job easy. I understand what it means to balance needs, and to take a position that disappoints most of the vocal public. And I commend you for having done that job well under the progressive leadership of Elaine Zielinski.

Yet, in recent years, land managers have come up against a new challenge. Members of the public who are not satisfied with the outcome of that public process are finding different means to influence decisions.

The fact is that critical questions are being decided not according to sound land management policy, but rather in the courts on the basis of narrow legal points, in congress on the basis of politics that may have little to do with the merits, or by voters on the basis of a two-line description of management that may affect 60 million acres.

My point is that the current approach -- and the way it is being framed -- as an either/or, "us" vs. "them" proposition -- has created enormous obstacles to accomplishing your mission: the wise, balanced administration of our public lands for the good of all the people -- now and in the future.

In fact, the polarization generated by the intervention of congress, the courts and the initiative process keeps us mired in such a rut of controversy that we cannot move forward toward real solutions. And as you well know, where our natural resources are concerned, inaction can have disastrous and irreversible consequences.

At the same time, this intervention erects barriers not only between interest groups, but between people -- between Oregonians. It subverts those qualities and values on which Oregon was built: honor for diversity, mutual respect and reverence for the lands and waters that surround and nurture us.

If we continue to act as if concern for the environment is incompatible with economic prosperity, or conversely, that there is no improvement needed in the environmental practices of natural resource based industries, then the gridlock will continue and we will surrender control of our future to the courts and to a congress, most members of whom have never walked on a stretch of BLM land.

But -- if we believe that there is a way to balance environmental and economic health, we can start working together toward a genuinely shared objective: healthy communities surrounded and sustained by a healthy environment. No one can argue with that. And I'm convinced we can reach that objective -- if we're willing to alter our approach.

Let me give you a couple of examples to illustrate the difference between our current approach to land management, and the way I think we can and should be operating.

First, take the Clean Streams Initiative which appears headed for the Oregon Ballot in November. Its aim is to prevent contamination of our streams -- which is a good objective.

But this initiative simply won't work.

For one thing, it targets only one source of contamination: that caused by grazing cattle. In addition, it does not address all the other non-point sources affecting water quality.

It invites endless litigation -- since any citizen would be able to sue a landowner over alleged violations. In short, it is a legal solution to a land management problem and the polarization that it will create will destroy the collaboration and cooperation in watershed councils and soil and water conservation districts all over the state will disappear.

The Clean Streams Initiative will simply divide people -- and nothing will get done.

I support clean streams, but not the clean streams initiative. But we must recognize that there wouldn't be a clean streams initiative if there wasn't a problem.

So, I have called on ranchers, farmers, the legislative leadership and members of the environmental community to work with me on fully funding and implementing plans we have in place to address watershed health -- especially in eastern Oregon.

Because the problem is real and even if this initiative doesn't pass in November, it will pass sometime in the future if we don't move together to solve the real problem.

Let me just pause for a moment and emphasize that my opposition to the Clean Streams Initiative is predicated on the willingness of the natural resource-based industries and legislative leadership to make some strong commitments on a specific set of actions -- including adequate funding -- to address the problem of watershed health.

And to date I have been a little disappointed. I have seen my name in literature being produced by the committee running the opposition campaign . . . but no mention of my strong belief that there must be a tangible alternative to address this issue.

And, quite frankly, if such commitments are not forthcoming, I am willing to support the initiative and try to fix some of its shortcomings in the legislature. We are going to have clean streams in this state. There is a right way to get there and there is another way . . . but we will get there, one way or the other.

Let me give you an example of the right way.

I want to contrast this litigious, confrontational approach with our Coastal Salmon Restoration Initiative, the objective

of which is to preserve and restore native coastal salmon populations and -- in the process -- to prevent their listing as an endangered species. This is important because salmon play such a significant role in our economy, our recreational pursuits and in our cultural identity.

Again -- it's a good objective.

The difference lies in how we are going about it.

Instead of establishing more regulations and prohibitions -- and imposing them top-down -- we are engaging landowners and local watershed councils in a collaborative effort to improve fish habitat. The state is setting a good example by careful management of state lands, and we are relying on private, voluntary actions, in a true partnership where the state provides incentives, technical assistance, and resources.

It's a simple, common-sense approach: instead of trying to make landowners take steps to protect fish habitat, we find ways to help them take those steps, on the assumption that because protecting salmon is in their interest -- and in everyone's interest -- these are steps they in fact want to take but may not know how.

This cooperative approach is crucial -- especially with Coastal Coho because most of the habitat in questions is on private land, not public land. If we're really going to improve habitat on private land, it's going to happen not because we force landowners to do something -- but because they can see and understand how it is in their best interest to do so.

Local ownership in the project translates into a much stronger commitment than you find when regulations are handed down from the top.

Working together, in partnership, we are getting things done.

Let me give you another example of how sound environmental policy can become lost in a sea of national partisan politics: the Salvage Rider.

As you're aware, this legislation was originally designed as a way to improve forest health in eastern Oregon: another good objective.

First, under pressure from the timber industry, the Rider was amended to allow cutting of green trees, including old growth timber on the west side of the Cascades.

Now, under election-year pressure from environmentalists, the Secretary of Agriculture has tightened the restrictions on salvage logging. But -- not surprisingly -- neither side is happy. The timber industry says the new restrictions will bring salvage logging to a "screeching halt," while the environmental community says the restrictions still don't go far enough.

Meanwhile, nothing is happening in eastern Oregon, where dead and dying trees have created a dangerous fuel load with the potential for catastrophic fires.

The whole salvage issue has become a political football, while the original objective of improving the health of our forests has been relegated to the sidelines -- at least in Congress. People are divided -- and nothing constructive is getting done.

Now let me describe a different kind of approach -- one that we are pursuing in Eastern Oregon. A year ago, I asked ten well-respected scientists in the northwest what they would recommend to promote East side forest health. This diverse group of scientists agreed on an approach to management of forests in the Blue Mountains.

Our goal, like the original goal of the Salvage Rider, is to improve forest health, and also to improve riparian health, watershed health, and the economic health of Eastern Oregon Communities.

These scientists agreed on an approach to environmentally sound timber harvests.

Notice that that phrase -- "environmentally sound timber harvests" -- encompasses the basic concerns of both sides of

the current debate, and assumes from the outset that they can be reconciled.

What did these scientists conclude? They concluded that if we want to improve the long-term health of Oregon forests and watersheds (which includes reducing the risk of catastrophic fires), and at the same time provide rural communities with the economic benefit that comes from timber harvests, then we need careful, active management. This means not only the removal of dying and diseased trees, but aggressive thinning of young stands as well.

This conclusion clearly required a certain amount of compromise on both sides of the timber issue, and the amazing thing is -- that's exactly what happened. During the field study stage of the Blue Mountain Report, we found people like John Beuter and Bob Beschta, nominally allied with opposing "camps," now allied with each other in a common effort to find the best way to improve forest health and provide wood to eastside communities.

In fact, through the efforts that produced this Report it became clear that there is about 80% agreement on the issue of wise forest and ecosystem management, and that if we focus on this common ground, we can actually make some progress.

What we've been doing is the opposite: we have been focusing almost exclusively on areas of controversy and nothing is getting done.

These examples illustrate some very clear differences between an approach where disgruntled parties turn to the courts, the congress and the voters for a more "permanent" fix and the approach of collaboration and cooperation.

Instead of framing the debate in a way that must involve a winner and a loser, we have brought competing interest groups together around a common goal, we've transformed them from adversaries into allies, and we are accomplishing things that will benefit this state and its people long after we are gone.

You know, this is not a new idea. Everyone agrees, in theory, that collaboration is more productive than confrontation. What is new is that we're actually doing it and it is working.

Let me be clear: if we want to control our own destiny, if we want to preserve our special quality of life so that it is not only our heritage but also our legacy, if we are genuinely committed to finding a balance between economic and environmental health, between jobs and stewardship -- then we must bring the natural resource management debate out of the realm of conflict and into the realm of cooperation and consensus.

As long as we focus only on our differences, we will not solve our problems. We will only prolong them.

The fact is that this debate is not really about either the economy or the environment; it's about the balance and reciprocity and mutual respect which alone will ensure a strong and stable future for all Oregonians.

You here today are in a strong position to advocate for this type of collaborative approach -- an approach which moves beyond problems to solutions.

You, more than anyone, understand these issues. If anyone can prevent policy from getting lost in politics -- it's you . . . and we count on your support.

We have major opportunities ahead to demonstrate our collaborative approach -- in putting a broad strategy in place for the Columbia basin, in promoting forest health in eastern Oregon, and in improving the quality of our streams. It is not too late to work together.

I continue to believe that what Oregonians have in common is far greater and stronger than the ways in which we differ -- and that only by remembering what we have in common and by building on that foundation can we preserve those things most precious to us, among which are the rare natural endowments of this state -- the lands and waters and fish and wildlife under your jurisdiction.

Thank you for all your past efforts -- and for your help and support in the future.

Governor John Kitzhaber

Monmouth--Independence Chamber of Commerce

Wednesday, June 12, 1996

Choose the Future

Thank you for your applause, though I promise not to let it go to my head, because I'm reminded of the story of a man who moves to a small town.

Shortly after he moves there, he goes to a movie theater to see the latest show, and as he comes in, he is greeted by applause, the lights dim and the movie starts.

He is favorably impressed, but somewhat confused. On his way out, he asks the theater manager if people in the town are always that polite to new residents. "Oh, that wasn't politeness," he said, "it's just that I won't start the movie until there's at least 30 people in the theater. You were the 30th."

It is with that parable in humility that I come before you today to ask you to think with me about Oregon's future -- and to start that by thinking about Oregon's present.

You who run and own Oregon's businesses know better than I do that we are experiencing a strong economy in Oregon right now.

We have unmatched prosperity, not just in the metropolitan area, but in counties throughout our state.

We have low unemployment, growing wage rates, strong job growth and strong income growth. In fact, in some parts of the state, the biggest economic problems are accommodating growth and dealing with shortages of skilled labor.

But today's prosperity isn't an accident or merely good fortune.

It is the result of a tradition of investment in our state -- and the result of very hard work by business and community leaders.

All of this is exactly what we dreamed of when I started my public career at the tail end of the 1970s.

The depth, breadth and devastation of the recession that gripped Oregon in those days is still fresh in my mind. I saw hardworking, third generation timber families in my district uprooted and torn apart.

Don't ever forget that those were very tough times for Oregon -- and their very toughness motivated the tenacity with which we approached economic development.

Now, 15 years later, we are experiencing the benefits of what we worked so hard for and invested for: a stronger more stable economy.

The investments we made in a good educational system and quality colleges and universities are paying off.

The investments we made in roads and transit are paying off.

The investments we made in promoting our state overseas as a great business location are paying off.

And the investments we made in promoting Oregon as a great travel destination are paying off.

Almost six months ago today, I delivered my state of the state address and I will ask you the same question today that I ask then: are we making the same investments we did 10 or 20 years ago -- or are we taking our prosperity for granted?

Well, I think I know the answer to that question: we aren't making the investments the previous generation did. And the result of our taking our prosperity for granted is that we will lose it.

No, we are making different choices than we did a generation ago -- when even in the depth of the depression of 1980, we raised an income tax surcharge to maintain essential services.

Today, we are making a different set of choices.

We are choosing to radically expand our prison system -- while making almost no investment in crime prevention.

Almost two years ago, we passed Ballot Measure 11 -- passed it, I believe, out of a sense of fear. And we passed it without knowing the real cost.

Well, it's a big bill. It's a billion dollar bill over the next five years and for those of you who want to see less government, it is a permanent expansion of government.

Let me give you a stark example. Next biennium, while school districts cut hundreds of teachers, we will be hiring almost one thousand new prison guards -- many at youth correctional facilities.

So, we won't be teaching your kids -- but we'll be able to guard them well.

But this is only the most recent example of our state's disinvestment policy.

In 1990, we voted to cap our property taxes (at least, that's what we thought we did -- not because of some rational plan to change state spending to different priorities, but out of a sense of frustration.

Unfortunately, the result, as you know has been an ever tighter state budget as we try to hold schools harmless and cut elsewhere.

If that weren't enough, we for some reason have clung to the idea that we need to return so called surplus revenues from the state.

But these are not really surpluses. They are funds generated by an excellent economy -- funds we need to be able to reinvest in our state.

No business would assume that it could thrive and remain competitive if it simply spent its profits. Rather, your reinvest in plant, equipment and training. The state must do no less.

And finally, for the last five years, we have refused to increase funding to maintain our roads and highways.

With 50,000 people moving into Oregon every year, our deteriorating transportation system is unable to accommodate this growth.

The result? We will be unable to maintain the economic opportunity and quality of life that have come to define Oregon.

The punch line to all this is even though our state is doing great economically, a series of choices we have made in the last five years means that the state will go into the next biennium with a \$300 million hole in the budget. And that means even more disinvestment in the 1997-99 biennium.

Even though we're doing great, we're increasing class size in our schools and asking them to teach even more aggressively.

We're raising tuition in our colleges and universities, even as it becomes more and more obvious that post-secondary education is mandatory for a quality job.

We are letting our highways and roads crumble.

And we are at risk of letting other precious assets go. Many of you know we will be closing parks in September. It's not because of mismanagement. It's that we simply can't afford them.

Well, today, I want you to think with me about Oregon's future and the investments we need to make to keep and expand the prosperity we are enjoying.

The first area I'd like to address is transportation.

For the last four months, I have had five regional committees and one statewide committee working to define how we can save money in the long term planning of our roads and highways.

They've been looking at exactly what the gap is between our resources and the investment we need to make to have a quality transportation system.

And finally, they've been looking at how we can reasonably, fairly and responsibly share the cost of closing that gap.

I expect to receive a report from those groups in early July. And let me stress that the first thing I will act on is recommendations on how to cut the cost of our transportation system in the long run.

Let me give you an example.

In the Bend area, we built a so-called bypass for through traffic so it wouldn't go through downtown Bend. But now, because there is so much access to the bypass, it has become just another commercial strip, doesn't move traffic efficiently and means we have to build yet another bypass.

There are things we can do now to make sure that we don't repeat costly mistakes like this.

But I also want to put you on notice that if this group tells me we need more resources, I will not be bashful about going out and working to get them.

The same is true in education.

I am working very hard now to develop -- like the transportation group -- a good sense of what a quality education should cost.

I believe that is what we must do if we are ever to convince a skeptical public that our current level of investment in education -- and I mean the continuum of education from pre-kindergarten through primary and secondary school and through college or university -- is inadequate.

That's why I have several groups of Oregonians working now to advise me on:

- How we can do a better job of preparing kids to be ready for school when they start kindergarten;
- How we can provide local citizens the option to elect for a greater level of funding and still maintain our march

toward equitable funding of all schools across the state;

- And how we can provide reduce financial and geographical barriers to higher education for Oregonians.

The bottom line is that we must both be more efficient with our use of education dollars -- and that we must make a very strong case if we are to ask for more dollars.

I could go on -- but I don't want to use up all the oxygen in the room.

I just want to close by reminding you of something that used to be a given: our state is a community.

There are not two Oregons, or three Oregons -- but one state with a common history, with common challenges and with a common future.

If we can forget for a moment the concept that

- we are Republicans and Democrats;
- That we are environmentalists and timber workers;
- That we are eastern Oregonians or western Oregonians;

If we can set aside these artificial distinctions for a moment and ask ourselves as members of a common community:
"What do we need to do together to secure our prosperity?"

Then I believe we will be getting somewhere.

That's the question that used to be the beginning of the debate. I want to make it so again and I look forward to hearing your answers.

Governor John Kitzhaber

Higher Education Policy Speech

May 30, 1996

Today I want to talk not about what we've traditionally thought of as "higher education," but about what I prefer to call "post-secondary education," because I think that term is more accurate, given today's realities. Specifically, I want to talk about your role in shaping Oregon's future. I know you have some legitimate concerns and I hope what I have to say will demonstrate not only my awareness of those concerns, but my intention to find ways of addressing them.

Ever since the passage of Ballot Measure 5 in 1990, and the passage of the Educational Act for the 21st Century in 1991, the policy, the media, and especially the emotional focus has centered on Oregon's primary and secondary schools: their funding crisis, the process of reform they are engaged in, and my recent well-publicized speech outlining some initial objectives and strategies for K-12.

In the process, it may seem that higher education -- or post-secondary education -- has been eclipsed.

I want to assure you today that I have never for one moment forgotten the vital importance of your role.

Education is in fact a continuum, where each part builds on what has gone before, and lays the foundation for what will come after. As important as K-12 is, it does not describe the entire universe of education. If our children aren't healthy and ready to learn when they get to school, it won't matter how superior our K-12 programs are.

And, if our high school graduates are unable to attend a college or university because there isn't room or because of fiscal, geographic, or cultural barriers, then no matter how well prepared they are, we cannot possibly produce a high-quality workforce for the 21st century.

For that reason, the entire spectrum of our education system must be a seamless sequence of steps, all driving toward one end: the betterment of the individual and of society as a whole.

Today, more than at any other time in history, our future depends on education after high school -- on post-secondary education in all its various forms -- community colleges; four-year colleges and universities, both public and private; professional schools; continuing education and lifelong learning. And today Oregon's post-secondary institutions face great challenges and great opportunities -- that simply did not exist in the past.

- First: today's economy is intensely competitive. It is becoming more so everyday. Employers are demanding -- and paying premium wages for -- those with the knowledge and skills to compete. The premium paid to a well-educated post-secondary graduate is now at an all-time high.
- Second: Because of these economic payoffs, the demand for post-secondary education services is going to skyrocket. As the children of the baby boom generation come of age over the next five years, we can expect growth of at least 20 percent for traditional college education in Oregon. At the same time, more and more adults are returning to school for degrees and to upgrade their skills, compounding the demand for services.

- Third, while employers still want the fundamental skills in critical thinking, problem solving, and communications associated with a broad, liberal education, there are also severe shortages in professional and technical workers in nearly every sector of the economy, which adds to the demand for services.
- Fourth, but not least: All these challenges come at a time when public dollars for post-secondary education are shrinking.

The result is that more and more Oregon students have to leave the state to pursue their education; and that more and more employers are looking outside Oregon for qualified workers, from the hundreds of electrical engineering jobs now being filled from out-of-state and out-of-country, to the \$20/hour mechanic that I learned was hired from LA because of local labor shortages.

And meanwhile, increasing numbers of degreed Oregon students are having to take low-level entry jobs. This represents a very serious threat to our economic future, and to our overall quality of life, since a healthy economy is essential to everything else that we want and need to accomplish.

As bleak as all that may sound, I'm not here to sound the death-knell of post-secondary education in Oregon. But I do believe that unless we act now, the situation will only get worse, and that eventually it will be beyond our power to reverse the downward slide.

I'm not willing to let that happen -- and it doesn't have to happen -- if we're open enough to reassess the role of post-secondary education in today's world, and flexible enough to readjust -- the way we think, the way we operate, and the way we work together.

I do not underestimate either the difficulty of meeting these challenges, or the absolutely critical role our post-secondary institutions must play in securing Oregon's position as a social and economic leader in the 21st century.

Let me emphasize: we cannot go forward without you. But there's something else we need to bear in mind.

While we have repeatedly underfunded post-secondary education in this state, even *before* Ballot Measure 5, this is not a problem that can be resolved simply by throwing money at it. And while additional resources will clearly be required, we must also find ways to do more with what we have and make better use of the resources available.

Strangely enough, the funding crisis created by Ballot Measure 5 has actually been the catalyst for an important, though painful, re-examination of our entire post-secondary system. In the last five years these institutions have done more to reshape their missions and cut overhead and eliminate weaker programs to position themselves for the 21st century than any other post-secondary system in the nation.

I commend Chancellor Cox and the Board of Higher Education for the work they have done, and I am impressed by their efforts to seek new sources of revenue in the face of public dollar decreases. Charitable contributions, like Phil Knight's enormously generous donation to the U of O, will make a huge difference, and could not be better spent than on our post-secondary schools.

Let me turn now to a couple of concrete steps my office is initiating.

First and foremost, we must tackle the problem of access, because it is essential that we produce more college graduates. To address that issue, I am establishing the Governor's Task Force on College Access. Its mission is to explore ways of eliminating barriers to access, so that any Oregon high school graduate who is qualified and who wants to go to an Oregon college is able to do so.

What are some of the barriers I'm talking about?

One is the barrier of inadequate capacity.

We are expecting an additional 5,000 high school graduates in the next five years. Right now, our post-secondary

schools cannot serve that number of students. This task force will identify the gap between the capacity we have and the capacity we need, and will explore ways of closing that gap.

One way to do this is to create closer links among our post-secondary campuses through the use of telecommunications technology. We are already working toward creating a "virtual" or "open university," which (among other things) would allow us to concentrate programs in one location, instead of duplicating them across several campuses. It would also give a student in Pendleton, for example, access to the engineering program at OSU.

And we must not forget that Oregon's independent colleges represent an important part of our total post-secondary capacity.

But even if we had sufficient capacity, many students would still be unable to pursue their education because of financial or geographic barriers.

Oregon's post-secondary institutions have responded to the current budget crunch by raising tuition again and again. And students who do not live along the I-5 corridor, or near one of our eastern post-secondary schools may find it difficult to continue their education after high school.

So, therefore, two additional things we're going to have to look at: first, our current tuition policies and second, using technology to expand opportunities for distance learning, as I just mentioned.

Our ultimate goal is to create the capacity for increasing numbers of Oregonians able to gain a post-secondary education regardless of where they live in the state, and regardless of family income.

But -- we have to remember that improving access will be meaningless unless we maintain quality, and quality is largely a function of faculty. Without competitive salaries, we're going to lose faculty to other states, which means that we're also going to have to look at the issue of faculty salaries as well.

The College Access Task Force will be ready this coming Fall to recommend initial steps the Governor might take in the '97-99 biennium to being closing the access gap, and by Fall of '97, the task force will recommend actions to close it completely and to keep it closed for the foreseeable future.

Let me stress that we are not looking at a "quick fix." This is not something that can be resolved in one or two years. Instead, we're looking at a two-stage process which includes immediate, short-term actions we can take in the coming biennium to produce some stability in our post-secondary system and which will lay the foundation for the second stage: a six-year strategic plan that will lead to a long-term solution.

Now: in addition to the issue of access, we must also investigate ways of making post-secondary education more responsive to the needs of Oregon business and industry. There's no question that our long-term economic interest depends on our ability to produce not only a high quality workforce, but one which is capable of meeting the demands of Oregon employers.

In response to that need, I'm establishing a Task Force to better link the output of post-secondary education to our economy. Its mission is to develop a strategic plan for the delivery of post-secondary education services that are in line with the requirements of Oregon businesses and industries.

Some important work in this area is already being done by OSSHE and by some of our leading business organizations, including OBC and AOI. What this Task Force will do is to take this work and merge it into an integrated set of recommendations which will then become part of our overall post-secondary strategy.

Let me just mention here that one other vital part of that strategy must involve finding ways to invest much more heavily in research and development.

Again, we're not looking at a "quick fix," but at a two-stage process: a set of recommendations we can implement during '97-99, coupled with a comprehensive long-range strategy for linking education to the economy to be implemented over

the following two biennia.

What does all of this mean to you? As I said earlier, we cannot go forward without you. Now is your chance to make the contribution only you can make.

Within the walls of our post-secondary institutions, where reverence for things past and visions of things to come merge in a dynamic present, there is tremendous creative energy. And I am personally committed to providing the framework for using that energy to chart our course for the future.

What we have to do in the short term is stabilize our post-secondary system financially and in terms of faculty and program continuity -- students must be assured that the courses they need to graduate will be available. But beyond that we need to rethink our whole post-secondary system. We must link education to the economy -- to address workforce needs, research needs and humane outcomes of a good liberal education.

And that brings me to my final point.

An education becomes the permanent personal possession of each man and woman who achieves one, and it bears both tangible and intangible fruit. It prepares us not only to make a living -- but to live, in the best possible sense. It provides economic security even as it opens the gates of vision.

Our efforts to bring education into line with today's economic realities does not mean that our post-secondary schools are merely job training centers and employment agencies. In addition to being members of the workforce, we are also parents and citizens of a free society, with a duty to preserve and transmit the perspective, the judgment, and the values that flow from a liberal education.

As Chesterton once remarked, education is the soul of society as it passes from one generation to the next. By unlocking human potential, it helps us look beyond the world we have to live in to a vision of the world we'd like to live in -- and it gives us the tools for getting there. I ask you to join me on that journey, and I want to assure you of my full and ongoing support.

Governor John Kitzhaber

Education Strategy Speech
April 18, 1996

Today I want to talk about our state's primary and secondary system of education. As a state, we are never far from the question of: "How do we better pay for our schools?"

That question is being asked nowhere more loudly and nowhere more frequently than it is here in Portland. Your community's recent success at avoiding a potentially crippling strike, while a great achievement, is also a reminder of three important facts:

First, the repair is temporary, not permanent. Portland -- and other districts around the state -- will face the same challenge again in the not so distant future. This does not diminish your accomplishment, and I applaud what you have done. But we all know that a stable, successful system is not one that drives to the brink of the cliff every two years -- because eventually, it's going to drive off.

Second is the question of state involvement.

During the recent crisis here in Portland, I received great pressure to find additional state resources to resolve the short term problem here. Yet, as important as the Portland School District is -- and it is enormously important to Oregon and to 57,000 Portland students -- the state cannot step in and give money to one district alone.

There are other flat-funded districts that have equal claim to state dollars and we simply do not have the resources within the current budget to address them all. In other words, we need a statewide solution -- not one that applies to only one or two districts.

Third, citizens are powerless under existing laws to tailor their local curriculum to address local needs. For example, Portland may want to, and in fact need, a strong course in international trade. Joseph may want an art course in bronze sculpture to take advantage of the opportunities offered by a unique local industry.

The fact is that citizens in Portland and around the state do not even have the ability to enhance their school curriculum if they want to. This is an issue of local control and needs to be changed.

It is in this context that I come before you today to share my ideas on how we move beyond this gridlock on education funding; on how we go about returning some of the local control over education that we have lost as a result of Ballot Measure 5; and, finally, on the importance of asking the right question which, I submit, is not "How much should we spend?," But rather, "What do we want to buy?"

To do so, it is vital that we understand where we have come from on the long trail of K-12 education funding, where we are now, and the challenges -- and the opportunities -- with which our current circumstances present us.

While there is loud complaint about the current system of funding and managing education, we must remember that there was just as loud a complaint about the way we used to do it . . . and for good reason.

Under the old system of locally controlled, locally funded education, there was a vast inequity between the educational resources and programs available to a child in a property-poor district and those available to a child in a property-rich district. Statewide expenditures on a per-student basis vary by more than \$3,000.

Further, district after district went to the brink of shutting down -- and some went over the brink and actually closed their doors for a limited time because of local unwillingness (or inability) to pass property tax levies for schools.

In other words, the old system was inequitable and unstable. When budget cuts were required they were understandably cast in terms of the loss of specific programs, teacher lay-offs, and increases in class size, rather than in terms of a demonstrable impact, which these actions had on what a student learned.

In short, there was no tangible connection between budget decisions and measurable student outcome.

That was yesterday. Today it is different -- but it is also the same. It is the same because the debate continues to focus on how much we spend rather on what we are buying.

In fact, the sophistication of the school finance debate in Salem continues to revolve around a series of calculations that tell us whether a district gets more or less state money than in the previous biennium. And while this may tell us what we need to spend from a political standpoint, it tells us very little about what we are buying for that expenditure.

At the same time, today's system is much different than the one we had five years ago for two important reasons: Ballot Measure 5 and the Education Act for the 21st Century.

Ballot Measure 5, passed in 1990, limits the local property tax contributions to schools to \$5 per thousand of assessed value. The Education Act for the 21st Century, passed in 1991, calls for students to achieve measurable performance standards as a condition for graduation. Let's look at the impact these two changes have had on our system.

In the five years since the passage of Measure 5, responsibility for funding education has moved from the local district to the state. Under the old system, the state provided around 30 percent of school funding while local citizens provided the remainder through school property tax levies. Now, the state pays almost 70 percent and local districts pay the remainder.

As a result of this funding shift, about 40 cents of every general fund dollar spent by the State of Oregon goes to K-12 education. This has created benefits as well as problems.

On the plus side, we are moving rapidly toward equalizing spending among districts. This is clearly a benefit for many students. Eventually, each student, regardless of the relative wealth of his/her district, will receive the same expenditure from the state. By 1998, we will have moved all school districts close to the Portland level of spending.

But, on the negative side, districts such as Portland, which are spending above the statewide average, have seen their funding flatten or shrink as a result of equalization.

Also, on the negative side, local citizens have been disenfranchised from school funding decisions because there is no mechanism by which they can increase district revenue even if they want to.

By the same token, the state -- which now provides the majority of the revenue -- is disenfranchised from spending decisions. These are made on a district-by-district basis by more than 200 locally elected school boards.

And we continue to know little about exactly what this huge (and growing) investment of public dollars buys. Nor do we have a good sense of what providing a quality education for every Oregon student actually costs -- which brings us to the Education Act for the 21st Century.

The Education Act, coupled with the shift to a state-funded system has finally given us the opportunity -- if we have the wisdom and the courage to seize it -- to ensure that students, teachers, administrators, and parents are held accountable based on what a student demonstrably learns -- not on how long they attend school.

Let me use an analogy. To become a competent airplane pilot, there is a certain amount of information that needs to be mastered. It may take 40 hours for some people, and 75 hours for others. But the knowledge and skill required remains constant. What varies is the time it takes to achieve it.

Now compare that with our current school system. In our system the constant is the time involved -- "seat time" -- in grades 1-12. What varies is the knowledge and skills that are mastered. If the same system applied to the training of pilots, we would have a lot more dead pilots.

We should not expect less of our educational system. What we want is a system in which the constant is the knowledge mastered and the variable is the time involved. We have never reached this point because we have never quantified what we want in terms of the knowledge mastered.

The Education Act will change all of that by establishing clear and measurable academic standards.

The standards -- which define both the "knowledge mastered" and answer the question of "what we are buying" -- are the certificate of initial mastery and the certificate of advanced mastery. These are fancy names for a simple concept: the success of a student should be measured not by how long they stay in school, but rather by their ability to demonstrate competency in a number of areas needed to succeed in the next century.

Oregon has committed itself to this course -- a course of setting and meeting high academic standards.

The schools in this part of the state are committed to this course as well. Portland public schools, David Douglas schools and others in this area have been among the leaders of all districts in securing the promise of higher standards for our children, never wavering from their commitment to this goal despite financial cutbacks.

The certificates of mastery will give the state, for the first time, the ability to define exactly what components make up the quality education our children need (and deserve) to succeed economically and socially in the 21st Century.

Armed with this definition, we are, for the first time, in a position to collect, compare, and analyze district-by-district and statewide information on what it costs to achieve these outcomes. In other words, we can define the state's obligation for funding the K-12 system in terms of the educational product we are buying.

We can define the state's obligation in terms of what taxpayers and children are getting for this investment.

This is a very important point. As I indicated earlier, there is currently no basis, other than a political one, for determining what per-student expenditure the state should provide. The Education Act changes that by giving us a basis for answering the question: "What do we want to buy?" That leaves us with the question: "How much does it cost?"

To answer this question, however -- to develop the data necessary to link our dollars to outcomes -- will take time. This data will not be available for the upcoming 1997-99 biennial budget.

Yet I believe that it is the state's responsibility to ensure that every Oregon student -- regardless of where they live or the relative wealth of their district -- has the resources necessary to achieve both the certificates of mastery.

Therefore, today I am proposing that we establish a process to collect the data necessary to link our state educational dollars to our desired outcomes.

This is the only way we can wisely guide our state investment in K-12 education. It is the only way the state -- which collects and disburses the vast majority of educational dollars -- can begin to make intelligent budget decisions. It is the only way we will ever get to an understanding of what level of funding the state must provide if we are to keep faith with the children whose education is entrusted to us.

Some say this is simply too difficult to do. Some say that the process of defining a quality education will simply result in every education service, activity or topic of study being thrown into the definition.

I do not accept that. Oregonians went through a process of prioritizing health care services -- something that was supposed to be impossible -- and they did it in less than two years. Defining a quality education will be more difficult, but it is not beyond our technical capability. It is limited only by our political will. And we have the added advantage of knowing what our outcomes should be: the ability to achieve the certificates of mastery.

It took two years to prioritize health care services and to connect them with real dollars. It is still a work in progress. To do the same for public education will take at least as long -- probably longer. But we have a much stronger basis from which to start. And we must begin.

While we are engaged in this endeavor, however -- and until we have agreed upon the level of state funding that will give all Oregon students an equal ability to succeed based on the attainment of clear academic standards -- we will still have districts that feel that the level of state funding they are currently receiving is inadequate to meet their local educational needs.

To address this transitional problem, I am also proposing that we develop a local funding option so that individual districts have the ability to secure the level of services which they believe are necessary.

In proposing such an option, however, I want to express -- in the strongest possible terms -- that it does not constitute a long term solution to stable K-12 funding.

If all we do to respond to the "school funding crisis" is create a local option without tying it to a process by which we can define the state's funding obligation -- that is, by which we can define what is not optional -- we will be back on the road to the same unequal, unaccountable system we are now moving away from. Program levels and educational opportunity will vary widely from district to district.

And we will be back on the road to an unstable system because there will be no way to determine what state funding level is needed to ensure that each student achieves a quality education. In many districts, this funding will be picked up in part by local resources and if, for whatever reason, local voters do not exercise the option, the educational success of students in that district will be at risk. Portland, for example, will be right back where it is today.

Furthermore, assuming that such a local option can be enacted, it is clear that it cannot be exercised before most districts in the state approach the expenditure level in Portland. This point will be reached in 1998.

To attempt to exercise the local option before that time will only increase the perceived inequity between districts. Such a proposal cannot survive politically if it is viewed, rightly or wrongly, as solving "Portland's problem" at the expense of the rest of the state. This means that while we may approve a local option during the 1997 legislative session, it cannot be exercised until the 1998-99 school year.

Given this reality and this timeline, we still need to deal with the short-term, one year, challenge faced by those districts -- Portland & others -- which are currently facing financial pressure.

We must, therefore, allow those districts to raise additional revenue from municipal and private sector sources to bridge their problem in the 97-98 school year without having it count against them in equalization.

I am prepared to propose the legislation necessary to allow this -- but only on a temporary basis.

The development of the local option concept will be undertaken by a state-wide task force, which I will appoint in the near future.

The larger, and far more important, question is how we determine the level of state support needed to achieve our educational objectives. Today I am calling on business leaders, educational leaders, parents and students throughout the state to join me in a process to determine the financial relationship between what we spend on education and our ability to meet the high standards of the Education Act for the 21st Century to develop a system in which no student is left behind.

This will not be a simple process nor a short term effort. It will require vision, creativity and an ongoing commitment.

For the entire time I served in the legislature -- and now as governor -- how we pay for schools has been an unresolved question. Many have put forth plans to increase educational funding -- and all have failed.

Perhaps it's because we have never answered the essential question: exactly what does all this money buy? We have had no way to hold the system accountable.

Until we can answer this question, we will be in the same position in which we have always been -- unable to get consensus on the investments we need to make.

I'm asking you to join with me in solving this problem because we either solve it together as one state, or we will not solve it at all.

Thank you.

State of the State: Keeping Oregon's Promise

Governor John A. Kitzhaber

Friday, January 19, 1996

Delivered before the Portland City Club

According to tradition, this speech should be a summary of Oregon's status and how my administration got us there.

And, as a matter of fact, Oregon is doing well -- very well.

Nearly every Oregon county is growing. Jobs are growing at about the same rate outside Portland and the Willamette Valley as inside.

The even better news is that jobs are now growing faster than population and per capita income and wages have begun to grow faster than the national average.

But today's prosperity didn't just happen. It would be nice to be able to take credit for it, but it's not the result of anything that happened this past year.

It is, instead, the result of vision, planning, commitment and investments that have happened over the past 20 years -- the very things that I contend are not happening today.

So instead of delivering the state of the state speech today, I'd like to talk about the fate of the state . . . I want to share my vision for Oregon and what I propose to move us toward it.

You've heard this quote before, but I want to share it again.

Fifty-eight years ago, in a speech before the Portland City Club, Lewis Mumford issued a challenge to the people of Oregon.

He said: "you have a basis here for civilization on its highest scale, and I am going to ask you a question which you

may not like. Are you good enough to have this country in your possession? Have you got enough intelligence, imagination, and cooperation among you to make the best use of these opportunities?"

I'd like to use that challenge as the basis for my remarks today. Will we keep the Oregon promise so eloquently described half a century ago or will we take it for granted and hence allow it to slip away?

That is the choice before us.

Today Oregon is still the best place in the world to live, because those who went before us cherished this place, guarded its gifts and protected its quality.

But unless we recommit ourselves to the kind of investments we have made in the past we will certainly lose the Oregon we love.

In the simplest terms, that is my message today; if we want to preserve the Oregon promise, we're going to have to invest. Not spend. Invest in transportation infrastructure and education. Investments that will pay large returns in future prosperity and quality of life.

But the only way we can afford to do this over the long term is by reducing expenditures in other parts of the state budget through policy choices that we must make now. Specifically, by reducing juvenile crime rates and by moving people off the welfare rolls and into the workforce, we can free up resources to invest in education and transportation.

That is the only way we can keep faith with the future.

So, let's begin by looking at where we are today.

Our economy is on an upswing. But we cannot sustain that growth unless we commit ourselves to strengthening our entire school system -- from pre-kindergarten to life-long learning opportunities.

In the past, we have understood that if we want economic opportunity for our children, we had to provide access to quality education, and we made the investments necessary to ensure that quality.

In particular, the enrollment capacity of our post-secondary schools has, until recently, kept up with demand, even during the baby boom period from 1960 to 1975. We were rightly proud of our ability to prepare a well qualified workforce, and to help our young adults realize their full potential, so that each successive generation could reinvest their talents and energies in making Oregon even better.

The importance of education was emphasized in Oregon Shines, the strategic planning document produced in 1986 by the Goldschmidt Administration. In fact, the first of the three strategic initiatives in that document was to develop a superior work force, an objective that is directly tied to a superior educational system.

Ten years later, this focus on education should be even more important as Oregon -- and the world -- continue to make the transition from an economy based on labor and natural resource extraction, to one based on information and knowledge.

But this is not the case.

Our efforts to fully fund public schools on an equitable basis for all Oregon children is struggling. You who live in Portland, know that. Your district faces cuts that will clearly impact the quality of education for Portland school children.

Our efforts to prepare Oregon citizens for the good jobs of our economy are undercapitalized.

Our funding for higher education is a disgrace -- a disaster waiting to happen. Oregon is dead last among the 50 states in per capita funding of higher education.

At a time when our economy demands highly-trained workers, our choice to disinvest in our education system is a choice for stagnation, low wage jobs and an uncompetitive workforce.

We are making the same choice with our transportation system.

There is no doubt that Oregon's historical commitment to a high quality transportation system has been a big part of our current economic success.

Our roads, as well as our other transportation systems, have helped us get where we are today. They enable our citizens to get to school and work; they provide public access to the natural wonders which are Oregon's special treasure; public transit lowers pollution and reduces congestion; and perhaps most importantly, our transportation infrastructure is a key to our economic health -- it moves our goods to markets outside our state.

But we are simply not maintaining this precious asset.

Over the next seven years, Oregon faces a potential loss of more than \$200 million in federal highway funds. At the same time, the Oregon Legislature has not increased funding to the highway trust fund for more than five years. Quite simply, we do not have the money in the current system to keep up with growth and maintenance needs. And every year we wait to fix the problem -- it gets worse. Our estimates show that early in the next century, we will only have the resources to either maintain our system or add needed capacity. That's unacceptable -- we must be able to do both.

With Oregon's population growing at a rate of nearly 50,000 people per year, the lack of investment in our transportation system deprives us of a critical tool to manage that growth in a way that does not detract from our quality of life.

There are those who believe that by not investing in our transportation system we can discourage growth. The truth is that an inadequate transportation system does not discourage growth, it simply produces sprawl and congestion.

Our choices in transportation and education reveal a general and alarming trend, leading to one inescapable conclusion: we are not investing the way we have in the past.

And it's not because we as a state aren't willing to put our resources behind problems. It's more a matter of priorities.

Let me give you one stark example. In 1990, 13 percent of the state general fund went to higher education. Four percent went to corrections.

Today, nine percent of the general fund goes to corrections -- mostly to prison construction and operation -- and only eight percent goes to higher education.

That means that in the past five years, our general fund commitment to higher education dropped by five percent while our commitment to prisons increased by five percent.

Does this really reflect what Oregonians value? Of course not. But it is clear to me that our choices no longer reflect the values that have traditionally defined Oregon.

We say we value our economy; yet we have not made education or transportation high priorities.

We say we value our children and their safety; but we have not yet made crime prevention a top priority. We have built a lot of prisons, but we have done little in the area of early intervention for at-risk youth -- who are committing crimes at a far higher rate than any other segment of the population.

We say we value compassion; yet 400,000 Oregonians are still without basic health care coverage.

Is this the Oregon of the future -- a place where people pay lip service to certain values and then undercut them with their actions?

Is the Oregon Promise destined to fail?

I say no. The challenges we face may be different from those of the past, but I do not believe they are any greater.

As I mentioned at the beginning of this speech, I believe we can make the investments necessary for our future prosperity. But to do so we must act to reduce expenditures in other parts of the state budget.

In that regard, I have four specific proposals which deal with reducing expenditures in public safety and public assistance and investing in transportation and education.

First, in public safety -- we must enable our public safety system to both punish criminals and prevent crime.

Today, we punish. But we don't prevent.

Keeping people in prison will protect the public from crimes by those particular offenders -- while they are in prison. But it will not prevent new crimes by new offenders. Building more and more prisons, which we have done and will continue to do under Ballot Measure 11, does not lower the crime rate.

Between 1987 and 1991 we built more than 3,000 new prison beds in Oregon. Yet today people feel no safer than they did eight years ago. In fact, they feel less secure because of the dramatic increase in violent crimes committed by juveniles.

Now, with Ballot Measure 11, we will build another 4,000 prison beds by 1999 at a cost of more than \$1 billion. Yet this huge expenditure will do nothing to reduce the ever-growing number of juvenile delinquents, who will become young thugs, who will become violent offenders.

The only way to do that is to invest in prevention -- to stem the tide of people coming into the system on the front end. That is one of the central goals of the Partnership for Community Corrections, Senate Bill 1145 . . . and the primary objective of the upcoming special session.

To Representative Mannix and Representative Tiernan, and others who oppose this effort -- who view prevention as being "soft on crime" -- I say this:

We will punish those who commit crimes in Oregon. We will fully implement the provisions of Ballot Measure 11. But to focus only on punishment and not at all on prevention is to accept the necessity of victims.

It is to say that we do not care how many crimes are committed in Oregon -- we do not care how many people are victimized -- as long as those responsible are punished. I simply do not buy it and I do not believe that most Oregonians do either.

I am not willing to continue to disinvest in education in order to build more prisons unless we make an equally strong commitment to reducing the incidence of crime -- particularly among juveniles.

That is how we reduce our overhead. That is how we build a public safety system, rather than simply a prison system. That is how we invest in the future. And I call on all Oregonians to support this effort in the upcoming special session.

The second major area of overhead in state government lies in our welfare system. It is clearly in the best long-term interest of all of us, now and in the future, to support policies that help our vulnerable citizens move from dependence to independence, whenever that is possible. In this area Oregon has been quite successful.

Oregon's welfare-to-work program is fast becoming a model for the nation. But we need to recognize that a significant contributing factor in our success has been the Oregon Health Plan.

By assuring low-income Oregonians that they won't lose access to health care if they get a job, we have dramatically lowered our welfare rolls. In the past year, we moved 4,500 families off welfare and into the workforce with a biennial general fund savings of \$30 million. That's cutting overhead.

We expect another 12 percent reduction in case load over the current biennium, but our success will be short-lived if we do not continue our pioneering effort to expand basic health care coverage to all our citizens.

Just 18 days ago the employer mandate to provide health insurance was automatically, and quietly repealed due to legislative action taken in 1993. This is nothing to celebrate. We have broken the promise of the Oregon Health Plan to extend coverage to the 400,000 working Oregonians and their dependents who remain uninsured.

This mandate may be repealed, but the problem won't go away. Those Oregonians will still be without coverage. They will still seek their basic care in the emergency room. They will still be paid for by shifting costs to the rest of us. And most importantly, they will still be without the resources to do what the rest of us take for granted: keep our health.

In the coming year, I will continue to press the case that these Oregonians must be afforded the opportunity for basic health coverage. If we are not to achieve this through an employer mandate, we have the responsibility to enact an alternative approach.

Over the next ten months, I will call upon our legislature, our businesses, our labor organizations and our health care providers to form a reinvigorated coalition to complete the health reforms we started in 1989.

I will reconstitute the Oregon Health Council and charge it with developing a six-year strategy for accomplishing the following:

First, ensuring access to a basic benefit package for all Oregonians. This access will draw upon the strengths of our current public/private financing partnership and will focus as a first order of business on extending coverage to Oregon's working uninsured. It will also address the needs of our migrant and seasonal workers.

Second, obtaining maximum health benefits from the resources currently being used in our health care system; ensuring that we capitalize our system efficiently, that we use technology efficiently, and that our health professionals employ best practice standards; and,

Third, exploring the potential for broader community partnerships to address the underlying health needs that drive people into the health care system in the first place. This will involve not only an increased community responsibility, but also increased individual responsibility for the overall health status of Oregonians.

By focusing on juvenile crime prevention and on expanding access to basic health care, we can continue to reduce expenditures in these two key areas -- public safety and public assistance. In the process, we will increase our ability to invest in the two areas most critical to our future security and prosperity: transportation and education.

Next week I will be initiating a statewide effort to address our transportation infrastructure needs. I believe we must invest in a transportation system that will deliver the kind of future that Oregonians want -- a place where livability and growth can exist side-by-side.

Let me make it clear, however, that we cannot fall back on another process that produces no more than a list of highway projects to be funded. Financing road construction or any transportation system improvement without giving thought to how we integrate them with our land use, economic development and housing plans is doomed to failure.

While there are very real capital construction needs that must be addressed, we cannot ultimately build our way out of this problem. Therefore, I intend to focus my initiative in a way that addresses these needs but that also helps us lower transportation construction and maintenance costs in the future and stretches our resources as far as possible.

The objectives of this initiative must be to maintain quality communities that have a high level of livability as well as economic opportunity.

There are several efforts underway around Oregon to meet the challenge of growth.

Here in the Portland Metropolitan Region, Metro officials are doing transportation work in the framework of the 2040 plan. This plan represents on paper what we need to do on the ground. We need to build on local efforts like this and develop new relationships between state, local and regional government which have the flexibility to deal with different needs around Oregon.

To accomplish this, I will appoint five regional advisory committees that will assess community and regional transportation needs in different parts of the state. The committees will be made up of public and private leaders who will bring a fresh look and a broad perspective to the needs of their region and its communities.

I will also appoint a state advisory committee that will assess needs of statewide concern. This committee will integrate its recommendations with those of the regional advisory committees to produce a comprehensive package for consideration by myself, the Oregon Transportation Commission and legislative leadership.

I will ask these citizen committees to follow a four-step path in developing recommendations related to transportation and growth management.

- First, identify the issues most critical to community livability and economic opportunity.
- Second, determine whether these issues have an associated transportation need and identify key gaps in the ability to meet those needs.
- Third, examine what more can be done to close these gaps in the absence of new resources.
- Fourth, if new resources are needed, the state committee will develop equitable funding options that maintain a close link between benefits and cost responsibility. This may well involve an expanded financing role for local and regional governments in some parts of the state, where growth is particularly challenging.

I expect this process to produce recommendations by mid-year which sets the stage for action on short term objectives in early 1997. I also expect the process to define a long-term agenda that helps us identify new approaches to management and financing of transportation and other infrastructure systems and services.

I will look for the same level of cooperation from our state's educational community because education is probably the single most important investment we can make to keep faith with the future.

But we must approach this challenge with a clear-eyed sense of Oregon's fiscal realities. I am not suggesting that our education system is over-funded.

I am simply saying that the likelihood of a major new funding source for education in the near future is remote. If our strategy for schools is based solely on the expectation that the next legislature will enact a significant tax increase, we may well find ourselves not only disappointed, but another two years down the road to a failing system.

What I am suggesting is that we must seek ways to reduce the cost of the system without compromising quality and redirect the savings plus any new resources we may have available to fill the gaps most critical to achieving our education objectives.

The first step is to stop thinking about our education system as a series of isolated islands -- all competing for limited resources at the expense of one another. Our education system must be viewed as a continuum.

Because, if our children aren't healthy and ready to learn when they get to school, it won't matter how superior our K-12 programs are. And, if our high school graduates are unable to attend a college or university because there isn't room or they can't afford to go, then no matter how well prepared they are, we cannot possibly produce a high quality workforce for the 21st century.

Today, I am calling for a new commitment to Oregon education. I am calling upon historically separate education and training organizations to pull together and create a single framework dedicated to the personal success of every Oregonian.

As we proceed, I will insist that education turf be set aside. But this is a challenge not just to the education community, but to all Oregonians.

It is a challenge to students to value the opportunity for an education.

It is a challenge to parents to be engaged in the education of their children.

It is a challenge to the business community to actively support the development of tomorrow's workforce.

It is a challenge to all those who may not have children in school to recognize that it is the productivity of the workforce that supports social security, medicare and other important programs.

Here are the specific efforts I will undertake:

First, we must make good on our commitment to full equity in school funding without sacrificing overall quality. We must move the debate beyond parochial disputes between neighboring districts to a focus on the long term health of the entire system.

Second, I will call on the Department of Education to work with the joint boards of education to complete the steps necessary to fully implement the Educational Reform Act for the 21st Century.

Third, to reduce cost in our primary and secondary school system, I will call on educators and private sector leaders in the technology and telecommunications fields to develop new ways of delivering instruction.

I want to stress that our school teachers are doing a tremendous job under challenging circumstances. We need to find new ways to support their efforts.

Fourth, I will charge the Chancellor of Higher Education and the Community College Commissioner to work with their colleagues to create the capacity needed for the 5,000 new high school graduates we will see in the next five years.

This will require working with leaders in the telecommunications industry to fashion an Oregon "virtual university" through which courses, degrees and workforce training can be delivered through satellite and cyberspace. It will also require collaboration with our private institutions.

Fifth, I will call on business leaders to recommend those education standards and workforce training programs that will work best for them here in Portland and around the state as we move into the 21st Century.

I expect work on these five initiatives to be finished by this fall when I will present a six-year plan to implement them as well as specific proposals for the 1997 legislative session.

Although neither our education system nor our transportation system is yet at a point of crisis, I am not willing to wait until a crisis occurs before taking action. That's not the way we've addressed problems in the past, and I can see no virtue whatsoever in doing it now. In fact, had our forebears acted on that principle, the Oregon Promise would be only a shadow on the face of history.

Instead, we have the opportunity to act now in public safety and public assistance to save resources in the long term. And we have the need to reinvest those savings in our transportation system and our education system.

We must do these things to keep Oregon the kind of place in which we want to live and work and we must do them together or we will not be able to deliver on Oregon's promise.

This promise is alive today -- dormant, maybe, but ready to flourish again if given the proper care.

But make no mistake: unless we actively recommit ourselves -- every single one of us -- to the qualities, priorities and investments -- that have defined Oregon and made it great, ten years from now Oregon will not be a good place to live.

This is no time to turn our backs on our legacy of wise stewardship.

And today we still have a choice.

We haven't ruined our water, or fouled our air, or extinguished precious species.

We haven't fallen prey to the kind of urban sprawl and congestion that defines our neighbors to the north and our neighbors to the south.

We haven't shut down our universities, or allowed our highways and bridges to deteriorate beyond repair.

We -- you and I -- are still in control of the fate of this state. And if we believe that future generations deserve the same blessings and opportunities we've been given, it is still our choice to make that a reality.

What higher honor can we pay to our forebears than to pledge that the matchless promise of the great state of Oregon will pass undiminished into the 21st Century -- and beyond?

What greater proof that we are good enough to have this country in our possession. That we have enough intelligence, imagination, and cooperation among us to make the best of Oregon?"

Today I ask you to join me in meeting the challenges that lie ahead . . .

Governor John Kitzhaber

Forest Policy Speech

Corvallis, Oregon

January 4, 1996

Good afternoon and thank you for inviting me to Corvallis to share my vision for Oregon's forests and to describe the important work underway to achieve that vision. My compliments to the Oregon Board of Forestry and to the College of Forestry for hosting this day-long forum -- a forum which is helping build a foundation for forest policy and research for the next century.

As I look around the room here today, I see a wide range of talents and interests. It makes me hopeful to see the ideas, energy and expertise assembled in one place.

The collective work you do -- the quality research and support of OSU and the College of Forestry; the leadership of the Board of Forestry; the on-the-ground leadership of private and public forest managers -- is critical to the future of our forests.

You've heard today about what is driving change, about our links to the global environment and the global economy, about where we've come from and where we need to go.

Let me try to put this in perspective today by describing my own long-term vision for Oregon's forests and the near-term challenges we must meet in order to achieve that vision.

We are here because we all care about the remarkable natural resources that define the Oregon character. One of these is our forests, which have been and always will be, essential to our quality of life. As you know, I describe the quality of life in Oregon as being made up of several components: public safety and accountability, solid educational opportunities, services and infrastructure to support vulnerable Oregonians, jobs and a strong economy and a quality environment.

These are all necessary building blocks for quality of life. And each, in its way, is connected directly or indirectly to our forests.

Therefore, it is incumbent upon us to work together to lead Oregon into the 21st century with a vision for these forests -- a vision that recognizes and nurtures these connections.

My vision for Oregon's forests is:

Healthy forests that provide timber, water, fish, clean air, wildlife and open spaces; where state, federal and private forest owners cooperate to create a sustainable flow of timber, preserve our special places and restore our damaged watersheds. In short, it's a vision where we find that delicate balance between protecting our environment and providing a reliable supply of natural resources.

Specifically, my vision sees a future in which:

Forest managers on private land will have the support of government to make long-term investments in forestry and conduct sound forest management practices that provide important forest products for local economies. A careful blend of regulations and incentives will provide environmental protections while ensuring sustainable forest practices.

State forests should provide an example of how to achieve resource production goals in an environmentally responsible manner. We must also provide sustainable, predictable revenues to counties and schools.

Oregon's federal forests will be managed to leave options for future generations. Make no mistake, timber production is and should be one of the objectives for management of the federal forests.

But there will remain the sense of wilderness and wildness that has defined our federal lands. And there will be habitat for sensitive, threatened or endangered species, roadless areas and unique resource or cultural areas. All must be part of the federal lands legacy we pass on to the next generation of Oregonians.

Our forests will provide and protect the intangible and hard-to-quantify treasure of what I call "special places." Places you go to remind yourself what it means to be an Oregonian. The stand of ponderosa pine that catches the morning light just so. The trout stream you fished as a child, surrounded by original forest. Places where time stands still and the natural beauty of the landscape can surround and refresh you.

We must also restore the natural resources that have been damaged by the rapid development and resource utilization that has characterized the last 100 years. The ongoing watershed health efforts and the voluntary fish restoration programs stand as examples of how public/private cooperation can restore ecosystems.

Achieving this vision will require a forest policy that encourages people to work together -- where local collaboration can replace posturing and conflict; where the careful application of forest science can replace courtroom decision making.

This may sound like a tall order. But it can be done. And it is up to us to do it.

A handful of critical challenges stand between us and achieving this long-term vision for Oregon's forests. Imbedded in each challenge are opportunities.

There are opportunities for research, opportunities for partnership and opportunities for action. Many of you in this room are in the unique position to meet these challenges.

I have described my vision of the responsibilities of the various forest owners in our state. The board of forestry, private landowners, local government and other stakeholders must work together in partnership to craft the future of non-federal forest land in Oregon. All of us must work together with President Clinton, congress and federal agency leadership to clarify the federal role and results.

Now allow me to describe what is seen as the essential components of an action plan:

1. A review of federal land policy and the president's Forest Plan;
2. Land transfer;
3. Forest health;
4. Innovative management strategies; and
5. Public education.

Let us first consider federal land policy and the Northwest Forest Plan.

- The federal component of our landbase -- more than half of Oregon's 28 million acres of forest -- has been at the

center of debate. I want to share with you some of the recent actions I have taken to work on these federal forest issues.

- At my urging, the Western Governor's Association has initiated a federal public land law review co-chair which will examine and help resolve lingering conflicts that are the inevitable result of several generations of federal land lawmaking. Our hope is to make some reasonable proposals to congress that will move us toward public land management policies that reflect a shared vision of resource protection and sustainable communities.
- I have also worked with President Clinton and representatives from the timber industry and environment groups to build support for the President's Forest Plan. I know that there are many on both sides of the debate who would like to see this plan killed in the courts or in the political arena. But I believe we must protect the viability of the president's plan. It is the only practical solution offered to date to resolve the Northwest's federal forest controversy. It provides a reasonable foundation upon which we can build. As research and monitoring provide new information, we can modify the plan as needed.

Second is the issue of land transfer.

- There is also growing pressure for us to look at land ownership patterns to see if they are meeting our objectives. We need to carefully examine the issues surrounding the many proposed land transfers that have been put on the table. Last week I indicated a willingness to work with the administration to consider a change in the management of O&C, public domain and Coos Bay Wagon Road Lands.
- I believe it may be in Oregon's best interest to manage these O&C lands that are adjacent to existing state lands, that are already available for timber harvest, or that meet a range of objectives including expansion of the state parks system or the opportunity to more efficiently and effectively manage these lands.

I do not generally support transferring lands that are unlikely to be revenue producing: wilderness, key watersheds, wild and scenic rivers, research natural areas, and late successional reserves.

As we work together to explore these possibilities, I would ask that any consideration of transfer be guided by the following principles:

- It must satisfy the public interest;
- Benefit present and future generations of Oregonians, and;
- Provide sufficient ecosystem protection to assure healthy populations of species.

I believe any transfer would be strengthened by an amendment to the state constitution that would lay out the state's responsibilities for this land.

As I consider any potential exchange, I plan to work with the president and with key representatives from the counties, the environmental community, the industry, the scientific community and state and federal agencies.

Third is the issue of forest health.

- We must take bold actions to resolve forest health problems. If we do not, insects, disease and catastrophic wildfire will bring these ailing ecosystems to their knees.
- I am currently working with the U.S. Forest Service and other federal agencies to establish pilot projects in eastside national forests to implement forest health strategies outlined in a report I commissioned earlier this year. Some of you who had a hand in that report are in the room. I thank you for your work and pledge to carry forward with your recommendations.

- These forest scientists believe that forest health restoration treatments such as thinning and fuel reduction can bring these lands back to health while also providing forest products for local economies. We will put these recommendations to work on the ground and evaluate the work with a citizen/science team to ensure we make progress on our forest health objectives in eastern Oregon.

Fourth, we must seek new ways of achieving our goals.

- In Oregon, we have good examples of innovative problem solving techniques where partnerships built around common goals have made a difference.
- A prime example is the Elliott State Forest on the South Coast. Oregon was the first state in the nation to enter into a habitat conservation plan agreement with the federal government that establishes a way to protect owls and murrelets, and harvest timber from this forest. It is an innovative approach that took dozens of individuals from many different state and federal agencies. And it is working.
- When Secretary of the Interior Bruce Babbitt came out to Oregon to sign the conservation plan agreement two months ago, he praised Oregon as a model of innovation and problem solving. That is the Oregon way. And it begins with agreeing on our common goals and vision for our forests. Other examples abound.
- The rivers and forests of the north and central coast range have seen an unprecedented partnership effort of private industry and state government. The North Coast Salmon Enhancement Project has brought together private landowners with biologists from the Department of Fish and Wildlife to enhance coastal salmon habitat.

From a forest policy perspective, we are exploring non-regulatory approaches as new science has emerged and as our society has changed.

Regulations are important forest policy tools, but don't necessarily always have to be the first tools out of the toolbox.

Incentives that provide technical and financial assistance to landowners can hold hope for the future. A committee of the board of forestry chaired by former state representative Walt Schroeder presented a long list of recommendations to the board of forestry just yesterday. We need to proceed with this important work.

Another example of collaboration is the work I have underway right now involving biologists and planners from a dozen state and federal agencies and local governments, private citizens and organizations to develop a Coastal Coho Salmon Restoration Plan. This plan will help us halt or reverse the decline of Oregon's coastal Coho salmon populations. It is this type of focused collaboration that will enable us to achieve our forest vision for the 21st Century.

But we must also bring the public along with us on this journey into the 21st Century.

And that brings us to public education.

Lasting and effective decisions about the future of our forests must involve all Oregonians. Our obligation is to learn from, as well as teach, our people about our forests and about how their lives and decisions are connected with our forests.

Many of you in this room can help explain natural resource issues to Oregonians and involve them in decision making. The Board and Department of Forestry, for instance, are beginning now to implement an interpretive program on the Tillamook State Forest designed to involve the public in learning about the Great Tillamook Burn and the new forest that has grown from the ashes.

We must not only acknowledge the tremendous contribution the academic community has made to our understanding of forest science, we must throw down a continuing challenge. I would ask that scientists continue to propose alternative

management strategies as well as develop methods to predict the outcomes of various policies. We policy makers will continue to rely on your expertise.

In summary, my vision for Oregon's forests is that they can provide a sustainable timber supply as well as the natural treasures of clean water, clean air and abundant wildlife. My vision is that this can be done cooperatively between state, federal and private land owners.

And I see important actions we can and must do on the path to achieving our vision of Oregon's forests:

- We must make clear what we want from Oregon 's forests and who is responsible for making that happen.
- We must take bold actions to resolve forest health problems.
- We must seek new ways of achieving our goals.
- We must bring our fellow Oregonians along with us as we seek to build this vision.

Given the nearness of the new year and the tradition of making new year's resolutions, I will close by offering this challenge to congress, to interests and to all Oregonians who care about our forests:

In 1996, let us resolve to set aside the disagreements in favor of the common agreements we can and must build for the health of our forests, our economy and our Oregon way of life.

Governor John Kitzhaber

WOSC Community Corrections Workshop Speech
August 22, 1995

Introduction:

Oregon voters last November passed Ballot Measures 11 and 17 which mandated tough minimum sentences for violent offenders and put them to work. In order to deal with the increased prison load due to these new laws, Governor Kitzhaber proposed Senate Bill 1145, the Partnership for Community Corrections, which sets up an unprecedented partnership between state and local government to house violent criminals.

SB 1145 was passed by the 1995 Legislature. On August 22, Western Oregon State College hosted a law enforcement workshop comprised of law enforcement officials from around the state to discuss the implementation of the Governor's Community Corrections plan. The following are the Governor's opening comments to the workshop.

More than three decades ago, Chief Justice Earl Warren compared the problem of rising crime in America to an overdue debt that the country must pay for having ignored for years the conditions that breed lawlessness. That debt has now grown to such towering proportions that it's about all we can do just to pay the interest. In fact, we've fallen behind.

We're here today to start changing that. We're going to do more than just pay the interest. We're going start paying the principal, and get out from under this massive liability once and for all.

Let me make it clear that this in no way belittles the efforts of the many people who have labored so long and hard to address the problem of crime. But the fact is that the problem has gotten worse, not better, and we now face a challenge driven by numbers so large that no one governmental entity can deal with them. We need to revise our whole approach to the problem of crime, and this workshop is a step in that direction.

Ballot Measures 11 and 17, approved last November in response to our failed efforts, were cries of anger and frustration wrung from everyday citizens fed up with rising crime. These measures told state government what it must do: provide stiffer and longer penalties for criminals, and put them to work.

It was up to us in government to figure out how we were going to do it. The first step was to understand what was wrong with our current approach. And it became clear that it was fragmented and often redundant, with uncertain lines of accountability and no true sense of partnership among different agencies and among different levels of government.

But most importantly, it was driven by immediate crises rather than by clear long-term goals.

These goals, in fact, are easily stated: to reclaim our streets and our neighborhoods, to restore a sense of personal security in the lives of all Oregonians, and to reduce crime tomorrow, not merely control it today.

If we agree that these are our goals, the next question is -- how do we achieve them? The answer is, by a series of steps, all directed toward the same end.

SB 1145 is one of those steps. It sets up an unprecedented partnership between local and state government, and it clarifies who is responsible for what.

We have to remember that crime is not just a state problem. Certainly crime occurs in the state. But it also occurs at the county level, at the city level, at the neighborhood level, and ultimately at the personal level. No one jurisdiction can duck the responsibility for dealing with crime.

As you know, under Senate Bill 1145, the state will assume responsibility for incarcerating violent offenders -- to get them off our streets and out of our communities for a long, long time. To assist in this task, counties will assume responsibility for offenders sentenced to 12 months or less. The state will provide operational dollars and funding for construction of new facilities. In addition, the counties will have a wide range of options for designing alternative sanctions.

Let me emphasize: every offender will have a sanction. No longer will first time offenders be brushed off without consequences. There will be no more ignoring or brushing off offenses, no more early release, no more unsupervised parole, no more tolerating an endless string of repeat offenses -- simply because we lack facilities or programs. And no longer will we use age and lack of resources as an excuse to shield violent juveniles from punishment. That's a pledge. Our future depends on it.

But it also depends on prevention.

If we devote the bulk of our resources to punishment, we will be doing nothing to stem the rising tide of crime, and in fact, we will have to make deep cuts in programs that actually do help prevent crime. If we don't take steps to prevent crime, we're committing ourselves to an open-ended program of prison construction. If we don't take steps to address the root causes of juvenile crime, we're giving up on an entire generation. I'm not willing to stand idly by and watch that happen, and neither are you.

You're here today because of your determination not to be mere passive witnesses to the problem of crime -- but rather to become a part of the solution -- but rather to take an active part in achieving our vision of a better, safer future. When I started working in emergency rooms more than 20 years ago, I learned right away that you have to stabilize a patient before you can get at the root of the problem; you have to stop a hemorrhage before you can look for and address the cause. The same is true of crime. We must get violent offenders behind bars, and do that first.

That's part of the message voters were sending last November. But I don't believe it was the whole message. Because punishment comes into play only after a crime has been committed. And if there's been a crime, then someone has been hurt. Someone has suffered. No one can convince me the voters were saying . . . we don't care how many crimes are committed, or how many victims there are -- as long as the people responsible are locked up.

Besides, we have to recognize that punishment -- building prisons and locking people up -- is the easy part of a public safety program. The greatest challenge lies in preventing crime before it happens. And for prevention to work, community involvement is absolutely essential. Every citizen must assume some responsibility for trying to keep people out of the system, because when crimes are committed, we all pay the price.

Crimes are committed locally, and we know the people who commit them -- or who are likely to commit them. We all know who makes up the at-risk population in our own communities. And it's the duty of all our citizens -- every single one of them -- not to turn their backs on this cancer growing in our midst.

Yes, state government has a role, and my administration is committed to carrying it out. But nothing we do at the state level can ever replace the need for community involvement and individual responsibility.

Our best chance at keeping people out of the system occurs early. And it occurs locally. Today we are taking steps to empower local people, by giving them the tools to address the critical issue of prevention, as well as the equally critical issue of punishment -- with state government as a partner and facilitator -- not as a director.

The state cannot solve this problem alone. We cannot do it without you -- your cooperation, your creativity, your commitment, your help. And from what I've seen, you're ready and willing to give those very things. Our community corrections action team has now met with the local public safety leadership in all 36 Oregon counties. I've attended many of those meetings myself. I'll continue to be personally involved at the local level.

And I can tell you that we've seen so far is very, very encouraging. We won't be finished in this biennium. We're looking at a sequence of steps that will carry us well into the next century. It took a long time to accumulate this debt, and it will take a while to repay it. But there's a new sense of energy and hope out there in every region of Oregon, as if our efforts are finally going to bear fruit, as if we're finally getting somewhere.

The partnership is working. People -- whatever their slot in government or in their communities -- are joining together to achieve a common goal. Day by day, little by little, people like you are moving us closer to our shared vision -- of a future governed by security, not ruled by fear.

I am grateful and honored to join you in this important work, and I pledge you my ongoing support.

Thank you.

[Return to Governor's Office](#)

Governor John Kitzhaber

Associated Oregon Industries (AOI) October 13, 1995

Good afternoon and thank you for having me down to Salishan.

I'm pleased and honored to be able to speak to you today as part of your 100th anniversary celebration.

Even though we have not always been on the same page, I want to suggest that the challenges facing the state, bear some similarities to the challenges facing your business. And as businesses in Oregon, I believe we share common objectives. Simply put, I believe the state must do three things:

One, engage in strategic planning to create a sense of where we want to go and how we want to get there.

Two, cut overhead so that we can free up resources to, three,

Make the strategic investments necessary to reach our vision.

These are tasks common to every enterprise -- yours and the state's. And I firmly believe we won't be able to move forward with this agenda without the help and understanding of the Oregon business community which you represent.

I realize many of you may cringe at phrases like "strategic planning" and "reaching our vision". They sound pretty amorphous. But they're not -- they're really fairly simple.

In this scheme, preserving the quality of life -- environmentally and culturally -- that defines Oregon is the goal of the strategic planning.

Preventing crime to reduce prison populations as well as moving people off welfare to reduce welfare costs constitutes cutting overhead.

And investing in education, transportation, telecommunications and other infrastructure is the strategic investment we need as a state.

In short, we need to cut overhead and increase investment. If we do, we should be able to accomplish the mission of prospering while still maintaining Oregon's excellent quality of life.

On top of all this, I would urge that we need to get out of the habit of thinking in one and two year budget cycles. We need to actually come up with a six-year plan for Oregon that begins to relate the investments made in one budget cycle to the investments made in those that follow.

Because for too long, Oregon has been in the habit of thinking and acting short term. We have not thought or acted outside of a two-year event horizon. It's no wonder then that we are not making the investments we need to maintain and expand our prosperity.

This may sound strangely pessimistic in light of the fact that we have low unemployment -- at least in the metropolitan area -- and record investment in high technology -- again in the metropolitan area and to some extent in the valley.

And the economy is strong. There's no doubt. But its strength is due to investments made before us. Investments we seem unwilling or unable to make today.

That is in part due to the staggering "overhead" costs we are carrying as a state -- especially in corrections. Just think for a moment what we are going to spend in the next five years implementing Ballot Measure 11 -- 1 billion dollars.

Imagine if we had that funding:

--To invest in head start to make sure all our children are ready to learn when they get to school.

--To invest in computers for schools so that every Oregon high school graduate was computer literate.

--To invest in our universities so that all Oregonians with the will and determination could get college degrees, or,

--To invest in transportation, sewers, telecommunications and the other infrastructure necessary for business growth and expansion.

Now, there's no getting back the money we will have to put into the corrections system to implement Ballot Measure 11. But there are ways, if we act now, to start stemming the flow of kids into our correctional system and reducing -- over the long term -- the costs of that system.

And there are ways, again if we act now and act honestly, to begin moving Oregonians off welfare and other forms of public assistance, so that over the long term, we cut the overhead cost of providing for these folks and provide them the assistance they need to become contributors to our state.

Let me just give you a few examples of projects I am working on now that are designed to cut the cost of state government over the long term.

Next week, I will go to Bend to kick off something I'm calling the Juvenile Intervention Symposium. That may sound like more governmentese, but it's basically a workshop to figure out what works and what doesn't in terms of keeping kids out of crime.

There's no secret that juveniles are the fastest growing segment of the criminal population. The secret, rather, is that there are a number of state, local and federal entities spending an unknown amount of money in an unknown amount of programs with unknown results to try and prevent juvenile crime.

If you want to work to cut the costs of government in the long term, and improve the quality of life for all Oregonians, there is no single task more important than helping our kids keep out of crime. And I would welcome any participation from your organization in helping do that.

Secondly, I welcome the support and active participation of your members in lobbying the US Congress in defense of the Oregon Health Plan.

After almost two years, the Health Plan is an unarguable success. It accomplishes everything a conservative, federalist congress seems to want: it reduces emergency room visits, gets people off welfare, reduces costs to hospitals and -- bonus of bonuses -- actually makes people healthier. This is a successful innovation. A victory for the laboratory of democracy.

Unfortunately, congress wants to kill it.

I'll be going back to Washington, D.C. to try and knock some sense into both House and Senate members to get the exception Oregon needs to continue with the Health Plan.

Now, I understand this is a congress in which business has some pull. Well, there's never been a more important time to use it. 130,000 Oregonians need your help if they are to continue to receive health care.

The benefit to you? Lower health care costs, a healthier workforce and a long term decline in the cost of providing welfare.

These are just two examples of what I am doing to try and make an impact in the cost of government services over the long term so that we can begin to move our resources away from these overhead costs and into the investment category.

Perhaps no sector of our state government requires that investment more than our education system. And when I say education system, I mean from preschool to Ph.D.

There is a tendency for us to think of education in terms of separate, unconnected islands. To see education as competing budget priorities instead of the intertwined system that it is.

Already, in a windup for the next session, we are beginning to view higher education separate from the rest of our educational system. Now, I don't want to discourage anyone in the system from thinking about reform -- about thinking how to do more with less -- but let me give this warning:

I will not accept a fragmented approach to changes in our education system. Rather, I plan to move forward in 1996 with a comprehensive approach to reform of our education system that recognizes the continuum of learning. Certainly, within that, we may come to some radical proposals about our higher education structure in Oregon. But I want to stress that we will do so only after careful, public consideration and only in concert with a comprehensive approach.

I believe that this is the only way we will be able to make meaningful change in our state's education system and the only way that we will be able to rebuild the consensus to expand our investment in education.

Again, I look forward to your fruitful participation in this process.

I will also need your help to move forward with another major investment Oregon needs to remain competitive: transportation.

For two legislative sessions, we have been unable to come to agreement on how to fund the maintenance, let alone the expansion, of our transportation infrastructure. Perhaps this is because we are unable to distinguish between a government expenditure -- which no one wants to fund -- and a community investment which is necessary to preserve our prosperity.

I will be working in the coming year to build the consensus for transportation investment. And when I say that, I can see little "gas tax alert" signs going off all over the room.

That's why I am working with the trucking industry, local government and others to come up with a comprehensive finance plan. If we consider just a gas tax or weight mile tax or any other financing element alone, we won't be able to move. The past four years have shown us this.

But if we can craft a compromise between all the constituencies that agree on the need to maintain and improve our transportation system, then perhaps we can move forward.

There is no survival value in pessimism. I'm willing to try and get this consensus. I am not willing to sit by and watch the same futile arguments end in failure.

I am not willing to sit by and watch our transportation system crumble.

I am not willing to sit by and watch our universities, community colleges and K-12 schools slowly disintegrate.

And I am not willing to let our corrections cost in this state rise unabated, stealing dollars from schools and roads and putting them into prisons.

I don't think this is the Oregon you want either.

I am convinced that, despite some differences, we share a common ground. I'm convinced that we share a common sense about budget priorities, about reducing our overhead and about increasing our investment in the future.

I close today by asking your membership, on their hundredth anniversary, to turn with me to face the next hundred years. Oregon has challenges to meet. Together, we can meet them and master them.

Thank you.

Governor John Kitzhaber

Economic Development Conference Speech
Newport, OR September 26, 1995

Six years ago, Governor Neil Goldschmidt unveiled a long-range vision for the state of Oregon -- an economic strategy for the "Pacific Century" known as "Oregon Shines." In his executive summary of the plan, the governor called on Oregonians to:

--Build the capacity for long-term, well-managed growth,

--To position ourselves to take advantage of the emerging global economy,

--And to pursue well-paying, productive jobs for Oregonians that would provide an economic base for enriching all aspects of our lives.

Today our goals remain the same. We still value economic growth -- not as an end in itself, but for what it will enable us to do -- educate our children, protect our communities, care for our vulnerable citizens, and preserve our quality of life.

We don't need to reinvent the vision.

We do need to deliver on it.

And we do need to make it relevant to today because thankfully, we don't face the same challenges of a decade ago.

Ten years ago, we were primarily focused on economic recovery following the recession of the early 1980s. Oregonians around the state were hurting. We were engaged in trying to put Oregon on the map, to overcome the image of a state that not only disdained economic growth, but actively discouraged it.

Today, the challenge is different. We face, as the title of this conference tells us, the challenges of prosperity.

Those challenges are simple to describe -- but tough to meet. They are:

--To not only grow, but grow purposefully without sacrificing the quality of life that defines Oregon;

--To recreate the consensus about the investments it will take to make this possible, and,

--To spread the benefits of growth geographically and socially so that we help create family-wage jobs not only in the Willamette Valley, but in rural Oregon as well.

To see growth without thought, all we have to do is look north to Seattle or south to California. We need to consider not just how much, but what kind of economic expansion we want here in Oregon. And we have to answer the question: is all growth good?

The Point is: we need to focus on the critical distinction between quantity . . . and quality.

Let me focus for a moment on that first challenge: to grow purposefully.

These days we hear a lot about "managed" growth. It has become more critical than ever before that we understand exactly what that means. In the simplest terms, it means that we retain control -- over how and where we grow.

Because economic growth is a double-edged sword. Done right, it will clear a path to long-term, balanced prosperity; done wrong, it can destroy the very qualities that make this state what it is.

Today Oregon still has a choice. Unlike many states, we have not ruined our water, or fouled our air, or fallen prey to the kind of urban sprawl and congestion that can drive people mad.

But we have only a narrow window of opportunity.

On one hand, we must grow because our future depends on prosperity. We need to create more jobs because there are twice as many people entering the labor pool as retiring out of it. So in a sense we have no choice.

On the other hand, we must do so in a way that preserves Oregon's special quality -- because once lost, I very much doubt it can be recaptured, and that's not a legacy I'm willing to leave behind.

I think there are two keys to meeting this challenge successfully:

--One is coordination: partnership and coordination of efforts among state and local agencies and between government and business, held together by a clear sense of the "big picture," a shared vision of the kind of future we want to create.

--The other is the need to make wise, balanced investments that I mentioned at the start of this speech -- investments in technology, infrastructure, and education -- things without which our current economic growth spurt will be no more than a flash in the pan.

Accomplishing these two things -- well-coordinated delivery of state resources coupled with smart investments for the future will help us meet what I described as that third challenge of prosperity:

--Delivering prosperity to more people in more places around our state.

Nothing so typifies our success as well as our challenges as does the high technology sector.

New high-tech companies are locating here in increasing numbers, and they are creating jobs and pumping money into our economy -- a lot of money. Our new chip plants have an investment in the state worth \$12 or \$13 billion. And just to give you an idea of what that means, you could buy all of downtown Portland for a mere \$2 billion.

Make no mistake about it -- this is a success of unparalleled magnitude and we should celebrate it.

But we should also pause and reflect for a moment.

And in that moment, we need to ask whether the incentives we're giving to bring these plants here are necessary and proportionate? I believe it's time to have a debate about our enterprise zone and strategic investment programs to answer these questions.

Oregonians need to be ensured that the tax breaks we grant are actually necessary to attract the industries, and that they are matched by the company's own investment in our community to be part of a strategy to create family-wage jobs. I do not approach this question with a bias -- but I feel strongly we need to answer it consciously and publicly in light of the huge high technology growth we are seeing.

Secondly, in the course of our celebration, we must not forget that our high technology investment has been regionally disproportionate. Almost all of it has been centered in the Willamette Valley, because that's where we have a concentration of facilities that can most easily accommodate it -- transit systems, sufficient housing, adequate public

services.

Now, I'm not saying we can or should bring semi-conductor fabrication facilities to rural Oregon. But I do want to remind everyone in this room and in this state that we cannot be satisfied with bringing growth and prosperity only to the Willamette Valley. It is but half a victory.

Rural Oregon still lags behind, and still has pockets of economic depression. That fact helps perpetuate the myth of "two Oregons" which poses a real and continuing threat to our future by obscuring our shared values and interests.

And so far, our economic development can most accurately be measured in terms of quantity, not quality. While it's true that in each year since 1985, job growth in Oregon has outpaced the national average, and that our unemployment rate is currently 4.8%, we need to look at what kind of jobs we're talking about. Far too many of them are low-paying service jobs.

And although we are succeeding in creating many high-tech jobs in the cutting-edge industries of the 21st century, one out of every two high-tech professional jobs goes to someone from outside the state. If this trend continues, it will soon be two out of three.

Michael Salvato, who did a recent case study on Oregon for the national academy of sciences, had this to say: "Although unemployment is over 11% in some parts of the state, technology firms still have to import workers from outside of Oregon because the state's workforce does not have the skills they require." That in itself should indicate that we could very well be on our way to a low-wage economy, and I don't believe that's the path we want to take.

If we are genuinely committed to a financially secure future for our children, we're going to have to pursue quality -- not just quantity -- expansion; and that will mean changing not only our approach -- but some of our attitudes as well.

If we want to cultivate wise, controlled economic development in the Willamette Valley, and at the same time bring rural Oregon into the economic loop, we need to focus on the two priorities of coordination and investment.

The first of these is coordination. To that end we have established a community solutions team composed of the directors of five state agencies which have some relation to economic growth: economic development, land conservation and development, transportation, environmental quality, and housing.

The team's goal is to coordinate efforts and investments among all these agencies to avoid conflict and to ensure that communities where growth is occurring are prepared to accommodate it. This will give us greater flexibility to encourage quality growth in rural regions, while taking some of the growth pressure off the willamette valley.

The community solutions team will work with communities to ascertain local needs -- which will differ from one community to another -- and coordinate investments in areas which will meet those needs. They would ensure, for example, that we don't site a plant where there is no housing available, or where the infrastructure can't accommodate increased traffic.

These efforts are especially important in bringing quality economic development to rural Oregon. The new prison in Ontario, for instance, will create 700 new jobs. But to handle that kind of expansion, the community will need investments in affordable housing, transportation; sewer and water systems, and so forth.

The community solutions team is charged with facilitating and coordinating those investments, in partnership with local government and local interests. The other key to success is appropriate, balanced long-term investments in certain pivotal areas.

One of these is infrastructure. We need to support improvements in the state's infrastructure -- specifically, transportation, because access to markets is absolutely essential to Oregon's prosperity. Our low population makes it impossible for us to consume all we produce here, so unless we are able to move our products to markets beyond the state, our economy will founder.

Another is telecommunications infrastructure, which will open job and educational opportunities in every region of Oregon.

Consider for a moment, Sykes Industries. It is a software services company which has recently located in Klamath Falls and whose primary need is telecommunications services.

It's no longer just an academic idea that telecommunications makes businesses less place bound. Companies like Sykes prove it's true. This is a tremendous advantage for Oregon -- if we can facilitate the investment in the telecommunications capacity we need to take advantage of it.

Yet another investment is land use planning. Oregonians have invested more than 20 years in the state's land use planning program, and have been well served by that investment. Our business community must continue to support these policies, because they contribute substantially to the livability that remains a chief selling point in our economic development efforts.

Finally, sustained, quality economic growth is absolutely dependent on reversing the peculiar and incredibly self-defeating attitude that has led us to underfund our higher education system -- not just once, but time after time after time.

I said at the start of this speech that we must recreate the consensus for public investment -- and there is no better example than our education system.

I believe one of the keys to accomplishing that is to view our education system not as a series of islands -- but rather as links in a chain. We must view education as a continuum from pre-kindergarten through higher education to life learning.

That is the way we can begin to reconnect Oregonians with the value and importance of education -- and especially higher education in this increasingly knowledge based economy.

If we don't, we'll continue to see our emerging high-wage, high tech professional jobs going mostly to people from outside the state. And we are not going to settle for that.

We must not forget that Oregon is basically a small-business state. We are blessed with many, many creative, energetic entrepreneurs, which is an invaluable asset. These investments are necessary to see that Oregon remains one of the best places in the world to start and grow a new business.

I challenge anyone who doubts that such investments are necessary to think about these questions:

--Is it good enough for Oregon to be dead last among the 50 states in funding for higher education?

--Is it good enough to let our new high-tech industries provide entry-level jobs for Oregonians, but to bring in their professional research and development people from outside, because our universities aren't equipped to train them?

--Is the telecommunications revolution going to pass three-fifths of Oregon by because we can't afford to run fiber-optic lines to rural Oregon?

--Do eastern Oregonians have good enough access to higher education and lifelong learning, so they can relearn their skills to keep pace with a changing economy?

--Are our roads and transit systems good enough to sustain our competitiveness in the global marketplace of the 21st century?

--Can we say for certain that our business investment decisions complement local land use plans and growth management initiatives?

--Are we making enough of the right kind of investments in Oregon's future?

If you can answer "yes" to all these questions, then I don't know what we're doing here.

But you know -- and I know -- that didn't happen. There is plenty of work ahead for all of us, and the time to begin on it is now. So far we've done well, which proves we can succeed.

But however bright our economic outlook may seem at the moment, nothing is assured unless we work to make it so. And nothing less than our future hangs in the balance.

I value that future. For the next 39 months, I am the chief custodian of Oregon's future -- and I will not stand idly by and watch us squander this moment of opportunity.

I think it's safe to say you feel the same way, or you wouldn't be here today. In meeting the challenge that lies before us, we will more than ever need your united help and support.

Ten years ago your vision and your efforts put Oregon on the map and re-energized a failing economy. Though today's challenge is different, and in some ways more difficult, I firmly believe that you -- and all Oregonians -- are equal to it - and that together we will make Oregon shine well into the Pacific Century.

[Return to Speeches](#)

[Return to Governor's Office](#)

September 25, 1995
Governor John Kitzhaber

Juvenile Justice

Last November, the people of Oregon sent a very clear message: that they wanted violent criminals off their streets and out of their communities. But I think there was more to it than that. I think people were saying that they are just plain sick and tired of escalating crime, and that they want it stopped.

Ballot Measure 11 was a mandate to be tough on crime by focusing on punishment. But we have to remember that punishment comes into play only after a crime has already been committed. If there's been a crime, then someone has been hurt. Someone has suffered.

Does anyone seriously think Oregonians were saying, "We don't care how many crimes are committed, or how many victims there are -- just as long as the people who do it get locked up"???

I don't. Neither do you. That's why you're here today -- to talk about ways to prevent violence, to prevent crime, especially crime committed by our youth.

When I say that, despite our best efforts, violent crimes committed by young people are increasing at a very alarming rate, I'm not telling you anything you don't already know. Let me emphasize the word "efforts" -- because it's not true that we're doing nothing.

Today there are hundreds of youth programs all over Oregon that seek to prevent juvenile crime by teaching children how to lead lives free from violence and substance abuse, how to resist negative peer pressure and the lure of gangs, and how to make positive life choices.

There are a number of intervention and treatment programs that attempt to turn youth away from early signs of criminality. These programs, on which we spend millions of dollars every year, are provided at the state, county and local levels by dedicated people who genuinely care about kids.

And yet juvenile crime is on the rise -- which suggests that if we simply do more of what we've been doing, we can expect more of the same disheartening -- even frightening -- results. Clearly, that's not what anyone wants to see. You and I wouldn't be here today if we didn't believe this is a problem we can do something about -- if we're willing to make some fundamental changes in our approach.

Right now we are under great pressure to do so. For one thing, there is the public sentiment which led to the passage of such strong anti-crime measures in last general election. For another, the implementation of Measure 11 puts severe strains on the state budget, and makes it imperative that we do something to stem the tide of people coming into our corrections system on the front end.

But above all, there is the inescapable fact that our current efforts to prevent juvenile crime are not working and need focus. But before we can make any intelligent choices about changing our approach, I think we need to understand why

our current approach is not working. It seems to me there are at least four reasons.

First: there is no clear consensus on what constitutes "prevention," or on who needs it -- and when. There is little disagreement that intervention on behalf of extremely young children has a great deal of value. But that alone is not enough.

There are plenty of young people who, for a variety of reasons, don't show obvious signs of problems until they are older. And addressing the problems of older children may present even greater difficulties than trying to help preschoolers.

The point is that when a child turns down the wrong road, the consequences -- for the kids themselves and for society -- are going to be devastating -- no matter when it happens. Effective prevention, then, must involve a balance of efforts spread across the age groups from birth to 18.

Second: the system we've been relying on for dealing with juvenile crime and crime prevention is incredibly fragmented--a bewildering array of state, county and local agencies and departments, together with numerous private, non-profit groups and organizations. And while all of these share the same general goal -- to help kids and keep them from turning to lives of crime -- their day-to-day operations are often redundant and may even conflict.

Third: partly as a result of this fragmentation, it has been very difficult to measure program effectiveness. There's no clear connection between effort and result -- except the negative connection suggested by rising crime rates. What's even worse, if you can't judge the effectiveness of a program by its outcome, then there's no accountability for particular choices -- and that's certainly one of the things we have to change.

To put it another way, we know we're spending a lot of money on juvenile crime prevention. But we have no way of measuring -- or even seeing -- what we're actually buying with those dollars.

Fourth, and perhaps most important, there has been no central state leadership that could coordinate and integrate and focus all the separate strands of this system and direct them toward one clearly defined and measurable goal. That's what I want my administration to provide.

Let me make it clear that I'm talking about leadership -- not control. Control belongs at the community level. Someone or something is needed to hold the system together in some kind of cohesive unit; but the front-line of prevention is the community -- kids get into trouble at the local, not the state, level; and solutions need to be crafted at the local level and tailored to fit local situations.

That's something the state can't do.

What the state can do -- and should do -- and will do -- is to support local efforts by acting as a partner and facilitator -- ensuring that our juvenile justice system is a comprehensive network of smoothly interlocking parts -- with no overlap, no collision, no redundancy, and that the programs we fund are those that provide the highest return in terms of effective prevention.

This problem is so severe, its solution so critical to our future, that we have to make every dollar count. What I'm talking about is a unified, consolidated statewide plan, rather than a collection of individual agency and program efforts. This plan must clearly define roles and expected outcomes, to ensure accountability. And it must include strategies for integrating services across agency lines and for connecting state efforts with the work being done at the level.

Here is the kind of process I have in mind:

First, since the front line for juvenile crime prevention is our local communities, that's where assessment and planning must start. Key players in this process would be law enforcement officials, judges, county commissioners, the district attorney, the juvenile department, juvenile parole officers, the local commission on children and families, the schools, program providers, advocacy groups, and concerned citizens.

These people should begin by analyzing arrest and referral rates, and the trends they indicate. The resulting data should help them identify who potential juvenile offenders are -- what are their most salient characteristics -- and what factors drive them to cross the line of the law. It is especially important to examine the characteristics of youth who have committed or who are at risk of committing Measure 11 offenses.

Second, based on the foregoing analysis, local communities must begin to develop strategies for targeting, intervening with, and treating the various categories of at-risk youth.

The key question is, what strategies have the greatest potential for preventing juvenile crime in general, and especially Measure 11 crime, in the next two to four years?

This step should include a careful analysis of existing programs to see which ones are or are not working, using research-based findings about effective program models. Programs not supported by research, unsuccessful programs, and programs which duplicate services should be discontinued.

Third, to suggest that there is not enough resources is not the answer. Resources must be channeled into the proper local needs. This can only happen by an exacting process of research and identification of the specific problem of a local community. Then, flexible funding must be available to provide each individual child with the proper resources.

Finally, local communities, in conjunction with the state, need to establish -- and articulate -- some reasonable expectations with regard to reductions in juvenile arrest and referral rates at the end of one year, and at the end of two years. They should also take into account any major barriers to achieving a higher reduction rate.

Let me say here that I think we desperately need a better computerized juvenile justice information system, so we can track these kids, and put ourselves in a better position to judge whether our efforts are working.

Now: while the details of this process still need a lot of refining, I think we at least have a better sense of where we've been going wrong -- and why; and I think we've already taken the first few important steps toward reversing the appalling escalation in juvenile crime.

Before I wind this up, I'd like to re-emphasize two points, because I believe they are critical.

First, the real solution to juvenile crime is local. We cannot do this without local control and community involvement, in partnership with the state and under strong state leadership.

Second, we already have in place a very good system for dealing with very young at-risk children -- the Relief Nursery in Eugene is one of the best examples. Now, with the passage of SB 1, we have a mechanism for dealing with kids at the other end of the spectrum -- those we were unable to help in time -- the kids who have to be locked up.

But in between these two extremes there's a huge number of kids who fall into risk at various ages and for various reasons -- kids between the ages of 8 and thirteen or fourteen -- and we have no organized way to target or treat them. They're falling through the cracks in the current system, far too many of them are going to end up in our correctional facilities, and if that happens, we're all going to pay the price.

Many of you here today have seen firsthand the heartbreaking human cost of crime -- the broken bodies, the shattered lives, the immeasurable grief that follow in the wake of violence. I've seen it too, as an emergency room doctor.

I know we share a sense of anger and frustration -- the same anger and frustration Oregon voters carried to the polls last November. But we have to turn those feelings into constructive action.

We have to restore some sense of public security. We must reclaim our streets and communities. And the best -- maybe the only -- way to do that is to focus on effective prevention of crime among our youngest citizens. That's one of the things I am most deeply committed to, and I welcome your cooperation and your support. Thank you for doing your part.

[Return to Governor's Office](#)

Governor Kitzhaber believes that having a well-educated work force is essential to Oregon's future economy. As Oregon has experienced a surge within the high-tech industry during the last few years, a disproportionate number of high-wage, research and development jobs in the high-tech fields are going to out-of-state workers because Oregon's workforce needs more and better training.

To reverse this trend, Governor Kitzhaber believes Oregon should focus investment in education to better prepare Oregon's work force for this changing economy. The Governor also believes tax cut proposals at this time will challenge Oregon's ability to make necessary investments in the future of the state.

Governor Kitzhaber spelled out these ideas as he addressed the North Coast Employer Education Summit on August 24th and focused on the important links between employment and schooling.

August 24, 1995
Governor John Kitzhaber

Work Force Quality

It's always a pleasure to attend events which celebrate people working together, particularly when they cross geographic, political, and institutional boundaries. It's an even greater pleasure when their product promises long-term benefits for Oregon, and this summit clearly holds that promise.

I'd like to talk a little bit about where you fit into our long-range vision for Oregon's future, and to spell out some of the pitfalls that lie before us, in the hope that, with your help, we can avoid them. You're here today because you understand the importance of investing in the future -- because you understand the importance of working together in partnership.

You also understand, better than anyone, that both education and business are keys to our future, and in fact form a natural partnership of supply and demand. In order to grow and thrive, our businesses need a quality workforce; it's up to our education system to supply that need. Today we stand on the threshold of boundless opportunities, but our ability to take advantage of them depends on our ability to make the long-term investments in education and technology that will assure a strong, growing economy.

One of the primary duties of state government is to keep the economy growing, because everything else we need to do -- provide for the public safety, provide job opportunities for our citizens, educate our children, care for our vulnerable, and protect and enhance our quality of life all these depend on sufficient revenue.

So the economy has always been a means to an end -- a tool for achieving a vision we all share. Yet today our economy is in transition, and the kind of workforce we trained a generation ago will no longer fit our needs. If we don't move ahead, we're going to fall behind. That would be a shameful legacy. And it's unworthy of the Oregon tradition -- a, tradition of leadership.

That's why we must take steps to assure that Oregon will shine as brightly in the 21st Century as it has shone in the past. And that means making the kind of investments that will enhance our future. It means joining forces in pursuit of a common goal . . . exactly the things you're gathered here to discuss.

I believe we've already made a good start, with such things as: The 1988 statewide planning effort known as Oregon Shines, which mapped out a long-range vision and key strategies for reaching it;

The Oregon progress board, which translated those key strategies into the measurable goals called the Oregon benchmarks;

The Education Act for the 21st Century, the Workforce Quality Act, and the Regional Workforce Quality Committees, one of which is sponsoring today's event.

We have every right to take pride in our progress, but we still have a long way to go. And we cannot ignore the obstacles that lie ahead. It's clear that if our economy is to keep pace with a changing world, we must make increased investments in education and technology. Yet our ability to make these investments is threatened by a number of circumstances which either tie up available revenue, or eliminate revenue we've previously counted on:

- Loss of federal block
- Saif payback
- Reduction in capital gains tax
- Establishment of education trust fund
- Lottery uncertainty

But perhaps the greatest cause for alarm is a recent proposal for a half percent income tax cut -- alarming not because of the tax cut itself, but because of the attitude behind it.

We all need to understand what's going on here. To begin with, it's a fact that taxes equal services. If we cut taxes, we also cut services.

There's nothing wrong with that, but we do need to recognize the underlying assumption: and that is that some of the services state government provides are unnecessary. If that's the case, then we should designate just what services we're talking about, and eliminate them, and then adjust the tax burden accordingly.

That is the politically courageous way to cut taxes.

That is the method that weighs the risks and benefits.

That is the accountable way -- where you get the glory for the tax cuts only after accepting responsibility for the service cuts.

And it's the only way I can endorse.

Of course, there is another way -- the way currently being proposed: cut taxes first, and then have to cut services to balance the budget.

This is the low-risk, low courage way, because it's hard to argue with cuts when the coffers are really empty. At the same time, this approach pushes the responsibility for making those cuts into the future and onto someone else's shoulders.

Now maybe you're asking -- what's the real difference here? What does it matter whether we cut taxes first and then cut services, or cut services and then cut taxes?

The difference between these two approaches is very subtle -- but very, very critical in terms of our future, and it gets at the heart of the difference between politics . . . and policy.

If we restrict revenue, so that program cuts have to be made, the debate is driven by money. The tendency is to look at the price-tag before looking at the value of the service or program, and too often without considering the long-term consequences of eliminating it. This approach focuses on the present requirement for a balanced budget, not on the future welfare of Oregonians.

On the other hand, searching for unnecessary services when money is not an issue, is more likely to produce sound policy. The debate centers around the value of particular services, to present and future Oregonians.

In the first case, the criterion for making cuts is money: short-term savings. The question is, "how much can we save if we cut this?"

In the second case, the criterion for making cuts is usefulness: long-term value. And the question is, "how will it affect people's lives, how will it affect their future, if we cut this?"

I personally believe we have a greater responsibility than to give people a tax break with no apparent strings attached. There are always strings attached. You don't cut taxes in a vacuum.

If we want to cut taxes, fine; but it's our duty to spell out what that will mean in people's daily lives. It might mean more money in their pockets today, yes, but at what price? What about tomorrow? At this point in our history, I think the price is too high. If we value our future, I think the price is too high. But to see whether I'm right or not, let me ask you seven questions:

Is it good enough for Oregon to be dead last among the 50 states in funding for higher education?

Is it good enough to let our new high-tech industries provide entry-level jobs for Oregonians, but to bring in their professional research and development people from outside, because our universities aren't equipped to train them?

Is the telecommunications revolution going to pass three-fifths of Oregon by because we can't afford to run fiber-optic lines to Union or Baker City or Myrtle Point?

Do enough of our children come to school ready to learn, and are our schools good enough when they get there?

Do Eastern Oregonians have good enough access to higher education so they can relearn their skills to keep pace with a changing economy?

Are our roads and transit systems good enough?

Are we investing enough in Oregon's future?

If you can answer "yes" to all these questions, then there's nothing left for us to do here. But if you answered "no" -- to even one of them -- then how responsible is it to be talking about cutting taxes?

Now is the time to invest and reinvest in our future.

Now is the time to bring our higher education system up to speed.

Now is the time to buy into the technology that will put Oregon on the cutting edge of the new global economy, and make education and jobs accessible to every single one of our people.

Now is the time to streamline our transit systems, and to update our curriculum to prepare the best qualified workforce in the nation and the world.

Now is not the time to start backing away from our responsibilities, if we value our future.

I take those responsibilities seriously, because I do value our future. For the next 40 months I am the chief custodian of Oregon's future -- and I will not stand idly by and countenance choices that may buy a little temporary political gain -- if

the price is a mortgage on the future of this state.

That's too high a price to pay. It's what one would expect of a politician, whose eye is on the next election, not of a statesman whose eye is on the next generation.

Your presence here today bears testimony to your commitment to the next generation of Oregonians. You understand that today's choices will expand -- or restrict -- tomorrow's options.

You understand that unless our children are ready to learn when they get to school, it won't matter how good our schools are.

That unless we invest in higher education and establish superiority in narrow but strategic areas, our new high-tech, high-paying jobs will go to non-Oregonians.

That unless we provide the necessary telecommunications infrastructure, rural Oregonians will continue to be at a disadvantage in accessing education and job opportunities.

That unless we foster more cooperative relationships between our schools and our business community, our workforce will never reach its full potential.

If we don't move ahead in these areas, we will fall behind. If we don't invest now in our future, we will lose control over our future.

I, for one, am not willing to let that happen. Neither are you. You are community leaders. You have the power to get people to listen. So let me leave you with this charge:

Go back to your communities here on the North Coast and tell them about the importance of training a quality workforce to meet the demands of the new high-tech industries;

About the importance of expanding our definition of education to include pre-kindergarten, higher education, and lifelong learning;

About the importance of investing in this whole spectrum of education, not just K-12;

About the importance of investing in the technology that will open education and employment opportunities to people in every region of Oregon;

About the importance of fostering closer working relationships between our schools and our business community, as you are doing here.

Help me help Oregonians understand that our future depends on making policy instead of playing politics; that it depends on making long-term investments, not just short-term expenditures; that above all it depends on seeing each other not as adversaries, but as allies, united by a common vision.

Oregon has always been a leader. We've proved that time and again -- with our land use laws, the Oregon Health Plan, the Educational Act for the 21st Century, the Oregon Benchmarks, our school-to-work program, and in countless other ways.

We've always been in the vanguard of change, because of our rare ability to foresee where the world is going and to get there first, setting an example for other states and for the nation. The economic and educational challenges we face -- the very challenges you're gathered to discuss -- are one more opportunity to prove that Oregon will continue to shine -- a bright beacon of hope on America's western rim.

I want to thank you for doing your part, and I pledge my continued support.

[Return to Governor's Office](#)

- **More Information:** [Prison Reform Press Release - January 11, 1996](#)

Governor Kitzhaber has called a special session of the Oregon Legislature to begin February 1, 1996 to implement Senate Bill 1145, the Partnership for Community Corrections. The plan is part of the Governor's statewide public safety strategy that aims at not only effectively locking up violent criminals, but also reducing the occurrence of crime in the first place. The following speech describes Senate Bill 1145 and its role in improving the public safety system in Oregon.

Governor John Kitzhaber, M.D.

Senate Bill 1145 / Community Corrections

It's been said that those who do not learn from history are doomed to repeat it.

That's why I'm worried about public safety policy in Oregon. Because, despite the best efforts of the well-meaning, the history of the criminal justice system in Oregon is a history of failure.

It's not a failure to build and operate prisons.

It's not a failure to try and convict felons, and to put a good many of them in jail.

It's not a failure to spend enormous sums of money on these endeavors -- more than \$1 billion over the last decade alone.

But it is a failure to make the public safe.

Let me ask you a couple of questions:

Do you feel any safer today than you did ten years ago before we built those three thousand new prison beds in the late 1980s? Do you think the crime rate is going up or going down? Are we being successful at turning kids away from crime -- or are we letting them go until they do something really bad and then simply locking them away?

We know the answers to those questions. Every poll taken shows crime as our number one concern. Every time we turn around, there's another story of senseless murder, rape or assault. And in response, we've passed tough, mandatory sentencing laws like Ballot Measure 11 that ensure serious criminals are given serious punishment. And let me just assure you that I am committed to fully implementing Ballot Measure 11.

Let me just tell you what we are doing in this state. We are building 3,000 new prison beds at Snake River Correctional

Institution. We are going to site and building another 1,500 bed adult prison. We are constructing 400 beds in five regional juvenile facilities and building two juvenile boot camps. This is a strong commitment to punishment.

But I am not confident that will make any lasting difference.

We'll build more prison beds and put more criminals away for longer periods of time. But does that do anything to choke off the ever-growing supply of juvenile delinquents who become young thugs who become violent felons? No, it doesn't. Ballot Measure 11 is only one part of the equation. It's punishment, but it's not prevention. Having either one without the other means you don't have public safety.

For the last year, I have been working with sheriffs, district attorneys, judges, county and city officials to take a first step toward creating a public safety system -- not just a state prison system. And this public safety system would be marked by these three things:

First, accountability:

- All offenders would be held accountable for their actions and receive some kind of punishment. This may be a diversion program, a boot camp, or a cell -- depending upon the offense committed. But no one would escape without consequence as they do today. Second, local control:

- Crime happens at the local level -- not in some vague abstraction called the state. That's why we need to empower local officials to deal with their crime problems in ways they know will work -- instead of mandating a cookie cutter, one size fits all approach from Salem. Third, prevention:

- Our public safety system would allow us greater resources, flexibility and creativity to deal with first-time and lesser offenders in a way that can help move them away from the crime system and into productive, law-abiding lives.

In the 1995 legislative session, we put these concepts into law and it was passed as Senate Bill 1145. It is based upon the three principles of accountability, local control and prevention. Senate Bill 1145 establishes an unprecedented partnership between county and state government, and it distributes the responsibility for punishing criminals in a way that is most likely to increase our overall safety in the long run.

Under the system created by this bill, the state, being in the best position to do so, and in accordance with the mandate of Ballot Measure 11, will assume responsibility for incarcerating violent offenders, and will build the bed space necessary to keep those felons off our streets and behind bars for the full duration of their sentences. Make no mistake about it. We will implement Ballot Measure 11 fully and we will keep these people off the streets.

Counties, on the other hand, will assume responsibility for designing and implementing effective, appropriate sanctions for felons sentenced to twelve months or less.

In addition, Senate Bill 1145 specifically requires the state to supply counties with the money and expertise necessary to carry out their charge, and provides that counties may opt out of the partnership if state funding ever falls below a baseline figure.

Why are we doing this? Conventional wisdom would tell us that simply building more prison space and keeping criminals in it longer is the way to go.

But that's not good enough. And it's not working. If it was, we wouldn't have a crime problem. We'd simply build ourselves out of it.

I am pushing hard for this new partnership in corrections between the state and the citizens of local communities because I am committed to reducing crime tomorrow, not merely containing it today. Because I am resolved to increase, permanently, the safety of the Oregon people. And because what we've been doing simply does not work.

To most of us that fact is very plain. But not to everyone. Representative Mannix and Representative Tiernan , whose

public assault on Senate Bill 1145 amounts to an endorsement of the status quo.

Let me tell you about the status quo.

What we have today is a system focused almost exclusively on punishment, and hardly at all on prevention. Now, with the passage of Ballot Measure 11, we have a system which says, essentially, it doesn't matter how many crimes are committed or how many victims there are -- as long as the people who commit them get locked up.

It's a system where local responsibility for the kind of people we're talking about under Senate Bill 1145 extends only to transporting them to a state prison, where they serve an average of four-and-a-half months, and are then paroled back into the communities.

It is a system where, all too often, a series of minor offenses are typically ignored until they escalate into a major offense and someone really gets hurt -- a system where, all too often, no one takes responsibility -- until something tragic happens.

But by then it's too late. Not too late for punishment; it's too late for the victim. Let me give you a couple of examples of today's public safety system at work:

Consider Fred, from the Eugene area. He's currently doing time until 1999 at the Snake River Correctional Facility. He is 20 years old and convicted rape II, two charges of attempted use of a dangerous weapon and with a felon in possession of a firearm.

But that wasn't the start of his criminal career. When he was 13, he was adjudicated for theft II, sex abuse I, and menacing. At age 17, Fred was charged with robbery II and possession of a short-barreled shotgun. At age 19, he was charged with rape II.

We put Fred away for several years now. But we apparently had no way to get him out of a cycle of crime until he had victimized at least half a dozen people.

At least no one died. You can't say that about the man in Portland who was beaten to death at a light rail stop -- allegedly by a group of young thugs with similar rap sheets.

Now ultimately, these folks have ended up doing hard time. But, isn't it too late?

Isn't it too late for the victims of all those petty crimes -- and the victim of that last brutal crime?

And isn't it too late for the criminal who finally went over the edge and did something horrible enough to get put away? I think it is way too late.

It's too late for the victim.

It's too late for the person who committed the crime.

And it's too late for us as a state which cannot even afford to adequately fund its schools. And here we are creating long-term wards of the state, who, even after they get out of prison are much more likely to be on public assistance.

The price of the status quo is simply too high -- too high in terms of victims and too high in terms of dollars.

Just remember that every time we talk about adequately funding our schools;

Every time we talk about our universities being dead last in the country in terms of per capita support;

And every time we cut back health coverage;

Just remember that we will spend an extra one billion dollars in the next five years on prison construction and operation.

That's a billion dollars we can't invest in the very infrastructure that helps keep kids out of crime in the first place.

But let's not forget that we're also talking about a ruined human being -- someone whose life might have gone otherwise if we had taken appropriate steps early on -- instead of looking the other way until we had no choice but to lock them up -- taking no responsibility until they do something that forces us to lock them up.

And that also means we take no responsibility for their victims -- we do nothing to prevent them from becoming victims. To accept arguments of Representatives Mannix and Tiernan is to accept the necessity of victims -- and I just don't buy that.

Representatives Mannix and Tiernan, and those they have enlisted under their "tough-on-crime-whatever-the-cost" banner -- argue that Senate Bill 1145 is "soft on crime." They argue that Senate Bill 1145 is a waste of tax dollars because the state can build prisons more cheaply than the counties can. And they argue that if 12-month-or-less felons are relegated to the communities, instead of the state, they will flood our streets and imperil our citizens.

Let's look for a moment at the assumptions behind these arguments.

To be "hard on crime" translates into punishment. But that's not being hard on crime -- it's being hard on criminals. It's not just a semantic distinction. It is a fundamental philosophical divide. On the one side you have a single minded determination to make sure criminals are punished. On the other -- the one I am trying to describe -- you have to couple that with a determination to prevent the commission of crimes in the first place.

Secondly, Senate Bill 1145's critics will tell you that we are turning dangerous criminals loose in local communities.

That is categorically false -- and it's insulting to the men and women who run local law enforcement. The fact of the matter is that 90 percent of those covered under Senate Bill 1145 are already on probation or parole in local communities.

And, under the existing system, when an offender violates parole or probation, the county can (and often does) pack the offender off to a receiving center and they eventually wend their way to a state facility -- or several different state facilities -- for a stay of less than five months.

Hence, what you have is a transportation system. Not a public safety system.

The issue before us is not about building prison beds. It's not about locking people up. It's about **keeping people safe**.

Thirdly, critics of 1145 charge that the state can build the prison space needed at a lesser cost than counties. The numbers are still out on that and our preliminary estimates show that costs are on a par. But the real cost issue is whether you are making any progress toward preventing the need to build more and more prison beds in the future. If we had started a decade ago to really prevent kids from becoming criminals, would we be spending a billion dollars on new prison beds in the next five years? That's the important question.

As for the argument that it is unsafe to place less than 12-month felons in a community setting, it too rests on a faulty assumption. It assumes that the current system keeps them out of the communities. It does -- for a few months; but then they're back, with no kind of program/treatment to keep them from committing further offenses. And, as I mentioned, the majority of this population gets into the state system not for a new offense, but for a technical violation of parole/probation.

Under the current system in many parts of Oregon, there are inadequate local sanctions and little local accountability for prevention. These folks are free to break the law and all communities have to do is drive to the jail, dump off their cargo, and then wait until the next time. Senate Bill 1145 would force communities to take some responsibility for preventing these violations -- and would give them the tools to do so.

What we are talking is the difference between a bus ride to a state cell and providing the resources to local counties for programs like secure, lock down alcohol and drug treatment that make these offenders work on the very problems that

landed them in jail in the first place. Or maybe they are sanctioned in a local work camp program that gives them an intense punishment experience the first time they commit a crime.

And if these prisoners are too tough for the programs -- the legislation I will introduce will build the jail bed that this offender will spend time in locally. This is the beginning of a real community safety effort. A vision of a range of local sanctions backed by the availability of a local hard jail bed.

As a doctor, I can't resist medical analogies. So let me begin to wrap up today by comparing the health care system to the public safety system.

The goal of our health care system is to decrease the supply of patients that need care -- especially expensive hospital care. In other words, to keep people healthy.

But the political and emotional media imperative always drives the system to deal with crisis. In health care, that means spending millions on resuscitating low birthweight infants -- but not investing in the very inexpensive pre-natal care that would ensure healthy babies in the first place.

The same is true of our public safety system. As you can see by the push to build big prisons and give long sentences -- the imperative is to deal with the symptom. And the symptom here is violent criminals. But I can't believe that together, we can't do something about preventing the creation of violent criminals.

Let me take this analogy a little further.

Individuals bear some responsibility for maintaining their own health. They can't abuse their bodies by smoking and drinking and driving recklessly and then expect someone else to take care of them and pay their bill.

In the same way, individuals in our communities can't ignore their at-risk population, turning a blind eye to minor infractions until something terrible happens, and then expect the state to take over with its prison system.

But that my friends is today's status quo.

It is a status quo I'm seeking to change. Our best chance of keeping people out of the criminal justice system occurs early, and it occurs locally -- the state cannot do this without community involvement. And that's what Senate Bill 1145 is about: it not only begins to assure that there's a sanction for everyone, for every infraction; it also puts everyone in the fight. And that's what it's going to take.

Half a century ago, under the threat of Nazi aggression, Winston Churchill rallied the free world with words we might use today, because the threat of escalating crime is every bit as sinister, and we must meet it with the same courage and resolve. To paraphrase Churchill, even though the challenge is great, we shall not flag or fail. We shall fight this threat on our streets and our highways. We shall fight it in our neighborhoods and our schools, and even in our homes.

We shall fight at every level of government and with every branch of law enforcement . . . we shall never stop, never weary, never give in . . . Until we are satisfied that we have restored the safety our people deserve.

To turn our backs on the premises and objectives of Senate Bill 1145 is to turn our backs on countless future victims, waiting in the wings for crime to strike -- crime we refused to prevent. To advocate a stepped-up version of our current approach -- build more and more prisons and lock up more and more people -- is, ironically, a wanton disregard for the safety of Oregonians.

Let me be clear: I did not undertake this office to preside over a penal colony we call Oregon. But if we continue to ignore the conditions that breed lawlessness, if we continue to ignore lawlessness in its early stages, if we continue to come down hard on crime only after it happens, and only when it involves violent and heinous infractions that cause untold suffering, if we refuse to learn from our history -- then a penal colony is what we will become -- and ... Oregonians will never be truly safe.

[Return to Governor's Office](#)

Governor John Kitzhaber

Oregon Newspaper Publishing Association Speech
21 July 1995

Governor Kitzhaber believes that in recent years, Oregon has lacked a solid, long-term vision for its future. On July 21, 1995, he delivered this speech to the Oregon Newspaper Publishing Association that outlined what he believes state government should be doing to secure a stable future for all Oregonians.

Thank you for inviting me to speak to you today. I am grateful for this opportunity -- particularly in this forum -- to share some of my thoughts and plans for the future of Oregon.

I sought this office in the first place because, when I looked at Oregon I saw a rudderless ship, drifting from one crisis to another without any clear direction or purpose.

I thought we were worth more than that...that we deserved more than that. And I wanted to do something about it.

William Jennings Bryan once said that the future is not a thing to be waited for, but a thing to be achieved.

Today, as Governor, I am more than ever convinced that if we're not going to just wait for the future to happen to us, we must develop a long-range vision -- a 20-year vision -- of what we want this state to become...a vision that will serve as a goal and an anchor in the riptide of change swirling around us. Without such a vision, we have no context for evaluating our day-to-day choices. The question is, how to change that.

Well, to begin with, I've found that one of the greatest obstacles to constructive change is a prevailing attitude that government is our enemy -- the cause of all our problems, rather than a tool for correcting them.

All of you here today know that anti-government sentiment formed a powerful campaign theme in 1994. Unless something changes, I expect 1996 will bring more of the same, and I think we have better uses for our time and energy.

I'm not here to defend government; but I do want to define it -- because I think that's the missing piece. And the easiest way to do that is to go back to our beginnings.

When we think of the Declaration of Independence, which we so recently celebrated, we tend to focus on the promise of equality and on our inalienable right to Life, Liberty, and the Pursuit of Happiness. But to that famous passage Jefferson added these important words: "That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

In other words, the function of government is to secure or protect our most fundamental human rights. The question we should be asking is not whether we need more government or less government; but what should government be doing for us -- and is it doing it? That's the question I want to address today.

Let's back up for a moment. Life, liberty, and the pursuit of happiness are wonderful words. But what do they actually

mean in our daily lives?

Over the past two years I have traveled to every corner of this state, and although we certainly have our differences, we also have certain basic things in common. We all want to feel safe in our homes and on our streets; we want to have jobs and job security; we want to be able to educate our children; we care about our vulnerable citizens -- a frail parent or grandparent, an abused or abandoned child; and we all want to be able to enjoy a good quality of life -- clean air and water, and open spaces in which to play.

These are the common desires of all Oregonians, transcending our individual differences. They are things that people, acting alone, could not provide for themselves. And they are important precisely because without them our rights to life, liberty, and the pursuit of happiness are jeopardized.

Taken together, they translate into a vision of our common future -- a vision that includes simple things like...

-- the freedom to ride a bike to the corner market, or to go running at dawn, or to catch the light rail into town -- without fear of assault...

-- the freedom that comes from knowing your job is secure, and pays enough to support your family, and educate your children, and set aside something for tomorrow...

-- the freedom to teach and to learn -- from pre-Kindergarten through the university -- without fear that money will run out and programs will be slashed.

When I look toward the future...

-- I see an Oregon where concern for our environment is balanced by concern for our economy, and where concern for our economy is balanced by concern for our environment...

-- I see an Oregon full of compassion for our children, our frail, and our poor...

-- Finally, I see an Oregon whose government and public institutions are trusted and respected -- because they have earned that trust and respect -- by being a tool for achieving this vision, and by being accountable to the people.

If this vision of the future is indeed one we all share, then the next question is -- how can government help us achieve it?

I see four ways where government can -- and should -- in the words of Abraham Lincoln, "do for a community of people what they need to have done, but cannot do themselves, acting separately and individually."

These are: providing for public safety, creating opportunities for work, caring for the vulnerable among us, and protecting our quality of life.

-- First, government has a legitimate duty to protect people's lives and property through an integrated system of public safety that not only provides swift, certain, and appropriate penalties for those who break the law, but also recognizes the value of prevention.

Because the fact is that most criminals are not born; they are made. I'm talking about the people who turn to gangs for acceptance, who turn to drugs to make life a little less bleak, who turn to vandalism, to child abuse, to other forms of domestic violence, out of frustration and rage at a society that seems not to care.

Punishment is absolutely necessary once a crime has been committed. But we will never reach our vision of a better future unless we also invest in prevention.

-- Second: government has a legitimate duty to create opportunities for work.

I'm not saying that government has a duty to give everyone a job. What I'm saying is that in this age of information and technology and global competition, the opportunity for work depends on two kinds of investments that could not be

made by individuals acting on their own.

These are investments in education and in infrastructure.

Of the four legitimate roles of government, this may well be the most important, because investments in education, in transportation, and in telecommunication infrastructure drive our economy and create jobs -- well-paying jobs that can support families. And economic activity and job creation provide the public revenue that, in turn, allows us to fund our educational system, to ensure the public safety, and to care for the vulnerable.

-- Third: government has a legitimate duty to assist us in caring for the less fortunate among us.

I like to think that here in Oregon, most of us believe that any personal gain that turns a blind eye to the suffering of others, or is built on the ruins of someone else's life, is a hollow victory.

We know that compassion exists -- we see it in our communities every time someone's house burns down. We saw it three months ago in the wake of the Oklahoma City bombing.

Compassion has always been part of the Oregon tradition. Yet the best evidence of compassion is to help the less fortunate move from dependence to independence, wherever that's possible -- so that they too can share equally in the opportunity for life, liberty and the pursuit of happiness. And the challenge we face is to restructure our human service programs to accomplish that aim.

-- Finally, government has a legitimate duty to ensure that all Oregonians can enjoy a good quality of life...to see that the collective actions of individuals, and our efforts to keep the economy moving, do not degrade our air, our water, or our land -- the very things that make Oregon what it is -- the most beautiful place in the world to live.

At the same time we must remember that quality of life in pristine rural Oregon is more than an environmental issue. It includes the ability to have jobs, to have good schools, and to feel safe.

Actually, that applies to all of us, anywhere in Oregon, because what we're talking about is a complex network of inter-related parts -- all necessary, all essential to the smooth functioning of the whole -- and all connected, so that over-emphasis in one area is bound to affect everything else.

More money for public safety, for example, will mean less money for education, less money for helping people who may pose a threat to public safety -- thus increasing the need for public safety. This is the cycle of short-term crisis-management in which we've been stuck for too long, and which we must break free of if we hope to create a future, not simply react to one.

Government's legitimate role, then, is to secure our basic rights by making appropriate, balanced investments in the four general areas I've mentioned -- always with an eye to achieving a particular vision of the future.

And here let me distinguish between investments and expenditures:

-- Expenditures keep the present stabilized; they have an immediate and visible return, but no long-term value.

-- Investments, by contrast, are stepping-stones to the future, even though we may not see a return for ten or twenty years.

But the important thing to note is that a choice to make expenditures often interferes with our ability to make investments.

Let me give you an example:

We know that low birthweight is a direct result of inadequate prenatal care. But as long as we devote our resources to the costly process of resuscitating low birthweight infants, we cannot make large-scale investments in prenatal care. That means more premature births, and more need for dramatic intervention.

Whereas investing in prenatal care would ultimately arrest the cycle, failure to make that investment simply assures that it will continue.

-- Education is an investment -- a stepping-stone to a better future.

-- Keeping our roads and bridges in good repair is an investment.

-- Helping the vulnerable among us move from dependence to independence is an investment.

Building prisons is largely an expenditure -- albeit a necessary one -- because it does nothing to stem the tide of people coming into the system on the front end.

The difference between expenditures and investments is the difference between treating symptoms and treating causes. And if you put it that way, it's pretty clear which choice is the wise one. But it's not always the easy one. Why? Because the emotional, political, and media imperatives are almost always to address symptoms -- to make expenditures -- because that's what people see.

That's the news you report.

An investment, on the other hand, is not "news." It has no emotional pull, and little political advantage, because we don't see an immediate return. BUT -- and this is important -- our collective rights to life, liberty, and the pursuit of happiness will never be secure unless we collectively resist the temptation only to make expenditures.

Only by making investments can we reduce the need for expenditures.

Only by making wise investments can we steer this ship we call Oregon toward a safe harbor, instead of just struggling to stay afloat, without security... and without hope.

But the political reality is that we cannot make investments, as opposed to expenditures, without some kind of six -- or eight -- year action plan that will give us a context for evaluating individual fiscal decisions...a context for ensuring that those decisions are more than isolated biennial balancing exercises, but are rather steps, each building on the one before, each moving us toward the kind of future we want to create.

To that end, I am requiring all state agencies to redefine themselves in the context of our long-range vision, and I will hold them accountable for the extent to which their budgets and their performance move us toward that vision.

At the same time, I think we must try, to the greatest possible extent, to move agency functions from centralized state control to local community control.

Because the fact is that people need some sense of ownership, of individual empowerment, over the programs that affect their daily lives. And local communities have the clearest sense of their own needs, and are in the best position to devise their own solutions. They may need state support to carry them out. And I intend to see that they have it.

But in every instance, the state government should be a partner, not a director -- an instrument for securing our right to life, liberty, and the pursuit of happiness, freeing us to create the kind of future we want.

My friends, if we think that government is a hindrance, not a helper, it just might be because we -- the people -- have allowed that to happen. One way or another, we must dispel the attitude of government versus the people.

Here in Oregon, at least, government is the people. And the people themselves have a role to play in shaping our future -- in fact, the most important role of all.

All of us should remember that we didn't just inherit this state from our ancestors; we are borrowing it from our children. And with the cooperation and support and accountability of the ONPA, of government at all levels, and of every single Oregon citizen -- together we can see that the future we create is one our children can be proud of.

Thank you.

[Return to Governor's Office](#)

Governor John Kitzhaber
Working Communities Speech

Governor Kitzhaber believes that the best solutions to many of Oregon's problems cannot be handed down by state government; rather, these solutions must come from the people of the communities at the local level. It is people at the local level who have the ability to join together to solve problems and create a living environment that they know is best for them. Governor Kitzhaber believes state government should empower these people to allow them to do this. With this theme, he has delivered the Working Communities speech to many different audiences.

WORKING COMMUNITIES

I want to start today by telling you a little story. It illustrates what I see as the best of Oregon: people with different backgrounds coming together to solve problems at the local level.

About a month after I took office, I took a trip to visit Coos Bay, Gold Beach, Bandon and Coquille. I spent an afternoon of that trip with volunteers from the Coquille Watershed Restoration Group. We visited the farm of Mr. Richard Deadmond. Now, Mr. Deadmond is not your typical environmentalist. He raises cattle on a farm -- through the middle of which runs the Coquille River.

However, working with volunteers, businesses and government, Mr. Deadmond cooperated in a major streamside restoration project on his property.

He helped build fences to keep the cattle out of the river. He put in irrigation pipes and watering troughs to bring water to his cattle so they wouldn't break down the fences.

And others on the river went to work building rock weirs, replacing lost gravel beds and other elements that fish need to survive in a stream.

And it worked.

Plain and simple, the people on the Coquille River -- from timber owners to fishermen to cattle ranchers like Mr. Deadmond -- came together and made a difference. and it was a difference which was easy to see: we saw literally dozens of steelhead going up stream -- fish that wouldn't have made it if the folks on the Coquille hadn't come together.

This is more than just a fish story -- though I've told plenty of those.

This is a story of how government, business and communities ought to work together.

It is a story of cooperation, not coercion; of progress, not conflict and of solutions not endless legal wrangling.

It is a story of success -- for Mr. Deadmond, for the Coquille River and for the fish that live in it.

And finally, it is a story about how I will govern:

by returning as much power as possible to local communities;

by stressing cooperation over conflict;

by reminding Oregonians that what ties us together is greater than that which divides us;

and by reminding people that everything we do is based on making stronger communities; making working communities.

because ultimately what matters is what happens in the reality of our communities -- not the abstraction we call the State of Oregon.

I think that too often there is a tendency to assume that we have *state* problems -- and not *community* problems.

I think that too often we push off responsibility for solving our common problems by saying "Oh, well, that's a problem for the state to solve."

Finally, and in a sense most disturbing, Oregonians have recently begun to create scapegoats in a process that divides urban from rural, poor from wealthy and environmentalists from those who make their living in the forests, fields and rivers.

It's become so bad that there is a new saying in the state: "In Oregon, we don't discard bottles, we discard people."

I think there is a way through this.

I think there is a way to move beyond the cynicism and negativity that have marked our public life and public discourse for the past several years.

And it starts by public officials being frank, honest and open.

It starts by a willingness to give power to people at the local level and get them invested in solving their own problems.

It starts by giving people real choices instead of false choices.

Let me give you the classic example of a "false choice" -- the Balanced Budget Amendment.

Now, I have nothing against a balanced budget. We balance ours every two years.

But, let's face it, the Balanced Budget Amendment didn't have anything to do with a balanced budget. It had everything to do with political expediency and posturing.

It doesn't balance the budget. It puts the burden of doing that on some future Congress. If Congress wanted to balance the budget, they could do it themselves.

A real choice would be "what should we cut out of the budget?"

The false choice is either being for or against the Balanced Budget Amendment.

Let me give you another example -- one that is close to my heart: the Oregon Health Plan. The Oregon Health Plan faced the issue of how to pay for medical care fairly and squarely. We know that ultimately, it will be cheaper to invest in prevention and wellness for Oregonians than it is to deny people care and wait to treat them in an emergency room.

Remember -- it is always cheaper and more human to treat high blood pressure than it is to treat a stroke.

Besides offering people real choices, I think government must seek to return power and responsibility to the community level.

Since I became Governor, I have traveled to Bend, Redmond, Prineville, Pendleton, Baker City, Astoria, Rainier,

Hermiston, Gold Beach, Coos Bay, Coquille, Bandon, Roseburg, Grants Pass, Medford and Ashland.

I haven't done it because I like to travel, although, trust me, it's nice to get away from the Capitol.

I've done it because of my sincere belief that it is at the community level that our problems are being solved -- just like Mr. Deadmond and the efforts to restore the habitat on the Coquille River.

In every one of these towns I've seen liberals and conservatives, environmentalists and ranchers, volunteers and business people coming together to solve local problems.

And in some instances, though not always, they are doing so in conjunction with state government. But in all instances where the state has been involved successfully, it's been with the state as a partner, not as a director.

Where we've been able to step back and let local communities take the initiative and lend support, we've been successful.

Because, after 15 years as a legislator and now Governor, I've learned that you can't make anybody do what they don't want to do. The only way things happen is when people become involved and invested in finding a solution for their community.

This is my guiding principle for governing.

Let me give you a couple of examples from the budget I presented to the Legislature in January.

In corrections, I have proposed giving responsibility to local communities for criminals sentenced to less than one year. This allows the state to take care of the most violent and dangerous criminals.

But it also allows communities the flexibility of how to deal with less serious offenders, including juveniles. Because it is at the community level that we are most capable of taking first and second time offenders, especially those under 18, and creating programs that prevent them from assuming a life of crime.

My goal is give local communities and local governments control, flexibility and funding to address certain correctional issues at the local level and at the same time to get the violent offenders and the career criminals out of the communities and into the state system where they belong.

This approach is an opportunity to develop a better partnership between the state and city and county governments, because managing crime is not just a state problem. Crimes are committed in counties and cities, programs to address and prevent juvenile crime are located in counties and in cities and people are paroled or put on probation in counties and cities.

Another example is the \$15 million I have proposed to be used for rural economic development.

The rural investment fund would provide flexible dollars to match other funds, build local economic capacity or provide project financing -- whatever the local community defines as its priority. Rural communities would define their own objectives for the funds and be held accountable to meet objectives defined by local communities themselves. The fund could be used by communities to develop rural telecommunications, encourage new business starts, improve local cultural attractions or whatever the community itself defines as its priority.

I'm confident that granting this kind of local power -- in corrections, economic development or whatever other endeavor you care to define -- will unleash tremendous creative power.

It's what I see every time I visit the communities of Oregon.

After all, the Coquille River is being improved not because the state mandated it. Mr. Deadmond isn't working with environmentalists because someone at the state ordered him to. People aren't cooperating because of some implicit or explicit threat.

Rather, people in this community have discovered their common interest. Face to face, they've found a way to act on it.

That's powerful. And it's a power I intend to build on as Governor.

Thank you.

Governor John Kitzhaber

Inaugural Address

January 9, 1995

In accepting the honor and assuming the duties of this high office, I do no more and no less than thirty-three men -- and one extraordinary woman -- have done before me.

So in a sense, this occasion is no different from the advent of any new administration, and it's difficult to say anything that hasn't been said before.

I might say that this is a new beginning. But each day is a new beginning.

I might say that these are difficult times. But other times have also been difficult.

I might say that, as Oregon's elected officials, we have a solemn obligation to act. But every elected official has that obligation.

I might say that history will judge us by our deeds. But when has history not done so?

Any of these things I might say. All of them are true. None of them sets us apart, or makes us any different from those who have gone before.

The only way we can be different is to make a difference. That is what we have been sent here to do.

The people of Oregon have placed on us two clear and urgent demands: to live within our means, and to carry out the legitimate work of state government by providing certain essential services.

If we are to make any difference at all, we must:

- provide for a good, stable school system from pre-Kindergarten through higher education
- provide for the public safety
- provide for our vulnerable citizens wherever possible by helping them help themselves
- provide good systems of transportation and telecommunications to support our economy
- and we must do all this with the money we now have

The budget I am submitting to the 68th legislature does meet these demands. But complete success hinges on two other factors:

First, if we are not to raise taxes, then we need an economy that thrives -- not just in the Willamette Valley, but everywhere in Oregon -- to provide the revenue to fund essential services. In the next several days I will be announcing detailed strategies to accomplish just that.

Second, we need a government that performs more effectively, more efficiently, and above all more accountably than it has ever had to do before.

I will hold government employees -- myself included -- accountable for meeting clear performance standards that can be measured.

And I will insist that all state employees reorient programs in ways that sustain economic growth and safeguard our quality of life.

All this we can do. But it will not be enough as long as we value today more than tomorrow, as long as we attack symptoms, while causes spread like a plague, as long as we are content to trade one set of problems for another, and call it a solution, and as long as we insist that the ways we differ are more important than the things we share.

We can make no progress until we rededicate ourselves to these plain truths: that Oregon's whole is greater than the sum of its parts; that blind self-interest is not just bad morals -- it's bad economics; and (as I've said before) that Oregon cannot be a good place for any of us to live until it is a good place for all of us to live.

Of course we'll have our differences. But we do agree on many issues that will shape our future:

- the need to end the school funding crisis
- the need to attack the root causes of juvenile crime
- the need to keep our economy moving, so all Oregonians have the opportunity for jobs and the pride and security that come with them
- and the need to manage Oregon's growth in ways that do not degrade our unmatched quality of life

These issues affect all Oregonians, regardless of political party, regardless of ethnic background, or religion, or sexual orientation. They affect all of us -- wherever we live or work or go to school -- and they cannot be solved without cooperation. That means we must stop ceding power to groups and individuals that draw their life-blood and their livelihood from turning Oregonians against each other. Our success depends on our willingness to respect our differences, on our willingness to strive to understand other points of view, and on our willingness to recognize that our most critical challenges have nothing to do with partisan politics and everything to do with the future of Oregon -- Our future.

The great lesson of our pioneer heritage is not just about perseverance and hard work; it's about a rare blending of individual strength and community spirit. It's about men and women with the wisdom to use diversity as a building block, not a stumbling block--and never as a weapon. It is that spirit and that wisdom that we need to recapture. And the time to do so is NOW.

It makes no difference whether the challenges we face are greater than ever before; we still must meet and surmount them. It makes no difference whether the legislature and the governor are of different political parties; we still have a job to do -- not as Republicans or Democrats, but as Oregonians. And we will do that job despite the difficulty, despite the popularity polls, despite the pressures of any special interest.

So today I call on President Smith, on Speaker Clarno, on the other members of the legislature, and on every single Oregonian to join me in this pledge:

- We will not sink to partisan bickering.
- We will not postpone action in order to preserve political power.
- We will not put personal gain above public trust.
- We will not trade one set of problems for another.
- Nor will we pile up superficial gains for the present, letting the future like a bewildered, abandoned child fend for

itself.

- Above all, we will not pretend there's an easy answer to all our problems, or that we can solve everything with no pain and no sacrifice.

Instead we will be honest with ourselves and with each other. We will balance today's urgent needs with tomorrow's imperative necessities. All it will take is a little common sense and some uncommon wisdom.

Only then will we deserve the trust we asked for when we entered the campaign of 1994. Only then can we begin to restore people's faith in government and in democracy itself. Only then will progress be more than a word. Only then will we be worthy not just to lead or legislate but to live in this magnificent state of Oregon at all.

Two months ago, at the polls, we proved we could gain a victory. Now, in the trenches, we must prove that we know how to use it wisely for the good of the many, not just the few; for the benefit of tomorrow's children, not just for ourselves today.

This day offers a breathing space, before our real work begins -- a time to recollect, to reconnect, to reassess and to rededicate ourselves to the solemn trust that's been placed in our hands.

Tomorrow, we will take up our task, mindful that whatever we do or leave undone will send ripples through an endless succession of days, touching, for better or for worse, the lives of those who come after us.

So let us dare to be different -- to make a difference. Let us boldly proclaim a new kind of progress -- the kind we too often pay lip service to, and too seldom translate into action. The kind of progress that considers more than our own private interests, but understands that the welfare of others is vital to our own. The kind of progress that does not regard compromise as weakness. The kind of progress that sees diversity not as a threat, but as a treasure; an opportunity to enrich and strengthen the fabric of our society. The kind of progress that values timeless principles over transient popularity -- principles like truth and honor and courage and compassion and service and sacrifice. These will remain, when wealth and worldly power and popular opinion are dust upon the wind.

And they are more than high-sounding rhetoric, more than outworn virtues with no place in the modern world. Without them, we may endure but we will never prevail. And we have a choice.

Today we stand perilously close to the brink of a chasm, and all our minds and all our energies have been concentrated on avoiding a fall. But with courage and honesty, with cooperation and balance, we can again find ourselves poised on the wings of promise to take flight toward our highest aspirations.

And why not? Why not?

We dwell in a rare and lovely place, where the flame of hope is not yet extinguished. More than half a century ago, a visitor here said that Oregon was as close as man could come to paradise on earth. I believe Oregon's greatness can rival its natural beauty. Working with each other, not against each other, we've seen this state rise out of the unblemished land, a bright beacon of hope on America's western rim, a tribute to community spirit and individual strength alike, and a credit and model to the nation.

My friends, we walk this path together. As long as we live within these borders, and share in the blessings and bounties of this small green corner of God's earth, we owe something in return. We owe something to each other. What we get, we must give back in equal measure. Let us begin today --

one state . . . one people . . . one destiny.

Gov. John Kitzhaber discusses forest health with the media on August 6 at the Cache Mountain Fire Complex just outside of Sisters, OR. Most severe wildfires are a symptom of poor forest health, however, the U.S. Forest Service had thinned small trees from this particular area, and though it burned, the fire was significantly less hot and damaging than an adjacent untreated area. This also reduced the risk to over 1,200 homes on the nearby Black Butte Ranch.

On May 30, Gov. Kitzhaber attended a ground-breaking ceremony at the Oregon Zoo for the new Salmon and Eagle exhibit. Here, Gov. Kitzhaber is meeting Sundance, a 9-year-old Red-Tailed Hawk, and Chinook, an 11-year-old Bald Eagle. Sundance was found in the wild in Arizona while she was still in the egg, and is imprinted onto people and is non-releasable. Chinook was found injured in the wild in Alaska; she can fly well enough to do a downhill flight in zoo shows but, because of her injury, she can't fly well enough to be released back into the wild.

EXECUTIVE ORDER NO. 02-27

DETERMINATION OF A STATE OF DROUGHT EMERGENCY IN COOS COUNTY DUE TO CONDITIONS CAUSED BY DROUGHT AND LOW WATER CONDITIONS.

Under ORS 401.055, I find that the weather pattern, ongoing drought and low water conditions in Coos County have the imminent potential for causing a natural and economic disaster of catastrophic proportions. The projected outlook will not significantly alleviate the current conditions, and it is anticipated that those conditions will continue. This will have profound consequences on the county's agricultural and natural resources, as well the likelihood for stark economic impacts.

State agencies including the Department of Agriculture, the Department of Water Resources, and Oregon Emergency Management are addressing the current conditions.

A timely response to this situation being vital to the well being and economic security of the citizens and businesses of Coos County I am therefore declaring a "state of drought emergency" and directing the following activities;

IT IS HEREBY ORDERED AND DIRECTED:

- I. The Oregon Department of Agriculture is directed to coordinate and provide assistance in seeking federal resources available to mitigate conditions and effect agricultural recovery.
- II. The Department of Water Resources is directed to coordinate and provide assistance and regulation it determines necessary in accordance with ORS 536.700 to 536.780
- III. The Office of Emergency Management is directed to coordinate and assist as needed with assessment and mitigation activities to address current and projected conditions.
- IV. All other departments are directed to coordinate with the above agencies and to provide appropriate state resources as determined essential to assist affected political subdivisions.

EXECUTIVE ORDER NO. 02-25

IMPLEMENTING THE PROTOCOL GOVERNING SITING AND PERMITTING OF INTERSTATE ELECTRIC TRANSMISSION LINES

Because recent changes to transmission access requirements have created a more regional electric power market in the western U.S., and

Because states have generally exercised authority to site electric transmission lines, and expanding wholesale electricity markets point out the need for closer cooperation between states and federal agencies, tribal governments and local governments in the efficient permitting and siting of new interstate transmission lines, and

Because a protocol has been established to enable affected states, local governments, federal agencies and tribal governments to participate in a systematic, coordinated, joint review of interstate transmission lines in the western U.S., and

Because it is the intent of the Western Governors to work with affected states, local governments, federal agencies and tribal governments to expedite the siting and construction of needed transmission facilities to better ensure an adequate, affordable and reliable electricity supply to western consumers, and

Because a coordinated review of proposed interstate transmission facilities will better serve interstate needs, enable the construction of needed transmission and ensure the public interest is protected, as long as it is linked with pro-active regional transmission planning considering both transmission and non-transmission alternatives and appropriate systems of financing, and

Because a Memorandum of Understanding has been entered into between the U.S. Department of Energy, U.S. Department of the Interior, U.S. Department of Agriculture, U.S. Environmental Protection Agency, Council on Environmental Quality and the Western Governors' Association regarding Energy Development and Conservation in the Western United States, signed in 2001.

THEREFORE, IT IS ORDERED AND DIRECTED:

That when an interstate electric transmission facility going through Oregon is proposed, the Oregon Energy Facility Siting Council and other Oregon agencies that have a role in environmental siting and permitting will:

- Create an efficient environmental review process that results in documents that can be shared and used by all entities with jurisdiction in the siting and permitting process,

EXECUTIVE ORDER NO. 02-25

Page 2

- Establish and periodically review, joint time lines for the conduct and timely completion of the review process and regulatory decisions,
- Establish a common understanding of the information needs, regulatory requirements and public interest issues prior to the environmental review process,
- Eliminate duplication of pre-application, scoping and permit review meetings among participating state, local, tribal and federal authorities,
- Create an understandable, streamlined review process that is structured, user friendly and predictable,
- Provide for early notification and sharing of information among affected states, local governments, federal agencies, tribal governments and project sponsors, and
- Preserve and protect the authority of each affected state, local government, tribal government and federal agency.

To implement this review process, the Oregon Energy Facility Siting Council and other Oregon review agencies shall adopt the following elements as part of a joint, coordinated review of specific proposed interstate transmission facilities:

- The Administrator of the Energy Resources Division, Oregon Office of Energy (OOE) will participate in a Project Team made up of representatives of each state to coordinate the review of the proposed project.
- The reviewing Oregon agencies shall notify OOE of any analysis related to need for the project, and OOE shall use this information in any review of need for the proposed facility done by the Project Team.
- The reviewing Oregon agencies shall, to the extent practicable, participate in joint activities, a system of record keeping, planning, evaluating and monitoring the proposed transmission facility.

EXECUTIVE ORDER NO. 02-25

Page 3

- The reviewing Oregon agencies shall participate in the preparation and review of environmental assessments and impact statements, evaluation of project impacts, public involvement efforts, project construction and operation monitoring and any other activities necessary to determine compliance with applicable requirements, and
- The reviewing Oregon agencies shall, to the extent practicable, comply with timelines, information requests, procedures and policies of the Project Team established under the Protocol Governing the Siting and Permitting of Interstate Electric Transmission Lines in the Western United States.

EXECUTIVE ORDER NO. 02 - 24

OREGON COUNCIL ON DEVELOPMENTAL DISABILITIES (Rescinds Executive Order NO. 88-07 and its Amendments)

The U.S. Congress has enacted Public Law 106-402 to assist states in affording persons with developmental disabilities the opportunity to become fully integrated and included in their communities, and to achieve their potential for independence and productivity. Under Public Law 106-402, states receive grants for activities to build their strength and capacity to address the unmet needs of persons with developmental disabilities in a coordinated fashion and for evaluating the implementation of such activities.

The Oregon Developmental Disabilities Council was initially established by Executive Order No. 74-18, and was continued by Executive Order Nos. 76-25, 79-11, 83-07, and 88-07 (amended by EO 98-08 and EO 99-08). The Council should now be called the Oregon Council on Developmental Disabilities, and should be continued under the mandate of PL 106-402 and as directed in this executive order.

IT IS ORDERED AND DIRECTED:

1. The Oregon Council on Developmental Disabilities Council is established to serve as an advocate for persons with developmental disabilities, and to advise the Governor, the Legislative Assembly, state agencies, and the public on matters relating to the needs and rights of such persons and their families. In doing so, the Council shall:
 - a. Prepare a Developmental Disabilities Council State Plan, as required by federal law, which describes the extent and scope of services provided to persons with developmental disabilities by federally assisted state programs, sets out specific objectives and related activities to be achieved under the Plan, and lists the state and federal resources to be used to meet such objectives.
 - b. Monitor, review, and evaluate annually the implementation of the Council's plan.
 - c. Review and comment, to the extent feasible, on other state agency plans, rules, policies, current or proposed, which affect persons with developmental disabilities.
 - d. Review and make recommendations to the Governor regarding the administration, management, and resources utilization of programs pertaining to persons with developmental disabilities.

EXECUTIVE ORDER NO. 02-24

Page 2

- e. Review and make recommendations to the Governor regarding current or proposed legislation affecting persons with developmental disabilities.
 - f. Review and make recommendations regarding the state's system for monitoring the quality of, and human rights protections in, state-sponsored programs for persons with developmental disabilities.
 - g. Assist state and local agencies to do coordinated planning by conducting public policy forums, studies, and other assessments of the major issues and challenges facing the service delivery system.
 - h. Coordinate public education efforts that seek and promote positive attitudes toward, and valued acceptance of, persons experiencing disabling conditions.
 - i. Submit to the Secretary of the Department of Health and Human Services, through the Governor, annual reports describing the strategies, activities, and results of the preceding year in relation to the Council's state plan, together with an accounting of the manner in which the federal and matching state funds were expended.
2. The Department of Human Services shall be the designated state agency to supervise the administration of the Council's state plan, keep records as needed by the Council and the federal government, and provide fiscal control and fund accounting.
3. The Council shall recommend to the Governor through the designated state agency, a staffing pattern adequate to carry out its duties and functions. Consistent with personnel procedures, the Administrator of the designated state agency shall appoint the Council's Executive Director upon the recommendation of the Council. Other Council staff shall be appointed upon the recommendation of the Council Executive Director, within the Council's hiring authority.
4. Council members shall be appointed by the Governor. The Council may offer recommendations regarding membership for the Governor's consideration. Council members shall serve four-year terms. The Governor may reappoint the same person to a second succeeding term. Membership shall consist of representatives as specified in Public Law 106-402.
5. The Council shall elect a Chairperson by majority vote. The Chairperson shall serve for a term of two years and may serve no more than one succeeding term. The Council shall meet at the call of the Chairperson, but not less than six times per year. The chairperson may appoint committees, as needed, consisting of Council members and non-members.

EXECUTIVE ORDER NO. 02-24

Page 3

6. Except as otherwise specified herein, Council members shall receive no compensation for their services, but are entitled to reimbursement for actual and necessary travel and other expenses incurred in the performance of their duties. Such expenses shall be paid from the budget of the Council, except that members who are public employees or employees of represented organizations or constituency groups shall be reimbursed by the respective agencies. Members of committees shall also not receive compensation, but may receive reimbursement for travel as in the case of members of the Council.
7. Subject to the availability of funds designated in the budget of the Council, all Council members, except public employees and employees of represented organizations or constituency groups, shall be eligible for a stipend for each day or partial day the member attends a meeting(s) sanctioned by the Chairperson. Such payments are set by the Council and may not exceed \$30.00 per day.
8. Consistent with Oregon and federal law, the Council shall develop a budget for its personnel, administration, and activities necessary to implement the Council's State Plan, which shall be submitted to the Department of Human Services for inclusion in the Department's biennial budget request to the Governor.
9. Executive Order No. 88-07 and its amendments (EO 98-08 and EO 99-08) are rescinded.

**DETERMINATION OF A STATE OF DROUGHT EMERGENCY IN MALHEUR COUNTY
DUE TO CONDITIONS CAUSED BY DROUGHT AND LOW WATER CONDITIONS.**

Pursuant to ORS 401.055, I find that the weather pattern, ongoing drought and low water conditions have the imminent potential for causing a natural and economic disaster of catastrophic proportions. It is anticipated that the projected outlook will not significantly alleviate the current conditions, and that they will continue to worsen. This will have profound consequences on the county's agricultural and natural resources, as well the likelihood for stark energy and economic impacts.

Current conditions are being addressed by state agencies including the Department of Agriculture, the Department of Water Resources, and Oregon Emergency Management.

A timely response to this situation being vital to the well being and economic security of the citizens and businesses of Malheur County I am therefore declaring a "state of drought emergency" and directing the following activities;

IT IS HEREBY ORDERED AND DIRECTED:

I. The Oregon Department of Agriculture is directed to coordinate and provide assistance in seeking federal resources available to mitigate conditions and effect agricultural recovery.

II. The Department of Water Resources is directed to coordinate and provide assistance and regulation it determines necessary in accordance with ORS 536.700 to 536.780

III. The Office of Emergency Management is directed to coordinate and assist as needed with assessment and mitigation activities to address current and projected conditions.

IV. All other departments are directed to coordinate with the above agencies and to provide appropriate state resources as determined essential to assist affected political subdivisions.

EXECUTIVE ORDER NO. 02-22

The safety of Oregon's children is a priority and the state should use every resource available to protect them.

The first few hours after a child is abducted are critical to the safe recovery of that child, and it is essential to utilize maximum public participation in the recovery efforts of law enforcement.

The Amber Plan, using the Emergency Alert System, television, radio and the state highway variable message system, provides timely emergency information to the public regarding a child abduction.

The Departments of Oregon State Police and Oregon Emergency Management, with partnership from the Oregon Department of Transportation, Oregon State Sheriffs' Association, Oregon Association Chiefs of Police, Oregon Association of Broadcasters and others, have formed an Amber Plan Work Group that has developed a statewide Amber Plan proposal.

The proposed statewide Amber Plan has been approved by the Governor's Public Safety Policy & Planning Council.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED

1. The Departments of Oregon State Police and Oregon Emergency Management shall work with Oregon law enforcement agencies, Oregon Department of Transportation, local media and broadcasters, and others to fully implement the state Amber Plan as soon as practical.
2. That upon implementation of the state Amber Plan, the state Amber Plan Work Group shall assume the role of a review committee charged with oversight and review of the state Amber Plan. The state Amber Plan review committee will self appoint a chair and co-chair person and determine other administrative details for the effective operation of committee.

Executive Order No. 02-22

EXECUTIVE ORDER NO. 02 – 18

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration in Curry County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 13, 2002 at 2:55 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of the "Biscuit Fire." The Biscuit Fire was caused by lightning strikes and has spread unchecked over large portions of Curry County. The fire threatens homes in rural areas of Curry County on the western side of the fire.

A structural overhead incident management team from the Office of State Fire Marshal is being sent to work with local, state and federal resources to develop and implement plans for protecting homes. After consultation with the Governor's Chief of Staff, the Department of Forestry and Governor Kitzhaber, the request was formally made by the Office of State Fire Marshal.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall make a limited mobilization of an overhead team and some task force leaders who will be carrying out a special structural protection assignment using resources arranged for by the Incident Management Team.

This emergency is declared only for this specifically named fire in Curry County, which occurred on August 13, 2002.

This order was made by verbal proclamation at 2:55 p.m. the 13th day of August, 2002 and signed this 11th day of September, 2002, in Salem, Oregon.

EXECUTIVE ORDER NO. EO 02-17

Public safety communication systems, and the ability to readily communicate among all public safety providers, play a critical role in protecting the lives and property of citizens and public safety professionals.

Given that the State's public safety communications infrastructure is rapidly aging and becoming outdated and the Federal Communications Commission is adopting policies and standards that affect communications systems, the State is going to have to make significant investments to upgrade its public safety communication system. These investments must be planned and leveraged in such a way so as to minimize the costs and maximize interoperability of these public safety communication systems.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Statewide Interoperability Executive Council is hereby created. The membership of the Council shall be comprised as follows:
 - a. Two members of the Legislative Assembly with interest in the subject of public safety and wireless communication systems.
 - b. Twelve additional members appointed by the Governor from the following organizations:
 - i. Oregon State Police
 - ii. Office of Emergency Management
 - iii. Department of Forestry
 - iv. Department of Corrections
 - v. Department of Transportation
 - vi. Department of Administrative Services
 - vii. Department of Human Services (for emergency medical services)
 - viii. Oregon Military Department
 - ix. Oregon Fire Chiefs Association
 - x. Oregon Association of Chiefs of Police
 - xi. Oregon State Sheriff's Association
 - xii. Oregon Association of Public Safety Communications Officials/
National Emergency Number Association

EXECUTIVE ORDER NO. 02-17

Page 2

- c. The Governor shall appoint a Chair from among the Council members. The Council may elect a Vice Chair from among the Council members to carry out the Chair's duties in his/her absence. The Chair shall establish an agenda and meeting schedule for the Council.
 - d. The State Interoperability Executive Council may vote and elect to accept as council members additional representatives from other agencies or organizations that have an interest in and/or contribution to developing a statewide public safety communication system.
2. The purpose of the State Interoperability Executive Council is to provide policy level direction for matters related to planning, designing and implementing guidelines, best practices, and standard approaches to address Oregon's public safety communications interoperability issues. The Council shall also recommend funding strategies that support development of a statewide system, including seeking federal funding, or other funding, for statewide interoperability. In an effort to improve wireless interoperability in Oregon, the Council shall:
- a. recommend strategies with regard to improving Oregon's wireless interoperability between agencies;
 - b. research and evaluate the best practices for the purchasing of equipment and the sharing of communications infrastructure;
 - c. strive to foster cooperation and improve inter-agency wireless communications among state, federal, and local jurisdictions;
 - d. serve as a central coordination point for local, regional, and national interoperability matters; and
 - e. develop recommendations for legislation or other state action that may be required to further promote wireless interoperability in Oregon.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration in Josephine County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 27, 2002 at 11:45 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Florence/Biscuit Complex Fire.” The Florence Fire, being managed by the Incident Management Team based at Lake Selmac, was caused by lightning strikes and has spread unchecked. The fire threatens the communities of Selma, O’Brien, and Cave Junction.

Assistance with life safety and structural fire protection is needed and was formally requested by the Josephine County Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Josephine County, which occurred on July 27, 2002.

This order was made by verbal proclamation at 11:45 p.m. the 27th day of July, 2002 and signed this 21st day of August, 2002, in Salem, Oregon.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration in Wasco County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 25, 2002 at 3:45 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “White River Fire.” The White River Fire was caused by lightning strikes and has spread unchecked. The fire threatens residents in Maupin.

Assistance with life safety and structural fire protection is needed and was formally requested by the Maupin Fire Chief and the Wasco County Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Wasco County, which occurred on July 25, 2002.

This order was made by verbal proclamation at 3:45 p.m. the 25th day of July, 2002 and signed this 21st day of August, 2002, in Salem, Oregon.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration in Jackson County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 27, 2002 at 8:25 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Timbered Rock Fire.” The Timbered Rock fire was caused by lightning strikes and has spread unchecked. The fire threatens 150 homes in four residential areas including Elk Creek.

Assistance with life safety and structural fire protection is needed and was formally requested by the Jackson County Commission Chair and the Jackson County Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Jackson County, which occurred on July 27, 2002.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration in Wasco County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 25, 2002 at 5:00 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of the “Sheldon Ridge Fire.” The Sheldon Ridge fire was caused by lightning strikes and has spread unchecked over large portions of Wasco County. The fire threatens a large number of structures, mostly residences, in the 7-Mile Hill, Browns Creek, Chenoweth and Mill Creek communities. Also threatened are 500 acres of cherry trees and the BPA Lolo power transmission lines.

Assistance with life safety and structural fire protection is needed and was formally requested by the Wasco County Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Wasco County, which occurred on July 25, 2002.

**EXECUTIVE ORDER NO. 02 - 11
SUSPENSION OF OREGON LAW REGARDING MOTOR CARRIER
REGULATIONS DUE TO EMERGENCY DECLARATION IN EXECUTIVE
ORDER NO. EO 02- 06**

Executive Order No. EO 02-06 declares a statewide emergency due to imminent threat of wildfire pursuant to ORS 401.055. Wildfires currently burning throughout Oregon constitute a significant danger to the state's resources and to the health and welfare of Oregon residents.

Furthermore, the number, and varied locations, of wildfires currently burning and endangering Oregon resources and residents require facilitation of rapid deployment of equipment and personnel to assist in containment of the wildfires.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. Under ORS 401.095(2), I find the following statutes and administrative rules inconsistent with the purposes of ORS 401.065 – ORS 401.085, and shall be deemed inoperative for all vehicles assisting in the emergency declared in Executive Order No. EO 02-06 while the emergency exists:

OAR 740-100-0010(2)(D);
ORS 825.100;
ORS 825.160;
ORS 825.450;
ORS 825.474; and
ORS 825.490.

2. All state agencies are hereby directed to suspend efforts to enforce these provisions for the duration of the emergency declared in Executive Order No. EO 02-06.

Done in Salem, Oregon this 1st day of August, 2002.

EXECUTIVE ORDER NO. E.O. 02 – 10

DETERMINATION OF A STATE OF EMERGENCY DUE TO WILDFIRES.

Pursuant to ORS 401.055, I find that threat to life and safety exists due to wildfires, which started in Josephine County during July 2002, and are currently continuing. The fire conditions in Josephine County caused by the Florence and Sour Biscuit fires are threatening residents of the numerous communities located in the Illinois Valley from Haynes Hill south to the California border.

The County of Josephine has exhausted their resources and are asking for the following assistance from the state: Firefighting personnel, bulldozers, water tenders, graders and fuel tankers.

IT IS ORDERED AND DIRECTED:

1. The Office of Emergency Management shall coordinate access to and the use of personnel and equipment from appropriate state agencies necessary to assess, alleviate, respond to or recover from conditions caused by this emergency.
2. The Oregon Department of Transportation shall provide essential assistance that is deemed necessary to assist the County in its needs.
3. The Oregon National Guard shall provide essential assistance that is deemed necessary to assist the County in its needs.
4. The Oregon State Police shall provide essential assistance that is deemed necessary to assist the County in its needs.
5. This order shall remain in effect until the threat is significantly relieved or eliminated.

This emergency is declared only for those areas of Josephine County impacted by wildfires, which started during July 2002.

This order is made by verbal proclamation at 4:00 p.m. this 30th day of July 2002 and signed this 31st day of July, 2002, in Salem, Oregon.

EXECUTIVE ORDER NO. EO 02 – 09

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Grant County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 17, 2002 at 5:31 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Malheur Complex/Flagtail Fire.” These fires, being managed by the same Incident Management Team based at Prairie City, were caused by lightning strikes and have spread unchecked over large portions of Grant County near Austin Junction and near Seneca. These fires threaten large numbers of structures, including residences and significant Oregon Department of Transportation and Department of Fish and Wildlife compounds.

Assistance with life safety and structural fire protection is needed and was formally requested by the Grant County Fire Defense Chief and the Grant County Judge.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Grant County, which occurred on July 17, 2002.

This order was made by verbal proclamation at 5:31 p.m. the 17th day of July, 2002 and signed this ___ day of July, 2002, in Salem, Oregon.

EXECUTIVE ORDER NO. EO-02-06

DETERMINATION OF A STATE OF EMERGENCY DUE TO THE IMMINENT THREAT OF WILDFIRE

Pursuant to ORS 401.055, I find that a fire emergency exists due to imminent threat from wildland fires statewide. Current fires in several areas, the ongoing potential for thunderstorms with lightning strikes, and this year's extreme drought conditions in several areas of Oregon indicate that these conditions will not be significantly relieved in the near future. I hereby declare that a wildland fire emergency exists statewide.

IT IS ORDERED AND DIRECTED:

The Department of State Police through it's Office of State Fire Marshal and Office of Emergency Management is authorized to coordinate the use of state personnel and equipment of all state agencies for the performance of any activity designed to prevent or alleviate damage from the emergency. This includes, but is not limited to use of the resources of the State of Oregon Military Department

This determination of a fire emergency is statewide. It is not to be construed as a comprehensive declaration or proclamation of emergency for other purposes. It is limited to the use of state resources and the National Guard for fire management. Requests for state resources must be submitted through the County governing body to Oregon Emergency Management in the same manner as required for other emergencies.

This order shall remain in effect until the threat is significantly relieved or the fire season ends.

This order was made by verbal proclamation at 8:25 AM on the 14th day of July, 2002 and signed this 17th day of July, 2002 in Salem, Oregon

EXECUTIVE ORDER NO. 02-04

WHEREAS, 1999 Senate Bill 555 created a new method of comprehensive planning for services provided to Oregon's children and their families; and

WHEREAS, implementing Senate Bill 555 required significant changes in the way state and local government agencies and other entities work together to identify, plan for, and provide needed, services, supports, and initiatives to children and families; and

WHEREAS, Senate Bill 555 identified the Department of Human Services, Criminal Justice Commission, Commission on Children and Families, Oregon Youth Authority, Department of Education, and Oregon Progress Board as principal State partners (principal State partners); and

WHEREAS, the Senate Bill 555 planning process affects additional State agencies, including the Community College and Workforce Development Department, Housing and Community Services Department, Economic and Community Development Department, Employment Department, and others (affected State agencies); and

WHEREAS, the role of the State of Oregon and its agencies in implementing Senate Bill 555 include:

- Developing partnerships among State agencies to combine planning and reporting requirements;
- Identifying, disseminating, and promoting information on best practices, promising approaches, and research-based practices;
- Collecting and managing data needed to inform the State and county planning and decision-making processes and developing a system to communicate to State agencies and counties in a coordinated fashion and at an appropriate level of detail;
- Jointly developing with counties planning and accountability processes that meet state needs and respond to the capacity of counties to implement those processes; and
- Providing resources, which may include funding, capacity-building, and technical assistance, to support the availability of effective, community-based services.

WHEREAS, the local community comprehensive plans shall include:

1. Identification of ways to connect all state and local planning processes related to services to children and families into the local coordinated comprehensive plan to create positive outcomes for children and families;
2. Provisions for a continuum of social supports at the community level for children from the prenatal stage through 18 years of age, and their families, that takes into account areas of need, service overlap, asset building, and community strengths;
3. An early childhood system plan;
4. Local alcohol and other drug prevention and treatment plans;
5. The local high-risk juvenile crime prevention plan;
6. Ways to improve results by addressing the needs, strengths, and assets of all children, families, and communities in the county or region including those children and families at high risk;
7. Strategies based on proven practices of effectiveness for the specific community; and
8. Strategies designed to achieve outcomes based on research-identified proven practices of effectiveness.

WHEREAS, State and local agencies have made significant progress in implementing the planning required by Senate Bill 555 but additional actions are necessary to continue that progress;

THEREFORE, IT IS ORDERED AND DIRECTED:

1. The principal State partners shall, to the greatest extent possible and within their assigned agency mission, jointly submit budget and legislative recommendations to the Department of Administrative Services for consideration in developing the 2003-05 Governor's Recommended Budget. The recommendations shall identify which planning processes and resources of the principal State partners should be directed by the county comprehensive plans and shall be based on information from the comprehensive plans submitted by the counties.
2. The principal State partners and other affected State agencies shall develop a statewide plan for children and families based upon the county plans. The State plan shall be based on the needs, priorities, and strategies identified in

the county plans and shall include recommendations for State agency actions. The principal State partners shall identify and involve other affected State agencies necessary to address issues identified in the county plans.

3. The principal State partners shall develop formal agreements to improve coordination among the principal State partners and shall develop agreements among the principal State partners and other affected State agencies as necessary. The agreements shall:
 - Identify which resources should be directed by the county comprehensive plans;
 - Identify individual planning processes of the principal State partners and other affected State agencies affected by the State and county comprehensive planning processes;
 - Systematize within each principal State partner how coordination will occur among the principal State partner agencies and programs within those agencies, including reviewing county plans and using information from the county plans in the State planning process;
 - Identify means for systematic communication among principal State partner agency staff at all levels;
 - Recognize the shared responsibility to achieve positive outcomes for children and families;
 - Identify data to be provided to counties for planning purposes, how it will be made available, and how it will be updated;
 - Identify data counties must collect and report to the State and how to minimize reporting requirements to counties;
 - Identify joint outcome measures and accountability processes that the principal State partners will use.
 - Establish a process and structure for the principal State partners to develop the statewide plan referred to above;
 - Identify how decisions affecting implementation of Senate Bill 555 will be made within and among the principal State partners, and
 - Identify how to provide coordinated training and technical assistance.
4. All State agencies and programs that serve children and families, directly or indirectly, shall review the contents of the county plans and to the greatest extent possible within the assigned agency mission of each partner incorporate them into their budget and policy development.

EXECUTIVE ORDER NO. 02-04
Page Four

5. The principal State partners shall report to the Governor annually on December 1 on the status of compliance with the provisions of this Executive Order.

EXECUTIVE ORDER NO. 02 - 03

**DETERMINATION OF A STATE OF DROUGHT EMERGENCY IN
UMATILLA COUNTY DUE TO CONDITIONS CAUSED BY DROUGHT,
LOW WATER CONDITIONS.**

Pursuant to ORS 401.055, I find that the weather pattern, ongoing drought and low water conditions have the imminent potential for causing a natural and economic disaster of catastrophic proportions. It is anticipated that the projected outlook will not significantly alleviate the current conditions, and that they will continue to worsen during the summer months. This will have profound consequences on the county's agricultural and natural resources, as well the likelihood for stark energy and economic impacts.

Current conditions are being addressed by state agencies including the Department of Agriculture, the Department of Water Resources, and Oregon Emergency Management.

A timely response to this situation being vital to the well being and economic security of the citizens and businesses of Umatilla County I am therefore declaring a "state of drought emergency" and directing the following activities;

IT IS HEREBY ORDERED AND DIRECTED:

I. The Oregon Department of Agriculture is directed to coordinate and provide assistance in seeking federal resources available to mitigate conditions and effect agricultural recovery.

II. The Department of Water Resources is directed to coordinate and provide assistance and regulation it determines necessary in accordance with ORS 536.700 to 536.780

III. The Office of Emergency Management is directed to coordinate and assist as needed with assessment and mitigation activities to address current and projected conditions.

EXECUTIVE ORDER NO. 02 – 03
Page Two

IV. All other departments are directed to coordinate with the above agencies and to provide appropriate state resources as determined essential to assist affected political subdivisions.

EXECUTIVE ORDER NO. EO 02-02

This Executive Order creates the Task Force on the Alcohol Beverage Industry. The Task Force will examine contemporary issues relating to the Oregon Liquor Control Commission and the alcohol beverage industry. It will review, analyze, and recommend changes as needed in the State's alcohol-related programs and policies.

The Task Force will be comprised of concerned members of the public, the alcohol beverage industry, policymakers, and local government.

The Task Force will make recommendations to the Governor and the Legislative Assembly before the 72nd Legislative Assembly convenes on ways to improve the business success of the alcohol industry in Oregon that do not adversely impact state and local revenue and that are not likely to increase alcohol problems.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Task Force on the Alcohol Beverage Industry is hereby created. The membership of the Task Force shall be comprised as follows.
 - a. Three members of the Legislative Assembly with interest and expertise in the subject of the alcohol beverage industry.
 - b. Eighteen additional members appointed by the Governor who are as follows:
 - i. Two persons representing liquor agents, one representing exclusive agents and another representing non-exclusive agents;
 - ii. Two people representing the distillery industry, one person from a local distillery and another representing national and international distillers;
 - iii. One person from the alcohol distributor industry;
 - iv. One person from the wine industry;
 - v. Three persons representing liquor sales licensees, one representing large off-premises licensees, one representing small, convenience store licensees, and one representing on-premise licensees;
 - vi. One person representing local law enforcement;
 - vii. One person representing labor;

Executive Order No. 02-02

Page Two

- viii. One person representing local government;
 - ix. One person from a neighborhood association;
 - x. One person from either the Oregon Coalition to Reduce Underage Drinking or the Oregon Partnership;
 - xi. One person from either Mothers Against Drunk Driving, or the Governor's Commission on Driving Under the Influence of Intoxicants;
 - xii. One person representing local business leaders;
 - xiii. One person from the Oregon Liquor Control Commission; and
 - xiv. One person representing community health providers.
 - c. The Governor shall appoint a Task Force Chair from the Task Force members. The Chair may designate a Vice Chair among the members of the Task Force to carry out the chair's duties in his/her absence. The Chair shall establish an agenda and meeting schedule for the Task Force, facilitate communication among the members of the task force, and shall assign duties to Task Force members.
- 2. The Oregon Liquor Control Commission shall provide staff support to the Task Force within its current budgetary resources. The directors of other state agencies with programs that relate to the Oregon Liquor Control Commission and the alcohol beverage industry shall cooperate by providing information as needed and available, and by meeting with and reporting to the Task Force as requested.
- 3. The purpose of the Task Force is to review alcohol regulation of businesses in Oregon in order to identify practices or policies that can be streamlined or eliminated without reducing government revenue and without increasing alcohol problems. To accomplish that purpose, the Task Force shall carry out the following activities:
 - a. Examine alternative models to Oregon's method of operating and regulating the sale of distilled spirits;
 - b. Review existing state statutes and administrative regulations affecting the sale and distribution of alcoholic beverages in order to identify regulations or practices that no longer serve a sound regulatory purpose;

Executive Order No. 02-02
Page Three

- c. Propose such legislation as the Task Force determines is necessary, and for each piece of proposed legislation, the Task Force shall outline the potential impacts of the proposed legislation on:
 - i. state/local/and other revenues;
 - ii. alcohol abuse prevention;
 - iii. treatment of alcohol abuse and alcohol addiction;
 - iv. public safety; and
 - v. community health and livability.
 - d. In carrying out its duties, the Task Force should seek testimony from concerned citizens, liquor agents, industry representatives, law enforcement, local government, alcohol prevention/moderation groups, health organizations, and state elected officials.
4. The Task Force shall prepare a report for the Governor and Legislative Assembly setting out its findings and recommendations no later than January 10, 2003.
5. This Executive Order expires on January 10, 2003, unless sooner rescinded or explicitly extended by the Governor.

Done at Salem, Oregon this 14 day of June, 2002.

EXECUTIVE ORDER NO. 01 - 26
OFFICE OF EMERGENCY MANAGEMENT

The unprecedented terrorist attacks on the United States of America on September 11, 2001 reaffirm to everyone the importance of adequate emergency preparedness. People of the State of Oregon now know they face the uncertain hazards of malicious harm as well as the more easily understood acts of nature and human error.

Oregon's Office of Emergency Management exists to execute the Governor's responsibilities to maintain an emergency services system, preparing and providing for the prevention, mitigation and management of emergencies or disasters that present a threat to the lives and property of citizens of and visitors to the State of Oregon.

Now therefore, after consultation with the Governor's Security Council, the Superintendent of State Police, the Speaker of the House and the President of the Senate,

IT IS HEREBY ORDERED AND DIRECTED:

1. The Office of Emergency Management shall be administratively elevated to the level of a department and member of the Governor's Cabinet, from which it shall perform its statutory duties.
2. The Legislative Assembly shall be requested to suitably enact this administrative change into law at its next regular session.
3. The Department of State Police, Department of Administrative Services, and any other applicable departments shall execute such agreements or memoranda as may be necessary to accomplish this administrative change.
4. The Office of Emergency Management shall provide overall leadership in coordinating private and governmental sector efforts to prepare, plan and communicate the efficient and effective use of our emergency system resources for all disasters or emergencies that affect Oregon.

Executive Order No. 01-26

ELECTRONIC GOVERNMENT

Electronic government both enables and requires rethinking how government is organized from the view of the citizen. It also requires rethinking the functions that government performs to serve the needs of its citizens.

An electronic government system based on customer demands rather than agency jurisdiction will lead to a more intuitive and efficient process of government-provided services, where information is collected once and government functions are integrated. Doing this well requires a focus on the government's relationship with the public and recognizes citizens as real stakeholders. It will also raise citizen expectations of their government.

Electronic technologies, utilizing the Internet and World Wide Web, promise to enable Oregon citizens and businesses to exchange information, transact business, receive government services, and more effectively participate in government debate.

The State of Oregon Enterprise Information Technology Strategy (1998) was implemented by Executive Order 99-05, directing:

- That Oregon public agencies seek to utilize information technologies to meet enterprise-wide needs on a priority basis; and
- That agencies and branches of state and local governments work in collaboration to recognize the need to promulgate and pursue the implementation of common standards in enterprise network, systems and applications as described in the *State of Oregon Information Technology Standards Directory*.

The Department of Administrative Services has developed a policy (DAS-03-27) to guide the development of electronic commerce and government transactions by all state agencies utilizing the Internet and World Wide Web.

The 1999 session of the Oregon Legislature approved through budget processes the funding of e-government through the Information Resources Management Division (IRMD) within the Department of Administrative Services. The IRMD is charged with coordinating and facilitating the use of Internet-based information technology by public agencies to deliver information, services, and electronic access to citizens and businesses. IRMD continues to report their progress through status reports per section 9 of this Executive Order.

EXECUTIVE ORDER NO. 01 – 25

Page Two

These services must be delivered in an efficient, user-friendly manner, and facilitate citizen access and customer satisfaction.

The Electronic Commerce Policy Committee of the Information Resources Management Council has completed a “*Electronic Commerce In Oregon Policy Briefing Paper*,” which provides technical and policy advice on matters relating to the requirements for successful use of Internet technology by state agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Department of Administrative Services, through the IRMD, shall work closely with all agencies and branches of government and institutions of higher education in developing and supporting the most effective and cost efficient means of providing information, delivering services, and promoting the participation in government processes utilizing the Internet and World Wide Web. The Department shall facilitate for all agencies, including branches of government and institutions of higher education, the sharing of resources, applications, application service provisioning, and common systems in the accomplishment of the Executive Order.
2. State agencies planning to utilize the Internet or World Wide Web to deliver information services will give priority to Enterprise Strategy's goals of open access and free information to private citizens, including new forms of citizen participation in government activities. This can be accomplished while pursuing new-cost, value-added services to citizens and businesses.
3. The Department of Administrative Services will lead an effort to produce standards for agencies to assess the impact of Web applications on the Wide Area Network (WAN). Agencies will participate in standard setting; and upon adoption of the standards by the Governor's Information Technology Roundtable, agency heads will certify, in writing, that their agency meets the standard. All applications designed for delivering Internet and Web-enabled financial and non-financial services to other agencies, businesses and citizens shall be reviewed by agencies based on standards to determine their impact on resources provided by the State of Oregon Enterprise Network (SOEN), and SOEN related network services. Such impacts take into consideration the following:

EXECUTIVE ORDER NO. 01 – 25

Page Three

- a) Quality of service components required for the delivery of time-critical financial transactions;
 - b) Capacity planning associated with the state's connection to the Internet (Transit);
 - c) Capacity planning associated with the state's arrangements with private Internet Service Providers within the state (Peering);
 - d) Determining the impact on resources within the Department of Administrative Services' General Government Data Center, including resources needed to provide secure financial transactions; and,
 - e) Assuring that the applications are adequately secured in conformance with state policy and standards.
4. It is envisioned that all state agencies planning the utilization of the Internet or World Wide Web for the conduct of financial transactions, or the delivery of non-financial services to citizens and businesses, will complete and document an "E-Government Readiness Assessment." The white paper "E-Government Strategic Planning" developed by the National Electronic Commerce Coordinating Council will be used as a guide. The Department of Administrative Services will lead an effort, in concert with state agencies, to develop the E-Government Readiness Assessment tool. This information will be maintained by the Information Resources Management Division of the Department of Administrative Services.
5. Upon formal adoption of risk and security standards by the Governor's Information Technology Roundtable, all applications of Internet or Web-enabled financial services offered by agencies and offices must meet or exceed performance of those adopted policies and standards, with technical assistance and ongoing coordination of such standards to be provided by DAS IRMD and the Oregon State Treasurer.

Until then, agencies will utilize prudent business practices to align their processes with the spirit of this Order. For instance, agencies planning to utilize, or who are actually utilizing the Internet or World Wide Web for the conduct of financial transactions or the delivery of services to citizens and businesses must certify, in writing, that the agency has met the Department of Administrative Service's security policies and standards for conducting financial transactions over the Internet or the World Wide Web. The current policy on electronic commerce in Oregon State Government is extended to the implementation date for the payment processing solution. This action will continue to address the desire for a consistent look and feel to the online electronic government application, and the formulation of a uniform set of both system standards and business policies and practices.

EXECUTIVE ORDER NO. 01-25

Page Four

6. The DAS IRMD shall develop, implement, and maintain a unified state government Web site, which is designed to provide citizens and businesses with secure, reliable, and convenient access to the information, services, and transactions offered by state agencies and branches. To be called "Oregon.gov" as to represent the purpose of the site and provide a path to its location, the coordinated site shall be hosted in the General Government Data Center and distributed through the State of Oregon Enterprise Network.

In all cases, the agencies and branches shall retain control of the underlying business processes located at Oregon.gov. All applications utilizing or enabling financial transactions must meet enterprise security standards.

7. In order to achieve the purposes of this Executive Order, all agencies should have completed an analysis of the legal, policy, and other limitations that may affect their conduct of electronic government not later than March 1, 2001. Such an assessment should include, but not be limited to, state and federal laws that do or may affect such transactions: privacy, confidentiality, funding, authentication, digital signature, accessibility, security, and fees.

The Department of Administrative Services shall be responsible for the coordination of this activity, working with the Department of Justice and agencies, with the Department of Administrative Services securing clarification of all common, enterprise-wide issues affecting agencies and individual agencies responsible for completing the analysis of rules, laws or policies uniquely applicable to them.

8. The Department of Administrative Services shall develop a policy governing the utilization of unauthorized software applications by state government agencies to protect the intellectual property of the owners of such applications and as a necessary measure to provide security from non-compliant applications operating within agencies on the State of Oregon Enterprise Network or at the General Government Data Center.

EXECUTIVE ORDER NO. 01-25

Page Five

9. The Governor's Information Technology Roundtable shall provide leadership for implementing this Order, and the State's Chief Information Officer shall provide status reports to the Office of the Governor, State Treasurer, the Secretary of State, and the Joint Legislative Committee on Information Management and Technology on January 1 of each year following the effective date of this Order, so long as this order remains in effect.

Done at Salem, Oregon this 1st day of November 2001.

EXECUTIVE ORDER NO. 01 - 24

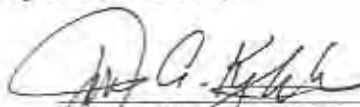

OREGON EMERGENCY RESPONSE SYSTEM

The Oregon Emergency Response System, established in 1972 and currently operating under Executive Order EO-91-17, has been the system for the notification, coordination, and management of state resources in response to natural and technological emergencies and civil disorder involving multi-jurisdictional cooperation between all levels of government and the private sector.

IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon Emergency Response System shall continue as a 24-hour operation under the management of the Department of State Police, Office of Emergency Management (OEM) as authorized under ORS 401.275
2. The Oregon Emergency Response System shall be the primary point of contact by which any public agency provides the state notification of an emergency or disaster; or a county requests access to state or federal resources to assist in responding to existing conditions.
3. The agencies participating in the Oregon Emergency Response System are those listed in the accompanying Memorandum of Understanding. (Attachment A)
4. All agencies participating in the Oregon Emergency Response System Council are directed to provide cooperative assistance within their resources and authority to other agencies, including but not limited to federal, state, county, city, special districts, and tribal entities in responding to or mitigating hazards that threaten the State of Oregon, pending further directives of the Governor.
5. Executive Order No. EO - 91 - 17 is rescinded.

Done at Salem, Oregon this 4 day of October 2001.

Bill Bradbury
SECRETARY OF STATE

MEMORANDUM OF UNDERSTANDING

The Oregon Emergency Response System (OERS) has been established to provide and implement procedures for coordinated state agency action in cases involving natural or technological hazards or civil disorder.

The Oregon Emergency Response System requires coordinated effort among various agencies of the State of Oregon. The signatories of this document, in consideration of the following mutual promises and covenants agree and understand:

1. The Oregon Emergency Response System shall be a coordinated effort among signatory agencies. Its effectiveness depends upon coordination with agencies among local, state, and federal governments as well as the private sector.
2. The scope of activities for Oregon Emergency Response System shall be defined by an OERS Council with designated representatives of each signatory. The role of the Council is to promote cooperation and consistency in emergency planning, response, mitigation, and recovery. The representatives, which include either division administrators or program managers, are identified on a membership roster attached to this document. Representatives may be changed by the Department Director without affecting the provisions of this agreement.
3. The function of the Council is to establish planning guidelines, review procedures, develop criteria for the provision of call lists and notification of personnel through the Oregon Emergency Response System, and to advise the Oregon Emergency Management Division on changes necessary to improve or update Oregon's emergency plans, policies, and procedures.
4. The Council shall be chaired by the Office of Emergency Management OERS Program Manager who is responsible for the updating process of OERS plans, guidelines, procedures, call-lists, and for the dissemination of information to participating agencies.
5. Technical advisory committees may be established to review state agency response to any event, identify special problems or issues, and/or advise on options to improve the overall statewide emergency services system.
6. No single agency will, in all cases, have the necessary resources or authority to carry out all response activities for an emergency or disaster. Therefore, coordination among agencies is essential. The Council endorses the Oregon Emergency Response System as a cooperative and unified effort which supports the individual agency responsibilities. Interagency agreements may periodically be reviewed by the OERS Council in order to ensure consistency and continuity with goals and objectives.

7. Preparedness for future incidents or emergency situations will be enhanced by the establishment of an after-action review, reporting process, and the development of training and exercises. Each agency will participate in OERS sponsored training as appropriate.

8. Public Information requires coordination and cooperation among affected agencies. The signatory state agencies agree to develop and maintain public information protocols relevant to their agencies responsibilities for hazards addressed in ORS 401.025(4).

SIGNATORIES:

Members of the Oregon Emergency Response System Council indicate their review of and support for the Executive Order and Memorandum of Understanding through their signatures affixed below:

 Ann Crook, Director Department of Aviation	 Phil Ward, Director Oregon Department of Agriculture

EXECUTIVE ORDER NO. 01-23

DETERMINATION OF A STATE OF DROUGHT EMERGENCY IN MORROW COUNTY DUE TO CONDITIONS CAUSED BY DROUGHT, LOW WATER CONDITIONS, AND ENERGY SHORTAGES IN THE WESTERN STATES.

Pursuant to ORS 401.055, I find that the weather pattern, ongoing drought and low water conditions, and the energy shortages in the western states have the imminent potential for causing a natural and economic disaster of catastrophic proportions. It is anticipated that the projected outlook will not significantly alleviate the current conditions, and that they will continue to worsen during the summer months. This will have profound consequences on the county's agricultural and natural resources, as well as the likelihood for stark energy and economic impacts.

Current conditions are being addressed by state agencies including the Department of Agriculture, the Department of Water Resources, and the Department of State Police and its Office of Emergency Management.

A timely response to this situation being vital to the well being and economic security of the citizens and businesses of Morrow County I am therefore declaring a "state of drought emergency" and directing the following activities;

IT IS HEREBY ORDERED AND DIRECTED:

I. The Oregon Department of Agriculture is directed to coordinate and provide assistance in seeking federal resources available to mitigate conditions and effect agricultural recovery.

II. The Department of Water Resources is directed to coordinate and provide assistance and regulation it determines necessary in accordance with ORS 536.700 to 536.780.

III. The Department of State Police Office of Emergency Management is directed to coordinate and assist as needed with assessment and mitigation activities to address current and projected conditions.

EXECUTIVE ORDER NO. 01-23

Page Two

IV. All other departments are directed to coordinate with the above agencies and to provide appropriate state resources as determined essential to assist affected political subdivisions.

EXECUTIVE ORDER NO. 01-22

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Umatilla County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 15, 2001 at 12:30 a.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the "Bridge Creek Fire." The "Bridge Creek Fire" was caused by lightning strikes and is located south of Ukiah along Highway 395 near the Bridge Creek Wildlife Management Area. The fire is threatening ten homes in the Camas Creek area and more structures including homes in Dale, and a state work center may be threatened due to erratic fire behavior.

Assistance is needed and was formally requested with a joint request by the Umatilla County Fire Defense Chief and the Grant County Judge.

IT IS HEREBY ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Umatilla County, which occurred on August 15, 2001.

This order was made by verbal proclamation at 12:30 a.m. the 15th day of August, 2001 and signed this 6th day of September, 2001, in Salem, Oregon.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Grant County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 14, 2001 at 7:45 a.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Monument Complex Fires.” The “Monument Complex Fires” were caused by lightning strikes in several areas and includes approximately 24 fires. Three of the fires are threatening the town of Monument and approximately 30 homes north and south of Monument.

Assistance is needed and was formally requested with a joint request by the Grant County Judge and the Grant County Fire Defense Chief.

IT IS HEREBY ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Grant County, which occurred on August 14, 2001.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Wallowa County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 17, 2001 at 11:39 a.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the "Horse Creek Fire." The "Horse Creek Fire" was caused by lightning strikes and is located north of Imnaha in the northeast corner of the state. The fire is threatening a number of homes along the Imnaha River and the town of Imnaha.

Assistance is needed and was formally requested by the Wallowa County Fire Defense Chief in conjunction with the Board of Wallowa County Commissioners.

IT IS HEREBY ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Wallowa County, which occurred on August 17, 2001.

This order was made by verbal proclamation at 11:39 a.m. the 17th day of August, 2001 and signed this 6th day of September, 2001, in Salem, Oregon.

EXECUTIVE ORDER NO. 01 – 16

SUSPENSION OF OREGON LAW REGARDING MOTOR CARRIER REGULATIONS DUE TO EMERGENCY DECLARATIONS OF EXECUTIVE ORDERS NO. EO – 01 – 14 and NO. EO – 01 - 15.

Executive Order No. EO 01 – 14 declares an emergency pursuant to ORS 476.510 – ORS 476.610 due to a conflagration fire in Umatilla County. Executive Order No. EO – 01 – 15 declares a statewide emergency due to imminent threat of wildfire pursuant to ORS 401.055. Wildfires currently burning throughout Oregon constitute a significant danger to timberland and to the health and welfare of residents.

Airports in LaGrande, John Day, Redmond, are currently unable to maintain sufficient fuel supplies for aircraft engaged in fighting these fires. Additional airports and other sources of motor fuel may confront similar circumstance in the near future. Various provisions of Oregon law relating to the regulation of motor carriers prohibit the level of delivery service required to alleviate these fuel supply shortages.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) Pursuant to ORS 401.095(2), I find the following statutes and administrative rules inconsistent with ORS 401.065 – ORS 401.085, and said statutes and administrative rules shall be deemed inoperative for all vehicles assisting in the emergencies declared in Executive Orders No. EO – 01 – 14 and No. EO – 01 – 15 so long as those emergencies exists:

OAR 740-100-0010(2)(D);
ORS 825.100;
ORS 825.160;
ORS 825.450;
ORS 825.474;
ORS 825.490.

The waiver of provisions of ORS Ch. 825 applies only to vehicles engaged in fire suppression activities that originate from out-of-state.

EXECUTIVE ORDER NO. 01 – 16

Page Two

- 2) All state agencies are hereby directed to suspend efforts to enforce these provisions for the duration of the emergencies declared in Executive Order No. EO – 01 – 14 and No. EO – 01 – 15.

**DETERMINATION OF A STATE OF EMERGENCY DUE TO THE
IMMINENT THREAT OF WILDFIRE**

Pursuant to ORS 401.055, I find that a fire emergency exists due to imminent threat from wildland fires statewide. Current fires in several areas, the ongoing potential for thunderstorms with lightening strikes, and a predominant weather pattern indicated these conditions will not be significantly relieved in the near future. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED:

1. The Department of State Police Office through its Office of State Fire Marshal and Emergency Management of the State of Oregon is authorized to coordinate the use of state personnel and equipment of all State agencies for the performance of any activity designed to prevent or alleviate damage from the emergency. This includes, but is not limited to, the resources of the Oregon Department of Forestry and the State of Oregon Military Department.
2. This determination of a fire emergency is statewide. It is not to be construed as a comprehensive declaration or proclamation of emergency for other purposes. It is limited to the use of state resources and the National Guard. Requests for resources for other emergencies must be submitted through the County governing body as required for other emergencies.
3. This order shall remain in effect until the threat is significantly relieved or the fire season ends.

This Order was made by verbal proclamation at 3:30 p.m. the 13th day of August 2001, and signed this 13th day of August, 2001.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Umatilla County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 28, 2001 at 3:35 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the "Two Rivers Fire." The "Two Rivers Fire" began in a wood chip pile at the Boise Cascade facility at the Port of Umatilla. The fire threatened industrial plants in the port, the Two Rivers Correctional facility, Hat Rock State Park and approximately 50 homes near Hat Rock State Park.

Assistance is needed and was formally requested by the Fire Defense Chief of the fire defense district composed of Morrow, Umatilla, and Gilliam counties.

IT IS HEREBY ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Umatilla County, which occurred on July 28, 2001.

This order was made by verbal proclamation at 3:35 p.m. the 28th day of July, 2001 and signed this 13th day of August, 2001, in Salem, Oregon.

AUTHORIZATION FOR ACCESS TO LAW ENFORCEMENT DATA SYSTEM

ORS 181.010 (8) (i) – (9) and OAR 257-010-0025 (1) (d) operate in conjunction to allow the Governor to authorize Law Enforcement Data System access to designated state and local agencies which require such information in order to fulfil statutory criminal and regulatory missions. Executive Order No. EO 90-05 grants such access to a number of state agencies, and establishes the conditions under which such access is authorized; subsequent Executive Orders Nos. EO 90-14, EO 90-21, EO 97-21, EO 98-13, EO 98-19, EO 99-04, EO 99 – 11, and EO 00-08 have authorized access for additional state agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) In addition to those agencies listed in paragraph (4) of Executive Order No. EO 90-05, and pursuant to the authority vested in me by ORS 181.010 (8) (i) (9) and OAR 257-010-0025 (1) (b), I hereby authorize the Oregon State Police to provide the following agencies with access to the Oregon State Police criminal offender information system:
 - a: The Oregon State Marine Board for purposes of issuing registration cards and licenses relating to the Oregon Outfitter Guide Program (ORS 704.020 – ORS 704.030) and the Oregon Charter Vessel Program (ORS 830.430 - ORS 830.440), and for enforcement of Oregon law regarding Boating Under the Influence of Intoxicants (ORS 830.315, ORS 830.994, ORS 830.815).
 - b: The Department of Revenue for purposes of protecting the confidentiality of taxpayer information pursuant to ORS 314.835, ORS 314.840, ORS 314.991, ORS 118.525, ORS 309.290, ORS 308.413, ORS 308.990, ORS 321.381, ORS 321.682, ORS 321.686, ORS 657.665, and Internal Revenue Code sec. 7213(a) and 7431, and for purposes of conducting background checks on prospective employees for specific, identified positions that involve the performance of tasks related to the Department of Revenue’s mission regarding seized property pursuant to ORS 314.419 and ORS 323.245, and duties

EXECUTIVE ORDER NO. EO 01-13

DETERMINATION OF A STATE OF DROUGHT EMERGENCY IN HARNEY COUNTY AND UNION COUNTY DUE TO CONDITIONS CAUSED BY DROUGHT, LOW WATER CONDITIONS, AND ENERGY SHORTAGES IN THE WESTERN STATES.

Pursuant to ORS 401.055, I find that the weather pattern, ongoing drought and low water conditions, and the energy shortages in the western states have the imminent potential for causing a natural and economic disaster of catastrophic proportions. It is anticipated that the projected outlook will not significantly alleviate the current conditions, and that they will continue to worsen during the summer months. This will have profound consequences on the county's agricultural and natural resources, as well as the likelihood for stark energy and economic impacts.

Current conditions are being addressed by state agencies including the Department of Agriculture, the Department of Water Resources, and the Department of State Police and its Office of Emergency Management.

A timely response to this situation being vital to the well being and economic security of the citizens and businesses of Harney County and Union County I am therefore declaring a "state of drought emergency" and directing the following activities;

IT IS HEREBY ORDERED AND DIRECTED:

I. The Oregon Department of Agriculture is directed coordinate assistance in seeking federal resources available to mitigate conditions and effect agricultural recovery.

II. The Department of Water Resources is directed to coordinate and provide assistance and regulation it determines necessary in accordance with ORS 536.700 to 536.780.

III. The Department of State Police Office of Emergency Management is directed to coordinate and assist as needed with assessment and mitigation activities to address current and projected conditions.

EXECUTIVE ORDER NO. 01 – 12
Page Two

IV. All other departments are directed to coordinate with the above agencies and to provide appropriate state resources as determined essential to assist affected political subdivisions.

EXECUTIVE ORDER NO. EO 01-10

TASK FORCE ON THE FUTURE OF SERVICES TO SENIORS AND PEOPLE WITH DISABILITIES

This Executive Order creates the Task Force on the Future of Services to Seniors and People with Disabilities. The Task Force will help Oregon prepare for the aging of the Baby Boomer Generation and the growth in the numbers of people with significant disabilities. It will review, analyze, and recommend changes as needed in the State's age and disability-related programs and policies.

The Task Force will be comprised of concerned seniors and people with disabilities, policymakers, and representatives from both private and non-profit organizations serving these populations.

The Task Force will make recommendations to the Governor and Legislative Assembly on improvements to systems serving seniors and people with disabilities in their communities

It is essential that Oregon prepare for the aging of the Baby Boomer generation and for the increasing numbers of people with severe disabilities. Failure to prepare and build systems capable of meeting the needs of these individuals will result in substantial costs and diminished quality of life for these individuals.

WHEREAS the numbers of seniors and persons with disabilities has been growing rapidly, and is expected to continue to grow rapidly over the next 25 years;

WHEREAS the ratio of seniors to available caregivers is expected to diminish over the next 25 years;

WHEREAS there is evidence that many individuals who will be retiring over the next 25 years will not have access to sufficient financial resources to allow economic self-sufficiency throughout their lives;

WHEREAS Oregon does not currently have enough accessible, affordable housing to shelter this growing senior and disabled population;

WHEREAS Oregon does not have enough accessible transportation to allow the senior and disabled population to fully participate in community life;

WHEREAS it takes many years to build the community-based infrastructure required to house, transport and care for growing numbers of seniors and persons with disabilities in a manner that optimizes dignity and autonomy;

EXECUTIVE ORDER NO. EO 01-10

Page Two

THEREBY IT IS HEREBY ORDERED AND DIRECTED:

1. The Task Force on the Future of Services to Seniors and People with Disabilities is hereby created. The membership of the Task Force shall be no greater than 25, comprised as follows:
 - a. Six members of the Legislative Assembly with interest and expertise in the subject of social services, long-term care or financial planning.
 - b. One representative from each of the following agencies and organizations, as nominated by the executive authority of the organization or agency and appointed by the Governor:
 - i. The Governor's Commission on Senior Services;
 - ii. The Oregon Disabilities Commission;
 - iii. Oregon Association of Area Agencies on Aging and Disability;
 - iv. The Housing and Community Services Department;
 - v. The Department of Human Services;
 - vi. The Long Term Care Ombudsman; and
 - vii. The Governor's Office.

Organizations are encouraged to nominate persons who are knowledgeable about systems serving seniors and people with disabilities and who have a specific knowledge about the priority areas that constitute the focus of the Task Force.

- c. Twelve additional members appointed by the Governor who are as follows:
 - i. Three persons representing consumers and advocates for individuals with long term care needs;
 - ii. Four persons from statewide organizations representing long term care providers, including two from not-for-profit providers;
 - iii. One in-home care provider;
 - iv. One person from an organization representing services to persons with special needs;

EXECUTIVE ORDER NO. EO 01-10

Page Three

- v. One person from the financial services industry; and
 - vi. Two physicians specializing in gerontology who are licensed to practice under ORS chapter 677.
2. The Governor shall appoint two members of the Task Force as co-chairs. One member shall be a member of the Legislative Assembly and one member shall be a representative from a provider or advocacy organization. The co-chairs shall establish an agenda for the Task Force, facilitate communication among members of the Task Force, and shall assign duties to Task Force members and appropriate staff.
3. The Department of Human Services shall provide support to the Task Force. The directors of other state agencies with programs that impact the dignity, quality of life, safety, health and independence of seniors and people with disabilities shall cooperate by providing information as needed and available, and by meeting with and reporting to the Task Force as requested.

The Department of Human Services and the Oregon Department of Administrative Services shall share the staffing functions of the Task Force. The Legislative Fiscal Office and the Legislative Administrator may consult and work with the Task Force in the performance of its functions and may furnish such information and advice as the members of the Task Force consider necessary to perform its functions.

4. The Task Force shall carry out the following activities:
- a. Develop a long range plan on the future of services to seniors and people with disabilities;
 - b. Consider the different types of long term care services necessary to meet the needs of Oregon's aging population;
 - c. Review and recommend legislative actions and levels of funding necessary to implement the long range plan;
 - d. Review the effectiveness of such recommendations and make an annual report to the Governor and the Legislature to detail findings and advice to appropriate agencies on any recommended changes.

EXECUTIVE ORDER NO. EO 01-10

Page Four

5. In carrying out these activities, the Task Force shall focus upon the following priorities:
 - ? Evaluating and improving where needed methods of governing and managing state programs for assistance to the elderly and persons with disabilities;
 - ? Identify methods for controlling the costs of long term care services;
 - ? Identify cross generational issues expected as demographics shift;
 - ? The development of long term care services sufficient to meet the needs of a rapidly aging population;
 - ? Exploring long-term care financial planning options that reduce the potential impact on the state's General Fund;
 - ? Identifying strategies to ensure adequate private and public funding of long term care services;
 - ? Identifying housing needs of the senior and disabled population;
 - ? Identifying strategies to replace, modernize or update deteriorating long term care facilities in order to meet the physical, psychological and medical needs of the long term care population;
 - ? Managing chronic health care issues and strengthening the connection between medical providers and caregivers through the study of behaviors to reduce the incidence of chronic disease; and
 - ? Identifying the different types of long term care services that are needed in rural and urban areas of the state;
 - ? Coordinate strategies to assure there is an adequately trained workforce to meet the needs of the growing senior and persons with disabilities.
6. The Task Force shall meet at least monthly, and may hold additional meetings as deemed necessary by the chairs.
7. The Task Force shall make its first report to the Governor by September 1, 2002, so that its recommendations can be considered in the development of the Governor's Recommended Budget.

EXECUTIVE ORDER NO. EO 01-10

EXECUTIVE ORDER NO. 01 - 08

OREGON'S PARTNERSHIP FOR OCCUPATIONAL AND CAREER INFORMATION

The State of Oregon acknowledges the essential roles played by occupational and career information in our educational and work force development systems. To address the need for quality career information, it is the policy of the state to coordinate and cooperate across the education and workforce systems to develop, disseminate, and effectively use the best occupational and career information products and services for Oregonians. The state is dedicated to coordinating and improving the partnerships between information providers and customers.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) Oregon's Partnership for Occupational and Career Information is established.
- 2) The Oregon Employment Department, having been designated by the Governor and the State Board of Education as Oregon's occupational/career information entity under the Carl Perkins Act, 20 USC sec 2301 *et seq*, shall lead and coordinate activities of the partnership.
- 3) The Oregon Career Information System shall be Oregon's designated Career Information Delivery System.
- 4) The Oregon Employment Department shall be Oregon's designated entity for the collection, analysis, and dissemination of occupational information.
- 5) The Partnership shall be comprised of representatives from
 - a: the Oregon Employment Department,
 - b: Oregon Career Information System,
 - c: the Oregon Department of Education, and
 - d: Department of Community College and Workforce Development.

To ensure the Partnership meets the goals in Part 6, these representatives shall be actively engaged in activities directly related to the development and delivery of occupational and career information. Partnership members are not entitled to compensation or expenses pursuant to ORS 292.495.

EXECUTIVE ORDER NO. 01 – 08

Page Two

- 6) The Partnership shall:
- a) Build and maintain strong, collaborative communication strategies that will ensure the sharing of information among state agencies, career information entities, and interested stakeholders;
 - b) Provide support for career guidance and academic counseling programs to promote improved career and education decision-making by individuals consistent with Oregon’s Educational Act of the 21st Century;
 - c) Improve student, parent, teacher, administrator, and counselor access to information and planning resources that relate educational preparation to career goals and expectations;
 - d) Increase state and local capacity for dissemination of occupational and career information that meets or exceeds industry standards;
 - e) Equip teachers, administrators, and counselors with the knowledge and skills needed to assist students and parents with occupational information, career exploration, and educational opportunities and financing;
 - f) Lead cooperative planning efforts for new occupational and careers information resources to support state workforce and educational goals;
 - g) Improve coordination and communication among organizations authorized by the Workforce Investment Act and the Wagner-Peyser Act to ensure the appropriate use of shared information and data and non-duplication of efforts as appropriate;
 - h) Provide ongoing means for customers, in particular, students and parents, to provide comments and feedback on products and services and design new products and services as appropriate to better meet customer requirements;
 - i) Collaborate with additional stakeholders on specific goals and targeted activities for the development, dissemination, and improvement of occupational and career information, resources, and services.

EXECUTIVE ORDER NO. 01 – 08

EXECUTIVE ORDER NO. EO 01 – 02

OREGON TASK FORCE ON BRAIN INJURY

The Center for Disease Control estimates that approximately 5.3 million Americans suffer from disabilities related to brain injury, a total exceeding that of each of the following: persistent mental illness, Alzheimer's, stroke, epilepsy, cerebral palsy or spinal cord injury.

The Health Division of the Oregon Department of Human Services analyzed hospital discharge data for the years 1997 and 1998 which identified 6,791 cases of persons hospitalized in Oregon for Traumatic Brain Injury (TBI). These data indicate that the largest number of brain injuries were caused by motor vehicle traffic crashes followed by falls. Oregon Trauma Registry data from the years 1995 and 1996 identified 5,598 persons admitted to hospitals for TBI. The annual average incidence rate of moderate and severe TBI, calculated using Oregon Hospital Discharge Index and the Oregon Trauma Registry data is 60-65 per 100,000.

As recently as 1970, approximately half of all persons suffering from TBI ultimately died as a result of their injuries. However, as a result of improved emergency response, quicker transport to trauma centers, and improved medical technology and techniques, as well as more prevalent use of safety equipment such as seat belts, child safety seats and air bags, that mortality rate has fallen to nearly 22%.

The resultant increase in persons living with TBI creates a need for long term care and rehabilitation that require a concentrated effort to better understand the nature of TBI. At present once patients are discharged from the hospital, there are very few service options to help address the variety of challenges these patients face. As a result, most TBI patients face a post-hospitalization landscape lacking in adequate support systems and viable care options. What makes the situation more difficult is that many individuals with TBI look outwardly normal, but still are significantly impaired in ways that affect their everyday functioning. In this sense, TBI is a "silent epidemic".

At present, available data regarding brain injuries in Oregon are very limited. They do not provide sufficient detail to enable targeting of additional TBI prevention measures or planning for post-hospital service care and service system needs based on functional outcome information. Consideration should be given to establishing a comprehensive TBI tracking system to collect data on incidence,

EXECUTIVE ORDER NO. E0 01-02

Page Two

patient demographics, nature of injury, cause of injury, injury locale, details on severity of injury, and functional outcomes. Such a system would make an important contribution to the prevention of brain injury and provide information to help improve the system of long-term support services to meet the needs of those who survive brain injury.

In Oregon, no State agency is charged with lead responsibility for programs to address the problems of persons with brain injury. This contrasts with the situation for persons who are developmentally disabled and persons with mental illness. Persons with brain injury and their families express frustration over the lack of services and the perceived fragmentation in delivery of services that do exist. Most of all, they express a desire for greater understanding and awareness of brain injury and its consequences on the part of agency staff, other professionals and the public generally. Overwhelmingly, they express the desire to work or participate in meaningful activity.

In an attempt to respond to the need for more services for persons with brain injury, the Oregon Department of Education in 1997 applied for and received a grant from the federal Bureau of Maternal and Child Health (MCH) of the Health Resources and Services Administration. Grant monies have been used to 1) create teams of experts on brain injury to support educators in Oregon school districts; 2) conduct training of survivors and families in self advocacy; and 3) to create an Oregon Brain Injury Resource Network (OBIRN) so that survivors and family members can call an 800 number or use the internet to obtain information about brain injury and referral to resources which may be able to help them. The grant project will end in August 2001, and with it an Advisory Council on Brain Injury formed to advise on the grant will disband.

Recognizing the need for greater attention to brain injury, 26 states have formally established brain injury advisory or coordinating councils, by executive order or legislation. These councils typically advise the Governor and legislature on the planning, coordination and development of services related to brain injury. They also promote the prevention of brain injury. Establishment of an advisory body on brain injury within the State government, whether by Executive Order or legislation, would be an important step toward creating greater awareness of brain injury as a major public health problem.

Approximately 12 states have established brain injury trust funds to provide services to persons with brain injury which were not being adequately funded from other sources. The source of funding in most cases has been surcharges on motor vehicle violations, and particularly drunk driving. Typically, utilization of trust

EXECUTIVE ORDER NO. 01-02

Page Three

fund monies is overseen by a board appointed by the governor. Most boards also have advisory functions in addition to their trust fund responsibilities.

The Brain Injury Association of Oregon has suggested that the State of Oregon establish such a TBI trust fund trust fund. An obvious issue related to the proposal is whether a state appropriation is to be made and the source of funding for such appropriation. Trust funds are also frequently authorized to seek and accept other private and public sources of funding. These issues, as well as the relationship of the suggested Brain Injury Advisory Council and the body which would oversee the trust fund should be examined by the Task Force.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Governor's Task Force on Traumatic Brain Injury is hereby created.
2. The Task Force shall consist of the following members, appointed by the Governor to serve indefinitely:
 - a. Two TBI survivors;
 - b. Two relatives of TBI survivors;
 - c. Two representatives of organizations which advocate for persons with brain injuries;
 - d. A representative from the insurance industry; and
 - e. Four representatives of the Oregon Department of Human Services, selected by that agency's Director, to include the following areas of expertise:
 - 1) Epidemiology, public health surveillance and injury prevention;
 - 2) Provision of social services to the disabled;
 - 3) Provision of vocational rehabilitation services; and
 - 4) Provision of mental health services and/or persons with developmental disabilities.

EXECUTIVE ORDER NO. 01-02

Page Four

- f. A representative of the Oregon Department of Education, selected by the Superintendent of Public Instruction;
 - g. two members of the Legislative Assembly or their designees; and
 - h. two medical professionals with experience in treating TBI.
3. The Task Force shall appoint a Chair and Vice-Chair by majority vote.
4. The Task Force shall:
 - a. Analyze and make recommendations regarding a coordinated state agency response to brain injury which focuses on the needs of persons with brain injury. This task should take special note of the results of input provided by brain injury survivors, family members and services providers during town meetings conducted jointly by the Department of Education and the Brain Injury Association of Oregon.
 - b. Explore sources of funding for a TBI Trust Fund to be used to provide support and assistance to survivors which will help them in their efforts to reclaim their lives, develop their abilities to function more independently and enable them to be integrated into and make their contribution to society.
 - c. Review the costs and benefits of establishing an Oregon TBI Registry and TBI Surveillance Program. The review shall include consideration of the experience of other states with similar programs.
 - d. Review and make recommendations regarding the establishment of a Brain Injury Advisory Council in order to advise the Governor and the Legislative Assembly on the needs of persons with brain injuries, and the coordination of the delivery of services to persons with brain injuries and their families.
 - e. Propose such legislation as may be necessary to implement the recommendations of the Task Force.

EXECUTIVE ORDER NO. 01-02

Page Five

- f. The Task Force may submit an interim report and recommendation on one or more of the preceding tasks if it determines it to be necessary or desirable.
- 5. Members of the Task Force are entitled to no compensation or reimbursement of expenses.

DETERMINATION OF A STATE OF DROUGHT EMERGENCY IN KLAMATH COUNTY DUE TO CONDITIONS CAUSED BY DROUGHT, LOW WATER CONDITIONS, AND ENERGY SHORTAGES IN THE WESTERN STATES.

Pursuant to ORS 401.055, I find that the weather pattern, ongoing drought and low water conditions, and the energy shortages in the western states have the imminent potential for causing a natural and economic disaster of catastrophic proportions. It is anticipated that the projected outlook will not significantly alleviate the current conditions, and that they will continue to worsen during the summer months. This will have profound consequences on the county's agricultural and natural resources, as well the likelihood for stark energy and economic impacts.

Current conditions are being addressed by state agencies including the Department of Agriculture, the Department of Water Resources, and the Department of State Police and its Office of Emergency Management.

A timely response to this situation being vital to the well being and economic security of the citizens and businesses of Klamath County, I am therefore declaring a "state of drought emergency" and directing the following activities;

THEREBY IT IS HEREBY ORDERED AND DIRECTED:

- I. The Department of Agriculture is directed to coordinate assistance in seeking federal resources available to mitigate conditions and effect agricultural recovery.
- II. The Department of Water Resources is directed to coordinate and provide assistance and regulation it determines necessary in accordance with ORS 536.700 to 536.780.
- III. The Department of State Police Office of Emergency Management is directed to coordinate and assist as needed with assessment and mitigation activities to address current and projected conditions
- IV. All other departments are directed to coordinate with the above agencies and to provide appropriate state resources as determined essential to assist affected political subdivisions.

EXECUTIVE ORDER NO. EO 01-01

This Executive Order shall take effect immediately upon the date hereof.

Done before me at Salem, Oregon this ____ day of March, 2001.

John A. Kitzhaber, M.D.
Governor

EXECUTIVE ORDER NO. 00 - 31

OREGON SHOWCASE STATE PARTNERSHIP FOR NATURAL DISASTER RESISTANCE AND RESILIENCE

WHEREAS, the State of Oregon is geographically vulnerable to earthquakes, wildfires, coastal and inland flooding, landslides, alluvial fan flooding, volcanic eruptions and other natural disasters that in the past have caused extensive loss of life and property and severe disruption to essential human services; and

WHEREAS, Oregon is one of the nation's fastest growing states, with a significant percent of the population living in the Cascadia Region Subduction Earthquake zone, in areas at high risk of flooding, and in wildland/urban interface areas prone to wildfires; and

WHEREAS, modeled earthquake losses for Oregon into the future rank third among all the states; and

WHEREAS, earthquakes in 1993 caused \$40 million in damage and floods in 1996 and 1997 caused over \$200 million in damage; and

WHEREAS, projected losses from an earthquake in the Cascadia subduction zone could exceed \$12 billion dollars, 30,000 destroyed buildings, and 8,000 lives lost; and

WHEREAS, wildfires have destroyed 100 homes in Oregon the past decade; and

WHEREAS, the State of Oregon is committed to providing the highest possible level of protection to its citizens in a manner consistent with risk management principles; and

WHEREAS, the State of Oregon views risk management of natural hazards as integral to efforts to achieve sustainability; and

WHEREAS, to further protect our residents, the State of Oregon has embarked upon a public/private partnership called the "Showcase State Initiative" in partnership with the Institute for Business and Home Safety (IBHS), SAFECO Insurance Companies, the University of Oregon Community Service Center, the State of Oregon Emergency Management, the Oregon Department of Geology and Mineral Industries (DOGAMI), the Department of Land Conservation and Development, many other state agencies, the Federal Emergency Management Agency, Oregon local governments and the business community; and

WHEREAS cooperation between public and private partners can expand efforts to reduce risks and demonstrate the benefits of taking specific, creative and partnered steps to further help Oregon communities reduce deaths, injuries, property damage, economic losses and human suffering caused by natural disasters.

EXECUTIVE ORDER NO. 00 – 31

Page Two

NOW, THEREFORE, I, John A. Kitzhaber, M.D., by virtue of the authority vested in me as Governor of the State of Oregon proclaim the State of Oregon a “Showcase State” for natural disaster resistance and resilience. The state, in cooperation with its public and private partners, and to the extent to which existing state budgetary and staff resources allow, will do the following:

1. Identify state agencies and private sector entities responsible and accountable for implementing actions in each of the areas listed below. Executives with authority and accountability in these areas will coordinate respective planning and will develop a mid-range strategic plan and a first-year action plan.
2. Complete statewide hazard, risk and vulnerability assessments for significant hazards that include hazard characterization, economic data, social and vulnerability data, and will provide assistance to municipalities to identify their natural hazard risks and vulnerability.
3. Develop partnerships with appropriate businesses to provide a public-private link for coordinated mitigation, preparedness, response and recovery. Partnerships should include critical businesses involved in recovery from natural hazard events (e.g., utilities, communications, food suppliers, medical facilities) and those businesses whose losses would impact the ability of the local and state economy to recover.
4. Promote and support enforcement of the latest version of the model building code as adopted by the state of Oregon and implemented in cooperation with local government to manage disaster-resistance.
5. Address relevant hazards and the risks they pose in any state-level land use decisions, including plans for state-owned property development. The state will also encourage adoption of local comprehensive plans that properly incorporate hazards into decision-making and provide for appropriate safeguards.
6. Maintain a state emergency response plan, develop a state post-disaster recovery plan, and provide technical assistance to municipalities for development of local recovery plans.
7. Ensure that communities participating in the National Flood Insurance Program (NFIP) are compliant, improve participation and ratings in the NFIP Community Rating System (CRS), and work with communities to improve community ratings in other areas including fire and building code effectiveness.

EXECUTIVE ORDER NO. 00 – 31

Page Three

8. Incorporate disaster protection into capital improvement budgets of public lifelines and critical facilities, such as utilities, telecommunications systems, transportation infrastructure, water supply, hospitals, wastewater treatment facilities, etc., and promote incorporation of disaster protection into capital improvements of similar private facilities.
9. Encourage the development of a disaster resistant state including encouragement of disaster resistant communities within the State in collaboration with the Federal Emergency Management Agency's *Project Impact* initiative.
10. Develop public outreach programs about the importance of mitigating the damage caused by natural hazards, to increase public awareness, change public attitudes, and spur action, through a coordinated effort with multiple stakeholders.
11. Support the proper incorporation of natural hazard reduction programs or information into school curricula.
12. Support, through cooperative public information efforts, the Institute for Business & Home Safety and its partners the in the non-structural retrofit of non-profit childcare centers through cooperative public information efforts.
13. Develop and conduct mitigation training for building, design, and construction professionals.
14. Identify and publicize existing incentives and disincentives for implementing mitigation measures in the areas of regulation, policy, social values, and in the financial and economic sectors.
15. Implementation of this order shall be implemented and coordinated by DOGAMI and Oregon Emergency Management on a joint basis.

This Executive Order shall take effect immediately upon the date hereof. Done at Salem, Oregon, this 12th day of December, 2000.

EXECUTIVE ORDER NO. EO 00 – 30

ELECTRONIC GOVERNMENT

Electronic government both enables and requires rethinking how government is organized from the view of the citizen. It also requires rethinking the functions that government performs to serve the needs of its citizens.

An electronic government system based on customer demands rather than agency jurisdiction will lead to a more intuitive and efficient process of government-provided services, where information is collected once and government functions are integrated. Doing this well requires a focus on the government's relationship with the public and recognizes citizens as real stakeholders. It will also raise citizen expectations of their government.

Electronic technologies, utilizing the Internet and World Wide Web, promise to enable Oregon citizens and businesses to exchange information, transact business, receive government services, and more effectively participate in government debate.

The State of Oregon Enterprise Information Technology Strategy (1998) was implemented by Executive Order 99-05, directing:

- That Oregon public agencies seek to utilize information technologies to meet enterprise-wide needs on a priority basis; and
- That agencies and branches of state and local governments work in collaboration to recognize the need to promulgate and pursue the implementation of common standards in enterprise network, systems and applications as described in the *State of Oregon Information Technology Standards Directory*.

The Department of Administrative Services has developed a policy (DAS-03-27) to guide the development of electronic commerce and government transactions by all state agencies utilizing the Internet and World Wide Web.

The 1999 session of the Oregon Legislature approved through budget processes the formation of the Oregon Center for Electronic Commerce and Government within the Department of Administrative Services. The Center is charged with coordinating and facilitating the use of Internet-based information technology by public agencies to deliver information, services, and electronic access to citizens and businesses.

EXECUTIVE ORDER NO. EO 00 – 30

Page Two

These services must be delivered in an efficient, user-friendly manner, and facilitate citizen access and customer satisfaction.

The Electronic Commerce Policy Committee of the Information Resources Management Council has completed a “*Electronic Commerce In Oregon Policy Briefing Paper,*” which provides technical and policy advice on matters relating to the requirements for successful use of Internet technology by state agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Department of Administrative Services, through the Oregon Center for Electronic Commerce and Government, shall work closely with all agencies and branches of government and institutions of higher education in developing and supporting the most effective and cost efficient means of providing information, delivering services, and promoting the participation in government processes utilizing the Internet and World Wide Web. The Department shall facilitate for all agencies, including branches of government and institutions of higher education, the sharing of resources, applications, application service provisioning, and common systems in the accomplishment of the Executive Order.
2. State agencies planning to utilize the Internet or World Wide Web to deliver information services will give priority to Enterprise Strategy's goals of open access and free information to private citizens, including new forms of citizen participation in government activities. This can be accomplished while pursuing new-cost, value-added services to citizens and businesses.
3. The Department of Administrative Services will lead an effort to produce standards for agencies to assess the impact of Web applications on the Wide Area Network (WAN). Agencies will participate in standard setting; and upon adoption of the standards by the Governor's Information Technology Roundtable, agency heads will certify, in writing, that their agency meets the standard. All applications designed for delivering Internet and Web-enabled financial and non-financial services to other agencies, businesses and citizens shall be reviewed by agencies based on standards to determine their impact on resources provided by the State of Oregon Enterprise Network (SOEN), and SOEN-related network services. Such impacts take into consideration the following:

EXECUTIVE ORDER NO. EO 00 – 30

Page Three

- a) Quality of service components required for the delivery of time-critical financial transactions;
 - b) Capacity planning associated with the state's connection to the Internet (Transit);
 - c) Capacity planning associated with the state's arrangements with private Internet Service Providers within the state (Peering);
 - d) Determining the impact on resources within the Department of Administrative Services' General Government Data Center, including resources needed to provide secure financial transactions; and,
 - e) Assuring that the applications are adequately secured in conformance with state policy and standards.
4. It is envisioned that all state agencies planning the utilization of the Internet or World Wide Web for the conduct of financial transactions, or the delivery of non-financial services to citizens and businesses, will complete and document an "E-Government Readiness Assessment." The white paper "E-Government Strategic Planning" developed by the National Electronic Commerce Coordinating Council will be used as a guide. The Department of Administrative Services will lead an effort, in concert with state agencies, to develop the E-Government Readiness Assessment tool. This information will be maintained by the Information Resources Management Division of the Department of Administrative Services.
5. Upon formal adoption of risk and security standards by the Governor's Information Technology Roundtable, all applications of Internet or Web-enabled financial services offered by agencies and offices must meet or exceed performance of those adopted policies and standards, with technical assistance and ongoing coordination of such standards to be provided by the Oregon Center for Electronic Commerce and Government and the Oregon State Treasurer.

Until then, agencies will utilize prudent business practices to align their processes with the spirit of this Order. For instance, agencies planning to utilize, or who are actually utilizing the Internet or World Wide Web for the conduct of financial transactions or the delivery of services to citizens and businesses must certify, in writing, that the agency has met the Department of Administrative Service's security policies and standards for conducting financial transactions over the Internet or the World Wide Web. The current policy on electronic commerce in Oregon State Government, DAS-03-27, is extended to November 1, 2001, consistent with this section.

EXECUTIVE ORDER NO. EO 00 – 30

Page Four

6. The Oregon Center for Electronic Commerce and Government shall develop, implement, and maintain a unified state government Web site, which is designed to provide citizens and businesses with secure, reliable, and convenient access to the information, services, and transactions offered by state agencies and branches. To be called "AccessOregon," or other appropriate name, the coordinated site shall be hosted in the General Government Data Center and distributed through the State of Oregon Enterprise Network.

In all cases, the agencies and branches shall retain control of the underlying business processes located at AccessOregon. All applications utilizing or enabling financial transactions must meet enterprise security standards.

7. In order to achieve the purposes of this Executive Order, all agencies should have completed an analysis of the legal, policy, and other limitations that may affect their conduct of electronic government not later than March 1, 2001. Such an assessment should include, but not be limited to, state and federal laws that do or may affect such transactions: privacy, confidentiality, funding, authentication, digital signature, accessibility, security, and fees.

The Department of Administrative Services shall be responsible for the coordination of this activity, working with the Department of Justice and agencies, with the Department of Administrative Services securing clarification of all common, enterprise-wide issues affecting agencies and individual agencies responsible for completing the analysis of rules, laws or policies uniquely applicable to them.

8. The Department of Administrative Services shall develop a policy governing the utilization of unauthorized software applications by state government agencies to protect the intellectual property of the owners of such applications and as a necessary measure to provide security from non-compliant applications operating within agencies on the State of Oregon Enterprise Network or at the General Government Data Center.
9. The Governor's Information Technology Roundtable shall provide leadership for implementing this Order, and the State's Chief Information Officer shall provide status reports to the Office of the Governor, State Treasurer, the Secretary of State, and the Joint Legislative Committee on Information Management and Technology on January 1 of each year following the effective date of this Order, so long as this order remains in effect.

EXECUTIVE ORDER NO. EO 00 - 29

DETERMINATION OF A STATE OF EMERGENCY DUE TO SEVERE DAMAGE TO ACCESS BRIDGE STRUCTURES IN CLATSOP COUNTY

Pursuant to ORS 401.055, I find that a threat to life and safety exists due to critically failing bridge structures on Labiske Rd. in Clatsop County. The severity of which was evaluated on October 28, 2000. The following impacts have occurred for which State assistance has been requested:

1. The county does not have the resources to effect an immediate permanent structure.
2. Unforeseen delays have occurred that preclude immediate resolution.
3. Emergency access for 16 families has been severely compromised and could become impossible during the winter months.
4. Most of the homes are heated with fuel oil that cannot now be delivered over the damaged bridges.
5. Other access routes do not exist.

Oregon National Guard assistance is needed to provide for the immediate installation of a temporary bridge to ensure fire and medical care vehicle access until the county can replace the damaged structure with a permanent structure, a time period not to exceed August 1, 2001. The County has agreed to reimburse the Oregon National Guard for the temporary use of such equipment, and to provide appropriate signage with warning information related to use of the bridges.

IT IS ORDERED AND DIRECTED:

1. The Oregon National Guard is directed to manage and coordinate the use of personnel and equipment necessary to alleviate, and mitigate the threat to life and safety caused by this emergency.

This emergency is declared only for the temporary replacement of the bridges on Labiske Rd. in Clatsop County impacted by this situation.

EXECUTIVE ORDER NO. EO 00 – 29

EXECUTIVE ORDER NO. EO 00 - 28

DETERMINATION OF A STATE OF EMERGENCY FOR HOOD RIVER COUNTY DUE TO FLASH FLOODING ACTIVITY

Pursuant to ORS 401.055, I find that severe weather in Hood River County has caused a natural disaster, which has severely damaged a portion of a county roadway. Damage occurred to bridges on Oregon 35, including the Whitewater Creek, Newton Creek, and Robin Hood Park bridges. The flooding also caused damage to U.S. Forest Service roads in Hood River County.

Immediate repair and reconstruction of the state highway system and Federal-aid highways is vital to the security, well-being and health of the citizens of Hood River County.

IT IS HEREBY ORDERED AND DIRECTED:

The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect recovery from this emergency.

This declaration is specifically limited to the affected area in Hood River County.

EXECUTIVE ORDER NO. EO – 00 – 27

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Wallowa County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 28, 2000 at 1:47 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of two fires known as the “Carrol Creek Fire” and the “Thorn Fire.” The “Carrol Creek Fire” and the “Thorn Fire” are two of several fires in more than one location around Enterprise and Innaha. The first is at Carrol Creek 10 miles east of Wallowa Lake and the second is one of a series of fires in the Eastside complex about 37 miles northeast of Enterprise in the Thompson Creek area.

Assistance is needed and was formally requested by the Acting Wallowa County Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fires in Wallowa County, which occurred on August 28, 2000.

This order was made by verbal proclamation at 1:47 p.m. the 28th day of August, 2000 and signed this 16th day of September, 2000, in Salem, Oregon.

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Crook County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 26, 2000 at 9:37 p.m. and is confirmed by this Executive Order. Response to the fire was re-opened on August 29, 2000 at 7:00 p.m. when the fire jumped the fire lines.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Hash Rock Fire.” The “Hash Rock Fire” is located north of the Ochoco Reservoir in Crook County, 18 miles northeast of Prineville. The “Hash Rock Fire” was declared contained and demobilization had begun. Heavy winds caused the fire to jump the lines and crews were re-dispatched to protect lines and structures.

Assistance is needed and was formally requested by the Crook County Fire Defense Chief and county judge through the Deschutes County alternate Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Crook County, which occurred on August 26, 2000.

This order was made by verbal proclamation at 9:37 p.m. the 26th day of August, 2000 and signed this 16th day of September, 2000, in Salem, Oregon.

GOVERNOR’S MATERNITY CARE TASK FORCE

Executive Order No. EO 95 – 10 established a Maternal Care Task Force (Task Force) to monitor policy issues relating to access to maternity care and study state and federal policies impacting maternity care in Oregon.

Since that time, the Oregon Medical Assistance Program (OMAP) and the Oregon Health Division (OHD) have developed a network of collaborative relationships with health plans participating in the Oregon Health Plan, as well as other community partners. Additionally, OMAP monitors maternity care access through review of encounter data and compliance with the requirement that fully capacitated health plans submit annual reports regarding HEDIS® measures related to member initiation of prenatal care. These policy developments achieve the charge set out for the Task Force in Executive Order No. EO 95 – 10.

THEREFORE IT IS HEREBY ORDERED AND DIRECTED:

Executive Order No. EO 95 – 10 is rescinded.

**DETERMINATION OF EMERGENCY CONFLAGRATION ACT DUE TO
FIRE IN GILLIAM AND MORROW COUNTIES**

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Gilliam and Morrow Counties. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 10, 2000 at 4:56 p.m and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Willow Creek Two Fire.” The “Willow Creek Two Fire” burned in three separate areas about eight miles west of Boardman in Gilliam and Morrow Counties, threatening the City of Boardman.

Assistance is needed and was formally requested by the Fire Defense Chief of three consolidated counties: Morrow, Umatilla and Gilliam counties.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Morrow County, which occurred on August 10, 2000.

EXECUTIVE ORDER NO. EO - 00 - 23

USE OF STATE RESOURCES TO ENCOURAGE THE DEVELOPMENT OF QUALITY COMMUNITIES

WHEREAS it is a goal of the State of Oregon as expressed in statute and in state agency goals and programs to accommodate growth and development in a manner that promotes quality communities, protects the land base for our farm and forest industries, and reduces the cost of public facilities and services; and

WHEREAS several state agencies are responsible for implementing this goal through state policies, statutes and administrative rules; and

WHEREAS there is a need to coordinate and target these programs and activities in order to protect the long-term value of the state's investments in Oregon communities and to use limited public dollars strategically; and

WHEREAS a set of development objectives reflecting state policies, statutes and administrative rules is needed to articulate the state's community development interests and to provide a framework for coordinating and targeting state programs and actions; and

WHEREAS it is recognized that local jurisdictions may have their own set of development objectives and priorities reflecting local needs and interests; and

WHEREAS the state should negotiate to resolve differences between state and local community development objectives.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The state shall strive to ensure that its programs and activities help build and maintain quality communities which have clean air and water, housing that is affordable to community residents, a balance of jobs and housing in proximity to one another, development patterns that minimize the cost of public services, and a mix of residential, commercial, industrial and institutional uses that supports a balanced transportation system.

EXECUTIVE ORDER NO. EO - 00 – 23

Page Two

A. Quality Development Objectives

The following Quality Development Objectives are hereby established to articulate the state's community development interests and to establish the state's investment priorities for the physical development of communities. The Objectives should be used in combination with state and local partnership principles and local development objectives to help build healthy and diverse communities and regions throughout Oregon.

- 1) Promote compact development within urban growth boundaries to minimize the costs of providing public services and infrastructure and to protect resource land outside urban growth boundaries.
- 2) Give priority to a quality mix of development that addresses the economic and community goals of a community and region.
- 3) Encourage mixed use, energy-efficient development designed to encourage walking, biking and transit use (where transit is available).
- 4) Support development that is compatible with a community's ability to provide adequate public facilities and services.
- 5) Facilitate development that is compatible with community and regional environmental concerns and available natural resources (e.g., available water, air quality, etc.)
- 6) Support development that provides for a balance of jobs and affordable housing within a community to reduce the need to commute long distances between home and work, thereby minimizing personal commuting costs as well as the public and societal costs of expanding the transportation infrastructure.
- 7) Promote sustainable local and regional economies in order to provide jobs for residents and financial support for community services.

B. Affected Agencies

The Quality Development Objectives are intended to guide all state agency actions related to community development.

EXECUTIVE ORDER NO. EO - 00 – 23

Page Three

However, the agencies on the Governor's Community Solutions Team including the Oregon Departments of Transportation, Environmental Quality, Economic and Community Development, Transportation, Land Conservation and Development, and Housing and Community Services will have the primary responsibility for implementation.

C. Implementation of "Quality Development Objectives"

- 1) Each agency shall ensure that agency actions are consistent with the "Quality Development Objectives."
- 2) Each Director of a Community Solutions Team agency shall designate staff to implement the executive order and to develop a training program for agency personnel responsible for implementing the "Quality Development Objectives."
- 3) No later than April 30, 1998, each Community Solutions Team agency shall submit a report to the Governor indicating how it will implement the "Quality Development Objectives" through agency programs, activities and the budget process. At that time, the Community Solutions Team shall also identify other state agencies which shall be involved in implementation.
- 4) The Community Solutions Team agencies shall implement an on-going mechanism to ensure coordination among major programs affecting community development.
- 5) By December 31, 1998, the Community Solutions Team shall prepare a report outlining how it is implementing the "Quality Development Objectives."
- 6) Each Community Solutions Team agency shall use the population and employment forecasts developed or approved by the Department of Administrative Service's Office of Economic Analysis in coordination with Oregon's 36 counties to plan and implement programs and activities.

Executive Order No. EO – 97 – 22 is hereby rescinded.

DETERMINATION OF EMERGENCY CONFLAGRATION ACT DUE TO FIRE IN WASCO COUNTY

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Wasco County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on August 8, 2000 at 6:04 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Antelope Fire.” The “Antelope Fire” is located in an unprotected area 1/4 mile from Antelope.

Assistance is needed and was formally requested by the Bureau of Land Management Incident Commander through the alternate Wasco County Fire Defense Chief.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Wasco County, which occurred on August 8, 2000.

EXECUTIVE ORDER NO. EO - 00 - 20

DETERMINATION OF A STATE OF EMERGENCY DUE TO THE IMMINENT THREAT OF WILDFIRE

Pursuant to ORS 401.055, I find that a fire emergency exists due to imminent threat from wildland fires statewide. Current fires in several areas, the ongoing potential for thunderstorms with lightning strikes, and a predominant weather pattern indicated these conditions will not be significantly relieved in the near future. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED:

1. The Department of State Police Office through its Office of State Fire Marshal and Emergency Management of the State of Oregon is authorized to coordinate the use of state personnel and equipment of all State agencies for the performance of any activity designed to prevent or alleviate damage from the emergency. This includes, but is not limited to, the resources of the Oregon Department of Forestry and the State of Oregon Military Department.
2. This determination of a fire emergency is statewide. It is not to be construed as a comprehensive declaration or proclamation of emergency for other purposes. It is limited to the use of state resources and the National Guard. Requests for resources for other emergencies must be submitted through the County governing body as required for other emergencies.
3. This order shall remain in effect until the threat is significantly relieved or the fire season ends.

This order was made by verbal proclamation at 4:00 p.m. the 8th day of August, 2000, and signed this 10th day of August, 2000, in Salem, Oregon.

EXECUTIVE ORDER NO. E.O. - 00 - 19

DETERMINATION OF A STATE OF EMERGENCY DUE TO WILDFIRES.

Pursuant to ORS 401.055, I find that threat to life and safety exists due to wildfires which occurred in Grant County on August 4, 2000. The following impacts have occurred for which State assistance has been requested:

1. Wildfires out of control near Slide Mountain in Strawberry wilderness area and numerous smaller sites throughout the county.
2. Fire threatening private property and structures
3. High winds and temps forecast for several days

Oregon National Guard Assistance is needed to assist with helicopters to fight the fires.

IT IS HEREBY ORDERED AND DIRECTED:

1. The Office of Emergency Management, shall coordinate access to and the use of personnel and equipment of all state agencies necessary to assess, alleviate, respond to, mitigate, or recover from conditions caused by this emergency.
2. The Oregon National Guard shall provide essential assistance that is deemed necessary to support this effort.

This emergency is declared only for those areas of Grant County impacted by wildfires which occurred on August 4, 2000.

This order is made by verbal proclamation this 4th day of August , 2000, and signed this 10th day of August, 2000, in Salem, Oregon.

EXECUTIVE ORDER NO. EO – 00 – 18

DETERMINATION OF EMERGENCY CONFLAGRATION ACT DUE TO FIRE IN MORROW COUNTY

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Morrow County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 22, 2000 at 1:50 p.m and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Willow Creek Fire.” The “Willow Creek Fire” started at the junction of Eight Mile Road and Four Mile Canyon in Gilliam County and spread out of control to Morrow County.

Assistance is needed and was formally requested by the Fire Defense Chief of three consolidated counties: Morrow, Umatilla and Gilliam counties.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Morrow County, which occurred on July 22, 2000.

This order was made by verbal proclamation at 1:50 p.m. the 22nd day of July, 2000 and signed this 10th day of August, 2000, in Salem, Oregon.

DETERMINATION OF EMERGENCY CONFLAGRATION ACT DUE TO FIRE IN MALHEUR COUNTY

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Malheur County. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on July 14, 2000 at 7:40 p.m and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “Jackson Fire.” The “Jackson Fire” started in the Vale area moving east towards Huntington and south towards Ontario.

Assistance is needed and was formally requested by the Fire Defense Chief of Malheur County.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Malheur County, which occurred on July 14, 2000.

This order was made by verbal proclamation at 7:40 p.m. the 14th day of July, 2000 and signed this 10th day of August, 2000, in Salem, Oregon.

DETERMINATION OF EMERGENCY CONFLAGRATION ACT DUE TO FIRE IN BENTON COUNTY

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration fire in Benton County in Central Eastern Washington. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on June 29, 2000 at 12:01 p.m. and is confirmed by this Executive Order.

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as the “24 Command Fire.” The “24 Command Fire” is located on the Hanford Nuclear Reservation and has burned into Benton City, Washington.

Assistance is needed and was formally requested by Washington State Fire Marshal Mary Corso through the WA/OR Interstate Fire Protection Operational Plan as authorized by the 1951 Civil Defense and Disaster Compact.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshal, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Benton County, Washington, which occurred on June 29, 2000.

This order was made by verbal proclamation at 12:01 p.m. the 29th day of June, 2000 and signed this 10th day of August, 2000, in Salem, Oregon.

EXECUTIVE ORDER NO. - 00-09

INTEGRATING DISPUTE RESOLUTION INTO STATE GOVERNMENT

WHEREAS, this Administration is committed to ensuring that state agencies utilize the most efficient and effective means of resolving disputes in fulfilling the mission of state government; and

WHEREAS, to be effective in addressing the wide array of issues they face, agencies need to employ a variety of strategies and problem solving tools; and

WHEREAS, alternative dispute resolution (ADR) methods offer an opportunity to resolve disputes in a collaborative manner; and

WHEREAS, ADR has proven to be successful in resolving and preventing public and private conflicts throughout the State of Oregon as well as globally; and

WHEREAS, the appropriate use of ADR by state agencies and the state's partners will improve the provision of public services by providing for broad input on, and creative resolutions to, complex public policy disputes; and

WHEREAS, the Oregon Dispute Resolution Commission, the Department of Justice, and the Department of Administrative Services have statutory roles in assisting agencies with ADR and are required by ORS 183.502 to collaborate in assisting state agencies to increase the use of alternative dispute resolution to resolve disputes involving the State of Oregon and a dispute resolution steering committee was created by executive order 96-32;

IT IS HEREBY ORDERED AND DIRECTED:

Each state agency shall:

review its processes for managing conflicts and controversies and take steps to ensure that its dispute resolution and conflict management processes are efficient and effective;

determine whether those systems could be improved through the use of facilitation, mediation, collaborative rulemaking, and other alternative dispute resolution processes, and;

take necessary steps to implement those improvements.

EXECUTIVE ORDER NO. - 00-09

Page Two

1. The Director of each Executive Department or Agency, with 50 FTE employees or more, shall designate an Agency Alternative Dispute Resolution Coordinator (Agency ADR Coordinator). The Agency ADR Coordinator shall work with the Dispute Resolution Steering Committee and the Public Policy Dispute Resolution Cluster Coordinators to encourage and facilitate the appropriate use of ADR within their agency and shall report with respect to such activities to the director of that department or agency.
2. The Agency ADR Coordinator of each Executive Department or agency shall participate in an ADR orientation and training conducted by the Oregon Dispute Resolution Commission and the Department of Justice **no later than** June 30, 2001.
3. The Agency ADR Coordinator shall be responsible for:
 - A. Acquiring and maintaining general knowledge of ADR processes, and the dispute resolution processes employed by their agency,
 - B. Determining where and how ADR might be applied in their or agency to increase agency efficiency, decrease the costs of resolving disputes and increase public and agency satisfaction with the process and results of agency dispute resolution activities, and
 - C. Coordinating their activities with their assigned Cluster Coordinators and with the other Agency ADR Coordinators within their cluster of agencies.
 - D. Submitting to the Governor by September 2001, an Agency ADR Needs Assessment, which shall include:
 - 1) a description of agency activities in which significant resources are used to resolve or manage disputes or controversies.
 - 2) a summary or description of the rules, policies and procedures that the agency employs, or plans to employ, to ensure that ADR is an available and effective dispute resolution option.

EXECUTIVE ORDER NO. - 00-09

Page Three

- 3) a description of the process, or a proposal to develop a process, for determining which disputes or controversies could benefit from the use of ADR.
 - 4) an assessment of how well the significant dispute resolution and conflict management processes within the agency are functioning as a system.
 - 5) an assessment of ADR training needs and a strategy for meeting those needs.
 - 6) a identification of where, within the individual agency budget, funding is available to adequately meet agency ADR Plan objectives.
- E. Submitting to the Governor, beginning on September 1, 2001, an Annual Agency ADR Report which shall include information for the previous fiscal year on:
- 1) agency utilization of ADR,
 - 2) the effectiveness of agency ADR processes,
 - 3) ADR Training received by agency employees,
 - 4) the implementation of any new ADR programs or projects,
 - 5) the status of any activities or actions proposed in the Agency ADR Plan, and,
 - 6) the goals for improving their ADR Programs in the next fiscal year.
- F. Working with the Dispute Resolution Steering Committee to ensure consistency of Agency ADR Plans and Agency Annual Reports. The cluster coordinators will be available for consultation and technical assistance in the development of these plans and reports.

EXECUTIVE ORDER NO. - 00-09

Page Four

4. The Governor, in consultation with the Oregon Dispute Resolution Commission and the Department of Justice, shall present an annual "Oregon Dispute Resolution Award" to recognize and honor an individual or agency within Oregon government who has performed outstanding service in the promotion or use of alternative dispute resolution in Oregon.

5. The Director of each Executive Department or Agency shall ensure that his/her department or agency has adopted those Attorney General Model Rules of Procedure under the Administrative Procedures Act and Attorney General's Model Confidentiality Administrative Rules that the department or agency has determined are appropriate for the agency's effective use of ADR.

EXECUTIVE ORDER NO. EO 00-08

AUTHORIZATION FOR ACCESS TO LAW ENFORCEMENT DATA SYSTEM

ORS 181.010 (8) (i) – (9) and OAR 257-010-0025 (1) (d) operate in conjunction to allow the Governor to authorize Law Enforcement Data System access to designated state and local agencies which require such information in order to fulfil statutory criminal and regulatory missions. Executive Order No. EO 90-05 grants such access to a number of state agencies, and establishes the conditions under which such access is authorized; subsequent Executive Orders Nos. EO 90-14, EO 90-21, EO 97-21, EO 98-13, EO 98-19, EO 99-04, and EO 99 - 11 have authorized access for additional state agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) In addition to those agencies listed in paragraph (4) of Executive Order No. EO 90-05, and pursuant to the authority vested in me by ORS 181.010 (8) (i) (9) and OAR 257-010-0025 (1) (b), I hereby authorize the Oregon State Police to provide the following agencies with access to the Oregon State Police criminal offender information system:
 - a: The Housing Authority of Yamhill County for purposes allowed under Public Law 104-120.
 - b: The Oregon Board of Chiropractic Examiners for purposes of conducting background checks on applicants for licensure as a Doctor of Chiropractic in Oregon.
- 2) Executive Order No. EO 90-05 continues to govern the compilation, maintenance, and dissemination of criminal offender information as defined in ORS 181.010 (2), and Executive Order EO 90-05 governs the access authorized for the state agencies granted LEDS access in this Order.

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO-00-07

**DEVELOPMENT OF A STATE STRATEGY PROMOTING
SUSTAINABILITY IN INTERNAL STATE GOVERNMENT OPERATIONS**

WHEREAS the unique natural qualities of the Pacific Northwest are unparalleled in the world and state government, as a large employer and facilities manager, impacts these qualities through its internal state government operations;

WHEREAS the people of the State of Oregon have a long history of finding innovative solutions to the most challenging and complex problems;

WHEREAS the State of Oregon strategic plan, *Oregon Shines*, reflects values that balance community, environmental and economic aspects of life in Oregon;

WHEREAS analysis of current trends described by the *Oregon Benchmarks* and by the *Oregon State of the Environment Report* shows significant threats to quality of life and environmental and economic sustainability;

WHEREAS the State of Oregon aspires to learn from the leadership of private industry, business, labor, educational institutions and other governments in addressing the goal of sustainable development;

WHEREAS it is the goal of the State of Oregon to increase efficiency in state government, cut long-term costs associated with state programs and save taxpayer dollars; and

WHEREAS this complex challenge is evolving, it is believed there are important steps the State of Oregon can take now to amend internal government operations to meet important goals.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The State of Oregon shall develop and promote policies and programs that will assist Oregon to meet a goal of sustainability within one generation - - by 2025.

EXECUTIVE ORDER NO. EO-00-07

Page Two

A number of significant steps will be necessary to achieve a sustainable future and will require the participation of all Oregonians. As an initial effort under this executive order, the State of Oregon shall focus on improving its internal operations as state government's first step toward meeting the goal of sustainability. This step is the first of many to be taken as we advance the state toward a sustainable future.

The State of Oregon adopts the following definition, goals and guidelines to promote sustainability.

Definition

Sustainability means using, developing and protecting resources at a rate and in a manner that enables people to meet their current needs and also provides that future generations can meet their own needs. Sustainability requires simultaneously meeting environmental, economic and community needs.

Goals

1. Increase the economic viability of all Oregon communities and citizens;
2. Increase the efficiency with which energy, water, material resources and land are used;
3. Reduce releases to air, water and land of substances harmful to human health and the environment; and
4. Reduce adverse impacts on natural habitats and species.

Guidelines

As the State of Oregon works toward sustainability, the state shall:

1. Employ the knowledge, expertise and creativity of Oregon's citizens in developing solutions;
2. Build upon existing private and public efforts throughout the state to ensure efficient and complementary results;

EXECUTIVE ORDER NO. EO-00-07

Page Three

3. Integrate efforts in ways that enhance the effectiveness of new and existing efforts;
4. Collaborate and cooperate to remove barriers and find solutions;
5. Emphasize on-going learning and adaptive management as techniques needed to inform and improve the process continually;
6. Develop voluntary, incentive-based and performance-oriented systems to supplement traditional regulatory approaches;
7. Seek to understand the full costs and benefits of possible actions to ensure that decisions are fully informed;
8. Using good science, measure resource use, environmental health and costs to determine progress in achieving desired outcomes; and
9. Establish clear, measurable goals and targets to guide state efforts toward sustainability.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

All state agencies and employees are expected to take actions to promote sustainable practices within state government. As an initial step, the Department of Administrative Services, with its central role in state buildings, procurement and communication, shall lead efforts focused on internal government operations. The following specific actions shall be taken under this executive order:

1. Adopt Sustainability Practices within State Government Operations to Demonstrate how to Reduce Waste

The Governor designates the Department of Administrative Services as the leader in implementing early sustainability measures in such areas as: facilities construction and operations; purchasing; energy usage; vehicle use and maintenance; information systems operations; and publishing and distribution.

The Department of Administrative Services, in collaboration with other state agencies, shall implement the following objectives:

EXECUTIVE ORDER NO. EO-00-07

Page Four

- a. Within six months following the date of this order, the Department of Administrative Services shall adopt sustainable facilities standards and guidelines. These shall guide the siting, design, construction, deconstruction, operation and maintenance of state buildings and landscapes, and the selection, terms and conditions for state leaseholds. The department shall:
 - i. Review and consider sustainable facilities standards, practices and principles employed by businesses, educational institutions and other governments;
 - ii. Obtain input from the existing Central Facilities Planning Committee and the existing Capital Projects Advisory Board, organized for state facilities coordination under ORS 276.227;
 - iii. Review and update state sustainable facilities standards and guidelines at least biennially; and
 - iv. Track and report key sustainable facilities performance elements through the existing State Facilities Coordination Program.
- b. The Department of Administrative Services shall use the North Mall Complex design, construction and maintenance as a pilot project to employ and evaluate sustainability methods and programs. The facility design shall employ a wide range of compatible, reliable sustainability actions. Where feasible, it shall test such programs and standards as the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) program.

EXECUTIVE ORDER NO. EO-00-07

Page Five

- c. The Department of Administrative Services shall expand state government purchasing power by aggressively entering into joint bidding agreements with other state and local governments and with multi-government purchasing alliances, and by encouraging local governments to access resulting low-price, high-value purchase agreements that promote sustainability. This will make sustainable products and services more widely available to local governments.

- d. To the extent that it is effective and practical to do so, the Department of Administrative Services shall take immediate action to purchase electrical energy from renewable resources such as wind, solar, geothermal and biomass. In the immediate future, this shall involve purchasing green power from private utilities as appropriate; beginning October 2001, this shall involve purchasing green power through direct access to the power generation market.

- e. The Department of Administrative Services shall appoint a Sustainable Supplier Council. In consultation with the council, the department, by June 2001, shall develop sustainability purchasing policies, targets and benchmarks for each of the following areas: paper products; building construction; cleaning products and coatings; general purpose motor vehicles and office furniture. In determining benchmarks, the council shall consider benefits and costs that could arise as a result of purchasing sustainable alternatives.

The Department of Administrative Services shall develop, based on its experience in implementing the preceding objectives, appropriate mechanisms to assist other state agencies in efficiently achieving sustainable internal operations. Mechanisms may include replication of department procedures or collaboration on the development of alternative approaches. In this effort, the department shall consult with the sustainability work group.

EXECUTIVE ORDER NO. EO-00-07

Page Six

The Department of Administrative Services shall report biennially to the Governor and the Legislative Assembly on actions taken to promote sustainability. The first such report shall be submitted by December 15, 2000 and shall address actions taken by the Department of Administrative Services and other state agencies to implement this executive order.

2. Create a Sustainability Work Group

To improve the efficiency and effectiveness of efforts related to the sustainability of state operations, the Governor shall assemble a Sustainability Work Group comprising representatives of the Legislative Assembly, state agencies, business, natural resources industry and environmental interests, labor, education and local government for the purpose of providing evaluations, recommendations and feedback on state efforts. The work group shall also be asked to develop options for additional steps the state can take to promote sustainability. Staffing for the work group shall be coordinated by the Governor's office. The work group shall present a first report to the Governor and the Legislative Assembly by December 15, 2000, with a final report due by June 1, 2001.

3. Assess Options for Sustainability Indicators and Targets

The Oregon Progress Board shall evaluate potential measures, including Oregon Benchmarks and the State of the Environment Report, for their effectiveness in measuring progress toward sustainability. In this evaluation, the Progress Board shall consult with the Sustainability Work Group and with the Department of Administrative Services. The Progress Board shall report to the Governor and Legislative Assembly on their findings as part of the board's biennial reporting process.

4. Conduct Business, Community and Public Outreach

Business and Community Outreach

In order for state government to develop sustainable internal operations and assist local organizations to do the same, the Economic and Community Development Department, after consultation with the Economic and Community Development Commission, other Community Solutions Team agencies and other appropriate state agencies, shall develop and implement strategies to accomplish the following actions:

- a. Develop partnerships among state and local governments, businesses and communities that support and promote sustainability;
- b. Coordinate efforts to better market sustainable products, industries and services from Oregon and encourage development of environmental technologies;
- c. Develop a range of resources to support organizations adopting sustainable practices. These resources may include training and educational opportunities, electronically available information, case studies and other services of greatest value to businesses, communities and other organizations;
- d. Intensify efforts to increase the economic stability of communities designated as “economically distressed;” and
- e. Evaluate a range of incentives that would make investments in sustainably-oriented businesses and practices more attractive.

EXECUTIVE ORDER NO. EO-00-07

Page Eight

By September 30, 2000, the Economic and Community Development Department shall prepare and submit to the Sustainability Work Group for its review a plan to encourage businesses and communities throughout the state to learn about and voluntarily adopt sustainable practices.

By December 15, 2000, the Economic and Community Development Department shall prepare and submit to the Governor and the Legislative Assembly a report on the actions taken to implement this executive order.

Public Outreach

The Governor's office, the Department of Administrative Services and the Economic and Community Development Department shall, after consultation with the Sustainability Work Group, develop and maintain Internet web sites describing the plans, actions and accomplishments of state agencies and highlighting examples of successful sustainability practices from the public and private sectors.

In addition, these entities, in collaboration with the Sustainability Work Group, shall develop and implement short-term plans to communicate with the general public about the state's efforts to promote sustainability.

5. **Pursue Further Efforts**

The State of Oregon, in cooperation with businesses, non-profit organizations, local governments and other citizens, will pursue further actions in an on-going effort to meet the goals and principles outlined in this executive order. The Governor, in subsequent orders and directives, may announce additional objectives to be pursued by agencies. Directives may also identify steps to ensure broad public participation in this sustainability effort.

EXECUTIVE ORDER NO. EO – 00 – 06

EXECUTIVE BRANCH CONTACT WITH THE PUBLIC UTILITY COMMISSION AND STAFF

WHEREAS, the Public Utility Commission (PUC) is statutorily obligated to represent and protect customers and put into effect measures that protect the public interest;

WHEREAS, the PUC is charged under Oregon statutes with oversight of regulated, investor owned utilities;

WHEREAS, the proceedings before the PUC should continue to produce decisions that are arrived at fairly and openly;

WHEREAS, Oregon citizens are best served when the PUC decisions are based on sound policy rather than political favor;

WHEREAS, the 70th Legislative Assembly enacted House Bill 3615, now enrolled as 1999 Oregon Laws, ch. 1102;

WHEREAS, House Bill 3615 created substantive changes in the appointment and duties of the chair of the PUC;

WHEREAS, there is concern that the direct appointment of the PUC chair by the governor could jeopardize the independence of the commission and its proceedings;

WHEREAS, the continued independence of the commission and the professional staff of the PUC is fundamental to the proper execution of the statutory obligation of the PUC's role in public protection;

WHEREAS, these concerns are particularly acute in connection with regulatory matters; and

WHEREAS, “regulatory matters”, as used in this Executive Order, means any matter that is pending or likely to be pending before the PUC and in which the PUC acts as the decision-maker including, but not limited to, open dockets, tariff filings and special contract filings.

EXECUTIVE ORDER NO. EO – 00 – 06

Page Two

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. That the Governor, the governor's staff and executive branch personnel will respect and encourage the commission and professional staff to independently fulfill their statutory and administrative duties;
2. That toward that end, the governor's staff and executive branch personnel shall refrain from and shall not make any attempt to pressure the commission, its chair or its staff to render a specific outcome in any regulatory matter of the commission other than in *on the record* presentations or as otherwise provided in the Executive Order;
3. The Governor, the governor's staff and executive branch personnel shall continue to abide by all *ex parte* rules including but not limited to written documents submitted in the record with regard to any communications with commissioners, the chair and the PUC staff with regard to any regulatory matters;
4. Any such communications as described in part 3 above shall be submitted by the commissioners or the professional staff to the commission in a timely manner for possible inclusion in the record of the regulatory matter in question so that all parties may offer comment on the record;
5. The commissioners and professional staff of the PUC are directed to report in writing directly to the entire commission any instances of *ex parte* communications from legislative or executive branch members or staff that could have the effect of materially affecting the outcome of any regulatory matters;
6. Such communications include, but are not limited to, subject matter directly connected to factual matters within the regulatory matter pending before the commission or communications designed to affect the assignment or reassignment of professional staff. This provision does not extend to processing of routine personnel issues in a manner consistent with Commission policy and procedures or that requires action by the Executive Branch under state law;
7. Any such communication as described in parts 5 and 6 of this order shall be submitted *in writing* to, and be considered by, the commission for inclusion in the record of the matter in question so that all parties may offer comment on the record if appropriate;

EXECUTIVE ORDER NO. EO – 00 – 06

Page Three

8. Notwithstanding the preceding sections of this order, the Governor, governor's staff, legislators, legislative staff and executive branch personnel may:
 - A. Continue to consult with the PUC chair, commissioners and members of the commission professional staff on the substance of legislative proposals or matters of legislative policy development, even if the substance of the proposals may reflect on matters pending before the PUC;
 - B. Participate, consistent with state law and PUC rules, as a party in any PUC proceeding and in so doing communicate with the PUC and its professional staff in the same manner as any party;
 - C. Consult with commissioners and professional staff when the PUC is participating in proceedings before an agency of the United States government or agencies of other states pursuant to ORS 756.040(3); and
 - D. Consult with the commissioners and professional staff when the PUC is engaged in interagency activities required by statute, Executive Order, interagency agreement or other such arrangement pursuant to ORS 756.040(4).
 - E. Receive factual briefings from PUC commissioners or professional staff.

EXECUTIVE ORDER NO. EO – 00 – 05

OREGON ENVIRONMENTAL JUSTICE CITIZEN ADVISORY BOARD

Environmental justice is the fair treatment and meaningful involvement of people of all colors, national origins, cultures, income levels, ages, gender and education level, in the development, implementation and enforcement of environmental laws, regulations and policies.

Executive Order No. EO 97 – 16 and EO 98 – 17 created an Environment Justice Advisory Board (Board) to oversee state agency implementation of the Environmental Equity Task Force Report (Task Force Report). State agencies were required to report on their efforts. The Task Force Report recommendations sought to ensure that state agencies assess and address the impacts of agency decisions on low-income and minority communities. Under the terms of EO 97 – 16, the Board ceased to exist in July of 1999.

Minority and low-income communities continue to lack adequate access to environmental-related governmental processes and decision-making. Proactive outreach efforts to such communities are essential to ensure that the crafting of state agency environmental decisions fully incorporate the impacts such decisions have on minority and low-income communities.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) Executive Orders No. EO 97 – 16 and 98 - 17 are hereby rescinded,
- 2) A 12 member Environmental Justice Advisory Board shall be appointed by the Governor. Members shall serve at the Governor's pleasure and shall, to the greatest extent possible, be comprised of individuals representing minority and low-income communities, environmental interests, industry and the geographically diverse areas of the state of Oregon. The Board shall select a chair by majority vote.
- 3) Members are entitled to no compensation under ORS 292.495.
- 4) The Board shall serve as a conduit between the Governor, agencies, and environmental justice communities regarding environmental-related processes and decision-making.

EXECUTIVE ORDER NO. EO – 00 – 05

Page Two

- 5) The Board shall advise natural resource and other state agencies (and other governmental entities where such entities request), on applicable environmental justice issues, including community concerns and public participation processes.
- 6) The Board shall define environmental justice issues.
- 7) State agencies will work collaboratively with the Board to identify minority and low-income communities that may be affected by environmental decisions made by such agencies.
- 8) Upon identification of these communities state agencies shall: a: define public outreach processes; b: assess the potential impacts of environmental decisions; and c: adequately address the ramifications of such impacts. State agencies shall work with the Board and communities on these actions.
- 9) The Board will meet with environmental justice communities and advise the Governor and agencies of issues raised by these communities and, if appropriate, make recommendations to address concerns.

SECRETARY OF STATE

JUDICIAL LIAISON TO DISPUTE RESOLUTION COMMISSON

Pursuant to ORS 36.115, the Dispute Resolution Commission (Commission) establishes standards and guidelines for the operation and evaluation of dispute resolution programs, sets minimum reporting standards for dispute resolution programs and sets minimum qualifications and training qualifications for persons performing mediation services. The Commission also formulates the basis for the allocation of funds from the Dispute Resolution Account.

In order to execute its statutory duties, it is essential that the commission receive input from members of the Oregon judiciary. Pursuant to ORS 36.105(4) and (7), the Commission's purposes include the provision of methods to evaluate the effect of dispute resolution programs on communities, local governments, the justice system and state agencies, and to foster efforts to integrate community, judicial and state agency dispute resolution programs. Judicial perspective is integral to ensuring that the Commission crafts and administers dispute resolution programs which are viable and capable of implementation and use by Oregon judges.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) The Chief Justice of the Oregon Supreme Court shall appoint a member of the Oregon judicial branch to act as a liaison from the judicial branch to the Oregon Dispute Resolute Commission (Commission).
- 2) The liaison shall offer judicial perspective on Commission action and shall participate freely in all discussion and matters that come before the commission.
- 3) The judicial branch appointee shall be a non-voting member of the commission and shall serve a three year term at the pleasure of the Chief Justice and the Governor.
- 4) The judicial liaison shall be entitled to no compensation or reimbursement for expenses under ORS 292.435.

EXECUTIVE ORDER NO. EO – 00 – 03

GOVERNOR’S DRUG AND VIOLENT CRIME ADVISORY BOARD

Each year the State of Oregon applies for the Edward Byrne Memorial State and Local Law Enforcement Assistance Grant from the U.S. Department of Justice to provide funding for new and innovative programs to improve Oregon’s ability to respond to drugs and violent crime. This grant award is based on Oregon’s annual Drug and Violent Crime Strategy. The Strategy identifies the Governor’s priorities in criminal justice and identifies methods or programs that would best meet those priorities. Each year the Strategy is developed by the Criminal Justice Services Division of the Oregon State Police, with input from state and local criminal justice and social service agencies and professionals. The Governor’s Drug and Violent Crime Advisory Board serves to advise the Criminal Justice Services Division and the Governor on what programs or practices would best serve to address crime.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. There is established a Governor’s Drug and Violent Crime Advisory Board.
2. The Board serves to advise the Governor on criminal justice issues and to develop the Governor’s annual Drug and Violent Crime Strategy to improve the criminal justice system in Oregon.
3. The Board shall consist of members appointed by the Governor and serving at his pleasure. Each member shall serve a four year term with the first terms being staggered with an equal number of terms expiring in each of the following years: 2002, 2003 and 2004. Each member may serve unlimited additional terms as determined by the Governor.
4. Board membership may consist of representatives or their designees from the following organizations: the Oregon State Sheriff’s Association, the State Commission on Children and Families, the Oregon Juvenile Department Directors Association, a Public Defender, a State Representative, a State Senator, a specialist in drug and alcohol abuse, a county community corrections department, the Department of Human Services, a State Court Judge, the Oregon Police Chiefs Association, the Oregon Military Department, the District Attorney’s Association, the domestic violence community, the Oregon University System, the Department of Education, the Attorney General’s Office, the Oregon State Police, the Department of Corrections, the US Attorney’s Office, the Portland Police Bureau, and the Oregon Youth Authority.

EXECUTIVE ORDER NO. EO – 00 – 03

Page Two

5. The Governor will appoint the Chairperson of the Board. A Vice-Chair will be elected by the Board from the current Board members.
6. The Council shall establish procedures to ensure public input; such procedures shall include notice to both domestic violence-related groups and interested individuals of public meetings held at such time and places as the Council shall determine.
7. The Board shall:
 - a. Develop and recommend to the Governor the annual Oregon Drug and Violent Crime Strategy for the expenditure of the Edward Byrne Memorial Grant Fund.
 - b. Identify and evaluate criminal justice programs that impact crime in the state of Oregon.
8. Members of the Board shall receive no pay or compensation for their involvement in the activities of the Board.
9. This executive order shall remain in effect until amended or rescinded.

EXECUTIVE ORDER NO. EO – 00 - 02

OREGON GEOGRAPHIC INFORMATION COUNCIL

Geographic information about the character and location of the state's human, economic, natural, and infrastructure resources, and the activities that affect and are affected by those resources, is essential to all levels of government in Oregon. Mapping land records, and geographic information systems (GIS) are the primary tools for analyzing this information.

For these reasons, Executive Order No. EO 83 - 15 established the State Map Advisory Council. The Council was given additional responsibilities by Executive Order No. EO 87- 11. Executive Order No. EO 89 - 16 charged the State Map Advisory Council with establishing a statewide GIS plan, establishing standards and procedures for digital map data, and providing direction to the State Service Center for Geographic Information Systems created by the Order. Executive Order No. EO 94 - 16 further revised the State Map Advisory Council, renamed the council the Oregon Geographic Information Council, and broadened the representation to include the human resource and public safety agencies.

State agencies require access to complete, current and accurate geographic information as human and natural resource policies become more complex. Furthermore, the completeness and accuracy of geographic information relies heavily on shared information between state, federal, and local governments. Consequently, further revision of the Oregon Geographic Information Council's appointed representation is required.

Oregon requires leadership to ensure it maintains a consistent vision for geographic information activities within the state and between governments. Such leadership requires a forum to encourage participation and to facilitate sharing of information about all aspects of geographic information, including GIS, mapping, global positioning systems, satellite imagery, and desktop tools. Finally, the need to assure the wisest use of limited resources requires a central point for coordination and partnerships.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. Executive Order No. EO 96-40 is hereby rescinded.

EXECUTIVE ORDER NO. EO – 00 - 02

Page Two

2. This Executive Order continues the Oregon Geographic Information Council (OGIC). The OGIC shall:
 - a. Provide leadership within state government regarding the accumulation, dissemination, analysis, and management of geographic information, including, but not limited to:
 - i. Advocacy before the Oregon Legislative Assembly, United States Congress, county commissions, city councils, and the private sector;
 - ii. Exploration of “best practices” relating to geographic information, while determining if such practices are applicable to Oregon;
 - iii. Creation and promotion of a statewide mission for geographic information; and
 - iv. Direction of that statewide mission through work with the Legislative Assembly, the Federal Geographic Data Exchange Group, and units of local government.
 - b. Provide a statewide forum for all geographic information issues. In providing such a forum, the OGIC shall:
 - i. Encourage the involvement of all parties potentially affected by geographic information issues;
 - ii. Function as the primary point of contact on discussions regarding geographic information issues affecting state agencies; and
 - iii. Facilitate the free flow of information between interested parties.
 - c. Fulfill a policy, planning, and assessment role regarding geographic information issues, including:
 - i. Conduct an ongoing review of statewide geographic information

EXECUTIVE ORDER NO. EO – 00 - 02

Page Three

systems, as well as oversight of GIS, in coordination and consultation with the Information Resources Management Division of the Department of Administrative Services (DAS);

- ii. Prioritization of geographic information initiatives;
 - iii. Development of geographic information guidelines and standards to be adopted by the Information Resource Management Council; and
 - iv. Provide advice to DAS on budget decisions regarding implementation of GIS functions.
- d. Promote coordination and partnerships among federal, state, and local government entities regarding geographic information issues.
3. The OGIC shall consist of the Director, or policy-level alternate, of the following governmental bodies:
- a. The Department of Agriculture, the Department of Environmental Quality, The Department of Fish and Wildlife, the Department of Forestry, Parks and Recreation Department, the Department of Human Resources, the Department of Transportation, the Department of Revenue, the Oregon Economic and Community Development Department; the Water Resources Department; the Department of Geology and Mineral Industries, and the Division of State Lands;
 - b. The Secretary of State's Office; and
 - c. The Governor's Office

Additionally, the OGIC shall consist of:

- d. The statewide coordinator for GIS;

EXECUTIVE ORDER NO. EO – 00 - 02

Page Four

- e. Two representatives of local governments; and
- f. A representative of one federal agency.

Additionally, the OGIC shall encourage other interested state and federal agencies to participate.

- 4. The Director or Deputy Director of the Department of Administrative Services (DAS) shall serve as the chair of the Council. Additionally,
 - a. The OGIC may establish standing committees and ad hoc work groups, as needed, to achieve its purpose, and to ensure the continual involvement of local and federal agencies;
 - b. The chair shall call the OGIC to meeting at least once per calendar quarter;
 - c. The DAS Information Resources Management Division shall provide staff assistance to the OGIC; and
 - d. No member of the OGIC shall receive compensation for their services.
- 5. This Executive Order provides for the coordination of statewide GIS projects; provides and administers a library of spatial data; and manages access to that data. Functions shall include:
 - a. Develop and document statewide spatial library data, as well as provide federal, state, county and local governments, and private sector representatives access to that information. Emphasis will be placed on strategies of on-site storage and on linked web site access to the data;
 - b. Provide customer support; and DAS-provided/brokered consultation, project support, and programming services to other state agencies;
 - c. Coordinate with federal agencies, state agencies and the private sector on the maintenance, gathering, distribution, and licensing, where applicable, of geographic information; and

EXECUTIVE ORDER NO. EO – 00 - 02

Page Five

- d. Provide staff support to the chair of the Council.
6. State agencies shall coordinate GIS mapping, and other geographic information activities with the OGIC, the Oregon Spatial library, and other local and federal agencies. Where appropriate, state agencies shall:
 - a. Create and maintain geographic data themes, and provide updates or linked web site access of that data to the Oregon Spatial Library on a schedule to be determined by the Information Resources Management Division;
 - b. Share information through the OGIC, and the GIS Coordinator, regarding projects involving geographic information and related systems technology;
 - c. Coordinate with the OGIC, and the GIS Coordinator, before making decisions about planning and development of projects involving the acquisition of geographic data, hardware, or software;
 - d. Participate in the review and updating of an Oregon Geographic Information Council Plan, and adhere to the policies and standards established in the Plan; and.
 7. The Information Resources Management Division of DAS shall work with the OGIC to develop policies and guidelines to guide agency acquisition of geographic information, based upon, yet not limited to, the following considerations:
 - a. The-cost effectiveness of computer hardware and software;
 - b. Compatibility with the Enterprise Information Technology Strategy;
 - c. Compliance with statewide standards, developed by OGIC, and endorsed by the Information Resources Management Council; and

EXECUTIVE ORDER NO. EO – 00 - 02

Page Six

- d. Whether or not agency acquisition or efforts duplicate the efforts of other agencies.

DETERMINATION OF A STATE OF EMERGENCY IN LANE COUNTY DUE TO SEVERE WEATHER AND FLOODING

Pursuant to ORS 401.055, I find that a threat to life, safety and property exists due to severe weather that has caused a natural disaster of major proportions to the state highway system in Lane County. During the past two months, heavy rains have caused landslides and erosion along Oregon Coast Highway No. 9 (U.S. 101). The instability has resulted in repeated debris flows forcing closure of the highway at Cape Cove, ten miles north of Florence.

This has resulted in an estimated \$2,000,000 in damage to the state highway system.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect repair and reconstruction of the federal aid highway system in Lane County.

Done at Salem, Oregon this 1st day of February, 2000.

EXECUTIVE ORDER NO. EO – 99 - 20

OREGON WORKFORCE INVESTMENT BOARD

1. The Governor has an interest in the further development of a statewide workforce investment system that brings together workforce training programs, education, and economic development to assure the self-sufficiency and economic well-being of the citizens of the state. In order to carry out this effort, the Governor will establish a Workforce Investment Board, constituted according to federal and state statute, to assist him in establishing and coordinating workforce programs in the State of Oregon and to advise him on policy relating to developing an effective workforce development system. This board will be named the Oregon Workforce Investment Board.
2. The United States Congress enacted the Workforce Investment Act of 1998, PL 105-220 (hereinafter the Act), that re-writes federal statutes governing job training programs, adult education and literacy, and vocational rehabilitation. The Act is intended to provide a more coordinated, customer-friendly, locally-driven workforce development system. It "codifies" the one-stop career center system approach that has been underway in Oregon for several years and supported, in part, by grants from the Department of Labor. Public Law 105-220 requires the Governor establish a State workforce investment board to assist in the development of the State plan described in section 112 of the Act and to carry out the other functions described therein.
3. The Governor is required to appoint 32 members to the state workforce investment board, hereinafter referred to as the Oregon Workforce Investment Board or "board", pursuant to Section 3, Chapter 1019, Oregon Laws 1999.
4. Through execution of this order, the Governor is exercising his authority under federal law to establish terms of appointment and other conditions governing appointment or membership on the board.
5. The 70th Oregon Legislature enacted legislation to implement the Act and specified the workforce programs and activities that shall be a part of Oregon's One Stop System, referred to as the Oregon Career Network. Section 6 of Chapter 1091, Oregon Laws 1999 (House Bill 2989). These programs and activities consist of:
 - a) programs authorized under Title IB of the Workforce Investment Act;
 - b) programs authorized under the Wagner- Peyser Act (29 U.S.C. 49 et seq.);
 - c) adult education and literacy activities authorized under title II of the Act;
 - d) programs authorized under Title I of the Rehabilitation Act of 1973 (29 U.S.C. 720 et seq.);

EXECUTIVE ORDER NO. EO – 99 - 20

Page Two

- e) programs authorized under section 403(a)(5) of the Social Security Act (42 U.S.C. 603(a)(5)) (as added by section 5001 of the Balanced Budget Act of 1997);
 - f) activities authorized under title V of the Older Americans Act of 1965 (42 U.S.C. 3056 et seq.);
 - g) postsecondary vocational education activities authorized under the Carl D. Perkins Vocational and Applied Technology Education Act (20 U.S.C. 2301 et seq.);
 - h) activities authorized under chapter 2 of title II of the Trade Act of 1974 (19 U.S.C. 2271 et seq.);
 - i) activities authorized under chapter 41 of title 38, United States Code;
 - j) employment and training activities carried out under the Community Services Block Grant Act (42 U.S.C. 9901 et seq.);
 - k) employment and training activities carried out by the Department of Housing and Urban Development;
 - l) programs authorized under State unemployment compensation laws (in accordance with applicable Federal law);
 - m) programs authorized under part A of title IV of the Social Security Act (42 U.S.C. 601 et seq.);
 - n) programs authorized under section 6(d)(4) of the Food Stamp Act of 1977 (7 U.S.C. 2015(d)(4));
 - o) work programs authorized under section 6(o) of the Food Stamp Act of 1977 (7 U.S.C. 2015(o)); and
 - p) programs authorized under the National and Community Service Act of 1990 (42 U.S.C. 12501 et seq.).
6. The board shall:
- a) advise the Governor on the development, implementation and coordination of state and local policies relating to the workforce programs listed above and others designated by the Governor;
 - b) carry out the duties and functions prescribed under the laws relating to: Workforce Investment Act of 1998 and Chapter 1019, Or Laws 1999 (House Bill 2989);
 - c) identify the workforce development needs in the state and recommend to the Governor goals for meeting such needs;

EXECUTIVE ORDER NO. EO – 99 - 20

Page Three

- d) prepare and recommend to the Governor a strategic and unified plan to accomplish the workforce development needs of the state and that meets the requirements of Section 112 of the Workforce Investment Act of 1998; and
- e) monitor the implementation of evaluate the effectiveness of the strategic plan.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) The Governor shall appoint the Chair and the Vice Chair from among the board's private sector business members.
- 2) The members shall serve a term of three years. Of the members first appointed to the board by the Governor, term-end dates shall be staggered using two, three and four year terms.
- 3) There is no limit on the number of terms a member may serve.
- 4) If a board member resigns or is incapacitated, the Governor shall appoint a person to fill out the remainder of the member's term.
- 5) Non-legislative and non-position Board members are entitled to reimbursement for mileage and expenses pursuant to ORS 292.495(2) for overnight stays subject to the standards applied to state employees by the Department of Administrative Services and the availability of funds.
- 6) The board is hereafter charged with carrying out the duties listed under Section 701 of the 1992 amendments to the Job Training Partnership Act (JTPA) (29 U.S.C. Sec. 1792)(1992) until the JTPA expires on June 30, 2000.
- 7) Executive Order No. EO-98-04 is hereby repealed.

Done at Salem, Oregon this 29 day of December, 1999.

DETERMINATION OF A STATE OF EMERGENCY IN TILLAMOOK COUNTY DUE TO SEVERE WEATHER AND FLOODING

Pursuant to ORS 401.055, I find that a threat to life, safety, and property exists due to severe weather that has caused a natural disaster of major proportions to the state highway system in Tillamook County. Beginning November 24, heavy rains caused flooding, landslides and erosion throughout the County.

This has resulted in an estimated \$374,500 damage to local federal-aid roads reported by Tillamook County, in addition to damages to the state highway system. Slides occurred on state highways at U.S. Highway 101, Oregon Coast Highway, milepost 102, and at Oregon 18, Salmon River Highway, milepost 13. Preliminary damage estimates for these two slides totals \$750,000.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect repair and reconstruction of the state highway system and local federal-aid highways in Tillamook County.

DETERMINATION OF A STATE OF EMERGENCY DUE TO HEAVY RAIN AND FLOODING

Pursuant to ORS 401.055, I find that threat to life and safety exists due to heavy rains causing downed trees and extensive damage to highways which occurred in Lincoln County on November 25, 1999. The following are impacts for which State and federal assistance have been requested:

Threats to life and property due to major flooding exist along the Salmon and Siletz Rivers in Lincoln County. Residents are unable to leave their homes to get to the Red Cross shelter in Lincoln City. There is significant difficulty for residents attempting to travel in any direction. Extensive hazards and road closures have occurred as the result of numerous land slides on county and state roads.

Lincoln County has indicated the situation is beyond their ability to respond in an effective and timely manner. State resources have been requested to assist with problems such as road clearance, debris removal, public safety and evacuation of residents.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess alleviate, and/or mitigate damage caused by this emergency.
2. The Oregon National Guard shall provide essential assistance that is deemed necessary to support this effort.

This emergency was verbally declared at 2:05 a.m. for those areas of Lincoln County impacted by severe weather conditions on November 25, 1999.

WILLAMETTE RESTORATION INITIATIVE (Amends EO 98-18)

WHEREAS, The Executive Order 98-18 established the Willamette Restoration Initiative in September, 1999;

WHEREAS, The Willamette Restoration Initiative has begun to make plans for, and is initiating and coordinating programs for, the restoration of the Willamette River and its watershed;

WHEREAS, It is desirable that the charge to the Willamette Restoration Initiative be refined and expanded to meet needs that have become apparent since the issuance of Executive Order 98-18;

WHEREAS, The relationship between the Willamette Restoration Initiative and the Executive and Legislative branches of state government needs to be clarified and defined; and,

WHEREAS, In particular, communications between the Legislative Assembly and the Willamette Restoration Initiative need to be improved, and the Legislative Assembly needs to be more fully involved in the work of the Initiative;

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

Executive Order 98-18 is hereby amended by this addendum:

1. Among the objectives of the Willamette Restoration Initiative (WRI) are:
 - A) Ensuring that the Legislative Assembly is fully informed of the problems, issues, and opportunities in the Willamette Valley watersheds, as well as of the work of the WRI, and
 - B) Providing full opportunity for the Legislative Assembly to participate effectively in the processes of the WRI.

2. In addition to its other responsibilities and activities, the Board of the WRI shall:
 - A) As part of the preliminary draft Willamette Basin amendments and supplements to the Oregon Plan for Salmon and Watersheds, identify the major problems that need to be addressed by the WRI and provide general guidance on strategies for addressing those problems;

EXECUTIVE ORDER NO. EO - 99 - 17

Page Two

- B) Deliver bimonthly progress reports to the Governor and the appropriate committees of the Legislative Assembly, which shall include a accounting of the budget, expenditures, and receipts of the WRI;
 - C) Afford the Legislative Assembly, as part of its oversight and coordination responsibilities under Ch. ____, Sec. 2, 1999 Oregon Laws (SB 133), full opportunity to participate in the work of the WRI and to comment effectively on that work, by delivering all papers, reports, agendas and other written work products of the WRI to the leadership of the Legislative Assembly at the same time as they are delivered to the WRI Board; and
 - D) Work with watershed councils and soil and water conservation districts to assist them in their missions and to coordinate their input into the work of the WRI.
3. In carrying out its responsibilities and activities, the WRI will not exercise governmental authority over any entity or to supersede the authority of watershed councils, soil and water conservation districts, or any other entity.
 4. State agencies will keep the appropriate committees of the Legislative Assembly informed of their activities with respect to the WRI.
 5. The Speaker of the House and the President of the Senate are invited jointly to appoint a member of the Legislative Assembly to the WRI Board, with all the rights and responsibilities of other WRI Board members.
 6. Executive Order 98-18 and this Executive Order are repealed, effective June 30, 2001.

EXECUTIVE ORDER NO. EO - 99-16

QUALITY EDUCATION COMMISSION

WHEREAS, with the passage of Measure 5 in 1990, primary funding responsibility for Oregon's K-12 system of public schools has shifted from the local to the state level;

WHEREAS, funding for K-12 schools now represents almost half the state's General Fund budget;

WHEREAS, the Legislature passed the Oregon Educational Act for the 21st Century to establish high levels of academic standards for Oregon's children;

WHEREAS, state policymakers have not previously had adequate tools allowing them to establish the reasonable costs of providing a quality education necessary for Oregon's children to meet those standards;

WHEREAS, the Legislative Council on the Oregon Quality Education Model published a report in June 1999 outlining a possible approach to determining those costs, but also acknowledging that the model was a work in progress, needing improvement and refinement; and

WHEREAS, the Legislature included funding in the Oregon Department of Education's 1999-2001 budget to continue work on development of a budget model;

THEREFORE, IN CONSULTATION WITH THE STATE SUPERINTENDENT OF PUBLIC INSTRUCTION, IT IS HEREBY ORDERED AND DIRECTED:

1. The Quality Education Commission is hereby created to help direct the further work necessary to validate and refine the Quality Education Model for use by state policymakers.
2. The Commission shall include 11 members co-appointed by the Governor and the State Superintendent of Public Instruction. Members shall serve at the pleasure of the Governor and State Superintendent.
3. The Chair shall be co-appointed by the Governor and the State Superintendent of Public Instruction.
4. The Commission shall meet at the call of the Chair. A majority of the members of the Commission shall constitute a quorum to do business.

EXECUTIVE ORDER NO. EO - 99 - 16

Page Two

5. Staffing to the Commission shall be provided by the Oregon Department of Education.
6. Members of the Commission shall receive no compensation for their activities as members of the Commission, but may be reimbursed for travel expenses incurred in attending Commission business pursuant to ORS 292.495(2).
7. The Commission shall:
 - Identify key issues to address in further validating and refining the Quality Education Model;
 - Solicit input from educators, education policy experts and others about the elements of the model;
 - Solicit public input regarding educational priorities for use in developing the model;
 - Make recommendations regarding model development based on research, data, public input and experience; and
 - Communicate with stakeholders regarding model development.
8. The Commission may establish subcommittees as necessary to assist in carrying out its work.
9. The Commission shall approve and monitor a workplan that will allow for further refinement and completion of a model in sufficient time to be used by the Governor in developing the Governor's Recommended Budget for K-12 schools.

EXECUTIVE ORDER NO. EO - 99 - 15

GOVERNOR'S PROCESS FOR FORECASTING K-12 SCHOOL FUNDING

WHEREAS, funding for K-12 schools now comprises almost half the State General Fund budget; and

WHEREAS, the primary source of revenue for K-12 schools is the State General Fund; and

WHEREAS, the State's calculation of a "current service level" budget for K-12 schools has not and cannot be developed at the level of detail as for other state programs; and

WHEREAS, K-12 schools require additional and more timely information on reasonable assumptions of a current service level budget to assist them in planning for their annual budgets;

THEREFORE IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon Department of Administrative Services (DAS) shall annually forecast a statewide allowable growth factor of general operating revenue per ADM_w that can be reasonably expected for each of the next three fiscal years by K-12 education districts. That forecast will consider:
 - a. Projected changes in the cost of personal services, other services, supplies and capital outlay; and
 - b. Forecasted local revenues as provided by the Oregon Department of Administrative Services, Legislative Fiscal Officer, Legislative Revenue Officer and Department of Revenue.
2. The Oregon Department of Administrative Services shall annually provide this forecast in conjunction with the December 1 Oregon Economic and Revenue Forecast.
3. With the agreement of the Superintendent of Public Instruction, the Oregon Department of Education will calculate, based upon current law, the distribution of those revenues and shall provide K-12 education districts with those forecasts annually in January of each year.
4. K-12 education districts should use these forecast revenues in the formulation of their budgets and other considerations for expenditure levels, including collective bargaining, contractual commitments, and program changes.

EXECUTIVE ORDER NO. EO - 99 - 15

Page Two

5. The State Board of Education will provide, in rule, procedures for K-12 education districts to report conditions that do not allow them to operate within the forecast revenue.

6. The Department of Administrative Services will form a "School Revenue Forecast Committee" to review the statewide average ADM_w forecasts. This committee shall consist of representatives from the Oregon Department of Education, the Legislative Fiscal Office, the Legislative Revenue Office, K-12 stakeholders from school districts, labor unions and the Legislature. This committee will meet in the fall prior to each annual forecast. Notwithstanding the requirement to provide the allowable growth factor in conjunction with the December 1 Oregon Economic and Revenue Forecast, the first allowable growth factor forecast will be provided subsequent to the convening of the School Revenue Forecast Committee.

EMPLOYMENT OF PEOPLE WITH DISABILITIES

WHEREAS, the 1990 passage of the Americans with Disabilities Act represented an historical benchmark and a milestone in America's commitment to full and equal opportunity for all of its citizens,

WHEREAS, the State of Oregon recognizes that the surest path to Oregon's continued vitality, competitiveness and resourcefulness is through the full realization of the contributions of all of its citizens,

WHEREAS, work is a valued activity, both for individuals and society and fulfills the need of an individual to be productive, promotes independence, enhances self-esteem, and allows for full inclusion in the mainstream of life,

WHEREAS, the State of Oregon has long recognized the value of maximizing the employment potential of all its citizens, including individuals with disabilities,

WHEREAS, increased employment of individuals with disabilities can be achieved through the provision of reasonable accommodations and expanded employment opportunities in the public and private sector,

WHEREAS, individuals with disabilities continue to encounter various forms of exclusion and discrimination in the critical area of employment,

WHEREAS, as a group, individuals with disabilities experience staggering levels of unemployment and poverty,

WHEREAS, the State of Oregon has long recognized the need to eliminate the effects of past and present societal discrimination based on physical, mental or developmental disabilities in which it has played a passive or active role,

WHEREAS, the State of Oregon requires that every state agency present the affirmative action objectives and performance of that agency to the Governor and to the Legislative Assembly,

WHEREAS, the increasing diversity of Oregon's population demands that we extend our efforts to maintain our economic viability and provide a high quality of life for all our citizens,

EXECUTIVE ORDER NO. EO - 99-14

Page Two

WHEREAS, state government can play a leadership role in promoting the employment of individuals with disabilities by serving as a model employer,

WHEREAS, the state of Oregon has had a state government hiring program for individuals with disabilities for twenty years,

WHEREAS, the Office on Affirmative Action reports that the state government workforce has seen a decline in job share by individuals with disabilities,

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) The Department of Administrative Services shall establish a revised state hiring program to increase the employment of individuals with disabilities in state service.
- 2) The mission of the new state hiring program is to create a coordinated and aggressive state program to bring individuals with disabilities into state employment at a rate that is as close as possible to that of the general population of working Oregonians.
- 3) The Department of Administrative Services, in partnership with the Department of Human Services, the Commission for the Blind and in cooperation with the Oregon University System which is responsible for its personnel under ORS 351.070, shall promote, administer and be accountable for the program.
- 4) The Department of Administrative Services shall report biennially to the Director of Affirmative Action the representation of individuals with disabilities in the state population who are ready and able to work. The Department shall base the report on the most current census and other data available to the Oregon Progress Board, relevant state agencies, Commissions and Councils.
- 5) The Director of Affirmative Action shall biennially set affirmative action objectives for the employment of individuals with disabilities for each division of state service and for state service overall; the Chancellor of the Oregon University System shall report to the Director on the related objectives of the OUS and the progress made during the biennium.

EXECUTIVE ORDER NO. EO - 99 - 14

Page Three

- 6) To aid and advise the Department of Administrative Services in implementing and evaluating the state hiring program, the Director of the Department of Administrative Services, the Chancellor of the Oregon University System and the Oregon Disabilities Commission shall jointly appoint an advisory committee that shall meet regularly and issue a progress report annually. The first report shall be delivered to my Affirmative Action Director by February 1, 2000.

ELIMINATION OF PERSISTENT, BIOACCUMULATIVE, AND TOXIC POLLUTANTS

WHEREAS, the quality of Oregon's environment today is the result of many years of combined efforts by the public, government agencies, and industry.;

WHEREAS, recent international studies have concluded that contaminants that are persistent, bioaccumulative, and toxic present the greatest risk to human health and the environment, and are not adequately addressed;

WHEREAS, these persistent, bioaccumulative, and toxic pollutants (PBTs) are associated with a broad range of adverse human health impacts such as cancer, effects on the nervous system, reproductive and development problems and hormonal disruption;

WHEREAS, PBTs accumulate in the tissues of plants and animals and become increasingly concentrated as they move up the food chain;

WHEREAS, PBTs remain an environmental and health concern long after they are used, generated as waste, or released into the environment;

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) In order to address the presence of the most threatening chemical substances in Oregon's environment, the Oregon Department of Environmental Quality shall lead a state-wide effort to eliminate the releases of PBTs into the environment.
- 2) Oregon's initial goals in this effort shall be to:
 - Outline a range of approaches that might be undertaken in Oregon to identify, track and eliminate the release of PBTs into the environment by the year 2020;
 - Evaluate state, national, and international efforts to eliminate PBTs;
 - Use available information to identify which PBTs are generated in Oregon, determine what activities generate PBTs, estimate the amounts being generated, and identify missing data; and
 - Identify ways to utilize education, technical assistance, pollution prevention, economic incentives, government procurement policies, compliance, and permitting activities to eliminate PBT releases.

EXECUTIVE ORDER NO. EO - 99 - 13

AUTHORIZATION FOR ACCESS TO LAW ENFORCEMENT DATA SYSTEM

ORS 181.010(8)(i)-(9) and OAR 257-010-0025(1)(b) operate in conjunction to allow the Governor to authorize Law Enforcement Data System access to designated state and local agencies which require such information in order to fulfill statutory criminal and regulatory missions. Executive Order No. EO 90 - 05 grants such access to a number of state agencies, and establishes the conditions under which such access is authorized; subsequent Executive Orders Nos. EO 90 - 05, EO 90 -21, EO 97 -21, EO 98 -13, and EO 98 - 19 have authorized access for additional state and local agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) In addition to those agencies listed in paragraph (4) of Executive Order No. EO 90 - 05, and pursuant to the authority vested in me by ORS 181.010(8)(i)-(9) and OAR 257-010-0025(1)(b), I hereby authorize the Oregon State Police to provide the Department of Consumer and Business Services with access to the Oregon State Police criminal offender information system solely for the purpose conducting background investigations on prospective employees for positions involved with cash receipting and depositing, payroll preparation functions, and mailroom services.
- 2) Executive Order No. EO 90 - 05 continues to govern the compilation, maintenance, and dissemination of criminal offender information as defined in ORS 181.010(2), and that Order governs the access authorized for state agencies granted access to the Oregon State Police criminal offender information system by this Order.

ACCOMMODATION BY STATE AGENCIES FOR EMPLOYEE BREAST FEEDING

WHEREAS, extensive research shows diverse and compelling advantages to infants, mothers and families from breast feeding and the use of human milk for infant feeding;

WHEREAS, these advantages include health, nutritional, immunologic, developmental, psychological, social, economic and environmental benefits;

WHEREAS, epidemiological research indicates that breast feeding and feeding infants with human milk decreases the incidence of a number of childhood diseases, ailments, and syndromes. Breast feeding and feeding with human milk also entails significant health benefits for mothers;

WHEREAS, increasing the rates of breast feeding initiation and duration is a national health objective, and one of the goals of Healthy People 2000, a national prevention initiative to improve the health of all Americans;

WHEREAS, the percentage of women currently electing to breast feed their babies is still below levels reported in the mid-1980s, and is far below the Healthy Project 2000 goal;

WHEREAS, multiple obstacles reduce the number of mothers who continue breast feeding after returning to work. Such obstacles include finding an adequate place for feeding or expressing milk, finding the time or flexibility to feed or express milk during working hours, using workspace to store milk, and general concerns about the social acceptability of feeding or expressing milk within the workplace;

WHEREAS, making state workplaces supportive for nursing mothers we will reap many benefits including: less employee turnover, reduced absenteeism, lower health care costs. And, we will be making an investment in the health of Oregon children and sending a clear message to our employees that they and their families are important by doing so;

WHEREAS, most employers are sympathetic to the needs of nursing mothers, and are very supportive of their employees when breast feeding concerns are brought to their attention. However, employees must be encouraged to discuss their needs with employers; and

EXECUTIVE ORDER NO. EO - 99 -10

Page Two

WHEREAS, the Oregon Health Division has not only achieved breast feeding friendly environment for its employees but has also taken the lead in developing resource materials to assist all employers in establishing breast feeding friendly policies in the workplace.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) State agencies shall take measures to ensure that all State of Oregon employees shall be provided with an adequate location for the expression of milk or breast feeding. Specifically, state agencies shall make reasonable efforts to provide a room or other location in close proximity to work areas, other than a restroom, where an employee can breast feed her child or express her milk in privacy.
- 2) State agencies shall provide reasonable unpaid rest periods each day to employees who choose to breast feed or express milk for their children.
- 3) State agencies shall work with employees to maximize flexibility regarding implementation of this Order, including the appropriate amount of time employees are allowed to express milk or breast feed
- 4) All state agencies shall obtain the Breast Feeding Friendly Employer Resource Packet from the Oregon Health Division and move as quickly as possible to become eligible for the Breast-Feeding Friendly Employer Certificate issued by the Health Division.

EXECUTIVE ORDER NO. EO - 99- 09

GOVERNOR'S ADVISORY COMMITTEE ON MOTORCYCLE SAFETY

The Governor's Advisory Committee on Motorcycle Safety was informally established by Governor Vic Atiyeh in 1981. The Committee represents the voice of Oregon motorcyclists and advises the Governor of the State of Oregon and the Governor's Highway Safety Representative on safety for motorcyclists in Oregon.

IT IS HEREBY ORDERED AND DIRECTED:

- 1) There is created a Governor's Advisory Committee on Motorcycle Safety (Committee), consisting of not more than eight members appointed by the Governor. Committee members shall serve at the pleasure of the Governor for four year terms as those terms were initially staggered. In case of a vacancy for any cause, the Governor shall make an appointment for the unexpired term.
- 2) The Committee shall focus its efforts upon rider education, drinking and riding, road hazards unique to motorcycles, motorist awareness of motorcycles, sharing the road and other safety issues. It shall advise the Governor and the Governor's Highway Safety Representative regarding motorcycle safety issues and legislation that is in the best interest of the Oregon transportation public. The Committee shall submit an annual report to the Governor outlining the Committee's accomplishments, goals and mission statement.
- 3) The Committee shall elect a chairperson by majority vote. The chairperson shall designate a vice-chair to carry out the duties of the chair in the chair's absence. The chair may designate subcommittees as needed.
- 4) The Committee shall meet in accord with a schedule approved by a majority of its members and shall meet on special occasions at the call of the chair. Five voting members shall constitute a quorum. A vote of the majority shall be sufficient for all actions of the Committee.
- 5) The Department of Transportation and the Governor's Highway Safety Representative shall provide staff assistance to the Committee.

EXECUTIVE ORDER NO. EO - 99- 09

Page Two

- 6) Members of the Committee shall receive no compensation for their services. However, members shall be eligible for reimbursement of travel expenses pursuant to ORS 292.495(2).
- 7) This Order shall expire on July 31, 2003.

OREGON DEVELOPMENTAL DISABILITY COUNCIL AMENDS EXECUTIVE ORDER NO. EO 88 - 07

The United States Congress has enacted Public Law 104-183 in order to assist states in affording persons with developmental disabilities the opportunity to become fully integrated into their communities and to achieve their potential for independence and productivity. Under the Public Law 104-183, states receive grants for activities to enhance their strength and capacity to address the unmet needs of persons with developmental disabilities in a coordinated fashion, evaluating the implementation of such activities.

In order to comply with federal guidelines relating to the receipt of such grants, the Oregon Developmental Disability Council must amend Executive Order No. EO - 88- 07 in order to allow for more frequent rotation of its membership.

IT IS HEREBY ORDERED AND DIRECTED:

- 1) Paragraph 4 of Executive Order No. EO - 88 - 07 is hereby amended so that it reads as follows:

“The Council shall consist of not more than 28 persons appointed by the Governor. The Council may offer recommendations regarding membership for the Governor’s consideration. Council members shall serve four year terms. The Governor may re-appoint the same person to a single succeeding term. Membership shall consist of representatives as as specified in Public Law 104-183.”

- 2) Paragraph 5 of Executive Order No. EO - 88 - 07 is hereby amended so that it reads as follows:

“The Council shall elect a chairperson by majority vote. The chairperson shall serve for a term of two years and may serve no more than one succeeding term. The Council shall meet at the call of the chairperson,

EXECUTIVE ORDER NO. EO 99 - 08

EXECUTIVE ORDER NO. EO - 99 - 07

RACIAL AND ETHNIC HEALTH TASK FORCE

This Executive Order creates the Racial and Ethnic Health Task Force to review, analyze, and recommend changes as needed in State of Oregon Agencies, including but not limited to the Department of Human Resources and other state programs with the goal of improving the individual and community health status for people of color and ethnic populations.

The Task Force created by this Order shall be comprised of concerned individuals from effected racial and ethnic communities, as well as representatives from both private and non-profit organizations and state agencies who are dedicated to working toward improvement in the health status of Oregon's racial and ethnic populations.

The Task Force will report annually to the Governor and Legislative Assembly on the performance of those state agencies whose programs address racial and ethnic health issues.

The Task Force will generally advise and assist state agencies in meeting the goals and objectives established by the Governor.

It is essential that we as a state achieve this goal for the economic, health, and social costs attributed to poor health status of racial and ethnic communities are substantial, and inflict a needless toll upon these communities and our state as a whole.

In early 1998 a group of concerned citizens gathered to form the Racial and Ethnic Health Work Group (Group) to study issues regarding racial and ethnic health issues. The Group developed a plan of action which identified the following three goals:

- * develop legislation establishing an entity to oversee racial and ethnic health issues affecting Oregonians;
- * recommend increased funding for the Oregon Health Division's Office of Multicultural Health;
- * create a task force to provide assistance and advice on monitoring and ensuring accountability for state activities related to prioritized racial and ethnic health issues identified in this Order for the 1999-2001 biennium.

WHEREAS the Oregon Benchmarks track the progress on infant mortality, prenatal services, and the numbers of adults and children lacking health coverage;

EXECUTIVE ORDER NO. EO - 99 - 07

Page Two

WHEREAS the Oregon Progress Board issued an update on Oregon minorities in January 1998 indicating improvement in selected health benchmarks but Oregon minorities continue to lag behind the state as a whole in areas such as infant mortality, prenatal services, and people lacking health coverage;

WHEREAS it has been determined that access to health care by racial and ethnic minorities is inadequate to address the chronic health issues these communities face;

WHEREAS it has also been determined that health coverage can best be defined as medically appropriate care provided when needed by culturally competent providers;

WHEREAS it has been determined that people of color and people with native languages other than English experience extreme difficulty accessing health services;

WHEREAS improving health status in all communities requires effective programs of prevention, protection, education and health promotion;

WHEREAS six critical health priorities have been identified for increased efforts during the 1999-2001 Biennium;

THEREBY IT IS HEREBY ORDERED AND DIRECTED:

1. The Racial and Ethnic Task Force is hereby created. The membership of the Task Force shall be no greater than 21, comprised as follows:
 - a: Six members of the Legislative Assembly with interest and expertise in the subject of racial and ethnic health. Three of these members shall be members of racial or ethnic groups.
 - b: One representative from each of the following agencies and organizations, as nominated by the executive authority of the organization or agency.
 - i) the Commission on Asian Affairs;
 - ii) the Commission on Black Affairs;
 - iii) the Commission on Hispanic Affairs;
 - iv) the Legislative Committee on Indian Services;
 - v) the Oregon Medical Association;
 - vi) the Conference of Local Health Officials;

EXECUTIVE ORDER NO. EO - 99 - 07

Page Three

- vii) the Oregon Association of Hospitals and Health Systems;
- viii) the Governor's Office.

Organizations are encouraged to nominate persons who are knowledgeable about public health issues and persons who have a specific knowledge about one or more of the six priority areas that shall constitute the focus of the Task Force during the 1999-2001 biennium.

- c: Seven additional members appointed by the Governor who are members of racial or ethnic groups.
2. The members of the Task Force shall choose two members as co-chairs. The co-chairs shall establish an agenda for the Task Force, facilitate communication among members of the Task Force, and generally provide leadership and direction for the Task Force.
 3. The following state agencies shall provide support to the Task Force:
 - a: the Oregon Health Division;
 - b: the Office of Alcohol and Drug Abuse Programs;
 - c: the Office of Medical Assistance Programs;
 - d: the Mental Health Division;
 - e: Senior and Disabled Services Division;
 - f: the Office for Oregon Health Plan Policy and Research;
 - g: the Oregon Medical Insurance Program;
 - h: the Insurance Pool Governing Board.

The directors of these state agencies, and other state agencies with authority and activities affecting the health status of racial and ethnic communities as identified by the Oregon Health Council and the Oregon Health Division, shall cooperate by providing information as needed and available, and by meeting with and reporting to the Task Force as requested.

4. The Task Force shall carry out the following activities:
 - a: review and recommend revisions to the goals, strategies, and outcome measurements of prevention and treatment programs

EXECUTIVE ORDER NO. EO - 99 - 07

Page Four

related to the racial and ethnic health issues identified in this Executive Order;

- b: review and recommend revisions to the implementation plans for programs related to the priority racial and ethnic health issues identified by this Executive Order and the accompanying budgets;
 - c: review the overall effectiveness of such programs and advise the appropriate agencies of any recommended changes including redirection of resources as indicated;
 - d: Make an annual report to the Governor detailing its findings and recommendations.
5. In carrying out these activities during the 1999-2001 biennium, the Task Force shall focus upon the following priorities:
- a: adequate access to treatment for Oregonians with physical and mental health coverage, with adequate access being defined as medically appropriate care provided when necessary by culturally competent providers in a suitable setting;
 - b: HIV/AIDS
 - c: diabetes;
 - d: asthma;
 - e: lead poisoning;
 - f: alcohol and drug abuse.
6. While other issues also disproportionately effect racial and ethnic communities, these priority areas were identified for the extreme consequences they visit upon children and families throughout racial and ethnic populations, as well as the need for concerted collaboration toward improving outcomes in the treatment of these conditions. In prioritizing these conditions, the Group assumed continued and funding levels and

EXECUTIVE ORDER NO. EO - 99 - 07

Page Five

service efforts for existing programs and activities in areas which also aim to provide increased access to services relating to racial and ethnic health. The Task Force shall establish priorities for future bienniums.

7. Meetings of the Task Force shall be coordinated and staffed by the Office for Oregon Health Plan Policy and Research in collaboration with the Oregon Health Division Office of Multicultural Health. The Task Force shall meet at least once per quarter, and may hold additional meetings as deemed necessary by the chairs.
8. This Order expires four years from the date of its issuance unless explicitly extended by the Governor.

Done at Salem, Oregon, this 10th day of March, 1999.

EXECUTIVE ORDER NO. EO - 99 - 06

DETERMINATION OF A STATE OF EMERGENCY IN LINCOLN COUNTY DUE TO THE GROUNDING OF THE NEW CARISSA

Pursuant to ORS 401.055, I find that threat to life and safety exists due to the grounding of the freighter New Carissa which occurred on March 3, 1999. The following events have occurred for which State and federal assistance have been requested:

The 440 foot New Carissa bow section ran aground at approximately 7:30 a.m. yesterday morning near the south entrance to Alsea Bay, near Waldport.

An overflight yesterday revealed an oil sheen to the mouth of Alsea Bay, as well as to the Bay to the Highway 101 bridge. Oil has also been detected as far as three miles north of the vessel.

Tarballs, ranging in size from those no larger than a dime to fist-sized, have been reported.

Assistance is needed in providing site security and traffic control to the beach areas affected by the grounding.

IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate damage caused by this emergency.
2. The Oregon Air Guard shall activate personnel and equipment needed for the provision of air traffic control at the Newport Municipal Airport.

This emergency is declared only for those areas of Lincoln County affected by this event.

This order was made by verbal proclamation at 3:10 pm on March 3, 1999 and signed this 5th day of March, 1999, at Salem, Oregon.

ENTERPRISE INFORMATION TECHNOLOGY STRATEGY

Pursuant to EO 98-05 and ORS 291.038, the Department of Administrative Services, in collaboration with the Information Resources Management Council and other state agencies, developed an Enterprise Information Technology Strategy.

WHEREAS the Enterprise Information Technology Strategy addresses the combined interests and missions of Oregon state government, including all three branches of government, higher education, community colleges, K-12 education, local and county governments and communities of interest serving a public interest mission.

WHEREAS Oregon governments can, through collaborative effort, achieve savings in the cost of collecting, using, networking, and maintaining information.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. All state agencies shall adopt the vision, principles, operating principles, strategies, and tactical imperatives of the Enterprise Information Technology Strategy. The key initiatives addressed in the plan are:
 - a: Find and fix mission critical systems that are not Year 2000 ready.
 - b: Adopt a common framework and guidelines to build information systems based on industry and international standards.
 - c: Develop and implement the operational alignment of the Department of Administrative Services and Department of Transportation data centers.
 - d: Adopt, implement and monitor technical and management information technology standards.
 - e: Establish a voice, video, and data network available for the use of all organizations within the enterprise.
 - f: Leverage existing and emerging Internet and network technologies to deliver educational coursework, transform government service delivery, and promote new and balanced economic and business development opportunities for all Oregonians.

EXECUTIVE ORDER NO. EO - 99 - 05

Page Two

- g: Develop policies, standards and pilot project opportunities in the areas of electronic communication, electronic data interchange and electronic commerce, including the public and private sector aspects of such commerce.
 - h: Foster interagency and intergovernmental data sharing through corporate data management and the development of multi-agency and multi-branch integrated databases. Privacy and confidentiality will be ensured where appropriate.
 - i: Recruit and retain qualified information technology professionals by offering competitive compensation, appropriate classifications, continuous technical education programs, and project management training.
2. The Department of Administrative Services shall employ and manage a statewide enterprise network. The network will:
- a: Consist of a scaleable electronic network that serves the agencies, institutions, partners of state government and qualified communities of interest.
 - b: Provide points-of-presence and access to all state agencies and major state facilities, intelligent transportation systems, county courthouses, public colleges and universities, public schools, educational service districts, community colleges and key public networks. The network will facilitate connection with all schools, hospitals, libraries, and local governments.
 - c: Be acquired as a service from existing and future providers of communications, computing and telecommunications systems and technologies.
 - d: The Department of Administrative Services may allow for the creation of separate research networks by institutions of higher education.
 - e: All state agencies will use the statewide enterprise network for delivery of voice, video, and data services, except that educational, public, and non-profit organizations are encouraged, but not required, to purchase network services that connect individual sites through the statewide enterprise network managed by the Department of Administrative Services.

EXECUTIVE ORDER NO. EO - 99 - 05

Page Three

3. The Department of Administrative Services, in collaboration with other state agencies, shall identify and deploy integrated database applications that serve the agencies and mission of State Government.
 - a: Selected pilot projects shall:
 - i. deliver education and training throughout the state and the enterprise;
 - ii: improve the effectiveness of government.
 - iii: demonstrate the benefits of sharing data among state agencies and their clients or partners.
 - b: At least one pilot project shall support the mission of the Community Solutions Team.
4. The Department of Administrative Services Information Resources Management Division shall develop an enterprise-wide intranet to serve the business processes of all participating agencies and organizations.
 - a: Selected pilot projects shall:
 - i: improve the effectiveness of government or education;
 - ii: demonstrate the benefits of improved communications and data sharing among state organizations and their clients or partners.
5. All organizations within the Oregon state governmental enterprise which are developing systems or applications for use on the statewide enterprise network or who propose to use state funding to support such efforts shall comply with the Department of Administrative Services Information Resource Management Division planning, implementation, and data archival policies and guidelines.

EXECUTIVE ORDER NO. EO - 99 - 05

Page Four

6. The Information Resources Management Council shall provide the leadership and necessary oversight to implement each initiative contained in the Oregon Enterprise Information Technology Strategy and shall make quarterly reports on progress to the Governor, the Joint Legislative Committee on Information Management and Technology, and the Department of Administrative Services.

Done at Salem, Oregon this 26th day of February, 1999.

EXECUTIVE ORDER NO. EO - 99 - 04

DETERMINATION OF A STATE OF EMERGENCY DUE TO THE GROUNDING OF THE NEW CARISSA

Pursuant to ORS 401.055, I find that threat to life and safety exists due to the grounding of the freighter New Carissa and subsequent oil spill which occurred in Coos County on February 4, 1999. The following events have occurred for which State and federal assistance have been requested:

Coos County law enforcement services have been expended and need assistance in providing site security for the grounding area and affected beaches with oil on them.

Assistance is needed in providing site security to the beach areas affected by the grounding and oil spill on a 24 hr basis.

IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess alleviate, or mitigate damage caused by this emergency.
2. The Oregon National Guard in coordination with Oregon Emergency Management shall provide essential assistance that is deemed necessary to support this effort.
3. The Oregon Air Guard shall activate personnel and equipment needed for the provision of air traffic control at the North Bend Airport in Coos County, Oregon.

This emergency is declared only for those areas of Coos County affected by events which occurred from February 4 to February 17, 1999.

This order was made by verbal proclamation at 1210 hours on the 17th day of February, 1999, and signed this 19th day of February, 1999, at Salem, Oregon.

EXECUTIVE ORDER NO. EO 99 - 03

**DETERMINATION OF A STATE OF EMERGENCY IN TILLAMOOK COUNTY
DUE TO LANDSLIDE ACTIVITY**

Pursuant to ORS 401.055, I find that severe weather in Tillamook County has caused a natural disaster which has severely damaged a major portion of a county roadway. Due to heavy precipitation, a landslide occurred on January 29, 1999, which has compromised public safety due to a massive failure and collapse on the Sandlake Road. The slide is continuing. Immediate repair and reconstruction of this roadway is vital to the security, well-being and health of the citizens in Tillamook County.

IT IS HEREBY ORDERED AND DIRECTED:

The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect recovery from this emergency.

This declaration is specifically limited to the affected area in Tillamook County.

Done at Salem, Oregon, this 3rd day of February, 1999.

EXECUTIVE ORDER NO. EO 99 - 02

JUVENILE JUSTICE AND DELINQUENCY PREVENTION ACT

IT IS HEREBY ORDERED AND DIRECTED:

1. Executive Order No. EO 94-04 is rescinded.
2. The Oregon Criminal Justice Commission shall be responsible for administration of the Juvenile Justice and Delinquency Prevention Act.
3. A statewide advisory group (SAG) for Juvenile Justice and Delinquency Prevention Act (JJDP A) shall be appointed by the Governor. The membership of the SAG will be in compliance with requirements of the JJDP A. Members shall be appointed from the Juvenile Crime Prevention Advisory Committee (JCPAC) and others.

The SAG shall consist of not less than 15 and not more than 33 persons appointed by the Governor. Those members shall be persons who have training, experience, or special knowledge concerning the prevention and treatment of juvenile delinquency or the administration of juvenile justice. Members will be broadly representative of geographic, economic, and ethnic minority interests in Oregon, and will meet the membership requirements specified in Title II, Part B, Section 223 (a) (3) of the Juvenile Justice and Delinquency Prevention Act, as amended (Public Law 93-415), 42 U.S.C. Section 5601 et seq.

The chair of the SAG shall be appointed by the JCPAC chair, consistent with requirements of the JJDP A.

4. The SAG shall meet at the call of the Chair. A majority of the members of the SAG constitute a quorum to do business.
5. The SAG shall:
 - A. Develop and recommend to the JCPAC a juvenile justice plan and recommendations to distribute funds made available under the JJDP A.

EXECUTIVE ORDER NO. EO 99 - 02

Page Two

The plan and funding recommendations shall be consistent, to the greatest extent possible, with both the purposes of the JCPAC under EO 98-09 and the requirements of the JJDPDA;

- B. Submit to the JCPAC, at least annually, recommendations related to its functions, including state compliance with the requirements of the Act;
 - C. Review and comment on Juvenile Justice and Delinquency Prevention Act applications submitted to the JCPAC and review progress and outcomes of projects funded;
 - D. Contact and seek regular input from juveniles currently under the jurisdiction of the juvenile justice system;
 - E. Provide for the active consultation with and participation of general local government in the development of a state plan that adequately takes into account the needs and requests of local governments; and
 - F. Complete other duties as assigned by the JCPAC.
 - G. The JJAC shall continue to serve as SAG for the purposes of JJPDA until such time as the Governor appoints members to the SAG established by this Order. The Commission on Children and Families shall continue to administer funding authorized for the JJAC on behalf of the SAG established by this Order as outlined in the transition plan submitted to the Governor.
 - H. Executive Order No. EO 98 - 09 is hereby amended such that JCPAC shall no longer serve as the SAG for purposes of the JJDPDA.
6. Subject to laws governing reimbursement of state officers and employees, members of the SAG shall be reimbursed for their actual and necessary travel

EXECUTIVE ORDER NO. EO 99 - 02

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 99-01

THE OREGON PLAN FOR SALMON AND WATERSHEDS

The purpose of the Oregon Plan for Salmon and Watersheds (the "Oregon Plan") as stated in the Plan and reaffirmed in this Executive Order is to restore Oregon's wild salmon and trout populations and fisheries to sustainable and productive levels that will provide substantial environmental, cultural, and economic benefits and to improve water quality. The Oregon Plan is a long-term, ongoing effort that began as a focused set of actions by state, local, tribal and private organizations and individuals in October of 1995. The Oregon Plan first addressed coho salmon on the Oregon Coast, was then broadened to include steelhead trout on the coast and in the Lower Columbia River, and is now expanding to all at-risk wild salmonids throughout the state. The Oregon Plan addresses all factors for decline of these species, including watershed conditions and fisheries, to the extent those factors can be affected by the state. The Oregon Plan was endorsed and funded by the Oregon Legislature in 1997 through Oregon Senate Bill 924 (1997 Or. Laws, ch. 7) and House Bill 3700 (1997 Or. Laws, ch. 8). The Oregon Plan is described in two principal documents: "The Oregon Plan," dated March 1997, and "The Oregon Plan for Salmon and Watersheds, Supplement I -- Steelhead," dated January 1998. As used in this Executive Order, the Oregon Plan also incorporates the Healthy Streams Partnership (Oregon Senate Bill 1010, 1993 Or. Laws, ch. 263).

The Oregon Plan is a cooperative effort of state, local, federal, tribal and private organizations and individuals. Although the Oregon Plan contains a strong foundation of protective regulations -- continuing existing regulatory programs and speeding the implementation of others -- an essential principle of the Plan is the need to move beyond prohibitions and to encourage efforts to improve conditions for salmon through non-regulatory means. Many of the most significant contributions to the Oregon Plan are private and quasi-governmental efforts to protect and restore salmon on working landscapes, including efforts by watershed councils.

Salmon and trout restoration requires action and sacrifice across the entire economic and geographic spectrum of Oregon. The commercial and sport fishing industries in Oregon have been heavily affected by complete or partial closures of fisheries. The forest industry operates under the Oregon Forest Practices Act, and has contributed substantially to salmon recovery through habitat restoration projects on private lands and by funding a large part of the state recovery efforts. The agriculture and mining industries are also taking actions that will protect and restore salmon and trout habitat and improve water quality (including financial support of restoration efforts by the mining industry). Urban areas are developing water conservation programs, spending funds for wastewater

treatment improvements to reduce point source pollution, reducing non-point source pollution and reducing activities that degrade riparian areas. All citizens of Oregon share responsibility for declining populations of wild salmon and trout, and it is important that there be both a broad commitment to reversing these historic trends and a sense that the burdens of restoration are being shared by all of society.

It is also important that there be independent scientific oversight of the Oregon Plan. This oversight is being provided by the Independent Multidisciplinary Science Team (IMST), established under Oregon Senate Bill 924 (1997 Or. Laws, ch. 7). Additional legislative oversight for the Oregon Plan is being provided by the Joint Legislative Committee on Salmon and Stream Enhancement (the "Joint Committee").

Under the federal Endangered Species Act (ESA) the U.S. Fish & Wildlife Service (F&WS) and the National Marine Fisheries Service (NMFS) are responsible for identifying species that are threatened or endangered, and for developing programs to conserve and recover those species. F&WS and NMFS have now listed salmonids under the ESA on the entire Oregon Coast, the lower Columbia River (including most of the Portland metropolitan area), the Klamath River basin, and in the upper Columbia and Snake River basins. More listings are expected within the next year.

To date, the F&WS and NMFS generally have not had the resources to develop and implement effective recovery plans for fisheries. In addition, in many areas a large proportion of the habitat that listed salmonids depend on is located on private lands, where the regulatory tools under the ESA are relatively ill-defined and indirect. Finally, federal agencies alone, even if they take an active regulatory approach to recovery, will not restore listed salmonids. The federal ESA may work to prohibit certain actions, but there is simply too much habitat on private lands for restoration to succeed without pro-active involvement and incentives for individuals, groups, and local governments to take affirmative actions to restore habitat on working landscapes.

In April, 1997 the State of Oregon and NMFS entered into a Memorandum of Agreement (MOA) under which the State agreed to continue existing measures under the March 1997 Oregon Plan and to take certain additional actions to protect and

restore coho salmon on the Oregon Coast. On May 6, 1997, NMFS determined that the Oregon Coast Evolutionarily Significant Unit (ESU) of coho salmon did not warrant listing as a threatened or endangered species under the ESA.

On June 2, 1998, the U.S. District Court for Oregon ordered NMFS to reconsider its

decision without taking into account any parts of the Oregon Plan or MOA that are not "current enforceable measures." The U.S. District Court for Oregon also held that the MOA was speculative, due to the fact that it provided for termination by either party on thirty days notice, and that therefore the MOA could not be considered by NMFS in its listing decision.

Under court order, NMFS reconsidered its decision without taking into account the application in the future of the harvest and hatchery measures contained in the Oregon Plan, or the habitat improvement programs being undertaken under the Oregon Plan, or the commitments made by the State of Oregon in the MOA for improvement of applicable habitat measures. Accordingly, NMFS listed Oregon Coast coho as threatened under the ESA on or about October 2, 1998.

The MOA provided for the State of Oregon to take actions necessary to ensure that Oregon Coast coho did not warrant listing as a threatened or endangered species under the federal ESA. Now that Oregon Coast coho are listed as a threatened species as a result of the U.S. District Court's order, the central purpose of the MOA has been eliminated. Due to the uncertainties created by the District Court's decision and the increasing extent of salmonids listed or proposed for listing under the federal ESA, it is important that the status of the State of Oregon's substantive commitments under the MOA and the purpose of the Oregon Plan be clarified.

Through this Executive Order, the State of Oregon reaffirms its intent to play the leading role in protecting and restoring Oregon Coast coho and other salmonids through the implementation of the Oregon Plan. This Executive Order provides the framework and direction for state agencies to implement (to the extent of their authorities) the Oregon Plan in a timely and effective manner. This Executive Order also provides a framework for extending the state's efforts beyond a focus on Oregon Coast coho, to watersheds and fisheries statewide. Consistent with the principle of adaptive management, this Order applies the experience gained to date in implementing the Oregon Plan to provide additional detailed direction to state agencies. Finally, this Executive Order establishes a public involvement process to prioritize continuing efforts under the Oregon Plan.

NOW THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

(1) Overall Direction

(a) Agencies of the State of Oregon will, consistent with their authorities, fully implement the state agency efforts described in the Oregon Plan and in this Executive Order.

(b) The overall objective for state agencies under the Oregon Plan and this Executive Order is to protect and restore salmonids and to improve water quality.

(c) The Governor will, in cooperation with the Joint Committee, IMST, affected state agencies, watershed councils, and other affected local entities and persons develop and implement a process to set biological and habitat goals and objectives to protect and restore salmonids on a basin or regional basis as soon as practicable. Once these goals and objectives are established, they will be used by state agencies to evaluate their regulatory and non-regulatory programs and measures relating to the protection and restoration of salmonids. Through this on-going evaluation, state agencies will determine any changes to their programs or measures that may be necessary to meet the biological and habitat goals and objectives. In the interim, the following objectives in subsections (d) and (e) shall apply to agencies' implementation of the Oregon Plan and this Executive Order.

(d) Actions that state agencies take, fund and/or authorize that are primarily for a purpose other than restoration of salmonids or the habitat they depend upon will, considering the anticipated duration and geographic scope of the actions:

(A) to the maximum extent practicable minimize and mitigate adverse effects of the actions on salmonids or the habitat they depend on; and

(B) not appreciably reduce the likelihood of the survival and recovery of salmonids in the wild.

(e) State agencies will take, fund and/or authorize actions that are primarily for the purpose of restoring salmonids or the habitat they depend upon, including actions implementing the Oregon Plan, with the goal of producing a conservation benefit that (if taken together with comparable and related actions by all persons and entities within the range of the species) is likely to result in sustainable population levels of salmonids in the foreseeable future, and in population levels of salmonids that provide substantial environmental, cultural and economic benefits to Oregonians in the long term.

(f) With the broadening of the Oregon Plan, prioritizing all agency actions according to coho core areas is no longer appropriate. Each state agency participating in the Oregon Plan, in consultation with ODFW and other partners involved in the implementation of the Plan and through a public involvement process, will modify their existing work programs in the Oregon Plan to prioritize agency measures to protect and restore salmonids in a timely and effective manner. The work programs will continue to

identify key specific outcomes, refine and improve designations of priority areas, and establish completion dates. These modifications will be submitted to the Governor, the Joint Committee, and to the appropriate boards and commissions as soon as possible, but in no event later than June 1, 1999. Progress reports on action plans will be submitted to the Governor, the Joint Committee, and to the appropriate boards and commissions on an annual basis. In prioritizing their efforts, state agencies shall consider how to maximize conservation benefits for salmonids and the habitat they depend on within limited resources and whether their actions are likely to increase populations of salmonids in the foreseeable future.

(g) State agencies will work cooperatively with landowners, local entities and other persons taking actions to protect or restore salmonids.

(h) As the Oregon Plan grows in geographic scope and in intensity of activity, there is a growing need to streamline and prioritize state agency activity at the regional level. One proposal has been to organize state natural resource agency field operations along hydrologic units. Therefore, state agencies will consider this proposal and, through the collective efforts of state agency directors, develop an organization plan that focuses state agency field effort on the activities and areas of highest priority under the Oregon Plan.

(i) State agencies will continue to encourage and work with agencies of the U.S. government to implement the federal measures described in the Oregon Plan. In addition, the state agencies will work with the federal government to develop additional means of protecting and restoring salmonids. Where appropriate, state agencies will request that federal agencies obtain incidental take permits under Section 7 of the federal ESA for state actions that are funded or authorized by a federal agency.

(j) State agencies will help support efforts to evaluate watershed conditions, and to develop specific strategic plans to provide for flood management, water quality improvement, and salmonid restoration in basins around the state, including the Willamette basin through the Willamette Restoration Initiative.

(k) The IMST will continue to provide oversight to ensure the use of the best scientific information available as the basis for implementation of and for adaptive changes to the Oregon Plan. State agencies will ensure that the IMST receives data and other information reasonably required for its functions in a timely manner. The Governor's Natural Resources Office (GNRO) has requested that the IMST's initial priority be review of the freshwater habitat needs of coho and the relationship between population levels, escapement levels, and habitat characteristics. The GNRO also will continue to request that the IMST annually review monitoring results and identify where the Oregon Plan

warrants change for scientific or technical reasons and make recommendations to the appropriate agency on those adjustments that appear necessary. Agencies will report their responses to any recommendations by the IMST to the Governor and to the Joint Committee. Any other changes identified by the IMST as necessary to achieve properly functioning riparian and aquatic habitat conditions required to protect and restore salmonids will be forwarded to the appropriate governmental entity for its consideration of the adoption of new, changed, or supplemental measures as rapidly as possible while providing for public involvement. Each state agency, by June 1, 1999, will ratify a monitoring team charter through an interagency memorandum. A draft of the charter is contained in the 1998 Oregon Plan Annual Report.

(l) Monitoring is a key element of the Oregon Plan. Each state agency will actively support the monitoring strategy described in the Oregon Plan. Each affected agency will participate on the monitoring team to coordinate activities and integrate analyses. Each agency will implement an appropriate monitoring program to assess the effectiveness of their programs and measures in meeting the objectives set forth in the Oregon Plan on an annual basis. In addition, agencies with regulatory programs that are included in the Oregon Plan will determine levels of compliance with regulatory standards and identify and act on opportunities to improve compliance levels.

(m) If information gathered regarding the effectiveness of measures in the Oregon Plan shows that existing strategies within state control are not achieving expected improvements and objectives, the agency(ies) responsible for those measures will seek appropriate changes in their regulations, policies, programs, measures and other areas of the Oregon Plan, as required to protect and restore coho and other salmonids. Such modification or supplementation will be done as rapidly as possible, consistent with public involvement.

(n) Agencies are using geographically-referenced data in their efforts under the Oregon Plan, and will be using Geographic Information Systems (GIS) in the analysis of these data. In doing so, the State GIS Plan, developed by the Oregon Geographic Information Council (OGIC) (see Executive Order 96-40) will be followed, with specific adherence to the Plan guidance on data documentation, coordination and data sharing. The agency with primary responsibility for gathering and updating the specific data will be responsible for meeting the requirements of the Plan, and to ensure coordination with OGIC, the State Service Center for GIS and other cooperating agencies. In addition, state agencies will cooperate with the Governor's Watershed Enhancement Board (GWEB), Soil and Water Conservation Districts (SWCDs), local watershed councils, landowners and others in making these essential data available.

(o) Geographically-based strategies to assess and achieve habitat needs and adequate escapement levels will be used, and the state agencies will continue with the development of standardized watershed assessment protocols, including a cumulative effects assessment. State agencies will also continue with the development of habitat restoration guides to evaluate and direct habitat restoration efforts.

(2) Continuation and Expansion of Existing Efforts. Without limiting the generality of section (1)(a) of this Executive Order, the following subsections of this Executive Order describe some of the many efforts in the Oregon Plan where the initial phase of work has been completed, and where efforts will be continued.

(a) The Oregon Fish & Wildlife Commission (OFWC), the Oregon Department of Fish & Wildlife (ODFW), and the Pacific Fishery Management Council (PFMC) are managing ocean and terminal fisheries according to the measures set forth in the Oregon Plan (ODFW I-A.1 and III-A.1). These measures set a maximum mortality rate (resulting from other fisheries) for any of four disaggregated stocks of coho of fifteen percent (15%) under poor ocean conditions. In 1997, the mortality rate from harvest is estimated to have been between nine and eleven percent (9-11%). ODFW and OFWC will continue these measures in state waters, and will actively support

continued implementation of the ocean harvest measures by the PFMC (Amendment 13 to the Council's salmon management plan) until and unless a different management regime agreeable to NMFS is adopted.

(b) The OFWC and ODFW will ensure that the fish hatchery measures set forth in the Oregon Plan are continued by the OFWC and ODFW. ODFW is marking all hatchery coho on the Oregon Coast. This marking will allow increased certainty in estimating hatchery stray rates beginning in 1999. Available data on hatchery stray rates for coho and steelhead are being provided to NMFS on an annual basis. The number of hatchery coho released is estimated to have been 1.7 million in 1998 -- substantially below the level called for in the Oregon Plan. This number will be reduced to 1.2 million in 1999. In addition, ODFW has, and will continue to provide annual reports regarding: (i) the number of juvenile hatchery coho that are released by brood year, locations and dates of release, life stage, and broodstock origin; (ii) the number of adult coho taken for broodstock for each hatchery, the location and date of collection, and the origin (hatchery or natural); (iii) the number of hatchery coho estimated to have spawned in natural habitat by basin; (iv) the estimated percentage of hatchery coho in the total natural spawning population; and (v) the mortality of naturally-spawning coho resulting from each fishery. NMFS may provide comments about hatchery programs affecting coho to ODFW, with any concerns to

be resolved between NMFS and ODFW.

(c) In addition to recent modifications to hatchery practices and programs, a new vision is needed for how Oregon will utilize hatcheries in the best and most effective manner. Therefore, the ODFW and the OFWC shall engage in a process to create a strategic plan for fish hatcheries in Oregon over the next decade (including state and federally-funded hatcheries, private hatcheries, and the STEP program). The essential elements of this process are as follows: (i) Impartial analysis -- conduct an impartial analysis of the scientific bases, and the social and economic effects of Oregon hatchery programs utilizing existing analyses and review where feasible, but conducting new analyses if necessary; (ii) Review the Wild Fish Management Policy (WFMP) -- because the future plan for hatcheries in Oregon is dependent on implementation of the WFMP, ODFW shall conduct a science and stakeholder review to determine if this significant policy should be revised and shall make any revision by July 2000; (iii) Frame alternative strategies -- convene a group of stockholders to frame alternative strategies, including outcomes and descriptions, of how hatcheries will be used in Oregon over the next decade (these strategies will address the use of hatcheries for wild fish population recovery including supplementation, research and monitoring, public education, and sport and commercial fishing opportunities); (iv) Public review and selection of a strategy -- the OFWC shall, after public review and comment, adopt a strategic plan to guide development of future hatchery programs, incorporating the strategy developed and adopted in accordance with subpart (iii) of this paragraph.

(d) Criteria and guidelines directing the design of projects that may affect fish passage have been established in a Memorandum of Understanding (MOU) between the Oregon Department of Transportation (ODOT), ODFW, the Oregon Department of Forestry (ODF), the Oregon Department of Agriculture (ODA), the Division of State Lands (DSL) and the Federal Highway Administration. These guidelines apply to the design, construction and consultations of projects affecting fish passage. Under the MOU, projects requiring regulatory approvals that follow these criteria and guidelines are expedited. Oregon agencies will continue to provide technical assistance to ensure that the criteria and guidelines are applied appropriately in restoration projects, as well as any other projects that may affect fish passage through road crossings and similar structures. ODFW will work with state agencies, local governments, and watershed councils to ensure that Oregon's standards for fish passage set forth in Exhibit A to the MOU are understood and are implemented.

(e) Fish presence, stream habitat, road and culvert surveys have been conducted for roads within ODOT jurisdiction and county roads in coastal basins, the Lower Columbia basin, the Willamette basin, and the Grande Ronde/Imnaha basins. Among the results of

these surveys is the finding that culvert barriers to fish passage affect a substantial quantity of salmonid habitat. For example, surveys of county and state highways in western Oregon found over 1,200 culverts that are barriers to passage. As a result, ODOT is placing additional priority on restoring fish access. For 1998, ODOT repaired or replaced 35 culverts restoring access to 101 miles of salmonid habitat. For 1999, the Oregon Transportation Commission will be asked to fund approximately \$4.0 million for culvert modification. ODOT and the Commission will continue to examine means to speed restoration of fish passage and to coordinate priorities with ODFW.

(f) Draft watershed assessment protocols have been developed and are being field tested. Beginning in 1999, SWCDs, watershed councils and others will be able to use the protocols as the basis for action plans to identify and prioritize opportunities to protect and restore salmonids. Watershed action plans have already been completed in a number of basins including the Rogue, Coos, Coquille and Grande Ronde. State agencies will work to support these watershed assessments and plans to the maximum extent practicable. Where watershed action plans have been developed under the protocols, GWEB will ensure that projects funded through the Watershed Improvement Grant Fund are consistent with watershed action plans, and other state agencies will work with SWCDs and watershed councils to ensure that activities they authorize, fund or undertake are consistent with watershed action plans to the maximum extent practicable.

(g) The State of Oregon has developed interim aquatic habitat restoration and enhancement guidelines for 1998. State agencies involved with restoration activities (ODFW, ODF, DSL, ODA, DEQ, and GWEB) will continue to develop and refine the interim guidelines for final publication in April 1999. The guidelines will be applied in restoration activities funded or authorized by state agencies. The purpose of the guidelines will be to define aquatic restoration and to identify and encourage aquatic habitat restoration techniques to restore salmonids.

(h) ODA and ODF have each entered into a Memorandum of Understanding with the Oregon Department of Environmental Quality relating to the development of Total Maximum Daily Loads (TMDLs) and Water Quality Management Area Plans (WQMAPs). ODA will adopt and implement WQMAPs (through the Healthy Streams Partnership) and ODF will review the adequacy of forest practices rules to meet water quality standards. ODF and ODA will evaluate the effectiveness of these measures in achieving water quality standards on a regular basis and implement any changes required to meet the standards.

(i) Agencies are implementing a coordinated monitoring program, as described in the Oregon Plan. This program includes technical support and standardized protocols for watershed councils, stream habitat surveys, forest practice effectiveness monitoring, water

withdrawal monitoring, ambient water quality monitoring, and biotic index studies, as well as fish presence surveys and salmonid abundance and survival monitoring in selected subbasins. State agencies are also working to coordinate monitoring efforts by state, federal, and local entities, including watershed councils. State agencies will work actively to ensure that the monitoring measures in the Oregon Plan are continued.

(j) GWEB has put into place new processes for identifying and coordinating the delivery of financial and technical assistance to individuals, agencies, watershed councils and soil and water conservation districts as they implement watershed restoration projects to improve water quality and restore aquatic resources. Over \$25 million has been distributed for watershed restoration projects in the last ten years. During the present (1997-99 biennium) GWEB has awarded over \$12 million dollars in state and federal funds for technical assistance and watershed restoration activities to implement the Oregon Plan. GWEB and state agencies will continue to seek financial resources to be allocated by GWEB for watershed restoration activities at the local and statewide levels.

(k) State agencies will continue to encourage, support and work to provide incentives for local, tribal, and private efforts to implement the Oregon Plan. In addition, state agencies will continue to provide financial assistance to local entities for projects to protect and restore salmonids to the extent consistent with their budgetary and legal authorities, and consistent with their work programs in the Oregon Plan. To the maximum extent practicable, state agencies will also provide technical assistance and planning tools to provide local conservation groups to assist in and target watershed restoration efforts. These efforts (during 1996 and 1997) are reported in "The Oregon Plan for Salmon and Watersheds: Watershed Restoration Inventory, 1998." Just a few of the important efforts that have been completed include:

(A) Eighty-two watershed councils have joined with forty-five Soil and Water Conservation Districts as well as private and public landowners to implement on-the-ground projects to protect and restore salmonids. During 1996 and 1997, a reported \$27.4 million was spent on 1,234 watershed restoration projects on non-federal lands. Both the amount spent and the number of projects represent significant increases (of over 300 percent) over prior years. In 1996-97, watershed councils, SWCDs and other organizations and individuals completed: (i) 138 stream fencing projects, involving at least 301 miles of streambank; (ii) 196 riparian area planting projects, involving at least 111 miles of streams; and (iii) 458 instream habitat improvement projects.

(B) Private and state forest landowners are implementing key efforts under the Oregon Plan, including the road risk and remediation program (ODF-1 and 2). Under this effort in 1996 and 1997, close to 4,000 miles of roads have been surveyed to identify

risks that the roads may pose to salmonid habitat. As the risks are identified, they are then prioritized for remediation following an established protocol. Already, 52 miles of forest roads have been closed, 843 miles of road repair and reconstruction projects to protect salmonid habitat have been completed, and an additional 14 miles of roads have been decommissioned or relocated. In addition, 530 culverts have been replaced, upgraded or installed for fish passage purposes, improving access to a reported 146 stream miles.

(C) Organizations working in Tillamook County have developed the Tillamook County Performance Partnership. The Partnership is implementing the Tillamook Bay National Estuary Program by addressing water quality, fisheries, floodplain management and economic development in the county. Among the actions that the Partnership has already accomplished are: (i) the closure of seven miles of degraded forest roads and the rehabilitation of 469 miles of roads to meet current standards, at a cost of \$18 million; (ii) the fencing of 53 miles of streambank, and the construction of three cattle bridges and 100 alternative cattle watering sites, at a cost of \$214,000; and (iii) the completion of 24 instream restoration projects and 34 barbs protecting 4,200 feet of streambank, at a cost of \$1.3 million dollars.

(D) The Confederated Tribes of the Grande Ronde Community of Oregon have completed a forest management plan that establishes standards for the protection of aquatic resources that are comparable to those found in the Aquatic Conservation Strategy of the Northwest Forest Plan.

(E) A combination of funding from the Oregon Wildlife Heritage Foundation and the National Fish and Wildlife Heritage Foundation (private, non-profit organizations) is providing support for seven biologists to design restoration projects. These projects are prioritized based on stream surveys, and are carried out with the voluntary participation and support of landowners. A ten-year monitoring plan has been funded and implemented to determine project effectiveness.

(F) The Oregon Cattlemen's Association has implemented its WEST Program that is designed to help landowners better understand their watersheds and stream functions through assessments and monitoring. The WEST Program brings landowners together along stream reaches, and offers a series of workshops, conducted on a site specific basis, free of charge. The workshops include riparian ecology, setting goals and objectives, Proper Functioning Condition (PFC), data collection and monitoring. Over 25 workshops have been held, with attendance ranging from 5 to 30 landowners per workshop. The WEST Program is sponsored by the Oregon Cattlemen's Association, DEQ, Oregon State University, and GWEB.

(G) Within the Tillamook State Forest road network 1,902 culverts have been replaced or added to improve road drainage and to disconnect storm water runoff from roads reducing stream sediment impacts. Additionally, some of these culverts also improved fish passage at stream crossings. In this process, ODF has also replaced six culverts with bridges improving fish passage to approximately four miles of stream. The Tillamook State Forest in conjunction with many partners, such as the Association of Northwest Steelheaders, GWEB, Simpson Timber Company, Tillamook County, the FishAmerica Foundation, Hardrock Construction Company, the Oregon Wildlife Heritage Foundation, the F&WS, the Oregon Youth Conservation Corps, Columbia Helicopters and Terra Helicopters, has also recently completed instream placement of over 400 rootwads, trees and boulders at a cost of \$300,000 for habitat enhancement.

(3) Key Agency Efforts. Continuation and completion of the following state agency efforts is critical to the success of the Oregon Plan. State agencies will make continuation or completion (as appropriate) of the following efforts a high priority.

(a) The State of Oregon and the U.S. Department of Agriculture have entered into a Conservation Reserve Enhancement Program (CREP). This cost-share program, one of the first of its kind, will be used to reduce the impacts of agricultural practices through water quality and habitat improvement. The objectives of the CREP are to: (i) provide incentives for farmers and ranchers to establish riparian buffers; (ii) protect and restore at least 4,000 miles of stream habitat by providing up to 95,000 acres of riparian buffers; (iii) restore up to 5,000 acres of wetlands that will benefit salmonids; and (iv) provide a mechanism for farmers and ranchers to comply with Oregon's Senate Bill 1010 (1993 Or. Laws, ch. 263).

(b) ODF will work with non-industrial forest landowners to administer the Stewardship Incentive Program and the Forest Resources Trust programs to protect and restore riparian and wetland areas that benefit salmonids.

(c) The Oregon Board of Forestry will determine, with the assistance of an advisory committee, to what extent changes to forest practices are needed to meet state water quality standards and to protect and restore salmonids. A substantial body of information regarding the effectiveness of current practices is being developed. This information includes: (i) the IMST report regarding the role of forest practices and forest habitat in protecting and restoring salmonids; and (ii) a series of monitoring projects that include the Storms of 1996 study, a riparian areas study, a stream temperature study, and a road drainage study. Using this information, as well as other available scientific information including scientific information from NMFS, the advisory committee will make

recommendations to the Board at both site and watershed scales on threats to salmonid habitat relating to sediment, water temperature, freshwater habitat needs, roads and fish passage. Based on the advisory committee's recommendations and other scientific information, the Board will make every effort to make its determinations by June 1999. The Board may determine that the most effective means of achieving any necessary changes to forest practices is through regulatory changes, statutory changes or through other programs including programs to create incentives for forest landowners. In the event that the Board determines that legislative changes are necessary to carry out its determinations, the Board will transmit any recommendations for such changes to the Governor and to the Joint Committee at the earliest possible date.

(d) Consistent with administrative rule, and statutory and constitutional mandates for the management of state forests, ODF State Forest management plans will include an aquatic conservation strategy that has a high likelihood of protecting and restoring properly functioning aquatic habitat for salmonids on state forest lands.

(e) ODF will present to NMFS a Habitat Conservation Plan (HCP) under Section 10 of the federal ESA that includes the Clatsop and Tillamook State Forests. ODF has already completed scientific review and has public review underway for this draft HCP. The scientific and public review comments will be considered by ODF in completing the draft HCP. The draft HCP will be presented to NMFS by June 1999. An HCP for the Elliott State Forest was approved by the U.S. Fish & Wildlife Service in 1995. In October of 1997, ODF and DSL forwarded the Elliott State Forest HCP to NMFS with the request that it be reviewed to determine whether it has a high likelihood of protecting and restoring properly functioning aquatic habitat conditions on state forest lands necessary to protect and restore salmonids. Based on discussions surrounding the NMFS review, ODF and DSL will determine what revisions, if any, are required to the Elliott HCP and/or Forest Management Plan to ensure a high likelihood of protecting and restoring properly functioning aquatic habitat for salmonids.

(f) Before the OFWC adopts and implements fishery regulations that may result in taking of coho, ODFW will provide NMFS with all available scientific information and analyses pertinent to the proposed regulation where the harvest measures are not under the jurisdiction of the PFMC, including results of the Oregon Plan monitoring and evaluation program. This information, together with the proposed regulation and supporting analysis, will be provided at least two weeks prior to the OFWC's action, to give NMFS time to review and comment on the proposed regulations.

(g) ODFW will evaluate the effects of predation on salmonids, and will work with affected federal agencies to determine whether changes to programs and law relating to

predation are warranted in order to protect and restore salmonids.

(h) Under Oregon Senate Bill 1010 (1993 Or. Laws, ch. 263), ODA will adopt Agricultural Water Quality Management Area Plans (AWQMAPs) for Tier I and Tier II watersheds by the end of 2002. The AWQMAPs will be designed and implemented to meet load allocations for agriculture needed to achieve state water quality standards. In addition, ODA will work with ODFW, DEQ, GWEB, SWCDs, federal agencies and watershed councils to determine to what extent additional measures related to achieving properly functioning riparian and aquatic habitat on agricultural lands are needed to protect and restore salmonids, giving attention first to priority areas identified in the Oregon Plan. In the event ODA is unable to reach a consensus regarding such measures, ODA will ask the IMST to review areas of substantive scientific disagreement and to make recommendations to ODA regarding how they should be resolved. In the event that legislative changes are needed to implement such measures, ODA will transmit any recommendations for such changes to the Governor and to the Joint Committee at the earliest possible date. In addition, any measures identified as needed by ODA will be implemented at the earliest practicable time.

(i) ODFW will expedite its applications for instream water rights and OWRD will process such applications promptly where flow deficits are identified as adversely affecting salmonids, and where such rights are not already in place. The Oregon Water Resources Department (OWRD) and the Oregon Water Resources Commission (OWRC) will also seek to facilitate flow restoration targeted to streams identified by OWRD and ODFW as posing the most critical low-flow barriers to salmonids. In addition, where necessary, OWRD will continue to work with the Oregon State Police to provide enforcement of water use. Where illegal water uses are identified, OWRD will ensure outcomes consistent with maintenance and restoration of flows.

(j) The Oregon Environmental Quality Commission (EQC) and DEQ will evaluate and will make every effort to utilize their authorities to continue to provide additional protection to priority areas (as determined under section 1(f) of this Executive Order), including in-stream flow protection under state law, and antidegradation policy under the federal Clean Water Act (including Outstanding Resource Waters designations and high quality waters designations).

(k) DSL has proposed to adopt changes to its Essential Salmonid Habitat rules that will provide additional protection for spawning and rearing areas of anadromous salmonids. In addition, ODFW and DSL will consult with the OWRC to determine where it is necessary to administratively close priority areas (including work under General Authorizations) to fill and removal activities in order to protect salmonids. DSL, ODFW,

ODF and ODA also will work together to identify means of regulating the removal of organic material (such as large woody debris) from streams where such removal would adversely affect salmonids and would not be contrary to other agency mandates.

(l) DSL will seek the advice of the IMST regarding whether gravel removal affects gravel and/or sediment budgets in a manner that adversely affects salmonids.

(m) The Department of Land Conservation and Development (DLCD), and the Land Conservation and Development Commission (LCDC) will evaluate and, to the extent feasible, speed implementation of existing Goal 5 requirements for riparian corridors.

(n) DLCD, DEQ, ODF, ODA, ODFW, and DSL and their respective boards and commissions will evaluate and implement programs to protect and restore riparian vegetation for the purposes of achieving statewide water quality standards and protecting and restoring aquatic habitat for salmonids.

(o) DLCD, with the assistance of DSL and ODFW, and in consultation with coastal cities and counties, shall review the requirements of Statewide Planning Goal 16 as they pertain to estuarine resources important to the restoration of salmonids, and shall, report its findings to LCDC for its consideration.

(p) The Oregon State Police will work to facilitate the existing cooperative relationship with the NMFS Office of Law Enforcement, as well as to maintain cooperation with other enforcement entities, in order to enhance law enforcement, public awareness and voluntary compliance related to harvest, habitat and other issues addressed in the Oregon Plan.

(q) The Oregon Parks and Recreation Department will continue to work to provide information and education to the public on salmon and steelhead needs through park programs and interpretive aids.

(r) The Oregon Marine Board will work to ensure fish friendly boating and to develop boating facilities that protect salmonids.

(s) State natural resource agencies will continue, to the extent feasible, to support watershed councils by providing technical assistance to develop watershed assessments, restoration plans and to develop watershed priorities to benefit salmonids. In addition, state natural resource agencies will work on a larger watershed scale to develop basin-wide restoration priorities.

(4) Future Modifications; Public Involvement for the Oregon Plan Generally. The GNRO will solicit public comments and input from participants in the Oregon Plan regarding whether there are refinements or changes to the Plan and/or the organizational framework for implementing the Plan that are necessary or desirable based on the experience gained over the past three years, or resulting from the widespread listings and proposed listings of salmon and trout under the federal ESA. Based on this public involvement, the GNRO will provide a report and recommendations to the Governor and the Joint Committee regarding whether modifications are necessary to the Oregon Plan in order to protect and restore coho and other salmonids.

(5) Definitions. For purposes of this Executive Order:

(a) The "Oregon Plan" means the Oregon Coastal Salmon Recovery Initiative, dated March 1997, and the Steelhead Supplement, dated January 1998. "Oregon Plan," as used in this Order, is intended to be consistent with the definition of the Oregon Coastal Salmon Recovery Initiative in Oregon Senate Bill 924 (1997 Or. Laws, ch. 7), and to include the Healthy Streams Partnership (1993 Or. Laws, ch. 263).

(b) "Protect" has the meaning given in section (1)(d) of this Executive Order.

(c) "Restore" has the meaning given in section (1)(e) of this Executive Order. Restore necessarily includes actions to manage salmonids to provide for adequate escapement levels, and actions to increase the quantity and improve the quality of properly functioning habitat upon which salmonids depend.

(d) "Coho" means native wild coho salmon found in rivers and lakes along the Oregon Coast.

(e) "Salmonids" means native wild salmon, char and trout in the State of Oregon.

(6) Effective Date; Relation to Federal ESA. This Executive Order will take effect on the date that it is filed with the Secretary of State. The State of Oregon will continue to work with NMFS to determine the appropriate relationship between the Oregon Plan and NMFS's efforts under the federal ESA.

Done at Salem, Oregon, this 8th day of January, 1999.

DEPUTY SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 20

GOVERNOR'S COMMITTEE ON STATE BOND PROGRAMS

An Oregon State Bond Committee is necessary to the effective management and coordination of state financing programs. The Committee can serve to assist state agencies with planning, education, and communication. This Order serves to continue the State Bond Committee established by Executive Order No. EO - 83 - 17.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon State Bond Committee (Committee) is hereby continued. The Committee shall assist the Governor in oversight of State programs which issue state financial obligations, including certificates of participation.
2. There shall be at least 10 Committee members, with the following members serving by virtue of their positions involving key roles in issuing State bonds and certificates of participation:
 - a. The State Treasurer or the Treasurer's representative.
 - b. The Director or senior finance manager[s] from each of the following state agencies:
 - i) Housing and Community Services Department
 - ii) Economic Development Department
 - iii) Office of Energy
 - iv) Department of Environmental Quality
 - v) Department of Administrative Services
 - vi) Department of Higher Education
 - vii) Department of Transportation
 - viii) Water Resources Department
 - ix) Department of Veterans' Affairs
 - c. Where the Director or senior finance manager from any other state agency that uses state financial obligations and wishes to have a member on the committee, the Governor may appoint additional members of the Committee. Such members shall serve at the Governor's pleasure.
3. The Director of the Department of Administrative Services or his designee from among other Committee members shall serve as chair of the

EXECUTIVE ORDER NO. EO 98 - 20

Page Two

Committee. The chair may involve individuals from organizations related to bonding or financial obligations to participate in Committee activities. The representative of the State Treasurer shall serve as vice-chair.

4. Committee members are entitled to neither compensation nor reimbursement for expenses.
5. The Committee shall meet on a monthly basis. The Committee is not required to meet in the absence of a determination by the Chair that there is Committee business to discuss. The Committee shall organize itself and adopt procedures which it deems necessary to carry out its tasks under this Order.
6. The Committee shall review the financing activities of each state agency and the designated members shall present status reports for their agencies at each meeting. The Committee may also organize and conduct training and educational standards for state employees whose work involves State bonds and other financial obligations. The Committee may also prepare reports in order to advise the Governor, the Legislative Assembly, and state agencies on matters affecting state bond programs. The Committee shall report on its activities to the Governor as requested.
7. The Committee shall provide advice and written procedures to ensure state agencies comply with state and federal tax laws and nationally recognized financial reporting standards, as well as disclose rules and guideline applicable to the administration of State bonds and financial obligations.
8. The chair may appoint subcommittees and task forces. The chair may appoint ex officio members to conduct special studies. The Committee may hold training and educational sessions. It may also prepare reports to advise the Governor, Legislative Assembly, and state agencies on matters affecting state bond programs.

EXECUTIVE ORDER NO. EO 98 - 20

Page Three

9. The Department of Administrative Services shall provide staff assistance to the Committee.

Done this 25th day of October, 1998, at Salem, Oregon.

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 19

AUTHORIZATION FOR ACCESS TO LAW ENFORCEMENT DATA SYSTEM

ORS 181.010(8)(i)-(9) and OAR 257-010-0025(1)(b) operate in conjunction to allow the Governor to authorize Law Enforcement Data System access to designated state and local agencies which require such information in order to fulfill statutory criminal and regulatory missions. Executive Order No. EO 90 - 05 grants such access to a number of state agencies, and establishes the conditions under which such access is authorized; subsequent Executive Orders Nos. EO 90 - 14, EO 90 - 21, EO 97 - 21, and EO 98 - 13 have authorized access for additional state agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED :

- 1) In addition to those agencies listed in paragraph (4) of Executive Order No. EO 90 - 05, and pursuant to the authority vested in me by ORS 181.010(8)(i)-(9) and OAR 257-010-0025(1)(b), I hereby authorize the Oregon State Police to provide the following state agencies with access to the Oregon State Police criminal offender information system:
 - a: The Governor's Advocacy and Childrens' Ombudsman Office, solely for the purpose of enforcing ORS 417.815, ORS 418.747, and ORS 419A.170.
 - b: The Department of Administrative Services, (DAS) solely for the purpose of conducting background investigations on prospective employees for specific, identified positions involving the printing, distribution, and inventory of negotiable documents which DAS prints for most state agencies.
 - c: The Oregon Military Department, solely for the purposes of enforcing 10 U.S.C. sec 504, the National Gun Control Act (18 U.S.C. sec 922), and for conducting background checks upon prospective employees of the National Guard Challenge Program operated pursuant to 32 U.S.C. sec 509.
- 2) Executive Order No. EO 90 - 05 continues to govern the compilation, maintenance, and dissemination of criminal offender information as

EXECUTIVE ORDER NO. EO 98 - 19

Page Two

defined in ORS 181.010(2), and Executive Order No. EO 90 -05 governs the access authorized for the state agencies granted LEDS access in this Order.

Done this 23rd day of October, 1998, at Salem, Oregon.

Phil Keisling
SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 18

WILLAMETTE RESTORATION INITIATIVE AND BOARD OF DIRECTORS

WHEREAS, the Willamette basin is home to 70 percent of Oregon's population, accounts for roughly 75 percent of its employment base, provides about half of its agricultural production, gives rise to Oregon's largest and the nation's 13th largest river, and contributes enormously to the vitality of the state by virtue of its diverse ecosystems, forests, cities and towns, and other human and natural resources; and

WHEREAS, stocks of the Willamette basin's once-abundant wild salmon and steelhead have either been designated, or are being considered for designation, under the Endangered Species Act as threatened, and whereas nearly 50 other species are at risk of extinction; and

WHEREAS, the Willamette River and its tributaries are subject to continued deterioration of water quality and consequent loss of both environmental and economic opportunity, such that more than 1,500 river-miles do not meet national water quality standards; and

WHEREAS, on December 17, 1997, Governor Kitzhaber accepted the recommendations of the Willamette River Basin Task Force, which included a proposal to establish a basin council to oversee an integrated, coordinated approach to maintaining and improving watershed health; and

WHEREAS, Governor Kitzhaber met in April, 1998 with more than 125 community leaders from throughout the basin, including local and state elected officials, city managers, and representatives from agricultural, conservation and business groups, who conveyed both their concerns about Endangered Species Act impacts, as well as their commitment to work together to improve the health of the Willamette's watershed; and

WHEREAS, there is no on-going and permanent structure in place to enable the residents of the basin to mount a concerted, collaborative effort to restore watershed health; and

WHEREAS, in June, 1998, Governor Kitzhaber requested the advice of an interim group on the purpose and attributes of a body to lead the preparation of basin recovery strategies;

EXECUTIVE ORDER NO. EO 98 - 18

Page Two

THEREFORE, IT IS ORDERED AND DIRECTED:

1. There is created a Willamette Restoration Initiative.
2. The Willamette Restoration Initiative's (hereinafter "WRI" or "The Initiative") objectives should include, but not be limited to:
 - A. Coordinating with other relevant efforts such as the Willamette Valley Livability Forum to ensure that the pursuit of watershed health is integrated with other community and economic development goals in the Valley.
 - B. Identifying and promoting the implementation of short- and long-term watershed-based, adaptive strategies that:
 - I. Within the context of human habitation and continuing basin growth, specifically focus on:
 - a) protecting fish and wildlife, restoring their habitat, and increasing populations of declining species;
 - b) properly managing floodplain areas; and
 - c) enhancing water quality; and
 - II. Generally the strategies should also:
 - a) engage broadly with watershed health issues rather than focus solely on tactics to avoid particular species listings;
 - b) result in sustainable ecological health;
 - c) help communities comply with environmental laws;
 - d) enhance local, cooperative efforts to restore watersheds;
 - e) promote long-term environmental stewardship and collective action;
 - f) build on existing local and regional efforts;
 - g) recognize and make efficient use of the underlying framework of existing law; and
 - h) are founded on sound science.

EXECUTIVE ORDER NO. EO 98 - 18

Page Three

- C. Forging a new private/public partnership dedicated to basin restoration and having the common goals of sustaining robust ecosystems and thriving economies.
 - D. Integrating to the maximum extent feasible all other on-going legal and planning processes of the federal, state, and local governments.
 - E. Simultaneously developing and assessing broad strategies and promoting actions to implement strategic choices.
 - F. Preventing the potentially disastrous consequences of uncoordinated and inadequate actions that could result in litigation that in turn reduces the region's ability to shape its environmental and economic future.
 - G. Employing collaborative political agreements and sound science to attain and maintain credibility.
 - H. Energetically publicizing the urgency of this mission and the serious social, economic, ecological and legal costs that will stem from a failure to act.
 - I. Serving as a focal point for the coordination of multiple agency agendas, as well as a communications vehicle for the dozens of public and private groups that have a stake in Basin watershed health.
 - J. Otherwise acting as the chief means for effecting the objectives of the Oregon Plan for Salmon and Watersheds in the Willamette Basin.
3. There is established a Board of Directors for WRI. Specifically, the Board shall:
- A. Oversee the preparation of a Willamette Restoration Strategy, including developing Willamette Basin amendments and supplements to the Oregon Plan for Salmon and Watersheds for approval by the Governor and the Legislature.

EXECUTIVE ORDER NO. EO 98 - 18

Page Four

- B. Work closely with the Lower Columbia River Estuary Program and Watershed Councils to harmonize and integrate strategies commonly needed for recovery of the Lower Columbia and Willamette River systems.
- C. In its oversight of the Restoration Initiative, recognize and build on the work of the Willamette Valley Livability Forum, as well as the Willamette River Basin Task Force, including its expression of a future vision for the basin, as restated below: The Willamette Basin must attain a dynamic balance between diverse human and ecological needs. Basin residents should live in healthy watersheds with functioning floodplains and habitats supporting a diversity of native species. Opportunities should exist for people to interact with the wildness of a restored, healthy river system. Valley residents should be part of a larger Basin community, connected by a system of rivers and streams. That system should provide healthy aquatic life, clean drinking water, safe places for recreation and support for a vibrant economy. Residents must accept individual and collective responsibility for this vision, and provide leaders with a mandate and the resources necessary to achieve and sustain it.
- D. Assure broad, on-going opportunity for groups with interests in the Willamette basin's ecological and economic resources to participate in the identification, refinement, and implementation of recovery objectives, strategies, and performance measures.
- E. Articulate clear and measurable criteria for communicating both the mission of restoration and the viability of specific strategies. The criteria should permit the identification of indicators of success and help to identify the costs of failure. The criteria should include timelines as well as actions. The Board shall also promote clear and objective reporting of the measures.
- F. Calculate costs of restoration strategies and assess federal, state and local resources and the availability as well of private groups and non-governmental bodies to sustain this long-term effort by considering the following tasks:

EXECUTIVE ORDER NO. EO 98 - 18

Page Five

- I. Reviewing rehabilitation opportunities identified by the Task Force;
 - II. Developing a sense for the most critical functions that operate within the valley affecting these opportunities;
 - III. Ranking Task Force items that speak to these most critical functions; and
 - IV. Identifying current or new funding sources to address these priorities.
 - V. Working closely and consulting with groups which have interests in the Willamette basin's ecological and economic resources.
 - VI. Encouraging development of federal, state, and local government and private organization budgets and budget processes that clearly identify, coordinate and schedule implementing actions specific to Willamette Basin recovery efforts.
- G. Guide fundraising efforts necessary for restoration strategy development and implementation.
 - H. Actively promote and support restoration strategy objectives and measures with government and private sector decision-makers and stakeholders, as well as with the general public.
 - I. Consider further alternatives to its structure and mission including the possibility of securing enabling authority from the Oregon Legislative Assembly at some appropriate time.
 - J. Deliver progress reports to the Governor and the Joint Legislative Committee on Salmon and Stream Enhancement detailing compliance with these goals. The reports shall be delivered on a

EXECUTIVE ORDER NO. EO 98 - 18

Page Six

periodic basis throughout the calendar year, beginning with the date of issuance of this Order.

4. The Board shall consist of not fewer than 20 members, nor more than 35 members including a Chair and vice-Chair. The Chair, in consultation with the Board shall select the vice-Chair. These Board members shall be appointed by and serve at the pleasure of the Governor.
5. The Board shall adopt by-laws which, in its estimation, establish clear processes and procedures for achieving the purposes described in sections 2 and 3 above. These by-laws shall, at a minimum, provide for:
 - A. Staggered terms of Board member service not to exceed four years;
 - B. A mechanism for making recommendations to the Governor for filling Board vacancies and/or adding members, should the Board determine it necessary;
 - C. An equitable and efficient mechanism for making Board decisions;
 - D. The respective roles of the Board and an executive director with regard to staff, budget, work programs, and operational responsibilities; and,
 - E. A seven member executive committee, appointed by the Chair, to perform the following internal and external functions:
 - I. Develop agendas for Board meetings;
 - II. Develop mechanisms for governance and maintenance of organizational cohesion, including guidelines for the participation of Board members on the Executive Committee;
 - III. Formulate initial strategic and implementation alternatives for full Board consideration;

EXECUTIVE ORDER NO. EO 98 - 18

Page Seven

- IV. Develop initial criteria for measurement and assessment of basin restoration strategies;
 - V. Identify specific projects and timelines that will minimize impacts of listing decisions or other adverse regulatory actions, and optimize recovery efforts;
 - VI. Develop coordination mechanisms with other agencies and groups with authority to affect the restoration of the Willamette River Basin;
 - VII. Develop, for consideration by the Board, a more specific definition of mission and objectives consistent with any future vision of the basin endorsed or created by the Board, and other basin needs.
6. In pursuing its charge, the Board is authorized to appoint advisory and technical groups from within or outside its own membership, including but not limited to:
- A. Public interest and citizen stakeholder groups;
 - B. Elected public officials of affected governments;
 - C. State agency representatives;
 - D. Federal agency representatives; and,
7. State agencies shall cooperate with the Willamette Restoration Initiative and its Board to the maximum extent feasible, subject to their legal mandates and budgetary ability.
8. On behalf of the Willamette Restoration Initiative, the Board may accept contributions of funds and assistance from the United States or its agencies, or from any other source, public or private, and agree to conditions thereon not inconsistent with the purposes described in this Order.

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 16

OREGON HISTORIC TRAILS ADVISORY COUNCIL

The *Oregon Historic Trails Report* presented by the Oregon Trails Coordinating Council in May, 1998 was the first step in the development of a statewide Oregon Historic Trails Program. The report serves as a general guide and planning document for future efforts in developing historic trail resources in Oregon. The Executive Summary of the *Oregon Historic Trails Report* noted the following:

“The objective of the Oregon Historic Trails Program is to establish Oregon as the nation’s leader in developing historic trails for their educational, recreational, and economic values. The Oregon Historic Trails Program, when fully implemented, will help preserve and leverage existing heritage resources while promoting rural economic development and growth through heritage tourism.

The opportunity to realize these benefits will depend on the entities that have the authority to act and collaborate on the program’s behalf: land management agencies, government commissions, heritage organizations, and tourism associations. The Council recommends that these entities move forward with the Oregon Historic Trails Program.”

The dissolution of the Oregon Trails Coordinating Council creates the need for a statewide advisory body to continue to recognize the value and significance of Oregon’s historic trails as outlined in ORS 358.057. The Oregon Trails Coordinating Council has recommended the reactivation of the Oregon Trails Advisory Council to oversee and advocate on behalf of Oregon’s historic trails.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) The Oregon Trail Advisory Council was created by Executive Order No. EO-84-10 and revised under Executive Order No. EO-94-02. This order restates the previous orders, revises the council’s scope, increases the membership, and changes the name to the “Oregon Historic Trails Advisory Council.”
- 2) The Oregon Historic Trails Advisory Council is hereby created. The council shall consist of nine members who shall be appointed by the Governor and serve at the Governor’s pleasure. Members shall be appointed to terms of four years. The council shall reflect the demographic

EXECUTIVE ORDER NO. EO 98 - 16

Page Two

diversity of the state of Oregon to the greatest extent possible. Current members of the Oregon Trail Advisory Council are eligible to serve on the OHTAC under their original term expiration dates.

The Governor shall designate the council chair. The chair shall designate a vice-chair who shall carry out the duties of the chair in the chair's absence. The council may add non-voting ex officio members, associate members, and subcommittees as it deems appropriate.

The council shall have regular stated meetings as determined by a majority of its members and shall meet on special occasions upon the calling of the chair. Five voting members shall constitute a quorum. A vote of the majority shall be sufficient for all actions of the council.

No members of the council, regardless of their status as voting members, ex officio members, associate members, or any other classification, are entitled to compensation for their services or reimbursement for their expenses.

- 3) The Oregon Historic Trails Advisory Council shall serve as an advisory body for activities and policies involving Oregon's historic trails as listed in ORS 358.057, particularly as they concern the State of Oregon. The council shall:
 - Promote public awareness of the historical significance of the trails and encourage the development, protection and interpretation of historical sites and outdoor recreation resources along their routes.
 - Act in an advisory capacity to Oregon agencies, bureaus, commissions, councils and committees, making recommendations about activities and policies that relate to the history of the trails and associated sites.
 - Serve as Oregon's official liaison with other states, associations, federal departments, bureaus and committees concerned with these trails to plan and coordinate activities which foster state and national recognition of the significance of Oregon's historic trails.

EXECUTIVE ORDER NO. EO 98 - 16

Page Three

- 4) The council shall have the authority to negotiate for staff assistance from the Oregon Parks and Recreation Department. The council shall report to the State Parks and Recreation Commission.

Done this 11th day of August, 1998, at Salem, Oregon.

AMENDS EXECUTIVE ORDER NO. EO 98 - 11

Executive Order No. EO 98 - 11 is hereby amended to read:

- “1. The Governor’s Task Force on Cultural Development is hereby created. The Task Force shall consist of not less than 12 and no more than 17 members appointed by the Governor serving at his pleasure. Members shall include representatives from arts, cultural, and heritage organizations, as well as individuals representing diverse, bi-partisan, statewide perspectives on how Oregon’s arts, culture, and heritage organizations can make Oregon a better place to live and work.

The Governor shall designate a Task Force chair. The vice-chair shall be designated by the chair and shall carry out the chair’s duties in his/her absence. The Governor may also appoint a member of his staff as a Task Force member or liaison.

The Task Force may add non-voting ex officio members, associate members, and subcommittees as it deems appropriate. No members of the Task Force, regardless of their status as voting members, ex officio members, associate members, or any other classification, are entitled to compensation or reimbursement for their services.”

EXECUTIVE ORDER NO. EO 98 - 14

GOVERNOR'S SMALL BUSINESS COUNCIL

The State of Oregon has an interest in promoting the growth and continued development of Oregon's small businesses, which comprise nearly 95 per cent of all Oregon businesses. There currently exists a need for a Small Business Council, which can work with the Governor and the Oregon Economic Development Department (OEDD) and other state agencies to develop recommendations on how best to promote the growth and economic vitality of Oregon's small business sector.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) The Governor's Small Business Council (the Council) is established.
- 2) The Council shall be made up of small business owners and managers representing diverse interests. In making appointments to the Council, the Governor shall consider the following:
 - a: Geographic and community diversity;
 - b: Balanced representation from among the following economic sectors:
 - i) manufacturing;
 - ii) retail;
 - iii) wholesale;
 - iv) services;
 - v) special segments, including micro-, emerging fast-growth companies, and family-owned and established businesses.
 - c: Adequate representation of minority- and women-owned businesses.
- 3) The Council shall consist of eleven persons appointed by the Governor; each member shall serve a term of three years, with the terms of the initial members to be staggered. Staffing for the Council shall initially be provided by OEDD.

EXECUTIVE ORDER NO. EO 98 - 14

Page Two

- 4) Council members may be owners or senior managers of the entities which they represent. A chair and vice-chair shall be selected by the Council.
- 5) When a vacancy occurs on the Council, a nominating committee appointed by the chair shall develop a list of nominees qualified within the diversity guidelines for Council membership established by Section 3 of this Executive Order. While the committee shall forward those nominees to the Governor for consideration, the Governor is not limited in appointing a member to the list developed by the committee.
- 6) Members of the Council shall receive no compensation for their activities as members of the Council, but may be reimbursed for travel expenses incurred in attending Council business pursuant to ORS 292.495(2).
- 7) The Council shall organize multiple regional conferences and a single statewide conference at which Oregon small business people may provide ongoing input to OEDD and other state agencies regarding state policies affecting the climate for small business in Oregon.
- 8) Additionally, the Council shall:
 - a: Develop and recommend to the Governor a formal policy statement supporting the advancement and success of the small business sector and ensuring that Oregon remains a small business-friendly state;
 - b: Develop a broad public policy agenda based upon Council recommendations enabling small and growing small businesses to have a voice in state policy-making;
 - c: Identify and evaluate state regulations which have the potential to unreasonably constrain small businesses;

EXECUTIVE ORDER NO. EO 98 - 14

Page Three

- d: Recommend changes in state programs, laws, policies, and services for the more efficient development of small businesses throughout Oregon;

Done at Salem, Oregon, this 20 day of July, 1998.

AUTHORIZATION FOR ACCESS TO LAW ENFORCEMENT DATA SYSTEM

ORS 181.010(8)(I)-(9) and OAR 257-010-0025(1)(d) operate in conjunction to allow the Governor to authorize Law Enforcement Data System Access to designated state and local agencies which require such information in order to fulfill statutory criminal and regulatory missions. Executive Order No. EO 90 - 05 grants such access to a number of state agencies, and establishes the conditions under which such access is authorized; subsequent Executive Orders Nos. EO 90 - 14, EO 90 - 21, and EO 97 - 21 have authorized access for additional state agencies.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) In addition to those agencies listed in paragraph 4(a) of Executive Order No. EO 90 - 05, and pursuant to the authority vested in me by ORS 181.010(9) and OAR 257-010-0025(1)(b), I hereby authorize the Oregon State Police to provide the following local agencies with access to the Oregon State Police criminal offender information system solely for purposes allowed under Public Law 104-120:
 - a: Housing Authority of Clackamas County;
 - b: North Bend City/Coos-Curry Housing Authority;
 - c: Housing Authority of Lane County;
 - d: Housing Authority of Lincoln County;
 - e: Marion County Housing Authority;
 - f: Housing Authority of City of Salem;
 - g: Housing Authority of Portland;
 - h: Polk County Housing Authority;
 - i: Housing Authority of Umatilla County.

EXECUTIVE ORDER NO. EO 98 - 13

EXECUTIVE ORDER NO. EO 98 - 12

DECLARATION OF A STATE OF EMERGENCY DUE TO FLOODING

Pursuant to ORS 401.055, I find that threat to life and safety exists due to flooding which occurred in Crook County on May 29 and 30, 1998. The following impacts have occurred for which State assistance has been requested:

Major flooding on Ochoco Creek below Ochoco Dam has resulted in the need to evacuate homes in the immediate area. A one block area on each side of the Creek extending through the City of Prineville, and including some residents outside the city limits of Prineville, could result in approximately 300 evacuations.

Oregon National Guard Assistance is needed to assist with evacuations and to provide access control at approximately 25 intersections over the next 24 hours.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment required in response to this emergency.
2. The Oregon National Guard shall provide essential assistance that is deemed necessary to support this effort.

This emergency is declared only for those areas of Crook County impacted by flooding which occurred on May 29 and 30.

This order was made by verbal proclamation at 10:15 pm on this 29th day of May, 1998, and signed this 11 day of June, 1998, at Salem, Oregon.

DEPUTY SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 11

GOVERNOR'S TASK FORCE ON CULTURAL DEVELOPMENT

Oregon's cultural organizations make important contributions to Oregon's quality of life, such as

- strengthening civic spirit in communities and encouraging growth and redevelopment in Oregon's cities and towns;
- attracting visitors to our state and otherwise directly contributing to the economy;
- enhancing the academic performance of Oregon's children and encouraging life-long learning among adults; and
- promoting greater appreciation of the natural environment and greater understanding of the humanities, history and Oregon's education and ethnic derivation to help Oregonians discover common purpose.

In spite of these contributions, the level of Oregon's public and private investment in its cultural organizations is among the lowest in the nation. Therefore, an official policy is needed to guide and encourage the investment needed to ensure and expand access to cultural opportunities for all Oregonians.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Governor's Task Force on Cultural Development is hereby created. The Task Force shall consist of not less than 12 and no more than 15 members appointed by the Governor and serving at his pleasure. Members shall include representatives from arts, cultural and heritage organizations, as well as individuals representing diverse, bi-partisan, statewide perspectives on how Oregon's arts, culture and heritage organizations can make Oregon a better place to live and work.

The Governor shall designate a Task Force chair. The vice-chair shall be designated by the chair and shall carry out the chair's duties in his/her absence. The Governor may also appoint a member of his staff as a Task Force member or liaison.

The Task Force may add non-voting ex officio members, associate members, and subcommittees as it deems appropriate. No members of the Task Force, regardless of their status as voting members, ex officio members, associate

EXECUTIVE ORDER NO. EO 98 - 11

Page Two

members, or any other classification, are entitled to compensation or reimbursement for their services.

The Task Force shall have regular stated meetings as determined by the majority of its members and shall meet on special occasions upon the calling of the chair.

2. The purpose of the Task Force is to create a broad based plan for preserving Oregon's cultural heritage and providing Oregonians with cultural opportunities throughout the state. This plan should address the strategic goals of Oregon Shines II:

- Quality jobs for all Oregonians
- Safe, caring, and engaged communities
- Healthy, sustainable surroundings

Specifically, this plan should:

- a) Assess arts, culture, and heritage in Oregon; establish priorities to guide and increase public and private investment; make recommendations on appropriate funding levels; and suggest means to encourage effective use of resources, assure accountability, and measure return on investment;
 - b) Encourage partnerships among Oregon's cultural organizations and between those organizations and other public and private institutions, including business, education, tourism, social services, government, community development, and others;
 - c) Include strategies for demonstrating better and more broadly how Oregon's cultural organizations can continue to make Oregon a better place to live and work, including ways to help Oregonians connect culture with issues such as the environment, youth at risk, education, public safety, economic development, and growth.
3. The Task Force's work shall include, but is not limited to, the following elements:
 - *Assessment* of the current status of Oregon's arts, culture, and heritage - how they are delivered and preserved, who they serve, how they benefit Oregonians, and how we pay for them in Oregon.

EXECUTIVE ORDER NO. EO 98 - 11

Page Three

- *Formation of a vision* regarding the methods by which Oregon might improve heritage preservation and the creation of cultural opportunities and adding missing elements to such preservation and opportunities, particularly through coordination and partnerships;
- *Development of a plan* to fulfill this vision, including the expected results of implementation and a means with which to measure return on investment;
- *Recommendations* regarding the resources and advocacy needed to implement the plan.

The Task Force shall rely on existing information and assessments to the greatest extent possible.

4. The Task Force shall strive to present its recommendations to the Governor no later than October 15, 1998.
5. This Executive Order expires and stands rescinded on December 31, 1998, unless sooner rescinded or explicitly extended by the Governor.

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 09

HIGH-RISK JUVENILE CRIME PREVENTION PARTNERSHIP

WHEREAS, our children are our future. We must take steps to see that Oregon children are given the chance to grow and become productive members of our society. But the pressures of growing up can lead youth to become involved in crime; and

WHEREAS, as a society Oregon has expressed a desire to punish criminals, even some youthful offenders. But we must also increase efforts to prevent youthful excursions into criminal behavior; and

WHEREAS, state government can not act alone. Oregon counties must become partners with state government to develop the strategy to curb the rise in juvenile crime; and

WHEREAS, juvenile crime can be prevented and reduced in Oregon. To better coordinate efforts to reduce juvenile crime, we must first begin to focus our efforts on High-Risk Juveniles; and

WHEREAS, the 36 Oregon Counties will adopt High-Risk Juvenile Crime Prevention plans that will target youth with more than one of the following risk factors:

- school failure
- substance abuse
- negative peer association
- anti-social behavior
- poor family function or support; and
- who are clearly demonstrating at-risk behaviors; and

WHEREAS, government or community agencies, schools and law enforcement will be the first to detect these at risk behaviors and are the front line in intervening with high risk juveniles; and

WHEREAS, without intervention such at-risk behavior will lead to imminent or increased involvement in the juvenile justice system; and

WHEREAS, funding sources are available to enable counties and state government to coordinate and plan this valuable effort;

THEREFORE, IT IS ORDERED AND DIRECTED:

1. The Juvenile Crime Prevention Advisory Committee (JCPAC) is established to review county plans to prevent high-risk juvenile crime and to recommend such plans to the Governor for funding.

EXECUTIVE ORDER NO. EO 98 - 09

Page Two

2. The JCPAC has the following roles for High-Risk Juvenile Crime Prevention planning:
 - Review allocation formula and budget.
 - Review/recommend local plans.
 - Ensure that planning criteria are met.
 - Recommend high-risk juvenile justice and prevention policy to Governor.
 - Ensure initiation of contracts based on approved plans. Serve as arena for any necessary mediation. Unresolved disagreements may be forwarded -- so noted -- to the Governor.
 - Review data and outcome information. Recommend revisions as necessary.
 - Establish and publish review/assessment criteria for the plans.
 - Oversee contract changes/adjustments.
3. The JCPAC shall utilize a framework for outcome evaluation in evaluating the ability of plans to meet the goal of juvenile crime reduction. The strategy shall be evaluated against specific indicators and interim outcomes.

Goal: To reduce juvenile crime

Indicators:

Reduce juvenile recidivism rates (reduce juvenile recidivism)

Reduce total juvenile arrest rate (crime per 1,000 youth)

Compliance with discretionary bed allocation at OYA institutions (maintain discretionary caps)

Interim Outcomes:

Decreased anti-social or acting out behavior

Increased family functioning

Increased school success

Decreased substance abuse

Increased positive peer association

EXECUTIVE ORDER NO. EO 98 - 09

Page Three

4. In developing this strategy the JCPAC will rely primarily upon the following documents which have been developed by the Joint Juvenile Crime Prevention Work Group and adopted by the partnership:

- *High-Risk Juvenile Crime Prevention Partnership Points of Agreement* dated June 26, 1998, which outlines the agreements of the state and local partners;
- *High-Risk Juvenile Crime Prevention Budget* (formula) dated June 26, 1998;
- *Community Planning Guide* dated June 26, 1998, which specifically describes how to meet the planning requirements of the programs and how to identify outcomes; and
- *Model Strategies for Juvenile Crime Prevention* dated May 1998 which outlines effective national models for juvenile crime prevention.

5. The JCPAC will have following balanced state and local membership:

<u>Local</u>	<u>State</u>	<u>Other Members</u>
County Commissioner	The Director of the Oregon Youth Authority or Designee	Citizen
Juvenile Director	The Director of the Oregon Commission on Children and Families or Designee	Research
Local CCF Director	The Director of the Dept. of Human Resources or Designee	
Law Enforcement Official	The Director of Office of Alcohol and Drug Abuse Programs or Designee	
Law Enforcement Official	The Director of the Criminal Justice Commission or Designee	
County Mental Health Director	Superintendent of Public Instruction or Designee	
Alcohol and Drug Professional	Superintendent of State Police or Designee	
School Superintendent	Governor's Designee	
Private Youth Service Provider	Governor's Designee	
Elected City Official		

6. The chair and members of the committee are appointed by the Governor and serve at the pleasure of the Governor. For each local position three candidates will be recommended by

EXECUTIVE ORDER NO. EO 98 - 09

Page Four

local associations for the Governor's final selection. This process will be developed by AOC in conjunction with affiliates. Where associations are not clearly identified the Governor's Executive Appointments Director will solicit nominations.

7. JCPAC shall also:

- Approve and coordinate the county youth diversion plans funded through the Oregon Youth Authority with the high-risk strategy (diversion funds remain in the budget of the Oregon Youth Authority).
- Act as the statewide advisory group (SAG) for Juvenile Justice Advisory Committee (JJAC) programs, after consultation and planning with the current JJAC to develop a mechanism to coordinate and integrate the functions required of the SAG by the federal Juvenile Justice and Delinquency Prevention Act.
- Coordinate planning and implementation for State Incentive Grant from the federal Center for Substance Abuse Prevention with the state and county High-Risk Juvenile Crime Prevention Partnership. (This is consistent with the State Office of Alcohol and Drug Abuse Program's comprehensive Alcohol, Tobacco, and Other Drug Prevention Plan Criteria.)
- The JCPAC will work to ensure broad-based citizen involvement in the planning and execution of coordinated juvenile crime prevention plans at both the state and local levels.
- Develop a funding policy that provides incentives for flexible programming and promotes strategies that stress re-investment in youth.

8. The JCPAC will periodically report to the Governor on its progress according to the schedule set out in the *High-Risk Juvenile Crime Prevention Partnership Community Planning Guide*. The planning for the 1999-01 biennium shall follow the following timeline, which may be extended by the JCPAC:

All local planning begins.....June 15, 1998
Local Plans Submitted to the State.....September 15, 1998
Recommendations to Governor regarding Statewide
Advisory Group transition planOctober 15, 1998
JCPAC local plan funding recommendations.....December 15, 1998
Prevention Plans Delivered to LegislatureJanuary 11, 1999

9. The Criminal Justice Commission shall staff the JCPAC and be responsible for implementation of the JCPAC recommendations. The Commission will also coordinate state technical assistance efforts on a statewide and county specific basis.

EXECUTIVE ORDER NO. EO 98 - 09

Page Five

10. The state will work on a nation-to-nation basis with tribal governments to develop tribal high-risk juvenile crime prevention plans.
11. All state agencies are hereby directed to coordinate with the JCPAC by adopting procedures and policies that promote the strategic plans developed by JCPAC. These efforts shall include but not be limited to interagency agreements and provision of staff to help coordinate the strategy.

EXECUTIVE ORDER NO. EO 98 - 08

**OREGON DEVELOPMENTAL DISABILITY COUNCIL
AMENDING EXECUTIVE ORDER NO. EO - 88 - 07**

The United States Congress has enacted Public Law 104-183 in order to assist states in affording person with developmental disabilities the opportunity to become fully integrated into their communities and to achieve their potential for independence and productivity. Under Public Law 104-183, states receive grants for activities to build their strength and capacity to address the unmet needs of persons with developmental disabilities in a coordinated fashion, evaluating the implementation of such activities.

The Oregon Developmental Disabilities Planning Council was established by Executive Order No. EO - 74 -18, and continued by Executive Orders Nos. EO - 76 - 25, EO - 79 - 11, EO - 83 - 07, and EO - 88- 07. The Council should now be continued under the mandate of Public Law 104-183.

THEREFORE, IT IS ORDERED AND DIRECTED:

- 1) Paragraph 4 of Executive Order No. EO- 88- 07 is hereby amended so that its last sentence reads as follows:

“Membership shall consist of representatives as specified in Public Law 104-183.”

- 2) Paragraph 5 of Executive Order No. EO - 88 - 07 is hereby amended so that its last sentence is deleted.

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 07

REDUCE WASTE AND REUSE OR RECYCLE MATERIALS

The policy of the State of Oregon is to reduce waste and to reuse or recycle materials. The state must also reduce hazardous waste and the use of toxic substances.

While state government has already set a good example, it must continue to do so. In order to help preserve the natural beauty of our state and its resources for future generations, state government must be a leader in preventing waste through recycling of materials it uses.

THEREFORE, IT IS ORDERED AND DIRECTED:

1. Executive Order No. EO - 90 - 09 is hereby repealed.
2. State agencies shall adopt the following recycling goals:
 - a: A reduction in the amount of solid waste from 1.04 pounds per FTE per work day to .50 pounds per FTE per work day by the year 2010.
 - b: An increase in the percentage of recyclable items actually recycled from the current rate of 81 percent to 100 percent by the year 2010.
 - c: An increase in the recovery rate of state office waste from the current rate of 71 percent to 85 percent by the year 2010.
 - d: An increase in the recovery rate of state institution waste from the current rate of 36 percent to 50 percent by the year 2000. An additional increase in such recovery to 75 percent by the year 2010.
3. State purchasing policies shall:
 - a: Promote the use of products that produce the least amount of waste, have a high recycled content, and are produced through environmentally sound methods.
 - b: Promote the use of biodegradable or durable and repairable products. Products should also be energy efficient and recyclable.
 - c: Create and sustain markets for environmentally sound products through their promotion and utilization by state agencies.

EXECUTIVE ORDER NO. EO 98 - 07

Page Two

- d: Take into account life-cycle costs and environmental impacts.
 - e: Reflect a preference for minimal packaging which can be returned to vendors, or can be recycled at no cost to the state.
 - f: Require the state and its food service contractors to avoid all use of polystyrene containers to the greatest extent possible.
 - g: Require that all new laser printers have two-sided capability. By the year 2005, two-sided shall be the printers' default mode.
 - h: Reflect a preference for paper products that have not been bleached with chlorine.
 - i: Require new photocopying machines to use recycled paper as the norm and have two-sided capability. By the year 2005, two-sided shall be the copiers' default mode.
 - j: To the greatest extent possible given state law regarding public bidding, reflect a preference for food service contractors who use environmentally sound food waste disposal. Avoid disposal in landfills or burners.
 - k: To the greatest extent possible given state law regarding public bidding, reflect a preference for building and demolition contractors who recycle and use recycled materials.
4. Agencies shall:
- a: Practice least waste at the point of purchase.
 - b: Seek used items at state and federal surplus property programs as a preferred form of procurement.
 - c: Reduce all use of paper and utilize e-mail and voice mail as alternatives. Share computer files.

EXECUTIVE ORDER NO. EO 98 - 07

Page Three

- d: Use electronic publishing. Use fewer paper forms. Share subscriptions and use route slips.
- e: Reuse materials to reduce waste, save money, and conserve energy.
- f: Use the back of paper for scratch paper, draft printing, or fax machines, ultimately recycling it.
- g: Commit to a thorough recycling program to reduce solid waste.
- h: Use recycled and recyclable papers and paper products wherever feasible.
- i: Print a symbol or note to show that any state writing or printing is on recycled paper.
- j: Avoid all colored papers. Use none that are neon, ultra bright, goldenrod, or dark hues.
- k: Use only white recycled writing pads.
- l: Print business cards on recycled paper with the recycled symbol.
- m: Ensure that users make two-sided copies.
- n: Support the composting of food waste and organic (including yard debris and animal waste).
- o: Dispose of food waste and yard debris as soundly as feasible. Avoid landfills and burners.
- p: Plan, build, and maintain buildings and grounds for least environmental impacts.
- q: Use vegetation and grounds practices that are environmentally sound.

EXECUTIVE ORDER NO. EO 98 - 07

John A. Kitzhaber, M.D.
GOVERNOR

ATTEST:

/S/

Phil Keisling
SECRETARY OF STATE

EXECUTIVE ORDER NO. EO 98 - 06

JUVENILE CORRECTION POPULATION FORECASTING ADVISORY COMMITTEE

The population in Oregon's Youth Correctional Facilities has grown substantially in recent years. The passage of Ballot Measure 11 during the 1994 General Election caused a major increase in the number of juveniles serving adult sentences. It is essential that state policy makers have accurate and uniform projections of the juvenile correctional population.

THEREFORE, IT IS ORDERED AND DIRECTED:

1. There is created a Juvenile Correction Population Forecasting Advisory Committee which shall assist the Department of Administrative Services in preparing projections of juvenile offender populations.
 - a. The Juvenile Correction Population Forecasting Advisory Committee shall consist of not more than seven members appointed by the Governor and serving at the Governor's pleasure. The committee shall include members who are knowledgeable about the juvenile justice system and trends that may affect the juvenile offender population.
 - b. Members of the Committee shall serve four-year terms. Initial appointments to the Committee may be for one, two or three years in order to provide staggered terms. Members of the Committee may be re-appointed.
 - c. The Governor shall appoint the Committee's chair, who shall hold that position at the Governor's pleasure. The Committee shall meet at least semi-annually at the call of the chair.
2. The Juvenile Correction Population Forecasting Advisory Committee shall:
 - a. Review and discuss the types of data needed to make projections of the juvenile offender population, select the most accurate data available, and inform the Department of Administrative Services of the potential location of such data for inclusion in the Department's juvenile population projection models.
 - b. Identify and evaluate trends, assumptions, policy developments and data inadequacies that may affect preliminary juvenile offender population

EXECUTIVE ORDER NO. EO 98-06

Page Two

projections prepared by the Department of Administrative Services and that may require adjustments to the data collected.

- c. Review and discuss the preliminary juvenile offender population projections produced by the Department of Administrative Services and provide to the Department any conclusions regarding trends, assumptions, policy developments and data inadequacies that should be included in the Department's juvenile offender population projection models or that may require alternation of the preliminary juvenile offender population projections.
 - d. Evaluate and advise on methodology used by the Department of Administrative Services in making its computations and projections.
 - e. Make recommendations to the Department of Administrative Services concerning procedures to be used and data to be collected to improve the juvenile corrections forecasting process in the future.
3. The Department of Administrative Services and the Juvenile Correction Population Forecasting Advisory Committee shall:
- a. Beginning May 1, 1998 and each subsequent April 15, ascertain by computation and project the number of juvenile offenders anticipated to be incarcerated under existing law and current practices by the Oregon Youth Authority during each month of the next calendar year, and during the next 10 years. A subsequent computation and projection is due not later than October 15, 1998 and each subsequent April 15 and October 15 thereafter.
 - b. To the greatest extent possible, include in its computations and projections a breakdown of anticipated juvenile population by gender, crime of conviction, length of incarceration and other relevant classifications.
 - c. Provide its computations, projections and updates every six months to the Governor, and to the Emergency Board if the legislature is not in session, or to the Joint Committee on Ways and Means if the legislature is in session.

EXECUTIVE ORDER NO. EO 98-06

Page Three

- d. Provide a written report at least biennially to the Governor and legislature on the methodology and assumptions used in preparing its computations and projections.
 - e. Provide copies of its reports to criminal justice agencies and members of the public who may be interested.
4. The Director of the Department of Administrative Services shall appoint a technical working group including persons with backgrounds in research, statistics and forecasting in the criminal justice context. The technical working group shall provide staff assistance to the Department of Administrative Services and the Juvenile Correction Population Forecasting Advisory Committee in carrying out their functions under this Executive Order. The technical working group, to the greatest extent possible, shall be comprised of members of the technical working group established in EO-95-06(5).
 5. The computations and projections prepared by the Department of Administrative Services pursuant to this Executive Order shall be used by the Oregon Youth Authority in preparing its biennial budget request and in developing its long-term plans; and by any other agency concerned with the effects of the juvenile offender population on policy development or budgeting.
 6. Members of the Committee shall be entitled to no compensation or reimbursement of travel expenses.

EXECUTIVE ORDER NO. EO 98 - 05

STATEWIDE STRATEGIC PLANNING FOR INFORMATION TECHNOLOGY

Information is a strategic asset of state government. Every state official, agency, and educational institution relies upon information resources, and must plan for coordination of such resources in order to acquire and use them to their maximum potential.

The state also requires statewide management of its information resources, for only a statewide approach can effectively address inter-agency needs and issues. Only a statewide approach can ensure that state information resources operate in concert to the net benefit of the state.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED THAT:

1. The Department of Administrative Services (“DAS”) shall develop a statewide Information Technology Strategic Plan (“the Plan”), with a three to five year duration. It shall do so in collaboration with state agencies and an Information Resources Management Council (“Council”). The Plan shall serve as the blueprint for the development and utilization of the state government’s information resources, including telecommunications, computing, and information technologies.

The Plan shall define and describe:

- a: A vision of Oregon’s future information technology. The vision shall include a migration path and schedule for any required major improvements and changes.
- b: Major capital improvement investments required to implement the Plan.
- c: Duties which state agencies and related public organizations must perform in order to implement the Plan.
- d: Directions for the use of information resources throughout state government.
- e: Policies, strategies, goals, and objectives relating to the method by which the state shall plan, acquire, secure, manage, and utilize its information resources.

EXECUTIVE ORDER NO. EO 98 - 05

Page Two

- f: A design for an advanced digital communications, computing and telecommunications network. The design shall reflect and adequately meet the combined needs of state agencies.
 - g: Methods by which to share state personnel, financing, buildings, and equipment necessary to plan, collect, process, transmit, and store information.
 - h: Legislative concepts necessary to implement the Plan.
 - i: A cohesive manner in which the elements of the Plan will operate within the statewide information system which provides ready access to information, computing, and telecommunications resources.
2. Pursuant to ORS 291.038(1), the Director of DAS or his designee shall chair an Information Resources Management Council, whose membership shall include:
- a: Two members of the Legislative Assembly;
 - b: A member from the Oregon Judicial Department;
 - c: A representative of the Secretary of State;
 - d: A representative of the Treasurer's Office;
 - e: The Vice-Chairman of the Oregon Telecommunications Forum Council;
 - f: Two representatives of local governments;
 - g: A representative employed as an elementary or post-secondary public educator;
 - h: Five agency executives;
 - i: Two representatives of Oregon's private sector;

EXECUTIVE ORDER NO. EO 98 - 05

Page Three

- j: Additional members as deemed advisable by the Council chair.
- 3. Council members serve at the pleasure of the DAS Director and are entitled to no compensation or reimbursement for expenses.
- 4. The Council chair shall appoint the following five work groups to aid in creation and implementation of the Plan:
 - a: Businesses processes work group;
 - b: Network architecture work group;
 - c: Governance and management;
 - d: Internet applications;
 - e: Workforce development.

The chair may appoint additional work groups which he deems necessary to assist with creation and implementation of the Plan.

EXECUTIVE ORDER NO. EO 98 - 04

DESIGNATION OF OREGON'S VIRTUAL HUMAN RESOURCE INVESTMENT COUNCIL

Title VII of the 1992 amendments to the federal Job Training Partnership Act (29 U.S.C. sec 1792) allows states to create Human Resource Investment Councils ("HRIC") for the following purposes:

- a: Review the provisions of services and use of funds and resources under applicable federal human resource programs and advise the Governor on methods of coordinating such provisions of services and use of funds and resources consistent with the laws and regulations governing such programs. These federal human resource programs include Job Training Partnership Act, the Carl P. Perkins vocational and Applied Technology and Education Act, the National Community Service Act of 1990, the Adult Education Act, the Wagner-Peyser Act, part F of Title IV of the Social Security Act and the employment program established under section 6 (d) (4) of the Food Stamps Act of 1977;
- b: advise the Governor on the development and implementation of state and local standards relating to applicable federal human resources programs and coordination of such standards and measures;
- c: carry out the duties and functions prescribed for existing state councils described under the laws relating to the applicable federal human resource programs;
- d: identify the workforce development needs in the state and recommend to the Governor goals for meeting such needs;
- e: prepare and recommend to the Governor a strategic plan to accomplish the workforce development needs of the state; and
- f: monitor the implementation of evaluate the effectiveness of the strategic plan.

EXECUTIVE ORDER NO. EO 98 - 04

Page Two

Legislation enacted by the 69th Legislative Assembly established an executive Workforce Policy Cabinet and Regional Workforce Committees, comprised of both public sector and private sector individuals, to coordinate the implementation of state and federal workforce development programs (1997 Or Laws c 652, s3). The duties of the Workforce Policy Cabinet and the chairs of the regional work force are consistent with and support the functions of a HRIC. Designation of selected members of the Workforce Policy Cabinet and the Regional Workforce Committees as a HRIC will enable Oregon to achieve better coordination and integration of federal and state workforce development programs.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. Representatives of Oregon's Workforce Policy Cabinet, members of the Chairs of the Regional Workforce Committees, and other workforce development partners are designated as members of a Human Resources Investment Council in accordance with Section 701 of the 1992 amendments to the Job Partnership Training Act (29 U.S.C. sec 1792 (1992)).

The members shall serve at the pleasure of the Governor for a term of four years. Of the members first appointed to the Council, term-end dates shall be staggered.

2. Membership on the Oregon Human Resource Investment Council shall conform to the requirements as set forth in Section 702 of the 1992 amendments to the federal Job Training Partnership Act (29 U.S.C. sec 1792a (1992)).

EXECUTIVE ORDER NO. EO 98 - 04

Page Three

3. Council members are entitled to no compensation, per diem, or expense reimbursement.

Done at Salem, Oregon this 19th day of February, 1998.

EXECUTIVE ORDER NO. EO 98 - 03

ADVISORY COMMITTEE TO OFFICE FOR OREGON HEALTH PLAN POLICY & RESEARCH

Enacted by the 69th Legislative Assembly, HB 2894 (1997 Or Laws c 683, s 34) directs the Office for Oregon Health Plan Policy and Research (“OHPPR”) to study the following public policy issues related to prepaid managed health care contracts authorized under ORS 414.725(1).

- A) the policy basis and advisability of maintaining differentials in capitation payment rates to fully-capitated health plans based on geographic regions;
- B) the reasonableness of such capitation payment rates both in the aggregate and with respect to total professional and institutional health care services, respectively; and,
- C) risk-adjustment mechanisms currently applied to such capitation payment rates, the advisability of implementing additional risk adjustment mechanisms and, as applicable, the methodology for implementing additional risk-adjustment mechanisms.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) Pursuant to 1997 Or Laws c 683, s 35 the following individuals are appointed to the Office for Oregon Health Plan Policy and Research Advisory Committee:
 - a: Representatives of managed care health care organizations serving primarily rural areas of the state:
 - i) Pat Gibford - CEO, Central Oregon Independent Health Systems, Bend
 - ii) Robert Dannenhofer, M.D.- Medical director of Sure Care Health Plan, Roseburg
 - b: Representatives of managed health care organizations serving primarily urban areas of the state:
 - i) Ruth Rogers-Bauman - Vice President, Regency HMO Oregon, Portland

EXECUTIVE ORDER NO. EO 98 - 03

Page Two

- ii) Shelly Handkins - CFO, Providence Good Health Plan, Portland
 - c: Representatives of medical providers or representatives of medical providers who serve patients in both rural and urban areas of the state:
 - i) Michael Graham, M.D. - Portland
 - ii) George Miller, M.D.- Salem
 - iii) Byron Sagunsky, M.D.- Klamath Falls
 - iv) Steve Ulrich - Health Data Research, Portland
 - d: A representative of a type A hospital:
 - i) David Harman - Harney District Hospital, Burns
 - e: A representative of a type B hospital:
 - i) Timothy Simmons - Hood River Memorial Hospital Hood River
 - f: A representative of the Office of Medical Assistance Programs:
 - i) Herschel Crawford, Salem
 - g: Additional representatives:
 - i) Ian Worden - PeaceHealth, Oregon Region, Eugene
 - ii) Timothy Goldfarb - OHSU, Portland
 - iii) Ian Timm - Oregon Primary Care Association, Portland
 - h: Mark Gibson, my Health Policy Advisor, shall serve on the committee in an ex officio capacity.
- 2) In conducting these policy evaluations and developing recommendations to the Office of Medical Assistance Programs and the 70th Legislative Assembly as detailed in 1997 Or Laws c 683 s 35, OHPPR is directed to

EXECUTIVE ORDER NO. EO 98 - 03

EXECUTIVE ORDER NO. EO 98 - 02

STATE EMPLOYER PLAN TO REDUCE TRI-COUNTY TRAFFIC

Reducing commuter and business driving is a cost-saving alternative to building ever-increasing highway and public transit capacity. Reduced driving also lessens air and water pollution, energy consumption, and highway maintenance costs.

The causes of traffic congestion and all its ills are simple. Too many people in too many vehicles try to use the same road space at the same time. The solutions, however, are not so simple. The only ultimate answer is for people to drive fewer miles, less often, in fewer vehicles, and at dispersed times.

Studies of the energy crisis of the 1970's found that drive-alone trips increased heavily despite widespread incentives and education. However, recent studies of mandatory employer programs reflect a more positive outcome. A recent national study found that mandatory programs for employers yielded an average trip reduction of 15 percent. Workplace-related issues play a major role the number of people who utilize a highway system at the same time. Therefore, employers have an opportunity to play a lead role in furthering traffic-load solutions.

Workplaces are key factors in traffic volume and timing. Standard work hours are the main reason for congestion-time commuting. Unpredictable work hours and solo field work are two reasons many people drive their cars to work. Some workers commute alone because they must transport children en route. Some do so because they dislike their commuting alternatives. Some have no alternatives. But, many of the causes of driving alone and driving during congestion hours can be moderated with little cost through changing employer practices. The state, as a major employer, has a duty to do its part to reduce the traffic load.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

This order shall apply to all agencies of the Executive Branch of the State of Oregon. It shall be mandatory for state workplaces employing ten or more on day shifts in the Multnomah, Washington, or Clackamas counties (the "plan area"). For simplicity, state agencies may apply this order to any or all work shifts and worksites in the state.

EXECUTIVE ORDER NO. EO 98 - 02

Page Two

1. It shall be the goal of the state, in its role as an employer, to reduce drive-along and congestion-time commuting in the Portland and Tri-county area and in other metropolitan areas of the state.
2. To the maximum extent practical, agencies shall adopt, provide, and promote the employee Commute Options and Actions recommended by the Department of Administrative Services.
3. Each worksite shall achieve at least a ten percent reduction in its baseline auto trip rate within one year of the issuance of this Order. Worksites that already have achieved auto trip rates that are low for their locales may apply to Department of Environmental Quality Employee Commute Option program for approval of a tailored reduction goals.
4. Agencies shall eliminate unnecessary business driving. They shall reduce drive-alone trips and unnecessary auto trips that clients must make to obtain state services. To the maximum extent practical, agencies shall adopt and expand upon the Business and Client Strategies recommended by the Department of Administrative Services.
5. Agencies shall allow drive-along trips between Salem and Portland only if rescheduling, public transit, teleconferencing, ride sharing, or other options are unworkable. To the extent possible, agencies shall schedule all meetings so that staff and clients from metropolitan areas do not travel in congested areas at congestion times. In keeping with the intent of ORS 283.515, agencies shall plan for, provide, and use teleconferencing equipment whenever practical to avoid staff and client travel to meetings.
6. Where practical, agencies shall charge fees, consistent with the goals of this order, for parking they provide to employees in the plan area. In locales near DAS parking, agencies' fees shall not be less than DAS fees.

EXECUTIVE ORDER NO. EO 98 - 02

Page Three

7. Agencies shall immediately assure that all worksites subject to the Employee Commute Options (ECO) rules (OAR 340-030-0800 through 340-030-1080) are, and remain, in full compliance with those rules. ECO dates and timelines shall be met.
8. The standard day shift shall be based on an individual work schedule for each employee. To the greatest extent practical, a work schedule shall allow a compressed work week, telecommuting, stationing at home, or flextime to match pool or transit schedules. A daily 8 AM to 5 PM schedule may be approved as the exception; such a schedule may be needed to match education, child care, car pool, or transit times; to conform to law or collective bargaining, to assure customer service, or similar reasons.
9. State executives and senior managers in the plan area shall apply one or more commute options to their own work times or commuting methods. They shall apply business travel goals and methods to themselves.
10. The Office of Energy and the Departments of Administrative Services, Environmental Quality, and Transportation shall provide consultation, information resources, and advice to agencies regarding this order.
11. Department of Transportation (ODOT) shall be the lead agency in promoting, coordinating, and monitoring this order in the Tri-county plan area. ODOT shall survey area agencies and make an annual progress and status report to the Governor. Agencies shall supply whatever information ODOT shall require. Where applicable, ODOT shall require the same data that affected agencies must submit to Department of Environmental Quality under its Employee Commute Options rules. Each agency shall designate a coordinator to work with ODOT. To reduce traffic, ODOT shall seek ways to provide public access to state Internet sites through public computers at state offices outside of congestion areas.
12. Department of Administrative Services shall review and revise state policies and services, proposing legislative concepts and revisions to existing Executive Orders where necessary, with the goal to:

EXECUTIVE ORDER NO. EO 98 - 02

Page Four

- a: Cut drive-alone trips between Salem and the plan area, including consideration of a shuttle service and teleconferencing services for small meetings.
- b: Make state pool cars accessible without necessitating private car trips to a motor pool.
- c: Park state cars nearer field work and away from the central plan area.
- d: Attain higher efficiency in the allocation and use of state cars.
- e: Provide transit subsidy options as transit allowances or by other means.
- f: Increase support or subsidy of car or van pool parking at all plan area worksites.
- g: Allow agencies to subsidize public transit passes.
- h: Require that state leasing and building sites be adjacent to public transit wherever possible.
- i: Find and foster or provide communication alternatives to travel.
- j: Provide economical, useful teleconferencing, computer conferencing, telecommuting, and videoteleconferencing equipment or services to agencies.

EXECUTIVE ORDER NO. EO 98 - 02

Page Five

- k: Invite ideas for employees and use interagency work groups to foster reduced highway travel related to state work.

LEGISLATIVE PROTOCOL FOR STATE AGENCY PERSONNEL

WHEREAS, the Governor of the State of Oregon is constitutionally required to propose the biannual state budget and is authorized to develop and introduce legislation; and

WHEREAS, the Governor of the State of Oregon authorizes Executive Branch agencies to recommend legislative concepts and budget proposals; and

WHEREAS, Executive Branch agencies are charged with implementing legislation adopted by the Oregon Legislative Assembly and signed by the Governor; and

WHEREAS, representatives of Executive Branch agencies often have a great deal of experience and expertise on matters relating to pending legislation under consideration by the Legislative Assembly; and

WHEREAS, Executive Branch agencies have a duty to provide clear, accurate, complete and useful information to the Legislative Assembly and the Governor about the potential effects of proposed statutory or constitutional changes on state policy.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The Department of Administrative Services, in conjunction with representatives from other Executive Branch agencies, shall develop and implement the following prior to the 1999 Legislative Assembly:

- a) A written code of conduct for agency personnel designated as legislative liaisons and for those agency personnel who are not designated legislative liaisons but may be called upon to interact with the Legislative Assembly; and
- b) Appropriate training opportunities for state personnel who interact with the Legislative Assembly; and
- c) An internal Executive Branch process by which complaints or concerns about the conduct of state agency personnel at the Legislative Assembly may be resolved; and,
- d) A clear policy regarding when and how Executive Branch agencies may hire outside lobbyists for the purpose of communicating with or lobbying the Legislative Assembly; and,

EXECUTIVE ORDER NO. EO 98 - 1

Page Two

- e) A clear policy regarding who may register as lobbyists and represent Executive Branch agencies before the Legislative Assembly or individual members; and
- f) A clear policy addressing the expenditure of agency or outside funds for lobbying purposes by state employees or outside lobbyists; and
- g) An appropriate roster with photos of those persons registered and authorized to represent Executive Branch agencies before the Legislative Assembly; and
- h) A plan to participate in appropriate information sessions for new legislators at the start of each session to inform them of Executive Branch policies regarding agency lobbying.

GOVERNOR'S TASK FORCE ON COMMUNITY RIGHT TO KNOW

WHEREAS the people of the State of Oregon have an interest in knowing about the presence of hazardous substances in their communities; and

WHEREAS affected businesses and individuals have expressed concern regarding their ability to meet regulatory requirements dealing with the reporting of the presence of hazardous substances; and

WHEREAS the State of Oregon has benefited from a statewide Community Information on Hazardous Substances Act (ORS 453.307 *et seq*);

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) Executive Order No. EO 97 - 20 is repealed.
- 2) There is created the Governor's Task Force on Community Right To Know. The Task Force shall review federal, local, and Oregon Community Right to Know reporting requirements, and other state and local hazardous substances reporting requirements.
- 3) In conducting such review, the Task Force shall identify the following:
 - a: What benefits does the public receive from the information collected through the current requirements and what impacts does the current requirements have on businesses.
 - b: What additional hazardous substance information may need to be routinely collected, on a statewide basis, from Oregon businesses? What benefits would the public receive and what would be the impacts on businesses?
 - c: What hazardous substance information is being collected at the local level that should be collected on a statewide basis? What benefits would the public receive and what would be the impacts on businesses?

EXECUTIVE ORDER NO. EO 97 - 24

Page Two

- d: Is duplicate hazardous substance information reporting occurring, should the duplication be eliminated, can it be eliminated and if so, how?
 - e: Are there state hazardous substance reporting programs which should be merged together and if so, which ones and how?
 - f: Is the public provided adequate access to the hazardous substance information that is collected, can access be improved and if so how?
- 4) The Task Force shall submit to the Governor and 70th Legislative Assembly a report summarizing its findings and making any recommended changes to the Oregon Community Information on Hazardous Substances Act (ORS 453.307 *et seq*) no later than January 1, 1999.
- 5) The State Fire Marshall shall provide staff support to the Task Force. All other state agencies with authority or responsibility for toxic or hazardous material handling or reporting shall cooperate with the Task Force as appropriate and furnish such information and advice as the members of the Task Force deem necessary to perform their function. Agency directors shall review the Task Force recommendations relevant to their agency and seek ways to respond where applicable.
- 6) State Agency staff representing agencies potentially affected by the community right-to-know laws shall participate in the activities of the Task Force as Technical Advisory Committee. Agencies to so participate include the State Fire Marshall, the Department of Agriculture, the Department of Environmental Quality, the Economic Development Department, the Health Division, and the Office of Emergency Management.
- 7) The Task Force shall be comprised of thirteen members appointed by the Governor. Members shall include at least 13 representatives from each of the following organizations or groups, serving at the Governor's pleasure:
- a: the Oregon business community;

EXECUTIVE ORDER NO. EO 97 - 24

EXECUTIVE ORDER NO. EO 97 - 22

USE OF STATE RESOURCES TO ENCOURAGE THE DEVELOPMENT OF QUALITY COMMUNITIES

WHEREAS it is a goal of the State of Oregon as expressed in statute and in state agency goals and programs to accommodate growth and development in a manner that promotes quality communities, protects the land base for our farm and forest industries, and reduces the cost of public facilities and services; and

WHEREAS several state agencies are responsible for implementing this goal through state policies, statutes and administrative rules; and

WHEREAS there is a need to coordinate and target these programs and activities in order to protect the long-term value of the state's investments in Oregon communities and to use limited public dollars strategically; and

WHEREAS a set of development objectives reflecting state policies, statutes and administrative rules is needed to articulate the state's community development interests and to provide a framework for coordinating and targeting state programs and actions; and

WHEREAS it is recognized that local jurisdictions may have their own set of development objectives and priorities reflecting local needs and interests; and

WHEREAS the state should negotiate to resolve differences between state and local community development objectives.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The state shall strive to ensure that its programs and activities help build and maintain quality communities which have clean air and water, housing that is affordable to community residents, a balance of jobs and housing in proximity to one another, development patterns that minimize the cost of public services, and a mix of residential, commercial, industrial and institutional uses that supports a balanced transportation system.

A. Quality Development Objectives

The following Quality Development Objectives are hereby established to articulate the state's community development interests and to establish the state's

EXECUTIVE ORDER NO. EO 97 - 22

Page Two

investment priorities for the physical development of communities. The Objectives should be used in combination with state and local partnership principles and local development objectives to help build healthy and diverse communities and regions throughout Oregon.

- 1) Promote compact development within urban growth boundaries to minimize the costs of providing public services and infrastructure and to protect resource land outside urban growth boundaries.
- 2) Give priority to a quality mix of development that addresses the economic and community goals of a community and region.
- 3) Encourage mixed use, energy-efficient development designed to encourage walking, biking and transit use (where transit is available).
- 4) Support development that is compatible with a community's ability to provide adequate public facilities and services.
- 5) Facilitate development that is compatible with community and regional environmental concerns and available natural resources (e.g., available water, air quality, etc.)
- 6) Support development that provides for a balance of jobs and affordable housing within a community to reduce the need to commute long distances between home and work, thereby minimizing personal commuting costs as well as the public and societal costs of expanding the transportation infrastructure.

B. Affected Agencies

The Quality Development Objectives are intended to guide all state agency actions related to community development.

However, the agencies on the Governor's Community Solutions Team including the Oregon Departments of Transportation, Environmental Quality, Economic

EXECUTIVE ORDER NO. EO 97 - 22

Page Three

Development, Transportation, Land Conservation and Development, and Housing and Community Services will have the primary responsibility for implementation.

C. Implementation of "Quality Development Objectives"

- 1) Each agency shall ensure that agency actions are consistent with the "Quality Development Objectives."
- 2) Each Director of a Community Solutions Team agency shall designate staff to implement the executive order and to develop a training program for agency personnel responsible for implementing the "Quality Development Objectives."
- 3) No later than April 30, 1998, each Community Solutions Team agency shall submit a report to the Governor indicating how it will implement the "Quality Development Objectives" through agency programs, activities and the budget process. At that time, the Community Solutions Team shall also identify other state agencies which shall be involved in implementation.
- 4) The Community Solutions Team agencies shall implement an on-going mechanism to ensure coordination among major programs affecting community development.
- 5) By December 31, 1998, the Community Solutions Team shall prepare a report outlining how it is implementing the "Quality Development Objectives."
- 6) Each Community Solutions Team agency shall use the population and employment forecasts developed or approved by the Department of

EXECUTIVE ORDER NO. EO 97 - 20

GOVERNOR'S TASK FORCE ON COMMUNITY RIGHT TO KNOW

WHEREAS the people of the State of Oregon have an interest in knowing about the presence of hazardous substances in their communities; and

WHEREAS affected businesses and individuals have expressed concern regarding their ability to meet regulatory requirements dealing with the reporting of the presence of hazardous substances; and

WHEREAS the State of Oregon has benefited from a statewide Community Right to Know law since 1985;

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

- 1) There is created the Governor's Task Force on Community Right To Know. The Task Force shall review federal and local reporting requirements regarding the storage of hazardous substances, as well as those embodied in the Oregon Community Right to Know Act.
- 2) In conducting such review, the Task Force shall identify the following:
 - a: the public benefit received from current federal, state, and local reporting requirements;
 - b: the impact of federal, state, and local reporting requirements upon Oregon businesses;
 - c: substantive differences and similarities between federal, state, and local reporting requirements;
 - d: existing procedures and policies for public access to information gathered under current federal, state, and local reporting requirements.
- 3) Having gathered such information, the Task Force shall undertake to determine the following:
 - a: bearing in mind the impact upon business and given the public benefit associated with current reporting requirement, what

EXECUTIVE ORDER NO. EO 97 - 20

Page Two

additional hazardous substance information, if any, should be added to current reporting requirements under the Oregon Community Right to Know Act?

- b: how may duplicate state and local reporting requirements be eliminated to render compliance with state and local reporting requirements more efficient and in so doing further the benefits to the public and minimize the impacts upon businesses?
 - c: whether reporting requirements under the Oregon Community Right to Know Act might be merged together bearing in mind the public interest and with the impact upon business in mind, and if so, which reporting requirements?
- 4) The Task Force shall submit a report to the Governor and 70th Legislative Assembly summarizing its findings and making any recommended changes to the Oregon Community Right to Know and Protection Act no later than January 1, 1999.
 - 5) The State Fire Marshall shall provide staff support to the Task Force. All other state agencies with authority or responsibility for toxic or hazardous martial handling or reporting shall cooperate with the Task Force as appropriate and furnish such information and advice as the members of the Task Force deem necessary to perform their function.
 - 6) State Agency staff representing the State Fire Marshall, the Department of Agriculture, the Department of Environmental Quality, the Economic Development Department, the Health Division, and the Office of Emergency Management shall participate in the activities of the Task Force as a Technical Advisory Committee.
 - 7) The Task Force shall be comprised of thirteen members, appointed by the Governor, consisting of a representative from each of the following organizations or groups, and such other members as the Governor may see fit to appoint:
 - a: the Oregon business community;

EXECUTIVE ORDER NO. EO 97 - 18

CRIMINAL JUSTICE: PROGRAM EFFECTIVENESS DATA AND RESEARCH NEEDS

The Oregon criminal justice community needs to continue to address program evaluation and research issues. Program and offender performance data must be readily available to judges, attorneys, and other practitioners to result in decisions based on the effectiveness of correctional programs in reducing the future criminal conduct of an offender. Criminal justice agencies, policy makers, legislators, and practitioners must have information readily available upon which to base their decisions.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. The Superintendent of the Department of State Police shall convene a working group to study and make recommendations regarding the criminal justice community's need for performance data and useful research thereto.
2. The working group shall be comprised of representatives of the following, appointed by each respective entity's administrative officer unless specified otherwise:
 - a: the Board of Parole and Post-Prison Supervision;
 - b: the Department of Corrections;
 - c: the Criminal Justice Commission;
 - d: the Oregon Youth Authority;
 - e: the State Commission on Children and Families;
 - f: the Office of Alcohol and Drug Abuse Programs;
 - g: a local public safety coordinating council, as appointed by the Superintendent of the Department of State Police;
 - h: a community corrections agency, as appointed by the Superintendent of the Department of State Police;
 - i: the Oregon State Sheriffs Association;

EXECUTIVE ORDER NO. EO 97 - 18

- j: the Oregon District Attorneys Association;
 - k: the Oregon Juvenile Department Directors Association;
 - l: a judge, appointed by the Chief Justice of the Oregon Supreme Court;
 - m: a crime victim, as appointed by the Superintendent of the Department of State Police;
 - n: the Program Manager of the State Police Criminal Justice Information Standards Program;
 - o: the Administrator of the Intergovernmental Services Bureau of the Department of State Police, who shall serve as chair of the working group.
3. The Superintendent of the Department of State Police may appoint additional members of the working group.
4. The work group shall identify issues and develop operational solutions which include as appropriate:
- a: the structure, staffing, governance and organizational location of any program recommended as part of the solution;
 - b: scope and priorities of activities undertaken as part of the solution;
 - c: legislative concepts necessary to implement the solution;
 - d: budget and recommended funding source for the solution;
 - e: collection, analysis, and dissemination of information to stakeholders;
and
 - f: coordination of existing or planned efforts between stakeholders.

EXECUTIVE ORDER NO. EO 97 - 18

CHARTER SCHOOL OPTION

WHEREAS, new types of schools, known as public charter schools, should be created to provide new, innovative, and more flexible ways of educating children within the public school system; and

WHEREAS, these model schools can serve as a catalyst for efforts to improve other public schools and the public school system as whole; and

WHEREAS, the encouragement of public charter schools shall not come at the expense of a strong public school system, nor should there be a diversion of public funds to convert private or religious schools to charter schools; and

WHEREAS, the goals of these public schools should include

- * an increase in student learning and achievement;
- * the provision of greater choices of learning opportunities for students;
- * to better meet the academic needs and match the academic interests of individual students;
- * to build stronger working relationships among educators, parents, and other community members;
- * the creation of new professional opportunity for teachers;
- * the establishment of additional forms of accountability for schools;
- * the creation of innovative measurement tools; and

WHEREAS, enactment by the Sixty-ninth Legislative Assembly of legislation enhancing the authority for the creation of alternative education programs offers an opportunity to encourage the establishment of public charter schools.

EXECUTIVE ORDER NO. EO 97 - 17

Page Two

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

The State Board of Education shall consider the goals of public charter schools and incorporate the abovementioned goals to the extent possible in administrative rules implementing the alternative education program legislation enacted by the Sixty-ninth Legislative Assembly.

OREGON ENVIRONMENTAL JUSTICE CITIZEN ADVISORY BOARD

Environmental Justice is the fair treatment and meaningful involvement of people of all colors, national origins, cultures, income levels, age, gender and educational level, in the development, implementation and enforcement of environmental laws, regulations and policies.

WHEREAS: The Oregon Environmental Equity Citizen Advisory Committee Report delivered to Governor Barbara Roberts in October, 1994 included a number of recommendations for ways in which the State of Oregon can better address issues of environmental equity; and

WHEREAS: The Advisory Committee found that minority and low income communities generally lack adequate access to environmentally-related governmental processes and decision-making; and

WHEREAS: The primary recommendation made by the Advisory Committee was that an advisory board be created within the state's natural resource agency structure to, "oversee the implementation of the Committee's recommendations."

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. A 12-member Environmental Justice Advisory Board shall be appointed by the Governor and serve at the Governor's pleasure, to function from August 1997 to July 1999. The Board shall be comprised of citizens representing minority and low income communities, environmental interests, and the geographically diverse areas of Oregon.
2. All agency directors with authority in natural resource or environmental related areas, as designated by the Governor's Natural Resource Office, will report to the Environmental Justice Advisory Board and the Governor annually on the results of their efforts to implement the recommendations of the Environmental Equity Task Force Report.
3. The report shall propose solutions for issues of environmental justice in Oregon. The report shall:

EXECUTIVE ORDER NO. EO 97 - 16

Page Two

- a: Identify which recommendations made by the Oregon Environmental Equity Citizen Advisory Committee Report are relevant and are being addressed with each program or policy. Evaluate the success of the agency in incorporating the task force recommendations into the relevant program or policy;
 - b: Explain how the suggestions and input from minority and low income communities, expressed through the Environmental Justice Advisory Board, have been considered and/or integrated into the program or policy;
 - c: Supply information on agency plans to expand upon the 1994 Advisory Committee report recommendations to further the progress of eliminating environmental injustice in Oregon.
4. All designated agencies with authority in natural resource or environmental related areas shall cooperate with the Board, by providing information as needed, and appearing before the board or its committees, as requested.
5. The Board is to annually submit a report to the Governor beginning August 1, 1998, setting forth its view of agency progress in furthering recommendations embodied in the 1994 Advisory Committee Report and identifying any other environmental justice issues the Board believes need attention.

EXECUTIVE ORDER NO. EO 97 - 15

OVERSIGHT TASK FORCE ON MENTAL HEALTH INTEGRATION

As mental health services traditionally provided by community mental health programs are integrated into the Oregon Health Plan, many Oregonians will become eligible for services through an expansion of benefits under the federal Medicaid program administered by the Oregon Department of Human Resources. Those persons who do not qualify for Medicaid, however, will continue to be served by the county-based community mental health system.

All stakeholders in Oregon's community mental health system and the Oregon Health Plan are concerned that the integration of mental health services be accomplished in an effective manner, while preserving the viability of community mental health programs. It is in Oregon's best interests to maintain the community mental health system in order to ensure that adults with serious and persistent mental illness and children suffering from serious emotional disturbances receive the care they require.

An Oversight Task Force on Mental Health Integration is required to monitor all aspects of the transition of mental health services to managed care under the Oregon Health Plan. The Task Force will identify areas of the state in which the viability of community mental health programs may be threatened, and as necessary, make recommendations to ameliorate such situations.

IT IS HEREBY ORDERED AND DIRECTED:

- 1) There is created the Oversight Task Force on Mental Health Integration.
- 2) The Task Force shall be comprised of nine members, appointed as follows:
 - a: One member of the Oregon Senate as appointed by the President of the Senate;
 - b: One member of the Oregon House of Representatives as appointed by the Speaker of the House;
 - c: One representative designated by the Association of Community Mental Health Programs;

EXECUTIVE ORDER NO. EO 97 - 15

Page Two

- d: The Director of the Department of Human Resources, or his designee;
 - e: Three members of the Oregon Health Council, appointed by the Governor, two of whom shall not be associated with health care, mental health or county government interests;
 - f: One member of the Oregon Health Services Commission, appointed by the Governor, familiar with the integration of mental health services into the prioritized list of condition-treatment pairs; and
 - g: the Administrator, Office for Oregon Health Plan Policy and Research.
- 3) The Task Force shall acquire information and make evaluations and recommendations concerning:
- a: The integration of mental health benefits and services under the Oregon Health Plan, including, but not limited to, the Request for Proposal and Contracting Process undertaken by the Mental Health and Development Disability Services Division;
 - b: The effects of the integration of mental health benefits and services, including but not limited to, access to, quality and cost of mental health treatment, and the coordination of services between and among providers of physical health and mental health services;
 - c: The effects of integration and managed care on vulnerable populations; e.g., seriously mentally ill adult, emotionally disturbed children;
 - d: Circumstances in which the viability of a county's community mental health program is threatened;

EXECUTIVE ORDER NO. EO 97 - 15

Page Three

- e: The fiscal aspects of integrating mental health services, including but not limited to, aggregate and per person revenues and expenses, administrative costs, and provider reimbursements and profits.
 - f: The structure of administration and management of mental health services within Oregon's Medicaid program.
- 4) The Task Force shall:
- a: Regularly solicit input from interested stakeholder organizations including family and consumer groups, health plans and mental and physical health providers, community mental health programs, senior and disabled services organizations, organizations representing children, and agencies of state government.
 - b: Transmit in a timely manner findings and recommendations concerning issues that come before it to the Department of Human Resources, the Office of Oregon Medical Assistance Programs, the Mental Health and Development Disability Services Division and the Emergency Board, as appropriate.
 - c: Submit a report with recommendations to the Governor and Emergency Board after the first year of integration and prior to the second-year Request for Proposal and contracts, and
 - d: Develop an independent and comprehensive final report to the 70th Legislative Assembly on mental health integration and recommendations for legislation, as necessary, to improve integration of mental and physical health care delivery to the populations served and to increase the efficiency and effectiveness of the integrated health care program funded

EXECUTIVE ORDER NO. EO - 97 - 13

YEAR 2000 PROBLEM

WHEREAS: The Year 2000 Problem pervades computer systems worldwide. Early computer programs were constrained to using only the last two digits of each year. As a result, two digit year codes are the norm in all kinds of software and equipment. As the Year 2000 neared, two digit year codes were recognized to be a major design flaw, in systems around the world. This flaw is commonly referred to as the *Year 2000 Problem*.

WHEREAS: If not corrected, the Year 2000 Problem will disrupt public services. The nature of the Year 2000 Problem varies among programs and computer types. Therefore, the damage it causes may take many forms. Flawed programs may mis-calculate dates, days of the week, years of age, or any passages of time. Some programs could cease to function. Others could delete records. Flaws in one program may cascade into other programs that utilize its flawed output. Essential public services could be disrupted.

WHEREAS: The solution is not quick or easy. Every state agency must search out the Year 2000 dating flaws in all its programs and equipment. While finding and fixing these flaws, the agencies must continue normal operations. All systems must be tested before they can be relied upon. In addition, agencies must protect their systems from potentially flawed data from other systems.

IT IS HEREBY ORDERED AND DIRECTED THAT:

- 1. Each agency of the state shall be responsible to find and fix the Year 2000 Problem in its essential systems.** Agencies shall also protect their essential systems from imports of other systems' data which are not Year 2000 compliant. Agencies shall make maximum practical use of existing resources. Each agency must prepare a plan for correction of the Year 2000 problem within its computer programs and equipment and submit that plan to the Department of Administrative Services.
- 2. Year 2000 solutions shall be a state priority.** To the extent it is practical to do so, each agency shall defer commencing new computer projects until acceptance of its Year 2000 plans by the Department of Administrative Services.

EXECUTIVE ORDER NO. EO - 97 - 13

Page Two

- 3. State agencies shall purchase no new software, system, enhancement, or equipment that fails to meet Year 2000 standards unless its use will end by 2000.**
- 4. The Department of Administrative Services shall continue to coordinate the state's *Year 2000 Project*.** Among other coordination tasks, the department shall:
 - a) Set year 2000 compliance standards for the state.**
 - b) Require progress reports from each state agency that is not Year 2000 compliant.**
 - c) Analyze and coordinate any Year 2000 funding requests.**
 - d) Make quarterly progress reports to the Governor's Chief of Staff.**
- 5. Agencies shall report to the Department of Administrative Services such information as the department may require.**

Phil Keisling
SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 97 - 10

TOBACCO REDUCTION ADVISORY COMMITTEE

On November 5, 1996, Oregon voters passed Ballot Measure 44, resulting in an increase in the state tobacco tax. Of the total resultant tobacco tax revenue, 5.77 per cent is to be credited to the Tobacco Use Reduction Account and continuously appropriated to the Oregon Health Division to fund prevention and education programs designed to reduce cigarette and tobacco use.

This Executive Order creates the Tobacco Reduction Advisory Committee in order to assist the Oregon Health Division in crafting, analyzing, and prioritizing such programs which seek to reduce statewide tobacco use. It is essential that we achieve this goal, for the economic, health, and social costs attributed to tobacco use are substantial and inflict a needless toll upon our state and its citizens.

Tobacco use is linked to one quarter of all deaths in Oregon. It is the leading cause of preventable death in Oregon, accounting for more than four times the number of deaths from motor vehicle accidents, suicide, AIDS, and homicide combined. Mothers' use of tobacco is related to the occurrence of low-birth weight babies and infant deaths.

The direct costs of smoking in Oregon totaled over \$400 million in 1990, with 43% paid from public funds and 57% through private insurers and individuals. Employers bear the burden of indirect costs: tobacco-related illness led to over \$100 million in lost productivity during 1990. The 6500 Oregon deaths linked to tobacco in 1990 led to a further \$800 million in lost productivity.

In December, 1995, the Tobacco-Free Coalition of Oregon published the Oregon Statewide Prevention Plan. The Plan outlines goals, objectives, and strategies to reduce tobacco use and its impact on the health and economic well-being of Oregonians. It calls for a broad-based, comprehensive effort that involves state and local policy makers, the health care community, businesses, educators, parents, and children.

The Plan also provides the blueprint for allocation of tax revenues appropriated to the Health Division. Strategies outlined in the Plan have been found effective in other states and focus heavily upon changing public policy and community norms. The Plan shall

EXECUTIVE ORDER NO. EO - 97 - 10

Page Two

serves as the strategic guide for the Committee as it seeks to reduce tobacco use in Oregon through the creation and implementation of specific programs aimed at the reduction of tobacco use.

The Tobacco Reduction Advisory Committee created by this Executive Order will be comprised of representatives from both private organizations and state agencies dedicated to the reduction of the harmful impact of Oregonians' tobacco use. The Committee will advise and assist the Health Division in the development and oversight of the Tobacco Prevention and Education Program. Prime among the Committee's goals is to assist the Health Division in establishing an outcome-oriented program which effectively decreases statewide tobacco use.

IT IS HEREBY ORDERED AND DIRECTED:

1. The Tobacco Reduction Advisory Committee is created. The Committee shall be comprised of one representative from each of the following organizations and agencies as designated by the executive authority of the organization or agency:
 - a. the American Cancer Society;
 - b. the American Heart Association;
 - c. the American Lung Association;
 - d. the Oregon Association of Hospitals;
 - e. the Oregon Medical Association;
 - f. the Conference of Local Health Officials;
 - g. Oregon Health Systems in Collaboration;
 - h. the Tobacco-Free Coalition of Oregon;
 - i. the Office of Alcohol and Drug Abuse Programs;
 - j. the Department of Education;
 - k. the Governor's Office;
 - l. the Oregon Health Division;
 - m. the Oregon Public Health Association.

2. Representatives may be removed and replaced at the discretion of

EXECUTIVE ORDER NO. EO 97 - 10

Page Three

the executive authority of the organization or state agency which they represent. The Health Division may request such removal and replacement if the representative fails to attend meetings or otherwise participate in the Committee's work. Such a request by the Health Division shall be binding upon the respective representative's organization or agency.

3. The Health Division representative and a representative chosen by a majority of the Committee shall serve as co-chairs of the Committee.
4. The Health Division shall convene and staff the meetings of the Committee. The Committee shall meet a minimum of two times per year, with additional meetings held as deemed necessary by the Health Division.
5. The Committee shall
 - a. Review the goals, strategies, and desired outcomes of the tobacco prevention and education programs;
 - b. Review the implementation plan for the Tobacco Prevention and Education Program and accompanying budget of the Health Division;
 - c. Review Administrative Rules drafted by the Health Division dealing with tobacco reduction and advise the Health Division on any necessary or desirable amendments;
 - d. Review the biennial report mandated by Section 15 of Ballot Measure 44 prior to its submission to the Legislative Assembly and the Governor and advise the Health Division on any necessary or desirable amendments;

EXECUTIVE ORDER NO. EO - 97 - 10

DETERMINATION OF A STATE OF EMERGENCY IN COOS, CURRY, DOUGLAS, GILLIAM, HOOD RIVER, MARION, LINCOLN, LINN, MORROW, MULTNOMAH, POLK, SHERMAN, TILLAMOOK, UMATILLA, WASCO, WASHINGTON, WHEELER AND YAMHILL COUNTIES

Pursuant to ORS 401.055, I find that a threat to life, safety, and property exists due to severe weather that has caused a natural disaster of major proportions to the state highways system in Coos, Curry, Douglas, Gilliam, Hood River, Marion, Lincoln, Linn, Morrow, Multnomah, Polk, Sherman, Tillamook, Umatilla, Wasco, Washington, Wheeler and Yamhill Counties. Beginning December 21, heavy rains caused flooding, landslides and erosion throughout these counties. This has resulted in damage to roads, bridges and private property totaling \$7,080,000.00.

These counties have certified that they have expended available resources and are seeking state resources in order to take essential protective measures, and assess damages in areas affected by flooding and landslides in order to mitigate the threat to public safety and alleviate emergency conditions.

IT IS HEREBY ORDERED AND DIRECTED:

1) The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect the recovery of transportation systems damaged by the state of emergency declared in this Order.

**DETERMINATION OF A STATE OF EMERGENCY IN COLUMBIA COUNTY
DUE TO SEVERE WEATHER AND FLOODING**

Pursuant to ORS 401.055, I find that a threat to life, safety, and property exists due to severe weather that has caused major flooding in Columbia County. The county has certified that they have expended available resources and are seeking state resources to take essential protective measures, and assess damages in areas affected by flooding and landslides to mitigate the threat and alleviate emergency conditions. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED THAT:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Oregon National Guard, in coordination with the Office of Emergency Management, shall provide essential assistance that is deemed necessary to carry out this mission.
3. All state departments shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected areas in Columbia County.

This order was made by verbal proclamation at 3:03 p.m. on the 3rd day of January, 1997, and signed this 9 day of January, 1997, at Salem, Oregon.

The county has certified that they have expended available resources and are seeking state resources to take essential protective measures, and assess damages in areas affected by flooding and landslides to mitigate the threat and alleviate emergency conditions. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED THAT:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Oregon National Guard, in coordination with the Office of Emergency Management, shall provide essential assistance that is deemed necessary to carry out this mission.
3. All state departments shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected areas in Baker County.

This order was made by verbal proclamation at 9:20 p.m. on the 1st day of January, 1997, and signed this 2 day of January, 1997, at Salem, Oregon.

EXECUTIVE ORDER NO. EO 96 - 47

WILLAMETTE VALLEY LIVABILITY FORUM ADVISORY BOARD

WHEREAS on February 27, 1996, Governor Kitzhaber accepted the recommendation of a blue ribbon panel to create the Willamette Valley Livability Forum, and;

WHEREAS the result of several years of analysis and deliberation has determined that the Forum shall be a broad-based, voluntary effort to bring together members of the business community and private citizens, and;

WHEREAS the forum shall coordinate the efforts of local, state, and federal governments, in order to understand and shape the development of the Willamette Valley in the face of rapid growth, and;

WHEREAS the Forum shall educate leaders and citizens about development trends and interrelationships among communities in the Valley, and;

WHEREAS the Forum shall advise local and state officials on issues relating to the economic development and physical environment of the Valley, and;

WHEREAS the Forum shall encourage leaders and citizens to create, promote, and implement a shared vision for shaping the Valley's growth for the next 50 years, and;

WHEREAS the Forum will need assistance and direction in fulfilling these tasks,

THEREFORE,

IT IS HEREBY ORDERED AND DIRECTED:

1. There is established a Willamette Valley Livability Forum Advisory Board.
2. The Advisory Board shall provide advice regarding Forum meetings, review and guide the Forum work plan, and select additional Forum participants.
3. The Advisory Board shall consist of 12 voting members appointed by the Governor and serving at his pleasure. The 12 members shall serve for staggered, four-year terms, with four members' terms expiring on January 31, [1998] four members' terms expiring on January 31, 1999, and four

members' terms expiring on January 31, 2000. The Advisory Board may select additional, ex officio members as it deems proper.

4. The composition of the Advisory Board members and Forum participants shall consist of private citizens, elected and appointed officials, chief executive officers, members of boards of directors, and senior managers of the entities which they represent. Ex-officio members may include representatives of federal agencies which exercise a key role in the Willamette Valley.
5. In addition to the 12 Board members, the Governor shall serve as co-chair of the Advisory Board and shall appoint a member of the Advisory Board as the other co-chair. By virtue of his chairmanship, the Governor shall exercise full member rights with regard to Board participation and voting.
6. When a position on the Advisory Board becomes vacant, a nominating committee appointed by the co-chair of the Advisory Board shall develop a list of qualified nominees and submit them to the Governor, who shall fill the vacancy by appointment after due, yet not exclusive, consideration of said list.
7. The Advisory Board shall:
 - A. Select additional Forum participants from across the Valley which represent the private sector as well as industry groups, local and regional governments, educational institutions, concerned citizens and interest groups, and state agencies.
 - B. Guide the work of the Forum such that it includes:
 - i) Researching and evaluating livability and growth issues;
 - ii) Analyzing current development trends;
 - iii) Development of alternative development scenarios;
 - iv) Formulation of a vision of a preferred future for the Willamette Valley; and
 - v) Creation of recommendations to achieve elements of this vision and benchmarks to measure progress.

- C. Help integrate and focus existing efforts of local, state, and federal governments, research universities, and members of the private sector in order to lay a comprehensive framework for a vision livability for the Willamette Valley.
 - D. Discuss common concerns and issues, consider forecasted development trends, and articulate and promote a shared vision for enhancing the livability of the Willamette Valley.
8. The Willamette Valley Livability Forum Advisory Board may accept contributions of funds and assistance from the United States or its agencies, or from any other source, public or private, and agree to conditions thereon not inconsistent with the purposes of the Willamette Valley Livability Forum.
 9. Advisory Board members and Forum participants shall receive no compensation for their involvement in the activities of either group.
 10. This Executive Order shall remain in effect until amended or rescinded.

Done in Salem, Oregon, this 20th day of December, 1996.

EXECUTIVE ORDER NO. EO 96 - 46

SERVICE IN OREGON NATIONAL GUARD

Oregon requires the ability to maintain a well organized militia ready and able to assist Oregonians in the event of natural disasters and disturbances. The past year has seen widespread flooding and wildfires which place this need in sharp focus.

In addition to providing for a well organized militia, Oregon law requires that employers grant leaves of absence to employees who are members of the organized militia when called to service by the Governor for emergency purposes. Confusion over the operation of this provision of state law requires this Executive Order, which seeks to both reaffirm Oregon's commitment to its organized militia as manifested in laws protecting employees' National Guard service-rights, and clarify the operation of such laws.

This Order also serves to acknowledge the important commitment each member of the Oregon National Guard and other reserve components make so that the organized militia constitutes a ready force able to successfully fulfill federal and state requirements.

IT IS HEREBY ORDERED AND DIRECTED:

1. No officer, employee, or agent within the Executive Branch of State Government shall, in carrying out their duties, violate any law by discriminating against or harassing any member of a Oregon National Guard or reserve component in retaliation for, or because of, that member's attempts or efforts to fulfill military duty requirements.
2. All state agency heads shall advise agency staff of the legal requirement of ORS 399.230, ORS 408.240-.290, ORS 652.250, 34 U.S.C. sec 4301 *et seq*, and relevant provisions of the Uniformed Service Employment and Re-Employment Rights Act of 1994.
3. All state agency heads shall advise agency staff of the contents of this Executive Order and further undertake all necessary steps to ensure that its intent is both understood and implemented.

Done at Salem, Oregon, this 16th day of December, 1996.

EXECUTIVE ORDER NO. EO - 96 - 45

DETERMINATION OF A STATE OF EMERGENCY IN LINCOLN, CLACKAMAS AND CURRY COUNTIES DUE TO LANDSLIDES AND FLOODING

Pursuant to ORS 401.055, I find that the state highway system has suffered damage due to landslides and flooding as a result of heavy rainfall beginning November 18, 1996. Local federal aid highways in Curry County have also sustained floods and landslide damage. Immediate repair and reconstruction of the highway system is vital for the safety of the traveling public and citizens in the affected areas of Lincoln, Clackamas and Curry Counties. These counties have expended available resources and are seeking additional resources to protect lives, assess the damage in areas affected by landslides and flooding, and to mitigate and alleviate hazardous conditions. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED THAT:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Department of Transportation is authorized to seek federal highway assistance funds for repair and reconstruction in the recovery from this emergency.
3. All state departments, including the National Guard, shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected areas in Lincoln, Clackamas and Curry Counties.

RE: THE STATE OF EMERGENCY IN DOUGLAS COUNTY DUE TO FLOODING**

Pursuant to ORS 401.055, I am extending Executive Order 96-43, the declaration of a state of emergency in Douglas County to include general damages from flooding and landslides that have affected highway systems and property. There is imminent threat from forecasted wind and rain storms that could cause further damage. The county has expended available resources and are seeking additional resources to protect lives, assess damages in areas affected by flooding, and to mitigate the threat and alleviate hazardous conditions. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED THAT:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Department of Transportation is authorized to seek federal highway assistance funds for repair and reconstruction in the recovery from this emergency.
3. All state departments, including the National Guard, shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected areas in Douglas County.

EXECUTIVE ORDER NO. EO - 96 - 40

OREGON GEOGRAPHIC INFORMATION COUNCIL

Geographic information about the character and location of the state's human, economic, natural, and infrastructure resources, and the activities that affect and are affected by those resources, is essential to all levels of government in Oregon. Mapping, land records, and geographic information systems (GIS) are the primary tools for analyzing this information.

For these reasons, Executive Order No. EO 83 - 15 established the State Map Advisory Council; the Council was given additional responsibilities by Executive Order No. EO 87 - 11. Executive Order No. EO 89 - 16 charged the State Map Advisory Council with establishing a statewide GIS plan, establishing standards and procedures for digital map data, and providing direction to the State Service Center for Geographic Information Systems created by the Order. Executive Order No. EO 94 - 16 further revised the State Map Advisory Council, renamed the council to the Oregon Geographic Information Council, and broadened the representation to include the human resource and public safety agencies.

State agencies require access to complete, current and accurate geographic information as both human and natural resource policies become more complex. Furthermore, the completeness and accuracy of geographic information relies heavily on shared information between state, federal, and local governments. Consequently, further revision of the Oregon Geographic Information Council's appointed representation is now required.

Oregon requires leadership to ensure it maintains a consistent vision for geographic information activities within the state and between governments. Such leadership requires a forum to encourage participation and to facilitate sharing of information about all aspects of geographic information, including GIS, mapping, global positioning systems, satellite imagery, and desktop tools. Finally, the need to assure the wisest use of limited resources requires a central point for coordination and partnerships.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1. Executive Order No. EO 94 - 16 is hereby rescinded.

2. This executive order continues the Oregon Geographic Information Council (OGIC). The OGIC shall:
 - a. Provide leadership within state government regarding the accumulation, dissemination, analysis, and management of geographic information, including, but not limited to
 - i. Advocacy before the Oregon Legislative Assembly, United States Congress, county commissions, city councils, and the private sector;
 - ii. Exploration of “best practices” relating to geographic information, while determining if such practices are applicable to Oregon;
 - iii. Creation and promotion of a statewide mission for geographic information, and
 - iv. Direction of that statewide mission through work with the Legislative Assembly, the Information Reserve Management Council, and the Federal Geographic Data Exchange group.
 - b. Provide a statewide forum for all geographic information issues; in providing such a forum, the OGIC shall
 - i. Encourage the involvement of all parties potentially affected by geographic information issues;
 - ii. Function as the primary point of contact on discussions regarding geographic information issues affecting state agencies;
 - iii. Facilitate the free flow of information between interested parties.
 - c. Fulfill a policy, planning, and assessment role regarding geographic information issues, including
 - i. Conduct of an ongoing review of statewide geographic information

systems, as well as oversight of GIS Service Center Policy, in coordination and consultation with the Information Resources Management Division of the Department of Administrative Services;

- ii. Prioritization of geographic information initiatives;
- iii. Development of geographic information guidelines and standards to be adopted by the IRM Council.

- d. Promote coordination and partnerships among federal, state, and local government entities regarding geographic information issues.

3. The OGIC shall consist of representatives of the following state agencies, selected by the director of the respective agency:

- a. the Department of Agriculture, the Department of Corrections, the Employment Department, the Department of Environmental Quality, the Department of Fish and Wildlife, the Department of Forestry, Parks and Recreation Department, the Department of Human Resources, the Department of Transportation, the Department of Revenue, the Water Resources Department, and the Division of State Lands.

Additionally, the OGIC shall consist of

- b. the Manager of the State Service Center for GIS;
- c. two representatives of local governments, selected by the Oregon GIS Association;
- c. and a representative of one federal agency, appointed by the Interorganizational Resources Information Council.

All members shall serve at the pleasure of the respective appointing authority for terms of four years. Additionally, the OGIC shall encourage other interested state and federal agencies to participate.

4. The Director of the Department of Administrative Services shall appoint a Council member chair of the Council. The chair shall serve for such term or terms as the director shall determine. Additionally,

- a. The OGIC may establish standing committees and ad hoc work groups as needed to achieve its purposes and to ensure the continual involvement of local and federal agencies.
- b. The chair shall call the OGIC to meeting at least once per calendar quarter.
- c. The State Service Center for GIS shall provide staff assistance to the OGIC.
- d. No members of the OGIC shall receive compensation for their services.

5. This executive order continues the State Service Center for Geographic Information Systems; its purpose remains to coordinate statewide GIS projects, provide and administer a library of GIS data, and manage access to that data. The State Service Center for GIS shall:

- a. Develop and document statewide digital map-information set, as well as provide federal, state, county and local governments, and private sector actors access to that information.
- b. Provide technical support, GIS training, consultation, project support, and programming services to other state agencies.
- c. Coordinate with both state agencies and the private sector the maintenance, gathering, distribution, and licensing, where applicable, of geographic information.
- d. Provide for project support on cost recovery basis.
- e. Provide staff support to the Chair of the Council.

6. State agencies shall coordinate their land resources management, GIS, mapping, and other geographic information activities with the OGIC, the GIS Service Center, and other local and federal agencies. Where appropriate, state agencies shall:

- a. Create and maintain geographic data themes, and provide updates of that data to the Digital Map Library at the GIS Service Center on a schedule to be determined by the agency data administrator and the GIS data librarian at the GIS Service Center.
- b. Share information through the OGIC regarding projects involving geographic information and related systems technology.
- c. Coordinate with the OGIC and the GIS Service Center before making decisions about planning and development of projects involving the acquisition of geographic data, hardware, or software.
- d. Participate in the review and updating of an Oregon Geographic Information Council Plan and adhere to the policies and standards established in the plan.

7. The Information Resource Management Division, Department of Administrative Services, shall work with the OGIC to develop policies and guidelines to guide agency acquisition of geographic information, based upon, yet not limited to, the following considerations:

- a. the-cost effectiveness of computer hardware and software;
- b. compatibility with statewide needs;
- c. compliance with "open architecture" standards;
- d. whether or not agency acquisition or efforts duplicate the efforts of other agencies or the GIS Service Center.

GOVERNOR'S COUNCIL ON DOMESTIC VIOLENCE

An increasingly significant portion of criminal offenses in Oregon stem from domestic violence; its consequences are serious and visible. Fortunately, grassroots community organizations and both state and national advocacy groups have heightened awareness of domestic violence, removing the veil behind which domestic violence remained for so long due to the perception that it constituted solely a private, family, or women's matter best addressed through means other than public intervention.

Contrary to that perception, the effects of domestic violence are widespread, crossing all social, racial and ethnic boundaries. Failure to adequately and comprehensively respond to domestic violence threatens to impede Oregon's progress toward achieving its economic, housing, health, educational, community empowerment, and quality-of-life goals. Specifically, domestic violence impacts

Women. Domestic violence is directed toward women in nearly 95% of reported cases nationwide, hindering women's pursuit of their basic human rights.

Crime. During a six month period during 1995, Oregon law enforcement officers responded to 23, 247 domestic violence incidents. Furthermore, twenty percent of all homicides in Oregon from the period 1991-1995 were the result of domestic violence.

Housing. Forty-three percent of homeless women and children nationwide report domestic violence as the primary cause of their homelessness. In Oregon, approximately eighty percent of all domestic violence victims are unable to take advantage of shelter facilities due to those facilities' lack of space.

The economy. Nationwide, domestic violence costs American businesses an estimated three to five billion dollars annually in lost work time, increased health-care costs, higher employee turnover, and lowered worker productivity.

Drugs. Nationwide, forty-five percent of female alcoholics report a history of spousal battering; ninety percent of pregnant substance abuse users taking part in the Multnomah County Corrections' ADAPT programs are victims of either domestic violence or sexual assault.

Public health. Nationwide, spousal abuse accounts for one in five medical visits by women and thirty percent of all emergency room visits. Eight percent of pregnant women in the United States are battered during their pregnancies. These women are twice as likely to miscarry, and four times as likely to give birth to low-birth weight infants. One out of every four female suicide attempts in the United States is preceded by spousal abuse. Across America, domestic violence results in an estimated loss of \$100 million annually in abuse-related medical bills.

Education. With one in eight film scenes depicting an act of rape, our educational system must teach our children that violence toward women is unacceptable. In one nationwide study, eighty percent of high school students believed that a husband was justified in forcing his wife to engage in sexual relations.

Utilizing a grant from the State Justice Institute, the Oregon Judicial Department created the Oregon Domestic Violence Council in 1994. Under the direction of leading members of the Oregon judiciary and with the involvement of the Oregon Coalition Against Domestic & Sexual Violence, the Council developed a coordinated community, county, and state-wide response to domestic violence, as well as protocols for law enforcement, the judiciary, the educational system, local advocacy groups, and health professionals.

The Council formulated statewide needs-assessments, while compiling data and research on domestic violence. Ultimately, the Council provided the framework for the work that remains to be done, if Oregon is to respond effectively to domestic violence.

Without the Council, current levels of research will not alter the fact we lack sufficient information regarding the causes and effects of domestic violence. The Council provided the framework for such research, as well as the development of strategies to respond effectively to domestic violence, to occur.

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED:

1) The Governor's Council on Domestic Violence is hereby created. The Council shall consist of ten members, appointed by the Governor; the Governor shall appoint a chair of the Council from among the ten members.

Five of the Council's ten members shall consist of persons currently active in the domestic violence field, while the remaining five members shall consist of lay citizens with diverse backgrounds and experiences. The composition of the Council shall reflect the multi-cultural composition of the state of Oregon to the greatest extent possible.

Council members shall serve staggered terms; thus, initially, the terms of four member shall expire on November 1, 1998, the terms of three members shall expire on November 1, 1999, and the terms of the remaining three members shall expire on November 1, 2000. Thereafter, all members shall serve terms of four years' length.

The Council may add non-voting ex officio members, associate members, and subcommittees as it deems appropriate. No members of the Council, regardless of their status as voting members, ex officio members, associate members, or any other classification, are entitled to compensation for their services.

2) The Council shall establish procedures to ensure public input; such procedures shall include notice to both domestic violence-related groups and interested individuals of public meetings held at such time and places as the Council shall determine. However, as a body which reports solely to the Governor, the Council is not subject to Oregon's public meetings law.

3) Creation of the Council signals a statewide initiative targeting violence against women and children. The Council shall determine how the state might best work to support the development of a coordinated community, county, and state-wide response for the prevention of domestic violence and protection of domestic violence victims, and accordingly shall recommend strategies aimed toward the prevention and reduction of domestic violence.

4) Initially, the Council shall consider additions to the statewide needs assessment conducted by the Oregon Domestic Violence Council, including, but not limited to,

a) needs specific or unique to racial, ethnic, or rural communities, based in part on the incidence of domestic violence within those communities;

b) the cost of fully funding domestic violence services for all domestic victims and their children;

c) the need for changes in the manner in which the Law Enforcement Data System enters domestic violence reports so that the system reflects a unified, coherent database from which state-wide analysis is possible;

d) law-reform needs which become apparent after a review designed to assess how provisions of state statutory law, the Oregon Administrative Rules, and state substantive law relating to juvenile justice issues impact domestic violence; this review shall specifically focus upon ORS 133.055 and ORS 133.310(3), Oregon's mandatory arrest statutes.

5) The Council shall review current state and private work-place policies regarding domestic violence and work with public and private employers, as well as labor unions and other employee representatives, in order to improve those policies based upon the goals which underlay the Council's strategies to prevent and reduce domestic violence.

6) The Council shall review practices and training standards for medical health professionals, as well as members of other professions whose tasks and duties place them in frequent contact with persons involved in domestic violence. Upon review, the Council shall recommend practices and training standards which empower such professionals to act in furtherance of the Council's strategies to prevent and reduce domestic violence.

7) The Council shall submit an initial report which details its recommendations and updated statewide needs assessment, as well as generally stating its progress toward

EXECUTIVE ORDER NO. EO 96 - 39

EXECUTIVE ORDER NO. EO - 96 - 38

AFFIRMATIVE ACTION: REVIEW AND RENEWAL

WHEREAS the State of Oregon has long recognized the need to eliminate the effects of past and present societal discrimination based on race, religion, national origin, age, sex, marital status, and physical or mental disabilities in which it has played a passive or active role,

WHEREAS past Governors and legislatures have pronounced policies aimed at remedying these historical wrongs,

WHEREAS the increasing diversity of Oregon's population demands that we renew and extend these efforts in order to maintain our economic viability and provide a high quality of life for all our citizens,

WHEREAS past programs involving quotas and strict numerical goals based on race or gender have not only created resentment, but have contributed to the impression of unequal opportunity for some Americans,

WHEREAS in the ensuing debate, the original purpose of prohibiting race and gender discrimination has become lost,

WHEREAS the United States Supreme Court has applied a strict scrutiny analysis to many local government programs designed to remedy past instances of societal discrimination,

WHEREAS states are now required to document specific instances of societal discrimination within geographic areas and in sectors of the workforce before implementing programs designed to affirm equal opportunity,

WHEREAS the Court has recently extended this analysis to invalidate federal programs aimed at assisting racial minorities,

WHEREAS it is fair to say that a wholesale assault on governmental actions to rectify past racial discrimination is under way at the federal level,

WHEREAS the State of Oregon remains committed to the principle of ethnic and gender equity and will continue to implement non-discrimination and affirmative action policies where applicable,

WHEREAS the need to provide greater opportunity for Oregon's ethnic and racial minorities is well documented,

WHEREAS certain of our racial minorities continue to experience a quality of life far below the societal norm, as evidenced by rates of infant-mortality, unemployment, and incarceration noticeably above state and national averages, and by life-expectancy and high school graduation rates noticeably below state and national averages,

WHEREAS these conditions will only worsen unless all our citizens are assured of a bona fide stake in Oregon's economic opportunity,

WHEREAS affirming our commitment to equal opportunity is a courageous investment we must make to provide that stake,

WHEREAS policies which affirm equal opportunity address other areas of long term concern to Oregonians, such as

Safety: Police forces which reflect the societal composition of the communities they serve help make Oregon a safer place for all citizens by providing a very real and personal example to members of minority groups of their stake in the state's safety efforts.

Education: If Oregon's children are to remain our greatest resource, the makeup of the teaching profession should reflect the societal composition of the students themselves, as teachers often serve as the role models at risk children so desperately need.

Vulnerable Citizens: If citizens from groups which have historically experienced discrimination are employed at all levels of the Oregon workforce, the State of Oregon will be better able to meet the needs of its vulnerable population in two ways. First, such employment implies a definition of "equal opportunity" that will consider every factor necessary to determine which applicants can best serve the policies and progress of the state. Second, vulnerable citizens who are contributing members of the workforce can become a bridge of opportunity for other citizens, similarly situated, who may lack the resources to attain the stability and quality of life most Oregonians take for granted;

WHEREAS new constitutional requirements may represent an obstacle to proponents of affirmative action, they in fact offer an opportunity to strengthen, from both a legal and public policy perspective, our policies and strategies for affirming equal opportunity,

WHEREAS new programs based on and designed in response to specific, documented instances of discrimination will withstand the emotional criticisms which have compelled other states to abandon the notion of affirming opportunity, and will provide a sound basis for similar programs in the future,

WHEREAS a recent study conducted by the City of Portland shows that many Oregonians remain burdened by a history of unequal opportunity,

WHEREAS these very citizens can offer gifts of diversity which reach beyond the traditional measures of merit,

WHEREAS to deny those gifts a place in the rich fabric of this state and this nation will only reinforce societal stereotypes and will ultimately harm us all, since in a very real sense, a de facto system of racial preference already exists for large segments of the majority population,

WHEREAS these issues are not new, nor will they be easily resolved,

WHEREAS if the idea of individual opportunity, so vital to the spirit of the nation, is to retain any meaning at all, it must find expression in a system which considers social as well as educational and qualitative factors,

WHEREAS restructured programs to affirm equal opportunity will accomplish what “affirmative action” has been accused of undermining, namely, leveling the playing field of economic opportunity for all Oregonians,

WHEREAS our history, our Constitution, and our commitment to human progress demand no less,

THEREFORE, IT IS HEREBY ORDERED AND DIRECTED THAT:

1) All state agency directors and administrators of major divisions or institutions shall report to me the status and results of their affirmative action policies and programs. The reports shall be delivered to my Affirmative Action Director by February 1, 1997. The reports shall provide:

- a. The goals of each policy or program.
- b. The date it was last reviewed.
- c. A summary of its success or lack thereof.
- d. Any plans to change programs or policies to improve results.

2) All supervisory managers in all agencies shall have their affirmative action efforts and results evaluated as part of the evaluation of their job performance.

3) The departments of Transportation and Corrections shall work with my Advocate for Minority, Women, and Emerging Small Business and my Affirmative Action Director to increase minority and women representation in the construction activities of this state. They shall gather together key representatives of construction companies, the banking industry, and other key players in the economy to formulate a plan of voluntary efforts. The recent disparity study in the Portland area, transportation improvements, and the unprecedented expansion of prison construction now underway afford ideal opportunities to achieve fair and equal participation in our state's construction industries. My Advocate for Minority, Women, and Emerging Small Business shall direct and coordinate this effort for the state.

4) All state agency directors and administrators of major divisions or institutions shall report to me the status and results of their efforts to improve outreach efforts and increase contracting participation by non-traditional businesses. The reports shall be delivered to my Advocate for Minority, Women, and Emerging Small Business by September 1, 1997.

The reports shall provide:

a. A summary of the efforts employed to assist minority, women, and emerging small businesses to qualify for contract opportunities generally.

b. A summary of the efforts employed to increase the share of contract business for the agency that is provided by minority, women, and emerging small businesses and the results of those efforts.

c. Any plans to change programs or policies to improve results.

Done this 15th day of October, 1996, at Salem, Oregon.

RESCISSION OF STATE OF EMERGENCY FOR THE STATE OF OREGON DUE TO SEVERE DROUGHT CONDITIONS IN CROOK, JACKSON, JOSEPHINE, JEFFERSON, DESCHUTES, GRANT, DOUGLAS, KLAMATH, SHERMAN, UMATILLA, AND MALHEUR COUNTIES

A state of emergency due to severe drought conditions was declared by the Governor for the counties of Crook, Jackson, Josephine, Jefferson, Deschutes, Grant, Douglas, Klamath, Sherman, Umatilla and Malheur in the following Executive Orders:

1. Executive Order No. EO-94-08 dated July 13, 1994 - Crook
2. Executive Order No. EO-94-09 dated July 26, 1994 - Jackson, Josephine, Jefferson, Deschutes
3. Executive Order No. EO-94-14 dated July 29, 1994 - Grant
4. Executive Order No. EO-94-15 dated July 29, 1994 - Douglas, Klamath, Sherman
5. Executive Order No. EO-94-17 dated September 27, 1994 - Umatilla
6. Executive Order No. EO-94-20 dated October 24, 1994 - Malheur

The 1994 drought conditions were resolved and these declarations are no longer necessary.

IT IS ORDERED AND DIRECTED:

1. Executive Order Nos. EO-94-08; EO-94-09; EO-94-14; EO-94-15; EO-94-17; and EO-94-20 are rescinded.

OREGON MOUNTED GOVERNOR'S GUARD

For many years, an informal group of citizen horsemen was organized as the Governor's Mounted Posse. In 1971 then Governor Tom McCall officially recognized the Posse as the Governor's Mounted Guard in Executive Order 71-3. They have escorted the Governor or represented him at parades, rodeos, horseshows, fairs, and similar functions. They also have been available for special tasks involving maintenance of order at such functions. Their tireless and uncompensated efforts merit continued official recognition, as the official Mounted Governor's Guard.

The State of Oregon shall assume no financial responsibility for the Guard, and its members shall receive no compensation for expenses. However, the Governor may call on the Guard to escort him or represent him at public functions where the presence of mounted escorts or representatives is appropriate. The Governor also may call on the Guard, or any member thereof, to perform special tasks involved in maintenance of order, including crowd control, when the services of horsemen is appropriate. Therefore,

IT IS ORDERED AND DIRECTED:

That an Oregon Mounted Governor's Guard, is to carry on the functions formerly performed by the Governor's Mounted Posse. The members of the Guard shall be appointed by the Governor and serve at his pleasure, on the basis of their qualifications and their adherence to standards presented by the Governor.

DETERMINATION OF A FIRE CONFLAGRATION IN JEFFERSON COUNTY

Pursuant to ORS 476.510-476.610, I find that threat to life, safety, and property exists due to a conflagration in Jefferson County on July 30, 1996 at 12:12 a.m. The following event has occurred for which State assistance has been requested:

It has been determined that a potential for loss of life or injuries exists, and there is a prospect for major property damage as a result of a fire known as "The Little Cabin Fire". The "Little Cabin Fire" is located nine miles south of Madras.

Assistance is needed and was formally requested by the Fire Defense Chief of Jefferson County, Oregon.

IT IS ORDERED AND DIRECTED:

The Oregon State Police and the Office of State Fire Marshall, shall mobilize fire resources statewide and coordinate with all appropriate Fire Defense Chiefs for the use of personnel and equipment to suppress and contain this fire.

This emergency is declared only for this specifically named fire in Jefferson County, which occurred on July 30, 1996.

This order is made by verbal proclamation at 12:12 a.m. on this 30th day of July, 1996.

Done at Salem, Oregon this 14th day of August 1996.

GOVERNOR

Attest:

SECRETARY OF STATE

DETERMINATION OF A STATE OF EMERGENCY DUE TO THE IMMINENT THREAT OF WILDFIRE

Pursuant to ORS 401.055, I find that a fire emergency exists due to imminent threat from wildland fires statewide. Current fires in several areas, the ongoing potential for thunderstorms with lightening strikes, and a predominant weather pattern indicated these conditions will not be significantly relieved in the near future. I hereby declare that a state of emergency exists.

IT IS ORDERED AND DIRECTED:

1. The Department of State Police Office through its Office of State Fire Marshal and Emergency Management of the State of Oregon is authorized to coordinate the use of state personnel and equipment of all State agencies for the performance of any activity designed to prevent or alleviate damage from the emergency. This includes, but is not limited to, the resources of the State of Oregon Military Department.
2. This determination of a fire emergency is statewide. It is not to be construed as a comprehensive declaration or proclamation of emergency for other purposes. It is limited to the use of state resources and the National Guard. Requests for resources must be submitted through the County governing body as required for other emergencies.
3. This order shall remain in effect until the threat is significantly relieved or the fire season ends.

This order was made by verbal proclamation at 1:00 p.m. the 12th day of August, 1996, and signed this 14th day of August, 1996, in Salem, Oregon.

DISPUTE RESOLUTION STEERING COMMITTEE

WHEREAS 1. There is a need to develop an integrated public policy program for promoting the appropriate use of collaborative, problem-solving processes to resolve disputes involving the state of Oregon.

WHEREAS 2. A framework for coordination between the Governor's Office, the Department of Justice, the Oregon Dispute Resolution Commission and state agencies on dispute resolution activities would provide efficiencies in program delivery.

IT IS HEREBY ORDERED AND DIRECTED:

1. A Steering Committee comprised of the Governor's Dispute Resolution Advisor, the State Attorney General or designee, the chair of the Oregon Dispute Resolution Commission (ODRC) or designee, the Dispute Resolution Coordinator in the Department of Justice and a state agency member as appointed by the Governor is created to provide overall policy coordination with respect to use of collaborative processes with state government. The Committee will operate on the principles of consensus.
2. The Steering Committee shall develop an integrated plan to expand and deliver dispute resolution services throughout state government and make recommendation to the Governor to carry it out.
3. The Committee and the Executive Branch agencies shall work together to identify opportunities to use or expand use of dispute resolution programs and services by state agencies, the Department of Justice and the Dispute Resolution Commission.
4. The Steering Committee may establish an Advisory Committee to provide advice and recommendations to the Steering Committee on ways to integrate and coordinate dispute resolution programs of the state executive and judicial branches.

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 96 - 30

STATE/TRIBAL GOVERNMENT-TO-GOVERNMENT RELATIONS

There are nine federally recognized Indian tribal governments located in the State of Oregon. These Indian tribes were in existence prior to the formation of the United States of America, and thus retain a unique legal status. The importance of recognizing the relationship that exists between the tribes and state government can not be underestimated.

As sovereigns the tribes and the State of Oregon must work together to develop mutual respect for the sovereign interests of both parties. The relationships between our governmental structures can only be built through trust and mutual respect .

The purpose of formalizing the government-to-government relationship that exists between Oregon's Indian tribes and the State is to establish a process which can assist in resolving potential conflicts, maximize key inter-governmental relations and enhance an exchange of ideas and resources for the greater good of all of Oregon's citizens, whether tribal members or not.

IT IS ORDERED AND DIRECTED:

1. That the Governor's Legal Counsel, or such other person as the Governor may from time to time designate, shall be accountable to the Governor for the implementation of this Executive Order and be responsible for convening an annual meeting where representatives of the State and the nine federally recognized Oregon tribal governments will work together to achieve mutual goals.

EXECUTIVE ORDER NO. EO - 96 - 30

Page Two

2. That the head of each Cabinet level department who is either appointed by the Governor or who reports to gubernatorial appointees and is made subject to this Order by the Governor (hereinafter “department”) shall be accountable to the Governor’s office for adopting a departmental State/Tribal Government statement that:
 - a. Recognizes that Oregon Indian tribal governments are interested in the development of state policy that affects tribal interests (hereinafter “state policy”) and recognizes the desirability of dialogue between tribal governments and the state, with regard to those state policies;
 - b. Identifies key personnel of the department as a “key contact[s]” responsible for coordination with tribal governments;
 - c. Establishes a process for the identification of those state policies by designated tribal representatives and key contacts ;
 - d. promotes dialogue between Oregon departments and tribal governments on those state policies ; and
 - e. That advances the government-to-government relationship by notifying staff and employees of this Executive Order.
3. Through the process established under this Executive Order the key contacts and designated tribal representatives shall identify issues of mutual concern arising from state policy. The departments and each tribal government shall make reasonable efforts to design solutions and develop programs to achieve mutual goals in relation to state policy.

EXECUTIVE ORDER NO. EO - 96 - 30

Page Three

4. That each department shall recognize the opportunity to use a number of tools to achieve mutual cooperation including but not limited to use of cooperative agreements with Indian tribal governments as provided for in ORS 190.110 when it is appropriate to do so.
5. That each department shall provide key managers with periodic training which enables them to better recognize Indian issues and to understand and respect the legal status of tribal governments and of American Indians as citizens of Oregon who also have their own unique and distinct culture. It is important as well for the tribes to develop tribal training so its members will better understand the workings and process of state government. It is the hope of the state that these training's will enable the tribes and the state to learn about each other's cultures and improve our mutual ability to communicate our interests more clearly. The key contact and designated tribal representatives shall consult on the scope and content of training as well as the coverage of its cost.
6. That the departments shall work cooperatively to accomplish the goals of this order.

It is the hope of the state and the tribes that this executive order will result in improving the quality of communication between our sovereign governments. The tribes and the state recognize that this order cannot and is not intended to create a forum for resolution of all issues between the tribes and the state. Nor is it meant to replace presently existing lines of communications. Both the tribes and the state recognize that issues that are the subject of litigation or that are likely to become the subject of litigation are inappropriate for discussion in this process.

Nothing in this order shall require the state or any of its agencies to violate or ignore any laws, rules, directives or other legal requirements or obligations imposed by state or federal law including but not limited to state Public Records laws, Public Meetings laws and provisions of the state Administrative Procedures Act.

EXECUTIVE ORDER NO. EO - 96 - 30

Page Four

This document has been adopted for the sole purpose of enhancing communication and mutual cooperation between the State of Oregon and the tribal governments and is not intended to, and does not, create any right to administrative or judicial review, or any other right or benefit or responsibility, substantive or procedural, enforceable by a party against the State of Oregon, its agencies or instrumentality's, its officers or employees, its subdivisions or any other persons.

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. 96 - 22

YOUTH SUICIDE PREVENTION TASK FORCE

Between 1990 and 1994, almost 200 Oregon youth committed suicide. During this time period, over 3000 suicide attempts were reported. Over the past 30 years, there has been a six-fold increase in the rate of suicide. While the greatest numbers of youth involved in these behaviors are urban youth, the rural areas of our state have a disproportionate representation of youth attempting or committing suicide.

We can no longer allow this tragedy to continue without doing our utmost to reduce this epidemic of suffering and loss. Each time this tragedy occurs, our state loses the potential of a life cut short. Each time we fail to prevent this tragedy, families suffer and our future is diminished. We will not fulfill our duty to our youth if we do not make every effort to reduce the factors that drive our young people to this most desperate act.

Those who are at risk of attempting or committing suicide suffer from a number of serious problems and situations. Mental illness, drug and alcohol abuse, domestic violence, and a history of experiencing child abuse or sexual abuse are all factors which contribute to this tragedy. The higher incidence of suicidal behaviors among gay, lesbian, and bisexual youth suggest that the social pressures surrounding nontraditional sexual orientations are also related to this growing problem.

To begin to stem this tide of tragedy, I am appointing a Governor's Task Force on Youth Suicide. The Task Force will be charged with developing an Oregon specific strategy for reducing suicide among our youth. The Task Force will begin meeting in February of this year and the preliminary report to me will be completed by October 1, 1996. The final written report to me and the Legislative Assembly will be completed by January 1, 1997. Therefore,

IT IS ORDERED AND DIRECTED:

1. The Governor's Task Force on Youth Suicide Prevention shall consist of thirteen members and shall be chaired by Laura Jeibmann, Executive Director of Metro Crisis. The Governor shall select the members of the Task Force. The Task Force shall receive expert support and technical assistance from broad-based work groups representing various interests and regions throughout the state.
2. The Task Force shall determine how the state can best work with and assist communities, government entities, families, churches, schools, health providers, community organizations and businesses in developing an implementing effective strategies for the prevention of suicide among our youth, ages 10-24 years.
3. All State Agencies who serve youth and families will participate on the Task Force and/or in an appropriate work group.

4. To accomplish this directive, the Task Force shall:

-- Identify effective suicide prevention programs and provide recommended strategies and guidelines on those programs to the agencies that have programs dealing with youth.

-- Recommend and prioritize strategies to educate and involve the public and the private sector in youth suicide prevention.

-- Identify and recommend ways to coordinate existing resources to effectively support local suicide prevention efforts targeted at at-risk youth including but not limited to: minority youth, physically and sexually abused youth, youth with nontraditional sexual orientation, youth with mental health problems, and youth affected by alcohol and drug abuse.

-- Identify and recommend ways to coordinate existing resources to effectively support local suicide prevention efforts targeted at at-risk youth.

-- Recommend methods to evaluate the effectiveness of suicide prevention programs.

-- Determine how the State can best collaborate with and assist families and community organizations to prevent youth suicide.

-- Recommend follow-up measures needed to deal with the problem of suicide in other demographic groups.

5. The Task Force shall consult with and collaborate with State and local bodies and people having an interest in youth suicide prevention. The Task Force shall establish procedures to ensure public input that shall include at a minimum public hearings in the various regions of the state.

6. At the conclusion of the steps outlined above, the Task Force shall prepare a report of its findings and make specific recommendations for changes in the applicable substantive and procedural laws, the allocation and use of available resources, and proposals for any additional programs and facilities. The final written report shall be presented to the Governor and Legislative Assembly by January 1 1997.

7. The members of the Task Force shall not be compensated for their services.

This order is made at 23rd day of March 1996.

to be amended as stated, this 15th day of May, 1996

GOVERNOR

Attest:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 96 - 20

DETERMINATION OF A STATE OF EMERGENCY IN DOUGLAS AND UNION
COUNTIES DUE TO HEAVY RAINS AND SUBSEQUENT FLOODING

Pursuant to ORS 401.055, I find that severe weather in Douglas and Union Counties has caused a natural disaster of major proportions to the State Highway System. Beginning February 6, 1996 the State Highway System suffered damage due to landslides, downed trees and flooding as a result of extremely heavy precipitation in the preceding days. Immediate repair and reconstruction of the State Highway System is vital to the security, well-being and health of the citizens in the affected counties.

IT IS ORDERED AND DIRECTED:

1. The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect recovery from this emergency.

This declaration is specifically limited to the affected areas in Douglas and Union Counties.

This order is made at 23rd day of March 1996.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 96 - 19

DETERMINATION OF A STATE OF EMERGENCY IN WHEELER COUNTY DUE
TO HEAVY RAINS AND SUBSEQUENT FLOODING

Pursuant to ORS 401.055, I find that a threat to life and safety exists due to flooding occurring in Wheeler County. The County and the cities have expended their available resources, initiated mutual aid agreements, and are seeking assistance to implement measures to mitigate the threat and alleviate emergency conditions.

IT IS ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Oregon National Guard, in coordination with the Office of Emergency Management, shall provide essential assistance that is deemed necessary to assess, alleviate, or mitigate the threat which is a direct result of existing conditions.
3. All state departments shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected county.

This order was made by verbal proclamation at 4:05 pm on the 8th day of March, 1996, and signed this 11th day of March, 1996.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 96 - 18

DETERMINATION OF A STATE OF EMERGENCY IN COOS COUNTY DUE TO
HEAVY RAINS AND SUBSEQUENT FLOODING

Pursuant to ORS 401.055, I find that a threat to life and safety exists due to flooding occurring in Coos County. The County and the cities have expended their available resources, initiated mutual aid agreements, and are seeking assistance to implement measures to mitigate the threat and alleviate emergency conditions.

IT IS ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Oregon National Guard, in coordination with the Office of Emergency Management, shall provide essential assistance that is deemed necessary to assess, alleviate, or mitigate the threat which is a direct result of existing conditions.
3. All state departments shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected county.

This order was made by verbal proclamation at 10:30 am on the 27th day of February, 1996, and signed this 14th day of March, 1996.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. 96 - 17

DETERMINATION OF A STATE OF EMERGENCY IN GILLIAM
COUNTY DUE TO FLOOD DAMAGE

Pursuant to ORS 401.055, I find that severe flooding in Gilliam County has caused a natural disaster of major proportions to the State Highway System. Beginning February 6, 1996, heavy rains and rapid snow melt caused flooding landslides, and erosion throughout Gilliam County.

This has resulted in damage to roads, bridges, and private property totaling \$600,000 dollars. Gilliam County roads are still closed or impassable as a result of this emergency, and the county lacks adequate skilled, technical to thoroughly assess the damage.

IT IS ORDERED AND DIRECTED:

1. The Oregon Department of State Police, Emergency Management Division shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment, including the Oregon National Guard, to assess, alleviate, or mitigate damage caused by this emergency.
2. The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect recovery from this emergency.

This order is made by verbal proclamation this 16th day of February, 1996.

GOVERNOR'S TASK FORCE ON GAMING

Oregon has recently experienced a recent rapid growth in gambling within the state. This growth has occurred both in the development of the state Lottery and with the growth of Indian gaming centers. As this has been happening we as a state have not taken the time to develop a clear and open-eyed policy with regard to the state's increasing involvement in gaming activities.

Oregon requires a clear policy on the effect and future of gaming. While Oregonians clearly enjoy the recreational pleasures of gambling, they just as clearly do not want the possible negative effects of gambling that in other states has included drug-related crimes and property-crimes.

While Lottery and gaming proceeds do provide funds for charitable activities, education, and economic development, Oregon cannot become so dependent upon gaming funds that their economic pressures dictate state fiscal policy. As an example the recent special legislative session was called, in part, to address a downturn in Lottery revenues which could have adversely affected K-12 education funding. This reflects a disturbing trend that we must consider.

The high quality of life which Oregonians enjoy requires careful maintenance and sound planning. It also requires us to make good public policy decisions based on what is best for Oregon. We must ask ourselves if this growing reliance on such an unstable form of revenue serves this purpose.

At the same time we have seen the phenomenal growth of gaming centers operated by Oregon Indian tribes. As Governor I appreciate the need for economic development and self-sufficiency among the tribes. But these centers have an impact on the fabric of life in Oregon that has yet to be determined. We can not arrive at a clear vision of the future of gaming in Oregon without considering the impact of this industry's development in the state.

It is time for the state to ask the hard questions about the presence and role of gambling in this state. We must come to a common understanding about its relation to our goals as a state.

Therefore,

IT IS HEREBY ORDERED AND DIRECTED:

1. There is appointed a Governor's Task Force on Gaming.
2. The Governor's Task Force shall examine the issues related to the presence of gaming in Oregon. The Task Force shall include a review of current state and local policies on gaming. Specifically, the Task Force shall include in its final report a review of the social and economic effects of gaming, criminal gaming activity, the amount of revenues generated by both legal and illegal gaming, the character and effects of competition between gambling activities and the entities that conduct gaming activities, and the effect of gaming upon participants.
3. The Task Force shall recommend to the Governor policy options on gaming in Oregon. The Task Force shall suggest any changes in the constitution, laws, or administrative rules of the State that the it considers appropriate to implement proposed policies. The Task Force shall address three broad areas of concern including but not limited to the following subjects:

Public Policy:

- Assess the impact of the growth of gambling on Oregon families and communities.
- Determine the implications of expanding the current scope of gaming.
- Determine whether, and if so, how, the Lottery should expand to account for current revenue shortfalls.

Revenue:

- Assess the economic impact of gaming upon the state and local governments including law enforcement agencies.
- Analyze the growing dependence of the state on lottery profits within the state budget.
- Assess the viability of continued lottery profits as a key element of state fiscal planning..

Regulatory:

- Review and assess the effectiveness of current state gambling regulatory policy.
- Review the effectiveness of the criminal justice system to deter and combat illegal gambling.
- Explore regulatory options available to the state to improve regulation of gaming activities.

I appoint the following individuals to the Governor's Task Force:

Ted Kulongoski, Attorney General, Salem
Brady Adams, State Senator, Grants Pass
Ron Cease, State Senator, Portland
Tony Corcoran, State Representative, Cottage Grove
Bob Repine, State Representative, Grants Pass
LeRon Howland, Superintendent, Oregon State Police, Salem
Bruce Thomas, Confederated Tribes of the Grande Ronde, Grande Ronde
Janet Towle, Lottery Commissioner, Eugene
Mike Schwartz, Lottery Commission, Eugene
Gretchen Pierce, Economic Development Commissioner, Eugene
Ellen Lowe, Ecumenical Ministries of Oregon, Portland
Helen Berg, Mayor, City of Corvallis
Mike McArthur, Sherman County Commissioner, Moro
Ozzie Rose, Confederation of Oregon School Administrators, Salem

Executive Order No. EO-96-03

Page Three

My Legal Counsel, Henry H. Lazenby, Jr., shall serve as an ex officio member of the Task Force.

I appoint the Attorney General chair of the Task Force. The Chair of the task force may establish such subcommittees as he sees fit to assist the task force in making its findings. Membership in the subcommittees shall not be limited to task force members.

The Task Force shall report its findings and recommendations to me by July 1, 1996.

EXECUTIVE ORDER NO. EO - 96 - 02

DETERMINATION OF A STATE OF EMERGENCY IN UNION COUNTY DUE
TO ICE-JAM FLOODING

Pursuant to ORS 401.055, I find that a threat to life and safety exists due to ice-jam flooding occurring in the city of Union and nearby areas of Union County. The city and county have expended their available resources, initiated mutual aid agreements, and are seeking assistance to transport needed equipment and supplies, and to implement flood fight measures to mitigate the threat and alleviate emergency conditions.

IT IS ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess, alleviate, or mitigate conditions caused by this emergency.
2. The Oregon National Guard, in coordination with the Office of Emergency Management, shall provide essential assistance that is deemed necessary to assess, alleviate, or mitigate the threat which is a direct result of existing conditions.
3. All state departments shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This declaration is specifically limited to the affected area in Union County.

This order was made by verbal proclamation at 3:53 p.m on the 4th day of February 1996, and signed this 5th day of February 1996.

GOVERNOR

ATTEST:

SECRETARY OF STATE

GOVERNOR'S TASK FORCE ON JUVENILE CRIME PREVENTION

In January 1994, Governor Barbara Roberts issued Executive Order 94-01, which called for "a comprehensive, substantive review of Oregon's response to juvenile crime." The basic policy and structure of the state's juvenile code had undergone no significant review or amendment since 1959, and there was mounting evidence and citizen concern that the existing juvenile justice system was not working. Arrest rates for juvenile violent crimes had increased dramatically, there had been a recent tenfold increase in the number of juveniles in custody for homicides and a doubling of those in custody for sex offenses. Youth gang activity and juvenile drug and firearm offenses were no longer problems only of the state's metropolitan areas, but were evident throughout the state.

The Executive Order established the Governor's Task Force on Juvenile Justice and directed the Task Force to:

1. Undertake a comprehensive review of Oregon's juvenile justice system;
2. Identify the components that were working and those that were not; and
3. Prepare a report of its findings and make specific recommendations for changes in the system.

The Attorney General chaired the nine-person Task Force, whose members included the President of the Oregon Senate, law enforcement officials, a business executive, two judges, a law professor, and a practicing lawyer. The full Task Force, its four subcommittees, and six special subcommittees and work groups, met 52 times over 11 months. In January 1995, the Task Force issued its Final Report, which proposed fundamental changes in the philosophy, structure, and practices of the state's juvenile justice system. These proposed changes were submitted to the 1995 legislature as Senate Bill 1. After careful study and review and after amending the bill where appropriate, the Legislature enacted Senate Bill 1 by an overwhelming majority, and on June 30, 1995 the bill became law.

The major components of the reform initiated by Senate Bill-1 include: (1) a statement of policy that in delinquency cases, the purposes of the juvenile justice system are protection of the public, reduction of delinquency, and fair and impartial adjudication and disposition; (2) creation of the Oregon Youth Authority as a new department to administer juvenile corrections programs and facilities; (3) establishment of a multi-tier juvenile corrections system, including up to five regional secure facilities (with space reserved for county detention) and up to eight regional boot camps; (4) provisions for state/county cooperation and contracting in the administration and provision of juvenile corrections programs; (5) implementation of Ballot Measure 11 as applied to juveniles by demarcating juvenile court and adult court jurisdiction, clarifying charging and prosecution procedures, and providing for prosecution and sentencing for lesser-included and same-transaction offenses; (6) authorization for judicial sentence review for juveniles convicted in adult court of non-Measure 11 offenses; (7) authorization for waiver to adult court for 12-14 year olds charged with certain violent felonies; (8) requires registration for juvenile sex offenders; (9) requires fingerprinting and photographing of juveniles in delinquency cases; (10) establishes criteria to be applied in determining dispositions in delinquency cases; (11) restricts the use of informal dispositions in delinquency cases and provides standards for juvenile court dismissal of delinquency petitions; (11) extends from age 21 to age 25 the maximum period for juvenile court jurisdiction; and (12) authorizes preadjudication detention of juveniles in possession of firearms.

The enactment of Senate Bill 1 is a major first step in the reevaluation and reform of Oregon's juvenile justice system. It provides a blueprint -- a beginning framework -- for the work that remains to be done, if we are to respond effectively to the juvenile crime that confronts us now and develop strategies and programs to prevent it in the future. The findings and proposals of the Governor's Task Force on Juvenile Justice and the legislative process that resulted in the enactment of Senate Bill 1 make it clear that there is much more to be done and that all of the institutions of our society, especially the family, schools, churches and other community organizations must be a part of that work.

There is a continuing need to assist local communities in developing juvenile crime prevention plans, incorporate juvenile crime prevention into the State's public safety plan, and review and assess the implementation of Senate Bill 1.

IT IS ORDERED AND DIRECTED:

1. The work of the Governor's Task Force on Juvenile Justice, created by Executive Order 94-01, shall be continue by the newly-created Governor's Task Force on Juvenile Crime Prevention. The Task Force shall consist of no more than 15 members and shall be chaired by the Attorney General. The Governor shall select the members of the Task Force.

The Task Force may add non-voting ex-officio members, associate members, and subcommittees as it deems appropriate. The Task Force shall seek to include a variety of professions in its activities.

2. The Task Force shall determine how the state can best work with and assist communities, including government entities, families, churches, schools, community organizations, and businesses in developing and implementing effective strategies for the prevention of juvenile delinquency and the protection and guidance of the children of Oregon. The Task Force shall identify conflicts or gaps among programs, agencies or services, and make recommendations on how to resolve them.
3. The Task Force shall act in consultation with local Commissions on Children and Families and with Local Public Safety Coordinating Councils to develop and coordinate a comprehensive juvenile crime prevention strategy for the State and for each community within the State. To accomplish this directive, the Task Force shall:
 - Identify effective crime prevention programs, provide information on those programs to local commissions and public safety coordinating councils, and provide other assistance to those bodies in developing local crime prevention plans.
 - Recommend and prioritize strategies to educate and involve the public and the private sector in juvenile crime prevention activities.
 - Identify and recommend ways to coordinate existing resources to effectively support local crime prevention efforts targeted at at-risk and crime-involved juveniles.
 - Recommend methods to evaluate the effectiveness of crime prevention programs.

- Determine how the State can best collaborate with and assist families and community organizations to prevent delinquency and to protect and guide children.
4. The Task Force shall review and assess the implementation and effectiveness of Senate Bill 1, as enacted by the 1995 Oregon Legislature. To accomplish this directive, the Task Force shall:
 - Review the provisions of ORS Chapters 419A, 419B, and 419C in light of the policy stated in Section 1a of Senate Bill 1.
 - Review and assess the adequacy of state and local facilities for pre-adjudication and post-adjudication detention of delinquent youth.
 - Continue to identify the state and local programs (both public and private) that work with or treat delinquent youth, assess the capabilities and effectiveness of the programs, and recommend whether additional or different programs are necessary.
 5. The Task Force shall determine whether new laws restricting possession or use of firearms by juveniles would be effective in reducing youth violence.
 6. The Task Force shall consult and collaborate with State and local bodies and people having an interest in juvenile crime prevention and the juvenile justice system. In addition, the Task Force shall establish procedures to ensure public input that shall include public hearings at such times and places as the Task Force may determine.
 7. At the conclusion of the review outlined above, the Task Force shall prepare a report of its findings and make specific recommendations for changes in the applicable substantive and procedural laws, the allocation and use of available resources, and proposals for any additional programs and facilities. The report shall be presented to the Governor by September 1, 1996.
 8. Members of the Task Force shall not be compensated for their services.

Done at Salem, Oregon this 17th day of January, 1996.

EXECUTIVE ORDER NO. EO - 96 - 1

Page 5

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 95 - 20

In Executive Order No. EO-95-19 an emergency was declared under the authority of ORS 401.055. The storm has left substantial areas of Oregon without electrical power. This represents a significant danger to the health and welfare of many Oregonians.

Utility companies from neighboring states have offered to assist in the extensive repair effort currently under way. However, certain Oregon laws are hindering their ability to help in mitigating the effects of the emergency declared by EO 95-19. Therefore,

IT IS ORDERED AND DIRECTED:

1. Under the power granted me in ORS 401.095, I find that the following statutes are inconsistent with the purposes of ORS 401.065 through 401.085 and shall be deemed inoperative for all out of state vehicles assisting in the emergency, as long as the emergency exists:

ORS 767.025; ORS 767.195 ; ORS 767.155; ORS 767.775; ORS 767.805; ORS 767.815 .

2. All State Departments are directed to suspend efforts to enforce these provisions during this emergency.

This Executive Order is declared and orders made this ____th day of December, 1995.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 95 - 19

DETERMINATION OF A STATE EMERGENCY
DUE TO SEVERE HIGH WINDS AND RAIN

Pursuant to ORS 401.055, I find that threat to life and safety exists due to a major storm consisting of high levels of both sustained winds with larger gusts and rain. This event occurred on December 12, 1995 throughout Western Oregon. The storm has impacted the state's infrastructure systems and caused significant damages affecting individuals and businesses.

IT IS ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to access, alleviate, or mitigate damage caused by this emergency.
2. Individuals and units of the Oregon National Guard are ordered to state active duty as deemed appropriate by the Adjutant General for emergency response operations. Additionally, the Oregon National Guard shall provide essential assistance that is deemed necessary to support this effort.
3. All State Departments shall coordinate requests and deployment of resources through the State Emergency Coordination Center.

This emergency is declared and orders made this 12th day of December, 1995.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. 95 - 18

DETERMINATION OF A STATE OF EMERGENCY IN CLATSOP AND
CLACKAMAS COUNTIES DUE TO FLOODING CAUSED BY SEVERE WEATHER

Pursuant to ORS 401.055, I find that severe weather in Oregon's northwestern counties has caused a natural disaster of major proportions to the State Highway System.

Continuing rain and the severe storm on November 27, 1995, caused damages to roads in Clatsop and Clackamas Counties.

A slide has occurred on the Oregon Coast Highway in Clatsop County at Milepoint 27.0. In Clackamas County, the Roaring River Bridge at milepoint 41.5 has failed due to foundation scour caused by extremely high stream flow.

Immediate repair and reconstruction of the state highways and county roads is vital to the security, well-being, and health of the citizens in the affected areas.

This emergency declaration is not being made, at this time, for the purpose of seeking FEMA disaster relief funds.

IT IS ORDERED AND DIRECTED:

1. The Oregon Department of State Police, Emergency Management Division shall coordinate all requests for technical assistance from impacted local jurisdictions.

2. The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect recovery from this emergency.

Done at Salem, Oregon this 6th day of December, 1995.

/S/
GOVERNOR

ATTEST:

/S/
DEPUTY SECRETARY OF STATE

EXECUTIVE ORDER NO. EO. - 95 - 17

GOVERNOR'S TASK FORCE ON STATE EMPLOYEE HEALTH BENEFITS

Passed by the Legislative Assembly during its 1995 regular session, Senate Bill 769 proposed the merger of the two bodies currently responsible for purchasing health insurance coverage for state employees, namely, the State Employees Benefit Board (SEBB), and the Bargaining Unit Benefit Board (BUBB). While unable to support the final bill, I do believe that the creation of one board responsible for the purchase of employee health benefits offers the most effective way of assuring that the State of Oregon provides its employees with quality and affordable benefits in a competitive marketplace.

Oregon will benefit from a task force advising how the state best proceed toward that goal.

IT IS ORDERED AND DIRECTED:

- 1) There is established a State Employee Health Benefits Task Force, consisting of 7 members appointed by the Governor. The members shall serve at the Governor's pleasure.
- 2) I hereby appoint the following persons to the Task Force:

Senator Gene Derfler

Representative Ken Strobeck

Jim McIntosh (Manager, SEBB)

Cheryl Willcoxon (Administrator, BUBB)

Chuck Mendenhall (BUBB Board Member)

Diane Lovell (SEBB Board Member)

Vickie Gates (Oregon Health Plan Administrator)

- 3) I appoint Vickie Gates, Oregon Health Plan Administrator, as chair. The members of the Task Force shall elect a vice-chair.

- 4) The Task Force shall make a report to the Governor by April 1, 1996. The Task Force report shall set forth the best plan for a consolidated board to purchase state employee benefits, including any proposed legislation to be submitted to the 1997 session of the Legislative Assembly. The plan shall achieve economic and administrative efficiency for both the state and its employees, build on the strengths of the existing boards, and promote an effective role for the new structure in the Oregon health care marketplace.

Done at Salem, Oregon, this 5th day of December, 1995.

GOVERNOR

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 95 - 16

DETERMINATION OF A STATE OF EMERGENCY IN TILLAMOOK AND
YAMHILL COUNTIES DUE TO LANDSLIDES CAUSED BY SEVERE WEATHER

Pursuant to ORS 401,055, I find that severe weather in Tillamook and Yamhill counties has caused a natural disaster of major proportions to the State Highway System. Beginning November 10, 1995, approximately six inches of rain fell within a 24-hour period at some recording stations within the area. This extremely heavy rainfall resulted in landslides on federal-aid highways.

Approximately 250,000 cubic yards of material slid at Milepoint Z 45.4 of the Oregon Coast Highway in Tillamook County. The highway is currently closed.

The Three Rivers Highway dropped approximately four feet at Milepoint 13.5 due to a slide in Yamhill County. Temporary repairs have been made and the highway has been re-opened to traffic.

Continuing rain and another severe storm on November 27, 1995, caused additional damages to roads, including the Wilson River Highway and the Trask River Highway. Immediate repair of the Oregon Coast Highway and reconstruction of both these federal-aid highways is vital to the security, well-being, and health of the citizens in the affected area.

IT IS ORDERED AND DIRECTED:

1. The Oregon Department of State Police, Emergency Management Division shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment, including the Oregon National Guard, to assess, alleviate, or mitigate damage caused by this emergency.
2. The Oregon Department of Transportation shall provide appropriate assistance and seek federal resources to effect recovery from this emergency.

This order is made by verbal proclamation this 28th day of November, 1995.

ATTEST:

DEPUTY SECRETARY OF STATE

EXECUTIVE ORDER NO. 95-15

OREGON TELECOMMUNICATIONS FORUM COUNCIL

The telecommunications infrastructure is a critical enabling technology for the economic, social, and cultural benefits of the rapidly increasing global exchange of information. However, telecommunications is primarily a market-driven infrastructure based upon private sector investment and deployment of a wide array of technologies by a wide range of providers. Consequently, Oregon needs to establish an on-going state-wide planning process to take advantage of the existing telecommunications infrastructure and to stimulate demand to encourage and enable long-term innovation and improvement. Our long-term goal should be to assure that affordable access to the information necessary for Oregon's economic benefit and quality of life is available to all Oregonians, regardless of income or location. As Oregon grows globally, our citizens must be able to participate in that growth locally.

In order to achieve this goal, we will have to organize users in new ways to aggregate demand, reduce costs, and create support networks. Telecommunications planning and implementation should take place, to the maximum extent possible, in the communities and regions of the state. State government should frame the challenge and then support local efforts to meet that challenge. To accomplish this, there is a need to create a state-wide planning council and to encourage and facilitate the formation of communities of interest by geographic and economic sectors of the state.

The success of the on-going planning process will also depend upon the intimate involvement of some critical state agencies. We cannot aggregate demand and encourage collaboration within our communities without involving the state agencies and calling upon their skills and their resources. State agency participation will also assure accountability as well as coordination since the agencies will be providing information and comments in full view of the public.

IT IS ORDERED AND DIRECTED:

1. There is established an Oregon Telecommunications Forum Council. The Council shall be composed of persons broadly representative of telecommunications services providers and user groups from the public, private, and non-profit sectors. Members of the Oregon Telecommunications Forum Council shall serve at the pleasure of the Governor.

The Governor shall serve as chair of the Council and shall request participation of the state agencies as the chair and the Council deem appropriate.

2. The Council shall establish a vision for telecommunications infrastructure in Oregon and develop short-term strategies and long-term plans for achieving that vision. In developing these strategies, the Council shall encourage, facilitate, and support the formation of communities of interests in the state based upon common telecommunications concerns by geographic area or economic sector. The Council shall actively seek the input of these communities of interests on telecommunications needs and barriers as well as opportunities to leverage investments and aggregate demand. In addition, the Council shall encourage partnerships among private, public, and non-profit telecommunications users and providers to further the efforts of the communities of interests, including support and encouragement of education and training opportunities relating to telecommunications.

The Council shall be an advisory body, making recommendations to the Governor, state agencies, and the Legislature on public and private actions to help carry out the strategies developed by the Council and the communities of interest.

3. The Council shall hold regional public hearings, public meetings, and workshops as needed to solicit comments and suggestions from the citizens. These meetings shall also be used to promote public understanding of Oregon telecommunications visions and strategies and to promote the opportunities available to citizens to affect telecommunications markets and investment decisions through community coalitions and the planning process.
4. As part of the strategy, the Council shall establish benchmarks to monitor progress and shall report on the benchmarks to the Oregon Progress Board.

5. To encourage partnerships and support community of interest efforts, the Council shall, using existing resources to the maximum extent possible, maintain a clearinghouse of information regarding the availability of Oregon's telecommunications infrastructure and user support services in a manner that will help match potential projects with potential sources of funding or other resources.

ATTEST:

PHIL KEISLING

EXECUTIVE ORDER NO. EO - 95 - 12

JOINT BOARDS OF EDUCATION AGENDA

Education policy issues and opportunities are not neatly confined to the jurisdictions of K-12, community colleges or higher education. Increasingly, our education investment reaches beyond education itself to contribute to career wage employment, self sufficiency for the vulnerable among us, safety in our homes and neighborhoods and a high quality of life.

As the opportunities for education reach beyond the neat boundaries of our past, so must the decision making reach beyond traditional turf and conventional thinking.

The Joint Boards of Education have four years of experience addressing opportunities that reach across those neat boundaries. The demands of education reform on programs for the preparation of education professionals have been reconciled in a single strategy thanks to the work of the Boards. Excellent work is also underway to link the standards of mastery in our K-12 system to the entrance requirements for our colleges and universities. Early discussions linking higher education and community college capacities for achieving a college education are also promising.

If Oregon is to get full measure from each of its education investments, those investments must recognize that education is a continuum; a chain with many links offering the promise to each Oregonian that completion of each of the steps leads to a productive and satisfying adult life. The revenue picture is uncertain. Our opportunities for discretionary investments must be strategically selected and focused on our education and economic infrastructure if we are to secure and build on the progress we have had to date.

If the promise of success at the end of the education continuum is to be realized by Oregonians, Oregon education must plan and organize its activities and investments in a way that invests early; secures each step along the continuum; and acknowledges that the interests of Oregon students and families must transcend institutional interests if the education services of our government are to be personally believable and valued by the voting public.

IT IS THEREFORE ORDERED AND DIRECTED:

1. Executive order No. EO-91-08 is rescinded.
2. The Joint Boards of Education, working with the Oregon Commission on Children and Families, shall jointly define the Oregon education continuum and shall use their articulation of the continuum to (1) assess the education capacity available to serve the needs of Oregonians at each step along the continuum; (2) recommend new relationships as necessary to make existing capacity more readily available to those who need it; and (3) recommend new and redirected investments needed to create capacity where it does not now exist.

I invite the Boards, working with the Commission, to capture the results of this effort as a framework for joint budget requests and statutory recommendations for the 1997 legislative session.

3. The Joint Boards of Education shall also identify the potential for participation by our education community in other efforts to better relate Oregon's government to our citizens, including efforts to achieve safe neighborhoods and communities, help for the vulnerable among us, a high quality environment and a healthy economy.

I invite the Joint Boards to work with the state agency teams developing strategies in each of these areas so specific proposals from the Joint Boards can be incorporated into those other strategies.

4. It is essential that Oregon's Educational Act for the 21st Century, (ORS 329) succeed. To that end, the Joint Boards shall make the policy decisions necessary to tie the promise of education reform to the links of the education continuum. Special attention is needed to the points where completion of one step serves as entrance to the next.

I invite the Joint Boards to propose such budgetary and statutory changes as are necessary to be sure Oregon's education reform effort is successful.

5. It is important that the work of the Joint Boards be both timely and lasting. To that end, I direct the Joint Boards to present recommendations developed within the context of this Executive Order as (1) a six year effort to establish an education continuum as the framework for education planning in Oregon, and (2) a set of 1997 legislative session proposals designed to take the initial steps in that direction.

To the extent that recommendations can be implemented under existing authority of either of the boards, they should be implemented. Recommendations for 1997 legislative action need to be in my hands no later than September 30, 1996.

John Kitzhaber, Governor

Deputy Secretary of State

EXECUTIVE ORDER NO. EO - 95 - 11

GOVERNOR'S ADVISORY COMMITTEE ON MOTORCYCLE SAFETY

The Governor's Advisory Committee on Motorcycle Safety was informally established by Governor Vic Atiyeh in 1981. The committee represents the voice of Oregon motorcyclists and advises the Governor of the State of Oregon and the Transportation Safety Section of the Department of Transportation on safety for motorcyclists in Oregon.

IT IS ORDERED AND DIRECTED:

1. There is created a Governor's Advisory Committee on Motorcycle Safety, consisting of not more than eight members appointed by the Governor. The term of office of a committee member shall be four years, but the members shall serve at the pleasure of the Governor. In case of a vacancy for any cause, the Governor shall make an appointment for the unexpired term.
2. The committee's focus shall be upon rider education, drinking and riding, road hazards unique to motorcycles, motorist awareness of motorcycles, sharing the road and other safety issues. It shall advise the Traffic Safety Commission and the Governor regarding motorcycle safety issues and legislation that is in the best interest of the Oregon transportation public. An annual report shall be submitted to the Governor outlining the committee's accomplishments, goals and mission statement.
3. The committee shall elect a chairperson. The chairperson shall designate a vice-chair to carry out the duties of the chair in the chair's absence. The chair may designate subcommittees as needed.
4. The committee shall meet in accord with a schedule approved by a majority of its members and shall meet on special occasions at the call of the chair. Five voting members shall constitute a quorum. A vote of the majority shall be sufficient for all actions of the committee.

5. The Department of Transportation shall provide staff assistance to the committee.
6. Members of the committee shall receive no compensation for their services.
7. The committee shall sunset on July 31, 1999.

EXECUTIVE ORDER NO. EO - 95 - 10

GOVERNOR'S MATERNITY CARE TASK FORCE

Maternity care is the cornerstone of health care delivery in the state; it provides a proven, cost-effective foundation for improving the health of all Oregonians, while serving as a healthy start to life which allows future citizens to achieve their full potential. While strides have been made to improve maternity care, barriers continue to exist, indicated by high rates of inadequate pre-natal care.

Oregon requires a task force to advise the state on issues related to maternity care.

IT IS ORDERED AND DIRECTED:

1. There is established a Maternal Care Task Force consisting of not more than 11 members, appointed by the Governor and serving at the Governor's pleasure. Appointments shall reflect the balance between those persons who have knowledge of the multi-disciplinary nature of maternity care, including but not limited to health care providers, hospitals, consumers, third-party reimbursers, and program planners, as well as balance between private sector and public sector actors, and rural and urban geographic areas. Appointments shall also reflect Oregon's ethnic diversity.
2. In order to provide for staggered terms, five members terms (Positions 1-5) shall expire in June of 1997, while the remaining six members' terms (Positions 6-11) shall expire in June of 1999.
3. The Governor shall appoint one of the members chair of the task force, who shall serve at the pleasure at the Governor. Task force members shall elect a vice-chair.
4. In the event of a vacancy, a nominating committee appointed by the chair shall produce a slate of qualified nominees, the names of those nominees to be submitted for consideration by the Governor.

5. The task force shall:
 - a. Monitor access to maternity care;
 - b. Study state and federal policies which affect maternity care in Oregon.
6. Members of the task force shall receive no compensation for their involvement and activities on behalf of the task force.
7. This Executive Order shall remain in effect until amended or rescinded.

DETERMINATION OF A STATE OF EMERGENCY DUE TO FLOODING

Pursuant to ORS 401.055, I find that threat to life and safety exists due to flooding which occurred in Wasco County on July 8 and 9, 1995. The following impacts have occurred for which State and federal assistance have been requested:

Major road damage has occurred on several county highways in Wasco County. Fifteen Mile Road, Wrentham Road, Easton Canyon Road and Longhollow Road are a few of these transportation systems that have had major road washouts, damage to shoulders and bridges, and culvert and drainage system damages. Additionally, the County has suffered severe soil erosion and debris deposits in many places.

Assistance is needed in debris removal, culvert, bridge and roadway repairs and reconstruction, and restructuring of drainage systems.

IT IS ORDERED AND DIRECTED:

1. The Oregon State Police, Office of Emergency Management, shall coordinate all appropriate agencies of the State of Oregon in using personnel and equipment to assess alleviate, or mitigate damage caused by this emergency.
2. The Oregon National Guard and Oregon Department of Transportation shall provide essential assistance that is deemed necessary to support this effort.

This emergency is declared only for those areas of Wasco County transportation systems that are not on the federal aid system, and received damages due to the flooding which occurred on July 8 and 9.

This order is made by verbal proclamation this 25th day of July, 1995.

EXECUTIVE ORDER NO. EO - 95 - 06

CORRECTION POPULATION FORECASTING ADVISORY COMMITTEE

Oregon's prison population has grown substantially in recent years, while the number of criminal offenders on parole or probation continues to increase dramatically as well.

The passage of Ballot Measures 11 and 17 in the 1994 General Election make it essential that state policy makers have accurate projections of future population changes. The initial Corrections Forecasting Advisory Committee was created by Executive Order EO-90-23 in 1990. Since that time the need for uniform predictions of the state's corrections population has become even more critical.

IT IS ORDERED AND DIRECTED:

1. Executive Order No. EO-90-23 is rescinded.
2. There is created a Corrections Population Forecasting Advisory Committee, which shall assist the Department of Administrative Services in preparing computations and estimates of criminal offender populations.
 - a. The Corrections Population Forecasting Advisory Committee shall consist of not more than ten members appointed by the Governor and serving at the Governor's pleasure. The committee shall include members who are knowledgeable about the criminal justice system and trends that may affect the offender population.
 - b. Members of the Committee shall serve four-year terms. Initial appointments to the Committee may be for terms of one, two, or three years in order to provide staggered terms. Members of the Committee may be re-appointed .
 - c. The Governor shall appoint the Committee's chair, who shall hold that position at the Governor's pleasure. The Committee shall meet at least quarterly at the call of the chair.
3. The Corrections Population Forecasting Advisory Committee shall:

a. Review and discuss the types of data needed to make projections of the offender population, select the most accurate data available, and inform the Department of Administrative Services of the potential location of such data for inclusion in the Department's offender population projection models.

b. Identify and evaluate trends, assumptions, policy developments and data inadequacies that may affect preliminary offender population projections prepared by the Department of Administrative Services and that may require adjustments to the data collected.

c. Review and discuss the preliminary offender population projections produced by the Department of Administrative Services and any other agencies involved in criminal justice forecasting, and provide to the Department of Administrative Services any conclusions regarding trends, assumptions, policy developments and data inadequacies that should be included in the Department's offender population projection models or that may require alteration of the preliminary offender population projections.

d. Evaluate and advise on the methodology used by the Department of Administrative Services in making its computations and estimates.

e. Make recommendations to the Department of Administrative Services concerning procedures to be used and data to be collected to improve the forecasting process in the future.

4. The Department of Administrative Services and the Corrections Forecasting Advisory Committee, shall:

a. Beginning October 1, 1995, and each subsequent October 1, ascertain by computation and estimate the number of criminal offenders anticipated to be incarcerated and the number of criminal offenders anticipated to be subject to supervision by the Department of Corrections during each month of the next calendar year, and during the next ten years. A subsequent computation and estimate is due not later than April 1, 1996 and each subsequent October 1 and April 1 in sequence thereafter.

b. To the greatest extent possible, include in its computations and estimates a breakdown of the anticipated offender population by gender, crime of conviction, length of incarceration and other relevant classifications.

c. Provide its computations, estimates and updates every six months to the Governor, and to the Emergency Board and the Interim Judiciary Committee if the legislature is not in session, or to the Joint Committee on Ways and Means and the House and Senate Judiciary Committees if the legislature is in session.

d. Provide a written report at least annually to the Governor and legislature on the methodology and assumptions used in preparing its computation and estimates.

e. Provide copies of its reports to criminal justice agencies and members of the public who may be interested.

5. The Director of the Department of Administrative Services shall appoint a technical working group including persons with backgrounds in research, statistics and forecasting in the criminal justice context. The technical working group shall provide staff assistance to the Department of Administrative Services and the Corrections Forecasting Advisory Committee in carrying out their functions under this Executive Order.

6. The computations and estimates prepared by the Department of Administrative Services pursuant to this Executive Order shall be used by the Department of Corrections in preparing its biennial budget request and in developing its long-term plans; by the Oregon Criminal Justice Commission in evaluating and recommending adjustments to the sentencing guidelines; and by any other state agency concerned with the effects of offender population on policy development or budgeting.

EXECUTIVE ORDER NO. EO - 95 - 05

OREGON PROGRESS BOARD

The Oregon economy of the future can provide unparalleled opportunity while maintaining Oregon's traditional values, if the state pursues the future with clarity of purpose and perseverance. The Oregon economy is in the midst of a massive transition created by technological changes, global competition, and new production practices.

In order to maintain employment opportunities, increase income levels, reduce poverty and generate the public revenue needed to provide public services, Oregon must increasingly rely on an economy which adds value to its natural resources and provides a diverse mix of products.

An Oregon Progress Board is needed to encourage the discussion and understanding of critical global and national economic trends that will affect the Oregon economy in the coming decades; and to formulate and submit to Oregonians a strategy that describes and explains a vision for Oregon's economic progress over the next 20 to 30 years; and to submit to the Legislative Assembly, for its adoption, goals for Oregon's progress, including measurable indicators of the achievement of those goals, in the manner prescribed in ORS 184.007.

IT IS ORDERED AND DIRECTED:

1. There is established an Oregon Progress Board consisting of nine members: the governor and eight members appointed by the governor and serving at the governor's pleasure. In the event of a vacancy for any cause, the governor shall make an appointment for the remainder of the unexpired term. The terms of the members shall be staggered; those terms of four of the members of the initial Board shall expire in January 1997, while the terms of the remaining four members shall expire in January 1999. Subsequent members shall be appointed to four year terms.

Members of the Board shall be entitled to compensation and expenses as provided in ORS 292.495. Of the members of the Board, five shall be selected who are residents of different congressional districts of this state. Members of the Oregon Progress Board shall be appointed so as to be representative of the ethnic, cultural, social and economic diversity of the people of the state of Oregon.

2. In accordance with the applicable provisions of ORS 183.310 to 183.550, the Oregon Progress Board may adopt rules necessary for administration of this Order. The governor shall serve as chair of the board and may appoint an executive officer for the board for a term and with such duties and powers as the board determines to be necessary or appropriate. A majority of the members of the Board constitutes a quorum for the transaction of business. The Board shall meet as the Board determines necessary at time and places specified by call of the chair or a majority of the members of the Board. The clerical, technical, and management personnel serving as staff under ORS 184.250, as of June 30, 1995 shall serve as the Board's initial staff.
3. The Oregon Progress Board shall develop a strategy for Oregon that addresses the economic, social, cultural, environmental, and other needs and aspirations of the people of Oregon. The strategy developed by the Board shall address issues that the Board determines are necessary and appropriate to Oregon's future. Such issues shall include: (a) education and the work force; (b) public and private cooperation; (c) environmental quality; (d) infrastructure; (e) such other issues as the Board, by majority vote, shall add to the strategy.

In developing the strategy, the Oregon Progress Board shall hold public hearings, public meetings, and workshops as needed to ensure the participation of a broad cross section of Oregon's population. The Board shall publicize the public hearings, public meetings and workshops in each city in which they are held and shall allow interested residents and other individuals to appear and be heard by the Board.

After considering any written comments and public testimony relating to the proposed strategy, the Board shall revise the strategy as it considers necessary or appropriate. The Board, by a vote of the majority of its members, shall approve and adopt a final strategy. The Board shall submit, in addition to its adopted strategy, a summary and digest of comments and public testimony and its response, if any, to those comments. The adopted strategy shall be submitted to the regular session of the Sixty-Ninth Legislative Assembly no later than January 15, 1997.

4. As part of the strategy adopted under section 3 of this Order, the Oregon Progress Board shall also adopt a recommended implementation plan. This plan shall include recommendations for statutory or other changes the Board deems

appropriate, including modifications in public fiscal and spending policies, as well as the allocation of lottery revenues, and also recommendations for implementing actions to be carried out by local governments, businesses, private citizens, and other organizations.

5. The Oregon Progress Board shall, in its adopted strategy, include a series of goals for Oregon's progress over the next two to three decades. These goals shall include such measurable indicators of attainment as the Board shall determine which show the extent to which each goal is being achieved. Goals shall be presented to the Legislative Assembly which may, by joint resolution, adopt, modify, delete, or add to these goals. Any goals adopted by the Legislative Assembly shall become the goals used by the Board in its subsequent activities. Subsequent to the legislative review and adoption of goals, the Board may recommend such modifications to the goals as it deems appropriate.

The Oregon Progress Board shall prepare, at least once each biennium, a report which describes Oregon's progress towards achievement of the board's strategy, based on the specific measures the Board has adopted for measuring the attainment of strategic goals. The report shall include an analysis of issues and trends of strategic significance and shall propose an agenda which identifies key steps Oregon should take over the following two years to build for Oregon's future. In developing the report required by this section, the Oregon Progress Board shall consider the criteria contained in ORS 285.005(3)(a) to (e).

DUE TO FIRE IN DESCHUTES COUNTY

Pursuant to ORS Chapter 476, I find that a fire emergency occurred on May 27, 1995, in the LaPine area, Deschutes County, Oregon. Pursuant to ORS 476.520, I find that resources necessary for protection of life and property from the fire are beyond local capabilities; thereby I am invoking the Emergency Conflagration Act. This action was made orally on May 27, 1995, at 3:35 p.m., and is confirmed by this Executive Order.

IT IS ORDERED AND DIRECTED:

1. Oregon State Police, Office of State Fire Marshal, shall be the lead agency in this event, and shall coordinate any and all resources necessary for response to this fire. Oregon State Police, Office of Emergency Management shall act in a support role to assist the Office of State Fire Marshal.
2. This determination of the Emergency Conflagration Act is limited to the LaPine area of Deschutes County, and is not construed as a comprehensive declaration or proclamation of emergency.

Done at Salem, Oregon, this 27th day of May, 1995.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 95 - 02

GOVERNOR'S FOOD PROCESSING COUNCIL

The Governor's Food Processing Task Force met several times in January and February of 1995 at the request of the Governor to develop recommendations on how the State of Oregon can best promote the growth and economic vitality of Oregon's food processing industry. On February 23 the task force presented its report to the governor at a meeting of the Chair, Karla Chambers, and Bruce Andrews, Director of the State Department of Agriculture.

The task force reported to the governor that the value added to food commodities produced in Oregon is approximately 32% -- which is below the national average of 54%. In order to improve this performance, the task force identified factors relating to business competitiveness, infrastructure, labor issues and food safety which the Governor should address.

The citizens of Oregon, particularly those in agricultural communities, have an interest in promoting the growth and continued development of Oregon's food processing industry.

IT IS ORDERED AND DIRECTED:

1. There is established a Food Processor's Council (FPC).
2. The Council will advocate policies and actions that create a positive business climate for food processing enterprises, and support development of new technologies and products that respond to market needs.
3. The Council shall consist of up to twelve (12) persons appointed by the Governor and serving at his pleasure. In order to provide staggered terms, four members of the initial board's terms shall expire in April 1997, four members' terms shall expire in April 1998, and the remaining four members' terms shall expire in April 1999. Subsequent members shall be appointed for four year terms. Non-voting, ex-officio members of the council shall be appointed by the governor and will serve at the governor's pleasure.

EXECUTIVE ORDER NO. EO - 95 - 02

Page Two

4. Council members may be owners, senior managers, workers or emeritus status of the entity they represent. Ex-officio members (in addition to the director of the Department of Agriculture and a representative from Oregon State University) may include a representative from Oregon Department of Environmental Quality and/or Oregon Economic Development Department.
5. The governor will appoint the council chair. A vice-chair and secretary will be elected by the council from the current council members.
6. When a vacancy occurs on the council, a nominating committee appointed by the chair shall develop a slate of qualified nominees representing the broad spectrum of interest involved with the food processing industry to be submitted for consideration by the governor.
7. The council shall:
 - a. Develop and recommend to the governor a formal policy statement which supports the development of this industry through state partnership with related development of the private sector efforts;
 - b. Identify common constraints and opportunities that influence economic performance of food processing companies;
 - c. Identify and evaluate state regulations that constrain the food processing industry;
 - d. Recommend changes in state programs, law, policies, and services for more efficient development of the food processing industry in Oregon; and,
 - e. Assure consumers that foods produced in Oregon are safe.

EXECUTIVE ORDER NO. EO - 95 - 02

Page Three

8. Members of the council shall receive no pay or compensation for their involvement in the activities of the council.
9. This executive order shall remain in effect until amended or rescinded.

Done at Salem, Oregon this 21st day of March, 1995.

GOVERNOR

ATTEST:

SECRETARY OF STATE

EXECUTIVE ORDER NO. EO - 95 - 01

GOVERNOR'S TECHNOLOGY COUNCIL

Oregon has the opportunity to increase the number of knowledge-based jobs and technology-generating industries, thus assuring Oregon's economic diversity and international competitiveness in the next century. Oregon can excel further in research and development with particular emphasis on technological innovation. Knowledge-based industries can become a more substantial element of the state's economy if Oregon becomes known as a state with the climate and resources to generate, retain and transfer new technologies.

A technology council is needed to advise the state on achieving excellence in research and technological innovation.

IT IS ORDERED AND DIRECTED:

1. There is created a Governor's Technology Council, consisting of not more than seven members appointed by the governor and serving at the governor's pleasure. In order to provide staggered terms, two members of the initial Board's terms shall expire in April 1997, two members' terms shall expire in April 1998, and the remaining three members' terms shall expire in April 1999. Subsequent members shall be appointed for four year terms.
2. The council shall develop an action plan on how to increase the rate at which technology is generated and diffused in Oregon's industries and recommend policies that are directed to long-term, as well as short-term, strategies. To do this, the council shall:
 - a. Establish a goal and realistic program objective;
 - b. Examine the current state of the economy, including missed opportunities and potential future development;
 - c. Analyze the private sector needs and strengths, including the potential for successful public/private partnerships;
 - d. Review existing resources and strengths in both public and private academic institutions in the State of Oregon and work in close cooperation with officials at research universities to identify

programs that would establish and strengthen research capabilities important to technology-generating industries;

- e. Compare or benchmark these findings against national and international technology trends;
 - f. Identify synergistic gaps and areas of research and development which should have priority in terms of economic development throughout the state and explore ways to expand growth and diffusion of technology in businesses outside of the Willamette Valley;
 - g. Develop specific strategies or actions needed to meet the goals and program objectives, including any future funding or legislation;
 - h. Continue to advise the governor in the implementation of the action plan and act as a resource for the governor on scientific and technological issues effective the state.
3. In carrying out its responsibilities, the council shall involve affected state agencies, including the State System of Higher Education, Economic Development Department, Oregon Resource and Technology Development Corporation, and related natural resource agencies.
 4. The council shall meet at the call of the chair, and at least four times a year. The governor shall designate the chair and vice chair, who shall serve at the pleasure of the governor. The council shall prepare this action plan and submit it to the governor for approval. The plan shall also include a recommendation regarding the future role of the council.
 5. The Department of Economic Development shall provide staff assistance to the council.

EXECUTIVE ORDER NO. EO - 95 - 01

Page 3

6. Members of the council shall not receive compensation for their services.

Done at Salem, Oregon this 15 day of March, 1995.

Governor

February 19, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4012 (2002 Special Session), unsigned and disapproved.

This bill would borrow \$120 million from the Common School Fund to pay for one year of operating costs for schools at a cost of \$135.5 million. It violates the 143-year old trust for our school children established by our pioneer ancestors. I do not believe that we should use a permanent trust fund and obligate ourselves to a long-term debt to deal with a short-term problem.

Furthermore, the specific Common School Fund moneys earmarked to be borrowed do not belong to the state. According to current law, the money from unclaimed properties - such as payroll checks, utility deposit checks and safety deposit contents -- are held by the state in trust for their rightful owners. A primary purpose of the unclaimed property program is to reunite these owners with their property. If claims for the unclaimed property proceeds that are being borrowed exceed the amount remaining in the unclaimed property deposit liability fund, then the state could be subject to a lawsuit to recover those funds. At the very least the state would need to ensure that funds are available to pay the claims.

This bill is not a good investment for the Common School Fund. First, given current market conditions, the state will likely lose money on its investments when it liquidates holdings in order to make the loan, unless there is a major turnaround in the stock market over the next year. Second, the interest rate being paid on all the money used, lost or diverted from the Common School Fund is less than the fund is projected to earn over the next five years.

Proponents of the bill stated that the interest rate used to determine the debt service would be 7.3 percent, equivalent to the projected rate of return for the fund. This interest rate, however, appears to apply only to the \$100 million borrowed and not for additional monies diverted during the current biennium and for any investment losses. As a result, the actual interest rate that would be paid is less than half what the fund is forecast to receive.

This bill is not a good investment for our school children. It uses a permanent trust fund that already generates money for schools to meet a short-term need. It also will result in even greater cutbacks in the next biennium when the debt service is repaid using Lottery dollars - money that is already earmarked for schools and economic development.

Finally HB 4012 jeopardizes the Division of State Lands' funding needed to manage the unclaimed property program in the next biennium. Since the program operations are currently funded through the earnings, and most of the principle would be diverted for a loan, the program would need to be funded through another source, such as the General Fund. During the 2003-05 biennium, a shortfall in the operating budget for this program (\$400,000-\$1,000,000 depending on

market performance) will result.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

February 26, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4013 (2002 First Special Session), unsigned but not disapproved. While allowing this bill to become law, I wish to share my reasons for not signing the legislation.

HB 4013 removes the Sunday liquor sales prohibition. The bill also sets out a mechanism through which \$3 million of anticipated increased revenues from those sales will be deposited into the general fund.

I do not believe that the bill will result in the anticipated increased revenues. The bill makes Sunday sales voluntary and a good number of liquor agents have expressed their opposition to being open seven days a week. Many also believe this will not result in increased purchases instead will simply spread the sales throughout week.

I think this measure sends the wrong message to young Oregonians, and I do not believe it will make a significant contribution to the state's revenues. However, I will not stand in the way of the legislative desire to provide for Sunday sales. It takes effect without my signature.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

February 26, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill 4014, unsigned and disapproved.

This bill contains a number of revenue changes. It requires the Governor to submit a plan to the Emergency Board on how it intends to use the funds allocation for the Post-Secondary Education Opportunity Commission.

Prior to the Special Session, I outlined two principles that I expected the Special Session to follow in crafting a solution to the current budget deficit:

- (1) Provide for a public process to debate proposed revenue and expenditure options during the Special Session. There was no such opportunity for Oregonians to debate the revenue changes proposed in House Bill 4014.
- (2) Include long-term structural change in any proposed solution to address the fact that the current budget is not sustainable into the future based on the projected revenue forecast. House Bill 4014 coupled with other legislation does not adequately address this long-term structural problem in state spending.

Finally, I disagree with program choices contained in House Bill 4014. This bill continues partial spending for the Oregon Rural Health Association, while investments in the Oregon Health Plan are reduced. It also transfers resources in the Housing and Community Services programs and cuts support for the State Board of Education and the Post-Secondary Education Opportunity Commission.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

February 19, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4015 (2002 Special Session), unsigned and disapproved.

The bill would make changes to the statutes governing the School Improvement Fund. The Fund was established during the 2001 legislative session as a means to focus additional resources to K-12 schools on a menu of activities directly related to improvement in student performance. The statutes governing the Fund specify various accountability measures, including a requirement that the Department of Education evaluate the annual progress of school districts in meeting performance targets established by the Quality Education Commission and funded by the Legislature. They include a provision requiring the focus of improvement for these funds for the current and the next biennium on 3rd and 5th grade reading and math benchmarks.

HB 4015 repeals the sections of the law relating to the focus of the 2001-03 and 2003-05 grant funds. It also retrospectively allows school districts to use funds already received for the 2001-02 school year (a total of \$108 million) in any way they wish.

HB 4015 is not needed. The provisions in the current statutes would not be in effect if the second year funding is not available for the School Improvement Fund, so there are no "unfunded mandates" included in the statutes. Although this bill has been portrayed as providing schools flexibility, I find it curious that the Legislature is willing to send a message that schools do not need to be accountable in a clearly-focused way for the first-year funding of \$108 million. Although the current budget shortfall may require that we slow down our efforts in improving literacy for our youngest students, I continue to believe that future investments should be targeted on early literacy as the best means of gaining long-term improvements in student performance.

HB 4015 sends the wrong message to our schools and their students about accountability, and I am not willing to support that message.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Veto Page](#)

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

February 26, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4020 (2002 Special Session), unsigned and disapproved.

Oregonians' telephone services are taxed to provide resources for 9-1-1 emergency services. This bill takes \$14 million in 9-1-1 tax revenue from the wireless subaccount and credits it to the General Fund. The 9-1-1 funds are critical to providing communication equipment and support systems for our public safety agencies and our emergency response networks. With the increasing use of cellular phones, these funds are vitally necessary to protect the safety of Oregonians.

It is irresponsible to transfer \$14 million of these funds to the General Fund because of the damage that will be caused to Enhanced 9-1-1 Wireless. Enhanced 9-1-1 Wireless will allow public safety officers to locate persons calling for assistance from a cellular phone. This capability will prove to be lifesaving – and Oregon cannot afford to neglect moving forward with this significant improvement to our overall public safety response capabilities.

I am only willing to support using \$7 million of the 9-1-1 funds to help with our immediate budget shortfall, though I would prefer that alternative revenues are identified for the rebalance of General Fund programs.

It is critical that we move forward with at least a \$7 million investment in hardware, software, training, and installation of new Geographic Information System advancements for our call centers so they can make significant progress toward meeting Federal Communication Commission standards.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

February 22, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am allowing HB 4021 to become law without my signature.

HB 4021 provides extended unemployment insurance benefits to workers dislocated by the current economic recession. In addition, if Reed Act funds become available for funding unemployment insurance benefits, the bill increases the payments received by unemployed workers by \$20 per week. These two elements of the bill prevent my veto.

However, one portion of the bill contains a manifestly bad policy and is the reason for my letting the bill become law without my signature. Although the AFL-CIO and Associated Oregon Industries supported the legislation with the benefit extension and increase only, the NFIB held the bill hostage for language that, contingent on Reed Act funds availability, would temporarily lower the unemployment insurance contribution rates paid by businesses. This is an undesirable precedent that completely changes the long established use of unemployment insurance (UI) funds.

The policy surrounding UI payments has, to date, been clear. The payments go to the families of unemployed workers. This has the dual effect of helping families through hard times when unemployment strikes, and supporting communities (including the businesses who serve unemployed families) by having the payments spent for basic services in the community. This carefully targets UI payments to the families who truly need the support, and the communities and businesses where the economic dislocations are the worst (highest unemployment rate).

The new policy set out in HB 4021 sends money directly back to businesses regardless of their need (businesses in areas still thriving get the same break as businesses in areas with greater dislocation) and subsidizes the profits of businesses and owners that may be doing quite well. We lose the original intent of UI funds, and we use UI funds to support persons who are not suffering because of the economy. I will reluctantly allow this bill to become law because our unemployed workers cannot afford to risk losing their badly needed benefits.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

April 11, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4025, unsigned and disapproved. HB 4025 eliminates the exemption of agricultural employment from the collective bargaining laws. While I believe both agricultural and labor organizations must be held accountable for creating a process that is fair for farmers and farm workers, I cannot support HB 4025.

This important issue deserves much greater attention and scrutiny than it received during the special session. While doing away with the exemption may appear as a viable approach to resolving farm labor disputes, it does not address the issues of how to effectively implement such legislation, and ignores other alternatives that also deserve attention.

Despite decades of disagreement, misunderstanding, and a lack of trust, I appreciate the recent efforts by labor and the agricultural industry to address these issues. Those groups have made progress by taking the time to gain an understanding of common interests and working together to develop a framework to resolve issues. Yet, HB 4025 threatens that process because it would immediately implement, through an emergency clause, collective bargaining provisions with no rules in place, nor the necessary resources and personnel to provide an effective process for farm workers and employers.

Farm worker representatives and employers are closer now than ever in working together to address those issues, but both sides must look beyond the history that has moved us to this point. Although I am vetoing HB 4025, I will work with all of the interested parties to craft a bill for the next time the legislature convenes. At this time of great opportunity, I think it is vitally important that we have a law that is responsive to Oregon's needs, provides accountability, and enhances both the lives of farm workers and the agricultural industry. HB 4025 does not represent such a piece of legislation.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Veto Page](#)

JOHN A. KITZHABER, M.D.
Governor

March 12, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4028 (2002 Second Special Session), unsigned but not disapproved. In transmitting this bill I wish to share my reasons for not signing the legislation.

HB 4028 is a substitute for HB 4013 that was passed during the 2002 First Special Session. While maintaining the provisions of HB 4013, HB 4028 adds the provision of an emergency clause. Like HB 4013, HB 4028 removes the Sunday liquor sales prohibition, and sets out a mechanism through which \$3 million of anticipated increased revenues from those sales will be deposited into the general fund.

As noted in my transmittal letter for HB 4013 (attached), I allowed it to become law without my signature. I stated in the HB 4013 transmittal letter that I do not believe this legislation will result in the anticipated increased revenues and that I have concerns about the message it sends to young Oregonians.

As with HB 4013, in which I did not stand in the way of the legislature's desire to provide for Sunday liquor sales, I will again not stand in the way of the legislature's desire to implement this policy immediately through the provisions of the emergency clause.

For these reasons I am transmitting HB 4028 to you unsigned but not disapproved, thereby allowing the bill to become law at the end of the 30 day period pursuant to Article V Sec. 15b (3) of the Oregon Constitution.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Veto Page](#)

JOHN A. KITZHABER, M.D.
Governor

March 12, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning HB 4029 unsigned and disapproved.

HB 4029 reduces the dental benefit for persons receiving coverage under the Oregon Health Plan. In doing so, it limits dental benefits in statute rather than using the normal process of prioritization through the Health Services Commission, funding by the legislature, and negotiations with the federal government.

Placing this language in law reduces the flexibility the state has to structure the dental benefit in ways that maintain and improve health to the greatest extent possible.

HB 4029 treats dental care differently than all other health care services and begins to break down the discipline of the Oregon Health Plan benefit design process.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4030 (2002 Special Session), unsigned and disapproved.

I restate my veto message of House Bill 4020 from the first 2002 Special Session. I continue to stand with Oregon's law, fire and emergency communications professionals that believe that an excessive depletion of these dedicated funds will significantly compromise major improvements in emergency communications.

Oregonians' telephone services are taxed to provide resources for 9-1-1 emergency services. This bill takes \$14 million in 9-1-1 tax revenue from the wireless subaccount and credits it to the General Fund. The 9-1-1 funds are critical to providing communication equipment and support systems for our public safety agencies and our emergency response networks. With the increasing use of cellular phones, these funds are vitally necessary to protect the safety of Oregonians.

It is irresponsible to transfer \$14 million of these funds to the General Fund because of the damage that will be caused to Enhanced 9-1-1 Wireless. Enhanced 9-1-1 Wireless will allow public safety officers to locate persons calling for assistance from a cellular phone. This capability will prove to be lifesaving - and Oregon cannot afford to neglect moving forward with this significant improvement to our overall public safety response capabilities.

Again, I am willing to support using only \$7 million of the 9-1-1 funds to help with our immediate budget shortfall, though I would prefer that alternative revenues are identified for the rebalance of General Fund programs.

It is critical that we move forward with at least a \$7 million investment in hardware, software, training, and installation of new Geographic Information System advancements for our call centers so they can make significant progress toward meeting Federal Communication Commission standards.

Sincerely,

John A. Kitzhaber, M.D.

March 12, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill (HB) 4041, unsigned and disapproved. HB 4041 sets out the text of a ballot title for House Joint Resolution (HJR) 76. HJR 76 establishes an Education Stability Fund in the Oregon Constitution and appropriates \$220 million from the fund to a State School Fund in May 2003.

In the same legislative session the Legislature also passed HB 4032. That bill requires the Attorney General to draft a ballot title for HJR 76 and requires that ballot title to be placed on the ballot in the event HB 4041 does not become law.

Ballot titles are perhaps the single most important source of information for voters about the substance of the measure on which they are voting at the time that they cast their vote. Because of that, it is extremely important that the titles be drafted carefully to reflect accurately the substance and consequences of the measure.

I am vetoing HB 4041 because it is unnecessary and ambiguous. HB 4041 is unnecessary because HB 4032 already provides a process through which the Attorney General drafts a ballot title that is subject to comment by both proponents and opponents of the measure. HB 4022 is ambiguous because it does not accurately describe that HJR 76, if adopted, would allow the Legislature to distribute both earnings and principal from the Education Stability Fund. In addition, the ballot title in HB 4041 neither states that the \$220 million transfer will not occur until May of 2003, nor does it explain that if both HJR 76 and Senate Joint Resolution (SJR) 50 (a similar constitutional amendment also appearing on the May ballot) are adopted, HJR 76 would repeal SJR 50.

In vetoing HB 4041 I am confident that the Attorney General, through the public comment process, will present Oregon voters with a more complete and accurate ballot title for HJR 76 on the May 2002 ballot, thereby giving Oregon voters an informed choice of whether to adopt the Education Stability Fund as structured under HJR 76.

Sincerely,

John A. Kitzhaber, M.D.

Governor

March 12, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill (HB) 4042, unsigned and disapproved. HB 4042 sets out the text of a ballot title for Senate Joint Resolution (SJR) 50, which the legislature passed in the 2002 First Special Session. SJR 50 establishes an Education Stability Fund in the Oregon Constitution and transfers \$120 million from the fund to a State School Fund in May 2003.

Before passing HB 4042, the Legislature passed Senate Bill (SB) 1010 in the 2002 First Special Session. That bill required the Attorney General to draft a ballot title for SJR 50. HB 4042 states that, if enacted, the ballot title in that bill would replace the ballot title prepared by the Attorney General under SB 1010.

Ballot titles are perhaps the single most important source of information for voters about the substance of the measure on which they are voting at the time that they cast their vote. Because of that, it is extremely important that the titles be drafted carefully to reflect accurately the substance and consequences of the measure.

I am vetoing HB 4042 because it is unnecessary and ambiguous. HB 4042 is unnecessary because the Attorney General has already drafted a ballot title for SJR 50, which is subject to comment by both proponents and opponents of the measure. HB 4042 is ambiguous because it does not accurately describe that SJR 50, if adopted, would allow the Legislature to distribute both earnings and principal from the Education Stability Fund. In addition, the ballot title in HB 4042 does not mention that the \$120 million transfer will not occur until May of 2003.

In vetoing HB 4042 I am confident that the Attorney General, through the public comment process, will present Oregon voters with a more complete ballot title for SJR 50 on the May 2002 ballot, thereby giving Oregon voters an informed choice of whether to adopt the Education Stability Fund as structured under SJR 50.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4055 (2002 Third Special Session), unsigned but not disapproved. In transmitting this bill I want to express my reason for not signing the legislation.

The bill does a number of things including eliminating vacant positions in state agencies, reducing salaries of elected officials, using one-time statutory revenues from the Common School Fund, using one time 911 tax revenues and increasing lottery bonding revenues.

One provision of the bill directs the Division of State Lands (DSL) to transfer \$17.7 million for fiscal year 2002-03 from the statutory portion of the Common School Fund to counties for distribution to schools, among other provisions. The bill further directs DSL to make its regular distribution under the current distribution policy if possible, and if unable to make this distribution, to report to the legislative revenue committees before March 1, 2003.

The statutory portion of the Common School Fund took 50 years to accrue to its current value. The use of this one-time revenue for one year of school operations comes at the expense of future school children.

Currently, interest from these funds go into the Distributable Income Account for distribution to schools under the State Land Board's adopted distribution policy. Given current market conditions it is likely that assets would need to be sold at a loss to make this extra distribution, with the loss chargeable to the Distributable Income Account. For these reasons it makes it much more unlikely that DSL will be able to make the regular distribution for this fiscal year.

While this bill may help solve the immediate budget deficit, it will add to the 2003-05 budget problem and create more uncertainty for school funding in the long term.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4056, unsigned and disapproved.

HB 4056 authorizes Oregon to borrow \$50 million for primary and secondary education with bonds that are to be repaid with revenue from the current cigarette tax. In addition, the bill authorizes up to an additional \$175 million to be borrowed - again backed by the cigarette tax - if the September 2002 revenue forecast has a shortfall greater than \$50 million. Finally, Oregon is obligated to repay these bonds regardless of whether the voters adopt the increase in the cigarette tax contained in HB 4051.

Simply stated, HB 4056 directs us to educate our children today by borrowing from their schools tomorrow. Furthermore, this bill would allow the Oregon Legislative Assembly to abrogate its constitutional duty to balance the state's budget and push the burden of doing so onto the children of tomorrow.

For these reasons, I am returning HB 4056 unsigned and disapproved.

Sincerely,

John A. Kitzhaber, M.D.

August 6, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4064 (2002 Special Session), unsigned and disapproved.

The bill would sunset the cigarette tax contained in House Bill 4051 on July 1, 2009. House Bill 4051, which I have signed, is a permanent tax increase of \$.60 per pack of cigarettes distributed on or after October 1, 2002. I believe we continue to need additional revenue, and I believe that revenue must be permanent.

Oregon's current budget shortfall has illustrated a serious long-term challenge: a structural budget deficit that preceded the recession and which will continue beyond it. Our current level of state programs and services is not sustainable into the future, based on the projected revenue forecast – even when the economy has fully recovered. The fact is that we are not going to grow our way out of this problem.

Over the course of three special sessions the legislature was unable to reduce the level of state programs and services beyond about \$450 million. The budget was cut as deeply as it could be cut – not only from the standpoint of good public policy, but from a political standpoint as well.

The only option left is to add permanent new revenue to fund important and needed services. By the time the sunset contained in House Bill 4064 would occur, the state will be receiving \$220 million per biennium from this revenue source – funds primarily dedicated to the Oregon Health Plan.

There is no evidence to support the assumption that Oregon will grow our way out of the current budget deficit. HB 4064 – if it became law – would result in the reduction of \$220 million in permanent revenue, and as a result would only worsen the budget problems we continue to face.

Sincerely,

John A. Kitzhaber, M.D.

October 22, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 4073 (2002 Fifth Special Session) unsigned but not disapproved. In transmitting this bill I want to share my reasons for not signing the legislation.

HB 4073 establishes the Master Settlement Asset Corporation (MSAC) for the purpose of selling a portion of the payments under the Master Settlement Agreement (MSA) for up to eight years to garner \$150 million in net proceeds to balance the 2001-2003 budget. This is a borrowing plan to pay for one-time state government operations. The state could pay over \$40 million in interest and other costs over eight years for \$150 million of 4-6 months of operational costs. Whether for a household or state government, this kind of financial mismanagement is imprudent and must be limited.

As the state has faced a growing budget crisis since the close of the 2001 Legislature, I have clearly stated I believe we should pay as we go. If we believe government services are important we should pay for them. If we are not willing to pay for government services, we should cut them. Borrowing to pay for one-time operations expenditures is bad fiscal policy.

Borrowing does nothing to solve the underlying structural budget problem the state is facing, and in fact makes this problem worse in future biennia. The structural gap between state revenues and expenditures has led both Moody's Investors Services and Standard and Poor's to downgrade the state's credit outlook from stable to negative. In addition, State Treasurer Randall Edwards expressed concerns about "the state's growing structural budget imbalance" in an August 27, 2002 letter to legislative leadership and me.

The amount of money to be paid the State under the MSA is subject every year to multiple adjustments based in part on the volume of cigarettes distributed nationally and on the outcome of litigation about the meaning of elements of the agreement. These uncertainties will be reflected in the cost of borrowing these funds and further erode my confidence in relying on the MSA for fundamental state services.

Finally, I would like to make it as clear as I can that we have a large fiscal challenge both in the current biennium and in the biennium immediately before us. In attempting to deal with this crisis, there were five special sessions. The results of those special sessions include \$609 million in cuts, \$697 million in one time revenue, \$267 million in shifting payments for K-12 schools and community colleges into the next biennium, \$65 million in cigarette taxes and another \$310 million in cuts that will be restored if voters pass a temporary tax increase in January.

It is unconscionable and irresponsible that some still espouse borrowing more or emptying more state accounts as a

credible way to approach the next budget. There really are only two honest and prudent ways that remain to deal with the budget gap facing Oregonians—either make hard choices to further cut schools, prisons, health care and other vital services or seek stable and adequate revenue.

While I have several concerns with this bill as noted above, I will allow it to become law without my signature because the amount of borrowing is limited to \$150 million and it was part of the budget agreement reached in the Fifth Special Session

Sincerely,

John A. Kitzhaber, M.D.

October 24, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill (HB) 4075, 2002 Fifth Special Session, unsigned but not disapproved. HB 4075 sets out the text of a ballot title, financial impact statement and explanatory statement for House Bill 4079. To repeal cuts to education, public safety, health care and related public services, HB 4079 proposes a temporary increase in the corporate excise tax and the top personal income tax bracket. In HB 4079, the Legislative Assembly has referred this question to Oregonians for their approval at a special election to be held throughout the state on January 28, 2003. The Secretary of State has designated HB 4079 as Ballot Measure 28.

Ballot titles, financial impact statements and explanatory statements are the most important source of information for voters about the substance of a measure. Indeed, in many instances, they are the only source of information for a voter. Because of that, it is extremely important that the ballot title, financial impact statement and explanatory statement be drafted carefully to reflect accurately the substance and consequences of the measure. As the dissemination of this information is a public service, the state has an obligation to prepare ballot titles, financial impact statements and explanatory statements that provide an objective and balanced description of the question presented to the voters.

Unfortunately, in HB 4075 the legislature has breached that obligation. The ballot title, financial impact statement and explanatory statement omit from voters a crucial aspect of this measure. Specifically, those parts of HB 4075 deliberately fail to inform Oregonians about the deep cuts to public services, which the Legislative Assembly set out in Section 2 of HB 5100.

For example, HB 5100 cuts \$95 million from the State School Fund, \$27 million from Higher Education and \$14 million from Community Colleges. It cuts \$90 million from health care and human services programs, hitting senior, disabled and low income Oregonians the hardest. It also cuts over \$55 million from public safety services, such as the Department of Corrections, State Police, Community Corrections and the Oregon Youth Authority. Those cuts are restored only if the measure passes—cuts that result in closing schools early, increasing tuition, compromising public safety and terminating services to vulnerable populations. And yet, HB 4075 makes no mention whatsoever of that consequence.

Because HB 4075 is misleading, my initial inclination was to veto it. The reason I am not exercising my veto authority on HB 4075, however, is my concern about further erosion in the integrity of the electoral process. Already, the opponents of the temporary corporate and personal income tax increase have made threats to file a lawsuit if I veto HB 4075, hoping to deprive the people of Oregon of the opportunity to vote on this matter on January 28. Although it is clear to me that the result of any litigation would be that the January 28 election date would be preserved and that this election would be conducted like any other special election, litigation on

those procedural issues would only delay the discussion we must all have on this matter as Oregonians.

In allowing HB 4075 to go into law without my signature, I ask all Oregonians who care about vital public services to join me in redoubling our efforts to make the choices clear. I have said throughout this long and difficult year that the principle of “pay-as-you-go” must ultimately prevail in government finance. When Oregonians vote on Measure 28 on January 28, it will be the first step toward reestablishing honest and accountable budgeting.

As concerned as I am about the misleading way HB 4075 puts the question to voters, I am confident in the ability of Oregon voters to see through that deception and fully understand the question being asked.

Sincerely,

John A. Kitzhaber, M.D.

October 25, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill (HB) 4077, 2002 Fifth Special Session, unsigned and disapproved.

HB 4077 would repeal Oregon's inheritance tax in 2005. In addition, the bill connects Oregon to certain provisions of federal estate tax law changes made in 1997 and 2001. In doing so, HB 4077 would result in a \$5.6 million loss to the state in the 2001-03 biennium, and an \$18.1 million loss in the 2003-05 biennium. Thereafter, when this bill repeals the inheritance tax, HB 4077 would result in more than a \$92 million loss for each subsequent biennium.

Not only would this bill result in an immediate and, over time, substantial decrease in revenues, HB 4077 is not real tax reform. The legislature enacted HB 4077 in isolation, and without exploring other tax reform measures. A decision whether to continue the inheritance tax must be a part of the larger debate on the appropriate balance of state spending to state revenue.

Because that debate did not occur, and given the substantial decrease in revenues that would result from this bill, I am compelled to veto HB 4077.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill 5070, unsigned and disapproved.

This bill is a companion to Senate Bill 5574. It makes General Fund and Lottery Funds adjustments to state agency budgets based on final decisions by the February 2002 Special Session.

While I agree with many of the proposed reductions contained in this bill, I disagree with the legislative process used to craft these reductions.

Prior to the Special Session, I outlined two principles for the Special Session to follow in crafting a solution to the current budget deficit:

- (1) Provide for a public process to debate proposed revenue and expenditure options during the Special Session. There was no such opportunity for Oregonians to debate the program reductions contained in House Bill 5070.
- (2) Include long-term structural change in any proposed solution to address the fact that the current budget is not sustainable into the future based on the projected revenue forecast. House Bill 5070 coupled with other legislation does not adequately address this long-term structural problem in state spending.

In addition, this bill requires the Executive Branch to take across-the-board cuts and restorations for every \$100 million change in future revenue forecasts. I fundamentally disagree with this approach to balancing budgets. It precludes any decision for choices based on program priorities and long-term investments.

Finally, there are technical questions about the legality of language in the bill related to the Medicaid Upper Payment Limit (MUPL) funds and the tobacco settlement funds. There is no language that transfers these funds to an account from which dollars can be expended.

Sincerely,

John A. Kitzhaber, M.D.

August 7, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 5091 (2002 Third Special Session), unsigned but not disapproved. In transmitting this bill I wish to share my reasons for not signing the legislation.

House Bill 5091 is the omnibus disappropriation bill. This bill makes additional cuts in a number of state programs in addition to significant reductions in funding for primary and secondary education and community colleges. As a result of this bill becoming law – and in conjunction with actions taken during previous special sessions and emergency boards – approximately \$780 million has been cut from the legislatively approved budget for the 2001-2003 biennium.

The most significant disappropriations within this bill are \$211 million to K-12 and \$56 million to community colleges. The Legislature chose to make general fund reductions to these programs and then in separate legislation, backfill these cuts with bonds backed by the cigarette tax and by an accounting maneuver. Because I have chosen to veto the legislation which would backfill the cuts, the consequence of letting this bill become law without my signature means that the Legislature's reductions to K-12 and community colleges will result in real cuts to these vitally important programs.

I want to make clear that I do not believe that K-12 or community colleges can take these cuts without a resulting serious and devastating short-term impact to Oregon's educational system. Providing a quality public education is the single most important service that state government funds. Nonetheless, funding public education in this way is a disservice to our school children, our workforce, and, indeed, to all Oregonians. It masks the fact that we have not provided sustainable revenue for these programs and misleads Oregonians into thinking there is not a serious problem with Oregon's budget. I think we can do better than this and I believe Oregonians deserve a chance to decide for themselves what level of funding they want to provide for public education.

For these reasons, I am returning HB 5091 unsigned but not disapproved.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Veto Page](#)

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

October 15, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I have signed Enrolled HB 5100, 2002 Fifth Special Session, but with the following line items in Section 1 disapproved:

- Administration, Page 1, DAS, General Fund, ch. 878 8, \$400,000; and
- Economic and Community Development, Page 3, Historical Society Grant, General Fund, ch. 471 1, \$468,374.

I am using my line item veto authority for these two items because both programs are important to the state's current and future economic development and recovery efforts.

The \$400,000 cut to the Community Solutions Office would result in the loss of 4 of 5 regional coordinators and one support staff position. These coordinators bring state staff and resources together to assist county and city governments implement priority local economic and community development projects. Several local governments have lauded this program for expediting important projects through agency review processes necessary for the projects to move forward.

The cut of \$468,374 to the Oregon Historical Society would make it impossible for the state to plan for the Lewis and Clark Bicentennial Celebration in Oregon. This major national event is expected to attract visitors from around the country and world to our state, bringing millions in tourism dollars to Oregon.

This action will reduce the ending balance by \$868,374.

Sincerely,

John A. Kitzhaber, M.D.

February 19, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning Senate Bill 1008 unsigned and disapproved.

This bill attempts to treat dental services differently than all other health care and preventive services prioritized by the Oregon Health Plan. The strength of the Oregon Health Plan is that it evaluates all health services with the same process and then purchases those services in priority order with the funds that are available. By treating dental care differently, this bill breaks the discipline of the priority setting process and erodes the integrity of the Oregon Health Plan.

The bill also creates the unacceptable precedent of placing in statute a benefit package and co-payments. This will make it impossible for us to alter the dental benefit for OHP patients should such an alteration be required for purposes of obtaining a waiver, rebalancing the DHS budget, or because new research makes such a change desirable.

Finally, the bill omitted the \$500 per year limit on services included in the dental benefit recommended by the Health Services Commission. This not only illustrates the folly of placing benefits in statute but it nullifies a large portion of the savings gained by the changes contained in the waiver. As a result, the bill would increase the cost of the new Oregon Health Plan waiver.

Sincerely,

John A. Kitzhaber, M.D.

August 7, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled Senate Bill 1022 (2002 Third Special Session), unsigned and disapproved. While recognizing the potential impact on K-12 schools, community colleges and those they serve, I cannot in good conscience allow this bill to become law. It represents unsound fiscal policy, creating an unsustainable funding mechanism for our public schools.

SB 1022 authorizes an accounting maneuver which moves the due date of the final state payment to primary and secondary schools and community colleges from the current biennium into the next. This allows the state to realize a one-time "paper gain" of \$260 million by deferring the responsibility to make this payment to the next legislature. In other words, the bill shifts the due date, but not the money with which to actually make the payment.

This maneuver is not materially different from a corporation taking future projected profits and showing them on today's books in order to give the shareholders an inflated picture of the financial health of the business. This bill would likewise be giving Oregonians – the shareholders of our system of public education – an inflated and inaccurate view of the true fiscal health of our schools.

Furthermore, SB 1022 does nothing to ensure that the \$260 million will be available for public education in the 2003-05 biennium since the current Legislature cannot obligate the next Legislature.

As we look towards the 2003-05 biennium, it is clear that difficult choices will need to be made. With projections of a gap between projected expenditures and available revenues of more than \$1.2 billion, it is time for the Legislature to make choices that not only address the shortfall this biennium but begin to address the problem for the next biennium as well.

It's time to be accountable.

For these reasons, I am returning SB 1022 unsigned and disapproved.

Sincerely,

John A. Kitzhaber, M.D.

February 19, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Senate Bill 5574, unsigned and disapproved.

This bill disappropriates General Fund and Lottery Funds from State agency budgets to partially address State government's revenue shortfall.

While I agree with many of the proposed reductions contained in this bill, I disagree with legislative process used to craft these reductions. I also disagree with the level and types of reductions proposed in Senate Bill 5574.

Prior to the Special Session, I outlined two principles that I expected the Special Session to follow in crafting a solution to the current budget deficit:

(1) Provide for a public process to debate proposed revenue and expenditure options during the Special Session. There was no such opportunity for Oregonians to debate the program reductions in Senate Bill 5574.

(2) Include long-term structural change in any proposed solution to address the fact that the current budget is not sustainable into the future based on the projected revenue forecast. Senate Bill 5574 coupled with other legislation does not adequately address this long-term structural problem in state spending.

Finally, I disagree fundamentally with many of the program reduction choices contained in Senate Bill 5574. For instance, this bill cuts funding to undergraduate instruction at Oregon's universities and reduces our investments in human resource prevention programs. Other policy choices should be considered.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

March 12, 2002

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled Senate Bill 5575 (2002 Second Special Session), with the following line items in Section 1 (3) Human Services, Medical Assistance Programs (page 4), unsigned and disapproved:

- General Fund ch. 892
1(2)(c) -60,593,030
- Other funds ch. 892 5 +67,500,000
ch. 894 2 +67,500,000

The General Fund ch. 892 1(2)(c) line item reduces the General Fund appropriation for the Medical Assistance Program by \$60,593,030.

The Other Funds line items of ch. 892 5 +67,500,000 and ch. 894 2 +67,500,000 replace the General Fund with \$67,500,000 of National Tobacco Settlement proceeds from the Health Care Trust Fund.

This action spends almost the entire National Tobacco Settlement account and effectively depletes the Health Care Trust Fund. Further, coupled with the \$220 million Education Endowment Fund raid and use of other one-time revenue, the legislative budget plan uses a staggering half billion dollars in one-time revenues, which will virtually spend every dime of the state's reserves and will create a huge financial cliff for the next biennium.

This entire budget deserves to be vetoed, but because of the state's serious cash flow problem, I will veto only the \$60,593,030 disappropriation of the Medical Assistance Program General Fund and the \$67.5 million in national Tobacco Settlement proceeds in SB 5575 and reluctantly let the rest of the bill become law.

Sincerely,

John A. Kitzhaber, M.D.

Governor

June 28, 2001

The Honorable Mark Simmons
Speaker of the House
H-269, State Capitol
Salem, OR 97301

Dear Speaker Simmons:

I am returning herewith enrolled HB 2001, unsigned and disapproved.

Throughout session, I have maintained that I would approve a redistricting plan that had broad support both from the membership and the leadership of this Legislative Assembly. Early in session, there were encouraging signs that all interested parties were working together on the legislative redistricting plan. However, the lack of process and public input and the stark partisan vote on HB 2001 highlight its shortcomings.

I have little doubt that any redistricting plan will go through rigorous legal analysis. With due regard to the Oregon Constitution, the statutes and the voluminous case law surrounding this issue, the core purpose of redistricting should not be forgotten. Redistricting should serve Oregonians by providing representation that truly reflects the nature of our people and our communities. For example, the statutes and our courts direct that communities should not be divided, unless absolutely necessary. The strict adherence in this plan to zero population deviation -- an attempt to create districts that have the same numerical population -- forces its drafters to unnecessarily divide city boundaries and to divide ethnic and community populations and disregard the other criteria in the statute and in case law.

HB 2001 is well out of line with the statutory requirements set forth in ORS 188.010. With the exception of the requirements in that statute that districts be of equal population and that two House of Representative districts shall be wholly included within a single state senatorial district, it appears that there are valid questions about each of the other requirements in ORS 188.010. For example, ORS 188.010(1)(c-d) mandates that districts shall "utilize existing geographic or political boundaries" and "not divide communities of interest." Yet, in several cases, this plan unnecessarily divides city and county boundaries and creates tremendous shifts in population and representation.

It is clear after reviewing the record of testimony and the many letters my office has received regarding the bill, there is a wide gap between the public input received by the committees working on this plan and the product that was incorporated into HB 2001 hours before it was voted out of the House Rules Committee.

For example, there was overwhelming testimony that Astoria and the Columbia River communities upriver share much in common and that the "river district" should be preserved as much as possible, as this was clearly a community of interest. Yet, this plan violates the public input, unnecessarily alters the boundaries of the current river district and realigns the district north and south along the coast and not east and west along the river. In addition, there was a great deal of testimony received from residents of West Linn, Lake Oswego, Bend, Tualatin, Coos Bay and other communities that hoped to be wholly contained in a single House district. And yet, in each of these cases, the cities are inexplicably divided.

The division of Bend is particularly perplexing. Deschutes County has experienced the most rapid growth of any county in Oregon since redistricting in 1991. Based on this, it is obvious that new lines need to be drawn for the core

Deschutes County House Districts -- 54 and 55. The City of Bend has grown to 52,029, very close to the target House District population of 57,023. And yet HB 2001 ignores the overwhelming public testimony and written letters seeking to accomplish what common sense would dictate --create a Bend district that puts the entire city in one House District and make up the difference with 5,000 citizens that live just beyond the city limits. Instead, the city is divided so that one-third of the population is in House District 55, and two-thirds of the population is in House District 54.

ORS 188.010(3) also requires that "No district shall be drawn for the purpose of diluting the voting strength of any language or ethnic minority group." At least two examples of dilution appear to violate this provision. First, a district in Hillsboro reduces the Hispanic population from 26% to 19%. In addition, the Hispanic population in two Salem districts -- 32 and 33 -- is divided in such a way that each district has roughly 11,000. Considering that the Hispanic population in Oregon has grown at a rate of over 100% -- from 4% to 8% -- over the last decade, it is clear that Hispanic representation should be enhanced by whatever plan is finally approved, not diminished. The pattern of dilution evidenced in HB 2001 will and should subject this plan to close scrutiny under both ORS 188.010 and the Voting Rights Act.

I trust that as the Secretary of State works through the process of drawing new districts, he will pay heed to the statutory requirements and the volume of public testimony received by the House and Senate Rules Committees during the length of session. I have full confidence that the Secretary of State, in accord with the Constitution, the statutes and the will of Oregonians, will draw a fair and sustainable redistricting plan. For the sake of our Legislative Assembly and the people we represent, this should be handled as expeditiously and as impartially as is possible.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith House Bill 2497, unsigned and disapproved for three key reasons: an undesirable policy regarding prior authorization, the requirement that certain medications be removed from capitation, and the requirement that diagnosis codes be placed on prescriptions.

Notwithstanding this veto, there are many constructive policies embodied in HB 2497. Fortunately, these can be enacted through administrative action. I will instruct the Department of Human Services (DHS) to implement the provisions of HB 2497 which require the following:

- Practitioners to write their OMAP provider number on the prescription;
- OMAP patients to designate a primary pharmacy or pharmacy network;
- DHS to expedite the resolution of rebate disputes between pharmaceutical manufactures and DHS and to collect the total amount of outstanding balances owed for unpaid drug rebates;
- DHS to seek rebates of at least 15.1% generic medications and establish a maximum allowable cost for certain drugs;

Controlling pharmaceutical costs is a complex task and what often seems desirable at first glance can ultimately be harmful to patients and increase costs. This is true of the portion of the bill that changes state policy to allow prior authorization of prescriptions based on the number of prescriptions obtained by a given patient over a six-month period of time. While I do not object in principle to the concept of prior authorization, I believe it must be used judiciously to avoid creating access barriers to needed medications. Allowing prior authorization based solely on the number of prescriptions obtained by a patient is simply bad policy. This singles out the sickest and most vulnerable of our Medicaid patients and subjects them to increased administrative hurdles for obtaining medications that may be the difference between life and death, independence and disability, and which could prevent the need for more expensive treatment. I will instruct OMAP to aggressively case-manage patients with high numbers of prescriptions in a manner that works collaboratively with their physicians to make sure they are getting optimal care rather than making it more difficult for physicians to render the best care.

The requirement for the Department to exclude by rule certain medications from the capitation rate for OHP providers is counter productive. At present, many OHP providers have drug utilization management systems that are effectively controlling pharmaceutical expenditures within their own provider group. Removing medications from these functioning management systems into fee for service payment by the state only increases the likelihood that inappropriate utilization will increase. In addition, some of the more effective pharmacy benefit management (PBM) contracts require the PBM to contract to provide medications on a capitated basis. This requirement would remove a potentially effective weapon in Oregon's arsenal for fighting drug costs.

Finally, the requirement for practitioners to write the diagnosis code of the condition for which a prescription is written

violates patient confidentiality and increases the hassle factor that practitioners who serve OHP patients must endure. Diagnosis codes are readily available in documents easily obtainable by the public. A pharmacy technician knowing the condition being treated seldom enhances the quality of care and the risk of unnecessary disclosure of a patient's health condition is greatly increased by such a practice. Creating an additional requirement for practitioners who see OHP patients also creates a disincentive for bringing OHP patients into one's practice by making the administrative burden practitioners already bear even greater.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning House Bill 2714, unsigned and disapproved.

The bill would require the Land Conservation and Development Commission (LCDC) to establish yet another way to allow dwellings on Oregon's best farmland. This topic has been debated countless times over the past several years and a compromise was reached among various diverse interests.

Under existing law, a new farm dwelling is not allowed on high value farmland unless the owner can demonstrate a gross (not net) income of \$80,000 from farming. This is intended to protect Oregon's most productive soils for farming by distinguishing between commercial farmers and those people who simply want to live in the country. On lower quality farmland, less restrictive tests have been established for dwellings.

House Bill 2714 would require LCDC to adopt a rule to allow new dwellings on high-value farmland based on the "capability" of the parcel to become a farm. In my estimation, this new "capability" test would be quite easy to meet. For example, any size parcel could be declared capable of commercial farming as long as neighboring residents are farmers.

Consequently, this new test would enable hundreds of new dwellings to be located on some of Oregon's best farmland without the need to demonstrate that the land is being used for farming purposes. Instead, an applicant would only have to demonstrate that the land could be used for farming in order to obtain permission for a dwelling.

The "capability test" proposed by HB 2714 is not a new idea. Such a test was widely used in the 1980's. Under this practice, so-called "farm dwellings" with no real connection to commercial agriculture proliferated on high-value farmland throughout the Willamette Valley. A 1990-91 study found that 75 percent of all new "farm dwellings" were occupied by people earning less than \$10,000 from farming. About 37 percent of these dwellings were approved on land that grossed no farm income after the dwelling was built, even though the residents had previously declared an intention to farm.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith, House Bill 2981, unsigned and disapproved.

This bill would require the Land Conservation and Development Commission to adopt rules governing the rural residential area located outside urban growth boundaries. This area is commonly referred to as the "urban fringe."

Last June, the Land Conservation and Development Commission adopted rules governing rural residential development in the urban fringe. The rules were adopted after a lengthy public process involving many stakeholders including the Oregon Building Industry Association which is the sponsor of HB 2981.

The rule established a minimum lot size for rural residential development within one-mile of urban growth boundaries. There is general consensus that it is important to maintain large parcels outside urban growth boundaries to enable a community to plan for future urban development in an efficient and more cost-effective manner. When a community decides to expand, it is easier to justify expansion of its urban growth boundary onto rural residential land located in the urban fringe land than onto prime farmland.

HB 2981 would require the Land Conservation and Development Commission to revisit this issue. I believe it is premature to take legislative action to amend an administrative rule adopted a little more than one year ago. I encourage the sponsor of HB 2981 to pursue the proposed changes directly with the Land Conservation and Development Commission and the Department.

Sincerely,

John A. Kitzhaber, M.D.

July 5, 2001

The Honorable Mark Simmons
Speaker of the House
H-269 State Capitol
Salem OR 97301

Dear Speaker Simmons:

I am returning herewith Enrolled HB 3344, unsigned and disapproved.

This bill would add a narrow definition of "science" to ORS 174.100. This particular definition is taken from the *Statement on 'What Is Science?'* adopted by the American Physical Society in 1999. Members of the American Physical Society have expressed serious concerns about this bill. I share that concern.

I am concerned about adding this, or any other single definition of "science," to that portion of Oregon Revised Statutes that provides definitions for use in all other ORS. The list of definitions in ORS 174.100 is short precisely because there are very few words or terms that have just a single meaning that is appropriate for all applications in state law.

From a practical standpoint, it is hard to even judge how a particular definition might affect the various statutes it is used in. The word "science" is used numerous times in Oregon Revised Statutes and Oregon Administrative Rules. The context for all these uses of "science" cover the spectrum of public policy topics from "A" to "Z."

While the definition of "science" proposed in HB 3344 is one way to define science, there are many other ways the word may be defined – all just as applicable in certain circumstances as the definition in the bill. The point is that no one definition of science fits all applications of the term. *Webster's Dictionary* includes several definitions of science, none as narrow as the definition proposed in this bill.

I understand that Oregonians want "science" to be fully considered in governmental decisions (rules, laws, programs and so on), particularly in the area of natural resources stewardship.

I couldn't agree more, and I will continue to urge that the best available science be used thoroughly and in the most objective way possible in any policy formulation or program implementation where it is applicable.

I also understand that some citizens are concerned that science has not been adequately or properly considered in some natural resources policies, but this contention is controversial, and we are better off to examine the situation on a case-by-case basis. Merely adding a definition of "science" to the statutes will not contribute to resolving such controversies.

Sincerely,

John A. Kitzhaber, M.D.

June 29, 2001

The Honorable Mark Simmons
Speaker of the House
H-269 State Capitol
Salem, OR 97301

Dear Speaker Simmons:

I am returning herewith House Bill 3363-A, unsigned and disapproved.

HB 3363-A would amend ORS 610, to include "wolf hybrids" among a list of predators that may be destructive to agricultural crops, products and activities. In early June, I indicated concern about this proposal because there is little evidence of a current problem to address or the likelihood of one emerging. In any event, if specific problems were to develop, adequate measures exist now to address them. ORS 609 provides Oregon's counties with the ability to legally authorize capture or taking of wolf hybrids as dogs when shown to kill, injure or chase livestock. This provides a sufficient tool applied at the local level to specific fact situations.

Many Oregonians have wolf hybrids as pets. This legislation would give Oregonians permission to kill someone's pet. HB3363-A also may create a liability under the federal Endangered Species Act for local landowners who kill, albeit in rare future circumstances, a wolf thinking it's a hybrid, resulting in a "take" of a federally listed species.

HB 3363-A is an unnecessary solution looking for a problem. I believe the tools in place today are adequate to deal with problem wolf hybrids, without placing Oregonians at higher risk of needlessly killing someone's wolf hybrid pet or a federally listed species.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith, House Bill 3528, unsigned and disapproved.

The bill would allow a gas station and full service hook-ups for a recreational vehicle park on farmland in Harney County. Under current law, these uses are prohibited in farm zones.

First, let me state that I understand the difficult economic situation in Harney County. It has been hard hit by a downturn in its natural resource-based economy and is struggling to find ways to replace lost jobs and income. The Malheur Wildlife Refuge and Steens Mountains are expected to attract valuable tourism and recreation to the region.

The proponents of House Bill 3528 are correct to point out that services such as gas stations and restaurants are needed in Harney County to accommodate tourism. They also indicate that the development would provide jobs for local residents. Both of these statements are true. Tourist-related services should be provided, to the extent possible, in existing towns to reinforce existing businesses.

Because the economy of Harney County is changing, however, it may be worthwhile to revisit historic land use patterns. Towns and developments that evolved to support a resource-based economy may not be conveniently located to accommodate the emerging growth in tourism.

As a consequence, there may be merit in the development proposed by House Bill 3528 but only if it is done in the context of a comprehensive strategy identifying special gateways to meet visitors' needs as they travel to the Steens and the Malheur Wildlife Refuge. If Harney County is so inclined to lead such an effort, I will ask state agencies to contribute staff and resources to work with them on this important issue in the interim.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 3808, unsigned and disapproved.

HB 3808 repeals permission for the federal government to acquire land (through sale, lease or gift) for migratory waterfowl refuges. Under the federal Migratory Bird Conservation Act, states must grant permission for such acquisitions, which Oregon did several years ago in ORS 272.060.

Repealing the general permission statute would make transactions between willing sellers and the Department of Interior subject to state legislative approval. This violates the fundamental private property rights of individual landowners, who for either economic or environmental reasons want to sell their land for this purpose.

Creation and expansion of refuges is an important tool that can be used to reduce waterfowl damage of agricultural crops by providing alternative habitats and food sources.

HB 3808 also contains changes to the Forest Practices Act that are not related to the relating clause in the bill.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 3809, unsigned and disapproved.

HB 3809 is a seriously flawed bill in two respects: (1) it creates a new and duplicative "expert scientific panel" for yet another examination of hatchery versus wild salmon issues; and (2) it represents another attempt by the Legislature to statutorily mandate state agency direction in the very complex science of salmon recovery.

A number of federal and state scientific panels have already, or are undergoing, serious reviews of artificial production (hatchery) methods and policies regarding salmon recovery in Oregon and the Northwest. Under the federal auspices of the Northwest Power Planning Council (Council) and the Bonneville Power Administration (BPA), the twin panels of the Independent Scientific Advisory Board (ISAB) and the Independent Scientific Review Board (ISRB) have been reviewing this and related salmon hatchery issues since 1997 and before.

In response to the continual federal mandates regarding the complex science of salmon recovery in Oregon, and to provide for sound scientific advice regarding Oregon Plan issues, including artificial production issues relating to recovery, Oregon utilizes its own Independent Multidisciplinary Science Team (IMST). The IMST has finished a thorough review of the policies and operations of ODFW's state fish hatcheries, and ODFW has been working closely with them in the development of the state's new Native Fish Conservation Policy and Conservation Hatchery Improvement Plan (CHIP).

In view of the large volume of scientific review now underway or just completed, the creation of one more "expert scientific panel" to review the existing science of hatchery versus wild salmon stocks is simply not needed.

ODFW is developing a new Native Fish Conservation Policy for managing Oregon's salmonids. I am confident that this effort, led by experts in fisheries management, will result in a management tool that will clarify the role of hatchery fish in salmon recovery. ODFW needs to have the flexibility to respond to changing conditions, legal mandates and fisheries needs, and not be limited in the management tools available to address recovery efforts.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled House Bill 3981, unsigned and disapproved.

This bill would weaken the state Endangered Species Act (ESA), the Forest Practices Act (FPA) and the Energy Facility Siting process. With regard to the FPA and Siting process this bill would remove the requirement to consider the needs of state listed species and other fish and wildlife needs. With the growing number of federal ESA listings, Oregon must do everything it can to minimize impacts to at-risk fish and wildlife and their habitat in order to avoid more federal listings in the state, which result in a loss of state and local control over fish and wildlife management.

This bill also would require extensive and costly economic and social impact studies both before state listing and during state recovery planning. The decision to list a species under the state ESA should be based on the biological status of the species. Economic and social impacts should be and are taken in consideration by ODFW during the development of the recovery plan. The state ESA itself applies only to state-owned and managed lands, giving it limited applicability as it currently stands.

The bill includes some provisions I do support, including the development of a safe harbor program for lessees of state land, and the development of a candidate conservation program to avoid species listings. However, the other provisions identified above make it unacceptable to me.

Sincerely,

John A. Kitzhaber, M.D.

Governor

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I have signed Senate Bill 50 but disapproved section 2, the emergency clause.

The bill directs the Oregon Department of Fish and Wildlife (ODFW) to promptly relocate its headquarters from Portland to Salem or the Salem area by the most cost-effective means. The bill also requires ODFW to work in consultation with the Department of Administrative Services (DAS) to minimize the cost of moving to leased quarters until a permanent site is provided and disposing of the existing headquarters. DAS is to develop a plan for a permanent location for the headquarters.

While I support the relocation of ODFW to Salem, I want to make sure that the impacts to personnel are fully considered and planned for before the move occurs and that affected employees have time to plan for the move as well. ODFW and DAS need time to plan for this move, in order to consider and deal with both fiscal and personnel impacts involved in this relocation.

By disapproving the emergency clause the new law will not take effect until January 1, 2002.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Senate Bill 67, unsigned and disapproved.

SB 67 would reduce personal and corporate income taxes by reducing the capital gains tax rate and, at full implementation, result in a \$510 million loss to the state's general revenues. This tax cut would primarily benefit Oregon's higher income households without a demonstrated benefit to Oregon's economy. At the same time it would further constrain a future legislature's ability to address the demand for public services. It also comes at a time when Oregon's income tax receipts indicate that our existing tax system may soon be tested by a recession.

This measure comes after two other very significant tax relief measures: Ballot Measure 88 and HB 2281. Measure 88, referred to the voters by the 1999 legislature, will reduce Oregon's personal income taxes by raising the state tax deduction for federal taxes. It will ultimately reduce state revenues by an estimated \$248 million. In addition, this session I signed into law HB 2281 which will reduce corporate income taxes by changing the corporate tax apportionment formula and result in reduction of well over \$60 million in state general revenues.

In 1998, I empanelled a tax review committee chaired by U.S. Bank Economist, John Mitchell, to take a twenty-year look at both our economy and our tax system. This group discovered that our tax system has changed significantly as a result of both voter initiatives and a changing economy. The most critical change has been the shift in the importance of the income tax. As a state, we are increasingly dependent upon income taxes to fund state government as well as our public school system. While our economy is more diverse than a decade ago, our revenue system is even more sensitive to changes in the economy.

After 10 years of the best economic times we may now be looking at a mild recession. We have no experience with economic weakness or recession under the current mix of revenues and responsibilities. However, we know that a recession will impact our general fund and therefore our schools.

This same tax review committee recommended the pursuit of a more balanced tax system, one less dependent upon the personal income tax. To the credit of the House Revenue Committee Chairman Lane Shetterly, the 2001 legislature briefly considered how to increase stability in our system while maintaining revenue neutrality. HB 3942, the Revenue Stabilization and Tax Reform Act, would have replaced Oregon's corporate income and excise taxes and cut the state's marginal income tax and capital gains rates with business activity tax. The proposal was designed to address more long-term stability and equity.

In the end, the legislature refused to further study this approach and chose instead to pursue a simple cut in capital gains taxes.

Oregon needs a broader tax base than the income tax can provide. Unfortunately, SB 67 would exasperate Oregon's

problem by further reducing income taxes. I regret that the legislature chose not to explore the concepts outlined in HB 3924 and instead opted for a simple tax cut.

Sincerely,

John A. Kitzhaber, M.D.

June 29, 2001

The Honorable Gene Derfler
Senate President
S-203 State Capitol
Salem, OR 97301

Dear President Derfler:

I am returning herewith SB 234, unsigned and disapproved.

SB 234 would dedicate \$500,000 from the Oregon Watershed and Enhancement Board's Restoration and Protection Research Fund to the Department of Higher Education for studies to determine the extent and cause of fish deformities in the Willamette River.

As created last session by HB 3225, the Research Fund is funded from interest earned on both the Watershed Improvement Grant Fund and the Watershed Improvement Operating Fund. This interest has been accruing to the Research Fund during the 1999-2001 biennium. The Attorney General issued advice on June 22, 2001 that generally indicates that interest earned on the Grant Fund must be used for "capital expenditures" as defined in ORS 541.351. Interest earned on the Operating Fund generally is available to fund research and other uses as defined in statute.

Because the interest that has accrued to the Research Fund now must be divided consistent with the 65%/35% split for Grant and Operating Funds, there is not enough money currently available in the Research Fund to support SB 234. The Independent Multidisciplinary Science Team, at the request of both OWEB and the legislature, was asked to identify and prioritize research needs for the Oregon Plan. They have done so in Technical Report 2001-2 dated March 5, 2001. They have assessed 12 research needs and ranked them from highest priority to low priority. On the low priority list is the need to "determine the cause and effects of disease, tumors, and other abnormalities of fish on the population dynamics of the fish and the implications for ecosystem and human health." 10 other projects are ranked higher on the priority list. Limited research funds should be used to address higher priority needs at this time.

I do want to note that the OWEB budget includes a budget note that directs the agency "to report to the Emergency Board on the development of a research study for the Willamette River directed toward an investigation of toxics and fish deformities in the basin." The agency, working with the IMST, OSU and DEQ, is to develop study parameters and provide a work plan, budget and recommended funding sources. This will provide an opportunity for the work called for in SB 234 to still occur.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning Senate Bill 374 unsigned and disapproved.

The bill modifies disclosure requirements for video game retailers and increases the age at which video lottery games can be played from 18 to 21.

The change in the disclosure requirements is very broad. It gives the Lottery director unfettered discretion to waive disclosure requirements. Oregon has had very strong disclosure requirements to make it difficult for organized crime syndicates to get a foothold in the state's lottery operations. This is no idle risk as reports from many other states show.

Through my gaming negotiations with Oregon's tribes, I have made strict disclosure a major component of our negotiations. The Oregon State Police are now able to view every contract and every employee within that industry. It makes no sense to relax our own standards in the state-controlled Lottery system.

I understand that the original intent was to allow the Lottery Director to waive disclosure requirements to accommodate modern business forms that have come into being since the Lottery was created nearly 20 years ago.

The Lottery Commission has cited a case in which the current disclosure requirements seem to be inappropriate. That case involved a situation in which a number of individuals inherited a business that was also a lottery game retailer. This may put those inheriting the business in a situation where they are subject to undesired public scrutiny.

Nonetheless, the protection of the public in the long run is a higher value than short-term personal discomfort.

While some adjustments in this circumstance may be desirable. The decision to waive disclosure requirements should not rest with one person alone. During the session I asked that the bill be returned to committee to add oversight of this new authority to the duties of the State Police or the Lottery Commission itself. The legislature declined to do so.

Oregon must do everything it can to retain the strongest possible disclosure requirements to make sure that organized crime does not get a foothold in the state lottery.

A more narrowly tailored bill with adequate security safeguards should easily gain approval next session.

Sincerely,

John A. Kitzhaber, M.D.

June 28, 2001

The Honorable Gene Derfler
President of the Senate
H-269, State Capitol
Salem, OR 97301

Dear President Derfler:

I am returning herewith enrolled SB 500, unsigned and disapproved.

SB 500 proposes to redraw district lines for each of Oregon's five Congressional districts. As drafted, it violates the principals of ORS 188.010. In addition, the redistricting plan found in SB 500 fails to incorporate the overwhelming weight of public input in the committee process.

There are a number of reasons for my veto of SB 500. First, it would force a great deal of unnecessary population shifts. For example, over 120,000 citizens that currently reside in the First Congressional District would no longer be in the First Congressional District. Over 60,000 citizens that are not currently in the First Congressional District would now be in the First Congressional District. This shift is in direct violation of ORS 188.010(1)(c-d) which require that congressional districts be drawn so as to "utilize existing geographic or political boundaries" and to "not divide communities of common interest."

Another glaring example of unnecessarily altering the makeup of current Congressional Districts and dividing communities of common interest is found in that under SB 500 as presented, Oregon State University and the University of Oregon would both be in the Fourth Congressional District. Currently, they are represented by separate members of Congress. As these two major research universities often compete for the same federal research grants, both would be highly compromised if forced to be represented by only one member of Congress.

The plan also splits the representation of Washington County in Congress for the first time in Oregon's history. In addition, western Multnomah County and Washington County have been part of the same Congressional District since 1967 and presents another violation of ORS 188.010.

Other aspects of the plan also are troubling and in violation of the statute. For example, the City of Milwaukie would be part of the First Congressional District, but is connected to the rest of the district only by a seldom-used rail freight bridge over the Willamette.

As it is now clear that the redrawing of Congressional District lines will be part of a court proceeding, it is my hope that the plan that is finally produced will more closely match the requirements of our statute.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Enrolled Senate Bill 502, unsigned and disapproved.

I believe we cannot increase our maximum interstate highway speed limit to 70 miles per hours (mph) safely. While many drivers are already traveling at speeds in excess of 70 mph, an increase from 65 mph to 70 mph will likely cause drivers to travel even faster. This incremental speed increase is the well-documented experience of most states that have increased speeds, and as speeds increase the crash and injury rates increase.

Last year, on average, one person died on Oregon roads and highways every 19 hours and one person was injured every 19 minutes. Four hundred and fifty one people died and 27,503 were injured. As large as these numbers are, they reflect a 14.3 percent reduction in fatalities and a 29.3 percent reduction in injuries since 1996. Oregon's crash rate has also gone down 12 percent during the same time period. While we should take pride in our improving safety record, the current levels of fatalities and injuries remain a vivid and compelling reason to continue our efforts to have one of the safest highway and road systems in the western United States.

This speed limit legislation provided new discretionary authority to the Oregon Transportation Commission and Oregon Department of Transportation to increase speeds to a maximum of 70 miles-per-hour for cars on the interstate highway system (I-5, I-82, I-84, I-105, I-205, I-405). From 1985 to 2000, 774 Oregonians were killed on our interstate highway system and 38,513 have been injured. Many of the injured people and their families live with life-long debilitating injuries typical of high-speed traffic accidents.

The rural interstate highway system is consistently the most deadly. In 2000, 27 people were killed on rural interstate highway segments compared with eight people on urban interstate highway segments. This fact is disturbing because the interstate highway segments most likely to be considered as appropriate for speed limit increases are rural segments of the interstates. The resulting policy would have allowed higher speeds on dangerous segments of highway without adequate or sustainable enforcement levels.

I am unwilling to risk more lives on our interstate highway system without being able to assure the citizens of Oregon that the speed limit will be adequately enforced. Today, we do not have the capability to provide adequate enforcement for all segments of our highway system. Without this capacity, more Oregonians will lose their lives on our freeways, and this unnecessary loss of life is unacceptable.

If I had confidence that we could enforce an increase in the speed limit on our interstate highways, I might have signed this legislation. I carefully considered implementing it through a limited demonstration project. However, I do not have confidence that such a demonstration could be implemented without creating significant diversion of Oregon State Police assets from other duties and without significant uncertainty related to a speed limit demonstration project.

The funding I sought for increased patrol was more than \$2 million, and the legislature declined to allocate these funds. The \$500,000 reported in some media as additional trooper funding was a part of my revised budget after the May forecast and does not reflect what I consider to be "increased" funding for SB 502. An explicit decision to fund patrol troopers for an interstate highway speed increase was not made by the legislature. The legislature crafted a very delicately balanced budget and I am concerned that unanticipated costs may make it difficult to fill all the trooper positions provided. For example, increased energy costs, emergency response associated with our current forest fires, or an arbitration award for salaries could easily put budgeted trooper positions at risk. It is an adequate budget but it does not provide adequate resources to accommodate a speed increase.

To assist in determining a level of enforcement adequate to control excessive speed on our interstate highway system, I have directed the Oregon State Police and the Oregon Department of Transportation to work together on this issue of effective enforcement. New speed monitoring instruments will be placed in segments of our interstate system. These devices offer us an opportunity to directly correlate speeds traveled and specific enforcement actions of the Oregon State Police. This information should be helpful to future policy discussions.

For these reasons, I am vetoing Senate Bill 502, and I encourage future governors and legislators to carefully consider the safety issue should legislation to increase the interstate highway speed limit again be considered.

Sincerely,

John A. Kitzhaber, M.D.

August 17, 2001

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith enrolled Senate Bill 593, unsigned and disapproved.

SB 593 directs the Oregon Department of Education (ODE) to provide an instructional phonics game to each approved Oregon pre-kindergarten program, effective on January 1, 2002. The bill raises the following concerns.

- During hearings, no public testimony validated the effectiveness of phonics games.
- No public testimony was heard regarding a request or a need for these phonics games.
- No public testimony indicated that Oregon Head Start Programs would use these games.
- Head Start programs already select curriculum materials and provide reading-readiness services tailored to each child's needs. By requiring specific phonics games for pre-kindergartens, SB 593 micro-manages what should be local curriculum and policy decisions.
- LFO estimates that the cost will be between \$22,000 and \$132,000 in 2001-03. The bill allows ODE to collect gifts, grants, donations, and federal funds to provide phonics games. However, if such funds are unavailable, ODE must use existing funds to provide phonics games, detracting from the purchase of requested and needed materials for pre-k programs.
- There is no sunset provision. As new programs are added and as games need replacement, there will be a continued draw on funds to support a program that has not been requested.

For these reasons, the Department of Education and the Oregon Head Start Association oppose SB 593. Neither they nor I are opposed to the use of phonics in pre-kindergarten or K-12 programs. This session I have signed SB 595 and HB 3941, which include the use of phonics in proposed pilot programs and research projects. Furthermore, the pre-kindergarten programs already can, and many do, utilize phonics approaches. Yet, we should not be forced to buy materials that pre-kindergarten programs have not requested, may not use, and which lacked adequate testimony as to any validation.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Bill Bradbury
Secretary of State
136 State Capitol
Salem, OR 97301

Dear Secretary Bradbury:

I am returning herewith Senate Bill 5533, with the line item in Section 18, page 3, lines 14-18 unsigned and disapproved.

This line item appropriates \$3.1 million in lottery funds to the Department of Agriculture for distribution to the County Fair Account. With my signature of HB 3530, which allocates \$3.1 million of net lottery proceeds from the Administrative Services Economic Development Fund to the County Fair Account, this line item appropriation in Senate Bill 5533 is a duplicate appropriation and therefore not necessary. I want to make it clear that this line item veto does not eliminate the \$3.1 appropriation to the County Fair Account in HB 3530 which I have signed.

Sincerely,

John A. Kitzhaber, M.D.

Septmeber 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith Enrolled House Bill 2050, unsigned and disapproved.

This bill is only slightly different from the "intangibles tax exemption" bill I vetoed in 1997. At the close of the 1997 legislative session I asked the Department of Revenue to assemble a work group to review the issue of the taxation of intangible property of the centrally assessed utilities in Oregon and offer recommendations for legislative action. Unfortunately, the work group was unable to agree on any specific recommendations. The process did, however, reveal substantial information about the extent of property that is considered "intangible", the difficulty in estimating its value and the differing interests within the key industry groups.

While I find myself in the same situation as 1997, the stakes have become greater. School funding has been a focus of attention and a driving force in considering any further tax exemptions or tax expenditures. It is ironic that the search for revenue for public schools this session was competing with the legislature's desire to provide tax breaks to businesses and many other individual constituencies. While each industry group taken by itself might have a legitimate argument, the cumulative impact of these tax cuts further damages our ability to pay for public education as well as public services such as public safety and public health.

I have stated repeatedly in correspondence with the legislature, my key concerns with the exemption of intangible property including fairness, avoiding a shift in the tax burden from Oregon business to individual households, stability for taxing districts, and the importance of clear definitions in order to avoid litigation. Despite meaningful changes, HB 2050 does not satisfy these concerns. Lastly, HB 2050 provides property tax reductions for centrally assessed utilities that have enjoyed a substantial reduction in property taxes over the last nine years.

I regret that the legislature chose not to forward the one intangibles exemption of merit: the value of Federal Communications Commission licenses.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning HB 2226 unsigned and disapproved.

HB 2226 would prevent the establishment of a private right of action for failure of a mandatory reporter of child abuse to report known or suspected child abuse. The bill also increases civil penalties for such an act, designates support enforcement employees of the Department of Justice as mandatory reporters of child abuse, and requires that law enforcement agencies or the State Office for Services to Children and Families to notify the employer or the licensing board of a mandatory reporter when there is reasonable cause to believe that there has been a failure to report abuse.

This legislation has much to recommend it. It increases the number of persons who are required by law to report child abuse. It increases civil penalties and encourages professional licensing boards to discipline persons who fail to report. However, by removing the possibility of a private cause of action over failure to report known or suspected child abuse, it eliminates an important tool which could greatly benefit the children of our state.

Since the legislative session has ended I have carefully reviewed the arguments on both sides of this issue. While it is possible to speculate on how these changes in statute will effect many of the organizations whose employees are subject to mandatory reporting, my review has convinced me that at present we have insufficient information to determine how these proposed changes in law might affect abused and neglected children in our state. This uncertainty has been a major factor in determining my position on this legislation, for it is the interest of abused and neglected children that I hold as my primary concern.

I am not convinced that law suits are the most effective method for encouraging persons to report abuse and neglect. There are clearly a number of situations in which law suits are not likely to be effective, chief among them the circumstance where no "deep pockets" are attached to the offender and thus there is not enough money involved to cause an attorney to take the case. The fact that there have been no more than two settlements involving such a suit in all the time that the child abuse reporting statute has been in existence, illustrates my point.

It is also unclear if the increase in civil penalty or the reporting to licensing boards are the best way to protect our children or whether they will sufficiently encourage mandatory reporters to fulfill their duty if the threat of a private action does not exist. Oregon's chief law enforcement officer, Attorney General Myers, and the District Attorneys Association clearly do not believe that these sanctions are sufficient if the private right of action is eliminated.

In the presence of such serious uncertainty, I have chosen to veto this legislation. However, I believe that there must be a better way to protect abused and neglected children than the current approach. I will lend the resources of my office to an ongoing discussion of this issue and I will be open to changes in the statute if I become convinced that the best interests of our children will be served by those changes.

Sincerely,

John A. Kitzhaber, M.D.

14 July, 1999

Honorable Lynn Snodgrass
Speaker of the House
Oregon State Legislature

Dear Speaker Snodgrass:

I am returning to you House Bill 2238, unsigned and disapproved.

HB 2238 would have made several changes to the state's unemployment insurance laws. Many of these changes would be helpful. The bill, initially requested by the Employment Department, would clarify a court case and ensure that the Department has the ability to determine whether benefits are due a worker and ensure that employers receive a sound experience rating. This bill also proposed to codify a current administrative rule that allows victims of domestic violence to quit work and receive benefits if they were in danger at their current workplace. The bill also clarified when benefits can be awarded in certain layoff situations.

Unfortunately, section 5 of HB 2238 excludes temporary pharmacists from unemployment insurance. This is unacceptable. Therefore, I am vetoing HB 2238.

Over the past several sessions, many bills have been introduced to eliminate certain employees from unemployment insurance coverage. As the number and scope of proposals to erode coverage has increased over the years, I have become progressively more concerned about the cumulative effect of these exemptions. I indicated earlier this session that I thought it was important to have a consistent policy recognizing the importance of an inclusive unemployment insurance program and to put a halt to this unwarranted erosion of coverage.

In 1989, the Legislature with bipartisan support and business and labor agreement, developed a test to determine whether an individual is an employee or an independent contractor. This test has worked well for over a decade. Section 5 of HB 2238 seeks to bypass this test. It interferes with pending litigation and excludes workers from unemployment insurance coverage by treating them in a manner different than the vast majority of Oregon workers.

Since a veto will negate the useful portions of this legislation along with the bad, I have directed the Employment Department to adopt a specific rule relating to critical domestic violence matters. This will deal substantially with the domestic violence provisions of the bill. I would also be pleased to discuss how this office can work with the Legislature over the interim to review the current independent contractor test to see if any changes are warranted.

Sincerely,

John A. Kitzhaber, M.D.

July 1, 1999

Honorable Lynn Snodgrass
Speaker of the House
Oregon State Legislature

Dear Speaker Snodgrass:

I am returning to you HB 2415, unsigned and disapproved.

HB 2415 would have made several changes to Oregon's elections code. Many of these changes are necessary and arise from the decision in the VanNatta v. Keisling case which disallowed several aspects of Measure 9 passed by the voters in 1994. Other changes in HB 2415 are not required as a result of the VanNatta case and expand the use of the political tax credit to allow contributions to political committees in addition to those made to political committees.

I am vetoing HB 2415 because of the unfunded \$1 million fiscal impact which would be caused by the expansion of the political tax credit to additional donations. Because we still do not have a budget agreement which accommodates this fiscal impact I cannot sign this bill. The estimated \$1 million impact would have to be taken out of another budget -- schools, health care, public safety or other programs important to many Oregonians. I believe the Legislature should make this fiscal decision explicitly through the regular budget process and not leave it to be funded by default.

I would be pleased to discuss this tax expenditure along with others should the Legislature choose to re-pass it and bring it for consideration in the budget process.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Press Releases](#)
[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

April 7, 1999

Dear Speaker Snodgrass:

I am returning herewith Enrolled House Bill 2452 to you, unsigned and disapproved.

I have three primary reasons for this action.

First, the bill has a \$1.9 million impact on schools for the 1999-2001 biennium. This comes at a time in the legislative session when I have seen no indication that the legislative leadership has a balanced budget plan nor a way to pay for this and other tax expenditures which are under consideration. I intend to examine every bill that makes its way to my desk for its impact on the state school budget.

Second, the bill could create an additional loss of revenue to schools. The law now allows some forestland owners to change the designation of their land and avoid the "privilege tax." The bill does not address the potential for designated forestland to be switched from one special assessment program to another before timber is cut. Some forestland owners could switch to an agriculture or grazing land special assessment before the year of the timber harvest, cut the trees while the land is under a new special assessment and then switch back to the forestland designation later and avoid the privilege tax under the bill as written. I understand that the consequences of moving land out of a special assessment program was raised before the House Revenue Committee but not resolved. The bill's sponsor is unable to identify how many acres of land this represents. Hence it is impossible to estimate the revenue impact of this "switching" potential.

Lastly, as stated in the report from the Legislative Revenue Office, this bill "muddies the question of whether the harvest tax is a tax on property subject to Measure 5 (1990) and Measure 50 (1997)." For this reason, the bill is not as simple as implied by its sponsors. In fact, a tax court case relating to this issue is now under review. Should the courts determine that the privilege tax is indeed a property tax then privilege tax rates would be reduced and consequently, tax revenues could also be reduced.

The timber industry has made significant contributions to the overall Oregon economy. Their continued support of the Oregon Salmon Restoration Plan, watershed enhancement and best forest practices is significant.

I have stated my interest in pursuing the issue of equitable timber taxation and expressed my commitment to work with the industry to find the most appropriate approach. I am willing to work with the Oregon Forest Industries Council to address their concerns with equity issues raised in this bill. The Department of Revenue is finalizing a report on the work of an interim Forestland Taxation Task Force which should inform this effort. However, this should occur within the context of the school budget issues we all face this legislative session.

Sincerely,
John A. Kitzhaber, MD

July 22, 1999

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 2463 to you unsigned and disapproved.

Under current law, an area seeking to incorporate must get agreement from incorporated cities located within three miles. The rationale for this is that a municipality within three miles of an area proposing incorporation often has assumed some responsibility to plan for and provide urban services to the unincorporated area. In addition, a newly created city often has impact on adjacent communities.

House Bill 2463 would eliminate that requirement and place the county in the position of determining whether to approve the incorporation. Neighboring cities would retain the right to participate in the hearing, but would not have "veto" power over the proposed incorporation.

The processes developed over time to enable communities to incorporate and to provide urban services are complex. They are designed to balance efficient functional consolidation with the preservation of local identity as an area transitions into a developed metropolitan area. These laws should not be changed without good cause.

The sponsor has done a great deal of work on this issue and presented good reasons to change the laws relative to incorporations outside the urban growth boundary. However, I remain concerned about how the law would be applied to areas within urban growth boundaries. Often these areas are already covered by negotiated intergovernmental agreements designed to provide sewer, water, police and fire protection to affected residents. Senate Bill 122, passed two sessions ago, established a process for obtaining these types of urban service agreements. This bill may serve to undermine those agreements.

I am reluctantly vetoing the bill on these grounds. I am committed, however, to working with the sponsor of the bill to address the specific issues he has identified. Perhaps the Community Solutions Team can also be of some assistance. I also plan to work with the sponsor in the interim to develop a bill for next session.

Sincerely,

John A. Kitzhaber, M.D.

July 15, 1999

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 2474 to you unsigned and disapproved.

Under existing law, applicants for local land use approvals may either accept the conditions of approval imposed by local government and proceed with their development or appeal the conditions to the Land Use Board of Appeals or the Circuit Court of Appeals and stop their development. House Bill 2474 would allow applicants to proceed with their development while still seeking relief from the conditions of approval.

The bill rightfully places the burden of proof on local governments to demonstrate that conditions placed on development are within constitutional requirements. Local governments benefit from the bill because they will know within 180 days whether a developer plans to seek legal relief from an approval condition. Existing case law is somewhat unclear on this point. Under certain circumstances, a developer may have the right to contest a condition in court several years after the local government approval.

I do not have an issue with the concept underlying this bill. It is important for developers and local governments to negotiate in good faith about what constitutes reasonable development conditions.

I have been informed, however, that House Bill 2474 has several legal problems. One could interpret the bill to allow an applicant to agree to an approval condition, begin construction, and still appeal the condition through the courts. Applicants should be required to inform a local government when they object to a condition to provide an opportunity for the jurisdiction to adopt findings to justify imposition of the condition.

Sincerely,

John A. Kitzhaber, M.D.

July 22, 1999

The Honorable Lynn Snodgrass
Speaker of the House
Room 269 - State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 2551, unsigned and disapproved.

This bill states that schools who educate students in grades 9-12 that receive state or federal funding must allow military recruiting personnel on-campus access to communicate with students about military scholarships and other related opportunities. It ultimately prohibits public school boards from denying access to military recruitment personnel to their campuses.

As I stated in my 1997 veto message of Senate Bill 680, a very similar bill, I share the proponents' desire to support the military. In particular, the Oregon National Guard and Coast Guard make enormous contributions to our state and its citizens both in times of crisis and through community projects and involvement. I believe that the National Guard provides great opportunities to minorities as they are coming out of high school, and I would urge local school districts and officials to further examine these opportunities and allowed access to the National Guard. Despite my personal feelings, however, I strongly believe that questions of access to local schools should be decided in the community by locally elected school boards.

We must respect the authority of locally elected officials to decide these matters.

Therefore, I am vetoing the bill.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Press Releases](#)

JOHN A. KITZHABER, M.D.
Governor

July 22, 1999

Honorable Lynn Snodgrass
Speaker of the House
H269 State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 2566 unsigned and disapproved. My specific concern is with Section 21, which establishes grants for "high-growth" school districts.

Proponents of this portion of the bill have argued that districts experiencing student growth have special needs that should be accommodated. I believe that these needs are, in fact, already being accommodated. School districts receive additional funding for each additional student they receive. In addition, a new component of the funding formula passed by the 1997 Legislature and now funded in this Session will provide grants to school districts opening new school buildings, including adding structures onto existing school buildings and adding portable school buildings. This facilities grant provides a state grant equal to 6% of the construction costs for these buildings. The combination of the basic school funding formula and the facilities grant, therefore, already acknowledges the additional costs school districts experience due to student growth.

Eighteen of the 30 superintendents whose districts would benefit from the high-growth grants have stated their opposition to this grant, noting that this \$10 million should be included in the basic school funding formula which would benefit all districts.

In vetoing this bill, I also request that actions be taken to allow the funding to be redistributed through the State School Fund and the other portions of the bill to be reconsidered by the Legislature.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol Building
Salem, Oregon 97310

Dear Secretary Keisling:

I am returning to you enrolled HB 2633, unsigned and disapproved.

House Bill 2633 would have required physicians to notify a parent of a minor prior to providing abortion care. While I cannot imagine anything more important than parental involvement with a teen facing an unintended pregnancy, I cannot support HB 2633. The bill, as written, is seriously flawed in a number of critical areas.

House Bill 2633 would do little to foster healthy communications within families. In families where good communications already exist, this bill would have no benefit. In families where the relationships are not strong, or worse are abusive, this legislation would create delays in seeking needed health services and real danger for many of the teens involved. The attempt to mitigate these dangers by providing a bypass provision for parental notification is completely inadequate.

This inadequacy is well illustrated by the fact that HB 2633 requires local governments to perform a service without providing the funding to pay for the service. Under the Oregon Constitution this creates an unfunded mandate and, because HB 2633 failed to receive a three-fifths majority vote in either chamber local governments cannot be compelled to provide the bypass service. As a result, there is no assurance that the bypass service would be available to teens in all areas of the state. Moreover, the bypass provision is further weakened by the fact that the health department employees who are best qualified to provide this service are barred from doing so by federal law contained in the Hyde amendments.

Beyond these policy concerns, it is clear that House Bill 2633 would have difficulty meeting the requirements of the U.S. Constitution. Once again Section 4 containing the by-pass provision is problematic. The U.S. Supreme Court has specified a series of criteria that are required for a by-pass provision to be deemed adequate protection and HB 2633 clearly fails this test.

Finally, and perhaps most importantly, in 1990 Oregonians firmly rejected a similar ballot measure seeking to mandate parental notification--Oregonians have already clearly expressed their will on this issue.

Good family communication cannot be legislated where it does not already exist. The vast majority of teens already confide in a parent when facing an unintended pregnancy. Most often, those who do not choose to do so have a good reason for making such a choice. I cannot support legislation that offers so little potential benefit at the risk of such egregious harm.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
State Capitol 136
Salem OR 97310

Dear Secretary Keisling:

I am returning herewith House Bill 2637 unsigned and disapproved.

HB 2637 provides an exemption for residents of Yamhill and Columbia counties who certify they do not commute into the Portland region for work from vehicle emissions testing. The bill also requires that the state maintain federal approval of the state implementation plan under the federal Clean Air Act.

As I stated in my letter of July 13 to Senate President Brady Adams and Speaker Lynn Snodgrass, my concerns are that HB 2637 could exempt polluting vehicles from the vehicle inspection program that contribute to the region's pollution problem; the bill does not identify substitute emission reduction strategies; and the bill does not identify an enforcement mechanism nor does it allocate any resources to enforce compliance of the exemption.

Currently, the Department of Environmental Quality (DEQ) conducts pollution tests on cars in the Portland area to help keep the air clean and meet federal standards. These pollution tests are part of the Environmental Protection Agency's (EPA) approved clean air plan for the Portland area. The federal Clean Air Act requires air to meet standards to protect people's health and the environment. Presently, DEQ implements the federal Clean Air Act in Oregon.

When DEQ expanded the Vehicle Inspection Program boundaries in 1995, small portions of Columbia and Yamhill counties were included in the new boundaries because at least 40 percent of their workforce commuted into the Portland region to work. Although the decision was based strictly on the percentage of work commuters, an even greater number of residents from these two counties commute into the Portland region for recreation, appointments, and a variety of other reasons. HB 2637 does not recognize that these visits also contribute to pollution in the region.

The challenge posed by exempting residents who claim they are not driving into the Portland area for work is the state's ability to assure EPA that this is in fact the case and that there is no loss of air quality. Because EPA requires emission reduction strategies to be quantifiable and enforceable, EPA would require DEQ to validate exemptions granted to people who certify they do not commute into the Portland region. HB 2637 lacks an enforcement mechanism to insure that residents who seek an exemption actually do not commute into the Portland area. Therefore, I fear HB 2637 could jeopardize the state's air quality program.

Nevertheless, I understand the frustration that those who never go into Portland must feel regarding the time and cost to have their vehicles inspected. DEQ has taken some steps to try to improve this situation. For example, DEQ is working with the City of Scappoose to locate a part time testing unit in the Scappoose area to reduce the travel distance for

Columbia County residents for car inspections.

DEQ has also established a program to reduce the compliance burden for people below 125 percent of the poverty line. For vehicle owners who qualify, their cars only have to pass the basic vehicle emissions test versus the more stringent enhanced test in order to cut the potential cost of repairs.

In addition, DEQ and the Department of Transportation have agreed to work together to explore solutions to computer problems that have resulted in residents of these counties being notified they have to have their vehicles inspected when in fact they live outside of the program boundaries.

DEQ has explored other options as well but has determined that other modifications to the program are not allowable under federal and/or state law, or they jeopardize the overall program.

In summary, HB 2637 will not help maintain clean, healthy air in the Portland Metropolitan region. It creates uncertainty about how the region will continue to comply with federal clean air standards. It requires DEQ to find a replacement for the pollution reduction that is lost through exempting certain cars and trucks from testing when the options available have proven to be unpopular and many were actually excluded from the clean air plan by various legislative actions taken in 1993 and 1995. It also impacts industries' ability to grow and their ability to keep up with fast changing market conditions if the state is failing to comply with federal air quality standards. Finally, violations put Oregon at risk of both losing federal highway dollars and the imposition of stricter standards on industry.

For all of these reasons, I am vetoing HB 2637.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

July 13, 1999

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith enrolled HB 2652, unsigned and disapproved.

I indicated in March that I would not support any legislation that would undermine the Oregon Plan for Salmon and Watersheds. It is clear that HB 2652 is designed to foreclose future flexibility in using the tools we have to address water quality concerns and fish recovery by prohibiting the Department of Environmental Quality (DEQ) from requiring permits for certain kinds of polluted runoff from agricultural operations. It also sends the wrong message about our commitment to improving water quality and recovering salmon.

Under the Oregon Plan we have repeatedly argued for the flexibility to use our tools in the best way to meet our goals. While I do not see DEQ addressing runoff from irrigated agriculture, agricultural stormwater, and maintenance of conveyances in a particularly different way than is described in HB 2652, I believe it is unnecessary to limit the potential application of our tools. For example, with regard to the application of herbicides to water conveyance systems, HB 2652 prohibits DEQ from requiring a permit for pesticides regulated under the Federal Insecticide, Fungicide and Rodenticide Act. Given that many pesticides are not tested on salmonids, nor do they specify timing of use in light of migration, spawning and emergence, we may decide in the future that we need to consider how we use our tools to limit the impacts on listed species during these vulnerable times.

In previous letters, I outlined my unwillingness to support any legislation that weakens the Oregon Plan. I see HB 2652 as foreclosing future options and limiting our tools and their flexibility through statute. I cannot sign such legislation when we have such a difficult task ahead.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning HB2657, unsigned and disapproved.

This is one of a variety of special interest bills that preempts a local government authority. I feel strongly that now, more than ever, local communities should have all the tools available to them to solve their own fiscal problems and meet the challenges that face our state. We cannot afford to strip cities, counties and special districts of their ability to solve problems at the local level.

Increasingly, population growth in some Oregon communities is putting more pressure on local services and our physical infrastructure. This pressure is experienced at the local level. The state cannot afford to cripple a local community's ability to address these pressures by taking away the tools now available to them. Local communities should retain the power to solve their own fiscal problems in a way that local people determine appropriate. Local voters, not the legislature, should decide these issues.

HB2657 would preempt the ability of cities, counties, special districts or other political subdivisions to impose a construction excise tax on the construction of real property improvements or other land development. My veto of this bill should not be interpreted as my advocacy for this excise tax. Rather, it represents my support for local communities determining their own destiny. There may be occasions when a preemption is needed for an issue of statewide concern, but that power should only be used when there is an urgent overriding need. That is not the case with HB2657.

While I regret that we did not participate in the committee deliberations on this bill it does violate a well-known general premise upon which we have been operating -- that we should preserve and enhance a local community's ability to tax themselves for services that citizens desire. The bill also runs counter to the recommendations of my Tax Review Policy Advisory Committee regarding local government revenue stability in the post Measure 50 environment.

I recognize that the legislature exempted the two Oregon communities that now have a construction excise tax. However, I cannot abide by taking this tool away from all other communities.

Sincerely,

John A. Kitzhaber, MD

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning enrolled HB 2700 unsigned and disapproved.

HB 2700 would change several important elements of the Oregon Health Plan (OHP) in ways which would violate the intent of the plan, create barriers to care for persons who are legitimately eligible for the plan, and it would reduce legislative accountability for continuing the OHP.

While the legislatively approved budget contains reasonable provisions for improving residency verification procedures the residency provisions in HB 2700 are poorly drafted. They appear to apply only to the categorically eligible persons and the medically needy. It is clear that HCFA will oppose such provisions and it is pointless to mandate our agency to take an action that would result in the denial of our Medicaid plan amendment and as such disrupt our ability to receive federal funds for this vital program. In addition, the constitutionality of these provisions is clearly in question. Numerous court rulings have affirmed the right of U.S. citizens to travel from state to state and to not suffer discrimination as a result of such travel. The residency provisions contained in HB 2700 will no doubt be challenged on this basis and the burden of defending such a challenge would negate any possible benefit derived from this policy change.

The copayment provisions of the bill are equally onerous. Once again, the specifics of the bill violate clearly articulated federal policy relative to copayments and would place in jeopardy our ability to receive federal funds. Moreover, they would unfairly burden those with chronic and disabling conditions who require frequent services from health care providers. While I remain open to the concept of a copayment for certain services, such a policy must be carefully balance in order to prevent it from becoming a barrier to needed care for persons who have no other option.

Other provisions of the bill would create an unnecessary burden on our criminal justice system and would create inefficiencies in administering the program thereby increasing costs and agency workload without increasing care to the persons who depend on the OHP to help them in their effort to become independent and self-sufficient.

Finally, I object to the provisions of HB 2700 which would sunset the OHP without an affirmative act of the legislature. If the legislature desires to discontinue the OHP, it must be accountable for such a precipitous action. This accountability can only be maintained if the legislature is required to vote affirmatively to stop the plan and can, in addition, obtain the agreement of the governor to do so.

Sincerely,

John A. Kitzhaber, M.D.

July 20, 1999

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, Oregon 97310

Dear Speaker Snodgrass:

I am returning herewith HB 2792, unsigned and disapproved.

HB 2792 would create a five percent property tax rebate for senior citizens who own principal residences with assessed values of up to \$300,000 and annual adjusted gross incomes under \$30,000. While the goal of attempting to provide additional property tax relief to senior citizens living on fixed incomes is laudable, it is a misplaced priority. Oregon already provides property tax relief through the senior property tax deferral program administered by the Oregon Department of Revenue. HB2792 is redundant and unnecessary.

Further, HB2792 was neither requested nor supported by senior advocates nor advocates for affordable housing. Rather, these groups indicated that if an additional \$17 million a year were available to assist low income senior citizens this is not where the help is needed most.

Lastly, I have repeatedly expressed my concerns regarding the extent to which tax expenditures reduce revenue at a time when we are struggling to dedicate the resources necessary to fund our schools and provide critical public services for all Oregonians. HB 2792 alone has an estimated annual revenue impact of more than \$17 million beginning in 2004. Regardless of the merits of HB 2792, this legislature's persistent refusal to consider the cumulative impact of individual enhanced tax expenditures is troubling.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning enrolled HB 2793 unsigned and disapproved.

HB 2793 would significantly alter the approach to minimum wage rights that Oregonians of certain ages and in certain occupations are entitled to under the provisions of the state's minimum wage law as modified by the statewide passage of Ballot Measure 36 in 1996. The ballot measure passed in 1996 treats all Oregonians the same regardless of their age, work history, or the industry in which they are employed. HB 2793 would create exemptions to the minimum wage rate required by law for certain minors and for certain tipped employees when the minimum wage rates are changed in the future.

HB 2793 would allow certain minors to be paid 50 cents per hour less for the first 45 days of their employment when the minimum wage is raised to over \$6.50 per hour. I find the argument that this 50 cent per hour reduction would create more jobs for minors to be dubious. I think it far more likely that this provision would create an incentive for employers to hire minors instead of adults for entry level positions solely to improve their bottom line rather than providing an opportunity that wouldn't otherwise exist for minors seeking work. As such this provision could reduce job prospects for adults who are attempting to enter the work force and move toward greater self sufficiency.

HB 2793 would also greatly disadvantage certain tipped employees. It could, over time, create a situation where tipped employees would be receiving a minimum wage that is one half that provided to other employees in the same industry. While advocates for this measure have committed to an approach that would redistribute any savings to other workers in their businesses, I believe that the enforcement of such a provision would be cumbersome at best. Perhaps more importantly, I find no compelling evidence that the industry needs to reduce the wages of tipped employees in order to adequately compensate other employees in their businesses. The proper role of a minimum wage law is to create a minimum level of compensation for all of Oregon's workers not to make certain jobs within a specific industry more or less attractive.

I deeply appreciate the efforts the proponents of this legislation made to make the bill more acceptable to those of us who oppose such a measure. However, I find the negative potential of this bill outweighs significantly any potential for positive change.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, Oregon 97310

Dear Secretary Keisling:

I am returning herewith House Bill 2808, unsigned and disapproved.

This bill would require anyone convicted of certain sex offenses between 1972 and 1989 to register as a sex offender. I am vetoing this bill because it fails to target offenders who pose the greatest risk to society and spends scarce public safety resources without any substantial benefit to public safety.

Most people subject to House Bill 2808 would have committed a single offense, which likely involved a family member, up to 25 years ago and have not committed another sex offense. These individuals are not a threat to public safety, yet they would be required to register as sex offenders for the rest of their lives, and to have information about them and the offense available to the public on the Internet.

I also am concerned about the impact of this renewed scrutiny on the victims of these offenses. Many people who have successfully recovered from intra-family abuse would be painfully reminded of events that they have struggled to put behind them.

Finally, this bill puts an undue burden on community corrections resources. In order to find these former offenders, law enforcement and community corrections officers would have to spend valuable time and resources looking for names and locating information for thousands of people who pose little or no risk to public safety rather than focusing on other activities which would provide a greater benefit to the public.

I might view this bill differently if the 1999 Legislative Assembly had not passed other legislation that does provide meaningful additions to strengthen Oregon's response to sex offenses. These measures extend supervision and increase punishment for persons convicted of serious sex offenses, increase penalties for public indecency, authorize chemical castration for some offenders, and comply with new federal law requirements regarding sex offender registration and community access to sex offender information.

Anyone who has committed a sex offense since 1989 is already required to register as sex offender. I believe this existing requirement, along with other bills passed by this legislature, provide strong protection to Oregonians while targeting the offenders who pose the greatest risk to public safety.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem OR 97310

Dear Secretary of State Keisling:

I am returning to you HB 2875, unsigned and disapproved.

HB 2875 purports to set standards on when cougars could be killed to protect public safety. However, there are several faults with this bill. As I stated in my letters of May 20 and June 18, to the House and Senate, respectively, my primary concern is that the bill creates no process by which decisions would be made to allow the taking of a particular animal. Under current law, the Oregon Department of Fish and Wildlife and/or local law enforcement are involved in that decision. Under HB 2875, it appears that any individual could make the decision whether a cougar was a threat to public safety. That is too broad a delegation of authority to be acceptable, particularly given the voters' strongly expressed sentiment that cougars should be managed conservatively.

Second, while there was a reduction in the numbers of cougars taken in the years immediately after Measure 18, that number has increased in recent years. While reported cougar damage complaints since 1995 have increased by 20%, the number of cougars taken has more than doubled, and is, in fact, greater than before Measure 18. There is little evidence that there is a problem that requires this legislation that was not already being addressed through current law.

I am aware that the current authority for taking cougars when there is a threat to life and safety is not clear. I would support legislation that would detail the process and provide clear legal standards under these circumstances. HB 2875 is not that legislation.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith Enrolled House Bill 2947, unsigned and disapproved.

This bill would provide a state tax credit for very broadly defined charitable giving beginning in the year 2001. While there is no question that we should all be encouraged to actively contribute to charitable causes, I cannot at this time support HB 2947.

HB 2947 begs the policy question of what level of state support is appropriate to encourage a wide range of private giving. I understand that this approach might help strengthen the state's relationship with the non-profit sector which is often called upon to compliment public services. In addition it allows those individuals who do not itemize their deductions an opportunity to benefit from giving. However, this must be balanced against the bill's estimated revenue impact of \$55 million in the 2001-2003 biennium. This magnitude of revenue loss will hurt our ability to pay for public schools and other basic public services. When resources are limited we must make choices that insure public funds, whether indirect through tax expenditures or directly through program appropriations, are meeting our primary goals.

I am interested in pursuing legislation to encourage private giving and volunteerism to promote community building.

Sincerely,

John A. Kitzhaber, M.D.

July 23, 1999

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning HB 2985 unsigned and disapproved.

HB 2985 is a reaction to two Supreme Court decisions relating to potential employer vicarious liability for acts of sexual abuse committed by employees. See *Fearing v. Bucher et al.*, 328 Or 367 (1999), *Lourim v. Swensen and Cascade Pacific Council, Boy Scouts of America, et al.*, 328 Or 380 (1999).

The *Fearing* and *Lourim* decisions held that a Catholic priest and Boy Scout counselor may have acted within the scope of employment when they molested young children whom they encountered through their employment. The court found that a jury could infer that performance of their employment duties was a precursor to the abuse which followed.

It is important to note the cases came to the Supreme Court for review after the employers were dismissed as a matter of law by the respective trial courts. The decisions do not hold the employers liable, they merely hold that a complaint can not automatically be dismissed by a court without adducing more evidence.

I believe that access to court process is an important principle of a democracy. HB 2985 will result in the dismissal of many cases without a proper airing of the facts.

HB 2985 will extend liability exemption to all employers under all circumstances. Employers are exempt unless the activity fell within the employees' job description. Such a legislative judgment can not possibly secure all the possible factual permutations in a just manner.

Finally, I am concerned that under the provisions of this bill these and other crime victims will be left without adequate remedies for the harm done to them.

For these reasons I disapprove of HB 2985.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

July 20, 1999

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 3028 to you unsigned and disapproved.

Under state law, jurisdictions have the authority to adopt and implement regulations on farmland based on the need to protect the "health, safety and welfare" of its citizens. House Bill 3028 would delete the term "welfare" from that authority. Consequently, state and local governments would not be allowed to regulate agricultural lands to protect natural resources such as wetlands, eagle nests, big game habitat, and watersheds.

I am concerned that this bill would adversely affect the state's ability to meet the objectives of the Oregon Plan for Salmon and Watersheds and other natural resource goals. Without the ability to review any development on agricultural land such as farm and non-farm dwellings and roads for their impacts on fish and wildlife, Oregon could stand to lose significant fish and wildlife habitats.

State and local governments need to retain the ability to protect the health, safety and welfare of the citizens of Oregon.

Sincerely,

John A. Kitzhaber, M.D.

Governor

July 15, 1999

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol Building
Salem, Oregon 97310

Dear Speaker Snodgrass:

I am returning herewith HB 3031, unsigned and disapproved. I realize you have not received communication from my office on this bill, and are not expecting this letter.

However, HB 3031 prohibits the Board of Dentistry from investigating complaints related to unacceptable patient care or unprofessional conduct against dentists more than five years after the conduct which forms the basis for complaint, or two years from the date that the conduct is discovered where the case involves fraud, deceit or misleading representation.

No other medical practice licensing board in Oregon has such time limitations. With regard to dentistry, certain conditions exist, such as periodontal disease, for which unacceptable dentistry would not be evident for more than five years.

In addition, there may be other situations where charges would not come to light within the two or five year period contained within the bill. HB 3031 would limit the ability of the Board of Dentistry to take action against licensees who have been found guilty of offenses that, although under the legal jurisdiction of other agencies, could still jeopardize patient care, such as sex offenses or fraud.

Licensed professionals should be accountable for the work they perform. HB 3031 limits the ability of Oregon's regulatory body from ensuring accountability from our licensed dentists. The bill is being returned to you unsigned and disapproved.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, Oregon

Dear Secretary Keisling:

I am returning herewith HB 3049, unsigned and disapproved.

HB 3049 is an example of legislation which the National Rifle Association and the gun industry are advocating nationwide to try to head off lawsuits resulting from an epidemic of gun violence in our nation. This legislation is, in my view, not only unnecessary but is a dangerous preemption of the powers of local officials to address one of the most pressing public safety problems of our time.

HB 3049 is a heavy-handed attempt to prevent legal action by local governments in Oregon should they determine that a law suit against a gun dealer or manufacturer is necessary to protect the public safety of their citizens. This would be an unprecedented action by the legislature to summarily prevent the filing of lawsuits by locally elected and accountable officials. If this legislation were to pass it would set a dangerous precedent for the state to dictate local governments may not take legal action against certain powerful interests threatening the safety of their communities.

During the legislative session, I wrote to the Senate President to express my deep concern over HB 3049. As I stated in that letter, this legislation is an improper preemption of powers that are best left in the hands of local officials and the Attorney General. Unfortunately, the legislature did nothing to address my stated concerns and I am forced to veto HB 3049 today.

Attorney General Myers also wrote a letter to the legislature, specifically the Public Safety Subcommittee of Ways and Means, expressing his opposition to the provision in HB 3049 which would prohibit the Attorney General from bringing suit or intervening on behalf of a suit against a firearms manufacturer or dealer. Again, these concerns were not addressed by the legislature. This provision would be both an unprecedented action by the legislature and an unnecessary limitation on the AG's litigation control authority. I agree with the Attorney General regarding the dangerous nature of this preemption of the Attorney General's powers. This alone would necessitate a veto of HB 3049.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, Oregon 97310

Dear Secretary Keisling:

I am returning House Bill 3054 herewith unsigned and disapproved.

House Bill 3054 contains two provisions which trouble me. Section 4 of the bill deems any dog kennel which has been in continuous operation since in 1990 with a valid county license "lawfully established." That provision's failure to specify any required land use approval could mean that any dog kennel, having obtained a county license, may be considered an outright permitted use on some of Oregon's best farmland. I cannot support such a potentially broad exemption to Oregon's land use approval process.

Additionally, Section 1 of the bill provides immunity for landowners against lawsuits brought by individuals who commit crimes against landowners while trespassing. This section would apply to a significant subset of cases where a landowner knows or should know their land is frequently used by trespassers. While such immunity from liability for landowners is perhaps appropriate in some cases, the myriad of possible applications makes it poor public policy in general.

For example, the bill would apply to trespassing teenagers, notorious for impulsive behavior and could be seriously injured by a known hazard. Should a landowner be absolved of responsibility for serious, long-term injury to a young adult caused by a known, preventable hazard simply because an act of vandalism occurred?

Decisions about civil liability in such cases are properly committed to the courts for resolution based upon the facts of each individual case. I believe that status-based restrictions upon citizens' access to the civil justice system are generally ill-advised absent broad-based and compelling public policy grounds, neither of which the sponsors of this bill have demonstrated.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith enrolled HB 3065, unsigned and disapproved.

This bill would have granted a specific water right for private use by legislative action. This unprecedented step would be contrary to public policy by ignoring the application process and review required for all others to obtain water rights. In addition, the water right granted by HB 3065 would have overridden existing statutory requirements relating to water availability and protection of designated scenic waterways and would have conflicted with salmon recovery efforts.

I vetoed a substantially similar bill in 1995. In the intervening time, little progress has been made by the Grants Pass Irrigation District in solving the fish passage and other problems associated with Savage Rapids Dam. There is no persuasive reason why I should change my position with respect to granting the water right sought by the district.

Sincerely,

John A. Kitzhaber, M.D.

July 22, 1999

The Honorable Lynn Snodgrass
Speaker of the House
State Capitol - Room 269
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith enrolled HB 3131, unsigned and disapproved.

HB 3131 would overturn a decision of the Fish and Wildlife Commission in 1998 that disapproved alternative fish mitigation plans, in lieu of a fishway at Milltown Hill Dam in Douglas County. In 1997, the Legislative Assembly vested the authority over mitigation plans with the Commission. Now, it seeks to change that authority, because, I presume, it did not like the outcome of the process it established.

While HB 3131 would still require approval by the Fish and Wildlife Commission before an alternative mitigation plan could go forward, the bill drops the requirement that those plans provide for a "net benefit for fish." I cannot agree to that change, when salmonids in the Umpqua drainage are in such a serious condition.

I have repeatedly stated my opposition to legislation which deals with only one project or one small area of the state. I believe the legislative process should focus on laws of general application to the entire state.

I cannot allow HB 3131 to become law.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith House Bill 3202, unsigned and disapproved.

HB 3202 extends the sunset date of the Pollution Control Tax Credit. When the Oregon Pollution Control Tax Credit was enacted in 1967, it was meant to help Oregon businesses comply with the newly-passed federal environmental laws and create a level-playing field across the country. We are now one of only three states that still have this kind of program. Currently, 75% of the dollar value of these tax credits are for actions required by law. These credit certificates have provided more than \$586 million in value.

Rather than simply extend this program, I believe this relic from the 1960's should be updated to provide an incentive to meet our state's current goals. My Tax Policy Review Committee, which included industry representatives, provided excellent recommendations for consideration by the Legislature and my office on how to do this.

Among their recommendations, they suggested eliminating tax credits awarded for pollution controls that simply bring a plant into compliance with current federal and state law. The committee also suggested expanding the credit to reward those businesses that employ pollution control methods that exceed what is required by environmental law.

As I stated in my letter of July 9 to the legislative leadership and my letter of May 18 to Representative Welsh, I believe this update is overdue and I will not extend the sunset date. Instead, I am committed to working in the interim with a broad group of stakeholders to set a new course before the current tax credit sunset date of December 31, 2001.

Sincerely

John A. Kitzhaber, M.D.

July 20, 1999

The Honorable Lynn Snodgrass
Speaker of the House
H-269 State Capitol
Salem OR 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 3259 to you unsigned and disapproved.

House Bill 3259 would allow schools to be sited on farmland in urban reserve areas. It would also allow sewer and water services to be extended outside urban growth boundaries to serve schools.

Under Oregon's land use program, communities are required to plan for their future development needs by accommodating a 20-year supply of buildable land within their urban growth boundaries. Communities may also establish urban reserve areas to identify where they intend to grow over the long-term. Until expansion of the urban growth boundary is necessary, farmland located in urban reserves must be protected for farm use.

Schools serving urban areas should be located within the communities they serve; within urban growth boundaries. They are major facilities that require urban levels of sewer, water, and transportation services. Schools generate traffic, noise and activity that is incompatible with many of the agricultural operations located in urban reserve areas.

I empathize with the sponsors of House Bill 3259. They are trying to help the fast-growing community of Beaverton keep pace with its need for schools. I do not believe, however, that pre-mature development of urban reserve areas is the answer to this problem.

Sincerely,

John A. Kitzhaber, M.D.

July 22, 1999

The Honorable Lynn Snodgrass
Speaker of the House
State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning herewith enrolled HB 3346, unsigned and disapproved.

HB 3346 would require a sediment study before the Water Resources Department could order the removal of a dam or artificial obstruction from waters of the state. While a sediment study may be appropriate for some dams or obstructions, it may not be necessary in every case. The judgment on when to order a sediment study is best left to the Water Resources Department, which already has the authority under law to order such studies before taking action.

Action by the Water Resources Commission to order dam removal is very rare. There is no credible evidence that the Commission has ignored or will ignore concern about sediment release from dam removal.

This bill places inappropriate and unnecessary restraints on land owners, dam operators, and agencies of state government. It should not become law.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
State Capitol 136
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith House Bill 3456 unsigned and disapproved.

I am concerned that HB 3456 weakens environmental standards; creates an unnecessary and expensive new bureaucracy; and is unnecessary to achieve administrative improvements to the cleanup program.

To begin with, the Department of Environmental Quality (DEQ) is responsible for ensuring that hazardous contamination is cleaned up. Safe, responsible cleanup of contamination caused by leaks or spills of hazardous substances not only protects Oregon's people, fish, water, and land, it also promotes economic development. As I stated in my letters of April 13, 1999 to Representative Welsh, House Water and Environment and July 14, 1999 to Senate President Brady Adams and Speaker Lynn Snodgrass, I am concerned that HB 3456 weakens DEQ's authority over cleanups and weakens environmental protection standards for cleanups of contaminated sites conducted without DEQ oversight.

Additionally, HB 3456B creates a new state panel. This panel is unnecessary. It would not perform any functions that are not allowed within the scope of current law. Rather than expanding government with this cumbersome new panel that is subject to Senate confirmation and new staff positions to support it, I believe we can address the issue of providing recourse in the case of technical disputes by having DEQ develop a mediation tool and other processes. This would also have the effect of saving scarce state funds.

Finally, we have a comprehensive cleanup law that has broad support and that achieves our goals. In 1995, the Legislature adopted a comprehensive cleanup bill that represented a consensus by representatives of business, environmental groups, banks, insurance companies, law firms, local governments and the Department of Environmental Quality. Stakeholders continued to work together to develop acceptable administrative rules. An ongoing stakeholders group continues to work to resolve any other concerns that arise.

Under this comprehensive cleanup law, three hundred cleanups are underway with two-thirds of these occurring with the responsible parties requesting to be part of the state's voluntary cleanup program. The number of sites becoming part of the voluntary program has doubled since 1996 under this program.

I believe we can view this as a real success. It concerns me that HB 3456B could now undo the basic foundation of Oregon's comprehensive cleanup law. For these reasons, I am vetoing House Bill 3456.

Sincerely,

John A. Kitzhaber, M.D.

July 22, 1999

Honorable Lynn Snodgrass
Speaker of the House
Oregon State Legislature

Dear Madam Speaker:

I am returning HB 3541, unsigned and disapproved.

HB 3541 would prohibit any state agency from adopting any rule or standard requiring the reduction of greenhouse gasses until the Kyoto Accord receives the approval of the US Senate. This bill is unnecessary, unclear and cedes decisions to the federal government that we have traditionally made in Oregon.

It is not clear to me why the proponents of this bill think it necessary. Currently there are no state agencies contemplating enacting a rule or regulation to implement the Kyoto Protocol prior to ratification by the US Senate. Further it is unlikely any will do so. In fact, I am not aware of an instance since statehood where an Oregon agency has implemented an international treaty provision prior to US Senate ratification.

HB 3541 suggests Oregon should wait until the US Senate ratifies the Kyoto Protocol before dealing with global warming issues. This is in direct conflict with the way Oregon has approached global warming issues. We have a history of arriving at a consensus and developing collaborative solutions to global warming concerns. That approach has shown that there are ready, inexpensive solutions that we can take in collaboration with business and government. One example is the reform of Oregon's siting law for power plants adopted by the 1997 legislature. The legislation was supported by both industry and the environmental community and made Oregon the first state in the nation with a carbon dioxide standard. Three power plants have been cited in Oregon under these standards with significant CO2 mitigation. HB 3541 would discourage these types of efforts.

Global Warming is a significant problem. Oregon has provided leadership and demonstrated how states can take positive action to curb greenhouse gases. Our consistent investments in energy conservation and our siting law are examples. Oregon needs to continue to be in touch with the leading scientific and business thinking to look for creative solutions to global warming. And we should do so in our own interest and on our own terms. HB 3541 sends the wrong message.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning HB 3605 unsigned and disapproved.

This bill would repeal a portion of the Employers Liability Act (ELA).

The Employer's Liability Act was originally enacted by the people of Oregon in 1911. The purpose of the act was to provide an avenue of recovery for severely injured workers or the families of workers killed while engaged in hazardous activities.

The basic premise of the law makes intuitive sense: At a job site with many employers, someone must have the responsibility to assure that the workplace is safe.

The original act makes the judgment that it would be unfair to have the surviving spouse or children of the deceased to have to find who is at fault for the death of the loved one in order to be fully compensated for that loss. The question of fault is left to those who are responsible for assuring a safe work place.

In the intervening years, Oregon has moved through voluntary, then mandatory, Worker's Compensation systems. And in those 88 years, the people and the Legislature has not seen the need to change this voter enacted statute.

HB 3605 would fundamentally change the course of litigation in cases of work-related death or serious injury. I do not believe that this law should be altered at this time. However, I will support efforts to develop a consensus bill that balances worker safety and fairness to contractors. I hope such a bill can be prepared for the 2001 Legislature.

Finally, HB 3605 places a cap of \$500,000 on non-economic damages. A recent opinion by the Oregon Supreme Court, Lakin v. Senco Products, Inc., et al., _____ Or _____ (SC S44110, July 15, 1999), held that these statutory limits on damages violate provisions of the Oregon Constitution that grant juries the exclusive right to determine damages.

For these reasons I have vetoed HB 3605.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith enrolled HB 3607 unsigned and disapproved.

HB 3607 was introduced to keep employers who made minor or clerical mistakes in payroll from suffering large penalties and substantial attorneys fees as a result. While the bill was substantially improved from earlier versions by the work of a conference committee, I find I still cannot support it.

The major flaw in the bill as it currently exists is that it would allow an employer to willfully routinely underpay employees and suffer only minor penalties so long as any arrears were made good within 10 days of a written demand for payment of wages owed.

If a penalty is to be an effective deterrent to inappropriate behavior, it must be sufficient to create a significant downside risk for the person contemplating the inappropriate act. This means, for example, that an employer could short pay 10 employees by \$50 each and depending on the number of employees who caught the mistake and made the necessary filings, pay less in penalty and back wages than the employer saved by underpaying in the first place so long as the payment was made within 10 days of the demand.

There is much to recommend the provisions now contained in HB 3607, but in its current form it is incomplete. To remain fair to employers but still maintain an adequate deterrent for unscrupulous employers it must either clarify the meaning of the term "willfully" in ORS 652.150, or it must include a provision that allows for greater penalties if an employer exhibits a pattern of inappropriate payroll activity.

I believe these issues can be resolved in a way that protects law abiding employers from undue penalization at the same time an adequate deterrent to inappropriate payroll practices is maintained. I will be happy to work with the interested parties in the interim to find a solution which meets these legitimate policy goals.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

June 1, 1999

Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning herewith Enrolled House Bill 5022, unsigned and disapproved.

I regret that I have been forced into a position where I must veto this budget because I believe that higher education is more important than ever ³/₄ not only for the individuals who earn college degrees, but also for the state's economy and for the quality of life we all enjoy. It was for these reasons that I initiated the process that led to the development of the new budget model for higher education and recommended \$73 million above the current service level to implement it.

HB 5022 would appropriate \$13.8 million more than my recommended budget plus \$0.7 million to the Emergency Board for campuses that achieve performance targets. And the budget report indicates the Legislature's intent to allocate additional funds to Higher Education beyond the \$14.5 million identified in HB 5022. For example, the Education Subcommittee of Ways and Means has now approved HB 5060, which sends \$5 million to the Emergency Board for the Engineering and Technology Industry Council. In addition, \$1 million has been moved to the capital budget for the library construction project at Western Oregon University and \$2 million has been moved to HB 5057 for statewide programs in agriculture and forestry at OSU. Furthermore, the Natural Resources Subcommittee is considering an additional amount up to \$21 million for statewide programs in agriculture and forestry.

I would be very pleased to appropriate an amount to Higher Education that was larger than my recommended budget because I believe that the Oregon University System needs and deserves it. However, I am unwilling to do so until we have some agreement on the larger budget picture and it is clear where these additional expenditures will come from.

Will part of this increase be funded by taking students off the Oregon Health Plan? Will we finance it by cutting child protective services? Will we reduce our efforts to stem the tide of juvenile violence? Will we take it out of the Head Start program? These are not insignificant questions and if we expect an accountable budget process from our state government, then the tradeoffs involved in balancing the budget must all be on the table at the same time.

In my letter to you of May 3, 1999 (a copy of which is attached) I requested that you not send me this budget until we have had an opportunity to clarify the overall budget plan. "Once the May revenue forecast has clarified the revenue picture, the bipartisan legislative leadership can discuss the higher education budget in the context of the larger budget picture. An alternative would be to simply hold the education budgets and determine how we will allocate our resources as part of an exit plan."

You have chosen not to pursue either of these alternatives and instead to forward HB 5022 to my desk where I must regrettably exercise my veto. While I continue to support additional resources for our post-secondary institutions, I am

not willing to support higher spending without giving the public the opportunity to see how it will be paid for.

While I insist on some degree of budget integrity, I will continue to work with the bipartisan legislative leadership to arrive at a balanced budget plan that serves all the needs facing our state -- including those of higher education.

Sincerely,

John A. Kitzhaber, M.D.

July 1, 1999

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, Oregon 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 5055, unsigned and disapproved.

Consistent with my veto of Senate Bill 5504, the budget for the Oregon Commission on Children and Families, I am vetoing the Oregon Youth Authority budget so that we can consider a comprehensive package of funding for children, youth, and their families consistent with the expectations set in our negotiations of Senate Bill 555.

As you know, Senate Bill 555 establishes a framework which makes it possible to enrich the budget for Healthy Start programs and to provide adequate levels of funding to the counties for their High-Risk Juvenile Crime Prevention Plans and for alcohol and drug treatment programs.

I continue to believe that Oregonians and the legislature want to ensure that we make the strongest possible effort to help troubled youth and their families and communities. I also recognize that we are making significant progress in reaching a final budget agreement. I am returning this budget to the legislature so it can give these issues further consideration during these negotiations.

Sincerely,

John A. Kitzhaber, M.D.

July 14, 1999

Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, OR 97310

Dear Speaker Snodgrass:

I am returning herewith Enrolled House Bill 5057, unsigned and disapproved.

Oregon's natural resource-based industries have long been a critical cornerstone of the state's economy. Today, these industries and the rural communities that have depended upon them face great challenges. Research & Development is, therefore, critical to future competitiveness in the natural resource-based industries, as it is in many other industries.

Over the years the Agricultural Experiment Station, OSU Extension Service and the Forest Research Laboratory have contributed in many ways to the competitiveness of these industries and our quality of life. In recognition of their important contributions, my recommended budget contains \$80 million for the statewide public services. This amount is substantial in comparison to the rest of my recommended budget (\$630 million) for the entire Oregon University System. And, in comparison to the \$5 million for the Engineering and Technology Industry Council, this \$80 million commitment of limited State General Fund dollars is disproportionate.

HB 5057 contains not only the \$80 million in my recommended budget, but also a \$12.5 million augmentation. Given our many other pressing needs and the steps that have been taken by the legislative leadership to limit available revenues, including the proposed restrictions on the tobacco settlement, I cannot support the \$12.5 million augmentation included in HB 5057 at this time

I would be very pleased to appropriate an amount to these statewide services - and to high technology - larger than my recommended budget because I believe that these programs need and deserve it. However, I am unwilling to do so until we have some agreement on the larger budget picture and it is clear where these additional expenditures will come from.

It is my hope that the legislature will return this budget to me in the context of a larger budget agreement and with the revenues necessary to fund it.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

July 7, 1999

The Honorable Lynn Snodgrass
Speaker of the House
269 State Capitol
Salem, Oregon 97310

Dear Speaker Snodgrass:

I am returning herewith House Bill 5060, unsigned and disapproved.

Last session, the Legislature created the Oregon Engineering Education Investment Fund and established the Engineering and Technology Industry Council to recommend new investments and to ensure successful programs. I am very pleased with the Council's accomplishments during the 1997-99 biennium. The new initiatives that could be funded with resources in HB 5060 would help to strengthen Oregon's high tech and software industries, which have been creating thousands of well-paying jobs and have been responsible for most of Oregon's growth in exports during the 1990s.

I share the interest of legislators in both houses for an expansion of activities between our universities and high tech industry. This is an important step forward for economic competitiveness in the 21st century. However, I cannot sign this bill until there has been agreement on the final budget. Of particular concern is the proposed plan of the legislative leadership to refer the so called "Health Security Trust," which would effectively remove the national tobacco settlement revenues from current budget negotiations. In short, this is simply a matter of timing and should not be read as substantial disagreement in principle.

I trust that negotiations on the final budget will soon come to closure. I look forward to the day when we can celebrate not only one of the best budgets for higher education in many years but also a new policy path that will carry Oregon into the 21st century.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

September 3, 1999

The Honorable Phil Keisling
Secretary of State
Salem, Oregon 97310

Dear Secretary of State Keisling:

I am returning herewith SB 115, unsigned and disapproved.

Abuse of alcohol is the cause or a major factor in many of the social and criminal justice problems we face in Oregon. That is why Oregonians have chosen to keep the distribution and sale of hard liquor as a state-run operation, and that is why we carefully regulate the sale of alcohol to minors. A strong and fair enforcement of the sale of alcohol is critical to keeping Oregon safe.

I am vetoing SB 115 because it would undermine the fair system of enforcement preventing the sale of liquor to minors which the Oregon Liquor Control Commission has developed through extensive work with their stakeholders. The bill would place in statute extensive restrictions on how the commission may conduct its minor decoy operations, one of the most successful means it has found to prevent the sale of alcohol to minors. Currently, the OLCC has adopted uniform minor decoy procedures and standards by policy while working closely with law enforcement agencies. The commission already has training programs in place and has adopted policies which prohibit the sanctioning of licensees based on a decoy program which does not meet certain standards. In these respects SB 115 would at best be duplicative, and at worst would severely limit the commission in meeting its obligations to protect Oregonians in the most effective way possible.

SB 115 also allowed the delivery of distilled spirits to restaurants and bars. I do not oppose the opportunity for liquor agents to provide delivery service; however, compensation for the cost of this service should be provided. I am aware that the Oregon Restaurant Association and state liquor agents have not been able to agree on how to implement this service. If I had signed SB 115, there would be no question that a proposal would move forward, and I believe that legislation regarding delivery would continue to have support next legislative session.

Therefore, I will work with the OLCC to address the issue of liquor delivery. The OLCC should initiate rulemaking to accomplish this aim, and I am requesting that such rulemaking begin expeditiously. I am confident that the Commission can and will successfully implement rules for delivery. And I believe, given fair compensation and with safeguards for regional competition, this service will improve Oregon's liquor distribution system.

Oregon's liquor agents provide an important public service in carrying out the liquor distribution policies of the state. It is important to continue to evolve the system in place and the service it provides to avoid a further push to privatize liquor distribution. It is also fair to provide compensation for service improvements.

The members of the OLCC have an important responsibility in controlling liquor distribution. It is, in many ways, a difficult enforcement role and I am thankful for the public service the Commission members and staff provide to all citizens of Oregon. My request will add to their burden of responsibilities as it will not be an easy task. So I deeply appreciate the commitment of the Commission Chair to bring this issue forward and to provide the state with a fair

alternative allowing liquor delivery.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

July 19, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning SB 229 unsigned and disapproved.

This measure re-orders the regulatory structure surrounding simulcasting in the pari-mutuel racing industry. The bulk of the bill represents a compromise among industry participants regarding which participants will be able to offer simulcasting.

The bill also expands the Oregon Racing Commission's authority to regulate simulcasting beyond the current statutory framework.

However, the bill is flawed in that it repeals the statutory limitation on the number of Off-Track Betting (OTB) sites that can be licensed in Oregon. The current limitation is 20 sites. There are presently 18 such operations in the state of Oregon.

Although the commission responded to concerns from my office about the repeal by enacting a resolution which would limit growth, I find this limited potential for growth to be too much.

The repeal comes at a time when a new cable channel offering gambling through television is about to premier nationwide. I believe it is premature to lift our statutory limit until the effect of this new phenomenon can be gauged.

Further the bill comes just weeks after a national study on gambling has stressed the importance of maintaining a moratorium on gambling expansion. The potential exists under SB 229 for the expansion of OTB facilities throughout the state.

In my terms as Governor I have taken steps to slow the growth of gambling.

Under my direction the State Lottery has placed a cap on the number of Video Slot machines that will be available.

I have worked to placed reasonable and respectful limits on the location and size of tribal casino gambling through negotiations.

I have also vetoed legislation that would have amounted to a giveaway of tax dollars to race tracks.

While the regulatory reform in this bill may be necessary, I find the provisions expanding gambling opportunities in the bill unacceptable. If the Legislature will re-pass this bill without repealing the cap on OTB facilities, I will sign this bill.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Press Releases](#)

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

June 28, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem OR 97310

Dear President Adams:

I am returning herewith SB 259, unsigned and disapproved.

In January 1999, the Oregon Tax Court approved a settlement between the State of Oregon and federal retirees related to the taxation of federal pensions. Under that settlement, refunds were to be paid to all federal retirees as soon as practicable, subject to budgetary constraints, and in any event, no later than June 30, 2003. I am personally committed to the terms of the settlement agreed to by the plaintiffs.

Early in this legislative session I suggested to the legislative leadership that we pay federal retirees immediately and remove this debt from the state's budget ledger while the resources were available to pay it. If this had been done we would have saved an estimated \$562,000 a month in interest charges. However, the legislature refused to act in large part because paying the settlement in the 1997-99 biennium would have reduced the revenue forecast, thus eliminating the "kicker." In fact, these payments could have been made as late as this month --thus saving millions in interest charges, but the legislature refused to authorize them in order to assure the \$150 million "kicker" payment to taxpayers. Thus, payment of this debt to federal retirees was delayed based upon a costly political strategy. The result has been to create budgetary constraints that now require a further delay in these payments.

Today we find ourselves in a budget battle around school finance that promises to prolong the 1999 legislative session. There are not sufficient resources to adequately fund local schools without unacceptable cuts in other important state services. It was not until five months into this legislative session that the legislative leadership developed a set of revenue principles which included payment of the federal retiree claims in the 1999-01 biennium. In the interest of funding schools at an acceptable level without damaging other programs critical to the health and safety of all Oregonians, we are now forced to wait to pay this debt.

I regret having to veto this bill, but the legislature has given me no alternative. While I would have preferred to retire this debt in the current biennium, we will still be able to meet the terms of the settlement agreement with a payment in the 2001-03 biennium.

Sincerely,

John A. Kitzhaber, MD

JOHN A. KITZHABER, M.D.
Governor

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am herewith returning SB 428, unsigned and disapproved. This bill would create a Student Bill of Rights Program, allowing students in the 11th and 12th grades to attend postsecondary institutions, with the tuition and other associated costs being reimbursed by the students' home school district.

Although I strongly support the concept of a "seamless" K-16 system and encouraging students to move into postsecondary education, my concerns are with the funding mechanism in this bill. State Superintendent Stan Bunn and I communicated these concerns in our June 22, 1999 letter to the Ways & Means Co-Chairs, as well as our June 29, 1999 letter to Senate President Brady Adams. This bill requires that the school district in which a student is enrolled pay the costs of tuition, books and materials when a student chooses to take a course at a postsecondary institution. The district has no authority to deny the payment, even if the district has similar courses available in its K-12 system.

The Legislative Fiscal Office estimated that, if 8% of students in grades 11 and 12 attended a postsecondary institution quarter-time, school districts would be required to pay \$3.7 million per year for these courses. This represents an unfunded mandate on an underfunded K-12 school system.

I am also concerned with the impact of this bill on the capacity of schools to offer a full curriculum to all students. As some students decide to enroll outside the high school for certain upper-level courses, high schools may have a diminished capacity to offer these classes to those students remaining.

Schools and postsecondary institutions throughout the state have already developed, and are expanding, partnerships allowing high school students to gain college credit. These partnerships are being developed in a way that allows postsecondary institutions to augment, not supplant the work of high schools and to provide the courses in settings that are developmentally appropriate for high school students.

Although I am vetoing this bill, I am asking the Department of Education, the Department of Community Colleges and Workforce Development and the Oregon University System, along with the Joint Boards of Education, to develop mechanisms and, if necessary, to propose future legislation to expand the availability of postsecondary opportunities for high school students throughout the state. There are many students in this state who can benefit from such opportunities, both students who are traditionally thought of as "high-achievers" and those who may find participation in such courses to be a viable alternative to dropping-out of high school. By providing for a thoughtful expansion of such opportunities, we can help deliver on our promise to provide all children in Oregon with the quality education they deserve.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

July 8, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem OR 97310

Dear President Adams:

I am returning herewith Senate Bill 474 to you unsigned and disapproved.

Senate Bill 474 declares that it is in the interests of the people of the State of Oregon to ensure that regulations are applied to private property in the least restrictive manner possible while still accomplishing statewide land use planning policies. The bill is intended to be a statement of Legislative policy direction to guide the development and implementation of Oregon's land use laws.

State and local governments constantly strive to balance the need for regulation to protect public health, safety and welfare with the potential restrictions those regulations may impose on individual citizens. I support the idea of implementing regulations in a way that minimizes the impacts on private property owners. Existing case law provides guidance on when a regulation has gone so far as to constitute a "taking of property without just compensation."

Senate Bill 474 is problematic, however, because it does not provide clear and objective standards by which government may judge whether its actions are consistent with the directive. It is a matter of individual interpretation as to whether a regulation is being applied in the "least restrictive manner possible."

This lack of clarity provides a fertile environment for unnecessary and costly litigation. For these reasons, I have decided to veto Senate Bill 474.

Sincerely,

John A. Kitzhaber, M.D.

Governor

September 3, 1999

The Honorable Phil Keisling
Secretary of State
State Capitol 136
Salem OR 97310

Dear Secretary Keisling:

I am returning herewith Senate Bill 524 unsigned and disapproved.

Senate Bill 524 would allow a community to vacate a public right-of-way without considering how that decision may affect the local land use plan dealing with transportation, community development, and the environment.

Under current law, a jurisdiction must ensure that a proposed vacation of certain types of public rights-of-way is consistent with its comprehensive land use plan and transportation system plan. This is important because streets and roadways form the basic building blocks for our communities. They define how our communities grow, whether there are adequate connections between our homes and schools, and greatly influence whether our communities are livable.

Senate Bill 524 would allow a community to vacate a public right-of-way without considering these important aspects of community livability.

This bill has broad application throughout the state but was originally proposed to address a situation in Yachats. I want to stress that I have a great deal of empathy for the affected property owners in that community. I also want to acknowledge the countless hours Mayor Roberts and others have spent trying to resolve this issue.

I do not believe, however, that Senate Bill 524 is a good solution to the problem in Yachats. I am willing to commit state resources in the interim to help the community pursue other options including the use of mediation if requested.

Sincerely,

John A. Kitzhaber, M.D.

Septmeber 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning SB 558 unsigned and disapproved.

As an emergency room physician, I cannot support increasing the speed limit on rural interstate highways as provided by Senate Bill 558. As Governor, I believe that I have a duty to protect the safety of our citizens. Increasing the legal limit for automobiles to 75 miles per hour and the limit for trucks to 70 miles per hour will significantly increase traffic deaths and serious injuries suffered by Oregonians.

There is no question that increased speeds will compromise the safety of our rural instate highway system, and the evidence is clear that highway fatalities will increase as speed increases. Speed limit increases will result in more severe crashes and will reduce the ability of vehicle restraint and safety systems to protect the occupants of cars. The trauma associated with high-speed vehicle crashes is tremendous and I have too many times witnessed the irreparable damage caused to the human body.

The only circumstance under which I would consider supporting an increase in the speed limit would be if it were accompanied by adequate law enforcement. Adequate enforcement is necessary to ensure speed limit compliance and for the protection of law-abiding drivers. Adequate patrols are critically important because too often high-speed crashes involve more than one vehicle. Unfortunately, the Oregon State Police lacks adequate patrols to enforce our speed limits, and even with the increased staffing proposed in the Oregon State Police budget, our patrol presence will remain inadequate.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Press Releases](#)
[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

July 20, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning Enrolled Senate Bill 595, unsigned and disapproved.

SB 595 is intended to provide a personal property tax exemption to wineries operating in exclusive farm use zones. Its proponents argue that this tax exemption will preserve more of Oregon's agricultural land while generating high-value products.

This veto represents a difficult choice. I am very proud of the strength and reputation of Oregon's wine industry. It is internationally renowned, highly successful and growing rapidly. However, I am not convinced that it needs this small exemption which has very large implications.

At the same time that I support this industry, I am gravely concerned with the continued erosion of local government taxing authority. SB 595 further erodes the local property tax base which is the major source of revenue for cities, counties and special districts such as rural fire protection districts. This is happening at the same time the legislature is preempting local governments from considering additional revenue options to offset these losses and address critical local infrastructure, public safety and public health needs. The legislature itself has recognized this problem with the passage of HB 2039 which would provide a partial reimbursement to local communities when it approves property tax exemptions. In other property tax exemption legislation approved this session, the legislature provided a "local option". This approach would allow local officials to weigh the costs and benefits of this kind of an exemption against the economic health of their community. Unfortunately, neither option is available under SB 595.

Further, this bill opens the door to a new type of property tax expenditure: processing machinery and equipment. This expansion of exempt activities sets a precedent that will open the door for other processing operations which, in principle, may not be different from wine processing.

As a result of my decision to veto SB 595, I will ask the Department of Revenue to work with the Oregon Farm Bureau, Northwest Processing Council, the Winegrowers Association and various taxing districts to review farm property taxation and the changing nature of farming in Oregon. The review should include an examination of processing on vertically integrated farms and may result in a comprehensive approach for consideration by the legislature in 2001.

Sincerely,

John A Kitzhaber, M.D

July 17, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem OR 97310

Dear President Adams:

I am returning herewith Senate Bill 675, unsigned and disapproved.

I indicated some time ago that I would not support any legislation that diminishes the Oregon Plan for Salmon and Watersheds. I believe that SB 675 would do this by weakening the authority of the Department of Environmental Quality (DEQ) to manage water quality comprehensively in Oregon. I also believe it creates inequities, legal uncertainty, and possibly threatens Oregon's delegated status under the Clean Water Act.

To begin with, SB 675 requires the state to waive state certification required under Section 401 of the Clean Water Act (CWA) for federally licensed or permitted activity, specifically those occurring under terms of a federal management plan. This would be irresponsible to the people of Oregon.

Section 401 is the section of the CWA that prevents state standards from being violated by federal activities. It requires an applicant for a federal license or permit to apply for certification from the state that potential discharges from their activity will not violate state standards. Under the CWA, the state must deny certification if compliance cannot be assured, or may place conditions on the activity in a permit. It is also the tool that the state uses to take a comprehensive view of the resource, to assure that local goals are met at the same time that water quality is protected, and to protect values that we have all agreed to through state public processes. I do not believe it is in the state's best interest to waive this responsibility and assume that the authorities or mission of any federal agency through their management plans are sufficient to consider all of the important state-held values; much less to enforce permit conditions to achieve these values.

In addition, SB 675 creates a legal question. Current law contains an express provision granting the DEQ the right to continue regulating nonpoint source pollution from agricultural activities. It recognizes DEQ's authority to assure attainment of water quality standards on agricultural lands by working with the Oregon Department of Agriculture on agricultural water quality management plans. SB 675 is in direct conflict with this provision. It removes DEQ from this partnership and confuses the overall delegation of the Clean Water Act in Oregon.

Finally, SB 675 limits ODA's regulating authority to only those lands subject to SB 1010 plans even though ODA has broader water quality regulatory authority under other statutes. This unnecessarily narrows the use of regulation when it may be necessary to apply it more broadly for salmon recovery.

For these reasons, SB 675, I am vetoing the bill.

Sincerely,

John A. Kitzhaber, M.D.

July 13, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning herewith SB 751, unsigned and disapproved.

I need to be clear that I am not opposed to districts using their existing authority to adopt school uniform policies. Yet, the House floor debate raised previously undisclosed concerns about SB 751. While it is understood that the bill was simply meant to encourage districts to adopt school uniform policies, these concerns raise the potential of subjecting school districts to litigation, and may impact existing school dress codes.

The U.S. Department of Education manual about school uniforms highlights the concern about assisting families that need financial help by stating, "uniform policies should make provisions for students whose families are unable to afford uniforms." SB 751 makes no such provisions. In addition, while the issue of what is a uniform was discussed in committee, the bill provides no definition of "uniform," nor does it describe any differences between "dress code," "uniform dress code," or "uniforms." This vagueness raises concerns about the bill's impact on existing dress codes.

As you are aware, SB 751 was voted down initially by the House because of these concerns. Despite these issues, the bill was reconsidered and passed by one vote. There was some hope that these issues could have been clarified and addressed in a conference committee. However, the Senate chose not to send it to a conference committee.

I again note that districts still have the authority to adopt school uniform policies. Unfortunately, these issues in SB 751 could lead to unintended and undesirable results for school districts, students, and their families.

Therefore, given that these issues remain of concern, I am vetoing the bill.

Sincerely,

John A. Kitzhaber, M.D.

July 22, 1999

Honorable Brady Adams
President of the Senate, Oregon State Legislature

Dear President Adams:

I am returning SB 811 unsigned and disapproved.

SB 811 includes two major provisions: a clarification in the law that to be eligible to receive a concealed handgun license (CHL) a person must not otherwise be prohibited from possessing a firearm under state or federal law; and, a major change in Oregon law requiring county sheriffs to waive the residency requirement for a CHL for permit holders from contiguous states. It is the dangers posed to the public safety in the latter provision which forces my veto.

Oregon's concealed weapons permit law gives county sheriffs the discretion to issue a permit to a resident of a contiguous state if that person has a "compelling business interest or other legitimate demonstrated need". That is as it should be. Because of the gravity of the decision and possible consequences for public safety Oregon sheriffs should retain their ability to screen applicants for a concealed handgun license from other states. We depend upon our locally-elected sheriffs to protect the public safety of those in their counties. It would be presumptuous -- if not downright dangerous -- for us to take away one of the necessary tools sheriffs have to protect the safety of Oregonians.

SB 811 would hand over the decision over which Californians, Nevadans, Idahoans, and Washingtonians would be eligible to carry a concealed weapon in Oregon to the legislatures of those states. If Idaho should decide, for example, that it would issue a permit to someone an Oregon sheriff believes to be dangerous, our sheriff would not have the discretion to retain the Oregon residency requirement. I trust the judgment of our sheriffs and am unwilling to give up that judgment in favor of the laws of other states. As Oregonians we deserve to have a public official accountable to us decide which outsiders can carry a concealed weapon in our midst. I am unwilling to sign this protection away.

Today we are more aware than ever of the dangers firearms pose in our society. SB 811 would only expose Oregonians to potentially greater dangers to our public safety.

Sincerely,

John A. Kitzhaber, M.D.

July 8, 1999

The Honorable Brady Adams
President of the Senate
State Capitol
Salem, OR 97310

Dear President Adams:

I am returning herewith Senate Bill 849, unsigned and disapproved.

The testimony presented on Senate Bill 849 indicated it is intended to solve one property owner's issue concerning access to a highway near a busy interchange on I-205. The bill would create and affect hundreds of similar situations across Oregon. In an effort to remedy this particular situation, the Oregon Department of Transportation (ODOT) would lose regulatory authority over the operation, capacity and type of use allowed on all frontage and utility roads it has or will construct.

ODOT must ensure that property owners have reasonable access to their property. Managing the connections to highways is one tool to make better use of the highway system by extending the life of interchanges. SB 849 would affect the state's ability to provide a safe and efficient highway infrastructure while preserving the significant investment made by taxpayers.

ODOT and Clackamas County are continuing to work through the issues specific to this property owner. There have been constructive discussions and they are working towards resolution. Therefore, I believe it is in the best interest of all Oregonians to veto this bill.

Sincerely,

John A. Kitzhaber, M.D.

July 13, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning herewith Senate Bill 887, unsigned and disapproved.

The bill serves to mandate school districts to adopt the National Rifle Association's Eddie Eagle Gun Safety program for all children in public school grades K-6. I disapprove of the bill for the following reasons.

This is a mandate of a program that would be in addition to the academic programs that school districts already have to provide. I do not favor adding mandates to schools that are unrelated to the academic standards schools are being asked to achieve. Furthermore, through past legislative actions, school districts already have the option to provide these firearm safety services if they wish.

The bill mandates only one program. This does not allow districts to choose from the array of nationally recognized firearm safety programs, including local law enforcement programs and the Oregon Health Sciences University's recognized "Think First" program.

While proponents indicate that the supporters of SB 887 are currently willing to provide the resources to implement the program, the bill does not address future fiscal issues. School districts, already struggling for adequate funding, will be left to cover costs if donated services are not available.

Lastly, the bill has no opt out provisions for parents who do not wish to have their children participate in such a gun safety program.

Therefore, I am vetoing the bill.

Sincerely,

John A. Kitzhaber, M.D.

July 19, 1999

The Honorable Brady Adams
President of the Senate
State Capitol
Salem OR 97310

Dear President Adams:

I am returning herewith enrolled SB 987, unsigned and disapproved.

SB 987 would require legislative approval before dams or artificial obstructions could be removed from waters of the state. This bill would be an unjustifiable intrusion into the legitimate workings of an administrative agency, the Water Resources Commission, which has been given the authority to make such decisions. In fact, the Legislative Assembly itself created a task force to suggest policies and procedures for making decisions about the future of hydroelectric projects. Since this task force is making good progress and is not required to submit its recommendations to the Legislative Assembly until 2001, SB 987 would preempt much thoughtful and useful work before the Legislative Assembly has all the available information.

There is also much confusing language in SB 987. The body of the bill was to be placed in ORS chapter 543, the chapter on hydroelectric facilities, but the language of the bill appears to refer to all dams and artificial obstructions. Also, the special exemption allowing federally licensed hydroelectric project owners to take out dams on their own volition without legislative approval implies that other dam owners may not voluntarily take out a dam without legislative approval. If this bill were so construed, it would place an unneeded restriction on the private and public owners of dams, dikes, and other structures.

My greatest concern about this bill is the restrictions it places on the Water Resources Commission to order action in the case of an emergency. When life and property are at stake, we must rely on administrative agencies' ability to take the needed action quickly. I cannot sanction waiting for the Legislative Assembly to convene and act if a question about dam safety emerges.

Finally, much of the debate on this bill concerned the future of federal dams on the Columbia and Snake Rivers. Since they are federal property, are not licensed by the state, and could not be removed by order of the Water Resources Commission, those dams would have been outside the reach of SB 987, even if I had thought it appropriate to sign the bill.

Sincerely,

John A. Kitzhaber, M.D.

Governor

July 8, 1999

The Honorable Brady Adams
President of the Senate
State Capitol
Salem, OR 97310

Dear President Adams:

I am returning herewith enrolled SB 988, unsigned and disapproved.

SB 988 would have required the Department of Fish and Wildlife to apply for transfer of federal authority to the state for management of marine mammals. While overall, I believe that the state has a stronger role to play in management of marine mammals, particularly Pacific harbor seals and California sea lions, this bill is not the appropriate vehicle for achieving that greater management role.

First of all, no funding accompanies this bill, nor is any under consideration for the ODFW budget. There would be considerable costs associated with taking over marine mammal management, but this bill ignores those costs.

Second, what further makes SB 988 appear more like a statement of protest than actual legislation is the definition of marine mammal contained in the bill. By defining the "optimum sustainable population" of all marine mammals as those "not in the waters of this state," the bill provides no scientific basis for management of those animals. Over two dozen species of marine mammals visit the waters of Oregon. If it is the Legislative Assembly's intent to manage all these animals, SB 988 provides no direction for doing so.

I cannot endorse this legislation.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

July 20, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem OR 97310

I am returning herewith Senate Bill 989 to you, unsigned and disapproved.

SB 989 prohibits the state from agreeing to federal acquisition of land and waters in the state without the consent of the county governing body. The bill repeals a number of laws relating to federal acquisition of certain types of properties. In addition it would eliminate the authority of the federal government to acquire land for navigation aids and federal buildings.

The bill would have a significant effect on how the federal government may acquire land or water for a bird refuge. The federal government, under this bill, would first need the consent of the affected county. I believe that a reasonable interpretation of the bill would require Legislative consent for these acquisitions, even if county consent is granted. The bill also has the effect of repealing statutes that apply state civil and criminal statutes within bird refuges.

Under Section 3 of the bill Oregon may not consent to the acquisition of land for National Forests without the consent of affected counties. This was already the case under ORS 272.040 and 272.050, which are repealed by SB 989. What the bill does, then, is eliminate the reservation of limited state jurisdiction over newly acquired National Forest lands. This would include, among other things, the jurisdiction to tax and the creation of rights of entry for transport of forest products

I believe that the acquisition of land by the federal government in the state is a matter best left for the state to decide on a case-by-case basis. This bill may allow counties to drive state, regional and federal policy as it relates to acquisition of certain land and water. The state is in the best position to balance the needs of the federal government with state and local interests and concerns.

Most alarming is the bill's provision repealing a state statute that allows the federal government to acquire up to ten acres of land for siting navigation aids. Navigation aids are essential for the safety of marine vessels.

Sincerely,

John A. Kitzhaber, M.D.

Governor

September 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith Enrolled Senate Bill 1061, unsigned and disapproved.

SB 1061 is an awkward attempt to add definition to the broad statutory framework that governs the use of local systems development charges (SDCs) which help pay for the infrastructure needs incurred with new development. Specifically, it will restrict a local community's ability to pay for parks and parks improvements. Oregon law already limits the use of SDCs making this bill not only unnecessary but overly restrictive.

Citizens need to have a variety tools available to them to meet local service needs, as well as maintain and enhance the livability of their communities. Parks are an important component of community livability. Increased growth pressures stress our ability to pay for and keep up with the demand for infrastructure improvements including parks.

Local citizens and their elected representatives should not be penalized for falling behind in parks improvements by restricting the level of parks service in new developments. Oregon law already requires a rational linkage between where SDC dollars are collected and where they are spent.

Sincerely,

John A. Kitzhaber, M.D.

July 19, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning SB 1115 unsigned and disapproved.

This bill, as introduced, placed limits on the ruling in *Rauda v. Oregon Roses* 147 Or App 106 (1997). There a group of agricultural workers gathered to complain about wages and working conditions. When they approached their employer, they were fired for engaging in collective activity.

The Court of Appeals, rightly, concluded that no worker should be subject to dismissal for simply raising concerns about wages and working conditions. The court case also opens the door for further gains by agricultural workers as they seek to better their working conditions.

The original bill narrowed the scope of the court ruling and gave the workers an inadequate administrative remedy through the Bureau of Labor and Industry.

My office helped facilitate negotiations on the bill in the House. While our efforts were sincere, I recognize that in the flurry of activity generated by this bill clear communications were not always a reality. However, my only interest was in reaching an agreement among the growers, workers and their political allies that I could sign.

The Oregon Farm Bureau made significant and substantial changes to the bill. They worked to broaden the definition of protected activities. They returned a limited right of private action to the bill. The Oregon Farm Bureau worked very hard to deliver a bill that I could sign.

But as it stands SB 1115 is still short of the mark in several respects.

First the literal language of the bill creates a right to discuss wages and working conditions. But there is not a true mechanism in the bill providing a real opportunity to resolve issues and resolve them quickly. Workers could still be fired without an adequate hearing for their grievances.

Secondly, there is nothing in the current bill that defuses these labor conflicts in a manner that provides dignity to the workers demands and meets the need of growers to get the crops harvested.

A late proposal to include a mediation component in the bill did not make it into SB 1115. Mediation would help resolve this issue by providing rapid response in impasse situations while also requiring back to work measures pending the outcome of talks.

A related bill, HB 2938, passed the House today and is on my desk. It contains provisions for a mediation program through the Department of Agriculture. The mediation concept is one that I think is workable and beneficial. However,

the mediation provisions in HB 2938 sunset in two years, leaving the rest of SB 1115 as permanent law.

I believe that the entire scheme should sunset in two years so that neither side would be permanently prejudiced. I met with growers and workers during the negotiation process. I recognized that both sides were extremely wary of certain aspects of the negotiated bill. A sunset is necessary for both sides to have security regarding the unintended consequences of the bill in operation.

For these reasons I will veto SB 1115. However, I believe that this issue, agricultural labor relations, is tremendously important to Oregon's future. A bill exists in this legislature that I will sign.

The complete package is in SB 1339 recently introduced by Sen. Metsger. This bill has the complete text of SB 1115. It also contains the mediation program and a more complete set of remedies for aggrieved workers that provide incentives for all parties to use mediation to resolve these disputes.

I urge the legislature to give top priority to passage of SB 1339. I plan to write today to the Legislature as a whole stressing the importance of this issue and the importance of passing SB 1339 this session.

Having said this, I realize that in the rush to sine die, it may not be possible for SB 1339 to become law. If it does not, I fully intend to stay involved in this issue. To start I will instruct, by executive order, the Department of Agriculture to establish a mediation process similar to that set out in HB 2938.

Agriculture is a vitally important industry in our state and as it moves into the 21st Century many changes will sweep over it. A resolution of agricultural labor issues in a manner which treats farmers and farm workers fairly must be a top priority.

Sincerely,

John A. Kitzhaber, M.D.

July 8, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem OR 97310

Dear President Adams:

I am returning herewith enrolled Senate Bill 1166, unsigned and disapproved.

In Oregon, we have a bi-partisan commitment to restore our salmon. In 1997, we formally committed to this through Senate Bill 924 which calls for successful implementation of the Oregon Plan for Salmon and Watersheds. State agencies have followed this law to implement the Oregon Plan since that time.

Outstanding Resource Water designation is one of many tools we committed to using under the Oregon Plan. This designation provides protection to priority waters. SB 1166 narrows in statute eligibility for Outstanding Resource Water designation to essentially pristine waters. This generally reflects the Department of Environmental Quality's (DEQ) policy that was developed with input from an advisory-working group, but reduces the flexible use of this tool, to restore and protect salmon

Under the Oregon Plan we have repeatedly argued for flexibility in the application of our tools. For example, over time we may find that there are waterbodies which are important, unique, or sensitive ecologically, but may not be pristine. Salmon may depend on some of these ecologically significant, but not pristine, waters. I would not want us to preclude our ability to use this tool to help us achieve our goal of salmon recovery. EPA has stated its intent that ORW designations are appropriate to protect ecological values in less than pristine waters.

In previous letters, I outlined my unwillingness to support any legislation that weakens the Oregon Plan as well as my particular concerns about SB 1166. While I respect the interest in certainty provided by SB 1166 to some of our partners in salmon recovery, I cannot support limiting our tools or their flexibility through statute when we have such a difficult task ahead.

Sincerely,

John A. Kitzhaber, M.D.

Governor

Septmeber 3, 1999

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith Enrolled Senate Bill 1275, unsigned and disapproved.

SB 1275 represents a major tax policy change in the way Oregon calculates corporate income taxes. I appreciate the proponents' economic development arguments and their desire to assist Oregon companies. Their arguments are not unlike those used to repeal the unitary tax during the 1980's -- a time of tremendous economic distress in Oregon. I served in the legislature at that time and voted for the repeal believing that it would have a positive impact on our economy. Today, however, we are enjoying a level of economic growth that outpaces the rest of the country and we are often hard-pressed to keep up with the demands it brings to our infrastructure, schools and quality of life. Our current conditions do not create a compelling case for a change of this magnitude. Further, it has been estimated that 5,976 Oregon businesses would be hurt by the changes in this legislation.

As I stated in my letter of July 13 to the legislative leadership and my letter of May 28 to Representative Strobeck, I am very interested in efforts that will enhance the stability and equity in Oregon's tax system. Our current economic prosperity masks our state's dependence upon an unstable revenue source. Until these issues are addressed I cannot in good conscience support major tax law changes that further jeopardize our school funding system. Oregon already has one of the lowest overall tax burdens in the country. I regret that the 1999 legislature did not spend more time addressing the very real problems of instability in our public and school finance system.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

July 26, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning SB 1282 unsigned and disapproved.

This bill would require the Department of Transportation to pay an additional surcharge to contractors who prevail in compensation claims. The idea is that contractors who have disputes with the agency over compensation often need to retain counsel and take other steps and should be compensated when they are proved "right".

I believe that such arrangements promote increased litigation and decrease opportunities to reach informal settlements. The prospect of rewarding continued conflict will not be consistent with the legislature's actions last session in requiring all state agencies to use alternative dispute resolution as a way of amicably ending these kinds of disputes. The concept of "loser pays" for state agency activities has surfaced frequently. I have consistently opposed such efforts.

We should not force the agencies to create a pot of money to reward unnecessary litigation against government.

For these reasons I had returned SB 1282 disapproved and unsigned.

Sincerely,

John A. Kitzhaber, M.D.

September 3, 1999

The Honorable Phil Keisling
Secretary of State
State Capitol 136
Salem OR 97310

Dear Secretary Keisling:

I am returning herewith Senate Bill 1296 to you, unsigned and disapproved.

SB 1296 would allow unmanned jetski-type personal watercraft to be used to tow a water-skier or person in a ski tube without having a boat operator or observer on board the vessel.

As I stated in my letters of July 8, 1999 and July 16, 1999 to Senate President Brady Adams and Speaker Lynn Snodgrass, my objections to this bill are two-fold. My primary concern is for waterway safety. With increased crowding and congestion on Oregon's waterways, there is more reason than ever to require an observer as well as a boat operator to maintain proper lookout. It is unreasonable to think that a person being towed behind an unmanned personal watercraft can simultaneously engage in water skiing while at the same time maintaining a proper lookout for other boats and persons in the water.

I am also concerned that the Ways and Means Committee chose not to provide the funds necessary to implement the bill, estimated to be \$127,000. The effect of this decision is to require current boat owners to subsidize the cost of the planning, management, education and enforcement associated with establishing safety zones for this new breed of personal watercraft. Revenue from these craft will not cover the cost of managing this new use.

This bill would create two classes of persons engaged in the same activity. Telling one class of water-skiers that they need an observer and operator to be safe, and another group that they don't need an observer/operator behind an unmanned personal watercraft is not consistent public policy.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

June 18, 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, Oregon 97310

Dear President Adams:

I am returning herewith Senate Bill 5504, unsigned and disapproved.

I believe that Oregonians and this legislature want to ensure that we make the strongest possible effort to help troubled youth and families in our communities. While the budget for the Oregon Commission on Children and Families represents one critically important element in a continuum of services necessary for children, I cannot accept as adequate Oregon's investment in children and youth until other critical elements in that continuum are funded. I will continue to work with the legislature until we have adequately addressed the needs of not only the youngest of our children, but at-risk youth and their families as well. I am disapproving this bill only to ensure that our efforts to help at-risk children and youth are carefully balanced and fully integrated.

I support the level of funding for the Oregon Commission on Children and Families contained in Senate Bill 5504 and fully expect the legislature to repass a budget that includes at least this level of funding. However, without additional funding for at-risk youth and drug-affected families, we will not have met our responsibility to Oregonians.

The policy work necessary to accomplish these aims is embedded in Senate Bill 555 currently under consideration in Ways and Means. Senate Bill 555 makes it possible to enrich the budget for Healthy Start programs and to provide adequate levels of funding to the counties for their High-Risk Juvenile Crime Prevention Plans and for alcohol and drug treatment programs.

To accomplish this aim, Senate Bill 555 and linked agency budgets must be considered and negotiated as a package of funding for children, youth, and their families. This means that the budgets of the Oregon Youth Authority, the Oregon Department of Human Resources, and the Oregon Criminal Justice Commission -- as well as the budget for the Oregon Commission on Children and Families -- must be considered in a common context by the bipartisan negotiating team that is currently meeting. These budgets must be crafted in a way that results in a carefully integrated and balanced package of funding that provides Oregon communities with the resources they need to serve children at risk, troubled youth and their families. I believe that we can do all this and provide adequate and appropriate funding for our schools.

I realize this veto is unexpected. On the other hand, I did not expect the drastic reduction in investment in both drug and alcohol treatment and at-risk youth which is reflected in the leadership budget released earlier this week.

I remain confident that by considering all these elements together the bipartisan budget negotiating team will be able to restore the balance necessary to meet our responsibilities to very young children as well as high-risk youth.

Sincerely,

John A. Kitzhaber, M.D.

8 July 1999

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning SB 5521 unsigned and disapproved.

While the General Fund resources included in the budget are reasonable, there is an important element of the Bureau of Labor and Industry's (BOLI) duties that is not adequately supported. Even though this budget contains an expenditure limitation for \$466,436 in Other Funds to support the Civil Rights Division, HB 2154, the bill which provides funding for the limitation, has not passed. Without such funding, the resulting shortfall has the effect of cutting funding for over 15% of the Civil Rights Division's caseload.

The civil rights of our citizens is a founding principle of both our federal and state constitution. It is inexcusable to leave in doubt our ability to enforce the civil rights of all Oregonians. I will gladly sign a budget identical to SB 5521 when I am assured that BOLI will have the resources needed to fulfill this crucial duty.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling::

I am returning herewith Enrolled House Bill 2062, unsigned and disapproved.

This veto represents a difficult choice. My staff and I spent considerable time with representatives of the centrally assessed companies as well as legislators discussing what is one of the most complex taxation issues to emerge this legislative session. I believe that with federal deregulation, global competition and other significant changes facing these industries, this issue merits further discussion

HB 2062 would exempt centrally assessed companies such as energy, telecommunications, airlines and railroads from paying taxes on the value of their intangible properties. How these industries are taxed and whether their tax burden is equitable compared to other industries as well as individual residential taxpayers requires greater analysis. Any major change in tax policy should receive a thorough public debate inside the larger context of economic and equity issues.

Further, I am concerned that the definition of an "intangible" found within HB 2062 is far too broad and will result in litigation. We have much to learn from the experience of other states that have struggled with this issue. The definition of intangibles has been in and out of the courts for years in California and has been challenged in a number of other states across the country. In preparing for the implementation of HB 2062 in Oregon, similar problems and disagreements have surfaced. For example, members of different industry groups are now identifying issues that might come within the scope of the legislation that were not identified during either the 1996 interim or during the 1997 legislative deliberations. Legislation which passed recently in the State of Washington has a much tighter definition of intangibles. We in Oregon can learn from their experience as well.

Lastly, HB 2062 will contribute to a shift in the tax burden from Oregon businesses to the individual Oregon residential property owner. I am not anxious to support any further shift of the property tax burden to homeowners from industry outside the context of a much broader discussion on tax equity. While the industry clearly has a strong argument on the basis of fairness this must be considered within the larger context of the overall taxation of centrally assessed companies.

As a result of my decision to veto HB 2062, I will instruct the Department of Revenue to establish an interim work group that includes the participation of these companies to look at the both the overall tax burden and changing nature of these industries and to develop a set of principles that should guide future decision making. If including intangibles in the assessment is not the way to arrive at a value of an industry we will need the assistance of these companies to identify a preferred option that is equitable, economically efficient and that can be administered with a minimum of litigation. This effort should lay the ground work for an approach to the intangibles issue for the 1999 legislative session.

Sincerely,

John A. Kitzhaber, M.D.

August 15, 1997
The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith HB 2157 unsigned and disapproved.

House Bill 2157 requires the Department of Corrections to pay more for hospital care provided to inmates than is currently paid by the agency. While the legislation did allow the agency to negotiate alternatives to the rate set in the bill, the guaranteed rate substantially reduced the possibility that an alternative could be negotiated.

I am determined to operate our state prisons cost effectively and medical care that must be provided to prisoners is one important component of the daily costs of housing prisoners. However, I have a long commitment to a health care agenda that reimburses hospitals and providers adequately and appropriately for their services. Although I am vetoing this bill, I want to communicate to everyone concerned that I expect the Department of Corrections to pay adequate and appropriate rates for health care provided to prisoners by hospitals.

To this end, I have directed the Office for the Oregon Health Plan Policy and Research to assist the Department of Corrections in the review and establishment of a method to reimburse hospitals for services provided to inmates. Reimbursement of hospitals for services provided to inmates should take into account the level of health care this particular population requires, the system for delivery of health care in the prisons, the share of the prison population hospitals are expected to service, as well as the economic factors that influence health care costs in different geographic regions of Oregon. These are complex questions which must be answered in order to establish reasonable rates for reimbursement of health care services. This should be negotiated community by community.

I am directing the Department of Corrections to rescind the current rules establishing a hospital reimbursement rate. The veto of House Bill 2157 provides time for the Department of Corrections to establish reasonable rates for the reimbursement of hospitals for services provided to state prisoners. With the assistance of the Administrator for the Office of the Oregon Health Plan Policy and Research hospital organizations will have the opportunity to participate in the analysis and consideration of rates for reimbursement for services delivered.

Sincerely,

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning HB 2222 unsigned and disapproved..

This measure contains provisions relating to unrelated topics. It enhances the crime of assault on a corrections officer to include hurling dangerous objects or substances at guards. It allows reserve police officers to carry concealed weapons. The measure also allows fax machines to be used in obtaining search warrants.

If these measures stood alone, I would enthusiastically sign the bill into law.

However, the bill also creates the crime of insurance fraud. Proponents of the measure have argued that Oregon needs this improvement to prosecute fraud rings that are operating now on the West Coast. I agree that we need to update our laws to provide law enforcement with the tools to combat these sophisticated criminals.

This bill, however, is flawed in one important respect -- in some situations, it applies to claimants but not insurers. Although the crime this bill creates does apply to fraudulent activity on the part of insurers in the solicitation of an insurance policy, it does not apply to an insurer's intentional fraudulent acts committed when settling a claim. It does, however, apply to a claimants intentional acts committed in filing and settling a claim. I find this lack of equal treatment unacceptable.

I will support a law that erases these ambiguities and allows law enforcement to focus on the real target: sophisticated organized fraud rings. Since House Bill 2222 does not do that, I am vetoing the bill.

Sincerely,

John A. Kitzhaber, M.D.

Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I have signed HB 2321 but disapproved section 6, the emergency clause.

This bill sets up a uniform process for review of state agency contracts by the Department of Justice. The bill requires early review of contract documents which should increase the efficiency and effectiveness of state government.

However, the bill would apply immediately to all designated state contracts once it becomes law. The Department of Justice needs some time to increase staff levels to meet the new requirements.

By disapproving the emergency clause the new law will not take effect until early October.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Lynn Lundquist
Speaker of the House
239 State Capitol
Salem, OR 97310

Dear Speaker Lundquist:

I am returning herewith House Bill 2340, unsigned and disapproved.

After the 1991 legislation requiring unification of Oregon school districts, and during the 1995 session, as well as in this legislative session, I have sought ways to consider the merits of the individual proposals for exemptions while maintaining our course toward implementing the now nearly completed process of statewide district unification.

Throughout these discussions, I have stated my commitment to the goal of statewide district unification and that any proposal for exemption must not only state the cause for exception, but must also carefully address the array of exemption issues. HB 2340 does not meet this criteria due to the following concerns.

It has been stated that the Agness School District faces closure without this bill. Given the funding advantages generated by the small school correction factor, testimony was provided that the Agness School is not due to close. Such a legislatively mandated boundary change for the Agness School District would cause legal complications for the other districts also involved in this merger. This boundary alteration would require the local education service district to begin the merger proceedings anew. Such proceedings could not be effective until 1998. The existing merger law requires the Superintendent of Public Instruction to declare school districts nonstandard if they do not offer a K-12 education by July 1, 1997. Thus, the other districts in this merger would be non-standard, and may be ineligible to receive state funds. This argument is supported by an opinion letter submitted to the Department of Education from their Assistant Attorney General (a copy of that opinion is attached). HB 2340 does not address these issues.

The interest of maintaining the Agness School appears to be addressed through continued small school correction funding and not by diluting the work done to date through the merger process.

Sincerely,

John A. Kitzhaber

The Honorable Lynn Lundquist
Speaker of the House of Representatives
239 State Capitol
Salem, OR 97310

Dear Speaker Lundquist:

I am returning herewith House Bill 2352, unsigned and disapproved.

The conditions that lead to my veto of this bill are similar to those included in my veto message on HB 2340.

I remain committed to of the process of statewide school unification mandated by the 1991 Legislative Assembly. I have expressed my willingness to consider exemptions from that legislation only if they are consistent with the timely completion of the unification process.

HB 2352 represents a last minute rollback on the commendable progress made in nearly completing the unification process.

A reversal of course at this late date denies Oregon citizens the benefits of unification intended by the 1991 legislation, including:

Better coordination of the curricula between elementary schools and their high schools in achieving the high academic standards contained in the Oregon Educational Act for the 21st Century. Equity of funding among schools served by the same high school system.

Pursuit of administrative and educational program fiscal efficiencies that have already been implemented by nearly all of the school districts that are subject to consolidation.

The last minute exemptions proposed by HB 2352 also create a number of significant logistical and legal problems, especially for newly formed school districts. Finally, and separate from the merits of unification itself, the overwhelming majority of affected school districts have made this legislation work. We should not act now to exempt a few from the admittedly difficult work involved in implementing Oregon's school district unification law.

Sincerely,

John A. Kitzhaber, M.D.

Dear Secretary Keisling:

I am returning herewith HB 2454, unsigned and disapproved.

The bill would repeal the motorcycle helmet law for riders 21 years of age and older. While I respect motorcycle riders' desire to choose whether to wear helmets, maintaining the current law is clearly in the best interests of the citizens of Oregon. This is consistent with the public position I have held on this issue for almost 20 years.

I am vetoing this bill, based not only on my experience as an emergency room physician, but also because the research clearly demonstrates that motorcycle helmet laws save lives, prevent injuries, and save public dollars. Helmeted riders have 28-73% lower death rates than unhelmeted riders and helmet usage reduces the incidence of severe head injury by 46-85%. States with helmet laws have death rates 20-40% lower than states without such laws. Helmet usage is 90-98% in states with mandatory laws, and only about 50% in those without. Unhelmeted riders have higher medical care costs than helmeted riders in crashes, and the majority of the costs are paid by the public rather than by the injured motorcyclist. If our helmet law were to be repealed, Oregon Medical Assistance Program estimates an increased expenditure of over \$6 million of public funds per biennium to pay for additional health care costs.

In addition, Oregonians showed strong support for mandatory motorcycle helmets when they overwhelmingly approved the 1988 referendum by a 2 - 1 margin. The measure passed in every county. A recent poll conducted by an independent research firm has shown that the people of this state continue to support the helmet law by a wide margin.

I will continue to oppose repealing the motorcycle helmet law based on my concern for the health of Oregon motorcyclists and my commitment to the judicious use of public funds. As I have stated in the past, the only way I would consider signing such a measure into law would be if those who are advocating freedom of choice for adult riders would also ensure that those exercising such a freedom also accept the full economic responsibility for their actions.

Sincerely,

John A. Kitzhaber, M.D.

Salem, OR 97310

Dear Speaker Lundquist:

I am returning herewith HB 2569, unsigned and disapproved.

The bill language indicates it seeks to guard the privacy of students, their parents and their families. The proponents seek the protection of the provisions found in the Family Education Rights and Privacy Act (FERPA) under 20 U.S.C. 1232g and 1232h.

However, 20 U.S.C. 1232g is already incorporated in state law, and 20 U.S.C. 1232h applies because our school districts receive federal funds. Therefore, these protections already exist and the bill unnecessary.

In complying with state laws and federal provisions, Oregon school districts remain committed to protecting student privacy and parental rights.

Sincerely,

John A. Kitzhaber, M.D.

Re: HB 2585

Dear Secretary of State Keisling:

I am returning HB 2585 to you disapproved and unsigned.

The Boxing and Wrestling Commission exists entirely from revenues generated from a surcharge on pay-per-view boxing and wrestling events on cable television systems. Any excess revenues go into the Children's Trust Fund.

HB 2585 would slash the budget of the Commission in half. This move would occur at a time when Oregon appears to be poised on the verge of an expansion of these sports. To drastically reduce the budget and the effectiveness of the Commission at this time is not sound policy.

As a physician I do not like these sports. But as long as we allow them to exist, I believe we must take every step possible to prevent the human suffering that can result from this kind of competition.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Lynn Lundquist
Speaker of the House
H-269 State Capitol
Salem, OR 97310

Dear Speaker Lundquist:

I am returning herewith HB 2701, unsigned and disapproved.

House Bill 2701 represents a state mandate to local schools to utilize a specific reading instructional technique. This is an inappropriate legislative imposition upon schools that subsumes the role of professional educators in deciding what classroom methodology is best for their students.

This bill entails curriculum, textbook, and instructional decisions, and imposes them on schools and teachers to use in the classroom. I cannot support legislation that substitutes itself for the process we have in place to work on and decide the details of classroom methodologies. It should be noted that there are no restrictions on districts from utilizing phonics as they deem necessary in providing an effective education program for their students.

My veto is not premised upon the merits of phonics, my opposition is in regards to a legislative process that mandates to educational professionals what classroom techniques they must utilize.

Sincerely,

John A. Kitzhaber, M.D.

Salem, OR 97310

Dear Secretary of State Keisling:

I am returning HB 2749 unsigned and disapproved.

HB 2749 requires that the Office for Services to Children and Families (SCF) release records compiled under the Child Abuse Reporting Law to certain individuals regardless of the effect that release might have on the children involved and without regard to the status of any investigation that might be underway.

Changes in laws relating to child abuse must be made with care and must have as their primary purpose protecting the interests of the children who are innocent victims of child abuse. HB 2749 requires that certain persons be given highly sensitive records regarding child abuse cases within 10 days of the request for the information. This creates a situation where records would almost certainly be released before investigations are completed by law enforcement agencies and would compromise the ability of law enforcement to satisfactorily complete these investigations. In addition, the requirements for disclosure to parents and grandparents would allow these persons, even if they are the suspected perpetrator of abuse, to gain access to all of the records relating to the child in question.

Clearly it is not in the best interest of children who have been abused to have the investigations into the abuse disrupted or compromised in any way. Moreover, children who have been abused could be placed in further danger if the abusers are given information which could be used to escape prosecution or conviction.

I believe that certain changes to the information disclosure laws dealing with records under the Child Abuse Reporting Act may be beneficial and would enhance the well-being of children who have suffered abuse. I remain committed to working with those who have an interest in this important topic to establish the best policy for our children.

Sincerely,

John A. Kitzhaber, M.D.

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith House Bill 2753 to you unsigned and disapproved.

House Bill 2753 was crafted to address a local issue. The city of Eugene wants to construct a trail along the Willamette River to expand recreational and commuting opportunities for city residents. Marist High School does not want the path to traverse school grounds because of potential student safety and liability issues.

I have long held to a policy of not supporting legislation which interferes with local control, especially on issues which are purely local in focus. Whether, when and how to construct a trail that will mainly be used for local travel fits into this category. Nonetheless, I dedicated a great deal of staff time and energy to facilitate a compromise: a bike path along the river designed to address the safety issues raised by Marist. I feel both parties negotiated in good faith.

As a result of the negotiations, the city is willing to construct fencing and/or a berm, to install lighting, to remove underbrush, and to erect "no loitering" signs so that there will be a physical and mental separation between the public trail and private school grounds. These improvements are important given that experts in school safety advise that "closed" campuses (e.g., campuses with a limited number of public access points) pose fewer security risks than "open" ones.

I believe the process was fair and the results a vast improvement over the previous situation. Ultimately, however, the residents of the city of Eugene will need to decide this issue through their elected officials.

Sincerely,

Re: Signing statement on HB 3009, 2104 with Veto message of HB 2870

Dear Secretary Keisling:

I have taken action today on a trio of bills relating to the racing industry in Oregon. I have vetoed HB 2870 but have signed HB 3009 and HB 2104.

I know there is concern about the growth of gambling in Oregon. I share that concern.

However, I believe that it is important to draw a distinction between the different types of gambling that exists in Oregon today: State Lottery, Race Tracks and Indian Casinos.

My primary focus is on the State Lottery because that is the form of gambling I can most directly affect. I will continue to oppose the expansion of Lottery products to include so-called line games. I believe these games will increase the levels of addiction in our state and the dependence of state government on lottery dollars.

I also believe that it is time for Oregonians to begin to look for ways to reduce our participation in state run gambling and start relying on more stable long term sources of finance for our education system and other essential services.

Tribal gambling has experienced the most dramatic growth in gambling in the state. But this is a right granted to the tribes under federal law. We can not forbid the tribes from gambling. We have had some success in negotiating compacts that give us more say about the ultimate size of that industry.

As I pointed out in my veto message on HB 2870 I am sympathetic to those Oregonians who are involved in the live animals racing industry.

The commercial tracks and the county and state fairs are traditional and limited forms of gambling that has existed in Oregon for over 65 years. Horse and dog racing has not been the focus of my concern about the growth of gambling in the state.

HB 3009 and HB 2104 are bills requested by the industry and the racing commission in an effort to give the industry an opportunity to regain market strength. The key to my approval of both these measures is that the Racing Commission is charged with developing a regulatory structure in both bills. My administration will watch and guide this new authority carefully.

I am announcing today that I have vetoed HB 2870, because of the provision of the bill that amounted to a giveaway of public funds to two commercial racetracks in Portland.

After much thought I have decided to approve HB 3009 which relates to gambling in Oregon.

HB 3009 enacts recommendations from the Governor's Task Force on Gaming. It creates the new crime of Cheating and revises our theft statutes to recognize the nature of gaming today.

It also extends regulatory authority to the Department of Justice for charitable games operated by private clubs such as the Elks.

The most controversial portion of the bill is the authority for the Oregon Racing Commission to allow and regulate a Multi-jurisdictional Totalizator Hub. This challenging name is long-hand for a computer system used to record Off-Track Betting (OTB) wagers. If such a business locates in Oregon it will need to be regulated.

I am signing this for two reasons.

First the Oregon Racing Commission is simply authorized to regulate such a computer business if the business locates in Oregon. It is unclear what authority the Commission would have without the provisions of this bill.

Second the bill will allow the racing industry to explore a business opportunity that could help reverse its recent misfortunes.

Similarly I have signed HB 2104. The most controversial aspect of this bill is the authorization of "account wagering" which will allow patrons at the two major tracks to open accounts for easier wagering. This bill keeps pace with changing technology in terms of use of various cash substitutes for today's commerce.

The Commission is committed to devising rules that will erect barriers for problem gamblers and emphasize restraint in daily betting through these limits.

I do not know if these proposals will assist the race tracks in surviving these tough times. But I will see to it that the Oregon Racing Commission devises rules that stress restraint and temperance with regard to gambling.

Sincerely,

John A. Kitzhaber, M.D.

Governor

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning HB 2920 unsigned and disapproved.

This bill raises the fine for Minor in Possession of Liquor to \$500. I support efforts to prevent young people from beginning to drink and/or use tobacco products. But this measure will not accomplish the desired effect.

The legislature can not simply increase the fine for a single offense. In order to effectively change the fine the legislature must either change the classification of the offense or change the maximum fine for an entire class of crimes. See, *State v. Rudder*, 324 Or 380 (1996).

The companion bill that would have accomplished this, HB 3611 did not pass the legislature.

Rather than force the courts through needless litigation which will result in the fine remaining the same, I am vetoing this bill.

Sincerely,

John A. Kitzhaber, M.D.

June 26, 1997

The Honorable Lynn Lundquist
Speaker of the House
269 State Capitol
Salem OR 97310

Dear Speaker Lundquist:

I am returning herewith Enrolled House Bill 2937A, unsigned and disapproved.

HB 2937A directs the Environmental Quality Commission to establish an exemption from the vehicle inspection test for individuals who live in Yamhill and Columbia counties and who do not commute into Multnomah, Clackamas, or Washington counties.

Clean air is vital to our health and our quality of life in Oregon. The Portland metropolitan area has made great strides to clean the air, and the federal government has approved our plan. Today, the challenge before us is not to clean up dirty air; the challenge is to maintain the strides we have made.

Our biggest threat to clean air is the motor vehicle. Industry has already invested millions of dollars in cleaning up their emissions. Now each of us must do our part as individuals to maintain clean air. DEQ's vehicle inspection program has been proven to be effective and cost efficient in reducing emissions.

I oppose this exemption of non-commuters in Yamhill and Columbia counties for several reasons: 1) the use of a motor vehicle for commuting to work is not necessarily indicative of the number of miles it travels, nor of the amount of pollution it produces, 2) creating an air quality exemption along a county line is not a resource-based decision, 3) an exemption from this important program will establish a poor precedent, and 4) the exemption is largely unenforceable.

I believe those who contribute to the air pollution problem should also contribute to the solution. This bill would limit our ability to ask for that contribution.

Sincerely,

A small blue square icon with a white question mark inside a rectangular box, likely a placeholder for a signature or a digital stamp.

Governor

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning HB 2948 unsigned and disapproved.

The bill would have created a new Office of Administrative Hearings. This independent agency would house and supervise hearings officers who oversee administrative hearings in contested cases.

These are cases involving an agency action relating to a professional license such as a nurse or a psychologist or a barber.

These are also hearings regarding water quality and clean air standards and how those standards are applied for the benefit of the public.

I support the idea of independent hearings officers who can provide a fair hearing for citizens who want to affect agency decisions. But this bill did not adequately address the issue of how to pay for this new department.

There were also provisions relating to ex parte contacts with hearings officers that, in my opinion, are too much like a legal trial and less like a more informal setting for citizens to be heard by their government.

Proponents of this measure have raised some criticisms of state administrative proceedings. These include a perception that hearings officers, if employed by agencies, have a built in bias and can not be fair. I do not believe that this accusation is true across the board or in most circumstances.

However, I have committed to the proponents that I will work with them to achieve reform of administrative hearings.

Consequently, I will appoint an interim study group to examine the current administrative hearings process and suggest changes. The group will be comprised of legislators, hearings officers, agency heads and representatives from the Department of Justice.

I will issue an Executive Order to implement approved reforms. If necessary, the study group may propose legislation for the next session of the Legislature.

Sincerely,

A small blue square icon with a white question mark inside a rectangular box.

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning HB 3002 unsigned and disapproved.

This bill is a companion to SB 301 which allows enforcement of restraining orders from other states in Oregon courts. This is an important tool as we continue to develop tools to combat domestic violence and spousal abuse. SB 301 sets out timetables and establishes grounds for violation of these orders.

However, HB 3002 adds attempted behavior to the list of violations of these orders. It does so without adequate definition to direct the courts in applying the law.

As a result we run the risk of blunting this major advance in fighting domestic violence through needless litigation over what actually constitutes an "attempt".

To avoid this I have signed SB 301 to let those coming to Oregon know that they can expect support from our courts as they seek to restore peace in their lives. I'm disapproving HB 3002 to avoid making the system confusing and frustrating.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Press Releases](#)

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

June 20, 1997

The Honorable Lynn Lundquist
Speaker of the House
H-269 State Capitol
Salem, OR 97310

Dear Speaker Lundquist:

I am returning herewith House Bill 3083, unsigned and disapproved.

The proponents seek a tool to help address the problem of students who exhibit quite disruptive behavior. References have been made to examples such as assaultive conduct, arson, and other very serious misconduct. I applaud the intent of the bill. However, the bill's language covers a much broader range of behavior and raises a number of concerns.

While I am vetoing the bill, I will work with the proponents in seeking another vehicle this session to help address the problem of disruptive students. My intent would be to seek language that maintains the proponents' intent while addressing the concerns listed below:

The bill refers to students who are in alternative education programs due to expulsion or suspension. Expulsion and suspension covers too wide a range of behavior -- there can be over 55,000 suspensions and 1,200 expulsions per year. Suspension can occur for behavior such as erratic attendance (repeated tardiness or absence). Instead of focusing on the intended most serious disruptive students, the bill's broad language could have many unintended implications for a large number of students and families.

By law, districts are required to provide alternative education programs for these students. The bill is vague as to the consequences of a parent's failure to pay the charges. If the district excludes or otherwise takes action against the student because of the parents' failure to comply, equal educational opportunities and civil rights legal issues could be involved.

Two groups affected by this legislation would be low income and minority students. This population is least able to pay additional charges for their children's education. While meaning to help address a problem, the bill could exacerbate the problem of increasing dropouts and issues of juvenile delinquency.

We must all work to address the problems of disruptive students. However, because of the concerns listed above, House Bill 3083 is not the appropriate solution. I will work with the proponents to achieve the appropriate legislative response.

Sincerely,

A small blue square icon with a white question mark inside a rectangular box, likely a placeholder for a signature or stamp.

August 15, 1997
The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith HB 3310, unsigned and disapproved.

Oregon has pioneered the way for reforming the nation's long term care systems. We have listened carefully to both taxpayers and older Oregonians. As a result we have developed a long term care system which costs less per person served and saves millions of dollars per year when compared to many other states. In addition, we serve the frail elderly first in their own homes, in community based assisted living facilities, in foster care and only as a last resort, in high cost and restrictive nursing homes. This is the care system our seniors say is best, and this is the efficiency taxpayers say they want.

House Bill 3310 runs contrary to these important policy objectives. It builds a new facility with public dollars when all available data indicates more nursing homes are not needed in our state. It may require veterans who use it to move a substantial distance from their homes and loved ones in order to take advantage of the care it offers. It is a product of an out of date federal system which ignores the national preference of most veterans to stay in their home community. This federal policy creates a perverse incentive by providing over \$2,000 per month in subsidies if they move to a Veteran's nursing home, but only provides \$90 per month for personal needs if they choose a nursing home in their own community. This policy does not honor our veterans as they deserve nor does it allow the services needed by our veterans to be purchased economically and efficiently. Attached to this veto message is a letter I have written to our congressional delegation asking them to begin working immediately to change this outdated approach to long term care.

Not only is this approach unfair to many veterans who wish to receive assistance from the Veterans Administration and who do not want to leave their home town, it is unfair to other older Oregonians. While veterans organizations support the Coquille project many of the organizations who represent the general population of older Oregonians do not. Groups opposing HB 3310 include the Governor's Commission on Senior Services, the Oregon State Council of Senior Citizens, the United Seniors of Oregon and the Oregon Disabilities Commission. These organizations understand that the stability of the long term care system that serves other frail Oregonians and our ability to control costs in that system depend on how effectively we are able to control the supply of nursing home beds in each region of our state. For these reasons, they believe that the Coquille project should meet the same need criteria that all other new nursing facilities are required to meet before construction. I agree with these groups that this is the best way to balance the needs of both veterans and the general population of Oregon's frail elderly.

There is also a concern about the fairness and validity of the economic development aspects of the Coquille project. Currently, there is no documented evidence that veterans who need nursing home care cannot obtain that care. The Oregon Department of Veterans Affairs (ODVA) cites anecdotal instances but neither the ODVA nor the Oregon Senior and Disabled Services Division (SDSD) can document a sufficient need to warrant opening a new facility. If there is not a significant unmet need for nursing facility beds for veterans, the only way that the Coquille facility can be filled is to draw patients from other facilities around the region within which the home is built. Thus, there is the clear possibility

that any economic gain experienced in Coquille will come at the expense of jobs being lost in other towns in the region. If this were not to occur because veterans prefer to stay in their own home towns as discussed earlier, then the Coquille facility would likely not be able to meet the 95% occupancy required for its success. This leaves the state with the choice of either shifting jobs from other Oregon communities to Coquille, or being forced to continue to operate a facility in Coquille which is significantly underutilized and which falls far short of the economic expectations of those who have worked so hard to site the home there.

Adding to this uncertainty is the scheduled opening of a large new veterans nursing home in The Dalles in October of this year. Starting this project has necessitated a loan from the War Veterans' Trust Fund of \$1.3 million which will take over three years to begin paying back and will not be fully amortized for ten years. This coupled with the lack of any experience in operating such a facility would suggest the prudent course to take would be to see how the project in The Dalles works out before committing to another project the size of the one in Coquille.

Finally, let me make clear that I support the study of our long term care system that is the largest part of HB 3310. While the statutory directive for this study will be lost with my veto of this legislation I will work to fulfill this desirable portion of the bill through other means.

The decision to veto HB 3310 has been a difficult one. I know that the economic situation on the south coast is serious, and that many well meaning, honorable, and dedicated Oregonians are actively supporting this project. I also know this action will be unpopular with some powerful interest groups. I pledge to continue to work with veterans groups and the city of Coquille to improve both the plight of Oregon's veterans and the economy of the community. However, I believe that ultimately, the best interests of veterans, other older Oregonians, Coquille, the south coast in general, and the state as a whole will be better served by my veto of this legislation.

Sincerely,

John A. Kitzhaber, M.D.

Re: HB 3455

Dear Secretary Keisling:

I am returning herewith House Bill 3455 unsigned and disapproved.

House Bill 3455 would provide an exemption for heavy duty diesel vehicles from the Department of Environmental Quality's (DEQ) emission testing program.

An exclusion for diesel vehicles now would be unfair to other sources of particulate pollution. The US Environmental Protection Agency has recently proposed new and stricter emission standards for particulates that may require emission reduction strategies to be developed in some areas of Oregon. Heavy duty diesel vehicles are significant contributors of particulate pollution. It would be unfair to other sources of particulate emissions, such as woodstoves and industry, to give diesel trucks a blanket exclusion.

The decision about whether to test diesel vehicles in the future should be made as part of an overall plan on emission reductions that looks at all options. Such a plan would appropriately be prepared by the Environmental Quality Commission. If emission reductions are necessary to protect public health and comply with fine particulate standards, emission standards for this class of vehicles would be one option evaluated by an advisory committee recommending strategies. These strategies would be available for public review and comment prior to any action by the Environmental Quality Commission.

House Bill 3455 is bad for the environment and bad public policy. Smoke from diesel vehicles (buses, garbage trucks, personal pickups and others) is DEQ's most frequent complaint from the public. A decision on whether to test the vehicles in the future should be a deliberate one that considers other options along with costs to the trucking industry and other sources of particulate pollution.

Sincerely,

A small blue square icon with a white question mark inside, located in a rectangular box.

John A. Kitzhaver, M.D.

July 29, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith HB 3502 unsigned and disapproved.

House Bill 3502 prescribes in law the ballot title for the referral of HB 2954, the repeal of 1994 Measure 16, passed by the voters, which allowed physician prescription of lethal drugs for terminally ill adults. It also specifies the brief summary and a statement of the result of a "yes" and a "no" vote that would appear on the ballot.

Ballot measure titles are perhaps the single most critical factor in informing voters about the substance of measures on which they will be voting. Because of this, it is extremely important the titles be drafted carefully to fairly reflect the substance and consequences of the measure.

I am vetoing HB 3502 because it is unfair and unnecessary. It is unfair because advocates from both sides of this very volatile issue were not included in the drafting process. It is unnecessary because Oregon statutes establish a well-defined and objective process for drafting ballot titles for initiatives and referrals.

The authors of HB 3502 -- passionate advocates on one side of the measure -- seek to by-pass part of the established procedure. They have fashioned an incomplete title for the measure, omitting many of the important features of Measure 16 which were included in the 1994 ballot title written by the Attorney General, approved by the Supreme Court, and sent to the voters. Indeed, the measure even omits any mention that this referral is a re-vote on the exact measure the voters passed in 1994.

Under Oregon's long-established ballot title drafting process the Attorney General is charged with writing a clear and fair ballot title. This title is then subject to comment by both proponents and opponents of the measure. The Attorney General must respond to these comments and certify the title. Interested parties have the ability to appeal the certified title to the Supreme Court. The Court then considers the title and may modify it as the court sees fit. In the case of the present measure, there is no good reason to ignore this deliberative and objective process.

I am also very concerned about the process by which HB 3502 was passed by the legislature. Doctor-assisted suicide was one of the most controversial and complex measures considered by the legislature this session. While the legislature did indeed dedicate a significant amount of time to investigating how Measure 16 could be strengthened, it spent almost no time considering the appropriateness of the ballot title language in HB 3502. The House held no public hearings on the bill and the Senate held a brief hearing in the rush of the final day of the session. A measure of this importance deserves much better.

In vetoing HB 3502 I am confident that the Attorney General and Supreme Court will present Oregon voters with a fair and complete ballot title for Measure 51 on the November ballot. The voters will then be able to once again pass considered judgment on the merits of a doctor-assisted suicide measure.

Sincerely,

John A. Kitzhaber, M.D.

August 15, 1997
The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith Enrolled House Bill 3734 to you, unsigned and disapproved.

HB 3734 would provide timber companies with an option to move from a "privilege" or severance based tax to a full tax on timber land. This approach would provide the timber industry with an estimated \$52 million in tax cuts. While I remain sympathetic with the issue of equity for the timber owners, I do not support HB 3734 as the correct approach to securing it.

My staff and I have spent many hours considering this bill as well as other approaches to timber taxation. During the legislative session I stated my support for insuring that the timber industry receive equal treatment under the provisions of ballot measure 50. I submitted letters of support for the HB 3734-minority report which would have provided the industry tax relief more comparable to that received by the average business.

Most recently I met with representatives of the Oregon Forest Industries Council to discuss the merits of HB 3734.

Since HB 3734 does not become effective until the following biennium there is adequate time to take a second look at this issue and draft an alternative approach for the consideration of the 1999 legislature. It is critically important that any major change in tax policy receive a thorough debate inside the larger context of economic and equity issues. Work in the interim would allow this to happen.

In closing, I would like to recognize the timber industry for the contribution it has made to the overall Oregon economy and particularly to the recent legislative session. Their support of the Oregon Salmon Restoration Plan, progressive landslide prevention legislation and the Oregon Transportation Initiative was significant and needs to be recognized.

Further I applaud their concern that local government services be protected in the course of developing the timber taxation legislation. I look forward to working with the industry on these and other issues.

Sincerely,

John A. Kitzhaber, M.D.

Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 1 to you unsigned and disapproved.

Senate Bill 1 is intended to relieve loggers of liability for cutting the wrong trees if directed to do so by another person. This concept is known as "good faith" trespass. I have two problems with the bill. First, it does not establish an adequate standard for loggers to ensure that their cutting operations are taking place with the permission of the legal owners. The result could leave timber owners without recourse for the losses they have suffered. Meanwhile, the logger has the option of purchasing Broad Form liability insurance as protection from the type of loss or risk anticipated by this bill. The use of this insurance has been an industry standard for many years. I believe the use of this traditional means of risk avoidance adequately protects the logger and the landowners in the event of wrongful harvest, thereby making the statutory change unnecessary.

The second problem with Senate Bill 1 is that it applies not only to timber lands, but to farmland, urban homes, parks, and other lands. It limits the long-standing common law remedies that are currently available to landowners for trespass.

Sincerely,

John A. Kitzhaber, M.D.

Re: SB 266

Dear Secretary Keisling:

I am returning SB 266 unsigned and disapproved.

This bill represents a further attempt to deny Oregon citizens full access to justice through the courts.

Under current Oregon law a jury verdict against multiple parties is set out in percentages of fault. If one of the parties is legally unable to pay, the remaining parties may have their responsibilities "re-allocated" to cover the damage.

SB 266 would result in a party responsible for at least 30% of the damage escaping responsibility in a reallocation. This would leave many deserving Oregonians without compensation for their injuries or property damage, even after a jury has reviewed all the evidence.

Sincerely,

John A. Kitzhaber, M.D.

Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 379 unsigned and disapproved.

Senate Bill 379 was sponsored by the Oregon Small Woodland Association which has the laudable goal of attempting to improve the productivity of non-industrial private forest land. I share this goal but do not feel that SB 379 will accomplish it.

The premise of the bill is that small woodland owners can manage forest resources better when they live on their land. While this argument has merit, the bill does not provide an enforceable way to ensure that the new homeowner will manage the land for forestry. Consequently, SB 379 would enable large amounts of Oregon's forest land to be converted to rural residential use because it would reduce the minimum lot size needed for a dwelling on land zoned for forest use from 160 acres to 60 acres in western Oregon and from 240 acres to 80 acres on the eastside.

Forestry is one of the most important industries in Oregon. The viability of the forest industry is dependent on protection of the forest land base. Senate Bill 379 would allow forest land to be converted to rural residential uses thereby affecting timber production both directly and indirectly.

In terms of direct impacts, forest land would be lost due to conversion to homesites, residential access roads, and service corridors for powerlines. Indirectly, the state's forest resources would be affected by a potential increase in conflicts between rural residents and timber owners over forest practices such as spraying. Other effects include increased public costs for roads, utilities, and police and fire protection.

Finally, on the issue of fire hazards. Increased development anywhere increases the risk of fire hazard and the cost of fighting fires. Woodland owners make a good case that when a small scale harvester lives on the land, he or she is more apt to provide an early warning of fire as well as to fight fires when they arise. This benefit must be weighed, however, with the added costs associated with a potential increase in fire hazards and in fire suppression.

For these reasons, I cannot sign this bill.

Sincerely,

A small blue square icon with a white question mark inside, located in a rectangular box.

June 26, 1997

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, Oregon 97310

Dear President Adams:

I am returning herewith Senate Bill 397, unsigned and disapproved.

Senate Bill 397 requires that the F. H. Dammasch State Hospital property shall be sold without regard to the recent siting of a corrections intake center and women's correctional facility on this state-owned property.

While I respect the legislative statement made by passage of the Senate Bill 397, I am disappointed that the legislature failed to provide an alternative solution for the siting of the correctional facilities which are intended to be constructed on this property.

This veto should not be a surprise to anyone. I have been very clear about my position on this issue. If the legislature desires to prevent the construction of any correctional facility which has been sited in the last seven months, it is incumbent on the legislature to also identify and site a cost-effective alternative.

I accepted the responsibility to site prisons conferred on me by the 1995 Legislative Assembly and I have carried out that duty in a responsible and forthright manner. The decision to site on the hospital property was not an easy one, but it was a responsible one given the careful and diligent process to identify acceptable prison sites in the tri-county metropolitan area.

Sincerely,

A small blue square icon with a white question mark inside a white rectangular box, likely a placeholder for a signature or a missing image.

JOHN A. KITZHABER, M.D.
Governor

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 440, unsigned and disapproved.

This legislation created two new state felony crimes to address mail theft, an important and growing problem in Oregon. Mail theft crimes increasingly are affecting more Oregonians and costing them more money, and the resulting debate on Senate Bill 440 has provided a needed focus on this public safety responsibility.

Having recognized the rise of mail theft crimes, I have vetoed Senate Bill 440 for three specific reasons. First, mail theft already is a federal crime. Before Oregon creates new crimes to assume what traditionally has been a federal responsibility, I believe we should engage in serious discussions with the U.S. Attorney's office regarding what the appropriate state and federal roles should be in a comprehensive and diligent effort to prevent and prosecute mail theft crimes. It is my intention to discuss this with the U.S. Attorney's office, Oregon district attorneys, and other Oregon law enforcement officials.

Second, Senate Bill 440 is flawed in its crafting and overreaching in its scope. For example, it is not appropriate for a teenager to be prosecuted in juvenile court for what would be a Class C felony if committed by an adult for a single act of damaging a mailbox, as this bill would allow. In addition, this bill would allow prosecution of a person who inadvertently opens another person's mail delivered to their address. These flaws alone would not have precluded my approval of this legislation, because I believe Oregon's district attorneys would exercise appropriate discretion in these types of cases and that these flaws could be fixed in the next legislative session. However, these reasons do contribute to my overall decision to veto this bill.

The third and most important reason for my veto is that the legislature failed to appropriate or reserve any money to pay for the costs of this new felony crime. While there has been a dispute about the precise fiscal impact of this bill, the legislature made no allocation at all. Because the state has engaged in a new partnership with counties for them to handle incarceration and supervision of many of these offenders, it is inappropriate to impose that cost without providing funding for it. Had the legislature made a specific allocation, my concerns about the cost of this legislation would have been alleviated.

I also would have been persuaded to sign this bill if I had been convinced that the majority of people stealing mail went without appropriate criminal punishment. However, I am informed that felony charges already are being filed in approximately 80 percent of mail theft cases. I therefore have concluded that the problems with this legislation outweigh the need to take immediate action.

As I have said, protecting the financial health of Oregon citizens and businesses by protecting delivery of the mail is an important responsibility of government. I will talk with the U.S. Attorney's office in Oregon about the steps that can be taken to heighten their role in protecting the integrity of our postal system. If after that discussion I determine that a sole

federal response will be inadequate, I will work with local, state and federal law enforcement officials to review Senate Bill 440 and improve it with the intention that the funding necessary to accomplish this job will be part of my 1999 recommended budget.

For these reasons, I am vetoing Senate Bill 440.

Sincerely,

John A. Kitzhaber, M.D.

[Return to Press Releases](#)

[Return to Governor's Office](#)

JOHN A. KITZHABER, M.D.
Governor

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 470 to you unsigned and disapproved.

This bill was drafted with the intention of increasing public notice and involvement in local decisions regarding the types of uses allowed in specific zone code designations. Specifically, the sponsors wanted to require notification of adjacent property owners on those use determinations which may have a high impact on surrounding parcels (e.g., a decision regarding whether a parole office is allowed in a specific zone).

This is a laudable goal. However, the bill was drafted very broadly. If adopted, it would affect all zone code use determinations regardless of impact beyond the subject site. Commonly-made decisions such as whether a grocery store is allowed in a commercial zone or a wood-working shop in an industrial zone may be subject to requirements for notification, a 14-day comment period, and an opportunity to appeal. Literally thousands of these decisions are made yearly in communities throughout Oregon.

To understand this bill and its companion Senate Bill 475, it is useful to put it into the context of existing law. In 1991, the legislature approved House Bill 2261 to make clear distinctions between "zone code use determinations", "limited land use decisions", and "land use decisions". The definitions reflect a carefully crafted compromise between the need to notify surrounding property owners of potential impacts and the level of impact that actually may result from a decision. Underlying this is the premise that zoning laws should provide property owners with some certainty about what to expect from development.

Decisions about what use is allowed in a particular zone were classified as ministerial decisions because they are made in accordance with provisions outlined in a zoning code. Anyone buying or renting property has access to a community's zone code and comprehensive plan designations to assess what might be expected on neighboring parcels.

Senate Bill 470 would make zone code use determinations subject to the decision-making procedures applicable to "limited land use decision" requirements. What this means is that prior to making a decision regarding whether a use is allowed in a particular zone, a local government would have to notify property owners within 100 feet of the affected site, provide a 14-day comment period, and provide an opportunity to appeal the local decision to the Land Use Board of Appeals.

Because it applies to all zone code use decisions, the bill would unnecessarily delay development and overburden local government without a clear benefit to citizens in the vast majority of cases.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

August 15, 1997
Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 475 to you unsigned and disapproved.

Similar to its companion bill, Senate Bill 470, this bill was drafted with the intention of increasing public notice and involvement in local decisions regarding the types of uses allowed in zoning classifications. Specifically, the goal of the sponsors was to require jurisdictions to notify adjacent property owners when a zone code use decision may have impact beyond the subject site.

The procedures outlined in the bill for accomplishing this are written very broadly, however. The bill amends the definition of a "permit" (ORS 215.402 (4)(b)) to exclude "a non-discretionary decision that determines the appropriate zoning classification for a particular use by applying clear and objective criteria or performance standards defining the uses permitted within the zone".

This represents a fundamental shift in the way all permits are processed. It would require jurisdictions to provide notice on such everyday decisions as issuing a building permit for a house in a single family zone because the planning director must interpret, or use discretion, in applying the zone code criteria. This would result in costly delays to development.

Finally, the bill would not serve its intended purpose. Senate Bill 475 requires notification at the point when a building permit is issued; not when a tenant occupies the building. Once a jurisdiction approves a permit for an applicant to build or remodel a building, there may be no other point in the development process for the jurisdiction to actually review a tenant use of the building.

For example, a builder or developer may obtain a permit to build office space to lease or sell on speculation. At the point the permit is issued, the jurisdiction is approving the applicant's plans to build an office building in a commercial zone. The tenant who eventually occupies the office space is under no obligation to return to the jurisdiction for a zoning permit. He or she is free to use the space for any of the uses allowed in a commercial zone. Depending on the zone code provisions, that could mean anything from a video rental store to an office complex.

I feel that communities have a responsibility to notify the public when a proposed development may negatively affect surrounding property owners. This must be balanced, however, with the need to provide a reasonable and efficient process which enables citizens to develop their property in a timely fashion. Senate Bill 475 does not improve the balance established under existing law.

Sincerely,

John A. Kitzhaber, M.D.

Re: SB 485

Dear Secretary Keisling:

I am returning Senate Bill 485 unsigned and disapproved.

This bill would prohibit state officers and employees from addressing the legislature or attending legislative hearings unless requested by the legislature. The bill goes too far to remedy a relatively minor problem.

As governor I head the Executive branch of state government. This bill places burdensome limitations on the exercise of my constitutional authority and those who act on behalf of my administration.

I believe it is important for the legislature to have the benefit of technical and specialized knowledge that experienced state employees can bring to the legislative process. As a former Senate President I know how valuable it can be to hear from the people who will, after all, be charged with implementing legislative policy direction.

I agree, however, that there should be clearer guidelines on the use of state employees by agencies in fulfilling this valuable function. As a result I will issue an Executive Order prior to the next legislative session detailing guidelines for state employee interaction with the Legislative Assembly.

It is vitally important that state policy not be created in a vacuum without reference to the practicalities of implementations. As a result I have disapproved Senate Bill 485.

Sincerely,

A rectangular box with a blue question mark icon, indicating a redacted signature.

August 8, 1997

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 494, unsigned and disapproved.

SB 494 contains child care and health care provisions which I strongly support. However, the addition to this bill of several sections relating to home schooling means that I cannot endorse it. Specifically, I object to the following provisions:

The bill expands the number of students who would be exempt from compulsory school attendance, and whose parents would therefore not be subject to reporting their child's educational progress.

The bill replaces the current annual examination of home schooled students with testing at grades 3, 5, 8, and 10. While the statewide assessment of public students takes place during those grade periods, local public schools are annually, if not monthly, testing students to assess their performance and progress.

The bill allows parents of students with disabilities to choose any person who has taught two years in any school during the past ten years to evaluate the child, instead of the current process of using exams from an approved list which are administered by a qualified neutral person. Maintaining the current practice better assures a quality and neutral assessment of the student.

The bill puts into statute a satisfactory progress standard of an examination score at or above the 15th percentile. This takes away the ability of the State Board of Education to address any concerns about such a low standard. The bill would allow, by law, even a student who scores below the 15th percentile to continue home schooling as long as the student scores at an equal or higher level in the next examination.

Vetoing SB 494 does not change nor further regulate current home schooling practices. I have a high regard for parents who are able to make such a personal commitment to their children's education. I have also been impressed by the testimony that most home schoolers achieve at a higher than average level. However, changes to home schooling laws cannot jeopardize the state's role in ensuring that children under its responsibility receive a quality education.

I regret having to forego the valuable child care and health care provisions in the bill. Yet, taken together, these changes to the home schooling laws do not serve a child's educational best interests, therefore, I am vetoing SB 494.

Sincerely,

John A. Kitzhaber, M.D.

Re: SB 541

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 541, unsigned and disapproved.

My decision to veto this legislation is consistent with my decision to veto Senate Bill 397. It is based on the same clear policy: if the legislature takes an action that would prohibit the construction and operation of a prison facility sited in the past eight months, it is incumbent on the legislature to provide an alternative solution to meeting the state's need for prison facilities.

If the legislature did not agree with the results of the prison siting process, the legislature could have accepted the responsibility to site prisons to meet the mandate the people of Oregon placed upon us when Ballot Measure 11 was passed in 1994. The legislature, with the assistance of the Department of Corrections, did consider one site late in the session, but that effort was unsuccessful.

Senate Bill 541 only serves to remove the availability of sited prison facilities -- therefore, I cannot support its aims. I have already accepted and exercised the authority to site prison facilities in every region of Oregon. I am not willing to again subject Oregon communities, inside or outside the tri-county metropolitan area, to yet another prison siting effort.

The siting of prisons is not an easy or pleasant responsibility. The Corrections Facilities Siting Authority, Oregon Department of Corrections, and I have carried out this difficult task in a fair and open manner which has resulted in accountable and cost-effective decisions. This veto, in combination with the budget the legislature provided for prison construction, will ensure that Oregon has the capacity to incarcerate violent criminals.

Sincerely,

John A. Kitzhaber, M.D.

JOHN A. KITZHABER, M.D.
Governor

June 25, 1997

The Honorable Brady Adams
President of the Senate
S-203 State Capitol
Salem, OR 97310

Dear President Adams:

I am returning herewith Senate Bill 680, unsigned and disapproved.

The bill prohibits public school boards, community college boards, OHSU, and state post-secondary institutions from denying access by military recruitment personnel to their campuses.

I share the proponents' desire to support the military. The Oregon National Guard in particular makes enormous contributions to the state both in times of crisis and through community projects. I believe that the National Guard provides great opportunities to minorities as they are coming out of high school, and I would urge local officials to consider a partial repeal of the ban as it applies to the Oregon National Guard. Despite my personal feelings, however, I believe questions of access to local schools and community colleges should be decided in the community by locally elected school boards and within the Oregon State System of Higher Education by the State Board of Higher Education.

We must respect the authority of locally elected officials to decide these matters.

Therefore, I am vetoing the bill.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 770, unsigned and disapproved.

This bill would have the effect of weakening Oregon's felony sentencing guidelines by allowing sentences negotiated between a prosecutor and defense attorney to ignore established limits on the length of felony sentences.

This bill was presented to the legislature as being necessary to avoid miscarriages of justice in cases that fell under Measure 11 by letter of the law but where a Measure 11 sentence would be inappropriate. The proponents argued that increased flexibility - beyond that already established in the sentencing guidelines -- was necessary in these cases to hold offenders appropriately accountable while avoiding unjust results. The legislature responded to that argument not only by passing Senate Bill 770, but also directly addressing potential injustices under Measure 11 by passing Senate Bill 1049, which allows judges to impose less-than Measure 11 sentences in specific circumstances.

I cannot approve Senate Bill 770 because it provides unrestricted discretion without any consideration for state policy. If the sentencing guidelines limits are too restrictive - in general or in specific types of cases -- then proponents should work with the Criminal Justice Commission to change those limits. But sentencing policy should continue to be governed by a consistent state policy, not through case-by-case decisions in each county.

In addition, I would not veto this bill if I believed that pleas already negotiated were at risk. But the Oregon Supreme Court has ruled in State vs. Adams (315 Or 359, 1993) that a person who stipulates to a sentence cannot appeal that sentence. The concurring opinion in Adams provides supporting authority for the current practice.

But before the legislature grants express approval for this practice, I believe it should carefully consider structuring sentencing discretion to provide additional flexibility where it is needed but to maintain state policy limits. Therefore, I am vetoing Senate Bill 770.

Sincerely,

John A. Kitzhaber, M.D.

The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith, SB 847 unsigned and disapproved.

This legislation runs counter to our efforts to increase accountability in Oregon's system of campaign finance. I must disapprove this and any other legislation that takes steps backward in this arena at the very time when we should be working to increase the faith voters have that those who violate campaign finance laws will be punished with certainty.

Senate Bill 847 would decrease and cap the penalties for violations of Oregon's campaign finance laws. It would also force the Secretary of State into the untenable position of having to determine "intent" in the violations.

While the current system is not perfect, I believe your efforts to address the concerns of the bill's proponents in rule will be much fairer and not diminish the level of responsibility involved in the campaign finance reporting system. The public must be confident that those in charge of assuring compliance with campaign finance laws have the flexibility to address legitimate circumstances in the process without sacrificing their enforcement power.

In addition, bills such as Senate Bill 847 are inherently unfair to those individuals and organizations who paid their fines in a timely fashion. This bill retroactively limits the penalties assessed to two individuals whose violations are under appeal.

While the intent of the original bill was well-meaning, I will not allow this legislation to become law because it steers Oregon away from a reliable system of checks and balances in its campaign finance system.

Sincerely,

John A. Kitzhaber, M.D.

Re: SB 953

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 953 unsigned and disapproved.

In its original form, Senate Bill 953 sought to amend ORS 825.139 to require that certain motor carriers make their vehicles available for a safety inspection within 90 days of receiving authority to operate in Oregon. Such pre-operational safety inspections are currently required by administrative rule, OAR 740-035-0150(2), established February 16, 1996. Senate Bill 953 in its original form would have streamlined the procedure for suspending a motor carrier for noncompliance, which currently includes a notice of proposed suspension, an opportunity for hearing, and then an order of suspension. Senate Bill 953 would have amended ORS 825.139(2) so that there would be a 10-day notice of suspension period and then automatic suspension absent receipt of a request for hearing. These objectives can be achieved through rule making.

Senate Bill 953 was subsequently amended during the legislative committee process in such a way as to additionally require that all state agencies also make their trucks available for safety inspection within 90 days of being acquired. Rather than a one-time requirement for motor carriers new to Oregon, the state would be forever required to make every new vehicle available for inspection. In the majority of instances, this means the state would be busy inspecting factory fresh newly acquired vehicles. The staff of state safety inspectors would be distracted from inspecting vehicles legitimately requiring such inspection and public safety on the highways would be negatively impacted. This amendment was ill considered and renders the bill in its final form impractical to implement and a step backwards for safety on our highways.

Sincerely,

John A. Kitzhaber, M.D.

Governor

August 15, 1997
The Honorable Phil Keisling
Secretary of State
136 State Capitol
Salem, OR 97310

Dear Secretary Keisling:

I am returning herewith SB 966, unsigned and disapproved.

SB 966 prohibits the consideration of geographical cost differences or prices in the development of capitation rates for managed care plans participating in the Oregon Health Plan Medicaid Demonstration. Currently, rates are adjusted according to geographical differences in input costs, based on the Health Care Financing Administration. At present, this is the best data we have available for this purpose.

While there are numerous claims that the aggregate per capita cost of providing health care is equal around the state, I have yet to see systemically based data that supports this claim. Conversely, there is a substantial body of Oregon specific data including, but not limited to, the cost of capital assets, labor costs, and the patterns of utilization, that supports the position that there are differences in the aggregate of providing care in various areas of the state. While I am open to new information that demonstrates otherwise, I am unwilling to change our current practice and run the risk of compromising access to care for Medicaid patients in certain areas of the state without first having something more than anecdotes on which to base such an action.

As was noted during administration testimony, SB 966 would decrease payments to plans in areas of the state with higher costs and increase rates in other areas where data show costs are lower. This creates the potential for a decrease in access in areas where most of the Oregon Health Plan members reside.

Another bill passed during the session, HB 2894 B Engrossed, addresses the issue of rate equity in a more considered way. It establishes a broad based advisory committee to the Office for Oregon Health Plan Policy and Research. The committee is charged with researching the issue of geographic rate adjustment and with recommending to OMAP specific capitation rate adjustment factors. In turn, OMAP is then directed to develop the 1999-2001 budget based upon these recommendations.

The advisory process identified in HB 2894 is an open one and allows for stakeholder participation. It also provides time for the health plans to prepare for any potential changes that would be required of OMAP.

I believe that a process which considers the expertise of actuaries, the affected parties from both high and low cost areas, and client access to care will result in the best outcome.

Sincerely,

Re: SB 1198

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 1198, unsigned and disapproved.

SB 1198 directs the Department of Education to implement the Oregon Media Literacy project. However, the project is largely symbolic. The legislature provided no funding to pay for the program.

The Department of Education would have to staff a steering committee and administer the program development and implementation out of its already limited budget. In addition to the concern about the cost to the Department of Education, federal funding is not allocated for the program nor is future funding certain.

I understand the concern about excessive television viewing, especially by our young people. However, this project is a sound-bite solution to a larger, more complex problem.

I cannot support legislation which is more symbolic than substantive.

Sincerely,

John A. Kitzhaber, M.D.

Re: SB 1205

Dear Secretary Keisling:

I am returning herewith SB 1205, unsigned and disapproved.

Senate Bill 1205 seeks to overturn a court of appeals ruling which holds that at will employees cannot be fired for simply meeting collectively with their employer to discuss wages and working conditions.

While some interests are concerned that this ruling overturns the entire "at will employment" doctrine, I find no legal substantiation to this argument. It is clear that the court's decision is narrowly focused and only allows affected employees to discuss wages and working conditions. It does not allow these employees to conduct slow downs, strikes, or other more substantial job actions. I am vetoing SB 1205 because I believe that all employees should be able to collectively discuss their wages and working conditions without fear of being fired for doing so. If there are unforeseen consequences to this court decision, I will work with all of the interested parties to ensure a fair resolution of any problems that arise.

Sincerely,

John A. Kitzhaber, M.D.

Salem, OR 97310

Dear Secretary of State Keisling:

I am returning herewith Senate Bill 5523, with the line item in Section 1(3)(a)(J) unsigned and disapproved. This line item creates an Emergency Fund appropriation for the creation of an Oregon Marine Academy to be housed aboard a former research ship obtained from the federal National Oceanic and Atmospheric Administration.

I applaud the efforts of Senator Jeanette Hamby and others to increase services to Oregon's young men and women who are at risk of committing criminal offenses and entering the juvenile justice system. As a state, we are doing far too little to provide the kind of educational and vocational opportunities that are necessary to reverse the increase in juvenile crime that Oregon has experienced in the past decade.

A ship-based program, however, involves high costs for operations and maintenance, and presents unique safety, security and liability issues. As a result of these concerns, and questions regarding the availability of on-going funding for operation of the program, I am reluctantly vetoing the appropriation.

Sincerely,

John A. Kitzhaber, M.D.

LEGISLATIVE COMMISSION ON INDIAN SERVICES

**167 State Capitol
Salem, OR 97310
(503) 986-1067
Fax: (503) 986-1071**

What is the Commission?

The Commission on Indian Services (CIS) was created by statute in 1975 to improve services to Indians in Oregon. Its 13 members are appointed jointly by the Senate President and the Speaker of the House to a two-year term. CIS members select their own officers to serve one-year terms of office.

Prior to its establishment, there was no suitable mechanism in state government to consider Indian concerns directly. CIS serves as the main forum in which Indian concerns are considered. It serves as a conduit through which concerns are channeled through the network to the appropriate entity; it serves as a point of access for finding out about state government programs and Indian communities; and it serves as a catalyst for bringing about change where change is needed.

Who is the Commission?

CIS consists of one member from the Oregon Senate, one member from the Oregon House of Representatives and 11 representatives from the following tribal councils and non-reservation areas throughout the state:

Confederated Tribes of Warm Springs:

Confederated Tribes of the Umatilla Indian Reservation;

Burns Paiute Tribe:

Confederated Tribes of Siletz:

Confederated Tribes of Grand Ronde:

Confederated Tribes of Coos, Lower Umpqua and Siuslaw:

Cow Creek Band of Umpqua Indians:

Klamath Tribes:

Coquille Tribe:

Portland Urban Area; and Willamette Valley Area.

What does the Commission do?

CIS recommends methods for the State of Oregon to improve its services to Indians and to improve its relationship with tribes in Oregon and Indian communities. CIS holds regular meetings to learn about the issues which concern Indian people and to discuss how these issues might best be addressed. Often, CIS invites representatives of state or local government to discuss their programs relative to Indian people.

CIS monitors legislation that may affect Indians, both while it is being considered by the Legislature and after it becomes law. CIS also notifies people about legislation in which they are interested and assists in coordinating and presenting testimony on issues of importance to Indians in Oregon. CIS serves as a resource and advisory body to the Executive Branch, the Legislature and state agencies.

CIS functions as an information clearinghouse about state government and Oregon's Indian communities. Toward this end, CIS publishes the biennial **Oregon Directory of American Indian Resources**. The **Directory** lists all tribes and Indian resource organizations in the state, as well as selected state, regional and federal offices. The **Directory** also contains statewide demographic information, a partial list of Oregon laws relating to Indians, and answers to frequently asked questions about tribal sovereignty, Indian ancestry and tribal benefits. As availability allows the **Directory** is provided free of charge. It is also available at State and local Libraries and on the Internet.

Under its enabling statute, ORS 172.100, CIS has the following responsibilities; 1) To compile information about services for Indians; 2) To develop programs to inform Indians about services available to them; 3) To advise public and private agencies about the needs and concerns of the Indian community; 4) To assess programs of state agencies operating for the benefit of Indians and recommend program improvement; and 5) To report biennially to the Governor and the Legislative Assembly on all matters of concerns to Indians in Oregon.

CIS has broad statutory responsibilities concerning the protection of cultural resources in Oregon. Under ORS 390.235 (Historic Materials), CIS is mandated to participate with the State Historic Preservation Office in the archaeological excavation permit process. Under ORS 97.740 (Burial Law), and ORS 358.905 (Archaeological Sites and Objects), CIS is responsible for providing consultation and designating the appropriate tribe if an Indian burial or archaeological object is discovered.

In addition, CIS provides consultation services to other state agencies when their Administrative Rules require them to discharge duties relating to American Indians or cultural resources. Two examples are Children's Services Division in Indian child welfare matters and Water Resources Department in hydro development activities.

What does the Commission not do?

CIS does not provide direct services or determine what services will be available to Indians. Similarly, CIS will not abrogate any agreements between Indians and any level of government, nor will CIS take a position in controversies between tribes or organizations.

How can the Commission assist you?

If you have a concern involving services for American Indians, bring it to the attention of a CIS member or staff. CIS will either refer you to the appropriate entity or initiate an inquiry into the issue. CIS may also offer alternatives for resolving the issue.

If you are interested in legislation that may have potential impact in Indian communities, ask CIS for information about it. Ask to be put on the CIS mailing list and attend CIS meetings held on a regular basis in the State Capitol building.

How can you assist the Commission?

CIS wants to know what problems exist with state agencies, what services should be available and how these services can be improved or established. If you have suggestions of this kind, write or plan to attend a CIS meeting to present your ideas.

GOVERNOR'S JUVENILE CRIME PREVENTION STRATEGY

"It takes an interagency consortium to effect juvenile crime."

- Rand Study, 1996

Why a Juvenile Crime Prevention Strategy Focused on High-Risk Youth?

Background Information

Oregon Shines II reviewed our progress toward making the state a more prosperous and desirable place in the last seven years. It also sets the three specific goals to attaining a "vital, prosperous Oregon that excels in all spheres of life" as 1) quality jobs for all Oregonians; 2) safe, caring, engaged communities; and 3) healthy, sustainable surroundings. The Governor's Juvenile Crime Prevention Strategy was brought about by some underlying facts that will have great impact on our ability to have the vital and prosperous Oregon we desire.

These include:

- the anticipated demand on the system due to Measure 11
- the anticipated resources needed to address this system demand
- lack of coordinated approach to juvenile crime at the state and local levels
- citizen and legislative focusing of resources on juvenile crime and corrections through past legislation and Measure 47
- voter mandated prioritizing of resources on education and corrections

Why this Strategy?

This particular strategy was designed to address the issues raised above for three key reasons:

1. It is cost effective.
2. It is the right thing to do.
3. It works.

The Strategy

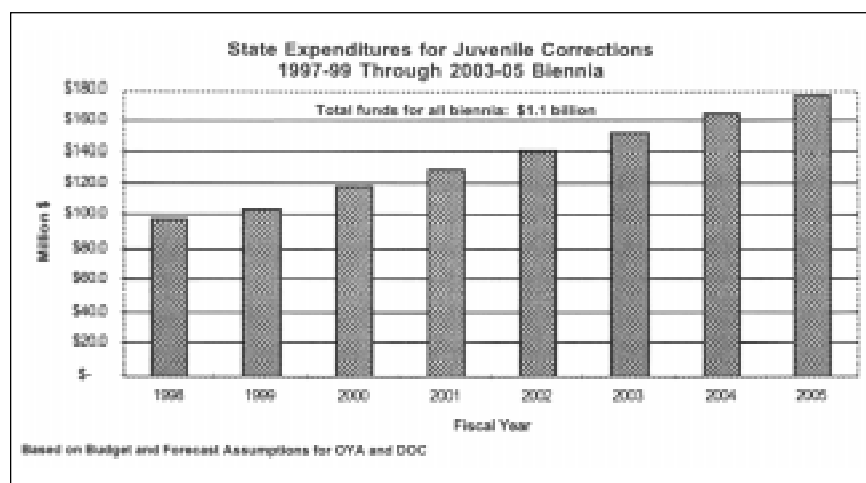

In an attempt to address these issues, Governor Kitzhaber has proposed a juvenile crime prevention strategy that seeks to provide the most immediate return possible for tax-payer investment. The strategy:

- focuses on community-based strategies for youth at highest levels of risk;
- coordinates efforts at the state and local levels;
- holds the system accountable for achieving results; and
- commits to reinvesting savings and avoided costs in prevention efforts that will provide a long term return on tax payer investment

Please refer to summary of the Governor's Juvenile Crime Prevention Strategy for more information.

It is Cost Effective

- ❑ At the anticipated rate of growth of juvenile crime due to Measure 11 the amount of resources needed to fund youth corrections will grow substantially in the next few biennia.
- ❑ Senate Bill 1 in the 1995 session formulated \$8m targeted to communities for training school diversion and gang prevention efforts. After the passage of Measure 11, these resources were used to provide bed space at the training school.
- ❑ In 1995, 26.5% of Oregon crime was committed by juveniles. Based on a two year study on victim cost and consequences at the National Institute of Justice, it is estimated that victim losses due to juvenile crime in Oregon amount to over \$800 million annually. This equals approximately \$257 per Oregon resident per year.
- ❑ The “RAND Study” found that the most cost-effective of the interventions studied was targeted at high-risk or “troublesome” youth early in delinquency and was focused on graduation. It also achieved the highest number of serious crimes prevented per million dollars spent and the highest savings of future criminal-justice system costs.
- ❑ According to the RAND Study, “based on current best estimates of program costs and benefits, investments in certain interventions for high-risk youth may be several times more cost effective in reducing serious crime than long mandatory sentences for repeat offenders. Furthermore, investments in these interventions may have additional payoffs that we do not account for in cost-effectiveness estimates.”

❑ The current biennium budget for the Oregon Youth Authority is \$113.6 million. The budget to build and manage beds due to anticipated growth is projected to be a cumulative total of over \$941 million by the 2003-2005 biennium.

❑ The Department of Corrections and the State Economist’s Office estimate that a cumulative total of over \$65 million of resources in the adult corrections system will be spend to address juveniles entering the adult system due to Measure 11 crimes in the next four biennia.

- ❑ Success with this strategy will result in increased resources available for community based prevention programs that are able to attain a long-term return on tax payer investment.

It is the Right Thing to do

- ❑ The University of Oregon's Institute on Violence and Destructive Behavior reviewed a sample of youth in Oregon's state training schools. This research showed that youth in the training school have some common characteristics. These characteristics include:
 - ✓ 82% have a learning disability or special education need
 - ✓ 73% have engaged in self-abusive behaviors
 - ✓ 73% have a parent convicted of a crime
 - ✓ 55% have a sibling convicted of a crime
 - ✓ 35% flunked a grade
 - ✓ 32% have attempted suicide
 - ✓ 23% have a gang affiliation
 - ✓ 13% are parents
- ❑ Early estimates of youth arrested for Measure 11 offenses show that approximately 50% have no prior delinquency.
- ❑ Many children who are on the verge of delinquency are acting out in response to problems they have experienced, including a breakdown in their family's ability to raise them. They may act out as the result of child abuse, neglect, domestic violence, etc.
- ❑ Institutions that children must rely on to help rear them have been eroded over the last fifteen years. Drug abuse, gangs, guns, violence and the like have exploded to overload the social support system and have lessened the ability of the "community" to respond to such kids.
- ❑ Oregon has not targeted high-risk youth in a coordinated fashion. Arrests of juveniles have increased in two-thirds of Oregon counties from 1995 to 1996. Thirty-one Oregon counties have increased juvenile arrests since 1990.
- ❑ We have not done all we could have, and should have, to address the predictable problems these kids are becoming. For example, we have known for a long time that:
 - most men in prison are the children of women who had their first child while they were teenagers;
 - some delinquents can be spotted by the age of four using known risk factors;
 - unsupervised children are at risk for delinquency;
 - providing effective intervention to high risk juveniles when they first enter the system is one of the most effective strategies to reduce future involvement in the system.
- ❑ While children need immediate and realistic consequences for delinquency, they also need more. Punishment alone will not change behavior. Interventions targeted to address the multiple risks faced by these children are needed.
- ❑ In order to achieve the vital, prosperous state we envision, Oregon needs every citizen to be as independent and productive as possible. Oregon needs the youth targeted by the Governor's strategy to be more productive than they are currently.

It Works

- ❑ Estimated juvenile arrests are expected to grow over 25% from 1995 to 2003. The average daily population at the training school is anticipated to increase over 50% during the same time period.
- ❑ The RAND Study found that the most effective strategy focused on intervention with high risk youth. In contrast to other approaches, results from well designed interventions with high risk youth will be felt within just a few years after the program is implemented, because the targeted youth are very close to their most crime-prone years.
- ❑ The RAND Study lists as a key impediment to formulating interventions for crime reduction the lack of an "obvious governmental authority" that can consider all the interests necessary (law enforcement, human services, education, welfare, etc.). They found difficulty in identifying one agency that could be neutral in effectively incorporating all the perspectives needed for an effective juvenile crime prevention strategy.
- ❑ The RAND Study found an "interagency consortium" is needed in the effort to reduce juvenile crime.

Total Juvenile Arrests Per 1,000 Juvenile Oregonians Per Year

**TRIBAL-STATE COMPACT FOR REGULATION OF
CLASS III GAMING BETWEEN THE BURNS-PAIUTE TRIBE AND
THE STATE OF OREGON**

PREAMBLE.

This Compact is made between the State of Oregon (hereinafter "State") and the Burns-Paiute Tribe (hereinafter the "Tribe") and pertains to Class III gaming to be conducted on lands that are held in trust for the Tribes that are subject to the provisions of the Indian Gaming Regulatory Act of October 17, 1988 (Public Law 100-497), 25 U.S.C. 2701 et seq. ("IGRA"). The terms of this Compact are unique to this Tribe and reflect the fact that the lands that are the subject of this Compact are subject to IGRA.

SECTION 1. TITLE.

THIS Compact is entered into this ___ day of _____ 1996, by and between The Burns-Paiute Tribe, a federally recognized Tribe of Indians, and the State of Oregon.

SECTION 2. FINDINGS.

WHEREAS, the Tribe is a federally recognized Indian Tribe, and is the beneficial owner of, and local government for, the trust lands of the Tribe located in the State of Oregon;

AND WHEREAS, the State and the Tribe are separate sovereigns and each respects the laws of the other sovereign;

AND WHEREAS, the public policy of the State is reflected in the Constitution, statutes and administrative rules of the State, and the Constitution provides that the "Legislative Assembly has no power to authorize, and shall prohibit casinos from operation in the State";

AND WHEREAS, the United States Congress has enacted IGRA which declares federal policy and provides a statutory basis for operation of gaming by the Tribe as a means of promoting tribal economic development, self-sufficiency, and strong tribal government;

AND WHEREAS, the Tribe exercises authority within the Burns-Paiute Tribe Indian Reservation, (hereafter referred to as "Indian Lands");

AND WHEREAS, the Tribe has represented that the gaming location is on land held in trust by the United States for the Tribe since 1972.

AND WHEREAS, IGRA is intended to provide a statutory basis for regulation of gaming by the Tribe adequate to shield them from organized crime and other corrupting influences, to ensure that the Tribe is the primary beneficiary of the gaming revenues, and to ensure that gaming is conducted fairly and honestly by both the operators and players;

AND WHEREAS, Congress has declared that it is a principal goal of federal Indian policy to promote tribal economic development, tribal self-sufficiency and strong tribal government;

AND WHEREAS, IGRA provides for a system of joint regulation by Indian Tribes and the Federal government (to the exclusion of the State) of Class I and II gaming on Tribal lands as defined in IGRA;

AND WHEREAS, IGRA establishes a system of agreements between Indian Tribes and States for the regulation of Class III gaming as defined in that Act;

AND WHEREAS, IGRA provides that Class III gaming activities are lawful on Tribal lands only if such activities are (1) located in a state that permits such gaming for any purpose by any person, organization or entity, (2) authorized by tribal ordinance, and (3) conducted in accordance with a Tribal-State Compact;

AND WHEREAS, the Congressional intent in passing IGRA was to reaffirm a long and well-established principle of federal Indian law as expressed in the United States Constitution, reflected in federal statutes and articulated in decisions of the United States Supreme Court that unless authorized by an act of Congress, the jurisdiction of State governments does not extend to Tribal lands;

AND WHEREAS, IGRA does not extend State jurisdiction or the application of State laws for any purpose other than jurisdiction and application of State laws to gaming conducted on Tribal land as set forth in this Compact;

AND WHEREAS, Congress recognized a role for State public policy and State law in the regulation of Class III Gaming;

AND WHEREAS, nothing in the Tribal-State Compact shall be construed to extend to any other activities or as an abrogation of other reserved rights of the Tribe or of the Tribe's sovereignty;

AND WHEREAS, IGRA is intended to expressly preempt the field in the governance of gaming activities on Tribal lands;

AND WHEREAS, the Tribe is authorized to act through Resolutions adopted by their Tribal Council;

AND WHEREAS, the State of Oregon is authorized to act through the Governor of the State;

NOW THEREFORE, in consideration of the mutual undertakings and agreements herein set forth, the Tribe and the State enter into the following Compact:

SECTION 3. DEFINITIONS.

As used in this Compact, and in its Appendices and Exhibits:

- A. "Background investigation" means the security and financial history checks of an employee, licensee or applicant for Tribal contract for the operation of video lottery games or for the sale of lottery games to the tribe.
- B. "Certification" means the inspection process used by the Oregon State Lottery to approve video lottery game terminals and games.
- C. "Class III Gaming Contract" means a contract that involves Major, Minor, or Sensitive Procurements.
- D. "Class III Gaming Contractor" is any individual, business or other entity that applies for or is a party to a Class III Gaming Contract.
- E. "Controlling interest" means fifteen percent (15%) of the equity ownership of a company.
- F. "Display" means the visual presentation of video lottery game features shown on the screen of a video lottery terminal.
- G. "Gaming facility" means the building proposed to be constructed as of the date of execution of this Compact that is located on land included in the Tribe's Reservation

at Burns, Oregon, and specifically described in Exhibit I to the Compact. If the size of the Gaming Facility is expanded as otherwise provided in this Compact, the term "Gaming Facility" shall thereafter refer to the expanded facility.

- H. "Gray Machine" means any electrical or electro-mechanical device, whether or not it is in working order or some act of manipulation, repair, adjustment or modification is required to render it operational that:
1. Awards credits or contains or is readily adaptable to contain, a circuit, meter, or switch capable of removing or recording the removal of credits earned by a player, other than removal during the course of continuous play; or
 2. Plays, emulates, or simulates a casino game, bingo, or keno. A device is no less a gray machine because, apart from its use or adaptability as such, it may also sell or deliver something of value on the basis other than chance.

"Gray Machine" does not include any device operated under the authority of State law or under the terms of this Compact.

- I. "Key Employee" means any officer or any person who can affect the course of business, make decisions, or is in a sensitive position.
- J. "High Security Employee" means any person with responsibility for the management or operation of the Class III gaming activities or access to gaming terminals or cash.
- K. "Low Security Employee" means any person employed to work in a gaming area with no responsibility for management or operation of the Class III gaming activities and no access to inside gaming terminals or cash.
- L. "Major Procurement" means any procurement action or contract for:
1. The printing of tickets used in any Class III gaming;
 2. Any goods or services involving the receiving or recording of number selections in any Class III gaming;
 3. Any goods, services, or products involving the determination of winners in any Class III gaming; or
 4. Video devices.

- M. "Management Contract" means any contract, subcontract, or collateral agreement between the Tribe and a contractor or between a contractor and a subcontractor if such contract or agreement provides for the management of all or part of a gaming operation.
- N. "Minor Procurement" means any procurement action or contract related to Class III gaming that is neither a Major Procurement nor a Sensitive Procurement. A typical example of this class of procurement is a contract to change the external appearance of a video terminal.
- O. "Owner" means any person or entity that owns 5% or more of the equity ownership of a company, alone or in combination with another person who is a spouse, parent, child or sibling.
- P. "Primary Management Official" means any person who:
1. Is designated as having management responsibility for any part of a Management Contract;
 2. Has authority --
 - a. to hire and fire employees; or
 - b. to set or otherwise establish working policy for the gaming operations; or
 3. Is the chief financial officer or other person who has financial management responsibility for Class III gaming operations.
- Q. "Sensitive Procurement" means any procurement action or contract for goods or services, other than a "Major Procurement," that may either directly or indirectly affect the integrity, security, honesty, and fairness of the operation and administration of Class III gaming. Typical examples of this class of procurement are the acquisition of security systems required to protect the security and integrity of the Class III gaming, financing agreements and consulting agreements for services related to operation of Class III gaming.
- R. "Video lottery terminal" or "terminal" means an electrical or electromechanical device, component, or terminal that displays a ticket through the use of a video display screen, and that is available for consumer play upon payment of any consideration, with winners determined by the application of the element of

chance and the amount won determined by the possible prizes displayed on the device.

SECTION 4. AUTHORIZED CLASS III GAMING.

A. Only Compact Between Tribe and State. This Compact shall be the only Compact between the Tribe and State and any and all Class III gaming conducted in the Gaming Facility shall be pursuant to this Compact. To the extent that elements of this Compact need to be altered to incorporate changes to the agreements between the parties -- including to permit additional Class III gaming -- the parties shall provide such changes in accordance with subsection 11.D. of this Compact.

B. Authorized games.

1. Subject to the provisions of this Compact, the Tribe may engage in only the following Class III games: Video lottery games of chance as described in Appendix A, keno as described in Appendix B and house banked blackjack as described in Appendix C and as further limited under subsection E of this section.
2. This section shall be construed consistent with federal classification of gaming activities. Notwithstanding any provision of this Compact, any gaming activity classified by federal regulation as Class II activity shall not be subject to the provisions of the Compact.

C. Gaming Location.

The Gaming Facility authorized by this Compact shall be located on the Tribe's land near Burns, Oregon. Both the Gaming Facility and the land are specifically described in Exhibit I to this Compact. This land is held in trust for the Tribe by the United States. Gaming authorized under this Compact shall be conducted only in the Gaming Facility. If another Oregon Tribe is authorized to operate a gaming facility on non-Tribal lands, the Tribe does not hereby abrogate any rights they may have under Section 20 of IGRA.

D. Number of video terminals. The number of Class III video lottery games of chance authorized by this Compact shall not exceed the number of such games that would occupy 15 percent (15%) of the total square footage of the gaming area and related portions of the Gaming Facility under customary industry spacing. The parties acknowledge that the Gaming Facility is a mixed use

facility. The parties agree that the size of the Gaming Facility to be devoted to Class III video lottery games of chance is determined by the area of those parts of the facility that are appropriately related to the gaming activities conducted therein (the "gaming area"). The parties also agree that, in combination, the gaming area of the facility and the spacing of video lottery terminals customary in the industry limit the number of video lottery terminals on the gaming floor to no more than 100. Subject to other terms of this agreement, the Tribe may determine in its discretion the location and spacing of video lottery terminals within the Gaming Facility.

E. Specific Rules Governing House Banked Blackjack

1. Before house banked blackjack is conducted at the gaming facility the Tribal Gaming Commission shall:
 - a. Ensure that the Gaming Facility Management develops rules and procedures for a system of internal controls that meets the minimum standards established in Appendix C.
 - b. Require the Gaming Facility Management to provide appropriate training for all dealers, supervisors and surveillance personnel involved in house banked blackjack, and for the Tribal Gaming Inspector, according to the minimum training standards established in Appendix C.
 - c. Ensure that the Gaming Facility Management establishes a security and surveillance plan that meets the minimum standards established in Appendix C.
 - d. Promulgate rules of operation for house banked blackjack that meet the minimum standards established in Appendix C, including rules of play, standards for equipment.
 - e. Promulgate a dispute resolution procedure that provides for investigation and review of any player complaint.
2. The Tribe shall establish an initial wager limit of \$50 per hand, except that the Tribe may offer a maximum wager limit of \$100 per hand on one table. After a period of two months of operation of house banked blackjack in full compliance with the requirements of this subsection, the Tribe may change the initial wager limit from \$50 to \$75 for three tables, and from \$100 to \$200 for one table. After any period of six months of operation of house banked

blackjack in full compliance with the requirements of this subsection, the Tribe may request a change in these wager limits. The State may refuse to agree to an increase in the initial wager limit if there have been any significant problems with the conduct of house banked blackjack due to noncompliance with the internal controls, the rules of operation of the game or with the terms of this subsection. The amount of any increase in the wager limit must be agreed to by both the State and the Tribe.

3. The Tribe may operate a maximum of four tables of house banked blackjack.
4. This authorization in this Compact for house banked blackjack shall expire on December 31, 1997 unless an amendment authorizing the play of house banked blackjack beyond that date has been negotiated and executed.

F. Principles Governing Gaming Operations Decisions

1. The Tribe and the State agree that maintaining the honesty, integrity, fairness and security of the Tribe's gaming operation is essential both to the success of the enterprise, and to satisfy the interests of the State and of the Tribe. The Tribe and the State agree that both of them have the responsibility to protect the citizens of this State who patronize the Tribe's gaming facility from any breach of security of the gaming operation. Accordingly, all decisions by the Tribe, the Tribal Gaming Commission and the management of the gaming operation, concerning regulation and operation of the Gaming Facility, including those decisions expressly placed within the Tribe's discretion under the terms of this Compact, shall be consistent with each of the following principles:
 - a. Any and all decisions concerning regulation and operation of the Tribal gaming enterprise, whether made by the Tribe, the Tribal Gaming Commission or the management of the gaming operation, shall reflect the particularly sensitive nature of a gaming operation.
 - b. In order to maintain the honesty, integrity, fairness and security of the Tribe's gaming operation, the Tribe, the Tribal Gaming Commission and the management of the gaming operation shall work diligently and take all reasonably necessary affirmative steps to prevent cheating and theft, and to protect the gaming operations from the influence or control by any form of criminal activity or organization.

- c. The honesty, integrity, fairness and security of the Tribe's gaming operation shall be of paramount consideration in awarding contracts, licensing and hiring employees, and in making other business decisions concerning the operation of the gaming enterprise. The Tribe, the Tribal Gaming Commission and the management of the gaming operation shall make no decisions that compromise the honesty, integrity, fairness or security of the gaming operation.
 - d. Regulation and operation of the Tribe's gaming activities shall be, at a minimum, consistent with generally accepted industry standards and practices, in order to maintain the honesty, integrity, fairness and security of the Tribe's gaming operation.
2. Procedure for Resolving Disputes Concerning Operational Decisions.
- a. If the State, in good faith, believes that any decision by the Tribe relating to the employment or licensing of any employee, awarding of any contract or operation of the gaming enterprise is inconsistent with the principles set forth in paragraph (a) of this subsection, or any other requirement of this section, the State may give written notice to the Tribe. The written notice shall describe the factual basis for the State's concern.
 - b. The parties shall meet and confer within 15 days after the Tribe receive the notice.
 - c. (1) If the State's concern is not resolved informally, either party may initiate non-binding arbitration within 45 days after the service of the written notice.
 - (2) An arbitrator shall be selected in the following manner:
 - (a) The parties shall obtain a list of qualified arbitrators from U.S. Arbitration and Mediation of Oregon, or any other arbitration panel agreed to by the parties.
 - (b) Each party, in turn, shall strike on name from the list, until one name remains. The parties shall draw lots to determine which party makes the first strike.
 - (3) Upon agreement by both parties, the arbitration proceeding shall be binding.

- (4) The parties shall divide the cost of the arbitration proceeding equally between them.
- d. Upon conclusion of the arbitration proceeding, if the parties have not elected to be bound by that result, either party may initiate an action in the United States District Court for the District of Oregon as provided in section 15 of this Compact.
 - e. Expedited Procedures.
 - (1) If the State, in good faith, believes that there is an immediate threat to the honesty, integrity, fairness and security of the Tribal gaming operations, and believes that substantial harm will result during the time that would pass if the procedure established in sub-paragraphs a. to c. of this paragraph is followed, the State may give written notice to the Tribal Gaming Commission. The written notice shall describe the factual basis for the State's concern. The written notice shall recommend specific action or actions the State believes will prevent substantial harm from occurring. The State and the Tribal Gaming Commission shall meet and confer, in person or by conference call, within 24 hours after the commission, or any member thereof, receives the notice. The Tribal Gaming Commission shall consider the State's recommendation and immediately thereafter shall take such action that addresses the State's concern as is necessary to protect the honesty, integrity, fairness and security of the Tribal gaming operation. Nothing in this subparagraph shall preclude either party from invoking the dispute resolution procedures provided in this Compact after the commission has acted.
 - (2) The parties shall confer within five days after the Tribe receives the notice.
 - (3) If the State's concern is not resolved informally within 10 days after the Tribe receives the notice, the State may initiate an action in the United States District Court for the District of Oregon as provided in section 15 of this Compact.

- (4) An immediate threat to the honesty, integrity, fairness and security of the Tribal gaming operations includes but is not limited to the following examples:
- (a) A criminal indictment is filed against any contractor, or owner or key employee of a contractor, or against any key employee of the Tribal gaming operation;
 - (b) A criminal organization or members of a criminal organization have obtained an ownership interest in a contractor, or a member of a criminal organization has become a key employee of a contractor;
 - (c) A malfunction of gaming equipment hardware or software causes patrons of the Gaming Facility to lose money, and that loss is directly related to the equipment malfunction;
 - (d) The security of gaming equipment has been impaired by loss, theft, or tampering;
 - (e) The physical safety or security of patrons is seriously at risk; and
 - (f) A continuing pattern of failure by the Tribe, the Tribal Gaming Commission or management of the gaming operation to enforce compliance with the provisions of this Compact, or the regulations and internal controls governing the gaming operation.

F. Expansion of Gaming Area. If the Tribe decides to expand the square footage of the Gaming Facility the parties shall enter into an addendum to this Compact in which the precise number of additional video lottery terminals to be located in the expansion shall be established. The limit on the number of video lottery terminals established in subsection D of this section shall be increased by the number of video lottery terminals that would occupy 15 percent (15%) of the total square footage of the expansion that is devoted to Class II and Class III gaming and related activities, given customary industry spacing of video lottery terminals.

G. Interim Gaming Facility. The Tribe is authorized to develop an interim gaming facility. The development and operation of this facility shall be provided by the terms of this subsection.

1. Location of Interim Facility. The site of the interim gaming facility will be on the site designated for the permanent gaming facility under the Compact, as more specifically described in Exhibit 1.
2. Type of Facility. The interim gaming facility will consist of a temporary building. The Tribe shall provide to the State a diagram of the alignment of the temporary building at least 30 days before opening of the interim gaming facility.
3. Layout of Facility. The total square footage of the interim gaming facility shall be no more than 4,100 square feet. The proposed floor plan for the building shall be provided to the State at least 30 days before opening.
4. Class III Gaming. The only Class III games that will be conducted in the interim gaming facility will be VLT's as defined in this Compact. The Tribe may install up to 100 VLT's in the interim gaming facility. Any reduction in the square footage of the interim gaming facility from that set forth in paragraph 3 above, shall result in a corresponding reduction in the number of VLTs authorized by this paragraph.
5. Duration of Interim Gaming Facility. Gaming in the interim gaming facility pursuant to this subsection may be conducted from the effective date of this Compact until the earlier of the opening of the permanent gaming facility under the Compact or six months after opening of the interim gaming facility.
6. Access to Interim Facility. Access to the interim gaming facility shall be on the same road that is planned for the permanent Gaming Facility.
7. Alcohol Policy. No alcohol will be served in the interim gaming facility.
8. Security. The Tribe shall consult with the Oregon State Police to assure that the security requirements of the Compact are fully satisfied before opening the interim gaming facility.
9. Applicability of Compact Requirements. Except as explicitly provided in this subsection all terms of the Compact for Class III Gaming between the Tribes and the State shall apply to the operation of the interim gaming facility.
10. Expiration. The authority to conduct Class III gaming in an interim gaming facility as authorized by this subsection shall expire on the earlier of the

date the permanent gaming facility is opened or six months after the opening of the interim gaming facility. The provisions of this subsection shall not apply to the permanent Gaming Facility.

SECTION 5. JURISDICTION.

A. In General.

1. The Tribe and Federal Government shall have criminal jurisdiction over offenses committed by Indians within the Gaming Facility. The criminal laws of the Tribe, and the Federal Government where applicable, shall govern the criminal conduct of Indians at the Gaming Facility. The Tribe has a Police Department, a Tribal Court and an agreement with Harney County for incarceration of Indian offenders.
2. The State has criminal jurisdiction over offenses committed by non-Indians within the Gaming Facility and the Burns Paiute Indian Reservation. The criminal laws of the State shall be applicable to non-Indians and have the same force and effect at the Gaming Facility as they have on non-Tribal lands within the State. The enforcement of criminal laws with respect to non-Indians at the Gaming Facility shall be established pursuant to and by a Memorandum of Understanding to be executed by the Tribe and the Oregon State Police. The State shall make reasonable efforts to enforce the criminal laws applicable to offenses committed by non-Indians within the Gaming Facility and the reservation.

- B. Except as provided in a Memorandum of Understanding executed in accordance with the foregoing paragraph 2 of subsection A above, law enforcement officers of the State of Oregon, or officers designated by the State, shall have free access to anywhere within the Gaming Facility for the purpose of maintaining public order and public safety, conducting investigations related to possible criminal activity and enforcing applicable laws of the State with respect to non-Indians. Any law enforcement activities undertaken by law enforcement officers of the State shall be in compliance with this Compact. The Tribe, or individuals acting on its behalf, shall provide State law enforcement officers or officers designated by the State access to locked and secure areas of the Gaming Facility in accordance with the regulations for the operation and management of the gaming operation.

- C. Subject to the provisions of paragraph 1 of subsection B of section 8, the State may station one or more officers, designated in accordance with subsection B of this section, at the Gaming Facility by mutual agreement with the Tribe.

SECTION 6. LICENSING AND CONTRACTING.

A. Licensing of Gaming Employees.

1. All Primary Management Officials and High Security Employees employed in the Gaming Facility shall be licensed by the Tribe in accordance with the provisions of this Compact.
2. All prospective employees -- whether Primary Management Officials, ~~both~~ High Security Employees or Low Security Employees -- shall provide to the Tribe any required application fees and the following information:
 - a. Full name, including any aliases by which the applicant has been known;
 - b. Social security number;
 - c. Date and place of birth;
 - d. Residential addresses for the past five years;
 - e. Employment history for the past five years;
 - f. Driver's license number and state of issuance;
 - g. All licenses issued and disciplinary actions taken by any State agency or Tribal gaming agency;
 - h. All criminal proceedings, except for minor traffic offenses, to which the applicant has been a party;
 - i. A current photograph.
 - j. Provide the results of a drug test and physical examination upon request of either of the parties to this Compact.
 - k. Any other information required by the Tribe.

3. In addition to the requirements of paragraph 6.A.2. above, prospective Primary Management Officials and High Security Employees shall provide a set of fingerprints.
4. The Tribe shall forward the applicant information to the State, along with the State required portion of the application fee as described in subsection 6.C. The Oregon State Police shall conduct a background investigation and provide a written report to the Tribe approving or disapproving the applicant within a reasonable period of time, but in no event shall such background checks exceed thirty (30) days without notice to and consent of the Tribe. If after investigation, the State determines there is cause to disapprove any applicant under the criteria established in paragraph 6.B.5. below, it shall promptly notify the Tribe of such determination and furnish the Tribe with copies of all relevant information pertaining to such determination.
5.
 - a. If the Oregon State Police disapproves for failure to meet the criteria established in paragraph 6.B.5. below, the Tribe shall not issue a license or approve employment of the applicant.
 - b. The Tribe shall deny a gaming license to any High Security Employee or Primary Management Official who does not meet the criteria established in paragraph 6.B.5. below. Denial of a license by the Tribe is final.
 - c. The Tribe shall not hire any Low Security Employee who does not meet the criteria established in subsection B.5. below.
6. Background investigation during employment. The Tribe or the State may conduct additional background investigations of any gaming employee at any time during the term of employment. If after investigation, the State determines there is cause for the dismissal of any employee under the criteria established in paragraph 6.B.5. below, it shall promptly notify the Tribe of such determination and furnish the Tribe with copies of all relevant information pertaining to such determination, along with a Request for Termination of employment. The Tribe shall review the State's request and supporting materials and if it concludes that good cause for dismissal is shown under the criteria established in paragraph 6.B.5. below, the subject employee shall be dismissed.
7. Temporary licensing of employees.

- a. The Tribe may issue a temporary license to High Security Employees 14 days after submission of the application to the Oregon State Police. The temporary license shall expire and become void upon completion of the background check and submission of the results to the Tribal Gaming Commission. If the employee does not qualify for a permanent license, the Tribe shall immediately revoke the temporary license.
- b. The Tribe may employ Low Security Employees on probation upon submission of the application to the State police. Any Low Security Employee shall be subject to immediate termination during probation if the State determines that the employee does not meet the criteria established in Paragraph 6.B.5. below.
- c. For purposes of this paragraph, if an application is forwarded by mail to the Oregon State Police or the results of a background check by the Oregon State Police are provided to the Tribe by mail, the material is deemed to be submitted three days after the date of mailing.
- d. No temporary license may be granted to a Primary Management Official or to a consultant under this paragraph.

8. Waiver of Disqualifying Criteria.

- a. If a prospective Primary Management Official, High Security Employee or Low Security Employee is disqualified for licensing or employment under the provisions of paragraph 5. above, and the Tribe believes that there are mitigating circumstances that justify waiver of the disqualifying factor, the Tribe may give written notice to the State asking to meet and confer concerning waiver of the disqualification. The Tribe and the State shall meet within 15 days after written notice is given.
- b. In order to waive disqualification of licensing or employment of any prospective Primary Management Official, High Security Employee or Low Security Employee, both the Tribe and the State must agree on the waiver.
- c. Waiver of disqualification of licensing or employment may be based on one or more of the following circumstances:
 - (1) Passage of time since conviction of a crime;

- (2) The applicant's age at the time of conviction;
 - (3) The severity of the offense committed;
 - (4) The overall criminal record of the applicant;
 - (5) The applicant's present reputation and standing in the community;
 - (6) The nature of the position for which the application is made.
9. Duration of license and renewal. Any employee license shall be effective for not more than three (3) years from the date of issue except that a licensed employee who has applied for renewal may continue to be employed under the expired license until final action is taken on the renewal application in accordance with the provisions of paragraphs 6.A.2. to 6.A.5. above. Applicants for renewal shall provide a renewal fee and updated information to the Tribe but will not be required to resubmit historical data already provided.
10. Revocation of license. The Tribe may revoke the license of any employee pursuant to policies determined by the Tribe. If the State notifies the Tribe that an employee does not meet the criteria described in paragraph 6.B.5. below, and the Tribe is satisfied of that fact, the Tribe shall revoke the employee's license.
11. The Tribe shall maintain a procedural manual for employees that includes rules and regulations of conduct and disciplinary standards for breach of procedures.

B. Contracts with Manufacturers and Suppliers.

1. The Tribe shall contract with all managers, manufacturers or suppliers of goods or services related to the play of Class III games authorized by this Compact before conducting any business related to Class III games.
2. The Tribe shall submit all Class III Gaming Contracts to the State for review, comment and approval and such contracts will specifically provide that the State will have such authority. The State must approve all contracts prior to execution. It is agreed that the State can deny a contract only in accordance with criteria established in paragraph 6.B.5. It is further agreed that State action on such contracts shall be completed within 60 days, and that failure by the State to meet this deadline shall create a presumption of approval that can

be rebutted for good cause shown. Should the parties fail to agree, then disputes shall be resolved in accordance with Section 15 of this Compact.

3. A background investigation may be conducted by the State on all Class III Gaming Contract applicants or contractors. The level of investigation will be determined by whether the individual procurement is classified as a Major Procurement, Minor Procurement or Sensitive Procurement. The level of investigation for a Major Procurement and Sensitive Procurement shall be more intense than that for a Minor Procurement. If a contract applicant has been approved by the State for a contract with another Tribe, the level of investigation need not be as intense as for a previously unapproved contract applicant.
4. The Tribe and the State shall not approve any Class III Gaming Contract that does not grant the State or the Tribe access to the contractor's business and financial records.
5. Criteria for Denial of Contract Application.
 - a. Unless otherwise specified, the State or the Tribe may deny a Class III Gaming Contract application for any of the following reasons:
 - (1) A conviction of the applicant or any owner or key employee of the applicant for any crime in any jurisdiction;
 - (2) A conviction of the applicant or any owner or key employee of the applicant for any gambling offense in any jurisdiction;
 - (3) A civil judgment against the applicant or any owner or key employee of the applicant, based in whole or in part upon conduct that allegedly constitutes a crime;
 - (4) A failure to disclose any material fact to the State or the Tribe or their authorized agents during initial or subsequent background or security investigations;
 - (5) A misstatement or untrue statement of material fact as determined by the Tribe or the State;
 - (6) An association with persons or businesses of known criminal background, or persons of disreputable character, that may adversely

affect the general credibility, security, integrity, honesty, fairness or reputation of the Tribe;

- (7) Any aspect of the applicant's past conduct that the Tribe or the State determines would adversely affect the integrity, security, honesty or fairness of Tribal gaming;
- (8) A person who is unqualified or disqualified to be a Class III Gaming Contractor owns, is an agent of or has any other interest in the applicant, regardless of the qualifications of the person who seeks approval as a contractor;
- (9) The applicant demonstrates inadequate financing for the business proposed under the type of contract for which application is made. The Tribe and the State shall consider whether financing is from a source that meets the qualifications of this paragraph 6.B.5. and is in an amount to ensure the likelihood of success in the performance of the contractor's duties and responsibilities; or
- (10) The applicant or its employees fail to demonstrate business ability and experience to establish, operate, and maintain the business for the type of contract for which application is made.

b. In evaluating whether to deny a contract related to Class III gaming based on subparagraphs 6.B.5.a.(1), (2) and (3) above, the State and the Tribe may consider the following factors:

- (1) The nature and severity of the conduct that constituted the offense or crime;
- (2) The time that has passed since satisfactory completion of the sentence, probation, or payment of the fine imposed;
- (3) The number of offenses or crimes; and
- (4) Any extenuating circumstances that enhance or reduce the impact of the offense or crime on the security, integrity, honesty, and fairness of the Tribal gaming enterprise.

c. No person applying for a Class III Gaming Contract shall own, manufacture, possess, operate, own an interest in, or gain income or

reimbursement in any manner from video gaming devices in any jurisdiction unless the devices are approved and certified by another state lottery, gambling or gaming control agency, Indian Tribe, or National Indian Gaming Commission, and such ownership, manufacture, possession, operation, or income is disclosed to and approved by the Tribe and the State.

- d. The Tribe or the State may reject an application if the applicant has not provided all of the information requested in the application.
- e. Notwithstanding subparagraphs a or b of this paragraph, if a Class III Gaming Contract application is required to be denied under subparagraphs a or b of this paragraph, because a person previously associated with the applicant or an employee of the applicant has been convicted of a crime, the Tribe may enter into a contract with the applicant if the applicant has severed its relationship with that person or employee. Before the Tribe may enter into a contract under this subparagraph, the State and the Tribe must agree that the relationship between the applicant and the person or employee has been severed. For purposes of this subparagraph, a relationship is severed if the person or the employee has no continuing connection with the direction or control of any aspect of the business of the applicant, and the person or employee is no longer employed by the applicant in any capacity. The burden of showing to the satisfaction of the Tribe and the State that a relationship has been severed is on the applicant.

6. Revocation of Class III Gaming Contract.

- a. The Tribe may revoke any contract pursuant to policies and procedures determined by the Tribe.
- b. Every Class III Gaming Contract shall provide that the State, although not a party to that contract, may revoke any contract for cause consistent with the criteria established by paragraph 6.B.5. of this section and that the Class III Gaming Contractor shall consent to the State's right to review and revoke all Class III Gaming Contracts. If the State intends to revoke a Class III Gaming Contract under this provision, the State shall first suspend the contract, and give the Tribe notice of the suspension. The Contractor shall have thirty (30) days in which to correct the situation giving rise to the suspension before the contract may be revoked.

7. Contractor Reporting Requirements.

- a. All contractors shall submit to the Tribe and the State any financial and operating data requested by the Tribe or the State.
- b. The Tribe shall specify the frequency and a uniform format for the submission of such data.
- c. The Tribe, the State, or their agents reserve the right to examine contractor tax records and the detailed records from which the tax reports are compiled.

8. Termination of Contract.

- a. No contract shall be in effect for a term longer than five (5) years.
- b. The Tribe and the State shall retain, in each contract, the right to terminate the contract immediately upon the occurrence of any of the following:
 - (1) The contractor is discovered to have made any statement, representation, warranty, or certification in connection with the contract that is materially false, deceptive, incorrect, or incomplete;
 - (2) The contractor fails to perform any material requirements of the contract or is in violation of any material provision thereof, and fails to cure same within ten (10) days' written notice of such failure;

- (3) The Tribe or the State determines satisfactory performance of the contract is substantially endangered or can reasonably anticipate such occurrence or default;
- (4) The Contractor, or any officer or employee of the Contractor or any owner of five percent (5%) or more of the equity ownership in the Contractor is convicted of a felony or a gambling-related offense that reflects on Contractor's ability to perform honestly in carrying out the contract;
- (5) The Contractor jeopardizes the integrity, security, honesty, or fairness of the Tribal gaming operation; or
- (6) Upon transfer of a controlling interest of the Contractor.

C. Fees for Approval of Employment Licenses and Contracts.

1. The State shall be reimbursed its costs for approval of employees, licenses and contracts, in accordance with the terms of this Compact.
2. The fees for State approval of licenses and contracts shall be set pursuant to a Memorandum of Understanding between the parties to be negotiated annually.
3. Should actual costs incurred by the State exceed the fees agreed to by the parties in the annual Memorandum of Understanding, the State will assess those additional costs to the applicants during or after the investigation. The applicant is required to pay the investigation fee in full prior to issuance of the contract or license except that interim contracts or licenses shall be issued for the period of time that a dispute is pending as contemplated at paragraph 6.C.4. below.
4. Should the State and the Tribe fail to agree to fees in the Memorandum of Understanding, the dispute shall be resolved pursuant to Section 15 of this Compact.

D. Management Contracts.

1. The Primary Management Official shall provide the State at all times with a current copy of any management agreement with the Tribe that allows it to conduct Class III gaming on the Tribal trust land.
2. The Primary Management Official shall furnish to the State complete information pertaining to any transfer of controlling interest in the management company at least 30 days before such change; or, if the Primary Management Official is not a party to the transaction effecting such change of ownership or interests, immediately upon acquiring knowledge of such change or any contemplated change.

SECTION 7. REGULATIONS FOR OPERATION AND MANAGEMENT OF CLASS III GAMES.

- A. Video Lottery Games of Chance. The acquisition, use and operation of all video lottery games of chance and keno authorized under this Compact shall be in accordance with the rules and regulations set forth in Appendices A and B. Appendices A and B are hereby incorporated into and made a part of this Compact.
- B. Blackjack. The rules and regulations governing the play of house-banked blackjack authorized under this Compact shall be those set forth in Appendix C which is hereby incorporated into and made a part of this Compact.
- C. Identification badges. The Tribe shall require all employees to wear, in plain view, identification badges issued by the Tribe that include photo and name. The Tribe and the State may provide, in a memorandum of understanding, for exceptions to the requirement that badges be worn in plain view, for confidential compliance personnel.
- D. No credit extended. All gaming shall be conducted on a cash basis. Except as provided herein, no person shall be extended credit for gaming nor shall the Tribe permit any person or organization to offer such credit for a fee. This restriction shall not apply to credits won by players who activate play on video games of chance after inserting coins or currency into the games. This section shall not restrict the right of the Tribe or any other person to offer check cashing or install and accept bank card or credit card transactions in the same manner as is permitted at any retail business in the State.
- E. Prohibition on attendance and play of minors. No person under the age of twenty one (21) shall be allowed to play any video lottery game of chance or blackjack

operated under this Compact. If any person under the age of twenty one (21) plays and otherwise qualifies to win any video lottery prize or compensation, the prize or compensation shall not be paid. No person under the age of eighteen (18) shall be allowed to play keno. No person under the age of eighteen (18) may work in the gaming area. No person under the age of twenty-one (21) may sell alcohol within the Gaming Facility.

- F. Prohibition of firearms. With the exception of federal, state, county, city or Tribal law enforcement agents or officers, no person shall possess firearms within the Gaming Facility.

- G. Alcohol Policy. No alcohol shall be served in the Gaming Facility unless authorized by the Tribe as permitted by federal law. Currently the Tribe does not legally permit the sale or possession of alcohol within the Burns Paiute Reservation. If Tribal law is changed to permit sales at the Gaming Facility, the Tribe shall notify the State. Service of alcohol shall be in compliance with State laws and Oregon Liquor Control Commission licensing regulations as provided in a memorandum of understanding under this Compact. Nothing in this subsection shall permit the State to impose taxes on the sale of alcohol by the Tribe. If alcohol is served in the Gaming Facility, no alcoholic beverages may be served free of charge or at a reduced price to any patron of the Gaming Facility as an inducement to participate in any gaming. In the event that alcohol is to be served in the Gaming Facility, it will be served only in a lounge or such other specified room and the service of alcohol on the gaming floor shall be prohibited.

- H. Liability for damage to persons and property. During the term of this Compact, the Tribe shall maintain public liability insurance with limits of not less than \$250,000 for one person and \$2,000,000 for any one occurrence for any bodily injury or property damage. The Tribe's insurance policy shall have an endorsement providing that the insurer may not invoke tribal sovereign immunity up to the limits of the policy. The Tribe shall indemnify, defend and hold harmless the State, its officers, directors, employees and agents from and against any claims, damages, losses or expenses asserted against or suffered or incurred by the State or its officers, directors, employees and agents (except as may be the result of their own negligence) based upon or arising out of any bodily injury or property damage resulting or claimed to result in whole or in part from any act or omission of the Tribe relating to the inspection of any gaming or gaming related facility pursuant to this Compact.

SECTION 8. INSPECTION AND ENFORCEMENT OF GAMING REGULATIONS.

A. Tribal Gaming Commission.

1. The Tribal Gaming Commission shall have primary responsibility for the on-site regulation, control and security of the gaming operation authorized by this Compact, and for the enforcement of this Compact on Tribal Lands. The Tribal Gaming Commission's role shall include the following functions:
 - a. Ensure compliance with all relevant laws;
 - b. Ensure the physical safety of patrons in, and of personnel employed by, the establishment;
 - c. Safeguard the assets transported to and from the gaming facility and cashier's cage department;
 - d. Protect patrons and property from illegal activity;
 - e. Detain persons suspected of crimes for the purpose of notifying the law enforcement authorities;
 - f. Record any and all unusual occurrences within the gaming facility in indelible ink in a bound notebook from which pages cannot be removed, and each side of each page of which is sequentially numbered, as follows:
 - (1) The assigned sequential number of the incident;
 - (2) The date;
 - (3) The time;
 - (4) The nature of the incident;
 - (5) The person involved in the incident; and
 - (6) The security employee assigned;
 - g. Maintain logs relating to surveillance, security, cashier's cage, credit, machine (showing when video machines opened), and machine location;

- h. Establish and maintain an updated list of persons barred from the gaming facility either because of their criminal history or because their association with career offenders or career offender organizations poses a threat to the honesty, security and integrity of gaming operations, and furnish that list to the State;
 - i. Obtain an annual audit by a Certified Public Accountant;
 - j. Maintain a closed circuit television system in the cash room of the gaming facility and provide copies of floor plan and TV system to the State;
 - k. Maintain a cashier's cage in accordance with industry standards for security;
 - l. Employ and train sufficient security personnel; and
 - m. Subject to State review and approval, establish a method for resolving disputes with players.
2. Reporting of Violation. A Tribal game inspector shall inspect the Gaming Facility at random during all hours of gaming operation, and shall have immediate access to any and all areas of the gaming operation for the purpose of ensuring compliance with the provisions of this Compact and Tribal ordinances. Any violations of the provisions of this Compact, or of Tribal ordinances by the Tribal gaming operation, a gaming employee, or any person on the premises whether or not associated with the Tribal gaming operation, shall be reported immediately to the Tribal Gaming Commission and reported to the State within seventy-two (72) hours of the time the violation was noted.
3. Investigations and Sanctions. The Tribal Gaming Commission shall investigate any reported violation of the Compact provisions and shall require the Tribal gaming operation to correct the violation upon such terms and conditions as the Tribal Gaming Commission determines to be necessary. The Tribal Gaming Commission shall be empowered by Tribal ordinance to impose fines and other sanctions within the jurisdiction of the Tribe against a gaming employee, or any other person directly or indirectly involved in, or benefitting from, the gaming operation.
4. Reporting to State. The Tribal Gaming Commission shall forward copies of all completed investigation reports and final dispositions to the State on a continuing basis. If requested by the Tribal Gaming Commission, the State

shall assist in any investigation initiated by the Tribal Gaming Commission, and provide other requested services to ensure proper compliance with the provisions of this Compact, Tribal ordinances and regulations or applicable laws of the State.

B. State Enforcement of Compact Provisions.

1. Monitoring. The State is authorized hereby to monitor the Tribal gaming operation to ensure that the operation is conducted in compliance with the provisions of this Compact. The Tribe may request removal of a State law enforcement officer or monitor on the basis of malfeasance, abuse of authority, or conduct disrespectful of Tribal institutions or culture. Effective performance of the officer's or monitor's duties shall not be a basis for disapproval. The State shall have free and unrestricted access to all areas of the Gaming Facility during normal operating hours without giving prior notice to the Tribal gaming operation. The Tribe agrees that the State monitoring function includes at a minimum the activities identified in the Compact, the amendments and the memorandum of understanding entered into pursuant to this Compact, and that the actual, reasonable and necessary cost of monitoring activities shall be assessed to the Tribe as provided in the memorandum of understanding entered into pursuant to this Compact. In addition to the State's regular monitoring functions, the Tribe agrees that the State may conduct the following activities, which shall also be assessed to the Tribe:
 - a. A joint pre-opening review of the Gaming Facility, which shall be conducted jointly by the Tribe and the State, to assure compliance with the Compact requirements governing gaming operations.
 - b. A comprehensive annual review, which shall be pre-planned and conducted jointly with the Tribal Gaming Commission, of the gaming operation to verify compliance with the requirements of this Compact and with the regulations and internal controls adopted by the Tribal Gaming Commission, including at a minimum review in the following areas: administrative controls (gaming management internal controls), gaming operations controls, drop boxes, station inventories, surveillance department controls, cashier cage controls, count room controls (security and surveillance), accounting department controls (security), general controls (compact regulatory requirements), blackjack controls, VLT controls, accounts payable, employee identification, gaming chip inventory for gaming floor and cage, physical examination of all class III

gaming cards, chips, e-proms, paper stock, printers, keno balls, fill slips, video gaming devices, keno controls, off-track betting and security department controls;

- c. Periodic review of any part of the gaming operation in order to verify compliance with the requirements of this Compact and with the regulations and internal controls;
 - d. Investigation of possible violations of this Compact or other gaming regulatory matters, whether discovery during the action, review or inspection by the State during its monitoring activities, or otherwise
2. As provided in Section 5 of this Compact, the Tribe's law enforcement agency is responsible for investigation of criminal law violations by Indians on the Reservation. The Tribe and the State agree that the Tribe's criminal law jurisdiction does not prevent the State from investigating possible violations of this Compact or other gaming regulatory matters. The Tribe and the State agree that their respective law enforcement agencies shall cooperate in any investigation that involves or potentially involves both criminal and gaming regulatory violations.
 3. Access to Records. The State is authorized hereby to review and copy, during normal business hours, and upon reasonable notice, all records maintained by the Tribal gaming operation; provided, that any copy thereof and any information derived therefrom, shall be deemed confidential and proprietary financial information of the Tribe to the extent provided under ORS 192.410 to 192.505. Any records or copies removed from the premises shall be returned to the Tribe after use. Nothing in this subsection precludes the State or the Tribe from disclosing information subject to the Rules of Civil Procedure or Evidence in connection with litigation, a prosecution or a criminal investigation.
 4. Investigation Reports. After completion of any inspection or investigation report, the State shall provide a copy of the report to the Tribal Gaming Commission.
- C. The State desires the Tribe to install an on-line accounting system for its video lottery terminals. The Tribe agrees **that it will** include an on-line accounting system for video lottery terminals in the permanent Gaming Facility **if the Tribe installs more than 100 video lottery terminals.** **If the Tribe proposes to install more than 100 video lottery terminals** the State agrees that **the**

requirement for an on-line accounting system may be waived if it is not economically or technically feasible [*for the Tribe to do so*]. The State agrees to meet and confer with the Tribe [*once*] **if** the Tribe's plans for the permanent Gaming Facility [*are developed*] **include installation of more than 100 video lottery terminals,** to review any economic or technical issues raised by the Tribe. The burden shall be on the Tribe to demonstrate to the State's satisfaction that it is not economically or technically feasible for the Tribe to install an on-line accounting system.

SECTION 9. STATE ASSESSMENT OF COSTS FOR OVERSIGHT.

- A. **Imposition of assessment for State law enforcement and regulatory expenditures.** The State shall make annually an assessment sufficient to compensate the State for the reasonable and necessary costs of regulating gaming operations and conducting state law enforcement investigations pursuant to this Compact. The State shall assess only those costs related to gaming. The State acknowledges expressly herein that the extent of oversight is related directly to the size and scope of gaming. Such assessment shall include any costs of fringe benefits for personnel. Fees received with respect to the submission of gaming licenses and contracts pursuant to subsection 6.C. of this Compact shall be subtracted from the amount of the assessment.
- B. **Procedure for Assessments.** The procedure for assessments shall be determined and agreed upon annually in a Memorandum of Understanding between the parties to this Compact. Such agreement shall include provisions for adjustments of excess assessments and underpayment of costs.
- C. If the parties fail to agree to the assessments under this section, such dispute shall be resolved pursuant to Section 15 of this Compact.

SECTION 10. APPLICATION OF STATE REGULATORY STANDARDS.

- A. **Health, environmental and safety standards.** Tribal ordinances and regulations governing health, environmental and safety standards applicable to the Gaming Facility shall be at least as rigorous as standards imposed by the laws and regulations of the State. The Tribe agrees to cooperate with any State agency generally responsible for enforcement of such health, environmental and safety standards in order to assure compliance with such standards. However, the Tribe shall have the exclusive regulatory jurisdiction over the enforcement of health, environmental and safety standards applicable to the Gaming Facility. The Tribe shall use its regulatory jurisdiction to assure that health, environmental and safety

standards are met. Tribal ordinances and regulations governing water discharges from the Gaming Facility shall be at least as rigorous as standards generally imposed by the laws and regulations of the State relating to public facilities; provided, however, that to the extent that federal water discharge standards specifically applicable to the Tribal lands would preempt such State standards, then such federal standards shall govern. For purposes of this subsection, “health, environmental and safety standards” include but are not limited to building codes, sanitation, food handling, water quality, solid waste disposal, workplace safety and fire protection. Compliance with the requirements of this subsection may be demonstrated by certification or other documentation of an appropriate state or local government agency.

B. Transportation Issues.

1. The Tribe shall provide a traffic impact study, prepared by a qualified traffic engineer registered in the State of Oregon. The study shall evaluate the effect of the proposed Gaming Facility, and any related development proposed by the Tribe as part of the same site, on the state highway system and any city street or county road that may be used by customers as access to the Gaming Facility. The traffic impact study shall determine the impacts of the proposed Gaming Facility and related development on the level of service of the affected highway(s), road(s) or street(s).
2. A determination whether the Gaming Facility shall be served directly by a state highway or by a city street or county road shall be made by the State and appropriate local officials on a consistent basis with other proposed developments.
 - a. If the Gaming Facility is to be served directly by a state highway, the Tribe shall apply for and obtain a road approach permit under Oregon Administrative Rules, Chapter 734, Division 50, and shall construct the approach and any other necessary improvements in accordance with that permit. A road approach permit shall not be denied because of the proposed use of the Tribe’s land. The Tribe shall provide and maintain access from its Gaming Facility onto the highway that is adequate to meet standards of the Oregon Department of Transportation, or shall enter into agreements with the Oregon Department of Transportation for the provision of such access by the State. The allocation of costs shall be as provided in Oregon Administrative Rule 734-50-020(1), which provides that the costs of constructing the road approach shall be borne by the permit applicant.

- b. If the Gaming Facility is to be served directly by a city street or county road, and indirectly by a state highway, the Tribe shall comply with applicable city or county street or road improvement requirements and satisfying any requirements the State imposes on the county or city relating to access to a state highway.
 3. If the Tribe plans additional development of the Gaming Facility site, the Tribe shall advise the appropriate state or local transportation planning officials of the planned development by submitting a master plan. In planning street, road or highway improvements, the Tribe, state and local transportation planning officials shall plan for improvements using the master plan. Construction of street, road or highway improvements may be completed in phases if practicable.
 4. Traffic improvements shall be those necessary to maintain the level of service of the affected highway(s), road(s) or street(s), and to provide safe access to and from the Gaming Facility. The Tribe shall not be responsible for improvements to affected high-ways, roads or streets unless the improvements are necessary to correct traffic impacts attributable to the Gaming Facility. For state highways, traffic improvements shall be consistent with the requirements of the State Highway Plan, including improvements necessary to mitigate traffic congestion, and to conform to the Oregon Department of Transportation access management policies. If the Oregon Department of Transportation determines that highway improvements are necessary, the department shall confer with the Tribe concerning the planning, design and construction of those improvements.
 5. The Tribe shall pay the reasonable cost of necessary street, road or highway improvements determined to be necessary on the basis of the traffic impact study and Oregon Department of Transportation requirements. If the Tribe disputes the amount of costs to be paid by the Tribe, the Tribe may initiate the dispute resolution procedure established under section 15 of this Compact.
- C. The Tribe shall report to the Oregon Department of Revenue gambling winnings paid to any person subject to Oregon Personal Income Tax on those winnings whenever the Tribe would be required to report those winnings to the Internal Revenue Service. The information shall be reported in the manner required by the Oregon Department of Revenue.

SECTION 11. EFFECTIVE DATE; TERMINATION; AMENDMENTS.

- A. Effective Date. This Compact shall become effective upon execution by the State and by the Tribe and appropriate federal approval.
- B. Termination. This Compact shall remain in effect until such time as:
1. This Compact is terminated by written agreement of both parties;
 2. The State amends its Constitution or laws to criminally prohibit within the State conduct of all of the Class III gaming authorized by this Compact, whether for profit or not for profit;
 3. A court of competent authority makes a final determination that all of the Class III games authorized by this Compact are criminally prohibited under the law of the State, and the determination has become final and enforceable;
 4. The federal government amends or repeals IGRA so that a Compact is no longer required for the Tribe's exercise of Class III gaming; or
 5. Either party materially breaches this Compact; but only after the dispute resolution process set forth in Section 15 of this Compact has been exhausted, and the breach has continued for a period of 60 days after written notice following the conclusion of the dispute resolution process.
- C. Automatic Amendment.
1. If a type of Class III game authorized under Section 4 of this Compact is criminally prohibited by an amendment to State statute or Constitution, this Compact shall no longer authorize the Tribe to engage in that type of Class III game, and any provisions in this Compact authorizing such gaming shall be void and of no effect.
 2. If a court decides that a Class III game authorized under this Compact is criminally prohibited, this Compact shall no longer authorize the Tribe to engage in that type of Class III game, and any provisions in this Compact authorizing such gaming shall be void and of no effect, but the Tribe shall be required to cease operating that Class III game only if and under the same circumstances and conditions as the State or any other affected person must cease operating the corresponding game under the court's decision.
- D. Amendments.

1. Except as provided in subsection 11.C. above, this Compact shall not be amended unless one of the following conditions occur:
 - a. The State becomes a party to another Tribal-State Compact that authorizes a tribe other than the Burns-Paiute Tribe to engage in any Class III gaming activity or scope of gaming activity not permitted under the terms of this Compact;
 - b. Eighteen months elapse after the effective date of this Compact;
 - c. The State amends State statute or Constitution to expand the type of Class III gaming permitted in the State for any purpose by any person, organization, or entity;
 - d. The State amends any rule or regulation that corresponds specifically to Appendices A, B or C of this Compact, but in such case this Compact shall be subject to amendment only to the extent of the specific rule or regulation;
 - e. The State negotiates substantial changes to the regulatory provisions of other Tribal-State Class III Gaming Compacts. Any negotiations under this sub-paragraph will take into consideration the size and scope of the Tribal gaming operation.
2. Paragraph 11.D.1. above does not require the State to renegotiate the terms of this Compact that apply to those forms of gaming previously authorized by Section 4 of this Compact, unless the State voluntarily consents to such renegotiation or as is otherwise provided for in this Compact.
3. Pursuant to paragraph 11.D.1., the State or the Tribe may by appropriate and lawful means, request negotiations to amend, replace or repeal this Compact. In the event of a request for renegotiation or the negotiation of a new agreement, this Compact shall remain in effect until renegotiated or replaced, unless sooner terminated under subsection 11.B. Such request to renegotiate shall be in writing and shall be sent by certified mail to the Governor of the State or the Chair of the Tribe at the appropriate office identified at Section 13 below. If a request is made by the Tribe, it shall be treated as a request to negotiate pursuant to IGRA. All procedures and remedies available under IGRA shall thereafter apply with the exception that the 180-day period for negotiation set forth at 25 U.S.C. 2710(d) shall be 100 days.

SECTION 12. DISCLAIMERS AND WAIVERS.

- A. Gaming at Another Location or Facility. The Tribe hereby waive any right it may have under IGRA to negotiate a Compact for Class III gaming at any other location or facility for a period of three (3) years from the effective date of this Compact.
- B. Status of Class II Gaming. Nothing in this Compact shall be deemed to affect the operation by the Tribe of any Class II gaming as defined in the Act or to confer upon the State any jurisdiction over such Class II gaming conducted by the Tribe.
- C. Prohibition on taxation by the State. Nothing in this Compact shall be deemed to authorize the State to impose any tax, fee, charge or assessment upon the Tribe or any Tribal gaming operation except for charges expressly authorized in accordance with this Compact.
- D. Preservation of Tribal self-government. Nothing in this Compact shall be deemed to authorize the State to regulate in any manner the government of the Tribe, including the Tribal Gaming Commission, or to interfere in any manner with the Tribe's selection of its governmental officers including members of the Tribal Gaming Commission. No licensing or registration requirement contemplated by this Compact shall be applicable to such officers with respect to their capacity as officers of the Tribe.
- E. This Compact is exclusively for the benefit of and governs only the respective authorities of and the relations between the Tribe and the State. Nothing in this Compact shall be construed as creating or granting any rights to any third party, or as establishing any objection or defense for any third party to any charge, offense or prosecution.

SECTION 13. NOTICES.

All notices required or authorized to be served to the Oregon State Police shall be served by first class mail at the following address:

Lieutenant
Oregon State Police
Tribal Gaming Section
400 Public Service Building
Salem, OR 97310

All other notices required or authorized to be served shall be served by first class mail at the following addresses:

Legal Counsel to the Governor
Office of the Governor
254 State Capitol
Salem, OR 97310

Chairperson, Tribal Council
Burns-Paiute Tribe
HC 71, 100 Pasigo Street
Burns, Oregon 97720-9303

SECTION 14. SEVERABILITY.

In the event that any section or provision of this Compact is held invalid, or its application to any particular activity is held invalid, it is the intent of the parties that the remaining sections of the Compact and the remaining applications of such section or provision shall continue in full force and effect.

SECTION 15. DISPUTE RESOLUTION.

- A. At the discretion of either party, in the event either party believes that the other party has failed to comply with any requirement of the Compact, that party may invoke the following dispute resolution procedure in order to foster cooperation and avoid the costs of litigation:
1. The party asserting noncompliance shall serve written notice on the other party in the manner provided in section 13. The notice shall identify the specific provision of the Compact alleged to have been violated and shall specify the factual basis for the alleged noncompliance. The State and the Tribe shall thereafter meet within thirty (30) days in an effort to resolve the dispute.
 2. In the event the dispute is not resolved to the satisfaction of the parties within ninety (90) days after service of notice, either party may initiate an action against the other party in the United States District Court for the District of Oregon to interpret or enforce the provisions of this Compact. In the event that the Federal court declines jurisdiction, an action can be filed in a State court of competent jurisdiction to interpret or enforce the provisions of this Compact.
- B. Nothing in subsection 15.A. shall be construed to waive, limit or restrict any remedy that is otherwise available to either party to enforce the provisions of this Compact or limit or restrict the ability of the parties to pursue, by mutual agreement, alternative methods of dispute resolution.

C. With respect to gaming not authorized by this Compact, nothing in this Compact shall be construed to limit the authority of the State or the federal government to take immediate action to enforce and prosecute the gambling laws of the State and the United States pursuant to 18 USC §1166 (Section 23 of IGRA).

SECTION 16. INTEGRATION

This compact is the complete and exclusive expression of the parties' intent.

EXECUTED as of the date and year above-written.

**TRIBAL-STATE COMPACT FOR REGULATION OF
CLASS III GAMING BETWEEN THE BURNS-PAIUTE TRIBE
AND THE STATE OF OREGON**

Appendix A

I. VIDEO LOTTERY GAMES

APPLICATION FOR CERTIFICATION OF A VIDEO LOTTERY TERMINAL

Section 177-100-070

- (1) A manufacturer shall not distribute a video lottery game or terminal for placement at the Gaming Facility unless the manufacturer and the game have been approved and the terminal has been certified by the State of Oregon. Only approved manufacturers may apply for certification of a video lottery terminal.
- (2) The manufacturer shall supply the Tribes and the State with a guideline and time table for accomplishing tasks involved in the acceptance and testing of the video lottery terminals. This includes all system functionality and communication of all information to and from the video lottery terminals, if any.
- (3) The manufacturer must provide a person to work with the Tribes and the State as needed in establishing, planning, and executing acceptance tests. Manufacturer assistance may also be requested in trouble-shooting communication and technical problems that are discovered when video lottery terminals are initially installed.
- (4) The manufacturer must submit terminal illustrations, schematics, block diagrams, circuit analysis, technical and operation manuals, program source codes and hexadecimal dumps (the compiled computer program represented in base 16 format), and any other information required by the Tribes and the State for purposes of analyzing and testing the video lottery terminal.
- (5) Testing of video lottery terminals will require working models of a video lottery terminal, associated required equipment, documentation described above to be transported to locations the Tribes and the State designate for testing, examination and analysis. The manufacturer shall pay all costs of any testing, examination, analysis, and transportation of the video lottery terminals. The testing, examination, and analysis of the video lottery terminals may include entire

dismantling of the video lottery terminal and some tests that may result in damage or destruction to one or more electronic components of the video lottery terminal. The Tribes or the State may require that the manufacturer provide specialized equipment or the services of an independent technical expert to test the video lottery terminal.

- (6) All video lottery terminal manufacturers must submit all hardware, software, and test equipment necessary for testing of their video lottery terminals.
- (7) Hardware that does not meet the standards of the Compact, its appendices, the Tribes and the State shall not be acceptable.

TRIBAL GAMING INVENTORY DECAL

Section 177-100-080

- (1) Each video lottery terminal certified for placement in the Gaming Facility shall display a Tribal Gaming Inventory Decal and must conform to the exact specifications of terminal prototypes tested and certified by the State.
- (2) No persons other than authorized Tribal or State personnel or their agents may affix or remove a Tribal Gaming Inventory Decal. The placement of the Tribal Gaming Inventory Decal represents that the terminal has been certified, inspected, and approved for operation in the State. The placement of the Tribal Gaming Inventory Decal on any equipment by the Tribal Gaming Commission represents that the terminal has been certified, inspected and approved for operation in the State and shall constitute documentation that the certification has been and will be kept on file by the Tribes. No persons other than authorized tribal personnel may affix or remove the Tribal Gaming Inventory Decal.
- (3) No terminal may be transported off Tribal land until the Tribal Gaming Inventory Decal has been removed.
- (4) A terminal shall not be moved out of the Gaming Facility without prior notification to the State.

EXTERNAL TERMINAL SPECIFICATIONS

Section 177-100-090

- (1) Terminals may publicly display information only on screen or housing that has been approved by the Tribes.
- (2) All information required for external display must be kept under glass or another transparent substance and at no time may stickers or other removable devices be placed on the terminal face.
- (3) Age restriction shall clearly be shown on the face of the terminal ("No person under 21 years of age may play").
- (4) Coin drops and non-video slot machines are prohibited.
- (5) Casino-style attract features shall be restricted but not prohibited.

PROCUREMENT OF TERMINALS

Section 177-100-095

- (1) Terminals to be located and operated within the State of Oregon shall be procured only by the Tribes.
- (2) The Tribes shall select and procure terminals from approved manufacturers pursuant to the Tribal-State Compact.

LOCATION OF AND ACCESS TO TERMINALS

Section 177-100-100

The terminals must be located in an area that is at all times monitored by the owner, manager, or employee of the manager to prevent access or play of video lottery terminals by persons under the age of 21.

DUTIES OF PRIMARY MANAGEMENT OFFICIAL

Section 177-100-110

- (1) No Primary Management Official or any employee of the Primary Management Official shall own or operate any gray machines.
- (2) The Primary Management Official shall not provide any form of financial assistance, or grant credit to enable players to play video lottery games.
- (3) The Primary Management Official shall attend all meetings, seminars, and training sessions required by the Tribes.
- (4) The Primary Management Official shall supervise its employees and their activities to ensure compliance with these rules.
- (5) The Primary Management Official shall assume responsibility for the proper and timely payment to players of video lottery game prizes.

DUTIES OF MANUFACTURERS

Section 177-100-130

Manufacturers, their representatives and agents shall have the following duties and constraints:

- (1) Promptly report to the Tribes any violation or any facts or circumstances that may result in a violation of these rules.
- (2) Provide immediate access to all records and the entire physical premises of the business for inspection at the request of the Tribes, the State or their auditors.
- (3) Provide the Tribes or State with keys to the logic area of each approved video lottery terminal model upon request.

TRANSPORTATION OF VIDEO LOTTERY TERMINALS WITHIN, INTO OR THROUGH THE STATE

Section 177-100-160

- (1) No person shall ship or transport video lottery terminals within or into the State, without first obtaining a written authorization or notification of approval from the State. Transporting or shipping within the State means the starting point and termination point of a trip are both within the boundaries of the State. Transportation or shipping into the State means the starting point is outside the State and terminates in the State.
- (2) No person shall ship or transport video lottery terminals through the State without first obtaining a written authorization from the nearest port of entry immediately upon arrival in the State.
- (3) The written authorization required under Subsections (1) and (2) of this rule shall include:
 - (a) The serial number of each terminal being transported;
 - (b) The full name and address of the person or establishment from which the terminals are obtained;
 - (c) The full name and address of the person or venue to whom the machines are being sent or transported; and
 - (d) The dates of shipment or transport within, into or through the State.
- (4) The written authorization shall accompany, at all times, the terminal or terminals in transport.

II. GENERAL VIDEO LOTTERY GAME RULES

AUTHORIZED VIDEO LOTTERY GAMES

Section 177-200-000

- (1) Video lottery terminals may offer any video lottery game that satisfies the elements of prize, chance and consideration as described in Op. Atty. Gen. No. 6336, September 25, 1989.
- (2) A video lottery terminal may offer one or more of the authorized video games.

GAME REQUIREMENTS

Section 177-200-010

- (1) Each game must display the amount wagered and the amount awarded for the occurrence of each possible winning occurrence based on the number of tickets wagered.
- (2) Each game must provide a method for players to view payout tables.

TICKET PRICE

Section 177-200-015

Except as limited by the terms of the Compact, the price of a ticket for all video lottery games shall be determined by the Tribes.

PAYMENT OF PRIZES

Section 177-200-020

No payment for prizes awarded on a terminal may be made unless the cash slip meets the following requirements:

- (1) It is fully legible and meets all the Tribes' security requirements.
- (2) It must not be mutilated, altered, unreadable, or tampered with in any manner.
- (3) It must not be counterfeit in whole or in part.

(4) It has been presented by a person authorized to play under these rules.

METHOD OF PAYMENT

Section 177-200-030

The Primary Management Official shall designate employees authorized to redeem cash slips during the Tribes' business hours of operation. Prizes shall be immediately paid in cash or by check when a player presents a cash slip for payment meeting the requirements of these rules. No prizes may be paid in tokens or chips.

REQUIREMENTS FOR RANDOMNESS TESTING

Section 177-200-050

Each video lottery terminal must have a random number generator that will determine the occurrence of a specific card or a specific number to be displayed on the video screen. A selection process will be considered random if it meets the following requirements.

- (1) Each card position, symbol position or, in the case of Keno, each number position satisfies the 99 percent confidence limit using the standard "Chi-squared analysis." "Chi-squared analysis" is the sum of the squares of the difference between the expected result and the observed result. "Card position" means the first card dealt, second card dealt, in sequential order. "Number position" means first number drawn, second number drawn in sequential order, up to the 20th number drawn.
- (2) Each card position, symbol position, or number position does not produce a significant statistic with regard to producing patterns of occurrences. Each card or number position will be considered random if it meets the 99 percent confidence level with regard to the "run test" or any similar pattern testing statistic. The "run test" is a mathematical statistic that determines the existence of recurring patterns within a set of data.
- (3) Each card position, symbol position, or number position is independently chosen without regard to any other card or number drawn within that game play. The test is the "correlation test." Each pair of card or number positions is considered random if they meet the 99 percent confidence level using standard correlation analysis.

- (4) Each card position, symbol position, or number position is independently chosen without reference to the same card or number position in the previous game. This test is the "serial correlation test." Each card or number position is considered random if it meets the 99 percent confidence level using standard serial correlation analysis.
- (5) The random number generator and selection process must be impervious to influences from outside devices including, but not limited to, electromagnetic interferences, electrostatic discharge and radio frequency interfaces.

**TRIBAL-STATE COMPACT FOR REGULATION OF
CLASS III GAMING BETWEEN THE BURNS-PAIUTE TRIBE
AND THE STATE OF OREGON**

Appendix B

KENO DESCRIPTION

DEFINITIONS

Section 177-99-000

For the purposes of Keno, the following definitions apply unless the context requires a different meaning or is otherwise inconsistent with the intention of the rules adopted by the Oregon State Lottery Commission.

- (1) "Exchange ticket" means the ticket issued to replace a consecutive game ticket that is validated before the last game on the ticket.
- (2) "Game" means the opportunity provided to a player to win a prize.
- (3) "Game slip" means the form used to indicate a player's selections.
- (4) "Spot" means the amount of numbers a player may play per game.
- (5) "Winning numbers" means the twenty (20) numbers from one (1) to eighty (80) which are randomly selected for each game.
- (6) "Keno runner" means an individual who picks up and delivers the Keno tickets that are written by customers in the gaming facility.
- (7) "Keno writer" means an individual stationed at the Keno counter who processes received tickets from either the customer or Keno runner.

GAME DESCRIPTION

Section 177-99-010

A Keno ticket has the numbers 1 through 80 on it. For each game a player may select from 1 to 20 numbers or spots. Twenty numbers are selected or drawn randomly. Prizes

are awarded based on the total amount of winning numbers matched by a player for the number of spots played for that game.

PLAY RULES

Section 177-99-020

- (1) To play, a player must use a game slip.
- (2) The player must mark the amount of spots to be played. A player can pick from one (1) to twenty (20) spots per game slip. A player may also play a "way ticket." A way ticket is the equivalent of playing multiple Keno tickets, but marking only one ticket.
- (3) The player must mark the number of dollars to be wagered per game and/or per way.
- (4) The player may then select the spots to be played by one of two methods. The player may mark the player's own selections on the game slip; if this method is used, the number of spots marked on the game slip must equal the number of spots that were selected to play. The other method of play is to select "Quick Pick", the number of spots randomly generated by the computer will match the number of spots indicated by the player.
- (5) The player shall indicate the number of consecutive games to be played: 1, 2, 3, 4, 5, 10, 20, 50 or 100.
- (6) The player shall present the completed game slip and the amount wagered either to a Keno runner or directly to the Keno counter for processing by the Keno writer. The cost of the ticket is equal to the amount wagered times the number of ways you are playing the ticket times the number of consecutive games indicated by the player. For example, if \$2 per game is wagered on a regular (one-way) ticket for 5 consecutive games, the total cost is \$10. If the same ticket is played "3 ways" the cost is \$30.
- (7) Minimum and maximum wagers will be set by the Tribal Gaming Commission.

CANCELLATION OF TICKETS

Section 177-99-030

A game ticket may be canceled or voided provided it is canceled from the system prior to the start of the game.

DETERMINATION OF WINNERS

Section 177-99-040

- (1) Keno tickets will be sold only during the hours of operation of the gaming facility. The selection of winning numbers shall take place at established intervals.
- (2) Winning number combinations shall be generated at the established intervals through the use of a computer-driven random number generator or conventional Keno blower mechanism. The number generating device shall meet the requirements of the Tribal-State Compact pertaining to contracts with manufacturers and suppliers, security, terminal specifications, equipment testing, procurement, duties of manufacturer and requirements for randomness testing.
- (3) The Tribal Gaming Commission shall establish the procedures for the operation and security of the numbers generation equipment.

PRIZE STRUCTURE

Section 177-99-050

- (1) Published payoff schedules shall be made available to the public at all times throughout the facility and in a conspicuous place immediately adjacent to the game.
- (2) A player is eligible to receive only the highest prize per game played on a ticket.

TICKET VALIDATION REQUIREMENTS

Section 177-99-060

- (1) After the numbers are drawn, the manager will review all inside (house copy) tickets and pull all winning tickets.
- (2) A master ticket to verify winners will be produced. The master ticket will have the winning numbers hole punched. This facilitates the verification of the customer's tickets.

**TRIBAL-STATE COMPACT FOR REGULATION OF
CLASS III GAMING BETWEEN THE BURNS-PAIUTE TRIBE
AND THE STATE OF OREGON**

APPENDIX C

HOUSE BANKED BLACKJACK

I. DEFINITIONS

As used in this Amendment and Appendix the following definitions shall apply:

Blackjack. "Blackjack" is a card game in which the object of the game is to accumulate cards with a total count nearer to 21 than that of the dealer.

Industry Standard. "Industry standard" refers to standards accepted or approved by the Nevada Gaming Control Board and the Nevada Gaming Commission. If the Nevada Gaming Control Board and Nevada Gaming Commission have no accepted or approved standard, "industry standard" refers to the commonly used practice in the gaming industry in the State of Nevada.

II. ADOPTION OF RULES FOR HOUSE BANKED BLACKJACK

A. The Tribal Gaming Commission shall adopt rules to govern the conduct of house banked blackjack at the gaming facility. Current copies of the game rules in effect shall be provided to the State. The rules shall include:

1. Procedures of play
2. Minimum and maximum permissible wagers
3. Payout on each form of wager
4. Procedures to be followed on occurrence of irregularities in play
5. Prohibitions on side betting between and against player and against the house
6. Hours of operation

Summaries of the rules for the method of play and payouts on winning bets shall be visibly displayed in the gaming facility and betting limits applicable to any gaming station shall be displayed at such gaming station.

B. The Tribal Gaming Commission shall also adopt specifications (may be provided by the equipment manufacturer or supplier) applicable to gaming equipment for:

1. Physical characteristics of chips; and
2. Physical characteristics of the following:
 - a. Cards (including procedures for receipt and storage)
 - b. Blackjack tables
 - c. Blackjack layouts
 - d. Dealing shoes (including procedures for receipt and storage)
 - e. Such other equipment as may be required for use in the game.

C. The Tribal Gaming Commission shall establish and provide to the State for review the rules and procedures for use of drop boxes at each gaming station to include: security, transportation to and from gaming stations, storage, counting and recording contents.

D. The Tribal Gaming Commission shall establish and provide to the State the duties, responsibilities and operating procedures for supervisors, pit bosses, floor managers, security and surveillance personnel.

III. INTERNAL CONTROLS

The Tribal Gaming Commission shall develop rules, policies, procedures and regulations for house banked blackjack, consistent with industry standards, that include provisions for the following:

1. Dealer Qualifications and Training Procedures
2. Shuffling, Cutting and Dealing Procedures
3. Specific Game Procedures & Rules
4. House Bank Rules (stake/chair or table rental if any)
5. Bet/Wager Limit By Table or Game
6. Card Inventory, Security, and Storage
7. Replacing Decks
8. Destruction of Used Decks
9. Qualifications and Training for Floor Supervisors and Pit Bosses
10. Chips
 - a. Denominations
 - b. Storage and Security
 - c. Table Inventory
 - d. Replacement Procedures (changing chip design)
 - e. Payment Procedures for Replaced Chips
11. Accepting Tips by Dealers

12. Federal and State Tax Reporting
13. Distributing gaming chips to gaming stations
14. Procedures for opening and closing gaming stations
15. Procedures for removing chips and coins from gaming stations
16. Table Identification

IV. TRAINING

A. The Tribal Gaming Commission shall require each blackjack supervisor, each pit boss, each blackjack dealer and all surveillance personnel to be trained either by a training school, academy or college recognized under industry standards or through an in-house training program such that the supervisor, pit boss, dealer or surveillance employee has the knowledge and skills required under industry standards for the job function that employee performs.

B. If blackjack dealers are trained through an in-house training program, the Tribes and State must agree that the training program meets the following minimum standards:

1. A minimum of 96 hours of instruction.
2. The instruction shall consist of a combination of lecture and laboratory.
3. The instruction shall be provided by an instructor licensed by the Tribal Gaming Commission.
4. The curriculum must be designed to provide students with the knowledge and skills necessary to satisfy entry level requirements common in the industry.

C. Each blackjack supervisor, pit boss and surveillance officer, shall receive training sufficient to meet industry standards in the areas of game protection, player money management and betting, card counting, and detection of other cheating methods.

D. The Tribal Gaming Commission may license blackjack trainers. At a minimum those licensees shall demonstrate sufficient skills, and meet minimum requirements that are consistent with industry standards, in the area of house banked blackjack. The Gaming Commission shall impose appropriate requirements for trainer licensing, such as graduation from a training school, academy or college recognized by the industry as having expertise in the areas of casino management and house banked blackjack, or an acceptable substitute of actual experience and references and a demonstrated ability to teach blackjack dealing skills and/or blackjack theory and games protection.

E. Training standards and programs shall be submitted to the State for review and comment. If the State determines that the Tribes' training standards or programs do not meet industry standards, or that the standards are not met in dealer or supervisor training, dispute resolution may be initiated.

V. SURVEILLANCE SYSTEMS

A. SURVEILLANCE SYSTEMS (GENERAL)

1. The purposes of a gaming facility surveillance system is to safeguard assets, to deter, detect and prosecute criminal acts, and to maintain public confidence and trust that Tribal gaming is conducted honestly and free of criminal elements and activity.
2. The Tribal Gaming Commission shall develop a surveillance system plan, and install, maintain and operate the gaming facility surveillance system in accordance with the standards set forth in this Appendix. The surveillance system plan shall be approved by the Tribal Gaming Commission if it satisfies the minimum standards.
3. The Tribal Gaming Commission shall submit the surveillance system plan to the State for review within 30 days after the date of execution of this amendment.
4. The plan shall include a description of all equipment utilized in the surveillance system; a blueprint or diagram that shows all of the areas to be monitored and the placement of surveillance equipment in relation to the activities being observed; a description of the procedures utilized in the operation of the gaming facility surveillance system; a description of the qualifications, training, and procedures of surveillance personnel; organizational reporting structure for surveillance personnel; and any other information required by the standards set forth in this Appendix.
5. The State shall review the proposed surveillance system plan and advise the Tribal Gaming Commission whether the minimum standards are satisfied. The State shall review the installation of the surveillance system when a review and inspection is performed. The State shall advise the Tribal Gaming Commission whether the surveillance system has been installed, maintained, and operated according to the minimum standards. The Tribe agrees that the surveillance system will be altered as necessary to meet the minimum standards. If the Tribe currently has a surveillance system in place, the surveillance plan may use a combination of current equipment and new to meet the standards, if there is no compromise of picture and recording quality.

6. In addition to the access granted under section 8.B. of the Compact, the State may review the operation of the surveillance system at least twice each year during an announced compliance audit. The State shall have access at any time to all surveillance records, tapes, reports and monitoring rooms at any time for the purpose of monitoring compliance with minimum standards and to confirm gaming integrity or security.

7. At the completion of any random or scheduled inspection the State will report its findings concerning the surveillance system to the Tribal Gaming Commission. The Tribe and the State agree that the results of the inspection are for the internal use of the Tribe and the State. To the extent allowed under Oregon law, the State agrees not to disclose the inspection results to anyone other than the Tribal Gaming Commission unless such disclosure is necessary for resolution of a dispute pursuant to the procedures in Section 15 of the Compact, or to provide evidence for a criminal prosecution.

8. The Tribe shall separate management of the functions of security and surveillance within the gaming facility.

9. The State shall perform a background investigation on all personnel employed as surveillance personnel, as provided in section 6 of the compact.

B. SURVEILLANCE SYSTEMS MINIMUM STANDARDS

1. SURVEILLANCE SYSTEM EQUIPMENT

- a. The surveillance system equipment must be able to identify each player, the dealer, and be of sufficient resolution and clarity to read individual cards and money denomination.
- b. The surveillance system shall be a combination of fixed cameras and pan-tilt-zoom (PTZ).
- c. The cameras and monitors may be either black and white, color or a combination of both. (The State recommends, but does not require, a combination of black/white and color.)
- d. The primary surveillance room and monitors must have override capabilities.
- e. Gaming Facility management shall establish communications systems on the gaming floor that are capable of immediately alerting surveillance personnel.

- f. Telephones on the gaming floor shall have the capability of a direct line or extension to the surveillance personnel.
 - g. Surveillance personnel in the surveillance room shall have radio communication with security personnel if security officers have radio communication with each other.
 - h. Surveillance equipment shall include a means by which surveillance personnel may observe and videotape all money transfers between the cashier and the gaming floor as transfers occur. The surveillance plan shall provide a means by which surveillance personnel can verify the locations, table number, time, date, and amount of transfers, and to whom the transfers were made.
 - i. All monitors being recorded must display time and date on screen
 - j. All fixed cameras will be continuously taped/all PTZ cameras will have the capability for taping of what is being monitored.
2. SURVEILLANCE SYSTEM EQUIPMENT LOCATIONS. At a minimum, surveillance cameras must provide:
- a. Main cashier
 - (1) Overview of cage working area
 - (2) Ability to identify patrons and employees
 - (3) PTZ or fixed camera allowing identification of cash transactions at each cash drawer
 - (4) Camera over file window

- b. Soft count room
 - (1) Clear view of entire count room
 - (2) Camera directly over count table to identify dollar amounts
 - (3) Clear view of vault
 - (4) Clear view of drop box
 - (5) Ability to read counting scale/meter

- c. Hard count room (if used)
 - (1) Clear view of entire count room
 - (2) Clear view of wrapping and/or counting machine

- d. Pit
 - (1) Ability to determine chip value and card value
 - (2) Clear view of playing surface
 - (3) Ability to identify patron, employee and table number

- e. Card Game Tables
 - (1) Fixed camera at each table
 - (2) Same view and identification requirements as pit cameras

EXHIBIT I

DESCRIPTION OF GAMING LOCATION

That certain parcel of land near Burns, Oregon, consisting of ten acres, described as the northwest quarter of the northwest quarter of the northwest quarter, section 13, township 23 South, range 30 East, Willamette Meridian, Harney County, Oregon, which was conveyed on March 2, 1928, by warranty deed from the Egan Land Company, an Oregon corporation, to the United States of America.

DESCRIPTION OF GAMING FACILITY

The Gaming Facility shall be a building of approximately 25,000 square feet, consisting of the following major areas: Bingo Hall, Class III Gaming Room, Kitchen, and dining areas, Administration area, and public areas. The Tribe agrees to provide the State with a more specific description of the Gaming Facility after the Tribe has developed a specific building plan.

The Gaming Facility will be as illustrated in this Exhibit, or an alternate design similar in all material respects.

THE STATE OF OREGON**

PREAMBLE.

This Compact is made between the State of Oregon (hereinafter "State") and the Confederated Tribes of Coos, Lower Umpqua and Siuslaw Indians (hereinafter the "Tribes") and pertains to Class III gaming to be conducted on lands that are held in trust for the Tribes that are subject to the provisions of the Indian Gaming Regulatory Act of October 17, 1988 (Public Law 100-497), 25 U.S.C. 2701 et seq. ("IGRA"). The terms of this Compact are unique to these Tribes and reflect the fact that the lands that are the subject of this compact are subject to IGRA.

SECTION 1. TITLE.

THIS Compact is entered into this ___ day of December, 1994, by and between The Confederated Tribes of Coos, Lower Umpqua and Siuslaw Indians, a federal-ly recognized Tribe of Indians, and the State of Oregon.

SECTION 2. FINDINGS.

WHEREAS, the Tribes are federally recognized Indian Tribes, pursuant to P.L. 98-487, and are the beneficial owners of, and local government for, the trust lands of the Tribes located in the State of Oregon;

AND WHEREAS, the State and the Tribes are separate sovereigns and each respects the laws of the other sovereign;

AND WHEREAS, the public policy of the State is reflected in the Constitution, statutes and administrative rules of the State, and the Constitution provides that the "Legislative Assembly has no power to authorize, and shall prohibit casinos from operation in the State";

AND WHEREAS, the United States Congress has enacted IGRA which declares federal policy and provides a statutory basis for operation of gaming by the Tribes as a means of promoting tribal economic development, self-sufficiency, and strong tribal government;

AND WHEREAS, the Tribes exercise authority within the Confederated Tribes of the Coos, Lower Umpqua and Siuslaw Indian Reservation, (hereafter referred to as "Indian Lands");

AND WHEREAS, the Tribes have represented that the gaming location is on land described in 25 USC §2719;

AND WHEREAS, IGRA is intended to provide a statutory basis for regulation of gaming by the Tribes adequate to shield them from organized crime and other corrupting influences, to ensure that the Tribes are the primary beneficiary of the gaming revenues, and to ensure that gaming is conducted fairly and honestly by both the operators and players;

AND WHEREAS, Congress has declared that it is a principal goal of federal Indian policy to promote tribal economic development, tribal self-sufficiency and strong tribal government;

AND WHEREAS, IGRA provides for a system of joint regulation by Indian Tribes and the Federal government (to the exclusion of the State) of Class I and II gaming on Tribal lands as defined in IGRA;

AND WHEREAS, IGRA establishes a system of agreements between Indian Tribes and States for the regulation of Class III gaming as defined in that Act;

AND WHEREAS, IGRA provides that Class III gaming activities are lawful on Tribal lands only if such activities are (1) located in a state that permits such gaming for any purpose by any person, organization or entity, (2) authorized by tribal ordinance, and (3) conducted in accordance with a Tribal-State Compact;

AND WHEREAS, the Congressional intent in passing IGRA was to reaffirm a long and well-established principle of federal Indian law as expressed in the United States Constitution, reflected in federal statutes and articulated in decisions of the United States Supreme Court that unless authorized by an act of Congress, the jurisdiction of State governments does not extend to Tribal lands;

AND WHEREAS, IGRA does not extend State jurisdiction or the application of State laws for any purpose other than jurisdiction and application of State laws to gaming conducted on Tribal land as set forth in this Compact;

AND WHEREAS, Congress recognized a role for State public policy and State law in the regulation of Class III Gaming;

AND WHEREAS, nothing in the Tribal-State Compact shall be construed to extend to any other activities or as an abrogation of other reserved rights of the Tribes or of the Tribes' sovereignty;

AND WHEREAS, IGRA is intended to expressly preempt the field in the governance of gaming activities on Tribal lands;

AND WHEREAS, the Tribes are authorized to act through Resolutions adopted by their Tribal Council;

AND WHEREAS, the State of Oregon is authorized to act through the Governor of the State;

NOW THEREFORE, in consideration of the mutual undertakings and agreements herein set forth, the Tribes and the State enter into the following Compact:

SECTION 3. DEFINITIONS.

As used in this Compact, and in its Appendices and Exhibits:

- A. "Background investigation" means the security and financial history checks of an employee, licensee or applicant for Tribal contract for the operation of video lottery games or for the sale of lottery games to the tribe.
- B. "Certification" means the inspection process used by the Oregon State Lottery to approve video lottery game terminals and games.
- C. "Class III Gaming Contract" means a contract that involves Major, Minor, or Sensitive Procurements.
- D. "Class III Gaming Contractor" is any individual, business or other entity that applies for or is a party to a Class III Gaming Contract.
- E. "Controlling interest" means fifteen percent (15%) of the equity ownership of a company.

F. "Display" means the visual presentation of video lottery game features shown on the screen of a video lottery terminal.

G. "Gaming facility" means the building proposed to be constructed as of the date of execution of this Compact that is located on land to be included in the Tribes' Reservation at Coos Bay, Oregon, and specifically described in Exhibit I to the Compact. If the size of the Gaming Facility is expanded as otherwise provided in this Compact, the term "Gaming Facility" shall thereafter refer to the expanded facility.

H. "Gray Machine" means any electrical or electro-mechanical device, whether or not it is in working order or some act of manipulation, repair, adjustment or modification is required to render it operational that:
