(7) A student shall not be excluded from a post-secondary institution for failing to receive a required vaccine if the State Health Officer has determined that there is a vaccine shortage and that is the reason the student has not received the vaccine. Any vaccine that has been waived due to a vaccine shortage will be required at the next term or semester, once the shortage has been lifted.

(8) The local public health officer, after consultation with the Public Health Division, may allow a student to attend an educational institution without meeting the minimum immunization requirements in case of temporary local vaccine shortage.

(a) The local health department shall provide a letter signed by the local health officer to the affected student stating that the vaccine requirement is being postponed. The letter must give guidance to the post-secondary institution about when vaccine is expected to be available.

(b) A photocopied form letter signed by the local health officer may be used by the local health department when the shortage is expected to affect more than one student.

333-050-0140
Second Dose Measles in Community Colleges

(1) Each community college shall require that students involved in clinical experiences in allied health programs, practicum experiences in education and child care programs and membership on intercollegiate sports teams have two doses of measles vaccine prior to each student's participation. The requirement shall apply only to those students born on or after January 1, 1957, using procedures developed by the institutions.

(2) The following records may be accepted as adequate proof of two doses of measles vaccine:

(a) Written documentation by student, health care practitioner, or an authorized representative of the local health department of the month, day and year of each dose, within four days prior to, on or after the first birthday, with a minimum of 24 days between first dose and second dose;

(b) For students born prior to 1984, no available date for the first dose but written documentation by student, health care practitioner, or an authorized representative of the local health department of the month, day and year of the second dose in or after December, 1989;

(c) An unsigned record printout from the statewide immunization information system, ALERT IIS; or

(d) An unsigned record printout from a computer system approved by the Public Health Division as specified in OAR 333-050-0060(5).

(3) Each community college under the jurisdiction of the law shall include a medical and nonmedical exemption and immunity documentation. Signing for a nonmedical exemption requires documentation of a signature of a health care practitioner that the practitioner has reviewed with the student the risks and benefits of immunization or a certificate verifying that the student has completed a vaccine educational module approved by the Public Health Division.

(4) Each community college shall develop procedures to implement and maintain this requirement.

(5) The Public Health Division may conduct validation surveys to ensure compliance.

(6) A student shall not be excluded from a community college for failing to receive a required vaccine if the State Health Officer has determined that there is a vaccine shortage and that is the reason the student has not received the vaccine. Any vaccine that has been waived due to a vaccine shortage will be required at the next term or semester, once the shortage has been lifted.

(7) The local public health officer, after consultation with the Public Health Division, may allow a student to attend an educational institution without meeting the minimum immunization requirements in case of temporary local vaccine shortage.

(a) The local health department shall provide a letter signed by the local health officer to the affected student stating that the vaccine requirement is being postponed. The letter must give guidance to the community college about when vaccine is expected to be available.

(b) A photocopied form letter signed by the local health officer may be used by the local health department when the shortage is expected to affect more than one student.

DIVISION 52

WIC FARM DIRECT NUTRITION PROGRAM

333-052-0030
Program Overview

(1) The purpose of the Oregon Farm Direct Nutrition Program (Oregon FDNP or FDNP) is to:

(a) Provide locally grown, fresh, nutritious, unprepared fruits, vegetables, and cut culinary herbs to women, infants, and children, who participate in the special supplemental nutrition program for women, infants, and children (WIC) and to low income seniors; and

(b) Expand the awareness and use of farmers' markets and farm stands where consumers can buy directly from the farmer.

(2) The Oregon FDNP is administered by Oregon Health Authority (Authority) in partnership with the Oregon Department of Agriculture.

Stat. Auth.: ORS 413.500

Stats. Implemented: ORS 413.500

Hist.: PH 10-2006, f. & cert. ef. 6-5-06; PH 7-2008, f. & cert. ef. 4-3-08; PH 8-2012(Temp), f. & cert. ef. 6-11-12 thru 12-7-12; PH 15-2012, f. & cert. ef. 12-20-12

333-052-0040
Definitions

(1) "Adequate Participant Access" means there are authorized farmers sufficient for participant need.

(2) "Agreement" means a written legal document binding the market or farmer and the Authority to designated terms and conditions.

(3) "AAA" means Area Agency on Aging.

(4) "ADRC" means Aging and Disability Resource Connection.

(5) "APD" means Department of Human Services, Aging and People with Disabilities.

(6) "Authority" means the Oregon Health Authority.

(7) "Authorized" or "authorization" means an eligible farmer or farmers' market has met the selection criteria and signed an agreement with the Authority allowing participation in FDNP, and is not currently disqualified.

(8) "Check" means a negotiable financial instrument by which FDNP benefits are provided to participants.

(9) "CMP" means a civil money penalty, which is a monetary penalty imposed against the farmer for noncompliance of FDNP rules.

(10) "Disqualification" means the act of terminating the agreement of an authorized farmers' market, or farmer from the FDNP for noncompliance with program requirements.

(11) "Eligible foods" means fresh, nutritious, unprepared, locally grown fruits and vegetables and culinary herbs for human consumption. Eligible foods may not be processed or prepared beyond their natural state except for usual harvesting and cleaning processes. For example, checks cannot be used for honey, maple syrup, cider, nuts, seeds, plants, eggs, meat, cheese and seafood.

(12) "Farm Direct Nutrition Program" or "FDNP" means the Oregon Farm Direct Nutrition Program (Oregon FDNP), which is composed of the collective Senior Farm Direct Nutrition Program and WIC Farm Direct Nutrition Program, regulated by the United States Department of Agriculture, Food and Nutrition Services and administered by the State of Oregon.

(13) "Farmer" means an individual who owns, leases, rents or sharecrops land to grow, cultivate or harvest crops on that land.

(14) "Farmers' Market" means a group of farmers who assemble over the course of a year at a defined location for the purpose of selling their produce directly to consumers.

(15) "Farm Stand" means a location at which a farmer sells produce directly to consumers.

(16) "FDNP Participant" or "participant" means a senior participant or a WIC participant receiving FDNP benefits.

(17) "Locally grown" means grown in the state of Oregon or in the following counties of a contiguous state: California — Del Norte, Modoc, Siskiyou; Idaho — Adams, Canyon, Idaho, Owyhee, Payette, Washington; Nevada — Humboldt, Washoe; Washington — Asotin, Benton, Clark, Columbia, Cowlitz, Garfield, Klickitat, Pacific, Skamania, Wahkiakum, Walla Walla.

(18) "Local WIC agency" means the agency or clinic where a WIC participant receives WIC services and benefits.

(19) "Market" means a farmers' market that has a signed agreement with the Authority to participate in the FDNP.

(20) "Market Coordinator" means an individual designated by the farmers' market manager (or market board members) responsible for overseeing the market's participation in the FDNP.

(21) "Market Season" means the time period in which FDNP checks may be transacted as determined by the Authority.

(22) "Senior Farm Direct Nutrition Program (SFDNP)" means the Senior Farmers' Market Nutrition Program funded by USDA that provides senior participants with checks that can be used to buy eligible foods from an authorized farmer.

(23) "Senior Participant" means an individual who meets all the eligibility components of the program and who receives FDNP checks.

(24) "SNAP" means the Supplemental Nutrition Assistance Program of the Food and Nutrition Services of the United States Department of Agriculture.

(25) "Trafficking" means the buying or exchanging of FDNP checks for cash, drugs, firearms or alcohol.

(26) "USDA" means the United States Department of Agriculture.

(27) "Validating" means stamping the FDNP check in the designated box with the farmer identification number using the stamp provided by the Authority or a replacement stamp purchased by the farmer.

(28) "Violation" means an activity that is prohibited by OAR 333-052-0030 through 333-052-0090 and classified in OAR 333-052-0080 through 333-052-0130.

(29) "WIC" or "WIC program" means the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) authorized by Section 17 of the Federal Child Nutrition Act of 1966, as amended, 42 U.S.C.§1786.

(30) "WIC Farm Direct Nutrition Program (WIC FDNP)" means the Farmers' Market Nutrition Program funded by USDA that provides WIC participants with checks that can be used to buy eligible foods from an authorized farmer.

(31) "WIC participant" means any pregnant, breastfeeding, or postpartum woman, infant, or child who meets all of the eligibility components of the WIC FDNP and receives WIC FDNP checks.

333-052-0043
Senior Participant Eligibility and Benefits

(1) An individual is eligible for the Senior Farm Direct Nutrition Program (SFDNP) if the individual meets all of the following eligibility criteria on April 1 of the calendar year in which benefits are sought:

(a) Has income less than 138 percent of the Federal Poverty Level;

(b) Receives Medicaid or SNAP benefits;

(c) Is homeless or resides in their own home or rental property; and

(d) Is age 62 years or older.

(2) SFDNP benefits are limited and benefits will be distributed in an equitable manner but may not be distributed to all individuals who are eligible.

(3) The Authority shall inform eligible seniors each year of the available benefits and how the benefits will be distributed.

(4) SFDNP benefits are valid from June 1 through October 31 of the year in which benefits were issued.

(5) Lost or stolen SFDNP benefits will not be replaced.

(6) An individual who does not receive a benefit in any given year due to lack of sufficient funding to provide SFDNP benefits to all eligible seniors is not entitled to hearing rights.

333-052-0044
WIC Participant Eligibility and Benefits

(1) A WIC participant is eligible to receive WIC Farm Direct Nutrition Program (WIC FDNP) benefits if the participant meets all of the following eligibility criteria on the date of FDNP benefit issuance:

(a) Is currently receiving benefits under the WIC Program; and

(b) Belongs to any of the following WIC categories:

(A) A pregnant woman;

(B) A breastfeeding woman less than one year after delivery;

(C) A non-lactating post-partum woman less than six months after delivery;

(D) A child through the end of the month he or she turns five years of age; or

(E) An infant four months of age or older.

(2) WIC FDNP benefits are limited and benefits will be distributed in an equitable manner within participating local agencies but may not be distributed to all individuals who are eligible.

(3) The Authority will determine a standard benefit package per eligible individual and per family each year.

(4) WIC FDNP benefits will only be issued to the participant/caretaker in a face-to-face contact at the local agency

where WIC benefits are received, and the participant/caretaker must receive a FDNP orientation when receiving checks for the first time in the current year.

(5) WIC FDNP benefits are valid from June 1 through October 31 of the year in which benefits were issued.

(6) Lost or stolen WIC FDNP benefits will not be replaced.

(7) Individuals who are denied WIC FDNP benefits may appeal the denial, but shall not receive WIC FDNP benefits while awaiting the decision.

(8) WIC participants whose WIC FDNP benefits are terminated may appeal the termination of benefits and shall continue to receive WIC FDNP benefits until the hearing official reaches a decision or the expiration of the current FDNP season, whichever occurs first.

333-052-0050
Eligible Foods

(1) FDNP checks may be used to purchase only eligible foods.

(2) Ineligible items include, but are not limited to:

(a) Baked goods, cheeses, cider, crafts, dairy products, dried fruits, dried herbs, dried vegetables, eggs, flowers, fruit juices, honey, jams, jellies, meats, nuts, plants of any kind, potted herbs, seafood, seeds, and syrups.

(b) Fresh fruits, vegetables, and cut culinary herbs that are not locally grown.

333-052-0060
Farmer Participation

(1) Only authorized farmers may accept FDNP checks from participants in exchange for eligible foods. Authorized farmers may not accept checks from unauthorized farmers.

(2) In order to be eligible for participation in the FDNP, a farmer applicant must:

(a) Own, lease, rent or sharecrop land to grow, cultivate, or harvest fruits, vegetables and cut herbs in Oregon or a bordering county in a contiguous state to sell fresh at a farmers' market or farm stand;

(b) Complete the farmer application and return it to the Oregon Department of Agriculture to verify eligibility; and

(c) Agree to follow the terms and conditions of the farmer agreement.

(3) Applications will be used to determine authorization for FDNP.

(4) The Authority and the FDNP are not required to authorize all applicants.

(5) Any individual who purchases all the produce they plan to sell is considered a distributor and is not allowed to participate in the FDNP.

Stat. Auth.: ORS 413.500
Stats. Implemented: ORS 413.500

333-052-0065
Farmer Agreements

(1) A farmer application/agreement must be signed by a representative who has legal authority to obligate the farmer.

(2) The farmer agreement must include a requirement that the farmer comply with OAR 333-052-0030 to 333-052-0130, as applicable to farmers.

(3) The farmer application/agreement will be valid for no more than three years.

(4) Neither the Authority nor the farmer is obligated to renew the agreement.

333-052-0070
Farmers' Market Participation

(1) In order to be eligible for participation in the FDNP a farmers' market applicant must:

(a) Designate an individual to be the FDNP market coordinator who will be on-site during operating hours;

(b) Have a minimum of five FDNP-eligible farmers participating in the market each year;

(c) Operate on a consistent basis over the course of the season; and

(d) Agree to comply with all terms and conditions specified in the FDNP agreement.

(2) The Authority and the FDNP are not required to authorize all applicants.

333-052-0075
Farmers' Market Agreements

(1) A farmers' market application/agreement must be signed by a representative who has legal authority to obligate the market.

(2) The application/agreement must include a requirement that the market:

(a) Comply with OAR 333-052-0030 to 333-052-0130, as applicable to markets;

(b) Furnish the necessary personnel and services to conduct market activities; and

(c) Do all things necessary for or incidental to the performance of the work set forth in the application/agreement.

(3) The market application/agreement will be valid for one market season.

(4) Neither the Authority nor the market has an obligation to renew an agreement.

333-052-0080
Farmer Participation Requirements, Violations and Sanctions

(1) An authorized farmer must:

(a) Comply with FDNP requirements contained in 7 CFR 248 and 7 CFR 249 and the terms and conditions of the farmer application/agreement;

(b) Accept training on FDNP requirements and ensure that all individuals working in the farmer's stall(s) at the farmers' market(s) or farm stand(s) are trained;

(c) Accept FDNP checks:

(A) For eligible foods only; and

(B) Within the valid dates of the program.

(d) Prominently display the official FDNP sign provided by the Authority on each day of operation when at authorized farmers' markets or authorized farm stands;

(e) Provide FDNP clients with the full amount of product for the value of each FDNP check;

(f) Cooperate with staff from the Authority, the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and provide information that the Authority or the Oregon Department of Agriculture may require;

(g) Comply with all state or federal laws regarding non-discrimination, and applicable USDA instructions to ensure that no individual will, on the grounds of race, color, national origin, age, sex or handicap, be excluded from participation, be denied benefits, or be otherwise subjected to discrimination, under the FDNP;

(h) Ensure that FDNP shoppers receive equitable treatment, including the availability of produce that is of the same quality and no greater price than sold to other shoppers;

(i) Assure that all FDNP checks are stamped with the farmer's Authority-assigned identification number and properly endorsed before cashing or depositing at the farmer's financial institution;

(j) Deposit or cash FDNP checks at the authorized farmer's financial institution by the date determined by the Authority;

(k) Reimburse the Authority for FDNP checks that are improperly transacted;

(l) Respond to requests, implement corrective action, and comply with the terms in final orders as directed by the Authority;

(m) Not provide credit in exchange for FDNP checks;

(n) Not charge sales tax on FDNP check purchases;

(o) Not seek restitution from FDNP participants for a check not paid by the Authority;

(p) Not give cash back for purchases that amount to less than the value of a check (providing change);

(q) Not use FDNP checks for any purpose other than deposit or cash at their financial institution; and

(r) Not accept FDNP checks from unauthorized farmers.

(2) A farmer is in violation of the FDNP if the farmer:

(a) Fails to:

(A) Comply with FDNP rules and the terms and conditions of the farmer application/agreement;

(B) Accept training on FDNP requirements and ensure that all individuals working in the farmer's stall(s) at the farmers' market(s) or farm stand(s) are trained;

(C) Prominently display the official FDNP sign provided by the Authority on each day of operation when at authorized farmers' markets or authorized farm stands;

(D) Provide FDNP clients with the full amount of product for the value of each FDNP check;

(E) Comply with all state or federal laws regarding non-discrimination, and applicable USDA instructions to ensure that no individual will, on the grounds of race, color, national origin, age, sex or handicap, be excluded from participation, be denied benefits, or be otherwise subjected to discrimination, under the FDNP;

(F) Ensure that FDNP shoppers receive equitable treatment, including the availability of produce that is of the same quality and no greater price than sold to other shoppers;

(G) Assure that all FDNP checks are stamped with the farmer's Authority-assigned identification number and properly endorsed before cashing or depositing at the farmer's financial institution;

(H) Deposit or cash FDNP checks at the authorized farmer's financial institution by the date determined by the Authority;

(I) Reimburse the Authority for FDNP checks that are improperly transacted;

(J) Cooperate with staff from the Authority, the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and provide information that the Authority or the Oregon Department of Agriculture may require;

(K) Respond to requests, implement corrective action, or comply with the terms in final orders as directed by the Authority.

(b) Accepts FDNP checks:

(A) For ineligible foods;

(B) For invalid dates; or

(C) From an unauthorized farmer.

(c) Provides credit in exchange for FDNP checks;

(d) Charges sales tax on FDNP check purchases;

(e) Seeks restitution from FDNP participants for a check not paid by the Authority;

(f) Gives cash back for purchases that amount to less than the value of a check (providing change);

(g) Uses FDNP checks for any purpose other than deposit or cash at their financial institution.

(3) Farmer sanctions:

(a) The Authority may issue a notification of non-compliance to an authorized farmer for an initial incident of:

(A) Accepting FDNP checks for ineligible foods;

(B) Failing to prominently display the official sign provided by the Authority, each market day when at authorized farmers' markets or authorized farm stands;

(C) Failing to provide FDNP clients with the full amount of product for the value of each FDNP check;

(D) Failing to ensure that FDNP shoppers receive equitable treatment, including the availability of produce that is of the same quality and no greater price than sold to other shoppers;

(E) Failing to reimburse the Authority for FDNP checks that are improperly transacted;

(F) Charging sales tax on FDNP check purchases;

(G) Seeking restitution from FDNP participants for checks not paid by the Authority;

(H) Giving cash back for purchases less than the value of the checks (providing change);

(I) Accepting FDNP checks from an unauthorized farmer;

(J) Failing to respond to requests, implement corrective action, or comply with the terms in final orders as directed by the Authority;

(K) Using FDNP checks for any purpose other than deposit or cash at the authorized farmer's financial institution; and

(L) Failing to cooperate with staff from the Authority, the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and failing to provide information that the Authority or the Oregon Department of Agriculture may require.

(b) The Authority may disqualify a farmer for four season months, which may cross from the year during which the violation occurred into the following year for an initial incident of providing credit in exchange for FDNP checks.

(c) The Authority may disqualify a farmer for four season months, which may cross from the year during which the violation occurred into the following year, for second or subsequent incidents of:

(A) Accepting FDNP checks for ineligible foods;

(B) Failing to prominently display the official sign provided by the Authority, each market day when at authorized farmers' markets or authorized farm stands;

(C) Failing to provide FDNP clients with the full amount of product for the value of each FDNP check;

(D) Failing to ensure that FDNP shoppers receive equitable treatment, including the availability of produce that is of the same quality and no greater price than sold to other shoppers;

(E) Charging sales tax on FDNP check purchases;

(F) Seeking restitution from FDNP participants for checks not paid by the Authority;

(G) Using FDNP checks for any purpose other than deposit or cash at the authorized farmer's financial institution;

(H) Charging FDNP participants higher prices than other customers;

(I) Giving cash back for purchases less than the value of the checks (providing change);

(J) Accepting FDNP checks from an unauthorized farmer; and

(K) Failing to respond to requests, implement corrective action, or comply with the terms in final orders as directed by the Authority.

(d) The Authority may not authorize farmers to accept FDNP checks the season following second or subsequent incidents of:

(A) Failing to reimburse the Authority for FDNP checks that are improperly transacted; or

(B) Failing to cooperate with staff from the Authority or the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and failing to provide information required to be submitted by the Authority or the Oregon Department of Agriculture.

(e) The Authority may immediately disqualify a farmer from the FDNP program for the remainder of the current season and the entire following season for an initial incident of:

(A) Trafficking in FDNP checks (exchanging checks for cash, controlled substances, tobacco products, firearms or alcohol) in any amount; or

(B) A USDA substantiated violation of laws regarding non-discrimination, and applicable USDA instructions.

(f) FDNP checks that are not stamped with the farmer's Authority-assigned identification number will be returned to the farmer without payment;

(g) FDNP checks redeemed outside the dates determined by the Authority will not be reimbursed; and

(h) FDNP checks redeemed by a farmer who has not been authorized will not be reimbursed.

(4) Farmers who do not comply with FDNP requirements are subject to sanctions, including civil money penalties, in addition to, or in lieu of, disqualification.

(a) Prior to disqualifying a farmer, the Authority may determine if disqualification of the farmer would result in inadequate participant access. If the Authority determines that disqualification of the farmer would result in inadequate participant access, the Authority may impose a CMP in lieu of disqualification in the amount of 5 percent of the farmer's previous season FDNP sales or $250, whichever is greater.

(b) The Authority must give written notice to a farmer of an action proposed to be taken against a farmer, not less than 15 days before the effective date of the action. The notice must state what action is being taken, the effective date of the action, and the procedure for requesting a hearing.

(c) A farmer that has been disqualified from the FDNP may reapply at the end of the disqualification period.

(d) The Authority may accept a farmer's voluntary withdrawal from the program as an alternative to disqualification. If a farmer chooses to withdraw in lieu of disqualification, the farmer may not apply for participation until the following year.

(e) The Authority will not reimburse farmers who have been disqualified or have withdrawn in lieu of disqualification.

(f) Civil money penalties must be paid to the Authority within the time period specified in the Notice.

(5) A farmer who commits fraud or abuse of the FDNP is subject to prosecution under applicable federal, state or local laws.

Market Participation Requirements, Violations and Sanctions

(1) An authorized market must:

(a) Comply with FDNP requirements contained in 7 CFR 248 and 7 CFR 249, FDNP rules, and the terms and conditions of the market application/agreement;

(b) Ensure that an authorized farmer is present at the market during all market hours of operation;

(c) Accept training on FDNP procedures and provide such training to market staff including volunteers and eligible farmers on behalf of the Authority;

(d) Cooperate in the Authority investigations of authorized farmers who:

(A) Redeem checks for ineligible foods;

(B) Charge FDNP customers higher prices than other customers;

(C) Accept checks outside the Authority determined market season;

(D) Give change for food purchased with FDNP checks (providing change);

(E) May not meet the definitions of "eligible farmer;" and

(F) Abuse any other program procedures.

(e) Comply with all state or federal laws regarding non-discrimination, and applicable USDA instructions to ensure that no individual will, on the grounds of race, color, national origin, age, sex or handicap, be excluded from participation, be denied benefits, or be otherwise subjected to discrimination, under the FDNP;

(f) Cooperate with staff from the Authority or the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and provide information required to be submitted by the Authority or the Oregon Department of Agriculture may require; and

(g) Respond to requests, implement corrective action, and comply with the terms in final orders as directed by the Authority.

(2) A market is in violation of the FDNP rules if the market fails to:

(a) Ensure that an authorized farmer is present at the market during all market hours of operation;

(b) Accept training on FDNP procedures and provide such training to market staff including volunteers and eligible farmers on behalf of the Authority;

(c) Cooperate in the Authority investigations of authorized farmers;

(d) Comply with all state or federal laws regarding non-discrimination, and applicable USDA instructions to ensure that no individual will, on the grounds of race, color, national origin, age, sex or handicap, be excluded from participation, be denied benefits, or be otherwise subjected to discrimination, under the FDNP;

(e) Cooperate with staff from the Authority or the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and provide information that the Authority or the Oregon Department of Agriculture may require;

(f) Notify the Authority when and if the market ceases operation prior to the end of the authorization period;

(g) Be accountable for the actions of market staff, including volunteers, in the provision of foods and related activities; and

(h) Respond to requests, implement corrective action, and comply with the terms in final orders as directed by the Authority.

(3) Market sanctions:

(a) The Authority may issue a notice of non-compliance to an authorized market for an initial incident of failing to:

(A) Ensure that an authorized farmer is present at the market during all market hours of operations;

(B) Accept training on FDNP procedures and provide such training to market staff including volunteers and eligible farmers on behalf of the Authority;

(C) Cooperate in the Authority investigations of authorized farmers;

(D) Cooperate with staff from the Authority, the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and provide information that the Authority or the Oregon Department of Agriculture may require; and

(E) Respond to requests, implement corrective action, and comply with the terms in final orders as directed by the Authority.

(b) A market may not be authorized the following year if, within the current season, there is a second or subsequent occurrence of failing to:

(A) Ensure that an authorized farmer is present at the market during all market hours of operations;

(B) Accept training on FDNP procedures and provide such training to market staff including volunteers and eligible farmers on behalf of the Authority;

(C) Cooperate in the Authority investigations of authorized farmers;

(D) Cooperate with staff from the Authority, the Oregon Department of Agriculture, or their designees in monitoring for compliance with program requirements and failing to provide information required to be submitted by the Authority or the Oregon Department of Agriculture; and

(E) Respond to requests, implement corrective action, and comply with the terms in final orders as directed by the Authority.

(c) The Authority may immediately disqualify a market from the FDNP program for the remainder of the current season and the entire following season for an initial incident of a USDA substantiated violation of laws regarding non-discrimination, and applicable USDA instructions.

(4) Markets who do not comply with FDNP requirements are subject to sanctions.

(a) The Authority must give written notice to a market of an action proposed to be taken against a market, not less than 15 days before the effective date of the action. The notice must state what action is being taken, the effective date of the action, and the procedure for requesting a hearing;

(b) A market that has been disqualified from the FDNP may reapply at the end of the disqualification period; and

(c) The Authority may accept a market's voluntary withdrawal from the program as an alternative to disqualification. If a market chooses to withdraw in lieu of disqualification, the market may not apply for participation until the following year.

(5) A market that commits fraud or abuse of the FDNP is subject to prosecution under applicable federal, state or local laws.

Oregon Health Authority Responsibilities

The Authority must:

(1) Administer the Oregon Farm Direct Nutrition Program in accordance with 7 CFR 248 (Farmers' Market Nutrition Program) and 7 CFR 249 (Senior Farmers' Market Nutrition Program);

(2) Distribute or facilitate distribution of FDNP checks to participants;

(3) Assure payment to farmers for properly redeemed FDNP checks;

(4) Assure that training is provided to new market managers and farmers who are new to the FDNP;

(5) Assure that "Oregon Farm Direct Nutrition Checks Welcome Here" signs are provided to all authorized farmers; and

(6) Monitor authorized farmers and markets for compliance with FDNP rules and agreements, and if necessary, impose sanctions.

Stat. Auth.: ORS 413.500
Stats. Implemented: ORS 413.500
Hist.: PH 10-2006, f. & cert. ef. 6-5-06; PH 7-2008, f. & cert. ef. 4-3-08; PH 8-2012(Temp), f. & cert. ef. 6-11-12 thru 12-7-12; PH 15-2012, f. & cert. ef. 12-20-12

333-052-0110
Monitoring

(1) The Authority must monitor farmers and markets for compliance with applicable laws and rules, including on-site investigation of randomly selected farmers and markets.

(2) The Authority may conduct covert compliance buys of FDNP authorized farmers for compliance with the Authority rules and regulations.

Stat. Auth.: ORS 413.500

333-052-0120
Complaints

(1) Anyone wishing to file a complaint against a FDNP participant, an authorized farmer, an authorized market, or the FDNP may do so in the following manner:

(a) Send a written comment to the WIC Compliance Coordinator at PO Box 14450, Portland, Oregon, 97293; or

(b) Call the state WIC office at 971-673-0040.

(2) A local WIC clinic, APD office, ADRC, AAA office or market manager may file a complaint on behalf of an individual who does not want to file a complaint independently.

(3) When the Authority receives a complaint alleging discrimination on the basis of race, color, national origin, age, sex or disability the Authority must automatically forward the complaint to USDA for investigation.

(4) Individuals alleging discrimination on the basis of race, color, national origin, age, sex or disability may also write directly to USDA, Director, Office of Adjudication and Compliance, 1400 Independence Avenue SW, Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TTY).

(5) The Authority may refer complaints regarding farmers or markets to the Oregon Department of Agriculture for investigation.

(6) The identity of any individual filing a complaint will be kept confidential except to the extent necessary to conduct any investigation, hearing or judicial proceeding regarding the complaint.

Appeals

(1) Markets and farmers are entitled to a hearing as provided by the Administrative Procedures Act (ORS Chapter 183) for a denial of participation, imposition of a sanction, or disqualification.

(2) Markets and farmers may not be entitled to a hearing under the Administrative Procedures Act to challenge:

(a) The validity or appropriateness of the Authority's selection criteria for farmer or market participation;

(b) The validity or appropriateness of the Authority's participant access determinations;

(c) The duration or expiration of a farmer or market agreement; or

(d) An Authority decision regarding a check payment or claims.

(3) The Authority may, at its discretion, permit the market or farmer to continue participating in the program pending the outcome of an administrative hearing. The farmer may be required to repay funds for FDNP checks redeemed during the pendency of the hearing, depending on the hearing outcome.

(4) A request for a hearing must be in writing and must be received within 30 days from the date of the notice describing the proposed action.

(5) The request for hearing must include:

(a) The name and address of the farmer or market requesting the hearing;

(b) The name and address of the attorney representing the farmer or market, if any;

(c) The decision made or action taken by the Authority against the farmer or market;

(d) The reason the farmer or market disagrees with the decision or action;

(e) Any special needs or requirements, such as, an interpreter or other special accommodations; and

(f) An attached copy of the notice from the Authority.

(6) If a hearing is requested under subsection (1) of this rule, a final written decision must be made within 60 days from the date the request for a hearing was received by the WIC Operations Manager. The time for issuing a decision may be extended upon agreement by the parties.

DIVISION 53

SPECIAL SUPPLEMENTAL NUTRITION PROGRAM FOR WOMEN, INFANTS AND CHILDREN (WIC) PARTICIPANT ADMINISTRATION

333-053-0000
Suspension of WIC Program

(1) Notwithstanding any other rules in this division, all WIC program benefits are suspended if there is a government or WIC program closure or if the government does not provide WIC funding. A suspension shall remain in effect until such time as funding is approved or as soon as the closure ends and only to the extent benefit issuance to participants is approved by the federal government.

(2) Notice of suspensions shall be made by the Oregon Health Authority by posting a notice on the WIC program website and by

notifying participants in writing. Notice of suspensions shall include the suspension effective date. As soon as funding is restored or as soon as the closure has ended, the Authority shall notify participants of the date that a suspension is lifted.

(3) Benefits may not be issued to participants and participants shall not redeem WIC food instruments they have already received during a suspension.

(4) Participants who disagree with a suspension are not entitled to continuing benefits or a contested case hearing but may challenge a suspension through a rule challenge under ORS 183.335 or 183.400.

333-053-0030
Description of the WIC Program

(1) The WIC program is a federally funded program established in 1972 by an amendment to the Child Nutrition Act of 1966. The purpose of the WIC program is to serve as an adjunct to health care by providing: nutrition education and counseling; nutritious supplemental foods; health screening and referral services to pregnant and breastfeeding women, infants and children in certain high-risk categories.

(2) Federal regulations governing the WIC program, 7 CFR § 246, require adoption and implementation of standards and procedures to guide the state's administration of the WIC program. These regulations also define the rights and responsibilities of participants.

(3) The Oregon Health Authority administers the WIC program in the State of Oregon.

(4) Any participant who receives benefits from the WIC program shall comply with these rules. Failure to comply with these rules shall result in sanctions.

(5) WIC program participation may include participation in the Oregon Farm Direct Nutrition Program (FDNP).

333-053-0040
Definitions

(1) "Adjunctively income eligible" means an applicant or participant who is eligible for WIC because they are:

(a) Certified and fully eligible to receive benefits for the:

(A) Food Distribution Program on Indian Reservations (FDPIR);

(B) Supplemental Nutrition Assistance Program (SNAP);

(C) Medicaid/Oregon Health Plan (OHP); or

(D) Temporary Assistance for Needy Families (TANF); or

(b) A member of a household with:

(A) A SNAP recipient;

(B) A pregnant woman or infant currently on Medicaid/OHP;

(C) A TANF recipient; or

(D) A FDPIR recipient.

(2) "Appeal" means review of an agency decision by a neutral third party.

(3) "Applicant" means any pregnant woman, post-partum woman, infant or child who is applying to receive WIC program benefits, and a breastfed infant of an applicant breastfeeding woman. Applicants include individuals who are currently participating in the program but are re-applying because their certification period is about to expire.

(4) "Authority" means the Oregon Health Authority.

(5) "Authorized food" means any supplemental foods approved by the Oregon WIC program and listed on the WIC Authorized Food List or food instrument.

(6) "Authorized shopper" means:

(a) The participant or any person designated by a participant who has been documented as such to act on the participant's behalf; and

(b) In the case of an infant or child, the caretaker or the caretaker's designee; or

(c) Any representative of the Authority posing as a participant or participant designee as authorized by the Authority.

(7) "Cardholder" means the person authorized by the WIC program to use the eWIC card to purchase WIC food benefits at WIC-authorized vendors.

(8) "Cash Value Benefit" or "CVB" means a fixed-dollar benefit on a check, voucher, electronic benefit transfer (EBT) card or other document which is used by an authorized shopper to obtain WIC authorized fruits and vegetables.

(9) "Certification" means the implementation of criteria and procedures to assess and document each applicant's eligibility for participation in the WIC program.

(10) "CFR" means Code of Federal Regulations.

(11) "Claim" means a demand for repayment for intentional misuse of WIC or FDNP benefits.

(12) "CSFP" means the Commodity Supplemental Food Program.

(13) "Disqualification" means termination of participation in the WIC program and cessation of WIC benefits due to a participant violation for a specific amount of time.

(14) "Dual participation" means simultaneous participation in more than one WIC program (more than one state or more than one local agency within Oregon) or participation in the WIC program and in the CSFP at the same time.

(15) "Electronic benefit account" or "EBA" means an account established for a WIC household administered by Oregon's eWIC banking contractor and where food benefits for all participants in the household are aggregated into that single account.

(16) "eWIC card" means the electronic benefit transfer (EBT) card used by cardholders to purchase WIC authorized foods or formulas from their electronic benefit account (EBA).

(17) "Fair hearing" means a proceeding before an administrative law judge to review actions proposed by the Authority.

(18) "Farm Direct Nutrition Program" or "FDNP" means the Farmers' Market Nutrition Program administered by the United States Department of Agriculture (USDA), Food and Nutrition Services and implemented by the State of Oregon, Oregon Health Authority.

(19) "First cardholder" means the required cardholder for an electronic benefit account. The first cardholder is either the woman participant or the parent or caretaker from the same household as the infant or child participant therefore sharing the same address.

(20) "Food instrument" means a WIC program voucher, check, coupon, electronic benefit transfer (EBT) card, or other document which is used to obtain authorized foods.

(21) "Hearing request" or "request for a hearing" means any clear expression by an individual, or the individual's parent, caretaker or representative, that he or she desires an opportunity to present his or her case to a higher authority.

(22) "Local agency" means:

(a) A public or private non-profit health or human services agency that provides health services, either directly or through contract with the Authority to provide services, in accordance with 7 CFR § 246.5;

(b) An Indian Health Service unit in contract with the Authority to provide services;

(c) An Indian tribe, band or group recognized by the Department of the Interior that operates a health clinic or is provided health services by an Indian Health Service unit; or

(d) An intertribal council or group that is an authorized representative of Indian tribes, bands or groups recognized by the Department of the Interior that operates a health clinic or is provided health services by an Indian Health Service unit.

(23) "Notice of Non-compliance" means a letter notifying participants, parents or caretakers of an infant or child participant when they commit a program violation. This notice is an explanation of the violation and a warning about repercussions of subsequent violations.

(24) "Participant" means any pregnant woman, breastfeeding woman, post-partum non-lactating woman, infant or child who has been certified to receive benefits from the WIC program.

(25) "Participant's caretaker" means a person who has significant responsibility for providing food to the infant or child. The caretaker is usually part of the family unit, for example the parent or legal guardian of the infant or child.

(26) "Restitution" means reimbursement to the Authority of the cash value of WIC program benefits received by a participant as a result of a violation.

(27) "Sanction" means a penalty imposed by the state WIC program because of a violation.

(28) "Second cardholder" means an individual authorized on a WIC electronic benefit account who has been issued their own eWIC card with the permission of the first cardholder.

(29) "Service area" means a local program or subdivision of a local agency that encompasses a specific geographic area.

(30) "Termination" means a participant's file is closed and WIC program benefits cease for any reason including, but not limited to, lack of eligibility, no longer breastfeeding, or transferring out of state, and participant violations.

(31) "Trafficking" means the buying or selling of a WIC food instrument for cash.

(32) "Violation" means any intentional action of a participant, parent or caretaker of an infant or child participant, or any eWIC cardholder, including actions listed in OAR 333-053-0080, that violates federal or state statutes, regulations, policies or procedures governing the WIC program.

(33) "WIC program" or "WIC" means the Special Supplemental Nutrition Program for Women, Infants and Children authorized by Section 17 of the Federal Child Nutrition Act of 1966, as amended, 42 U.S.C. § 1786.

(34) "WIC program benefits" mean benefits a participant receives that includes but are not limited to food, formula, and breast pumps.

333-053-0050
Participant Eligibility

(1) In order to be eligible for the WIC program, at the time of application an applicant must:

(a) Be a pregnant woman, a breastfeeding woman less than one year after delivery, a non-lactating, post-partum woman less than six months after delivery, or a child through the end of the month he or she turns five years of age;

(b) Reside within the jurisdiction of the State of Oregon or within the Indian State jurisdiction;

(c) Meet the state's income eligibility criteria at the time of application; and

(d) Be at nutritional risk as defined by the Authority.

(2) In order to establish eligibility, a state or local agency shall require proof of residency, identity, and income and may require verification of pregnancy.

(3) Participants may only be enrolled in one local agency or clinic within a local agency in Oregon at a time.

(4) Participants may be enrolled in only one state WIC program at a time. If a participant moves to a new state they are no longer eligible to receive Oregon WIC program benefits.

(5) A participant may be terminated from the WIC program because they are no longer eligible.

(6) A participant may be disqualified from the WIC program for violations of program rules.

(7) A participant may voluntarily withdraw from participating in the WIC program at any time.

(8) A participant is eligible to receive FDNP benefits if the individual meets all of the following eligibility criteria on the date of FDNP benefit issuance:

(a) Is currently receiving benefits under the WIC program; and

(b) Belongs to any eligible WIC category described in subsection (1)(a) of this rule; and

(c) Is four months of age or older.

(9) A participant will be informed of and required to verify that he or she understands the rights and responsibilities of WIC participation at the time of their eligibility certification.

333-053-0060
Participant Information

(1) Applicants shall provide accurate information as part of the certification process.

(2) State or local WIC staff may verify any of the information provided by the applicant, participant, or participant's caretaker.

(3) The WIC program may share information about applicants and participants with other public health programs and Oregon Head Start programs. This information will only be used to access other health services and assess the effectiveness of those services.

(4) Information concerning eligibility shall be shared with another WIC clinic or local agency if the participant moves from one service area to another or to a different state.

(5) Applicants, participants and the participant's caretakers will be given the opportunity to register to vote at the local agency, and they may decline to provide this information. Receipt of WIC program benefits will not be affected by answers to voter registration questions.

333-053-0075
eWIC Cards

(1) At the time of certification, a first cardholder will be identified and issued a eWIC card for the family.

(a) If a family requires more than one authorized shopper, a second eWIC card for use by the family's second cardholder will be issued.

(b) Each family will have no more than two activated eWIC cards at a time.

(c) No more than one activated eWIC card can be assigned to a cardholder at a time.

(2) The Authority may issue replacement eWIC cards at its discretion.

Stat. Auth.: ORS 413.500

Hist.: PH 10-2013, f. 11-6-13, cert. ef. 12-1-13

333-053-0080
Participant Violations

(1) During each certification visit, participants shall be informed of their rights and responsibilities, program rules and the sanctions issued should they intentionally violate a program rule.

(2) Whenever the Authority assesses a claim of misappropriated WIC program benefits of $100 or more resulting from a participant violation, assesses a claim for dual participation, or assesses a second or subsequent claim of any amount resulting from a participant violation, the Authority shall disqualify the participant for one year.

(3) A participant shall be issued a Notice of Non-compliance for the first instance; a six month disqualification from the program and issued a claim for the second instance; and a one year disqualification from the program and issued a claim for the third and any subsequent instance of the following violations:

(a) Simultaneously using his or her own WIC benefits and acting as a store cashier for the transaction if employed by or owns store;

(b) Destruction of vendor or farmer property during a WIC transaction;

(c) Verbal abuse of store, farmer, or farm stand employees or owners during a WIC or FDNP transaction;

(d) Verbal abuse of state or local agency staff;

(e) Destruction of state or local agency property;

(f) Altering a food instrument;

(g) Returning foods purchased with a food instrument to a WIC vendor in exchange for money or different food unless they are receiving the identical item in exchange;

(h) Using or attempting to use a food instrument reported lost or stolen; or

(i) Redeeming a food instrument for unauthorized foods or formula.

(4) A participant shall be issued a Notice of Non-compliance and issued a claim for the first instance; and disqualified from the program for one year and issued a claim for the second and any subsequent instance of misrepresenting eligibility information to gain WIC or FDNP benefits.

(5) A participant shall be disqualified from the program for six months for the first instance and disqualified from the program for one year for the second or any subsequent instance of the following violations:

(a) Assaulting or using physical force, actual or threatened, against store, farmer, or farm stand employees or owners during a WIC or FDNP transaction; or

(b) Assaulting or using physical force, actual or threatened, against state or local agency staff.

(6) A participant shall be disqualified from the program for one year and issued a claim for the first and any subsequent instance of the following violations:

(a) Collusion with local agency staff to improperly obtain WIC program or FDNP benefits;

(b) Collusion with store staff to use a food instrument for the purchase of anything other than specifically indicated WIC program benefits;

(c) Theft of a food instrument;

(d) Buying, attempting to buy, exchanging, attempting to exchange, selling, or attempting to sell food or formula purchased with a food instrument for cash, credit, merchandise, favors, or other non-food items;

(e) Trafficking or attempting to traffic a food instrument; or

(f) Collusion with store staff to accept the return of food or formula purchased with a food instrument for cash, credit, merchandise, favors, or other non-food items.

(7) The Authority may decide not to impose a disqualification if, within 30 days of the date the letter was mailed demanding repayment, full restitution is made or a repayment schedule is agreed upon. In the case of a violation committed by the parent or caretaker of an infant or child participant, or by a participant under the age of 18, the Authority may approve the designation of a proxy in order to continue program benefits to these participants.

(8) Participants may reapply for benefits at any time after the disqualification period is over.

333-053-0100
Participant Claims

(1) If the Authority determines that WIC program benefits have been obtained, sold, given away, traded, or otherwise disposed of improperly as the result of a participant violation, the Authority shall establish a claim against the participant for the full value of such benefits.

(2) For all participant claims, the Authority shall issue a written notification demanding repayment.

(3) If the full restitution is not made or a repayment schedule is not agreed on within 30 days of the date the letter was mailed, the Authority shall take additional collection actions until restitution is made or a repayment schedule is agreed on, unless the Authority determines that further collection actions would not be cost-effective to pursue.

333-053-0110
Administrative Review

(1) The Authority shall provide a participant with a fair hearing in accordance with the provision of ORS Chapter 183 and 7 CFR 246.9 for the following:

(a) Denial of participation;

(b) Disqualification; or

(c) A claim against the individual for repayment of the cash value of improperly obtained or disposed of WIC program benefits.

(2) The Authority shall notify the participant in writing of the right to a fair hearing, of the method by which a hearing may be requested, and that any positions or arguments on behalf of the individual may be presented personally or by a representative such as a relative, friend, legal counsel or other spokesperson.

(3) The Authority shall not limit or interfere with the participant's freedom to request a hearing.

(4) Participants must request a fair hearing within 60 days from the date the Authority notifies the applicant or participant of an adverse action.

(5) The Authority shall not deny or dismiss the request for a fair hearing unless:

(a) The request is not received within 60 days;

(b) The request is withdrawn in writing by the participant or participant's representative;

(c) The participant or the participant's representative fails, without good cause, to appear at the scheduled hearing; or

(d) The participant has been denied participation by a previous hearing and cannot provide evidence that the circumstances relevant to program eligibility have changed in such a way as to justify a hearing.

(6) Participants may continue receiving WIC benefits pending a hearing outcome or their certification period expires, whichever comes first.

(7) Applicants who are denied benefits at initial certification, participants whose certification periods have expired, and participants who become categorically ineligible during a certification

period may request an administrative hearing to appeal the denial or termination of WIC program benefits, however they shall not receive WIC program benefits while awaiting the hearing or its outcome.

DIVISION 54

SPECIAL SUPPLEMENTAL NUTRITION PROGRAM FOR WOMEN, INFANTS AND CHILDREN (WIC)

333-054-0000
Description of WIC Program

(1) The WIC Program is a federally funded program established in 1972 by an amendment to the Child Nutrition Act of 1966. The purpose of the WIC Program is to serve as an adjunct to health care by providing: nutrition education and counseling; nutritious supplemental foods; and health screening and referral services to pregnant and breast-feeding women, infants, and children in certain high-risk categories.

(2) Federal regulations governing the WIC Program, 7 CFR § Part 246, require adoption and implementation of standards and procedures to guide the state's administration of the WIC Program. These regulations also define the rights and responsibilities of vendors and farmers.

(3) The WIC Program in the State of Oregon is administered by the Oregon Health Authority (Authority).

333-054-0010
Definitions

(1) "A50" means an authorized vendor or applicant that derives, or is expected to derive, more than 50 percent of its total annual food sales from WIC food sales. The total food sales do not include alcohol, tobacco, lottery or any other non-food item.

(2) "Abbreviated administrative review" means a hearing that is held at the request of a vendor that has been issued an application denial, civil money penalty, civil penalty, or sanction by the Authority. Abbreviated reviews are facilitated by the Authority staff other than the staff person that imposed the sanction. A facilitated discussion is held in order to resolve the imposition of a sanction.

(3) "Adequate participant access" means there are authorized vendors sufficient for participant need using Authority criteria in OAR 333-054-0060.

(4) "Annual Food Sales" means sales of all Supplemental Nutrition Assistance Program (SNAP) eligible foods intended for home preparation and consumption including meat, fish, and poultry; bread and cereal products; dairy products; and fruits and vegetables. Food items such as condiments and spices, coffee, tea, cocoa, and carbonated and non-carbonated drinks may be included in food sales when offered for sale along with foods in the categories identified above. Food sales do not include sales of any items that cannot be purchased with SNAP benefits, such as hot foods or food that will be eaten in the store.

(5) "Applicant" means any person, or person with an interest in the business, making a written request for authorization to participate in the WIC Program, including vendors and farmers that reapply for authorization.

(6) "Authority" means the Oregon Health Authority.

(7) "Authorization" means the process by which the Authority assesses, selects, and enters into agreements with stores and farmers that apply or subsequently reapply to be vendors or authorized farmers.

(8) "Authorized food" means any supplemental foods approved by the Oregon WIC Program and listed on the WIC Authorized Food List or food instrument.

(9) "Authorized shopper" means the participant or any person designated by a participant who has been documented as such to act on the participant's behalf and, in the case of an infant or child, the caretaker or the caretaker's designee. This includes any representative posing as a participant or participant designee as authorized by the Authority.

(10) "CFR" means Code of Federal Regulations.

(11) "CMP" means civil money penalty.

(12) "Cash Value Benefit" or "CVB" means a fixed-dollar benefit on a check, voucher, electronic benefit transfer (EBT) card or other document which is used by an authorized shopper to obtain WIC authorized fruits and vegetables.

(13) "Compliance buy" means a single covert, on-site visit in which an Authority authorized representative poses as an authorized shopper and attempts to transact, or transacts, one or more food instruments.

(14) "Disqualification" means cancelling the WIC program participation of a vendor or farmer, as a punitive action.

(15) "Educational buy" means a single, on-site visit used for training purposes in which an Authority authorized representative poses as an authorized shopper, redeems WIC food instruments, and provides the vendor with immediate feedback about compliance with WIC procedures.

(16) "Expired food" means WIC-authorized food or formula that is defective, spoiled, or has exceeded its sell by, best if used by, or other date on the package limiting the sale or use of the food or formula.

(17) "Farmer" means an individual who owns, leases, rents or sharecrops land to grow, cultivate or harvest crops on that land.

(18) "Farmer agreement" means a standard written legal contract between the farmer and the Authority that sets forth responsibilities of the parties.

(19) "FNS" means the Food and Nutrition Service of the U. S. Department of Agriculture.

(20) "Food instrument" or "FI" means a WIC Program voucher, check, coupon, electronic benefit transfer (EBT) card or other document, which is used to obtain authorized foods.

(21) "Full administrative review" means a formal hearing that is held before an assigned administrative law judge from the state Office of Administrative Hearings in accordance with 7 CFR § 246.18 and ORS Chapter 183.

(22) "Incentive item" means a food or non-food item offered free of charge to WIC shoppers, but not other shoppers, or eligibility to receive an item is structured where the majority of those meeting the criteria are WIC shoppers, to motivate them to shop at a particular store. Examples of incentive items include, but are not limited to, cash gifts/prizes in any amount for any reason, lottery tickets, transportation, sales/specials such as a buy-one-get-one free or free additional ounces offer not offered to other shoppers, and other free food or merchandise not offered to other shoppers.

(23) "Inventory audit" means an examination of food invoices or other proofs of vendor purchases to determine whether a vendor has purchased sufficient quantities of authorized foods to support the vendor's claim for reimbursement for such foods from the Authority during a specific period of time.

(24) "Investigation" means a period of review, beginning with the start of an inventory audit or the first compliance buy and closing when the audit has been completed or a sufficient number of compliance buys have been completed to provide evidence of compliance or non-compliance, not to exceed 24 months, to determine a vendor or farmer's compliance with program rules and procedures.

(25) "Local agency" means:

(a) A public or private nonprofit health or human services agency that provides health services, either directly or through contract, in accordance with 7 CFR § 246.5;

(b) An Indian Health Service unit;

(c) An Indian tribe, band or group recognized by the Department of the Interior which operates a health clinic or is provided health services by an Indian Health Service unit; or

(d) An intertribal council or group that is an authorized representative of Indian tribes, bands or groups recognized by the Department of the Interior, which operates a health clinic or is provided health services by an Indian Health Service unit.

(26) "Notice of Non-compliance" means a letter notifying vendors when they commit a program violation. This notice is an explanation of the violation and a warning about repercussions of subsequent violations.

(27) "Overcharge" means intentionally or unintentionally charging the Authority more for authorized foods than the actual shelf price or the price charged to other shoppers.

(28) "Participant" means any pregnant woman, breastfeeding woman, post-partum non-lactating woman, infant or child who has been certified to receive benefits from the WIC Program.

(29) "Pattern" means three or more findings of the same rule violation that occurs within a single investigation or over the course of one or more routine monitoring(s).

(30) "Peer group" means a group of vendors considered to be in the same category by the Authority based on factors such as store type, size or business model, number of cash registers and geography.

(31) "Person" means a human being, a public or private corporation, an unincorporated association, a partnership, a Limited Liability Corporation, a sole proprietor, a government or a governmental instrumentality.

(32) "Person with an interest in the business" means an officer, director, partner, or manager of the business or a shareholder with 10 percent interest or more in the business.

(33) "Pharmacy — in-store" means a pharmacy that is located within a WIC authorized grocery store and is affiliated with that business entity.

(34) "Pharmacy — stand alone" means a pharmacy that is operated independently from or is not located in a WIC authorized grocery store.

(35) "Price adjustment" means an adjustment made by the Authority, in accordance with the vendor/farmer agreement, to the amount paid to the vendor/farmer on a food purchase, to ensure that the payment complies with the Authority price limitations.

(36) "Prominently displayed" means immediately noticeable by persons entering the vendor or farmer location.

(37) "Routine monitoring" means an overt, on-site visit in which the Authority authorized representatives or federal officials identify themselves to vendor or farm personnel.

(38) "Shelf Price Survey" or "SPS" means a tool used by the Authority to collect a sample of a WIC authorized vendor's current shelf prices.

(39) "SNAP" means the Supplemental Nutrition Assistance Program of the Food and Nutrition Services of the U.S. Department of Agriculture. This program was formerly known as the Food Stamp Program or "FSP."

(40) "Termination" means the cancellation of a vendor or farmer agreement which may or may not be linked to a disqualification.

(41) "Trafficking" means buying or selling WIC food instruments for cash.

(42) "U.S.C." means United States Code.

(43) "Unauthorized food item" means foods, brands and sizes not allowed on the WIC Authorized Food List. It also means foods not specified on a food instrument as eligible for purchase for that participant, with WIC benefits.

(44) "Vendor" means the current owner(s) or any person with an interest in the business, of any retail store location that is currently authorized by the Authority to participate in the WIC Program. Vendor may also refer to the authorized store location.

(45) "Vendor agreement" means a standard written legal contract between the vendor and the Authority that sets forth responsibilities of the parties.

(46) "Vendor Price List" means a form containing current authorized foods with current shelf prices completed by the vendor and submitted to the Authority and in which vendors document their shelf prices at the time of the application process.

(47) "Violation" means an activity that is prohibited by OAR 333-054-0000 through 333-054-0070 and is classified in OAR 333-054-0050 and 333-054-0055.

(48) "WIC Authorized Food List" means the supplemental foods approved by the State of Oregon.

(49) "WIC food benefit" means supplemental foods issued to a participant for purchase at an authorized vendor.

(50) "WIC Program" or "WIC" means the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) authorized by Section 17 of the Federal Child Nutrition Act of 1966, as amended, 42 U.S.C. § 1786.

333-054-0020
How a Vendor Becomes WIC Authorized

(1) Only vendors authorized by the Authority may accept Oregon food instruments in exchange for authorized foods.

(2) Application:

(a) An applicant shall submit a completed application to the Authority, which includes:

(A) An application form;

(B) A Vendor Price List;

(C) A current SNAP authorization number; and

(D) Any other documents or information required by the Authority.

(b) The Authority may limit the periods during which applications for vendor authorization will be accepted and processed. The Authority will process applications, outside of the limited application period, if it determines the applicant's store is necessary to ensure adequate participant access in a specific geographic location.

(c) The Authority may impose a moratorium on the authorization of new vendors. Notice will be provided to current vendors prior to such a moratorium. During the period of moratorium the Authority may choose to not accept applications, not process applications, and not to authorize new stores. A moratorium will not apply to a store that is necessary for participant access.

(3) Selection Criteria: In order for the Authority to consider authorizing an applicant, the applicant shall:

(a) Demonstrate and maintain competitive pricing as determined by the Authority based on the applicant's current existing shelf prices on the date of application, as charged to regular shoppers and as compared to data from the peer group appropriate to the applicant's characteristics. Such data may include redemption prices and shelf prices. If an applicant's store is necessary to ensure adequate participant access, it may be exempt from this requirement;

(b) Possess a current bank account number;

(c) Possess a current electronic mail address;

(d) Not have, within the previous six years, a criminal conviction or civil judgment involving fraud or any other offense related to the applicant's business integrity or honesty;

(e) Possess a current SNAP authorization number. Pharmacies, military commissaries, and stores that are determined by the Authority as necessary to provide adequate participant access shall be exempt from this selection requirement due to the nature of the services they provide for the WIC Program;

(f) Not have a history of serious violations with either the WIC Program or SNAP;

(g) Not be currently disqualified from participation in another state's WIC Program. The Authority shall not authorize an applicant

that has been assessed a CMP in lieu of disqualification by another state WIC Program until the period of the disqualification that would otherwise have been imposed has expired;

(h) Not be currently disqualified from participation in the SNAP. The Authority shall not authorize an applicant that has been assessed a SNAP civil money penalty in lieu of disqualification until the period of the disqualification that would otherwise have been imposed has expired unless this store has been determined necessary for participant access;

(i) Have a fixed location for each store that includes refrigeration and freezer equipment in the retail area;

(j) Carry foods intended for home preparation and consumption, in addition to WIC-required minimum stock items, that include:

(A) Fresh or frozen uncooked meat, fish, or poultry (or meat substitute);

(B) Bread and cereal products;

(C) Dairy products; and

(D) Fresh fruits and vegetables.

(k) Meet minimum stock requirements at the time of application to become an authorized vendor:

(A) A store that is applying for authorization must meet minimum stock requirements at the time of application, either on the shelf or with proof of order at the time of the on-site review;

(B) Expired foods will not be counted towards meeting minimum stock requirements.

(C) Stand-alone pharmacies and in-store pharmacies are exempt from minimum stock requirements; and

(D) Grocery stores with in-store pharmacies are required to meet all minimum stock requirements.

(l) Not have expired foods in three or more food categories that are on the minimum stock requirements.

(m) Obtain infant formula, including formula that requires a prescription, within 72 hours of an Authority, local agency or WIC shopper request if the vendor is a stand-alone pharmacy or has an in-store pharmacy.

(n) Purchase infant formula, which is to be sold to WIC shoppers, only from the Oregon WIC Program's list of approved manufacturers, wholesalers, distributors, and WIC-authorized retailers.

(A) Vendors must maintain and provide, when requested, documentation showing source(s) of infant formula purchases; and

(B) Vendors must not sell infant formula that is defective, spoiled, or has exceeded its "sell by," "best if used by," or other date on the package limiting the sale or use of the infant formula.

(o) Maintain and provide documentation of SNAP-eligible food sales throughout the contract period. According to USDA, CFR 245.2, "Food sales" means sales of all foods that are eligible items under the SNAP. These foods are intended for home preparation and consumption and include:

(A) Meat, fish, and poultry;

(B) Bread and cereal products;

(C) Dairy products; and

(D) Fruits and vegetables;

(E) Food items such as condiments and spices, coffee, tea, cocoa, and carbonated and noncarbonated beverages may be included in food sales when offered for sale along with foods in the four primary categories. Food sales do not include sales of any items that are not approved for purchase with SNAP benefits, such as alcoholic beverages, hot foods, or foods that will be eaten on the store premises; and

(p) Be open for business at least eight hours per day for five days per week.

(4) Authorization Requirements:

(a) The Authority or its designated representative shall conduct a documented on-site visit prior to, or at the time of, authorization of an applicant, including evaluating the inventory and condition of authorized foods and providing the applicant with the WIC Program information prior to or at the time of authorization;

(b) The Authority may grant a written exception to minimum stock requirements for cases where there is no participant need in the vendor's area for a specific authorized food item. The Authority shall determine participant need based on:

(A) Local agency's input regarding a vendor request for exception;

(B) Vendor redemption data relative to the vendor's request; and

(C) Number of participants prescribed the specific food item in the vendor's store's zip code.

(c) If a vendor with a stock exception is notified of a specific need for that authorized food item, the vendor will ensure that the authorized food item is available within seven days of the request.

(d) Once authorized, the vendor shall remain in compliance with the current selection criteria set forth in OAR 333-054-0020(3) for the duration of the vendor agreement.

(5) Application Denials: The Authority shall give the applicant written notification of denial, in conformance with ORS Chapter 183. As otherwise provided in these rules, the Authority may deny an applicant authorization for reasons including, but not limited to, the following:

(a) The applicant's failure to meet the selection criteria;

(b) The applicant's store or business has been sold by its previous owner in an attempt to circumvent a WIC program sanction. In making this determination, the Authority may consider such factors as whether the applicant's store or business was sold to a relative by blood or marriage of the previous owner(s) or sold to any person for less than its fair market value;

(c) The applicant's history of complaints, violations and sanctions;

(d) The applicant's refusal to accept training from the WIC program;

(e) The applicant's submission of prices to the Authority for WIC foods that are not the actual prices being charged to current customers;

(f) The applicant's submission of prices to the Authority for WIC foods that the vendor does not stock in the store;

(g) The applicant's failure to complete an application within an Authority-specified period of time, after notification of the application's deficiencies; or

(h) The applicant's misrepresentation of information on the application.

(6) Subsequent to authorization, an agreement may be terminated if it is found that the vendor provided false or omitted pertinent information during the authorization process.

(7) If the Authority denies an application it may require the applicant to wait some period of time before reapplying.

Above 50% Vendors (A50)

(1) An applicant that is likely to derive more than 50 percent of the store's annual food sales from WIC transactions will not be authorized except for cases of participant access hardship as determined solely by the Authority.

(2) If a currently authorized vendor is found to derive more than 50 percent of the store's annual food sales from WIC transactions the Authority will terminate the vendor agreement unless the vendor is necessary for participant access.

333-054-0027
How a Farmer Becomes WIC Authorized

(1) Only authorized farmers may accept CVBs from authorized shoppers in exchange for eligible foods. Authorized farmers may not accept CVBs from unauthorized farmers.

(2) In order to be eligible for participation in the WIC program, a farmer applicant must:

(a) Grow, cultivate, or harvest fresh fruits or vegetables in Oregon or a bordering county in a contiguous state to sell at a farmers' market or farm stand. Farmers are exempt from the minimum WIC authorized food stocking requirements as indicated for vendor authorization under OAR 333-054-0020(3);

(b) Complete the farmer application and return it to the appropriate state office to verify eligibility; and

(c) Agree to follow the terms and conditions of the farmer agreement.

(3) The Authority shall conduct an interactive training for all farmers who have never previously participated in the program prior to their commencing participation.

(4) The Authority and the WIC program are not required to authorize all applicants.

(5) Any individual who purchases all the produce they plan to sell is considered a distributor and is not allowed to participate in the WIC program as a farmer.

333-054-0030
Vendor Agreements

(1) Each applicant who has been approved for authorization shall sign a vendor agreement.

(a) The vendor agreement shall include the contractual obligations that must be met by an authorized vendor.

(b) Failure to adhere to the vendor agreement is a violation and may result in a sanction.

(c) The vendor agreement shall be signed by a representative of the Authority and a representative of the vendor who has the legal authority to sign the vendor agreement and obligate the applicant to the terms of the vendor agreement.

(d) The term of a vendor agreement shall not exceed three years.

(2) The Authority shall provide a vendor with not less than 15 days advance written notice of the expiration of its vendor agreement.

(3) The Authority shall immediately terminate the vendor agreement if it determines that the vendor has provided false information in connection with its application for authorization.

(4) When a vendor has more than one store location, the vendor agreement shall include a list of each store's name and location. Individual store locations may be added or deleted, by amendment to the vendor agreement or disqualification of an individual store location, without affecting the remaining store locations. Each store location included in the vendor agreement shall meet all applicable laws and rules.

(5) The vendor agreement does not constitute a license or property interest.

(6) The vendor agrees to comply with terms in a final order issued by the Authority or an investigation by federal or state officials.

(7) A vendor shall provide the Authority or a federal official access to food instruments negotiated on requested dates.

333-054-0033
Provision of Incentive Items

(1) Vendors shall not provide or advertise the provision of incentive items to WIC shoppers that are not offered to other shoppers.

(2) The Authority may approve any of the following incentive items to be provided by authorized vendors to WIC shoppers, at the discretion of the Authority:

(a) Food, merchandise, or services obtained at no cost to the vendor, subject to documentation;

(b) Food, merchandise, or services with a nominal value of $2 or less per item, which is subject to documentation;

(c) Food sales and specials which involve no cost or less than $2 in cost to the vendor for the food items involved, subject to documentation, and do not result in a charge to a WIC food instrument for foods in excess of the foods listed on the food instrument; and

(d) Minimal customary courtesies of the retail food trade, such as helping the shopper to obtain an item from a shelf or from behind a counter, bagging food for the shopper, and assisting the shopper with loading the food into a vehicle.

(3) The following incentive items are prohibited for authorized vendors to provide to WIC shoppers:

(a) Services which result in a conflict of interest or the appearance of such conflict for the authorized vendor, such as assistance with applying for WIC benefits;

(b) Lottery tickets provided to WIC shoppers at no charge or below face value;

(c) Cash gifts in any form, in any amount and for any reason;

(d) Anything made available in a public area as a complimentary gift which may be consumed or taken without charge;

(e) An allowable incentive item provided more than once per WIC shopper per visit, regardless of the number of shoppers or food instruments involved, unless the incentive items had been obtained by the vendor at no cost or the total value of the multiple incentive items provided during the shopping visit would not exceed the less than $2 nominal value limit;

(f) Food, merchandise, or services of greater than the nominal value provided to the WIC shopper;

(g) Food or merchandise sold to WIC shoppers, but not other shoppers, below fair market value;

(h) Any kind of incentive item which incurs a liability for the WIC Program; and

(i) Any kind of incentive item which violates federal, state, or local law or regulations.

(4) For-profit goods or services offered by the authorized vendor to WIC shoppers at fair market value based on comparable for-profit goods or services of other businesses are not incentive items subject to approval or prohibition, except that such goods or services must not constitute a conflict of interest or result in a liability for the WIC Program.

Farmer Agreements

(1) A farmer application/agreement must be signed by a representative who has legal authority to obligate the farmer.

(2) The farmer application/agreement must include a requirement that the farmer comply with OAR 333-054-0000 through 333-054-0070, as applicable to farmers.

(3) The farmer application/agreement will be valid for no more than three years.

(4) Neither the Authority nor the farmer is obligated to renew the agreement.

(5) An authorized farmer must comply with requirements contained in 7 CFR 246, OAR 333-054-0000 through 333-054-0070, and the terms and conditions of the farmer application/agreement.

333-054-0040
Vendor and Farmer Monitoring

(1) The Authority shall, at its sole discretion, monitor vendors and farmers for compliance with applicable laws and rules.

(2) The Authority or its authorized representative must conduct compliance buys or inventory audits to collect evidence of improper vendor practices.

(3) The Authority or its authorized representative shall conduct routine monitorings and survey current WIC authorized food shelf prices of selected vendors.

(4) The Authority or its authorized representative shall conduct covert compliance buys and routine monitorings of authorized farmers for compliance with the Authority rules and regulations.

(5) The Authority or its authorized representative may conduct educational buys at selected authorized vendors.

(6) The Authority or its authorized representative may conduct an inventory count of authorized WIC foods at select vendors. The inventory count may include any WIC authorized foods physically located within the store at the time of the visit as well as the foods' current shelf prices.

Vendor Violation Notifications and Sanctions

(1) The Authority must notify a vendor in writing when an investigation reveals an initial incidence of a violation for which a pattern of incidences must be established in order to impose a sanction, before another such incidence is documented, unless the Authority determines, in its discretion, on a case-by-case basis, that notifying the vendor would compromise an investigation.

(2) Prior to imposing a sanction for a pattern of violative incidences, the Authority must either provide such notice to the vendor, or document in the vendor file the reason(s) for determining that such a notice would compromise an investigation.

(3) If notification is provided, the Authority may continue its investigation after the notice of violation is received by the vendor, or presumed to be received by the vendor consistent with the Authority's procedures for providing such notice.

(4) All incidences of a violation occurring during the first compliance buy visit must constitute only one incidence of that violation for the purpose of establishing a pattern of incidences.

(5) A single violative incidence may only be used to establish the violations as written in OAR 333-054-0050(4)(d) and 333-054-0050(4)(e).

(6) Vendors shall receive a written "Notice of Non-compliance" for a single instance of:

(a) Failing to comply with the vendor's current vendor agreement;

(b) Failing to complete and return the Shelf Price Survey (SPS) by the deadline set by the Authority;

(c) Failing to provide the authorized shopper with a receipt for foods purchased with a food instrument;

(d) Failing to ensure that within 60 days of a name change the outside sign bears the same name as that listed on the vendor agreement;

(e) Influencing an authorized shopper's selection of authorized foods;

(f) Failing to display prices;

(g) Requesting or requiring any identification or information from the authorized shopper other than the WIC Program identification card;

(h) Failing to respond to a request issued by the Authority;

(i) Failing to accept training when required by the Authority;

(j) Using the "WIC" acronym or logos without prior authorization by the Authority;

(k) Failing to maintain or provide, to the Authority upon request, invoices or receipts to show source(s) of formula purchase;

(l) Retaining WIC identification or any information that identifies a shopper as a WIC participant or disclosing information regarding a client of the WIC Program to any person other than the Authority, its representatives or a federal official;

(m) Failing to comply with the terms in a final order issued by the Authority;

(n) Failing to comply with an investigation by federal or state officials;

(o) Refusing the Authority or a federal official access to food instruments negotiated on the day of review;

(p) Failing to provide, within two business days of the Authority's request, purchasing/receiving records to substantiate the volume and prices charged to the Authority;

(q) Failing to stock appropriate quantities of authorized foods and infant formula;

(r) Violating the nondiscrimination clause listed in the vendor agreement;

(s) Failing to maintain or provide, to the Authority upon request, documentation for each incentive item;

(t) Failing to have at least one register that accepts WIC open during all of the vendor's operating hours;

(u) Failing to display signs at registers to indicate where WIC is accepted, if the vendor doesn't accept WIC in all lanes; or

(v) Stocking expired foods on the shelf in three or more food categories that are on the minimum stock requirements.

(7) The Authority shall issue the following civil penalties to vendors for program violations committed within a single contract period:

(a) The Authority shall issue a civil penalty of $100 to vendors for the first instance of seeking restitution from an authorized shopper or participant for a WIC transaction not reimbursed or partially reimbursed by the Authority, or for which the Authority has requested payment from the vendor.

(b) The Authority shall issue a civil penalty of $100 to vendors for second instances of the following violations:

(A) Failing to display prices for WIC-authorized items;

(B) Failing to stock appropriate quantities of authorized foods and infant formula;

(C) Requesting or requiring any identification or information from the authorized shopper other than the WIC Program identification card;

(D) Requiring a cash purchase in addition to the WIC transaction;

(E) Requiring authorized shoppers to pay for authorized foods during a WIC transaction other than with a food instrument. It is permissible for a vendor to request payment over the dollar amount listed on a CVB if the cost of the authorized purchase exceeds the CVB amount.

(F) Using the "WIC" acronym or logos without prior authorization by the Authority;

(G) Failing to attend training when required by the Authority;

(H) Failing to maintain or provide, to the Authority upon request, documentation for each incentive item;

(I) Failing to have at least one register that accepts WIC open during all of the vendor's operating hours;

(J) Failing to display signs at registers to indicate where WIC is accepted, if the vendor doesn't accept WIC in all lanes;

(K) Failing to provide the authorized shopper with a receipt for foods purchased with a food instrument; or

(L) Stocking expired foods on the shelf in three or more food categories that are on the minimum stock requirements.

(c) The Authority shall issue a civil penalty of $200 to vendors for a second instance of seeking restitution from an authorized shopper or participant for a WIC transaction not reimbursed or partially reimbursed by the Authority, or for which the Authority has requested payment from the vendor.

(d) The Authority shall issue a civil penalty of $200 to vendors for third instances of the following violations:

(A) Failing to display prices for WIC-authorized items;

(B) Using the "WIC" acronym or logos without prior authorization by the Authority;

(C) Requesting or requiring any identification or information from the authorized shopper other than the WIC Program identification card;

(D) Requiring a cash purchase in addition to the WIC transaction;

(E) Requiring authorized shoppers to pay for authorized foods during a WIC transaction other than with a food instrument. It is permissible for a vendor to request payment over the dollar amount listed on a CVB if the cost of the authorized purchase exceeds the CVB amount.

(F) Failing to have at least one register that accepts WIC open during all of the vendor's operating hours;

(G) Failing to display signs at registers to indicate where WIC is accepted, if the vendor doesn't accept WIC in all lanes; or

(H) Failing to provide the authorized shopper with a receipt for foods purchased with a food instrument.

(e) The Authority shall issue a civil penalty of $400 to vendors for the fourth offense of the following violations:

(A) Failing to display prices for WIC-authorized items;

(B) Failing to provide the authorized shopper with a receipt for foods purchased with a food instrument;

(C) Failing to have at least one register that accepts WIC open during all of the vendor's operating hours; or

(D) Failing to display signs at registers to indicate where WIC is accepted, if the vendor doesn't accept WIC in all lanes.

(f) The Authority shall issue a civil penalty of $800 to vendors for the fifth offense of the following violations:

(A) Failing to display prices for WIC-authorized items;

(B) Failing to provide the authorized shopper with a receipt for foods purchased with a food instrument;

(C) Failing to have at least one register that accepts WIC open during all of the vendor's operating hours; or

(D) Failing to display signs at registers to indicate where WIC is accepted, if the vendor doesn't accept WIC in all lanes.

(g) The Authority shall issue a civil penalty of $1600 to vendors for the sixth offense of the following violations:

(A) Failing to display prices for WIC-authorized items;

(B) Failing to provide the authorized shopper with a receipt for foods purchased with a food instrument;

(C) Failing to have at least one register that accepts WIC open during all of the vendor's operating hours; or

(D) Failing to display signs at registers to indicate where WIC is accepted, if the vendor doesn't accept WIC in all lanes.

(8) Sanctions:

(a) The Authority shall deny a vendor's application for authorization upon renewal and require a six-month waiting period before the vendor may reapply if a vendor fails for a third instance to attend training when required by the Authority.

(b) For the following violations, the Authority shall disqualify a vendor for one year:

(A) A pattern of providing unauthorized food items in exchange for food instruments, including charging for authorized food provided in excess of those listed on the food instrument;

(B) A pattern of failing to stock appropriate quantities of authorized foods and infant formula;

(C) A pattern of providing change when redeeming a food instrument;

(D) A pattern of allowing a refund or any other item of value in exchange for authorized foods or providing exchanges for authorized food items obtained with food instruments, except for exchanges of an identical authorized food item when the original authorized food item is defective, spoiled, or has exceeded its "sell by," "best if used by," or other date limiting the sale or use of the food item. An identical authorized food item means the exact brand and size as the original authorized food item obtained and returned by the authorized shopper;

(E) Providing WIC shoppers with incentive items or other merchandise or services not approved by the Authority;

(F) A pattern of failing to maintain or provide, to the Authority upon request, documentation for each incentive item;

(G) Failure to pay a civil penalty assessed by the Authority within the designated timeframe set forth in the notice of civil penalty;

(H) A pattern of failing to comply with the vendor's current vendor agreement; or

(I) A pattern of stocking expired foods on the shelf in three or more food categories that are on the minimum stock requirements.

(c) For the following violations, the Authority shall disqualify the vendor for three years:

(A) One incident of the sale of alcohol, an alcoholic beverage, or a tobacco product in exchange for a food instrument;

(B) Failing an Authority inventory audit;

(C) A pattern of claiming reimbursement for the sale of an amount of a specific authorized food item, which exceeds the store's documented inventory of that authorized food item for a specific period of time;

(D) A pattern of vendor overcharges;

(E) A pattern of receiving, transacting or redeeming food instruments outside of authorized channels or locations. This includes, but is not limited to use of an unauthorized vendor, use of an unauthorized person, or redemption of food instruments outside of an authorized store location;

(F) A pattern of seeking restitution from an authorized shopper or participant for a WIC transaction not reimbursed or partially reimbursed by the Authority, or for which the Authority has requested payment from the vendor;

(G) A pattern of charging for foods not received by the authorized shopper; or

(H) A pattern of providing credit or non-food items in exchange for food instruments, other than those items listed in OAR 333-054-0050(4)(d) and 333-054-0050(4)(e).

(d) For the following violations, the Authority shall disqualify the vendor for six years:

(A) One incident of buying or selling a food instrument for cash (trafficking); or

(B) One incident of selling a firearm, ammunition, explosive, or controlled substance, as defined in 21 U.S.C. § 802, in exchange for a food instrument.

(e) The Authority shall permanently disqualify a vendor convicted of trafficking in food instruments or selling firearms, ammunition, explosives, or controlled substances as defined in 21 U.S.C. § 802 in exchange for a food instrument.

333-054-0052
Suspension of Vendor Agreements

(1) Notwithstanding any other rule in this division, WIC program benefits are suspended and all vendor agreements are suspended if there is a government or WIC program closure or if the government does not provide WIC funding. A suspension shall remain in effect until such time as funding is approved or as soon as the closure ends and only to the extent benefit issuance to participants is approved by the federal government.

(2) Suspensions apply to all WIC-authorized vendors, including farmers transacting cash value benefits. Suspensions do not apply to WIC-authorized farmers transacting Farm Direct Nutrition Program checks.

(3) Notice of suspensions shall be made by both electronic mail and United States Postal Service mail to all WIC-authorized vendors and farmers and shall include the suspension effective date. Notice of suspensions will be delivered with as much notice as possible. As soon as funding is restored or as soon as the closure has ended, the Authority shall notify vendors and farmers of the date that a suspension is lifted.

(4) Vendors and farmers shall not accept WIC food instruments, shall not provide food benefits and shall not deposit WIC food instruments for payment during a suspension.

(5) WIC-authorized vendors and farmers who disagree with a suspension are not entitled to a contested case hearing but may challenge a suspension through a rule challenge under ORS 183.335 or 183.400.

333-054-0055
Farmer Violations and Sanctions

(1) A farmer is in violation if a farmer fails to comply with WIC program rules and the terms and conditions of the farmer application/agreement or fails to respond to requests, implement corrective action, or comply with the terms in final orders as directed by the Authority.

(2) Farmer Sanctions:

(a) The Authority may issue a written notification of non-compliance to an authorized farmer for an initial incident of:

(A) Accepting CVBs for ineligible foods;

(B) Failing to prominently display the official sign provided by the Authority, each market day when at authorized farmers' markets or authorized farm stands;

(C) Failing to provide WIC shoppers with the full amount of product for the value of each CVB;

(D) Failing to ensure that WIC shoppers receive equitable treatment, including the availability of produce that is of the same quality and no greater price than sold to other shoppers;

(E) Failing to reimburse the Authority for CVBs that are improperly transacted;

(F) Charging sales tax on CVB purchases;

(G) Seeking restitution from WIC shoppers or participants for CVBs not paid by the Authority;

(H) Giving cash back for purchases less than the value of the CVB (providing change);

(I) Accepting CVBs from an unauthorized farmer;

(J) Failing to comply with WIC program rules and the terms and conditions of the farmer application/agreement;

(K) Failing to respond to requests, implement corrective action, or comply with the terms in final orders as directed by the Authority;

(L) Using CVBs for any purpose other than to deposit or cash them at the authorized farmer's financial institution; or

(M) Failing to cooperate with staff from the Authority, staff authorized to act on the Authority's behalf or the Oregon Department of Agriculture in monitoring for compliance with program requirements and failing to provide information that the Authority or the Oregon Department of Agriculture may require.

(b) The Authority may disqualify a farmer for six months for an initial incident of:

(A) Providing credit in exchange for CVBs; or

(B) Charging WIC shoppers higher prices than other shoppers.

(c) The Authority may disqualify a farmer for six months, for second or subsequent incidents of:

(A) Accepting CVBs for ineligible foods;

(B) Failing to prominently display the official sign provided by the Authority, each market day when at authorized farmers' markets or authorized farm stands;

(C) Failing to provide WIC shoppers with the full amount of product for the value of each CVB;

(D) Failing to ensure that WIC shoppers receive equitable treatment, including the availability of produce that is of the same quality and no greater price than sold to other shoppers;

(E) Charging sales tax on CVB purchases;

(F) Seeking restitution from WIC shoppers or participants for CVBs not paid by the Authority;

(G) Using CVBs for any purpose other than deposit or cash at the authorized farmer's financial institution;

(H) Giving cash back for purchases less than the value of the CVB (providing change);

(I) Accepting CVBs from an unauthorized farmer; or

(J) Failing to respond to requests, implement corrective action, or comply with the terms in final orders as directed by the Authority.

(d) The Authority may disqualify a farmer for one year following second or subsequent incidents of:

(A) Providing credit in exchange for CVBs;

(B) Charging WIC shoppers higher prices than other shoppers;

(C) Failing to reimburse the Authority for CVBs that are improperly transacted; or

(D) Failing to cooperate with staff from the Authority or the Oregon Department of Agriculture in monitoring for compliance with program requirements and failing to provide information required to be submitted by the Authority or the Oregon Department of Agriculture.

(e) The Authority may immediately disqualify a farmer for three years for an incident of:

(A) Trafficking in CVBs (exchanging checks for cash, controlled substances, tobacco products, firearms, or alcohol) in any amount; or

(B) A USDA substantiated violation of laws regarding non-discrimination, and applicable USDA instructions.

333-054-0060
Vendor Disqualifications

(1) A vendor may not apply for authorization during a period of disqualification from the WIC Program.

(2) The Authority shall not accept a vendor's voluntary withdrawal from the WIC Program as an alternative to disqualification. In addition, the Authority may not use non-renewal as an alternative to disqualification.

(3) The Authority shall disqualify a vendor that does not pay, partially pays or fails to timely pay, a CMP assessed in lieu of disqualification, for the length of the disqualification corresponding to the violation for which the CMP was assessed.

(4) In order to participate in the WIC program after a vendor is disqualified, it must apply for authorization after the disqualification period has passed.

(5) The Authority shall disqualify a vendor for a period corresponding to the most serious sanction during the course of a single investigation when the Authority determines the vendor has committed multiple violations. The Authority shall include all violations in the notice of administrative action. If a sanction for a specific violation is not upheld after the hearing or appeal, the Authority may impose a sanction for any remaining violations.

(6) If the basis for disqualification of a vendor is for violation of OAR 333-054-0050(8)(d), the effective date of the disqualification is the date the vendor received notice, either actual or constructive, of the disqualification.

(7) The Authority may disqualify a vendor that has been disqualified or assessed a CMP in lieu of disqualification by another WIC state agency for a mandatory sanction.

(a) The length of the disqualification shall be for the same length of time as the disqualification by the other WIC state agency or, in the case of a CMP in lieu of disqualification assessed by the other WIC state agency, for the same length of time for which the vendor would otherwise have been disqualified. The disqualification may begin at a later date than the sanction imposed by the other WIC state agency.

(b) If the Authority determines that disqualification of a vendor would result in inadequate participant access, the Authority shall impose a CMP in lieu of disqualification.

(8) The Authority shall disqualify a vendor who has been disqualified from the SNAP. The disqualification shall be for the same length of time as the SNAP disqualification, although it may begin at a later date than the SNAP disqualification. Such disqualification

by the WIC program shall not be subject to administrative or judicial review under the WIC program.

(a) The Authority may disqualify a vendor who has been assessed a CMP in lieu of disqualification in the SNAP, as provided in 7 CFR § 278.6. The length of such disqualification shall correspond to the period for which the vendor would otherwise have been disqualified in the SNAP. The Authority shall determine if the disqualification of a vendor would result in inadequate participant access prior to disqualifying a vendor for SNAP disqualification pursuant to section (8) of this rule or for any of the violations listed in this rule. If the Authority determines that disqualification of the vendor would result in inadequate participant access, the Authority shall not disqualify or impose a CMP in lieu of disqualification. The Authority shall include participant access documentation in vendor files.

(b) The Authority shall provide the appropriate FNS office with a copy of the notice of adverse action and information on vendors it has disqualified. This information shall include the vendor's name, address, identification number, the type of violation(s), length of the disqualification, or the length of the disqualification corresponding to the violation for which a SNAP CMP was assessed.

(9) Disqualification from the WIC Program may result in disqualification as a retailer in the SNAP. Such disqualification may not be subject to administrative or judicial review under the SNAP.

(10) Prior to disqualifying a vendor, the Authority shall determine if disqualification of the vendor would result in inadequate participant access.

(a) If the Authority determines that disqualification of the vendor would result in inadequate participant access, the Authority shall not disqualify the vendor and shall impose a CMP in lieu of disqualification.

(b) The Authority shall include documentation of its participant access determination and any supporting documentation in the vendor's file.

(c) The Authority shall not impose a CMP in lieu of disqualification for third or subsequent sanctions, even if the disqualification results in inadequate participant access.

(d) The Authority shall not impose a CMP in lieu of disqualification for trafficking or an illegal sales conviction, even if the disqualification results in inadequate participant access.

(11) Pursuant to 7 CFR 246.12 (l)(1), the Authority shall use the following formula to calculate a CMP imposed in lieu of disqualification:

(a) Determine the vendor's average monthly redemptions for at least the six-month period ending with the month immediately preceding the month during which the notice of administrative action is dated;

(b) Multiply the average monthly redemptions figure by 10 percent (.10); and

(c) Multiply the product from subsection (11)(b) of this rule by the number of months for which the store would have been disqualified. This is the amount of the CMP, provided that the CMP shall not exceed $11,000 for each violation. For a violation that warrants permanent disqualification, the amount of the CMP shall be $11,000. The Authority shall impose a CMP for each violation when during the course of a single investigation the Authority determines a vendor has committed multiple violations. The total amount of CMPs imposed for violations cited as part of a single investigation shall not exceed $49,000.

(12) The Authority shall use the formula in subsections (11)(a) through (c) of this rule to calculate a CMP in lieu of disqualification for any violation under OAR 333-054-0050(4)(b). The Authority has the discretion to reduce the amount of this CMP in quarterly increments, after reviewing the following criteria:

(a) Whether the vendor had other WIC violations or complaints within the 12 months immediately preceding the month the notice of administrative action is dated;

(b) The degree of severity of the violations and complaints;

(c) If the vendor being sanctioned is part of a multi-store chain, whether there is a pattern within the corporation of violations and the seriousness of those violations; and

(d) The degree of cooperation shown by the vendor, demonstrated by the vendor's willingness to schedule staff training and to make changes in store operations based on the Authority recommendations.

(13) The Authority shall, where appropriate, refer vendors who abuse the WIC Program to appropriate federal, state or local authorities for prosecution under applicable statutes.

(14) A vendor who commits fraud or abuse of the program is subject to prosecution under applicable federal, state or local laws. A vendor who has embezzled, willfully misapplied, stolen or fraudulently obtained program funds, assets, or property shall be subject to a fine of not more than $25,000 or imprisonment for not more than five years or both, if the value of the funds is $100 or more. If the value is less than $100, the penalties are a fine of not more than $1,000 or imprisonment for not more than one year or both.

(15) A vendor may be subject to actions in addition to the sanctions in this rule, such as claims by the Authority of reimbursement for improperly redeemed food instruments and penalties outlined in 7 CFR § 246.12(1)(2)(i).

(16) The Authority shall use the following criteria to determine inadequate participant access:

(a) The availability of other authorized vendors within a 15-mile radius; and

(b) Geographic barriers.

(17) Any time the Authority uses criteria in section (16) of this rule, the Authority shall include participant access documentation in the vendor file.

(18) The Authority shall not reimburse for food instruments submitted by a vendor for payment during a period of disqualification.

(19) A vendor is not entitled to receive any compensation for revenues lost as a result of a disqualification.

333-054-0065
Farmer Disqualifications

(1) Farmers who do not comply with WIC program requirements are subject to sanctions, including civil penalties, in addition to, or in lieu of, disqualification.

(2) Prior to disqualifying a farmer, the Authority may determine if disqualification of the farmer would result in inadequate participant access. If the Authority determines that disqualification of the farmer would result in inadequate participant access, the Authority may impose a CMP in lieu of disqualification in the amount of 5 percent of the farmer's CVBs sales over the last twelve months or $250, whichever is greater.

(3) The Authority must give written notice to a farmer of an action proposed to be taken against a farmer, not less than 15 days before the effective date of the action. The notice must state what action is being taken, the effective date of the action, and the procedure for requesting a hearing.

(4) A farmer that has been disqualified from the WIC program may reapply at the end of the disqualification period.

(5) The Authority may accept a farmer's voluntary withdrawal from the program as an alternative to disqualification. If a farmer chooses to withdraw in lieu of disqualification, the farmer may not apply for participation until the following year.

(6) The Authority will not reimburse farmers who have been disqualified or have withdrawn in lieu of disqualification.

(7) Civil penalties must be paid to the Authority within the time period specified in the Notice.

(8) A farmer who commits fraud or abuse of the WIC program is subject to prosecution under applicable federal, state or local laws.

333-054-0070
Administrative Review

(1) The Authority shall provide a full administrative review in accordance with the provisions of ORS Chapter 183 for the following, as applicable:

(a) Denial of authorization based on a determination that the vendor or farmer is attempting to circumvent a sanction;

(b) Termination of an agreement for cause;

(c) Disqualification;

(d) Imposition of a civil penalty or a CMP in lieu of disqualification; and

(e) Denial of authorization based on the vendor selection criteria for competitive price or minimum variety and quantity of authorized WIC foods.

(2) The Authority may provide a vendor with an abbreviated or full administrative review in accordance with the provisions of ORS Chapter 183 for the following, as applicable:

(a) Denial of authorization based on selection criteria for business integrity or for a current SNAP disqualification or CMP penalty for hardship;

(b) Denial of authorization based on an Authority selection criteria for previous history of WIC sanctions or SNAP withdrawal of authorization or disqualification;

(c) Denial of authorization based on the Authority's limiting criteria;

(d) Termination of an agreement because of a change in ownership or location or cessation of operations;

(e) Disqualification based on a trafficking conviction;

(f) Disqualification based on the imposition of a SNAP CMP for hardship;

(g) Disqualification or CMP based on a USDA mandatory sanction from another state WIC agency; and

(h) Application of criteria used to determine whether a store is an A50.

(3) The vendor or farmer shall not be entitled to an administrative review for the following actions, as applicable:

(a) The validity or appropriateness of the Authority's limiting or selection criteria;

(b) The validity or appropriateness of the Authority's participant access criteria and the Authority's participant access determinations;

(c) The Authority's determination regarding whether an effective policy and program in effect to prevent trafficking regardless of the vendor or farmer's awareness, approval, or involvement in the violation activity;

(d) Denial of authorization if the Authority vendor authorization is subject to the procurement procedures applicable to the Authority;

(e) The expiration of the agreement;

(f) Disputes regarding food instrument payments and claims;

(g) Disqualification of a vendor as a result of disqualification from the SNAP;

(h) The Authority's determination whether to notify a vendor in writing when an investigation reveals an initial violation for which a pattern of violations must be established in order to impose a sanction;

(i) The Authority's determination to include or exclude an infant formula manufacturer, wholesaler, distributor, or retailer from the list required;

(j) The validity or appropriateness of the Authority's criteria used to determine whether or not a vendor is an A50 store; and

(k) The validity or appropriateness of the Authority's prohibition of incentive items and the Authority's denial of an A50 vendor's request to provide an incentive item to shoppers.

(4) A request for a hearing must be in writing and must be received within 30 days from the date of the notice describing the proposed action.

(5) The Authority may, at its discretion, permit the vendor or farmer to continue participating in the program pending the outcome of an administrative hearing. The vendor or farmer may be required to repay funds for FIs redeemed during the pendency of the hearing, depending on the hearing outcome.

(6) If an agreement expires during the appeal period, the Authority will accept application for renewal and delay determination until all appeals have been exhausted.

DIVISION 55

TRAINING ON LIFESAVING TREATMENTS

333-055-0000
Purpose

(1) The purpose of OAR 333-055-0000 through 333-055-0035 is to describe the circumstances under which these rules apply and to define the procedures for authorizing certain individuals, when a licensed health care professional is not immediately available, to administer:

(a) Epinephrine to a person who has a severe allergic response to an allergen;

(b) Glucagon to a person who is experiencing severe hypoglycemia when other treatment has failed or cannot be initiated; and

(c) Medication that treats adrenal insufficiency to a student who is experiencing an adrenal crisis.

(2) Severe allergic reactions requiring epinephrine will occur in a wide variety of circumstances.

(3) Severe hypoglycemia requiring glucagon, in settings where children prone to severe hypoglycemia are known to lay providers and where arrangements for the availability of glucagon have been made, will occur primarily in, but not limited to, school settings, sports activities, and camps.

(4) An adrenal crisis for students diagnosed with adrenal insufficiency will occur in a wide variety of circumstances. The administration of medication to treat a student experiencing an adrenal crisis may be provided by trained school personnel in accordance with OAR 581-021-0037 whose parent or guardian has provided the necessary medication and equipment for administration.

Stat. Auth.: ORS 433.805 & 433.810

Hist.: HD 10-1982, f. & ef. 5-25-82; HD 23-1990(Temp), f. & cert. ef. 8-15-90; OHD 7-1998, f. & cert. ef. 7-28-98; OSHA 4-2012, f. 9-19-12, cert. ef. 1-1-13; PH 14-2012, f. & cert. ef. 9-19-12; PH 3-2016, f. & cert. ef. 2-8-16

333-055-0006
Definitions

(1) "Adrenal crisis" means a sudden, severe worsening of symptoms associated with adrenal insufficiency, such as severe pain in the lower back, abdomen or legs; vomiting; diarrhea; dehydration; low blood pressure or loss of consciousness.

(2) "Adrenal insufficiency" means a hormonal disorder that occurs when the adrenal glands do not produce enough adrenal hormones.

(3) "Allergen" means a substance, usually a protein, that evokes a particular adverse response in a sensitive individual.

(4) "Allergic response" means a medical condition caused by exposure to an allergen, with physical symptoms that range from localized itching to severe anaphylactic shock and that may be life threatening.

(5) "Emergency Medical Services Provider (EMS Provider)" means a person who has received formal training in pre-hospital and emergency care and is state-licensed to attend to any ill, injured or disabled person. Police officers, fire fighters, funeral home employees and other personnel serving in a dual capacity, one of which meets the definition of "emergency medical services provider" are "emergency medical services providers" within the meaning of ORS Chapter 682.

(6) "Hypoglycemia" means a condition in which a person experiences low blood sugar, producing symptoms such as drowsiness, loss of muscle control so that chewing or swallowing is impaired, irrational behavior in which food intake is resisted, convulsions, fainting or coma.

(7) "Other treatment" means oral administration of food containing glucose or other forms of carbohydrate, such as jelly or candy.

(8) "Other treatment has failed" means a hypoglycemic student's symptoms have worsened after the administration of a food containing glucose or other form of carbohydrate or a hypoglycemic student has become incoherent, unconscious or unresponsive.

(9) "Paramedic" means a person who is licensed by the Oregon Health Authority as a Paramedic.

(10) "Supervising professional" means a physician licensed under ORS Chapter 677, or a nurse practitioner licensed under ORS Chapter 678 to practice in this state and who has prescription writing authority.

333-055-0015
Educational Training

(1) Individuals to be trained to administer glucagon and school personnel to be trained to administer a medication that treats a student who has adrenal insufficiency and who is experiencing symptoms of adrenal crisis based on the student's health plan must be trained by:

(a) A physician licensed under ORS Chapter 677;

(b) A nurse practitioner licensed under ORS Chapter 678; or

(c) A registered nurse licensed under ORS Chapter 678.

(2) Individuals to be trained to administer epinephrine must be trained by:

(a) A physician licensed under ORS Chapter 677;

(b) A nurse practitioner licensed under ORS Chapter 678;

(c) A registered nurse licensed under ORS Chapter 678 as assigned by a supervising professional to teach the OHA-Public Health Division Treatment of Severe Allergic Reaction training and distributes a Certificate of Completion and Authorization to Obtain Epinephrine in accordance with OAR 333-055-0030(1); or

(d) A paramedic as delegated by an EMS Medical Director defined in OAR chapter 333, division 265.

(3) The training described in sections (1) and (2) of this rule must follow the Oregon Health Authority, Public Health Division training protocol, or an Authority approved equivalent. The Public Health Division approved training protocol for emergency glucagon providers is available on the Internet at http://healthoregon.org/diabetes. The training protocols for the treatment of severe allergic reaction or treatment of adrenal crisis are available on the Internet at http://healthoregon.org/ems.

333-055-0021
Eligibility for Training

In order to be eligible for training under OAR 333-055-0015, a person must:

(1) Be 18 years of age or older; and

(2) Have, or reasonably expect to have, responsibility for or contact with at least one other person as a result of the eligible person's occupational or volunteer status, such as, but not limited to, a camp counselor, scout leader, forest ranger, school employee, tour guide or chaperone.

Stat. Auth.: ORS 433.810
Stats. Implemented: ORS 433.820
Hist: PH 14-2012, f. & cert. ef. 9-19-12; PH 3-2016, f. & cert. ef. 2-8-16

333-055-0030
Certificates of Completion of Training

(1) Persons who successfully complete educational training under OAR 333-055-0000 through 333-055-0035 shall be given a Public Health Division statement of completion signed by the individual conducting the training. The statement of completion for the treatment of allergic response training may also be used as an authorization to obtain epinephrine if fully completed and personally signed by a nurse practitioner or a physician responsible for the training program. (a) A statement of completion for the treatment of allergic response training may be obtained from the Oregon Health Authority, Public Health Division, 800 NE Oregon Street, Suite 290, Portland, Oregon 97232, Phone: (971) 673-1230.

(b) A statement of completion for emergency glucagon providers is included in the training protocol available at http://healthoregon.org/diabetes.

(c) A statement of completion for school personnel trained in the administration of a medication to treat adrenal crisis is included in the treatment of adrenal insufficiency protocol available at http://healthoregon.org/ems.

(2) The statement of completion and authorization to obtain epinephrine form allows a pharmacist to generate a prescription and dispense an emergency supply of epinephrine for not more than one child and one adult in an automatic injection device if signed by a nurse practitioner or physician. Whenever such a statement of completion form for an emergency supply of epinephrine is presented, the pharmacist shall write upon the back of the statement of completion form in non-erasable ink the date that the prescription was filled, returning the statement of completion to the holder. The prescription may be filled up to four times. The pharmacist who dispenses an emergency supply of epinephrine under this rule shall also reduce the prescription to writing for his files, as in the case of an oral prescription for a non-controlled substance, and file the same in the pharmacy.

(3) A person who has successfully competed educational training in the administration of glucagon may receive, from the parent or guardian of a student, doses of glucagon prescribed by a health care professional with appropriate prescriptive privileges licensed under ORS chapters 677 or 678, and the necessary paraphernalia for administration.

(4) A person who has successfully competed educational training in the administration of a medication to treat adrenal crisis may receive, from the parent or guardian of a student, medication that treats adrenal insufficiency prescribed by a health care professional with appropriate prescriptive privileges licensed under ORS Chapters 677 or 678, and the necessary paraphernalia for administration.

(5) Completion of a training program and receipt of a statement of completion does not guarantee the competency of the individual trained.

(6) A statement of completion and authorization to obtain epinephrine shall expire three years after the date of training identified on the statement of completion. Individuals trained to administer epinephrine, glucagon or a medication to treat adrenal insufficiency must be trained every three years in accordance with OAR 333-055-0015 in order to obtain a new statement of completion.

(7) Individuals trained to administer epinephrine, glucagon or a medication to treat adrenal crisis may be asked to provide copies of a current statement of completion to their employers or to organizations or entities to which they volunteer.

333-055-0035
Circumstances in Which Trained Persons May Administer Epinephrine, Glucagon or a Medication to Treat Adrenal Crisis

(1) A person who holds a current statement of completion pursuant to OAR 333-055-0030 may, in an emergency situation when a licensed health care professional is not immediately available, administer epinephrine to any person suffering a severe allergic response to an insect sting or other allergen. The decision to give epinephrine should be based upon recognition of the signs of a systemic allergic reaction and need not be postponed for purposes of identifying the specific antigen which caused the reaction.

(2) A person who holds a current statement of completion pursuant to OAR 333-055-0030 may, in an emergency situation involving an individual who is experiencing hypoglycemia and when a licensed health care professional is not immediately available, administer health care professional-prescribed glucagon to a person for whom glucagon is prescribed, when other treatment has failed or cannot be initiated. The decision to give glucagon should be based upon recognition of the signs of severe hypoglycemia and the inability to correct it with oral intake of food or drink.

(3) School personnel who hold a current statement of completion pursuant to OAR 333-055-0030 may, in an emergency situation involving a student diagnosed with adrenal insufficiency who is experiencing symptoms of adrenal crisis and when a licensed health care professional is not immediately available, administer health care professional-prescribed medication to treat adrenal insufficiency. The decision to give medication to a student with adrenal insufficiency should be based upon the student's health plan in accordance with OAR 581-021-0037 and recognition of the signs of adrenal crisis and need not be postponed.

Opiate Overdose

333-055-0100
Purpose

(1) The purpose of OAR 333-055-0100 through 333-055-0110 is to define the protocols and criteria for training on lifesaving treatments for opiate overdose.

(2) Nothing in these rules is meant to require training for health care professionals that are otherwise authorized to administer naloxone within their scope of practice.

(3) Opiate overdose requiring lifesaving treatment occurs in a wide variety of settings and circumstances, creating a need for training a variety of overdose responders. In recognition of this need, Oregon law authorizes a wide range of organizations to provide training on lifesaving treatments for opiate overdose including public health authorities, and organizations and other appropriate entities that provide services to individuals who take opiates. The Oregon Public Health Division interprets providing services to opiate users broadly and includes but is not limited to clinical, substance abuse, social services, public health, law enforcement and criminal justice, and other providers.

Stats. Implemented: ORS 689.681

Hist.: PH 8-2013(Temp), f. & cert. ef. 7-1-13 thru 12-27-13; PH 12-2013, f. & cert. ef. 11-19-13

333-055-0105
Definitions

Unless otherwise stated in OAR 333-055-0100 through 333-055-0110, or the context of 333-055-0100 through 333-055-0110 requires otherwise, the following definitions apply to OAR 333-055-0100 through 333-055-0110:

(1) "Certified nurse practitioner" means a nurse practitioner licensed under ORS Chapter 678.

(2) "Licensed physician" means a physician licensed under ORS Chapter 677.

(3) "Opiate" has the same meaning given that term in Oregon Laws 2013, chapter 340.

(4) "Opiate overdose" has the same meaning given that term in Oregon Laws 2013, chapter 340.

(5) "Oversight" means ensuring, through periodic review, that the training on lifesaving treatments for opiate overdose is consistent with the scope and intent of the protocols and criteria established by Oregon Health Authority. 'Oversight' does not require the licensed physician or certified nurse practitioner to be present during the training.

Stat. Auth: ORS 689.681
Stats. Implemented: ORS 689.681
Hist.: PH 8-2013(Temp), f. & cert. ef. 7-1-13 thru 12-27-13; PH 12-2013, f. & cert. ef. 11-19-13

333-055-0110
Educational Training

(1) Training to administer naloxone is subject to oversight by a licensed physician or certified nurse practitioner with prescriptive privileges.

(2) Subject to the oversight required in section (1) of this rule, training may be conducted by a public health authority, an organization or other entity that provides services to individuals who take opiates.

(3) Individuals trained to respond to opiate overdose must be retrained at least every three years.

(4) The training must meet the protocols and criteria established by Oregon Health Authority, Public Health Division. The approved training protocol and criteria for the treatment of opiate overdose is available on the Internet at https://public.health.oregon.gov/ProviderPartnerResources/EMSTraumaSystems/Pages/Naloxone-Training-Protocol.aspx and is incorporated by reference.

Stat. Auth: ORS 689.681
Stats. Implemented: ORS 689.681
Hist.: PH 8-2013(Temp), f. & cert. ef. 7-1-13 thru 12-27-13; PH 12-2013, f. & cert. ef. 11-19-13

333-055-0115
Certificate of Completion of Training

(1) Persons who successfully complete opiate overdose response training under OAR 333-055-0000 through 333-055-0115 shall be given a statement of completion signed by the individual conducting the training. The statement of completion may be used as an authorization to obtain naloxone from a licensed pharmacy if fully completed and signed by a nurse practitioner or physician overseeing the training. The statement of completion for the treatment of opiate overdose response training is available on the Internet at https://public.health.oregon.gov/ProviderPartnerResources/EMSTraumaSystems/Pages/Naloxone-Training-Protocol.aspx and is incorporated by reference.

(2) The statement of completion authorizes a pharmacist to generate a prescription and dispense to the trained individual doses of naloxone if the statement of completion is signed by a nurse practitioner or physician. Whenever such a statement of completion is presented, the pharmacist may generate a prescription and dispense naloxone to the trained individual as specified under OAR 855-041-2330.

(3) A statement of completion and authorization to obtain naloxone shall expire three years after the date of training identified on the statement of completion. Individuals trained to respond to opiate overdose must be trained every three years in accordance with OAR 333-055-0110 to obtain a new statement of completion.

DIVISION 56

INFECTIOUS WASTE MANAGEMENT

333-056-0010
Purpose of Infectious Waste Administrative Rules

The purpose of OAR 333-056-0020 through 333-056-0050 is to define terms related to infectious waste and to prescribe acceptable methods of storage and treatment of infectious waste.

Stat. Auth.: ORS 431.110, 433.004 & 459.395
Stats. Implemented: ORS 459.395
Hist.: HD 15-1990, f. 6-5-90, cert. ef. 7-1-90; OHD 15-2001, f. & cert. ef. 7-12-01, Renumbered from 333-018-0040

333-056-0020
Definitions Relating to Infectious Waste

As used in OAR 333-056-0010 through 333-056-0050, unless the context requires otherwise, the following definitions apply:

(1) "Act" means chapter 763, Oregon Laws, 1989, codified as ORS 459.386 to 459.405.

(2) "Disposal" means the final placement of treated infectious waste in a disposal site operating under a permit issued by a state or federal agency.

(3) "Disposal site" means land and facilities used for the disposal, handling or transfer of, or resource recovery from solid wastes, including but not limited to dumps, landfills, sludge lagoons, sludge treatment facilities, disposal sites for septic tank pumping or cesspool cleaning service, transfer stations, resource recovery facilities, incinerators for solid waste delivered by the public or by a solid waste collection service, composting plants and land and facilities previously used for solid waste disposal at a land disposal site. "Disposal site" does not include:

(a) A facility subject to the permit requirements of ORS 468.740;

(b) A landfill site which is used by the owner or person in control of the premises to dispose of soil, rock, concrete or other similar non-decomposable materials, unless the site is used by the public either directly or through a solid waste collection service; or

(c) A site operated by a wrecker issued a certificate under ORS 822.110.

(4) "Division" means the Oregon Health Authority, Public Health Division.

(5) "Incineration" means the reduction in volume and weight of waste by combustion.

(6) "Infectious waste" means:

(a) "Biological waste", which includes blood and blood products, excretions, exudates, secretions, suctionings and other body fluids that cannot be directly discarded into the municipal sewer system, and waste materials saturated with blood or body fluids, but does not include diapers soiled with urine or feces. In addition, biological waste does not include articles contaminated with fully absorbed or dried blood, such as gauze, paper towels, and sanitary napkins;

(b) "Cultures and stocks", which includes etiologic agents and associated biologicals, including specimen cultures and dishes and devices used to transfer, inoculate and mix cultures, wastes from production of biologicals, and serums and discarded live and attenuated vaccines. "Cultures" does not include throat and urine cultures;

(c) "Pathological waste", which includes biopsy materials and all human tissues, anatomical parts that emanate from surgery, obstetrical procedures, autopsy and laboratory procedures and animal carcasses exposed to pathogens in research and the bedding and other waste from such animals. "Pathological waste" does not include teeth or formaldehyde or other preservative agents;

(d) "Sharps", which includes needles, IV tubing with needles attached, scalpel blades, lancets, glass tubes that could be broken during handling and syringes that have been removed from their original sterile containers;

(e) "Syringe" means an instrument for the injection of medicine or the withdrawal of body fluids that consists of a hollow barrel fitted with a plunger and a hollow needle.

(7) "Landfill" means a facility for the disposal of solid waste involving the placement of solid waste on or beneath the land surface.

(8) "Noninfectious" means a state in which a disease causing agent is not capable of causing an infection to occur.

(9) "Saturated Waste" means waste that contains enough body fluid that it would cause dripping of the body fluid from the waste container, with or without compaction.

(10) "Sterilization" means, for purposes of these rules, any process which changes infectious waste so that disease causing agents contained within it are rendered non-infectious at the time the process is completed.

(11) "Storage" means the temporary containment of infectious waste in a manner that does not constitute treatment or disposal of such waste.

(12) "Transportation" means the movement of infectious waste from the point of generation over a public highway to any intermediate point, to the point of final treatment, and to the point of final disposal.

(13) "Treatment" means incineration, sterilization or other method, technique or process approved by the Oregon Health Authority, Public Health Division that changes the character or composition of any infectious waste so as to render the waste noninfectious. Treatment also includes methods of rendering waste noninfectious, which are approved by the Environmental Quality Commission.

Stat. Auth.: ORS 431.110, 433.004 & 459.395
Stats. Implemented: ORS 431.110, 433.004 & 459.395
Hist.: HD 15-1990, f. 6-5-90, cert. ef. 7-1-90; OHD 15-2001, f. & cert. ef. 7-12-01, Renumbered from 333-018-0050; PH 16-2013, f. 12-26-13, cert. ef. 1-1-14; PH 10-2015, f. 7-2-15, cert. ef. 7-3-15

333-056-0030
Infectious Waste Treatment

(1) Pathological wastes shall be treated by incineration in an incinerator that provides complete combustion of waste to carbonized or mineralized ash. However, if the Department of Environmental Quality determines that incineration is not reasonably available within a wasteshed, pathological wastes may be disposed of in the same manner provided for cultures and stocks.

(2) Cultures, stocks, sharps and biological wastes must be treated using one of the following methods, as delineated in subsections (2)(a), (b) and (c) of this rule:

(a) Treated via incineration. If incineration is utilized, it shall be done in compliance with all applicable rules established by the Environmental Quality Commission;

(b) Sterilization with saturated steam in a pressurized vessel. If this method is employed, a vessel dedicated to infectious waste treatment must be utilized. Operating procedures which must be developed and implemented shall include at least the following:

(A) Adoption of standard written operating procedures for each steam sterilizer including time, temperature, pressure, type of waste, type of container(s), type of closure on container(s), pattern of loading, and maximum load quantity. The manufacturer's recommendations shall be taken into account;

(B) Methods for monitoring recording or temperature measuring devices during each complete cycle to ensure that the manufacturer's recommended temperature is attained for the recommended amount of time in order to achieve sterilization of the entire load. Temperature measuring devices shall be checked for calibration at least annually;

(C) Methods for using heat sensitive tape or other device designed to indicate attainment of adequate sterilization conditions, for each container;

(D) Methods for at least monthly use of the biological indicator Bacillus stearothermophilus, or equivalent, placed at the center of a load processed under standard operating conditions, to confirm the attainment of adequate sterilization conditions;

(E) Methods for maintenance of records pertaining to paragraphs (2)(a)(A), (B) and (D) of this rule. These records shall be maintained and available for Division review for a period of not less than one year.

(c) Treated by other methods that meet the following criteria:

(A) The specific processes of the method have been tested under the conditions in which the method would be used in Oregon for the treatment of infectious waste. Such testing has demonstrated that the method is effective in rendering infectious agents noninfectious by showing bactericidal efficacy against at least spore-forming bacteria and a Mycobacterium. The testing methodology, test results, and documentation thereof must be considered scientifically valid by the Division. The determination of validity requires, but is not limited to:

(i) The testing methodology follows basic scientific principles or objectivity and is fully documented;

(ii) The results of the testing are fully documented. Raw data are made available to the Division if they are requested by the Division;

(iii) The testing has been done by a scientist(s) with an advanced degree in microbiology and with a record of having published scientific research results in a peer reviewed journal;

(iv) The report of the testing methodology and results, together with the statement "This report is an accurate and complete account of the test methods I performed and the test results I obtained" have been signed by the scientist(s) who performed the testing; and

(B) Any discharges into air or water and any solid waste resulting from the method meet the requirements of the laws and administrative rules of the Oregon Department of Environmental Quality; or

(C) The Environmental Quality Commission has approved the method and has accepted that method by administrative rule.

(3) Liquid or soluble semi-solid biological wastes may be discharged into a sewage treatment system that provides secondary treatment of waste.

(4) After treatment approved by the Division or the Environmental Quality Commission, sharps may be disposed of directly into a permitted land disposal site only if the sharps are in a red, leak-proof, rigid, puncture-resistant container which is taped closed or tightly lidded to prevent loss of the contents. The containers may not be compacted or otherwise broken before placement in the landfill. They must be placed in a segregated area of the landfill.

(5) Methods of treatment which have not been delineated in this rule or approved by the Division or the Environmental Quality Commission, as applicable, are not permitted.

333-056-0040
Infectious Waste Storage Times and Temperature

(1) Infectious waste shall be segregated from other wastes by separate containment at the point of generation.

(2) Enclosures used for storage of infectious waste shall be secured to prevent access by unauthorized persons and marked with prominent warning signs.

(3) Pathological waste, biological waste and cultures/stocks shall be treated or disposed of pursuant to OAR 333-056-0010 through 333-056-0030 within seven days of generation, unless it is refrigerated (between 33 and 48 degrees Fahrenheit) or frozen (less than 32 degrees Fahrenheit). Refrigerated or frozen infectious waste may be stored 30 days prior to treatment or disposal.

(4) Prior to being treated pursuant to OAR 333-056-0010 through 333-056-0030, sharps contained in a leak proof, rigid, puncture resistant container which is taped closed or tightly lidded to prevent loss of the contents may be stored indefinitely.

(5) Generators that produce 50 pounds or less of infectious waste in any calendar month shall be exempt from the requirements pertaining to storage times and temperatures.

Exemption for Placenta Removal from a Health Care Facility

(1) Notwithstanding any other provision in these rules, a health care facility or freestanding birthing center, as those terms are defined in ORS 442.015, may release a placenta to the woman from whom the placenta originated, or to her designee, if:

(a) The facility or birthing center has a written policy and procedure to ensure the safe management and transport of placentas;

(b) The woman tested negative for infection by hepatitis B and human immunodeficiency viruses by testing obtained since the beginning of the pregnancy; and

(c) The woman, or her designee, and the woman's health care provider sign a form that contains at least the following:

(A) The woman's name, date of birth, address and the name of the health care provider;

(B) An attestation by the woman or her designee that the placenta will not be used for commercial purposes; and

(C) An attestation by the health care provider that:

(i) Since the beginning of the pregnancy the woman tested negative for infection by hepatitis B and human immunodeficiency viruses;

(ii) The woman either tested negative for hepatitis C virus since the beginning of the pregnancy or is not at risk for hepatitis C; and

(iii) To the health care provider's knowledge, the woman has no infection that poses a threat to persons who handle the placenta.

(2) The health care facility or freestanding birthing center must keep a copy of the signed release form described in subsection (1)(c) of this rule in the mother's medical record.

(3) Health care facilities and freestanding birthing centers shall make policies and procedures developed in accordance with subsection (1)(a) of this rule available to the Division upon request.

(4) Nothing in this rule prohibits a health care facility or freestanding birthing center from having additional requirements for the removal of a placenta from the facility or center.

Prevention of Disease Transmission by Blood-Contaminated Sharp Objects

Any person using sharp instruments (for example, needles, lancets, scalpels) for purposes of drawing blood, administering medication, or medical/surgical procedures on humans, shall dispose of such items in a manner that will protect any other handlers of this waste from injury. The disposal of such waste shall be in accordance with current recommendations of the U.S. Centers for Disease Control and Prevention, and shall include the use of impervious, rigid, puncture-proof containers. This rule applies to but is not limited to blood banks, plasmapherisis centers, medical clinics, dental offices, outpatient care centers, inpatient care facilities, hospitals, and home health agencies.

DIVISION 60

PUBLIC WATER SYSTEMS

Public Swimming Pools and Bathhouses

333-060-0005
Purpose

These rules adopted pursuant to the provisions of ORS 448.011, prescribe the requirements for the construction and operation of public swimming pools, public wading pools and bathhouses. They are for the purpose of protecting the health, safety, and welfare of persons using those facilities.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.011
Hist.: HD 2-1979, f. 1-25-79, ef. 3-1-79, Renumbered from 333-042-0076; HD 7-1986, f. & ef. 5-1-86

333-060-0010
Adoption by Reference

Outside standards, listings and publications referred to in these sections are by reference made a part of these rules.

333-060-0015
Definitions

As used in these rules unless otherwise required by context:

(1) "Administrator" means the State Public Health Director or designee of the Oregon Health Authority, Public Health Division.

(2) "Approved" means approved in writing by the Division.

(3) "Athletic club" means a facility constructed to provide athletic or physical conditioning for its members, guests and/or patrons. It includes but is not limited to racquetball clubs, health spas, fitness facilities, aerobics, etc.

(4) "Bathhouse" means a structure, which contains dressing rooms, showers and toilet facilities for use with an adjacent public swimming pool.

(5) "Builder" means a person who, in the pursuit of an independent business, undertakes, or offers to undertake, or submits a bid, to construct, alter, repair, or improve any public swimming pool, spa pool or bathhouse and the appurtenances thereto.

(6) "Certified Operator" means a person performing the duties of the responsible supervisor, and responsible for providing direction and training to non-certified responsible supervisors and other pool personnel in regards to pool maintenance and operation. This person shall be certified by an organization providing training in pool safety, maintenance and operation recognized by the Division. Such courses and organizations include the Certified Pool Operator Program, by the National Swimming Pool Foundation, and the Aquatic Facility Operator Program, by the National Recreation and Parks Association, or equivalent, as determined by the Division.

(7) "Cross connection" means an unprotected connection between the piping carrying potable water and the piping or fixtures which carry other water or other substances.

(8) "Division" means the Oregon Health Authority, Public Health Division.

(9) "General-use Public Swimming Pool" means any public swimming pool other than a limited-use public swimming pool. Public swimming pools operated in conjunction with a companion facility but not limited to use of the residents, patrons or members of the companion facility are general-use swimming pools.

(10) "Guest protection zone" means a defined and prescribed area of a swimming pool or aquatic feature. A designated lifeguard is responsible for scanning a guest protection zone. Scanning refers to the actions performed by the lifeguard to visually survey and continuously and comprehensively monitor the guest protection zone.

(11) "10/20 Guest Protection Standard" means using a lifeguard planning standard that will place guards in numbers and locations, with identified areas of responsibility, so that they can theoretically identify a victim within 10 seconds and reach the victim within 20 more seconds. This is only a planning tool and actual response times will vary depending on the abilities of the lifeguard, their alertness, their vigilance and what else is happening in the pool.

(12) "Horseplay" means any unsafe activity, which in the opinion of the Division or the pool operator endangers the pool users and/or bystanders.

(13) "Instructor" means a currently certified American Red Cross Water Safety Instructor, YMCA Swim Instructor, or a person having equivalent certification as determined by the Division.

(14) "Lifeguard" means a person holding current certification in the following three areas:

(a) Lifeguard certification. Certification in one of the following:

(A) American Red Cross Lifeguard Training;

(B) Young Men's Christian Association (YMCA) Lifeguarding;

(C) International Lifeguard Training Program (ILTP) for deep water;

(D) Starfish Aquatics Institute StarGuard; or

(E) Other lifeguard training approved by the Division.

(b) First aid certification. Certification in one of the following:

(A) American Red Cross First Aid;

(B) American Safety and Health Institute Universal Basic First Aid:

(C) Emergency Medical Planning America Medic First Aid (MFA); or

(D) Other equivalent First Aid Course approved by the Division.

(c) CPR certification. Certification in one of the following:

(A) American Red Cross CPR for the Professional Rescuer;

(B) American Heart Association Healthcare Provider CPR;

(C) American Safety and Health Institute CPR Pro for the Professional Rescuer; or

(D) Other equivalent CPR training approved by the Division.

(15) "Limited-use Public Swimming Pool" means any public swimming pool located at and operated in connection with a companion facility such as a residential housing facility having five or more living units, travelers' accommodations, mobile home park, recreation park, boarding school, organizational camp, dude ranch, club or association where use of the pool is limited to residents, patrons or members of the companion facility.

(16) "Person" includes, in addition to the definition in ORS 174.100, municipalities, recreation districts, counties and state agencies, instrumentalities, or builder.

(17) "Private Swimming Pool" means any swimming pool, wading pool or spray pool owned by no more than four individuals, either jointly, individually or through association, incorporation or otherwise, and operated and maintained in conjunction with a companion residential housing facility having no more than four living units, for the use of the occupants thereof and their personal friends only. Private pools shall not be subject to the provisions of these rules.

(18) "Public Spa Pool" means any public swimming pool or wading pool designed primarily to direct water or air-enriched water under pressure onto the bather's body with the intent of producing a relaxing or therapeutic effect.

(19) "Public Swimming Pool" means an artificial structure, and its appurtenances, which contains water more than two feet (600mm) deep which is expressly designated or which is used with the knowledge and consent of the owner or operator for swimming or recreational bathing and which is for the use of any segment of the public. "Public swimming pool" includes, but is not limited to, swimming pools owned or operated by:

(a) Traveler's accommodations;

(b) Recreation parks;

(c) Colleges;

(d) Schools;

(e) Organizational camps as defined in ORS 446.310;

(f) Clubs;

(g) Associations;

(h) Business establishments for their patrons or employees;

(i) Private persons and that are open to the public;

(j) Recreation districts;

(k) Municipalities;

(l) Counties; or

(m) A state agency.

(20) "Public Wading Pool" means an artificial structure, and its appurtenances, which contains water less than two feet (600mm) deep which is expressly designated or which is used with the knowledge and consent of the owner or operator for wading or recreational bathing and which is for the use of any segment of the public, whether limited to patrons of a companion facility or not. Special types of wading pools include but are not limited to:

(a) "Spray Pool" or "Water Playground" meaning a wading pool containing spray features intended for recreational use, but that does not allow water to pond in the basin. Spray pools or water playgrounds that do not pond water and use potable water once then send it to waste are not regulated by these rules.

(b) "Interactive Fountain" meaning a wading pool designed for esthetic appreciation, which is expressly designated or which is used with the knowledge and consent of the owner or operator for wading or recreational bathing by any segment of the public. Interactive fountains are a type of wading pool. Interactive fountains that do not pond water and use potable water once then send it to waste are not regulated by these rules.

(c) "Non-Regulated Fountain" means a fountain designed and operated solely for visual appreciation and for that function only. The Division does not license or regulate this type of fountain.

(21) "Responsible Supervisor" means a person, or persons, designated by the operator to provide emergency assistance to patrons, maintain order and enforce pool use regulations, governing safety and sanitation, including pool closure, and who is knowledgeable about pool maintenance and operation and the testing of pool water.

(22) "Shallow Water Lifeguard" means a person with training in the skills needed to lifeguard in four feet (1.2 m) of water or less. This person shall have current certification in:

(a) International Lifeguard Training Program (ILTP) for shallow water guards;

(b) Starfish Aquatics Institute StarGuard with a competency assessment designation of three feet of water or less, or;

(c) Equivalent training, as approved by the Division.

(23) "Special-use pool" means a public swimming pool which is designed specifically for sporting or recreational purposes and may include but are not limited to special features such as wave pools, diving pools, splash pools, zero depth pools, portable slides, and water slides.

(24) "Supplemental Disinfectant" means a disinfectant, which is intended to augment water quality in a public swimming pool or spa and will provide disinfection in conjunction with the approved disinfectant.

(25) "Swimming Pool" means an artificial structure, basin, chamber or tank used for wading, swimming, diving, water recreation, therapy or bathing. It does not include facilities where the water is drained after each use, when such facility has no heater, filter, or sanitizing equipment or spray pools that use potable water once and send to waste and that do not pond water in the basin. Types of pools are as follows:

(a) "Combination pool" means a pool used for swimming and diving, having both shallow and deep portions.

(b) "Diving pool" means a pool used exclusively for diving.

(c) "Exercise pool" means a pool small in area and of shallow depth usually associated with a health spa.

(d) "Mobile pool" means a pool constructed on a mobile structure, which can be transported from place to place.

(e) "Reverse flow pool" means a pool of a design in which the water enters at the bottom and leaves at the water line.

(f) "Spa" means a relatively small pool, which uses high temperature water and which may include a water agitation system or air-enriched water under pressure, with the intent of producing a relaxing or therapeutic effect. A spa is sometimes called a whirlpool.

(g) "Special-use pool" means a pool used for a purpose not otherwise defined, such as for apparatus swimming, diving, and underwater photography training, therapy, or other use by the public.

(h) "Spray Pool" means a type of wading pool that provides water for recreational bathing through the use of sprays, fountains, buckets or other means, that allows the water to run by gravity to a drain and does not pond water in the basin. Spray pools that use potable water once and waste it to the drain without ponding of the water are not regulated by these rules.

(i) "Wading Pool" means a shallow pool used primarily by children, and designed to have a water depth no greater than 24 inches.

(j) "Waterslide plunge pool" means a pool located at the exit end of a waterslide flume and intended and designed to receive sliders emerging from the flume.

(k) "Water recreation attraction" means a special-use pool designed and intended for recreational use with special design or operational features that provide the patron recreational activity which may be different from that associated with a conventional swimming pool, and that purposefully involves immersion of the body partially or totally in the water.

NOTE: Examples of water recreation attractions are waterslide plunge pools, lazy or slow rivers, tubing pools, and wave pools.

(l) "Wave pool" means a pool designed for generating waves for recreational purposes.

(m) "Zero-depth pool" means a pool having a bottom slope, which continues through decreasing depth until the bottom joins with the deck around either part or all of the pool perimeter. It may have no walls, or may have walls around part of the perimeter.

(26) "Variance" means written permission from the Division for a public swimming pool, public spa pool or public wading pool to be operated when it does not comply with all the applicable rules for public swimming pools, public spa pools or public wading pools.

(27) "Waterpark slide" means a slide at a public pool, which has a length of at least twenty feet (6.1m), not including the platform.

333-060-0020
Compliance

(1) Swimming pools and wading pools which were in public use before May 13, 1959, shall not be required to comply with Structural Stability, OAR 333-060-0050(2); and Dimensions, 333-060-0060(3) and (4), provided such pools are operated in compliance with all other rules of the Division relating to public swimming pools.

(2) All swimming pools and wading pools which were constructed and in use but were not in public use as defined in Definitions, OAR 333-060-0015(19), and were not licensed by the State Board of Health before June 10, 1959, shall before being operated for any public use, have complete and detailed plans submitted to the Division. A license to operate as a public pool shall not be issued until the pool is made to comply with the requirements of these rules.

(3) Any public wading pool constructed before July 1, 2006, but not licensed by the Division or its agent health department before that date, must obtain a license to operate:

(a) Wading pools, other than spray pools, without water recirculation must comply with the requirements of OAR 333-060-0510(1) or must cease operation;

(b) All existing wading pools must provide protection against entrapment, hair entanglement and evisceration in compliance with OAR 333-060-0510(2), or cease operation by December 31, 2008.

(4) Any limited-use swimming pool operated in conjunction with a companion residential housing facility having five or more living units and which was operated and maintained for the use of the occupants thereof and their personal friends only, but which was not required to be licensed prior to February 25, 1971, shall not be required to comply with Structural Stability, OAR 333-060-0050(2); Dimensions, 333-060-0060(3), (4) and (5)(a); Piping, 333-060-0130(1), (2), and (3); and Overflow Systems, 333-060-0115(2)(b), (3) and (4); provided such pools are operated in compliance with all other requirements of these rules.

(5) Public swimming pools built prior to March 1, 1979, are exempt from the following requirements of these rules provided such pools are operated in continuous compliance with the rules in effect at the time such pools were constructed:

(a) Dimensions, OAR 333-060-0060(2), (5)(a)(B), (5)(b);

(b) Finishes, Markings and Lifelines, OAR 333-060-0065(3);

(c) Ladders, Recessed Steps and Stairways, OAR 333-060-0080(7), (8);

(d) Decks, OAR 333-060-0110(1)(a), (2), (6), (7);

(e) Overflow Systems, OAR 333-060-0115(3);

(f) Recirculation Systems, OAR 333-060-0120(2)(c);

(g) Inlets and Outlets, OAR 333-060-0125(2), (4);

(h) Piping, OAR 333-060-0130(1), (4);

(i) Pumps, OAR 333-060-0135(1)(a), (b), (4);

(j) Filters, OAR 333-060-0140(2)(a)–(d), (6), (7);

(k) Heaters, OAR 333-060-0145(1)(c);

(l) Disinfectant and Chemical Feeders, OAR 333-060-0150(4);

(m) Equipment Room, OAR 333-060-0160(1);

(n) Bathhouse and Sanitary Facilities, OAR 333-060-0170(3)(a), (b);

(o) Signs, OAR 333-060-0215(1), (2) and (3).

(6) The exemptions of sections (1), (2), (3), and (4) of this rule apply provided the exemption does not present a health or safety hazard. Exemptions do not apply to any alteration or replacement of affected component part.

333-060-0025
Permit to Construct

(1) No person shall construct a public swimming pool, public wading pool, or bathhouse adjacent thereto, or alter any such structures without:

(a) Submitting complete plans and specifications to the Division;

(b) Receiving a written plan approval or conditional approval from the Division;

(c) Paying a construction permit fee to the Division;

(d) Receiving a permit to construct from the Division.

(2) Plans, specifications, and fees required herein shall be submitted at the time of filing application for a construction permit.

(3) No person shall deviate from the approved or conditionally approved plans and specifications during the construction or alteration of a facility described in section (1) of this rule without written approval of the Division.

(4) Construction permits will be issued only to the owner or authorized agent of the owner.

(5) The Division may issue a conditional construction permit where the plans and specifications for the proposed public swimming pool demonstrate a new technology or alternative mode of operation not contemplated in these rules. Such a permit may be issued only when the proponent of the facility has provided information to the Division from which the Division determines that the swimming pool may be reasonably expected to:

(a) Operate continuously in a clean and sanitary manner;

(b) Not constitute a menace to public health and safety; and

(c) Provide health and safety protection equal to or greater than that required by these rules.

(6) The conditional permit may impose conditions which will be set forth in a license for operation. These conditions may include, but not be limited to, submission of monitoring reports, sampling requirements, use restrictions and such other conditions as the Division may deem necessary to protect the public health and safety or to establish further the Division's expectancy of such protection. Furthermore, any license issued subject to a conditional permit shall carry the condition that, by its acceptance, the holder understands that a conditional license may not be renewed, may be revoked or suspended, or a permanent license not issued in the future, if the Division determines that the provisions of subsections (5)(a), (b), and (c) of this rule are not met. Such conditional construction permit authority is not conferred upon any county notwithstanding any delegated or contractual authority in administration and enforcement of the public swimming pool statutes and rules.

333-060-0030
Plans

(1) Plans and specifications shall be prepared by a professional engineer or architect registered in the State of Oregon. Specific exemptions to this requirement may be granted by the Division, where in the judgment of the Division no architectural or engineering problems are presented and the plans accurately depict the proposed pool and address all requirements of these rules.

(2) Plans shall be submitted in duplicate, drawn to scale and shall include:

(a) One plan view;

(b) One longitudinal section;

(c) One transverse section through the main drain;

(d) One overall plan showing the pool in relation to other facilities in the area. (This plan may be combined with subsection (2)(a) of this rule.);

(e) One detailed view of the equipment room layout;

(f) One vicinity map;

(g) One piping schematic showing piping, pipe size, inlets, main drains, skimmers, gutter outlets, vacuum fittings, and all other appurtenances connected to the pool piping system. (This plan may be combined with subsection (2)(a) of this rule);

(h) One cross section of the step treads and risers.

(3) Plan notes such as "fence by owner" or "deck to be under separate contract" shall not be acceptable as a substitute for scale drawings.

(4) Plans shall include the following information in tabulated form:

(a) Legal address of the facility;

(b) Location of the facility if different from legal address;

(c) Owner's name, address and telephone number;

(d) Surface area of pool;

(e) Pool volume, turn over time, flow rate, filter rate/unit area, type of filter and total system head loss;

(f) Manufacturer, make and model numbers of the pump, filter and automatic chemical feed apparatus, filter head loss (clean and dirty), and pump curve showing design flow rate and head;

(g) Source of water used at the pool;

(h) Means of disposing backwash water.

333-060-0035
Licenses

(1) No person shall operate a public swimming pool or public wading pool without:

(a) Securing an approved final construction inspection from the Division or its agent; or, if an unlicensed wading pool constructed before July 1, 2006, a compliance inspection. The compliance inspection will show items of non-compliance that need to be corrected before license issuance or the need to comply with the requirements of OAR 333-060-0510;

(b) Making application for a license to operate such pool;

(c) Paying the license fee; and

(d) Securing a license from the Division or delegate county health department.

(2) Such license terminates and is renewable on December 31 of each year.

333-060-0040
Conditional Licenses

(1) Conditional licenses may be issued by the Division in circumstances where:

(a) There is substantial compliance with these rules;

(b) A written schedule for total compliance approved by the Division is instituted and maintained; and

(c) In the judgment of the Division, there is no immediate threat to the health and safety of bathers during the time in which complete compliance is attained. The Division may also require special safeguards to be instituted and maintained as a condition of the conditional license.

(2) Conditional licenses may also be issued by the Division, as provided in OAR 333-060-0025(5).

333-060-0045
Maintenance and Modification

(1) All equipment of public swimming pools and public wading pools shall be operational and shall be kept in good repair. Such equipment shall be maintained in conformance with the original design or better.

(2) The structural components of all public swimming pools and their appurtenances shall be maintained in good repair.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.005 - 448.100, 448.990
Hist.: HD 2-1979, f. 1-25-79, ef. 3-1-79, Renumbered from 333-042-0103; PH 17-2006, f. 6-30-06, cert. ef. 7-1-06

333-060-0050
Structural Stability

(1) All public swimming pools and public wading pools shall be watertight, constructed of waterproof and enduring materials compatible with the swimming pool environment and shall be designed to withstand all anticipated loading for both pool-empty and pool-full conditions.

(2) Where a high water table may be encountered, provisions shall be made for relief of hydrostatic pressure from under the pool floor and/or around the pool walls.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.005 - 448.100, 448.990

333-060-0055
Size

Public swimming pools shall be sized according to and shall not exceed the design limit of the user load functions shown below. User loads are specific in-pool loads only. Area of deep water, "D" equals the surface area of the pool greater than five feet (1.5m) deep. Area of shallow water, "S" equals the surface area of the pool less than five feet (1.5m) deep. Surface area, "A" equals the area of the entire pool:

(1) Outdoor swimming pools with a surface area of more than 2,000 square feet — Max. load = (D / 27) + (S / 15);

(2) Outdoor swimming pools with a surface area of less than 2,000 square feet — Max. load = A / 24;

(3) Indoor swimming pools — Max. load = A / 24;

(4) Spray pools, wading pools — Max. load = A / 24.

333-060-0060
Dimensions

(1) Public swimming pools and public wading pools shall have no sharp edges or protrusions where walls meet at an acute angle. Public swimming pools and public wading pools shall be shaped so as to provide for complete water recirculation and mixing. Walls in public wading pools must be vertical with a 3 to 6-inch (75–150 mm) radius at the pool wall/ pool floor juncture.

(2) There shall be no wall ledges in public swimming pools.

(3) Public swimming pools shall be not less than 3' (90cm) nor more than 3'6" (105cm) in depth at their shallowest point.

(4) Walls in public swimming pools shall be vertical or within 11 degrees of vertical for a minimum distance of 2'9" (82.5cm) in deep areas or 2'6" (75cm) in shallow areas from which point they may be radius to join the floor.

(5)(a) Break in grade shall occur at dept no shallower than 5' (1.5m), except pools built prior to March 1, 1979, shall be uniform to a depth of 4'6" (1.4m), and shall not exceed the following:

(A) General-use pools: 1' of fall in 12' (30cm in 3.7m) horizontally;

(B) Limited-use pools: 1' of fall in 10' (30cm in 3m) horizontally.

(b) Floor slopes in the transition area between the deep and shallow portions of the pool shall not exceed 1' of fall in 3' (30cm in 90cm) horizontally.

(6) The wall-floor transition radius shall:

(a) Have its center no less than 2'9" (82.5cm) below the surface of the water in deep areas or 2'6" (75cm) in shallow areas;

(b) Be tangent to the wall;

(c) Be less than or equal to the depth of the pool minus the vertical wall depth measured from the water line in deep areas minus 3" (7.5cm), to allow draining to the main drain. (R maximum = Pool Depth — Vertical Wall Depth — 3" (7.5cm).)

(7) Pools intended for diving shall comply with OAR 333-060-0085.

Stats. Implemented: ORS 448.005 - 448.100, 448.990
Hist.: HD 2-1979, f. 1-25-79, ef. 3-1-79, Renumbered from 333-042-0111; HD 7-1986, f. & ef. 5-1-86; HD 22-1994, f. 8-22-94, cert. ef. 9-1-94; PH 17-2006, f. 6-30-06, cert. ef. 7-1-06

333-060-0065
Finishes, Markings and Lifelines

(1)(a) Wall and floor finishes shall be of non-toxic materials, shall be impervious and enduring. Such finishes shall be smooth and easily cleanable.

(b) Floors and walls of public swimming pools and public wading pools shall be white, of a light color or a light-colored pattern.

(2) A lifeline shall be provided 2' (60cm) on the shallow side of the break in grade between shallow and deep portions of the pool. Where there is a uniform slope, a lifeline is not required.

(a) This lifeline shall be securely fastened to wall anchors. Wall anchors shall be of corrosion-resistant materials and shall be recessed or have no projections which constitute safety hazards when the lifeline is removed. Pools built prior to March 1, 1979 shall comply with this rule at such time as the interior pool finish is repaired.

(b) The lifeline shall be marked with visible floats at not greater than 7' (2.1m) intervals. The line shall be of sufficient size and strength to offer a good handhold and to support loads normally imposed by bathers.

(c) The lifeline shall lie in place except when pool use is restricted to lap swimming by competent swimmers or to supervised swimming instruction by a certified swim instruc-tor.

(3) The break in grade of the pool shall be marked with a 4" (10cm) minimum width of floor tile or painted stripe of a color contrasting with the bottom. Where there is a uniform slope, a stripe is not required.

(4) Depth of water (in feet) shall be plainly and conspicuously marked above or at the water level on the vertical pool wall except for splash-out (deck level overflow) pools and on the top of the coping or edge of the deck or walk next to the pool. There shall be such markers at the maximum and minimum depth points and at 1' (30cm) depth increments in the shallow portion of the pool. Depth markings shall be spaced at no more than 25' (7.6m) intervals. There shall be depth markings at slope breaks. Pools built prior to March 1, 1979 shall comply with this rule pertaining to vertical pool wall markings when the interior pool finish is repaired or resurfaced.

(5) Depth markings shall be at least 4" (10cm) in height and of a color contrasting with the background.

333-060-0070
Illumination

(1) Where underwater lighting is used, not less than 0.5 watts incandescent or the equivalent shall be employed per square foot of pool area.

(2) Where underwater lighting is used, and night or indoor swimming is permitted, area lighting shall be provided for the deck areas and directed away from the pool surface. No less than 0.6 watts incandescent or the equivalent per square foot of deck area shall be used.

(3) Where underwater lighting is not employed and night swimming is permitted, area and pool lighting combined shall be provided at not less than two watts incandescent or the equivalent per square foot of deck area.

333-060-0075
Ventilation

(1) A public swimming pool or public wading pool license holder must ensure that there is sufficient ventilation to prevent build-up of harmful amounts of moisture or chemical byproducts in the air of buildings enclosing swimming pools and public wading pools.

(2) A public swimming pool or public wading pool built or renovated after September 1, 2014, and enclosed in a building must have a ventilation system that complies with the requirements of the **Oregon Structural Specialty Code, 2014 Edition**, and the **Oregon Mechanical Specialty Code, 2014 Edition**, both incorporated by reference.

333-060-0080
Ladders, Recessed Steps and Stairways

(1) All public swimming pools shall have a ladder, set of recessed steps or stairway located at 75' (22.9m) intervals around the pool perimeter with a minimum of two such means of egress.

(2) There shall be at least one ladder, set of recessed steps or stairway at the shallow end and another at the deep end of the pool.

(3) Ladder treads, recessed step surfaces and stairs shall have slip-resistant surfaces.

(4)(a) Ladders and recessed steps shall be provided with two handrails;

(b) Stairways shall be provided with at least one handrail.

(5) Recessed steps shall drain into the pool.

(6) Ladders, recessed steps and stairways shall be located so as not to interfere with racing lanes.

(7) Stairway treads shall have a minimum unobstructed horizontal tread depth of 10" (25cm) and a minimum unobstructed surface area of 240 square inches.

(8) Risers at the centerline of the stairway treads shall have a maximum uniform height of 12" (30cm). The vertical riser height from deck surface down to the top of the first tread shall not exceed 12" (30cm).

(9) Ladders and handrails shall be securely mounted.

333-060-0085
Diving

(1) Public swimming pools used for diving shall provide water depths and lateral and vertical clearances as follows:

(a) Pools constructed after May 1, 1986, shall comply with the minimum dimensions of **Figure 1**, **Table 1**. [Table not included. See ED. Note.]

(b) Pools constructed prior to May 1, 1986, shall comply with the minimum dimensions of **Figure 2**, **Table 2**. [Table not included. See ED. Note.]

(2) There shall be at least 16' (4.9m) of unobstructed vertical clearance above any diving board measured from the center of the front end of the board. This clearance shall extend horizontally 8' (2.4m) behind, 16' (4.9m) in front, and 8' (2.4m) to each side of the end of the board.

(3)(a) Diving boards one meter or more in height above the water shall be equipped with a stairway or ladder and two handrails;

(b) Diving boards one meter or higher shall be protected with guard rails, one on each side of the board. Such guard rails shall extend to the edge of the pool wall.

(4) Diving platforms higher than three meters shall not be installed at public swimming pools without the approval of the Division.

[ED. NOTE: Tables referenced are available from the agency.]

333-060-0090
Slides

(1) Slides shall comply with the requirements of the U.S. Consumer Product Safety Commission Safety Standards for Swimming Pool Slides as published in the **Code of Federal Regulations Vol. 16, Part 1207, Pages 265-281 (16 CFR Part 1207)**.

(2) Slides shall:

(a) Be sturdily constructed or corrosion-resistant material;

(b) Be securely fastened to the pool deck;

(c) Have a ladder equipped with slip-resistant treads and rigidly attached handrails;

(d) Have runways which are smooth, of one piece, and free of cutting, pinching, puncturing or abrasion hazards;

(e) Have slide runways which are provided with side rails on both sides; such side rails shall be no less than 2" (5cm) in height.

(3) Slide runways shall be water lubricated when in use.

(4) There shall be no slides higher than 12" (30cm) above the water level.

(5) Water depths 4.5' (1.4m) beyond the end of the slide shall be based on the slide height as follows: Height — Minimum Water Depth:

(a) More than 3 feet (90cm) up to 7.5 feet — (2.3m);

(b) 4 feet (1.2m) — More than 7.5 (2.3m) feet;

(c) Up to 8 feet (2.4m) — 5 feet (1.5m);

(d) More than 8.0 feet (2.4m) up to 11 feet (3.4m) — 5.5 feet (1.7m);

(e) More than 11.0 feet (3.4m) up to 12 feet (3.7m) — 6 feet (1.8m).

(6) Slides shall be equipped with the warning signs found in **Figure 3**. [Figure not included. See ED. Note.]

(7) Portable toddler slides (3 feet or less)(90cm) shall have an entry into water depths which are recommended by the manufacturer and approved by the Division or delegate county. Water depths for slide entry are determined by but not limited to platform height, length of slide, and weight of bather.

333-060-0091
Waterpark Slides

(1) Water park slides installed after January 1, 1994 must comply with the requirements of the U.S. Consumer Products Safety Commission safety standards for Swimming Pool Slides as published in the **Code of Federal Regulations Vol. 16**, **Part 1207**, **Pages 265-281 (16 CFR Part 1207)**.

(2) Prior to entering the pool, the last ten feet (3m) of the slide must be horizontal.

(3) The slide shall be designed so that it enters the pool at or below the water level.

(4) The pool shall be constructed of concrete or other structurally rigid, impervious materials with a smooth, slip resistant finish:

(a) There shall be a three and a half (3.5) foot (1m) minimum distance between the exterior slide wall and the adjacent vertical pool wall;

(b) There shall be a minimum twenty (20) feet (6.1m) between the slide exit and the opposite side of the pool, excluding steps;

(c) Centerlines for multiple slides shall be parallel, a minimum of eight (8) feet (2.4m) apart, and not intersect for twenty (20) feet (6.1m);

(d) The water depth at the slide exit shall be a minimum of three (3) feet (1m). This depth shall be maintained for a minimum distance of ten (10) feet (3m).

(5) If a public pool is for the exclusive use of a waterpark slide splash area, the pool's recirculation system shall be designed to provide a 60 minute turnover rate.

(6) During operation:

(a) Lifeguards shall be on duty at the slide splash area;

(b) The platform area shall have an attendant in place.

(7) Entry shall be regulated at a minimum of ten (10) second intervals.

(8) A sign shall be posted describing the proper way to use the slide. The sign shall include at least the following:

(a) Slide feet first only!

(b) Slide sitting up or lying on your back!

(c) Slide one at a time only!

(d) Always enter the pool feet first! Do not somersault, twist, or dive from the end of the slide.

333-060-0095
Elevated Lifeguard Chairs

(1) Elevated lifeguard chairs or elevated lifeguard platforms shall be provided at all general-use swimming pools.

(2) There shall be one lifeguard chair or elevated lifeguard platform for each 120 (36.6m) feet of pool perimeter and with the exception of section (3) of this rule may be spaced at the discretion of the pool operator.

(3) Where more than one lifeguard chair or elevated lifeguard platform is required, there shall be one chair or platform located on each side of the pool.

(4) Portable lifeguard chairs or elevated lifeguard platforms shall be acceptable providing they are structurally sound and tilt proof.

(5) Lifeguard chairs shall be at least 6' (1.8m) in height from the deck surface to the chair seat or elevated lifeguard platforms shall be at least 34" (85cm) in height from the deck surface to the platform surface.

(6) Where pool decks are at least 6' (1.8m) in width, all general-use pools build prior to March 1, 1979, shall comply with section (2) of this rule. All pools shall comply with section (5) of this rule, at such time as new elevated chairs or platforms are installed and/or existing elevated chairs or platforms need replacement, providing existing chairs are a minimum of 4' (1.2m) in height.

333-060-0100
Life Saving Equipment

The following life saving equipment shall be provided at all public swimming pools:

(1) A non-adjustable reach-pole not less than twelve (12) feet (3.6m) in length with an attached life hook.

(2) One life buoy with an attached thirty (30) foot (9.2m) long line. Such equipment shall be mounted conspicuously within the pool enclosure or the pool room and be readily available to lifeguards and pool users.

Hist.: HD 2-1979, f. 1-25-79, ef. 3-1-79, Renumbered from 333-042-0130; HD 7-1986, f. & ef. 5-1-86; HD 22-1994, f. 8-22-94, cert. ef. 9-1-94

333-060-0105
Swimming Pool Enclosure

A pool license holder must ensure that:

(1) A public swimming pool is protected by an enclosure such as a fence, wall, or building without private entrances to the pool area; and

(2) Swimming and wading pool enclosures, except as provided in OAR 333-060-0505(9), including windows, gates and doors are constructed in such a manner so as to discourage access to the pool by unsupervised children and domestic animals and incorporate the following construction standards:

(a) Enclosures shall be not less than four feet (1.2m) in height measured from the outside ground level at a point one foot (300 mm) horizontal from the base of the enclosure;

(b) There shall be not more than four inches (100 mm) of space between the bottom of the enclosure and the ground's surface or pool deck;

(c) Separation between vertical sections and bars shall be a maximum of four inches (100 mm);

(d) Horizontal rails shall be spaced with a minimum 42 inches (1065 mm) separation;

(e) All exterior projections or recessions shall be 42 inches (1065 mm) from either the top or bottom of the fence;

(f) Gates and doors in swimming pool enclosures shall be self-closing and shall be equipped with a lockable self-latching device. The operating controls for the self-latching device shall be located at least 42 inches (1065 mm) above the exterior ground surface or pool deck. Gates and doors on new pools must swing "out" of the pool enclosure, or away from the pool. Existing pools must make the door or gate swing change when the change is not highly burdensome or impractical due to special conditions or cause.

(g) Entrances with self-closing and self-locking devices requiring the use of a key, keycard, or combination code to gain access may have controls 36 inches to 54 inches (0.9 m to 1.35 m) above the exterior ground surface. The gates or doors cannot require a key, keycard or combination code to exit the pool area;

(h) Construction methods and materials shall be used that provide a durable and low maintenance structure; and

(i) Buildings constructed on or after September 1, 2014 and buildings enclosing swimming pools that are remodeled or renovated on or after September 1, 2014 shall be constructed in accordance with the requirements of the Oregon Structural Specialty Code 2014 Edition.

(3) The Division may approve alternate enclosure materials and methods where the Division finds such materials and methods equivalent to those described in section (2) of this rule.

(4) Swimming pool enclosures constructed prior to March 1, 1979, which are a minimum of 42 inches (105cm) in height; or with spacing not greater than five inches (13cm) between vertical boards (bars); or with spacing not greater than five inches (13cm) between the bottom of the fence and the pool deck; or with spaces between the horizontal rails not less than 38 inches (95cm), shall be acceptable until such time as the enclosure requires repair or replacement.

(a) Pools without constant supervision in the pool area may provide access through controlled entry points based on one of the following conditions:

(A) When only adults over the age of 18 are allowed access to the pool area through a controlled-access point such as a registration or check-in desk, they may have direct access to the pool without passing through closed doors or gates. The pool entry must be able to be locked and secured when the pool is closed.

(B) If persons under the age of 18 might have access to the pool area, then the operator must provide a lockable, self-closing door or gate with a self-latching device. The operating controls for the latch must be located 42 inches to 54 inches (1.2 m to 1.35 m) above the exterior ground surface; or

(b) When a pool is closed to patrons, all entry/exit points are to be properly maintained and secured against unauthorized entry.

333-060-0110
Decks

(1) The following minimum continuous unobstructed deck widths, which may include the coping, shall be provided at all public pools and public wading pools:

(a) General-use swimming pools — 8' (2.4m).

(b) Limited-use swimming pools, spray pools, wading pools — 4' (1.2m).

(A) Pools built prior to March 1, 1979, shall have 4' (1.2m) of deck on at least two sides of the pool.

(B) Public wading pools and spray pools built prior to July 1, 2006 must have a minimum of 4' (1.2m) of deck around the pool. Wading pools built after July 1, 2006 must comply with the deck requirements of OAR 333-060-0505(8).

(2) A minimum of 4' (1.2m) unobstructed deck shall be provided on all sides of diving equipment and slides.

(3) Decks shall slope no less than 1/4" per foot (6mm per 30cm) and shall be drained to perimeter or area drains.

(4) Deck surfaces:

(a) Shall be constructed of concrete, non-slip tile, or equally impervious material with a slip-resistant, easily cleanable surface impervious to water.

(b) Surfaces meeting the requirements of (4)(a) of this rule must be maintained for a minimum width of 8' (2.4m) around the perimeter of general-use pools and 4' (1.2m) around the perimeter of limited-use pools or within the limits of the deck drainage area, whichever is greater. Wood decking, carpeting or artificial turf deck surfaces are prohibited within 8' (2.4m) of general-use pools or 4' (1.2m) of limited-use pools or within the limits of the deck drainage area, whichever is greater.

(c) Pools previously approved with deck surfaces not complying with (4)(a) of this rule shall comply at such time as the surface requires repair or is replaced.

(5) Joints between concrete deck slabs shall be watertight and shall be designed so as to protect the pool, coping and its mortar bed from movement of the deck.

(6) Decks shall be provided with expansion joints.

(7) Voids between adjoining concrete deck slabs shall be no greater than 3/16" (5mm).

(8) Adjoining deck surface elevations shall vary no more than 1/4" (6mm).

(9) New and replacement expansion joints shall not be constructed of wood.

Overflow Systems

All public swimming pools shall be operated with a continuous overflow. Overflow systems shall be either of the perimeter type or a series of surface skimmers:

(1) A perimeter type overflow system shall be used at all general-use public swimming pools and at limited-use public swimming pools which are greater than 30 feet (9.1m) in width or have more than 2,500 square feet of surface area. Such perimeter system shall:

(a) Extend completely around the pool;

(b) Have a gutter which is smooth, cleanable and provides positive drainage.

(2) A perimeter-type or skimmer-type overflow system shall be used at all limited-use public swimming pools less than 30 feet (9.1m) in width or with less than 2,500 square feet of surface area:

(a) Where skimmers are used, there shall be one skimmer for each 400 square feet of surface area, with a minimum of two skimmers;

(b) Skimmers shall be located so as to achieve effective skimming action over the entire surface area of the pool.

(3)(a) Perimeter overflow systems shall be connected to the recirculation system with a system surge capacity of at least one gallon per square foot of pool surface. External surge systems shall be capable of transferring water at a rate equal to 100 percent of the design pool flow rate. Gutters shall drain in two minutes or less after sudden flooding;

(b) Pools with perimeter overflow systems shall be provided with surge tanks unless predesigned and prefabricated to use in-gutter of in-pool surge. Surge tanks shall have a capacity of one gallon per square foot of pool surface.

(4) Overflow systems shall be designed so as to return overflow water to the recirculation system ahead of the filters. Pro-

visions shall be made for diverting gutter water to waste when cleaning the gutter.

(5) Pools built prior to 1971 which were constructed without the overflow system being connected to the recirculation system shall satisfy this requirement by overflowing at least daily provided the water quality parameters of Pool Water Quality OAR 333-060-0200 and **Table 3** are met.

[ED. NOTE: Tables referenced are available from the agency.]

333-060-0120
Recirculation System

(1) All public swimming and wading pools shall have recirculation and filtration systems with piping, pumps, filters, disinfection and other equipment to maintain pool water quality as required by these rules.

(2) The system of pumps, filters, disinfection facilities and other equipment shall be of adequate size to recirculate, filter and disinfect the entire volume of pool water in the following maximum time intervals: Maximum Turnover — Time

(a) General-use public pools and limited-use public pools of over 2,000 square feet of surface area — 6 hours.

(b) Limited-use public pools of less than 2,000 square feet of surface area — 8 hours.

(c) Public wading pools — See OAR 333-060-0505.

(d) Limited use pools operated in conjunction with athletic clubs and built after May 1, 1986 — 6 hours.

(3) Overflow water shall not be less than 50 percent of the total recirculated water.

(4) Recirculation and filtration systems shall be in operation con-tinuously while the facility is in use.

333-060-0125
Inlets

(1) Pool inlets must be provided, sized and arranged to produce a uniform circulation of water so as to maintain a uniform disinfectant residual throughout the pool.

(2) There must be at least one inlet per 400 square feet of pool area or 10,000 gallons of water, whichever is greater.

(3) Pools more than 50 feet wide and reverse flow pools must use floor inlet fittings uniformly spaced no more than 20 feet apart and within 15 feet of the sidewalls.

(4) Grates must be designed so as to prevent entrapment of fingers.

(5) All recirculation inlet fittings must be adjustable for rate of flow. Wall inlet fittings must be directional.

(6) Inlet fittings must have tamper-proof screws that cannot be removed except with tools. Grates, vortex plates and inlet fittings must be in place whenever the pool is in use.

(7) Direct potable water pool inlets must:

(a) Be over-the-rim fill spouts with air gaps located under a diving board or beside grab rails;

(b) Be through-the-wall fill lines located above the water level and equipped with an appropriate backflow prevention device installed per OAR 333-061-0071; or

(c) Be directly connected to the recirculation water supply and equipped with reduced pressure device installed per OAR 333-061-0071 on the potable water supply adjacent to the connection with the pool recirculation water.

333-060-0128
Submerged Suction Outlets and Drains

(1) The requirements in sections (2) and (3) of this rule apply to:

(a) A swimming pool constructed after December 25, 2009;

(b) A swimming pool constructed before December 25, 2009, that on or after July 1, 2015, has its submerged suction fittings renovated or remodeled.

(2) A swimming pool must have at least two outlets located at the lowest point of the pool floor to drain the entire floor area. Exceptions to this include:

(a) Reverse Flow Pools, where the drain is not connected to the recirculation system, but is provided for drainage of the pool through an air-gap connection to the sanitary sewer.

(b) Other suction-fitting arrangement that allows the drainage of the pool through an air-gap connection to the sanitary sewer, or other approved location, while also providing entrapment protection.

(c) Pools with no drain system, with provisions to completely drain the pool to the sanitary sewer or other approved location, by other means that have entrapment protection.

(3) A swimming pool must have submerged suction fittings installed according to the following standards:

(a) Pool main drains must be installed in the deepest part of the pool and designed to minimize tripping and toe stubbing hazards. Suction fittings must be installed to minimize tripping, toe stubbing and scrape hazards.

(b) Main drain and submerged suction outlets must be designed with sufficient open area that the maximum velocity through the cover does not exceed the cover's listed flowrate.

(c) All hardware and fittings must be supplied by the manufacturer and installed according to the manufacturer's directions.

(d) Main drain and submerged suction fitting systems must provide entrapment, hair entanglement and evisceration protection.

(A) Main drains and submerged suction fittings and sumps must be compliant with the requirements of ANSI/APSP-16, Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs (2011). The cover must be labeled and include; "VGB 2008," the logo of the third party listing agency, the standard for which it was tested, the gallons per minute of flow for which it was approved and the location it is to be placed.

(B) All submerged suction fittings must be installed with a sump designed and approved by the manufacturer for that outlet cover.

(C) All field built sumps must be designed by an Oregon registered engineer and must be built so the opening of the suction pipe is no closer than 1.5 times the pipe's inside diameter from the bottom of the listed suction cover/plate.

(D) Main drains and submerged suction fittings must be separated by at least three feet (915mm) (measured from the main drain connector pipe centerline) between the furthest fittings, or be on separate planes, placed so the floor and wall suction fittings cannot be easily blocked at the same time.

DIVISION 61

PUBLIC WATER SYSTEMS

333-061-0005
Purpose

The purpose of these rules is to provide a basis for implementing the Oregon Drinking Water Quality Act of 1981, enacted to assure safe drinking water at all water systems which serve the public, and to promote coordination between the programs for supervising water systems which are conducted by the Authority and the U.S. Environmental Protection Agency.

Stat. Auth.: ORS 448.131
Stats. Implemented: ORS 448.123 & 448.273
Hist.: HD 106, f. & ef. 2-6-76; HD 17-1981(Temp), f. & ef. 8-28-81; HD 4-1982, f. & ef. 2-26-82; Renumbered from 333-042-0200, HD 2-1983, f. & ef. 2-23-83; HD 9-1989, f. & cert. ef. 11-13-89; PH 7-2010, f. & cert. ef. 4-19-10

333-061-0010
Scope

(1) These rules apply to all public water systems providing piped water for human consumption as defined by the Act.

(2) These rules also apply to all public water systems providing water for human consumption through constructed conveyances other than pipes after Aug. 5, 1998 to at least 15 service connections or that regularly serves at least 25 individuals daily at least 60 days of the year. A water system which meets any of the following "service connection" exclusion criteria and thereby reduces the number of service connections to fewer than 15 and serving fewer than 25 individuals is not a Public Water System:

(a) Water provided by the supplier to the connection is not used for human consumption;

(b) Alternative water (i.e. bottled water, hauled water, or other source) meeting State and Federal water quality standards, as prescribed in OAR 333-061-0030 or 21CFR165, is provided by the supplier to the connection for drinking and cooking;

(c) Treated water meeting State standards, as prescribed in OAR 333-061-0030, applied centrally or at point-of-entry is provided by the supplier, pass-through entity or user to the connection for drinking, cooking and personal hygiene.

(3) These rules do not apply to:

(a) A public water system that:

(A) Consists only of distribution and storage facilities and does not have any source or treatment facilities installed to comply with the maximum contaminant levels covered by these rules; and

(B) Obtains all of its water from, but is not owned or operated by, a public water system to which these rules apply; and

(C) Does not sell water directly to any person; and

(D) Is not a carrier which conveys passengers in interstate commerce.

(b) An irrigation district in existence prior to May 18, 1994, that provides primarily agricultural service through a piped water system to at least 15 service connections or serving at least 25 individuals daily at least 60 days of the year with only incidental residential or similar use, and where all of the connections comply with the alternative or treated water exclusions prescribed in subsections (2)(b) or (c) of this rule.

(c) A public water system that distributes water through submeters if that water system:

(A) Receives all of its water from, but is not owned by, another public water system; and

(B) Consists only of distribution and storage facilities and where all such facilities and all submeters are located on a single parcel of property, and the water system does not have any source or treatment facilities installed to comply with the maximum contaminant levels covered by these rules.

333-061-0020
Definitions

As used in these rules, unless the context indicates otherwise:

(1) "Act" means the Oregon Drinking Water Quality Act of 1981 (ORS 448.115-448.990 as amended).

(2) "Action Level" means the concentration of lead or copper in water which determines, in some cases, the treatment requirements that a water system is required to complete.

(3) "Administrator" means the Director of the Oregon Health Authority or his/her designee.

(4) "Analytical Run" means the process during which a set of analytical drinking water samples along with an appropriate number of blanks, matrix spikes, or quality control samples are analyzed according to National Environmental Laboratory Accreditation Conference (NELAC) requirements to determine the presence, absence, or concentration of a specific target analyte or analytes. An analytical run is complete when the instrument performing the sample analysis generates a report of the sample analysis.

(5) "Approval" or "Approved" means approved in writing.

(6) "Approved Air Gap (AG)" means a physical separation between the free-flowing discharge end of a potable water supply pipeline and an open or non-pressurized receiving vessel. An "Approved Air Gap" shall be at least twice the diameter of the supply pipe measured vertically above the overflow rim of the vessel and in no case less than 1 inch (2.54 cm), and in accord with Oregon Plumbing Specialty Code.

(7) "Approved Backflow Prevention Assembly" means a Reduced Pressure Principle Backflow Prevention Assembly, Reduced Pressure Principle-Detector Backflow Prevention Assembly, Double Check Valve Backflow Prevention Assembly, Double Check-Detector Backflow Prevention Assembly, Pressure Vacuum Breaker Backsiphonage Prevention Assembly, or Spill-Resistant Pressure Vacuum Breaker Backsiphonage Prevention Assembly, of a make, model, orientation, and size approved by the Authority. Assemblies listed in the currently approved backflow prevention assemblies list developed by the University of Southern California, Foundation for Cross-Connection Control and Hydraulic Research, or other testing laboratories using equivalent testing methods, are considered approved by the Authority.

(8) "Aquifer" means a water saturated and permeable geological formation, group of formations, or part of a formation that is capable of transmitting water in sufficient quantity to supply wells or springs.

(9) "Aquifer Parameter" means a characteristic of an aquifer, such as thickness, porosity or hydraulic conductivity.

(10) "Aquifer Test" means pumping a well in a manner that will provide information regarding the hydraulic characteristics of the aquifer.

(11) "Area of public health concern" means an area of the state with a confirmed presence of groundwater contaminants likely to cause adverse human health effects.

(12) "Atmospheric Vacuum Breaker (AVB)" means a non-testable device consisting of an air inlet valve or float check, a check seat and an air inlet port(s). This device is designed to protect against a non-health hazard or a health hazard under a back-siphonage condition only. Product and material approval is under the Oregon Plumbing Specialty Code.

(13) "Authority" means the Oregon Health Authority or its designee.

(14) "Auxiliary Water Supply" means any supply of water used to augment the supply obtained from the public water system, which serves the premises in question.

(15) "Average Groundwater Velocity" means the average velocity at which groundwater moves through the aquifer as a function of hydraulic gradient, hydraulic conductivity and porosity.

(16) "AWWA" means the American Water Works Association.

(17) "Backflow" means the flow of water or other liquids, mixtures, or substances into the distributing pipes of a potable supply of water from any sources other than its intended source, and is caused by backsiphonage or backpressure.

(18) "Backflow Preventer" means a device, assembly or method to prevent backflow into the potable water system.

(19) "Backflow Prevention Assembly" means a backflow prevention assembly such as a Pressure Vacuum Breaker Backsiphonage Prevention Assembly, Spill-Resistant Pressure Vacuum Breaker Backsiphonage Prevention Assembly, Double Check Valve Backflow Prevention Assembly, Double Check-Detector Backflow Prevention Assembly, Reduced Pressure Principle Backflow Prevention Assembly, or Reduced Pressure Principle-Detector Backflow Prevention Assembly and the attached shutoff valves on the inlet and outlet ends of the assembly, assembled as a complete unit.

(20) "Backpressure" means an elevation of pressure downstream of the distribution system that would cause, or tend to cause, water to flow opposite of its intended direction.

(21) "Backsiphonage" means a drop in distribution system pressure below atmospheric pressure (partial vacuum), that would cause, or tend to cause, water to flow opposite of its intended direction.

(22) "Bank Filtration" means a water treatment process that uses a horizontal or vertical well to recover surface water that has naturally infiltrated into groundwater through a river bed or bank(s). Infiltration is typically enhanced by the hydraulic gradient imposed by a nearby pumping water supply.

(23) "Best Available Technology" or "BAT" means the best technology, treatment techniques, or other means which the EPA finds, after examination for efficacy under field conditions and not solely under laboratory conditions, are available (taking cost into consideration).

(24) "Bore-Sighted Drain to Daylight" means an unrestricted straight-line opening in an enclosure that vents to grade, and is sized and constructed to adequately drain the full flow discharge from a reduced pressure principle backflow prevention assembly thus preventing any potential for submersion of the assembly.

(25) "Bottled Water" means potable water from a source approved by the Authority for domestic use which is placed in small, easily transportable containers.

(26) "Calculated Fixed Radius" means a technique to delineate a wellhead protection area, based on the determination of the volume of the aquifer needed to supply groundwater to a well over a given length of time.

(27) "CFR" means the Code of Federal Regulations. Specifically, it refers to those sections of the code which deal with the National Primary and Secondary Drinking Water Regulations.

(28) "Check Valve" means a valve, which allows flow in only one direction.

(29) "Coagulation" means a process using coagulant chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into floc.

(30) "Coliform Investigation" means an evaluation to identify the possible presence of sanitary defects, defects in distribution system coliform monitoring practices, and (when possible) the likely reason that the investigation was triggered at the water system. Coliform investigations are classified as level 1 or level 2 as prescribed by OAR 333-061-0078.

(31) "Coliform-Positive" means the presence of coliform bacteria in a water sample.

(32) "Combined distribution system" means the interconnected distribution system consisting of the distribution systems of wholesale water systems and of the purchasing water systems that receive finished water.

(33) "Community Water System" means a public water system that has 15 or more service connections used by year-round residents, or that regularly serves 25 or more year-round residents.

(34) "Compliance Cycle" means the nine-year calendar year cycle during which public water systems must monitor. Each compliance cycle consists of three three-year compliance periods. The first calendar year cycle begins January 1, 1993 and ends December 31, 2001.

(35) "Compliance Period" means a three-year calendar year period within a compliance cycle. Each compliance cycle has three three-year compliance periods. Within the first compliance cycle, the first compliance period runs from January 1, 1993 to December 31, 1995; the second from January 1, 1996 to December 31, 1998; and the third from January 1, 1999 to December 31, 2001.

(36) "Comprehensive performance evaluation (CPE)" means a thorough review and analysis of a treatment plant's performance-based capabilities and associated administrative, operation and maintenance practices. It is conducted to identify factors that may be adversely impacting a plant's capability to achieve compliance and emphasizes approaches that can be implemented without significant capital improvements. The CPE must consist of at least the following components: Assessment of plant performance; evaluations of major unit processes; identification and prioritization of performance limiting factors; assessment of the applicability of comprehensive technical assistance; and preparation of a CPE report.

(37) "Conceptual Model" means a three-dimensional representation of the groundwater system, including the location and extent of the hydrogeologic units, areas of recharge and discharge, hydrogeologic boundaries and hydraulic gradient.

(38) "Confined Well" means a well completed in a confined aquifer. More specifically, it is a well which produces water from a formation that is overlain by an impermeable material of extensive area. This well shall be constructed according to OAR chapter 690, division 200 "Well Construction and Maintenance" standards.

(39) "Confluent Growth" means a continuous bacterial growth covering the entire filtration area of a membrane filter, or a portion thereof, in which bacterial colonies are not discrete.

(40) "Constructed Conveyance" means any human-made conduit such as ditches, culverts, waterways, flumes, mine drains, canals or any human-altered natural water bodies or waterways as determined by the Authority.

(41) "Contaminant" means any physical, chemical, biological, or radiological substance or matter in water that creates a health hazard.

(42) "Contingency Plan" means a document setting out an organized, planned and coordinated course of action to be followed in the event of a loss of capacity to supply water to the distribution system or in case of a fire, explosion or release of hazardous waste which could threaten human health or the environment.

(43) "Continuing Education Unit (CEU)" means a nationally recognized unit of measurement for assigning credits for education or training that provides the participant with advanced or post high school learning. One CEU is awarded for every 10 classroom hours of lecture or the equivalent of participation in an organized education experience, conducted under responsible sponsorship, capable direction and qualified instruction as determined by the Authority or its designee.

(44) "Conventional Filtration Treatment Plant" means a water treatment plant using conventional or direct filtration to treat surface water or groundwater under the direct influence of surface water.

(45) "Corrosion Inhibitor" means a substance capable of reducing the corrosivity of water toward metal plumbing materials, especially lead and copper, by forming a protective film on the interior surface of those materials.

(46) "Cross Connection" means any actual or potential unprotected connection or structural arrangement between the public or user's potable water system and any other source or system through which it is possible to introduce into any part of the potable system any used water, industrial fluid, gas, or substances

other than the intended potable water with which the system is supplied. Bypass arrangements, jumper connections, removable sections, swivel, or change-over devices, and other temporary or permanent devices through which, or because of which, backflow can occur are considered to be cross connections.

(47) "CT" means the product of the residual disinfectant concentration "C" (measured in mg/l) and disinfectant contact time(s), "T" (measured in minutes).

(48) "Degree of Hazard" means either pollution (non-health hazard) or contamination (health hazard) and is determined by an evaluation of hazardous conditions within a system.

(49) "Delineation" means the determination of the extent, orientation and boundaries of a wellhead protection area using factors such as geology, aquifer characteristics, well pumping rates and time of travel.

(50) "Demonstration Study" means a series of tests performed to prove an overall effective removal or inactivation rate of a pathogenic organism through a treatment or disinfection process.

(51) "Direct Responsible Charge (DRC)" means an individual designated by the owner or authorized agent to make decisions regarding the daily operational activities of a public water system, water treatment facility or distribution system, that will directly impact the quality or quantity of drinking water.

(52) "Discharge" means the volume rate of loss of groundwater from the aquifer through wells, springs or to surface water.

(53) "Disinfectant Contact Time" means the time in minutes that it takes for water to move from the point of disinfectant application or the previous point of disinfection residual measurement to a point before or at the point where residual disinfectant concentration is measured.

(54) "Disinfectant Residual Maintenance" means a process where public water systems add chlorine (or other chemical oxidant) for the purpose of maintaining a disinfectant residual in the distribution system, when the source(s) is not at risk of microbial contamination.

(55) "Disinfection" means a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents.

(56) "Disinfection profile" means a summary of Giardia lamblia inactivation through the treatment plant.

(57) "Distribution System" means that portion of the water system in which water is stored or conveyed from the water treatment plant or other supply point to the premises of a consumer.

(58) "Domestic" means provided for human consumption.

(59) "Domestic or other non-distribution system plumbing problem" means a coliform contamination problem in a public water system with more than one service connection that is limited to the specific service connection from which the coliform-positive sample was taken.

(60) "Dose Equivalent" means the product of the absorbed dose from ionizing radiation and such factors as account for differences in biological effectiveness due to the type of radiation and its distribution in the body as specified by the International Commission on Radiological Units and Measurements (ICRU).

(61) "Double Check-Detector Backflow Prevention Assembly (DCDA)" means a specially designed assembly composed of a line size approved double check valve assembly assembled with a bypass containing a specific water meter and an approved double check valve assembly. The meter shall register accurately for only very low rates of flow up to three gallons per minute and shall show a registration for all rates of flow. This assembly is designed to protect against a non-health hazard.

(62) "Double Check Valve Backflow Prevention Assembly (DC)" means an assembly of two independently acting approved check valves, including tightly closing resilient seated shutoff valves attached at each end of the assembly and fitted with properly located resilient seated test cocks. This assembly is designed to protect against a non-health hazard.

(63) "Drawdown" means the difference, measured vertically, between the static water level in the well and the water level during pumping.

(64) "Drinking Water Protection" means implementing strategies within a drinking water protection area to minimize the potential impact of contaminant sources on the quality of water being used as a drinking water source by a Public Water System.

(65) "Drinking Water Protection Area (DWPA)" means the source area supplying drinking water to a Public Water System. For a surface water-supplied drinking water source the DWPA is all or a specifically determined part of a lake's, reservoir's or stream's watershed that has been certified by the Department of Environmental Quality. For a groundwater-supplied drinking water source the DWPA is the area on the surface that directly overlies that part of the aquifer that supplies groundwater to a well, well field or spring that has been certified by the Authority.

(66) "Drinking Water Protection Plan" means a plan, certified by the Department of Environmental Quality according to OAR 340-040-0160 to 340-040-0180, which identifies the actions to be taken at the local level to protect a specifically defined and certified drinking water protection area. The plan is developed by the local Responsible Management Authority or team and includes a written description of each element, public participation efforts, and an implementation schedule.

(67) "Dual sample set" means a set of two samples collected at the same time and same location, with one sample analyzed for TTHM and the other for HAA5. Dual sample sets are collected for the purposes of conducting an Initial Distribution System Evaluation (IDSE) as prescribed in 333-061-0036(4)(b) of these rules, and for determining compliance with the maximum contaminant levels for TTHM and HAA5 listed in OAR 333-061-0030(2)(b).

(68) "Effective Corrosion Inhibitor Residual" means a concentration sufficient to form a passivating film on the interior walls of a pipe.

(69) "Effective Porosity" means the ratio of the volume of interconnected voids (openings) in a geological formation to the overall volume of the material.

(70) "Element" means one of seven objectives considered by the U.S. EPA as the minimum required components in any state wellhead protection program: specification of duties, delineation of the wellhead protection area, inventory of potential contaminant sources, specification of management approaches, development of contingency plans, addressing new (future) wells, and ensuring public participation.

(71) "Emergency" means a condition resulting from an unusual calamity such as a flood, storm, earthquake, drought, civil disorder, volcanic eruption, an accidental spill of hazardous material, or other occurrence which disrupts water service at a public water system or endangers the quality of water produced by a public water system.

(72) "Emergency Response Plan" means a written document establishing contacts, operating procedures, and actions taken for a public water system to minimize the impact or potential impact of a natural disaster, accident, or intentional act which disrupts or damages, or potentially disrupts or potentially damages the public water system or drinking water supply, and returns the public water system to normal operating condition.

(73) "Enhanced coagulation" means the addition of sufficient coagulant for improved removal of disinfection byproduct precursors by conventional filtration treatment.

(74) "Enhanced softening" means the improved removal of disinfection byproduct precursors by precipitative softening.

(75) "EPA" means the United States Environmental Protection Agency.

(76) "Filter profile" means a graphical representation of individual filter performance, based on continuous turbidity measurements or total particle counts versus time for an entire filter run, from start-up to backwash inclusively, that includes an assessment of filter performance while another filter is being backwashed.

(77) "Filtration" means a process for removing particulate matter from water through porous media.

(a) "Bag filtration" means a pressure-driven separation process that removes particulate matter using engineered media. It is typically constructed of a non-rigid, fabric filtration media housed

in a pressure vessel in which the direction of flow is from the inside of the bag to the outside.

(b) "Cartridge filtration" means a pressure-driven separation process that removes particulate matter using engineered media. It is typically constructed of rigid or semi-rigid, self-supporting filter elements housed in a pressure vessel in which flow is from the outside of the cartridge to the inside.

(c) "Conventional Filtration Treatment" means a series of processes including coagulation (requiring the use of a primary coagulant and rapid mix), flocculation, sedimentation, and filtration resulting in substantial particulate removal.

(d) "Direct Filtration Treatment" means a series of processes including coagulation (requiring the use of a primary coagulant and rapid mix) and filtration but excluding sedimentation resulting in substantial particulate removal.

(e) "Diatomaceous Earth Filtration" means a process resulting in substantial particulate removal in which:

(A) A precoat cake of diatomaceous earth filter media is deposited on a support membrane (septum); and

(B) While the water is filtered by passing through the cake on the septum, additional filter media, known as body feed, is continuously added to the feed water, in order to maintain the permeability of the filter cake.

(f) "Membrane filtration" means a pressure or vacuum driven separation process in which particulate matter larger than one micrometer is rejected by engineered media, primarily through a size-exclusion mechanism, and which has a measurable removal efficiency of a target organism that can be verified through the application of a direct integrity test. This definition includes the common membrane technologies of microfiltration, ultrafiltration, nanofiltration, and reverse osmosis.

(g) "Slow Sand Filtration" means a process involving passage of raw water through a bed of sand at low velocity (generally less than 235 gallons per square foot per day) resulting in substantial particulate removal by both physical and biological mechanisms.

(78) "Filtration Endorsement" means a special certification that may be added to an operator's water treatment level 2 certification, and is related to the operator's experience with and knowledge of the operation of conventional and direct filtration treatment.

(79) "Finished water" means water that is introduced into the distribution system of a public water system and intended for distribution and consumption without further treatment, except as necessary to maintain water quality in the distribution system such as booster disinfection or the addition of corrosion control chemicals.

(80) "First Customer" means the initial service connection or tap on a public water supply after any treatment processes.

(81) "First Draw Sample" means a one-liter sample of tap water that has been standing in plumbing pipes at least 6 hours and is collected without flushing the tap.

(82) "Flocculation" means a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means.

(83) "Flowing stream" means a course of running water flowing in a definite channel.

(84) "Future Groundwater Sources" means wells or springs that may be required by the public water system in the future to meet the needs of the system.

(85) "GAC 10" means granular activated carbon filter beds with an empty-bed contact time of 10 minutes based on average daily flow and a carbon reactivation frequency of every 180 days, except that the reactivation frequency for GAC10 used as a best available technology for compliance with OAR 333-061-0030(2)(b) shall be 120 days.

(86) "GAC 20" means granular activated carbon filter beds with an empty-bed contact time of 20 minutes based on average daily flow and a carbon reactivation frequency of every 240 days.

(87) "Gross Alpha Particle Activity" means the total radioactivity due to alpha particle emission as inferred from measurements on a dry sample.

(88) "Gross Beta Particle Activity" means the total radioactivity due to beta particle emission as inferred from measurements on a dry sample.

(89) "Groundwater" means any water, except capillary moisture, beneath the land surface or beneath the bed of any stream, lake, reservoir or other body of surface water within the boundaries of this state, whatever may be the geologic formation or structure in which such water stands, flows, percolates or otherwise moves.

(90) "Groundwater System" means any public water system that uses groundwater, including purchasing water systems that receive finished groundwater, but excluding public water systems that combine all of their groundwater with surface water or groundwater under the direct influence of surface water prior to treatment.

(91) "Groundwater under the direct influence of surface water" or "GWUDI" means any water beneath the surface of the ground with significant occurrence of insects or other macroorganisms, algae or large-diameter pathogens such as Giardia lamblia or Cryptosporidium, or significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions.

(92) "Haloacetic acids (five)" or "HAA5" means the sum of the concentrations in milligrams per liter of the haloacetic acid compounds (monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, monobromoacetic acid and dibromoacetic acid), rounded to two significant figures after addition.

(93) "Hauled Water" means water for human consumption transported from a Public Water System in a manner approved by the Authority.

(94) "Health Hazard (Contamination)" means an impairment of the quality of the water that could create an actual hazard to the public health through poisoning or through the spread of disease by sewage, industrial fluids, waste, or other substances.

(95) "Human Consumption" means water used for drinking, personal hygiene bathing, showering, cooking, dishwashing, and maintaining oral hygiene.

(96) "Hydraulic Conductivity" means the capacity of the medium, for example, soil, aquifer, or any hydrogeological unit of interest, to transmit water.

(97) "Hydraulic Connection" refers to a well, spring or other groundwater collection system in which it has been determined that part of the water supplied by the collection system is derived, either naturally or induced, from a surface water source.

(98) "Hydraulic Gradient" means the slope of the water table or potentiometric surface, calculated by dividing the change in hydraulic head between two points by the horizontal distance between the points in the direction of groundwater flow.

(99) "Hydraulic Head" means the energy possessed by the water mass at a given point, related to the height above the datum plane that water resides in a well drilled to that point. In a groundwater system, the hydraulic head is composed of elevation head and pressure head.

(100) "Hydrogeologic Boundary" means physical features that bound and control direction of groundwater flow in a groundwater system. Boundaries may be in the form of a constant head, for example, streams, or represent barriers to flow, for example, groundwater divides and impermeable geologic barriers.

(101) "Hydrogeologic Mapping" means characterizing hydrogeologic features (for example, hydrogeologic units, hydrogeologic boundaries, etc.) within an area and determining their location, areal extent and relationship to one another.

(102) "Hydrogeologic Unit" means a geologic formation, group of formations, or part of a formation that has consistent and definable hydraulic properties.

(103) "Impermeable Material" means a material that limits the passage of water.

(104) "Impounding Reservoir" means an uncovered body of water formed behind a dam across a river or stream, and in which water is stored.

(105) "Infiltration Gallery" means a system of perforated pipes laid along the banks or under the bed of a stream or lake

installed for the purpose of collecting water from the formation beneath the stream or lake.

(106) "Initial Compliance Period" means the 1993-95 three-year compliance period for systems with 150 or more service connections and the 1996-98 three-year compliance period for systems having fewer than 150 service connections for the contaminants prescribed in OAR 333-061-0036(2)(a), 333-061-0036(3)(a) and (3)(b).

(107) "Interfering Wells" means wells that, because of their proximity and pumping characteristics, and as a result of the aquifer's hydraulic properties, produce drawdown cones that overlap during simultaneous pumping. The result is a lowering of the pumping level in each well below what it would be if that well were pumping by itself.

(108) "Inventory of Potential Contaminant Sources" means the reconnaissance level location of land use activities within the Drinking Water Protection Area that as a category have been associated with groundwater or surface water contamination in Oregon and elsewhere in the United States.

(109) "Lake/reservoir" means a natural or man-made basin or hollow on the Earth's surface in which water collects or is stored that may or may not have a current or single direction of flow.

(110) "Lead Free" means:

(a) Not containing more than 0.2 percent lead when used with respect to solders and flux; and

(b) Not more than a weighted average of 0.25 percent lead when used with respect to the wetted surfaces of pipes, pipe fittings, plumbing fittings, and fixtures.

(111) "Lead Service Line" means a service line made of lead, which connects the water main to the building inlet and any pigtail, gooseneck or other fitting, which is connected to such lead line.

(112) "Legionella" means a genus of bacteria, some species of which have caused a type of pneumonia called Legionnaires Disease.

(113) "Local Administrative Authority" means the individual official, board, department or agency established and authorized by a state, county or city to administer and enforce the provisions of the Oregon State Plumbing Specialty Code adopted under OAR 918-750-0110.

(114) "Locational running annual average (LRAA)" means the arithmetic average of analytical results for samples taken at a specific monitoring location during the previous four calendar quarters.

(115) "Major Additions or Modifications" means changes of considerable extent or complexity including, but not limited to, projects involving water sources, treatment facilities, facilities for continuous disinfection, finished water storage, pumping facilities, transmission mains, and distribution mains, except main replacements of the same length and diameter.

(116) "Man-made Beta Particle and Photon Emitters" means all radionuclides emitting beta particles or photons listed in Maximum Permissible Body Burdens and Maximum Permissible Concentration of Radionuclides in Air or Water for Occupational Exposure, NBS Handbook 69, except the daughter products of Thorium-232, Uranium-235 and Uranium-238.

(117) "Master Plan" means an overall plan, which shows the projected development of a distribution system and alternatives for source development.

(118) "Maximum Contaminant Level" or "MCL" means the maximum allowable level of a contaminant in water delivered to the users of a public water system, except in the case of turbidity where the maximum allowable level is measured at the point of entry to the distribution system.

(119) "Maximum Residual Disinfectant Level (MRDL)" means a level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects.

(120) "Multi-purpose Piping System" means a piping system within residential dwellings intended to serve both domestic and fire protection needs. This type of system is considered part of a potable water system.

(121) "New Groundwater Sources" means additional or modified wells or springs owned by the Public Water System.

(122) "Non-Health Hazard (Pollution)" means an impairment of the quality of the water to a degree that does not create a hazard to the public health, but does adversely affect the aesthetic qualities of such water for potable use.

(123) "Non-Transient Non-Community Water System (NTNC)" means a public water system that is not a Community Water System and that regularly serves at least 25 of the same persons over 6 months per year.

(124) "Open Interval" means in a cased well, the sum of the length(s) of the screened or perforated zone(s) and in an uncased (open-hole) well, the sum of the thickness(es) of the water-bearing zones or, if undeterminable, 10 percent of the length of the open hole.

(125) "Operating Experience" means knowledge gained through the direct performance of duties, tasks, and responsibilities at a drinking water system or in a related field.

(126) "Operational Decision Making" means the act of making decisions about alternatives in the performance of a water treatment plant or distribution system relating to water quality or water quantity that may affect public health.

(127) "Operator," means a person responsible for the operation of a water treatment plant or distribution system.

(128) "Optimal Corrosion Control Treatment" means the corrosion control treatment that minimizes the lead and copper concentrations at users' taps while insuring that the treatment does not cause the water system to violate any national primary drinking water regulations.

(129) "Pathogenic" means a specific agent (bacterium, virus or parasite) causing or capable of causing disease.

(130) "Peak Daily Demand" means the maximum rate of water use, expressed in gallons per day, over the 24-hour period of heaviest consumption.

(131) "Permit" means official permission granted by the Authority for a public water system which exceeds maximum contaminant levels to delay, because of economic or other compelling factors, the installation of water treatment facilities which are necessary to produce water which does not exceed maximum contaminant levels.

(132) "Person" means any individual, corporation, association, firm, partnership, municipal, state or federal agency, or joint stock company and includes any receiver, special master, trustee, assignee, or other similar representative thereof.

(133) "Picocurie (pCi)" means that quantity of radioactive material producing 2.22 nuclear transformations per minute.

(134) "Pilot Study" means the construction and operation of a scaled down treatment system during a given period of time to determine the feasibility a full-scale treatment facility.

(135) "Plant intake" means the works or structures at the head of a conduit through which water is diverted from a source, such as a river or lake, into a treatment plant.

(136) "Plug Flow" means movement of water in a pipe such that particles pass through the pipe and are discharged in the same sequence in which they entered.

(137) "Point of Delivery (POD)" means the point of connection between a public water system and the user's water system. Beyond the point of delivery, the Oregon Plumbing Specialty Code applies. See "Service Connection."

(138) "Point of Disinfectant Application" is the point where the disinfectant is applied and water downstream of that point is not subject to recontamination by surface water runoff.

(139) "Point-of-Entry Treatment Device" is a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building.

(140) "Point-of-Use Treatment Device" is a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap.

(141) "Pollutant" means a substance that creates an impairment of the quality of the water to a degree which does not create a

hazard to the public health, but which does adversely affect the aesthetic qualities of the water.

(142) "Porous Media Assumption" means the assumption that groundwater moves in the aquifer as if the aquifer were granular in character, that is moves directly down-gradient, and the velocity of the groundwater can be described by Darcy's Law.

(143) "Post High School Education" means that education acquired through programs such as short schools, bona fide correspondence courses, trade schools, colleges, universities, formalized workshops or seminars that are acceptable to the Authority and for which college or continuing education credit is issued by the training sponsor.

(144) "Potable Water" See Safe Drinking Water.

(145) "Potential Contaminant Source Inventory" means the determination of the location within the wellhead protection area of activities known to use or produce materials that can contaminate groundwater.

(146) "Potential Cross Connection" means a cross connection that would most likely occur, but may not be taking place at the time of an inspection.

(147) "Potentiometric Surface" means a surface that denotes the variation of hydraulic head in the given aquifer across an area.

(148) "Premises" means real estate and the structures on it.

(149) "Premises Isolation" means the practice of protecting the public water supply from contamination or pollution by installing backflow prevention assemblies at, or near, the point of delivery where the water supply enters the premises. Premises isolation does not guarantee protection to persons on the premises.

(150) "Presedimentation" means a preliminary treatment process used to remove gravel, sand and other particulate material from the source water through settling before the water enters the primary clarification and filtration processes in a treatment plant.

(151) "Pressure Vacuum Breaker Backsiphonage Prevention Assembly (PVB)" means an assembly consisting of an independently operating, internally loaded check valve and an independently operating loaded air inlet valve located on the discharge side of the check valve. This assembly is to be equipped with properly located resilient seated test cocks and tightly closing resilient seated shutoff valves attached at each end of the assembly. This assembly is designed to protect against a non-health hazard or a health hazard under backsiphonage conditions only.

(152) "Provisional Delineation" means approximating the wellhead protection area for a well by using the wellhead protection area from another well in the same hydrogeologic setting or by using generalized values for the aquifer characteristics to generate an approximate wellhead protection area for the well. Used only for the purpose of evaluating potential siting of new or future groundwater sources. Not an acceptable way to formally delineate a wellhead protection area.

(153) "Public Health Hazard" means a condition, device or practice which is conducive to the introduction of waterborne disease organisms, or harmful chemical, physical, or radioactive substances into a public water system, and which presents an unreasonable risk to health.

(154) "Public Water System" means a system for the provision to the public of piped water for human consumption, if such system has more than three service connections, or supplies water to a public or commercial establishment that operates a total of at least 60 days per year, and that is used by 10 or more individuals per day. Public water system also means a system for the provision to the public of water through constructed conveyances other than pipes to at least 15 service connections or regularly serves at least 25 individuals daily at least 60 days of the year. A public water system is either a "Community Water System," a "Transient Non-Community Water System," a "Non-Transient Non-Community Water System" or a "State Regulated Water System."

(155) "Purchasing Water System" means a public water system which obtains its water in whole or in part from one or more public water systems. Delivery may be through a direct connection or through the distribution system of one or more purchasing water systems.

(156) "Recharge" means the process by which water is added to a zone of saturation, usually by downward infiltration from the surface.

(157) "Recharge Area" means a land area in which water percolates to the zone of saturation through infiltration from the surface.

(158) "Recovery" means the rise in water level in a well from the pumping level towards the original static water level after pumping has been discontinued.

(159) "Reduced Pressure Principle Backflow Prevention Assembly (RP)" means an assembly containing two independently acting approved check valves, together with a hydraulically operating, mechanically independent pressure differential relief valve located between the check valves and at the same time below the first check valve. The unit shall include properly located resilient seated test cocks and tightly closing resilient seated shutoff valves at each end of the assembly. This assembly is designed to protect against a non-health hazard or a health hazard.

(160) "Reduced Pressure Principle-Detector Backflow Prevention Assembly (RPDA)" means a specifically designed assembly composed of a line size approved reduced pressure principle backflow prevention assembly with a bypass containing a specific water meter and an approved reduced pressure principle backflow prevention assembly. The meter shall register accurately for only very low rates of flow up to three gallons per minute and shall show a registration for all rates of flow. This assembly is designed to protect against a non-health hazard or a health hazard.

(161) "Rem" means the unit of dose equivalent from ionizing radiation to the total body or any internal organ or organ system. A "millirem (mrem)" is 1/1000 of a rem.

(162) "Repeat Compliance Period" means any subsequent compliance period after the initial compliance period.

(163) "Residual disinfectant concentration" means the concentration of disinfectant measured in mg/l in a representative sample of water.

(164) "Responsible Management Authority" means the Public Water System whose water supply is being protected and any government entity having management, rule or ordinance-making authority to implement wellhead protection management strategies within the wellhead protection area. The Responsible Management Authority is responsible for implementation of the Wellhead Protection Plan and includes cities, counties, special districts, Indian tribes, state/federal entities as well as public water systems.

(165) "Safe Drinking Water" means water which has sufficiently low concentrations of microbiological, inorganic chemical, organic chemical, radiological or physical substances so that individuals drinking such water at normal levels of consumption, will not be exposed to disease organisms or other substances which may produce harmful physiological effects.

(166) "Sanitary Defect" means a defect that could provide a pathway of entry for microbial contamination into the distribution system or that is indicative of a failure or imminent failure in a barrier that is already in place.

(167) "Sanitary Survey (Water System Survey)" means an onsite review of the water source(s), facilities, equipment, operation, maintenance and monitoring compliance of a public water system to evaluate the adequacy of the water system, its sources and operations in the distribution of safe drinking water. The sanitary survey also identifies sources of contamination by using the results of source water assessments where available.

(168) "Seasonal water system" means a water system operated as a non-community public water system only part of each year and that is started up at the beginning and shut down at the end of each operating season.

(169) "Secondary Contaminant" means those contaminants, which, at the levels generally found in drinking water, do not present an unreasonable risk to health, but do:

(a) Have adverse effects on the taste, odor and color of water;

(b) Produce undesirable staining of plumbing fixtures; or

(c) Interfere with treatment processes applied by water suppliers.

(170) "Secondary Maximum Contaminant Level (SMCL)" means the level of a secondary contaminant which when exceeded may adversely affect the aesthetic quality of the drinking water which thereby may deter public acceptance of drinking water provided by public water systems or may interfere with water treatment methods.

(171) "Sedimentation" means a process for removal of solids before filtration by gravity or separation.

(172) "Seller's Designee" means the person assigned by the seller to complete the necessary paperwork and submit the lab results to the Authority and can be the seller's attorney, real estate agent or broker, the person conducting the tests or a private party.

(173) "Sensitivity" means the intrinsic characteristics of a drinking water source such as depth to the aquifer for groundwater or highly erodible soils in a watershed that increase the potential for contamination to take place if a contaminant source is present.

(174) "Service Connection" means the piping connection by means of which water is conveyed from a distribution main of a public water system to a user's premises. For a community water system, the portion of the service connection that conveys water from the distribution main to the user's property line, or to the service meter, where provided, is under the jurisdiction of the water supplier.

(175) "Significant Deficiency" means a defect in design, operation, or maintenance, or a malfunction of the source(s), treatment, storage, or distribution system that has been determined to cause or have the potential for causing the introduction of contamination into the water delivered to consumers.

(176) "Single Connection System" means a public water system serving only one installation, such as a restaurant, campground or place of employment.

(177) "Single Family Structure" means a building constructed as a single-family residence that is currently used as either a residence or a place of business.

(178) "Small Water System," for the purposes of OAR 333-061-0210 through 0272, means a community or non-transient non-community water system serving 150 service connections or less using only groundwater or purchasing finished water from another public water system.

(179) "Source Water Assessment" means the information compiled by the Authority and the Department of Environmental Quality (DEQ), consisting of the delineation, inventory and susceptibility analyses of the drinking water source, which enable public water systems to develop and implement drinking water protection plans.

(180) "Specific Ultraviolet Absorption (SUVA) at 254 nanometers" means an indicator of the humic content of water as a calculated parameter obtained by dividing a sample's ultraviolet absorption at a wavelength of 254 nanometers (UV254) by its concentration of dissolved organic carbon (DOC) (in milligrams per liter).

(181) "Spill Resistant Pressure Vacuum Breaker Backsiphonage Prevention Assembly (SVB)" means an assembly containing an independently operating, internally loaded check valve and independently operating loaded air inlet valve located on the discharge side of the check valve. The assembly is to be equipped with a properly located resilient seated test cock, a properly located bleed/vent valve, and tightly closing resilient seated shutoff valves attached at each end of the assembly. This assembly is designed to protect against a non-health hazard or a health hazard under a backsiphonage condition only.

(182) "Spring" means a naturally occurring discharge of flowing water at the ground surface, or into surface water where the flow of water is the result of gravity or artesian pressure. Springs can be derived from groundwater or they can be surface water influenced.

(183) "Stand-alone Fire Suppression System" means a piping system within a premises intended to only serve as a fire protection system separated from the potable water system.

(184) "State Regulated Water System" means a public water system, which serves 4 to 14 service connections or serves 10 to 24 people. Monitoring requirements for these systems are the same as those for Transient Non-Community water systems.

(185) "Static Water Level" means the vertical distance from ground surface to the water level in the well when the well is at rest, that is, the well has not been pumped recently and the water level is stable. This is the natural level of water in the well.

(186) "Submeter" means a water meter by which a property owner (or association of property owners) meters individual water use after the water passes through a master meter. For the purposes of OAR 333-061-0010, submetering does not constitute applying a direct charge for water or directly selling water to a person.

(187) "Surface Water" means all water, which is open to the atmosphere and subject to surface runoff.

(188) "Susceptibility" means the potential, as a result of the combination of land use activities and source water sensitivity, that contamination of the drinking water source may occur.

(189) "Team" means the local Wellhead Protection team, which includes representatives from the Responsible Management Authorities and various interests and stakeholders potentially affected by the Wellhead Protection Plan.

(190) "Thermal Expansion" means the pressure increase due to a rise in water temperature that occurs in water piping systems when such systems become "closed" by the installation of a backflow prevention assembly or other means, and will not allow for expansion beyond that point of installation.

(191) "These Rules" means the Oregon Administrative Rules encompassed by OAR 333-061-0005 through 333-061-0335.

(192) "Time-of-Travel (TOT)" means the amount of time it takes groundwater to flow to a given well. TOT is the criterion that effectively determines the radius in the calculated fixed radius method and the up-gradient distance to be used for the analytical and numerical models during delineation of the wellhead protection area.

(193) "Too Numerous to Count (TNTC)" means that the total number of bacterial colonies exceeds 200 on a 47 mm diameter membrane filter used for coliform bacteria detection.

(194) "Total Organic Carbon (TOC)" means total organic carbon in milligrams per liter measured using heat, oxygen, ultraviolet irradiation, chemical oxidants, or combinations of these oxidants that convert organic carbon to carbon dioxide, rounded to two significant figures.

(195) "Total Trihalomethanes" or "TTHM" means the sum of the concentrations in milligrams per liter of the trihalomethane compounds bromodichloromethane, dibromochloromethane, tribromomethane (bromoform) and trichloromethane (chloroform), rounded to two significant figures after addition.

(196) "Transient Non-Community Water System (TNC)" means a public water system that serves a transient population of 25 or more persons.

(197) "Turbidity" means a measure of the cloudiness of water caused by suspended particles. The units of measure for turbidity are nephelometric turbidity units (NTU).

(198) "Two-stage lime softening" means a process in which a chemical addition and hardness precipitation occur in each of two distinct unit clarification processes in series prior to filtration.

(199) "Unconfined Well" means a well completed in an unconfined aquifer, and more specifically, a well which produces water from a formation that is not overlaying by impermeable material. This well shall be constructed according to OAR chapter 690, division 200 "Well Construction and Maintenance" standards.

(200) "Uncovered finished water storage facility" means a tank, reservoir, or other facility used to store water that will undergo no further treatment to reduce microbial pathogens except residual disinfection and is directly open to the atmosphere.

(201) "University of Southern California, Foundation for Cross-Connection Control and Hydraulic Research (USC FCCCHR)" is an agency that conducts laboratory and field tests to evaluate and grant "Certificates of Approval" to backflow prevention assemblies meeting approved standards.

(202) "Vadose Zone" means the zone between the ground surface and the water table where the available open spaces between

soil and sediment particles, in rock fractures, etc., are most filled with air.

(203) "Variance" means official permission granted by the Authority for public water systems to exceed maximum contaminant levels because the quality of the raw water is such that the best available treatment techniques are not capable of treating the water so that it complies with maximum contaminant levels, and there is no unreasonable risk to health.

(204) "Vault" means an approved enclosure above or below ground to house a backflow prevention assembly that complies with the local administrative authority having jurisdiction.

(205) "Virus" means a virus of fecal origin, which is infectious to humans by waterborne transmission.

(206) "Vulnerability" has the same meaning as susceptibility.

(207) "Waiver" means official permission from the Authority for a public water system to deviate from the construction standards set forth in these rules.

(208) "Water-bearing Zone" means that part or parts of the aquifer encountered during drilling that yield(s) water to a well.

(209) "Waterborne disease outbreak" means the significant occurrence of acute infectious illness, epidemiologically associated with the ingestion of water from a public water system which is deficient in treatment, as determined by the Authority.

(210) "Water Source" means any lake, stream, spring, groundwater supply, impoundment or other source of water from which water is obtained for a public water system. In some cases, a public water system can be the source of supply for one or more other public water systems.

(211) "Water Supplier" means a person, group of persons, municipality, district, corporation or other entity, which owns or operates a public potable water system.

(212) "Water System" means a system for the provision of piped water for human consumption.

(213) "Water System Operations Manual" means a written document describing the actions and procedures necessary to operate and maintain the entire water system.

(214) "Water Table" means the upper surface of an unconfined aquifer, the surface of which is at atmospheric pressure and fluctuates seasonally. It is defined by the levels at which water stands in wells that penetrate the aquifer.

(215) "Water Treatment" means a process of altering water quality by physical or chemical means and may include domestic, industrial or commercial applications.

(216) "Water Treatment Plant" means that portion of a water system that in some way alters the physical, chemical, or bacteriological quality of the water being treated.

(217) "Well" means an artificial opening or artificially altered natural opening, however made, by which ground water is sought or through which ground water flows under natural pressure or is artificially withdrawn or injected, provided that this definition shall not include a natural spring, or wells drilled for the purpose of exploration or production of oil or gas.

(218) "Wellfield" means two or more drinking water wells, belonging to the same water system that are within 2,500 feet, or as determined by the Authority, and produce from the same and no other aquifer.

(219) "Wellhead Protection." See Drinking Water Protection.

(220) "Wellhead Protection Area (WHPA)." See Drinking Water Protection Area.

(221) "Wellhead Protection Plan." See Drinking Water Protection Plan.

(222) "Wholesale system" means a public water system that treats source water as necessary to produce finished water and then delivers some or all of that finished water to another public water system. Delivery may be through a direct connection or through the distribution system of one or more purchasing water systems.

333-061-0025
Responsibilities of Water Suppliers

Water suppliers are responsible for taking all reasonable actions to assure that the water delivered to water users does not exceed maximum contaminant levels, to assure that water system facilities are free of public health hazards, and to assure that water system operation and maintenance are performed as required by these rules. Such actions include, but are not limited to:

(1) Routinely collecting and submitting water samples for laboratory analyses at the frequencies prescribed by OAR 333-061-0036;

(2) Taking immediate corrective action when the results of analyses or measurements indicate that maximum contaminant levels have been exceeded and report the results of these analyses as prescribed by OAR 333-061-0040;

(3) Reporting as prescribed by OAR 333-061-0040, the results of analyses or measurements which indicate that maximum contaminant levels have not been exceeded;

(4) Notifying all customers of the water system and the general public in the service area, as prescribed by OAR 333-061-0042, when the maximum contaminant levels have been exceeded;

(5) Notifying all customers served by the water system, as prescribed by OAR 333-061-0042, when reporting requirements are not being met, when public health hazards are found to exist in the system, or when the operation of the system is subject to a permit or a variance;

(6) Maintaining monitoring and operating records and making these records available for review when the system is inspected;

(7) Maintaining a pressure of at least 20 pounds per square inch (psi) at all service connections at all times;

(8) Following-up on complaints relating to water quality from users and maintaining records and reports on actions undertaken;

(9) Conducting an active program for systematically identifying and controlling cross connections;

(10) Submitting, to the Authority, plans prepared by a professional engineer registered in Oregon for review and approval before undertaking the construction of new water systems or major modifications to existing water systems, unless exempted from this requirement;

(11) Assuring that the water system is in compliance with OAR 333-061-0032 relating to water treatment;

(12) Assuring that the water system is in compliance with OAR 333-061-0210–333-061-0272 relating to certification of water system operators; and

(13) Assuring that Transient Non-Community water systems utilizing surface water sources or groundwater sources under the influence of surface water are in compliance with OAR 333-061-0065(2)(c) relating to required special training.

333-061-0030
Maximum Contaminant Levels and Action Levels

(1) Maximum contaminant levels (MCLs) and action levels (ALs) for inorganic chemicals apply to all community and non-transient non-community water systems and are listed in Table 1, except the MCL for fluoride which applies only to community water systems and the MCL for nitrate which applies to all water systems. [Table not included. See ED. NOTE.]

(a) Compliance with the maximum contaminant levels for inorganic contaminants is calculated pursuant to OAR 333-061-0036(2)(i).

(b) Exceeding the secondary contaminant level for fluoride as specified in section (6) of this rule requires a special public notice as specified in OAR 333-061-0042(7).

(c) The lead action level is exceeded if the concentration of lead in more than 10 percent of tap water samples collected during any monitoring period conducted in accordance with OAR 333-061-0036(2)(c)(A) through (E) is greater than 0.015 mg/L (that is, if the "90th percentile" lead level is greater than 0.015 mg/L). The copper action level is exceeded if the concentration of copper in more than 10 percent of tap water samples collected during any monitoring period conducted in accordance with OAR 333-061-0036(2)(c)(A) through (E) is greater than 1.3 mg/L (that is, if the "90th percentile" copper level is greater than 1.3 mg/L).

(A) The 90th percentile lead and copper levels shall be computed as follows: The results of all lead or copper samples taken during a monitoring period shall be placed in ascending order from the sample with the lowest concentration to the sample with the highest concentration. Each sampling result shall be assigned a number, ascending by single integers beginning with the number 1 for the sample with the lowest contaminant level. The number assigned to the sample with the highest contaminant level shall be equal to the total number of samples taken. The number of samples taken during the monitoring period shall be multiplied by 0.9. The contaminant concentration in the numbered sample yielded by this calculation is the 90th percentile contaminant level.

(B) For water systems serving fewer than 100 people that collect five samples per monitoring period, the 90th percentile is computed by taking the average of the highest and second highest concentrations. For a water system allowed by the Authority to collect fewer than five samples the sample result with the highest concentration is considered the 90th percentile value.

(2) Maximum contaminant levels for organic chemicals:

(a) The maximum contaminant levels for synthetic organic chemicals are shown in Table 2 and apply to all community and non-transient non-community water systems. Compliance with MCLs shall be calculated pursuant to OAR 333-061-0036(3)(a)(H) and (I). [Table not included. See ED. NOTE.]

(b) The maximum contaminant levels for disinfection byproducts are shown in Table 3 and apply to all community and non-transient non-community water systems that add a disinfectant (oxidant) to the water supply at any point in the treatment process or deliver water in which a disinfectant has been added to the water supply. [Table not included. See ED. NOTE.]

(A) Compliance with the MCLs for TTHM and HAA5 shall be calculated as a locational running annual arithmetic average according to OAR 333-061-0036(4)(c).

(B) Compliance with the MCL for bromate shall be calculated as a running annual arithmetic average pursuant to OAR 333-061-0036(4)(h).

(C) Compliance with the MCL for chlorite shall be calculated as a running annual arithmetic average pursuant to OAR 333-061-0036(4)(g).

(c) The maximum contaminant levels for volatile organic chemicals are indicated in Table 4 and apply to all community and non-transient non-community water systems. Compliance with MCLs shall be calculated pursuant to OAR 333-061-0036(3)(b)(H) and (I). [Table not included. See ED. NOTE.]

(d) When the Authority has reason to believe that a water supply has been contaminated by a toxic organic chemical, it will determine whether a public health hazard exists and whether control measures must be carried out;

(e) The Authority may establish maximum contaminant levels for additional organic chemicals as deemed necessary when there is reason to suspect that the use of those chemicals will impair water quality to an extent that poses an unreasonable risk to the health of the water users;

(f) Persons who apply pesticides within watersheds above surface water intakes of public water systems shall comply with federal and state pesticide application requirements. (Safe Drinking Water Act (EPA), Clean Water Act (EPA), Federal Insecticide, Fungicide and Rodenticide Act (EPA), ORS 536.220 to 536.360 (Water Resources), 468B.005 (DEQ), 527.610 to 527.990 (DOF), 634.016 to 634.992 (Department of Agriculture)). Any person who has reasonable cause to believe that his or her actions have led to organic chemical contamination of a public water system shall report that fact immediately to the water supplier.

(3) Maximum contaminant levels for turbidity are applicable to all public water systems using surface water sources or groundwater sources under the direct influence of surface water in whole or in part. Compliance with MCLs shall be calculated pursuant to OAR 333-061-0036(5).

(a) The maximum contaminant levels for turbidity at water systems where filtration treatment is not provided are as follows:

(A) The turbidity level cannot exceed 5 NTU in representative samples of the source water immediately prior to the first or only point of disinfectant application unless:

(i) The Authority determines that any such event was caused by circumstances that were unusual and unpredictable; and

(ii) As a result of any such event, there have not been more than two events in the past 12 months the system served water to the public, or more than five events in the past 120 months the system served water to the public, in which the turbidity level exceeded 5 NTU. An "event" is a series of consecutive days during which at least one turbidity measurement each day exceeds 5 NTU. Turbidity measurements must be collected as required by OAR 333-061-0036(5)(a)(B).

(b) Beginning no later than 18 months after the failure to meet the requirements of OAR 333-061-0032(1) through (3), the maximum contaminant levels for turbidity in drinking water measured at a point representing filtered water prior to any storage are as follows:

(A) Conventional filtration treatment or direct filtration treatment.

(i) At water systems where conventional filtration or direct filtration treatment is used, the turbidity level of representative samples of a system's filtered water, measured as soon after filtration as possible and prior to any storage, must be less than or equal to 0.3 NTU in at least 95 percent of the measurements taken each month, measured as specified in OAR 333-061-0036(5).

(ii) At water systems where conventional filtration or direct filtration treatment is used, the turbidity level of representative samples of a system's filtered water, measured as soon after filtration as possible and prior to any storage, must at no time exceed 1 NTU measured as specified in OAR 333-061-0036(5).

(B) Slow sand filtration.

(i) At water systems where slow sand filtration is used, the turbidity level of representative samples of filtered water, measured as soon after filtration as possible and prior to any storage, must be less than or equal to 1 NTU in at least 95 percent of the measurements taken each month, measured as specified in OAR 333-061-0036(5)(b), except that if the Authority determines there is no significant interference with disinfection at a higher turbidity level, the Authority may substitute this higher turbidity limit for that system.

(ii) The turbidity level of representative samples of filtered water must at no time exceed 5 NTU, measured as specified in OAR 333-061-0036(5)(b).

(C) Diatomaceous earth filtration.

(i) At water systems where diatomaceous earth filtration is used, the turbidity level of representative samples of filtered water,

measured as soon after filtration as possible and prior to any storage, must be less than or equal to 1 NTU in at least 95 percent of the measurements taken each month, measured as specified in OAR 333-061-0036(5)(b).

(ii) The turbidity level of representative samples of filtered water must at no time exceed 5 NTU, measured as specified in OAR 333-061-0036(5)(b).

(D) Other filtration technologies. At water systems where filtration technologies other than those listed in paragraphs (3)(b)(A) through (C) of this rule are used, the turbidity level must be less than or equal to 1 NTU in at least 95 percent of the measurements taken each month and at no time exceed 5 NTU, as specified in OAR 333-061-0036(5)(b)(A). The Authority may substitute a lower turbidity value(s) if it is determined that the above limit(s) cannot achieve the required level of treatment. The water supplier must demonstrate to the Authority that the alternative filtration technology in combination with disinfection treatment as specified in OAR 333-061-0032 and monitored as specified by OAR 333-061-0036 consistently achieves 99.9 percent removal or inactivation of Giardia lamblia cysts and 99.99 percent removal or inactivation of viruses, and for all of those systems serving at least 10,000 people and beginning January 1, 2005 for all of those systems serving less than 10,000 people, 99 percent removal of Cryptosporidium oocysts.

(4) The maximum contaminant level for E. coli applies to all public water systems as specified in this section.

(a) A water system exceeds or violates the MCL for E. coli if any of the conditions identified in paragraphs (4)(a)(A) through (4)(a)(D) of this rule occur.

(A) An E. coli-positive repeat sample follows a total coliform-positive routine sample.

(B) A total coliform-positive repeat sample follows an E. coli-positive routine sample.

(C) All required repeat samples are not collected following an E. coli-positive routine sample.

(D) Any repeat sample is not analyzed for E. coli when it tests positive for total coliform.

(b) Exceeding the MCL for E. coli may pose an acute risk to health and requires the distribution of public notification as specified in OAR 333-061-0042.

(5) Maximum contaminant levels for radionuclides are applicable only to community water systems and are indicated in Table 5: [Table not included. See ED. NOTE.]

(a) The average annual concentration of beta particle and photon radioactivity from man-made sources shall not produce an annual dose equivalent to the total body or any internal organ greater than 4 millirem per year according to the criteria listed in the National Bureau of Standards Handbook 69 as amended August, 1963. If two or more radionuclides are present, the sum total of their annual dose equivalent to the total body or to any organ shall not exceed 4 millirem/year.

(A) The average annual concentration of tritium assumed to produce a total body dose of 4 mrem/year is 20,000 pCi/L;

(B) The average annual concentration of strontium-90 assumed to produce a bone marrow dose of 4 mrem/year is 8 pCi/L.

(b) Compliance with the MCLs shall be calculated pursuant to OAR 333-061-0036(7)(c).

(6) Contaminant levels for secondary contaminants are applicable to all public water systems. These are indicated in Table 6. (Also note OAR 333-061-0036(8)). [Table not included. See ED. NOTE.]

(a) Exceeding the secondary contaminant level for fluoride requires a special public notice as specified in OAR 333-061-0042(7).

(b) Exceeding the maximum contaminant level for fluoride as specified in section (1) of this rule requires public notification as specified in OAR 333-061-0042(2)(b)(A).

(7) Acrylamide and Epichlorohydrin. For every public water system, the water supplier must certify annually to the state in writing, using third party certification approved by the state or manufacturer's certification, that when acrylamide and epichlorohydrin are used in drinking water systems, the combination, or product, of dose and monomer level does not exceed the levels specified as follows:

(a) Acrylamide: 0.05 percent dosed at 1 ppm or equivalent.

(b) Epichlorohydrin: 0.01 percent dosed at 20 ppm or equivalent.

333-061-0032
Treatment Requirements and Performance Standards for Surface Water, Groundwater Under Direct Influence of Surface Water, and Groundwater

(1) General requirements for all public water systems supplied by a surface water source or a groundwater source under the direct influence of surface water.

(a) These regulations establish criteria under which filtration is required and treatment technique requirements in lieu of maximum contaminant levels for the following contaminants: Giardia lamblia, viruses, heterotrophic plate count bacteria, Legionella, Cryptosporidium, and turbidity. Each public water system with a surface water source or a groundwater source under the direct influence of surface water must provide treatment of that source water that complies with these treatment technique requirements. The treatment technique requirements consist of installing and properly operating water treatment processes which reliably achieve:

(A) At least 99.9 percent (3-log) removal or inactivation of Giardia lamblia cysts between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer, and

(B) At least 99.99 percent (4-log) removal or inactivation of viruses between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer.

(C) At least 99 percent (2-log) removal of Cryptosporidium between a point where the raw water is not subject to recontamination by surface water runoff and a point downstream before or at the first customer for filtered systems, or Cryptosporidium control under the watershed control plan for unfiltered systems; and

(D) Compliance with any applicable disinfection profiling and benchmark requirements as specified in OAR 333-061-0036(4)(l) and 333-061-0060(1)(e).

(E) Sampling and Bin Classification for Cryptosporidium:

(i) All water suppliers must conduct an initial and second round of source water monitoring, as prescribed in subsection 333-061-0036(5)(e) of these rules, for each plant that treats a surface

water or GWUDI source to determine what level, if any, of additional Cryptosporidium treatment they must provide.

(ii) Filtered systems must determine their Cryptosporidium treatment bin classification as prescribed in subsection (4)(f) of this rule and provide additional treatment for Cryptosporidium, if required, as prescribed in subsection (4)(g) of this rule. All unfiltered systems must provide treatment for Cryptosporidium as prescribed in subsections (3)(e) through (g) of this rule. Filtered and unfiltered systems must implement Cryptosporidium treatment according to the schedule in paragraph (1)(a)(F) of this rule.

(iii) Systems required to provide additional treatment for Cryptosporidium must implement microbial toolbox options that are designed and operated as prescribed in sections (13) through (17) of this rule and in OAR 333-061-0036(5)(c), 333-061-0050(4) and 333-061-0050(5)(k).

(F) Schedule for compliance with Cryptosporidium treatment requirements.

(i) Following initial bin classification as prescribed in subsection (4)(f) of this rule, filtered water systems must provide the level of treatment for Cryptosporidium required under subsection (4)(g) of this rule according to the schedule in subparagraph (1)(a)(F)(iii) of this rule.

(ii) Following initial determination of the mean Cryptosporidium level as prescribed by subsection (2)(c) of this rule, unfiltered water systems must provide the level of treatment for Cryptosporidium required under subsection (3)(e) of this rule according to the schedule in subparagraph (1)(a)(F)(iii) of this rule.

(iii) Cryptosporidium treatment compliance dates. The Authority may allow up to an additional two years from the date specified below for water systems making capital improvements.

(I) Water systems that serve at least 100,000 people must comply with Cryptosporidium treatment by April 1, 2012.

(II) Water systems that serve from 50,000 to 99,999 people must comply with Cryptosporidium treatment by October 1, 2012.

(III) Water systems that serve from 10,000 to 49,999 people must comply with Cryptosporidium treatment by October 1, 2013.

(IV) Water systems that serve fewer than 10,000 people must comply with Cryptosporidium treatment by October 1, 2014.

(V) State-Regulated public water systems must comply with Cryptosporidium treatment by October 1, 2015.

(iv) If the bin classification for a filtered water system changes following the second round of source water monitoring as prescribed in subsection (4)(f) of this rule, the water system must provide the level of treatment for Cryptosporidium required by subsection (4)(g) of this rule on a schedule approved by the Authority.

(v) If the mean Cryptosporidium level for an unfiltered water system changes following the second round of monitoring as prescribed by paragraph (2)(c)(A) of this rule, the water system must provide the level of Cryptosporidium treatment required by subsection (3)(e) of this rule, due to the change, following a schedule approved by the Authority.

(b) A public water system using a surface water source or a ground water source under the direct influence of surface water is considered to be in compliance with the requirements of this rule if:

(A) The system meets the requirements for avoiding filtration in section (2) of this rule and the disinfection requirements in section (3) of this rule, and the disinfection benchmarking requirements of OAR 333-061-0060(1)(e); or

(B) The system meets the filtration requirements in section (4) of this rule and the disinfection requirements in section (5) of this rule and the disinfection benchmarking requirements of OAR 333-061-0060(1)(e).

(c) Water systems that utilize sources that have been determined to be under the direct influence of surface water according to section (8) of this rule have 18 months to meet the requirements of sections (2) and (3) of this rule, or the requirements of sections (4) and (5) of this rule. During that time, the system must meet the following Interim Standards:

(A) The turbidity of water entering the distribution system must never exceed 5 NTU. Turbidity measurements must be taken a minimum of once per day. If continuous turbidimeters are in place, measurements should be taken every four hours; and

(B) Disinfection must be sufficient to reliably achieve at least 1.0 log inactivation of Giardia lamblia cysts prior to the first user. Daily disinfection "CT" values must be calculated and recorded daily, including pH and temperature measurements, and disinfection residuals at the first customer.

(C) Reports must be submitted to the Authority monthly as prescribed in OAR 333-061-0040.

(D) If these interim standards are not met, the owner or operator of the water system must notify customers of the failure as required in OAR 333-061-0042(2)(b)(A).

(2) Requirements for public water systems utilizing surface water or GWUDI sources without filtration.

(a) Source water quality conditions.

(A) The fecal coliform concentration must be equal to or less than 20/100 ml, or the total coliform concentration must be equal to or less than 100/100 ml, in samples collected as prescribed by OAR 333-061-0036(5)(a)(A), in at least 90 percent of the measurements made for the 6 previous months that a water system served water to the public on an ongoing basis. If a water supplier measures both fecal and total coliform as specified in this paragraph, only the fecal coliform criterion must be met.

(B) The turbidity level cannot exceed the maximum contaminant level prescribed in OAR 333-061-0030(3)(a)(A).

(b) Site-specific conditions.

(A) Water systems must meet the disinfection requirements as prescribed in section (3) of this rule at least 11 of the 12 previous months that the system served water to the public, on an ongoing basis, unless a system fails to meet the requirements during 2 of the 12 previous months that the system served water to the public, and the Authority determines that at least one of these failures was caused by circumstances that were unusual and unpredictable.

(B) Water suppliers must maintain a comprehensive watershed control program which minimizes the potential for contamination by Giardia lamblia cysts, Cryptosporidium oocysts, and viruses in the source water. For water systems using GWUDI, and at the discretion of the Authority, a certified drinking water protection plan (OAR 340-040-0160 to 340-040-0180) that addresses both the groundwater and surface water components of the drinking water supply may be substituted for a watershed control program. The watershed control program shall be developed according to guidelines in OAR 333-061-0075. The public water system must demonstrate through ownership or written agreements with landowners within the watershed that it can control all human activities which may have an adverse impact on the microbiological quality of the source water. The system must submit an annual report to the Authority identifying any special concerns about the watershed, the procedures used to resolve the concern, current activities affecting water quality, and projections of future adverse impacts or activities and the means to address them. At a minimum, the watershed control program must:

(i) Characterize the watershed hydrology and land ownership;

(ii) Identify watershed characteristics and activities which have or may have an adverse effect on source water quality; and

(iii) Monitor the occurrence of activities which may have an adverse effect on source water quality.

(C) Water systems must be subject to an annual on-site inspection of the watershed control program and the disinfection treatment process by the Authority. The on-site inspection must indicate to the Authority's satisfaction that the watershed control program and disinfection treatment process are adequately designed and maintained including the adequacy limiting the potential contamination by Cryptosporidium oocysts. The inspection must include:

(i) A review of the effectiveness of the watershed control program;

(ii) A review of the physical condition of the source intake and how well it is protected;

(iii) A review of the system's equipment maintenance program to ensure there is low probability for failure of the disinfection process;

(iv) An inspection of the disinfection equipment for physical deterioration;

(v) A review of operating procedures;

(vi) A review of data records to ensure that all required tests are being conducted and recorded and disinfection is effectively practiced; and

(vii) Identification of any improvements which are needed in the equipment, system maintenance and operation, or data collection.

(D) Water systems must not have been identified by the Authority as the source of waterborne disease outbreak under the system's current configuration. If such an outbreak occurs, the water system's treatment process must be sufficiently modified, as determined by the Authority, to prevent any future such occurrence.

(E) Water systems must meet each of the following conditions on an ongoing basis for at least 11 of the 12 previous months that the water system served water to the public unless the Authority determines that failure to meet this requirement was not caused by a deficiency in treatment of the source water.

(i) The MCL for E. coli as prescribed by OAR 333-061-0030(4) was not exceeded at the water system.

(ii) The equivalent to either of the level one coliform investigation triggers specified in OAR 333-061-0078(2)(a)(A) or (B) was not exceeded at the water system prior to March 31, 2016 if applicable.

(F) Water systems must be in compliance with the requirements for total trihalomethanes, haloacetic acids (five), bromate, chlorite, chlorine, chloramines, and chlorine dioxide as specified in OAR 333-061-0036(4).

(c) Determination of mean Cryptosporidium level.

(A) Unfiltered water systems must calculate the arithmetic average of all Cryptosporidium sample concentrations following completion of the initial and second round of source water monitoring conducted in accordance with OAR 333-061-0036(5)(e). Systems must report this value to the Authority for approval no later than 6 months after the date the system was required to complete the required monitoring.

(B) If the frequency of monthly Cryptosporidium sampling varies, water systems must calculate a monthly average for each month of sampling. Systems must then use these monthly average concentrations, rather than individual sample concentrations, in the calculation of the mean Cryptosporidium level prescribed in paragraph (2)(c)(A) of this rule.

(C) The report to the Authority of the mean Cryptosporidium levels calculated in accordance with paragraph (2)(c)(A) of this rule must include a summary of the source water monitoring data used for the calculation.

(D) Failure to comply with the conditions of subsection (2)(c) of this rule is a violation of treatment technique requirements.

(d) A public water system which fails to meet any of the criteria in section (2) of this rule is in violation of a treatment technique requirement. The Authority can require filtration to be installed where it determines necessary.

(3) Disinfection requirements for systems utilizing surface water or GWUDI sources without filtration. Each public water system that does not provide filtration treatment must provide disinfection treatment as follows:

(a) The disinfection treatment must be sufficient to ensure at least 99.9 percent (3-log) inactivation of Giardia lamblia cysts and 99.99 percent (4-log) inactivation of viruses, every day the system serves water to the public, except any one day each month. Each day a system serves water to the public, the public water system must calculate the CT value(s) from the system's treatment parameters, using the procedure specified in OAR 333-061-0036(5)(a)(C) and determine whether this value(s) is sufficient to achieve the specified inactivation rates for Giardia lamblia cysts and viruses. If a system uses a disinfectant other the chlorine, the system must demonstrate to the Authority through the use of an approved protocol for on-site disinfection demonstration studies or other information satisfactory to the Authority that the system is achieving the required inactivation rates on a daily basis instead of meeting the "CT" values in this rule.

(b) Systems for chemical disinfection must have either:

(A) Redundant components, including an auxiliary power supply with automatic start-up and alarm to ensure that disinfectant application is maintained continuously while water is being delivered to the distribution system; or

(B) Automatic shut-off of delivery of water to the distribution system whenever there is less than 0.2 mg/l of residual disinfectant concentration in the water, or if the ultraviolet light system fails. If the Authority determines than automatic shut-off would cause unreasonable risk to health or interfere with fire protection, the system must comply with paragraph (3)(b)(A) of this rule.

(c) The residual disinfectant concentration in the water entering the distribution system, measured as specified in OAR 333-061-0036(5)(a)(E), cannot be less than 0.2 mg/l for more than four hours.

(d) Disinfectant residuals in the distribution system. The residual disinfectant concentration in the distribution system, measured as total chlorine, combined chlorine, or chlorine dioxide, as specified in OAR 333-061-0036(5)(a)(F), cannot be undetectable in more than 5 percent of the samples each month, for any two consecutive months that the system serves water to the public.

(e) Unfiltered water systems must provide the level of Cryptosporidium inactivation specified in this subsection, based on their mean Cryptosporidium levels, and determined in accordance with subsection (2)(c) of this rule and according to the schedule in subsection (1)(a) of this rule.

(A) Unfiltered systems with a mean Cryptosporidium level of 0.01 oocysts/L or less must provide at least 2-log Cryptosporidium inactivation.

(B) Unfiltered systems with a mean Cryptosporidium level of greater than 0.01 oocysts/L must provide at least 3-log Cryptosporidium inactivation.

(f) Inactivation treatment technology requirements. Unfiltered systems must use chlorine dioxide, ozone, or UV as prescribed by OAR 333-061-0036(5)(c) to meet the Cryptosporidium inactivation requirements of this section.

(A) Systems that use chlorine dioxide or ozone and fail to achieve the Cryptosporidium inactivation required in subsection (3)(e) of this rule on more than one day in the calendar month are in violation of the treatment technique requirement.

(B) Systems that use UV light and fail to achieve the Cryptosporidium inactivation required in subsection (3)(e) of this rule because they do not to meet the criteria specified in subsection (18)(c) of this rule are in violation of the treatment technique requirement.

(g) Use of two disinfectants. Unfiltered water systems must meet the combined Cryptosporidium inactivation requirements of subsection (3)(e) of this rule, and the Giardia lamblia and virus inactivation requirements of subsection (3)(a) of this rule using a minimum of two disinfectants. Each of the two disinfectants must achieve by itself, the total inactivation required for at least one of the following pathogens: Cryptosporidium, Giardia lamblia, or viruses.

(4) Requirements for systems utilizing surface water or GWUDI sources that provide filtration:

(a) A public water system that uses a surface water source or a groundwater source under the direct influence of surface water, and does not meet all of the criteria in sections (1), (2), and (3) of this rule for avoiding filtration, violates a treatment technique and must provide treatment consisting of both disinfection, as specified in section (5) of this rule, and filtration treatment which complies with the requirements of either subsection (4)(b), (c), (d), or (e) of this rule by June 29, 1993 or within 18 months of the failure to meet the criteria in section (2) of this rule for avoiding filtration, whichever is later. Failure to install a required treatment by the prescribed dates is a violation of the treatment technique requirements.

(b) Conventional filtration treatment or direct filtration. Systems using conventional filtration treatment or direct filtration

treatment shall meet the turbidity requirements as specified in OAR 333-0061-0030(3)(b)(A)(i) and (ii).

(c) Slow sand filtration. Systems using slow sand filtration treatment shall meet the turbidity requirements prescribed in OAR 333-061-0030(3)(b)(B).

(d) Diatomaceous earth filtration. Systems using diatomaceous earth filtration treatment shall meet the turbidity requirements prescribed in OAR 333-061-0030(3)(b)(C).

(e) Other filtration technologies. Systems using other filtration technologies shall meet the turbidity requirements prescribed in OAR 333-061-0030(3)(b)(D).

(A) GWUDI systems using bank filtration as an alternate filtration technology must meet the requirements listed in section (9) of this rule.

(B) Systems using membrane filtration must conduct continuous indirect integrity testing and daily direct integrity testing in accordance with OAR 333-061-0036(5)(d)(B) and (C).

(f) Cryptosporidium Bin classification for filtered water systems. Following completion of the initial round of source water monitoring required by OAR 333-061-0036(5)(e), filtered water systems must calculate an initial Cryptosporidium bin concentration for each plant for which monitoring was required. Calculation of the bin concentration must be based upon the Cryptosporidium results reported in accordance with OAR 333-061-0036(5)(e), and must comply with paragraphs (4)(f)(A) through (F) of this rule.

(A) For water systems that collect 48 or more samples, the bin concentration is equal to the arithmetic average of all sample concentrations.

(B) For water systems that collect at least 24 samples, but not more than 47 samples, the bin concentration is equal to the highest arithmetic average of all sample concentrations in any 12 consecutive months during which Cryptosporidium samples were collected.

(C) For water systems that serve fewer than 10,000 people and only collect Cryptosporidium samples for 12 months, that is, collect 24 samples in 12 months, the bin concentration is equal to the arithmetic average of all sample concentrations.

(D) For water systems with plants operating only part of the year, and that monitor fewer than 12 months per year as prescribed by OAR 333-061-0036(5)(e)(E), the bin concentration is equal to the highest arithmetic average of all sample concentrations during any year of Cryptosporidium monitoring.

(E) If the monthly Cryptosporidium sampling frequency varies, water systems must first calculate a monthly average for each month of monitoring. Water systems must then use these monthly average concentrations, rather than individual sample concentrations, in the applicable calculation for bin classification of this subsection.

(F) Bin classification table.

(i) Filtered water systems must determine their initial bin classification from Table 8 as follows and using the Cryptosporidium bin concentration calculated under subsection (4)(f) of this rule: [Table not included. See ED. NOTE.]

(ii) Following completion of the second round of source water monitoring required as prescribed by OAR 333-061-0036(5)(e)(B), filtered water systems must recalculate their Cryptosporidium bin concentration based upon the sample results reported in accordance with OAR 333-061-0036(5)(e)(B) and following the procedures specified in paragraphs (4)(f)(A) through (D) of this rule. Water systems must then re-determine their bin classification using Table 8 in paragraph (4)(f)(F) of this rule. [Table not included. See ED. NOTE.]

(G) Filtered water systems must report their bin classification as prescribed by paragraph (4)(f)(F) of this rule to the Authority for approval no later than 6 months after the system is required to complete the initial and second round of source water monitoring based on the schedule in OAR 333-061-0036(5)(e)(C).

(H) The bin classification report to the Authority must include a summary of source water monitoring data and the calculation procedure used to determine bin classification. Failure to comply with the conditions of this paragraph is a violation of treatment technique requirements.

(g) Additional Cryptosporidium treatment requirements.

(A) Filtered water systems must provide the level of additional treatment for Cryptosporidium specified in Table 9 based on their bin classification as determined under subsection (4)(f) of this rule, and according to the schedule in paragraph (1)(a)(F) of this rule. [Table not included. See ED. NOTE.]

(B) Filtered water systems must use one or more of the treatment and management options listed in section (13) of this rule, termed the microbial toolbox, to comply with the additional Cryptosporidium treatment required by paragraph (4)(g)(A) of this rule.

(C) Systems classified in Bin 3 or Bin 4 must achieve at least 1-log of the additional Cryptosporidium treatment, as required by paragraph (4)(g)(A) of this rule, using either one or a combination of the following: bag filters, bank filtration, cartridge filters, chlorine dioxide, membranes, ozone, or UV, as described in sections (14) through (18) of this rule and in OAR 333-061-0036(5)(c).

(i) Failure by a water system, in any month, to achieve the treatment credit required by sections (14) through (18) of this rule and OAR 333-061-0036(5)(c) that is at least equal to the level of treatment required by paragraph (4)(g)(A) of this rule, is a violation of treatment technique requirements.

(ii) If the Authority determines during a sanitary survey or equivalent source water assessment, that after a system completed the monitoring conducted as required by OAR 333-061-0036(5)(e)(A) or (B), significant changes occurred in the system's watershed that could lead to increased contamination of the source water by Cryptosporidium, the system must take action as specified by the Authority to address the contamination. These actions may include additional source water monitoring or implementing microbial toolbox options specified in section (13) of this rule.

(5) Disinfection requirements for systems utilizing surface water or GWUDI sources with filtration:

(a) The disinfection treatment must be sufficient to ensure that the total treatment processes of that system achieve at least 99.9 percent (3-log) inactivation or removal of Giardia lamblia cysts and at least 99.99 percent (4-log) inactivation or removal of viruses as determined by the Authority.

(b) The residual disinfectant concentration in the water entering the distribution system, measured as specified in OAR 333-061-0036(5)(b)(D), cannot be less than 0.2 mg/l for more than 4 hours.

(c) The residual disinfectant concentration in the distribution system, measured as total chlorine, combined chlorine, or chlorine dioxide, as specified is OAR 333-061-0036(5)(b)(D) cannot be undetectable in more than 5 percent of the samples each month, for any two consecutive months that the system serves water to the public.

(6) Requirements for water systems using groundwater sources.

(a) Water suppliers responsible for groundwater systems as defined by OAR 333-061-0020(90) must comply with the requirements of this section when a significant deficiency is identified or a groundwater source sample collected according to OAR 333-061-0036(6)(j) is E. coli positive. The Authority may require a water supplier to comply with the provisions of this section when a groundwater source sample collected according to OAR 333-061-0036(6)(i) or (k) is E. coli positive.

(b) When a significant deficiency is identified at a public water system that uses both groundwater and surface water or groundwater under the direct influence of surface water, the water supplier must comply with provisions of this section except in cases where the Authority determines that the significant deficiency is in a portion of the distribution system that is served solely by surface water or groundwater under the direct influence of surface water.

(c) Water suppliers must consult with the Authority regarding the appropriate corrective action within 30 days of receiving written notice from the Authority of a significant deficiency, written notice from a laboratory that a groundwater source sample collected in accordance with OAR 333-061-0036(6)(j) was E. coli

-positive, or direction from the Authority that an E. coli -positive collected in accordance with OAR 333-061-0036(6)(i) or (k) requires corrective action.

(d) Within 120 days (or earlier if directed by the Authority) of receiving written notification from the Authority of a significant deficiency, written notice from a laboratory that a groundwater source sample collected in accordance with OAR 333-061-0036(6)(j) was found to be E. coli positive, or direction from the Authority that a E. coli -positive sample collected in accordance with OAR 333-061-0036(6)(i) or (k) requires corrective action, the water supplier must either:

(A) Have completed corrective action in accordance with applicable Authority plan review processes or other Authority guidance, including any Authority-specified interim measures; or

(B) Be in compliance with an Authority approved corrective action plan and schedule subject to the following conditions:

(i) Any subsequent modifications to an approved corrective action plan and schedule must be approved by the Authority; and

(ii) If the Authority specifies interim measures for the protection of public health pending Authority approval of the corrective action plan and schedule, or pending completion of the corrective action plan, the water supplier must comply with these interim measures as well as with any schedule specified by the Authority.

(e) Water suppliers subject to the requirements of this section must, upon approval by the Authority, implement one or more of the following corrective action alternatives:

(A) Correct all significant deficiencies;

(B) Disconnect the groundwater source from the water system and provide an alternate source of water. If a disconnected well is or will be within 100 feet of a public water supply well, the disconnected well must be abandoned in accordance with 333-061-0050(2)(a)(E);

(C) Eliminate the source of contamination; or

(D) Provide treatment for the groundwater source that reliably achieves at least 4-log inactivation, removal, or a combination of inactivation and removal of viruses before or at the first customer. If the groundwater source does not meet all of the applicable construction standards specified in OAR 333-061-0050(2)(a) or (b), and the Authority determines that reconstruction of the groundwater source will add a significant measure of public health protection, then the groundwater source must be made to meet all of the applicable construction standards specified in OAR 333-061-0050(2)(a) or (b) before treatment is applied as prescribed by OAR 333-061-0050(5)(b).

(f) Water suppliers responsible for water systems using fecally contaminated groundwater sources must provide continuous disinfection as prescribed by OAR 333-061-0050(5) when disinfection is approved by the Authority as a corrective action.

(g) If three or more coliform investigations are triggered within a rolling 12 month period or four or more coliform investigations are triggered within a rolling two year period, water suppliers must install and utilize treatment for disinfectant residual maintenance. For the purposes of this subsection, only coliform investigations triggered as specified in OAR 333-061-0078(2)(a)(A) or (B) or (2)(b)(A) will be considered.

(A) Treatment must be installed and operating within six months unless the Authority approves an alternate schedule.

(B) Disinfectant residuals must be monitored as prescribed by OAR 333-061-0036(9).

(h) A water supplier violates this rule if any of the situations specified in paragraphs (6)(h)(A) through (C) of this rule occur. Violation of this rule is a violation of treatment technique requirements and requires a tier two public notice be published as specified by OAR 333-061-0042.

(A) Within 120 days (or earlier if directed by the Authority) of receiving written notice from the Authority of a significant deficiency, a water supplier:

(i) Fails to complete corrective action in accordance with applicable Authority plan review processes or other Authority guidance, including Authority specified interim actions and measures; or

(ii) Fails to be in compliance with an Authority approved corrective action plan and schedule.

(B) Within 120 days (or earlier if directed by the Authority) of receiving notification of an E. coli-positive groundwater source sample collected according to OAR 333-061-0036(6)(j) and not invalidated according to OAR 333-061-0036(6)(l), a water supplier:

(i) Fails to complete corrective action according to applicable Authority plan review processes or other Authority guidance, including interim actions and measures; or

(ii) Fails to be in compliance with an Authority approved corrective action plan and schedule.

(C) A water supplier fails to correct any disruption in treatment within four hours of determining a disruption is occurring at a groundwater system subject to the requirements of subsection (7)(b) of this rule and required to maintain at least 4-log treatment of viruses (using inactivation, removal, or an Authority approved combination of 4-log virus inactivation and removal) before or at the first customer.

(7) Compliance monitoring requirements for groundwater systems that provide at least 4-log treatment of viruses. Water systems must comply with the requirements of (7)(a) through (7)(c) of this rule.

(a) A groundwater system that is not required to meet the source water monitoring requirements of 333-061-0036(6)(i) or (j) of these rules, because it provides at least 4-log treatment of viruses (using inactivation, removal, or an Authority-approved combination of 4-log virus inactivation and removal) before or at the first customer for any groundwater source, must comply with the requirements of this subsection within 30 days of placing the groundwater source in service, whichever is later.

(A) The water system must notify the Authority in writing, that it provides at least 4-log treatment of viruses (using inactivation, removal, or an Authority approved combination of 4-log virus inactivation and removal) before or at the first customer for the groundwater source. Notification to the Authority must include engineering, operational, or other information that the Authority requests to evaluate the submission.

(B) The system must conduct compliance monitoring as required by subsection (7)(b) of this rule.

(C) The system must conduct groundwater source monitoring under OAR 333-061-0036(6) if the system subsequently discontinues 4-log treatment of viruses (using inactivation, removal, or an Authority-approved combination of 4-log virus inactivation and removal) before or at the first customer for the groundwater source.

(b) Monitoring requirements. A groundwater system subject to the requirements of section (6) or subsection (7)(a) of this rule must monitor the effectiveness and reliability of treatment for that groundwater source before or at the first customer as follows:

(A) Chemical Disinfection:

(i) Groundwater systems serving greater than 3,300 people must continuously monitor the residual disinfectant concentration using analytical methods as specified in OAR 333-061-0036(1), at a location approved by the Authority, and must record the lowest residual disinfectant concentration each day that water from the groundwater source is served to the public. The groundwater system must maintain the Authority-determined residual disinfectant concentration every day the groundwater system serves water from the groundwater source to the public. If there is a failure in the continuous monitoring equipment, the groundwater system must conduct grab sampling every four hours until the continuous monitoring equipment is returned to service. The system must resume continuous residual disinfectant monitoring within 14 days.

(ii) Groundwater systems serving 3,300 or fewer people must monitor the residual disinfectant concentration using analytical methods as specified in OAR 333-061-0036(1), at a location approved by the Authority, and record the residual disinfection concentration each day that water from the groundwater source is served to the public. The groundwater system must maintain the

Authority-determined residual disinfectant concentration every day the groundwater system serves water from the groundwater source to the public. The groundwater system must take a daily grab sample during the hour of peak flow or at another time specified by the Authority. If any daily grab sample measurement falls below the Authority-determined residual disinfectant concentration, the groundwater system must take follow-up samples every four hours until the residual disinfectant concentration is restored to the Authority-determined level. Alternately, a groundwater system that serves 3,300 or fewer people may monitor continuously and meet the requirements of subparagraph (7)(b)(A)(i) of this rule.

(B) Membrane filtration. A groundwater system that uses membrane filtration to achieve at least 4-log removal of viruses must monitor and operate the membrane filtration process in accordance with all Authority-specified monitoring and compliance requirements. A groundwater system that uses membrane filtration is in compliance with the requirement to achieve at least 4-log removal of viruses when:

(i) The membrane has an absolute molecular weight cut-off (MWCO), or an alternate parameter describing the exclusion characteristics of the membrane, that can reliably achieve at least 4-log removal of viruses;

(ii) The membrane process is operated in accordance with Authority-specified compliance requirements; and

(iii) The integrity of the membrane is intact as verified per OAR 333-061-0050(4)(c)(I).

(C) Alternative treatment. A groundwater system that uses an Authority-approved alternative treatment to provide at least 4-log treatment of viruses (using inactivation, removal, or an Authority-approved combination of 4-log virus inactivation and removal) before or at the first customer must:

(i) Monitor the alternative treatment in accordance with all Authority-specified monitoring requirements; and

(ii) Operate the alternative treatment in accordance with all compliance requirements that the Authority determines to be necessary to achieve at least 4-log treatment of viruses.

(c) Discontinuing treatment. A groundwater system may discontinue 4-log treatment of viruses (using inactivation, removal, or an Authority-approved combination of 4-log virus inactivation and removal) before or at the first customer for a groundwater source if the Authority determines, and documents in writing, that 4-log treatment of viruses is no longer necessary for that groundwater source. A system that discontinues 4-log treatment of viruses is subject to the source water monitoring requirements of OAR 333-061-0036(6).

(8) Determination of groundwater under the direct influence of surface water (GWUDI)

(a) Except for wells using only a handpump, all groundwater sources must be evaluated for the potential of surface water influence if the source is in proximity to perennial or intermittent surface water and meets one of the hydrogeologic setting-surface water setback criteria identified in paragraph (A) and either paragraph (B) or (C). Hydrogeologic setting is identified by the Source Water Assessment or some other hydrogeologic study approved by the Authority.

(A) The groundwater source draws water from:

(i) A sand aquifer and is within 75 feet of surface water;

(ii) A sand and gravel aquifer and is within 100 feet of surface water;

(iii) A coarse sand, gravel, and boulder aquifer and is within 200 feet of surface water;

(iv) A fractured bedrock aquifer or layered volcanic aquifer and is within 500 feet of surface water; or

(v) Greater distances if geologic conditions or historical monitoring data indicate additional risk at the source; and

(B) There is a history of microbiological contamination in the source; or

(C) The Source Water Assessment or some other hydrogeologic study approved by the Authority determines the source is highly sensitive as a result of aquifer characteristics, vadose zone characteristics, monitoring history or well construction.

(b) Except as provided by subsection (8)(c) of this rule, water suppliers must conduct sampling for any groundwater source(s) meeting the criteria specified in subsection (8)(a) of this rule. Sampling must be conducted according to the following criteria:

(A) Collection of twelve consecutive monthly source water samples when the source is used year-round, or every month the source provides water to the public during one operational season for water sources used seasonally;

(B) Samples must be analyzed for E. coli in accordance with all the applicable provisions of OAR 333-061-0036(1); and

(C) Samples must be collected at the water source prior to any treatment unless the Authority approves an alternate sampling location that is representative of source water quality.

(c) Public water systems that are required to evaluate their source(s) for direct influence of surface water may submit results of a hydrogeologic assessment completed by an Oregon registered geologist or other licensed professional with demonstrated experience and competence in hydrogeology in accordance with ORS 672.505 through 672.705 to demonstrate that the source is not potentially under the direct influence of surface water. The assessment must be consistent with the Oregon State Board of Geologist Examiners "Hydrology Report Guidelines," must be completed within a timeframe specified by the Authority and must include the following:

(A) Well characteristics: well depth, screened or perforated interval, casing seal placement;

(B) Aquifer characteristics: thickness of the vadose zone, hydraulic conductivity of the vadose zone and the aquifer, presence of low permeability zones in the vadose zone, degree of connection between the aquifer and surface water;

(C) Hydraulic gradient: gradient between the aquifer and surface water source during pumping conditions, variation of static water level and surface water level with time; and

(D) Groundwater flow: flow of water from the surface water source to the groundwater source during pumping conditions, estimated time-of-travel for groundwater from the surface water source(s) to the well(s), spring(s), etc.

(d) If a source water sample collected in accordance with subsection (8)(b) of this rule is reported as E. coli positive, then the water supplier must collect five additional source water samples within 24 hours of receiving notification of the positive sample result.

(e) If any of the five additional source water samples specified in subsection (8)(d) of this rule is E. coli positive then the original E. coli positive sample is considered confirmed, and the water supplier must have the groundwater source analyzed for surface water influence according to subsection (8)(h) of this rule. Further E. coli monitoring is not required.

(f) A water supplier may be required to have the groundwater source analyzed for surface water influence according to subsection (8)(h) of this rule at the discretion of the Authority if source water samples are consistently total coliform positive.

(g) Emergency groundwater sources that meet the criteria of subsection (8)(a) of this rule can either be evaluated as prescribed in subsection 8(b) or (8)(c) of this rule, or the evaluation can be waived if a Tier 2 public notice as prescribed in OAR 333-061-0042 is issued each time the source is used. The notice must explain that the source has been identified as potentially under the direct influence of surface water, but has not been fully evaluated, and therefore may not be treated sufficiently to inactivate pathogens such as Giardia lamblia and Cryptosporidium.

(h) Determination of surface water influence on a groundwater source must be based upon a minimum of two samples conducted according to the "Consensus Method for Determining Groundwaters under the Direct Influence of Surface Water Using Microscopic Particulate Analysis (MPA)." Both water samples must be collected during a period of high runoff or streamflow and separated by a period of at least four weeks, or at other times as determined by the Authority. Scoring for diatoms, other algae, and insects/larvae is

partially modified according to Table 10. Scoring for Giardia lamblia, coccidia, rotifers, and plant debris remains unchanged. [Table not included. See ED. NOTE.]

(i) A water source will be classified as groundwater or GWUDI as follows:

(A) If the two initial microscopic particulate analyses have a risk score of less than 10, the water system source is classified as groundwater;

(B) If any microscopic particulate analysis (MPA) risk score is greater than 19, or each risk score is greater than 14, the water source is classified as GWUDI;

(C) If at least one of the two MPA risk scores is between 10 and 19, two additional microscopic particulate analyses must be conducted, and water source classification will be made as follows:

(i) If all of the MPA risk scores are less than 15, the water system source is classified as groundwater;

(ii) If any MPA risk score is greater than 19, or two or more are greater than 14, the water system source is classified as under the direct influence of surface water; or

(iii) If only one of four MPA risk scores is greater than 14, two additional microscopic particulate analyses must be conducted, and water source classification will be based upon further evaluation by the Authority.

(j) If an infiltration gallery, Ranney well, or dug well has been classified as groundwater under this rule, the turbidity of the source must be monitored and recorded daily and kept by the water system operator. If the turbidity exceeds 5 NTU or if the surface water body changes course such that risk to the groundwater source is increased, an MPA must be conducted at that time. Reevaluation may be required by the Authority at any time.

(k) The Authority may determine a groundwater source to be under the direct influence of surface water if the criteria in subsection (8)(a) of this rule are met and there are significant or relatively rapid shifts in groundwater characteristics, such as turbidity, which closely correlate to changes in weather or surface water conditions.

(l) The Authority may require reevaluation of a groundwater source, as specified in this section, if geologic conditions, water quality trends, or other indicators change despite any data previously collected or any determination previously made.

(m) The Authority may determine that a source is not under direct influence of surface water based on criteria other than MPAs including the Source Water Assessment, source water protection, and other water quality parameters. The determination shall be based on the criteria indicating that the water source has a very low susceptibility to contamination by parasites, including Giardia lamblia and Cryptosporidium. The Authority may impose additional monitoring or disinfection treatment requirements to ensure that the risk remains low.

(9) Requirements for groundwater sources under the direct influence of surface water seeking alternative filtration credit through bank filtration:

(a) Water systems with all MPA risk scores less than 30 may choose the option to evaluate for bank filtration credit. The water system must conduct a demonstration of performance study that includes an assessment of the ability of the local hydrogeologic setting to provide a minimum of 2-log reduction in the number of particles and microorganisms in the Giardia and Cryptosporidium size range between surface water and the groundwater source. The bank filtration study must include the following elements or other Authority approved methods:

(A) The bank filtration study must involve the collection of data on removal of biological surrogates and particles in the Cryptosporidium size range of 2–5 microns or other surrogates approved by the Authority, and related hydrogeologic and water quality parameters during the full range of operating conditions. The demonstration study methods shall be reviewed and approved by the Authority prior to implementation. Final assessment of removal credit granted to the well shall be made by the Authority based on the study results.

(b) If a GWUDI system using bank filtration as an alternative filtration technology violates the MCL for turbidity specified in OAR 333-061-0030(3)(b)(D), the water system must investigate the cause of the high turbidity within 24 hours of the exceedance. Pending the results of the investigation by the water system, the Authority may require a new bank filtration study.

(10) Disinfection Byproduct Control Requirements:

(a) This rule establishes criteria under which community water systems and Non-transient, Non-community water systems which add a chemical disinfectant to the water in any part of the drinking water treatment process must modify their practices to meet MCLs and MRDLs in OAR 333-061-0030 and 0031, respectively. This rule also establishes the treatment technique requirements for disinfection byproduct precursors, and the criteria under which transient non-community water systems that use chlorine dioxide as a disinfectant or oxidant must modify their practices to meet the MRDL for chlorine dioxide as specified in OAR 333-061-0031.

(b) Water systems may increase residual disinfectant levels in the distribution system of chlorine or chloramines (but not chlorine dioxide) to a level and for a time necessary to protect public health, to address specific microbiological contamination problems caused by circumstances such as, but not limited to, distribution line breaks, storm run-off events, source water contamination events, or cross connection events.

(c) Enhanced coagulation or enhanced softening are authorized treatment techniques to control the level of disinfection byproduct precursors for water systems using surface water or groundwater under the direct influence of surface water and conventional filtration treatment. Community and Non-transient Non-community water systems using conventional filtration treatment must operate with enhanced coagulation or enhanced softening to achieve the total organic carbon (TOC) percent removal levels specified in subsection (10)(d) of this rule unless the system meets at least one of the alternative compliance criteria listed in paragraph (10)(c)(A) or (10)(c)(B) of this rule.

(A) Alternative compliance criteria for enhanced coagulation and enhanced softening systems. Water systems may use the alternative compliance criteria in subparagraphs (10)(c)(A)(i) through (vi) of this rule in lieu of complying with the performance criteria specified in subsection (e) of this section. Systems must still comply with monitoring requirements specified in OAR 333-061-0036(4)(k).

(i) The system's source water TOC level is less than 2.0 mg/L, calculated quarterly as a running annual average.

(ii) The system's treated water TOC level is less than 2.0 mg/L, calculated quarterly as a running annual average.

(iii) The system's source water TOC is less than 4.0 mg/L, calculated quarterly as a running annual average; the source water alkalinity is greater than 60 mg/L (as CaCO3 calculated quarterly as a running annual average; and the TTHM and HAA5 running annual averages are no greater than 0.040 mg/L and 0.030 mg/L, respectively.

(iv) The TTHM and HAA5 running annual averages are no greater than 0.040 mg/L and 0.030 mg/L, respectively, and the system uses only chlorine for primary disinfection and maintenance of a residual in the distribution system.

(v) The system's source water SUVA, prior to any treatment and measured monthly is less than or equal to 2.0 L/mg-m, calculated quarterly as a running annual average.

(vi) The system's finished water SUVA, measured monthly is less than or equal to 2.0 L/mg-m, calculated quarterly as a running annual average.

(B) Additional alternative compliance criteria for softening systems. Systems practicing enhanced softening that cannot achieve the TOC removals required by paragraph (10)(d)(B) of this rule may use the alternative compliance criteria in subparagraphs (10)(c)(B)(i) and (ii) of this rule in lieu of complying with subsection (10)(d) of this rule. Systems must still comply with monitoring requirements in specified in OAR 333-061-0036(4)(k).

(i) Softening that results in lowering the treated water alkalinity to less than 60 mg/L (as CaCO3), measured monthly and calculated quarterly as a running annual average.

(ii) Softening that results in removing at least 10 mg/L of magnesium hardness (as CaCO3), measured monthly and calculated quarterly as a running annual average.

(d) Enhanced coagulation and enhanced softening performance requirements.

(A) Systems must achieve the percent reduction of TOC specified in paragraph (10)(d)(B) in this rule between the source water and the combined filter effluent, unless the Authority approves a system's request for alternate minimum TOC removal (Step 2) requirements under paragraph (10)(d)(C) of this rule.

(B) Required Step 1 TOC reductions, specified in Table 11, are based upon specified source water parameters. Systems practicing softening are required to meet the Step 1 TOC reductions in the far-right column (Source water alkalinity >120 mg/L) for the specified source water TOC: [Table not included. See ED. NOTE.]

(C) Water systems that cannot achieve the Step 1 TOC removals required by paragraph (10)(d)(B) of this rule due to water quality parameters or operational constraints must apply to the Authority, within three months of failure to achieve the TOC removals required by paragraph (10)(d)(B) of this rule, for approval of alternative minimum TOC (Step 2) removal requirements submitted by the water system. If the Authority approves the alternative minimum TOC removal (Step 2) requirements, the Authority may make those requirements retroactive for the purposes of determining compliance. Until the Authority approves the alternate minimum TOC removal (Step 2) requirements, the water system must meet the Step 1 TOC removals contained in paragraph (10)(d)(B) of this rule.

(D) Alternate minimum TOC removal (Step 2) requirements. Applications made to the Authority by enhanced coagulation systems for approval of alternative minimum TOC removal (Step 2) requirements under paragraph (10)(d)(C) of this rule must include, as a minimum, results of bench-scale or pilot-scale testing conducted under subparagraph (10)(d)(D)(i) of this rule. The submitted bench-scale or pilot scale testing must be used to determine the alternate enhanced coagulation level.

(i) Alternate enhanced coagulation level is defined as coagulation at a coagulant dose and pH as determined by the method described in subparagraphs (10)(d)(D)(i) through (v) of this rule such that an incremental addition of 10 mg/L of alum (or equivalent amount of ferric salt) results in a TOC removal of less than or equal to 0.3 mg/ L. The percent removal of TOC at this point on the "TOC removal versus coagulant dose" curve is then defined as the minimum TOC removal required for the system. Once approved by the Authority, this minimum requirement supersedes the minimum TOC removal required by the Table 11 in paragraph (10)(d)(B) of this rule. This requirement will be effective until such time as the Authority approves a new value based on the results of a new bench-scale and pilot-scale test. Failure to achieve Authority-set alternative minimum TOC removal levels is a violation. [Table not included. See ED. NOTE.]

(ii) Bench-scale or pilot-scale testing of enhanced coagulation must be conducted by using representative water samples and adding 10 mg/L increments of alum (or equivalent amounts of ferric salt) until the pH is reduced to a level less than or equal to the enhanced coagulation Step 2 target pH as specified in Table 12: [Table not included. See ED. NOTE.]

(iii) For waters with alkalinities of less than 60 mg/L for which addition of small amounts of alum or equivalent addition of iron coagulant drives the pH below 5.5 before significant TOC removal occurs, the system must add necessary chemicals to maintain the pH between 5.3 and 5.7 in samples until the TOC removal of 0.3 mg/L per 10 mg/L alum added (or equivalent addition of iron coagulant) is reached.

(iv) The system may operate at any coagulant dose or pH necessary, consistent with these rules to achieve the minimum TOC percent removal approved under paragraph (10)(d)(C) of this rule.

(v) If the TOC removal is consistently less than 0.3 mg/L of TOC per 10 mg/L of incremental alum dose at all dosages of alum (or equivalent addition of iron coagulant), the water is deemed to contain TOC not amenable to enhanced coagulation. The water system may then apply to the Authority for a waiver of enhanced coagulation requirements.

(e) Compliance calculations.

(A) Water systems other than those identified in paragraphs (10)(c)(A) or (d)(B) of this rule must comply with requirements contained in paragraph (10)(d)(B) or (C) of this rule. Systems must calculate compliance quarterly, beginning after the system has collected 12 months of data, by determining an annual average using the following method:

(i) Determine actual monthly TOC percent removal, equal to: {1- (treated water TOC/source water TOC)}x100

(ii) Determine the required monthly TOC percent removal (from either Table 11 in paragraph (10)(d)(B) of this rule or from paragraph (10)(d)(C) of this rule). [Table not included. See ED. NOTE.]

(iii) Divide the value in subparagraph (10)(e)(A)(i) of this rule by the value in subparagraph (10)(e)(A)(ii) of this rule.

(iv) Add together the results of subparagraph (10)(e)(A)(iii) of this rule for the last 12 months and divide by 12.

(v) If the value calculated in subparagraph (10)(e)(A)(iv) of this rule is less than 1.00, the water system is not in compliance with the TOC percent removal requirements.

(B) Water systems may use the provisions in subparagraphs (10)(e)(B)(i) through (v) of this rule in lieu of the calculations in subparagraph (10)(e)(A)(i) through (v) of this rule to determine compliance with TOC percent removal requirements.

(i) In any month that the water system's treated or source water TOC level is less than 2.0 mg/L, the water system may assign a monthly value of 1.0 (in lieu of the value calculated in subparagraph (10)(e)(A)(iii) of this rule) when calculating compliance under the provisions of paragraph (10)(e)(A) of this rule.

(ii) In any month that a system practicing softening removes at least 10 mg/L of magnesium hardness (as CaCO3), the water system may assign a monthly value of 1.0 (in lieu of the value calculated in subparagraph (10)(e)(A)(iii) of this rule) when calculating compliance under the provisions of paragraph (10)(e)(A) of this rule.

(iii) In any month that the water system's source water SUVA, prior to any treatment is less than or equal to 2.0 L/mg-m, the water system may assign a monthly value of 1.0 (in lieu of the value calculated in subparagraph (10)(e)(A)(iii) of this rule) when calculating compliance under the provisions of paragraph (10)(e)(A) of this rule.

(iv) In any month that the water system's finished water SUVA is less than or equal to 2.0 L/mg-m, the system may assign a monthly value of 1.0 (in lieu of the value calculated in subparagraph (10)(e)(A)(iii) of this rule) when calculating compliance under the provisions of paragraph (10)(e)(A) of this rule.

(v) In any month that a system practicing enhanced softening lowers alkalinity below 60 mg/L (as CaCO3), the water system may assign a monthly value of 1.0 (in lieu of the value calculated in subparagraph (10)(e)(A)(iii) of this rule) when calculating compliance under the provisions of paragraph (10)(e)(A) of this rule.

(C) Water systems using conventional treatment may also comply with the requirements of this section by meeting the criteria in paragraph (10)(c)(A) or (B) of this rule.

(11) Requirements for Water Treatment Plant Recycled Water

(a) Any water system using surface water or groundwater under the direct influence of surface water that uses conventional filtration treatment or direct filtration treatment and that recycles spent filter backwash water, thickener, supernatant, or liquids from dewatering processes must meet the requirements of subsections (11)(b) and (c) of this rule and OAR 333-061-0040(2)(i).

(b) A water system must notify the Authority in writing by December 8, 2003 if that water system recycles spent filter backwash water, thickener supernatant, or liquids from dewatering

processes. This notification must include, at a minimum, the information specified in paragraphs (11)(b)(A) and (B) of this rule.

(A) A water treatment plant schematic showing the origin of all flows which are recycled (including, but not limited to, spent filter backwash water, thickener supernatant, and liquids from dewatering processes), the hydraulic conveyance used to transport them, and the location where they are re-introduced back into the water treatment plant.

(B) Typical recycle flow in gallons per minute (gpm), the highest observed water treatment plant flow experienced in the previous year (gpm), the design flow for the water treatment plant (gpm), and the operating capacity of the water treatment plant (gpm) that has been determined by the Authority where the Authority has made such determinations.

(c) Any water system that recycles spent filter backwash water, thickener supernatant, or liquids from dewatering processes must return these flows through the processes of a system's existing conventional filtration treatment plant or direct filtration treatment plant as defined by these rules or at an alternate location approved by the Authority by June 8, 2004. If capital improvements are required to modify the recycle location to meet this requirement, all capital improvements must be completed no later than June 8, 2006.

(12) Water systems using uncovered finished water storage facilities must comply with the conditions of either subsections (12)(a) or (b) of this rule for each uncovered finished water storage facility, or be in compliance with an Authority approved schedule to meet these conditions no later than April 1, 2009.

(a) Water systems must cover any uncovered finished water storage facility; or

(b) Treat the discharge from the uncovered finished water storage facility into the distribution system to achieve at least 4-log virus, 3-log Giardia lamblia, and 2-log Cryptosporidium inactivation or removal using a protocol approved by the Authority.

(c) Failure to comply with the requirements of this section is a violation of the treatment technique requirement.

(13) Summary and General Requirements of Microbial toolbox options for meeting Cryptosporidium treatment requirements. Filtered water systems are eligible for the treatment credits listed in Table 13 of this section by meeting the conditions for microbial toolbox options described in sections (14) through (18) of this rule and in OAR 333-061-0036(5)(c). Unfiltered water systems are eligible only for the treatment credits specified as inactivation toolbox options in Table 13. Water systems apply these treatment credits to meet the requirements of subsections (3)(e) or (4)(g) of this rule, as applicable. [Table not included. See ED. NOTE.]

(14) Source toolbox components for meeting Cryptosporidium treatment requirements.

(a) Watershed control program. Water systems receive 0.5-log Cryptosporidium treatment credit for implementing a watershed control program that meets the requirements of this subsection.

(A) Water systems must notify the Authority of the intent to apply for the watershed control program credit no later than two years prior to the treatment compliance date applicable to the system in subsection (1)(a) of this rule.

(B) Water systems must submit a proposed watershed control plan to the Authority no later than one year before the applicable treatment compliance date in subsection (1)(a) of this rule. The Authority must approve the watershed control plan for the water system to receive the applicable treatment credit. The watershed control plan must include the following elements:

(i) Identification of an area of influence, outside of which the likelihood of Cryptosporidium or fecal contamination affecting the treatment plant intake is not significant. This is the area to be evaluated in future watershed surveys under subparagraph (14)(a)(E)(ii) of this rule;

(ii) Identification of both potential and actual sources of Cryptosporidium contamination, and an assessment of the relative impact of these contamination sources on the water system's source water quality;

(iii) An analysis of the effectiveness and feasibility of control measures that could reduce Cryptosporidium loading from sources of contamination to the system's source water; and

(iv) A statement of goals and specific actions the system will undertake to reduce source water Cryptosporidium levels. The plan must explain how the actions are expected to contribute to specific goals, identify watershed partners and their roles, identify resource requirements and commitments, and include a schedule for plan implementation with deadlines for completing specific actions identified in the plan.

(C) Water Systems with existing watershed control programs are eligible to seek this credit, but must meet the requirements prescribed in paragraph (14)(a)(B) of this rule, and must specify ongoing and future actions that will reduce source water Cryptosporidium levels.

(D) If the Authority does not respond to a water system regarding approval of a watershed control plan submitted in accordance with this section, and the system meets the other requirements of this section, the watershed control program will be considered approved and a 0.5 log Cryptosporidium treatment credit will be awarded unless the Authority subsequently withdraws such approval.

(E) Water systems must complete the actions specified in this paragraph to maintain the 0.5-log credit.

(i) Water systems must submit an annual watershed control program status report to the Authority. The status report must describe the water system's implementation of the approved plan, and assess the adequacy of the plan to meet its goals. It must explain how the water system is addressing any deficiencies in plan implementation, including those previously identified by the Authority, or as the result of the watershed survey conducted in accordance with subparagraph (14)(a)(E)(ii) of this rule. The watershed control program status report must also describe any significant changes that have occurred in the watershed since the last watershed sanitary survey.

(ii) Water systems must undergo a watershed sanitary survey every three years for community water systems and every five years for non-community water systems and submit the survey report to the Authority. The survey must be conducted according to Authority guidelines and by persons the Authority approves.

(I) The watershed sanitary survey must meet the following criteria: encompass the region identified in the Authority approved watershed control plan as the area of influence; assess the implementation of actions to reduce source water Cryptosporidium levels; and identify any significant new sources of Cryptosporidium.

(II) If the Authority determines that significant changes may have occurred in the watershed since the previous watershed sanitary survey, water systems must undergo another watershed sanitary survey by a date determined by the Authority regardless of the regular date specified in subparagraph (14)(a)(E)(ii) of this rule.

(iii) The water system must make the watershed control plan, annual status reports, and watershed sanitary survey reports available to the public upon request. These documents must be in a plain language style and include criteria by which to evaluate the success of the program in achieving plan goals. The Authority may approve withholding portions of the annual status report, watershed control plan, and watershed sanitary survey from the public based on water supply security considerations.

(F) If the Authority determines that a water system is not implementing the approved watershed control plan, the Authority may withdraw the watershed control program treatment credit.

(G) If a water system determines, during implementation, that making a significant change to its approved watershed control program is necessary, the system must notify the Authority prior to making any such changes. If any change is likely to reduce the level of source water protection, the system must notify the Authority of the actions the water system will take to mitigate this effect.

(b) Alternative source. A water system may conduct source water monitoring that reflects a different intake location (either in

the same source or from an alternate source), or a different procedure for the timing or level of withdrawal from the source. If the Authority approves, a system may determine its bin classification under subsection (4)(f) of this rule based on the alternative source monitoring results.

(A) If a water system conducts alternative source monitoring as prescribed by this subsection, the water system must also monitor their current plant intake concurrently as prescribed by OAR 333-061-0036(5)(e).

(B) Alternative source monitoring as prescribed by this subsection must meet the requirements for source monitoring to determine bin classification, as described in OAR 333-061-0036(1), 333-061-0036(5)(e) through (g), and 333-061-0040(1)(o). Water systems must report the alternative source monitoring results to the Authority, including supporting information that documents the operating conditions under which the samples were collected.

(C) If a system determines its bin classification according to subsection (4)(f) of this rule using alternative source monitoring results that reflect a different intake location or a different procedure for managing the timing or level of withdrawal from the source, the system must relocate the intake or permanently adopt the withdrawal procedure, as applicable, no later than the applicable treatment compliance date in subsection (1)(a) of this rule.

(15) Pre-filtration treatment toolbox components for meeting Cryptosporidium treatment requirements.

(a) Presedimentation. Systems receive 0.5-log Cryptosporidium treatment credit for a presedimentation basin during any month the process meets the criteria specified in this paragraph:

(A) The presedimentation basin must be in continuous operation, and must treat the entire plant flow taken from a surface water or GWUDI source;

(B) The water system must continuously add a coagulant to the presedimentation basin; and

(C) The presedimentation basin must achieve the performance criteria specified in this paragraph.

(i) The basin must demonstrate at least 0.5-log mean reduction of influent turbidity. This reduction must be determined using daily turbidity measurements of the presedimentation process influent and effluent, and must be calculated as follows: log10(monthly mean of daily influent turbidity)-log10(monthly mean of daily effluent turbidity).

(ii) The basin must also comply with Authority-approved performance criteria that demonstrates at least 0.5-log mean removal of micron-sized particulate material through the presedimentation process.

(b) Two-stage lime softening. Systems receive an additional 0.5-log Cryptosporidium treatment credit for a two-stage lime softening plant if chemical addition and hardness precipitation occur in two separate and sequential softening stages prior to filtration. Both softening stages must treat the entire plant flow taken from a surface water or GWUDI source.

(c) Bank filtration. Water systems receive Cryptosporidium treatment credit for bank filtration that serves as pretreatment to a filtration plant by meeting the criteria specified in this section. Water systems using bank filtration when they begin source water monitoring according to OAR 333-061-0036(5)(e) must collect samples as prescribed by OAR 333-061-0036(5)(g) and are not eligible for this credit.

(A) Wells with a groundwater flow path of at least 25 feet receive 0.5-log treatment credit. Wells with a groundwater flow path of at least 50 feet receive 1.0-log treatment credit. The groundwater flow path must be determined as specified in paragraph (D) of this subsection.

(B) Only wells in granular aquifers are eligible for treatment credit. Granular aquifers are those comprised of sand, clay, silt, rock fragments, pebbles or larger particles, and minor cement. A water system must characterize the aquifer at the well site to determine aquifer properties.

(i) Water systems must extract a core from the aquifer and demonstrate that in at least 90 percent of the core length, grains less than 1.0 mm in diameter constitute at least 10 percent of the core material.

(C) Only horizontal and vertical wells are eligible for treatment credit.

(D) For vertical wells, the groundwater flow path is the measured distance from the edge of the surface water body under high flow conditions (as determined by the 100 year floodplain elevation boundary or by the floodway, as defined in Federal Emergency Management Agency flood hazard maps) to the well screen. For horizontal wells, the groundwater flow path is the measured distance from the bed of the river under normal flow conditions to the closest horizontal well lateral screen.

(E) Water systems must monitor each wellhead for turbidity at least once every four hours while the bank filtration process is in operation. If monthly average turbidity levels, based on daily maximum values in the well, exceed 1 NTU, the system must report this result to the Authority and conduct an assessment within 30 days to determine the cause of the high turbidity levels in the well. If the Authority determines that microbial removal has been compromised, the Authority may revoke treatment credit until the water system implements Authority-approved corrective actions to remediate the problem.

(F) Springs and infiltration galleries are not eligible for treatment credit under this section, but are eligible for a treatment credit in accordance with subsection (16)(c) of this rule.

(G) Bank filtration demonstration of performance. The Authority may approve Cryptosporidium treatment credit for bank filtration based on a demonstration of performance study that meets the criteria in this paragraph. This treatment credit may be greater than 1.0-log and may be awarded to bank filtration that does not meet the criteria in (15)(c)(A) through (E) of this rule.

(i) The study must follow an Authority approved protocol, and must include the collection of data on the removal of Cryptosporidium or a surrogate for Cryptosporidium and related hydrogeologic and water quality parameters during the full range of operating conditions.

(ii) The study must include sampling from both the production well(s) and monitoring wells that are screened and located along the shortest flow path between the surface water source and the production well(s).

(16) Treatment performance toolbox components for meeting Cryptosporidium treatment requirements.

(a) Combined filter performance. Water systems using conventional filtration treatment or direct filtration treatment receive an additional 0.5-log Cryptosporidium treatment credit during any month that the water system meets the criteria in this subsection. Combined filter effluent (CFE) turbidity must be less than or equal to 0.15 NTU in at least 95 percent of the measurements. Turbidity must be measured as described in OAR 333-061-0036(5)(a)(B).

(b) Individual filter performance. Water systems using conventional filtration treatment or direct filtration treatment receive 0.5-log Cryptosporidium treatment credit, which can be in addition to the 0.5-log credit under subsection (16)(a) of this rule, during any month the system meets the criteria in this subsection. Compliance with this criteria must be based on individual filter turbidity monitoring as described in OAR 333-061-0036(5)(d).

(A) The filtered water turbidity for each individual filter must be less than or equal to 0.15 NTU in at least 95 percent of the measurements recorded each month.

(B) No individual filter may have a measured turbidity greater than 0.3 NTU in two consecutive measurements taken 15 minutes apart.

(C) Any system that has received treatment credit for individual filter performance and fails to meet the requirements of paragraphs (16)(b)(A) or (B) of this rule, during any month, is in violation of treatment technique requirements as prescribed by subsection (4)(g) of this rule unless the Authority determines the following:

(i) The failure was due to unusual and short-term circumstances that could not reasonably be prevented through optimizing treatment plant design, operation, or maintenance; and

(ii) The system has experienced no more than two such failures in any calendar year.

(c) Demonstration of performance. The Authority may approve Cryptosporidium treatment credit for water treatment processes based on a demonstration of performance study that meets the criteria in this subsection. This treatment credit may be greater than or less than the prescribed treatment credits in subsection (4)(g) or sections (15) through (18) of this rule and may be awarded to treatment processes that do not meet the criteria for the prescribed credits.

(A) Water systems cannot receive the prescribed treatment credit for any toolbox option in sections (15) through (18) of this rule, if that toolbox option is included in a demonstration of performance study for which treatment credit is awarded under this subsection.

(B) The demonstration of performance study must follow an Authority approved protocol, and must demonstrate the level of Cryptosporidium reduction achieved by the treatment process under the full range of expected operating conditions for the water system.

(C) Approval by the Authority must be in writing, and may include monitoring and treatment performance criteria that the system must demonstrate and report on an ongoing basis to remain eligible for the treatment credit. The Authority may require such criteria where necessary to verify that the conditions under which the demonstration of performance credit was approved are maintained during routine operation.

(17) Additional filtration toolbox components for meeting Cryptosporidium treatment requirements.

(a) Bag and cartridge filters. Systems receive Cryptosporidium treatment credit of up to 2.0-log for individual bag or cartridge filters and up to 2.5-log for bag or cartridge filters operated in series by meeting the requirements in OAR 333-061-0050(4)(c)(J). To be eligible for this credit, water systems must report to the Authority, the results of challenge testing conducted in accordance with OAR 333-061-0050(4)(c)(J). The filters must treat the entire plant flow.

(b) Membrane filtration. Systems receive Cryptosporidium treatment credit for membrane filtration that meets the requirements of this paragraph. Membrane cartridge filters that meet the definition of membrane filtration in OAR 333-061-0020(77)(f) are eligible for this credit. The level of treatment credit a system receives is equal to the lower of the values determined under OAR 333-061-0050(4)(c)(H)(i) and (ii).

(c) Second stage filtration. Water systems receive 0.5-log Cryptosporidium treatment credit for a separate second stage of Authority-approved filtration that consists of sand, dual media, GAC, or other fine grain media following granular media filtration. To be eligible for this credit, the first stage of filtration must be preceded by a coagulation step and, both filtration stages must treat the entire plant flow taken from a surface water or GWUDI source. The Authority must assign the treatment credit based on an assessment of the design characteristics of the filtration process. A cap (added layer of filter media), such as GAC, on a single stage of filtration is not eligible for this credit.

(d) Slow sand filtration (as secondary filter). Water systems are eligible to receive 2.5-log Cryptosporidium treatment credit for a slow sand filtration process that follows a separate stage of filtration if both filtration stages treat the entire plant flow taken from a surface water or GWUDI source, and no disinfectant residual is present in the influent water to the slow sand filtration process. The Authority must assign the treatment credit based on an assessment of the design characteristics of the filtration process. This subsection does not apply to treatment credit awarded to slow sand filtration used as a primary filtration process.

(18) Inactivation toolbox components for meeting Cryptosporidium treatment requirements.

(a) If Chlorine Dioxide is used, CT values in Table 30 must be met. [Table not included. See ED. NOTE.]

(b) If Ozone is used, CT values in Table 31 must be met. [Table not included. See ED. NOTE.]

(c) To receive treatment credit for UV light, water systems must treat at least 95 percent of the water delivered to the public during each month by UV reactors operating within validated conditions for the required UV dose, as prescribed by OAR 333-061-0036(5)(c)(D) and 333-061-0050(5)(k)(I). Systems must demonstrate compliance with this condition by the monitoring required in OAR 333-061-0036(5)(c)(D)(ii).

[ED. NOTE: Tables referenced are available from the agency.]

Treatment Requirements and Performance Standards for Corrosion Control

(1) General requirements:

(a) All Community and Non-Transient Non-Community water systems required to provide corrosion control shall install and operate optimal corrosion control treatment.

(b) Any water system that complies with the applicable corrosion control treatment requirements specified by the Authority under sections (2) and (3) of this rule shall be deemed in compliance with the treatment requirement contained in subsection (1)(a) of this rule.

(c) Any system exceeding the lead or copper action level shall implement all applicable source water treatment requirements specified by the Authority under section (4) of this rule.

(d) Any system exceeding the lead action level shall implement the public education requirements contained in section (5) of this rule.

(e) Tap water monitoring for lead and copper, monitoring for water quality parameters, source water monitoring for lead and copper, and analyses of the monitoring results shall be completed in accordance with OAR 333-061-0036(1)(a) and 333-061-0036(2)(c).

(f) Systems shall report to the Authority all required treatment provision information and maintain appropriate records as prescribed in OAR 333-061-0034 and 0040.

(g) Failure to comply with the applicable requirements prescribed in these rules, shall constitute a violation of the national primary drinking water regulations for lead and/or copper.

(2) Systems shall complete the corrosion control treatment requirements as prescribed in section (3) of this rule as follows:

(a) Large systems (serving >50,000 persons) shall complete the following corrosion control treatment steps, unless it is deemed to have optimized corrosion control as prescribed in paragraphs (d)(B) or (d)(C) of this section:

(A) Systems shall conduct initial tap and water quality parameter monitoring for two consecutive six-month periods as prescribed in OAR 333-061-0036(2)(c)(D)(i) and (2)(c)(F) beginning January 1, 1992;

(B) Systems shall complete corrosion control studies prescribed in subsection (3)(c) of this rule by July 1, 1994;

(C) The Authority shall designate optimal corrosion control treatment as prescribed in subsection (3)(i) of this rule by January 1, 1995;

(D) Systems shall install optimal corrosion control treatment as prescribed in subsection (3)(k) of this rule by January 1, 1997;

(E) Systems shall complete follow-up sampling as prescribed in OAR 333-061-0036(2)(c)(D)(ii) and (2)(c)(F)(iv) by January 1, 1998;

(F) The Authority shall review installation of treatment and designate optimal water quality control parameters as prescribed in subsection (3)(l) of this rule by July 1, 1998.

(G) Systems shall operate in compliance with the Authority-specified optimal water quality control parameters as prescribed in subsection (3)(m) of this rule and continue to conduct tap sampling.

(b) Medium systems (serving 3,301 to 50,000 persons) shall complete the following corrosion control treatment steps, unless it is deemed to have optimized corrosion control under paragraph (d)(A),(d)(B), or (d)(C) of this section:

(A) Systems shall conduct initial tap sampling beginning July 1,1992 until the system either exceeds the lead or copper action level or becomes eligible for reduced monitoring under OAR 333-061-0036(2)(c)(D)(iv). A system exceeding the lead or copper action level shall recommend optimal corrosion control treatment within six months after the end of the monitoring period during which it exceeds one of the action levels.

(B) Within 12 months after the end of the monitoring period during which a system exceeds the lead or copper action level, the Authority may require the system to perform corrosion control studies. If the Authority does not require the system to perform such studies, the Authority shall specify optimal corrosion control treatment within the following time frames:

(i) For medium systems, within 18 months after the end of the monitoring period during which such system exceeds the lead or copper action level;

(ii) For small systems, within 24 months after the end of the monitoring period during which such system exceeds the lead or copper action level.

(C) If the Authority requires a system to perform corrosion control studies under paragraph (2)(b)(B) of this rule, the system shall complete the studies within 18 months after the Authority requires that such studies be conducted.

(D) If the system has performed corrosion control studies under paragraph (2)(b)(B) of this rule, the Authority shall designate optimal corrosion control treatment within 6 months after completion of paragraph (2)(b)(C) of this rule.

(E) Systems shall install optimal corrosion control treatment within 24 months after the Authority designates such treatment.

(F) Systems shall complete follow-up sampling within 36 months after the Authority designates optimal corrosion control treatment.

(G) The Authority shall review the system's installation of treatment and designate optimal water quality control parameters within 6 months after completion of follow-up sampling.

(H) Systems shall operate in compliance with the Authority-designated optimal water quality control parameters and continue to conduct tap sampling.

(c) Small systems (serving 3,300 or less persons) shall complete the corrosion control treatment steps prescribed in subsection (2)(b) of this rule, unless it is deemed to have optimized corrosion control under paragraphs (d)(A), (d)(B), or (d)(C) of this section. Small systems shall conduct initial tap sampling beginning July 1, 1993.

(d) A system is deemed to have optimized corrosion control and is not required to complete the applicable corrosion control treatment steps identified in this section if the system satisfies one of the following criteria. Any system deemed to have optimized corrosion control under this rule, and which has treatment in place, shall continue to operate and maintain optimal corrosion control treatment and meet any requirements that the Authority determines appropriate to ensure optimal corrosion control treatment is maintained:

(A) A small or medium-size water system meets the lead and copper action levels during each of two consecutive six-month monitoring periods conducted in accordance with OAR 333-061-0036(2)(c)(A) through (E).

(B) Any water system that demonstrates to the satisfaction of the Authority that it has conducted activities equivalent to the corrosion control steps applicable to such system under this section. If the Authority makes this determination, it shall provide the system with written notice explaining the basis for its decision and shall specify the water quality control parameters representing optimal corrosion control in accordance with subsection (3)(l) of this rule. Water systems deemed to have optimized corrosion control under this paragraph shall operate in compliance with the Authority-designated optimal water quality control parameters in accordance with subsection (3)(m) of this rule and continue to conduct lead and copper tap and water quality parameter sampling in accordance with OAR 333-061-0036(2)(c)(D)(iii) and 333-061-0036(2)(c)(F)(v), respectively. A system shall provide the Authority with the following information in order to support a determination under this paragraph:

(i) The results of all test samples collected for each of the water quality parameters in subsection (3)(d) of this rule;

(ii) A report explaining the test methods used by the water system to evaluate the corrosion control treatments listed in subsection (3)(c) of this rule, the results of all tests conducted, and the basis for the system's selection of optimal corrosion control treatment;

(iii) A report explaining how corrosion control has been installed and how it is being maintained to insure minimal lead and copper concentrations at consumers' taps; and

(iv) The results of tap water samples collected in accordance with OAR 333-061-0036(2)(c)(A) through (E) at least once every six months for one year after corrosion control has been installed.

(C) Any water system is deemed to have optimized corrosion control if it submits results of tap water monitoring and source water monitoring conducted in accordance with OAR 333-061-0036(2)(c)(A) through (E), (G) and (H) that demonstrates for two consecutive six-month monitoring periods that the difference between the 90th percentile tap water lead level computed under OAR 333-061-0030(1)(c)(A) and the highest source water lead concentration, is less than 0.005 mg/l:

(i) Those systems whose highest source water lead level is below the MDL may also be deemed to have optimized corrosion control if the 90th percentile tap water lead level is less than or equal to the PQL for lead for two consecutive 6-month monitoring periods;

(ii) Any water system deemed to have optimized corrosion control shall continue monitoring for lead and copper at the tap no less frequently than once every three years using the reduced number of sampling sites and collecting the samples at the specified times and locations. Any such system that has not conducted a round of monitoring since September 30, 1997, shall complete a round of monitoring no later than September 30, 2000;

(iii) Any water system deemed to have optimized corrosion control shall notify the Authority in writing of any upcoming long-term change in treatment (eg. changing disinfectants or corrosion control chemicals) or the addition of a new source. The Authority must review and approve the addition of a new source or long-term change in water treatment before it is implemented by the water system. The Authority may require any such system to conduct additional monitoring or to take other action the Authority deems appropriate to ensure that such systems maintain minimal levels of corrosion in the distribution system;

(iv) As of July 2001, a system is not deemed to have optimized corrosion control unless it meets the copper action level.

(v) Any system triggered into corrosion control because it is no longer deemed to have optimized corrosion control shall implement corrosion control treatment in accordance with the deadlines prescribed in subsections (b) and (c) of this rule. Any such large system shall adhere to the schedule specified for medium size systems, with the time periods for completing each step being triggered by the date the system is no longer deemed to have optimized corrosion control.

(e) Any small or medium-size water system that is required to complete the corrosion control steps due to its exceedance of the lead or copper action level may cease completing the treatment steps whenever the system meets both action levels during each of two consecutive monitoring periods conducted pursuant to OAR 333-061-0036(2)(c)(A) through (E) and submits the results to the Authority. If any such water system thereafter exceeds the lead or copper action level during any monitoring period, the system (or the Authority, as the case may be) shall recommence completion of

the applicable treatment steps, beginning with the first treatment step which was not previously completed in its entirety. The Authority may require a system to repeat treatment steps previously completed by the system where the Authority determines that this is necessary to implement properly the treatment requirements of this section. The Authority shall notify the system in writing of such a determination and explain the basis for its decision. The requirement for any small- or medium- size system to implement corrosion control treatment steps in accordance with subsection (2)(b) of this rule (including systems deemed to have optimized corrosion control under paragraph (2)(d)(A) of this rule) is triggered whenever any small- or medium- size system exceeds the lead or copper action level.

(3) Each system shall complete the corrosion control treatment requirements described below which are applicable to such system under section (2) of this rule:

(a) Based upon the results of lead and copper tap monitoring and water quality parameter monitoring, small and medium-size water systems exceeding the lead or copper action level shall recommend installation of one or more of the corrosion control treatments listed in subsection (3)(c) of this rule which the system believes constitutes optimal corrosion control for that system. The Authority may require the system to conduct additional water quality parameter monitoring in accordance with OAR 333-061-0036(2)(c)(F)(iii) to assist the Authority in reviewing the system's recommendation.

(b) The Authority may require any small or medium-size system that exceeds the lead or copper action level to perform corrosion control studies under subsection (3)(c) of this rule to identify optimal corrosion control treatment for the system.

(c) Any public water system performing corrosion control studies shall evaluate the effectiveness of each of the treatments which follow, and, if appropriate, combinations of the treatments which follow to identify the optimal corrosion control treatment for that system. The water system shall evaluate each of the corrosion control treatments using either pipe rig/loop tests, metal coupon tests, partial-system tests, or analyses based on documented analogous treatments with other systems of similar size, water chemistry and distribution system configuration:

(A) Alkalinity and pH adjustment;

(B) Calcium hardness adjustment; and

(C) The addition of a phosphate or silicate based corrosion inhibitor at a concentration sufficient to maintain an effective residual concentration in all test tap samples.

(d) The water system shall measure the following water quality parameters in any tests conducted under this subsection before and after evaluating the corrosion control treatments listed in subsection (3)(c) of this rule:

(A) Lead;

(B) Copper;

(C) pH;

(D) Alkalinity;

(E) Calcium;

(F) Conductivity;

(G) Orthophosphate (when an inhibitor containing a phosphate compound is used);

(H) Silicate (when an inhibitor containing a silicate compound is used);

(I) Water temperature.

(e) Any additional chemical treatment approaches considered by the water system shall be evaluated by the water system by conducting appropriate studies and analyses approved by the Authority that are equivalent in scope to the studies and analyses required in this section.

(f) The water system shall identify all chemical or physical constraints that limit or prohibit the use of a particular corrosion control treatment and document such constraints with at least one of the following:

(A) Data and documentation showing that a particular corrosion control treatment has adversely affected other water treatment processes when used by another water system with comparable water quality characteristics; and/or

(B) Data and documentation demonstrating that the water system has previously attempted to evaluate a particular corrosion control treatment and has found that the treatment is ineffective or adversely affects other water quality treatment processes.

(g) The water system shall evaluate the effect of the chemicals used for corrosion control treatment on other water quality treatment processes.

(h) On the basis of an analysis of the data generated during each evaluation, the water system shall recommend to the Authority in writing the treatment option that the corrosion control studies indicate constitutes optimal corrosion control treatment for that system. The water system shall provide a rationale for its recommendation along with all supporting documentation specified in subsections (3)(c) through (g) of this rule.

(i) Based upon consideration of available information including, where applicable, studies performed under subsection (3)(c) through (g) of this rule and a system's recommended treatment alternative, the Authority shall either approve the corrosion control treatment option recommended by the system, or designate alternative corrosion control treatment(s) from among those listed in subsection (3)(c) of this rule. When designating optimal treatment the Authority shall consider the effects that additional corrosion control treatment will have on water quality parameters and on other water quality treatment processes.

(j) The Authority shall notify the system of its decision on optimal corrosion control treatment in writing and explain the basis for this determination. If the Authority requests additional information to aid its review, the water system shall provide the information.

(k) Each system shall properly install and operate throughout its distribution system the optimal corrosion control treatment designated by the Authority under subsection (3)(i) of this rule.

(l) The Authority shall evaluate the results of all lead and copper tap samples and water quality parameter samples submitted by the water system and determine whether the system has properly installed and operated the optimal corrosion control treatment designated by the Authority in subsection (3)(i) of this rule. Upon reviewing the results of tap water and water quality parameter monitoring by the system, both before and after the system installs optimal corrosion control treatment, the Authority shall designate values for the applicable water quality control parameters as listed below and shall be those that the Authority determines to reflect optimal corrosion control treatment for the system. The Authority may designate values for additional water quality control parameters determined by the Authority to reflect optimal corrosion control for the system. The Authority shall notify the system in writing of these determinations and explain the basis for its decisions.

(A) A minimum value or a range of values for pH measured at each entry point to the distribution system;

(B) A minimum pH value, measured in all tap samples. Such value shall be 7.0, unless the Authority determines that meeting a pH level of 7.0 is not technologically feasible or is not necessary for the system to optimize corrosion control;

(C) If a corrosion inhibitor is used, a minimum concentration or a range of concentrations for the inhibitor, measured at each entry point to the distribution system and in all tap samples, that the Authority determines is necessary to form a passivating film on the interior walls of the pipes of the distribution system;

(D) If alkalinity is adjusted as part of optimal corrosion control treatment, a minimum concentration or a range of concentrations for alkalinity, measured at each entry point to the distribution system and in all tap samples;

(E) If calcium carbonate stabilization is used as part of corrosion control, a minimum concentration or a range of concentrations for calcium, measured in all tap samples.

(m) All systems that have installed treatment optimizing corrosion control shall continue to operate and maintain optimal corrosion control treatment, including maintaining water quality parameters at or above minimum values or within ranges designated by the Authority under subsection (3)(l) of this rule for all samples

collected under OAR 333-061-0036(2)(c)(F)(v)-(vii). Compliance shall be determined every six months, as specified under OAR 333-061-0036(2)(c)(F)(v). A water system is out of compliance for a six-month period if it has excursions for any Authority-designated water quality parameter on more than nine days during the period. An excursion occurs whenever the daily value for one or more of the water quality parameters measured at a sampling location is below the minimum value or outside the range designated by the Authority. Daily values are calculated as follows:

(A) On days when more than one measurement for the water quality parameter is collected at the sampling location, the daily value shall be the average of all results collected during the day regardless of whether they are collected through continuous monitoring, grab sampling or a combination of both;

(B) On days when only one measurement for the water quality parameter is collected at the sampling location, the daily value shall be the result of that measurement.

(C) On days when no measurement is collected for the water quality parameter at the sampling location, the daily value shall be the daily value calculated on the most recent day on which the water quality parameter was measured at the sample site;

(n) Upon its own initiative or in response to a request by a water system or other interested party, the Authority may modify its determination of the optimal corrosion control treatment under subsection (3)(i) of this rule or optimal water quality control parameters under subsection (3)(l) of this rule. A request for modification by a system or other interested party shall be in writing, explain why the modification is appropriate, and provide supporting documentation. The Authority may modify its determination where it concludes that such change is necessary to ensure that the system continues to optimize corrosion control treatment. A revised determination shall be made in writing, set forth the new treatment requirements, explain the basis for the Authority's decision, and provide an implementation schedule for completing the treatment modifications.

(4) Source water treatment requirements:

(a) Systems shall complete the applicable source water monitoring and treatment requirements prescribed in subsection (4)(b) of this rule and OAR 333-061-0036(2)(c)(A) through (E), (G) and (H) by the following deadlines:

(A) A system exceeding the lead or copper action level shall complete lead and copper source water monitoring as prescribed in OAR 333-061-0036(2)(c)(G) and (H) and make a treatment recommendation to the Authority as prescribed in paragraph (4)(b)(A) of this rule no later than 180 days after the end of the monitoring period during which the lead or copper action level was exceeded.

(B) The Authority shall make a determination regarding source water treatment as prescribed in paragraph (4)(b)(B) of this rule within 6 months after submission of monitoring results required under paragraph (4)(a)(A) of this rule.

(C) If the Authority requires installation of source water treatment, the system shall install the treatment as prescribed in paragraph (4)(b)(C) of this rule within 24 months after completion of requirements prescribed in paragraph (4)(a)(B) of this rule.

(D) The system shall complete follow-up tap water monitoring as prescribed in OAR 333-061-0036(2)(c)(D)(ii) and source water monitoring as prescribed in OAR 333-061-0036(2)(c)(I) within 36 months after completion of requirements prescribed in paragraph (4)(a)(B) of this rule.

(E) The Authority shall review the system's installation and operation of source water treatment and specify maximum permissible source water levels as prescribed in paragraph (4)(b)(D) of this rule within 6 months after completion of requirements prescribed in paragraph (4)(a)(D) of this rule.

(F) The system shall operate in compliance with the Authority-specified maximum permissible lead and copper source water levels as prescribed in paragraph (4)(b)(D) of this rule and continue source water monitoring as prescribed in OAR 333-061-0036(2)(c)(J).

(b) Source water treatment description:

(A) Any system which exceeds the lead or copper action level shall recommend in writing to the Authority the installation and operation of one of the source water treatments listed in paragraph (4)(b)(B) of this rule. A system may recommend that no treatment be installed based upon a demonstration that source water treatment is not necessary to minimize lead and copper levels at users' taps.

(B) The Authority shall complete an evaluation of the results of all source water samples submitted by the water system to determine whether source water treatment is necessary to minimize lead or copper levels in water delivered to users' taps. If the Authority determines that treatment is needed, the Authority shall either require installation and operation of the source water treatment recommended by the system (if any) or require the installation and operation of another source water treatment from among the following: ion exchange, reverse osmosis, lime softening or coagulation/filtration. If the Authority requests additional information to aid in its review, the water system shall provide the information by the date specified by the Authority in its request. The Authority shall notify the system in writing of its determination and set forth the basis for its decision.

(C) Each system shall properly install and operate the source water treatment designated by the Authority under paragraph (4)(b)(B) of this rule.

(D) The Authority shall review the source water samples taken by the water system both before and after the system installs source water treatment, and determine whether the system has properly installed and operated the source water treatment designated by the Authority. Based upon its review, the Authority shall designate the maximum permissible lead and copper concentrations for finished water entering the distribution system. Such levels shall reflect the contaminant removal capability of the treatment properly operated and maintained. The Authority shall notify the system in writing and explain the basis for its decision.

(E) Each water system shall maintain lead and copper levels below the maximum permissible concentrations designated by the Authority at each sampling point monitored in accordance with OAR 333-061-0036(2)(c)(G) through (K). The system is out of compliance with this paragraph if the level of lead or copper at any sampling point is greater than the maximum permissible concentration designated by the Authority.

(F) Upon its own initiative or in response to a request by a water system or other interested party, the Authority may modify its determination of the source water treatment under paragraph (4)(b)(B) of this rule, or maximum permissible lead and copper concentrations for finished water entering the distribution system under paragraph (4)(b)(D) of this rule. A request for modification by a system or other interested party shall be in writing, explain why the modification is appropriate, and provide supporting documentation. The Authority may modify its determination where it concludes that such change is necessary to ensure that the system continues to minimize lead and copper concentrations in source water. A revised determination shall be made in writing, set forth the new treatment requirements, explain the basis for the Authority's decision, and provide an implementation schedule for completing the treatment modifications.

(5) All water systems must deliver a consumer notice of lead tap water monitoring results to persons served by the water system at sites that are tested, as specified in subsection (5)(e) of this rule. Water systems that exceed the lead action level must sample the tap water of any customer who requests it in accordance with subsection (5)(d) of this rule. A water system that exceeds the lead action level based on tap water samples collected in accordance with OAR 333-061-0036(2)(c)(A) through (E) shall deliver the public education materials contained in subsections (5)(a) and (b) of this rule in accordance with the requirements in subsection (5)(c) of this rule.

(a) Content of written materials. Community and non-transient non-community water system(s) shall include the following elements in all of the printed materials it distributes through its lead public education program in the same order listed below. Paragraphs (5)(a)(A), (B) and (F) of this rule must be included in the materials

exactly as written except for the text in braces in these paragraphs for which the system must include system-specific information. Any additional information presented by a system shall be consistent with the information below and be in plain language that can be understood by the general public. Water systems must submit all written public education materials to the Authority prior to delivery.

(A) IMPORTANT INFORMATION ABOUT LEAD IN YOUR DRINKING WATER. {INSERT NAME OF WATER SYSTEM} found elevated levels of lead in drinking water in some homes/buildings. Lead can cause serious health problems, especially for pregnant women and young children. Please read this information closely to see what you can do to reduce lead in your drinking water.

(B) HEALTH EFFECTS OF LEAD: Lead can cause serious health problems if too much enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of the body. The greatest risk of lead exposure is to infants, young children and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones, and it can be released later in life. During pregnancy, the child receives lead from the mother's bones, which may affect brain development.

(C) SOURCES OF LEAD:

(i) Explain what lead is.

(ii) Explain the possible sources of lead in drinking water and how lead enters drinking water. Include information on home/building plumbing materials and service lines that contain lead.

(iii) Discuss other important sources of lead exposure in addition to drinking water (e.g., paint).

(D) STEPS THE CONSUMER CAN TAKE TO REDUCE THEIR EXPOSURE TO LEAD IN DRINKING WATER:

(i) Encourage running the water to flush out the lead.

(ii) Explain concerns with using hot water from the tap and specifically caution against the use of hot water for preparing baby formula.

(iii) Explain that boiling water does not reduce lead levels.

(iv) Discuss other options consumers can take to reduce exposure to lead in drinking water, such as alternative sources or treatment of water.

(v) Suggest that parents have their child's blood tested for lead.

(E) Explain why there are elevated levels of lead in the system's drinking water (if known) and what the water system is doing to reduce the lead levels in homes/buildings in this area.

(F) For more information, call us at {INSERT YOUR NUMBER}, {(if applicable include the following) or visit our web site at {INSERT YOUR WEB SITE HERE}}. For more information on reducing lead exposure around your home/building and the health effects of lead, visit EPA's web site at http://www.epa.gov/lead or contact your health care provider.

(b) Community water systems must also:

(A) Tell consumers how to get their water tested;

(B) Discuss lead in plumbing components and the difference between low lead and lead free.

(c) Delivery of public education materials.

(A) For public water systems serving a large proportion of non-English speaking consumers, as determined by the Authority, the public education materials must contain information in the appropriate language(s) regarding the importance of the notice or contain a telephone number or address where persons served may contact the water system to obtain a translated copy of the public education materials or to request assistance in the appropriate language.

(B) A community water system that exceeds the lead action level on the basis of tap water samples collected in accordance with tap water monitoring requirements of these rules and that is not already conducting public education tasks under this rule must conduct the public education tasks under this section within 60 days after the end of the monitoring period in which the exceedance occurred.

(i) Deliver printed materials meeting the content requirements of subsections (5)(a) and (5)(b) of this rule to all bill paying customers;

(ii) Contact customers who are most at risk by delivering education materials that meet the content requirements of subsections (5)(a) and (5)(b) of this rule to local public health agencies even if they are not located within the water system's service area, along with an informational notice that encourages distribution to all the organization's potentially affected customers or community water system's users. The water system must contact the local public health agencies directly by phone or in person. The local public health agencies may provide a specific list of additional community based organizations serving target populations, which may include organizations outside the service area of the water system. If such lists are provided, systems must deliver education materials that meet the content requirements of subsections (5)(a) and (5)(b) of this rule to all organizations on the provided lists.

(iii) Contact customers who are most at risk by delivering materials that meet the content requirements of subsections (5)(a) and (5)(b) of this rule to public and private schools or school boards; Women, Infants and children (WIC), and Head Start programs; public and private hospitals and medical clinics; Pediatricians; family planning clinics; and local welfare agencies located within the water system's service area along with an informational notice that encourages distribution to all of the organization's potentially affected customers or community water system's users.

(iv) Make a good faith effort to locate licensed childcare centers; public and private preschools; and Obstetricians-Gynecologists and Midwives within the service area and deliver materials that meet the content requirements of subsections (5)(a) and (5)(b) of this rule to them, along with an informational notice that encourages distribution to all potentially affected customers or users. The good faith effort to contact at-risk customers may include requesting a specific contact list of these organizations from the local public health agencies, even if the agencies are not located within the water system's service area.

(v) No less often than quarterly, provide information on or in each water bill as long as the system exceeds the action level for lead. The message on the water bill must include the following statement exactly as written except for the text in braces for which the water system must include system-specific information: {INSERT NAME OF WATER SYSTEM} found high levels of lead in drinking water in some homes. Lead can cause serious health problems. For more information please call {INSERT NAME OF WATER SYSTEM}, {(if applicable include the following) or visit our web site at {INSERT YOUR WEB SITE HERE}}. The message or delivery mechanisms can be modified in consultation with the Authority; specifically the Authority may allow a separate mailing of public education materials to customers if the water system cannot place the information on water bills.

(vi) Post material meeting the content requirements of subsection (5)(a) and (5)(b) of this rule on the water system's web site if the system serves a population greater than 100,000.

(vii) Submit a press release to newspaper, television and radio stations.

(viii) In addition to (5)(c)(B)(i) through (vii) of this rule systems must implement at least three activities from the following: public service announcements; paid advertisements; public area information displays; emails to customers; public meetings; household deliveries, targeted individual customer contact; direct material distribution to all multi-family homes and institutions or other methods approved by the Authority. The educational content and selection of these activities must be determined in consultation with the Authority.

(ix) For systems that are required to conduct monitoring annually or less frequently, the end of the monitoring period is September 30 of the calendar year in which the sampling occurs,

or, if the Authority has established an alternate monitoring period, the last day of that period.

(C) As long as a community water system exceeds the action level, it must repeat the activities in subsection (5)(c) of this rule as follows:

(i) A community water system shall repeat the tasks contained in (5)(c)(B)(i),(ii),(iii),(iv) and (viii) of this rule every 12 months.

(ii) A community water system shall repeat tasks contained in (5)(c)(B)(v) of this rule with each billing cycle.

(iii) A community water system serving a population greater than 100,000 shall post and retain material on a publicly accessible web site pursuant to (5)(c)(B)(vi) of this rule.

(iv) The community water system shall repeat the task in (5)(c)(B)(vii) of this rule twice every 12 months on a schedule agreed upon with the Authority. The Authority can allow activities in (5)(c)(B) of this rule to extend beyond the 60-day requirement if needed for implementation purposes on a case-by-case basis; however, this extension must be approved in writing by the Authority in advance of the 60-day deadline.

(D) Within 60 days after the end of the monitoring period in which the exceedance occurred (unless it already is repeating public education tasks), a non-transient non-community water system shall deliver the public education materials specified by (5)(a) of this rule as follows:

(i) Post informational posters on lead in drinking water in a public place or common area in each of the buildings served by the system; and

(ii) Distribute informational pamphlets and/or brochures on lead in drinking water to each person served by the non-transient non-community water system. The Authority may allow the system to utilize electronic transmission in lieu of or combined with printed materials as long as it achieves at least the same coverage.

(iii) For systems that are required to conduct monitoring annually or less frequently, the end of the monitoring period is September 30 of the calendar year in which the sampling occurs, or, if the Authority has established an alternate monitoring period, the last day of that period.

(E) A non-transient non-community water system shall repeat the tasks contained in (5)(c)(D) at least once during each calendar year in which the system exceeds the action level. The Authority can allow activities to extend beyond the 60-day requirement if needed for implementation purposes on a case-by-case basis, however, this extension must be approved in writing by the Authority in advance of the 60-day deadline.

(F) A water system may discontinue delivery of public education materials if the system has met the lead action level during the most recent six-month monitoring period conducted pursuant to the monitoring requirements of these rules. Such a system shall recommence public education requirements if it subsequently exceeds the lead action level during any monitoring period.

(G) A community water system may apply to the Authority, in writing to use only the text specified in (5)(a) of this rule in lieu of the text in (5)(a) and (5)(b) of this rule and to perform the tasks listed in (5)(c)(D) and (E) in lieu of the tasks in (5)(c)(B) and (C) of this rule if:

(i) The system is a facility, such as a prison or a hospital, where the population served is not capable of or is prevented from making improvements to plumbing or installing point of use treatment devices: and

(ii) The system provides water as part of the cost of services provided and does not separately charge for water consumption.

(H) A community water system serving 3,300 or fewer people may limit certain aspects of their public education programs as follows:

(i) With respect to the requirements of (5)(c)(B)(viii), a system serving 3,300 or fewer must implement at least one of the activities listed.

(ii) With respect to the requirements of (5)(c)(B)(ii), (iii) and (iv) of this rule, a system serving 3,300 or fewer people may limit the distribution of the public education materials required to facilities and organizations served by the system that are most likely to be visited regularly by pregnant women and children.

(iii) With respect to the requirements of (5)(c)(B)(vii) of this rule the Authority may waive this requirement for systems serving 3,300 or fewer persons as long as the system distributes notices to every household served by the system.

(d) Supplemental monitoring and notification of results. A water system that fails to meet the lead action level on the basis of tap samples collected in accordance with OAR 333-061-0036(2)(c)(A) through (E) shall offer to sample the tap water of any customer who requests it. The system is not required to pay for collecting or analyzing the sample, nor is the system required to collect and analyze the sample itself.

(e) Notification of results.

(A) All water systems must provide a notice of the individual tap results from lead tap water monitoring carried out under the monitoring requirements of these rules to the persons served by the water system at the specific sampling site from which the sample was taken (e.g. the occupants of the residence where the tap was tested).

(B) A water system must provide the consumer notice as soon as practical, but no later than 30 days after the system learns of the tap monitoring results.

(C) The consumer notice must include the results of lead tap water monitoring for the tap that was tested, an explanation of the health effects of lead, list steps consumers can take to reduce exposure to lead in drinking water and contact information for the water utility. The notice must also provide the maximum contaminant level goal and the action level for lead and the definitions for these two terms.

(D) The Consumer notice must be provided to persons served at the tap that was tested, either by mail or by another method approved by the Authority. For example, upon approval by the Authority, a non-transient, non-community water system could post the results on a bulletin board in the facility to allow users to review the information. The system must provide the notice to customers at sample taps tested, including consumers who do not receive water bills.

333-061-0036
Sampling and Analytical Requirements

(1) General:

(a) Samples required by these rules must be analyzed using EPA approved methods set forth in 40 CFR 141 by a laboratory accredited according to OAR chapter 333, division 064 and the Oregon Environmental Laboratory Accreditation Program (ORELAP). The laboratory must be certified to analyze drinking water samples using the specific method for the contaminant being analyzed.

(A) The Authority will only accept sample results that have been handled and documented in accordance with ORELAP standards, except as prescribed by subsection (1)(i) of this rule.

(B) Samples required by these rules must be collected after the water has been allowed to flow from the sample tap for a sufficient length of time to assure that the collected sample is representative of water in the distribution system or from the water source as applicable, except samples for lead or copper in tap water which must be collected as prescribed by paragraph (2)(c)(B) of this rule.

(b) Accredited laboratories will be considered a primary or subcontracted laboratory as specified by paragraphs (1)(b)(A) and (B) of this rule.

(A) A primary laboratory is the first accredited laboratory that receives a compliance sample for analysis, and is responsible for

chain of custody documentation (if applicable), performing the analytical method on a compliance sample (if applicable), final report review, and submission of results to the water system and the Authority as specified in OAR 333-061-0040(1)(b)(B). Primary laboratories must hold primary or secondary ORELAP accreditation.

(B) A subcontracted laboratory is an accredited laboratory that performs the analytical method on a compliance sample, and is responsible for sample analysis and result reporting to the primary laboratory as specified in OAR 333-061-0040(1)(b)(B). Subcontracted laboratories must hold ORELAP primary or secondary accreditation for the appropriate method(s).

(c) Alternate Analytical Methods:

(A) With the written permission of the Authority, and concurred in by the Administrator of the U.S. EPA, an alternate analytical method may be employed on the condition that it is substantially equivalent to the prescribed test in both precision and accuracy as it relates to the determination of compliance with any MCL; and

(B) The use of the alternate analytical method shall not decrease the frequency of sampling required by these rules.

(d) Monitoring of purchasing water systems:

(A) When a public water system obtains its water, in whole or in part, from one or more public water systems, the monitoring requirements imposed by these rules on the purchasing water system may be modified by the Authority to the extent that the system supplying the water is in compliance with its source monitoring requirements. When a public water system supplies water to one or more other public water systems, the Authority may modify monitoring requirements imposed by this rule to the extent that the interconnection of the systems justifies treating them as a single system for monitoring purposes.

(B) Any modified monitoring shall be conducted pursuant to a schedule specified by the Authority and concurred in by the Administrator of the US Environmental Protection Agency.

(e) Water suppliers shall monitor each water source individually for contaminants listed in OAR 333-061-0030 (Maximum Contaminant Levels), except for coliform bacteria, HAA5s, TTHMs and corrosion by-products, at the entry point to the distribution system except as described below. Any such modified monitoring shall be conducted pursuant to a schedule prescribed by the Authority.

(A) If the system draws water from more than one source and sources are combined before distribution, the system may be allowed to sample at an entry point to the distribution system during normal operating conditions, where justified, taking into account operational considerations, geologic and hydrologic conditions, and other factors.

(B) If a system draws water from multiple ground water sources which are not combined before distribution, the system may be allowed to sample at a representative source or sources, where justified, taking into account geologic and hydrogeologic conditions, land uses, well construction, and other factors.

(f) Compliance with MCLs shall be based on each sampling point as described in this section. If any point is determined to be out of compliance, the system shall be deemed out of compliance. If an entirely separated portion of a water system is out of compliance, then only that portion of the system shall be deemed out of compliance.

(g) The Authority may require additional sampling and analysis for the contaminants included in OAR 333-061-0030 (Maximum Contaminant Levels) when necessary to determine whether an unreasonable risk to health exists. The Authority may also require sampling and analysis for additional contaminants not included in OAR 333-061-0030 (Maximum Contaminant Levels) when necessary for public health protection.

(h) Water suppliers and their appointed representatives shall collect water samples from representative locations in the water system as prescribed in this rule and shall employ proper sampling procedures and techniques. Samples submitted to laboratories for analysis shall be clearly identified and shall include the name of the water system, public water system identification number, sampling date, and time, sample location identifying the sample tap, the name of the person collecting the sample and be labeled as follows:

(A) Routine: These are samples collected from established sampling locations within a water system at specified frequencies to satisfy monitoring requirements as prescribed in this rule. These samples are used to calculate compliance with maximum contaminant levels prescribed in OAR 333-061-0030(4);

(B) Repeat: These are samples collected as a follow-up to a routine sample that has exceeded a maximum contaminant level as prescribed in OAR 333-061-0030. Repeat samples are also used to calculate compliance with maximum contaminant levels prescribed in OAR 333-061-0030(4);

(C) Special: These are samples collected to supplement routine monitoring samples and are not required to be reported to the Authority. Samples of this type are not considered representative of the water system and are outside the scope of normal quality assurance and control procedures or the established compliance monitoring program. Special samples include, but are not limited to, samples taken for special studies, user complaints, post construction/repair disinfection, sources not in service and raw water prior to treatment, except as required by this rule.

(i) Measurements for turbidity, disinfectant residual, temperature, alkalinity, calcium, conductivity, chlorite, bromide, TOC, SUVA, dissolved organic carbon, UV254, orthophosphate, silica and pH may be performed on site using approved methods by individuals trained in sampling and testing techniques. Daily chlorite samples measured at the entrance to the distribution system must be performed by a party approved by the Authority.

(j) Nothing in these rules shall be construed to preclude the Authority or any of its duly authorized representatives from taking samples and from using the results of such samples to determine compliance with applicable requirements of these rules.

(k) Wellfield Determination

(A) Water systems possessing two or more wells that separately supply water to the distribution system may be eligible to have those wells considered as a wellfield source for monitoring purposes provided the requirements of this rule are met. Information pertinent to determining whether the wellfield designation is appropriate can be found in the water system's Source Water Assessment Report.

(B) To be classified as a wellfield, the wells must meet the following criteria:

(i) The wells must be within 2,500 feet of one another or as determined in a state approved hydrogeological study to minimize inter-well interference drawdowns. For wells located in a low-impact land use area, this criterion may be waived at the discretion of the Authority.

(ii) The wells must produce from the same and no other aquifer. This criterion is determined using source water assessment results, based on well reports, maps and other hydrogeological information.

(C) To be considered for wellfield designation, the water supplier must submit the following to the Authority:

(i) A schematic drawing showing all sources, entry points and relevant sample taps;

(ii) A map and description of the land use activities within the respective wellhead protection areas (using the inventory section of the Source Water Assessment Report); and

(iii) A description of the pumping patterns.

(D) If a water system's wells are considered to comprise a wellfield, the susceptibility analysis conducted during the source water assessment is utilized to determine the sampling point(s). Table 14 summarizes the alternatives: [Table not included. See ED. NOTE.]

(E) To determine the most susceptible well, the area within the two-year time-of-travel is considered. The Authority will consider the potential contaminant source inventory determined during the source water assessment, the aquifer sensitivity, pumping patterns and other pertinent hydrogeological information.

(F) The Authority may still designate more than one entry point within the wellfield as a sampling point if well construction or land use practices warrant. For a large area containing numerous wells, sub-wellfields may be identified, each with its own sample site designation.

(2) Inorganic chemicals:

(a) Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cyanide, Fluoride, Mercury, Nickel, Selenium and Thallium.

(A) Sampling of water systems for regulated Inorganic Chemicals shall be conducted as follows:

(i) Community and Non-Transient Non-Community Water systems using surface water sources or groundwater sources under the direct influence of surface water solely or a combination of surface and ground water sources shall sample at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment. Surface water systems shall collect samples annually at each sampling point beginning in the initial compliance period according to the schedule in subsection (2)(j) of this rule. The water system shall take each sample at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant.

(ii) Community and Non-Transient Non-Community Water systems using ground water sources shall sample at each point in the distribution system representative of each source after treatment or at entry points to the distribution system representative of each source after any application of treatment. Ground water systems shall collect samples once every three years at each sampling point beginning in the initial compliance period according to the schedule in subsection (2)(j) of this rule. The water system shall take each sample at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant.

(iii) All new Transient Non-Community and State Regulated water systems or existing Transient Non-Community, and State Regulated water systems with new sources shall sample once for arsenic. Samples are to be collected at the entry points to the distribution system representative of each source after any application of treatment.

(iv) If a system draws water from more than one source and the sources are combined before distribution, the system must sample at an entry point to the distribution system during periods of normal operating conditions when water is representative of all the sources being used.

(v) A water system with two or more wells that have been determined to constitute a "wellfield" as specified in subsection (1)(k) of this rule may reduce sampling to only those entry point(s) designated by the Authority.

(B) The Authority may allow compositing of samples from a maximum of 5 sampling points, provided that the detection limit of the method used for analysis is less than one-fifth of the MCL. Compositing of samples is to be done in the laboratory. Composite samples must be analyzed within 14 days of collection. If the concentration in the composite sample is equal to or greater than one-fifth of the MCL of any inorganic chemical listed in section (2) of this rule, then a follow-up sample must be taken for the contaminants which exceeded one-fifth of the MCL within 14 days at each sampling point included in the composite. If duplicates of the original sample taken from each sampling point used in the composite are available, the system may use these instead of resampling. The duplicates must be analyzed and the results reported to the Authority within 14 days of collection. If the population served by the water system is >3,300 persons, then compositing can only be allowed within the system. In systems serving ≤3,300 persons, compositing is allowed among multiple systems provided the 5 sample limit is maintained.

(C) Water systems may apply to the Authority for a waiver from the monitoring frequencies specified in paragraph (2)(a)(A) of this rule on the condition that the system shall take a minimum of one sample while the waiver is effective and the effective period for the waiver shall not exceed one nine-year compliance cycle.

(i) The Authority may grant a waiver provided surface water systems have monitored annually for at least three years and groundwater systems have conducted a minimum of three rounds of monitoring (at least one sample shall have been taken since January 1, 1990), and all analytical results are less than the maximum contaminant levels prescribed in OAR 333-061-0030 for inorganic chemicals. Systems that use a new water source are not eligible for a waiver until three rounds of monitoring from the new source have been completed.

(ii) Waivers granted by the Authority shall be in writing and shall set forth the basis for the determination. The Authority shall review and revise, where appropriate, its determination of the appropriate monitoring frequency when the system submits new monitoring data or where other data relevant to the system's appropriate monitoring frequency become available. In determining the appropriate reduced monitoring frequency, the Authority shall consider the reported concentrations from all previous monitoring; the degree of variation in reported concentrations; and other factors which may affect concentrations such as changes in groundwater pumping rates, changes in the system's configuration, changes in the system's operating procedures, or changes in stream flows or characteristics.

(D) Systems which exceed the maximum contaminant levels as calculated in subsection (2)(i) of this rule shall monitor quarterly beginning in the next quarter after the violation occurred. The Authority may decrease the quarterly monitoring requirement to the frequencies prescribed in paragraph (2)(a)(A) of this rule when it is determined that the system is reliably and consistently below the maximum contaminant level. Before such a decrease is permitted a groundwater system must collect at least two quarterly samples and a surface water system must collect a minimum of four quarterly samples.

(E) All new systems or systems that use a new source of water must demonstrate compliance with the MCL within a period of time specified by the Authority. The system must also comply with the initial sampling frequencies specified by the Authority to ensure a system can demonstrate compliance with the MCL. Routine and increased monitoring frequencies shall be conducted in accordance with the requirements in this section.

(b) Asbestos:

(A) At community and non-transient non-community water systems regardless of source, sampling must be conducted for Asbestos at least once during the initial three-year compliance period of each nine-year compliance cycle unless a waiver is granted by the Authority according to paragraph (2)(b)(B) of this rule.

(B) The Authority may grant a waiver from the monitoring prescribed by paragraph (2)(b)(A) of this rule if a water system is determined not to be vulnerable to either asbestos contamination in its source water or due to corrosion of asbestos-cement pipe, or both. If granted, the water supplier will not be required to monitor while the waiver remains in effect. A waiver remains in effect until the completion of the three year compliance period.

(C) At water systems vulnerable to asbestos contamination due solely to corrosion of asbestos-cement pipe, one sample must be collected at a tap served by the asbestos-cement pipe under conditions where asbestos contamination is most likely to occur.

(D) At water systems vulnerable to asbestos contamination due solely to asbestos in source water shall, one sample must be collected at the entry point to the distribution system after any treatment.

(E) A system vulnerable to asbestos contamination due both to its source water supply and corrosion of asbestos-cement pipe shall take one sample at a tap served by asbestos-cement pipe and under conditions where asbestos contamination is most likely to occur.

(F) If a sample result exceeds the maximum contaminant level for asbestos as prescribed in subsection (2)(i) of this rule, the water supplier shall monitor quarterly beginning in the next quarter after the violation occurred. If the Authority determines that the sample results are reliably and consistently below the maximum contaminant level based on a minimum of two quarterly samples for groundwater

systems or a minimum of four quarterly samples for water systems using surface water sources, the monitoring may be returned to the frequency prescribed in paragraph (2)(b)(A) of this rule.

(c) Lead and Copper:

(A) At community and non-transient non-community water systems, monitoring for lead and copper in tap water must be conducted as specified in this subsection. Sample site location:

(i) Each water system shall complete a materials evaluation of its distribution system in order to identify a pool of targeted sampling sites that meets the requirements of this paragraph, and which is sufficiently large to ensure that the water system can collect the number of lead and copper tap samples required in paragraph (2)(c)(C) of this rule. All sites from which first draw samples are collected shall be selected from this pool of targeted sampling sites. Sampling sites may not include faucets that have point-of-use or point-of-entry treatment devices designed to remove inorganic contaminants.

(ii) In addition to any information that may have been gathered under the special corrosivity monitoring requirements, the water system shall review the sources of information listed below in order to identify a sufficient number of sampling sites:

(I) All plumbing codes, permits, and records in the files of the building department(s) which indicate the plumbing materials that are installed within publicly and privately owned structures connected to the distribution system; and

(II) All existing water quality information, which includes the results of all prior analyses of the system or individual structures connected to the system, indicating locations that may be particularly susceptible to high lead or copper concentrations.

(iii) The sampling sites selected for a community water system's sampling pool ("tier 1 sampling sites") shall consist of single family structures that contain copper pipes with lead solder installed from January 1, 1983 through June 30, 1985 or contain lead pipes. When multiple-family residences comprise at least 20 percent of the structures served by a water system, the system may include these types of structures in its sampling pool.

(iv) Any community water system with insufficient tier 1 sampling sites shall complete its sampling pool with "tier 2 sampling sites", consisting of buildings, including multiple-family residences that contain copper pipes with lead solder installed from January 1, 1983 through June 30, 1985 or contain lead pipes.

(v) Any community water system with insufficient tier 1 and tier 2 sampling sites shall complete its sampling pool with "tier 3 sampling sites", consisting of single family structures that contain copper pipes with lead solder installed before 1983. A community water system with insufficient tier 1, tier 2 and tier 3 sampling sites shall complete its sampling pool with representative sites throughout the distribution system. A representative site is a site in which the plumbing materials used at that site would be commonly found at other sites served by the system.

(vi) The sampling sites selected for a non-transient non-community water system ("tier 1 sampling sites") shall consist of buildings that contain copper pipes with lead solder installed from January 1, 1983 through June 30, 1985 or contain lead pipes.

(vii) A non-transient non-community water system with insufficient tier 1 sites that meet the targeting criteria in subparagraph (2)(c)(A)(vi) of this rule shall complete its sampling pool with sampling sites that contain copper pipes with lead solder installed before 1983. If additional sites are needed, the system shall use representative sites throughout the distribution system. A representative site is a site in which the plumbing materials used at that site would be commonly found at other sites served by the water system.

(viii) Any water system whose sampling pool does not consist exclusively of tier 1 sites shall demonstrate in a letter submitted to the Authority under OAR 333-061-0040(1)(g)(A)(i) why a review of the information listed in subparagraph (2)(c)(A)(ii) of this rule was inadequate to locate a sufficient number of tier 1 sites. Any community water system which includes tier 3 sampling sites in its sampling pool shall demonstrate in such a letter why it was unable to locate a sufficient number of tier 1 and tier 2 sampling sites.

(B) Monitoring requirements for lead and copper in tap water. Sample collection methods:

(i) All tap samples for lead and copper collected in accordance with this paragraph shall be first draw samples.

(ii) Each first-draw tap sample for lead and copper shall be one liter in volume and have stood motionless in the plumbing system of each sampling site for at least six hours. First-draw samples from residential housing shall be collected from the cold-water kitchen tap or bathroom sink tap. First-draw samples from a non-residential building shall be one liter in volume and shall be collected at an interior tap from which water is typically drawn for consumption. First-draw samples may be collected by the system or the system may allow residents to collect first-draw samples after instructing the residents of the sampling procedures specified in this paragraph. To avoid problems of residents handling nitric acid, acid fixation of first draw samples may be done up to 14 days after the sample is collected. If a system allows residents to perform sampling, the system may not challenge, based on alleged errors in sample collection, the accuracy of sampling results.

(iii) A water system shall collect each first-draw tap sample from the same sampling site from which it collected a previous sample. If, for any reason, the water system cannot gain entry to a sampling site in order to collect a follow-up tap sample, the system may collect the follow-up tap sample from another sampling site in its sampling pool as long as the new site meets the same targeting criteria, and is within reasonable proximity of the original site.

(C) Monitoring requirements for lead and copper in tap water. Number of samples: Water systems shall collect at least one sample during each monitoring period specified in paragraph (2)(c)(D) of this rule from the number of sites listed in the first column below ("standard monitoring"). A system conducting reduced monitoring under subparagraph (2)(c)(D)(iv) of this rule shall collect at least one sample from the number of sites specified in the second column below during each monitoring period specified in subparagraph (2)(c)(D)(iv) of this rule. Such reduced monitoring sites shall be representative of the sites required for standard monitoring. A system that has fewer than five drinking water taps, that can be used for human consumption meeting the sample site criteria of paragraph (2)(c)(A) of this rule to reach the required number of sample sites, must collect at least one sample from each tap and then must collect additional samples from those taps on different days during the monitoring period to meet the required number of sites. Alternatively the Authority may allow these public water systems to collect a number of samples less than the number of sites specified below provided that 100 percent of all taps that can be used for human consumption are sampled. The Authority must approve this reduction of the minimum number of samples in writing based on a request from the system or onsite verification by the Authority. The Authority may specify sampling locations when a system is conducting reduced monitoring.

System Size — # of sites — # of sites
(# People Served) — (Standard Monitoring) — (Reduced Monitoring)
>100,000 — 100 — 50
10,001 to 100,000 — 60 — 30
3,301 to 10,000 — 40 — 20
501 to 3,300 — 20 — 10
101 to 500 — 10 — 5
≤100 — 5 — 5

(D) Monitoring requirements for lead and copper in tap water. Timing of monitoring:

(i) Initial tap monitoring requirements:

(I) All large systems shall monitor during two consecutive six-month periods.

(II) All small and medium-size systems shall monitor during each six-month monitoring period until the system exceeds the lead or copper action level and is therefore required to implement the corrosion control treatment requirements specified in OAR 333-061-0034(2), in which case the system shall continue monitoring in accordance with subparagraph (2)(c)(D)(ii) of this rule, or the system meets the lead and copper action levels during two consecutive six-month monitoring periods, in which case the system may reduce monitoring in accordance with subparagraph (2)(c)(D)(iv) of this rule.

(ii) Monitoring after installation of corrosion control and source water treatment.

(I) Any large (serving more than 50,000 persons) system which installs optimal corrosion control treatment pursuant to OAR 333-061-0034(2)(a)(D) shall monitor during two consecutive six-month monitoring periods by the date specified in 333-061-0034(2)(a)(E).

(II) Any small (serving 3,300 people or less) or medium-size (serving 3,301 to 50,000 persons) system which installs optimal corrosion control treatment pursuant to OAR 333-061-0034(2)(b)(E) shall monitor during two consecutive six-month monitoring periods by the date specified in 333-061-0034(2)(b)(F).

(III) Any system which installs source water treatment pursuant to OAR 333-061-0034(4)(a)(C) shall monitor during two consecutive six-month monitoring periods by the date specified in 333-061-0034(4)(a)(D).

(iii) Monitoring after the Authority specifies water quality parameter values for optimal corrosion control. After the Authority specifies the values for water quality control parameters under OAR 333-061-0034(3)(l), the system shall monitor during each subsequent six-month monitoring period, with the first monitoring period to begin on the date the Authority specifies the optimal values.

(iv) Reduced monitoring

(I) A small or medium-size water system that meets the lead and copper action levels during each of two consecutive six-month monitoring periods may reduce the number of samples in accordance with paragraph (2)(c)(C) of this rule, and reduce the frequency of sampling to once per year. A small or medium water system collecting fewer than five samples as specified in (2)(c)(C) of this rule that meets the lead and copper action levels during each of two consecutive six-month monitoring periods may reduce the frequency of sampling to once per year. In no case can the system reduce the number of samples required below the minimum of one sample per available tap. This sampling shall begin during the calendar year immediately following the end of the second consecutive six-month monitoring period.

(II) Any water system that meets the lead action level and maintains the range of values for the water quality control parameters reflecting optimal corrosion control treatment specified by the Authority during each of two consecutive six-month monitoring periods may reduce the frequency of monitoring to once per year and reduce the number of lead and copper samples in accordance with paragraph (2)(c)(C) of this rule if it receives written approval from the Authority. This sampling shall begin during the calendar year immediately following the end of the second consecutive six-month monitoring period. The Authority shall review monitoring, treatment, and other relevant information submitted by the water system, and shall notify the system in writing when it determines the system is eligible to commence reduced monitoring. The Authority shall review, and where appropriate, revise its determination when the system submits new monitoring or treatment data, or when other data relevant to the number and frequency of tap sampling becomes available.

(III) A small or medium-size water system that meets the lead and copper action levels during three consecutive years of monitoring may reduce the frequency of monitoring for lead and copper from annually to once every three years. Any water system that meets the lead action level and maintains the range of values for the water quality control parameters reflecting optimal corrosion control treatment specified by the Authority during three consecutive years of monitoring may reduce the frequency of monitoring from annually to once every three years if it receives written approval from the Authority. Samples collected once every three years shall be collected no later than every third calendar year. The Authority shall review monitoring, treatment, and other relevant information submitted by the water system and shall notify the system in writing when it determines the system is eligible to reduce the frequency of monitoring to once every three years. The Authority shall review, and where appropriate, revise its determination when the system submits new monitoring or treatment data, or when other data relevant to the number and frequency of tap sampling becomes available.

(IV) A water system that reduces the number and frequency of sampling shall collect these samples from representative sites included in the pool of targeted sampling sites identified in paragraph (2)(c)(A) of this rule. Systems sampling annually or less frequently shall conduct the lead and copper tap sampling during the months of June, July, August or September. The Authority may approve a different period for conducting the lead and copper tap sampling for systems collecting a reduced number of samples. Such a period shall be no longer than four consecutive months and must represent a time of normal operation where the highest levels of lead are most likely to occur. For a non-transient non-community water system that does not operate during the months of June through September, and for which the period of normal operation where the highest levels of lead are most likely to occur is not known, the Authority shall designate a period that represents a time of normal operation for the system. This sampling shall begin during the period approved or designated by the Authority in the calendar year immediately following the end of the second consecutive six-month monitoring period for systems initiating annual monitoring and during the three-year period following the end of the third consecutive calendar year of annual monitoring for systems initiating triennial monitoring. Community and non-transient non- community water systems monitoring annually or triennially that have been collecting samples during the months of June through December and that receive Authority approval to alter their sample collection period must collect their next round of samples during a time period that ends no later than 21 months or 45 months, respectively, after the previous round of sampling. Subsequent rounds of sampling must be collected annually or triennially as required in this subsection.

(V) A small or medium-size water system subject to reduced monitoring that exceeds the lead or copper action level shall resume sampling in accordance with subparagraph (2)(c)(D)(iii) of this rule and collect the number of samples specified for standard lead and copper monitoring in paragraph (2)(c)(C) of this rule and shall also conduct water quality parameter monitoring in accordance with subparagraphs (2)(c)(F)(iii), (iv) or (v) of this rule, as appropriate, during the period in which the lead or copper action level was exceeded. Any such system may resume annual monitoring for lead and copper at the tap at the reduced number of sites after it has completed two subsequent consecutive six-month rounds of monitoring that meet the requirement of subparagraph (2)(c)(D)(iv)(I) of this rule. This sampling shall begin during the calendar year immediately following the end of the second consecutive six-month monitoring period. Any such system may resume triennial monitoring for lead and copper at the reduced number of sites after it demonstrates through subsequent rounds of monitoring that it meets the criteria prescribed in subparagraphs (2)(c)(D)(iv)(III) or (VI) of this rule. Any water system subject to reduced monitoring frequency that fails to meet the lead action level during any four-month monitoring period or that fails to operate at or above the minimum value or within the range of values for the water quality control parameters specified by the Authority for more than nine days in any six-month period specified in subparagraph (2)(c)(F)(v) of this rule shall conduct tap water sampling for lead and copper at the frequency specified in subparagraph (2)(c)(D)(iii) of this rule, collect the number of samples specified for standard monitoring, and shall resume monitoring for water quality parameters within the distribution system in accordance with subparagraph (2)(c)(F)(v) of this rule. This standard tap water sampling shall begin no later than the six-month monitoring period beginning January 1 of the calendar year following the lead action level exceedance or water quality parameter excursion. Such a system may resume reduced monitoring for lead and copper at the tap and for water quality parameters within the distribution system under the following conditions Such a system may, with written Authority approval, resume reduced annual monitoring for lead and copper at the tap after it has completed two subsequent six-month rounds of tap lead and copper monitoring that meet the criteria specified in subpara-

graph (2)(c)(D)(iv)(II) of this rule. This sampling shall begin during the calendar year immediately following the end of the second consecutive six-month monitoring period. Such a system, with written Authority approval, may resume reduced triennial monitoring for lead and copper at the tap if it meets the criteria specified in subparagraphs (2)(c)(D)(iv)(III) and (VI) of this rule. Such a system may reduce the number and frequency of water quality parameter distribution tap samples required in accordance with subparagraph (2)(c)(F)(vi)(I) and (II) of this rule. Such a system may not resume triennial monitoring for water quality parameters distribution tap samples until it demonstrates that it has re-qualified for triennial monitoring.

(VI) Any water system that demonstrates for two consecutive 6-month monitoring periods that the 90th percentile lead level is less than or equal to 0.005 mg/l and the 90th percentile copper level is less than or equal to 0.65 mg/l may reduce the number of samples in accordance with paragraph (2)(c)(C) of this rule and reduce the frequency of sampling to once every three calendar years.

(VII) Any water system subject to a reduced monitoring frequency under (2)(c)(D)(iv) of this rule shall notify the Authority in writing of any upcoming long-term change in treatment or addition of a new source. The Authority must review and approve the addition of a new source or long-term change in water treatment before it is implemented by the water system. The Authority may require the system to resume standard monitoring or take other appropriate steps such as increased water quality parameter monitoring or re-evaluation of its corrosion control treatment given the potentially different water quality considerations.

(E) Monitoring requirements for lead and copper in tap water. Additional monitoring by systems: The results of any monitoring conducted in addition to the minimum requirements of subsection (c) of this rule shall be considered by the system and the Authority in making any determinations (that is, calculating the 90th percentile lead or copper level). The Authority may invalidate lead and copper tap water samples as follows:

(i) The Authority may invalidate a lead or copper tap sample if at least one of the following conditions is met. The decision and the rationale for the decision must be documented in writing by the Authority. A sample invalidated by the Authority does not count toward determining lead or copper 90th percentile levels or toward meeting the minimum monitoring requirements:

(I) The laboratory establishes that improper sample analysis caused erroneous results; or

(II) A site that did not meet the site selection criteria; or

(III) The sample container was damaged in transit; or

(IV) There is substantial reason to believe that the sample was subject to tampering.

(ii) The system must report the results of all samples to the Authority and all supporting documentation for samples the system believes should be invalidated.

(iii) The Authority may not invalidate a sample solely on the grounds that a follow-up sample result is higher or lower than that of the original sample.

(iv) The water system must collect replacement samples for any samples invalidated if, after the invalidation of one or more samples, the system has too few samples to meet the minimum requirements. Any such replacement samples must be taken as soon as possible, but no later than 20 days after the date the Authority invalidates the sample. The replacement samples shall be taken at the same locations as the invalidated samples or, if that is not possible, at locations other than those already used for sampling during the monitoring period.

(F) Monitoring requirements for water quality parameters. All large water systems and all medium and small water systems that exceed the lead or copper action levels shall monitor water quality parameters in addition to lead and copper as follows:

(i) General Requirements. Sample collection methods:

(I) Tap samples shall be representative of water quality throughout the distribution system taking into account the number of persons served, the different sources of water, the different treatment methods employed by the system, and seasonal variability. Water quality parameter sampling is not required to be conducted at taps targeted for lead and copper sampling, however, established coliform sampling sites may be used to satisfy these requirements.

(II) Samples collected at the entry point(s) to the distribution system shall be from locations representative of each source after treatment. If a system draws water from more than one source and the sources are combined before distribution, the system must sample at an entry point to the distribution system during periods of normal operating conditions when water is representative of all sources being used.

(ii) General requirements. Number of samples:

(I) Systems shall collect two tap samples for applicable water quality parameters during each monitoring period specified under subparagraphs (2)(c)(F)(iii) through (vi) of this rule from the following number of sites.

System Size # People served — # of Sites For Water Quality Parameters
>100,000 — 25
10,001-100,000 — 10
3,301 to 10,000 — 3
501 to 3,300 — 2
101 to 500 — 1
<100 — 1

(II) Except as provided in subparagraph (2)(c)(F)(iv)(III) of this rule, systems shall collect two samples for each applicable water quality parameter at each entry point to the distribution system during each monitoring period specified in subparagraph (2)(c)(F)(iii) of this rule. During each monitoring period specified in subparagraphs (2)(c)(F)(iv) through (vi) of this rule, systems shall collect one sample for each applicable water quality parameter at each entry point to the distribution system.

(iii) Initial Sampling. All large water systems shall measure the applicable water quality parameters as specified below at taps and at each entry point to the distribution system during each six-month monitoring period specified in subparagraph (2)(c)(D)(i) of this rule. All small and medium-size systems shall measure the applicable water quality parameters at the locations specified below during each six-month monitoring period specified in subparagraph (2)(c)(D)(i) of this rule during which the system exceeds the lead or copper action level:

(I) At taps: pH, alkalinity, orthophosphate (when an inhibitor containing a phosphate compound is used), silica (when an inhibitor containing a silicate compound is used), calcium, conductivity, and water temperature.

(II) At each entry point to the distribution system: all of the applicable parameters listed in subparagraph (2)(c)(F)(iii)(I) of this rule.

(iv) Monitoring after installation of corrosion control. Any large system which installs optimal corrosion control treatment pursuant to OAR 333-061-0034(2)(a)(D) shall measure the water quality parameters at the locations and frequencies specified below during each six-month monitoring period specified in subparagraph (2)(c)(D)(ii)(I) of this rule. Any small or medium-size system which installs optimal corrosion control treatment shall conduct such monitoring during each six-month monitoring period specified in subparagraph (2)(c)(D)(ii)(II) of this rule in which the system exceeds the lead or copper action level.

(I) At taps, two samples for: pH, alkalinity, orthophosphate (when an inhibitor containing a phosphate compound is used), silica (when an inhibitor containing a silicate compound is used), calcium (when calcium carbonate stabilization is used as part of corrosion control).

(II) Except as provided in subparagraph (2)(c)(D)(iv)(III) of this rule, at each entry point to the distribution system, at least one sample, no less frequently than every two weeks (bi-weekly) for: pH; when alkalinity is adjusted as part of optimal corrosion control, a reading of the dosage rate of the chemical used to adjust alkalinity, and the alkalinity concentration; and when a corrosion inhibitor is used as part of optimal corrosion control, a reading of the dosage rate of the inhibitor used, and the concentration of orthophosphate or silica (whichever is applicable).

(III) Any ground water system can limit entry point sampling to those entry points that are representative of water quality and treatment conditions throughout the system. If water from untreated ground water sources mixes with water from treated ground water sources, the system must monitor for water quality parameters both at representative entry points receiving treatment and no treatment. Prior to the start of any monitoring, the system shall provide to the Authority written information identifying the selected entry points and documentation, including information on seasonal variability, sufficient to demonstrate that the sites are representative of water quality and treatment conditions throughout the system.

(v) Monitoring after Authority specifies water quality parameter values for optimal corrosion control. After the Authority specifies the values for applicable water quality control parameters reflecting optimal corrosion control treatment under OAR 333-061-0034(3)(l), all large systems shall measure the applicable water quality parameters in accordance with subparagraph (2)(c)(F)(iv) of this rule and determine compliance every six months with the first six-month period to begin on either January 1 or July 1, whichever comes first, after the Authority specifies optimal water quality parameter values. Any small or medium-size system shall conduct such monitoring during each monitoring period specified in this paragraph in which the system exceeds the lead or copper action level. For any such small and medium-size system that is subject to a reduced monitoring frequency pursuant to subparagraph (2)(c)(D)(iv) of this rule at the time of the action level exceedance, the start of the applicable six-month monitoring period shall coincide with the start of the applicable monitoring period under (2)(c)(D) of this rule. Compliance with Authority-designated optimal water quality parameter values shall be determined as specified under 333-061-0034(3)(m).

(vi) Reduced monitoring:

(I) Any water system that maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment during each of two consecutive six-month monitoring periods under paragraph (2)(c)(D) of this rule shall continue monitoring at the entry point(s) to the distribution system as specified in subparagraph (2)(c)(F)(iv)(II) of this rule. Such system may collect two tap samples for applicable water quality parameters from the following reduced number of sites during each six-month monitoring period.

System Size# People served — Reduced # of Sites for Water Quality Parameters

>100,000 — 10
10,001-100,000 — 7
3,301 to 10,000 — 3
501 to 3,300 — 2
101 to 500 — 1
<100 — 1

(II) Any water system that maintains the minimum values or maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the Authority under OAR 333-061-0034(3) (l) during three consecutive years of monitoring may reduce the frequency with which it collects the number of tap samples for applicable water quality parameters specified in subparagraph (2)(c)(F)(vi)(I) of this rule from every six months to annually. This sampling begins during the calendar year immediately following the end of the monitoring period in which the third consecutive year of six-month monitoring occurs. Any water system that maintains the minimum values or maintains the range of values for the water quality parameters reflecting optimal corrosion control treatment specified by the Authority under 333-061-0034(3)(l) during three consecutive years of annual monitoring may reduce the frequency with which it collects the number of tap samples for applicable water quality parameters from annually to every three years. This sampling begins no later than the third calendar year following the end of the monitoring period in which the third consecutive year of monitoring occurs.

(III) A water system may reduce the frequency with which it collects tap samples for applicable water quality parameters to every three years if it demonstrates during two consecutive monitoring periods that its tap water lead level at the 90th percentile is less than or equal to 0.005 mg/l, that its tap water copper level at the 90th percentile is less than or equal to 0.65 mg/l, and that it also has maintained the range of values for water quality parameters reflecting optimal corrosion control treatment specified by the Authority. Monitoring conducted every three years shall be done no later than every third calendar year.

(IV) A water system that conducts sampling annually shall collect these samples evenly throughout the year so as to reflect seasonal variability.

(V) Any water system subject to reduced monitoring frequency that fails to operate at or above the minimum value or within the range of values for the water quality parameters specified by the Authority under OAR 333-061-0034(3)(l) for more than nine days in any six-month period shall resume distribution system tap water sampling in accordance with the number and frequency requirements in subparagraph (2)(c)(F)(v) of this rule. Such a system may resume annual monitoring for water quality parameters at the tap at the reduced number of sites after it has completed two subsequent consecutive six-month rounds of monitoring that meet the criteria specified in subparagraph (2)(c)(F)(v) of this rule or may resume triennial monitoring at the reduced number of sites after it demonstrates through subsequent annual rounds that it meets the criteria of subparagraphs (2)(c)(F)(vi)(I) and (II) of this rule.

(vii) Additional monitoring by systems. The results of any monitoring conducted in addition to the minimum requirements of subsection (2)(c) of this rule shall be considered by the system and the Authority in making any determinations.

(G) Monitoring requirements for lead and copper in source water. Sample location, collection methods, and number of samples:

(i) A water system that fails to meet the lead or copper action level on the basis of tap samples collected in accordance with paragraphs (2)(c)(A) through (E) of this rule shall collect lead and copper source water samples in accordance with the following requirements regarding sample location, number of samples, and collection methods:

(I) Ground water systems shall take a minimum of one sample at every entry point to the distribution system which is representative of each well after treatment. The system shall take each sample at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant;

(II) Surface water systems shall take a minimum of one sample at every entry point to the distribution system after any application of treatment or in the distribution system at a point which is representative of each source, after treatment. The system shall take each sample at the same sampling point unless conditions make another sampling point more representative of each source or treatment plant; Surface water systems include systems with a combination of surface and ground sources; and

(III) If a system draws water from more than one source and the sources are combined before distribution, the system must sample at an entry point to the distribution system during periods when water is representative of all sources being used.

(ii) Where the results of sampling indicate an exceedance of maximum permissible source water levels established under OAR 333-061-0034(4)(b)(D) the Authority may require that one additional sample be collected as soon as possible after the initial sample was taken (but not to exceed two weeks) at the same sampling point. If an Authority-required confirmation sample is taken for lead or copper, then the results of the initial and confirmation sample shall be averaged in determining compliance with the Authority-specified maximum permissible levels. Any sample value below the detection limit shall be considered to be zero. For lead any value above the detection limit but below the Practical Quantitation Level (PQL) (0.005 mg/l) shall either be considered as the measured value or be considered one-half the PQL (0.0025 mg/l). For copper any value above the detection limit but below the PQL (0.050 mg/l) shall either be considered as the measured value or be considered one-half the PQL (0.025 mg/l).

(H) Monitoring requirements for lead and copper in source water. Monitoring frequency after system exceeds tap water action level. Any system which exceeds the lead or copper action level at

the tap, shall collect one source water sample from each entry point to the distribution system no later than six months after the end of the monitoring period during which the lead or copper action level was exceeded. For monitoring periods that are annual or less frequent, the end of the monitoring period is September 30 of the calendar year in which the sampling occurs, or if the Authority has established an alternate monitoring period, the last day of that period.

(i) Monitoring frequency after installation of source water treatment. Any system which installs source water treatment pursuant to OAR 333-061-0034(4)(a)(C) shall collect an additional source water sample from each entry point to the distribution system during two consecutive six-month monitoring periods by the deadline specified in 333-061-0034(4)(a)(D).

(ii) Monitoring frequency after Authority specifies maximum permissible source water levels or determines that source water treatment is not needed.

(I) A system shall monitor at the frequency specified below in cases where the Authority specifies maximum permissible source water levels under OAR 333-061-0034(4)(b)(D) or determines that the system is not required to install source water treatment under 333-061-0034(4)(b)(B). A water system using only groundwater shall collect samples once during the three-year compliance period in effect when the applicable Authority determination is made. Such systems shall collect samples once during each subsequent compliance period. Triennial samples shall be collected every third calendar year. A water system using surface water (or a combination of surface and groundwater) shall collect samples once during each calendar year, the first annual monitoring period to begin during the year in which the applicable Authority determination is made.

(II) A system is not required to conduct source water sampling for lead or copper if the system meets the action level for the specific contaminant in tap water samples during the entire source water sampling period applicable to the system under subparagraph (2)(c)(H)(ii)(I) of this rule.

(iii) Reduced monitoring frequency:

(I) A water system using only groundwater may reduce the monitoring frequency for lead and copper in source water to once during each nine-year compliance cycle provided that the samples are collected no later than every ninth calendar year and it demonstrates that finished drinking water entering the distribution system has been maintained below the maximum permissible lead and copper concentrations specified by the Authority in OAR 333-061-0034(4)(b)(D) during at least three consecutive compliance periods under subparagraph (2)(c)(H)(ii)(I) of this rule or the Authority has determined that source water treatment is not needed and the system demonstrates during at least three consecutive compliance periods under subparagraph (2)(c)(H)(ii)(I) of this rule that the concentration of lead in source water was less than or equal to 0.005 mg/l and the concentration of copper in source water was less than or equal to 0.65 mg/l.

(II) A water system using surface water (or a combination of surface and ground waters) may reduce the monitoring frequency for lead and copper in source water to once during each nine-year compliance cycle provided that the samples are collected no later than every ninth calendar year and it demonstrates that finished drinking water entering the distribution system has been maintained below the maximum permissible lead and copper concentrations specified by the Authority in OAR 333-061-0034(4)(b)(D) for at least three consecutive years or the Authority has determined that source water treatment is not needed and the system demonstrates that during at least three consecutive years the concentration of lead in source water was less than or equal to 0.005 mg/l and the concentration of copper in source water was less than or equal to 0.65 mg/l.

(III) A water system that uses a new source of water is not eligible for reduced monitoring for lead or copper until concentrations in samples collected from the new source during three consecutive monitoring periods are below the maximum permissible lead and copper concentrations specified by the Authority in OAR 333-061-0034(4)(a)(E).

(d) Nitrate:

(A) Community and non-transient non-community water systems using surface water sources or groundwater sources under the direct influence of surface water shall monitor for Nitrate on a quarterly basis, at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment, beginning January 1, 1993. The Authority may allow a surface water system to reduce the sampling frequency to annually provided that all analytical results from four consecutive quarters are less than 50 percent of the MCL. A surface water system shall return to quarterly monitoring if any one sample is 50 percent of the MCL.

(B) Community and non-transient non-community water systems using groundwater sources shall monitor for Nitrate annually, at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment, beginning January 1, 1993. The Authority shall require quarterly monitoring for a least one year following any one sample in which the concentration is 50 percent of the MCL. The system may return to annual monitoring after four consecutive quarterly samples are found to be reliably and consistently below the MCL.

(C) Transient non-community and state regulated water systems shall monitor for Nitrate annually, at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment, beginning January 1, 1993. Transient non-community water systems must monitor quarterly for at least one year following any one sample in which the concentration is 50 percent of the MCL. The system may return to annual monitoring after four consecutive quarterly samples are found to be reliably and consistently below the MCL.

(D) After the initial round of quarterly sampling is completed, each community and non-transient non-community water system which is monitoring annually shall take subsequent samples during the quarter(s) which previously resulted in the highest analytical result.

(e) Nitrite:

(A) Community, non-transient non-community, and transient non-community water systems shall collect one sample for Nitrite at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment during the compliance period beginning January 1, 1993.

(B) After the initial sample, all systems where analytical results for Nitrite are <50 percent of the MCL, shall monitor once during each subsequent compliance period.

(C) Water systems must conduct quarterly monitoring for at least one year following any one sample in which the concentration is ≥50 percent of the MCL. A water system may change to annual monitoring after four consecutive quarterly samples are found to be reliably and consistently below 50 percent of the MCL.

(D) A water system with an analytical result ≥50 percent of the MCL may never monitor less frequently than annually. Systems which are monitoring annually must collect each subsequent sample during the quarter(s) which previously resulted in the highest analytical result.

(E) The Authority may grant a waiver from the monitoring frequency specified in paragraph (2)(e)(B) of this rule provided that water systems have conducted a minimum of three rounds of monitoring (at least one sample shall have been collected since January 1, 1993), and all analytical results are less than 50 percent of the MCL prescribed in OAR 333-061-0030. Water systems that have been granted a waiver must monitor once during each nine-year compliance cycle. Waivers must be granted as prescribed by subparagraph (2)(a)(C)(ii) of this rule.

(F) A water system with two or more wells that have been determined to constitute a "wellfield" as specified in subsection (1)(k) of this rule may reduce sampling to only those entry point(s) designated by the Authority.

(f) Sodium:

(A) Samples of water which is delivered to users shall be analyzed for Sodium as follows:

(i) Community and non-transient non-community water systems, surface water sources, once per year for each source;

(ii) Community and non-transient non-community water systems, ground water sources, once every three years for each source.

(B) The water supplier shall report to the Authority the results of the analyses for Sodium as prescribed in OAR 333-061-0040. The Authority shall notify local health officials of the test results.

(g) Confirmation Samples:

(A) Where the results of sampling for antimony, arsenic, asbestos, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nickel, selenium or thallium exceed the MCL prescribed in OAR 333-061-0030 for inorganic chemicals, the Authority may require one additional sample to be taken as soon as possible after the initial sample was taken (but not to exceed two weeks) at the same sampling point.

(B) Where the results of sampling for nitrate or nitrite exceed the MCL prescribed in OAR 333-061-0030 for inorganic chemicals, the system is required to collect one additional sample within 24 hours of notification of the results of the initial sample at the same sampling point. Systems unable to comply with the 24-hr sampling requirement must initiate consultation with the Authority as soon as practical, but no later than 24 hours after the system learns of the violation and must immediately notify their users as prescribed in OAR 333-061-0042(2)(a)(B), and collect one additional sample within two weeks of notification of the results of the initial sample.

(C) If a confirmation sample required by the Authority is taken for any contaminant then the results of the initial and confirmation sample shall be averaged. The resultant average shall be used to determine the system's compliance as prescribed in subsection (2)(i) of this rule.

(h) The Authority may require more frequent monitoring than specified in subsections (2)(a) through (f) of this rule or may require confirmation samples for positive and negative results. Systems may apply to the Authority to conduct more frequent monitoring than is required in this section.

(i) Compliance with the inorganic MCLs as listed in OAR 333-061-0030(1) (Table 1) shall be determined based on the analytical result(s) obtained at each sampling point as follows: [Table not included. See ED. NOTE.]

(A) For systems which are conducting monitoring at a frequency greater than annual, compliance with the MCLs for antimony, arsenic, asbestos, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nickel, selenium or thallium is determined by a running annual average at any sampling point. If the average at any sampling point rounded to the same number of significant figures as the MCL for the substance in question is greater than the MCL, then the system is out of compliance. If any one sample would cause the annual average to be exceeded, then the system is out of compliance immediately. Any sample with results below the detection limit specified for the approved EPA analytical method shall be calculated at zero for the purpose of determining the annual average. If a system fails to collect the required number of samples, compliance (average concentration) will be based on the total number of samples collected.

(B) Systems monitoring annually or less frequently for antimony, arsenic, asbestos, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nickel, selenium or thallium must begin quarterly sampling if the level of a contaminant at any sampling point is greater than the MCL listed in OAR 333-061-0030(1). The water system will then determine compliance with the MCL by running annual average at the sampling point. The water system will not be considered in violation of the MCL until it has completed one year of quarterly monitoring. If any sample result will cause the running annual average to exceed the MCL at any sampling point, the system is out of compliance with the MCL immediately. If a system fails to collect the required number of samples, compliance (average concentration) will be based on the total number of samples collected.

(C) Compliance with MCLs for nitrate and nitrite is determined based on one sample if the levels of these contaminants are below the MCLs. If the levels of nitrate or nitrite exceed the MCLs in the initial sample, a confirmation sample is required in accordance with paragraph (2)(g)(B) of this rule and compliance shall be determined based on the average of the initial and confirmation samples.

(D) If the results of an analysis as prescribed in this rule indicate the level of any contaminant exceeds the maximum contaminant level, the water supplier shall report the analysis results to the Authority within 48 hours as prescribed in OAR 333-061-0040 and initiate the public notice procedures as prescribed by OAR 333-061-0042.

(E) A water system's running annual average (RAA) is calculated by averaging the analytical results for the current monitoring period and the previous monitoring periods within a one-year time frame. For water systems monitoring less frequently than quarterly, the first sample result that exceeds the MCL is considered to be the initial sampling result for determination of the RAA. Multiple sample results within any monitoring period will be averaged and then rounded to the same number of significant figures as the MCL of the contaminant in question. For the purposes of calculating a RAA, a monitoring period may be a calendar month or calendar quarter. Special samples, as described by paragraph (1)(h)(C) of this rule, will not be included in the calculation of a system's running annual average.

(3) Organic chemicals:

(a) Water suppliers responsible for community and non-transient non-community water systems must conduct monitoring according to this section for the following regulated synthetic organic chemicals (SOC): Alachlor, Atrazine, Benzo(a)pyrene, Carbofuran, Chlordane, Dalapon, Dibromochloropropane, Dinoseb, Dioxin(2,3,7,8-TCDD), Diquat, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Endothall, Endrin, Ethylene dibromide, Glyphosate, Heptachlor, Heptachlor epoxide, Hexachlorobenzene, Hexachlorocyclopentadiene, Lindane(BHC-g), Methoxychlor, Oxamyl(Vydate), Picloram, Polychlorinated biphenyls, Pentachlorophenol, Simazine, Toxaphene, 2,4-D and 2,4,5-TP Silvex.

(A) Initial sampling

(i) At sampling points served by surface water or GWUDI sources, samples must be collected at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment. At least four consecutive quarterly samples must be collected at each sampling point during each compliance period. Samples must be collected from the same sampling point unless conditions make another sampling point more representative of each source or treatment plant.

(ii) At sampling points served by groundwater sources only, samples must be collected at every entry point to the distribution system after any application of treatment. Samples must be collected annually for three consecutive years at each sampling point during each compliance period. Samples must be collected from the same sampling point unless conditions make another sampling point more representative of each source or treatment plant. New wells in an existing wellfield, within an existing drinking water protection area, or within an area well characterized by area-wide source water assessments or past monitoring results as determined by the Authority, may be eligible for a reduction in initial monitoring from three consecutive annual samples to one sample if no detections occur and if, based on the system's source water assessment, the Authority determines that the new well is producing from the same and only the same aquifer or does not significantly modify the existing drinking water protection area.

(iii) If a system draws water from more than one source and sources are combined before distribution, samples must be collected at an entry point to the distribution system during periods of normal operating conditions when water is representative of all the sources being used.

(iv) At water systems with two or more wells that have been determined to constitute a wellfield as specified in subsection

(1)(k) of this rule, sampling may be reduced to only those entry points designated by the Authority.

(B) If the initial analyses as specified in subparagraphs (3)(a)(A)(i) or (ii) of this rule does not detect any contaminant listed in subsection (3)(a) of this rule, then monitoring at each sampling point should be conducted as follows:

(i) At water systems serving more than 3,300 people, two quarterly samples in the same calendar year during each repeat 3-year compliance period; or

(ii) At systems serving 3,300 people or less, one sample in each repeat 3-year compliance period.

(C) Water suppliers may apply to the Authority for a waiver from the monitoring frequencies specified in subparagraphs (3)(a)(A)(i) or (ii) or paragraph (3)(a)(B) of this rule. If the Authority determines there was no previous use of a contaminant within a watershed or zone of influence, a waiver may be granted. If the Authority determines that a contaminant was used previously or the use of a contaminant is unknown then the factors specified in subparagraph (3)(a)(C)(iii) of this rule shall determine whether a waiver is granted. A waiver must be in place prior to the year in which the monitoring is to be conducted. Water suppliers must reapply for a waiver for each compliance period. Regardless of waiver status, monitoring must occur at the minimum frequencies specified in subparagraph (3)(a)(C)(v) or (vi) of this rule.

(i) The drinking water protection area delineated during the source water assessment must be used according to Authority procedures and guidance.

(ii) For waivers based on the use of a contaminant, the criteria considered by the Authority includes but is not limited to the use, storage, distribution, transport and disposal of the contaminant within the delineated recharge or watershed area.

(iii) For waivers based on susceptibility to contamination, the criteria considered by the Authority includes but is not limited to the history of bacteria or nitrate contamination, well construction, agricultural management practices, infiltration potential, contaminant mobility and persistence, previous analytical results, the proximity of the system to a potential point or non-point source of contamination, and use of PCBs in equipment used in the production, distribution, or storage of water.

(iv) The Authority may establish area-wide waivers based on historical monitoring data, land use activity, and the results of source water assessments or waivers based on use or susceptibility.

(v) Monitoring must be conducted at least once every six years for all SOCs if an Authority approved drinking water protection plan exists for the water system.

(vi) Monitoring must be conducted at least once every nine years for those SOCs not used within the drinking water protection area if no Authority approved drinking water protection plan exists for a water system. Monitoring must be conducted at least once every six years or once every nine years as determined by the Authority, for those SOCs used within the drinking water protection area based upon SOC chemical characteristics, aquifer characteristics and well construction.

(D) If a contaminant listed in subsection (3)(a) of this rule is detected at a water system equal to or greater than the minimum detection limit listed in Table 15, then the water supplier shall monitor quarterly at each sampling point where a detection occurred. If a contaminant is detected at a concentration greater than the maximum contaminant level, monitoring must be conducted as prescribed by paragraph (3)(a)(E) of this rule. [Table not included. See ED. NOTE.]

(i) The Authority may reduce the monitoring frequency required by paragraph (3)(a)(D) of this rule to annually if at least two quarterly samples for groundwater sources or four quarterly samples for surface water sources are reliably and consistently below the MCL. Annual monitoring according to this subparagraph must be conducted during the quarter that previously yielded the highest analytical result.

(ii) At systems where three consecutive annual samples are collected with no detection of a contaminant, water suppliers may apply to the Authority for a waiver as specified in paragraph (3)(a)(C) of this rule. Monitoring may not be reduced to less often than annually except upon receipt of a waiver granted by the Authority.

(iii) If monitoring required by paragraphs (3)(a)(A) through (D) of this rule results in the detection of either Heptachlor or Heptachlor epoxide, then subsequent monitoring shall analyze for both contaminants.

(E) If a contaminant listed in subsection (3)(a) of this rule is detected at a concentration greater than the maximum contaminant level, then the water supplier must monitor quarterly. After a minimum of four quarterly samples, if results are reliably and consistently below the MCL and in compliance with paragraph (3)(a)(H) of this rule, then the water supplier may monitor annually.

(F) The Authority may require confirmation samples for positive or negative results. If a confirmation sample is required by the Authority, the result must be averaged with the original sample result (unless the previous sample has been invalidated by the Authority) and the average used to determine compliance.

(G) The Authority may allow compositing of samples to reduce the number of samples to be analyzed at a water system. Composite samples from a maximum of five sampling points are allowed, provided that the detection limit of the method used for analysis is less than one-fifth of the MCL. Compositing of samples must be conducted in the laboratory and analyzed within 14 days of sample collections. If the concentration in the composite sample detects one or more contaminants listed in subsection (3)(a) of this rule, then a follow-up sample must be collected and analyzed within 14 days at each sampling point included in the composite, and be analyzed for that contaminant. Duplicates collected for the original composite samples may be used instead of re-sampling provided the duplicates are analyzed and the results reported to the Authority within 14 days of collection. For water systems serving more than 3,300 people, the Authority may allow compositing at sampling points only within a single system. For systems serving 3,300 people or less, the Authority may allow compositing among different systems, provided the 5-sample limit is maintained.

(H) Compliance with contaminants listed in OAR 333-061-0030(2)(a) shall be determined based on the analytical results obtained at each sampling point. If one sampling point is in violation of an MCL, the water system is in violation of the MCL. For systems which monitor more than once per year, compliance with the MCL is determined by a running annual average at each sampling point. At systems where annual or less frequent monitoring takes place, if sample results exceed the regulatory detection limit prescribed in paragraph (3)(a)(D) of this rule (Table 15), monitoring must be increased to quarterly. The system will not be considered in violation of the MCL until it has completed one year of quarterly monitoring. If any single sample result will cause the running annual average to exceed the MCL at any sampling point, the system is out of compliance with the MCL immediately. If a system fails to collect the required number of samples, compliance will be based on the total number of samples collected. If a sample result is less than the detection limit, zero will be used to calculate the annual average. If the system is out of compliance, the system shall follow the reporting and public notification procedures as prescribed in OAR 333-061-0040 and 333-061-0042(2)(b)(A). [Table not included. See ED. NOTE.]

(I) The running annual average (RAA) for a contaminant is calculated by averaging the analytical results for the current monitoring period and the previous monitoring periods within a one-year time frame. For water systems monitoring less frequently than quarterly, the first sample result that exceeds the detection limit or MCL is considered to be the initial sampling result for determination of the RAA. Multiple sample results within any monitoring period will be averaged and then rounded to the same number of significant figures as the MCL for the contaminant in question. For the purposes of calculating a RAA, a monitoring period may be a calendar month or calendar quarter. Special samples, as described by paragraph (1)(h)(C) of this rule, will not be included in the calculation of the running annual average at a water system.

(J) All new systems or systems that use a new source of water must demonstrate compliance with the MCL within a period of time specified by the Authority. The system must also comply with the initial sampling frequencies specified by the Authority to ensure a system can demonstrate compliance with the MCL.

(b) Water suppliers responsible for community and non-transient non-community water systems must conduct monitoring according to this section for the following regulated volatile organic chemicals (VOCs): Benzene, Carbon tetrachloride, cis-1,2-Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, p-Dichlorobenzene, Styrene, Tetrachloroethylene(PCE), Toluene, trans-1,2-Dichloroethylene, Trichloroethylene(TCE), Vinyl chloride, Xylenes(total), 1,1-Dichloroethylene, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, 1,2-Dichloroethane, 1,2-Dichloropropane, and 1,2,4-Trichlorobenzene.

(A) Initial monitoring:

(i) At sampling points served by surface water or GWUDI sources, samples must be collected at each point in the distribution system representative of each source after treatment or at entry points to the distribution system after any application of treatment. At least four consecutive quarterly samples must be collected at each sampling point during each compliance period. Samples must be collected from the same sampling point unless conditions make another sampling point more representative of each source or treatment plant.

(ii) At sampling points served by groundwater sources only, samples must be collected at every entry point to the distribution system after any application of treatment. Samples must be collected annually for three consecutive years at each sampling point during each compliance period. Samples must be collected from the same sampling point unless conditions make another sampling point more representative of each source or treatment plant. New wells in an existing wellfield, within an existing drinking water protection area, or within an area well characterized by area-wide source water assessments or past monitoring results as determined by the Authority, may be eligible for a reduction in initial monitoring from three consecutive annual samples to one sample if no detections occur and if, based on the system's source water assessment, the Authority determines that the new well is producing from the same and only the same aquifer or does not significantly modify the existing drinking water protection area.

(iii) The Authority may designate additional sampling points within the distribution system or at the consumer's tap which more accurately determines consumer exposure to VOCs.

(iv) If a water system draws water from more than one source and the sources are combined before distribution, the samples must be collected at entry points to the distribution system during periods of normal operating conditions when water is representative of all sources being used.

(v) A water system with two or more wells that have been determined to constitute a wellfield as specified in subsection (1)(k) of this rule may reduce sampling to only those entry point(s) designated by the Authority.

(B) If the initial analyses conducted according to subparagraphs (3)(b)(A)(i) or (ii) of this rule do not detect any contaminant listed in subsection (3)(b) of this rule, then monitoring for all of the VOCs should be conducted as follows:

(i) For sampling points served by surface water or GWUDI sources, one sample every year per entry point; or

(ii) For sampling points served only by groundwater sources, one sample every three years per entry point.

(C) Water suppliers may apply to the Authority for a waiver from the monitoring frequencies specified in paragraph (3)(b)(B) of this rule. Waivers will be granted according to the criteria and procedures specified in subparagraphs (3)(a)(C)(i) through (vi) of this rule if the Authority determines there were no detections of any contaminant listed in subsection (3)(b) of this rule and if an Authority approved drinking water protection plan exists for the water system or for those VOCs used within a portion of the drinking water protection area that the Authority has determined is not susceptible to VOC contamination.

(i) Waivers granted for monitoring at groundwater systems shall be effective for no more than six years.

(I) Waivers must be in place prior to the year in which monitoring is to be conducted, and water suppliers must reapply for a waiver from VOC monitoring every two compliance periods (six years).

(II) As a condition of a waiver, water suppliers must collect one sample at each sampling point during the time the waiver is in effect and update the vulnerability assessment for the water system addressing those factors listed in subparagraphs (3)(a)(C)(ii) and (iii) of this rule. The Authority must be able to confirm that a system is not susceptible within three years of the original determination, and every time the vulnerability assessment is updated, or the waiver is invalidated and monitoring must be conducted as specified in paragraph (3)(b)(B) of this rule.

(ii) At water systems using surface water that have been determined not to be vulnerable to VOC contamination by the Authority, monitoring must be conducted at the frequency prescribed by the Authority. Water suppliers must update the vulnerability assessment for such water systems during each compliance period and submit the vulnerability assessment to the Authority regardless of the frequency of monitoring.

(iii) The Authority may establish area-wide waivers based on historical monitoring data, land use activity, the results of source water assessments or waivers granted for use of VOCs or susceptibility to VOC contamination.

(D) If a contaminant listed in subsection (3)(b) of this rule (except vinyl chloride) is detected in any sample at a concentration greater than the minimum detection limit of 0.0005 mg/l, then the water supplier shall monitor quarterly at each sampling point where a detection occurred except as provided in subparagraph (3)(b)(D)(i) of this rule.

(i) The Authority may reduce the monitoring frequency specified in this paragraph to annually if results for the water system are reliably and consistently below the MCL for at least two quarters for sample points served only by groundwater sources and four quarters for sample points served by surface water or GWUDI sources.

(I) For annual monitoring, samples must be collected during the quarter that previously yielded the highest analytical result.

(II) If a contaminant is detected at a concentration greater than 0.0005 mg/l but below the MCL in one of the annual samples as prescribed by subparagraph (3)(b)(D)(i) of this rule, the water supplier shall monitor at the frequency specified by the Authority but in no case less frequently than annually.

(ii) At water systems or sampling points where three consecutive annual samples are collected with no detection of a contaminant, water suppliers may apply to the Authority for a waiver as specified in paragraph (3)(b)(C) of this rule. Monitoring may not be reduced to less often than annually except upon by a waiver granted by the Authority.

(iii) At water systems using groundwater sources where one or more of the following two-carbon organic compounds was detected: trichloroethylene, tetrachloroethylene, 1,2-dichloroethane, 1,1,1-trichloroethane, cis-1,2-dichloroethylene, trans-1,2-dichloroethylene or 1,1-dichloroethylene, the water supplier shall monitor quarterly for vinyl chloride. A vinyl chloride sample shall be collected at each sampling point at which one or more of the two-carbon organic compounds was detected. If the results of the first analysis do not detect vinyl chloride, the Authority may reduce the quarterly monitoring frequency of vinyl chloride monitoring to one sample during each compliance period. Water suppliers responsible for surface water systems are required to monitor for vinyl chloride at the discretion of the Authority.

(E) If a contaminant listed in subsection (3)(b) of this rule is detected at a concentration greater than the maximum contaminant level, then the water supplier must monitor quarterly. After a minimum of four consecutive quarterly samples, if results are reliably and consistently below the MCL and in compliance with paragraph

(3)(b)(H) of this rule, then the water supplier may monitor annually. Annual samples must be collected during the quarter which previously yielded the highest analytical result.

(F) The Authority may require confirmation samples for positive or negative results. If a confirmation sample is required by the Authority, the result must be averaged with the original sample result and the average used to determine compliance.

(G) The Authority may allow compositing of samples to reduce the number of samples to be analyzed by the system. Composite samples from a maximum of five sampling points are allowed, provided that the detection limit of the method used for analysis is less than one-fifth of the MCL. Compositing of samples must be conducted in the laboratory and samples must be analyzed within 14 days of sample collections. If the concentration in the composite sample is 0.0005 mg/l or greater for any contaminant listed in subsection (3)(b) of this rule, then a follow-up sample must be collected and analyzed within 14 days at each sampling point included in the composite, and be analyzed for that contaminant. Duplicates collected for the original composite samples may be used instead of resampling provided the duplicates are analyzed and the results reported to the Authority within 14 days of collection. For water systems serving a population greater than 3,300 people, the Authority may allow compositing at sampling points only within a single water system. For water systems serving population of 3,300 people or less, the Authority may allow compositing among different water systems provided the 5-sample limit is maintained.

(H) Compliance with contaminants listed in OAR 333-061-0030(2)(c) shall be determined based on the analytical results obtained at each sampling point. If one sampling point is in violation of an MCL, the water system is in violation of the MCL. For systems which monitor more than once per year, compliance with the MCL is determined by a running annual average at each sampling point. At systems where annual or less frequent monitoring takes place, if sample results exceed the MCL, monitoring must be increased to quarterly. The system will not be considered in violation of the MCL until it has completed one year of quarterly sampling. If any single sample result will cause the running annual average to exceed the MCL at any sampling point, the system is out of compliance with the MCL immediately. If a system fails to collect the required number of samples, compliance will be based on the total number of samples collected. If a sample result is less than the detection limit, zero will be used to calculate the annual average. If the water system is out of compliance, the system shall follow the reporting and public notification procedures as prescribed in 333-061-0040 and 333-061-0042(2)(b)(A).

(I) The running annual average (RAA) for a contaminant is calculated by averaging the analytical results for the current monitoring period and the previous monitoring periods within a one-year time frame. For water systems monitoring less frequently than quarterly, the first sample result that exceeds the detection limit or MCL is considered to be the initial sampling result for determination of the RAA. Multiple sample results within any monitoring period will be averaged and then rounded to the same number of significant figures as the MCL for the contaminant in question. For the purposes of calculating a RAA, a monitoring period may be a calendar month or calendar quarter. Special samples, as described by paragraph (1)(h)(C) of this rule, will not be included in the calculation of the running annual average at a water system.

(J) All new water systems or systems that use a new source of water must demonstrate compliance with the MCL within a period of time specified by the Authority. The system must also comply with the initial sampling frequencies specified by the Authority to ensure a system can demonstrate compliance with the MCL.

(4) Disinfectant Residuals, Disinfection Byproducts, and Disinfection Byproduct Precursors

(a) General sampling and analytical requirements. The requirements of this section apply to all community and non-transient non-community water systems that add a disinfectant (oxidant) to the water supply at any point in the treatment process or deliver water in which a disinfectant (oxidant) has been added to the water supply except that compliance with paragraph (4)(i)(B) is required at transient non-community water systems where chlorine dioxide is used as a disinfectant or oxidant.

(A) Water systems must take all samples during normal operating conditions.

(B) Failure to monitor in accordance with the monitoring plan as specified in paragraph (4)(c)(B) of this rule is a monitoring violation.

(C) Failure to monitor will be treated as a violation for the entire period covered by the annual average where compliance is based on a running annual average (RAA) of monthly or quarterly samples or averages and the system's failure to monitor makes it impossible to determine compliance with MCLs or MRDLs.

(D) Systems must use only data collected under the provisions of this rule to qualify for reduced monitoring.

(E) All samples collected and analyzed under the provisions of section (4) of this rule must be included in determining compliance, even if that number is greater than the minimum required.

(b) Initial Distribution System Evaluation (IDSE) Requirements. This subsection establishes monitoring and other requirements for identifying monitoring locations which, in conjunction with the requirements of subsections (4)(c) and (4)(d) of this rule, determine compliance with the MCLs for TTHM and HAA5 as specified in OAR 333-061-0030. Non-transient non-community water systems serving less than 10,000 people are exempt from the requirements of this subsection.

(A) Water suppliers that begin adding a disinfectant to a water system must complete an IDSE by conducting either standard monitoring or a system specific study. Water suppliers must consult with the Authority after completing the IDSE to identify compliance monitoring locations prior to developing a monitoring plan as prescribed in paragraph (4)(c)(B) of this rule that includes monitoring locations identified through the IDSE process. Samples collected to conduct an IDSE will not be used for the purpose of determining compliance with MCLs as prescribed by OAR 333-061-0030(2)(b).

(B) Standard monitoring

(i) Standard monitoring plans must include the elements specified in subparagraphs (4)(b)(B)(i)(I) through (III) of this rule:

(I) A schematic of the distribution system (including distribution system water sources, entry points, and storage facilities), with notes indicating the locations and dates of all projected standard monitoring;

(II) An explanation of standard monitoring location selection, and a summary of data relied on to justify the selection; and

(III) The population served and source water classification for the water system.

(ii) Water systems must monitor as indicated in Table 16 below. Water systems must collect dual sample sets at each monitoring location, and at least one round of monitoring must be during the peak historical month for TTHM or HAA5 levels, or during the month of warmest water temperature. Water systems must review available compliance, study, or operational data to determine the peak historical month for TTHM or HAA5 levels or the month of warmest water temperature. [Table not included. See ED. NOTE.]

(iii) Samples must be collected at locations spread throughout the distribution system.

(iv) If the number of entry points to the distribution system is fewer than the number of entry point monitoring locations specified in Table 16, excess entry point samples must be replaced equally by samples collected at locations where you would expect to find high TTHM and HAA5 concentration. If there is an odd number of excess sampling locations, the additional sample must be collected at a location where you would expect to find high TTHM concentration. If the number of entry points to the distribution system is greater than the number of entry point monitoring locations specified in Table 16, the samples must be collected at entry points having the highest annual water flows. [Table not included. See ED. NOTE.]

(v) Monitoring in accordance with Table 16 may not be reduced according to the provisions of subsection (1)(d) of this rule. [Table not included. See ED. NOTE.]

(vi) IDSE report. Water suppliers must submit an IDSE report to the Authority within 90 days of completing standard monitoring that includes the following elements:

(I) All TTHM and HAA5 analytical results collected in accordance with this rule, and all standard monitoring analytical results collected during the period of the IDSE as individual analytical results and a locational running annual average (LRAA) presented in a format acceptable to the Authority. If changed from the standard monitoring plan prescribed by subparagraph (4)(b)(B)(i) of this rule, the report must also include a schematic of the distribution system, the population served, and the source water type.

(II) An explanation of any deviations from the approved standard monitoring plan.

(III) Recommended times and locations for the compliance monitoring required by subsections (4)(c) and (4)(d) of this rule, based on the protocol prescribed by subparagraph (4)(b)(D)(iii) of this rule, including an explanation for why the locations were selected.

(C) System Specific Study. A system specific study must be based on modeling as prescribed by subparagraph (4)(b)(C)(i) of this rule.

(i) Modeling. Water systems may conduct analysis of an extended period simulation hydraulic model. The hydraulic model and analysis must meet the following criteria:

(I) The model must simulate a 24-hour variation in demand and show a consistently repeating 24-hour pattern of residence time;

(II) The model must represent the following criteria: (1) 75 percent of pipe volume; (2) 50 percent of pipe length; (3) all pressure zones; (4) all 12-inch diameter and larger pipes; (5) all 8-inch and larger pipes that connect pressure zones, influence zones from different sources, storage facilities, major demand areas, pumps, and control valves, or are known or expected to be significant conveyors of water; (6) all 6-inch and larger pipes that connect remote areas of a distribution system to the main portion of the system; (7) all storage facilities with standard operations represented in the model; and (8) all active pump stations with controls represented in the model; and (9) all active control valves; and

(III) The model must be calibrated, or have calibration plans for the current configuration of the distribution system during the period of highest TTHM formation potential. All storage facilities must be evaluated as part of the calibration process. Calibration must be completed no later than 12-months after submission of the system specific study plan.

(IV) Reporting modeling. The system specific study plan must include: (1) tabular or spreadsheet data demonstrating that the model meets requirements in subparagraph (C)(i)(II) of this section; (2) a description of all calibration activities undertaken, and if calibration is complete, a graph of predicted tank levels versus measured tank levels for the storage facility with the highest residence time in each pressure zone, and a time series graph of the residence time at the longest residence time storage facility in the distribution system showing the predictions for the entire simulation period (that is, from time zero until the time it takes to for the model to reach a consistently repeating pattern of residence time); (3) model output showing preliminary 24 hour average residence time predictions throughout the distribution system; (4) timing and number of samples representative of the distribution system planned for at least one monitoring period of TTHM and HAA5 dual sample monitoring at a number of locations no less than would be required for the system under standard monitoring in paragraph (4)(b)(B) of this rule during the historical month of high TTHM; (5) description of how all requirements will be completed no later than 12 months after system submits the system specific study plan; (6) schematic of the distribution system (including distribution system entry points and their sources, and storage facilities), with notes indicating the locations and dates of all completed system specific study monitoring (if calibration is complete) and all compliance monitoring conducted in accordance with this rule; and (7) population served and system type (surface water, groundwater under the direct influence of surface water, or groundwater).

(V) If a model is submitted that does not meet the requirements of subparagraph (4)(b)(C)(i) of this rule, the system must correct the deficiencies and respond to Authority inquiries concerning the model. Failure to correct deficiencies or respond to inquiries by the Authority will result in the system having to conduct standard monitoring as prescribed by paragraph (4)(b)(B) of this rule.

(ii) IDSE report. Water suppliers must submit the IDSE report to the Authority within 90 days of completing the system specific study, and the report must include the following elements:

(I) The IDSE report must include all system specific study monitoring results collected during the period of the system specific study submitted in a tabular or spreadsheet format acceptable to the Authority. If changed from the system specific study plan submitted under paragraph (4)(b)(C) of this rule, the IDSE report must also include a schematic of the distribution system, the population served, and source water classification;

(II) If using the modeling provision prescribed by subparagraph (4)(b)(C)(i) of this rule, the water supplier must include final information for the elements described in subparagraphs (4)(b)(C)(i)(IV) and (V) of this rule, and a 24-hour time series graph of residence time for each location selected for monitoring in accordance with subsections (4)(c) and (4)(d) of this rule;

(III) The water supplier must recommend monitoring locations selected for monitoring in accordance with subsections (4)(c) and (4)(d) of this rule based on the protocol in paragraph (4)(b)(D) of this rule. It must also recommend and justify the timing of the monitoring to be conducted at these monitoring locations.

(IV) The IDSE report must include an explanation of any deviations from the approved system specific study plan.

(V) The IDSE report must include the analytical and modeling results, and the justification for recommending the monitoring locations selected for monitoring in accordance with subsections (4)(c) and (4)(d) of this rule.

(D) Monitoring location recommendations.

(i) The IDSE report must include recommendations and explanation for where and during what month(s) TTHM and HAA5 monitoring in accordance with subsections (4)(c) and (4)(d) of this rule should be conducted. Recommendations must be based on the criteria in subparagraphs (4)(b)(D)(ii) through (v) of this rule.

(ii) Water suppliers must collect samples as prescribed by Table 17 below. The number of samples and recommended locations must be used for monitoring in accordance with subsections (4)(c) and (4)(d) of this rule, unless the Authority requires different or additional locations. Monitoring locations should be dispersed throughout the distribution system to the maximum extent possible. [Table not included. See ED. NOTE.]

(iii) Water suppliers must recommend locations for monitoring in accordance with subsections (4)(c) and (4)(d) of this rule based on standard monitoring results or system specific study results. Water suppliers must comply with the protocol specified in subparagraphs (4)(b)(D)(iii)(I) through (VI) of this rule. If a water system is required to monitor at more than six locations, the protocol must be repeated as necessary. Water systems must select the:

(I) Location with the highest TTHM LRAA not previously selected through this protocol;

(II) Location with the highest HAA5 LRAA not previously selected through this protocol;

(III) Location with the highest TTHM LRAA not previously selected through this protocol;

(IV) Location with the highest TTHM LRAA not previously selected through this protocol;

(V) Location with the highest HAA5 LRAA not previously selected through this protocol; and

(VI) Location with the highest HAA5 LRAA not previously selected through this protocol.

(iv) A water supplier may recommend locations other than those determined through subparagraph (4)(b)(D)(iii) of this rule, if the system includes a rationale for selecting other locations. If the Authority approves the alternate locations, the water system must monitor at these locations to determine compliance with subsections (4)(c) and (4)(d) of this rule.

(v) The water system's recommended monitoring schedule must include the month of historically highest TTHM and HAA5 concentration, unless the Authority approves another month. Once the highest historical month has been identified, and if quarterly or more frequent routine monitoring is required, water systems must schedule monitoring at a regular frequency of at least every 90 days.

(c) Monitoring requirements for TTHM and HAA5:

(A) Routine Monitoring Frequency. At water systems for which an IDSE report was submitted, samples must be collected at the locations and during the months recommended in the IDSE report as prescribed by paragraph (4)(b)(D) of this rule, unless the Authority requires other or additional locations after its review. At non-transient non-community water systems serving less than 10,000 people and for water systems granted a waiver by the EPA exempting the water supplier from completing an IDSE, samples must be collected at the location(s) and dates identified in the monitoring plan developed as prescribed in paragraph (4)(c)(B) of this rule. Samples must be collected at no fewer than the number of locations identified in Table 18: [Table not included. See ED. NOTE.]

(B) A monitoring plan must be developed for every water system where monitoring is required according to this subsection, and must be maintained and made available for inspection by the Authority and the general public.

(i) The monitoring plan must include the following elements:

(I) Monitoring locations;

(II) Monitoring dates; and

(III) Compliance calculation procedures.

(ii) For water systems where an IDSE report was not required as prescribed in paragraphs (4)(b)(B) or (4)(b)(C) of this rule the monitoring plan must identify the required number of monitoring locations for monitoring in accordance with subsections (4)(c) and (4)(d) of this rule. Water suppliers must identify the locations by alternating the selection of locations representing high TTHM levels and high HAA5 levels until the required number of monitoring locations have been identified. Water suppliers must also provide a rationale for identifying the locations as having high levels of TTHM or HAA5.

(iii) For water systems using surface water or GWUDI sources serving more than 3,300 people, a copy of the monitoring plan must be submitted to the Authority prior to the date the water supplier conducts initial monitoring according to this subsection, unless the IDSE report submitted as prescribed in subsection (4)(b) of this rule contains all the information required in paragraph (4)(c)(B) of this rule.

(iv) Revisions to monitoring plans. Water suppliers may revise monitoring plans to reflect changes in treatment, distribution system operations, layout (including new service areas), or other factors that may affect TTHM or HAA5 formation, including Authority-approved reasons, after consultation with the Authority regarding the need and justification for the revision. If monitoring locations are changed, then water systems must replace existing monitoring locations with the lowest LRAA with new locations that reflect current distribution system locations expected to have high TTHM or HAA5 levels. The Authority may require modifications in monitoring plans. Surface water or groundwater under the direct influence of surface water systems serving > 3,300 people must submit a copy of their modified monitoring plan to the Authority prior to the date required to comply with the revised monitoring plan.

(C) A water system monitoring for TTHM or HAA5 in accordance with subsections (4)(c), (4)(d) or (4)(e) of this rule is in violation of the MCL specified in OAR 333-061-0030(2)(b) when the LRAA calculation at any monitoring location exceeds the MCL based on four consecutive quarters of monitoring (or fewer than four quarters of monitoring if the MCL would be exceeded regardless of monitoring results in subsequent quarters). A water system is in violation of the monitoring requirements every quarter that a monitoring result would be used in calculating an LRAA if the system fails to monitor.

(D) Compliance calculations and determinations. For water systems where quarterly monitoring is required, water suppliers must make compliance calculations at the end of every calendar quarter beginning with the fourth quarter of the initial monitoring period. The LRAA must be calculated prior to the fourth quarter if fewer than four quarters of data would cause the MCL to be exceeded, regardless of the monitoring results in subsequent quarters. Water suppliers required to conduct monitoring at a frequency less than quarterly must make compliance calculations every time samples are collected.

(i) Water suppliers must calculate the LRAA for TTHM and HAA5 to determine that each LRAA does not exceed the MCL listed in OAR 333-061-0030(2)(b) for water systems where quarterly monitoring is required. Water suppliers that fail to complete four consecutive quarters of monitoring must calculate the LRAA based on the available data from the most recent four quarters. Water suppliers that collect more than one sample per quarter at a specific monitoring location must average all samples collected in the quarter for that location to determine a quarterly average to be used in the LRAA calculation.

(ii) For water systems where monitoring is yearly or less frequent, water suppliers must determine that each sample collected is less than the MCL listed in OAR 333-061-0030(2)(b). If any sample exceeds the MCL, the water system must comply with the requirements of subsection (4)(e) of this rule. If no sample exceeds the MCL, the sample result for each monitoring location is considered the LRAA for that monitoring location.

(iii) A water supplier required to conduct quarterly monitoring at a water system is in violation of the monitoring requirements for each quarter that a monitoring result would be used in calculating an LRAA if monitor is not conducted.

(d) Reduced monitoring. Water suppliers may reduce monitoring to the frequency specified in Table 19 any time the LRAA is ≤0.040 mg/L for TTHM and ≤0.030 mg/L for HAA5 at all monitoring locations. [Table not included. See ED. NOTE.]

(A) Water suppliers may only use data collected under the provisions of subsections (4)(c) and (4)(d) of this rule to qualify for reduced monitoring. In addition, the annual source water average TOC level, before any treatment, must be less than or equal to 4.0 mg/L at each plant treating surface water or groundwater under the direct influence of surface water, based on monitoring conducted as prescribed in paragraph (4)(d)(D) and subsection (4)(k) of this rule.

(B) Water suppliers may remain on reduced monitoring so long as:

(i) The LRAA for water systems conducting quarterly monitoring is less than or equal to 0.040 mg/L for TTHM and less than or equal to 0.030 mg/L for HAA5 at each monitoring location; or

(ii) Samples collected by water systems conducting annual or less frequent monitoring are less than or equal to 0.060 mg/L for TTHM and less than or equal to 0.045 mg/L for HAA5.

(C) Water suppliers must resume routine monitoring as prescribed in subsection (4)(c) of this rule, or begin increased monitoring as prescribed in subsection (4)(e) of this rule if:

(i) The LRAA based on quarterly monitoring exceeds 0.040 mg/L for TTHM or 0.030 mg/L for HAA5 at any monitoring location; or

(ii) A sample collected at any location exceeds either 0.060 mg/L for TTHM or 0.045 mg/L for HAA5 when the monitoring frequency is annual or less frequent; or

(iii) The average annual source water TOC level, before any treatment, is greater than 4.0 mg/L at any treatment plant treating surface water or groundwater under the direct influence of surface water.

(D) Monitoring requirements for source water TOC. For water systems using surface water or GWUDI sources, TOC samples must be collected every 30 days at a location prior to any treatment in order to qualify for reduced TTHM and HAA5 monitoring as prescribed by this subsection, unless the water system is monitoring as prescribed by subsection (4)(k) of this rule. To remain on reduced monitoring, and in addition to meeting other criteria for reduced monitoring, the source water TOC running annual average must be ≤4.0 mg/L, based on the most recent four quarters of monitoring, on a continuing basis at a location prior to any treatment. Once qualified for reduced monitoring as prescribed by this subsection, a water system may reduce source water TOC monitoring to quarterly TOC samples collected every 90 days at a location prior to any treatment.

(E) A water system may be returned to routine monitoring at the Authority's discretion.

(e) Increased Monitoring

(A) At water systems where annual or less frequent monitoring is required according to subsections (4)(c) or (4)(d) of this rule, monitoring must be increased to dual sample sets collected every 90 days at all locations if a TTHM or HAA5 sample exceeds the MCL at any location.

(B) At water systems where increased monitoring is conducted according to paragraph (4)(e)(A) of this rule, samples must be collected at the monitoring locations specified in the monitoring plan developed according to paragraph (4)(c)(B) of this rule.

(C) Monitoring may be returned to routine if at least four consecutive quarters of increased monitoring has been conducted and the LRAA for every monitoring location is less than or equal to 0.060 mg/L for TTHM and 0.045 mg/L for HAA5.

(f) Operational Evaluation Levels:

(A) The Operational evaluation level for TTHM or HAA5 has been exceeded at a monitoring location when the sum of the two previous quarters' sample results plus twice the current quarter's sample result, divided by 4, exceeds the MCL.

(B) Operational evaluation and report.

(i) Systems that exceed the operational evaluation level for either TTHM or HAA5 must conduct an operational evaluation and submit a written report of the evaluation to the Authority no later than 90 days after being notified of the analytical result that causes the system to exceed the operational evaluation level. The written report must be made available to the public upon request.

(ii) Operational evaluations must include an examination of the water system's treatment and distribution practices, including but not limited to: storage tank operations, excess storage capacity, distribution system flushing, changes in sources or source water quality, and treatment changes or problems that may contribute to TTHM and HAA5 formation. The examination must also include what steps could be considered to minimize future exceedances.

(I) The Authority may allow water systems to limit the scope of the evaluation if the water system is able to identify the cause of the operational evaluation level exceedance.

(II) The request to limit the scope of the evaluation does not extend the schedule specified in subparagraph (4)(f)(B)(i) of this rule for submitting the written report. The Authority must approve this limited scope of evaluation in writing, and the water system must keep that approval with the completed report.

(g) Chlorite monitoring and compliance for community and non-transient non-community water systems where chlorine dioxide is used for disinfection or oxidation.

(A) Routine monitoring.

(i) Daily monitoring. Samples must be collected every day at the entrance to the distribution system. For any daily sample that exceeds the chlorite MCL, the water supplier must collect additional samples in the distribution system the following day at the locations required by paragraph (4)(g)(B) of this rule, in addition to the sample required at the entrance to the distribution system.

(ii) Monthly monitoring. A three sample set must be collected every month in the distribution system. The water supplier must collect one sample at each of the following locations: near the first customer, at a location representative of average residence time, and at a location reflecting maximum residence time in the distribution system. Any additional routine sampling must be conducted in the same manner (as three sample sets, at the specified locations). The water supplier may use the results of additional monitoring conducted under paragraph (4)(g)(B) of this rule to meet the requirement for monitoring in this paragraph.

(B) Additional monitoring. On each day following a routine sample monitoring result that exceeds the chlorite MCL at the entrance to the distribution system, the water supplier is required to collect three chlorite distribution system samples at the following locations: as close to the first customer as possible, in a location representative of average residence time, and as close to the end of the distribution system as possible (reflecting maximum residence time in the distribution system).

(C) Reduced monitoring.

(i) Chlorite monitoring at the entrance to the distribution system required by subparagraph (4)(g)(A)(i) of this rule may not be reduced.

(ii) Chlorite monitoring in the distribution system required by subparagraph (4)(g)(A)(ii) of this rule may be reduced to one three sample set per quarter after one year of monitoring where no individual chlorite sample taken in the distribution system under subparagraph (4)(g)(A)(ii) of this rule has exceeded the chlorite MCL and the system has not been required to conduct monitoring under paragraph (4)(g)(B) of this rule. The system may remain on the reduced monitoring schedule until either any of the three individual chlorite samples taken quarterly in the distribution system under subparagraph (4)(g)(A)(ii) of this rule exceeds the chlorite MCL or the system is required to conduct monitoring under paragraph (4)(g)(B) of this rule, at which time the system must revert to routine monitoring.

(D) Compliance must be based on an arithmetic average of each three sample set taken in the distribution system as required by subparagraph (4)(g)(A)(ii) of this rule and paragraph (4)(g)(B) of this rule. If the arithmetic average of any three sample set exceeds the MCL, the water system is in violation of the MCL and must notify the public as required by OAR 333-061-0042(2)(b)(A), in addition to reporting to the Authority as required by OAR 333-061-0040.

(h) Bromate monitoring and compliance for water systems where ozone is used for disinfection or oxidation.

(A) Routine monitoring. One sample must be collected every month for each treatment plant in the water system using ozone. Water suppliers must collect samples monthly at the entrance to the distribution system while the ozonation system is operating under normal conditions.

(B) Reduced monitoring. Bromate monitoring may be reduced from monthly to quarterly if the bromate concentration is less than or equal to 0.0025 mg/L as a running annual average based on monthly bromate measurements for the most recent four quarters. Water suppliers may continue reduced monitoring as long as the running annual average of quarterly bromate samples is less than or equal to 0.0025 mg/L. If the running annual average bromate concentration is >0.0025 mg/L, the water supplier must resume routine monitoring as required by paragraph (4)(h)(A) of this rule.

(C) Compliance must be based on a running annual arithmetic average, computed quarterly, of monthly samples (or, for months in which the system takes more than one sample, the average of all samples collected during the month) collected by the water supplier as required by this subsection. If the average of samples covering any consecutive four quarter period exceeds the MCL, the water system is in violation of the MCL and must notify the public as required by OAR 333-061-0042(2)(b)(A), in addition to reporting to the Authority as required by OAR 333-061-0040. If a water supplier fails to complete 12 consecutive months monitoring, compliance with the MCL for the last four quarter compliance period must be based on an average of the available data.

(i) Monitoring and compliance requirements for disinfectant residuals

(A) Chlorine and chloramines

(i) Routine monitoring. At water systems where chlorine or chloramines are used, water suppliers must measure the residual disinfectant level at the same points in the distribution system and at the same time when total coliforms are sampled as specified in OAR 333-061-0036(6). At water systems where surface water or GWUDI sources are used, results of residual disinfectant concentration sampling conducted as required by OAR 333-061-0036(5)(a)(F) for unfiltered systems or OAR 333-061-0036(5)(b)(E) for systems which filter, may be used in lieu of collecting separate samples. Compliance with this rule is achieved when the running annual average of monthly averages of samples collected in the distribution system, computed quarterly, is less than or equal to the MRDL. Operators may increase residual disinfectant levels of chlorine or chloramine (but not chlorine dioxide) in the distribution system to a level and for a time necessary to protect public health in order to address specific microbiological contaminant problems resulting from events in the source water or in the distribution system.

(ii) Reduced monitoring from subparagraph (4)(i)(A)(i) of this rule is not allowed.

(iii) Compliance requirements for chlorine and chloramines.

(I) Compliance must be based on a running annual arithmetic average, computed quarterly, of monthly averages of all samples collected by the water supplier as required by paragraph (4)(i)(A) of this rule. If the average covering any consecutive four quarter period exceeds the MRDL, the MRDL is exceeded and the water supplier must notify the public as required by OAR 333-061-0042(2)(b)(A), in addition to reporting to the Authority as required by OAR 333-061-0040.

(II) In cases where water suppliers switch between the use of chlorine and chloramines for residual disinfection at a water system during the year, compliance must be determined by including together all monitoring results of both chlorine and chloramines in calculating compliance. Reports submitted as required by OAR 333-061-0040(1) must clearly indicate which residual disinfectant was analyzed for each sample.

(B) Chlorine dioxide

(i) Routine monitoring. At water systems where chlorine dioxide is used for disinfection or oxidation, water suppliers must collect daily samples at the entrance to the distribution system. For any daily sample that exceeds the MRDL, the water supplier must collect samples in the distribution system the following day at the locations required by subparagraph (4)(i)(B)(ii) of this rule, in addition to the sample required at the entrance to the distribution system. Compliance with this rule is achieved when daily samples are taken at the entrance to the distribution system and no two consecutive daily samples exceed the MRDL.

(ii) Additional monitoring. On each day following a routine sample monitoring result that exceeds the MRDL, the water supplier is required to collect three chlorine dioxide distribution system samples. If chlorine dioxide or chloramines are used to maintain a disinfectant residual in the distribution system, or if chlorine is used to maintain a disinfectant residual in the distribution system and there are no disinfection addition points after the entrance to the distribution system (that is, no booster chlorination), the water supplier must collect three samples as close to the first customer as possible, at intervals of at least six hours. If chlorine is used to maintain a disinfectant residual in the distribution system and there are one or more disinfection addition points after the entrance to the distribution system (that is, booster chlorination), the water supplier must collect one sample at each of the following locations: as close to the first customer as possible, in a location representative of average residence time, and as close to the end of the distribution system as possible (reflecting maximum residence time in the distribution system).

(iii) Chlorine dioxide monitoring may not be reduced from subparagraph (4)(i)(B)(ii) of this rule.

(iv) Compliance requirements for chlorine dioxide

(I) Acute violations. Compliance must be based on consecutive daily samples collected by the water system as required by paragraph (4)(i)(B) of this rule. If any daily sample taken at the entrance to the distribution system exceeds the MRDL, and on the following day one (or more) of the three samples taken in the distribution system exceed the MRDL, the water system is in violation of the MRDL and must take immediate corrective action to lower the level of chlorine dioxide below the MRDL and must notify the public pursuant to the procedures for acute health risks as required by OAR 333-061-0042(2)(a)(C) in addition to reporting to the Authority as required by OAR 333-061-0040. Failure to take samples in the distribution system the day following an exceedance of the chlorine dioxide MRDL at the entrance to the distribution system will also be considered an MRDL violation and the water system must notify the public of the violation in accordance with the provisions for acute violations as required by OAR 333-061-0042(2)(a)(C) in addition to reporting to the Authority as required by OAR 333-061-0040.

(II) Non-acute violations. Compliance must be based on consecutive daily samples collected by the system as required by paragraph (4)(i)(B) of this rule. If any two consecutive daily samples taken at the entrance to the distribution system exceed the MRDL and all distribution system samples taken are below the MRDL, the water system is in violation of the MRDL and must take corrective action to lower the level of chlorine dioxide below the MRDL at the point of sampling and will notify the public pursuant to the procedures for non-acute health risks specified by OAR 333-061-0042(2)(b)(A), in addition to reporting to the Authority as required by OAR 333-061-0040. Failure to monitor at the entrance to the distribution system the day following an exceedance of the chlorine dioxide MRDL at the entrance to the distribution system is also an MRDL violation and the water system must notify the public of the violation in accordance with the provisions for non-acute violations specified by OAR 333-061-0042(2)(b)(A) in addition to reporting to the Authority as required by OAR 333-061-0040.

(j) Additional requirements for purchasing water systems. Purchasing water systems that do not add a disinfectant, but deliver water where a disinfectant (oxidant) has been added to the water supply at any point in the treatment process must comply with analytical and monitoring requirements for chlorine and chloramines as prescribed in subsection (4)(i) of this rule.

(k) Monitoring requirements for disinfection byproduct precursors (DBPP)

(A) Routine monitoring. At water systems where surface water or GWUDI sources are used and where conventional filtration treatment is used, monitoring must be conducted at each treatment plant for TOC no later than the point of combined filter effluent turbidity monitoring and representative of the treated water. Monitoring for TOC must be conducted in the source water prior to any treatment at the same time as monitoring for TOC in the treated water. These samples (source water and treated water) are referred to as paired samples. At the same time as the source water sample is collected, all water suppliers must also measure alkalinity in the source water prior to any treatment. Water suppliers must collect one paired sample and one source water alkalinity sample per month per treatment plant at a time representative of normal operating conditions and influent water quality.

(B) Reduced monitoring. At water systems using surface water or GWUDI sources with an average treated water TOC of less than 2.0 mg/L for two consecutive years, or less than 1.0 mg/L for one year, monitoring may be reduced to one paired sample and one source water alkalinity sample per plant per quarter. The water system must revert to routine monitoring in the month following the quarter when the annual average treated water TOC is greater than or equal to 2.0 mg/L.

(C) Compliance must be determined as specified by OAR 333-061-0032(10)(e). Water suppliers may begin monitoring to determine whether Step 1 TOC removals can be met 12 months prior to the compliance date for the system. This monitoring is not required and failure to monitor during this period is not a violation. However, any water system that does not monitor during this period, and then determines in the first 12 months after the compliance date that it is not able to meet the Step 1 requirements as specified in OAR 333-061-0032(10)(d)(B) and must therefore apply for

alternate minimum TOC removal (Step 2) requirements, is not eligible for retroactive approval of alternate minimum TOC removal (Step 2) requirements as allowed by OAR 333-061-0032(10)(d)(C) and is in violation. Water systems may apply for alternate minimum TOC removal (Step 2) requirements any time after the compliance date. For systems required to meet step 1 TOC removals, if the value calculated under OAR 333-061-0032(10)(e)(A)(iv) is less than 1.00, the system is in violation of the treatment technique requirements and must notify the public pursuant to OAR 333-061-0042(2)(b)(A), in addition to reporting to the Authority pursuant to OAR 333-061-0040.

(l) Disinfection Profiling and Disinfection Benchmarking. For any community, non-transient non-community, or transient non-community water system utilizing surface water or GWUDI sources where a significant change to the disinfection treatment process as defined by OAR 333-061-0060(1)(e)(A) through (1)(e)(D) is proposed, the water supplier must conduct disinfection profiling and benchmarking for Giardia lamblia and viruses. For any community or non-transient non-community water system where surface water or GWUDI sources are used and where the running annual average greater than or equal to 0.064 mg/l for TTHM or 0.048 mg/l for HAA5, the water supplier must conduct disinfection profiling for Giardia lamblia.

(A) For water systems serving at least 10,000 people, water suppliers must conduct the disinfection profiling in accordance with the USEPA Disinfection Profiling and Benchmarking Guidance Manual. The profile must be based on daily inactivation rate calculations over a period of 12 consecutive months. If chloramines, ozone, or chlorine dioxide is used as a primary disinfectant, the log inactivation for viruses must be calculated and an additional disinfection profile must be developed using a method approved by the Authority.

(B) At water systems serving less than 10,000 people, the disinfection profiling must be conducted in accordance with or the USEPA LT1-ESWTR Disinfection Profiling and Benchmarking Technical Guidance Manual. The profile must be based on weekly inactivation rate calculations collected on the same calendar day over a period of 12 consecutive months. If chloramines, ozone, or chlorine dioxide are used as a primary disinfectant, the log inactivation for viruses must be calculated and an additional disinfection profile must be developed using a method approved by the Authority.

(C) At water systems using either a single or multiple points of disinfection, monitoring must be conducted according to the following parameters to determine total log inactivation for each disinfection segment:

(i) The temperature of the disinfected water at each residual disinfectant concentration sampling point during peak hourly flow;

(ii) The pH of the disinfected water at each residual disinfectant concentration sampling point during peak hourly flow for systems using chlorine;

(iii) The disinfectant contact time(s) ("T") during peak hourly flow; and

(iv) The residual disinfectant concentration(s) ("C") of the water before or at the first customer and prior to each additional point of disinfection during peak hourly flow.

(D) Water suppliers required to develop disinfection profiles as prescribed by OAR 333-061-0060(1)(e) must meet the requirements of subparagraphs (4)(l)(D)(i) through (iii) of this rule:

(i) Water systems must monitor at least weekly for a period of 12 consecutive months to determine the total log inactivation for Giardia lamblia and viruses. If water systems monitor more frequently, the monitoring frequency must be evenly spaced. Water systems that operate for fewer than 12 months per year must monitor weekly during the period of operation;

(ii) Water systems must determine log inactivation for Giardia lamblia through the entire plant, based on CT99.9 values in Tables 21 through 28 in OAR 333-061-0036(5) as applicable; and [Table not included. See ED. NOTE.]

(iii) Water systems must determine log inactivation for viruses through the entire treatment plant based on a protocol approved by the Authority.

(E) Water suppliers must calculate the total inactivation ratio for Giardia lamblia as specified in this paragraph.

(i) Water systems using only one point of disinfectant application must determine the total inactivation ratio for the disinfection segment based on the methods specified in this paragraph.

(I) Water systems must determine one inactivation ratio (CTcalc/CT99.9) before or at the first customer during peak hourly flow; or

(II) Must determine successive (CTcalc/CT99.9) values, representing sequential inactivation ratios, between the point of disinfectant application and a point before or at the first customer during peak hourly flow. Water systems must calculate the total inactivation ratio by determining (CTcalc/CT99.9) for each sequence and then adding the (CTcalc/CT99.9) values together to determine Σ(CTcalc/CT99.9).

(ii) For water systems where there is more than one point of disinfectant application before the first customer, water suppliers must determine the (CTcalc/CT99.9) value of each disinfection segment immediately prior to the next point of disinfectant application, or for the final segment, before or at the first customer, during peak hourly flow. The (CTcalc/CT99.9) value of each segment and Σ(CTcalc/CT99.9) must be calculated using the method in subparagraph (4)(l)(E)(i)(II) of this rule.

(iii) The system must determine the total log of inactivation by multiplying the value calculated in subparagraphs (4)(l)(E)(i) or (ii) of this rule by 3.0.

(F) In lieu of conducting new monitoring as prescribed by paragraph (4)(l)(C) of this rule, water suppliers may elect to meet the requirements of subparagraphs (4)(l)(F)(i) or (ii) of this rule as follows:

(i) For water systems that have at least one year of existing data that are substantially equivalent to data collected in accordance with the provisions of this subsection may use these data to develop disinfection profiles as specified in this section if the water supplier has not made a significant change to treatment practices nor changed sources since the data were collected. Water suppliers may develop disinfection profiles using up to three years of existing data.

(ii) Water suppliers may use disinfection profile(s) developed as prescribed by this subsection in lieu of developing a new profile if the system has neither made a significant change to its treatment practice nor changed sources since the profile was developed. Water systems that have not developed a virus profile as prescribed by paragraph (4)(l)(G) of this rule must develop a virus profile using the same monitoring data on which the Giardia lamblia profile is based.

(G) Water suppliers must calculate the log of inactivation for viruses using a similar protocol as described in paragraph (4)(l)(D) of this rule, using a CT99.99 and a multiplication factor of 4.0.

(H) A water system subject to OAR 333-061-0060(1)(e) must calculate a disinfection benchmark using the procedures specified in subparagraphs (4)(l)(H)(i) and (ii) of this rule to calculate a disinfection benchmark.

(i) For each year of profiling data collected and calculated as prescribed by paragraphs (4)(l)(A) through (G) of this rule, systems must determine the lowest mean monthly level of both Giardia lamblia and virus inactivation. Water systems must determine the mean Giardia lamblia and virus inactivation for each calendar month for each year of profiling data by dividing the sum of daily or weekly Giardia lamblia and virus log inactivation by the number of values calculated for that month.

(ii) The disinfection benchmark is the lowest monthly mean value (for water systems with one year of profiling data) or the mean of the lowest monthly mean values (for water systems with more than one year of profiling data) of Giardia lamblia and virus log inactivation in each year of profiling data.

(I) Water systems must retain the disinfection profile data in graphic form, such as a spreadsheet, which must be available for

review by the Authority as part of a sanitary survey or other field visit contact.

(5) Surface Water Treatment.

(a) A public water system that uses a surface water source or a groundwater source under the direct influence of surface water that does not provide filtration treatment must monitor water quality as specified in this subsection beginning January 1, 1991 for systems using a surface water source and January 1, 1991 or 6 months after the Authority has identified a source as being under the direct influence of surface water for groundwater sources, whichever is later.

(A) Fecal coliform or total coliform density measurements as required by OAR 333-061-0032(2)(a)(A) must be performed on representative source water samples immediately prior to the first or only point of disinfectant application. The system must sample for fecal or total coliforms at the minimum frequency shown in Table 20 each week the system serves water to the public. These samples must be collected on separate days. Also one fecal or total coliform density measurement must be made every day the system serves water to the public when the turbidity of the source water exceeds 1 NTU (these samples count towards the weekly coliform sampling requirement) unless the Authority determines that the system, for logistical reasons outside of its control, cannot have the sample analyzed within 30 hours of collection. [Table not included. See ED. NOTE.]

(B) Turbidity measurements to determine compliance with OAR 333-061-0030(3)(a) must be performed on representative grab samples of source water immediately prior to the first or only point of disinfectant application every four hours (or more frequently) that the system serves water to the public. A public water system may substitute continuous turbidity monitoring for grab sample monitoring if it validates the continuous measurement for accuracy on a regular basis using a protocol approved by the Authority. Systems using continuous turbidity monitoring must report the turbidity data to the Authority in the same manner that grab sample results are reported. The Authority will furnish report forms upon request.

(C) The total inactivation ratio for each day that the system is in operation must be determined based on the CT99.9 values in Tables 21 through 28. The parameters necessary to determine the total inactivation ratio must be monitored as follows: [Table not included. See ED. NOTE.]

(i) The temperature of the disinfected water must be measured at least once per day at each residual disinfectant concentration sampling point.

(ii) If the system uses chlorine, the pH of the disinfected water must be measured at least once per day at each chlorine residual disinfectant concentration sampling point.

(iii) The disinfectant contact time(s) ("T") in minutes must be determined for each day during peak hourly flow.

(iv) The residual disinfectant concentration(s) ("C") in mg/l before or at the first customer must be measured each day during peak hourly flow.

(v) If a system uses a disinfectant other than chlorine or UV, the system may demonstrate to the Authority, through the use of protocol approved by the Authority for on-site disinfection challenge studies or other information satisfactory to the Authority, that CT99.9 values other than those specified in the Tables 27 and 28 or other operational parameters are adequate to demonstrate that the system is achieving the minimum inactivation rates required by OAR 333-061-0032(3)(a). [Table not included. See ED. NOTE.]

(D) The total inactivation ratio must be calculated as follows:

(i) If the system uses only one point of disinfectant application, the system may determine the total inactivation ratio based on either of the following two methods:

(I) One inactivation ratio (CTcalc/CTrequired) is determined before or at the first customer during peak hourly flow and if the CTcalc/CTrequired is greater than or equal to 1.0, the Giardia lamblia inactivation requirement has been achieved; or

(II) Successive CTcalc/CTrequired values representing sequential inactivation ratios, are determined between the point of disinfection application and a point before or at the first customer during peak hourly flow. Under this alternative, the following method must be used to calculate the total inactivation ratio:

Step 1: Determine CTcalc/CTrequired for each sequence
Step 2: Add the CTcalc/CTrequired values together
Step 3: If (CTcalc/CTrequired) is greater than or equal to 1.0, the Giardia lamblia inactivation requirement has been achieved.

(ii) If the system uses more than one point of disinfectant application before or at the first customer, the system must determine the CT value of each disinfection sequence immediately prior to the next point of disinfectant application during peak hourly flow. The CTcalc/CTrequired value of each sequence and CTcalc/CTrequired must be calculated using the methods in subparagraph (5)(a)(D)(i)(II) of this rule to determine if the system is in compliance with OAR 333-061-0032(3)(a) or (5)(a).

(E) The residual disinfectant concentration of the water entering the distribution system must be monitored continuously, and the lowest value must be recorded each day. If there is a failure in the continuous monitoring equipment, grab sampling every 4 hours may be conducted in lieu of continuous monitoring, but for no more than 5 working days following the failure of the equipment, and systems serving 3,300 or fewer persons may take grab samples in lieu of providing continuous monitoring on an ongoing basis at the frequencies prescribed in Table 29. The day's samples cannot be taken at the same time. The sampling intervals are subject to Authority review and approval. If at any time the residual disinfectant concentration falls below 0.2 mg/l in a system using grab sampling in lieu of continuous monitoring, the system must take a grab sample every 4 hours until the residual disinfectant concentration is > 0.2 mg/l. [Table not included. See ED. NOTE.]

(F) The residual disinfectant concentration must be measured at least at the same points in the distribution system and at the same time as total coliforms are sampled as specified in section (6) of this rule, except that the Authority may allow a public water system which uses both a surface water source or a groundwater source under the direct influence of surface water, and a groundwater source, to take disinfectant residual samples at points other than the total coliform sampling points if the Authority determines that such points are more representative of treated (disinfected) water quality within the distribution system.

(b) A public water system that uses a surface water source or a groundwater source under the direct influence of surface water that does provide filtration treatment must monitor water quality as specified in this subsection when filtration treatment is installed.

(A) Turbidity

(i) Turbidity measurements as required by section OAR 333-061-0032(4) must be performed on representative samples of the system's filtered water, measured prior to any storage, every four hours (or more frequently) that the system serves water to the public. A public water system may substitute continuous turbidity monitoring for grab sample monitoring if it validates the continuous measurement for accuracy on a regular basis using a protocol approved by the Authority.

(ii) Calibration of all turbidimeters must be performed according to manufacturer's specifications, but no less frequently than quarterly.

(iii) Water systems using conventional filtration must measure settled water turbidity every day.

(iv) Water systems using conventional or direct filtration must conduct turbidity profiles for individual filters every calendar quarter.

(v) For any systems using slow sand filtration or filtration treatment other than conventional treatment, direct filtration, or diatomaceous earth filtration, the Authority may reduce the sampling frequency to once per day if it determines that less frequent monitoring is sufficient to indicate effective filtration performance.

(vi) Systems using lime softening may acidify representative samples prior to analysis using a method approved by the Authority.

(B) The actual CT value achieved must be calculated each day the treatment plant is in operation. The parameters necessary to determine the actual CT value must be monitored as follows:

(i) The temperature of the disinfected water must be measured at least once per day at each residual disinfectant concentration sampling point as prescribed in subparagraph (5)(b)(B)(iv) of this rule.

(ii) If the system uses chlorine, the pH of the disinfected water must be measured at least once per day at each chlorine residual disinfectant concentration sampling point.

(iii) The disinfectant contact time(s) ("T") in minutes must be determined for each day during peak hourly flow, based on results of a tracer study conducted according to OAR 333-061-0050(6)(a)(R), or other method approved by the Authority.

(iv) The residual disinfectant concentration(s) ("C") in mg/l before or at the first customer must be measured each day during peak hourly flow.

(v) If a system uses a disinfectant other than chlorine, the system may demonstrate to the Authority, through the use of protocol approved by the Authority for on-site disinfection challenge studies or other information satisfactory to the Authority, or other operational parameters are adequate to demonstrate that the system is achieving the minimum inactivation rates required by OAR 333-061-0032(5)(a).

(C) The inactivation ratio calculations as prescribed in paragraph (5)(a)(D) of this rule.

(D) Monitoring for the residual disinfectant concentration entering the distribution system shall be performed as prescribed in paragraph (5)(a)(E) of this rule.

(E) Monitoring for the residual disinfectant concentration in the distribution system shall be performed as prescribed in paragraph (5)(a)(F) of this rule.

(F) Water systems using membrane filtration must perform direct integrity testing on each filter canister at least daily, per OAR 333-061-0036(5)(d)(B).

(c) Inactivation credit for water systems using a disinfectant other than chlorine for pathogen inactivation.

(A) Calculation of CT values.

(i) CT is the product of the disinfectant concentration (C, in milligrams per liter) and actual disinfectant contact time (T, in minutes). Systems with treatment credit for chlorine dioxide or ozone as prescribed by paragraphs (5)(c)(B) or (C) of this rule must calculate CT at least once per day, with both C and T measured during peak hourly flow as specified in paragraph (5)(b)(B) of this rule.

(ii) Systems with several disinfection segments in sequence must calculate CT for each segment where treatment credit is sought, where a disinfection segment is defined as a treatment unit process with a measurable disinfectant residual level and a liquid volume. If using this approach, water systems must add the Cryptosporidium CT values in each segment to determine the total CT for the treatment plant.

(B) CT values for chlorine dioxide and ozone.

(i) Systems receive the Cryptosporidium treatment credit listed in Table 30 by meeting the corresponding chlorine dioxide CT value for the applicable water temperature, as described in paragraph (5)(c)(A) of this rule. [Table not included. See ED. NOTE.]

(ii) Systems receive the Cryptosporidium treatment credit listed in Table 31 by meeting the corresponding ozone CT values for the applicable water temperature, as described in paragraph (5)(c)(A) of this rule. [Table not included. See ED. NOTE.]

(C) Site-specific study. The Authority may approve alternative chlorine dioxide or ozone CT values to those listed in Table 30 or Table 31 on a site-specific basis. The Authority must base this approval on a site-specific study conducted by a water system that follows an Authority approved protocol. [Table not included. See ED. NOTE.]

(D) Ultraviolet light. Systems receive Cryptosporidium, Giardia lamblia, and virus treatment credits for ultraviolet light (UV) reactors by achieving the corresponding UV dose values shown in subparagraph (5)(c)(D)(i) of this rule. Systems must validate and monitor UV reactors as described in OAR 333-061-0050(5)(k) and subparagraphs (5)(c)(D)(ii) and (iii) of this rule to demonstrate that they are achieving a particular UV dose value for treatment credit.

(i) UV dose table. The treatment credits listed in this table are for UV light at a wavelength of 254 nm as produced by a low pressure mercury vapor lamp. To receive treatment credit for other lamp types, systems must demonstrate an equivalent germicidal dose through reactor validation testing as specified in OAR 333-061-0050(5)(k). The UV dose values in Table 32 are applicable to post-filter applications of UV in filtered water systems, unfiltered water systems, and groundwater systems required to disinfect as prescribed by OAR 333-061-0032(6). [Table not included. See ED. NOTE.]

(ii) Reactor monitoring. Systems must monitor their UV reactors to determine if the reactors are operating within validated conditions, as prescribed by OAR 333-061-0050(5)(k). This monitoring must include UV intensity as measured by a UV sensor, flow rate, lamp status, UV Transmittance, and other parameters the Authority designates based on UV reactor operation. Water systems must verify the calibration of UV sensors at least monthly, and must recalibrate sensors in accordance with the EPA UV Disinfection Guidance Manual as necessary.

(iii) Water systems must monitor the percentage of water delivered to the public that was treated within validated conditions for the required UV dose. If less than 95 percent of water delivered was within validated conditions, a Tier 2 public notice must be issued as prescribed by OAR 333-061-0042(3)(b).

(d) Requirements for individual filter effluent turbidity monitoring

(A) In addition to subsection (5)(b) of this rule, water systems using surface water or groundwater under the direct influence of surface water where treatment includes conventional filtration treatment or direct filtration treatment must conduct continuous turbidity monitoring for each individual filter and must calibrate turbidimeters using the procedure specified by the manufacturer. Individual filter monitoring results must be recorded every 15 minutes. If there is a failure in the continuous turbidity monitoring equipment, the water system must conduct grab sampling every four hours in lieu of continuous monitoring until the turbidimeter is repaired and back on-line. The water system serving at least 10,000 people has a maximum of five working days after failure to repair the equipment or the water system is in violation. The water system serving less than 10,000 people has a maximum of 14 days to resume continuous monitoring before a violation is incurred. If the water system's conventional or direct filtration treatment plant consists of two or fewer filters, continuous monitoring of the combined filter effluent turbidity may be substituted for continuous monitoring of individual filter effluent turbidity. For systems serving less than 10,000 people, the recording and calibration requirements that apply to individual filters also apply when continuous monitoring of the combined filter effluent turbidity is substituted for the continuous monitoring of individual filter effluent turbidity;

(B) Direct integrity testing for membrane filtration. Water systems must conduct direct integrity testing in a manner that demonstrates a removal efficiency equal to or greater than the removal credit awarded to the membrane filtration process, and that meets the requirements described in this paragraph. A direct integrity test is defined as a physical test applied to a membrane unit in order to identify and isolate integrity breaches (that is, one or more leaks that could result in contamination of the filtrate).

(i) The direct integrity test must be independently applied to each membrane unit in service. A membrane unit is defined as a group of membrane modules that share common valving that allows the unit to be isolated from the rest of the water system for the purpose of integrity testing or other maintenance.

(ii) The direct integrity method must have a resolution of three micrometers or less, where resolution is defined as the size of the smallest integrity breach that contributes to a response from the direct integrity test.

(iii) The direct integrity test must have a sensitivity sufficient to verify the log treatment credit awarded to the membrane

filtration process by the Authority, where sensitivity is defined as the maximum log removal value that can be reliably verified by a direct integrity test. Sensitivity must be determined using the approach in either subparagraphs (5)(d)(B)(iii)(I) or (II) of this rule as applicable to the type of direct integrity test the system uses.

(I) For direct integrity tests that use an applied pressure or vacuum, the direct integrity test sensitivity must be calculated according to the following equation:

LRVDIT = LOG10 (Qp /(VCF x Qbreach))

Where:

LRVDIT = the sensitivity of the direct integrity test;

Qp = total design filtrate flow from the membrane unit;

Qbreach = flow of water from an integrity breach associated with the smallest integrity test response that can be reliably measured; and

VCF = volumetric concentration factor. The volumetric concentration factor is the ratio of the suspended solids concentration on the high pressure side of the membrane relative to that in the feed water.

(II) For direct integrity tests that use a particulate or molecular marker, the direct integrity test sensitivity must be calculated according to the following equation:

LRVDIT = LOG10(Cf)-LOG10(Cp)

Where:

LRVDIT = the sensitivity of the direct integrity test;

Cf = the typical feed concentration of the marker used in the test; and

Cp = the filtrate concentration of the marker from an integral membrane unit.

(iv) Water systems must establish a control limit within the sensitivity limits of the direct integrity test that is indicative of an integral membrane unit capable of meeting the removal credit awarded by the Authority.

(v) If the result of a direct integrity test exceeds the control limit established under subparagraph (5)(d)(B)(iv) of this rule, the water system must remove the membrane unit from service. Water systems must conduct a direct integrity test to verify any repairs, and may return the membrane unit to service only if the direct integrity test is within the established control limit.

(vi) Water systems must conduct direct integrity testing on each membrane unit at a frequency of not less than once each day that the membrane unit is in operation. The Authority may approve less frequent testing, based on demonstrated process reliability, the use of multiple barriers effective for Cryptosporidium, or reliable process safeguards.

(C) Indirect integrity monitoring for membrane filtration. Water systems must conduct continuous indirect integrity monitoring on each membrane unit according to the criteria specified in this paragraph. Indirect integrity monitoring is defined as monitoring some aspect of filtrate water quality that is indicative of the removal of particulate matter. A water system that implements continuous direct integrity testing of membrane units in accordance with the criteria specified in subparagraphs (5)(d)(B)(i) through (v) of this rule is not subject to the requirements for continuous indirect integrity monitoring. Water systems must submit a monthly report to the Authority summarizing all continuous indirect integrity monitoring results triggering direct integrity testing and the corrective action that was taken in each case.

(i) Unless the Authority approves an alternative parameter, continuous indirect integrity monitoring must include continuous filtrate turbidity monitoring.

(ii) Continuous monitoring must be conducted at a frequency of no less than once every 15 minutes.

(iii) Continuous monitoring must be separately conducted on each membrane unit.

(iv) If indirect integrity monitoring includes turbidity and the filtrate turbidity readings are above 0.15 NTU for a period greater than 15 minutes (that is, two consecutive 15-minute readings above 0.15 NTU), direct integrity testing in accordance with subparagraphs (5)(d)(B)(i) through (v) of this rule must immediately be performed on the associated membrane unit.

(v) If indirect integrity monitoring includes an Authority-approved alternative parameter and if the alternative parameter exceeds an Authority approved control limit for a period greater than 15 minutes, direct integrity testing in accordance with subparagraphs (5)(d)(B)(i) through (v) of this rule must immediately be performed on the associated membrane unit.

(e) Source water monitoring. Wholesale water systems, as defined in OAR 333-061-0020(222), must comply with the requirements of this rule based on the population of the largest water system in the combined distribution system. Water systems required to provide filtration treatment must comply with the requirements of this rule whether or not the water system is currently operating filtration treatment. The requirements of this rule for unfiltered water systems only apply to those water systems that met and continue to meet the requirements of OAR 333-061-0032(2) and (3).

(A) Initial round. Water systems must conduct monitoring as prescribed by this paragraph, and following the schedule specified in paragraph (5)(e)(C) of this rule, unless the system meets the monitoring exemption criteria specified in paragraph (5)(e)(D) of this rule.

(i) Filtered water systems serving at least 10,000 people must sample their source water for Cryptosporidium, E. coli, and turbidity at least monthly for 24 months.

(ii) Unfiltered water systems serving at least 10,000 people must sample their source water for Cryptosporidium at least monthly for 24 months.

(iii) Filtered water systems serving less than 10,000 people must sample their source water for E. coli at least once every two weeks for 12 months.

(I) Filtered water systems serving fewer than 10,000 people may avoid E. coli monitoring if the system monitors for Cryptosporidium as prescribed in subparagraph (5)(e)(A)(iv) of this rule. The water system must notify the Authority no later than three months prior to the date the system is otherwise required to start E. coli monitoring under paragraph (5)(e)(C) of this rule.

(iv) Filtered water systems serving fewer than 10,000 people must sample their source water for Cryptosporidium at least twice per month for 12 months or at least monthly for 24 months if they meet one of the following, based on monitoring conducted in accordance with subparagraph (5)(e)(A)(iii) of this rule:

(I) The annual mean E. coli concentration, in the surface water source, is greater than 100 E. coli/100 mL;

(II) The water system does not conduct E. coli monitoring as described in subparagraph (5)(e)(A)(iii) of this rule; or

(III) Water systems using groundwater under the direct influence of surface water must comply with the requirements of this paragraph based on the E. coli level specified in subparagraph (5)(e)(A)(iv)(I) of this rule.

(v) Unfiltered water systems serving fewer than 10,000 people must sample their source water for Cryptosporidium at least twice per month for 12 months or at least monthly for 24 months.

(vi) Water systems may sample more frequently than required under this section if the sampling frequency is evenly spaced throughout the monitoring period.

(vii) The Authority may approve monitoring for an indicator other than E. coli to comply with the monitoring prescribed by subparagraph (5)(e)(A)(iii) of this rule for filtered water systems serving fewer than 10,000 people. The Authority may approve an alternative to the E. coli concentrations that trigger Cryptosporidium monitoring as specified in subparagraphs (5)(e)(A)(iv)(I) and (III) of this rule. The Authority's approval to the system will be in writing and will include the basis for the Authority's determination that the alternative indicator or trigger level will provide a more accurate identification of whether a water system will exceed the Bin 1 Cryptosporidium level specified in Table 8 in OAR 333-061-0032(4)(f)(F). [Table not included. See ED. NOTE.]

(B) Water systems must conduct a second round of source water monitoring that meets the requirements for monitoring parameters, frequency, and duration described in paragraph (5)(e)(A) of this rule, and according to the schedule in paragraph (5)(e)(C) of this rule, unless they meet the monitoring exemption criteria specified in paragraph (5)(e)(D) of this rule.

(C) Monitoring schedule. Systems must begin monitoring as required in paragraphs (5)(e)(A) and (B) of this rule no later than the month beginning with the date listed in Table 33. [Table not included. See ED. NOTE.]

(D) Monitoring avoidance.

(i) Filtered water systems are not required to conduct source water monitoring as prescribed by this subsection if the system will provide a total of at least 5.5-log of treatment for Cryptosporidium, equivalent to meeting the treatment requirements of Bin 4 in OAR 333-061-0032(4)(g) and 333-061-0032(13) through (18).

(ii) Unfiltered water systems are not required to conduct source water monitoring as prescribed by this subsection if the system will provide a total of at least 3-log Cryptosporidium inactivation, equivalent to meeting the treatment requirements for unfiltered systems with a mean Cryptosporidium concentration of greater than 0.01 oocysts/L in OAR 333-061-0032(3)(e).

(iii) If a water system chooses to provide the level of treatment specified in subparagraph (5)(e)(D)(i) or (ii) of this rule, rather than conducting source water monitoring, the water system must notify the Authority in writing no later than the date the system is otherwise required to submit a sampling schedule for monitoring as prescribed by OAR 333-061-0036(5)(f)(A). A water system may choose to cease source water monitoring at any point after it has initiated monitoring if it notifies the Authority in writing that it will provide this level of treatment. Water systems must install and operate technologies to provide this level of treatment by the applicable treatment compliance date in OAR 333-061-0032(1)(a)(F).

(E) Seasonal plants. Systems with surface water or GWUDI treatment plants that operate for only part of the year must conduct source water monitoring in accordance with this subsection, but with the following modifications:

(i) Water systems must sample their source water only during the months that the plant is in use unless the Authority specifies another monitoring period based on plant operating practices.

(ii) Water systems with treatment plants that operate less than six months per year, and that monitor for Cryptosporidium, must collect at least six Cryptosporidium samples per year for two years of monitoring. Samples must be evenly spaced throughout the period the plant operates.

(F) New sources. A water system that begins using a new source of surface water or GWUDI after the system is required to begin monitoring as prescribed in paragraph (5)(e)(C) of this rule must monitor the new source on a schedule the Authority approves. Source water monitoring must meet the requirements of this subsection, and the water system must also meet the bin classification and Cryptosporidium treatment requirements of OAR 333-061-0032 for the new source on a schedule the Authority approves.

(i) This applies to water systems using surface water or GWUDI sources that begin operation after the monitoring start date applicable to the system's size specified in Table 33.

(ii) The water system must begin a second round of source water monitoring no later than six years following determination of the mean Cryptosporidium level or initial bin classification as prescribed by OAR 333-061-0032(2) or (4) respectively, as applicable.

(G) Failure to collect any source water sample in accordance with the sampling requirements, schedule, sampling location, analytical method, approved laboratory, and reporting requirements of this section is a monitoring violation.

(H) Grandfathering monitoring data. Systems may use monitoring data collected prior to the applicable monitoring start date in paragraph (5)(e)(C) of this rule to meet the initial source water monitoring requirements in paragraph (5)(e)(A) of this rule. Grandfathered data may substitute for an equivalent number of months at the end of the monitoring period. All data submitted under this paragraph must meet the requirements in subsection (5)(h) of this rule.

(f) Source water sampling schedules.

(A) Water systems required to conduct source water monitoring as prescribed in subsection (5)(e) of this rule must submit a sampling schedule that specifies the calendar dates when the system will collect each required sample.

(i) Water systems must submit sampling schedules to the Authority, no later than three months prior to the applicable date listed in paragraph (5)(e)(C) of this rule, for each round of required monitoring.

(ii) If the Authority does not respond to a water system regarding its sampling schedule, the system must sample at the reported schedule.

(B) Water systems must collect samples within a five-day period, starting two days before the scheduled sampling date and ending two days after. The five-day period applies to each of the dates indicated in the sampling schedule unless one of the following conditions applies:

(i) An extreme condition or situation exists that may pose danger to the sample collector or that cannot be avoided, and that prevents the water system from sampling in the scheduled five-day period. In this case, the water system must sample as close to the scheduled date as possible unless the Authority approves an alternative sampling date. The water system must submit an explanation for the delayed sampling date to the Authority concurrent with the submittal of the sample to the laboratory; or

(ii) A water system is unable to report a valid analytical result for the scheduled sampling date due to equipment failure, loss of or damage to the sample, failure to comply with the analytical method requirements (including the quality control requirements), or the failure of an approved laboratory to analyze the sample.

(I) In this case the water system must collect a replacement sample as prescribed in subparagraph (5)(f)(B)(ii)(II) of this rule.

(II) The system must collect the replacement sample not later than 21 days after receiving information that an analytical result cannot be reported for the scheduled date unless the water system demonstrates that collecting a replacement sample within this time frame is not feasible or the Authority approves an alternative resampling date. The system must submit an explanation for the delayed sampling date to the Authority concurrent with the submittal of the sample to the laboratory.

(iii) Water systems that fail to meet the criteria of paragraph (5)(f)(B) of this rule for any required source water sample must revise their sampling schedules to add dates for collecting all missed samples. Water systems must submit the revised sampling schedule to the Authority for approval prior to beginning collecting the missed samples.

(g) Source water sampling locations.

(A) Water systems required to conduct source water monitoring as prescribed in subsection (5)(e) of this rule must collect samples for each plant that treats a surface water or GWUDI source. Where multiple plants draw water from the same influent, such as the same pipe or intake, the Authority may approve one set of monitoring results to be used to satisfy the requirements for all treatment plants.

(B) Water systems must collect source water samples prior to chemical treatment, such as coagulants, oxidants and disinfectants, unless the system meets the following condition:

(i) The Authority may approve a water system to collect a source water sample after chemical treatment if the Authority determines that collecting a sample prior to chemical treatment is not feasible for the system and that the chemical treatment is unlikely to have a significant adverse effect on the analysis of the sample.

(C) Water systems that recycle filter backwash water must collect source water samples prior to the point of filter backwash water addition.

(D) Bank filtration.

(i) Water systems that receive Cryptosporidium treatment credit for bank filtration as an alternate filtration technology as specified by OAR 333-061-0032(9) must collect source water samples in the surface water source prior to bank filtration.

(ii) Water systems that use bank filtration as pretreatment to a filtration plant must collect source water samples from the well, after bank filtration. Use of bank filtration during monitoring must be consistent with routine operational practice. Water systems collecting samples after a bank filtration process may not receive treatment credit for the bank filtration prescribed by OAR 333-061-0032(9).

(E) Multiple sources. Water systems with treatment plants that use multiple water sources, including multiple surface water sources and blended surface water and groundwater sources, must collect samples as specified in subparagraph (5)(g)(E)(i) or (ii) of this rule. The use of multiple sources during monitoring must be consistent with routine operational practice.

(i) If a sampling tap is available where the sources are combined prior to treatment, water systems must collect samples from this tap.

(ii) If a sampling tap where the sources are combined prior to treatment is not available, systems must collect samples at each source near the intake on the same day and must comply with either subparagraph (5)(g)(E)(ii)(I) or (II) below for sample analysis.

(I) Water systems may composite samples from each source into one sample prior to analysis. The volume of sample from each source must be weighted according to the proportion of the source in the total plant flow at the time the sample is collected.

(II) Water systems may analyze samples from each source separately and calculate a weighted average of the analysis results for each sampling date. The weighted average must be calculated by multiplying the analysis result for each source by the fraction the source contributed to total plant flow at the time the sample was collected and then adding these values.

(F) Additional requirements. Water systems must submit a description of their sampling location(s) to the Authority at the same time as the sampling schedule required under subsection (5)(f) of this rule. This description must address the position of the sampling location in relation to the system's water source(s) and treatment processes, including pretreatment, points of chemical treatment, and filter backwash recycle. If the Authority does not respond to a water system regarding sampling location(s), the system must sample at the reported location(s).

(h) Grandfathering previously collected data.

(A) Water systems may comply with the initial source water monitoring requirements of paragraph (5)(e)(A) of this rule by grandfathering sample results collected before the system is required to begin monitoring. To be grandfathered, the sample results and analysis must meet the criteria in this section and the Authority must approve the previously sampled data.

(i) A filtered water system may grandfather Cryptosporidium samples to meet the monitoring requirements of paragraph (5)(e)(A) of this rule when the system does not have corresponding E. coli and turbidity samples.

(ii) A water system that grandfathers Cryptosporidium samples is not required to collect the E. coli and turbidity samples when the system completes the requirements for Cryptosporidium monitoring under paragraph (5)(e)(A) of this rule.

(B) The analysis of grandfathered E. coli and Cryptosporidium samples must meet the analytical method and approved laboratory requirements of subsections (1)(a) and (1)(c) of this rule.

(C) The sampling location of grandfathered samples must meet the conditions specified in subsection (5)(g) of this rule.

(D) Grandfathered Cryptosporidium samples must have been collected no less frequently than each calendar month on a regular schedule, and no earlier than January 1999. Sample collection intervals may vary for the conditions specified in subparagraph (5)(f)(B)(i) through (ii) of this rule if the system provides documentation of the condition when reporting monitoring results.

(i) The Authority may approve grandfathering of previously collected data where there are time gaps in the sampling frequency if the water system conducts additional monitoring as specified by the Authority to ensure that the data used to comply with the initial source water monitoring requirements of paragraph (5)(e)(A) of this rule are seasonally representative and unbiased.

(ii) Water systems may grandfather previously collected data where the sampling frequency within each month varied. If the Cryptosporidium sampling frequency varied, water systems must follow the monthly averaging procedure in OAR 333-061-0032(2)(c)(B) or OAR-333-061-0032(4)(f)(E) as applicable, when calculating the bin classification for filtered water systems or the mean Cryptosporidium concentration for unfiltered water systems.

(E) Reporting monitoring results for grandfathering. Water systems that request to grandfather previously collected monitoring results must report the following information by the applicable dates listed in this paragraph.

(i) Water systems must report that they intend to submit previously collected monitoring. This report must specify the number of previously collected results the system will submit, the dates of the first and last sample, and whether a system will conduct additional source water monitoring to meet the requirements of paragraph (5)(e)(A) of this rule. Water systems must report this information no later than the date the sampling schedule is required as prescribed by subsection (5)(f) of this rule.

(ii) Water systems must report previously collected monitoring results for grandfathering, along with the associated documentation listed in subparagraphs (5)(h)(E)(ii)(I) through (IV) of this rule, no later than two months after the applicable date listed in paragraph (5)(e)(C) of this rule.

(I) For each sample result, water systems must report the applicable data elements specified by OAR 333-061-0040(1)(o).

(II) Water systems must certify that the reported monitoring results include all results the system generated during the time period beginning with the first reported result and ending with the final reported result. This applies to samples that were collected from the sampling location specified for source water monitoring under this paragraph and analyzed in accordance with subsection (1)(a) of this rule.

(III) Water systems must certify that the samples were representative of a plant's source water(s) and that the source water(s) have not changed. Water systems must report a description of the sampling location(s), which must address the position of the sampling location in relation to the system's water source(s) and treatment processes, including points of chemical addition and filter backwash recycle.

(IV) For Cryptosporidium samples, the laboratory or laboratories that analyzed the samples must provide a letter certifying that the quality control criteria in accordance with subsection (1)(a) of this rule were met for each sample batch associated with the reported results. Alternatively, the laboratory may provide bench sheets and sample examination report forms for each field, matrix spike, IPR, OPR, and method blank sample associated with the reported results.

(F) If the Authority determines that a previously collected data set submitted for grandfathering was generated during source water conditions that were not normal for the system, such as a drought, the Authority may disapprove the data. Alternatively, the Authority may approve the previously collected data if the water system reports additional source water monitoring data, as determined by the Authority, to ensure that the data set used under OAR 333-061-0032(4)(f) or 0032(2)(c) represents average source water conditions for the system.

(G) If a water system submits previously collected data that fully meets the number of samples required for initial source water monitoring required by paragraph (5)(e)(A) of this rule, and some of the data is rejected due to not meeting the requirements of this subsection, systems must conduct additional monitoring to replace rejected data on a schedule the Authority approves. Water systems are not required to begin this additional monitoring until two months after notification that data has been rejected and that additional monitoring is necessary.

(6) Coliform Bacteria and Microbiological Contaminants

(a) General requirements for coliform bacteria sampling

(A) Sample Handling Requirements

(i) The standard sample volume required for analysis, regardless of analytical method used, is 100 ml.

(ii) Only the presence or absence of total coliforms and E. coli is required to be determined, not a determination of density.

(iii) Test medium incubation must be initiated within 30 hours of sample collection. Samples should be held below 10 deg. C during transit.

(iv) If water having residual chlorine (measured as free, combined, or total chlorine) is to be analyzed, sufficient sodium thiosulfate (Na2S2O3) must be added to the sample bottle before sterilization to neutralize any residual chlorine in the water sample. Dechlorination procedures are addressed in Section 9060A.2 of Standard Methods for the Examination of Water and Wastewater (20th and 21st editions).

(B) Water suppliers must comply with the repeat monitoring requirements and E. coli analytical requirements specified in subsection (6)(g) of this rule following any total coliform-positive sample collected according to subsections (6)(b) through (6)(f) of this rule.

(C) Water suppliers must determine whether a coliform investigation trigger as specified in OAR 333-061-0078(2) has been exceeded once all monitoring as required by subsections (6)(b) through (6)(g) of this rule has been completed for a calendar month.

(D) If a routine or repeat sample is total coliform-positive, the sample must be analyzed to determine if E. coli are present. If E. coli are present, the water supplier must notify the Authority by the end of the day when the water supplier is notified of the test result, unless the water supplier is notified of the result after the Authority office is closed, in which case the water supplier must notify the Authority before the end of the next business day.

(E) The Authority may, on a case-by-case basis, allow a water supplier to forgo E. coli testing on a total coliform-positive sample if that water supplier assumes that the total coliform-positive sample is E. coli-positive. Accordingly, the water supplier must notify the Authority as specified in paragraph (6)(a)(D) of this rule and take action appropriate for exceeding the MCL for E. coli as specified in OAR 333-061-0030(4).

(F) The Authority may invalidate a total coliform-positive sample only if the conditions specified in subparagraph (6)(a)(F)(i), (ii), or (iii) of this rule are met. A total coliform-positive sample invalidated according to this paragraph does not count toward meeting the minimum monitoring requirements of this rule.

(i) The laboratory establishes that improper sample analysis caused the total coliform-positive result.

(ii) The Authority, on the basis of the results of repeat samples collected as required by subsection (6)(g) of this rule, determines that the total coliform-positive sample resulted from a domestic or other non-distribution system plumbing problem. The Authority cannot invalidate a sample on the basis of repeat sample results unless all repeat sample(s) collected at the same tap as the original total coliform-positive sample are also total coliform-positive, and all repeat samples collected at a location other than the original tap are total coliform-negative (for example, the Authority cannot invalidate a total coliform-positive sample on the basis of repeat samples if all the repeat samples are total coliform-negative, or if the water system has only one service connection).

(iii) The Authority has substantial grounds to believe that a total coliform-positive result is due to a circumstance or condition that does not reflect water quality in the distribution system. In this case, the water supplier must still collect all repeat samples required by subsection (6)(g) of this rule, and use them to determine whether a coliform investigation trigger as specified in OAR 333-061-0078(2) has been exceeded. To invalidate a total coliform-positive sample under this paragraph, the decision and supporting rationale must be documented in writing, and approved and signed by the supervisor of the Authority official who recommended the decision. The written documentation must state the specific cause of the total coliform-positive sample, and what action the water supplier has taken, or will take, to correct this problem. The Authority will not invalidate a total coliform-positive sample solely on the grounds that all repeat samples are total coliform-negative. If the Authority invalidates a sample according to this subparagraph the written documentation will be made available to the EPA or the public upon request.

(G) A laboratory must invalidate a total coliform sample (unless total coliforms are detected) if the sample produces a turbid culture in the absence of gas production using an analytical method where gas formation is examined (for example, the Multiple-Tube Fermentation Technique), produces a turbid culture in the absence of an acid reaction in the Presence-Absence (P–A) Coliform Test, or exhibits confluent growth or produces colonies too numerous to count with an analytical method using a membrane filter (for example, Membrane Filter Technique). If a laboratory invalidates a sample because of such interference, the system must collect another sample from the same location as the original sample within 24 hours of being notified of the interference problem, and have it analyzed for the presence of total coliforms. The water supplier must continue to re-sample within 24 hours and have the samples analyzed until it obtains a valid result. The Authority may waive the 24-hour time limit on a case-by-case basis.

(H) A total coliform-positive sample invalidated according to paragraphs (6)(a)(F) or (G) of this rule does not count toward meeting the minimum monitoring requirements specified in this section.

(I) Water suppliers must develop a written coliform sampling plan for every water system that they own or operate or for which they are responsible according to the criteria in this paragraph by March 31, 2016. The plan must identify sampling sites and a sample collection schedule that is representative of water throughout the distribution system. Water suppliers must collect total coliform samples according to the plan. Plans are subject to Authority review and revision.

(i) Monitoring required by subsections (6)(b) through (6)(g) of this rule may take place at a customer's premises, dedicated sampling station, or other designated sampling location. Routine and repeat sample sites and any sampling points necessary to meet the requirements of subsection (6)(i) of this rule must be reflected in the coliform sampling plan.

(ii) Samples must be collected at regular time intervals throughout the month, except that groundwater systems serving 4,900 or fewer people may collect all required samples on a single day if they are collected at different sites.

(iii) Water suppliers must collect at least the minimum number of required samples every month even if the MCL for E. coli as specified in OAR 333-061-0030(4) was exceeded or a coliform investigation trigger as specified in OAR 333-061-0078(2) was exceeded.

(iv) Water suppliers may use monitoring as a tool to assist in investigating problems whereby additional samples beyond the number required by this section may be collected to investigate potential problems in the distribution system. A water supplier collecting more routine samples than required in a month must include the results of the additional sampling in calculating whether a coliform investigation trigger as specified in OAR 333-061-0078(2) has been exceeded only if the samples are collected in accordance with an existing coliform sampling plan and are representative of water throughout the distribution system.

(v) Water suppliers must identify repeat monitoring locations in the coliform sampling plan. At least one repeat sample must be collected from the sampling tap where the original total coliform-positive sample was collected, at least one repeat sample must be collected at a tap within five service connections upstream and at least one repeat sample must be collected at a tap within five service connections downstream of the original sampling site unless the provisions of subparagraphs (6)(a)(I)(v)(I) or (6)(a)(I)(v)(II) of this rule are met. If a total coliform-positive sample is at the end of the distribution system, or one service connection away from the end of the distribution system, the Authority may allow an alternative sampling location in lieu of the requirement to collect at least one repeat sample upstream or downstream of the original sampling site. Except as provided for in subparagraph (6)(a)(I)(v)(II) of this rule, at water systems where triggered source water monitoring is required according to paragraph (6)(i)(A), groundwater source samples must be collected in addition to repeat samples as required by subsection (6)(g) of this rule.

(I) Water suppliers may propose repeat monitoring locations to the Authority that the water supplier believes to be representative of a pathway for contamination of the distribution system. A water supplier may elect to specify either alternative fixed locations or

criteria for selecting repeat sampling sites on a situational basis in a standard operating procedure (SOP) in its coliform sampling plan. The water supplier must design its SOP to focus the repeat samples at locations that best verify and determine the extent of potential contamination of the distribution system area based on specific situations. The Authority may modify the SOP or require alternative monitoring locations as needed.

(II) For groundwater systems serving 1,000 people or less, repeat sampling locations may be proposed that differentiate potential source water and distribution system contamination (for example, by sampling at entry points to the distribution system). A water system with a single groundwater source and a single service connection may request to collect repeat samples at the location for triggered source water monitoring. The Authority may approve the request if the water supplier demonstrates that the coliform sampling plan remains representative of water quality in the distribution system. If approved by the Authority, the sample result may be used to meet the monitoring requirements in both subsection (6)(g) and (6)(i) of this rule.

(III) Triggered source water monitoring locations as required by subsection (6)(i) of this rule must be identified in the plan in addition to the repeat samples required by subsection (6)(g) of this rule.

(IV) The Authority may review, revise, and approve, as appropriate, repeat sampling proposed by systems under subparagraphs (6)(a)(I)(v)(I) and (II) of this rule. The water supplier must demonstrate that the coliform sampling plan remains representative of the water quality in the distribution system. The Authority may determine that monitoring at the entry point to the distribution system (especially for groundwater systems without disinfection) is effective to differentiate between potential source water and distribution system problems.

(b) At non-transient non-community, transient non-community and state regulated water systems using only groundwater as defined in OAR 333-061-0020(89) and serving 1,000 people or less, one sample must be collected for coliform bacteria every calendar quarter the water system provides water to the public. At seasonal water systems as defined in OAR 333-061-0020(168), monitoring is increased to one sample every month the system is in operation.

(A) For the purpose of determining a water supplier's eligibility to continue or qualify for quarterly monitoring according to the provisions of subparagraphs (6)(b)(C)(iv) or (6)(b)(D)(ii) of this rule at a transient non-community water system, the Authority may elect to not consider monitoring violations according to paragraph (6)(p)(A) of this rule if the missed sample is collected no later than the end of the monitoring period following the monitoring period in which the sample was missed. The water supplier must collect the make-up sample in a different week than the routine sample for that monitoring period and should collect the sample as soon as possible during the monitoring period.

(B) Water suppliers must submit to a special monitoring evaluation during each sanitary survey as specified in OAR 333-061-0076 to review the status of a water system, including the distribution system, and determine whether the system is on an appropriate monitoring schedule. After the Authority has performed the special monitoring evaluation, it may modify the system's monitoring schedule, as necessary, or it may allow the system to stay on its existing monitoring schedule, consistent with the provisions of this subsection.

(C) Monitoring must be increased to monthly the month following any of the events identified in subparagraphs (6)(b)(C)(i) through (6)(b)(C)(iv) of this rule. Monthly monitoring must continue until the requirements in subparagraph (6)(b)(D) of this rule are met. A water system prescribed monthly monitoring for reasons other than those identified in paragraphs (6)(b)(C)(i) through (6)(b)(C)(iv) of this rule is not considered to be on increased monitoring for the purposes of this paragraph and will be restored to quarterly monitoring at the discretion of the Authority.

(i) One level 2 coliform investigation or two level 1 coliform investigations are triggered as specified in OAR 333-061-0078(2) at a water system in a rolling 12 month period.

(ii) The MCL for E. coli is exceeded at a water system.

(iii) A violation as specified in OAR 333-061-0078(5) occurs at a water system.

(iv) Two violations as specified in subsection (6)(p) of this rule occur, or one violation as specified in subsection (6)(p) of this rule occurs and one level 1 coliform investigation as prescribed by OAR 333-061-0078(2) is triggered during a rolling 12-month period for a water system.

(D) The Authority may reduce the monitoring frequency from monthly monitoring as specified in paragraph (6)(b)(C) of this rule to quarterly monitoring if the criteria specified in subparagraphs (6)(b)(D)(i) and (6)(b)(D)(ii) of this rule are met.

(i) A sanitary survey, level 2 coliform investigation or an equivalent site visit was completed by the Authority or another party authorized by the Authority within the previous 12 months, and the water system was found to be free of sanitary defects and to have a protected water source; and

(ii) The water supplier ensured the following at the water system for at least the previous 12 consecutive months:

(I) No MCL exceedances as prescribed by OAR 333-061-0030(4) or 40 CFR 141.63;

(II) That all samples required by this rule and 40 CFR 141.21 were collected and reported to the Authority;

(III) No coliform investigation trigger exceedances as prescribed by OAR 333-061-0078(2); and

(IV) No coliform investigation violations as prescribed by OAR 333-061-0078(5).

(E) Additional routine monitoring the month following a total coliform-positive sample. At least three routine samples must be collected during the next month following one or more total coliform-positive samples at water systems prescribed quarterly monitoring. The Authority may waive this requirement if the conditions of subparagraphs (6)(b)(E)(i), (6)(b)(E)(ii), or (6)(b)(E)(iii) of this rule are met. Samples may either be collected at regular time intervals throughout the month or may be collected on a single day if samples are collected at different sites. The results from the analysis of additional routine samples must be used to determine if a coliform investigation trigger was exceeded as specified in OAR 333-061-0078(2).

(i) The Authority may waive the requirement to collect three routine samples as required by paragraph (6)(b)(E) of this rule if the Authority, or a party authorized by the Authority, performs a site visit before the end of the next month in which the system provides water to the public. The site visit must be sufficiently detailed to allow the Authority to determine whether additional monitoring or any corrective action is needed. A representative of the water supplier may not perform this site visit, even if the representative is a party authorized by the Authority to perform sanitary surveys.

(ii) The Authority may waive the requirement to collect three routine samples as required by paragraph (6)(b)(E) of this rule if the Authority has determined why the sample was total coliform-positive and has established that the water supplier has corrected the problem or will correct the problem before the end of the next month in which the water system serves water to the public. In this case, the Authority must document this decision to waive the following month's additional monitoring requirement in writing, have it approved and signed by an Authority supervisor who recommends such a decision, and make this document available to the EPA and public. The written documentation must describe the specific cause of the total coliform-positive sample and what action the water supplier has taken or will take to correct this problem.

(iii) The Authority will not waive the requirement to collect three additional routine samples the next month in which the system provides water to the public solely on the grounds that all repeat samples are total coliform-negative. If the Authority determines that the water supplier has corrected the contamination problem before the set of repeat samples required by subsection (6)(g) of this rule is collected, and all repeat samples were total coliform-

negative, the Authority may waive the requirement for additional routine monitoring the next month.

(c) At community water systems using only groundwater as defined in OAR 333-061-0020(89) serving 1,000 people or less, one sample must be collected for coliform bacteria every month.

(d) At water systems using surface water or GWUDI serving 1,000 people or less, one sample must be collected for coliform bacteria every month.

(e) At public water systems serving more than 1,000 people, the monitoring frequency for total coliform bacteria is based on the population served by the system, as specified in Table 34: [Table not included. See ED. NOTE.]

(f) At water systems using surface water or GWUDI without filtration treatment as specified in OAR 333-061-0032(2) and (3), at least one sample must be collected near the first service connection every day the turbidity level measured as specified in OAR 333-061-0036(5)(a)(B) exceeds 1 NTU. The sample must be analyzed for the presence of total coliform bacteria and must be collected within 24 hours of the first exceedance, unless the Authority determines that the water supplier, for logistical reasons beyond its control, cannot have the sample analyzed within 30 hours of collection and identifies an alternative sample collection schedule. Sample results from this coliform monitoring must be included in determining whether a coliform investigation trigger as specified in OAR 333-061-0078(2) was exceeded.

(g) If a sample collected as prescribed by subsections (6)(b) through (6)(f) of this rule is total coliform-positive, a set of repeat samples must be collected within 24 hours of being notified of the positive result. No fewer than three repeat samples must be collected for each total coliform-positive sample found.

(A) The Authority may extend the 24-hour limit on a case-by-case basis if a logistical problem beyond its control prevents a water supplier from collecting the repeat samples within 24 hours.

(B) All repeat samples must be collected on the same day, except that at water systems with only a single service connection the Authority may allow the required set of repeat samples to be collected over a three-day period, or the collection of a larger volume repeat sample(s) in one or more sample containers of any size as long as the total volume collected is at least 300 ml.

(C) An additional set of repeat samples must be collected if one or more repeat samples in the current set of repeat samples is total coliform-positive. The additional set of repeat samples must be collected within 24 hours of being notified of the positive result, unless the Authority extends the limit as specified in paragraph (6)(g)(A) of this rule. Water suppliers must continue to collect additional sets of repeat samples until either total coliforms are not detected in one complete set of repeat samples or the water supplier determines that a coliform investigation trigger as specified in OAR 333-061-0078(2) was exceeded as a result of a repeat sample being total coliform-positive and notifies the Authority. If a trigger identified in OAR 333-061-0078(2) is exceeded as a result of a routine sample being total coliform-positive, water suppliers are required to conduct only one round of repeat monitoring for each total coliform-positive routine sample.

(D) After a water supplier collects a routine sample and before it learns the results of the analysis of that sample, if it collects another routine sample(s) from within five adjacent service connections of the initial sample, and the initial sample, after analysis, is found to be total coliform-positive, then the water supplier may count the subsequent sample(s) as a repeat sample instead of as a routine sample.

(E) Repeat samples collected at a groundwater source

(i) If a repeat sample as specified in this subsection was collected at the location for triggered source water monitoring as specified in paragraph (6)(i)(A) of this rule and is E. coli-positive, the MCL for E. coli as specified in OAR 333-061-0030(4) was exceeded and the water supplier must also comply with subsection (6)(j) of this rule. If more than one repeat sample is collected at the monitoring location required for triggered source water monitoring, the water supplier may reduce the number of additional source water samples required by subsection (6)(j) of this rule by the number of repeat samples taken at that location that were not E. coli-positive.

(ii) If more than one repeat sample is collected at the location for triggered source water monitoring as specified in paragraph (6)(i)(A) of this rule, and more than one repeat sample is E. coli-positive, the MCL for E. coli was exceeded and the water supplier must also comply with OAR 333-061-0032(6).

(iii) If all repeat samples collected at the location for triggered source water monitoring as specified in paragraph (6)(i)(A) of this rule are E. coli-negative and a repeat sample collected at a monitoring location other than one required for triggered source water monitoring is E. coli-positive, the MCL for E. coli was exceeded, but the water supplier is not required to comply with subsection (6)(j) of this rule.

(h) Sampling for additional pathogens may be required by the Authority when specific evidence indicates the possible presence of such organisms.

(i) Groundwater source sampling requirements:

(A) At least one sample must be collected from every groundwater source for which at least 4-log treatment of viruses is not applied before or at the first customer within 24 hours of notification of a total coliform-positive sample collected as prescribed by subsections (6)(b) through (6)(f) of this rule that is not invalidated according to paragraphs (6)(a)(F) or (G) of this rule.

(i) The sample must be collected from every groundwater source in use at the time the total coliform-positive sample was collected, except as provided by subparagraph (6)(i)(A)(ii) of this rule.

(ii) If approved by the Authority, the sampling required by this subsection may be conducted at a representative groundwater source or sources at water systems with more than one ground water source. If directed by the Authority, water suppliers must request approval of a triggered source water monitoring plan that identifies one or more ground water sources that are representative of each monitoring site in a system's coliform sampling plan according to paragraph (6)(a)(I) of this rule and that the water supplier intends to use for representative sampling under this paragraph.

(iii) The Authority may extend the 24-hour time limit for the collection of samples on a case-by-case basis if the water supplier cannot collect the sample(s) within 24 hours due to circumstances beyond its control. In the case of an extension, the Authority will specify how much time the water supplier has to collect the sample(s).

(iv) A water supplier is not required to comply with the source water monitoring requirements specified in this paragraph if either of the following conditions exists:

(I) The Authority determines, and documents in writing, that the total coliform-positive sample collected as prescribed by subsections (6)(b) through (6)(f) of this rule is caused by a distribution system deficiency; or

(II) The total coliform-positive sample collected as prescribed by subsections (6)(b) through (6)(f) of this rule is collected at a location that meets Authority criteria for distribution system conditions that will cause total coliform-positive samples.

(v) Groundwater source samples required by this subsection must be collected at a location prior to any treatment unless the Authority approves an alternative sampling location. If the water system's configuration does not allow for sampling at the groundwater source, the water system must collect a sample at an Authority-approved location representative of source water quality.

(B) Additional Requirements related to wholesale water systems that use groundwater sources without providing at least 4-log inactivation of viruses for each groundwater source and purchasing water systems.

(i) If a sample collected according to subsections (6)(b) through (6)(f) of this rule at a purchasing water system is total coliform-positive, the water supplier for that purchasing system must notify the water supplier for the wholesale system(s) within 24 hours of being notified of the total coliform-positive sample.

(ii) If the water supplier for a wholesale system receives notice that a sample collected according to subsections (6)(b)

through (6)(f) of this rule at a purchasing water system it serves is total coliform-positive, the wholesaler must collect a sample from its groundwater source(s) as prescribed by paragraph (6)(i)(A) of this rule and have it analyzed for E. coli within 24 hours of notification.

(iii) If a sample collected according to subparagraph (6)(i)(A) of this rule at a wholesale system is E. coli-positive, the water supplier must notify the water supplier(s) for all purchasing water systems served by the groundwater source of the E. coli-positive source water sample within 24 hours of being notified of the result. The water supplier for the wholesale system must also meet the requirements of subsection (6)(j) of this rule.

(j) Five additional samples must be collected from the same source within 24 hours of notification of an E. coli-positive sample collected as prescribed by paragraph (6)(i)(A) or (6)(k) of this rule at a groundwater source and not invalidated according to subsection (6)(l) of this rule if the Authority does not require corrective action as prescribed by OAR 333-061-0032(6).

(k) At groundwater systems where chlorine, ultraviolet light, or another oxidant is used for disinfection, but where 4-log inactivation of viruses is not achieved, assessment monitoring must be conducted at the groundwater source to determine the potential for viral contamination.

(A) Assessment monitoring according to this subsection must include thecollection of at least one sample from each groundwater source every year. The Authority may grant written approval to conduct monitoring at one or more representative groundwater sources within a water system that draw water from the same hydrogeologic setting.

(B) A sample collected according to paragraph (6)(i)(A) of this rule or a sample collected for GWUDI determination according to OAR 333-061-0032(8) may be used to meet the requirements of this subsection.

(C) Additional Source Water Assessment Monitoring

(i) The Authority may require additional source water assessment monitoring if at least one of the following conditions occur:

(I) At least one total coliform-positive sample was collected from the groundwater source;

(II) A groundwater source having been determined by the Authority to be susceptible to fecal contamination through a Source Water Assessment (or equivalent hydrogeologic assessment wherein susceptibility is defined as a result of a highly sensitive source due to aquifer characteristics, vadose zone characteristics, monitoring history, or well construction) and the presence of a fecal contaminant source within the two-year time-of-travel zone, outreach area, or zone one area;

(III) A source that draws water from an aquifer that the Authority has identified as being fecally contaminated;

(IV) A determination by a source water assessment or equivalent hydrogeologic analysis that the groundwater source is highly sensitive, and that the source is located within an area that has a high density of underground injection control wells; or

(V) Other criteria at the discretion of the Authority.

(ii) Requirements for additional source water assessment monitoring include, but are not limited to:

(I) Collecting 12 consecutive monthly groundwater source samples for water systems that operate year-round, or monthly samples that represent each month the water system provides groundwater to the public for water systems that operate seasonally;

(II) Collecting a standard sample volume of at least 100 mL for E. coli analysis regardless of the analytical method used;

(III) Analysis of all samples for the presence of E. coli, using an analytical method as prescribed by section (1) of this rule;

(IV) Collecting samples at a location prior to any treatment unless the Authority approves a sampling location after treatment; and

(V) Collecting samples at the groundwater source, unless the water system's configuration does not allow for raw water sampling and the Authority approves an alternate sampling location that is representative of the water quality of that groundwater source.

(D) The Authority may require a groundwater source to be re-evaluated as prescribed by this subsection if geologic conditions, source pumping conditions, or fecal contaminant source conditions change over time.

(l) The Authority may invalidate an E. coli-positive groundwater source sample collected according to subsections (6)(i), (j) or (k) of this rule only under the following conditions:

(A) The water supplier or laboratory notifies the Authority in writing that improper sample analysis occurred; or

(B) The Authority determines and documents in writing that there is substantial evidence that an E. coli -positive sample is not related to source water quality.

(m) If the Authority invalidates an E. coli -positive groundwater source sample according to subsection (6)(l) of this rule, the water supplier must collect another source water sample as prescribed by subsection (6)(i) of this rule within 24 hours of being notified of the invalidation. The Authority may extend the 24-hour time limit on a case-by-case basis if the system cannot collect the source water sample within 24 hours due to circumstances beyond its control. In the case of an extension, the Authority must specify how much time the system has to collect the sample.

(n) The Authority may direct a water supplier to conduct source water assessment monitoring as prescribed by subsection (6)(k) of this rule when a new groundwater source is placed into service. Monitoring as prescribed by this subsection must begin before the groundwater source is used to provide water to the public.

(o) The Authority may require a water supplier to provide any existing information that will enable the Authority to perform an assessment to determine whether the groundwater system obtains water from a hydrogeologically sensitive aquifer.

(p) Monitoring violations.

(A) Failure to collect every required routine or additional routine sample in a compliance period is a violation of this rule.

(B) Failure to analyze for E. coli following a total coliform-positive routine sample is a violation of this rule.

(q) Every water system must undergo a sanitary survey at least every five years at a frequency determined by the authority. The Authority will review the results of each survey to determine whether the existing monitoring frequency is adequate and what additional measures, if any, the water supplier needs to undertake to improve drinking water quality.

(r) For any samples collected or analyzed for coliform bacteria on March 31, 2016 or earlier or for any repeat samples collected or analyzed for coliform bacteria after March 31, 2016 in response to a positive sample collected on March 31, 2016 or earlier, the provisions of 40 CFR 141.21(b), (c), (e), (f) and (g) apply to processing and analysis of that sample.

(7) Radionuclides:

(a) Gross alpha particle activity, Radium 226, Radium 228, and Uranium:

(A) Initial Monitoring. Community Water Systems without acceptable historical data, as defined below, must conduct initial monitoring to determine compliance with OAR 333-061-0030(5) by December 31, 2007.

(i) Samples must be collected from each entry point to the distribution system during 4 consecutive quarters before December 31, 2007 according to the following schedule:

Population — Begin initial monitoring - Complete initial monitoring by
300 or More — First quarter 2005 — Fourth quarter 2005
100-299 — First quarter 2006 — Fourth quarter 2006
Less than 100 — First quarter 2007 — Fourth quarter 2007

(ii) New systems or systems using a new source must conduct initial monitoring beginning the first quarter of operation, followed by three consecutive quarterly samples.

(iii) The Authority may waive the final two quarters of the initial monitoring at an entry point if the results of the samples from the first two quarters are below the method detection limit.

(iv) Grandparenting of historical data. A system may use monitoring data from each source or entry point collected between June 2000 and December 8, 2003 to satisfy the initial monitoring requirements.

(v) If the average of the initial monitoring results for a sampling point is above the MCL, the system must collect and analyze quarterly samples at the entry point until the system has results from four consecutive quarters that are at or below the MCL, unless the system enters into another schedule as part of a formal compliance agreement with the Authority.

(B) Reduced Monitoring. Radionuclide monitoring may be reduced to once every three years, once every six years, or once every nine years based on the following criteria:

(i) If the average of the initial monitoring result for each contaminant (gross alpha particle activity, radium-226, radium-228, and uranium) at a given entry point is below the detection limit, sampling for that contaminant may be reduced to once every nine years.

(ii) For gross alpha particle activity, combined radium 226 and radium 228, and uranium, if the average of the initial monitoring results is at or above the detection limit but at or below one-half the MCL, sampling for that contaminant may be reduced to once every six years.

(iii) For gross alpha particle activity, combined radium 226 and radium 228, and uranium, if the average of the initial monitoring results is above one-half the MCL but at or below the MCL, the system must collect one sample at that sampling point at least once every three years.

(iv) Systems must use the samples collected during the reduced monitoring period to determine the monitoring frequency for subsequent monitoring periods.

(v) If a system has a monitoring result that exceeds the MCL while on reduced monitoring, the system must collect and analyze quarterly samples at that entry point until the system has results from four consecutive quarters that are below the MCL, unless the system enters into another schedule as part of a formal compliance agreement with the Authority.

(vi) A water system with two or more wells that have been determined to constitute a "wellfield" as specified in subsection (1)(k) of this rule may reduce sampling to only those entry point(s) designated by the Authority.

(C) Compositing of samples. A system may composite up to four consecutive quarterly samples from a single entry point if the analysis is done within a year of the first sample. If the analytical result from the composited sample is greater than one-half the MCL, the Authority may direct the system to take additional quarterly samples before allowing the system to sample under a reduced monitoring schedule.

(D) Substitution of results.

(i) A gross alpha particle activity measurement may be substituted for the required radium-226 measurement if the gross alpha particle activity does not exceed 5 pCi/L.

(ii) A gross alpha particle activity measurement may be substituted for the required uranium measurement if the gross alpha particle activity does not exceed 15 pCi/L.

(iii) The gross alpha measurement shall have a confidence interval of 95 percent (1.65 where one-half is the standard deviation of the net counting rate of the sample) for radium-226 and uranium.

(iv) When a system uses a gross alpha particle activity measurement in lieu of a radium-226 or uranium measurement, the gross alpha particle activity analytical result will be used to determine the future monitoring frequency for radium-226 or uranium. If the gross alpha particle activity result is less than detection, half the method detection limit will be used to determine compliance and the future monitoring frequency.

(b) Beta particle and photon radioactivity:

(A) Community water systems designated by the Authority as "vulnerable" must sample for beta particle and photon radioactivity as follows. No waivers shall be granted:

(i) Initial samples must be collected by December 31, 2007.

(ii) Quarterly samples for beta emitters and annual samples for tritium and strontium-90 must be taken at each entry point to the distribution system. Systems already designated by the state must continue to sample until the state removes the designation.

(iii) If the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity at a sample point has a running annual average less than or equal to 50 pCi/l , sampling for contaminants prescribed in subparagraph (7)(b)(A)(i) of this rule maybe reduced to once every three years.

(B) Community water systems designated by the Authority as "contaminated" by effluents from nuclear facilities and must sample for beta particle and photon radioactivity as follows. No waivers shall be granted.

(i) Systems must collect quarterly samples for beta emitters as detailed below and iodine-131 and annual samples for tritium and strontium-90 at each entry point to the distribution system. Sampling must continue until the Authority removes the designation.

(ii) Quarterly monitoring for gross beta particle activity is based on the analysis of monthly samples or the analysis of a composite of three monthly samples.

(iii) For iodine-131, a composite of five consecutive daily samples shall be analyzed once each quarter. More frequent monitoring may be required if iodine-131 is detected.

(iv) Annual monitoring for strontium-90 and tritium shall be conducted by means of the analysis of a composite of four consecutive quarterly samples or analysis of four quarterly samples.

(v) If the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity at an entry point has a running annual average less than or equal to 15 pCi/l, the Authority may reduce the frequency of monitoring for contaminants prescribed in subparagraph (7)(b)(B)(i) of this rule at that entry point to every three years.

(C) For systems in the vicinity of a nuclear facility, the Authority may allow the substitution of appropriate environmental surveillance data taken in conjunction with operation of a nuclear facility for direct monitoring of man-made radioactivity by the water supplier where such data is applicable to a particular Community water system. In the event of a release, monitoring must be done at the water system's entry points.

(D) Systems may analyze for naturally occurring potassium-40 beta particle activity from the same or equivalent sample used for the gross beta particle activity analysis. Systems are allowed to subtract the potassium-40 beta particle activity value from the total gross beta particle activity value to determine if the screening level is exceeded. The potassium-40 beta particle activity must be calculated by multiplying elemental potassium concentrations (in mg/l) by a factor of 0.82.

(E) If the gross beta particle activity minus the naturally occurring potassium-40 beta particle activity exceeds the screening level, an analysis of the sample must be performed to identify the major radioactive constituents present in the sample and the appropriate doses must be calculated and summed to determine compliance with OAR 333-061-0030(5). Doses must also be calculated and combined for measured levels of tritium and strontium to determine compliance.

(F) Systems must monitor monthly at the entry point(s) which exceed the MCL listed in OAR 333-061-0030(5) beginning the month after the exceedance occurs. Systems must continue monthly monitoring until the system has established, by a rolling average of three monthly samples, that the MCL is being met. Systems who establish that the MCL is being met must return to quarterly monitoring until they meet the requirements set forth in subparagraph (7)(b)(A)(ii) or (7)(b)(B)(v) of this rule.

(c) General monitoring and compliance requirements for radionuclides.

(A) The Authority may require more frequent monitoring than specified in subsections (7)(a) and (b) of this rule, or may require confirmation samples at its discretion. The results of the initial and confirmation samples will be averaged for use in compliance determinations.

(B) Each system shall monitor at the time designated by the Authority during each compliance period. To determine compliance with 333-061-0030(5), averages of data shall be used and shall be rounded to the same number of significant figures as the MCL of the contaminant in question.

(C) Compliance.

(i) For systems monitoring more than once per year, compliance with the MCL is determined by a running annual average at each sampling point. If the average of any sampling point is greater than the MCL, then the system is out of compliance with the MCL.

(ii) For systems monitoring more than once per year, if any sample result will cause the running average to exceed the MCL at any entry point, the system is out of compliance with the MCL immediately.

(iii) Systems must include all samples taken and analyzed under the provisions of this section in determining compliance, even if that number is greater than the minimum required.

(iv) If a system does not collect all required samples when compliance is based on a running annual average of quarterly samples, compliance will be based on the running average of the samples collected.

(v) If a sample is less than the detection limit, zero will be used to calculate the annual average, unless a gross alpha particle activity is being used in lieu of radium-226 or uranium. In that case, if the gross alpha particle activity result is less than detection, one-half the detection limit will be used to calculate the annual average.

(D) The Authority has the discretion to delete results of obvious sampling or analytical errors.

(E) When the average annual maximum contaminant level for radionuclides as specified in Table 5 is exceeded, the water supplier shall, within 48 hours, report the analysis results to the Authority as prescribed in OAR 333-061-0040 and initiate the public notification procedures prescribed in 333-061-0042(2)(b)(A). [Table not included. See ED. NOTE.]

(8) Secondary contaminants:

(a) The levels listed in Table 6 of OAR 333-061-0030 represent reasonable goals for drinking water quality, but routine sampling for these secondary contaminants is not required. [Table not included. See ED. NOTE.]

(b) The Authority may however, require sampling and analysis under the following circumstances:

(A) User complaints of taste, odor or staining of plumbing fixtures.

(B) Where treatment of the water is proposed and the levels of secondary contaminants are needed to determine the method and degree of treatment.

(C) Where levels of secondary contaminants are determined by the Authority to present an unreasonable risk to health.

(c) If the results of the analyses do not exceed levels for secondary contaminants, listed in Table 6 of OAR 333-061-0030, subsequent sampling and analysis shall be at the discretion of the Authority. [Table not included. See ED. NOTE.]

(d) If the results of the analyses indicate that the levels for secondary contaminants, listed in Table 6 of OAR 333-061-0030 are exceeded, the Authority shall determine whether the contaminant levels pose an unreasonable risk to health or interfere with the ability of a water treatment facility to produce a quality of water complying with the Maximum Contaminant Levels of these rules and specify follow-up actions to be taken. [Table not included. See ED. NOTE.]

(e) During the period while any measures called for in subsection (8)(d) of this rule are being implemented, the water supplier shall follow the procedures relating to variances and permits which are prescribed in OAR 333-061-0045.

(9) Monitoring of disinfectant residuals in the distribution system

(a) All public water systems that add a disinfectant to the water supply at any point in the treatment process, or deliver water in which a disinfectant has been added to the water supply, must maintain a detectable disinfectant residual throughout the distribution system and shall measure and record the residual:

(A) At one or more representative points at a frequency that is sufficient to detect variations in chlorine demand and changes in water flow but in no case less often than twice per week; and

(B) At the same points in the distribution system and at the same times as total coliforms are sampled as prescribed by subsections (6)(b) through (6)(f) of this rule.

(b) The Authority may allow a water supplier to collect disinfectant residual samples as specified in paragraph (9)(a)(B) of this rule at points other than the total coliform sampling points at public water systems which use both a surface water source or GWUDI source and a groundwater source, if the Authority determines that such points are more representative of treated (disinfected) water quality within the distribution system. At water systems where surface water or GWUDI is used, the results of residual disinfectant concentration sampling conducted as prescribed by subsection (5)(a) of this rule for unfiltered systems or subsection (5)(b) of this rule for systems which filter, may be used in lieu of collecting separate samples.

(c) All public water systems that add chlorine for any purpose must ensure that the chlorine residual entering the distribution system after treatment is less than 4.0 mg/l.

(d) The Authority may waive the monitoring requirements specified in subsection (9)(a) of this rule for water systems that add chlorine for purposes such as the oxidation of metals or taste and odor control if a water system measures and records the residual daily and verifies that there is no remaining disinfectant residual at or before the first customer.

(e) Where chlorine is used as the disinfectant, the measurement of residual chlorine shall be by the DPD or other EPA-approved method in accordance with Standard Methods for the Examination of Water and Waste-water, and shall measure the free chlorine residual or total chlorine residual as applicable;

(f) The water supplier shall maintain a summary report of the residual disinfectant measurements and shall retain this summary report at a convenient location within or near the area served by the water system.

333-061-0040
Reporting and Record Keeping

(1) Reporting requirements:

(a) Any person who has reason to believe that his or her actions have led to contamination of a public water system shall report that fact immediately to the water supplier and the Authority.

(b) Laboratory Reporting

(A) Analyses required by OAR 333-061-0036 and performed by an accredited laboratory as defined in OAR 333-061-0036(1)(b) must be reported on a form produced by the accredited laboratory. The laboratory analysis report must be submitted to the Authority within 10 days of the end of the month, or within 10 days of the end of the required monitoring period.

(B) Mandatory reporting requirements for primary laboratories as defined in OAR 333-061-0036(1)(b)(A). These laboratories must:

(i) Validate the results of any sample analysis and report that analysis directly to the Authority and to the water supplier within 48 hours or two business days of completing the analytical run if the samples analysis:

(I) Exceeds the MCL for nitrate as specified in OAR 333-061-0030(1); or

(II) Is positive for coliform bacteria.

(ii) Report any sample analysis directly to the Authority and to the water supplier within 24 hours or on the next business day

after validating a sample result that exceeds the MCL for any chemical analyte specified in OAR 333-061-0030 other than nitrate.

(iii) Report any sample analysis directly to the Authority and to the water supplier within 24 hours or on the next business day after obtaining a sample result from a subcontracted laboratory, if the sample analysis:

(I) Exceeds the MCL for nitrate as specified in OAR 333-061-0030(1) or is positive for coliform bacteria; or

(II) Exceeds the MCL for any chemical analyte specified in OAR 333-061-0030 other than nitrate upon validating the sample analysis.

(C) Mandatory reporting requirements for subcontracted laboratories as defined in OAR 333-061-0036(1)(b)(B). These laboratories must:

(i) Validate the results of any sample analysis and report that analysis to their client laboratory within 48 hours or two business days of completing the analytical run if the analysis:

(I) Exceeds the MCL for nitrate as specified in OAR 333-061-0030(1); or

(II) Is positive for coliform bacteria.

(ii) Report any sample analysis to their client laboratory within 24 hours or on the next business day after validating a sample result that exceeds the MCL for any chemical analyte specified in OAR 333-061-0030 other than nitrate.

(c) Water suppliers must report the following events to the Authority within 24 hours or sooner as prescribed in this subsection.

(A) The detection of any substance or pathogenic organisms in the water that has caused or is likely to cause physical suffering or illness.

(B) An exceedance of the MCL for E. coli, which must be reported to the Authority by the end of the day when the water supplier learns of the exceedance and which must be followed by public notice according to OAR 333-061-0042.

(C) Notification of an E. coli-positive routine sample, which must be reported to the Authority according to by the end of the day when the water supplier learns of the result, unless the water supplier is notified of the result after the Authority office is closed, in which case the water supplier must notify the Authority before the end of the next business day.

(D) Violation of a coliform investigation requirement as specified in OAR 333-061-0078(5), which must be followed by public notice according to OAR 333-061-0042.

(d) The water supplier using a surface water source or a groundwater source under direct influence of surface water which provides filtration treatment shall report monthly beginning June 29, 1993 or when filtration is installed, whichever is later, to the Authority the results of any test, measurement or analysis required by OAR 333-061-0036(5)(b) of these rules within 10 days after the end of the month.

(A) All systems using surface water or groundwater under the direct influence of surface water shall consult with the Authority within 24 hours, after learning:

(i) That the turbidity exceeded 5 NTU;

(ii) Of a waterborne disease outbreak potentially attributable to that water system;

(iii) That the disinfectant residual concentration in the water entering the distribution system fell below 0.2 mg/l and whether or not the residual was restored to at least 0.2 mg/l within four hours.

(B) In addition to the reporting and recordkeeping requirements in paragraph (1)(d)(A) of this rule, a public water system which provides conventional filtration treatment or direct filtration serving at least 10,000 people must report monthly to the Authority the information specified in subparagraphs (1)(d)(B)(i) and (ii) of this rule. Public water systems which provide filtration treatment other than conventional filtration treatment, direct filtration, slow sand filtration, and diatomaceous earth filtration, regardless of population served, must also meet the requirements of paragraph (1)(d)(A) of this rule and must report monthly to the Authority the information specified in subparagraph (1)(d)(B)(i) of this rule.

(i) Turbidity measurements as required by OAR 333-061-0036(5) must be reported within 10 days after the end of each month the system serves water to the public. Information that must be reported includes:

(I) The total number of filtered water turbidity measurements taken during the month;

(II) The number and percentage of filtered water turbidity measurements taken during the month which are less than or equal to the turbidity limits specified by OAR 333-061-0030(3)(b)(A) through (D);

(III) The date and value of any turbidity measurements taken during the month which exceed 1 NTU for systems using conventional filtration treatment or direct filtration, or which exceed the maximum level set by the Authority specified in OAR 333-061-0030(3)(b)(D).

(IV) The date and value of any turbidity measurements taken during the month which exceed 5 NTU for systems using slow sand filtration or diatomaceous earth filtration.

(ii) Water systems must maintain the results of individual filter monitoring for at least three years. Water systems must report that they have conducted individual filter turbidity monitoring within 10 days after the end of each month the system serves water to the public. Water systems must also report individual filter turbidity measurement results within 10 days after the end of each month the system serves water to the public only if measurements demonstrate one or more of the conditions in subparagraphs (1)(d)(B)(ii)(I) through (IV) of this rule. Water systems that use lime softening may apply to the Authority for alternative exceedance levels for the levels specified in subparagraphs (1)(d)(B)(ii)(I) through (IV) of this rule if the water system can demonstrate that higher turbidity levels in individual filters are due to lime carryover only and not due to degraded filter performance.

(I) For any individual filter that has a measured turbidity level of greater than 1.0 NTU in two consecutive measurements taken 15 minutes apart, the water system must report the filter number, the turbidity measurement, and the date(s) on which the exceedance occurred. In addition, the water system must either produce a filter profile for the filter within seven days of the exceedance (if the water system is not able to identify an obvious reason for the abnormal filter performance) and report that the profile has been produced or report the obvious reason for the exceedance.

(II) For any individual filter that has a measured turbidity level of greater than 0.5 NTU in two consecutive measurements taken 15 minutes apart at the end of the first four hours of continuous filter operation after the filter has been backwashed or otherwise taken offline, the system must report the filter number, the turbidity, and the date(s) on which the exceedance occurred. In addition, the system must either produce a filter profile for the filter within seven days of the exceedance (if the system is not able to identify an obvious reason for the abnormal filter performance) and report that the profile has been produced or report the obvious reason for the exceedance.

(III) For any individual filter that has a measured turbidity level of greater than 1.0 NTU in two consecutive measurements taken 15 minutes apart at any time in each of three consecutive months, the water system must report the filter number, the turbidity measurement, and the date(s) on which the exceedance occurred. In addition, the water system must conduct a self-assessment of the filter within 14 days of the exceedance and report that the self-assessment was conducted. The self assessment must consist of at least the following components: assessment of filter performance; development of a filter profile; identification and prioritization of factors limiting filter performance; assessment of the applicability of corrections; and preparation of a filter self-assessment report.

(IV) For any individual filter that has a measured turbidity level of greater than 2.0 NTU in two consecutive measurements taken 15 minutes apart at any time in each of two consecutive months, the water system must report the filter number, the turbidity measurement, and the date(s) on which the exceedance occurred. In addition, the water system must arrange to have a

comprehensive performance evaluation by the Authority or a third party approved by the Authority conducted no later than 30 days following the exceedance and have the evaluation completed and submitted to the Authority no later than 90 days following the exceedance.

(iii) If at any time the turbidity exceeds 1 NTU in representative samples of filtered water in a system using conventional filtration treatment or direct filtration, the system must inform the Authority as soon as possible, but no later than the end of the next business day.

(iv) If at any time the turbidity in representative samples of filtered water exceed the maximum level set by the Authority as specified in OAR 333-061-0030(3)(b)(D) for filtration technologies other than conventional filtration treatment, direct filtration, slow sand filtration, or diatomaceous earth filtration, the water system must inform the Authority as soon as possible, but no later than the end of the next business day.

(C) In addition to the reporting and recordkeeping requirements in paragraph (1)(d)(A) of this rule, a public water system which provides conventional filtration treatment or direct filtration treatment serving less than 10,000 people must report monthly to the Authority the information specified in subparagraphs (1)(d)(B)(i) of this rule and beginning January 1, 2005 the information specified in subparagraph(1)(d)(C)(i) of this rule. Public water systems which provide filtration treatment other than conventional filtration treatment, direct filtration, slow sand filtration, and diatomaceous earth filtration regardless of population served must also meet the requirements of paragraph (1)(d)(A) of this rule and must report monthly to the Authority the information specified in subparagraph (1)(d)(B)(i) of this rule.

(i) Water systems must maintain the results of individual filter monitoring for at least three years. Water systems must report that they have conducted individual filter turbidity monitoring within 10 days after the end of each month the system serves water to the public. Water systems must also report individual filter turbidity measurement results within 10 days after the end of each month the system serves water to the public only if measurements demonstrate one or more of the conditions in subparagraphs (1)(d)(C)(i)(I) through (III) of this rule. Water systems that use lime softening may apply to the Authority for alternative exceedance levels for the levels specified in subparagraphs (1)(d)(C)(i)(I) through (III) of this rule if the water system can demonstrate that higher turbidity levels in individual filters are due to lime carryover only and not due to degraded filter performance.

(I) If the turbidity of an individual filter (or the turbidity of the combined filter effluent (CFE) for systems with two or less filters that monitor CFE in lieu of individual filter monitoring) is greater than 1.0 NTU in two consecutive measurements taken 15 minutes apart, the water system must report to the Authority by the 10th day of the following month the filter number(s), the turbidity value(s) that exceeded 1.0 NTU, the corresponding date(s) of occurrence, and the cause (if known) for the elevated turbidity values. The Authority may request the water system produce a turbidity profile for the filter(s) in question.

(II) If the turbidity of an individual filter (or the turbidity of the combined filter effluent (CFE) for systems with two or less filters that monitor CFE in lieu of individual filter monitoring) is greater than 1.0 NTU in two consecutive measurements taken 15 minutes apart for three consecutive months, the water system must conduct a filter self-assessment within 14 days of the date the turbidity exceeded 1.0 NTU during the third month, unless a CPE is performed in lieu of a filter self-assessment. Systems with two filters monitoring the CFE must conduct a filter self-assessment for both filters. The self-assessment must consist of the following components: assessment of filter performance; development of a filter profile; identification and prioritization of factors limiting filter performance; assessment of the applicability of corrections; and preparation of a filter self-assessment report. When a self-assessment is required, the water system must report the date the self-assessment was triggered, the date the self-assessment was completed, and the conclusion(s) of the self-assessment by the 10th of the following month or 14 days after the self-assessment was triggered only if the self-assessment was triggered during the last four days of the month.

(III) If the turbidity of an individual filter (or the turbidity of the combined filter effluent (CFE) for systems with two or less filters that monitor CFE in lieu of individual filter monitoring) is greater than 2.0 NTU in two consecutive measurements taken 15 minutes apart for two consecutive months, the water system must report these turbidity results to the Authority by the 10th of the following month and arrange to have a comprehensive performance evaluation (CPE) by the Authority or a third party approved by the Authority conducted within 60 days of the date the turbidity exceeded 2.0 NTU during the second month. The CPE report must be submitted to the Authority no later than 120 days following the date the turbidity exceeded 2.0 NTU during the second month. A CPE is not needed if the Authority or approved third party has conducted a CPE within the last 12 months or the Authority and the water system are jointly participating in an on-going Comprehensive Technical Assistance (CTA) project as part of the Composite Correction Program with the water system. When a CPE is required, the water system must report that a CPE is required and the date that the CPE was triggered by the 10th day of the following month.

(e) The water supplier for water systems using a surface water source or a groundwater source under direct influence of a surface source which does not provide filtration treatment shall report according to subsection (1)(d) of this rule in addition to the requirements of this subsection. Monthly reporting to the Authority will begin January 1, 1991 for systems using surface water sources and January 1, 1991 or six months after the Authority determines surface influence for systems using groundwater under the direct influence of surface water.

(A) Report to the Authority within 10 days after the end of each month, the results or analysis of:

(i) Fecal coliform or total coliform bacteria test results on raw (untreated) source water.

(ii) Daily disinfection "CT" values including parameters such as pH measurements, temperature, and disinfectant residuals at the first customer used to compute the "CT" values.

(iii) Daily determinations using the "CT" values of the adequacy of disinfectant available for inactivation of Giardia lamblia or viruses as specified in OAR 333-061-0032(1)(a).

(B) Report to the Authority within 10 days after the end of each Federal Fiscal year (September 30), the results of:

(i) The watershed control program requirements as specified in OAR 333-061-0032(2)(b)(B).

(ii) The on-site inspection summary requirements as specified in OAR 333-061-0032(2)(b)(C).

(f) Special reporting requirements for groundwater systems.

(A) Groundwater systems conducting compliance monitoring in accordance with OAR 333-061-0032(7)(b) must notify the Authority any time the water system fails to meet any Authority-specified operating requirements including, but not limited to, minimum residual disinfectant concentration, membrane operating criteria or membrane integrity, and alternative treatment operating criteria, if operation in accordance with the specified criteria is not restored within four hours. The groundwater system must notify the Authority as soon as possible, but in no case later than the end of the next business day.

(B) A groundwater system must notify the Authority within 30 days of completing any corrective action as prescribed by OAR 333-061-0032(6).

(C) A groundwater system subject to the requirements of OAR 333-061-0036(6)(i) must provide documentation to the Authority within 30 days that a total coliform-positive sample met Authority criteria for exceptions to triggered source water monitoring requirements because the total coliform-positive sample was attributed to distribution system conditions.

(D) A groundwater system conducting compliance monitoring as prescribed by OAR 333-061-0032(7)(b) must report the results of daily residual disinfectant concentration measurements at the entry point within 10 days after the end of each month.

(g) All Community and Non-Transient Non-Community public water systems shall report all of the following information pertaining to lead and copper to the Authority in accordance with the requirements of this subsection.

(A) Except as provided in subparagraph (1)(h)(A)(vii) of this rule, a public water system shall report the information below for all tap water samples and for all water quality parameter samples within 10 days following the end of each applicable monitoring period. For monitoring periods with a duration less than six-months, the end of the monitoring period is the last date samples can be collected during that period.

(i) The results of all tap samples for lead and copper including the location of each site and the criteria under which the site was selected for the system's sampling pool. With the exception of initial tap sampling, the system shall designate any site which was not sampled during previous monitoring periods, and include an explanation of why sampling sites have changed. By the applicable date specified in OAR 333-061-0036(2)(c)(D)(i) for commencement of initial monitoring, each Community Water System which does not complete its targeted sampling pool meeting the criteria for tier 1 sampling sites shall send a letter to the Authority justifying its selection of tier 2 or tier 3 sampling sites. By the applicable date specified in OAR 333-061-0036(2)(c)(D)(i) for commencement of initial monitoring, each Non-Transient Non-Community water system which does not complete its sampling pool meeting the criteria for tier 1 sampling sites shall send a letter to the Authority justifying its selection of sampling sites.

(ii) A certification that each first draw sample collected by the water system is one-liter in volume and, to the best of their knowledge, has stood motionless in the service line, or in the interior plumbing of a sampling site, for at least six hours. Where residents collected samples, a certification that each tap sample collected by the residents was taken after the water system informed them of proper sampling procedures according to OAR 333-061-0036(2)(c)(B)(ii).

(iii) The results of all tap samples for pH, and where applicable, alkalinity, calcium, conductivity, temperature, and orthophosphate or silica, and the results of all samples collected at the entry point(s) to the distribution system for applicable water quality parameters according to OAR 333-061-0036(2)(c)(F)(iii) through (vi).

(iv) Each water system that requests that the Authority reduce the number and frequency of sampling shall provide the information required in OAR 333-061-0036(2)(c)(D)(iv).

(v) Documentation for each tap water lead and copper sample for which the water system requests invalidation.

(vi) The 90th percentile lead and copper tap water samples collected during each monitoring period.

(vii) A water system shall report the results of all water quality parameter samples collected for follow-up tap monitoring prescribed in OAR 333-061-0036(2)(c)(F)(iv) through (vii) during each six-month monitoring period within 10 days following the end of the monitoring period unless the Authority specifies a more frequent monitoring requirement.

(B) A water system shall report the sampling results for all source water samples collected for lead and copper within the first 10 days following the end of each source water monitoring period according to OAR 333-061-0036(2)(c)(G). With the exception of the first round of source water sampling, the system shall specify any site which was not sampled during previous monitoring periods, and include an explanation of why the sampling point has changed.

(C) Corrosion control treatment reporting requirements. By the applicable dates according to OAR 333-061-0034(2)(a) through (e), systems shall report the following information: for systems demonstrating that they have already optimized corrosion control, the information required in OAR 333-061-0034(2)(d)(B) or (C); for systems required to optimize corrosion control, their recommendation regarding optimal corrosion control treatment according to OAR 333-061-0034(3)(a); for systems required to evaluate the effectiveness of corrosion control treatments, the information required in OAR 333-061-0034(3)(c) of these rules; for systems required to install optimal corrosion control designated by the Authority according to OAR 333-061-0034(3)(i), a letter certifying that the system has completed the installation.

(D) Source water treatment reporting requirements. By the applicable dates according to OAR 333-061-0034(4)(a), systems shall report the following information to the Authority: the system's recommendation regarding source water treatment if required according to OAR 333-061-0034(4)(b)(A); for systems required to install source water treatment according to OAR 333-061-0034(4)(b)(B), a letter certifying that the system has completed the installation of the treatment designated by the Authority within 24 months after the Authority designated the treatment.

(E) Public education program reporting requirements.

(i) Any water system that is subject to the public education requirements in OAR 333-061-0034(5) shall, within 10 days after the end of each period in which the system is required to perform public education tasks in accordance with OAR 333-061-0034(5)(c), send written documentation to the Authority that contains:

(I) A demonstration that the system has delivered the public education materials that meet the content and delivery requirements specified in OAR 333-061-0034(5)(a) through (c); and

(II) A list of all the newspapers, radio stations, television stations, and facilities and organizations to which the system delivered public education materials during the period in which the system was required to perform public education tasks.

(ii) Unless required by the Authority, a system that previously has submitted the information in subparagraph (1)(g)(E)(i)(II) of this rule need not resubmit the information, as long as there have been no changes in the distribution list and the system certifies that the public education materials were distributed to the same list submitted previously.

(iii) No later than three months following the end of the monitoring period, each system must mail a sample copy of the consumer notification of tap results to the Authority along with a certification that the notification has been distributed in a manner consistent with the requirements of OAR 333-061-0034(5)(e).

(F) Any system which collects sampling data in addition to that required by this subsection shall report the results to the Authority within the first 10 days following the end of the applicable monitoring period under OAR 333-061-0036(2)(c)(A) through (H) during which the samples are collected.

(G) At a time specified by the Authority prior to the addition of a new source or any long-term change in water treatment, a water system deemed to have optimized corrosion control, or is subject to reduced monitoring, shall submit written documentation to the Authority describing the change or addition. The Authority must review and approve the addition or change before it is implemented by the water system.

(H) Each ground water system that limits water quality parameter monitoring to a subset of entry points shall provide written correspondence to the Authority that identifies the selected entry points and includes information sufficient to demonstrate that the sites are representative of water quality and treatment conditions throughout the system. This correspondence must be submitted to the Authority prior to commencement of such monitoring.

(h) The water supplier shall report to the Authority the results of any test, measurement or analysis required by these rules that is performed on site (for example, supplemental fluoride) by trained personnel within 10 days after the end of the month, except that reports which indicate that fluoride levels exceed 4.0 mg/l shall be reported within 48 hours:

(i) The water supplier shall submit to the Authority within 10 days after completing any public notification action as prescribed in OAR 333-061-0042 a representative copy of each type of notice distributed to the water users or made available to the public and the media along with certification that the system has fully complied with the distribution and public notification requirements.

(j) Water systems required to sample for the contaminants listed in OAR 333-061-0036(4)(c) through (4)(e) or (4)(g) through (4)(k) must report the information listed in Tables 35 through 37 to

the Authority. Water systems monitoring quarterly or more frequently must report to the Authority within 10 days after the end of each quarter in which samples were collected. Water systems required to sample less frequently than quarterly must report to the Authority within 10 days after the end of each monitoring period in which samples were collected. Water systems are required to submit the information listed in Tables 35 through 37, within 10 days of the end of any quarter in which monitoring is required. [Table not included. See ED. NOTE.]

(A) Disinfection byproducts. Water systems must report the information specified in Table 35 as follows: [Table not included. See ED. NOTE.]

(B) Disinfectants. Water systems must report the information specified in Table 36 as follows: [Table not included. See ED. NOTE.]

(C) Disinfection byproduct precursors and enhanced coagulation or enhanced softening. Water systems must report the information specified in Table 37 as follows: [Table not included. See ED. NOTE.]

(D) The Authority may choose to perform calculations and determine whether the MCL was exceeded or the system is eligible for reduced monitoring in lieu of having the system report that information.

(k) Systems using surface water or GWUDI sources must respond to the Authority within 45 days of receiving a sanitary survey report or comprehensive performance evaluation report that identifies significant deficiencies. The response must meet the criteria specified in OAR 333-061-0076(6)(a). Failure to report to the Authority requires a Tier 2 public notice as prescribed in OAR 333-061-0042(2)(b)(D).

(l) Reporting requirements related to triggered coliform investigations

(A) Water suppliers required to conduct a level 1 coliform investigation as prescribed by OAR 333-061-0078 must submit a completed investigation report as prescribed by OAR 333-061-0078(3) to the Authority within 30 days of learning a trigger as specified in OAR 333-061-0078(2) was exceeded. Water suppliers subject to a level 2 coliform investigation as prescribed by OAR 333-061-0078(3) must ensure a completed investigation report is submitted to the Authority within 30 days of learning a trigger as specified in OAR 333-061-0078(2) was exceeded.

(B) Water suppliers must report to the Authority the completion of every scheduled corrective action within 30 days for corrections not completed by the time the investigation report was reported to the Authority as specified in paragraph (1)(l)(A) of this rule.

(m) Water suppliers that have failed to comply with a coliform monitoring requirement as prescribed by OAR 333-061-0036(6) must report the monitoring violation to the Authority within 10 days after the water supplier discovers the violation, and notify the public in accordance with OAR 333-061-0042.

(n) Water suppliers responsible for seasonal water systems must certify in a manner determined by the Authority, that an Authority-approved start-up procedure has been completed prior to serving water to the public. Water suppliers must submit the certification to the Authority prior to the seasonal water system opening for the season and serving water to the public.

(o) Reporting source water monitoring results for Cryptosporidium and E. coli collected in accordance with OAR 333-061-0036(5)(e). Water systems must report results from the source water monitoring no later than 10 days after the end of the first month following the month when the sample is collected as prescribed by this subsection.

(A) Water systems must report the following data elements for each Cryptosporidium analysis: PWS ID, facility ID, sample collection date, sample type (field or matrix spike), sample volume filtered in Liters (to nearest 250 mL), whether 100 percent of the filtered volume was examined, and the number of oocysts counted.

(i) For matrix spike samples, water systems must also report the sample volume spiked and estimated number of oocysts spiked. These data are not required for field samples.

(ii) For samples in which less than 10 L is filtered or less than 100 percent of the sample volume is examined, systems must also report the number of filters used and the packed pellet volume.

(iii) For samples in which less than 100 percent of sample volume is examined, systems must also report the volume of re-suspended concentrate and volume of this re-suspension processed through immunomagnetic separation.

(B) Water systems must report the following data elements for each E. coli analysis: PWS ID, facility ID, sample collection date, analytical method number, method type, source type (flowing stream, lake/reservoir, or GWUDI), E. coli/100 mL, and turbidity (if required).

(p) Reporting requirements relating to Cryptosporidium protection.

(A) Water systems must report sampling schedules prescribed by OAR 333-061-0036(5)(f) and source water monitoring results in accordance with subsection (1)(p) of this rule unless they notify the Authority that they will not conduct source water monitoring due to meeting the criteria of OAR 333-061-0036(5)(e)(D).

(B) Filtered water systems must report their Cryptosporidium bin classification as described in OAR 333-061-0032(4)(f).

(C) Unfiltered water systems must report their mean source water Cryptosporidium level as described in OAR 333-061-0032(2)(c).

(D) Water systems must report disinfection profiles and benchmarks to the Authority as prescribed by OAR 333-061-0036(4)(l) and 333-061-0060(1)(e) prior to making a significant change in disinfection practice.

(E) Water systems must report to the Authority any microbial toolbox options as specified in Table 38 used to comply with treatment requirements under OAR 333-061-0032(2)(c), (3)(e) through (g), and (4)(g). Alternatively, the Authority may approve a water system to operate within required parameters for treatment credit rather than reporting monthly operational data for toolbox options. [Table not included. See ED. NOTE.]

(q) Water systems must report the use of uncovered finished water storage facilities to the Authority as described in OAR 333-061-0032(12).

(r) Reporting violations

(A) Failure to report coliform sampling results as required by OAR 333-061-0036(6) after monitoring was properly conducted in a timely manner is a violation of this rule.

(B) Failure to submit a completed coliform investigation report form after conducting an investigation or failure to ensure a coliform investigation report is submitted following a level 2 coliform investigation is a violation of this rule.

(C) Failure to notify the Authority following an E. coli-positive sample as required by paragraph (1)(c)(C) of this rule is a violation of this rule.

(D) Failure to certify and report completion of an Authority-approved start-up procedure at a seasonal water system as required by subsection (1)(n) of this rule is a violation of this rule.

(2) Record Maintenance by Water Suppliers:

(a) Water suppliers of public water systems shall retain records relating to the quality of the water produced and the condition of the physical components of the system. These records shall be kept at a convenient location within or near the area served by the water system;

(b) Records of microbiological analyses shall be kept for at least five years. Records of chemical analyses, secondary contaminants, turbidity, radioactive substances, and monitoring plans shall be kept for at least 10 years. Data may be transferred to tabular summaries provided the following information is included:

(A) Date, place and time of sampling, and the name of the person who collected the sample;

(B) Identification of the sample as to whether it was a routine finished water sample, repeat sample, raw water sample or special purpose sample;

(C) Date and time of the analysis, the laboratory and person performing the analysis; and,

(D) Analytical method used and results of the analysis.

(c) Records of actions taken to correct items of non-compliance shall be kept for at least three years after the last action taken with respect to the particular violation;

(d) Reports, summaries or communications on sanitary surveys shall be kept for at least 10 years;

(e) Records concerning variances or permits shall be kept for at least five years after the expiration of the variance or permit;

(f) Records of residual disinfectant measurements shall be kept for at least two years.

(g) All public water systems subject to the requirements of subsection (1)(f) of this rule shall retain the original records of all sampling data and analyses, reports, surveys, letters, evaluations, schedules, Authority determinations, and any other information required for no fewer than 12 years.

(h) Copies of public notices issued pursuant to OAR 333-061-0042 and certifications made to the Authority must be kept for three years after issuance.

(i) For water systems using surface water or groundwater under the direct influence of surface water that uses conventional filtration treatment or direct filtration treatment and that recycles spent filter backwash water, thickener, supernatant, or liquids from dewatering processes, water suppliers must collect and retain on file recycle flow information specified in paragraphs (2)(i)(A) through (F) of this rule for review and evaluation by the Authority:

(A) Copy of the recycle notification and information submitted to the Authority as required by OAR 333-061-0032(11);

(B) List of all recycle flows and the frequency with which they are returned;

(C) Average and maximum backwash flow rate through the filters and the average and maximum duration of the filter backwash process in minutes;

(D) Typical filter run length and a written summary of how filter run length is determined;

(E) The type of treatment provided for the recycle flow;

(F) Data on the physical dimensions of the equalization or treatment units, typical and maximum hydraulic loading rates, type of treatment chemicals used and average dose and frequency of use, and frequency at which solids are removed, if applicable.

(j) Water suppliers must maintain the following information in their records relating to water systems using groundwater sources:

(A) Documentation of corrective actions for a period of not less than 10 years;

(B) Documentation of notice to the public as prescribed by OAR 333-061-0042(8) for a period of not less than three years;

(C) Records of decisions made in accordance with OAR 333-061-0036(6)(i)(A)(iv) and records of invalidation of E. coli - positive groundwater source samples in accordance with OAR 333-061-0036(6)(l) for a period of not less than five years;

(D) For purchasing water systems, documentation of notification to the wholesale system(s) of total-coliform positive samples not invalidated in accordance under OAR 333-061-0036(6)(a)(F) for a period of not less than five years; and

(E) For any water system required to perform compliance monitoring in accordance with OAR 333-061-0032(7)(b):

(i) Records of the Authority-specified minimum disinfectant residual for a period of not less than ten years;

(ii) Records of the lowest daily residual disinfectant concentration and records of the date and duration of any failure to maintain the Authority-prescribed minimum residual disinfectant concentration for a period of more than four hours for a period of not less than five years; and

(iii) Records of Authority-specified compliance requirements for membrane filtration, parameters specified by the Authority for Authority-approved alternative treatment, and records of the date and duration of any failure to meet the membrane operating, membrane integrity, or alternative treatment operating requirements for more than four hours for a period of not less than five years.

(k) For systems required to compile a disinfection profile, the results of the profile (including raw data and analysis) must be kept indefinitely as well as the disinfection benchmark (including raw data and analysis) determined from the profile.

(l) Recordkeeping requirements pertaining to Cryptosporidium protection. Water systems must keep:

(A) Results from the source water monitoring prescribed by OAR 333-061-0036(5)(e) for three years after bin classification in accordance with OAR 333-061-0032(4)(f) for filtered systems, or determination of the mean Cryptosporidium level in accordance with OAR 333-061-0032(2)(c) for unfiltered systems for the particular round of monitoring.

(B) Any notification to the Authority that they will not conduct source water monitoring due to meeting the criteria specified in OAR 333-061-0036(5)(e)(D) for three years.

(C) The results of treatment monitoring associated with microbial toolbox options as prescribed by OAR 333-061-0032(14) through (18) and with uncovered finished water reservoirs in accordance with OAR 333-061-0032(12)(b), as applicable, for three years.

(m) IDSE reports (including Authority modifications) must be kept for at least 10 years. IDSE standard monitoring plans and IDSE system specific study plans must be retained at least as long as the IDSE report or any Authority modifications, whichever is longer. IDSE reports and any Authority modification must be made available for review by the Authority or the public.

(n) Water systems must retain a complete copy of any 40/30 certification submitted to the EPA for 10 years after the date the certification was submitted. The certification, all data upon which the certification is based, and any EPA notification must be available for review by the Authority or the public.

(o) Water suppliers must maintain any coliform investigation form, regardless of who conducts the investigation, and documentation of corrective actions completed as a result of those investigations, or other available summary documentation of the sanitary defects and corrective actions taken as specified in OAR 333-061-0078 for Authority review. This record must be maintained for a period not less than five years after completion of the coliform investigation or corrective action, whichever is later.

(p) Water suppliers must maintain a record of any repeat sample collected that meets Authority criteria for an extension of the 24-hour period for collecting repeat samples as provided for in OAR 333-061-0036(6)(g).

333-061-0042
Public Notice

(1) The owner or operator of a public water system must provide public notice to persons served by the water system for all violations and situations established by these rules.

(a) Public water systems that provide drinking water to purchasing water systems are required to give public notice to the owner or operator of the purchasing water system who is responsible for providing public notice to the persons it serves.

(b) If a public water system has a violation in a portion of the distribution system that is physically or hydraulically isolated from other parts of the distribution system, the Authority may, in writing, allow the system to limit distribution of the public notice to only persons served by that portion of the system which is out of compliance.

(c) A copy of any public notice must be sent to the Authority as required in OAR 333-061-0040(1)(i).

(2) Public notice requirements are divided into three tiers to take into account the seriousness of the violation or situation and of any potential adverse health effects that may be involved:

(a) Tier 1: A Tier 1 notice is required for violations and situations with significant potential to have serious adverse effects on human health as a result of short-term exposure, including but not limited to the following:

(A) Exceeding the MCL for E. Coli as specified in OAR 333-061-0030(4);

(B) Exceeding the MCL for nitrate, nitrite, or total nitrate and nitrite, or when the water system fails to take a confirmation sample within 24 hours of the system's receipt of the first sample showing an exceedance of the nitrate or nitrite MCL;

(C) Exceeding the MRDL for chlorine dioxide as prescribed in OAR 333-061-0031 when one or more samples taken in the distribution system the day following an exceedance of the MRDL at the entrance of the distribution system exceed the MRDL, or when the water system does not take the required samples in the distribution system;

(D) Violation of the interim operating plan for turbidity for a surface water system that does not meet the exception criteria for avoiding filtration under OAR 333-061-0032 nor has installed filtration treatment as defined by these rules when the Authority determines after consultation that a Tier 1 notice is required or where consultation does not take place within 24 hours after the system learns of the violation;

(E) Violation of a surface water treatment requirement as prescribed in OAR 333-061-0032, resulting from a single exceedance of the maximum allowable turbidity limit, where the Authority determines after consultation that a Tier 1 notice is required or where consultation does not take place within 24 hours after the system learns of the violation;

(F) Occurrence of a waterborne disease outbreak or other waterborne emergency, such as a failure or significant interruption in key water treatment processes, a natural disaster that disrupts the water supply or distribution system, or a chemical spill or unexpected loading of possible pathogens into the source water that significantly increases the potential for drinking water contamination;

(G) Detection of E. coli in source water samples collected as specified in OAR 333-061-0036(6)(i) through (k); and

(H) Other violations or situations with significant potential to have serious adverse effects on human health as a result of short term exposure, as determined by the Authority.

(b) Tier 2: required for all violations and situations with potential to have serious adverse effects on human health, including but not limited to:

(A) All violations of the MCL, MRDL, and treatment technique requirements, except where a Tier 1 notice is required or where the Authority determines that a Tier 1 notice is required.

(B) Violations of the monitoring and testing procedure requirements, where the Authority determines that a Tier 2 rather than a Tier 3 public notice is required, taking into account potential health impacts and persistence of the violation.

(C) Failure to comply with the terms and conditions of any variance or permit in place.

(D) Failure to respond to sanitary survey reports or comprehensive performance evaluation reports prepared by the Authority as required in OAR 333-061-0076 and 333-061-0077.

(E) Use of an emergency groundwater source that has been identified as potentially under the direct influence of surface water, but has not been fully evaluated.

(F) Failing to comply with groundwater treatment or corrective action requirements specified in OAR 333-061-0032.

(G) Failing to complete a coliform investigation or corrective action related to a coliform investigation as prescribed by OAR 333-061-0078.

(H) Failing to complete or follow an Authority approved start-up procedure prior to serving water to the public at a seasonal water system.

(c) Tier 3: required for other violations or situations not included in Tier 1 and 2, including but not limited to:

(A) Failing to conduct monitoring or reporting as prescribed by these rules except where the Authority determines a Tier 1 or Tier 2 notice is required;

(B) Failure to comply with a testing procedure established in these rules except where a Tier 1 notice is required or where the Authority determines that a Tier 2 notice is required;

(C) Operation under a variance or permit granted by the Authority;

(D) Availability of unregulated contaminant monitoring results as required under section (6) of this rule;

(E) Exceedance of the fluoride secondary MCL as required under section (7) of this rule; and

(F) Disinfection profiling and benchmarking monitoring and testing violations.

(G) Failing to submit a completed investigation report or notify the Authority when corrective action is completed related to a coliform investigation as prescribed by OAR 333-061-0078.

(H) Failing to certify to the Authority upon completing an Authority approved start-up procedure at a seasonal water system.

(I) Failure to analyze for E. coli following a total coliform-positive routine sample collected according to OAR 333-061-0036(6)(b) through (g).

(J) Failure to notify the Authority following an E. coli-positive sample in a timely manner as required by OAR 333-061-0036(6)(a)(D).

(K) Failure to conduct recordkeeping as prescribed by OAR 333-061-0040(2)(o) or (p).

(d) The Authority may require public notice for violations or other situations not listed in this section, or a higher tier of public notice for specific violations and situations listed in this section.

(3) All public notices established by these rules shall be distributed in the form, manner and frequency as described in this section:

(a) Tier 1 notices: public water systems required to distribute Tier 1 notices must:

(A) Provide the notice as soon as practical, but no later than 24 hours after learning of the violation or situation;

(B) Initiate consultation with the Authority as soon as practical, but no later than 24 hours after learning of the violation or situation;

(C) Comply with any additional notification requirements established as a result of consultation with the Authority;

(D) The form and manner used by the public water system are to fit the specific situation, but must be designed to reach residential, transient, and non-transient users of the water system. In order to reach all persons served, one or more of the following forms of delivery must be used:

(i) Appropriate broadcast media such as radio and television;

(ii) Posting of the notice in conspicuous locations throughout the area served by the water system;

(iii) Hand delivery of the notice to persons served by the water system; or

(iv) Another delivery method approved in writing by the Authority.

(b) Tier 2 notices: water suppliers required to distribute Tier 2 notices must:

(A) Provide the public notice as soon as practical, but no later than 30 days after learning of the violation or situation. The Authority may, in writing, extend additional time for the initial notice of up to three months in appropriate circumstances;

(B) If the public notice is posted, leave the notice in place as long as the violation or situation exists, but in no case for less than seven days, even if the violation or situation is resolved;

(C) Repeat the notice every three months as long as the violation or situation persists.

(D) For the turbidity violations specified in subparagraphs (3)(b)(D)(i) and (ii) of this rule, public water systems must consult with the Authority as soon as practical, but no later than 24 hours after learning of the violation to determine whether a Tier 1 public

notice is required to protect public health. When consultation with the Authority does not take place within the 24 hour period, the water system must distribute a Tier 1 notice of the violation within the next 24 hours as prescribed in subsection (3)(a) of this rule:

(i) Violation of the interim operating plan for turbidity for a surface water system that does not meet the exception criteria for avoiding filtration under OAR 333-061-0032 nor has installed treatment as defined by these rules; or

(ii) Violation of the SWTR, LT1ESWTR, or IESWTR treatment technique requirement as prescribed in OAR 333-061-0032, resulting from a single exceedance of the maximum allowable turbidity limit.

(E) The form and manner used by the public water system for initial and repeat notices must be calculated to reach persons served by the system in the required time period. The form and manner may vary based on the specific situation and type of water system, but it must at a minimum meet the following requirements:

(i) Unless directed otherwise by the Authority in writing, community water systems must provide notice by:

(I) Mail or other direct delivery to each customer receiving a bill and to other service connections to which water is delivered by the public water system; and

(II) Any other method reasonably calculated to reach other persons regularly served by the water system who would not normally be reached by mail or direct delivery. Other methods may include: local newspapers, delivery of multiple copies for distribution, posting, e-mail and community organizations.

(ii) Unless directed otherwise by the Authority in writing, non-community water systems must provide notice by:

(I) Posting the notice in conspicuous locations frequented by users throughout the distribution system, or by mail or direct delivery to each customer or connection; and

(II) Any other method reasonably calculated to reach other persons not normally reached by posting, mail or direct delivery. Other methods may include: local newspaper, newsletter, e-mail and multiple copies in central locations.

(c) Tier 3 notices: public water systems required to distribute Tier 3 notices must:

(A) Provide the public notice not later than one year after learning of the violation or situation or begins operating under a variance or permit. Following the initial notice, the system must repeat the notice annually for as long as the violation, variance, permit or other situation persists. If the public notice is posted, the notice must remain in place for as long as the violation, variance, permit, or other situation persists, but in no case less than seven days even if the violation or situation is resolved.

(B) Instead of individual Tier 3 public notices, a community public water system may use its annual Consumer Confidence Report (CCR) for the initial and all repeat notices detailing all violations and situations that occurred during the previous twelve months. This method may be used as long as it is distributed within the one year requirement in paragraph (3)(c)(A) of this rule, follows the public notice content required under section (4) of this rule and is delivered to users as required under paragraph (3)(c)(C) of this rule.

(C) The form and manner used by the public water system for initial and repeat notices must be calculated to reach persons served by the system in the required time period. The form and manner may vary based on the specific situation and type of water system, but it must at a minimum meet the following requirements:

(i) Unless directed otherwise by the Authority in writing, community water systems must provide notice by:

(I) Mail or other direct delivery to each customer receiving a bill and to other service connections to which water is delivered by the public water system; and

(II) Any other method reasonably calculated to reach other persons regularly served by the water system who would not normally be reached by mail or direct delivery. Other methods may include: local newspapers, delivery of multiple copies for distribution, posting, e-mail and community organizations.

(ii) Unless directed otherwise by the Authority in writing, non-community water systems must provide notice by:

(I) Posting the notice in conspicuous locations frequented by users throughout the distribution system, or by mail or direct delivery to each customer or connection; and

(II) Any other method reasonably calculated to reach other persons not normally reached by posting, mail or direct delivery. Other methods may include: local newspaper, newsletter, e-mail and delivery of multiple copies in central locations.

(4) Content of Public Notice:

(a) When a public water system has a violation or situation prescribed in these rules requiring a public notice, each public notice must include the following elements:

(A) A description of the violation or situation, including the contaminant(s) of concern, and the contaminant level;

(B) When the violation or situation occurred;

(C) Any potential adverse health effects including the standard language required under paragraphs (4)(d)(A) and (B) of this rule;

(D) The population at risk, including subpopulations particularly vulnerable if exposed to the contaminant in their drinking water;

(E) Whether alternative water supplies should be used;

(F) What actions consumers should take, including when they should seek medical help, if known;

(G) What the system is doing to correct the violation or situation;

(H) When the water system expects to return to compliance or resolve the situation;

(I) The name, business address, and phone number of the water system owner, operator, or designee of the public water system as a source of additional information concerning the notice; and

(J) A statement to encourage the notice recipient to distribute the public notice to other persons served, using the standard language under paragraph (4)(d)(C) of this rule.

(b) Content of public notices for public water systems operating under a variance or permit:

(A) If a public water system has been granted a variance or permit, the public notice must contain:

(i) An explanation of the reasons for the variance or permit;

(ii) The date on which the variance of permit was issued;

(iii) A brief status report on the steps the system is taking to install treatment, find alternative sources of water or otherwise comply with the terms and schedules of the variance or permit; and

(iv) A notice of any opportunity for public input in the review of the variance or permit.

(B) If a public water system violates the conditions of a variance or permit, the public notice must contain the ten elements listed in subsection (4)(a) of this rule.

(c) Public notice presentation:

(A) Each public notice required by these rules must:

(I)Be displayed in a conspicuous way when printed or posted;

(ii) Not contain overly technical language or very small print;

(iii) Not be formatted in a way that defeats the purpose of the notice;

(iv) Not contain language which nullifies the purpose of the notice.

(B) Each public notice required by these rules must comply with multilingual requirements as follows:

(i) For public water systems serving a large proportion of non-English speaking consumers, as determined by the Authority, the public notice must contain information in the appropriate language(s) regarding the importance of the notice or contain a telephone number or address where persons served may contact the water system to obtain a translated copy of the notice or to request assistance in the appropriate language.

(ii) In cases where the Authority has not determined what constitutes a large proportion of non-English speaking consumers, the public water system must include in the public notice the same information required in subparagraph (4)(c)(B)(i) of this rule

where appropriate to reach a large proportion of non-English speaking persons served by the water system.

(d) Standard language: public water systems are required to include the following standard language in their public notice:

(A) Public water systems must include in each public notice the specific health effects language as prescribed in OAR 333-061-0097 for each MCL, MRDL, and treatment technique violation and for each violation of a condition of a variance or permit.

(B) Public water systems must include the following language in their notice, including the language necessary to fill in the blanks, for all monitoring and testing procedure violations:

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During {compliance period}, we "did not monitor or test" or "did not complete all monitoring or testing" for {contaminants(s)}, and therefore cannot be sure of the quality of your drinking water during that time.

(C) Public water systems are required where applicable to include the following standard language to encourage the distribution of the public notice to all persons served:

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

(5) Notice to new billing units or new customers:

(a) Community water systems must give a copy of the most recent public notice for any continuing violation, the existence of a variance or permit, or other ongoing situations requiring a public notice to all new billing units or new customers prior to or at the time service begins.

(b) Non-community water systems must continuously post the public notice in conspicuous locations in order to inform new consumers of any continuing violation, variance or permit, or other situations requiring a public notice for as long as the violation, variance, permit, or other situation persists.

(6) Special notice of availability of unregulated contaminant monitoring results:

(a) The owner or operator of a community water system or non-transient, non-community water systems required by EPA to monitor for unregulated contaminants must notify persons served by the system of the availability of the results of such sampling no later than 12 months after the monitoring results are known.

(b) The form and manner of the public notice must follow the requirements for a tier 3 public notice as prescribed in paragraphs (3)(c)(B) and (C) of this rule. The notice must also identify a person and provide the telephone number to contact for information on the monitoring results.

(7) Special notice for exceedance of the SMCL for fluoride:

(a) Community water systems that exceed the fluoride secondary MCL of 2 mg/l, determined by the last single sample taken in accordance with OAR 333-061-0036(2), but do not exceed the MCL of 4 mg/l for fluoride must provide the public notice in subsection (7)(d) of this rule to persons served by the water system. Public notice must be provided as soon as practical but no later than 12 months from the day the water system learns of the exceedance. The public water system must repeat the notice at least annually for as long as the exceedance persists. The Authority may require an initial notice sooner than 12 months and repeat notices more frequently than annually on a case-by-case basis;

(b) A copy of the notice must also be sent to all new billing units and new customers at the time service begins and to the Authority. If the public notice is posted, the notice must remain in place for as long as the secondary MCL is exceeded, but in no case less than seven days, even if the exceedance is eliminated;

(c) The form and manner of the public notice, including repeat notices must follow the requirements for tier 3 public notice;

(d) The notice must contain the following language, including the language necessary to fill in the blanks:

This is an alert about your drinking water and a cosmetic dental problem that might affect children under nine years of age. At low levels, fluoride can help prevent cavities, but children drinking water containing more than 2 mg/l of fluoride may develop cosmetic discoloration of their permanent teeth (dental fluorosis). The drinking water provided by your community water system {name} has a fluoride concentration of {insert value} mg/l.

Dental fluorosis, in its moderate or severe forms, may result in a brown staining or pitting of the permanent teeth. This problem occurs only in developing teeth, before they erupt from the gums. Children under nine should be provided with alternative sources of drinking water or water that has been treated to remove the fluoride to avoid the possibility of staining and pitting of their permanent teeth. You may also want to contact your dentist about proper use by young children of fluoride-containing products. Older children and adults may safely drink the water.

Drinking water containing more than 4 mg/l of fluoride (the U.S. EPA's drinking water standard) can increase your risk of developing bone disease. Your drinking water does not contain more than 4 mg/l of fluoride, but we're required to notify you when we discover that the fluoride levels in your drinking water exceed 2 mg/l because of this cosmetic dental problem.

For more information, please call {name of water system contact} of {name of community water system} at {phone number}. Some home water treatment units are also available to remove fluoride from drinking water. To learn more about available home water treatment units, you may call NSF International at 1-877-8-NSF-HELP.

(8) Special notice to the public for significant deficiencies or source water fecal contamination.

(a) A community water system that uses groundwater and that receives notification from the Authority of a significant deficiency or of an E. coli-positive groundwater source sample, that is not invalidated in accordance with OAR 333-061-0036(6)(l), must inform the public served by the water system of the E. coli-positive source sample or the significant deficiency that has not been corrected as prescribed by OAR 333-061-0043(5). The water system must continue to inform the public annually until the significant deficiency is corrected, or the fecal contamination in the groundwater source is determined by the Authority to be corrected in accordance with OAR 333-061-0032(6).

(b) A non-community groundwater system that receives notice from the Authority of a significant deficiency must inform the public served by the water system in a manner approved by the Authority of the significant deficiency if it has not been corrected within 12 months of the notification by the Authority. The water system must continue to inform the public annually until the significant deficiency is corrected. The information must include:

(A) The nature of the significant deficiency and the date the significant deficiency was identified by the Authority;

(B) The Authority-approved plan and schedule for correction of the significant deficiency, including any interim measures, progress to date, and any interim measures completed; and

(C) For water systems with a large proportion of non-English speaking consumers as determined by the Authority, information must be distributed in the appropriate language(s) regarding the importance of the notice or a telephone number or address where consumers may contact the system to obtain a translated copy of the notice or assistance in the appropriate language.

(c) If directed by the Authority, a non-community water system with significant deficiencies that have been corrected must inform its customers of the significant deficiencies, how the deficiencies were corrected, and the dates of correction under subsection (8)(b) of this rule.

(9) Special notice for repeated failure to conduct monitoring of the source water for Cryptosporidium and for failure to determine bin classification or mean Cryptosporidium level.

(a) Special notice for repeated failure to monitor. The owner or operator of a community or non-community water system that is required to monitor source water in accordance with OAR 333-061-0036(5)(e) must notify persons served by the water system that monitoring has not been completed as required no later than 30 days after the system has failed to collect any three months of monitoring as specified in Table 33. The notice must be repeated as specified in subsection (3)(b) of this rule. [Table not included. See ED. NOTE.]

(b) Special notice for failure to determine bin classification or mean Cryptosporidium level. The owner or operator of a community or non-community water system that is required to determine a bin

classification in accordance with OAR 333-061-0032(4)(f), or to determine a mean Cryptosporidium level as prescribed by OAR 333-061-0032(2)(c), must notify persons served by the water system that the determination has not been made as required no later than 30 days after the system has failed to report the determination in accordance with OAR 333-061-0032(2)(c)(A) through (D) or OAR 333-061-0032(4)(f)(G) and (H).

(A) The notice must be repeated as specified in subsection (3)(b) of this rule.

(B) The notice is not required if the system is complying with an Authority approved schedule to address the violation.

(c) The form and manner of the special notice must follow the requirements for a Tier 2 public notice as prescribed in subsection (3)(b) of this rule. The special notice must be presented as required by subsection (4)(c) of this rule.

(d) The special notice must contain the following language, including system specific language for the text within the braces.

(A) The special notice for repeated failure to conduct monitoring must contain:

{Water system name} is required to monitor the source of your drinking water for Cryptosporidium. Results of the monitoring are to be used to determine whether water treatment at the {treatment plant name} is sufficient to adequately remove Cryptosporidium from your drinking water. We are required to complete this monitoring and make this determination by {required bin determination date}. We ``did not monitor or test'' or ``did not complete all monitoring or testing'' on schedule and, therefore, we may not be able to determine by the required date what treatment modifications, if any, must be made to ensure adequate Cryptosporidium removal. Missing this deadline may, in turn, jeopardize our ability to have the required treatment modifications, if any, completed by the deadline required, {date}. For more information, please call {name of water system contact} of { water system name} at {phone number}.

(B) The special notice for failure to determine bin classification or mean Cryptosporidium level must contain the following language:

{Water system name} is required to monitor the source of your drinking water for Cryptosporidium in order to determine by {date} whether water treatment at the {treatment plant name} is sufficient to adequately remove Cryptosporidium from your drinking water. We have not made this determination by the required date. Our failure to do this may jeopardize our ability to have the required treatment modifications, if any, completed by the required deadline of {date}. For more information, please call {name of water system contact} of {water system name} at {phone number}.

(C) Each special notice must also include a description of what the system is doing to correct the violation and when the system expects to return to compliance or resolve the situation.

(10) Public notification by the Authority. The Authority may give notice to the public required by this section on behalf of the owner or operator of the public water system. However, the owner or operator of the public water system remains legally responsible for ensuring that the requirements of this section are met.

333-061-0043
Consumer Confidence Reports

This rule establishes the minimum requirements for the content of annual reports that community water systems must deliver to their customers. These reports must contain information on the quality of the water delivered by the systems and characterize the risks (if any) from exposure to contaminants detected in the drinking water in an accurate and understandable manner. For the purpose of this rule, customers are defined as billing units or service connections to which water is delivered by a Community Water System.

(1) Delivery deadlines:

(a) Community water systems must deliver their reports by July 1, annually. The report must contain data collected during, or prior to, the previous calendar year;

(b) A new community water system must deliver its first report by July 1 of the year after its first full calendar year in operation and annually thereafter;

(c) A community water system that sells water to another community water system must deliver the applicable information to the buyer system:

(A) No later than April 1, annually; or

(B) On a date mutually agreed upon by the seller and the purchaser, and specifically included in a contract between the parties.

(2) Content of the Reports:

(a) Each community water system must provide to its customers an annual report that contains the information specified in sections (2), (3), (4), and (5) of this rule;

(b) Each report must identify the source(s) of the water delivered by the community water system by providing information on:

(A) The type of water: for example, surface water, ground water; and

(B) The commonly used name (if any) and location of the body (or bodies) of water.

(c) If a source water assessment has been completed, the report must notify consumers of the availability of this information and the means to obtain it. In addition, systems are encouraged to highlight in the report significant potential sources of contamination in the drinking water protection area if they have readily available information. Where a system has received a source water assessment from the Authority, the report must include a brief summary of the system's susceptibility to potential sources of contamination, using language provided by the Authority or written by the operator;

(d) Each report must contain the following definitions:

(A) Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety;

(B) Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

(C) Variance: A system operating under a variance as prescribed in OAR 333-061-0045 must include the following definition in its report: Variances: State permission not to meet an MCL or a treatment technique under certain conditions;

(D) Treatment Technique or Action Level: A system which has a detection for a contaminant for which EPA has set a treatment technique or an action level must include one or both of the following definitions as applicable:

(i) Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water;

(ii) Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

(E) Maximum Residual Disinfectant Level Goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

(F) Maximum Residual Disinfectant Level or MRDL: The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

(3) Detected Contaminants:

(a) The following information must be included in each report for contaminants subject to mandatory monitoring (except Cryptosporidium). Detected means at or above the detection level prescribed by each EPA approved analytical method set forth in 40 CFR 141:

(A) Contaminants and disinfection by-products subject to an MCL, action level, MRDL, or treatment technique (regulated contaminants); and

(B) Unregulated contaminants for which monitoring is required.

(b) The data relating to these contaminants must be displayed in one table or in several adjacent tables. Any additional monitoring results which a community water system chooses to include in its report must be displayed separately.

(c) The data must be derived from data collected to comply with state monitoring and analytical requirements during the calendar year except that where a system is allowed to monitor for regulated contaminants less often than once a year, the table(s) must include the date and results of the most recent sampling and the report must include a brief statement indicating that the data presented in the report are from the most recent testing done in accordance with the regulation. No data older than five years need be included.

(d) For detected regulated contaminants (listed in Table 39 of this rule), the table(s) in the report must contain: [Table not included. See ED. NOTE.]

(A) The MCL for that contaminant expressed as a number equal to or greater than 1.0 (as provided in Table 39); [Table not included. See ED. NOTE.]

(B) The MCLG for that contaminant expressed in the same units as the MCL;

(C) If there is no MCL for a detected contaminant, the table must indicate that there is a treatment technique, or specify the action level, applicable to that contaminant, and the report must include the definitions for treatment technique or action level, as appropriate, specified in paragraph (2)(d)(D) of this rule;

(D) For contaminants subject to an MCL, except turbidity and total coliforms and E. coli, the highest contaminant level used to determine compliance with these rules and the range of detected levels, as follows:

(i) When compliance with the MCL is determined annually or less frequently: the highest detected level at any sampling point and the range of detected levels expressed in the same units as the MCL;

(ii) When compliance with the MCL is determined by calculating a running annual average of all samples taken at a monitoring location: the highest average at any of the monitoring locations and the range of all monitoring locations must be expressed in the same unit of measure as the MCL. For the MCL for TTHM and HAA5 as specified by OAR 333-061-0030(2)(b), water systems must include the highest locational running annual average for TTHM and HAA5 and the range of individual sample results for all monitoring locations expressed in the same unit of measure as the MCL. If more than one location exceeds the MCL for TTHM or HAA5, the water system must include the locational running annual averages for all locations that exceed the MCL;

(iii) When compliance with the MCL is determined on a system wide basis by calculating a running annual average of all samples at all monitoring locations: the average and range of detections must be expressed in the same units as the MCL. The water system is required to include individual sample results for an IDSE conducted in accordance with OAR 333-061-0036(4)(b) of this rule when determining the range of TTHM and HAA5 results to be reported in the annual consumer confidence report for the calendar year that the IDSE samples were taken;

(iv) When rounding of results to determine compliance with the MCL is allowed by the regulations, rounding should be done prior to multiplying the results by the factor listed in Table 39 of this rule. [Table not included. See ED. NOTE.]

(e) Turbidity:

(A) When it is reported pursuant to OAR 333-061-0030(3)(a), 333-061-0032(2), and 333-061-0036(5)(a): the highest monthly value. The report should include an explanation of the reasons for measuring turbidity. This includes water systems currently without filtration treatment, but required to install filtration through a Notice of Violation and Remedial Order.

(B) When it is reported pursuant to OAR 333-061-0030(3): The highest single measurement and the lowest monthly percentage of samples meeting the turbidity limits specified in OAR 333-061-0030(3) for the filtration technology being used. The report should include an explanation of the reasons for measuring turbidity.

(f) Lead and copper: the 90th percentile value of the most recent round of sampling and the number of sampling sites exceeding the action level and the lead-specific information as prescribed in subsection (4)(c) of this rule.

(g) For total coliform until March 31, 2016:

(A) The highest monthly number of positive samples for systems collecting fewer than 40 samples per month; or

(B) The highest monthly percentage of positive samples for systems collecting at least 40 samples per month.

(h) For E. coli: the total number of positive samples.

(i) Reports that contain information regarding level 1 or level 2 coliform investigations required as specified in OAR 333-061-0078 must include the following definitions as applicable:

(A) "Level 1 Coliform Investigation" means a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

(B) "Level 2 Coliform Investigation" means a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred or why total coliform bacteria have been found in our water system on multiple occasions.

(j) The likely source(s) of detected contaminants to the best of the operator's knowledge. Specific information regarding contaminants may be available in sanitary surveys and source water assessments, and should be used when available to the operator. If the operator lacks specific information on the likely source, the report must include one or more of the typical sources for that contaminant listed in Table 40 which are most applicable to the system. [Table not included. See ED. NOTE.]

(k) If a community water system distributes water to its customers from multiple hydraulically independent distribution systems that are fed by different raw water sources, the table should contain a separate column for each service area and the report should identify each separate distribution system. Alternatively, systems could produce separate reports tailored to include data for each service area.

(l) The table(s) must clearly identify any data indicating violations of MCLs, MRDLs, or treatment techniques and the report must contain a clear and readily understandable explanation of the violation, the length of the violation, the potential adverse health effects, and actions taken by the system to address the violation. To describe the potential health effects, the system must use the relevant language in Table 40 of this rule. [Table not included. See ED. NOTE.]

(m) For detected unregulated contaminants for which monitoring is required (except Cryptosporidium), the table(s) must contain the average and range at which the contaminant was detected. The report may include a brief explanation of the reasons for monitoring for unregulated contaminants.

(n) Information on Cryptosporidium, radon, and other contaminants:

(A) If the system has performed any monitoring for Cryptosporidium, which indicates that Cryptosporidium may be present in the source water or the finished water, the report must include:

(i) A summary of the results of the monitoring, and

(ii) An explanation of the significance of the results.

(B) If the system has performed any monitoring for radon which indicates that radon may be present in the finished water, the report must include:

(i) The results of the monitoring; and

(ii) An explanation of the significance of the results.

(C) If the system has performed additional monitoring which indicates the presence of other contaminants in the finished water, the system is strongly encouraged to report any results which may indicate a health concern. To determine if results may indicate a

health concern, EPA recommends that systems find out if EPA has proposed a National Primary Drinking Water Regulation or issued a health advisory for that contaminant by calling the Safe Drinking Water Hotline (800-426-4791). EPA considers detects above a proposed MCL or health advisory level to indicate possible health concerns. For such contaminants, EPA recommends that the report include:

(i) The results of the monitoring; and

(ii) An explanation of the significance of the results noting the existence of a health advisory or a proposed regulation.

(o) Compliance with OAR 333-061: In addition to subsection (3)(k) of this rule, the report must note any violation that occurred during the year covered by the report of a requirement listed below, and include a clear and readily understandable explanation of the violation, any potential adverse health effects, and the steps the system has taken to correct the violation.

(A) Monitoring and reporting of compliance data;

(B) Filtration and disinfection prescribed by OAR 333-061-0032: For systems which have failed to install adequate filtration or disinfection equipment or processes which constitutes a violation or have an equipment failure constituting a violation, the report must include the following language as part of the explanation of potential adverse health effects: Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches;

(C) Lead and copper control requirements: For systems which fail to take one or more actions prescribed by OAR 333-061-0034 the report must include the applicable language in Table 40 of this rule for lead, copper, or both; [Table not included. See ED. NOTE.]

(D) Treatment techniques for Acrylamide and Epichlorohydrin: For systems which violate the requirements of OAR 333-061-0030(7), the report must include the relevant health effects language in Table 40 of this rule. [Table not included. See ED. NOTE.]

(E) Recordkeeping of compliance data;

(F) Special monitoring requirements prescribed by OAR 333-061-0036(2)(f) and for unregulated contaminants as required by EPA;

(G) Violation of the terms of a variance, administrative order or judicial order.

(p) Variances: If a system is operating under the terms of a variance as prescribed in OAR 333-061-0045, the report must contain:

(A) An explanation of the reasons for the variance;

(B) The date on which the variance was issued;

(C) A brief status report on the steps the system is taking to install treatment, find alternative sources of water, or otherwise comply with the terms and schedules of the variance; and

(D) A notice of any opportunity for public input in the review, or renewal, of the variance.

(q) Additional information:

(A) The report must contain a brief explanation regarding contaminants which may reasonably be expected to be found in drinking water including bottled water. This explanation may include the language in subparagraphs (3)(q)(A)(i), (ii) and (iii) of this rule, or systems may use their own comparable language. The report also must include the language of subparagraph (3)(q)(A)(iv) of this rule.

(i) The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity;

(ii) Contaminants that may be present in source water include:

(I) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;

(II) Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming;

(III) Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses;

(IV) Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems;

(V) Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

(iii) In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health;

(iv) Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

(B) The report must include the telephone number of the owner, operator, or designee of the community water system as a source of additional information concerning the report;

(C) In communities with a large proportion of non-English speaking residents the report must contain information in the appropriate language(s) regarding the importance of the report or contain a telephone number or address where such residents may contact the system to obtain a translated copy of the report or assistance in the appropriate language;

(D) The report must include information (for example, time and place of regularly scheduled board meetings) about opportunities for public participation in decisions that may affect the quality of the water;

(E) The systems may include such additional information as they deem necessary for public education consistent with, and not detracting from, the purpose of the report.

(4) Required additional health information:

(a) All reports must prominently display the following language: Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

(b) A system which detects nitrate at levels above 5 mg/l, but does not exceed the MCL:

(A) Must include a short informational statement about the impacts of nitrate on children using language such as: Nitrate in drinking water at levels above 10 mg/l is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant you should ask advice from your health care provider.

(B) May write its own educational statement, but only in consultation with the Authority.

(c) Every report must include the following lead-specific information:

(A) A short informational statement about the lead in drinking water and its effects on children. The statement must include the following information: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and

components associated with service lines and home plumbing. {NAME OF WATER UTILITY} is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

(B) The water system may write its own educational statement, but only in consultation with the Authority.

(d) Requirements related to coliform investigations as specified in OAR 333-061-0078.

(A) A water supplier required to comply with any requirement related to level one or level two coliform investigations that are not due to an exceedance of the MCL for E. coli must include in the report the text found in subparagraphs (4)(d)(A)(i) through (iii) of this rule as appropriate, replacing the language in brackets with system specific information as appropriate.

(i) Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct investigation(s) to identify problems and to correct any problems that were found during these investigation(s).

(ii) During the past year we were required to conduct [INSERT NUMBER OF LEVEL 1 COLIFORM INVESTIGATIONS] level 1 coliform investigation(s). [INSERT NUMBER OF LEVEL 1 COLIFORM INVESTIGATIONS] level 1 coliform investigation (s) were completed. In addition, we were required to take [INSERT NUMBER OF CORRECTIVE ACTIONS] corrective actions and we completed [INSERT NUMBER OF CORRECTIVE ACTIONS] of these actions.

(iii) During the past year [INSERT NUMBER OF LEVEL 2 COLIFORM INVESTIGATIONS] level 2 coliform investigations were required to be completed for our water system. [INSERT NUMBER OF LEVEL 2 COLIFORM INVESTIGATIONS] level 2 coliform investigations were completed. In addition, we were required to take [INSERT NUMBER OF CORRECTIVE ACTIONS] corrective actions and we completed [INSERT NUMBER OF CORRECTIVE ACTIONS] of these actions.

(B) A water supplier required to comply with any requirements related to a level 2 coliform investigation due to an exceedance of the MCL for E. coli must include in the report the text found in subparagraphs (4)(d)(B)(i) and (ii) of this rule as appropriate, replacing the language in brackets with system specific information as appropriate.

(i) E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely compromised immune systems. We found E. coli bacteria, indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct investigation(s) to identify problems and to correct any problems that were found during these investigations.

(ii) We were required to complete a level 2 coliform investigation because we found E. coli in our water system. In addition, we were required to take [INSERT NUMBER OF CORRECTIVE ACTIONS] corrective actions and we completed [INSERT NUMBER OF CORRECTIVE ACTIONS] of these actions.

(C) A water supplier that has failed to complete a required coliform investigation or correct all identified sanitary defects must include one or both of the following statements, as appropriate:

(i) During the past year, we failed to conduct the required coliform investigation(s).

(ii) During the past year, we failed to correct all sanitary defects that were identified during a coliform investigation as required.

(D) If E. coli is detected at a water system and the MCL for E. coli was exceeded, in addition to including the information as required by section (3) of this rule, the water supplier must include one or more of the statements specified in subparagraphs (4)(d)(D)(i) through (iv) of this rule as appropriate to describe any noncompliance:

(i) We had an E. coli-positive repeat sample following a total coliform-positive routine sample.

(ii) We had a total coliform-positive repeat sample following an E. coli-positive routine sample.

(iii) We failed to collect all required repeat samples following an E. coli-positive routine sample.

(iv) We failed to test for E. coli when a repeat sample tested positive for total coliform.

(E) If E. coli is detected at a water system but the MCL for E. coli was not exceeded, in addition to completing the table(s) as specified in section (3) of this rule, a water supplier may include a statement that explains that although E. coli was detected, the MCL for E. coli was not exceeded at the water system.

(5) Special requirements for groundwater systems:

(a) Any groundwater system that receives notification of a significant deficiency that is not corrected at the time of the next report, or of an E. coli-positive groundwater source sample that was not invalidated in accordance OAR 333-061-0036(6)(l) must inform its customers in the next report. The water system must continue to inform the public annually until the Authority determines that the particular significant deficiency is corrected or that the fecal contamination in the groundwater source is addressed in accordance with OAR 333-061-0032(6). Each report must include the following elements:

(A) The nature of the particular significant deficiency or the source of the fecal contamination (if the source is known), and the date the significant deficiency was identified by the Authority or the dates of the E. coli-positive groundwater source samples;

(B) If the fecal contamination in the groundwater source has been addressed as prescribed by OAR 333-061-0032(6) and the date of such action;

(C) The Authority-approved plan and schedule for correction, including interim measures, progress to date, and any interim measures completed for any significant deficiency or fecal contamination in the groundwater source that has not been addressed as prescribed by OAR 333-061-0032(6); and

(D) The potential health effects language specified in OAR 333-061-0097(4)(a) if the system received notice of a E. coli-positive groundwater source sample that was not invalidated by the Authority in accordance with OAR 333-061-0036(6)(l).

(b) The Authority may require a water system with significant deficiencies that have been corrected before the next report is issued to inform its customers of the significant deficiency, how the deficiency was corrected, and the date of correction in accordance with subsection (5)(a) of this rule.

(6) Report delivery and recordkeeping:

(a) Except as provided in subsection (6)(g) of this rule, each community water system must mail or otherwise directly deliver one copy of the report to each customer.

(b) The system must make a good faith effort to reach consumers who do not get water bills, using means recommended by the Authority. EPA expects that an adequate good faith effort will be tailored to the consumers who are served by the system but are not bill-paying customers, such as renters or workers. A good faith effort to reach consumers would include a mix of methods appropriate to the particular system such as: Posting the reports on the Internet; mailing to postal patrons in metropolitan areas; advertising the availability of the report in the news media; publication in a local newspaper; posting in public places such as cafeterias or lunch rooms of public buildings; delivery of multiple copies for

distribution by singularly-billed customers such as apartment buildings or large private employers; delivery to community organizations.

(c) No later than the date the system is required to distribute the report to its customers, each community water system must mail a copy of the report to the Authority, followed within three months by a certification that the report has been distributed to customers, and that the information is correct and consistent with the compliance monitoring data previously submitted to the Authority.

(d) No later than the date the system is required to distribute the report to its customers, each community water system must deliver the report to any other agency or clearinghouse identified by the Authority.

(e) Each community water system must make its reports available to the public upon request.

(f) Each community water system serving 100,000 or more persons must post its current year's report to a publicly-accessible site on the Internet.

(g) The Governor of a State or his designee, can waive the requirement of subsection (6)(a) of this rule for community water systems serving fewer than 10,000 persons.

(A) Such systems must:

(i) Publish the reports in one or more local newspapers serving the area in which the system is located;

(ii) Inform the customers that the reports will not be mailed, either in the newspapers in which the reports are published or by other means approved by the State; and

(iii) Make the reports available to the public upon request.

(B) Systems serving 500 or fewer persons may forego the requirements of subparagraphs (6)(g)(A)(i) and (ii) of this rule if they provide notice at least once per year to their customers by mail, door-to-door delivery or by posting in an appropriate location that the report is available upon request.

(h) Any system subject to this rule must retain copies of its consumer confidence report for no less than five years.

[ED. NOTE: Tables referenced are available from the agency.]

333-061-0045
Variances

(1) Variances from the maximum contaminant levels may be granted by the Authority to public water systems under the following circumstances where:

(a) An evaluation satisfactory to the Authority indicates that alternative sources of water are not reasonably available to the system;

(b) There will be no unreasonable risk to health;

(c) The water supplier has provided sufficient evidence to confirm that the best available treatment techniques which are generally available are unable to treat the water in question so that it meets maximum contaminant levels;

(d) The water supplier agrees to notify the water users at least once every three months, or more frequently if determined by the Authority, that the water system is not in compliance;

(e) A compliance schedule is submitted which outlines how the water supplier intends to achieve compliance, and the water supplier agrees to review this schedule once every three years to determine whether changes have occurred in the conditions which formed the basis for the schedule; and

(f) A plan is submitted which outlines interim control measures including application of the best technology treatment technique to be implemented during the period that the variance is in effect.

(2) The Authority shall document all findings of its determinations and if the Authority prescribes a schedule requiring compliance with a contaminant level for which the variance is granted later than five years from the date of issuance of the variance the Authority shall:

(a) Document the rationale for the extended compliance schedule;

(b) Discuss the rationale for the extended compliance schedule in the required public notice and opportunity for public hearing; and

(c) Provide the shortest practicable time schedule feasible under the circumstances.

(3) Before denying a request for a variance, the Authority shall advise the water supplier of the reasons for the denial and shall give the supplier an opportunity to present additional information. If the additional information is not sufficient to justify granting the variance, the variance shall be denied.

(4) If the Authority determines that the variance should be granted, it shall announce its intention to either hold a public hearing in the affected area prior to granting the variance; or serve notice of intent to grant the variance either personally, or by registered or certified mail to all customers connected to the water system, or by publication in a newspaper in general circulation in the area. If no hearing is requested within 10 days of the date that notice is given, the Authority may grant the variance.

(5) When a variance has been granted, and a water supplier fails to meet the compliance schedule, or fails to implement the interim control measures, or fails to undertake the monitoring required under the conditions of the variance, the Authority may initiate enforcement action authorized by these rules.

(6) Variances from the maximum contaminant levels for volatile organic chemicals, organic chemicals and inorganic chemicals shall be issued by the Authority as follows:

(a) The Authority shall require Community water systems and Non-Transient Non-Community water systems to install or use any treatment method identified in OAR 333-061-0050(4)(b)(B), (E) and (F) as a condition for granting a variance except as provided in subsection (6)(b) of this rule. If, after the system's installation of the treatment method, the system cannot meet the MCL, that system shall be eligible for a variance.

(b) If a system can demonstrate through comprehensive engineering assessments, which may include pilot plant studies, that the treatment methods identified in OAR 333-061-0050(4)(b)(B), (E) and (F) would only achieve an insignificant reduction in contaminants, the Authority may issue a schedule of compliance that requires the system being granted the variance to examine other treatment methods as a condition of obtaining the variance.

(c) If the Authority determines that a treatment method identified in subsection (6)(b) of this rule is technically feasible, the Authority may require the system to install or use that treatment method in connection with a compliance schedule. The Authority's determination shall be based upon studies by the system and other relevant information.

(d) The Authority may require a public water system to use bottled water, point-of-use devices, point-of-entry devices or other means as a condition of granting a variance to avoid an unreasonable risk to health.

(7) The variances from the maximum contaminant level for fluoride shall be granted by the Authority as follows:

(a) The Authority shall require a Community water system to install or use any treatment method identified in OAR 333-061-0050(4)(b)(C) as a condition for granting a variance unless the Authority determines that such treatment method is not available and effective for fluoride control for the system. A treatment method shall not be considered to be "available and effective" for an individual system if the treatment method would not be technically appropriate and technically feasible for that system. If, upon application by a system for a variance, the Authority determines that none of the treatment methods identified in OAR 333-061-0050(4)(b)(C) are available and effective for the system, that system shall be entitled to a variance. The Authority's determination as to the availability and effectiveness of such treatment methods shall be based upon studies by the system and other relevant information. If a system submits information to demonstrate that a treat-

ment method is not available and effective for fluoride control for that system, the Authority shall make a finding whether this information supports a decision that such treatment method is not available and effective for that system before requiring installation or use of such treatment method.

(b) The Authority shall issue a schedule of compliance that may require the system being granted the variance to examine the following treatment methods to determine the probability that any of the following methods will significantly reduce the level of fluoride for that system, and if such probability exists, to determine whether any of these methods are technically feasible and economically reasonable, and that the fluoride reductions obtained will be commensurate with the costs incurred with the installation and use of such treatment methods for that system: Modification of lime softening; Alum coagulation; Electrodialysis; Anion exchange resins; Well field management; Alternate source; or Regionalization.

(c) If the Authority determines that a treatment method identified in subsection (6)(b) of this rule or any other treatment method is technically feasible, economically reasonable, and will achieve fluoride reductions commensurate with the costs incurred with the installation or use of such treatment method for the system, the Authority shall require the system to install or use that treatment method in connection with a compliance schedule. The Authority's determination shall be based upon studies by the system and other relevant information.

(8) Public water systems that use bottled water as a condition for receiving a variance must meet the following requirements.

(a) The public water system must develop and put in place a monitoring program approved by the Authority that provides reasonable assurances that the bottled water meets all MCLs. The public water system must monitor a representative sample of the bottled water for all applicable contaminants under OAR 333-061-0036 the first quarter that it supplies the bottled water to the public, and annually thereafter. Results of the monitoring program shall be provided to the Authority annually.

(b) As an alternative to subsection (7)(a) of this rule, the public water system must receive a certification from the bottled water company that the bottled water supplied has been taken from an "approved source" as defined in 21 CFR 129.3(a); the bottled water company has conducted monitoring in accordance with 21 CFR 129.80(g)(1) through (3); and the bottled water does not exceed any MCLs or quality limits as set out in 21 CFR 103.35, 110, and 129. The public water system shall provide the certification to the Authority the first quarter after it supplies bottled water and annually thereafter.

(c) The public water system is fully responsible for the provision of sufficient quantities of bottled water to every person supplied by the public water system, via door-to-door bottled water delivery.

(9) Public water systems that use point-of-use devices as a condition for obtaining a variance must meet the following requirements:

(a) It is the responsibility of the public water system to operate and maintain the point-of-use treatment system.

(b) The public water system must develop a monitoring plan and obtain Authority approval for the plan before point-of-use devices are installed for compliance. This monitoring plan must provide health protection equivalent to a monitoring plan for central water treatment.

(c) Effective technology must be properly applied under a plan approved by the Authority and the microbiological safety of the water must be maintained.

(d) The water system must submit adequate certification of performance, field testing and, if not included in the certification process, a rigorous engineering design review to the Authority for approval prior to installation.

(e) The design and application of the point-of-use devices must consider the tendency for increase in heterotrophic bacteria concentrations in water treated with activated carbon. It may be necessary to use frequent backwashing, post-contractor disinfection, and Heterotrophic Plate Count monitoring to ensure that the microbiological safety of the water is not compromised.

(f) All consumers shall be protected. Every building connected to the system must have a point-of-use device installed, maintained, and adequately monitored. The Authority must be assured that every building is subject to treatment and monitoring, and that the rights and responsibilities of the public water system customer convey with title upon sale of property.

(10) Public water systems shall not use bottled water to achieve compliance with an MCL. Bottled water or point-of-use devices may be used on a temporary basis to avoid an unreasonable risk to health.

(11) The Authority will not grant a variance or exemption to the requirements of OAR 333-061-0030(3), OAR 333-061-0030(4) or OAR 333-061-0034. Variances to OAR 333-061-0032 will only be granted as provided by section (12) of this rule. The Authority will not grant any variances to the requirements of OAR 333-061-0036 pertaining to the treatment of surface water and groundwater under the direct influence of surface water. No permits will be granted for OAR 333-061-0030(4), 333-061-0032(3)(c) or 333-061-0032(5)(b).

(12) The Authority may grant variances from the standards specified in OAR 333-061-0032(3)(e) through (g) requiring the use of a specified water treatment technique if the Authority determines that the use of a specified water treatment technique is not necessary to protect public health based on the nature of the raw water source for a public water system. A variance granted under this section shall be conditioned on such monitoring and other requirements as the Administrator of the U.S. Environmental Protection Agency or the Director of the Oregon Health Authority may prescribe.

333-061-0046
Permits

(1) Permits may be issued by the Authority under the following circumstances:

(a) The water system is existing and in operation on the date the MCL or treatment technique requirement became effective; and

(b) The water supplier is unable to comply with the maximum contaminant levels or a treatment requirement due to economic or other compelling factors and;

(c) The water system has not been granted a variance.

(2) Permits may be issued only when the following conditions are met:

(a) The system is unable to implement measures to develop an alternative source of water supply; and

(b) The system cannot reasonably make management or restructuring changes that will result in compliance or improve the quality of the drinking water; and

(c) The system cannot meet the standard without capital improvements which cannot be completed prior to the effective date of the standard; and

(d) In the case of a system which needs financial assistance for the necessary improvement, the system has entered into an agreement to obtain such financial assistance through Federal and State funding programs available to the water system; and

(e) If applicable, the system has entered into an enforceable agreement to become a part of a regional public water system, and the system is taking all practicable steps to meet the standard; and

(f) There will be no unreasonable risk to health; and

(g) The water supplier agrees to notify the water users at least once every three months that the water system is out of compliance; and

(h) The water supplier agrees to a compliance schedule prescribed by the Authority which includes interim measures to eliminate the risks to health and which sets a specific time limit for the water supplier to install the water treatment facilities or comply with the maximum contaminant levels. The compliance schedule shall not exceed 3 years from date of issuance. Bottled water, point-of-use devices or point-of-entry devices may be used as interim health protection measures as prescribed in OAR 333-061-0045(8) and (9) and 333-061-0050(4)(d), except that point-of-entry devices are not allowed as a condition for issuing a permit for corrosion control treatment requirements for lead and copper. Point-of-entry devices may be used as a condition for issuing a permit for source water treatment.

(3) The procedures for processing requests for permits shall be the same as indicated for variances in OAR 333-061-0045(3) and (4).

(4) After a permit has been issued, the water supplier shall be subject to the same requirements as those indicated for variances in OAR 333-061-0045(5).

(5) The Authority is not permitted to issue any permits for alternate requirements other than those required by OAR 333-061-0030(3) and (4), as well as the requirements of 333-061-0032, 333-061-0034 and 333-061-0036.

(6) The Authority shall document all findings of determinations and consider the following:

(a) Before finding that management and restructuring changes cannot be made, the Authority shall consider the following measures, and the availability of State Revolving Loan Fund assistance, or any other Federal or State program, that is reasonably likely to be available within the period of the permit to implement these measures:

(A) Consideration of the rate increases, accounting changes, the appointment of a State-certified operator under the State's Operator Certification program, contractual agreements for joint operation with one or more public water systems;

(B) Activities consistent with the State's Capacity Development Strategy to help the public water system acquire and maintain technical, financial and managerial capacity to come into compliance with the Safe Drinking Water Act; and

(C) Ownership changes, physical consolidation with another public water system, or other feasible and appropriate means of consolidation which would result in compliance with the Safe Drinking Water Act.

(b) The Authority must consider the availability of an alternative source of water, including the feasibility of partnerships with neighboring public water systems, as identified by the public water system or by the Authority consistent with the Capacity Development Strategy.

(7) In the case of a public water system serving a population of not more than 3,300 persons and which needs financial assistance for the necessary improvements under the initial compliance schedule, a permit granted by the Authority may be renewed for one or more additional 2-year periods, but not to exceed a total of six additional years, only if the Authority establishes that the public water system is taking all practicable steps to meet the requirements and the established compliance schedule to achieve full compliance with the contaminant level or treatment technique for which the permit was granted. The Authority shall document its findings in granting a permit under this rule.

333-061-0050
Construction Standards

(1) General:

(a) These standards shall apply to the construction of new public water systems and to major additions or modifications to existing public water systems and are intended to assure that the system facilities, when constructed, will be free of public health hazards and will be capable of producing water which consistently complies with the maximum contaminant levels;

(b) Facilities at public water systems must comply with the construction standards in place at the time the facility was constructed or installed for use at a public water system. A public water system shall not be required to undertake alterations to existing facilities, unless the standard is listed as a significant deficiency as prescribed in OAR 333-061-0076(4) or if maximum contaminant levels are being exceeded.

(c) Non-public water systems that are converted to public water systems shall be modified as necessary to conform to the requirements of this rule.

(d) Facilities at public water systems shall be designed and constructed in a manner such that contamination will be effectively excluded, and the structures and piping will be capable of safely withstanding external and internal forces acting upon them;

(e) Only materials designed for potable water service and meeting NSF Standard 61 - Drinking Water System Components or equivalent shall be used in those elements of the water system which are in contact with potable water;

(f) New tanks, pumps, equipment, pipe valves and fittings shall be used in the construction of new public water systems, major additions or major modifications to existing water systems. The Authority may permit the use of used items when it can be demonstrated that they have been renovated and are suitable for use in public water systems;

(g) Prior to construction of new facilities, the water supplier shall submit plans to the Authority for approval as specified in OAR 333-061-0060(1)(a).

(h) Construction may deviate from the requirements of this section provided that documentation is submitted, to the satisfaction of the Authority, that the deviation is equal to or superior to the requirements of this section as specified in OAR 333-061-0055 (variances from construction standards).

(i) A public water system or other Responsible Management Authority using groundwater, or groundwater under the direct influence of surface water, derived from springs, confined or unconfined wells that wish to have a state certified wellhead protection program shall comply with the requirements as specified in OAR 333-061-0057, 0060, and 0065, as well as OAR 340-040-0140 through 0200. Additional technical information is available in the Oregon Wellhead Protection Guidance Manual.

(j) All new groundwater sources are subject to consideration for potential direct influence of surface water as prescribed in OAR 333-061-0032(8).

(2) Groundwater:

(a) Wells:

(A) For the purpose of this rule, wells are defined as holes or other excavations that are drilled, dug or otherwise constructed for the purpose of capturing groundwater or groundwater in hydraulic connection with surface water as a source of public drinking water.

(B) The area within 100 feet of the well shall be owned by the water supplier, or a perpetual restrictive easement shall be obtained by the water supplier for all land (with the exception of public rights-of-way) within 100 feet of the well. The easement shall be recorded with the county in which the well is located and with the recorded deed to the property. A certified true copy shall be filed with the Authority;

(C) Not withstanding paragraph (2)(a)(A) of this rule, wells located on land owned by a public entity, (Federal, State, County, Municipality) which is not the water supplier, a permit issued by the public entity to the water supplier shall suffice in lieu of an easement. Said permit shall state that no existing or potential public health hazard shall be permitted within a minimum of 100 feet of a well site;

(D) Public or private roadways may be allowed within 100 feet of a confined well, provided the well is protected against con-

tamination from surface runoff or hazardous liquids which may be spilled on the roadway and is protected from unauthorized access;

(E) The following sanitary hazards are not allowed within 100 feet of a well which serves a public water system unless waived by the Authority: any existing or proposed pit privy, subsurface sewage disposal drain field; cesspool; solid waste disposal site; pressure sewer line; buried fuel storage tank; animal yard, feedlot or animal waste storage; untreated storm water or gray water disposal; chemical (including solvents, pesticides and fertilizers) storage, usage or application; fuel transfer or storage; mineral resource extraction, vehicle or machinery maintenance or long term storage; junk/auto/scrap yard; cemetery; unapproved well; well that has not been properly abandoned or of unknown or suspect construction; source of pathogenic organisms or any other similar public health hazards. No gravity sewer line or septic tank shall be permitted within 50 feet of a well which serves a public water system. Clearances greater than indicated above shall be provided when it is determined by the Authority that the aquifer sensitivity and degree of hazard require a greater degree of protection. Above-ground fuel storage tanks provided for emergency water pumping equipment may be exempted from this requirement by the Authority provided that a secondary containment system is in place that will accommodate 125 percent of the fuel tank storage;

(F) Except as in paragraph (2)(a)(A) and (2)(a)(E) of this rule, in those areas served by community gravity sanitary sewers, the area of ownership or control may be reduced to 50 feet;

(G) Wells shall not be located at sites which are prone to flooding. In cases where the site is subject to flooding, the area around the well shall be mounded, and the top of the well casing shall be extended at least two feet above the anticipated 100-year (1 percent) flood level;

(H) Except as otherwise provided herein, wells shall be constructed in accordance with the general standards for the construction and maintenance of water wells in Oregon as prescribed in OAR chapter 690, divisions 200 through 220;

(I) Wells as defined in paragraph (2)(a)(A) of this rule that are less than 12 feet in depth must be constructed so as to be cased and sealed from the surface to a minimum of three feet above the bottom of the well. The casing may consist of concrete or metal culvert pipe or other pre-approved materials. The seal shall be watertight, be a minimum of four inches in thickness and may consist of cement, bentonite or concrete (see concrete requirements prescribed in OAR 690-210-315). The construction and placement of these wells must comply with all requirements of this rule.

(J) Before a well is placed into operation as the source of supply at a public water system, laboratory reports as required by OAR 333-061-0036 shall be submitted by the water supplier;

(K) Water obtained from wells which exceed the maximum contaminant levels shall be treated as outlined in section (4) of this rule;

(L) The pump installation, piping arrangements, other appurtenances, and well house details at wells which serve as the source of supply for a public water system, shall meet the following requirements:

(i) The line shaft bearings of turbine pumps shall be water-lubricated, except that bearings lubricated with non-toxic approved food-grade lubricants may be permitted in wells where water-lubricated bearings are not feasible due to depth to the water;

(ii) Where turbine pumps are installed, the top of the casing shall be sealed into the pump motor. Where submersible pumps are installed, the top of the casing shall be provided with a watertight sanitary seal;

(iii) A casing vent shall be provided and shall be fitted with a screened return bend;

(iv) Provisions shall be made for determining the depth to water surface in the well under pumping and static conditions;

(v) A sampling tap shall be provided on the pump discharge line;

(vi) Piping arrangements shall include provisions for pumping the total flow from the well to waste;

(vii) A method of determining the total output of each well shall be provided. This requirement may be waived by the Authority at confined wells which serve as the source of supply for Transient Non-Community water systems;

(viii) A reinforced concrete slab shall be poured around the well casing at ground surface. The slab shall be sloped to drain away from the casing;

(ix) The ground surface around the well slab shall be graded so that drainage is away from the well;

(x) The top of the well casing shall extend at least 12 inches above the concrete slab;

(xi) Provisions shall be made for protecting pump controls and other above-ground appurtenances at the well head. Where a wellhouse is installed for this purpose, it shall meet applicable building codes and shall be insulated, heated and provided with lights, except that where the wellhouse consists of a small removable box-like structure the requirement for lights may be waived by the Authority;

(xii) The wellhouse shall be constructed so that the well pump can be removed.

(xiii) Wells equipped with pitless adaptors or units are not required to meet the requirements of subparagraphs (2)(a)(L)(iii) and (viii) of this rule.

(M) The area in the vicinity of a well, particularly the area uphill or upstream, shall be surveyed by the water supplier to determine the location and nature of any existing or potential public health hazards;

(N) The requirements with respect to land ownership, clearances from public health hazards, and protection against flooding for wells in an unconfined aquifer shall be the same or more restrictive than those prescribed for wells in confined aquifers, as determined by the Authority.

(O) Before a well is placed into operation as the source of supply for a public water system, the following documents shall be submitted by the water supplier:

(i) Reports on pumping tests for yield and drawdown for unconfined wells;

(ii) Reports of laboratory analyses on contaminants in the water as required by OAR 333-061-0036;

(iii) Performance data on the pumps and other equipment;

(iv) Proposals for disinfection as required by section (5) of this rule, if applicable.

(v) Reports on determination of potential direct influence by surface water into groundwater source as prescribed in section (3) of this rule.

(b) Springs:

(A) In addition to those requirements under subsection (2)(a) of this rule, construction of spring supplies shall meet the following requirements:

(i) An intercepting ditch shall be provided above the spring to effectively divert surface water;

(ii) A fence shall be installed around the spring area unless other provisions are made to effectively prevent access by animals and unauthorized persons;

(iii) The springbox shall be constructed of concrete or other impervious durable material and shall be installed so that surface water is excluded;

(iv) The springbox shall be provided with a screened overflow which discharges to daylight, an outlet pipe provided with a shutoff valve, a bottom drain, an access manhole with a tightly fitting cover, and a curb around the manhole.

(v) Spring collection facilities that meet the definition of a well in paragraph (2)(a)(A) of this rule must comply with construction requirements specified in paragraph (2)(a)(I) of this rule.

(B) Reports on flow tests shall be provided to establish the yield of springs.

(3) Surface water and groundwater under direct surface water influence source facilities:

(a) In selecting a site for an infiltration gallery, or for a direct intake from a stream, lake, or impounding reservoir, consideration shall be given to land use in the watershed. A sanitary survey of the

watershed shall be made by the water supplier to evaluate natural and man-made factors which may affect water quality and investigations shall also be made of seasonal variations in water quality and quantity. A report giving the results of this survey shall be submitted for review and approval by the Authority.

(b) A determination shall be made as to the status of water rights, and this information shall be submitted to the Authority for review.

(c) Impounding reservoirs shall be designed and constructed so that they include the following features:

(A) The capacity shall be sufficient to meet projected demands during drought conditions;

(B) Outlet piping shall be arranged so that water can be withdrawn from various depths;

(C) Facilities shall be provided for releasing undesirable water.

(d) Direct intake structures shall be designed and constructed so that they include the following features:

(A) Screens shall be provided to prevent fish, leaves and debris from entering the system;

(B) Provisions shall be made for cleaning the screens, or self-cleaning screens shall be installed;

(C) Motors and electrical controls shall be located above flood level;

(D) Provisions shall be made to restrict swimming and boating in the vicinity of the intake;

(E) Valves or sluice gates shall be installed at the intake to provide for the exclusion of undesirable water when required.

(4) Water treatment facilities (other than disinfection):

(a) General

(A) Water treatment facilities shall be capable of producing water which consistently does not exceed maximum contaminant levels. The type of treatment shall depend on the raw water quality. The Authority shall make determinations of treatment capabilities based upon recommendations in the US EPA Guidance Manual for Compliance with the Filtration and Disinfection Requirements for Public Water Systems Using Surface Water Sources.

(B) Investigations shall be undertaken by the water supplier prior to the selection or installation of treatment facilities to determine the physical, chemical and microbiological characteristics of the raw water as appropriate. These investigations shall include a determination of the seasonal variations in water quality, as well as a survey to identify potential sources of contamination which may affect the quality of the raw water.

(C) Water obtained from wells constructed in conformance with the requirements of these rules and which is found not to exceed the maximum contaminant levels, may be used without treatment at public water systems;

(D) Laboratory equipment shall be provided so that the water supplier can perform analyses necessary to monitor and control the treatment processes.

(E) A sampling tap shall be provided following the treatment process and before the first user when any form of water treatment is in use at a water system.

(b) Best Available Technology

(A) Pilot studies or other supporting data shall be used to demonstrate the effectiveness of any treatment method other than that defined as best available technology. Pilot study protocol shall be approved beforehand by the Authority. When point-of-use (POU) or point-of-entry (POE) devices are used for compliance, programs to ensure proper long-term operation, maintenance, and monitoring shall be provided by the water system to ensure adequate performance.

(B) The Authority identifies the following as the best available technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for volatile organic chemicals:

(i) Central treatment using packed tower aeration for all these chemicals.

(ii) Central treatment using granular activated carbon for all these chemicals except vinyl chloride.

(C) The Authority identifies the following as the best available technology, treatment techniques or other means generally available for achieving compliance with the Maximum Contaminant Level for fluoride.

(i) Activated alumina absorption, centrally applied.

(ii) Reverse osmosis, centrally applied.

(D) The Authority identifies the following as the best available technology, treatment techniques, or other means available for achieving compliance with the MCL for E. coli as specified in OAR 333-061-0030(4).

(i) Protection of wells from fecal contamination by appropriate placement and construction.

(ii) Maintenance of a disinfectant residual throughout the distribution system.

(iii) Proper maintenance of the distribution system including appropriate pipe replacement and repair procedures, main flushing programs, proper operation and maintenance of storage tanks and reservoirs, cross connection control and maintaining a minimum pressure of 20 psi at all service connections.

(iv) Filtration treatment or disinfection of surface water or GWUDI or disinfection of groundwater using strong oxidants such as chlorine, chlorine dioxide, or ozone.

(v) For systems using only groundwater, compliance with the requirements of an Authority approved wellhead protection program.

(E) The Authority identifies the following as the best available technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for organic chemicals.

(i) Central treatment using packed tower aeration for Dibromochloropropane, Ethylene Dibromide, Hexachlorocyclopentadiene and Di(2-ethylhexyl)adipate.

(ii) Central treatment using granular activated carbon for all these chemicals except Trihalomethanes and Glyphosate.

(iii) Central treatment using oxidation (chlorination or ozonation) for Glyphosate.

(F) The Authority identifies the following as the best available technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for inorganic chemicals. Preoxidation may be required to convert Arsenic III to Arsenic V.

(i) Central treatment using coagulation/filtration for systems with 500 or more service connections for Antimony, Arsenic V (for systems with populations 501-10,000), Asbestos, Beryllium, Cadmium, Chromium, Mercury (influent concentration ≥ 10ug/L), and Selenium (Selenium IV only).

(ii) Central treatment using direct and diatomite filtration for Asbestos.

(iii) Central treatment using granular activated carbon for Mercury.

(iv) Central treatment using activated alumina for Arsenic V (for systems with populations l0,000 or less), Beryllium, Selenium and Thallium.

(v) Central treatment using ion exchange for Arsenic V (for systems with populations 10,000 or less), Barium, Beryllium, Cadmium, Chromium, Cyanide, Nickel, Nitrate, Nitrite and Thallium.

(vi) Central treatment using lime softening for systems with 500 or more service connections for Arsenic V (for systems with populations of 501-10,000), Barium, Beryllium, Cadmium, Chromium (Chromium III only), Mercury (influent concentration ≥ 10ug/L), Nickel and Selenium.

(vii) Central treatment using reverse osmosis for Antimony, Arsenic V (for systems with populations of 501-10,000), Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury (influent concentration ≥ 10ug/L), Nickel, Nitrate, Nitrite, and Selenium.

(viii) Central treatment using corrosion control for Asbestos and Lead and Copper.

(ix) Central treatment using electrodialysis for Arsenic V (for systems with populations of 501-10,000), Barium, Nitrate, and Selenium.

(x) Central treatment using alkaline chlorination (pH≥8.5) for Cyanide.

(xi) Central treatment using coagulation-assisted microfiltration for Arsenic V (for systems with populations 501-10,000).

(xii) Central treatment using oxidation/filtration for Arsenic V (to obtain high removals, iron to Arsenic ratio must be at least 20:1).

(xiii) Point-of-use treatment using activated alumina for Arsenic V (for systems with populations 10,000 or less).

(xiv) Point-of-use treatment using reverse osmosis for Arsenic V (for systems with populations 10,000 or less).

(G) The Authority identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum contaminant levels for disinfection byproducts:

(i) For bromate concentrations: control of ozone treatment process to reduce production of bromate.

(ii) For chlorite concentrations: control of treatment processes to reduce disinfectant demand and control of disinfection treatment processes to reduce disinfectant levels.

(iii) For TTHM and HAA5, for water systems that disinfect their source water and monitor in accordance with OAR 333-061-0036(4)(c) or (d): enhanced coagulation or enhanced softening plus GAC10; or nanofiltration with a molecular weight cutoff less than or equal to 1000 Daltons; or GAC20.

(iv) For TTHMs and HAA5, for purchasing water systems with populations greater than or equal to 10,000 and that monitor in accordance with OAR 333-061-0036(4)(c) or (d) improved distribution system and storage tank management to reduce residence time, plus the use of chloramines for disinfectant residual maintenance. This applies only to the disinfected water that purchasing water systems receive from a wholesale system.

(v) For TTHMs and HAA5, for purchasing water systems with populations less than 10,000 and that monitor in accordance with OAR 333-061-0036(4)(c) or (d): improved distribution system and storage tank management to reduce residence time. This applies only to the disinfected water that purchasing water systems receive from a wholesale system.

(H) The Authority identifies the following as the best technology, treatment techniques, or other means available for achieving compliance with the maximum residual disinfectant levels: Control of treatment processes to reduce disinfectant demand and control of disinfection treatment processes to reduce disinfectant levels.

(I) The Authority identifies the following as the best available technology, treatment techniques, or other means available for achieving compliance with the MCLs for radionuclides.

(i) Central treatment using ion exchange for combined radium-226/228, beta particle/photon activity and uranium.

(ii) Central treatment using reverse osmosis for combined radium-226/228, gross alpha particle activity, beta particle/photon activity, and uranium (for systems with populations 501-10,000).

(iii) Central treatment using lime softening for combined radium-226/228, and uranium (for systems with populations 501-10,000).

(iv) Central treatment using enhanced coagulation/filtration for uranium.

(v) Central treatment using activated alumina for uranium (for systems with populations of 10,000 or less).

(vi) Central treatment using greensand filtration for combined radium-226/228.

(vii) Central treatment using electrodialysis for combined radium-226/228.

(viii) Central treatment using pre-formed hydrous manganese oxide filtration for combined radium-226/228.

(ix) Central treatment using co-precipitation with barium for combined radium-226/228.

(x) Point-of-use treatment using ion exchange for combined radium-226/228, beta particle/photon activity, and uranium.

(xi) Point-of use treatment using reverse osmosis for combined radium-226/228, gross alpha particle activity, beta particle/ photon activity, and uranium (for systems with populations of 10,000 or less).

(c) Filtration of Surface Water Sources and Groundwater Sources Under the Direct Influence of Surface Water

(A) All water systems using surface water or groundwater sources under the direct influence of surface water that fail to meet the criteria for avoiding filtration prescribed in OAR 33-061-0032(2) and (3) must meet all requirements of this subsection for installing filtration treatment.

(B) There are four standard filtration methods: conventional filtration, direct filtration, slow sand, and diatomaceous earth. Other filtration technologies are only acceptable if their efficiency at removing target organisms and contaminants can be demonstrated to be equal to or more efficient than these. The assumed log removals credited to filtration of Giardia lamblia and viruses will be based on recommendations in the US EPA Guidance Manual for Compliance with the Filtration and Disinfection Requirements for Public Water Systems Using Surface Water Sources. In all cases, filtration processes must be designed and operated to achieve at least 2.0 log removal of Giardia lamblia. For membrane filtration, removal credits shall be verified by a challenge study according to paragraphs (4)(c)(H) and (I) of this rule. Bag and Cartridge Filtration must have removal credits demonstrated in a challenge study according to paragraph (4)(c)(J) of this rule. The combination of filtration and disinfection must meet the inactivation levels prescribed in OAR 333-061-0032(1). Any water system wishing to challenge the assumed log removal credits must conduct demonstration studies based on the recommendations in the USEPA SWTR Guidance Manual and have the study protocol approved by the Authority.

(C) Pilot studies shall be conducted by the water supplier to demonstrate the effectiveness of any filtration method other than conventional filtration. Pilot study protocol shall be approved in advance by the Authority. Results of the pilot study shall be submitted to the Authority for review and approval.

(D) Regardless of the filtration method used, the water system must achieve a minimum of 0.5-log reduction of Giardia lamblia and a 1.0-log reduction of viruses from disinfection alone after filtration treatment.

(E) All filtration systems shall be designed and operated so as to meet the requirements prescribed in OAR 333-061-0032(4) and (5). Design of the filtration system must be in keeping with accepted standard engineering references acknowledged by the Authority such as the Great Lakes Upper Mississippi River "Recommended Standards for Water Works" technical reports by the International Reference Center for Community Water Supply and Sanitation, or publications from the World Health Organization. A list of additional references is available from the Authority upon request.

(F) Requirements for water systems using conventional or direct filtration

(i) Systems that employ multiple filters shall be designed such that turbidity measurements are monitored for each filter independently of the other filter(s). Each filter shall have a provision to discharge effluent water as waste.

(ii) All water treatment plants shall have an auto-dial call out alarm or an automatic shut-off for high turbidity.

(G) Additional requirements for membrane filtration. Each membrane filter system must have a turbidimeter installed after each filter unit for continuous indirect integrity monitoring. Once operating, direct and indirect integrity testing must be conducted on each unit as described in OAR 333-061-0036(5)(d). The operation and maintenance manual must include a diagnosis and repair plan such that the ability to remove pathogens is not compromised.

(H) Challenge Study criteria for Membrane Filtration. Water systems receive Cryptosporidium treatment credit for membrane filtration, as defined in OAR 333-061-0020(77)(f), that meets the criteria of this paragraph. The level of treatment credit a water system receives is equal to the lower of the values determined in this paragraph.

(i) The removal efficiency demonstrated during challenge testing conducted under the conditions in accordance with paragraph (4)(c)(I) of this rule.

(ii) The maximum removal efficiency that can be verified through direct integrity testing of the membrane filtration process under the conditions prescribed by OAR 333-061-0036(5)(d)(B).

(I) Challenge Testing. The membrane filter used by the water system must undergo challenge testing to evaluate removal efficiency, and results of the challenge testing must be reported to the Authority. Challenge testing must be conducted according to the criteria specified in this paragraph. Water systems may use data from challenge testing conducted prior to June 1, 2009 if the prior testing was consistent with the criteria specified in this paragraph.

(i) Challenge testing must be conducted on a full-scale membrane module, identical in material and construction to the membrane modules used in the water system's treatment facility, or a smaller-scale membrane module, identical in material and similar in construction to the full-scale module. A module is defined as the smallest component of a membrane unit in which a specific membrane surface area is housed in a device with a filtrate outlet structure.

(ii) Challenge testing must be conducted using Cryptosporidium oocysts or a surrogate that is removed no more efficiently than Cryptosporidium oocysts. Cryptosporidium or the surrogate used during challenge testing is referred to as the challenge particulate. The concentration of the challenge particulate, in both the feed and filtrate water, must be determined using a method capable of discretely quantifying the specific challenge particulate used in the test; gross measurements such as turbidity may not be used.

(iii) The maximum feed water concentration that can be used during a challenge test is based on the detection limit of the challenge particulate in the filtrate and must be determined according to the following equation:

Maximum Feed Concentration = 3.16 x 106 x (Filtrate Detection Limit)

(iv) Challenge testing must be conducted according to representative hydraulic conditions at the maximum design flux and maximum design process recovery specified by the manufacturer for the membrane module. Flux is defined as the throughput of a pressure driven membrane process expressed as flow per unit of membrane area. Recovery is defined as the volumetric percent of feed water that is converted to filtrate over the course of an operating cycle uninterrupted by events such as chemical cleaning or a solids removal process (that is, backwashing).

(v) Removal efficiency of a membrane module must be calculated from the challenge test results and expressed as a log removal value according to the following equation:

LRV = LOG10(Cf) - LOG10(Cp)

Where:

LRV = log removal value demonstrated during the challenge test;

Cf = the feed concentration measured during the challenge test; and

Cp = the filtrate concentration measured during the challenge test. Equivalent units must be used for the feed and filtrate concentrations. If the challenge particulate is not detected in the filtrate, the term Cp is set equal to the detection limit for the purpose of calculating the LRV. An LRV must be calculated for each membrane module evaluated during the challenge test.

(vi) The removal efficiency of a membrane filtration process demonstrated during challenge testing must be expressed as a log removal value (LRVC-Test). If fewer than 20 modules are tested, then LRVC-Test is equal to the lowest of the representative LRVs among the modules tested. If 20 or more modules are tested, then LRVC-Test is equal to the 10th percentile of the representative LRVs among the modules tested. The percentile is defined by (i/(n+1))where i is the rank of n individual data points ordered lowest to highest. If necessary, the 10th percentile may be calculated using linear interpolation.

(vii) The challenge test must establish a quality control release value (QCRV) for a non-destructive performance test that demonstrates the Cryptosporidium removal capability of the membrane filtration module. This performance test must be applied to each production membrane module used by the system that was not directly challenge tested in order to verify Cryptosporidium removal capability. Production modules that do not meet the established QCRV are not eligible for the treatment credit demonstrated during the challenge test.

(viii) If a previously tested membrane is modified in a manner that could change the removal efficiency of the membrane or the applicability of the non-destructive performance test and associated QCRV, additional challenge testing to demonstrate the removal efficiency of, and determine a new QCRV for, the modified membrane must be conducted and submitted to the Authority.

(J) Challenge Study requirements for Bag and Cartridge Filtration.

(i) The Cryptosporidium treatment credit awarded to bag or cartridge filters must be based on the removal efficiency demonstrated during challenge testing that is conducted according to the criteria specified in this paragraph. A factor of safety equal to 1-log for individual bag or cartridge filters and 0.5-log for bag or cartridge filters in series must be applied to challenge testing results to determine removal credit. Water systems may use results from challenge testing conducted prior to June 1, 2009 if the prior testing was consistent with the criteria specified in this paragraph.

(ii) Challenge testing must be performed on full-scale bag or cartridge filters and the associated filter housing or pressure vessel, that are identical in material and construction to the filters and housings the water system will use for removal of Cryptosporidium. Bag or cartridge filters must be challenge tested in the same configuration that the system will use, either as individual filters or as a series configuration of filters.

(iii) Challenge testing must be conducted using Cryptosporidium or a surrogate that is removed no more efficiently than Cryptosporidium. The microorganism or surrogate used during challenge testing is referred to as the challenge particulate. The concentration of the challenge particulate must be determined using a method capable of discreetly quantifying the specific microorganism or surrogate used in the test; gross measurements such as turbidity may not be used.

(iv) The maximum feed water concentration that can be used during a challenge test must be based on the detection limit of the challenge particulate in the filtrate (that is, filtrate detection limit) and must be calculated using the following equation:Maximum Feed Concentration = 1 x 104 x (Filtrate Detection Limit)

(v) Challenge testing must be conducted at the maximum design flow rate for the filter as specified by the manufacturer.

(vi) Each filter evaluated must be tested for a duration sufficient to reach 100 percent of the terminal pressure drop, which establishes the maximum pressure drop under which the filter may be used to comply with the requirements of this paragraph.

(vii) Removal efficiency of a filter must be determined from the results of the challenge test and expressed in terms of log removal values using the following equation:

LRV = LOG10(Cf)-LOG10(Cp)

Where:

LRV = log removal value demonstrated during challenge testing;

Cf = the feed concentration measured during the challenge test; and

Cp = the filtrate concentration measured during the challenge test. In applying this equation, the same units must be used for the feed and filtrate concentrations. If the challenge particulate is not detected in the filtrate, then the term Cp must be set equal to the detection limit.

(viii) Each filter tested must be challenged with the challenge particulate during three periods over the filtration cycle: within two hours of start-up of a new filter; when the pressure drop is between 45 and 55 percent of the terminal pressure drop; and at the end of the cycle after the pressure drop has reached 100 percent of the terminal pressure drop. An LRV must be calculated for each of these challenge periods for each filter tested. The LRV for the filter (LRVfilter) must be assigned the value of the minimum LRV observed during the three challenge periods for that filter.

(ix) If fewer than 20 filters are tested, the overall removal efficiency for the filter product line must be set equal to the lowest LRVfilter among the filters tested. If 20 or more filters are tested, the overall removal efficiency for the filter product line must be set equal to the 10th percentile of the set of LRVfilter values for the various filters tested. The percentile is defined by (i/(n+1))where i

is the rank of n individual data points ordered lowest to highest. If necessary, the 10th percentile may be calculated using linear interpolation.

(x) If a previously tested filter is modified in a manner that could change the removal efficiency of the filter product line, challenge testing to demonstrate the removal efficiency of the modified filter must be conducted and submitted to the Authority.

(K) Water systems using cartridge filtration must have pressure gauges installed before and after each cartridge filter.

(L) Water systems using diatomaceous earth filtration must add the body feed with the influent flow.

(d) Criteria and procedures for public water systems using point-of-entry (POE) or point-of-use (POU) devices.

(A) Public water systems may use POE or POU devices to comply with maximum contaminant levels, where specified in subsection (4)(b) of this rule, only if they meet the requirements of this subsection.

(B) It is the responsibility of the public water system to operate and maintain the POE or POU treatment system.

(C) The public water system must develop and obtain Authority approval for a monitoring plan before POE or POU devices are installed for compliance. Under the plan approved by the Authority, POE or POU devices must provide health protection equivalent to central water treatment. "Equivalent" means that the water would meet all Maximum Contaminant Levels as prescribed in OAR 333-061-0030 and would be of acceptable quality similar to water distributed by a well-operated central treatment plant. Monitoring must include contaminant removal efficacy, physical measurements and observations such as total flow treated and mechanical condition of the treatment equipment.

(D) Effective technology must be properly applied under a plan approved by the Authority and the microbiological safety of the water must be maintained.

(i) The water supplier must submit adequate certification of performance, field testing, and, if not included in the certification process, a rigorous engineering design review of the POE or POU devices to the Authority for approval prior to installation.

(ii) The design and application of the POE or POU devices must consider the tendency for increase in heterotrophic bacteria concentrations in water treated with activated carbon. It may be necessary to use frequent backwashing, post-contractor disinfection, and Heterotrophic Plate Count monitoring to ensure that the microbiological safety of the water is not compromised.

(iii) The POE or POU device must be evaluated to assure that the device will not cause increased corrosion of lead and copper bearing materials located between the device and the tap that could increase contaminant levels of lead and copper at the tap.

(E) All consumers shall be protected. Every building connected to the system must have a POE or POU device installed, maintained, and adequately monitored. The Authority must be assured that every building is subject to treatment and monitoring, and that the rights and responsibilities of the public water system customer convey with title upon sale of property.

(5) Facilities for continuous disinfection and disinfectant residual maintenance:

(a) Water obtained from surface sources or groundwater sources under the direct influence of surface water shall, as a minimum, be provided with continuous disinfection before such water may be used as a source of supply for a public water system. Water obtained from wells constructed in conformance with the requirements of these rules and which is found not to exceed microbiological maximum contaminant levels, may be used without treatment at public water systems;

(b) Water obtained from wells and springs shall be considered groundwater unless determined otherwise by the Authority. Wells and springs may be utilized without continuous disinfection if the construction requirements of section (2) of this rule are met and analyses indicate that the water consistently meets microbiological standards. A well or spring that is inadequately constructed, shows a history of E coli. contamination, and where the Authority determines that reconstruction will add a significant measure of public health protection, must be upgraded to meet current construction standards or disconnected from the water system.

(c) In public water systems where continuous disinfection is required as the sole form of treatment, or as one component of more extensive treatment to meet the requirements prescribed in OAR 333-061-0032(1), the facilities shall be designed so that:

(A) The disinfectant applied shall be capable of effectively destroying pathogenic organisms;

(B) The disinfectant is applied in proportion to water flow; and

(C) Disinfectants, other than ultraviolet light and ozone disinfection treatment, shall be capable of leaving a residual in the water which can be readily measured and which continues to serve as an active disinfectant; and

(D) Sufficient contact time shall be provided to achieve "CT" values capable of the inactivation required by OAR 333-061-0032(1). For ultraviolet light disinfection treatment, sufficient irradiance expressed in milliwatts per square centimeter (mWs/cm2) and exposure time expressed in seconds shall be provided to achieve UV dose levels expressed as (mWs/cm2) or millijoules per square centimeter (mJ/cm2) capable of the inactivation required by OAR 333-061-0032(1).

(d) When continuous disinfection, other than ultraviolet light disinfection, is required for reasons other than the treatment of surface water sources or groundwater sources under the direct influence of surface water, in addition to the requirements of paragraphs (5)(c)(A) through (C) of this rule, the facilities shall be designed so that:

(A) The primary disinfection treatment is sufficient to ensure at least 99.99 percent (4-log) inactivation or removal of viruses as determined by the Authority, or;

(B) There is sufficient contact time provided to achieve disinfection under all flow conditions between the point of disinfectant application and the point of first water use:

(i) When chlorine is used as the primary disinfectant, the system shall be constructed to achieve a free chlorine residual of 0.2 mg/l after 30 minutes contact time under all flow conditions before first water use;

(ii) When ammonia is added to the water with the chlorine to form a chloramine as the disinfectant, the system shall be constructed to achieve a combined chlorine residual of at least 2.0 mg/l after three hours contact time under all flow conditions before first water use;

(e) Provisions shall be made to alert the water supplier before the chlorine supply is exhausted. Water systems serving more than 3,300 people shall have an auto-dial call out alarm or an automatic shut-off for low chlorine residual when chlorine is used as a disinfectant.

(f) For continuous disinfection only, provisions shall be made for sampling the water before and after chlorination;

(g) Testing equipment shall be provided to determine the chlorine residual;

(h) Chlorinator piping shall be designed to prevent the contamination of the potable water system by backflow of untreated water or water having excessive concentrations of chlorine;

(i) The disinfectant must be applied in proportion to water flow;

(j) Chlorine gas feeders and chlorine gas storage areas shall:

(A) Be enclosed and separated from other operating areas;

(B) Chlorine cylinders shall be restrained in position to prevent upset by chaining 100 and 150 pound cylinders two-thirds of their height up from the floor and by double chocking one ton cylinders;

(C) The room housing the feeders and cylinders shall be above ground surface, shall have doors which open outward and to the outside and shall be ventilated by mechanical means at floor level and shall have an air intake located higher than the exhaust ventilation;

(D) Be located so that chlorine gas, if released, will not flow into the building ventilation systems;

(E) Have corrosion resistant lighting and ventilation switches located outside the enclosure, adjacent to the door;

(F) Be provided with a platform or hydraulic scale for measuring the weight of the chlorine cylinders;

(G) Be provided with a gas mask or self contained breathing apparatus approved by the National Institute of Occupational Safety and Health (NIOSH) for protection against chlorine gas and kept in good working condition. Storage of such equipment shall be in an area adjoining the chlorine room and shall be readily available. (Also see the Oregon Occupational Health and Safety regulations contained in OAR chapter 437.)

(k) When continuous disinfection treatment is provided through ultraviolet light (UV) disinfection, the facilities shall be designed to meet the requirements of this subsection:

(A) The UV unit must achieve the dosage indicated in Table 32 for the required pathogen inactivation. [Table not included. See ED. NOTE.]

(B) Ultraviolet lamps are insulated from direct contact with the influent water and are removable from the lamp housing;

(C) The treatment unit must have an upstream valve or device that prevents flows from exceeding the manufacturer's maximum rated flow rate, an ultraviolet light sensor that monitors light intensity through the water during operation, and a visual and audible alarm;

(D) There must be a visual means to verify operation of all ultraviolet lamps;

(E) The lamps, lamp sleeves, housings and other equipment must be able to withstand the working pressures applied through the unit;

(F) The treatment facility must be sheltered from the weather and accessible for routine maintenance as well as routine cleaning and replacement of the lamp sleeves and cleaning of the sensor windows/lenses;

(G) The lamps must be changed as per the manufacturer's recommendation; and

(H) The treatment unit must have shut-off valves at both the inlet side and the outlet side of the treatment unit. There shall be no bypass piping around the treatment unit.

(I) Reactor validation testing. All water systems, except those specified in paragraph (5)(k)(J) of this rule, must use UV reactors that have undergone validation testing to determine the operating conditions under which the reactor delivers the UV dose required in OAR 333-061-0036(5)(c) (that is, validated operating conditions). These operating conditions must include flow rate, UV intensity as measured by a UV sensor, UV Transmittance, and UV lamp status.

(i) When determining validated operating conditions, water systems must account for the following factors: UV absorbance by the water; lamp fouling and aging; measurement uncertainty of online sensors; UV dose distributions arising from the velocity profiles through the reactor; failure of UV lamps or other critical system components; and inlet and outlet piping or channel configurations of the UV reactor.

(ii) Validation testing must include the following: full scale testing of a reactor that conforms uniformly to the UV reactors used by the water system and inactivation of a test microorganism whose dose response characteristics have been quantified with a low pressure mercury vapor lamp.

(iii) The Authority may approve an alternative approach to validation testing.

(J) Non-Community water systems using only groundwater sources, and having minimal distribution systems as determined by the Authority, may use ultraviolet light as the only disinfectant when total coliforms but no E. coli have been detected in the source water. UV units must meet the specifications of a Class A UV system under the NSF Standard 55. The minimum ultraviolet light failsafe dosage set point shall be equivalent to 40 mW-s/cm2 (40 mJ/cm2) with a wavelength between 200 and 300 nanometers. The UV unit must automatically shut-off water flow if dosage drops below this failsafe set point.

(6) Finished water storage:

(a) Distribution reservoirs and treatment plant storage facilities for finished water shall be constructed to meet the following requirements:

(A) They shall be constructed of concrete, steel, wood or other durable material capable of withstanding external and internal forces which may act upon the structure;

(B) Ground-level reservoirs shall be constructed on undisturbed soil, bedrock or other stable foundation material capable of supporting the structure when full;

(C) Steel reservoirs, standpipes and elevated tanks shall be constructed in conformance with the AWWA Standards D100 and D103;

(D) Concrete reservoirs shall be provided with sufficient reinforcing to prevent the formation of cracks, and waterstops and dowels shall be placed at construction joints. Poured-in-place wall castings shall be provided where pipes pass through the concrete;

(E) Wooden reservoirs shall be redwood or other equally durable wood and shall be installed on a reinforced concrete base. Where redwood reservoirs are used, separate inlet and outlet pipes are required and the water entering the reservoir must be have a disinfectant continuously applied so as to result in a detectable residual in the water leaving the reservoir;

(F) Start-up procedures for new redwood tanks shall consist of filling the tank with a solution of water containing a minimum of two pounds of sodium carbonate per 1,000 gallons of water and retaining this solution in the tank a minimum of seven days before flushing;

(G) Where ground-level reservoirs are located partially below ground, the bottom shall be above the ground water table and footing drains discharging to daylight shall be provided to carry away ground water which may accumulate around the perimeter of the structure;

(H) The finished water storage capacity shall be increased to accommodate fire flows when fire hydrants are provided;

(I) Finished water storage facilities shall have watertight roofs;

(J) An access manhole shall be provided to permit entry to the interior for cleaning and maintenance. When the access manhole is on the roof of the reservoir there shall be a curbing around the opening and a lockable watertight cover that overlaps the curbing;

(K) Internal ladders of durable material, shall be provided where the only access manhole is located on the roof;

(L) Screened vents shall be provided above the highest water level to permit circulation of air above the water in finished water storage facilities;

(M) A drain shall be provided at the lowest point in the bottom, and an overflow of sufficient diameter to handle the maximum flow into the tank shall be provided at or near the top of the sidewall. The outlet ends of the drain and overflow shall be fitted with angle-flap valves or equivalent protection and shall discharge with an airgap to a watercourse or storm drain capable of accommodating the flow;

(N) A silt stop shall be provided at the outlet pipe;

(O) Where a single inlet/outlet pipe is installed and the reservoir floats on the system, provisions shall be made to insure an adequate exchange of water and to prevent degradation of the water quality and to assure the disinfection levels required in subparagraph (5)(c)(D) of this rule;

(P) A fence or other method of vandal deterrence shall be provided around distribution reservoirs;

(Q) When interior surfaces of finished water storage tanks are provided with a protective coating, the coating shall meet the requirements of NSF Standard 61 — Drinking Water System Components or equivalent.

(R) Reservoirs and clearwells that are to be used for disinfection contact time to treat surface water shall use a tracer study to determine the actual contact time. The Authority must approve procedures and protocols for the tracer study prior to the initiation of the study. The Authority recommends the US EPA Guidance Manual for Compliance with the Filtration and Disinfec-

tion Requirements for Public Water Systems Using Surface Water Sources for a tracer study procedure and protocol.

(S) Reservoirs and clearwells that are to be used for disinfection contact time to treat surface water shall have a means to adequately determine the flow rate on the effluent line.

(b) Pressure tanks for finished water shall meet the following requirements:

(A) Pressure tanks shall be installed above normal ground surface;

(B) Bypass piping around the pressure tank shall be provided to permit operation of the system while the tank is being maintained or repaired;

(C) Pressure tanks greater than 1,000 gallons shall be provided with an access manhole and a water sight-glass.

(D) All pressure tanks shall be provided with a drain, a pressure gauge, an air blow-off valve, means for adding air and pressure switches for controlling the operation of the pump(s);

(E) Pressure tanks shall be constructed of steel or an alternative material provided the tank is NSF 61 certified and shall be designed for pressure at least 50 percent greater than the maximum system pressure anticipated.

(7) Pumping facilities:

(a) Wherever possible, booster pumps shall take suction from tanks and reservoirs to avoid the potential for negative pressures on the suction line which result when the pump suction is directly connected to a distribution main;

(b) Pumps which take suction from distribution mains for the purpose of serving areas of higher elevation shall be provided with a low pressure cut-off switch on the suction side set at no less than 20 psi;

(c) Suction lift at pumping stations shall be avoided as far as possible, and pumps shall be installed so that the suction line is under a positive head. If suction lift cannot be avoided, provision shall be made for priming with water which does not exceed maximum contaminant levels;

(d) Pumping stations shall be located above maximum anticipated 100-year (1 percent) flood level, and the area around the pumping station shall be graded so that surface drainage is away from the station;

(e) Pumping stations shall be of durable construction so as to protect the equipment from the elements. The door to the pumping station shall be lockable, and facilities for heating and lighting shall be provided. The floor of the pumping station shall be sloped to provide adequate drainage.

(8) Distribution systems:

(a) Wherever possible, distribution pipelines shall be located on public property. Where pipelines are required to pass through private property, easements shall be obtained from the property owner and shall be recorded with the county clerk;

(b) Pipe, pipe fittings, valves and other appurtenances utilized at Community water systems shall be manufactured, installed and tested in conformance with the latest standards of the American Water Works Association, NSF International or other equivalent standards acceptable to the Authority;

(c) In Community water systems, distribution mains located in public roadways or easements, and the portion of the service connections from the distribution main to the customer's property line or service meter where provided are subject to the requirements of these rules. The piping from the customer's property line, or the meter where provided, to the point of water use (the building supply line) is subject to the requirements of the State Plumbing Code;

(d) In all Public Water Systems where the system facilities and the premises being served are both on the same parcel of property, requirements relating to pipe materials and pipe installation shall comply with the State Plumbing Code;

(e) Distribution piping shall be designed and installed so that the pressure measured at the property line in the case of Community water systems, or at the furthest point of water use, in the case of a Transient Non-Community water system of the type described in subsection (d) of this section, shall not be reduced below 20 psi;

(f) Distribution piping shall be carefully bedded and fully supported in material free from rocks and shall be provided with a cover of at least 30 inches. Select backfill material shall be tamped in layers around and over the pipe to support and protect it. Large rocks or boulders shall not be used as backfill over the pipe;

(g) Provision shall be made at all bends, tees, plugs, and hydrants to prevent movement of the pipe or fitting;

(h) Wherever possible, dead ends shall be minimized by looping. Where dead ends are installed, or low points exist, blow-offs of adequate size shall be provided for flushing;

(i) Air-relief valves shall be installed at high points where air can accumulate. The breather tube on air-relief valves shall be extended above ground surface and provided with a screened, downward facing elbow;

(j) Yarn, oakum, lead or other material which may impair water quality shall not be used where it will be in contact with potable water;

(k) Nonconductive water pipe (plastic or other material) that is not encased in conductive pipe or casing must have an electrically conductive wire or other approved conductor for locating the pipe when the pipeline is underground. The wire shall be No. 18 AWG (minimum) solid copper with blue colored insulation. Ends of wire shall be accessible in water meter boxes, valve boxes or casings, or outside the foundation of buildings where the pipeline enters the building. The distance between tracer lead access locations shall not be more than 1,000 feet. Joints or splices in wire shall be waterproof.

(l) Piping that is to be used for disinfection contact time shall be verified by plug flow calculations under maximum flow conditions.

(9) Crossings-Sanitary sewers and water lines:

(a) All reference to sewers in this section shall mean sanitary sewers;

(b) In situations involving a water line parallel to a sewer main or sewer lateral, the separation between the two shall be as indicated in Figure 1; [Figure not included. See ED NOTE.]

(c) In situations where a water line and a sewer main or sewer lateral cross, the separation between the two shall be as follows:

(A) Wherever possible, the bottom of the water line shall be 1.5 feet or more above the top of the sewer line and one full length of the water line shall be centered at the crossing;

(B) Where the water line crosses over the sewer line but with a clearance of less than 1.5 feet, the sewer line shall be exposed to the sewer line joints on both sides of the crossing to permit examination of the sewer pipe. If the sewer pipe is in good condition and there is no evidence of leakage from the sewer line, the 1.5-foot separation may be reduced. However, in this situation, the water supplier must center one length of the water line at the crossing and must prepare a written report of the findings and indicating the reasons for reducing the separation. If the water supplier determines that the conditions are not favorable or finds evidence of leakage from the sewer line, the sewer line shall be replaced with a full length of pipe centered at the crossing point, of PVC pressure pipe (ASTM D-2241, SDR 32.5), high-density PE pipe (Drisco pipe 1000), ductile-iron Class 50 (AWWA C-51), or other acceptable pipe; or the sewer shall be encased in a reinforced concrete jacket for a distance of 10 feet on both sides of the crossing.

(C) Where the water line crosses under the sewer line, the water supplier shall expose the sewer line and examine it as indicated in paragraph (9)(c)(B) of this rule. If conditions are favorable and there is no evidence of leakage from the sewer line, the sewer line may be left in place, but special precautions must be taken to assure that the backfill material over the water line in the vicinity of the crossing is thoroughly tamped in order to prevent settlement which could result in the leakage of sewage. In this situation, the water supplier must center one length of the water line at the crossing and must prepare a written report recording the manner in which the sewer line was supported at the crossing and the material and methods used in backfilling and tamping to prevent settlement of the sewer. If the water supplier determines that conditions are not favorable or finds evidence of leakage from

the sewer line, the provisions of paragraph (9)(c)(B) of this rule apply.

(d) When a water main is installed under a stream or other watercourse, a minimum cover of 30 inches shall be provided over the pipe. Where the watercourse is more than 15 feet wide, the pipe shall be of special construction with flexible watertight joints, valves shall be provided on both sides of the crossing so that the section can be isolated for testing or repair, and test cocks shall be provided at the valves.

(10) Disinfection of facilities:

(a) Following construction or installation of new facilities and repairs to existing facilities, those portions of the facilities which will be in contact with water delivered to users must be cleaned and flushed with potable water and disinfected according to AWWA Standards C651 through C654 before they are placed into service. Disinfection must be by chlorine unless another disinfectant can be demonstrated to be equally effective.

(b) For construction of new distribution pipelines (with any associated service connections and other appurtenances installed at the time of construction), disinfection by chlorination must be conducted as specified in paragraphs (A) through (C) of this subsection unless another method from AWWA Standard C651 is used.

(A) A solution with a free chlorine residual of 25 mg/l must be introduced to the pipe such that the solution will contact all surfaces and trapped air will be eliminated. The solution must remain in place for at least 24 hours.

(B) After 24 hours, if the free chlorine residual is 10 mg/l or greater, the chlorine solution must be drained and the pipe flushed with potable water. If the free chlorine residual is less than 10 mg/l after 24-hours, the pipe must be flushed and rechlorinated until a free chlorine residual of 10 mg/l or more is present after a 24 hour period.

(C) After the pipe is disinfected, flushed and filled with potable water, bacteriological samples must be collected to determine the procedures' effectiveness. At least two samples must be collected from the new pipe at least 16 hours apart and analyzed for coliform bacteria. If the pipe has held potable water for at least 16 hours before sample collection, two samples may be collected at least 15 minutes apart while the sample tap is left running. If the results of both analyses indicate the water is free of coliform bacteria, the pipe may be put into service. If the either sample indicates the presence of coliform bacteria, the disinfection and flushing process must be repeated until samples are free of coliform.

(c) For repaired pipelines that were depressurized and wholly or partly dewatered during repair or that likely experienced contamination during repair, disinfection according to the procedure specified in paragraphs (10)(b)(A) through (C) of this rule must be followed except that bacteriological samples must be collected downstream of the repair site. If the direction of flow is unknown, samples must be collected on each side of the repair site.

(d) A water line may be returned to service, following repairs or routine maintenance, prior to receiving a report on the bacteriological analysis if the following procedures have been completed:

(A) Customer meters were shut off prior to placing the water line out of service;

(B) The area below the water line to be repaired was excavated and dewatered;

(C) The exposed pipe was treated with a hypochlorite solution;

(D) The water line was flushed thoroughly, and a concentration of residual chlorine has been re-established that is comparable to the level normally maintained by the water system, if applicable; and

(E) Bacteriological analysis has been conducted as a record of repair effectiveness.

(e) For reservoirs and tanks, disinfection by chlorination shall be accomplished according to AWWA Standard C652 which includes, but is not limited to, the following methods:

(A) Filling the reservoir or tank and maintaining a free chlorine residual of not less than 10 mg/l for the appropriate 6 or 24 hour retention period; or

(B) Filling the reservoir or tank with a 50 mg/l chlorine solution and leaving for six hours; or

(C) Directly applying by spraying or brushing a 200 mg/l solution to all surfaces of the storage facility in contact with water if the facility were full to the overflow elevation.

(f) When the procedures described in paragraphs (10)(e)(A) and (B) of this rule are followed, the reservoir or tank shall be drained after the prescribed contact period and refilled with potable water, and a sample taken for microbiological analysis. If the results of the analysis indicate that the water is free of coliform organisms, the facility may be put into service. If not, the procedure shall be repeated until a sample free of coliform organisms is obtained;

(g) When the procedure described in paragraph (10)(e)(C) of this rule is followed, the reservoir or tank shall be filled with potable water and a sample taken for microbiological analysis. It will not be necessary to flush the reservoir or tank after the chlorine solution is applied by spraying or brushing. Microbiological analysis shall indicate that the water is free of coliform organisms before the facility can be put into service;

(h) When a reservoir is chlorinated following routine maintenance, inspection, or repair, it may be put back into service prior to receiving the report on the microbiological analysis provided the water leaving the reservoir has a free chlorine residual of at least 0.4 mg/l or a combined chlorine residual of at least 2.0 mg/l.

(i) Underwater divers used for routine maintenance, inspection, or repair of reservoirs shall use a full body dry suit with hardhat scuba and an external air supply. The diver shall be disinfected by spraying a 200 mg/l solution of chlorine on all surfaces that will come into contact with drinking water.

Waivers from Construction Standards

The Authority may grant waivers from the construction standards prescribed by these rules:

(1) When it is demonstrated to the satisfaction of the Authority that strict compliance with the rule would be highly burdensome or impractical due to special conditions or causes; and

(2) When the public or private interest in the granting of the waiver is found by the Authority to clearly outweigh the interest of the application of uniform rules; and

(3) When alternate measures are provided which, in the opinion of the Authority, will provide adequate protection to the health and safety of the public including the ability to produce water which does not exceed the maximum contaminant levels listed in OAR 333-061-0030.

333-061-0057
Voluntary Drinking Water Protection Program

(1) In accordance with OAR 340-040-0140 through 0200, a public water system or other responsible management authority that wishes to have a state certified drinking water protection program shall comply with the requirements prescribed in this rule.

(2) Delineation of the drinking water protection area (DWPA):

(a) Delineations will be accomplished for all Community, Non-transient Non Community and Transient Non Community water systems as part of the Safe Drinking Water Act's Source Water Assessment Program. Water systems may choose to complete or upgrade the delineations themselves. If so, they must comply with subsection (2)(b) of this rule;

(b) Delineation requirements for all groundwater sources are as follow:

(A) Delineations will be accomplished using a minimum TOT criterion of 10 years unless a hydrogeologic boundary is encountered at a shorter time of travel or as specified in subsection (2)(c) of this rule;

(B) Delineations will be accomplished by a registered geologist, engineering geologist or other licensed professional with demonstrated experience and competence in hydrogeology in accordance with ORS 672.505 through 672.705;

(C) Except as noted in subsection (2)(c) of this rule, a conceptual ground water model shall be developed for all public water systems participating in the voluntary drinking water protection program. The model shall be based on available information including, but not limited to, well reports, published reports and available unpublished reports and theses, etc. Sources of this information include the Water Resources Department, U. S. Geological Survey, Department of Geology and Mineral Industries, Department of Environmental Quality, university libraries and the Authority. The model shall include, but not be limited to, the identification and characterization of hydrogeologic units, determination of hydrogeologic boundaries, if any, areas of discharge and recharge and distribution of hydraulic head for the aquifer(s) of concern. The model shall also evaluate whether or not the porous media assumption is valid;

(D) The delineated DWPA and supporting documentation shall be submitted to the Authority for review and certification;

(E) Within 60 days of the receipt of the delineated drinking water protection area and supporting documentation, the Authority shall send a written acknowledgment of that receipt and an estimated date for review and certification of the delineation;

(F) The delineation techniques stipulated in this rule represent the minimum acceptable effort required for a state certified program. The use of a more sophisticated technique is acceptable.

(c) Springs. For water systems served by springs, hydrogeologic mapping shall be used to delineate the recharge area to the spring(s).

(d) Wells.

(A) All delineations for groundwater derived from wells shall use an adjusted pump rate (Qa) that allows for potential growth using one of the methods described below, whichever yields the smallest value for Qa:

(i) 125 percent of average pump rate as determined from the three months representing the highest usage; or

(ii) 125 percent of average pump rate as determined using a comparable community; or

(iii) The design capacity of the pump; or

(iv) 90 percent of the safe yield of the well.

(v) The water system's population times 200 gallons per day.

(B) For water systems serving a population ≤500 and using a single well, the minimum acceptable delineation method is a calculated fixed radius. Parameters considered in this technique include Qa, effective porosity, open (screened or perforated) interval or thickness of the water-bearing zone(s), whichever is less, and a TOT of 15 years.

(C) For water systems serving a population of 501 to 3,300 or systems serving ≤500 with multiple wells, the DWPA(s) shall be delineated using a combination of an analytical technique and hydrogeologic mapping.

(D) For water systems serving a population >3,300, the conceptual model shall be refined using site-specific collected data. Data collected shall include, but not be limited to, measured static water levels for the purpose of generating a map of the appropriate potentiometric-or water table surface, and at a minimum a 24-hour constant-rate aquifer test. The well to be tested should remain idle for a period of 24 hours prior to the test. Water levels in the well should be monitored at appropriate intervals during the pre-pumping, pumping and recovery phases. Additional technical information is given in the Oregon Wellhead Protection Guidance Manual and the 1996 Oregon Source Water Assessment Guidance.

(E) For water systems serving a population of 3,301 to 50,000, the DWPA(s) shall be delineated as provided in subsection (2)(c) of this rule, with the exception of using the site specific data collected in accordance with subsection (2)(c) of this rule.

(F) For water systems serving a population >50,000 and using wells, the DWPA(s) shall be delineated using numerical models or comparable analytical methods. The model must be calibrated using field observations and measurements of appropriate hydrogeologic parameters.

(e) Susceptibility Analysis. To guide the development of management strategies, the aquifer's susceptibility within the DWPA may be determined using the methods described in the Use and Susceptibility Waiver Guidance Document, the 1996 Oregon Source Water Assessment Guidance or another pre-approved process. Additional technical information is available in the Oregon Wellhead Protection Guidance Manual.

(f) Delineation Update. The water system's DWPA delineation shall be re-examined every five years or during the sanitary survey for that system for potential revisions (OAR 340-040-0190). Factors that may require revision of a DWPA boundary include, but are not limited to the following:

(A) A significant change in the pumping rate;

(B) A significant change in recharge to the aquifer;

(C) Wells outside the control of the water system placed in a manner that could significantly modify the shape and/or orientation of the original DWPA.

(3) New and Future Groundwater Sources:

(a) New sources. With regard to the voluntary wellhead protection program, a new source is defined as an additional or modified well(s) and/or spring(s) that will be used by the water system.

(A) For new wells or springs outside an existing DWPA or deriving water from a different aquifer than that supplying other already delineated DWPAs, the following steps shall be completed:

(i) If more than one potential site is available, the water system or other responsible management authority shall conduct a provisional delineation and a preliminary potential contaminant source inventory for each site being considered in order to evaluate the long-term viability of each of the sites available; and

(ii) Delineate the chosen site as prescribed in section (2) of this rule. Further technical information is provided in the Oregon Wellhead Protection Guidance Manual.

(B) For new wells or springs inside an existing DWPA or potentially influencing an existing DWPA, the following steps shall be completed:

(i) Evaluate sites and delineate DWPA(s) as prescribed in subparagraphs (3)(a)(A)(i) and (ii) of this rule; and

(ii) Modify the existing wellhead protection plan to encompass modifications resulting from the new delineation.

(C) New wells or springs as defined in subsection (3)(a) of this rule shall comply with all appropriate construction standards as prescribed in OAR 333-061-0050 and shall comply with plan submission requirements as prescribed in 333-061-0060.

(b) Future sources. A public water system or other responsible management authority that has recognized the need for future groundwater supplies beyond their current capacity may choose to identify the area where this future supply will be obtained in accordance with subparagraph (3)(a)(A)(i) of this rule.

(4) Contingency Planning:

(a) Public water systems shall develop or revise contingency plans for response to potential loss or reduction of their drinking water source(s). Key elements of the plan shall include, but not be limited to, the following:

(A) Inventory/prioritize all threats to the drinking water supply;

(B) Prioritize water usage;

(C) Anticipate responses to potential incidents;

(D) Identify key personnel and development of notification roster;

(E) Identify short-term and long-term replacement potable water supplies;

(F) Identify short-term and long-term conservation measures;

(G) Provide for plan testing, review and update;

(H) Provide for new and on-going training of appropriate individuals;

(I) Provide for education of the public; and

(J) Identify logistical and financial resources.

(b) Public water systems shall coordinate their contingency plan with the emergency response plans of the appropriate county and/or city and with the contingency plans developed by industries using hazardous materials within the wellhead protection area.

Stat. Auth.: ORS 448.131

Stats. Implemented: ORS 431.110, 431.150, 448.131, 448.150 & 448.273

333-061-0058
Wellfield Determination

(1) Water systems possessing two or more wells that separately supply water to the distribution system may be eligible to have those wells considered as a wellfield source for monitoring purposes provided the requirements of this rule are met. Information pertinent to determining whether the wellfield designation is appropriate can be found in the water system's Source Water Assessment Report.

(2) To be classified as a wellfield, the wells must meet the following criteria:

(a) The wells must be within 2,500 feet of one another or as determined in a state approved hydrogeological study to minimize inter-well interference drawdowns. For wells located in a low-impact land use area, this criterion may be waived at the discretion of the Authority.

(b) The wells must produce from the same and no other aquifer. This criterion is determined using source water assessment results, based on well reports, maps and other hydrogeological information.

(3) To be considered for wellfield designation, the water supplier is asked to submit the following to the Authority:

(a) A schematic drawing showing all sources, entry points and relevant sample taps;

(b) A map and description of the land use activities within the respective wellhead protection areas (using the inventory section of the Source Water Assessment Report); and

(c) A description of the pumping patterns.

(4) If a water system's wells are considered to comprise a wellfield, the susceptibility analysis conducted during the source water assessment is utilized to determine the sampling point(s). Table 46 summarizes the alternatives: [Table not included. See ED. NOTE.]

(5) To determine the most susceptible well, the area within the two-year time-of-travel is considered. The Authority will consider the potential contaminant source inventory determined during the source water assessment, the aquifer sensitivity, pumping patterns and other pertinent hydrogeological information.

(6) The Authority may still designate more than one entry point within the wellfield as a sampling point if well construction and/or land use practices warrant. For a large area containing numerous wells, sub-wellfields may be identified, each with its own sample site designation.

[ED. NOTE: Tables referenced are available from the agency.]

333-061-0060
Plan Submission and Review Requirements

(1) Plan Submission:

(a) Construction and installation plans shall be submitted to and approved by the Authority before construction begins on new systems or major additions or modifications, as determined by the Authority, are made to existing systems. Plans shall be drawn to scale;

(b) Preliminary plans, pilot studies, master plans and construction plans shall be prepared by a Professional Engineer registered in Oregon, and submitted to the Authority unless exempted by the Authority (See OAR 333-061-0060(4));

(c) Plans shall set forth the following:

(A) Sufficient detail, including specifications, to completely and clearly illustrate what is to be constructed and how those facilities will meet the construction standards set forth in these regulations. Elevation or section views shall be provided where required for clarity;

(B) Supporting information attesting to the quality of the proposed source of water;

(C) Vicinity map of the proposed project relative to the existing system or established landmarks of the area;

(D) Name of the owner of the water system facilities during construction and the name of the owner and operator of the facilities after completion of the project;

(E) Procedures for cleaning and disinfecting those facilities which will be in contact with the potable water.

(d) Prior to drilling a well, a site plan shall be submitted which shows the site location, topography, drainage, surface water sources, specifications for well drilling, location of the well relative to sanitary hazards, dimensions of the area reserved to be kept free of potential sources of contamination, evidence of ownership or control of the reserve area and the anticipated depth of the aquifer from which the water is to be derived. The Authority will review well reports from the area and in consultation with the local watermaster and the well constructor as appropriate will recommend the depth of placement of the casing seal. After the well is drilled, the following documents shall be submitted to the Authority for review and approval: Well driller's report, report of the pump test which indicates that the well has been pumped for a sufficient length of time to establish the reliable yield of the well on a sustained basis, including data on the static water level, the pumping rate(s), the changes in drawdown over the duration of the test, the rate of recovery after the pump was turned off, reports on physical, chemical and microbiological quality of the well water, performance data on the well pump, a plan of the structure for protecting above-ground controls and appurtenances, and a plan showing how the well will be connected to the water system. (See OAR 333-061-0050(2)).

(e) Any community, non-transient non-community, or transient non-community water system that treats surface water or groundwater under the influence of surface water and that desires to make a significant change to its disinfection treatment process as defined by paragraphs (1)(e)(A) through (1)(e)(D) of this rule, is required to develop a disinfection profile and calculate a disinfection benchmark according to OAR 333-061-0036(4)(e). The water system must consult with and provide any additional information requested by the Authority prior to making such a change. The water system must develop a disinfection profile for Giardia lamblia and viruses, calculate a disinfection benchmark, describe the proposed change in the disinfection process, and analyze the effect(s) of the proposed change on current levels of disinfection according to the USEPA Disinfection Profiling and Benchmarking Guidance Manual

or the USEPA LT1-ESWTR Disinfection Profiling and Benchmarking Technical Guidance Manual and submit the information to the Authority for review and approval. Significant changes to the disinfection treatment process include:

(A) Changes to the point of application:

(B) Changes to the disinfectants used in the treatment process;

(C) Changes to the disinfection process;

(D) Any other modification identified by the Authority.

(f) A water system that uses either chloramines, chlorine dioxide, or ozone for primary disinfection, and that is required to prepare a disinfection profile for Giardia lamblia as prescribed by subsection (1)(e) of this rule, must also prepare a disinfection profile for viruses and calculate the logs of inactivation for viruses using the methods specified in OAR 333-061-0036(4)(l).

(2) Plan review:

(a) Upon receipt of plans, the Authority shall review the plans and either approve them or advise that correction or clarification is required. When the correction or clarification is received, and the item(s) in question are resolved, the Authority shall then approve the plans;

(b) Upon completion of a project, a professional engineer registered in Oregon shall submit to the Authority a statement certifying that the project has been constructed in compliance with the approved plans and specifications. When substantial deviations from the approved plans are made, as-built plans showing compliance with these rules shall be submitted to the Authority;

(c) Plans shall not be required for emergency repair of existing facilities. In lieu of plans, written notice shall be submitted to the Authority immediately after the emergency work is completed stating the nature of the emergency, the extent of the work and whether or not any threats to the water quality exists or existed during the emergency.

(3) Plan review fees: Plans submitted to the Authority shall be accompanied by a fee as indicated in Table 41. Those plans not accompanied by a fee will not be reviewed. [Table not included. See ED. NOTE.]

(4) Plan review exemptions:

(a) Water suppliers may be exempted from submitting plans of main extensions, providing they:

(A) Have provided the Authority with a current master plan; and

(B) Certify that the work will be carried out in conformance with the construction standards of these rules; and

(C) Submit to the Authority an annual summary of the projects completed; and

(D) Certify that they have staff qualified to effectively supervise the projects.

(b) Those water suppliers certifying that they have staff qualified to effectively plan, design and supervise their projects, may request the Authority for further exemption from this rule. Such requests must be accompanied by a listing of staff proposed to accomplish the work and a current master plan. To maintain the exemption, the foregoing must be annually updated;

(c) At the discretion of the Authority, Community, Transient and Non-Transient Non-Community and State Regulated water systems may be exempted from submitting engineered plans. They shall, however, submit adequate plans indicating that the project meets the minimum construction standards of these rules.

(5) Master plans:

(a) Community water systems with 300 or more service connections shall maintain a current master plan. Master plans shall be prepared by a professional engineer registered in Oregon and submitted to the Authority for review and approval.

(b) Each master plan shall evaluate the needs of the water system for at least a twenty year period and shall include but is not limited to the following elements:

(A) A summary of the overall plan that includes the water quality and service goals, identified present and future water system deficiencies, the engineer's recommended alternative for achieving the goals and correcting the deficiencies, and the recommended implementation schedule and financing program for constructing improvements.

(B) A description of the existing water system which includes the service area, source(s) of supply, status of water rights, current status of drinking water quality and compliance with regulatory standards, maps or schematics of the water system showing size and location of facilities, estimates of water use, and operation and maintenance requirements.

(C) A description of water quality and level of service goals for the water system, considering, as appropriate, existing and future regulatory requirements, nonregulatory water quality needs of water users, flow and pressure requirements, and capacity needs related to water use and fire flow needs.

(D) An estimate of the projected growth of the water system during the master plan period and the impacts on the service area boundaries, water supply source(s) and availability, and customer water use.

(E) An engineering evaluation of the ability of the existing water system facilities to meet the water quality and level of service goals, identification of any existing water system deficiencies, and deficiencies likely to develop within the master plan period. The evaluation shall include the water supply source, water treatment, storage, distribution facilities, and operation and maintenance requirements. The evaluation shall also include a description of the water rights with a determination of additional water availability, and the impacts of present and probable future drinking water quality regulations.

(F) Identification of alternative engineering solutions, environmental impacts, and associated capital and operation and maintenance costs, to correct water system deficiencies and achieve system expansion to meet anticipated growth, including identification of available options for cooperative or coordinated water system improvements with other local water suppliers.

(G) A description of alternatives to finance water system improvements including local financing (such as user rates and system development charges) and financing assistance programs.

(H) A recommended water system improvement program including the recommended engineering alternative and associated costs, maps or schematics showing size and location of proposed facilities, the recommended financing alternative, and a recommended schedule for water system design and construction.

(I) If required as a condition of a water use permit issued by the Water Resources Department, the Master Plan shall address the requirements of OAR 690-086-0120 (Water Management and Conservation Plans).

(c) The implementation of any portion of a water system master plan must be consistent with OAR 333-061 (Public Drinking Water Systems, Oregon Health Authority), OAR 660-011 (Public Facilities Planning, Department of Land Conservation and Development) and OAR 690-086 (Water Management and Conservation Plans, Water Resources Department).

333-061-0061
Capacity Requirements for Public Water Systems

(1) Water system capacity is defined as the technical, managerial, and financial capability of the water system necessary to plan for, achieve, and maintain compliance with applicable drinking water standards.

(2) Capacity requirements for new public water systems.

(a) Any new community, non-transient non-community, or transient non-community public water system commencing operations on or after October 1, 1999, must meet the applicable requirements in this rule prior to serving drinking water to the public. The owner of such water system shall submit evidence of meeting all applicable requirements to the Authority for review and shall commence operation only after Authority approval. This rule does not apply to water systems that were built and operating prior to October 1, 1999.

(b) Requirements for Technical Capacity

(A) The water system must comply with the local land use requirements of OAR 333-061-0062, including submission to the Authority of evidence of approval by the local land use authority.

(B) The water system must comply with plan submission and review requirements of OAR 333-061-0060, and plans submitted must comply with construction standards in 333-061-0050.

(C) The owner of a new water system must demonstrate a valid water right permit as required and prescribed by the Oregon Water Resources Department (ORS Chapter 537).

(D) The water system must submit initial water quality test results demonstrating compliance with applicable Maximum Contaminant Levels (OAR 333-061-0030), and applicable treatment requirements and performance standards (OAR 333-061-0032 and 0034).

(E) Community water systems shall have water use meters installed at all service connections.

(F) Community water systems with 300 or more service connections shall have a master plan meeting the requirements of OAR 333-061-0060.

(c) Requirements for Managerial Capacity

(A) Community and non-transient non-community water systems must employ or contract for the services of a certified operator as required by OAR 333-061-0225.

(B) Community water systems within areas of Oregon where State or Federally listed sensitive, threatened or endangered fish species are located, shall consult with the Oregon Water Resources Department. If required by the Oregon Water Resources Department, community water systems shall have water management and conservation plans meeting the requirements of Oregon Water Resources Department OAR 690-086-0010 through 0920.

(d) Requirements for Financial Capacity. The water system must establish a water rate structure and billing procedure, or alternate financial plan, to assure that funds are collected and available to meet the anticipated operation, maintenance, and replacement costs of the water system.

(3) Capacity requirements for public water systems applying for a loan from the Drinking Water State Revolving Loan Fund.

(a) All public water systems qualifying for a Drinking Water State Revolving Fund loan must receive a capacity assessment for technical and managerial capacity from the Authority, and financial capacity from the Oregon Economic & Community Development Department through the loan application process, prior to contract execution.

(b) All deficiencies identified in the capacity assessment must be corrected such that:

(A) Those deficiencies identified in the capacity assessment as major deficiencies must be corrected prior to contract execution. Major deficiencies include but are not limited to the following:

(i) Under technical capacity, major infrastructure deficiencies identified in the sanitary survey and not corrected as a part of this project or identified as a deficiency under paragraph (E) of this subsection; or

(ii) Under managerial capacity, no certified operator and no contract or agreement for operator services from another water system or management agency; or

(iii) Under financial capacity, inappropriate financial statements, lack of a capital financing program, or an inadequate rate structure to cover necessary system operation, debt service, or capital replacement.

(B) Those deficiencies identified in the capacity assessment as loan conditions must be corrected as a part of the contract prior to contract completion or on a schedule set and/or approved and tracked by the Authority or its designee. Loan condition deficiencies are deficiencies which may take considerable staff or contractor time and possibly some funding to correct. Loan condition deficiencies include but are not limited to the following:

(i) Under technical capacity, inadequate or no water rights, incomplete installation of water use meters, incomplete or no engineering drawings of the water system, out-of-date or no master plan, or incomplete or no plan review on prior construction projects; or

(ii) Under managerial capacity, having an operator at a lower level than required in responsible charge of the water system, no written emergency response plan, no written water conservation program if required by the Water Resources Department under OAR 690-086-0010 through 690-086-0920, no written water system operations manual, or no cross connection program.

(C) Those deficiencies identified in the capacity assessment as short term deficiencies must be corrected prior to contract completion and will be tracked by the Authority. Short term deficiencies are deficiencies which can be quickly corrected with additional staff attention. Short term deficiencies include but are not limited to the following:

(i) Under technical capacity, water quality monitoring is incomplete, no coliform sample plan or site map, or no written water quality monitoring plan; or

(ii) Under managerial capacity, no annual cross connection summary report if required, or no consumer confidence report if required.

(D) Those deficiencies identified in the capacity assessment as corrected with the project will be considered by the Authority as corrected with contract completion.

(E) All other deficiencies identified in the capacity assessment must be identified and established as a future construction project in the water system master plan, feasibility study, or other such document in order to be considered by the Authority as corrected in the future.

(c) Funding to correct a deficiency identified as a loan condition under paragraph (b)(B) of this section may be included as part of the project contract under the Drinking Water State Revolving Fund, if that part of the project to correct the deficiency qualifies under the terms of the Drinking Water State Revolving Fund.

(4) Capacity requirements for other public water systems.

(a) All community, non-transient non-community, and transient non-community public water systems will receive capacity assessments conducted by or with the assistance of the Authority.

(A) The capacity assessment consists of a written report identifying deficiencies in technical, managerial, and financial capacity, and a letter listing recommendations to correct the deficiencies. The findings of the capacity assessment and recommendations for correction will be presented to the management of the water system at a regular or special meeting.

(B) The frequency of capacity assessments for a public water system, as described in this subsection, is dependent on the risk to human health as determined by the Authority.

(C) The recommendations for correction of deficiencies identified in capacity assessments are, or, become requirements for any public water system, as described in this subsection, with multiple violations of the drinking water standards, in significant non-compliance with the drinking water standards, or an Administrative Order issued by the Authority.

Stat. Auth.: ORS 448.131

333-061-0062
Land Use Coordination

(1) The purpose of this rule is to assure that Oregon Health Authority's actions taken pursuant to ORS 448.131 and OAR

chapter 333, division 61, comply with state land use coordination requirements in ORS 197.180 and OAR chapter 660, divisions 30 and 31. This rule also implements applicable portions of the Authority's state agency coordination program concerning the review and approval of plans and projects pursuant to ORS 448.131.

(2) The requirements of OAR 333-061, shall apply to Authority approval of plans or projects submitted under ORS 448.131 for:

(a) New public water systems;

(b) Major additions, alterations, and extensions of water transmission mains;

(c) Development of new water sources; and

(d) Relocation of water treatment or storage facilities.

(3) In order to approve a plan or project listed under subsections (2)(a) through (d) of this rule, the Authority shall find that it complies with the Statewide Planning Goals and is compatible with applicable acknowledged city and county comprehensive plan and land use regulations. To make its goal compliance and plan compatibility findings, the Authority shall comply with sections (1) through (9) of this rule and shall also adhere to the procedures in the Authority's state agency coordination program which is hereby adopted by reference.

(4) Except where the Authority is required to directly address the Statewide Planning Goals, the Authority shall make its goal compliance findings for each plan or project listed in subsections (2)(a) through (d) of this rule based on the land use compatibility information provided to the Authority by the project applicant.

(5) An applicant seeking approval of a plan or project listed in subsections (2)(a) through (d) of this rule shall provide the Authority with information documenting the plan or project's compatibility with the applicable acknowledged comprehensive plans and land use regulations. Such documentation shall be submitted in a manner as established by the Authority and shall include one of the following:

(a) A copy of the local land use permit (e.g., conditional use permit, subdivision approval, zoning clearance, etc.) demonstrating that the plan or project has received land use approval from the jurisdiction; or

(b) Written information from an authorized representative of the affected city or county affirming that the proposed plan or project is compatible with the acknowledged comprehensive plan(s) for the area, but does not require specific land use approval by the jurisdiction; or

(c) Other written information acceptable to the Authority equivalent to subsection (5)(a) or (b) of this rule demonstrating the plan or project's land use compatibility.

(6) The Authority shall adopt findings directly against the Statewide Planning Goals if a situation ever arises where the Authority must approve a plan or project, but is unable to rely upon or is not provided with the appropriate land use compatibility information by the applicant. In this instance, the Authority shall comply with OAR 660-030-0065 and the corresponding procedures in the Authority's state agency coordination program to adopt the necessary findings demonstrating the plan or project's compliance with the Statewide Goals.

(7) Where more than one unit of local government has land use approval authority over the plan or site of the proposed project, written information from the applicant must be submitted to the Authority as provided in section (5) of this rule documenting the plan or project's compatibility with each of the affected jurisdiction's comprehensive plans.

(8) Information documenting land use compatibility in accordance with section (5) of this rule may be submitted to the Authority for public water system master plans or portions thereof. In this section, no subsequent land use compatibility determination will be required for an individual project where the applicant demonstrated that the project is contemplated by and consistent with the previously approved master plan.

(9) The meaning of land use terms used in this rule shall be as defined in OAR 660-030-0005.

Stat. Auth.: ORS 197.180 & 448.131

333-061-0063

Environmental Review Process for The Safe Drinking Water Revolving Loan Fund Program

(1) This rule provides for environmental review of actions that are funded through the Safe Drinking Water Revolving Loan Fund (SDWRLF). This rule is applied in a manner that is consistent with 40 CFR Part 6, Subpart E and related subparts (July 1, 1997). An applicant for funding from the SDWRLF shall consult with the Authority at an early stage in the preparation of an application to determine the required level of environmental review. Based on review of existing information, the Authority shall assess the potential environmental effects of the proposed action and shall instruct the applicant either to:

(a) Submit a request for a categorical exclusion in a format specified by the Authority;

(b) Prepare and submit an environmental information document (EID) in a format specified by the Authority; or

(c) Prepare and submit an environmental impact report (EIR) in a format specified by the Authority.

(2) Categorical exclusions:

(a) Categorical exclusions are categories of actions proposed for funding from the SDWRLF, which do not individually, cumulatively over time, or in conjunction with other actions, have a significant effect on the quality of the human environment, and have been identified by the Authority as having no such effect. Such actions may be excluded by the Authority from further environmental review requirements if the information provided by the water supplier and any additional information before the Authority does not identify any environmental effects of the action that warrant additional environmental review by the Authority. The following actions may be categorically excluded by the Authority:

(A) Actions solely directed toward minor rehabilitation of existing facilities, functional replacement of equipment, or toward the construction of new ancillary facilities adjacent or appurtenant to existing facilities;

(B) Actions in sewered communities with a population of 10,000, or less, which are for minor upgrading or minor expansion of existing drinking water systems. This category does not include actions that directly or indirectly involve new drinking water sources, or the extension of new water distribution systems;

(C) Actions in unsewered communities with a population of 10,000 or less, that do not include the development of new drinking water sources, and that will not result in any increase in or change to the rate, nature or location of water diversion or discharge to surface water.

(b) In addition to the criteria set forth in subsection (a) of this rule, categorical exclusions will not be granted if the proposed action meets the criteria for not granting such exclusions in 40 CFR 6.107(e) or 6.505(c) (July 1, 1997). In addition, in order to qualify for a categorical exclusion, the action must be compatible with applicable acknowledged comprehensive plans and land use regulations, which must be documented according to the requirements of OAR 333-061-0062(5) and (7).

(c) A categorical exclusion may be revoked by the Authority and an environmental review required if the proposed action no longer meets the requirements for a categorical exclusion due to changes in the proposed action, or if the Authority determines from new information that significant environmental effects may result from the proposed action.

(d) If a categorical exclusion is granted, and a notice of the exclusion has been published in a newspaper of general circulation in the geographical area of the proposed action, the action can proceed.

(3) Environmental review process:

(a) When issuance of a categorical exclusion is not appropriate, the applicant shall prepare an EID or an EIR, as required by the

Authority. The EID or EIR shall consider practicable alternatives to the proposed action (including a no-action alternative), as well as the proposed action.

(b) The EIR or EID shall contain an evaluation of applicable laws relating to significant environmental resources that may be affected by the proposed action and alternatives to the proposed action. The applicant shall consult with appropriate federal, state and local agencies regarding such laws.

(c) The EIR or EID shall consider a full range of relevant impacts (both direct and indirect, and current and future impacts) of the proposed action and alternatives to the proposed action, including measures to mitigate adverse impacts, cumulative impacts, and impacts that cause irreversible or irretrievable commitment of resources.

(d) If the Authority requires an EID, the applicant shall prepare and the Authority shall review a draft EID. Following its review, the Authority shall either request additional information regarding potential impacts of the proposed action, or shall accept the EID as final. Once the Authority accepts the EID, the Authority shall prepare an environment assessment (EA) of the proposed action based on the EID and any other supplemental information deemed necessary by the Authority. Based on the EA and any measures to mitigate or eliminate adverse effects of the proposed action on the environment (which measures shall be included as a condition of any loan award as set forth in section (4) of this rule), the Authority will either prepare and issue a Finding of No Significant Impact (FNSI) or require the preparation of an EIR under subsection (3)(e) of this rule. In determining whether to issue a FNSI, the Authority shall apply the criteria set forth in 40 CFR 6.509, 6.108(a) and 6.108 (c through g) (July 1, 1997). If the Authority determines to issue a FNSI, notice of the FNSI shall be published in a newspaper of general circulation in the geographical area of the proposed action. Following a period of at least thirty (30) days after publication of the notice, and after any public concerns about the impacts of the proposed action are resolved to the extent determined to be appropriate by the Authority, the Authority may issue a final FNSI, and the action can proceed.

(e) If the Authority requires an EIR:

(A) The applicant shall conduct a duly noticed public meeting regarding the proposed action, which may be combined with other public hearings or meetings regarding the proposed action;

(B) The applicant shall prepare and submit a draft EIR to all interested agencies and persons, for review and comment;

(C) The applicant shall prepare and submit a final EIR that responds to agency and public comments for Authority review and decision;

(D) The Authority, following its review of the EIR, shall determine whether the action may proceed. In the event the Authority determines the action may proceed following completion of an EIR, it shall specify in writing what mitigation measures, if any, are to be required.

(4) In the event the Authority determines the action may proceed following preparation of an EID or an EIR, the Authority shall ensure that mitigation measures identified in its review as required for the issuance of a FNSI or otherwise, are implemented. This may be done by incorporating such measures as conditions of any loan agreement, or otherwise as the Authority determines will best ensure their completion in a timely manner.

(5) Under appropriate circumstances, the Authority may allow the partitioning of environmental review such that the environmental review will be required for only a component/portion of a planned system instead of completing an environmental review for the remainder of the system(s). In determining whether to approve partitioning of environmental review, the Authority shall consider 40 CFR Section 6.507 (July 1, 1997).

(6) Waiver; validity:

(a) If environmental review for the proposed action has already been conducted by another government agency, the Authority may, in its discretion, waive the requirements of this rule.

(b) Environmental reviews may be valid for up to five years. If a loan application is received for an action with an environmental review that is more than five years old, the Authority shall require a new or supplemental environmental review in accordance with these rules.

333-061-0064
Emergency Response Plan Requirements

All public water systems shall maintain a current emergency response plan.

(1) The emergency response plan shall be completed according to the following schedule and shall be reviewed and updated at least every five years.

(a) Completed by September 30, 2003 for public water systems serving 100,000 population or more.

(b) Completed by June 30, 2004 for public water systems serving a population of 50,000 or more but less than 100,000.

(c) Completed by December 31, 2004 for public water systems serving a population greater than 3,300 but less than 50,000.

(d) Completed by June 30, 2005 for public water systems serving a population of 3,300 or less.

(e) If a public water system applying for funds from the Safe Drinking Water Revolving Loan Fund Program is required to develop an emergency response plan as a part of a capacity assessment, then the emergency response plan is required to be completed before final payout of the loan.

(2) All public water systems shall complete a security vulnerability assessment and develop a prioritized plan for risk reduction.

(3) As evidence of completion, all public water systems shall submit a statement to the Authority certifying that the Emergency Response Plan and vulnerability assessment have been completed according to the requirements of this rule and that staff have been instructed in the use of the emergency response plan. The emergency response plan/vulnerability assessment shall be made available for review by the Authority and/or the County Health Department. All Community water systems >3,300 population are required to submit a copy of their Vulnerability Assessment and certification of completion for their Emergency Response Plan and Vulnerability Assessment to EPA as required in the federal Bioterrorism Preparedness and Response Act of 2002.

(4) Community water systems shall coordinate with the lead County Emergency Coordinator when preparing or revising an emergency response plan.

(5) The emergency response plan shall include but is not limited to the following elements:

(a) Communications and authority.

(A) Develop an emergency contacts list, and review and update this list at least annually.

(B) Decision-making authorities and responsibilities of water system personnel shall be determined and detailed in the emergency response plan.

(C) Procedure for notification of agencies, the water users, and the local media.

(b) Water system security. Public water systems shall develop a security program. The security program shall include, but is not limited to, the following components: security management, physical activity, physical security, chemical storage and use, personnel, computer system, and program evaluation as defined in the State Model Emergency Response Plan.

(c) Water system hazard review.

(A) Public water systems shall conduct an inspection of the water system annually to identify the hazards that could affect the water system.

(B) Public water systems shall correct construction deficiencies to eliminate hazards or potential hazards, correct major sanitary

survey deficiencies as determined by the Authority, and perform regular maintenance.

(d) Emergency equipment and water supplies.

(A) Public water systems shall make provisions for an auxiliary power supply if not a gravity system, and redundant equipment for critical components. Community water systems shall identify equipment that can be utilized in the event of an intentional attack which can render harmless or significantly lessen the impact of the attack on the public health and safety and supply of public drinking water.

(B) Public water systems shall develop a plan for emergency water to include the rationing of drinking water, identifying and utilizing alternative drinking water sources and supplies, and alternative distribution of drinking water.

(e) Emergency response procedures

(A) Public water systems shall develop procedures for responding to emergencies most likely to strike the water system. Community water systems shall develop plans and procedures that can be implemented in the event of a terrorist or other intentional attack on the water system.

(B) The emergency response plan shall describe procedures to isolate all parts of the water system. Community water systems shall develop actions and procedures which can render harmless or significantly lessen the impact of terrorist attacks or other intentional actions on public health and safety and supply of public drinking water.

(C) The emergency response plan shall describe the emergency disinfection procedure, process for issuing a boil water advisory, and process for handling a waterborne disease outbreak.

(6) Water system staff shall be instructed and trained in the use of the emergency response plan.

Stat. Auth.: ORS 448.131

333-061-0065
Operation and Maintenance

(1) Public water systems shall be operated and maintained in a manner that assures continuous production and delivery of potable water by:

(a) Operating all phases and components of the system effectively in the manner for which they were designed;

(b) Assuring that all leaks are promptly repaired and, broken or malfunctioning equipment is promptly repaired or replaced;

(c) Making readily available and in good condition the proper equipment, tools and parts to make repairs to the system. When possible, notice shall be given to the water users of impending repairs that will affect the quality of the water or the continuity of the water service. All repairs must meet the construction standards of these rules and comply with disinfection requirements of OAR 333-061-0050 prior to reestablishing use of the repaired portion of the system;

(d) Implementing actions to assure safe drinking water during emergencies. Water suppliers seeking a state certified wellhead protection program for their water system shall comply with the contingency planning requirements as prescribed in OAR 333-061-0057(4).

(2) Personnel:

(a) Personnel responsible for maintenance and operation of public water systems shall be competent, knowledgeable of all the functions of that particular facility and shall have the training and experience necessary to assure continuous delivery of water which does not exceed the maximum contaminant levels;

(b) Certification as prescribed by OAR 333-061-0210 through 333-061-0272 is required for personnel in direct responsible charge of operations for all community and non-transient non-community water systems.

(c) Personnel responsible for operating water treatment plants at transient non-community water systems using water sources classified as surface water or groundwater under the direct influence of surface water must attend the Authority's "Essentials of Surface Water Treatment" training course or an equivalent training.

(3) The identity of ownership of a water system shall be filed with the Authority. Notification of changes in ownership shall be filed immediately with the Authority upon completion of the transaction.

(4) All public water systems must maintain a current water system operations manual.

(a) The water system operations manual shall be completed according to the requirements of the capacity assessment or sanitary survey and shall be reviewed and updated at least every five years. If a public water system applying for funds from the Safe Drinking Water Revolving Loan Fund Program is required to develop a water system operations manual as a part of a capacity assessment, then the water system operations manual is required to be completed before final payout of the loan.

(b) As evidence of completion, public water systems shall submit a statement to the Authority certifying that the water system operations manual has been completed according to the requirements in this rule, and that staff have been instructed in the use of the water system operations manual.

(c) The water system operations manual shall include, but is not limited to, the following elements if they are applicable:

(A) Source operation and maintenance;

(B) Water treatment operation and maintenance;

(C) Reservoir operation and maintenance;

(D) Distribution system operation and maintenance; and

(E) Written protocols for on-site operators describing the operational decisions the operator is allowed to make under OAR 333-061-0225.

(d) Water system staff shall be instructed and trained in the use of the water system operations manual.

(5) Documents and records:

(a) The following documents and records shall be retained by the water supplier at community water systems and shall be available when the system is inspected or upon request by the Authority:

(A) Complete and current as-built plans and specifications of the entire system and such other documents as are necessary for the maintenance and operation of the system;

(B) Current operating manuals covering the general operation of each phase of the water system;

(C) A current master plan and revisions thereof;

(D) Data showing production capabilities of each water source and system component;

(E) Current records of the number, type and location of service connections;

(F) Current records of raw water quality, both chemical and microbiological;

(G) Current records of all chemicals and dosage rates used in the treatment of water;

(H) Reports on maintenance work performed on water treatment and delivery facilities;

(I) Records relating to the sampling and analysis undertaken to assure compliance with the maximum contaminant levels;

(J) Record of residual disinfectant measurements, where applicable;

(K) Records of cross connection control and backflow prevention device testing, where applicable;

(L) Records of customer complaints pertaining to water quality and follow-up action undertaken;

(M) Fluoridation records, where applicable;

(N) Other records as may be required by these rules.

(6) Water Treatment Operations:

(a) Chlorinators and other equipment used to apply chemicals at a public water system shall be operated and maintained in accordance with the manufacturers' specifications and recommendations for efficient operation and safety.

(b) When chlorine is used as the disinfectant, the procedures shall be as follows:

(A) Chlorine shall be applied in proportion to the flow;

(B) For reasons other than the treatment of surface water sources or groundwater sources under the direct influence of surface water, the rate of application shall be sufficient to result in a free chlorine residual of at least 0.2 mg/l after a 30-minute contact time and throughout the distribution system;

(c) When ammonia is added to the water with the chlorine to form a chloramine as the disinfectant, for reasons other than the treatment of surface water sources or groundwater sources under the direct influences of surface water, the rate of application shall result in a combined chlorine residual of at least 2.0 mg/l after a three-hour contact time;

(d) When corrosion control chemicals are applied to achieve compliance with the action levels for lead and copper, the point of application shall be after all other treatment processes, unless determined otherwise by the Authority.

(e) At water systems where cartridge filters are used, the filters must be changed according to the manufacturer's recommended pressure differential.

(7) When an emergency arises within a water system which affects the quality of water produced by the system, the water supplier shall notify the Authority immediately.

(8) Water suppliers must complete an Authority approved start-up procedure prior to serving water to the public at all seasonal water systems as defined in OAR 333-061-0020(168). The start-up procedure may include a requirement to conduct additional monitoring at the discretion of the Authority. A water supplier may be exempted from some or all of the requirements related to start-up of a seasonal water system if the entire distribution system remains pressurized during the entire period that the water system is not operating. Failing to complete an Authority-approved start-up procedure at a seasonal water system prior to serving water to the public is a violation of treatment technique requirements and of this rule.

333-061-0070
Cross Connection Control Requirements

(1) Water suppliers shall undertake cross connection control programs to protect the public water systems from pollution and contamination.

(2) The water supplier's responsibility for cross connection control shall begin at the water supply source, include all public treatment, storage, and distribution facilities under the water supplier's control, and end at the point of delivery to the water user's premises.

(3) Water suppliers shall develop and implement cross connection control programs that meet the minimum requirements set forth in these rules.

(4) Water suppliers shall develop a procedure to coordinate cross connection control requirements with the appropriate local administrative authority having jurisdiction.

(5) The water supplier shall ensure that inspections of approved air gaps, approved devices, and inspections and tests of approved backflow prevention assemblies protecting the public water system are conducted:

(a) At the time of installation, any repair or relocation;

(b) At least annually;

(c) More frequently than annually for approved backflow prevention assemblies that repeatedly fail, or are protecting health hazard cross connections, as determined by the water supplier;

(d) After a backflow incident; or

(e) After an approved air gap is re-plumbed.

(6) Approved air gaps, approved devices, or approved backflow prevention assemblies, found not to be functioning properly shall be repaired, replaced or re-plumbed by the water user or premises owner, as defined in the water supplier's local ordinance or enabling authority, or the water supplier may take action in accordance with subsection (9)(a) of these rules.

(7) A water user or premises owner who obtains water from a water supplier must notify the water supplier if they add any chemicals or substance to the water.

(8) Premises isolation requirements:

(a) For service connections to premises listed or defined in Table 42 (Premises Requiring Isolation), the water supplier shall ensure an approved backflow prevention assembly or an approved air gap is installed; [Table not included. See ED. NOTE.]

(A) Premises with cross connections not listed or defined in Table 42 (Premises Requiring Isolation), shall be individually evaluated. The water supplier shall require the installation of an approved backflow prevention assembly or an approved air gap commensurate with the degree of hazard on the premises, as defined in Table 43 (Backflow Prevention Methods); [Table not included. See ED. NOTE.]

(B) In lieu of premise isolation, the water supplier may accept an in-premises approved backflow prevention assembly as protection for the public water system when the approved backflow prevention assembly is installed, maintained and tested in accordance with these rules.

(b) Where premises isolation is used to protect against a cross connection, the following requirements apply;

(A) The water supplier shall:

(i) Ensure the approved backflow prevention assembly is installed at a location adjacent to the service connection or point of delivery;

(ii) Ensure any alternate location used must be with the approval of the water supplier and must meet the water supplier's cross connection control requirements; and

(iii) Notify the premises owner and water user, in writing, of thermal expansion concerns.

(B) The premises owner shall:

(i) Ensure no cross connections exist between the point of delivery from the public water system and the approved backflow prevention assemblies, when these are installed in an alternate location; and

(ii) Assume responsibility for testing, maintenance, and repair of the installed approved backflow prevention assembly to protect against the hazard.

(c) Where unique conditions exist, but not limited to, extreme terrain or pipe elevation changes, or structures greater than three stories in height, even with no actual or potential health hazard, an approved backflow prevention assembly may be installed at the point of delivery; and

(d) Where the water supplier chooses to use premises isolation by the installation of an approved backflow prevention assembly on a one- or two-family dwelling under the jurisdiction of the Oregon Plumbing Specialty Code and there is no actual or potential cross connection, the water supplier shall:

(A) Install the approved backflow prevention assembly at the point of delivery;

(B) Notify the premises owner and water user in writing of thermal expansion concerns; and

(C) Take responsibility for testing, maintenance and repair of the installed approved backflow prevention assembly.

(9) In community water systems, water suppliers shall implement a cross connection control program directly, or by written agreement with another agency experienced in cross connection control. The local cross connection program shall consist of the following elements:

(a) Local ordinance or enabling authority that authorizes discontinuing water service to premises for:

(A) Failure to remove or eliminate an existing unprotected or potential cross connection;

(B) Failure to install a required approved backflow prevention assembly;

(C) Failure to maintain an approved backflow prevention assembly; or

(D) Failure to conduct the required testing of an approved backflow prevention assembly.

(b) A written program plan for community water systems with 300 or more service connections shall include the following:

(A) A list of premises where health hazard cross connections exist, including, but not limited to, those listed in Table 42 (Premises Requiring Isolation); [Table not included. See ED. NOTE.]

(B) A current list of certified cross connection control staff members;

(C) Procedures for evaluating the degree of hazard posed by a water user's premises;

(D) A procedure for notifying the water user if a non-health hazard or health hazard is identified, and for informing the water user of any corrective action required;

(E) The type of protection required to prevent backflow into the public water supply, commensurate with the degree of hazard that exists on the water user's premises, as defined in Table 43 (Backflow Prevention Methods); [Table not included. See ED. NOTE.]

(F) A description of what corrective actions will be taken if a water user fails to comply with the water supplier's cross connection control requirements;

(G) Current records of approved backflow prevention assemblies installed, inspections completed, backflow prevention assembly test results on backflow prevention assemblies and verification of current Backflow Assembly Tester certification; and

(H) A public education program about cross connection control.

(c) The water supplier shall prepare and submit a cross connection control Annual Summary Report to the Authority, on forms provided by the Authority, before the last working day of March each year.

(d) In community water systems having 300 or more service connections, water suppliers shall ensure at least one person is certified as a Cross Connection Control Specialist, unless specifically exempted from this requirement by the Authority.

(10) Fees: Community water systems shall submit to the Authority an annual cross connection program implementation fee, based on the number of service connections, as follows:

Service Connections — Fee:
15-99 — $30.
100-999 — $75.
1,000-9,999 — $200.
10,000 or more — $350.

(a) Billing invoices will be mailed to water systems in the first week of November each year and are due by January first of the following year;

(b) Fees are payable to Oregon Health Authority by check or money order;

(c) A late fee of 50 percent of the original amount will be added to the total amount due and will be assessed after January 31 of each year.

(11) In transient or non-transient non-community water systems, the water supplier that owns or operates the system shall:

(a) Ensure no cross connections exist, or are isolated from the potable water system with an approved backflow prevention assembly, as required in section (12) of this rule;

(b) Ensure approved backflow prevention assemblies are installed at, or near, the cross connection; and

(c) Conduct an annual cross connection survey and inspection to ensure compliance with these rules, and test all backflow assemblies annually. All building permits and related inspections are to be made by the Department of Consumer and Business Services, Building Codes Division, as required by ORS 447.020.

(12) Approved backflow prevention assemblies and devices required under these rules shall be approved by the University of Southern California, Foundation for Cross-Connection Control and Hydraulic Research, or other equivalent testing laboratories approved by the Authority.

(13) Backflow prevention assemblies installed before the effective date of these rules that were approved at the time of installation, but are not currently approved, shall be permitted to remain in service provided the assemblies are not moved, the piping systems are not significantly remodeled or modified, the assemblies are properly maintained, and they are commensurate with the degree of hazard they were installed to protect. The assemblies must be tested at least annually and perform satisfactorily to the testing procedures set forth in these rules.

(14) Tests performed by Authority-certified Backflow Assembly Testers shall be in conformance with procedures established by the University of Southern California, Foundation for Cross Connection Control and Hydraulic Research, Manual of Cross-Connection Control, 10th Edition, or other equivalent testing procedures approved by the Authority.

(15) Backflow prevention assemblies shall be tested by Authority-certified Backflow Assembly Testers, except as otherwise provided for journeyman plumbers or apprentice plumbers in OAR 333-061-0072 of these rules (Backflow Assembly Tester Certification). The Backflow Assembly Tester must produce three copies of all test reports. One copy must be maintained in the Tester's permanent records, one copy must be provided to the water user or property owner, and one copy must be provided to the water supplier.

(a) Test reports must be provided within 10 working days; and

(b) The test reports must be in a manner and form acceptable to the water supplier.

(16) All approved backflow prevention assemblies subject to these rules shall be installed in accordance with OAR 333-061-0071 and the Oregon Plumbing Specialty Code.

(17) The Authority shall establish an advisory board for cross connection control issues consisting of not more than nine members, and including representation from the following:

(a) Oregon licensed Plumbers;

(b) Authority certified Backflow Assembly Testers;

(c) Authority certified Cross Connection Specialists;

(d) Water Suppliers;

(e) The general public;

(f) Authority certified Instructors of Backflow Assembly Testers or Cross Connection Specialists;

(g) Backflow assembly manufacturers or authorized representatives;

(h) Engineers experienced in water systems, cross connection control or backflow prevention; and

(i) Oregon certified Plumbing Inspectors.

333-061-0071
Backflow Prevention Assembly Installation and Operation Standards

(1) Any approved backflow prevention assembly required by OAR 333-061-0070 shall be installed in a manner that:

(a) Facilitates its proper operation, maintenance, inspection, and in-line testing using standard installation procedures approved by the Authority, such as, but not limited to, University of Southern California, Manual of Cross-Connection Control, 10th Edition, the Pacific Northwest Section American Water Works Association,

Cross Connection Control Manual, 7th Edition, or the local administrative authority having jurisdiction;

(b) Precludes the possibility of continuous submersion of an approved backflow prevention assembly, and precludes the possibility of any submersion of the relief valve on a reduced pressure principle backflow prevention assembly; and

(c) Maintains compliance with all applicable safety regulations and the Oregon Plumbing Specialty Code.

(2) For premises isolation installation:

(a) The approved backflow prevention assembly shall be installed at a location adjacent to the service connection or point of delivery; or

(b) Any alternate location must be with the advance approval of the water supplier and must meet the water supplier's cross connection control requirements; and

(c) The premises owner shall ensure no cross connections exist between the point of delivery from the public water system and the approved backflow prevention assembly.

(3) Bypass piping installed around any approved backflow prevention assembly must be equipped with an approved backflow prevention assembly to:

(a) Afford at least the same level of protection as the approved backflow prevention assembly being bypassed; and

(b) Comply with all requirements of these rules.

(4) All Oregon Plumbing Specialty Code approved residential multi-purpose fire suppression systems constructed of potable water piping and materials do not require a backflow prevention assembly.

(5) Stand-alone fire suppression systems shall be protected commensurate with the degree of hazard, as defined in Table 43 (Backflow Prevention Methods). [Table not included. See ED. NOTE.]

(6) Stand-alone irrigation systems shall be protected commensurate with the degree of hazard, as defined in Table 43 (Backflow Prevention Methods). [Table not included. See ED. NOTE.]

(7) A Reduced Pressure Principle Backflow Prevention Assembly (RP) or Reduced Pressure Principle-Detector Backflow Prevention Assembly (RPDA): [Figure 1 not included. See ED. NOTE.]

(a) Shall conform to bottom and side clearances when the assembly is installed inside a building. Access doors may be provided on the top or sides of an above-ground vault;

(b) Shall always be installed horizontally, never vertically, unless they are specifically approved for vertical installation;

(c) Shall always be installed above the 100 year (1 percent) flood level unless approved by the appropriate local administrative authority having jurisdiction;

(d) Shall never have extended or plugged relief valves;

(e) Shall be protected from freezing when necessary;

(f) Shall be provided with an approved air gap drain;

(g) Shall not be installed in an enclosed vault or box unless a bore-sighted drain to daylight is provided;

(h) May be installed with reduced clearances if the pipes are two inches in diameter or smaller, are accessible for testing and repairing, and approved by the appropriate local administrative authority having jurisdiction;

(i) Shall not be installed at a height greater than five feet unless there is a permanently installed platform meeting Oregon Occupational Safety and Health Administration (OR-OSHA) standards to facilitate servicing the assembly; and

(j) Be used to protect against a non-health hazard or health hazard for backsiphonage or backpressure conditions.

(8) A Double Check Valve Backflow Prevention Assembly (DC) or Double Check Detector Backflow Prevention Assembly (DCDA): [Figure 2 not included. See ED. NOTE.]

(a) Shall conform to bottom and side clearances when the assembly is installed inside a building;

(b) May be installed vertically as well as horizontally provided the assembly is specifically listed for that orientation in the Authority's Approved Backflow Prevention Assembly List.

(c) May be installed below grade in a vault, provided that water-tight fitted plugs or caps are installed in the test cocks, and the assembly shall not be subject to continuous immersion;

(d) Shall not be installed at a height greater than five feet unless there is a permanently installed platform meeting Oregon Occupational Safety and Health Administration (OR-OSHA) standards to facilitate servicing the assembly;

(e) May be installed with reduced clearances if the pipes are two inches in diameter or smaller, provided that they are accessible for testing and repairing, and approved by the appropriate local administrative authority having jurisdiction;

(f) Shall have adequate drainage provided except that the drain shall not be directly connected to a sanitary or storm water drain. Installers shall check with the water supplier and appropriate local administrative authority having jurisdiction for additional requirements;

(g) Shall be protected from freezing when necessary; and

(h) Be used to protect against non-health hazards under backsiphonage and backpressure conditions.

(9) A Pressure Vacuum Breaker Backsiphonage Prevention Assembly (PVB) or Spill-Resistant Pressure Vacuum Breaker Backsiphonage Prevention Assembly (SVB) shall: [Figure 3 not included. See ED. NOTE.]

(a) Be installed where occasional water discharge from the assembly caused by pressure fluctuations will not be objectionable;

(b) Have adequate spacing available for maintenance and testing;

(c) Not be subject to flooding;

(d) Be installed a minimum of 12 inches above the highest downstream piping and outlets;

(e) Have absolutely no means of imposing backpressure by a pump or other means. The downstream side of the pressure vacuum breaker backsiphonage prevention assembly or spill-resistant pressure vacuum breaker backsiphonage prevention assembly may be maintained under pressure by a valve; and

(f) Be used to protect against backsiphonage only, not backpressure.

(10) An Atmospheric Vacuum Breaker (AVB) shall: [Figure 4 not included. See ED. NOTE.]

(a) Have absolutely no means of shut-off on the downstream or discharge side of the atmospheric vacuum breaker;

(b) Not be installed in dusty or corrosive atmospheres;

(c) Not be installed where subject to flooding;

(d) Be installed a minimum of six inches above the highest downstream piping and outlets;

(e) Be used intermittently;

(f) Have product and material approval under the Oregon Plumbing Specialty Code for non-testable devices.

(g) Not be pressurized for more than 12 hours in any 24-hour period; and

(h) Be used to protect against backsiphonage only, not backpressure.

[ED. NOTE: Tables, Figures & Publications referenced are available from the agency.]

333-061-0072
Backflow Assembly Tester Certification

(1) In order to be certified as a backflow assembly tester, individuals must successfully complete all the requirements of this rule for testing backflow prevention assemblies. Only the following individuals may perform the field-testing on backflow prevention assemblies required by these rules:

(a) Individuals certified by the Authority to test backflow prevention assemblies; and

(b) Journeyman plumbers defined as those who hold a certificate of competency issued under ORS Chapter 693 or apprentice plumbers, as defined under ORS 693.010.

(2) Journeyman plumbers or apprentice plumbers who test backflow prevention assemblies shall satisfactorily complete an Authority approved backflow assembly tester training course, according to rules adopted by the Director of Consumer and Business Services.

(3) Individuals certified as a backflow assembly tester must comply with ORS 448.279(2).

(4) All backflow assembly tester training courses must be approved by the Authority and taken at an Authority approved training facility.

(5) Satisfactory completion of an approved backflow assembly tester training course means:

(a) Completing the course;

(b) Scoring at least 70 percent on the written examination; and

(c) Scoring at least 90 percent on the physical-performance examination.

(6) In order to apply for initial backflow assembly tester certification, individuals must submit:

(a) A completed initial application with all required documentation as specified on the initial application form and in this rule, including but not limited to:

(A) Proof of high school graduation, GED, associate's degree, bachelor's degree, master's degree, or PhD; and

(B) Proof of satisfactory completion, as described in section (5) of this rule, of a backflow assembly tester initial training course within the 12 months prior to the Authority receiving the completed application; and

(b) The initial certification fee as specified in section (9) of this rule.

(7) Backflow assembly tester certification expires on December 31 every two years based upon the first letter in the last name of the individual. Certification for individuals with names beginning in the letters A–K expire in even numbered years, and certification for individuals with names beginning in the letters L–Z expire in odd-numbered years. Certification renewal fees may be prorated if individuals are required to renew their certification prior to the end of the most recent two-year certification period.

(a) Backflow assembly testers may only perform tests if they possess current, valid certification.

(b) In order to apply to renew backflow assembly tester certification, individuals must submit:

(A) A completed renewal application with all required documentation as specified on the renewal application form and in this rule, including but not limited to:

(i) Proof of satisfactory completion, as described in section (5) of this rule, of either a backflow assembly tester renewal course or a backflow tester initial training course within the two year period prior to the expiration date of the certification; and

(ii) Yearly test gauge accuracy verification or calibration reports performed in the same month every year, as determined by the backflow assembly tester; and

(B) The certification renewal fee, as specified in section (9) of this rule.

(c) The Authority may grant certification renewal without a reinstatement fee until January 31 in the year following the expiration date of the certification. A reinstatement fee as prescribed by section (9) of this rule is required in addition to the renewal fee for all renewal applications received after the grace period ending on January 31 following the expiration date of the certification.

(d) Backflow assembly testers that fail to renew their certification for one year following the expiration date of their certification must meet the requirements established for applicants as prescribed by sections (6) or (8) of this rule as applicable.

(8) In order to apply for backflow assembly tester certification based on reciprocity, individuals must submit:

(a) A completed reciprocity application form with all required documentation as specified on the application form and in these rules, including but not limited to:

(A) Proof of current certification from a state or entity having substantially equivalent certification training and testing standards to those set forth in these rules, as determined by the Authority;

(B) Proof of satisfactory completion, as described in section (5) of this rule, of a backflow assembly tester initial training course or a backflow tester renewal course within the 12 months prior to the Authority receiving the completed application;

(C) Proof of high school graduation, GED, associate's degree, bachelor's degree, master's degree, or PhD; and

(D) Yearly test gauge accuracy verification or calibration reports performed in the same month every year, as determined by the backflow assembly tester; and

(b) The reciprocity review and initial certification fees as specified in section (9) of this rule.

(9) Fees related to backflow assembly tester certification.

(a) Payments shall be made to the Oregon Health Authority, Public Health Division.

(b) The Authority will not refund any fees once it has initiated processing an application.

(c) Fees are:

(A) Initial Certification (2-years) $195;

(B) Certification Renewal (2-years) $195;

(C) Reciprocity Review $35;

(D) Reinstatement $50; and

(E) Combination Certification Renewal (2-years) $305.

(d) Initial certification fees may be prorated to the nearest year for the remainder of the 2-year certification period.

(e) The Combination Certification Renewal fee applies when applicants simultaneously renew their backflow assembly tester and cross connection specialist certifications.

(10) Enforcement related to Backflow Assembly Tester certification

(a) The Authority may deny an initial application for certification, an application for renewal of certification, an application for certification based on reciprocity, or revoke a certification if the Authority determines the applicant/backflow assembly tester:

(A) Provided false information to the Authority;

(B) Did not possess certification issued by another state or entity because it was revoked;

(C) Permitted another person to use their certificate number;

(D) Failed to properly perform backflow prevention assembly testing;

(E) Falsified a backflow assembly test report;

(F) Failed to comply with ORS 448.279(2);

(G) Failed to comply with these rules or other applicable federal, state or local laws or regulations; or

(H) Performed backflow assembly tests with a gauge that was not calibrated for accuracy within the 12-month period prior to testing the assembly.

(b) Applicants or backflow assembly testers who have been denied initial, renewal, or reciprocity certification or whose certifications have been revoked have the right to appeal according to the provisions of chapter 183, Oregon Revised Statutes.

(c) Applicants or backflow assembly testers who have been denied initial, renewal, or reciprocity certification or whose certifications have been revoked, may not reapply for certification for one year from the date of denial or revocation of certification.

(d) Applicants or backflow assembly testers may petition the Authority prior to one year from the date of denial or revocation and may be allowed to reapply at an earlier date, at the discretion of the Authority.

(e) Backflow assembly tester test reports shall be made available to the Authority upon request.

333-061-0073
Cross Connection Specialist Certification

(1) In order to be certified as a cross connection specialist, individuals must successfully complete all the applicable requirements of this rule. Only individuals certified by the Authority may administer cross connection control programs.

(2) Individuals certified as a cross connection specialist must comply with ORS 448.279(2).

(3) All training courses must be taken at an Authority approved training facility or be an Oregon Environmental Services Advisory Council approved course.

(4) Satisfactory completion of an approved cross connection specialist training course means:

(a) Completing the course; and

(b) Scoring at least 70 percent on the written examination.

(5) In order to apply for initial cross connection specialist certification, individuals must submit:

(a) A completed initial application with all required documentation as specified on the initial application form and in this rule, including but not limited to:

(A) Proof of high school graduation, GED, associate's degree, bachelor's degree, master's degree, or PhD; and

(B) Proof of satisfactory completion, as described in section (4) of this rule, of a cross connection specialist initial training course within the 12 months prior to the Authority receiving the completed application;

(C) Proof of one-year of experience working with public water systems as defined in OAR 333-061-0020 or plumbing as defined in ORS 447.010; and

(b) The initial certification fee as specified in section (8) of this rule.

(6) Cross connection specialist certification expires on December 31 every two years based upon the first letter in the last name of the individual. Certification for individuals with names beginning in the letters A-K expires in even numbered years, and certification for individuals with names beginning in the letters L-Z expires in odd numbered years Certification renewal fees may be prorated if individuals are required to renew their certification prior to the end of the most recent two-year certification period.

(a) In order to apply to renew cross connection specialist certification, individuals must submit:

(A) A completed renewal application with all required documentation as specified on the application form and in this rule, including but not limited to, proof of satisfactory completion of a total of at least 0.6 continuing education units from cross connection-related training courses or meetings taken within the two year period immediately prior to the date of the Authority receiving the completed application. Training courses and meetings must be attended at an Authority approved training facility or be approved by the Oregon Environmental Services Advisory Council; and

(B) The certification renewal fee, as specified in section (8) of this rule.

(b) The Authority may grant certification renewal without a reinstatement fee until January 31 in the year following the expiration date of the certification. A reinstatement fee as prescribed by section (8) of this rule is required in addition to the renewal fee for all renewal applications received after the grace period ending on January 31 following the expiration date of the certification.

(c) Cross connection specialists that fail to renew their certification for one year following the expiration date of their certification must meet the requirements established for applicants as prescribed by sections (5) or (7) of this rule.

(7) In order to apply for cross connection specialist certification based on reciprocity, individuals must submit:

(a) A completed reciprocity application form with all required documentation as specified on the application form and in this rule, including but not limited to:

(A) Proof of current certification from a state or entity having substantially equivalent certification training and testing standards to those set forth in these rules, as determined by the Authority;

(B) Proof of satisfactory completion, as described in section (4) of this rule, of a cross connection specialist initial training course or cross connection specialist renewal course within the 12 months prior to the Authority receiving the completed application;

(C) Proof of high school graduation, GED, associate's degree, bachelor's degree, master's degree, or PhD; and

(b) The reciprocity application fee as specified in section (8) of this rule.

(8) Fees related to Cross Connection Specialist certification.

(a) Payments shall be made to the Oregon Health Authority, Public Health Division.

(b) The Authority will not refund any fees once it has initiated processing an application.

(c) Fees are:

(A) Initial Certification (2-years) $195;

(B) Certification Renewal (2-years) $195;

(C) Reciprocity Review $35;

(D) Reinstatement $50; and

(E) Combination Certification Renewal (2-years) $305.

(d) Initial certification fees may be prorated to the nearest year for the remainder of the 2-year certification period.

(e) The Combination Certification Renewal fee applies when applicants simultaneously renew their backflow assembly tester and cross connection specialist certifications.

(9) Enforcement related to cross connection specialist certification.

(a) The Authority may deny an initial application for certification, an application for renewal of certification, an application for certification based on reciprocity, or revoke a certification if the Authority determines the applicant/cross connection specialist:

(A) Provided false information to the Authority;

(B) Did not possess certification issued by another state or entity because it was revoked;

(C) Permitted another person to use their certificate number;

(D) Falsified a survey/inspection/Annual Summary Report;

(E) Failed to comply with ORS 448.279(2); or

(F) Failed to comply with these rules or other applicable federal, state or local laws or regulations.

(b) Applicants or cross connection specialists who have been denied initial, renewal, or reciprocity certification or who have had their certification revoked have the right to appeal according to the provisions of Chapter 183, Oregon Revised Statutes.

(c) Applicants or cross connection specialists who have been denied initial, renewal, or reciprocity certification or who have had their certification revoked may not reapply for certification for one year from the date of denial or revocation of certification.

(d) Applicants or cross connection specialists may petition the Authority prior to one year from the date of denial or revocation and may be allowed to reapply at an earlier date, at the discretion of the Authority.

333-061-0074
Cross Connection Training Programs, Course, and Instructor Requirements

(1) In order to qualify as an Authority approved Cross Connection Specialist training program or facility or Backflow Assembly Tester training program or facility, the following requirements must be met:

(a) The training program must keep permanent records on attendance and performance of each student that enrolls in a course;

(b) The training program must submit the names of students who have successfully completed the training course to the Authority upon completion of the training course;

(c) The training schedule must be set in advance and the schedule must be submitted to the Authority quarterly for review and publication;

(d) The backflow training program must maintain a proper ratio of student-to-training equipment. A maximum ratio of three students for each backflow assembly test station is allowed for the Backflow Assembly Tester-training course;

(e) The training program must provide uniform training at all course locations;

(f) The training program shall provide the training materials necessary to complete the course. The training materials must be updated annually and submitted to the Authority for approval; and

(g) The training program must have the following minimum training equipment available for each course:

(A) Each test station for Backflow Assembly Tester initial training and certification renewal courses shall include:

(i) An operating pressure vacuum breaker backsiphonage prevention assembly, spill resistant pressure vacuum breaker backsiphonage prevention assembly, double check valve backflow prevention assembly, and a reduced pressure principle backflow prevention assembly, with appropriate test gauges for each assembly; and

(ii) A backflow prevention assembly failure simulator shall also be provided that is capable of simulating leaking check valves, shutoff valves, and relief valve failures.

(B) The training aids for the Backflow Assembly Tester training program or facility and Cross Connection Specialist training program or facility shall include the atmospheric vacuum breaker, pressure vacuum breaker backsiphonage prevention assembly, spill resistant pressure vacuum breaker backsiphonage prevention assembly, double check valve backflow prevention assembly, reduced pressure principle backflow prevention assembly, and a variety of test gauges.

(h) The training program must maintain uniform course curriculum according to sections (2), (3), (4) and (5) of this rule section, and maintain uniform instructor requirements according to section (6) of this rule section, subject to approval by the Authority.

(2) Requirements for the Cross Connection Specialist initial training course shall include:

(a) A minimum of 30 hours of training;

(b) The course content shall contain, but is not limited to, the following topics:

(A) Definitions, identification of cross connection hazards, and the hydraulics of backflow;

(B) Approved cross connection control methods, backflow prevention assembly specifications, and testing methods used for Authority-approved backflow prevention assemblies;

(C) Cross connection control requirements for public water systems, implementation of a cross connection control program, and writing a local cross connection control ordinance;

(D) Public education and record keeping requirements for an effective cross connection control program;

(E) Facility water use inspection techniques and hands on inspection of local facilities to identify actual or potential cross connections;

(F) Cross connection control program enforcement and managing a Backflow Assembly Tester program; and

(G) Review and discussion of Cross Connection Specialist safety issues.

(c) A minimum score of 85 percent is required to pass the Authority approved Cross Connection Specialist written examination.

(3) Requirements for the Backflow Assembly Tester initial training course shall include:

(a) A minimum of 40 hours of training;

(b) The course content shall contain, but is not limited to, the following topics:

(A) Definitions, identification of cross connections, and the hydraulics of backflow;

(B) Hazards associated with backflow pollution and contamination of potable water, approved cross connection control methods, and cross connection control program requirements for public water systems;

(C) Backflow prevention assembly approval requirements, specifications and installation requirements for approved backflow prevention assemblies, and backflow prevention assembly repair techniques;

(D) Complete disassembly and reassembly of each type of backflow prevention assembly;

(E) Hands-on demonstration of the correct test procedures, troubleshooting for each type of backflow prevention assembly, and diagnosis of two failure and/or abnormal conditions during the hands- on backflow assembly test of each type of backflow prevention assembly;

(F) Test gauge calibration and gauge accuracy verification methods; and

(G) Review and discussion of Backflow Assembly Tester safety issues.

(c) A minimum score of 75 percent is required to pass the Authority-approved Backflow Assembly Tester written examination; and

(d) A minimum score of 90 percent is required to pass the Authority-approved Backflow Assembly Tester physical performance examination.

(4) Requirements for Cross Connection Specialist certification renewal shall include:

(a) A minimum of 0.6 CEU of training;

(b) The course content shall contain, but is not limited to, the following topics:

(A) Review of cross connection control regulations OAR 333-061-0070 through 0073;

(B) Review and discussion of recent backflow incidents and identification of cross connections; and

(C) Review and discussion of Cross Connection Specialist safety issues.

(5) Requirements for Backflow Assembly Tester certification renewal shall include:

(a) A minimum of 0.5 CEU of training, excluding examination time;

(b) The course content shall contain, but is not limited to, the following topics:

(A) Review of cross connection control regulations OAR 333-061-0070 through 0073;

(B) Review of approved test procedures for backflow prevention assemblies;

(C) Hands-on demonstration of the correct test procedures for each type of backflow prevention assembly;

(D) The correct student diagnosis and explanation of two failure and/or abnormal conditions during the hands-on backflow prevention assembly test of each type of backflow prevention assembly;

(E) Review and discussion of Backflow Assembly Tester safety issues; and

(F) Written examination that includes questions on cross connection control regulations OAR 333-061-0070 through 0073.

(c) A minimum score of 75 percent is required to pass the Authority approved Backflow Assembly Tester written examination; and

(d) A minimum score of 90 percent is required to pass the Authority approved Backflow Assembly Tester physical performance examination.

(6) Instructor qualification requirements shall include:

(a) To be eligible as an instructor for Cross Connection Specialist initial training or certification renewal course, the following experience in the cross connection control field is required:

(A) Must be currently certified as a Cross Connection Specialist in Oregon;

(B) Must have 2 years experience in enforcement of cross connection control requirements, or as a certified Cross Connection Specialist, or have related experience, subject to approval by the Authority;

(C) Must participate in two complete Cross Connection Specialist training courses as a student instructor assigned to teach a portion of the curriculum. A student instructor training program

schedule must be submitted to the Authority for approval before training begins;

(D) Must receive a recommendation from the instructor of record for approval as an instructor. An unfavorable recommendation must be documented by supporting information and may be challenged by the trainee or by the Authority; and

(E) Must attend at least one instructor update meeting provided by the Authority each year.

(b) To be eligible as an instructor for the Backflow Assembly Tester initial training or certification renewal course, the following experience in the backflow prevention field is required:

(A) Must be currently certified as a Backflow Assembly Tester in Oregon;

(B) Must have 2 years experience as a certified Backflow Assembly Tester and experience installing, testing backflow prevention assemblies, or as a vocational instructor, or have related experience, subject to approval by the Authority;

(C) Must participate in two complete Backflow Assembly Tester training courses as a student instructor assigned to teach a portion of the text curriculum and the physical performance portion of the curriculum. A student instructor training program schedule must be submitted to the Authority for approval before training begins;

(D) Must receive a recommendation from the instructor of record for approval as an instructor. An unfavorable recommendation must be documented by supporting information and may be challenged by the trainee or by the Authority; and

(E) Must attend at least one instructor update meeting provided by the Authority each year.

(c) The Authority shall maintain a list of qualified instructors.

Stat. Auth.: ORS 448.131

Stats. Implemented: ORS 431.110, 431.150, 448.131, 448.150, 448.268, 448.273, 448.278 & 448.279

333-061-0075
Sanitary Surveys of Watersheds

(1) In water systems utilizing surface water sources or groundwater sources under the direct influence of surface water that do not provide filtration treatment, the water supplier shall conduct sanitary surveys of the watershed as deemed necessary by the water system to meet the requirements of OAR 333-061-0032(2)(b)(B). The results of the watershed survey will be reviewed by the Authority during the annual on-site inspection required by OAR 333-061-0032(2)(b)(C). The Authority recommends that systems which do provide filtration treatment for surface water sources or groundwater sources under the direct influence of surface water also conduct annual sanitary surveys of the watershed.

(2) The survey shall include but not be limited to, an evaluation of the following man made and natural features in the watershed and their effect on water quality:

(a) Nature of and condition of dams, impoundments, intake facilities, diversion works, screens, disinfection equipment, perimeter fences, signs, gates;

(b) Nature of surface geology, character of soils, presence of slides, character of vegetation and forests, animal population, amounts of precipitation;

(c) Nature of human activities, extent of cultivated and grazing land, zoning restrictions, extent of human habitation, logging activities, method of sewage disposal, proximity of fecal contamination to intake, recreational activities and measures to control activities in the watershed;

(d) Nature of raw water, level of coliform organisms, vulnerability assessments of potential contaminants, algae, turbidity, color, mineral constituents, detention time in reservoir, time required for flow from sources of contamination to intake;

(e) Type and effectiveness of measures to control contamination, and algae, disinfection applications and residuals carried, monitoring practices, patrol of borders.

(3) A report on the findings of the survey shall be submitted annually to the Authority as required by OAR 333-061-0040(1).

(4) The Authority recommends using the guidelines in the US EPA Guidance Manual for Compliance with the Filtration and Disinfection Requirements for Public Water Systems Using Surface Water Sources to construct an effective watershed control management plan. A list of additional references recommended by the Authority is available upon request.

333-061-0076
Sanitary Surveys

(1) All sanitary surveys as defined by OAR 333-061-0020(167) and this rule shall be conducted by the Authority.

(2) Every water system must undergo a sanitary survey at least every five years at a frequency determined by the Authority. Water suppliers must provide the Authority, upon request, any existing information that will enable the Authority to conduct the sanitary survey.

(3) The sanitary survey report shall be completed by staff and sent to the water system following the site visit. The content of the sanitary survey report shall address, at a minimum, the following components of a water system: source of supply; treatment; distribution system; finished water storage; pumps, pump facilities and controls; monitoring, reporting and data verification; system management and operations; and operator certification compliance.

(4) The sanitary survey report must identify any significant deficiency prescribed in this section, or any violation of drinking water regulations, discovered in the on-site visit. For the purposes of sanitary surveys, significant deficiencies for all water systems are:

(a) Surface Water Treatment:

(A) Incorrect location for compliance turbidity monitoring;

(B) For systems serving more than 3,300 people, no auto-dial, call-out alarm or auto-plant shutoff for low chlorine residual;

(C) For conventional or direct filtration, no auto-dial, call-out alarm or auto-plant shutoff for high turbidity when no operator is on-site;

(D) For conventional filtration, settled water turbidity not measured daily;

(E) For conventional or direct filtration, turbidity profile not conducted on individual filters at least quarterly;

(F) For cartridge filtration, no pressure gauges before and after cartridge filter;

(G) For cartridge filtration, filters not changed according to manufacturer's recommended pressure differential; and

(H) For diatomaceous earth filtration, body feed not added with influent flow.

(b) Groundwater Well Construction:

(A) Sanitary seal and casing not watertight;

(B) Does not meet setbacks from hazards;

(C) Wellhead not protected from flooding;

(D) No raw water sample tap;

(E) No treated sample tap, if applicable; and

(F) If well vent exists, not screened.

(c) Groundwater Springbox Construction:

(A) Not constructed of impervious, durable material;

(B) No watertight access hatch/entry;

(C) No screened overflow;

(D) Does not meet setbacks from hazards;

(E) No raw water sample tap; and

(F) No treated sample tap, if applicable.

(d) Disinfection:

(A) No means to adequately determine flow rate on contact chamber effluent line;

(B) Failure to calculate CT values correctly; and

(C) No means to adequately determine disinfection contact time under peak flow and minimum storage conditions.

(e) Finished water storage:

(A) Hatch not locked;

(B) Roof and hatch not watertight;

(C) No flap-valve or equivalent over drain/overflow; and

(D) No screened vent.

(5) Sanitary survey fees. All water suppliers are subject to a fee payable to the Authority for sanitary surveys conducted according to this rule on or before the due date specified on the invoice sent to the water supplier.

(a) For community water systems, the sanitary survey fee is based upon either the number of connections or the population served.

(A) For community water systems with more than 250 service connections, the sanitary survey fee shall be based upon the number of connections served by the system.

(B) For community water systems with 250 service connections or less, but serving more than 1,000 people, the sanitary survey fee shall be based upon the population served by the system. For wholesale community water systems in this category, the sanitary survey fee will be assessed as a community water system without water treatment (WT) as specified in the table below.

(b) Transient non-community water systems identified as campgrounds with multiple handpumps will be considered one water system and assessed a single fee for the purposes of this rule.

(c) Late fees. A late fee will be assessed to any water system which fails to pay its sanitary survey fee within 10 days of the due date in the invoice sent to the water system. The late fee may be waived at the discretion of the Authority. Fees for sanitary surveys are listed in Table 44 below: [Table not included. See ED. NOTE.]

(6) Response required to address sanitary survey deficiencies:

(a) For water systems that use surface water sources or GWUDI sources, water suppliers must respond in writing to the Authority within 45 days of receiving the sanitary survey report.

(A) The response of the water system must include:

(i) The plan the water system will follow to resolve or correct the identified significant deficiencies;

(ii) The plan the water system will follow to resolve or correct any violations of drinking water regulations identified during the sanitary survey or at any other time; and

(iii) The schedule the water system will follow to execute the plan.

(B) The plans and schedules identified above in subparagraphs (6)(a)(A)(i) through (iii) of this rule must be approved by the Authority.

(b) For water systems that use only groundwater sources, water suppliers must consult with the Authority within 30 days of receiving written notice of a significant deficiency or a violation of a drinking water regulation identified during the sanitary survey. Within 120 days of receiving written notice of a significant deficiency or violation of a drinking water regulation, water suppliers must:

(A) Have corrected the significant deficiency or rule violation; or

(B) Be in compliance with an Authority approved corrective action plan.

(7) Public water systems that fail to respond to the Authority within the timeframe specified, are required to issue a tier 2 public notice as prescribed in OAR 333-061-0042(2)(b)(D).

(8) Public water systems must correct the deficiencies or violations identified in the sanitary survey according to the Authority-approved schedule identified in section (6) of this rule. Failure to do so constitutes a violation of these rules.

333-061-0077

Composite Correction Program & Comprehensive Performance Evaluations

(1) All Comprehensive Performance Evaluation Reports (CPEs) as defined by OAR 333-061-0020(36) and this rule shall be conducted by the Authority.

(2) Any public water system using surface water or groundwater under direct surface water influence which treats the water using conventional or direct filtration treatment is subject to the Composite Correction Program, including CPEs, as determined necessary or appropriate by the Authority.

(3) Any public water system using surface water or groundwater under direct surface water influence which treats the water using conventional or direct filtration treatment that has a measured filtered water turbidity level greater than 2.0 NTU from any individual filter in two consecutive measurements taken 15 minutes apart in each of two consecutive months as stated in OAR 333-061-0040(1)(d)(B) (ii)(IV) is required to have a CPE conducted on that public water system's water treatment facility.

(4) The CPE report shall be completed by staff and sent to the water system following the site visit. The content of the CPE report shall include, at a minimum, the following components: An assessment of the water treatment plant performance from current and historical water quality data, an evaluation of each major (treatment) unit process, an identification and prioritization of the water treatment plant performance limiting factors, and an assessment by the Authority if additional comprehensive technical assistance would be beneficial to the water system. The CPE results must be written into a report and submitted to the public water system by the Authority.

(5) The public water system receiving the CPE report must respond in writing to the Authority within 45 days (for systems serving at least 10,000 people) or 120 days (for systems serving less than 10,000 people) of receiving the report as required by OAR 333-061-0040(1)(k). The response of the public water system must include:

(a) The plan the public water system will follow to resolve or correct the identified performance limiting factors that are within the water system's (and its governing body) ability to control; and

(b) The schedule the public water system will follow to execute the plan.

(6) The public water system must take corrective action through the CCP according to the schedule identified in subsection (5)(b) of this rule to resolve the performance limiting factors identified. Failure by the water system to take corrective action to resolve the performance limiting factors constitutes a violation of these rules.

333-061-0078

Coliform Investigations

(1) A coliform investigation, as defined in OAR 333-061-0020(30), is an evaluation to identify the possible presence of sanitary defects, defects in distribution system coliform monitoring practices, and the likely reason that the coliform investigation was triggered at the public water system. Coliform investigations are separated into two levels as described in this section.

(a) A level 1 coliform investigation is conducted by the water supplier or a representative thereof. Minimum elements of the investigation include review and identification of atypical events that could affect distributed water quality or indicate that distributed water quality was impaired; changes in distribution system maintenance and operation that could affect distributed water quality (including water storage); source and treatment considerations that bear on distributed water quality, where appropriate (for example, whether a ground water system is disinfected); existing water quality monitoring data; and inadequacies in sample sites, sampling protocol, and sample processing.

(b) A level 2 coliform investigation is conducted by the Authority or a party approved by the Authority and is a more detailed and comprehensive examination of a water system (including the system's monitoring and operational practices) than a level 1 investigation. Minimum elements include those that are part of a level 1 investigation and additional review of available information, internal and external resources, and other relevant practices. Water suppliers must comply with any expedited actions or additional actions required by the Authority in the case of an exceedance of the MCL for E. coli.

(2) Coliform investigations must be conducted according to section (3) of this rule after a coliform investigation trigger identified in this section is exceeded at a water system.

(a) Level 1 coliform investigation triggers include, but are not limited to:

(A) Exceeding 5.0 percent total coliform-positive samples for the month at water systems where 40 or more samples per month are collected;

(B) Having two or more total coliform-positive samples in the same month at water systems where fewer than 40 samples per month are collected; or

(C) Failing to collect every required repeat sample after any single total coliform-positive sample.

(b) Level 2 coliform investigation triggers include, but are not limited to:

(A) An exceedance of the MCL for E. coli as specified in OAR 333-061-0030(4); or

(B) A second level 1 trigger as specified in subsection (2)(a) of this rule within a rolling 12-month period, unless the Authority has determined a likely cause for the total coliform-positive samples responsible for the first level 1 investigation trigger and established that the water supplier corrected the problem.

(c) The results of all routine and repeat samples collected according to OAR 333-061-0036(6)(b) through (g) not invalidated by the Authority must be used to determine whether a coliform investigation trigger as specified in this section has been exceeded.

(d) Special purpose samples, such as those collected to determine whether disinfection practices are sufficient following pipe placement, replacement, or repair, may not be used to determine whether a coliform investigation trigger has been exceeded.

(3) Water suppliers must ensure that coliform investigations are conducted in order to identify the possible presence of sanitary defects and defects in distribution system coliform monitoring practices.

(a) Water suppliers must ensure that investigators evaluate at least the minimum elements as specified in subsection (1)(a) or (1)(b) of this rule and must conduct the investigation consistent with any Authority directives that tailor specific investigation elements with respect to the size and type of the system and the size, type, and characteristics of the distribution system.

(b) Water suppliers must conduct level 1 coliform investigations consistent with Authority requirements if any of the investigation triggers specified in subsection (2)(a) of this rule are exceeded.

(A) The coliform investigation must be completed as soon as practical after exceeding the trigger, and must include a report summarizing the investigation.

(B) In the completed investigation report, water suppliers must describe sanitary defects detected, corrective actions completed, and a proposed timetable for any corrective actions not already completed. The investigation report may also note that no sanitary defects were identified.

(C) If the Authority reviews the completed coliform investigation report and determines that the investigation is not sufficient (including any proposed timetable for any corrective actions not already completed), the Authority will consult with the water supplier. If the Authority requires revisions after consultation, the water supplier must submit a revised investigation report to the Authority on an agreed-upon schedule not to exceed 30 days from the date of the consultation.

(c) Water suppliers must submit to and ensure a level 2 coliform investigation is conducted as soon as practical after a coliform investigation trigger specified in subsection (2)(b) of this rule is exceeded. Water suppliers must ensure a completed investigation report is submitted to the Authority as specified in OAR 333-061-0040(1)(l).

(A) Water suppliers must communicate with the Authority to ensure the investigation is completed within 30 days after learning that a coliform investigation trigger was exceeded.

(B) Completed investigation reports must describe sanitary defects detected, corrective actions completed, and a proposed timetable for any corrective actions not already completed. The investigation report may also note that no sanitary defects were identified.

(C) Water suppliers must comply with any expedited actions or additional actions required by the Authority in the case of an exceedance of the MCL for E. coli.

(D) If the Authority reviews a completed level 2 coliform investigation report and determines that the investigation is not sufficient (including any proposed timetable for any corrective actions not already completed), the Authority will consult with the water supplier. If the Authority requires revisions after consultation, the water supplier must ensure a revised investigation report is submitted to the Authority on an agreed-upon schedule not to exceed 30 days.

(d) Upon completion and submission of a level 1 or level 2 coliform investigation report, the Authority must determine if a likely cause for the level 1 trigger or level 2 trigger was identified and determine whether the water supplier corrected the problem, or agreed to a schedule acceptable to the Authority for correcting the problem.

(4) Water suppliers must correct sanitary defects discovered during level 1 or level 2 coliform investigations as soon as practical. For corrections not completed by the time an investigation report is submitted to the Authority, the water supplier must complete the corrective action(s) in compliance with a timetable approved by the Authority in consultation with the water supplier. The water supplier must notify the Authority when each scheduled corrective action is completed. At any time during the investigation or corrective action phase, either the water supplier or the Authority may request a consultation with the other party to determine the appropriate actions to be taken. The water supplier may consult with the Authority regarding all relevant information that may impact its ability to comply with a requirement of this rule, including the method of accomplishment, an appropriate timeframe, and other relevant information.

(5) Failing to conduct the required coliform investigation after a trigger is exceeded or failure to complete corrective actions according to an Authority approved timetable is a violation of this rule.

333-061-0080
Role of Counties

(1) Counties may develop water service plans to encourage small water systems to consolidate where possible.

(2) Prior to issuing building permits, the issuing agency must certify that the Authority has approved construction and installation plans for water system developments proposed after August 21, 1981. They must additionally certify that the water system development plan does not violate the water service plans for the city or county where the building permit will be issued.

(3) Counties or boundary commissions are authorized to approve the formation, dissolution, consolidation and expansion of water systems not owned by cities. In doing so, counties or boundary commissions should consider whether water service is extended in a logical fashion and whether water systems have a financial base sufficient for operation and maintenance.

(4) The Authority may delegate upon request any of its duties as set forth in these rules to counties. In doing so, the Authority shall require assurances that the county shall:

(a) Employ sufficient qualified personnel to perform the duties involved;

(b) Perform the duties involved continuously for the duration of the delegation;

(c) Report periodically on the nature and status of the activities being performed.

333-061-0085
Supplemental Fluoridation

(1) When fluoride compounds are added at public water systems for the prevention of dental caries, it shall be done in accordance with the following:

(a) The chemical feed apparatus shall be of a type specifically designed for metering fluoride compounds in proportion to the flow of water being treated. The apparatus shall possess an accuracy tolerance of no more than plus or minus five percent and shall be designed and installed in a manner such that the injection of fluoride compounds is terminated when the water being treated ceases to flow;

(b) The specifications for the fluoride compounds shall conform with the most current AWWA standards as follows:

(A) Sodium fluoride — AWWA B701.

(B) Sodium fluorosilicate — AWWA B702.

(C) Fluorosilicic acid — AWWA B703.

(c) Respirators, replacement units and other safety equipment shall be stored in approved, dust-proof containers or cabinets when not in use.

(2) Prior to the application of fluoride compounds at public water systems, the water supplier shall submit to the Authority and receive approval for:

(a) Plans and specifications for the equipment with information on the testing instruments and protective devices for the operating personnel;

(b) Specifications of the fluoride compound to be used;

(c) Qualifications and training record of the person in responsible charge of the fluoridation operation;

(d) Current chemical analysis of the unfluoridated water.

(3) During operation of the fluoridation equipment, the operator shall:

(a) Not exceed 2.0 mg/l of fluoride in the finished water;

(b) Maintain all equipment in good working order;

(c) Make determinations of the fluoride content by approved methods on:

(A) The unfluoridated water as required by the Authority;

(B) The fluoridated water daily.

(d) Record daily the amount of fluoride added to the water, the quantity of water treated and the fluoride levels of the treated water. These records shall be submitted to the Authority monthly;

(e) Submit a split sample of the fluoridated water to the Authority for analysis as the Authority may require;

(f) Maintain and use safety equipment as required in this section.

Stat. Auth.: ORS 448.131

333-061-0087
Product Acceptability Criteria

(1) Any pipe, solder, or flux which is used in the installation or repair of:

(a) Any public water system, or

(b) Any plumbing in a residential or nonresidential facility providing water for human consumption shall be lead free. This subsection shall not apply to leaded joints necessary for the repair of cast iron pipes.

(2) Labeling of Solders. No solder containing more than 0.20 percent lead shall be sold in Oregon after July 1, 1985, unless said solder contains a warning label, prominently displayed, which states, "Contains Lead. Oregon Law prohibits the use of this solder in making up joints and fittings in any private or public potable water supply system or any individual water user's line". Solder to be used in making up joints and fittings in any private or public potable water supply system or any individual water user's line shall meet ASTM Specification B32-76.

(3) Plumbing piping shall not be used for electrical grounding in any new construction.

(4) Use of lead pipe prohibited. No lead pipe shall be used in any potable water system. Persons who own or operate a public water system shall submit a compliance schedule, acceptable to the Authority, for the identification and removal of all lead service pipes or they shall certify to the Authority that no lead service piping exists in the system. The compliance schedule or the certification shall be submitted for approval by July 1, 1985.

(5) Materials and products which come into contact with drinking water supplied by public water systems or which come into contact with drinking water treatment chemicals used by public water systems shall meet the requirements of NSF Standard 61 Drinking Water System Components — Health Effects (Revised October 1988) or equivalent. These materials and products include but are not limited to process media, protective materials, joining and sealing materials, pipes and related products, and mechanical devices used in treatment, transmission, and distribution systems.

(6) Products added to public water systems for treatment, purposes including but not limited to disinfection, oxidation, filtration, scale control, corrosion control, pH adjustment, softening, precipitation, sequestering, fluoridation, coagulation, flocculation, and water well treatment shall meet the requirements of NSF Standard 60 - Drinking Water Treatment Chemicals — Health Effects (Revised October 1988) or equivalent.

(7) Point-of-use reverse osmosis drinking water treatment systems and materials and components used in these systems designed to be used for the reduction of specific contaminants from public water supplies shall meet the requirements of NSF Standard 58 — Reverse Osmosis Drinking Water Treatment Systems — or equivalent.

(8) Point-of-use and point-of-entry drinking water treatment units, other than reverse osmosis units, designed to be used for the reduction of specific contaminants from public water supplies shall meet the requirements of NSF Standards 53 — Drinking Water Treatment Units -Health Effects — or equivalent.

Penalties

(1) Violation of these rules shall be punishable as set forth in ORS 448.990 which stipulates that violation of any section of these rules is a Class A misdemeanor.

(2) Pursuant to ORS 448.280, 448.285 and 448.290, any person who violates these rules shall be subject to a civil penalty. Each and every violation is a separate and distinct offense, and each day's violation is a separate and distinct violation.

(3) The civil penalty for the following violations shall not exceed $1,000 per day for each violation:

(a) Failure to obtain approval of plans prior to the construction of water system facilities;

(b) Failure to construct water system facilities in compliance with approved plans;

(c) Failure to take immediate action to correct maximum contaminant level violations;

(d) Failure to comply with sampling and analytical requirements;

(e) Failure to comply with reporting and public notification requirements;

(f) Failure to meet the conditions of a compliance schedule developed under a variance or permit;

(g) Failure to comply with cross connection control requirements;

(h) Failure to comply with the operation and maintenance requirements;

(i) Failure to comply with an order issued by the Authority; and

(j) Failure to utilize an operator in direct responsible charge of a water system.

(4) Civil penalties shall be based on the population served by public water systems and shall be in accordance with Table 45 below: [Table not included. See ED. NOTE.]

[ED. NOTE: Tables referenced are available from the agency.]

Adverse Health Effects Language

When providing the information on potential adverse health effects required by these rules in notices of violations of maximum contaminant levels, maximum residual disinfectant levels, treatment technique requirements, or notices of the granting or the continued existence of variances or permits, or notices of failure to comply with a variance or permit schedule, the owner or operator of a public water system shall include the language specified below for each contaminant.

(1) Adverse Health Effects for Organic Chemicals:

(a) Volatile Organic Chemicals (VOCs):

(A) Benzene. Some people who drink water containing benzene in excess of the MCL over many years could experience anemia or a decrease in blood platelets, and may have an increased risk of getting cancer.

(B) Carbon tetrachloride. Some people who drink water containing carbon tetrachloride in excess of the MCL over many years could experience problems with their liver and may have an increased risk of getting cancer.

(C) Chlorobenzene. Some people who drink water containing chlorobenzene in excess of the MCL over many years could experience problems with their liver or kidneys.

(D) o-Dichlorobenzene. Some people who drink water containing o-dichlorobenzene well in excess of the MCL over many years could experience problems with their liver, kidneys, or circulatory systems.

(E) p-Dichlorobenzene. Some people who drink water containing p-dichlorobenzene in excess of the MCL over many years could experience anemia, damage to their liver, kidneys, or spleen, or changes in their blood.

(F) 1,2-Dichloroethane. Some people who drink water containing 1,2-dichloroethane in excess of the MCL over many years may have an increased risk of getting cancer.

(G) 1,1-Dichloroethylene. Some people who drink water containing 1,1-dichloroethylene in excess of the MCL over many years could experience problems with their liver.

(H) cis-1,2-Dichloroethylene. Some people who drink water containing cis-1,2-dichloroethylene in excess of the MCL over many years could experience problems with their liver.

(I) trans-1,2-Dichloroethylene. Some people who drink water containing trans-1,2- dichloroethylene well in excess of the MCL over many years could experience problems with their liver.

(J) Dichloromethane(methylene chloride). Some people who drink water containing dichloromethane in excess of the MCL over many years could have liver problems and may have an increased risk of getting cancer.

(K) 1,2-Dichloropropane. Some people who drink water containing 1,2-dichloropropane in excess of the MCL over many years may have an increased risk of getting cancer.

(L) Ethylbenzene. Some people who drink water containing ethylbenzene well in excess of the MCL over many years could experience problems with their liver or kidneys.

(M) Styrene. Some people who drink water containing styrene well in excess of the MCL over many years could have problems with their liver, kidneys, or circulatory system.

(N) Tetrachloroethylene(PCE). Some people who drink water containing tetrachloroethylene in excess of the MCL over many years could have problems with their liver, and may have an increased risk of getting cancer.

(O) 1,2,4-trichlorobenzene. Some people who drink water containing 1,2,4-trichlorobenzene well in excess of the MCL over many years could experience changes in their adrenal glands.

(P) 1,1,1-Trichloroethane. Some people who drink water containing 1,1,1- trichloroethane in excess of the MCL over many years could experience problems with their liver, nervous system, or circulatory system.

(Q) 1,1,2-Trichloroethane. Some people who drink water containing 1,1,2-trichloroethane well in excess of the MCL over many years could have problems with their liver, kidneys, or immune systems.

(R) Trichloroethylene. Some people who drink water containing trichloroethylene in excess of the MCL over many years could experience problems with their liver and may have an increased risk of getting cancer.

(S) Toluene. Some people who drink water containing toluene well in excess of the MCL over many years could have problems with their nervous system, kidneys, or liver.

(T) Vinyl chloride. Some people who drink water containing vinyl chloride in excess of the MCL over many years may have an increased risk of getting cancer.

(U) Xylenes. Some people who drink water containing xylenes in excess of the MCL over many years could experience damage to their nervous system.

(b) Synthetic Organic Chemicals (SOCs):

(A) 2,4-D. Some people who drink water containing the weed killer 2,4-D well in excess of the MCL over many years could experience problems with their kidneys, liver, or adrenal glands.

(B) 2,4,5-TP(Silvex). Some people who drink water containing 2,4,5-TP in excess of the MCL over many years could experience liver problems.

(C) Alachlor. Some people who drink water containing alachlor in excess of the MCL over many years could have problems with their eyes, liver, kidneys, or spleen, or experience anemia, and may have an increased risk of getting cancer.

(D) Atrazine. Some people who drink water containing atrazine well in excess of the MCL over many years could experience problems with their cardiovascular system or reproductive difficulties.

(E) Benzo(a)pyrene. Some people who drink water containing benzo(a)pyrene in excess of the MCL over many years may experience reproductive difficulties and may have an increased risk of getting cancer.

(F) Carbofuran. Some people who drink water containing carbofuran in excess of the MCL over many years could experience problems with their blood, or nervous or reproductive systems.

(G) Chlordane. Some people who drink water containing chlordane in excess of the MCL over many years could experience problems with their liver or nervous system, and may have an increased risk of getting cancer.

(H) Dalapon. Some people who drink water containing dalapon well in excess of the MCL over many years could experience minor kidney changes.

(I) Di(2-ethylhexyl)adipate. Some people who drink water containing di(2-ethylhexyl)adipate well in excess of the MCL over many years could experience toxic effects such as weight loss, liver enlargement or possible reproductive difficulties.

(J) Di(2-ethylhexyl)phthalate. Some people who drink water containing di(2-ethylhexyl)phthalate well in excess of the MCL over many years may have problems with their liver or experience reproductive difficulties, and may have an increased risk of getting cancer.

(K) Dibromochloropropane (DBCP). Some people who drink water containing DBCP in excess of the MCL over many years could experience reproductive difficulties and may have an increased risk of getting cancer.

(L) Dinoseb. Some people who drink water containing dinoseb well in excess of the MCL over many years could experience reproductive difficulties.

(M) Diquat. Some people who drink water containing diquat in excess of the MCL over many years could get cataracts.

(N) Dioxin (2,3,7,8-TCDD). Some people who drink water containing dioxin in excess of the MCL over many years could experience reproductive difficulties and may have an increased risk of getting cancer.

(O) Endothall. Some people who drink water containing endothall in excess of the MCL over many years could experience problems with their stomach or intestines.

(P) Endrin. Some people who drink water containing endrin in excess of the MCL over many years could experience liver problems.

(Q) Ethylene dibromide (EDB). Some people who drink water containing ethylene dibromide in excess of the MCL over many years could experience problems with their liver, stomach, reproductive system, or kidneys, and may have an increased risk of getting cancer.

(R) Glyphosate. Some people who drink water containing glyphosate in excess of the MCL over many years could experience problems with their kidneys or reproductive difficulties.

(S) Heptachlor. Some people who drink water containing heptachlor in excess of the MCL over many years could experience liver damage and may have an increased risk of getting cancer.

(T) Heptachlor epoxide. Some people who drink water containing heptachlor epoxide in excess of the MCL over many years could experience liver damage and may have an increased risk of getting cancer.

(U) Hexachlorobenzene. Some people who drink water containing hexachlorobenzene in excess of the MCL over many years could experience problems with their liver or kidneys or adverse reproductive effects, and may have an increased risk of getting cancer.

(V) Hexachlorocyclopentadiene. Some people who drink water containing hexachlorocyclopentadiene well in excess of the MCL over many years could experience problems with their kidneys or stomach.

(W) Lindane. Some people who drink water containing lindane in excess of the MCL over many years could experience problems with their kidneys or liver.

(X) Methoxychlor. Some people who drink water containing methoxychlor in excess of the MCL over many years could experience reproductive difficulties.

(Y) Oxamyl. Some people who drink water containing oxamyl in excess of the MCL over many years could experience slight nervous system effects.

(Z) Polychlorinated biphenyls (PCBs). Some people who drink water containing polychlorinated biphenyls in excess of the MCL over many years could experience changes in their skin, problems with their thymus gland, immune deficiencies or reproductive or nervous system difficulties, and may have an increased risk of getting cancer.

(AA) Pentachlorophenol. Some people who drink water containing pentachlorophenol in excess of the MCL over many years could experience problems with their liver or kidneys, and may have an increased risk of getting cancer.

(BB) Picloram. Some people who drink water containing picloram in excess of the MCL over many years could experience problems with their liver.

(CC) Simazine. Some people who drink water containing simazine in excess of the MCL over many years could experience problems with their blood.

(DD) Toxaphene. Some people who drink water containing toxaphene in excess of the MCL over many years could have problems with their kidneys, liver, or thyroid, and may have an increased risk of getting cancer.

(2) Special Notice for Lead and Copper.

(a) Mandatory health effects information. When providing the information in public notices on the potential adverse health effects of lead in drinking water, the owner or operator of the water system shall include the following specific language in the notice:

"Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure."

(b) Mandatory health effects information. When providing information on the potential adverse health effects of copper in drinking water, the owner or operator of the water system shall include the following specific language in the notice:

"Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor."

(3) Inorganics — public notice language.

(a) Antimony. Some people who drink water containing antimony well in excess of the MCL over many years could experience increases in blood cholesterol and decreases in blood sugar.

(b) Arsenic. Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system, and may have an increased risk of getting cancer.

(c) Asbestos. Some people who drink water containing asbestos in excess of the MCL over many years may have an increased risk of developing benign intestinal polyps.

(d) Barium. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.

(e) Beryllium. Some people who drink water containing beryllium well in excess of the MCL over many years could develop intestinal lesions.

(f) Cadmium. Some people who drink water containing cadmium in excess of the MCL over many years could experience kidney damage.

(g) Chromium. Some people who use water containing chromium well in excess of the MCL over many years could experience allergic dermatitis.

(h) Cyanide. Some people who drink water containing cyanide well in excess of the MCL over many years could experience nerve damage or problems with their thyroid.

(i) Fluoride. Some people who drink water containing fluoride in excess of the MCL (4.0 mg/l) over many years could get bone disease, including pain and tenderness of the bones. Fluoride in

drinking water at half the MCL (2.0mg/l) or more may cause mottling of children's teeth, usually in children less than nine years old. Mottling, also known as dental fluorosis, may include brown staining or pitting of the teeth, and occurs only in developing teeth before they erupt from the gums.

(j) Mercury. Some people who drink water containing inorganic mercury well in excess of the MCL over many years could experience kidney damage.

(k) Nitrate (as nitrogen). Infants below the age of 6 months who drink water containing nitrate in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue baby syndrome.

(l) Nitrite. Infants below the age of 6 months who drink water containing nitrite in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue baby syndrome.

(m) Total Nitrate and Nitrite. Infants below the age of 6 months who drink water containing nitrate and nitrite in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue baby syndrome.

(n) Selenium. Selenium is an essential nutrient. However, some people who drink water containing selenium in excess of the MCL over many years could experience hair or fingernail losses, numbness in fingers or toes, or problems with their circulation.

(o) Thallium. Some people who drink water containing thallium in excess of the MCL over many years could experience hair loss, changes in their blood, or problems with their kidneys, intestines, or liver.

(4) Microbiological contaminants

(a) When providing information in public notices required under OAR 333-061-0042(2)(b) for exceeding the MCL for total coliform bacteria as specified in 40 CFR 141.63, the water supplier must include the following specific language in the notice:

"Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems."

(b) When providing information in public notices for an exceedance of the MCL for E. coli bacteria as prescribed by OAR 333-061-0030(4), the language within quotation marks must be included, exactly as written:

"E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely compromised immune systems."

(c) When providing information in public notices for failing to complete a coliform investigation or corrective action as required by OAR 333-061-0078, the language specified in paragraphs (4)(c)(A) or (4)(c)(B) must be included, exactly as written except for the language within brackets. The language in paragraph (4)(c)(A) must be used when total coliform was detected at a water system and the language in (4)(c)(B) must be used when E. coli was detected regardless of whether the MCL for E. coli was exceeded.

(A) Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct investigations to identify problems and to correct any problems that are found.

[THE WATER SUPPLIER MUST USE THE FOLLOWING APPLICABLE SENTENCES.]

We failed to conduct the required coliform investigation.

We failed to correct all identified sanitary defects that were found during the coliform investigation(s).

(B) E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Human pathogens in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a greater health risk for infants, young children, the elderly, and people with severely compromised immune systems. We violated the standard for E. coli, indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct a detailed investigation to identify problems and to correct any problems that are found.

[THE WATER SUPPLIER MUST USE THE FOLLOWING APPLICABLE SENTENCES.]

We failed to conduct the required coliform investigation.

We failed to correct all identified sanitary defects that were found during the coliform investigation that we conducted.

(d) When providing information in public notices for failing to complete an Authority approved start-up procedure at a seasonal water system, the water supplier must include specific information about the situation as prescribed by OAR 333-061-0042(4)(a). Additionally, if monitoring was required as part of the Authority approved start-up procedure the following language in quotation marks must be included, exactly as written except for the language in brackets where water system specific information must be included: "We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During [compliance period], we did not complete [any or all] required monitoring or testing for coliform bacteria, and therefore cannot be sure of the quality of your drinking water during that time."

(e) Turbidity. Turbidity has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include, bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea and associated headaches.

(5) Treatment Techniques -- Public Notice Language.

(a) Acrylamide. Some people who drink water containing high levels of acrylamide over a long period of time could have problems with their nervous system or blood, and may have an increased risk of getting cancer.

(b) Epichlorohydrin. Some people who drink water containing high levels of epichlorohydrin over a long period of time could experience stomach problems, and may have an increased risk of getting cancer.

(c) Surface Water Treatment Rule (Giardia, viruses, heterotrophic plate count bacteria, Legionella), Interim Enhanced Surface Water Treatment Rule (Giardia, viruses, heterotrophic plate count bacteria, Legionella and Cryptosporidium), Long Term 1 Enhanced Surface Water Treatment Rule (Giardia, viruses, heterotrophic plate count bacteria, Legionella and Cryptosporidium) and Filter Backwash Recycling Rule (Cryptosporidium). Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

(d) Groundwater. Inadequately treated or inadequately protected water may contain disease-causing organisms. These organisms can cause symptoms such as diarrhea, nausea, cramps, and associated headaches.

(e) Use of an emergency groundwater source that has been identified as potentially groundwater under direct influence of surface water, but has not been fully evaluated. This type of source may not be treated sufficiently to inactivate pathogens such as Giardia lamblia and Cryptosporidium.

(6) Disinfectant and Disinfection Byproducts -- Special Adverse Health Effects Language.

(a) Total Trihalomethanes (TTHMs). Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

(b) Haloacetic Acids (HAA). Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

(c) Chlorine. Some people who use water containing chlorine well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chlo-

rine well in excess of the MRDL could experience stomach discomfort.

(d) Chloramines. Some people who use water containing chloramines well in excess of the MRDL could experience irritating effects to their eyes and nose. Some people who drink water containing chloramines well in excess of the MRDL could experience stomach discomfort or anemia.

(e) Chlorine dioxide. (where any 2 consecutive daily samples taken at the entrance to the distribution system are above the MRDL). Some infants and young children who drink water containing chlorine dioxide in excess of the MRDL could experience nervous system effects. Similar effects may occur in fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL. Some people may experience anemia.

NOTE: In addition to the language in this introductory text of subsection (6)(e) of this rule, water systems must include either the language in paragraphs (6)(e)(A) or (6)(e)(B) of this rule. Water systems with a violation at the treatment plant, but not in the distribution system, are required to use the language in paragraph (6)(e)(A) of this rule and treat the violation as a non-acute violation. Water systems with a violation in the distribution system are required to use the language in paragraph (6)(e)(B) of this rule and treat the violation as an acute violation.

(A) The chlorine dioxide violations reported today are the result of exceedances at the treatment facility only, and do not include violations within the distribution system serving users of this water supply. Continued compliance with chlorine dioxide levels within the distribution system minimizes the potential risk of these violations to present consumers.

(B) The chlorine dioxide violations reported today include exceedances of the EPA standard within the distribution system serving water users. Violations of the chlorine dioxide standard within the distribution system may harm human health based on short-term exposures. Certain groups, including fetuses, infants, and young children, may be especially susceptible to nervous system effects of excessive exposure to chlorine dioxide-treated water. The purpose of this notice is to advise that such persons should consider reducing their risk of adverse effects from these chlorine dioxide violations by seeking alternate sources of water for human consumption until such exceedances are rectified. Local and State health authorities are the best sources for information concerning alternate drinking water.

(f) Bromate. Some people who drink water containing bromate in excess of the MCL over many years may have an increased risk of getting cancer.

(g) Chlorite. Some infants and young children who drink water containing chlorite in excess of the MCL could experience nervous system effects. Similar effects may occur in fetuses of pregnant women who drink water containing chlorite in excess of the MCL. Some people may experience anemia.

(h) Total Organic Carbon (TOC). Total Organic Carbon (TOC) has no health effects. However, TOC provides a medium for the formation of disinfection byproducts (DBPs). These byproducts include trihalomethanes and haloacetic acids. Drinking water containing these byproducts in excess of the MCL may lead to adverse health effects, liver or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer.

(7) Adverse health effects for radionuclides:

(a) Beta/photon emitters. Certain minerals are radioactive and may emit forms of radiation known as photons and beta radiation. Some people who drink water containing beta and photon emitters in excess of the MCL over many years may have an increased risk of getting cancer.

(b) Alpha emitters. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

(c) Combined Radium-226/228. Some people who drink water containing radium-226 or -228 in excess of the MCL over many years may have an increased risk of getting cancer.

(d) Uranium. Some people who drink water containing uranium in excess of the MCL over many years may have an increased risk of getting cancer and kidney toxicity.

Public Water Systems/Certification

333-061-0210
Scope

OAR 333-061-0210 through 333-061-0272 apply to community and non-transient non-community public water systems, water suppliers responsible for these types of water systems, and the operators of water treatment plants and distribution systems at community and non-transient non-community public water systems.

Stat. Auth.: ORS 448.131
Stats. Implemented: ORS 448.450, 448.455, 448.460, 448.465 & 448.994

333-061-0220
Classification of Water Treatment Plants and Water Distribution Systems

Water treatment plants and distribution systems at community and non-transient non-community public water systems are classified based on the size and complexity of the water system facility. Classification of a water system or water system facility determines the level of certification required for operators in direct responsible charge of a water system or water system facility as prescribed by OAR 333-061-0225.

(1) Small water system classification applies when a water system serves 150 service connections or less and:

(a) Uses only groundwater as its source; or

(b) Purchases finished water from another public water system.

(2) Water distribution classification applies when a water system is not classified as small in accordance with section (1) of this rule, and is based on the population served by the water system as follows:

Classification: — Population Served:
Water Distribution 1 — 1 to 1,500.
Water Distribution 2 — 1,501 to 15,000.
Water Distribution 3 — 15,001 to 50,000.
Water Distribution 4 — 50,001 or more

(3) Water treatment classification applies to water treatment plants when:

(a) A water system is not classified as small in accordance with section (1) of this rule; and

(b) Treatment is provided for contaminants identified in OAR 333-061-0030(1) through (5) and (7) by that water treatment plant.

(c) Water treatment classification is based on a point system that reflects the complexity of water treatment present. Points are assigned as follows:

Item — Points.
Treatment system size: (population served or flow whichever is greater).
Population served — 1/10,000 (max 30).
Average daily flow — 1/1 mgd (max 30).
Treatment system water source:
Groundwater: — 3.
Surface Water or Groundwater Under the Influence of Surface Water — 5.
Chemical Treatment/Addition Process:
Fluoridation — 5.
Disinfection:
Ultraviolet (UV) — 2.
UV with Chlorine Residual — 5.
Ammonia/Chloramination — 3.
Chlorine — 5.
Mixed Oxidants — 7.
Ozonation (on-site generation) — 10.
Residual Maintenance — 0.
pH adjustment:
Slaked-Quicklime (Calcium Oxide) — 5.
Hydrated Lime (Calcium Hydroxide) — 4.
All others — 1.
(hydrochloric acid, sodium hydroxide, sulfuric acid, sodium carbonate).
Coagulation & Flocculation processes:
Chemical addition — 1–5.
(1 point for each type of chemical coagulant or polymer added, maximum 5 points).
Rapid mix units:
Mechanical mixers — 3.
Injection mixers — 2.
In-line blender mixers — 2.
Flocculation units:
Hydraulic flocculators — 2.
Mechanical flocculators — 3.
Clarification and Sedimentation Processes:
Adsorption Clarifier — 10.
Horizontal-flow (rectangular basins) — 5.
Horizontal-flow (round basins) — 7.
Up-flow solid contact sedimentation — 15.
Inclined-plate sedimentation — 10.
Tube sedimentation — 10.
Dissolved air flotation — 10.
Filtration Processes:
Single/mono media filtration — 3.
Dual or mixed media filtration — 5.
Membrane Filtration/Microscreens — 5.
Direct — 5.
Diatomaceous earth — 12.
Slow sand filtration — 5.
Cartridge/bag filters — 5.
Pressure or greensand filtration — 10.
Stability or Corrosion Control:
Slaked-Quicklime (calcium oxide) — 10.
Hydrated Lime (calcium hydroxide) — 8.
Caustic soda (sodium hydroxide) — 6.
Orthophosphate — 5.
Soda ash (sodium carbonate) — 4.
Aeration: Packed tower, Diffusers — 3.
Calcite — 2.
Others: sodium bicarbonate, silicates — 4.
Other Treatment Processes:
Aeration — 3.
Packed tower aeration — 5.
Ion exchange/softening — 5.
Lime-soda ash softening — 20.
Copper sulfate treatment — 5.
Powdered activated carbon — 5.
Potassium permanganate — 5.
Special Processes (reverse osmosis, activated alumina, other) — 15.
Sequestering (polyphosphates) — 3.
Residuals Disposal:
Discharge to lagoons — 5.
Discharge to lagoons and then raw water source — 8.
Discharge to raw water — 10.
Disposal to sanitary sewer — 3.
Mechanical dewatering — 5.
On-site disposal — 5.
Land application — 5.
Solids composting — 5.
Facility characteristics Instrumentation:
The use of SCADA or similar instrumentation systems to provide data with no process control — 1.
The use of SCADA or similar instrumentation systems to provide data with partial process control — 3.
The use of SCADA or similar instrumentation systems to provide data with complete process control — 5
Clear well size less than average day design flow — 5.
Classification of Water Treatment Plants.
Classification — Points:
Water Treatment 1 — 1 to 30.
Water Treatment 2 — 31 to 55.
Water Treatment 3 — 56 to 75.
Water Treatment 4 — 76 or more.

(4) Filtration endorsement is an additional classification that applies when a water treatment plant is classified as Water Treatment 2 and uses conventional or direct filtration treatment to treat surface water or groundwater under the influence of surface water. Filtration endorsement certification, as prescribed by OAR 333-061-0235, is required for operators designated in direct responsible charge of a water treatment plant receiving the filtration endorsement classification, except for those operators already certified at Water Treatment Level 3 or higher.

333-061-0225
General Requirements Applying to Water Suppliers and Water Systems

(1) Water suppliers responsible for community and non-transient non-community water systems must at all times employ, contract with, or otherwise utilize an operator to be in direct responsible charge of every distribution system and water treatment plant. An operator designated in direct responsible charge of a distribution system or water treatment plant must be available during those periods of time when decisions relating to treatment processes, water quality, and water quantity that may affect public health are made.

(a) The operator(s) described in this section must be certified as prescribed by OAR 333-061-0228 or 333-061-0235 through 0265, at a level equal to or greater than the classification of the distribution system or water treatment plant as prescribed by 333-061-0220, for which they are responsible.

(b) A water supplier subject to this rule must report to the Authority, the name(s) of the operator(s) that has been designated to be in direct responsible charge of the distribution system and water treatment plant as applicable, and must notify the Authority within 30 days of any change of operator.

(2) A water supplier may employ, contract with, or utilize other operators in addition to those required by section (1) of this rule. For operators certified at less than the Authority-required level(s) for distribution or treatment, the water supplier must establish a written protocol for each of the other operators that:

(a) Describes the operational decisions the operator is allowed to make;

(b) Requires the operator to notify the operator in direct responsible charge when they make decisions related to process control, water quality or water quantity that may affect public health;

(c) Describes the specific conditions under which the operator must consult with the operator in direct responsible charge, and when and how consultation is to be made;

(d) Takes into account the certification level of the operator; their knowledge, skills, and abilities, and the range of expected operating conditions of the water system; and

(e) Is signed and dated by the operator in direct responsible charge and the operator to which the protocol applies, and is available for inspection by the Authority.

333-061-0228
Certification Requirements For Small Water System Operators

(1) In order to apply for certification as the operator of a water system classified as small as prescribed by OAR 333-061-0220(1), individuals must:

(a) Have graduated from high school or completed an approved GED program; and

(A) Complete an Authority approved training for small water system operations and water treatment processes; or

(B) Pass an Authority approved written examination relating to small water system operations and water treatment; and

(b) Submit a certificate demonstrating the completion of the required training or examination specified in paragraphs (1)(a)(A) or (B) of this rule.

(2) Certification at the small water system level expires on July 31 three years after the training or examination as specified in paragraphs (1)(a)(A) or (B) was completed.

(3) Individuals certified as prescribed by OAR 333-061-0235 through 333-061-0265 at levels 1 through 4 for water distribution or water treatment are qualified to be designated in direct responsible charge of a water system classified as small as prescribed by 333-061-0220(1).

(4) Small water system certification as prescribed by this rule is exempt from fees.

333-061-0230
Contracting For Services

(1) Water suppliers responsible for community and non-transient non-community water systems may establish contracts with an individual certified operator, another water supplier, or an organization with certified operators available for contract to obtain operational services at a public water system.

(2) Operators contracted to be in direct responsible charge of a water system, distribution system or a water treatment plant, as prescribed by OAR 333-061-0225 must be certified at or greater than the level of the classification of the water system or facility for which they will be responsible.

(3) Written contracts for operators designated in direct responsible charge of a water system must:

(a) Require the operator to be available on call 24 hours every day and able to respond on-site, to the water system, upon request; and

(b) Specify that the operator will take corrective action when the results of analyses or measurements indicate maximum contaminant levels have been exceeded or minimum treatment levels are not maintained.

(4) Water suppliers must submit to the Authority, a copy of any contract established for certified operators serving at a water system for which the water supplier is responsible.

(a) Contracts must be signed by the operator and the water supplier, or an authorized representative of the water supplier, before the operator may provide any services to the water supplier.

(b) Contracts must be submitted to the Authority within 30 days of the contract being signed by all parties.

(5) Contracts are only valid for individuals that possess current certification.

333-061-0232
General Requirements Applying to Water System Operators

Operators serving at water systems and water system facilities as specified in OAR 333-061-0210 are responsible for ensuring the safe operation of the water system facilities for which they are responsible, and the production of safe drinking water at that water system. All operators serving at water treatment plants and distribution systems must:

(1) Comply with any Authority order or investigation;

(2) Ensure every application, record, or other document filed with or reported to the Authority by the operator is true and accurate; and

(3) Immediately notify the Authority when a violation of these rules is observed that may result in a public health hazard.

Stat. Auth.: ORS 448.131
Stats. Implemented: ORS 448.450, 448.455 & 448.994
Hist.: PH 14-2014, f. & cert. ef. 5-8-14

333-061-0235
Operator Certification Requirements, Levels 1–4

Operator certification, as specified in this rule, applies to each of the levels of water system facility classification specified in OAR 333-061-0220(2) through (4), and does not apply to small water system classification as specified in OAR 333-061-0220(1).

(1) In order to receive certification as specified in this rule, applicants must:

(a) Provide proof of, including the date of graduation or completion, a high school diploma, GED, associate's degree, bachelor's degree, master's degree, or PhD; and

(b) Successfully complete an examination for the level and type of certification sought by the applicant.

(2) Minimum qualifications for water treatment (WT) or water distribution (WD) operator certification are identified in Table 46. Experience or a combination of experience and education is required depending on the certification and level sought. [Table not included. See ED. NOTE.]

(a) Operating experience must have been gained through direct, "hands-on" operation of water system facilities and includes, but is not limited to, decisions related to water quality or quantity that may affect public health. Knowledge gained from the performance of duties as an official, inspector, manager, engineer, or director of public works, and that does not include the actual operation or supervision of water system facilities, does not qualify an individual for certification as prescribed by these rules.

(A) For water distribution certification, experience in one of the following fields may be accepted, not to exceed one-half of the total experience required: wastewater collection; water treatment; cross connection control; and industrial or commercial process water treatment.

(B) For water treatment certification, experience in one of the following fields may be accepted, not to exceed one-half of the total experience required: wastewater treatment; wastewater treatment laboratory; water distribution; and industrial or commercial process water treatment.

(C) One year of experience is equivalent to 12 months of full-time employment with one hundred percent of the individual's time dedicated to activities directly related to the certification for which they are applying.

(D) Operating experience earned at a water treatment plant or distribution system is considered qualifying experience for certification up to one classification level higher than that of the water system facility where the experience was earned.

(b) The Authority may, at its discretion, permit the substitution of post high school education for experience. Acceptable fields of study include, but are not limited to: allied sciences, chemistry, engineering, industrial or commercial water processing, wastewater collection, wastewater treatment plant operations, wastewater laboratory analysis, water distribution, and water treatment plant operations.

(A) Substituted education may not exceed one-half of the experience required for the certification and level sought.

(B) Any degree or accumulation of college credit hours must be from an educational institution accredited through an agency recognized by the U.S. Department of Education to be acceptable.

(C) The following are considered equivalent to 12 months of post high school education:

(i) One year of college education;

(ii) Thirty semester hours of college education;

(iii) Forty-five quarter hours of college education; or

(iv) Forty-five continuing education units (CEU).

(D) College credits and post high school education from other sources may be combined to total 45 CEU.

(3) Individuals may request credit for on-the-job training as either experience or education, but not both.

(4) Individuals seeking certification at water distribution and water treatment levels 3 and 4 must possess experience in operational decision making as defined in OAR 333-061-0020(126). Any work experience as specified in subsection (2)(a) of this rule qualifies as operational decision making experience if it meets the criteria specified in OAR 333-061-0020(126).

(5) To qualify for filtration endorsement certification, as prescribed by OAR 333-061-0220(4), individuals must:

(a) Possess WT Level 2 certification;

(b) Have one year of operational decision making experience at a water treatment plant utilizing conventional or direct filtration treatment; and

(c) Successfully pass a filtration endorsement examination.

333-061-0245
Applications For Certification Levels 1–4

(1) An applicant for certification must submit documentation with any application demonstrating that their qualifying experience and education meets the minimum requirements as specified in OAR 333-061-0235.

(2) To obtain initial certification or certification at a higher level by examination, individuals must:

(a) Submit complete, original, signed copies of their application for the examination, and affidavit of experience;

(b) Meet the minimum qualifications for the certification sought as prescribed by OAR 333-061-0235;

(c) Pay the applicable examination fee as prescribed by OAR 333-061-0265 for the certification sought and examination applied for; and

(d) Successfully pass the examination for the certification sought.

(3) To obtain certification by reciprocity, individuals must:

(a) Possess current, valid certification in another state or province which has a recognized certification program substantially equivalent to the requirements set forth in these rules;

(b) Submit a complete, original, signed reciprocity application and an affidavit of experience;

(c) Pay the applicable reciprocity application fee as prescribed by OAR 333-061-0265 for each certificate desired; and

(d) Pay the exam fee as prescribed by OAR 333-061-0265, for any examination as prescribed by OAR 333-061-0250, if required by the Authority.

(4) All applications for exams must be accompanied by the appropriate fee(s) and documentation, and must be submitted to the Authority 60 days prior to the desired examination date.

(5) Operating experience earned at a water treatment plant or distribution system is considered qualifying experience for examinations up to one classification level higher than that of the water system where the applicant gained their experience.

333-061-0250
Examinations for Certification, Levels 1–4

(1) Examinations will be provided at locations and at times designated by the Authority or its designee.

(2) Applicants must obtain a minimum score of 70 percent in order to pass the examination.

(3) Individuals may not take the same examination more than twice in a 12 month period unless they can demonstrate, to the satisfaction of the Authority, that they have completed specific educa-

tion related to the examination since taking the second examination.

(4) The Authority or its designee will score all examinations and notify applicants of the results. Examinations will not be returned to the applicant.

Stat. Auth.: ORS 448.131

333-061-0260
Certificate Renewal Levels 1–4

(1) Certification expires December 31 every two years based upon the first letter in the last name of the individual. Certification for individuals with names beginning in the letters A–K expires in even numbered years, and certification for individuals with names beginning in the letters L–Z expires in odd numbered years. Certification renewal fees may be prorated if an individual's current certification expires one year prior to the beginning of the next two-year certification period.

(2) Operators must earn two continuing education units (CEU) every two years in areas of relevant subject matter as described below.

(a) CEU for specialized operator training will be accepted from the following categories at the discretion of the Authority.

(A) Technical capacity: water treatment facilities construction and performance, source construction and protection, capacity, storage, pumping and distribution facility construction and protection, water distribution integrity/leakage and water quality issues related to public/user health.

(B) Managerial capacity: water system operation, planning, system governance, development and implementation of system policies, professional support, record keeping, drinking water and related regulations to insure protection of public health, communication and involvement with water users.

(C) Financial capacity: adequacy of revenues to meet expenses, revenue sources, affordability of user charges, rate setting process, budgeting, production and utilization of a capital improvement plan, periodic financial audits, bond ratings, debt and borrowing.

(b) Two college credits in the fields of engineering, chemistry, water/wastewater technology, or allied sciences satisfy continuing education requirements.

(c) CEU from other states having standards equal to or greater than these rules may be accepted by the Authority.

(d) Maintaining CEU records is the responsibility of the operator.

(e) CEU credit will be awarded for the same course or training only once every two year period.

(3) An operator who fails to renew their certification as prescribed by section (1) of this rule by the expiration date cannot be in direct responsible charge of a water system.

(4) The Authority may grant certification renewal without a reinstatement fee until January 31 in the year following the expiration date of the certification. A reinstatement fee as prescribed by OAR 333-061-0265 is required in addition to any renewal fees for all renewal applications received after the grace period ending on January 31 immediately following the expiration date of the certification.

(5) Any certified operator who fails to renew their certification for one year following the expiration date of the certification must meet the requirements established for initial applicants for certification as specified in OAR 333-061-0245.

333-061-0265
Fees

(1) All fees must be paid to the Oregon Health Authority or its designee.

(2) Application fees are not refundable unless:

(a) The Authority has taken no action on a certification application; or

(b) The Authority determines the wrong application has been filed.

(3) Applicants for certification by exam must submit the exam fee and application fee, along with an original signed and complete application. Examination fees may be refunded if:

(a) The application is denied, or

(b) The applicant notifies the Authority no less than one week in advance of the exam that the applicant is unable to sit for the exam.

(4) Applications will be accepted for processing only when accompanied by the appropriate fees as indicated in the fee schedule below:

(a) Certification Renewal — $140.
(b) Combination Certification-each additional — $70.
(c) Application Fee:
(A) Level 1 Distribution or Treatment — $90.
(B) Level 2 Distribution or Treatment — $125.
(C) Level 3 Distribution or Treatment — $160.
(D) Level 4 Distribution or Treatment — $195.
(E) Filtration Endorsement — $90.
(d) Reciprocity Review (each certification) — $100.
(e) Reinstatement — $50 + Certificate Renewal Fee.
(f) Document Replacement Fee — $25.

(5) Filtration endorsement certification is an extension of an operator's water treatment certification, and no additional annual fee is required to maintain the endorsement.

(6) A document replacement fee must be paid at the time of request for a replacement document.

333-061-0270
Refusal, Suspension, or Revocation of Certification

(1) The Authority may deny an individual's initial or renewal application for operator certification, or suspend or revoke an operator's certification if the applicant or operator:

(a) Obtained the certificate by fraud, deceit, or misrepresentation;

(b) Has been grossly negligent, incompetent or has demonstrated misconduct in the performance of the duties of an operator or supervisor of a distribution system or water treatment plant in Oregon or any other state, province or country;

(c) Has violated or failed to comply with any Authority rule or order;

(d) Fails to comply with any Authority investigation; or

(e) Knowingly makes any false statement or misrepresentation in any application, record, or other document filed with the Authority.

(2) An individual whose application or certification is proposed to be denied, suspended, or revoked has the right to a hearing pursuant to ORS Chapter 183.

(3) No person whose certificate has been revoked under this rule is eligible to apply for certification for one year from the effective date of the final order of revocation. Any such person who applies for certification must meet all the requirements established for initial applicants.

333-061-0272
Suspension of Certification

(1) The Authority may immediately suspend an operator's certification for violation of any portion of OAR 333-061-0005 to 333-061-0270 if the Authority finds that such violation(s) constitute a serious danger to the public health or safety. The Authority shall set forth specific reasons for such findings.

(2) An operator has 90 days from the date of notice to the operator to request a hearing. The hearing shall be held as soon as practicable if a request for hearing is received by the Authority.

Domestic Well Program

333-061-0305
Purpose

The purpose of these rules is to provide a basis for implementing ORS 448.271. This law became effective on July 24, 1989, and establishes a program to provide water quality monitoring of underground aquifers that are used for domestic purposes.

Stat. Auth.: ORS 448.131
Stats. Implemented: ORS 448.271
Hist.: HD 24-1990, f. & cert. ef. 11-16-90; PH 7-2010, f. & cert. ef. 4-19-10

333-061-0310
Scope

These rules apply to sellers in any transaction for the sale or exchange of real estate that includes a dug, drilled or driven well that supplies ground water for domestic purposes. Properties with springs that are used for domestic purposes are exempt from these rules. The seller is required to have certain tests done on the well water and send the results to the Authority. Failure of seller to test will not interfere with the sale of the property. The Authority may require tests for other contaminants under certain conditions.

Stat. Auth.: ORS 448.131
Stats. Implemented: ORS 448.271
Hist.: HD 24-1990, f. & cert. ef. 11-16-90; PH 7-2010, f. & cert. ef. 4-19-10

333-061-0324
Area of Public Health Concern

If the Authority confirms, as a result of monitoring required by OAR 333-061-0036, monitoring or assessment activities conducted by the Department of Environmental Quality, or any other scientifically valid data approved by the Authority, the presence of contaminants likely to cause adverse human health effects in groundwater supplies, then the Authority may declare an area of public health concern. The declaration shall specify the following:

(1) The specific aquifer(s) or geographic boundaries subject to the contamination;

(2) The detected contaminant(s);

(3) The human health risks attributed to the contaminant;

(4) The expected duration of the contamination; and

(5) The suspected or confirmed source of the contamination.

Stat. Auth.: ORS 448.131
Stats. Implemented: ORS 448.271
Hist.: PH 7-2010, f. & cert. ef. 4-19-10

333-061-0325
Domestic Well Tests

(1) In any transaction for the sale or exchange of real estate that includes a well that supplies ground water for domestic purposes, the seller of the real estate shall, upon accepting an offer to purchase that real estate, have the well water tested for arsenic, nitrate, and total coliform bacteria. If the well is in a designated area of public health concern, the Authority may require additional testing.

(2) The seller, or seller's designee, must submit the results of the required tests to the Authority and to the buyer within 90 days of receiving the results of the tests.

(3) If the seller, or seller's designee, fails to comply with sections (1) and (2) of this rule, this does not invalidate any of the documents needed to complete the sale of the real estate.

(4) The seller, or seller's designee, is responsible for making sure that the Authority's Water Systems Data Sheet is completed and submitted to the Authority with copies of the arsenic, nitrate, and total coliform bacteria lab slips.

(5) The Water Resources Department well identification number and a description of the property shall be entered on the water system data sheet for the seller to be considered in compliance with ORS 448.271. The description shall include township, range, section, street address, city, state and zip code.

(6) The lab tests required by ORS 448.271 cannot be waived even if the buyer agrees not to have the well tested.

(7) The lab tests for arsenic, nitrate, and coliform bacteria are considered valid for one year if they are associated with the sale of the property.

(8) If the well is not on the property being sold, but the real property includes an interest to a well on adjacent property, including an easement, that interest would be considered part of the real property. Therefore the tests would be required.

(9) ORS 448.271 only applies to wells that have been made operational to supply groundwater for domestic purposes. Capped domestic wells on unimproved lots are not required to be tested.

Stat. Auth.: ORS 448.131

333-061-0330
Accredited Laboratories

Only laboratories accredited according to Oregon Environmental Laboratory Accreditation Program (ORELAP) standards, as prescribed by OAR 333-064-0005 through 0065, shall be used to conduct the water tests required by these rules.

Stat. Auth.: ORS 448.131

333-061-0335
Sample Collection

(1) Only persons who have knowledge of the appropriate procedures for the collection and handling of the water samples for arsenic, nitrate, and total coliform bacteria and who have experience in this area shall collect the samples. These persons include Registered Sanitarians, certified water system operators, well drillers, pump installers, and lab technicians. Specific instructions for the collection, preservation, handling and transport of the samples may be obtained from certified laboratories, county health departments or the Authority and must be strictly adhered to.

(2) The samples must be drawn from the source prior to any form of water treatment. Samples may be collected after treatment injection points where water treatment has been bypassed or temporarily disabled.

(3) In the event that the well has been shock chlorinated, no follow up samples shall be taken until five days have elapsed.

DIVISION 62

PUBLIC SPA POOL RULES

333-062-0005
Purpose

These rules adopted pursuant to the provisions of ORS 448.011, prescribe the requirements for the construction and operation of public spa pools and bathhouses. They are for the purpose of protecting the health and welfare of persons using these facilities.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.011
Hist.: HD 14-1980(Temp), f. & ef. 12-19-80; HD 8-1981, f. & ef. 6-23-81; Renumbered from 333-042-0300

333-062-0010
Adoption by Reference

Outside standards, listings and publications referred to in these rules are by reference made a part of these rules.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 183.355
Hist.: HD 14-1980(Temp), f. & ef. 12-19-80; HD 8-1981, f. & ef. 6-23-81; Renumbered from 333-042-0305

333-062-0015
Definitions

As used in these rules unless otherwise required by context:

(1) "Administrator" means the Assistant Director of the Oregon Health Authority, Public Health Division.

(2) "Approved" means approved in writing by the Division.

(3) "Bathhouse" means a structure which contains dressing rooms, showers and toilet facilities for use with an adjacent public spa pool or public swimming pool.

(4) "Builder" means a person who, in the pursuit of an independent business, undertakes, or offers to undertake, or submits a bid, to construct, alter, repair, or improve any public swimming pool, spa pool or bathhouse and the appurtenances.

(5) "Cross Connection" means an unprotected connection between the piping carrying potable water and the piping or fixtures which carry other water or other substances.

(6) "Division" means the Oregon Health Authority, Public Health Division.

(7) "General-Use Public Spa Pool" means any public spa pool other than limited-use public spa pool. Public spa pools operated in conjunction with a companion facility but not limited to use of the residents, patrons, or members of the companion facility are general-use spa pools.

(8) "Horseplay" means any unsafe activity which in the opinion of the Division or the spa operator endangers the spa users and bystanders.

(9) "Lifeguard" means a person with current American Red Cross lifeguard, National Pool and Waterpark Lifeguard, YMCA lifeguard (or equivalent as determined by the Public Health Division) certification or license.

(10) "Limited-use Public Spa Pool" means any public spa pool located at and operated in connection with a companion facility such as a residential housing facility having five or more living units, traveler's accommodations, mobile home park, recreation park, boarding school, organizational camp, dude ranch, club or association where use of the pool is limited to residents, patrons or members of the companion facility.

(11) "Oxidized" means a process of chemically removing organic debris, using a product used to reduce combined chlorine and for the purposes of these rules is an alternative to superchlorination.

(12) "Person" includes, in addition to the definition in ORS 174.100, municipalities, recreation districts, counties and state agencies or instrumentalities.

(13) "Private Swimming Pool" means any swimming pool, wading pool or spa pool owned by no more than four individuals, either jointly, individually or through association, incorporation or otherwise and operated and maintained in conjunction with a companion residential housing facility and having no more than four living units, for the use of the occupants thereof and their personal friends only. Private pools shall not be subject to the provisions of these rules.

(14) "Public Spa Pool" means any public swimming pool or wading pool designed primarily to direct water or air-enriched water under pressure onto the bather's body with the intent of producing a relaxing or therapeutic effect.

(15) "Public Swimming Pool" means an artificial structure and its appurtenances, which contains water more than two feet deep which is expressly designated or which is used with the knowledge and consent of the owner or operator for swimming or recreational bathing and which is for the use of any segment of the public. "Public swimming pool" includes, but is not limited to, swimming pools owned or operated by:

(a) Traveler's accommodations;
(b) Recreation parks;
(c) Colleges;
(d) Schools;
(e) Organizational camps as defined in ORS 446.310;
(f) Clubs;
(g) Associations;
(h) Business establishments for their patrons or employees;
(i) Private persons and that are open to the public;
(j) Recreation districts;
(k) Municipalities;
(l) Counties; or
(m) A state agency.

(16) "Public Wading Pool" means an artificial structure, and its appurtenances, which contains water less than two feet deep which is expressly designated or which is used with the knowledge and consent of the owner or operator for wading or recreational bathing and which is for the use of any segment of the public, whether limited to patrons of a companion facility or not.

(17) "Supplemental Disinfectant" means a disinfectant which is intended to augment water quality in a public swimming pool or spa and will provide disinfection in conjunction with the approved primary disinfectant.

(18) "These rules" mean OAR 333-062-0005 through 333-062-0185.

(19) "Variance" means written permission from the division for a public swimming pool, public spa pool or public wading pool to be operated when it does not comply with all the applicable rules for public swimming pools, public spa pools or public wading pools.

333-062-0020
Compliance

(1) Public spa pools built prior to June 23, 1981, are exempt from the following requirements of these rules, provided such pools are constructed and maintained in accordance with the plans approved by the Division for the construction of the spa pool, and provided the exemption does not present a health or safety hazard:

(a) OAR 333-062-0065(3);
(b) OAR 333-062-0085(1), (2), and (10);
(c) OAR 333-062-0090(2)(a);
(d) OAR 333-062-0095(3) and (4);
(e) OAR 333-062-0100(2);
(f) OAR 333-062-0115(2)(a), (b), (c);
(g) OAR 333-062-0140(1).

(2) The above exemptions do not apply to any alteration or replacement of the affected components.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.011

333-062-0025
Permit to Construct

(1) No person shall construct a public spa pool or bathhouse adjacent thereto, or alter any such structures without:

(a) Submitting complete plans and specifications to the Division;

(b) Paying the stipulated plan review fee to the Division;

(c) Receiving a written plan approval or conditional approval from the Division;

(d) Paying the stipulated construction permit fee (unless fee exempt) to the Division;

(e) Receiving a permit to construct from the Division.

(2) Plans, specifications, and fees required herein shall be submitted at the time of filing application for a construction permit.

(3) No person shall deviate from the approved or conditionally approved plans and specifications during the construction or alteration of a facility described in section (1) of this rule without the written approval of the Division.

(4) Construction permits will be issued only to the owner or authorized agent of the owner.

(5)(a) The Division may issue a conditional construction permit where the plans and specifications for the proposed public spa pool demonstrate a new technology or alternative mode of operation not contemplated in these rules. Such a permit may be issued only when the proponent of the facility has provided information to the Division from which the Division determines that the spa pool may be reasonably expected to:

(A) Operate continuously in a clean and sanitary manner;

(B) Not constitute a menace to public health or safety; and

(C) Provide health and safety protection equal to or greater than that required by these rules.

(b) The conditional permit may impose conditions which will be set forth in a license for operation. These conditions may include but not be limited to submission of monitoring reports, sampling requirements, use restrictions, and such other conditions as the Division may deem necessary to protect the public health and safety or to further establish the Division's expectancy of such protection. Furthermore, any license issued subject to a conditional construction permit shall carry the condition that by its acceptance the holder understands that a conditional license may not be renewed, may be revoked or suspended, or a permanent license not issued in the future, if the Division determines that the provisions of subsections (5)(a), (b) and (c) of this rule are not met. Such conditional construction permit authority is not conferred upon any county notwithstanding any delegated or contractual authority in administration and enforcement of the public spa pool statutes and rules.

333-062-0030
Plans

(1) Plans and specifications shall be prepared by a professional engineer or architect registered in the State of Oregon. Specific exemptions to this requirement may be granted by the Division, where in the judgment of the Division no architectural or engineering problems are presented and the plans accurately depict the proposed spa pool and address all requirements of these rules.

(2) Plans shall be submitted in duplicate, drawn to scale and in sufficient detail to completely and clearly illustrate what is to be constructed and shall include:

(a) One plan view;

(b) One cross section through the main drain;

(c) One overall plan showing the pool in relation to other facilities in the area. (This plan may be combined with subsection (2)(a) of this rule);

(d) One detailed view of the equipment room layout;

(e) One vicinity map;

(f) One piping schematic showing piping, pipe size, inlets, main drains, skimmers, gutter outlets, vacuum fittings, and all other appurtenances connected to the pool piping system. (This plan may be combined with subsection (2)(a) of this rule);

(g) One cross section of the step treads and risers.

(3) Plans must show all required components of the spa pool and its appurtenances and plan notes such as "fence by owner" or "deck to be under separate contract" shall not be acceptable as a substitute for scale drawings.

(4) Plans shall include the following information in tabulated form:

(a) Legal address of the facility;

(b) Location of the facility if different from legal address;

(c) Owner's or authorized agent's name, address and telephone number;

(d) Surface area of pool;

(e) Pool volume, turn over time, flow rate, filter rate/unit area, type of filter and total system head loss;

(f) Manufacturer, make and model numbers of the pump, filter, and automatic chemical feed apparatus, filter head loss (clean and dirty), and pump curve showing design flow rate and head;

(g) Source of water used at the pool;

(h) Means of disposing of backwash water and/or drained water from the spa;

(i) Specifications of materials relating to the spa pool, piping, inlets and outlets, skimmers.

333-062-0035
Licenses

No person shall operate a public spa pool, without:

(1) The pool having received a final construction inspection and approval from the Division;

(2) Making application for a license to operate such a pool;

(3) Paying the license fee; and

(4) Securing a license from the Division;

(5) Such license terminates and is renewable on December 31 of each year.

333-062-0040
Conditional Licenses

(1) Conditional licenses may be issued by the Division in circumstances in which:

(a) There is substantial compliance with these rules;

(b) In which a written schedule for total compliance approved by the Division is instituted and maintained; and

(c) Where in the judgment of the Division, there will be no immediate threat to health and safety during the time in which to meet complete compliance. The Division may also require special safeguards to be instituted and maintained as a condition of the conditional license.

(2) Conditional licenses may also be issued by the Division as provided in OAR 333-062-0025(5).

333-062-0045
Maintenance and Modification

(1) All equipment of public spa pools shall be operational and shall be kept in good repair. Such equipment shall be maintained in conformance with the original design or better.

(2) The structural components of all public spa pools and their appurtenances shall be maintained in good repair.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.011

333-062-0050
Size

Public spa pools shall be sized according to and shall not exceed the design limit of the bather load function shown below. Bather loads are specific in-tank loads only.

Maximum Load = A divided by 10

Where A equals the surface area of the public spa pool in square feet.

333-062-0055
Dimensions

(1) Public spa pools shall not have sharp edges or protrusions where walls meet at an acute angle. Public spa pools shall be shaped so as to provide for complete water circulation and mixing.

(2) Public spa pools shall be no deeper than 4' (1.22 m) measured from the water line.

(3) The maximum depth of any seat or sitting bench shall be 2'0" (61 cm) measured from the water line.

Stat. Auth.: ORS 448.011

333-062-0060
Finishes and Markings

(1) Wall and floor finishes shall be of non-toxic materials, shall be impervious and enduring. Such finishes shall be smooth and easily cleanable.

(2) Public spa pools shall have permanent depth markings plainly and conspicuously posted and located as follows:

(a) The maximum water depth shall be clearly marked;

(b) Depth markings shall be at least 4" (10 cm) in height and of a contrasting color with the background;

(c) Depth markings shall be placed within 18" (46 cm) of the water's edge and shall be positioned to be read while standing on the deck facing the water;

(d) Depth markings shall be spaced at no more than 25' (7.62 m) intervals and shall be uniformly located around the perimeter of the spa.

(3) Spas with wooden interior surfaces are not allowed.

Stat. Auth.: ORS 448.011
Stats. Implemented: ORS 448.011

333-062-0065
Illumination

(1) Where underwater lighting is used, the electrical circuit to the underwater light shall be equipped with a ground fault interrupter.

(2) Where underwater lighting is not employed, and night or indoor bathing is permitted, the combined area and pool lighting shall be not less than two watts per square foot (0.93 m2) of deck area.

(3) Where underwater lighting is used, and night or indoor bathing is permitted, area lighting shall be provided for the deck areas and directed away from the spa pool surface. No less than 0.6 watts incandescent or the equivalent per square foot of deck area shall be used.

333-062-0070
Ventilation

(1) A public spa pool license holder must ensure that there is sufficient ventilation to prevent build-up of harmful amounts of moisture or chemical byproducts in the air of buildings enclosing spa pools.

(2) New and public spa pool ventilation systems renovated after September 1, 2014 must comply with the requirements of the Oregon Structural Specialty Code, 2014 Edition, and the Oregon Mechanical Specialty Code, 2014 Edition.

333-062-0075
Ladders, Recessed Steps and Stairways

(1) Spa ladders, recessed steps or stairways shall be provided where spa depth exceed 24."

(2) There shall be at least one ladder, set of recessed steps or stairway for each 50 feet of spa pool perimeter or fraction thereof.

(3) Ladder treads, recessed step surfaces and stairs shall have slip-resistant surfaces.

(4)(a) Ladders and recessed steps shall be provided with two handrails;

(b) Stairs shall be provided with at least one handrail.

(5) Recessed steps shall drain into the pool.

(6) Stairway treads shall have a minimum unobstructed horizontal tread depth of 10" (25 cm) and a minimum unobstructed surface area of 240 square inches (154 cm2).

(7) Risers at the centerline of the stairway treads shall have a maximum uniform height of 12" (30 cm). The vertical riser height from deck surface down to the top of the first tread shall not exceed 12" (30 cm). When the bottom tread serves as a bench or seat, the bottom riser shall be a maximum of 14" (35 cm).

(8) Ladders and handrails shall be securely mounted.

Spa Pool Enclosure

A public spa pool license holder must ensure that:

(1) A public spa pool is protected by an enclosure such as a fence, wall, or building without private entrances to the pool area; and

(2) Spa pool enclosures including windows, gates and doors are constructed in such a manner so as to discourage or prevent access to the pool by unsupervised children and domestic animals and incorporate the following construction standards:

(a) Enclosures shall not be less than four feet (1.2 m) in height measured from the outside ground at a point one foot (300 mm) horizontal from the base of the enclosure;

(b) There shall be not more than four inches (100 mm) of space between the bottom of the enclosure and the ground's surface or pool deck;

(c) Separation between vertical sections and bars shall be a maximum of four inches (100mm);

(d) Horizontal rails shall be spaced with a minimum 42 inches (1065mm) separation;

(e) All exterior projections or recessions shall be 42 inches (1065mm) from either the top or bottom of the fence;

(f) Gates and doors in spa enclosures shall be self-closing and shall be equipped with a lockable and self-latching device. The operating controls for the self-latching device shall be located at least 42 inches (1065 mm) above the exterior ground or pool deck. Gates and doors on new pools must swing "out" of the pool enclosure, or away from the pool. If an existing pool's gates or door does not swing away from the pool, it must be changed when the change is not highly burdensome or impractical due to special conditions or cause

(g) Entrances with self-closing and self-locking devices requiring the use of a key, keycard or combination code to gain access may have controls located at a minimum of 36 inches to 54

inches (0.9 m to 1.35 m) above the exterior ground surface. The gates or doors cannot require a key, keycard or combination code to exit the pool area;

(h) Construction methods and materials shall be used that provide a durable and low maintenance structure;

(i) Buildings enclosing public spa pools constructed on or after September 1, 2014 and buildings enclosing spa pools that are remodeled or renovated on or after September 1, 2014 shall be constructed in accordance with the requirements of the Oregon Structural Specialty Code 2014 Edition.

(3) When a pool is closed to patrons, all entry/exit points are to be properly maintained and secured against unauthorized entry.

333-062-0085
Decks

(1) A 6' x 8' continuous unobstructed deck shall be provided on at least one side of all public spa pools with less than 100 square feet of water surface. Public spa pools with 100 square feet of water surface area or more shall provide additional deck area at least four feet wide around at least 50 percent of the spa.

(2) Walkways and decks shall be constructed of concrete, non-slip tile or equally impervious material with a smooth, but non-slip, easily cleanable surface.

(3) Decks shall slope no less than 1/4" (6 mm) per foot (30 cm).

(4) Deck surfaces shall be slip-resistant.

(5) Joints between concrete deck slabs shall be water tight and shall be designed so as to protect the pool, coping and its mortar bed from movement of the deck.

(6) Decks shall be provided with expansion joints. New and replacement expansion joints shall not be constructed of wood.

(7) Voids between adjoining concrete deck slabs shall be no greater than 3/16" (5 mm).

(8) Adjoining deck surface elevations shall vary no more than 1/4" (6 mm).

(9) Decks shall be drained to perimeter drains.

(10) Wood decking around public spa pools is prohibited.

333-062-0090
Overflow Systems

(1) All public spa pools shall be operated with a continuous overflow.

(2)(a) Where surface skimmers are used, the flow rate through the skimmer shall be designed to provide 50 percent of the total turnover rate with a maximum flow through any single skimmer of 30 gpm;

(b) The minimum acceptable width for the intake throat of a skimmer, measured at the wider location, shall be 5";

(c) Where surface skimmers are used as the sole overflow system, one surface skimmer shall be provided for each 100 square feet (9.3 m^2) or fraction thereof of the spa's surface area. If a conflict arises between subsection (a) of this section and this subsection, the subsection requiring the greatest number of skimmers shall apply;

(d) When two or more skimmers are used in a spa, they shall be located so as to maintain effective skimming action over the entire surface area of the spa.

333-062-0095
Recirculation Systems

(1) Public spa pools shall have recirculation systems and filtration systems with piping, pumps, filters, disinfection and other equipment which maintain spa pool water quality in accordance with OAR 333-062-0165(1).

(2) The system of pumps, filters, disinfection facilities and other equipment shall be of adequate size to recirculate, filter and disinfect the entire volume of spa water within 30 minutes.

(3) The recirculation system shall be a two pump system. One pump will provide the required turnover rate, filtration and disinfection for the spa water. The second pump shall provide the water for the hydrotherapy turbulence of the water.

(4) Public spa pool recirculation systems shall be separate from companion swimming pools.

(5) Recirculation and filtration systems shall be in operation continuously while the facility is in use.

333-062-0100
Inlets

(1) Pool inlets must be provided, sized, and arranged to produce a uniform circulation of water so as to maintain a uniform disinfectant residual throughout the pool.

(2) There must be at least one inlet per 400 square feet of pool area or 10,000 gallons of water, whichever is greater, with a minimum of two inlets.

(3) Grates must be designed so as to prevent entrapment of fingers.

(4) All recirculation inlet fittings must be adjustable for rate of flow. Wall inlet fittings must be directional.

(5) Inlet fittings must have tamper-proof screws that cannot be removed except with tools. Grates, vortex plates and inlet fittings must be in place whenever the spa is in use.

(6) Direct potable water pool inlets must:

(a) Be over-the-rim spouts with an air-gap located beside grab rails;

(b) Be through-the-wall fill lines located above the water level and equipped with an appropriate backflow prevention device installed per OAR 333-061-0071; or

(c) Be directly connected to the recirculation water supply and equipped with reduced pressure device installed per OAR 333-061-0071 on the potable water supply adjacent to the connection with the spa pool recirculation water.

333-062-0103
Submerged Suction Fittings and Drains

(1) The requirement in section (3) of this rule applies to:

(a) A spa pool constructed after December 25, 2009;

(b) A spa pool constructed before December 25, 2009, that on or after July 1, 2015, has its submerged suction fittings renovated or remodeled.

(2)(a) Every spa pool must have an easy and effective means of draining the pool.

(b) Main drain and submerged suction outlets must be designed with sufficient open area that the maximum velocity through the cover does not exceed the cover's listed flowrate. Drains and suction fittings must be installed to minimize tripping, toe stubbing and scrape hazards.

(c) All hardware and fittings must be supplied by the manufacturer and installed according to the manufacturer's directions.

(d) Broken or missing grate fittings. If the pool operator finds that a suction fitting is broken or missing, the operator must close

the pool immediately, shut down the recirculation system and remain closed until the fitting has been replaced.

(3) New construction. Main drain and submerged suction fitting systems must provide entrapment, hair entanglement and evisceration protection.

(a) Main drains and submerged suction fittings and sumps must be compliant with the requirements of ANSI/APSP-16 Suction Fittings for Use in Swimming Pools, Wading Pools, Spas, and Hot Tubs (2011). The cover must be labeled and include; "VGB 2008," the logo of the third party listing agency, the standard for which it was tested, the gallons per minute flow for which it was approved and the location it is to be placed.

(b) The spa licensee must maintain any documentation concerning the main drain or submerged suction fitting.

(c) All submerged suction fittings must be installed with a sump designed and approved by the manufacturer for that outlet cover.

(d) All field built sumps must be designed by an Oregon registered engineer and must be built so the opening of the suction pipe is no closer than 1.5 times the pipe's inside diameter from the bottom of the listed suction cover/plate.

(e) Main drains and submerged suction fittings must be separated by at least three feet (915mm)(measured from the main drain connector pipe centerlines) between the furthest fittings, or be on separate planes, placed so the floor and wall suction fittings cannot be easily blocked at the same time.

(A) The outlets must be sized to handle an equal portion of at least 200 percent of the recirculation flow.

(B) The outlets must be installed so that they cannot be isolated from one another; no intervening valves.

(C) The piping going back to the pump must be located in the hydraulic middle of the connector piping, and must be the same size as the connector piping.

333-062-0105
Piping

(1) Spa pool recirculation piping shall be sized to carry the following maximum design flows:

(a) Discharge piping (except copper) — 10 ft./sec. (3.05 m/sec.);

(b) Discharge piping (copper) — 8 ft./sec. (2.44 m/sec.);

(c) Suction velocity — 6 ft./sec. (1.83 m/sec.).

(2) Pool recirculation piping, if plastic, shall comply with **National Sanitation Foundation Standard Number 14 for Plastic Piping System Components and Related Materials**.

(3) Spa pool backwash and/or drain lines shall be permanently piped with an air break. For all spa pools built after May 1, 1986, the pool backwash and/or drain line shall be permanently piped with an air break to discharge into an approved sewerage system.

333-062-0110
Pumps

(1) A pump and motor shall be provided for recirculation of pool water:

(a) All pumps shall be provided with a strainer on the suction side of the pump. The strainer shall be at least equal in size to the pump suction line;

(b) Strainers installed below water level shall be provided with a valve on each side to facilitate cleaning.

(2) Performance of pumps shall meet the conditions of flow required for filtering and backwashing the filters against the total dynamic head developed by the complete system. Pumps shall be capable of providing design flow rates at no less than 60 feet (1.83 kg/cm2) of total dynamic head.

(3) Pumps shall be capable of pumping at a rate sufficient to turn over the total pool volume within 30 minutes.

(4) Pumps on public spa pools built or remodeled after the effective date of these rules shall comply with National Sanitation Foundation Standard Number 50 on centrifugal pumps.

(5) Pumps shall be sized so as to pump the flow required in section (3) of this rule under filter soil conditions such as to create pressures or vacuums at which manufacturers recommend filter cleaning.

333-062-0115
Filters

(1) Filters shall be capable of maintaining pool water clarity as described in OAR 333-062-0165(1)(i) under conditions of maximum user load.

(2) Public spa pool filter rates shall not exceed the following:

(a) High rate sand filter — 18 gpm per square foot (.093 m^2) of filter media or that rate approved by the manufacturer for that particular filter, whichever is less;

(b) Diatomaceous earth filters — 1.5 gpm (5.7 1pm) per square foot (.09 m^2) of filter media;

(c) Cartridge filters — 0.375 gpm per square foot of effective filter area. Effective filter area shall be that as determined by a testing laboratory recognized by the Division to make such tests.

(3) A means shall be provided to permit release of air which enters the filter tank.

(4) Filter components which require servicing shall be accessible and available for inspection and repair.

(5) Filters shall meet the safety performance standards of the **National Sanitation Foundation Number 50 for Circulation System Components for Swimming Pools**.

(6) Separation tanks or settling sumps are required with DE filters. Separation tanks shall:

(a) Be provided with a manual means of air release or a lid which provides a slow and safe release of pressures;

(b) Have a precautionary statement affixed warning the user that the air release must be opened before starting the circulation pump.

333-062-0120
Heaters

(1) Fired water heaters installed after September 1, 1994, used exclusively for heating water for spa pools are considered pool boilers and are exempt from the requirements of ORS 480.510 to 480.665 (Boiler and Pressure Vessel Law) if:

(a) Units are equipped with a flow switch or pressure switch set at a minimum of 1-1/2 psig;

(b) No intervening stop valves are installed on the discharge side of the unit;

(c) Discharge piping is not reduced from the engineering sizing of the fired heater;

(d) All units are equipped with an ASME-approved pressure and temperature relieving device set at 50 psig;

(e) The unit has a maximum of 10 gallons capacity contained within the unit; and

(f) The burner is wired in series with the recirculation pump.

(2) Where fuel-burning swimming pool heaters are provided for public spa pools, they shall:

(a) Be situated so that the pilot light, if present, is readily accessible;

(b) Be provided with an adequate supply of combustion air;

(c) Be equipped with metal or chlorinated polyvinyl chloride pipe (CPVC) for a minimum of 18 inches upstream and downstream of the heating equipment. However, where manufacturer's recom-

mended installation allows shorter lengths of CPVC, installation according to the manufacturer's recommendation is allowed in lieu of 18 inches of CPVC if documentation of manufacturer's recommendations is provided.

(3) Where electrical heaters are provided, they shall be installed in accordance with the **Oregon Electrical Specialty Code, 2014 Edition.**

333-062-0125
Disinfectant and Chemical Feeders

(1) A means of disinfecting the public spa pool water shall be provided which provides a disinfecting residual in the pool waters at all times as described in OAR 333-062-0165(1)(a).

(2) Automatic disinfection equipment for introducing a disinfectant shall be provided.

(3) Disinfection equipment shall be equipped with suitable controls capable of fine feed rate adjustment.

(4) Hypochlorinators, erosion (flow-through) feeders, or other adjustable output rate chemical feeding equipment shall conform to **National Sanitation Foundation Number 50 for Circulation System Components for Swimming Pools**.

(5) Where chlorine gas is used as the disinfectant:

(a) Such chlorine gas, its feeders, and other containers shall be housed in a room or compart-ment separate from other pool equipment. Such room or compartment shall:

(A) Be at or above ground level;

(B) Have adequate ventilation to the outside air;

(C) Have a door which opens to the outside of the building of which the room or compartment is a part. Doors installed after the effective date of these rules shall have a shatter-proof gas tight inspection window for viewing the enclosed area. Such a door must open away from public access area;

(D) Be located so that chlorine gas, if accidentally released will not flow into the pool room or into the building ventilation systems;

(E) Have lighting and ventilation switches located outside the enclosure, adjacent to the door;

(F) Shall have a fail-safe mechanism which ceases chlorination in case of malfunction;

(G) Gas chlorinators shall be equipped with an anti-siphon chlorine injection device.

(b) A platform scale for measuring the weight of the chlorine cylinders shall be provided;

(c) A full face negative pressure respirator with a chlorine cartridge approved by the National Institute of Occupational Safety and Health (NIOSH) for protection against chlorine gas or a U.S. approved self-contained breathing apparatus approved by the U.S. Bureau of Mines shall be supplied, kept in good working condition and mounted outside the chlorine enclosure.

NOTE: Storage of such equipment in rooms adjoining the chlorine room is permissible provided such equipment is readily available.

(6) Where disinfectants other than chlorine or bromine are used, such disinfectants shall:

(a) Achieve water disinfection equal to that which free chlorine or bromine provides at the concentration specified in OAR 333-062-0165(1)(a);

(b) Be approved by the Division;

(c) Pose no adverse physiological hazards to the users and have a proven record of effectiveness.

(7) Ozone disinfection may be used only under conditional approval by the Division as a supplemental system. Interim guidelines governing the installation and operation of ozone equipment may be requested from the Division.

333-062-0130
Air Induction Systems

(1) Air induction systems, when provided, shall totally prevent water back-up that would cause electrical shock hazards.

(2) Air intake sources shall be positioned and/or designed to minimize contaminants (such as deck water, dirt, etc.) from being introduced into the spa pool.

333-062-0135
Valves, Meters, and Gauges

(1) Flow meters shall be installed in all recirculation systems. Such meters shall:

(a) Measure flow in gallons per minute;

(b) Be mounted as recommended by the manufacturer; and

(c) Be located so as to be easily read.

(2) Pressure gauges shall be installed on the inlet and outlet of the filter.

(3) When the pump is below the overflow rim of the spa, valves shall be installed on permanently connected suction and discharge lines and located in an accessible place outside the walls of the spa. All valves shall be located where they will be readily and easily accessible for maintenance and removal.

333-062-0140
Equipment Room

(1) Spa pool equipment rooms shall be large enough to permit ready access to all equipment for both operation and maintenance with a minimum floor area of 50 square feet with a floor drain.

(2) Spa pool equipment rooms shall be adequately ventilated.

(3) Spa pool equipment rooms shall protect the equipment from the elements and be locked permitting access only to authorized personnel.

(4) Equipment rooms shall be lighted to properly operate and maintain equipment.

333-062-0150
Bathhouses and Sanitary Facilities

(1) Where a spa pool is operated in conjunction with a companion facility, a bathhouse common to both facilities shall be acceptable, provided the minimum facility ratios and locations described in sections (2) through (5) of this rule are followed.

(2) Bathhouses must be maintained in good repair and kept clean. Bathhouses for all spa pools built after September 1, 2014 must:

(a)(A) Meet the requirements of:

(i) The Oregon Structural Specialty Code, 2014 Edition;

(ii) The Oregon Mechanical Specialty Code, 2014 Edition;

(iii) The Oregon Electrical Specialty Code, 2014 Edition;

(iv) The Oregon Plumbing Specialty Code, 2014 Edition.

(B) Including all permit and inspection requirements of the aforementioned codes.

(b) Provide toilets and lavatories within 1,000 feet (305 m) of the spa;

(c) Contain dressing room(s) and sanitary facilities, separate for each sex;

(d) Have floors which are slip resistant, easily cleanable, and coved to a height of four inches (100 mm);

(e) Have shower compartments with walls which are impervious to water to a height of six feet (1.8 m) above the floor. An effective water-tight joint between the wall and the floor shall be maintained. (Wooden racks or duck boards over shower floors are prohibited);

(f) Have interior wall and ceiling finishes which are smooth, easily cleanable, and impervious to water;

(g) Where rubber or impervious mats are used, have such mats clean and dry between usages;

(h) Have shower stall floors that are finished with non-slip impervious surfaces;

(i) Where glass bath or glass shower doors are used, have such doors made of safety glass.

(3) Sanitary facilities, based upon the following maximum user load and equal distribution of sexes, shall be provided:

(a) Toilets:

(A) Women, one per 40 spa users or fraction thereof, with a minimum of two;

(B) Men, one per 60 spa users or a fraction thereof with a minimum of two. Urinals shall be an acceptable substitute for no more than one-half of the toilets.

(b) Lavatories adjacent to toilets, one per 60 spa users or fraction thereof.

(c) Showers — One shower head per 40 pool users of fraction thereof, with a minimum of two.

(4) Hot and cold or tempered water only shall be provided at all shower heads.

(5) Soap shall be provided at all shower heads and lavatories.

(6) Hose bibs shall be provided for washing down the bathhouse interior.

(7) Floors shall slope a minimum of one-quarter inch per foot (2.1 percent slope) and shall drain to floor drains.

(8) The bathhouse shall be located within 1,000 feet (305 m) of the spa pool.

333-062-0160
Domestic Water Quality

(1) All water used in public spa pools and bathhouses shall comply with the rules of the Division for Domestic Water Supplies, OAR 333-061-0005 through 333-061-0099.

(2) There shall be no cross-connection between the public spa water recirculation system or backwash system and the domestic water supply.

(3) Public spa pool water recirculation and backwash systems shall comply with the Cross Connection Control Requirements of OAR 333-061-0070.

333-062-0165
Spa Water Quality

(1) Water in public spa pools shall be maintained with water quality parameters within limits set out in **Table 1**. [Table not included. See ED. NOTE.]

(2) Testing Equipment:

(a) All public swimming pools shall have functional test kit(s) or equipment for measuring the pH, free and combined chlorine concentration, or bromine, (or concentration of other approved disinfectant), total alkalinity, turbidity (water clarity) and cyanuric acid if stabilized chlorine is used;

(b) Functional test kits or testing systems shall be provided to test for total copper and silver concentrations when they are used as supplemental disinfectants;

(c) Test kits for measuring free chlorine or bromine shall use DPD as the reagent.

(3) Pool operators shall test and record the parameters described in section (1) of this rule with the following minimum frequencies during periods when the pool is open for use:

(a) pH — Every two hours;

(b) Chlorine (Non-stabilized) — Hourly; chlorine (stabilized) — Every two hours; continuous reading devices shall satisfy requirements of subsections (3)(a) and (b) of this rule if such devices record in pH units and ppm of free chlorine;

(c) Bromine — hourly; continuous reading devices shall record in units of ppm bromine;

(d) Total alkalinity — Daily;

(e) Total copper — Weekly, if used;

(f) Total silver:

(A) If ionizing technology is used, once per quarter for one year after equipment is installed; twice per year thereafter;

(B) Weekly if silver is dispensed without using ionizing technology.

(g) Turbidity — Daily;

(h) Cyanuric acid — Weekly (when using stabilized chlorine);

(i) Calcium hardness — Weekly (recommended).

(4) Spa pools shall be drained and refilled with fresh water at least once every 30 days.

(5) Spa pool water shall be oxidized or superchlorinated as needed when combined chlorine exceeds spa water quality parameters, **Table 1**. [Table not included. See ED. NOTE.]

(6) Notwithstanding the above, the Division may require any other testing frequency for a spa water parameter or a chemical added to the spa for the purpose of protecting public health.

[ED. NOTE: Tables referenced are available from the agency.]

333-062-0170
Operation and Maintenance

(1) Operators of public spa pools shall be thoroughly knowledgeable on good practices of the spa operation and with the laws and rules pertaining to public spa pools. If, at any time, the spa meets one of the spa pool closure criteria in OAR 333-062-0255 the spa pool license holder, operator, or responsible supervisor shall immediately close the spa to the public until the requirements are satisfied.

(2)(a) Operators of public spa pools shall keep records pertaining to the operation and maintenance of the pool which they operate;

(b) Such records shall be maintained daily during periods when the pool is open, shall be retained by the operator and made available to the Division on request. All such records shall be retained for a period of two years;

(c) Records shall include at least the following:

(A) Results of the tests described in OAR 333-062-0165(3);

(B) Date and time of filter backwash;

(C) Dates that the pool was emptied or cleaned;

(D) Periods of recirculation equipment operation or malfunction and repair.

(d) A recommended record keeping form is provided in Appendix A.

(3) All parts and facilities of public spa pools and bathhouses shall be kept clean, in good repair and free of safety hazards.

[ED. NOTE: Appendix referenced is available from the agency.]

333-062-0175
Safety

(1)(a) The operator of any public spa pool shall report in writing to the Division any drowning, other death or injury requiring medical treatment occurring on the spa pool's premises;

(b) Such reports shall be made on forms provided by the Division and shall be submitted within seven days of the occurrence.

(2) Operators or managers shall make visual observation of the spa pool during operating hours. Such visual observation shall be no less than once every two hours.

(3) Lifeguards, pool operators and managers shall enforce the following rules at all public spa pools:

(a) Non-swimmers and children under 14 years of age shall not use the spa pool unless a lifeguard or a responsible adult observer is present;

(b) Bathers shall take a cleansing shower;

(c) No person suffering from a communicable disease transmissible via water or under the influence of an intoxicating liquor or drug shall use the pool;

(d) No person shall take food or drink inside the pool enclosure except in areas specifically designated for such use as described in OAR 333-062-0155;

(e) No person shall bring, throw or carry food, drink, smoking material, trash, debris, or any other foreign substances into the pool;

(f) No person shall run or engage in horseplay in or around a public spa pool;

(g) Persons in street shoes shall not be permitted on the pool deck areas used by the bathers.

(4) The hydrotherapy pump and air blower shall be connected to a maximum 15 minute timer switch located no closer than ten feet from the spa water's edge.

(5) Recirculation pumps and heater thermostat switches shall be inaccessible to bathers.

333-062-0180
Signs

(1) All public spa pools shall post a sign at the entrance to the spa pool enclosure reading as follows:

STOP

All persons are required to take a cleansing shower before entering the spa pool.

CAUTION

Elderly persons and those suffering from heart disease, diabetes or high blood pressure should consult their physician before using the spa pool.

No person suffering from a communicable disease, transmissible via water, shall use the spa pool. Persons using prescription medications should consult their physician before using the spa pool.

Individuals under the influence of alcohol should not use the spa pool

No person shall use the spa pool alone

Pregnant women should not use the spa pool without consulting their physician.

Persons should spend no more than 15 minutes in the spa at any one session

All children under 14 years of age shall be accompanied by a responsible adult observer.

No person shall run or engage in horseplay in or around the spa pool.

(2) Signs shall be a minimum of 24" x 18" with letters at least 3/8" in height.

333-062-0185
Variance

(1) The Division may grant a variance from requirements of these rules as follows:

(a) Where it is demonstrated to the satisfaction of the Division that strict compliance with the rule would be highly burdensome or impractical due to special conditions or cause;

(b) Where the public or private interest in the granting of the variance is found by the Division to clearly outweigh the interest of the application of uniform rules; and

(c) Where such alternative measures are provided which in the opinion of the Division will provide adequate public health and safety protection.

(2) Such variance authority is not conferred upon any county notwithstanding delegated or contractual authority in administration and enforcement of the swimming pool statutes and rules.

Stats. Implemented: ORS 448.037

Hist.: HD 14-1980(Temp), f. & ef. 12-19-80; HD 8-1981, f. & ef. 6-23-81; Renumbered from 333-042-0480

333-062-0250
Enforcement

(1) ACCESS. The pool license holder, operator, or responsible supervisor must permit an authorized employee or agent of the Division to enter any public spa pool area, whenever the spa pool is open, or at any other reasonable time for the purpose of inspecting the spa pool. The inspection may include, but is not limited to, the bathhouse or toilet/shower facilities, chemical storage, pool enclosure and security provisions, recirculation equipment, piping, ventilation, supervision areas, operations, pool records and files, to determine compliance with these rules.

(2) NOTICE OF VIOLATIONS. If upon inspection of a public spa pool, the Division or its agent finds that the spa pool is not designed, constructed, equipped, maintained or operated as required by these rules, the Division or its agent must notify the license holder, operator, or responsible supervisor in writing of the violations. The inspection report must specify the changes required to make the spa pool and its operation conform to the standards established in these rules and the time period within which to comply. If the violations pose an immediate danger to the public's health, the Division or its agent may take action authorized under OAR 333-062-0255 prior to notifying the license holder, operator, or responsible supervisor in writing of the violations.

(3) SUSPENSION OR REVOCATION. If the license holder does not correct the violations listed in the notice issued under section (2) of this rule within the specified time period, the Division or its agent may issue a notice proposing to suspend or revoke the license to operate the spa pool in accordance with ORS Chapter 183. A license holder shall have 21 days to request a hearing.

333-062-0255
Spa Pool Closure Criteria

(1) If one or more of the conditions outlined in subsection (3)(a) through (j) of this rule is present at the public spa pool facility, the spa pool license holder, operator or responsible supervisor must immediately close the pool until the situation is resolved.

(2) If a spa pool license holder, operator or responsible supervisor has not acted in accordance with section (1) of this rule, the Division or its agent may issue an emergency suspension order, and close a spa in accordance with ORS 183.430(2). The emergency suspension may be used if one or more of the conditions in subsec-

tion (3)(a) through (j) of this rule exist that present a serious and immediate danger to the public's health or safety.

(3) Conditions requiring immediate closure of the public spa pool, until they are resolved include:

(a) CHEMICAL PARAMETERS. Failure to comply with the disinfectant residual levels, high levels for cyanuric acid or out of range pH established in OAR 333-062-0170(1), and items (a) thru (i) of Table 1;

(b) WATER QUALITY. Failure to comply with the water quality standards for clarity and bacteria established in OAR 333-062-0165(1) and items (j) and (k) of Table 1;

(c) TEMPERATURE. Water temperature over 104 degrees Fahrenheit.

(d) TREATMENT EQUIPMENT. A non-operational circulation pump, filter, or disinfectant feeder. With the approval of the local public health authority, when the chemical feeder(s) is inoperative for no more than a few hours while repairs are made, the spa pool may remain open, if the water chemistry can be maintained manually.

(e) ELECTRICAL SAFETY.

(A) The presence of bare electrical wires or other obvious electrical deficiency; or

(B) The presence of lightning or severe storms within a minimum 10-mile (16 km) proximity of the pool at outdoor spa pools.

(f) SUPERVISION. The absence of a responsible supervisor or required lifeguard;

(g) ENCLOSURES. Enclosures such as fences, doors, gates or windows that are not in compliance with OAR 333-062-0080;

(h) SUBMERGED SUCTION FITTINGS. A broken, missing or improperly attached submerged suction fitting, as required by OAR 333-062-0103(1)(d);

(i) FECAL ACCIDENT. A fecal accident occurs or feces is found in the pool. Information related to proper fecal incident response can be found at http://public.health.oregon.gov/HealthyEnvironments/Recreation/PoolsLodging/Documents/cdcfecal.pdf; or

(j) OTHER CONDITIONS. The presence of a hazardous substance or object in the spa pool, or the existence of any condition creating an immediate danger to health or safety.

(4) In accordance with ORS 183.430(2), a license holder shall have 90 days after the date of notice of emergency suspension to request a hearing and if a hearing is requested a hearing must be granted to the licensee or permittee as soon as practicable after such demand.

Stat. Auth.: ORS 448.011

DIVISION 64

ACCREDITATION OF LABORATORIES

333-064-0005
Purpose

These rules are for the purpose of implementing Oregon Revised Statutes (ORS) 438.605 to 438.620, 448.280 and the Oregon Drinking Water Quality Act of 1981. ORS 438.610 states that the Oregon Health Authority shall by adopting standards in concurrence with the accrediting body, implement an environmental laboratory accreditation program hereafter referred to as the Oregon Environmental Laboratory Accreditation Program (ORELAP). These rules establish requirements for the accreditation of laboratories analyzing samples under the guidance of the Clean Air Act (CAA), Clean Water Act (CWA), Safe Drinking Water Act (SDWA), the Resource, Conservation and Recovery Act (RCRA) and cannabis testing under ORS 475B.550 to 475B.590. Testing of water samples under ORS 448.150, Oregon's Drinking Water Quality Act, must be conducted by an ORELAP accredited laboratory.

Stat. Auth.: ORS 448.150(1), 448.131, 448.280(1)(b) & (2), 438.605, 438.610, 438.615, 438.620 & 475B.565
Stats. Implemented: ORS 448.280(1)(b) & (2), 438.605, 438.610, 438.615, 438.620 & 475B.565
Hist.: OHD 7-1999, f. & cert. ef. 10-26-99; OHD 16-2002, f. & cert. ef. 10-10-02; PH 13-2003(Temp), f. & cert. ef. 9-22-03 thru 3-20-04; PH 20-2003, f. 12-02-03, cert. ef. 12-08-03; PH 6-2011, f. & cert. ef. 8-9-11; PH 31-2015(Temp), f. 12-29-15, cert. ef. 1-1-16 thru 6-28-16; PH 17-2016, f. & cert. ef. 6-7-16

333-064-0010
Scope

(1) These rules apply to:

(a) Laboratories seeking accreditation to perform environmental or agricultural laboratory testing;

(b) Laboratories seeking accreditation to perform sampling and laboratory testing of marijuana items as required by ORS 475B.565; and

(c) Accredited laboratories performing:

(A) Environmental or agricultural testing; or

(B) Sampling and testing of marijuana items.

(2) Accreditation as described in these rules is required for all laboratories reporting drinking water analysis results to the Oregon Health Authority except for Oregon Department of Agriculture Laboratory, Oregon Department of Environmental Quality Laboratory and the Oregon State Public Health Laboratory which must be certified by the United States Environmental Protection Agency for drinking water analysis.

(3) Accreditation as described in these rules is required for all Oregon laboratories testing marijuana items.

Stat. Auth.: ORS 448.150(1), 448.131, 448.280(1)(b) & (2), 438.605, 438.610, 438.615, 438.620 & 475B.565
Stats. Implemented: ORS 448.280(1)(b) & (2), 438.605, 438.610, 438.615, 438.620 & 475B.565
Hist.: OHD 7-1999, f. & cert. ef. 10-26-99; OHD 16-2002, f. & cert. ef. 10-10-02; PH 13-2003(Temp), f. & cert. ef. 9-22-03 thru 3-20-04; PH 20-2003, f. 12-02-03, cert. ef. 12-08-03; PH 6-2011, f. & cert. ef. 8-9-11; PH 31-2015(Temp), f. 12-29-15, cert. ef. 1-1-16 thru 6-28-16; PH 17-2016, f. & cert. ef. 6-7-16

333-064-0025
Definitions

As used in these rules, unless the context indicates otherwise:

(1) "Accrediting Body" means the official accrediting authority for the Oregon Environmental Laboratory Accreditation Program comprised of the Administrator of the Oregon State Public Health Laboratory or designee, the Laboratory Administrator of the Department of Environmental Quality or designee and the Laboratory Administrator of the Department of Agriculture or designee.

(2) "Air" as a matrix means air samples, which are analyzed for possible contaminants under the guidance of the Clean Air Act.

(3) "Authority" means the Oregon Health Authority.

(4) "Biological Tissue" as a matrix means samples of biological tissue, excluding those of human origin.

(5) "Cannabis Sampling" means an activity related to obtaining a representative sample of a marijuana item for purposes of testing

in accordance with these rules and OAR 333-007-0300 to 333-007-0490.

(6) "Clean Air Act (CAA)" means the enabling legislation, 42 U.S.C. 7401 et seq. (1974), Public Law 91-604, 84 Stat. 1676 Public Law 95-95, 91 Stat., 685 and Public Law 95-190, 91 Stat., 1399, that empowers the EPA to promulgate air quality standards, monitor and enforce them.

(7) "Clean Water Act (CWA)" means the enabling legislation under 33 U.S.C. 1251 et seq., Public Law 92-50086, Stat. 816 that empowers the EPA to set discharge limitations, write discharge permits, monitor and bring enforcement action for non-compliance.

(8) "Drinking Water" as a matrix means samples of presumed potable water and source water, which are analyzed for possible contaminants under the guidance of the Safe Drinking Water Act.

(9) "Fields of Accreditation" means those matrix, technology/method, and analyte combinations for which ORELAP offers accreditation.

(10) "Laboratory" means a fixed location or mobile facility that collects or analyzes samples in a controlled and scientific manner with the appropriate equipment and instruments required by accredited sampling and testing methods.

(11) "Marijuana item" has the meaning given that term in ORS 475B.550.

(12) "Mobile Category 1 Laboratory" means any facility, deployed for no more than six consecutive months and no more than six months during a calendar year, that:

(a) Analyzes samples utilizing the staff and equipment from the parent fixed laboratory;

(b) Operates under the quality system of its parent fixed laboratory;

(c) Is capable of moving or being moved from site to site, such as but not limited to vans, trailers and motor coaches; and

(d) May operate under the fixed laboratory's accreditation.

(13) "Mobile Category 2 Laboratory" means any facility that:

(a) Analyzes samples;

(b) Operates under its own quality system;

(c) Is capable of moving or being moved from site to site, such as but not limited to vans, trailers and motor coaches; and

(d) Issues the final reports or is a mobile laboratory operating with a fixed laboratory's quality system, but is deployed for more than six consecutive months or more than six months in a calendar year.

(14) "National Environmental Laboratory Accreditation Program (NELAP)" means the program established to oversee the implementation of the TNI Standards.

(15) "NELAP approved accrediting body" means a state or federal department/agency that has been approved by NELAP as being an entity whose accreditation and assessment program meets all of the requirements of the TNI Standards.

(16) "Non-Potable Water" as a matrix means aqueous samples, which are analyzed under the guidance of the Clean Water Act or the Resource, Conservation and Recovery Act.

(17) "On-site assessment" means an on-site visit to the laboratory to verify items addressed in the ORELAP application and to evaluate the facility and analytical performance for conformance with the TNI Standards.

(18) "ORELAP approved assessor" means an assessor whose qualification has been evaluated by ORELAP and found to meet TNI Standards for laboratory on-site assessors.

(19) "Primary Accreditation" means accreditation by a NELAP approved accrediting body based on a laboratory's compliance to TNI Standards after a review of the laboratory's application, quality manual, PT results and on-site assessment results as described in the TNI Standards.

(20) "Proficiency testing (PT)" means the analysis of samples obtained from providers that meet the TNI standards for PT providers. The composition of the sample is unknown to the laboratory performing the analysis, and is used in part to evaluate the ability of the laboratory to produce precise and accurate results.

(21) "Public water system" means a water system as defined in OAR 333-061-0010.

(22) "Quality Manual (QM)" means a document stating the management policies, objectives, principles, organizational structure and authority, responsibilities, accountability, and implementation of a laboratory to ensure the quality of its product and the utility of its product to its users.

(23) "Resource Conservation and Recovery Act (RCRA)" means the enabling legislation, 42 U.S.C. section 6901 et seq. (1976), that requires the EPA to protect human health and protecting and monitoring the environment by regulating hazardous waste disposal practices.

(24) "Safe Drinking Water Act (SDWA)" means the SDWA enacted in 1974 and the Safe Drinking Water Amendments of 1986, 42 U.S.C. 300f et seq., Public Law 93-523, that is the enabling legislation that requires the EPA to protect the quality of drinking water in the U.S. by setting maximum allowable contaminant levels, monitoring, and enforcing violations.

(25) "Secondary Accreditation" means the recognition by reciprocity for the fields of accreditation, methods and analytes for which the laboratory holds current primary accreditation by another NELAP approved accrediting body.

(26) "Solids" as a matrix means samples of soil, sludge and other non-aqueous compounds analyzed under the guidance of the Resource, Conservation and Recovery Act. Cannabinoid products and concentrates or extracts as defined in ORS 475B.550 shall be included in this matrix as solids.

(27) "TNI" means the NELAC Institute. TNI is a voluntary organization of state and federal environmental officials and interest groups purposed primarily to establish mutually acceptable standards for accrediting environmental laboratories.

(28) "TNI Standards" means the adopted TNI Standards (© 2009 The NELAC Institute), which are documents describing the elements of laboratory accreditation that was developed and established by the consensus principles of TNI and meets the approval requirements of TNI procedures and policies.

(29) "These rules" means the Oregon Administrative Rules encompassed by OAR 333-064-0005 through 333-064-0065.

(30) "Third party assessor" means an ORELAP approved assessor who has a current contract with the Oregon Health Authority to perform on-site assessments of laboratories for ORELAP and is not employed by the state agencies comprising ORELAP's accrediting body.

(31) "United States Environmental Protection Agency (EPA)" means the federal government agency with the responsibility for protecting public health and safeguarding and improving the natural environment (that is air, water, and land) upon which human life depends.

333-064-0030

Schedule for Requesting Accreditation, Period of Accreditation

(1) Laboratories in Oregon will be considered to be accredited by ORELAP after the laboratory has requested accreditation, been evaluated by ORELAP and has met all criteria in accordance with OAR 333-064-0035.

(2) The accreditation period for each laboratory is for one year with subsequent accreditation periods beginning from the first day the laboratory is granted accreditation.

(3) Laboratories must reapply for ORELAP approval annually, with the application to be received by ORELAP 120 calendar days prior to the expiration of the current accreditation period and with all appropriate fees paid no less than 60 days prior to the expiration of their current certificate of accreditation.

(4) ORELAP-accredited laboratories may apply for accreditation of additional parameters (analytes, methods, matrices) at any time during their accreditation period with accreditation for such parameters expiring with the current accreditation period.

Stat. Auth.: ORS 448.150(1), 448.131, 448.280(1)(b) & (2), 438.610 & 438.615

333-064-0035
Approval Requirements

(1) This rule and the TNI Standards describe the procedure for obtaining and maintaining accreditation.

(2) ORELAP accreditation can be granted, denied, suspended, or revoked in total or in part as described in the TNI Standards.

(3) In no case shall a laboratory be accredited that does not comply with the TNI Standards as specified in this rule.

(4) The elements for accreditation shall include but are not restricted to:

(a) Application for accreditation:

(A) ORELAP will make online, electronic applications available to all laboratories requesting an application.

(B) The laboratory must request ORELAP accreditation by completing and submitting to ORELAP an acceptable application that includes all elements as required by the TNI Standards. For primary accreditation this includes a completed application with all required documents. For secondary accreditation this includes a completed application with all of the required documents plus proof of accreditation from a primary accrediting body.

(b) Laboratory's participation in a biennial on-site assessment(s) as required by the TNI Standards. Environmental testing laboratories seeking initial, primary ORELAP accreditation shall not be granted accreditation prior to an acceptable on-site assessment;

(c) Laboratory's participation in proficiency testing (PT) and the obtaining of acceptable PT results according to the TNI Standards;

(d) A quality manual (QM) that includes all elements as set forth in the TNI Standards;

(e) Laboratory staff members that meet the TNI Standards for training and experience for their responsibilities within the environmental laboratory;

(f) Creation and retention of all records pertaining to samples and analyses, including chain of custody documents, log books, work sheets, raw data, calculations, quality assurance data, and reports according to TNI Standards;

(g) Laboratory's full payment of all appropriate fees as described in OAR 333-064-0060.

333-064-0040
Action Response for Laboratory Drinking Water Analysis Results

(1) If an accredited laboratory is authorized by the water supplier to report results of analyses required by OAR 333-061-0036 and performed by the laboratory directly to the Oregon Health Authority (Authority), then it must do so within 10 days after the end of the month, or within 10 days after the end of the monitoring period.

(2) If a result exceeds the maximum contaminant level (MCL) specified in OAR 333-061-0030:

(a) The accredited lab that issues the final test report must:

(A) Validate the results of any sample analysis and report that analysis directly to the Authority and to the water supplier within 48 hours or two business days of completing the analytical run if the sample analysis:

(i) Exceeds the MCL for nitrate as specified in OAR 333-061-0030(1); or

(ii) Is positive for coliform bacteria.

(B) Report any sample analysis directly to the Authority and to the water supplier within 24 hours or on the next business day after validating a sample result that exceeds the MCL for any chemical analyte specified in OAR 333-061-0030 other than nitrate.

(C) Report any sample analysis directly to the Authority and to the water supplier within 24 hours or on the next business day after obtaining a sample result from a subcontracted laboratory, if the sample analysis:

(i) Exceeds the MCL for nitrate as specified in OAR 333-061-0030(1) or is positive for coliform bacteria; or

(ii) Exceeds the MCL for any chemical analyte specified in OAR 333-061-0030 other than nitrate upon validating the sample analysis.

(b) Accredited, subcontracted laboratories must:

(A) Validate the results of any sample analysis and report that analysis to their client laboratory within 48 hours or two business days of completing the analytical run if the analysis:

(i) Exceeds the MCL for nitrate as specified in OAR 333-061-0030(1); or

(ii) Is positive for coliform bacteria.

(B) Report any sample analysis to their client laboratory within 24 hours or on the next business day after validating a sample result that exceeds the MCL for any chemical analyte specified in OAR 333-061-0030 other than nitrate.

(3) The laboratory must notify the public water system and, if authorized by the water system, the Authority of all unregulated contaminants detected and their concentrations from each specific method used to measure the regulated contaminants.

(4) The laboratory must use report forms that have been approved by the Authority for reporting drinking water test results to the Authority.

333-064-0050
Accreditation of Out-of-State and Mobile Category 2 Laboratories

(1) ORELAP shall accredit out-of-state laboratories that are eligible for reciprocal accreditation provided:

(a) The laboratory is accredited by a state recognized as a NELAP accrediting body for those fields of testing (analytes, methods, matrices) in which the laboratory is requesting accreditation pursuant to this rule.

(b) The laboratory submits to ORELAP an acceptable application as described in OAR 333-064-0035(4).

(c) The laboratory pays all appropriate fees as described in OAR 333-064-0060.

(2) ORELAP may accredit out-of-state laboratories that are located in states that do not have a NELAP approved accrediting body for the fields of testing and matrices in which the laboratory desires accreditation provided that the laboratory complies with all the requirements in OAR 333-064-0035.

(3) ORELAP may accredit mobile category 2 laboratories that do not operate as an entity of an Oregon fixed base facility as out-of-state laboratories. Such laboratories must meet all of the requirements for out-of-state laboratories pursuant to these rules.

Stat. Auth.: ORS 448.150(1) & 448.131, 448.280(1)(b) & (2), 438.605, 438.610, 438.615 & 438.620

333-064-0060
Fee Schedule

Fees will be charged to Oregon and out-of-state laboratories according to the following schedule. A mobile category 2 laboratory that operates as an entity of an Oregon fixed base facility will be considered an in-state laboratory, and one that does not operate as an entity of an Oregon fixed base facility will be considered an out-of-state laboratory. Mobile category 1 laboratories are covered under the parent fixed laboratory's accreditation and are not required to pay an additional fee. Mobile category 2 laboratories require separate accreditation and are accredited to their vehicle identification numbers (VIN).

(1) A non-refundable application fee must be paid for each application requesting accreditation for methods.

(a) For laboratories located in Oregon, one of three levels of fees, Tier 1 at $450, Tier 2 at $900 and Tier 3 at $1,600 will be charged. The Tiers will be determined by the total number of points derived from the number of fields of accreditation requested for accreditation listed in subsections (2)(a) through (c) of this rule.

(A) Each Basic Field of Accreditation has a multiplier of 1.

(B) Each Moderate Field of Accreditation has a multiplier of 3.

(C) Each Complex Field of Accreditation has a multiplier of 5.

(D) Each Advanced Technology Field of Accreditation has a multiplier of 7.

(E) Cannabis Sampling only for application has a multiplier of 11.

(F) The total number of points is determined by first summing the number of fields of accreditation within each category (Basic, Moderate, Complex or Advanced Technology) and then multiplying the sums by their appropriate multiplier as given in this rule. The sum of these results determines the total number of points for each laboratory. Laboratories with a total of 1 to 10 points are to be considered Tier 1 laboratories, 11 to 25 points are Tier 2 laboratories and 26 or more points are Tier 3 laboratories.

(b) For each out-of-state laboratory requesting primary or secondary accreditation through ORELAP, one of three levels of fees, Tier 1 at $1,650, Tier 2 at $2,640 and Tier 3 at $3,960 will be charged with each Tier determined according to subsection (1)(a) of this rule.

(c) If a new owner acquires the laboratory and wishes the laboratory to remain accredited, the laboratory must submit a new owner application, and may be required to pay the application fee and be subject to a new on-site assessment and payment of on-site assessment fees as described in this rule.

(2) Upon ORELAP's review of a laboratory's application, each laboratory requesting primary accreditation through ORELAP, when ORELAP personnel will be used for the assessment, will be charged an assessment fee as follows:

(a) Oregon laboratories will be charged $90 and out-of-state laboratories will be charged $120 for each of the following Basic Fields of Accreditation requested for accreditation:

(A) Gravimetric;

(B) Physical;

(C) Probe.

(b) Oregon laboratories will be charged $350 and out-of-state laboratories will be charged $462 for each of the following Moderate Fields of Accreditation requested for accreditation:

(A) Inorganic Atomic absorption spectrometry;

(B) Inorganic Atomic fluorescence spectrometry;

(C) Inorganic-non-metals automated colorimetric;

(D) Inorganic-non-metals manual colorimetric;

(E) Inorganic-ion chromatography (IC);

(F) Organic-liquid chromatography (LC);

(G) General microbiology including but not limited to these three: 1) Chromofluorogenic; 2) Membrane Filter and /or Heterotrophic Plate Count (HPC); and 3) Multiple Tube Fermentation/Most Probable Number (MPN) (one fee applies for all);

(H) Asbestos (bulk);

(I) Asbestos — electron microscopy.

(c) Oregon laboratories will be charged $500 and out-of-state laboratories will be charged $660 for each of the following Complex Fields of Accreditation requested for accreditation:

(A) Organic — gas chromatography/mass spectrometry (GC/MS) — volatiles;

(B) Organic — gas chromatography/mass spectrometry (GC/MS) — extractables;

(C) Organic — liquid chromatography/mass spectrometry (LC/MS);

(D) Organic — gas chromatography (GC) volatiles, extractables;

(E) Inorganic — metals — inductively coupled plasma/atomic emission spectrometry (ICP/AES);

(F) Inorganic — metals — inductively coupled plasma/mass spectrometry (ICP/MS);

(G) Inorganic — ion chromatography/mass spectrometry (IC/MS);

(H) X-ray;

(I) Whole Effluent Toxicity (WET) immunoassay;

(J) Radiochemistry.

(d) Oregon laboratories will be charged $1,000 and out-of-state laboratories will be charged $1,440 for each of the following Advanced Technology Fields of Accreditation requested for accreditation:

(A) Organic — gas chromatography/tandem mass spectrometry (GC/MS/MS);

(B) Organic — high resolution gas chromatography/high resolution mass spectrometry (HiResGC/HiResMS);

(C) Organic — liquid chromatography/tandem mass spectrometry (LC/MS/MS);

(D) Microbiology — Polymerase chain reaction (PCR);

(E) Mycology and Parasitology — Filtration/Immunomagnetic Separation/Immunoflurorescence Assay microscopy (Filtration/IMS/FA);

(F) Cannabis Sampling.

(e) The following additional fees will be charged to Oregon laboratories for each additional matrix per field of accreditation for which the laboratory has requested accreditation:

(A) $10 for Basic Fields of Accreditation.

(B) $40 for Moderate Fields of Accreditation.

(C) $75 for Complex Fields of Accreditation.

(D) $150 for Advanced Technology Fields of Accreditation.

(f) The following additional fees will be charged to out-of-state laboratories for each additional matrix per field of accreditation for which the laboratory has requested accreditation:

(A) $13 for Basic Fields of Accreditation.

(B) $53 for Moderate Fields of Accreditation.

(C) $100 for Complex Fields of Accreditation.

(D) $198 for Advanced Technology Fields of Accreditation.

(3) For purposes of section (2) of this rule the matrices are:
(a) Air;
(b) Biological tissue;
(c) Drinking water;
(d) Non-potable water; and
(e) Solids.

(4) Assessment fees must be paid before a routine on-site assessment will be performed.

(5) All laboratories must pay the appropriate on-site assessment fee per on-site assessment performed due to just cause according to TNI Standards.

(6) All Oregon laboratories requesting primary accreditation through ORELAP where Oregon state assessor(s) will perform the on-site assessment must pay an on-site trip fee for each on-site assessment. For a mobile category 2 laboratory, the trip fees are waived if it is moved to the Oregon State Public Health Laboratory for the on-site assessment, and reduced to the amount in excess of its fixed base facility when moved to the fixed base facility if both are to be assessed at the same time.

(a) On-site trip fees are $350 for Tier 1, $500 for Tier 2 and $1,000 for Tier 3 laboratories with the Tiers determined according to subsection (1)(a) of this rule.

(b) All laboratories must pay the appropriate on-site trip fee for performing each required on-site assessment and additional assessments as requested by the laboratory for accreditation for additional fields of accreditation and matrices.

(c) All laboratories must pay the appropriate on-site trip fee per on-site assessment performed due to just cause according to TNI Standards.

(7) All laboratories located in Oregon requesting primary accreditation through ORELAP where ORELAP has determined that third party assessors will be used, must pay ORELAP application assessment fees plus all third party assessors costs. ORELAP may require the laboratory to pay the on-site assessment costs directly to the third party assessor according to the schedule of the assessor for all required on-site assessments.

(8) All out of-state laboratories must pay all on-site assessment costs incurred by ORELAP approved assessors to perform the on-site assessment including but not limited to transportation, per diem and wages during travel. For a mobile category 2 laboratory, the travel costs are waived if it is moved to the Oregon State Public Health Laboratory for the on-site assessment, and reduced to the amount in excess of its fixed base facility when moved to the fixed base facility if both are to be assessed at the same time. The excess amount is to be determined by those fields of accreditation and matrices requested for accreditation by the mobile lab that have not been requested by its fixed based facility. If third party assessors are used, ORELAP may require the lab to pay the on-site assessment costs directly to the assessor according to the schedule of the assessor for all required inspections.

(9) Accredited laboratories requesting additions to their fields of accreditation during the accreditation period must pay:

(a) The difference in cost of the application fee with a minimum fee of $200;

(b) The difference in cost of the assessment fee;

(c) An on-site trip fee, as described in subsection (6)(a) and section (8) of this rule, based only on the additional parameters if ORELAP determines that an on-site assessment is required.

333-064-0065
Civil Penalties

(1) In addition to any other penalty provided by law, the Oregon Health Authority, in collaboration with the accrediting body, may impose a civil penalty not to exceed $500 per day per violation upon any and all laboratories that:

(a) Falsely purport to be ORELAP accredited;

(b) Improperly use their ORELAP accreditation status in order to mislead; or

(c) Use the TNI\NELAP logo in catalogs, advertisements, business solicitations, proposals, quotations, laboratory reports and other materials without proper authorization.

(2) The Oregon Health Authority reserves the right to pursue other remedies and may take any other disciplinary action against alleged violators.

(3) In establishing the amount of the penalty for each violation, the Oregon Health Authority will consider, but not be limited to the following factors:

(a) The gravity and magnitude of the violation;

(b) The laboratory's previous record of complying or failing to comply with this rule.

(c) The laboratory's history in taking all feasible steps or in following all procedures necessary or appropriate to correct the violation; and,

(d) Such other considerations as the Oregon Health Authority may consider appropriate.

(4) The Oregon Health Authority in collaboration the accrediting body may deny, suspend or revoke accreditation of any laboratory that fails to pay on demand a civil penalty that has become due and payable, provided that it first gives the laboratory an opportunity for a hearing as outlined in ORS chapter 183.

Oregon Environmental Laboratory Accreditation Program (ORELAP)

333-064-0100
Marijuana Item Sampling Procedures and Testing

(1) For purposes of this rule the definitions in OAR 333-007-0310 apply unless the context indicates otherwise.

(2) Sampling.

(a) A laboratory must prepare marijuana item sampling policies and procedures that contain all of the information necessary for collecting and transporting samples from a marijuana item in a manner that does not endanger the integrity of the sample for any analysis required by this rule. These policies and procedures must be appropriate to the matrix being sampled.

(b) Sampling policies and procedures must be accredited by ORELAP prior to any marijuana samples being taken. The policies and procedures must be consistent with the following ORELAP sampling protocols approved by the accrediting body, incorporated by reference:

(A) Usable Marijuana: ORELAP-SOP-001 Rev 2.0;

(B) Concentrates and Extract: ORELAP-SOP-002 Rev 2.0; and

(C) Cannabis Products: ORELAP-SOP-003 Rev 2.0. [Sampling protocols may be found on the ORELAP and Cannabis Testing webpage, public.health.oregon.gov/LaboratoryServices/EnvironmentalLaboratoryAccreditation/Pages/cannabis-info.aspx]

(c) Care should be taken by laboratory personnel while sampling to avoid contamination of the non-sampled material. Sample containers must be free of analytes of interest and appropriate for the analyses requested.

(d) A sufficient sample size must be taken for analysis of all requested tests and the quality control performed by the testing laboratory for these tests.

(e) A laboratory must comply with any recording requirements for samples and subsamples in the accredited policies and procedures and at a minimum:

(A) Record the location of each sample and subsample taken.

(B) Assign a field identification number for each sample, subsample and field duplicate that have an unequivocal link to the laboratory analysis identification.

(C) Assign a unique identification number for the test batch in accordance with OAR 333-007-0370 and TNI EL standard requirements.

(D) Have a documented system for uniquely identifying the samples to be tested to ensure there can be no confusion regarding the identity of such samples at any time. This system must include identification for all samples, subsamples, preservations, sample containers, tests, and subsequent extracts or digestates.

(E) Place the laboratory identification code as a durable mark on each sample container.

(F) Enter a unique identification number into the laboratory records. This number must be the link that associates the sample with related laboratory activities such as sample preparation. In cases where the sample collector and analyst are the same individual, or the laboratory pre-assigns numbers to sample containers, the unique identification number may be the same as the field identification code.

(f) Combining subsamples.

(A) Subsamples collected from the same batch must be combined into a single sample by a laboratory prior to testing unless the batch is undergoing process validation or has not yet gone through process validation.

(B) Subsamples and samples collected from different batches may not be combined.

(C) Field duplicates may not be combined with the primary samples.

(3) THC and CBD testing validity. When testing a sample for THC and CBD a laboratory must comply with additional method validation as follows:

(a) Run a laboratory control standard in accordance with TNI standards requirements within acceptance criteria of 70 percent to 130 percent recovery.

(b) Analyze field duplicates of samples within precision control limits of plus or minus 20 percent RPD, if field duplicates are required.

(4) Calculating total THC and total CBD.

(a) Total THC must be calculated as follows, where M is the mass or mass fraction of delta-9 THC or delta-9 THCA:

$M_{\text{total delta-9 THC}} = M_{\text{delta-9 THC}} + 0.877 \times M_{\text{delta-9 THCA}}$.

(b) Total CBD must be calculated as follows, where M is the mass or mass fraction of CBD and CBDA:

$M_{\text{total CBD}} = M_{\text{CBD}} + 0.877 \times M_{\text{CBDA}}$.

(c) Each test report must include the total THC and total CBD.

(5) Report total THC and total CBD as Dry Weight. A laboratory must report total THC and Total CBD content by dry weight calculated as follows:

$P_{\text{total THC(dry)}} = P_{\text{total THC(wet)}} / [1-(P_{\text{moisture}}/100)]$

$P_{\text{total CBD(dry)}} = P_{\text{total CBD(wet)}} / [1-(P_{\text{moisture}}/100)]$

(6) Calculating RPD and RSD.

(a) A laboratory must use the following calculation for determining RPD:

RPD= *(sample result–duplicate result)(sample result+duplicate result*2

(b) A laboratory must use the following calculation for determining RSD:

% RSD= sx x*100%*

s=i=0n(xi–x)2(n–1)

(c) For purposes of this section:

(A) S = standard deviation.

(B) n = total number of values.

(C) x_i = each individual value used to calculate mean.

(D) x = mean of n values.

(d) For calculating both RPD and RSD if any results are less than the LOQ the absolute value of the LOQ is used in the equation.

(7) Tentative Identification of Compounds (TIC).

(a) If a laboratory is using a gas chromatography mass spectrometry instrument for analysis when testing cannabinoid concentrates or extracts for solvents and determines that a sample may contain compounds that are not included in the list of analytes the laboratory is testing for the laboratory must attempt to achieve tentative identification.

(b) Tentative identification is achieved by searching NIST 2014 or an equivalent database (>250,000 compounds).

(c) A laboratory shall report to the licensee or registrant and the Authority or the Commission, depending on which agency has jurisdiction, up to five tentatively identified compounds (TICS) that have the greatest apparent concentration.

(d) Match scores for background subtracted or deconvoluted spectra should exceed 90 percent compared to library spectrum.

(A) The top five matches over 90 percent must be reported by the lab

(B) TIC quantitation is estimated by comparing analyte area to the closest internal standard area and assuming a response factor (RF) =1.

(8) A laboratory must provide:

(a) Any pesticide test result to the Department of Agriculture upon that agency's request.

(b) A sample or a portion of a sample to the Department of Agriculture upon that agency's request, document the chain of custody from the laboratory to the Department, and document that the sample or portion of the sample was provided to the Department in the Commission's seed to sale tracking system.

(9) A laboratory performing tests for a licensee must enter any information required by the Commission in the Commission's seed to sale tracking system.

(10) A laboratory performing tests for a registrant must comply with the documentation requirements in OAR 333-007-0370.

(11) The Authority may, in its discretion, deviate from TNI Standards in order to comply with OAR 333-007-0400 to 333-007-0490 and these rules based on the state's needs.

Stat. Auth.: ORS 438.605, 438.610, 438.615 & 438.620, ORS 475B.555.

Stats. Implemented: ORS 438.605, 438.610, 438.615 & 438.620, ORS 475B.555

333-064-0110

Reporting Marijuana Test Results

(1) For purposes of this rule the definitions in OAR 333-007-0310 apply unless the context indicates otherwise.

(2) Within 24 hours of completion of the laboratory's data review and approval procedures a laboratory must report all failed tests for testing required under OAR 333-007-0300 to 333-007-0490 except for failed water activity, whether or not the lab is reanalyzing the sample under OAR 333-007-0450:

(a) Into the Commission's seed to sale tracking system if performing testing for a licensee; and

(b) To the Authority electronically at www.healthoregon.org/ommp if performing testing for a registrant.

(3) The laboratory must report all test results required under OAR 333-007-0300 to 333-007-0490 that have not been reported under section (2) of this rule into the Commission's seed to sale tracking system if performing testing for a licensee.

(4) A laboratory must determine and include on each test report its limit of quantification (LOQ) for each analyte listed in OAR 333-007-0400 Table 3 and OAR 333-007-0410 Table 4.

(5) When reporting pesticide testing results the laboratory must include in the report any target compound that falls below the LOQ that has a signal to noise ratio of greater than 3:1 and meets identification criteria with a result of "detected."

(6) A test report must include any associated test batch numbers and the date each test was completed.

(7) A laboratory that is reporting failed test results to the Commission or the Authority in accordance with section (2) of this rule must report the failed test at the same time or before reporting to the licensee or registrant.

(8) In addition to reporting failed test results in accordance with section (2) of this rule a laboratory conducting testing for a registrant must report to the Authority electronically at www.healthoregon.org/ommp any pesticide testing report with a "detected" as described in section (5) of this rule.

(9) Test results expire after one year.

DIVISION 68

ACCREDITATION OF TRAINING PROGRAMS FOR PROFESSIONALS ENGAGED IN LEAD-BASED PAINT ACTIVITES

333-068-0005
Authority, Purpose, Scope

(1) Authority. These rules are promulgated in accordance with and under the authority of ORS 431.920.

(2) Purpose. These rules prescribe the requirements for accredited training programs to ensure a properly trained workforce to perform inspection, risk assessment and abatement of hazards associated with lead-based paint. These rules are designed to ensure that good quality training is available to those who need or want to have training in lead-based paint inspection, assessment or abatement activities.

(3) Scope.

(a) A training program may seek accreditation to offer lead-based paint activity courses in any of the following disciplines: inspector, risk assessor, supervisor, project designer, and abatement worker. A training program accredited in a discipline may also seek accreditation to offer refresher courses for the discipline.

(b) These rules prescribe the requirements for training programs to provide, offer, or claim to provide Authority accredited lead-based paint activities courses.

(c) These rules prescribe those actions or circumstances that constitute failure to achieve or maintain competency, or that otherwise are contrary to the public interest, for which the Authority may deny, suspend, or revoke accreditation.

(d) These rules provide criteria for the certification by the Authority and licensure by the Construction Contractors Board (CCB) of persons and the firms employing persons who have completed accredited training.

(e) These rules establish fees to the extent necessary to defray costs of those activities prescribed herein.

Stat. Auth.: ORS 431.920
Stats. Implemented: ORS 431.920

333-068-0015
Definitions

As used in these rules unless otherwise required by context:

(1) "Abatement" means any measure or set of measures designed to permanently eliminate lead-based paint hazards including, but not limited to:

(a) The removal of lead-based paint and lead-contaminated dust, the permanent enclosure or encapsulation of lead-based paint, the replacement of lead-painted surfaces or fixtures, and the removal or covering of lead-contaminated soil; and

(b) All preparation, cleanup, disposal, and post-abatement clearance examination activities associated with such measures;

(c) Specifically, abatement includes, but is not limited to:

(A) Projects for which there is a written contract or other documentation, which provides that an individual or firm will be conducting activities in or to a residential dwelling or child-occupied facility that results in permanent elimination of lead-based paint hazards or designed to permanently eliminate lead-based paint hazards as described in subsections (1)(a) and (1)(b) above.

(B) Projects resulting in the permanent elimination of lead-based paint hazards, conducted by certified and licensed firms or individuals, unless such projects are covered under subsection (1)(d) of this definition.

(c) Projects resulting in the permanent elimination of lead-based paint hazards; conducted by firms or individuals who, through their company name or promotional literature, represent, advertise, or hold themselves out to be in the business of performing lead-based paint activities, unless such projects are covered under subsection (1)(d) of this section.

(d) Projects resulting in the permanent elimination of lead-based paint hazards that are conducted in response to state or local abatement orders.

(e) Abatement does not include renovation, remodeling, landscaping or other activities, when such activities are not designed to permanently eliminate lead-based paint hazards, but, instead, are designed to repair, restore, or remodel a given structure or dwelling, even though these activities may incidentally result in a reduction or elimination of lead-based paint hazards. Furthermore, abatement does not include interim controls, operations and maintenance activities, or other measures and activities designed to temporarily, but not permanently, reduce lead-based paint hazards.

(2) "Accreditation" means the process whereby the Authority has reviewed and approved a training program's written application with associated materials for accreditation, and has conducted an on-site audit finding the training program in compliance as specified in these rules.

(3) "Accredited Training Program" means an individual, corporation, partnership or other unincorporated association or public entity to which the Authority, the U.S. Environmental Protection Agency (EPA), or an EPA-authorized state or tribal program has received accreditation or provisional accreditation to provide training for individuals engaged in lead-based paint activities.

(4) "Approved" means approved in writing by the Authority.

(5) "Authority" means the Oregon Health Authority.

(6) "Certified" means successful completion of a training program accredited by the Authority, EPA or an EPA-authorized state or tribal program, passage of a certification examination administered by the Authority, satisfaction of any other requirements for the appropriate discipline, and submittal and approval of the appropriate application by the Authority for inspection, risk assessment or abatement activities in target housing and child-occupied facilities.

(7) "Certified firm" means a company, partnership, corporation, sole proprietorship, association, or other business entity that performs lead-based paint activities that the Authority has issued a certificate under OAR 333-069-0005 through 333-069-0090.

(8) "Clearance examination" means visual examination and clearance testing performed following abatement of lead-based paint or lead-based paint hazards using documented methodologies as defined in this section. Such examination shall be performed by a person certified to perform risk assessments or lead-based paint inspections.

(9) "Clearance examination standards" means values that indicate the maximum amount of lead permitted in dust on a surface or in soil following completion of an abatement activity. Standards for lead in dust are 40 micrograms per square foot ($\mu g/ft^2$) on floors, 250 $\mu g/ft^2$ on interior window sills, and 400 $\mu g/ft^2$ on window troughs. The values for lead in soil are 400 parts per million (ppm) in play areas and 1,200 ppm in the remainder of the yard.

(10) "Contact hour" means 60 minutes of lead-based paint related training which may include a break of not more than 10 minutes.

(11) "Course completion document" means documentation issued by an accredited training program to an individual as proof of successful completion of an Authority approved lead-based paint course or refresher training course.

(12) "Demonstration testing" means the observation and scoring of a student's job task and equipment use skills taught during a course or refresher training course.

(13) "Discipline" means a specific type or category of lead-based paint activity.

(14) "Guest instructor" means an individual who is responsible for providing less than 30 percent of training in any course.

(15) "Hands-on training" means training during which students practice skills that they will be expected to perform at the worksite.

(16) "Inspection" means a surface-by-surface investigation to determine the presence of lead-based paint and the provision of a report, in writing, explaining the results of the investigation.

(17) "Inspector" means an individual who is certified by the Authority to conduct in target housing and child-occupied facilities a surface-by-surface investigation to determine the presence of lead-based paint and the provision of a written report explaining the results of the investigation; and to collect dust-wipe and soil samples incidental to post-abatement clearance examination, in accordance with OAR 333-069-0070.

(18) "Instructor" means an individual who is responsible for providing 30 percent or more of training in any course.

(19) "Interactive/participatory teaching methods" means instruction which consists of active participation of the students, such as brainstorming, hands-on training, demonstration and practice, small group problem-solving, learning games, discussions, risk mapping, field visits, walk-throughs, problem-posing, group work assignments, homework review sessions, question-and-answer periods, skits, or role-playing sessions. Lecture is not considered an interactive/participatory teaching method.

(20) "Job tasks" mean the specific activities performed in the context of work.

(21) "Lead-based paint" means paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

(22) "Lead-based paint activities" means, in the case of target housing and child-occupied facilities, inspection, risk-assessment, and abatement.

(23) "Lead-based paint hazard" means any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, lead-contaminated paint that is deteriorated or present in accessible surfaces, friction surfaces or impact surfaces that would result in adverse human health effects.

(24) "Licensed" means a person who has been certified by the Authority in one or more disciplines and has completed the requirements of the CCB.

(25) "Person" means individuals, corporations, associations, firms, partnerships, joint stock companies, and public entities.

(26) "Principal instructor" means the individual who has the primary responsibility for organizing and teaching a particular course.

(27) "Proficiency test" means any alternative to a conventional written examination that is used to measure a trainee's mastery of course content. An oral examination offered to a trainee with a manual disability is an example of a proficiency test.

(28) "Provisional accreditation" means the Authority has reviewed and finds acceptable a training program's written application for accreditation, but has not conducted an on-site audit as specified in these rules.

(29) "Project designer" means an individual who is certified by the Authority and licensed by the CCB to interpret lead inspection or risk assessment reports and to develop plans, specifications, and project procedures for lead abatement projects in target housing and child-occupied facilities, including, occupant notification and protection, clean-up and clearance, and abatement reports.

(30) "Refresher training course" means a minimum seven hour training course (or four hours for project designer) accredited by the Authority to update an individual's knowledge and skills in the discipline in which training is offered.

(31) "Risk assessment" means an on-site investigation to determine the existence, nature, severity, and location of lead-based paint hazards, and the provision of a report by the individual or the firm conducting the risk assessment, explaining the results of the investigation and options for reducing lead-based hazards.

(32) "Risk assessor" means an individual who is certified by the Authority and licensed by the CCB to conduct, in target housing and child-occupied facilities, on-site investigations to determine the existence, nature, severity, and location of lead-based paint hazards, and to provide a report explaining the results of the investigation and options for reducing lead-based hazards; and who may conduct a lead-hazard investigation, in accordance with OAR 333-069-0070.

(33) "Sample quality control" means a plan or design which ensures the authenticity, integrity, and accuracy of samples, including dust, soil, and paint chip or film samples. Sample quality control also includes provisions for representative sampling and control samples.

(34) "Supervisor" means an individual who is certified by the Authority and licensed by the CCB to either conduct or oversee and direct the work-site conduct of lead-based paint abatement and clearance activities in target housing and child-occupied facilities, and to prepare occupant protection plans and abatement reports in accordance with OAR 333-069-0070.

(35) "These rules" means OAR 333-068-0005 through 333-068-0065.

(36) "Training manager" means the individual responsible for administering a training program and monitoring the performance of principal instructors and guest instructors.

(37) "Worker" means an individual who is certified by the Authority and licensed by the CCB to conduct work site lead-based paint abatement activities in target housing and child-occupied facilities in accordance with OAR 333-069-0070.

333-068-0020
Accreditation Required

(1) No person shall provide, offer, or claim to provide an accredited lead-based paint activities course unless the person has received accreditation or provisional accreditation from the Authority.

(2) Curriculums may be accredited for the initial and refresher training courses for inspector, risk assessor, abatement worker, supervisor, and project designer.

(3) Only Authority accredited or provisionally accredited training programs are eligible to offer refresher training courses for lead-based paint discipline courses.

(4) To qualify for and maintain accreditation, a training program shall:

(a) Propose and offer at least one accredited or provisionally accredited lead-based paint training course.

(b) Conform with personnel, operational and curriculum requirements.

(c) Comply with accreditation application and procedural requirements.

(5) The Authority shall review and approve or deny accreditation, provisional accreditation, or renewal of accreditation of any applicant.

(a) If approved, a written notice shall be sent to the applicant.

(b) If denied, the Authority shall state, in writing, the reasons for denial. An applicant may reapply for accreditation of the same course after a period of 30 days from the date the application was denied.

(6) Provisional status shall be removed upon an on-site audit stating that requirements for Authority approval are satisfied.

(a) A provisional accredited or accredited training program shall permit the Authority to conduct an audit without charge to the Authority.

(b) Advance notice shall not be required prior to conducting an audit.

(c) An audit shall be performed on-site and shall include, but not be limited to, a review of: records, including course completion forms and attendance records; facilities; instructional curriculum; examination design, administration and security procedures, and

results, including those of demonstration testing; classroom instruction; audio-visual materials; course content; and coverage.

(7) Accreditation must be obtained and maintained for each training course and refresher training course.

(8) Accreditation shall be valid for 1 year, must be renewed annually, and shall not be transferrable.

(9) Accreditation based on a valid lead-based paint accreditation issued by the EPA or by an EPA-authorized state or tribal program shall be issued with an expiration date not to exceed the date of expiration listed on the EPA or EPA-authorized state or tribal accreditation document.

(10) The provider of an accredited or provisionally accredited training course shall submit for review a written description of changes in method or content that affect one-half hour or more of contact instruction.

(11) A provider of an accredited training course may not implement changes in method or content that affect one-half hour or more of contact instruction without prior approval of the Authority.

(12) An accredited or provisionally accredited training program shall permit the Authority to conduct unannounced on-site audits at any time.

(13) An accredited or provisionally accredited training program shall notify the Authority within 30 days of any change to the current application.

333-068-0025
Application

(1) Submittal of a completed application for course accreditation or re-accreditation shall include:

(a) Name, address, and phone number of training program and training program manager.

(b) List of course(s) for which accreditation is being applied.

(c) Training program manager signed statement certifying each instructor meets qualifications under OAR 333-068-0030 in these rules, as well as, a list of the topics/skill areas to be taught by each instructor.

(d) A copy of the entire course or refresher course instruction curriculum, including, but not limited to: learning objectives; documentation of course agenda with time allocation for each course topic and sequence of topics to be covered during the course(s); student and instructor manuals, handouts, quizzes and homework.

(e) Copy of the test blueprint describing the portion of test questions devoted to each major course topic.

(f) Description of the classroom and field site training facilities, equipment for lecture and hands-on training and equipment storage.

(g) Description of the procedures for conducting the assessment of the hands-on skills and evaluation testing of trainees' ability to perform work practices.

(h) A copy of the quality control plan developed by the training manager. The plan shall be used to maintain and improve the training program and contain at least the following elements:

(A) Procedures for periodic revision of training materials and course test to be current with innovations in the field.

(B) Procedures for the training manager's annual review of principle instructor competency.

(i) An example of numbered certificates to be issued to students who successfully complete the training course.

(j) Description of record keeping procedures.

(k) Schedule of anticipated course dates and location(s).

(l) Description of the amount of time and type of hands-on training including student-to-instructor ratio during hands-on training.

(m) Description of the teaching methods to be used for each major topic and for hands-on training.

(n) Description of the audio/visual aids to be used for each major topic.

(2) The program application materials shall demonstrate that it meets the minimum requirements for each discipline for which the program is seeking accreditation.

(3) Documentation of compliance with Oregon Administrative Rules for radioactive lead detection devices in accordance with OAR chapter 333, divisions 102 and 103, which includes, but is not limited to, licensing, storage, and use requirements shall be provided.

(4) Documentation of accreditation issued by the EPA or an EPA-authorized state or tribal program, if applicable.

(5) Applicants for accreditation based on accreditation from the EPA or an EPA-authorized state or tribal program must document to the Authority that they have read and understand the accreditation standards as described in these rules.

(6) When re-accrediting, the training program shall submit a completed application form and required documentation, except for unchanged information and documentation that was submitted with the original application.

(7) When seeking accreditation to offer an additional course, the training program shall submit a completed application form and required documentation, except for unchanged information and documentation submitted with the original application for accreditation.

(8) The Authority may deny an application for accreditation or re-accreditation of a training course for any of the following reasons:

(a) Failure to complete application in accordance with Authority policy or instructions.

(b) Failure to meet minimum curriculum standards as set forth in these rules.

(c) Failure to meet minimum operational standards as set forth in these rules.

(d) Failure to pass a field audit conducted in accordance with Authority policy and procedures.

(9) An applicant whose application for accreditation or re-accreditation of a training course has been denied by the Authority may submit another application for accreditation or reaccreditation of the course after a period of 30 days from the date the application was denied.

(10) The Authority may withdraw provisional accreditation of a training program following the failure of a field audit of that course. If provisional accreditation is withdrawn by the Authority, the training program is required to receive written permission from the Authority before continuing to offer the course for which provisional accreditation has been withdrawn.

Stat. Auth.: ORS 431.920
Stats. Implemented: ORS 431.920

333-068-0030
Minimum Personnel Requirements

(1) The training program shall be administered by a training manager having the following minimum qualifications:

(a) Two years of experience administering training programs or two years of experience teaching or training adults;

(b) Successful completion of a course that provides instruction in the planning and teaching of an adult education course, or has obtained a bachelor's or graduate level degree in adult education from an accredited college or university;

(c) A bachelor's or graduate degree in building construction technology, engineering, industrial hygiene, safety, public health, education, business administration or program management including: lead or asbestos abatement, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene;

(d) Successful completion of at least 16 contact hours of lead-based paint training from any of the required topics listed in OAR 333-068-0040.

(2) Each training program shall be taught by a principal instructor who shall be responsible for the organization of the course, teaching of all course material, may deliver course content and has the following minimum qualifications:

(a) Has completed a course that provides instruction in the planning and teaching of any adult education course, or has obtained a degree in adult education from an accredited college or university, or has at least two years of classroom experience in teaching workers or adults;

(b) Successful completion of at least 16 contact hours lead-based paint training from any of the required topics listed in OAR 333-068-0040;

(c) Demonstrated one year of experience, education, or training in lead or asbestos abatement, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene. Except, that instructors of hands-on training must have two years of such experience; and

(d) Successful completion of seven contact hours of an Authority accredited refresher training instruction annually.

(3) Only a principal instructor receiving a satisfactory annual performance review by the training manager shall provide course or refresher training, unless the instructor is also the training manager.

(4) The training manager may designate guest instructors as needed for teaching particular skills specific to the lecture, hands-on activities, or work practice components of a course.

(a) Each qualified guest instructor shall have a minimum of one year of experience related to the subject matter that they teach.

(b) Except that, guest instructors of hands-on training shall have a minimum of two years of lead-based paint activities experience.

(5) The maximum student to instructor ratio shall be 30 to 1 for classroom training and 10 to 1 for hands-on instruction.

Stat. Auth.: ORS 431.920
Stats. Implemented: ORS 431.920
Hist.: HD 19-1997, f. & cert. ef. 12-12-97; OHD 1-1999, f. & cert. ef. 1-19-99; PH 4-2011, f. & cert. ef. 6-16-11

333-068-0035
Minimum Operation Requirements

(1) The training program shall have available and provide adequate facilities for delivery of the lecture, hands-on training and assessment activities. This includes training equipment that reflects current work practices, and maintaining or updating the equipment and facilities as needed.

(2) For each course offered, the training program shall conduct at the completion of each course a course test composed of questions relevant to the objectives of the course and, if applicable, a hands-on skills assessment, or in the alternative, a proficiency test for that discipline.

(a) The written course examination shall contain a minimum of 50 questions, which shall be presented in multiple-choice format.

(b) A member of the training staff or a designated proctor must remain in the room where the examination is being administered until all trainees have completed the exam.

(c) Each trainee must successfully complete the hands-on skills assessment and receive a passing score on the written course test to pass any course, or successfully complete a proficiency test.

(d) The hands-on skill assessment is an evaluation of the effectiveness of the hands-on training which shall test the ability of the trainees to demonstrate satisfactory performance of work practices and procedures in OAR 333-069-0070, as well as any other skills demonstrated in the course.

(3) The training manager is responsible for maintaining the validity and integrity of the hands-on skills assessment or proficiency test to assure that it accurately evaluates the trainee's performance of the work practices and procedures associated with the course topics.

(4) The training manager is responsible for maintaining the validity and integrity of the course test to ensure that it accurately evaluates the trainee's knowledge and retention of the course topics.

(a) The course test is an evaluation of the overall effectiveness of the training which shall test the trainee's knowledge and retention of the topics covered during the course. A score of 70 percent is considered passing the course test.

(b) The course test shall be developed in accordance with the test blueprint submitted with the training course accreditation application.

(5) Training programs shall issue unique course completion certificates to each individual who successfully completes the course requirements. The course completion certificate shall include:

(a) The name, a unique identification number, and the individual's address;

(b) Name of particular course completed;

(c) Dates of course completion/test passage;

(d) Expiration date of certification, which shall be six months from date of course completion;

(e) Name, address, and telephone number of training program

(6) The training manager shall develop and implement a quality control plan to be used to maintain or improve the quality of the training program and contain at least:

(a) Procedures for periodic revision of training materials and course test to reflect innovations in the field; and

(b) Procedures for training manager's annual review of instructor competency.

(7) The training manager shall offer courses which teach the work practice standards, testing criteria and field measurements for conducting lead-based paint activities and other lead-based paint standards that are at least as protective of the environment and of public health as those developed by the EPA, and in accordance with worker safety requirements of the Oregon Occupational Safety and Health Administration (OR-OSHA), and based on principles and practices determined to protect the environment and human beings from exposure to lead contaminants. These standards shall be taught in the appropriate courses to provide trainees with the knowledge needed to perform the lead-based paint activities they are responsible for conducting

(8) The training manager shall be responsible for ensuring that the training program complies at all times with the accreditation regulations.

(9) The training manager shall provide the Authority with a current listing of training courses including the date, time and location of scheduled lead-based paint training courses.

(10) The training manager shall permit the Authority to conduct a course audit without charge to the Authority.

(a) Advance notice shall not be required prior to conducting a course audit to verify the contents of the application for accreditation.

(b) A course audit shall be performed on-site and shall include, but not be limited to, a review of: instructional curriculum; examination design, administration and security procedures, and results, including those of demonstration testing; classroom instruction; audio-visual materials; course content; coverage; teaching facilities, and equipment licensure.

(11) An accredited training program shall maintain at the principal place of business in Oregon, accurate records of attendance; examination results including demonstration testing; completed course forms; and training director, instructor and guest instructor qualifications, for at least seven years.

Stat. Auth.: ORS 431.920
Stats. Implemented: ORS 431.920

333-068-0040
Minimum Curriculum Requirements

(1) The inspector course shall consist of a minimum of 24 contact hours. At least 10 of the 24 required contact hours shall be taught using interactive/participatory teaching methods, which includes a minimum of eight hours hands-on training.

(a) Classroom instruction shall include, but not be limited to:

(A) Roles and responsibilities of lead-based paint inspector including qualifications and conflicts of interest.

(B) One contact hour of background information on lead, including but not limited to, identification of environmental lead

sources such as surface dust, soil, water, air and food; history of uses and locations of lead and leaded paint in buildings; lead dust and paint characteristics; and summary of abatement control options.

(C) One contact hour of adverse health effects of lead exposure, including but not limited to, nature of lead-related diseases; pathways of exposure and how exposure occurs; dose-response relationships; permissible exposure limit; blood lead levels in children and adults; effects on various body systems; different effects on children and adults including women and the fetus during pregnancy; symptoms and diagnosis of lead poisoning and reportable blood lead levels; how lead in the body is absorbed, distributed and eliminated; medical treatment for lead poisoning including but not limited to chelation therapy.

(D) One contact hour on regulatory review and background information of relevant federal, state, and local regulations including guidance that pertains to lead-based paint and lead-based paint activities.

(E) At least one contact hour on radiation information and safety training requirements including but not limited to:

(i) The Oregon radiation safety training requirements.

(ii) Ionization radiation including atomic structure, units of radiation, radioactivity, radioactive decay, ionization, radiation absorption in matter, and radiation detection.

(iii) Safe use of X-ray florescent (XRF) analyzers, including limitations, transportation, storage, records, record keeping and licensing requirements.

(F) At least two contact hours on lead-based paint respiratory protection and personal protective training that conforms with OAR 437-003-0001(4)(m).

(G) At least six contact hours on inspection work practice standard tasks including, but not limited to:

(i) Legal responsibilities and insurance issues including liabilities, errors and omissions, and bonding.

(ii) Formulation of a testing plan for multi-family dwellings and single family target housing and child-occupied facilities, including notification of property owner and occupants, building access, and use of warning signs.

(iii) Investigation protocol, sample collection including equipment, procedures, quality assurance, contamination factors before, during and after abatement as set forth in the U.S. Housing and Urban Development's (HUD's) " Guidelines for the Evaluation and Control of Lead-based Paint Hazards in Housing" and EPA's "Residential Sampling of Lead: Protocols for Dust and Soil Sampling".

(iv) Sample analysis and quality assurance procedures including National Lead Laboratory Accreditation Program (NLLAP) recognized laboratories to test paint, dust, soil and other media.

(b) Hands-on training shall include performance of tasks including but not limited to:

(A) Lead-based paint inspection methods including selection of rooms and components for sampling or testing.

(B) Paint, dust and soil sampling methodologies.

(C) Clearance standards and testing, including random sampling.

(D) Preparation of a final inspection report.

(2) The risk assessor course shall consist of a minimum of 40 contact hours, which includes a 24 contact hour inspector course. At least 16 of the 40 required contact hours shall be taught using interactive/participatory teaching methods, which includes a minimum of 12 hours of hands-on training.

(a) Classroom instruction shall include, but not be limited to:

(A) Role and responsibilities of a risk assessor including risk assessor qualifications, legal obligations, conflicts of interest, and insurance issues.

(B) Collection of background information to perform a risk assessment

(C) Sources of environmental lead contamination exposure sources including paint, surface dust and soil, water, air, packaging, and food.

(D) Risk assessment report form;

(E) Lead hazard screen protocol;

(F) Development of hazard control options, the role of interim controls, and operations and maintenance activities to reduce lead-based paint hazards.

(G) Preparation of a final risk assessment report;

(H) Record keeping;

(I) At least nine contact hours on lead hazard screen and risk assessment work practice standard tasks for target housing and child-occupied facilities.

(b) Hands-on training shall include performance of tasks including but not limited to:

(A) Visual inspections for the purposes of identifying potential lead-based paint hazard sources;

(B) Sampling for other sources of lead exposure;

(C) Interpretation of lead-based paint and other lead sampling results including all applicable state or federal guidance or regulations pertaining to lead-based paint hazards.

(3) The supervisor course shall consist of at least a minimum of 32 contact hours. At least 13 of the 32 required contact hours shall be taught using interactive/participatory teaching methods which includes a minimum of eight hours hands-on training.

(a) Classroom instruction shall include, but not be limited to:

(A) Roles and responsibilities of lead-based paint supervisor including supervisor qualifications, legal obligations, conflicts of interest, abatement liability, and insurance issues.

(B) Background information on lead, including but not limited to, identification of environmental lead sources such as surface dust, soil, water, air and food; history of uses and locations of lead and leaded paint in buildings; lead dust and paint characteristics; and summary of abatement control options.

(C) Adverse health effects of lead exposure, including but not limited to, nature of lead related diseases; pathways of exposure and how exposure occurs; dose-response relationships; permissible exposure limit; blood lead levels in children and adults; effects on various body systems; different effects on children and adults including women and the fetus during pregnancy; symptoms and diagnosis of poisoning and reportable blood lead levels; how lead in the body is absorbed, distributed and eliminated; medical treatment for lead poisoning including but not limited to chelation therapy.

(D) Regulatory review and background information of relevant federal, state, and local regulations including guidance that pertains to lead-based paint and lead-based paint activities.

(E) At least two contact hours on lead-based paint respiratory protection and personal protective training that conforms with OAR 437-003-0001(64)(m).

(F) Identification and prevention of hazards encountered during lead-based paint activities including potential lead hazard exposure; prevention of lead dust contamination; emergency procedures for sudden releases and electrical, heat stress, fire, explosion and other hazards, chemical air contaminants, and disturbance of friable asbestos.

(G) Record keeping.

(H) Personal hygiene, including entry and exit procedures for the work area, use of showers, avoidance of eating, drinking, smoking, chewing, and applying cosmetics in the work or changing area, avoidance of take-home exposures.

(I) Medical monitoring requirements discussion of need for medical monitoring of lead toxicity and disclosure of lead related medical history and treatment of lead poisoning cases including medical removal and issues involved in selecting medical services.

(J) Hazard communication with property owner, occupants and neighbors relative to the reduction or elimination of lead sources at the job site.

(K) Development and implementation of an occupant protection plan and abatement report.

(L) Clearance examination standards and testing.

(M) Clean-up and waste disposal.

(N) At least six contact hours on supervisor work practice standard tasks including but not limited to:

(i) Interior and exterior leaded paint, soil and dust abatement methods, including chemical, enclosure, manual, mechanical, blasting, and encapsulation; removal and demolition; ventilation and engineering controls; management in place; and clean-up techniques, including high efficiency particulate air (HEPA) vacuums and negative air machines, as described in HUD's "Guidelines for the Evaluation and Control of Lead-based Paint Hazards in Housing."

(ii) Construction and maintenance of containment barriers.

(iii) Warning signs and their placement.

(iv) Electrical and ventilation system lockout and hazardous and non-hazardous waste characterization and disposal.

(b) Hands-on training shall include performance of tasks including but not limited to:

(A) Risk assessment and inspection report interpretation;

(B) Hazard recognition and control;

(C) Respiratory protection and protective clothing;

(D) Lead paint abatement or lead hazard reduction including prohibited methods;

(E) Interior dust abatement/clean-up or lead hazard reduction;

(F) Soil and exterior dust abatement or lead hazard reduction.

(4) The project designer course shall consist of at least a minimum of 40 contact hours, which includes a 32 contact hours supervisor course. At least 16 of the 40 required contact hours shall be taught using interactive/participatory teaching methods, which includes a minimum of eight hours hands-on training and shall include, but not be limited to:

(a) Role and responsibilities of a project designer.

(b) Development and implementation of an occupant protection plan for large scale abatement projects.

(c) Lead-based paint abatement and lead-based paint hazard reduction methods, including restricted practices for large scale projects.

(d) Interior dust abatement/clean-up or lead hazard control and reduction methods for large scale projects.

(e) Clearance examination standards and testing for large scale projects.

(f) Integration of lead-based paint abatement methods with modernization and rehabilitation projects for large scale abatement projects.

(5) The abatement worker course shall consist of at least a minimum of 16 contact hours. At least eight of the 16 required contact hours shall be taught using interactive/participatory teaching methods, which includes a minimum of eight hours hands-on training.

(a) Classroom instruction shall include, but not be limited to:

(A) Role and responsibilities of an abatement worker.

(B) One contact hour of background information on lead, including but not limited to, identification of environmental lead sources such as surface dust, soil, water, air and food; history of uses and locations of lead and leaded paint in buildings; lead dust and paint characteristics; and summary of abatement control options.

(C) One contact hour of adverse health effects of lead exposure, including but not limited to, nature of lead related diseases; pathways of exposure and how exposure occurs; dose-response relationships; permissible exposure limit; blood lead levels in children and adults; effects on various body systems; different effects on children and adults including women and the fetus during pregnancy; symptoms and diagnosis of poisoning and reportable blood lead levels; how lead in the body is absorbed, distributed and eliminated; medical treatment for lead poisoning including but not limited to chelation therapy.

(D) One contact hour on regulatory review and background information of relevant federal, state, and local regulations including guidance that pertains to lead-based paint and lead-based paint activities.

(E) Identification and prevention of hazards encountered during lead-based paint activities including potential lead hazard exposure; prevention of lead dust contamination; emergency procedures for sudden releases and electrical, heat stress, fire, explosion and other hazards, chemical air contaminants, and disturbance of friable asbestos.

(F) At least six contact hours on lead-based paint abatement work practice standard tasks including, but not limited to:

(i) Interior and exterior leaded paint, soil and dust abatement methods, including chemical, enclosure, hand, mechanical, blasting, encapsulation, and management in place, and clean-up techniques, including high efficiency particulate air (HEPA) vacuums and negative air machines, as described in HUD's " Guidelines for the Evaluation and Control of Lead-based Paint Hazards in Housing."

(ii) Construction and maintenance of containment barriers.

(iii) Warning signs and their placement.

(iv) Electrical and ventilation system lockout and hazardous and non-hazardous waste characterization and disposal.

(G) Record keeping.

(H) At least two contact hours on lead-based paint respiratory protection and personal protective training that conforms with OAR 437-003-0001(4)(m).

(I) Personal hygiene, including entry and exit procedures for the work area, use of showers, avoidance of eating, drinking, smoking, chewing, and applying cosmetics in the work or changing area, avoidance of take-home exposures.

(J) Medical monitoring requirements discussion that shall include, but not be limited to, the need for medical monitoring of lead toxicity; the disclosure of lead-related medical history; and the treatment of lead poisoning cases, including issues of medical removal and of selecting medical services.

(K) Hazard communication with property owner, occupants and neighbors relative to the reduction or elimination of lead sources at the job site.

(b) Hands-on training shall include performance of tasks including but not limited to:

(A) Lead-based paint hazard recognition and control;

(B) Lead-based paint abatement and lead-based paint hazard reduction methods, including restricted practices;

(C) Interior dust abatement/clean-up methods or lead hazard reduction;

(D) Soil & exterior dust abatement methods or lead hazard reduction;

(E) Waste disposal.

(6) OR-OSHA respiratory protection and personal protective equipment training is required under these rules. Other OR-OSHA lead-based paint requirements may be included in the training, but are not required by the Authority.

Minimum Requirements for Accreditation of Refresher Training Course

(1) Refresher training shall only be provided by an accredited training program for the same course discipline.

(2) Refresher training course shall consist of at least seven contact hours of training except for the project designer refresher course which shall consist of at least four contact hours of training.

(3) Each refresher training course shall review the curriculum topics of the respective accredited or provisionally accredited lead-based paint training course and include, but not be limited to:

(a) An overview of current lead-based paint safety practices in general, as well as, specific safety practices for the refresher discipline.

(b) An update on current federal, state, and local lead-based paint laws and regulations in general, as well as, specific laws and regulations applicable to the discipline.

(c) An update on current technologies relating to lead-based paint activities in general, as well as, specific information pertaining to the discipline.

(4) Each student shall be required to pass a course test and a hands-on assessment (if applicable) covering course topics and

upon passing the student shall be provided with a course completion certificate.

(5) The training program shall conduct a hands-on assessment, if applicable, and a course completion test for each course offered.

(6) At least 40 percent of refresher education instruction shall be taught using interactive/participatory teaching methods, except for refresher education instruction for lead abatement workers, which shall be taught using at least 50 percent interactive/participatory teaching methods.

(7) A training program seeking accreditation of a refresher course shall submit a written application including:

(a) Name, address, and telephone number;

(b) List of course(s) for which accreditation application is being made;

(c) A copy of student manuals and instructor manuals to be used for each course;

(d) A copy of the course agenda for each course;

(e) Also include with the application for accreditation documentation that complies with OAR 333-068-0030(1) through (4).

333-068-0050
Renewal of Training Program

(1) If a training program meets the regulations for accreditation the program shall be reaccredited. A training program accreditation shall expire one year from date of reaccreditation and shall not be transferable.

(2) A training program seeking reaccreditation shall submit an application to the Authority no later than 60 days before its accreditation expires. If a training program does not submit its application for reaccreditation by that date, the Authority cannot guarantee that the program will be reaccredited before the end of the accreditation period.

(3) The application shall contain:

(a) The training program's name, address, and telephone number;

(b) List of courses for which it is applying for reaccreditation;

(c) Description of any changes or updates to the training facility or equipment; and

(d) The certified statement as described in OAR 333-069-0050(4) below.

(4) The training program's application for reaccreditation shall contain a statement signed by the training program manager certifying that:

(a) The course materials, for each course, meet the minimum training curricula requirements, as appropriate;

(b) The training manager, principal instructors, and guest instructors meet the qualifications in OAR 333-068-0030(1) through 333-068-0030(4);

(c) The training program manager complies at all times with all requirements in OAR 333-068-0030;

(d) The quality control program meets the requirements in OAR 333-068-0025(h); and

(e) The record keeping and reporting requirements of OAR 333-068-0060 shall be followed.

(5) An audit may be performed by the Authority to verify the certified statement and the contents of the application.

333-068-0055
Suspensions, Revocation and Modification of Accredited Training Course Curriculum

(1) After notice and a hearing, the Authority may suspend, revoke, or modify a training program's accreditation if a training program, training manager, or other person with supervisory authority over the program has:

(a) Misrepresented the contents of the training course to the Authority and/or student population;

(b) Failed to submit required notifications in a timely manner;

(c) Failed to maintain required records;

(d) Falsified accreditation records, instructor qualifications, or other accreditation information;

(e) Failed to comply with the training standards and requirements for accreditation of training programs or to deliver the course according to the content and format described in the training program's application for accreditation and granted provisional approval by the Authority.

(f) Failed to comply with federal, state or local lead-based paint statutes or regulations.

(2) In addition to an administrative or judicial finding of violation, execution of a consent agreement in settlement of an enforcement action constitutes evidence of a failure to comply with relevant statutes or regulations.

(3) Training programs shall permit representatives of the Authority to attend any training course for the purpose of evaluation or monitoring of the course without charge.

(4) Prior to suspending, revoking, or modifying an accreditation of a training program the program shall be notified in writing of procedures in accordance with ORS 183.310 to 183.540.

(5) A training program, for whom the Authority has suspended or revoked a training course, must initiate a new application process with the Authority for re-instatement of the training program and may do so after 45 days following the date of the suspension or revocation.

(6) The Authority shall maintain a list, available to the public, of parties whose accreditation has been suspended, revoked, or modified.

333-068-0060
Training Course Record-Keeping

(1) Accredited training programs shall maintain, and make available to the Authority if requested, the following records:

(a) All documents specified in OAR 333-068-0030 that demonstrate the qualifications listed in OAR 333-068-0030(2), (3), and (4) for training manager, principal instructors, and work practice instructors;

(b) Current curriculum, course materials and documents reflecting any changes made to these materials;

(c) Course test blueprint;

(d) Information on how hands-on assessment is conducted including, but not limited to, who conducts the assessment, how skills are graded, what facilities are used, and the pass/fail rate;

(e) The quality control plan;

(f) Results of student's hands-on skills assessments and course tests and a copy of each student's course completion certificate; and

(g) Any other material submitted as part of the program's application for accreditation.

(2) All training course records shall be retained a minimum of seven years at the location specified on the training course accreditation application.

(3) The Authority shall be notified 30 days prior to any change in the training program's current application.

(4) Accredited or provisionally accredited training programs shall provide the Authority with a course roster of persons who have successfully completed the training course within 30 days of course completion.

(5) Accredited or provisionally accredited training programs shall notify the Authority with the location and dates of each course a minimum of 30 days prior to course starting date.

333-068-0065
Fees

The following fees are established:

(1) A non-refundable application fee of $750 for accreditation of a standard lead-based paint inspector or supervisor training

course and $500 for accreditation of a standard lead-based paint risk assessor or worker training course; a non-refundable application fee of $600 for a refresher lead-based paint activities training course covering more than two disciplines; and a non-refundable application fee of $500 for an inspector or supervisor refresher training course; and $350 for a risk assessor or a worker refresher training course.

(2) A non-refundable annual reaccreditation application fee of $300 for any initial standard lead-based paint activities training course for each discipline; a non-refundable annual reaccreditation application fee of $200 for a refresher training course covering more than two disciplines; and a non-refundable annual renewal application fee of $100 for a refresher training course covering up to two disciplines.

(3) For initial accreditation application, the following non-refundable fees shall apply for each standard training or refresher training course: Training manager: $175; Each additional instructor or guest instructor: $90.

(4) For annual reaccreditation application, the following non-refundable fees shall apply for each standard training or refresher training course: Training manager: $100; Each additional instructor or guest instructor: $50.

(5) Applicants for accreditation shall pay no more than the maximum single training manager fee for each training manager. An additional instructor or guest instructor fee shall be paid for every training course that is taught by the training manager.

DIVISION 69

CERTIFICATION OF INDIVIDUALS AND FIRMS ENGAGED IN LEAD-BASED PAINT ACTIVITIES

333-069-0005
Authority, Purpose, Scope

(1) Authority. These rules are promulgated in accordance with and under the authority of ORS 431.920.

(2) Purpose:

(a) The purpose of these rules is to address Oregon's need for a qualified and properly trained workforce to perform inspection, risk assessment and removal of hazards associated with lead-based paint, to safeguard the environment and protect human health, and the health of building occupants, especially for high-risk groups (children under six years of age), from lead-based paint hazards.

(b) These rules prescribe the requirements for certification of individuals and firms engaged in lead-based paint activities in target housing and child-occupied facilities.

(c) These rules will establish work practice standards for the performance of lead-based paint inspection, risk assessment, and abatement activities for individuals and firms and will require that all lead-based paint activities be performed only by certified individuals and firms.

(3) Scope:

(a) These rules apply to all individuals and firms who are engaged in lead-based paint activities for compensation or where a child residing in the building has been identified as having an elevated blood lead level.

(b) These rules establish the requirement that lead-based paint activities be performed only by certified individuals and firms.

(c) These rules prescribe the requirements for, and the manner of, certifying competency of applicants for certification of lead-based paint inspector, risk assessor, supervisor, project designer, and worker, and of firms employing such individuals.

(d) These rules prescribe work practice standards for the removal or mitigation of lead-based paint hazards and for the performance of lead-based paint inspection and risk assessment, and those actions or circumstances that constitute failure to achieve or maintain competency, or that otherwise are contrary to the public interest, for which the Authority may assess civil penalties, deny, suspend, or revoke certification.

(e) These rules establish fees to the extent necessary to defray costs of those activities prescribed herein.

333-069-0015
Definitions

As used in these rules unless otherwise required by context:

(1) "Abatement" means any measure or set of measures designed to permanently eliminate lead-based paint hazards including, but not limited to:

(a) The removal of paint and dust, the permanent enclosure or encapsulation of lead-based paint, the replacement of painted surfaces or fixtures, or the removal or covering of soil, when lead-based paint hazards are present in such paint, dust or soil; and

(b) All preparation, cleanup, disposal, and post-abatement clearance examination activities associated with such measures,

(c) Specifically, abatement includes, but is not limited to:

(A) Projects for which there is a written contract or other documentation, which provides that an individual or firm will be conducting activities in or to a residential dwelling or child-occupied facility that results in permanent elimination of lead-based paint hazards or designed to permanently eliminate lead-based paint hazards and described in subsections (1)(a) and (1)(b) above.

(B) Projects resulting in the permanent elimination of lead-based paint hazards, conducted by certified and licensed firms or individuals, unless such projects are covered under subsection (1)(d) of this definition.

(C) Projects resulting in the permanent elimination of lead-based paint hazards, conducted by certified firms or individuals who, through their company name or promotional literature, represent, advertise, or hold themselves out to be in the business of performing lead-based paint activities, unless such projects are covered under subsection (1)(d) of this section.

(D) Projects resulting in the permanent elimination of lead-based paint hazards that are conducted in response to state or local abatement orders.

(d) Abatement does not include renovation, remodeling, landscaping or other activities, when such activities are not designed to permanently eliminate lead-based paint hazards, but, instead, are designed to repair, restore, or remodel a given structure or dwelling, even though these activities may incidentally result in a reduction or elimination of lead-based paint hazards. Furthermore, abatement does not include interim controls, operations and maintenance activities, or other measures and activities designed to temporarily, but not permanently, reduce lead-based paint hazards.

(2) "Accredited training program" means a training program accredited or provisionally accredited by the Authority, the Environmental Protection Agency (EPA), or an EPA-authorized state or tribal program, to provide training for individuals engaged in lead-based paint activities.

(3) "Arithmetic mean" means the algebraic sum of data values divided by the number of data values (e.g., the sum of the concentration of lead in several soil samples divided by the number of samples).

(4) "Authority" means the Oregon Health Authority.

(5) "Certified" means successful completion of a training program accredited by the Authority, passage of a certification examination administered by the Authority and satisfaction of any other requirements for the appropriate discipline, and submittal and approval of the appropriate application by the Authority for inspection, risk assessment or abatement activities in target housing and child-occupied facilities.

(6) "Certified firm" means a company, partnership, corporation, sole proprietorship, association, or other entity that performs lead-based paint activities to which the Authority has issued a certificate under these rules.

(7) "Chewable surface" means an interior or exterior surface painted with lead-based paint that a young child can mouth or chew. A chewable surface is the same as an accessible surface. Hard metal substrates and other materials that cannot be dented by the bite of a young child are not considered chewable.

(8) "Child-occupied facility" means a building, or a portion of a building, constructed prior to 1978, visited regularly by the same child, under six years of age, on at least two different days within any week (Sunday through Saturday period), provided that each day's visit lasts at least three hours and the combined weekly visit lasts at least six hours, and the combined annual visits last at least 60 hours. Child-occupied facilities may include, but are not limited to, day-care centers, preschools and kindergarten classrooms.

(9) "Clearance examination" means visual examination and clearance testing performed following abatement of lead-based paint or lead-based paint hazards using documented methodologies as defined in this rule. Such examination shall be performed by a person certified to perform risk assessments or lead-based paint inspections.

(10) "Clearance examination standards" means values that indicate the maximum amount of lead permitted in dust on a surface or in soil following completion of an abatement activity. Standards for lead in dust are 40 micrograms per square foot ($\mu g/ft^2$) on floors, 250 $\mu g/ft^2$ on interior window sills, and 400 $\mu g/ft^2$ on window troughs. The values for lead in soil are 400 parts per million (ppm) in play areas and 1,200 ppm in the remainder of the yard.

(11) "Common area" means a portion of a building that is generally accessible to all occupants that may include, but that is not limited to, hallways, stairways, laundry and recreational rooms, playgrounds, community centers, garages, and boundary fences.

(12) "Common area group" means a group of common areas that are similar in design, construction, and function. Common area groups include, but are not limited to hallways, stairwells, and laundry rooms.

(13) "Component" means an architectural element of a dwelling unit or common area identified by type and location, such as a bedroom wall, an exterior window sill, a baseboard in a living room, a kitchen floor, an interior window sill in a bathroom, a porch floor, stair treads in a common stairwell, or an exterior wall.

(14) "Concentration" means the relative content of a specific substance contained within a larger mass, such as the amount of lead (in micrograms per gram or parts per million by weight) in a sample of dust or soil.

(15) "Contact hour" means 60 minutes of lead-based paint related training, which may include a break of not more than 10 minutes.

(16) "Containment" means a process or arrangement of materials to protect workers and the environment by controlling exposure to the lead-contaminated dust and debris created during an abatement.

(17) "Course completion date" means the final date of classroom instruction and/or student examination of an accredited lead-based paint training course.

(18) "Course completion certificate" means documentation issued by an accredited training program to an individual as proof of successful completion of an Authority-accredited lead-based paint training course.

(19) "Critical barrier" means a containment structure that allows for the passage of persons or materials.

(20) "Demonstration testing" means the observation and scoring of a student's job task and equipment use skills taught during a course or continuing education instruction.

(21) "Deteriorated paint" means any interior or exterior paint or other coating that is peeling, chipping, chalking or cracking, or any paint or coating located on an interior or exterior surface or fixture that is otherwise damaged or separated from the substrate.

(22) "Discipline" means a specific type or category of lead-based paint activity.

(23) "Distinct painting history" means the application history, as indicated by the visual appearance or a record of application, over time, of paint or other surface coatings to a component or room.

(24) "Documented methodologies" are written methods or protocols used to sample for the presence of lead in paint, dust, and soil as recommended in U.S. Department of Housing and Urban Development (HUD) "Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing", and "EPA's Residential Sampling for Lead: Protocols for Dust and Soil Sampling".

(25) "Dripline" means the area within three feet surrounding the perimeter of a building.

(26) "Dust-lead hazard" means surface dust in a residential dwelling or child-occupied facility that contains a mass-per-area concentration of lead equal to or exceeding 40 $\mu g/ft^2$ on floors, 250 $\mu g/ft^2$ on interior window sills, or 400 $\mu g/ft^2$ based on wipe samples.

(27) "Emergency" means a situation in which failure to act promptly would likely result in immediate harm to persons or property.

(28) "Emergency lead-based paint abatement activities" means activities required in response to an elevated blood lead level determination, or federal, state, tribal or local emergency abatement order, or operations necessitated by non-routine failures of equipment, that were not planned but result from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, or threatens equipment and/or property with significant damage.

(29) "Firm" means a sole proprietorship, corporation, association, partnership, or joint stock company.

(30) "Friction surface" means an interior or exterior surface that is subject to abrasion or friction, including, but not limited to, certain window, floor, and stair surfaces.

(31) "Hands-on training" means training during which students practice skills that they will be expected to perform at the worksite.

(32) "Impact surface" means an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of door frames.

(33) "Inspection" means a surface-by-surface investigation to determine the presence of lead-based paint and the provision of a report, in writing, explaining the results of the investigation.

(34) "Inspector" means an individual who is certified by the Authority and licensed by the Construction Contractors Board (CCB), except where exempt by these rules, to conduct in target housing and child-occupied facilities a surface-by-surface investigation to determine the presence of lead-based paint and the provision of a report, in writing; and conduct clearance procedures in accordance with OAR 333-069-0070. An inspector may also collect dust and soil samples and perform clearance examinations. An inspector may cite the applicable standard for the medium being sampled, but may not evaluate the results or assess risk.

(35) "Interior window sill" means the portion of the horizontal window ledge that protrudes into the interior of the room.

(36) "Job tasks" mean the specific activities performed in the context of work.

(37) "Lead-based paint" means paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

(38) "Lead-based paint activities" means, in the case of target housing and child-occupied facilities, inspection, risk-assessment, and abatement.

(39) "Lead-based paint hazard" means any condition that causes exposure to lead from lead-contaminated dust, lead-contaminated soil, lead-contaminated paint that is deteriorated or present in accessible surfaces, friction surfaces or impact surfaces that would result in adverse human health effects.

(40) "Lead hazard standard" means the amount of lead the Authority considers to be a hazard in target housing or child-occupied facilities. The standards for lead in dust are 40 micrograms per square foot ($\mu g/ft^2$) on floors, 250 $\mu g/ft^2$ on interior window sills, and 400 $\mu g/ft^2$ on window troughs. The standards for lead in soil are 400 parts per million (ppm) in play areas and 1,200 ppm in the remainder of the yard.

(41) "Licensed" means a person or firm who has been certified by the Authority in one or more disciplines and is licensed by the CCB.

(42) "Loading" means the quantity of specific substance present per unit of surface area, such as the amount of lead in micrograms contained in the dust collected from a certain surface area divided by the surface area in square feet or square meters.

(43) "Multi-family housing" means a housing property consisting of more than four dwelling units.

(44) "Notice of noncompliance" is a description, in writing, of activities conducted in violation of these rules observed or documented by the Authority, and of requirements for corrective action.

(45) "Paint in poor condition" means more than 10 square feet of deteriorated paint on exterior components with large surface areas; or more than two square feet of deteriorated paint on interior components with large surface areas (e.g., walls, ceilings, floors, doors); or more than 10 percent of the total surface area of the component is deteriorated on interior or exterior components with small surface areas (window sills, baseboards, soffits, trim).

(46) "Paint-lead hazard" means any of the following:

(a) Any lead-based paint on a friction surface that is subject to abrasion and where the lead dust levels on the nearest horizontal surface underneath the friction surface (e.g., the window sill, or floor) are equal to or greater than the dust-lead hazard levels identified in these rules.

(b) Any damaged or otherwise deteriorated lead-based paint on an impact surface that is caused by impact from a related building component (such as a door knob that knocks into a wall or a door that knocks against its door frame).

(c) Any chewable lead-based painted surface on which there is evidence of teeth marks.

(d) Any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

(47) "Permit" means a written authorization obtained from the Authority without which a painter may not remove or stabilize paint on target housing or pre-1978 child-occupied facilities.

(48) "Permanent" means having an expected design life of 20 years.

(49) "Permanently covered soil" means soil which has been separated from human contact by the placement of a barrier consisting of solid, relatively impermeable materials, such as pavement or concrete. Grass, mulch, and other landscaping materials are not considered permanent covering.

(50) "Person" means an individual.

(51) "Play area" means an area of frequent soil contact by children under six years of age as indicated by, but not limited to, such factors including the following: the presence of play equipment (e.g., sandboxes, swing sets, and sliding boards), toys, or other children's possessions, observations of play patterns, or information provided by parents, residents, care givers, or property owners.

(52) "Preliminary clearance" means clearance of interior living areas according to which an inspector or risk assessor determines that residual lead levels (as determined by laboratory analysis) do not exceed clearance examination standards.

(53) "Project designer" means an individual who is certified by the Authority and licensed by the CCB to interpret lead inspection or risk assessment reports and to develop plans, specifications, and project procedures for lead abatement projects in target housing and child-occupied facilities, including occupant notification and protection, clean-up and clearance, and abatement reports.

(54) "Public agency" means an entity that functions as part of a governmental body or organization at the local, state, or federal level.

(55) "Refresher training course" means a minimum seven hour training program accredited by the Authority to update an individual's knowledge and skills so that he/she can effectively and safely continue to practice in the field.

(56) "Residential building" means a building containing one or more residential dwellings.

(57) "Residential dwelling" means:

(a) A detached single family dwelling unit, including attached structures such as porches and stoops; or

(b) A single family dwelling unit in a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be occupied, in whole or in part, as the home or residence of one or more persons.

(58) "Risk assessment" means an on-site investigation to determine the existence, nature, severity, and location of lead-based paint hazards, and the provision of a report by the individual or the firm conducting the risk assessment, explaining the results of the investigation and options for reducing lead-based paint hazards.

(59) "Risk assessor" means an individual who is certified by the Authority and licensed by the CCB, unless where exempt by the rules, to conduct in target housing and child-occupied facilities on-site investigation to determine the existence, nature, severity, and location of lead-based paint hazards, and to provide a report explaining the results of the investigation and options for reducing lead-based paint hazards; and who may conduct a lead-hazard screen, in accordance with OAR 333-069-0070.

(60) "Room" means a separate part of the inside of a building, such as a bedroom, living room, dining room, kitchen, bathroom, laundry room, or utility room. To be considered a separate room, the room must be separated from adjoining rooms by built-in walls or archways that extend at least six inches from an intersecting wall. Half walls or bookcases count as room separators if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls. A screened in porch that is used as a living area is a room.

(61) "Sample quality control" means a plan or design which ensures the authenticity, integrity, and accuracy of samples, including dust, soil, and paint chip or film samples. Sample quality control also includes provisions for representative sampling and control samples.

(62) "Scope of work" means a written description of all of the abatement activities to be conducted at a specific abatement project site.

(63) "Soil-lead hazard" means bare soil on residential real property or on the property of a child-occupied facility that contains total lead equal to or exceeding 400 ppm in a play area or average of 1,200 ppm of bare soil in the remainder of the yard based on soil samples.

(64) "Soil sample" means a sample collected in a representative location using American Society for Testing Materials (ASTM) E1727, ''Standard Practice for Field Collection of Soil Samples for Lead Determination by Atomic Spectrometry Techniques,'' or equivalent method.

(65) "Supervisor" means an individual who is certified by the Authority and licensed by the CCB to either conduct or oversee and direct the work-site conduct of lead-based paint abatement and clearance activities in target housing and child-occupied facilities, and to prepare occupant protection plans and abatement reports in accordance with OAR 333-069-0070.

(66) "Target housing" means any housing constructed prior to 1978, except housing for the elderly or persons with disabilities (unless any one or more children under six years of age resides or is expected to reside in such housing for the elderly or persons with disabilities) or any zero-bedroom dwelling.

(67) "These rules" means OAR 333-069-0005 through 333-069-0090.

(68) "Weighted arithmetic mean" means the arithmetic mean of sample results weighted by the number of subsamples in each sample. Its purpose is to give influence to a sample relative to the surface area it represents. A single surface sample is comprised of a single subsample. A composite sample may contain from two to four subsamples of the same area as each other and of each single surface sample in the composite. The weighted arithmetic mean is obtained by summing, for all samples, the product of the sample's result multiplied by the number of subsamples in the sample, and dividing the sum by the total number of subsamples contained in all samples. For example the weighted arithmetic mean of a single surface sample containing 60 $\mu g/ft^2$, a composite sample (three subsamples) containing 100 $\mu g/ft^2$, and a composite sample (4 subsamples) containing 110 mg/ft^2 is 100 $\mu g/ft^2$. This result is based on the equation [60+(3*100) + (4*110)]/(1+3+4).

(69) "Window trough" means for a typical double-hung window, the portion of the exterior window sill between the interior window sill (or stool) and the frame of the storm window. If there is no storm window, the window trough is the area that receives both the upper and lower window sashes when they are both lowered. The window trough is sometimes referred to as the window ''well''.

(70) "Wipe sample" means a sample collected by wiping a representative surface of known area, as determined by ASTM E 1728, ''Standard Practice for Field Collection of Settled Dust Samples Using Wipe Sampling Methods for Lead Determination by Atomic Spectrometry Techniques, or equivalent method, with an acceptable wipe material as defined in ASTM E 1792, ''Standard Specification for Wipe Sampling Materials for Lead in Surface Dust.''

(71) "Worker" means an individual who is certified by the Authority and licensed by the CCB to conduct lead-based paint abatement activities in target housing and child-occupied facilities in accordance with OAR 333-069-0070.

333-069-0020
Certification Required

(1) No person, firm, or public agency shall offer to perform or perform lead-based paint inspection, risk assessment, or abatement activities in target housing or child-occupied facilities without first receiving certification from the Authority and a license from the CCB, except if such a person, firm, or public agency is exempt from CCB licensing requirements.

(2) All certificates to perform lead-based paint activities shall expire on June 30, and are renewable upon meeting all of the requirements as determined by the Authority.

(3) Certified persons or firms conducting lead-based paint activities shall comply with the work practice standards for performing lead-based paint activities as prescribed in these rules. Painters shall follow the work practices described on the Permit application.

(4) It shall be considered a violation of these rules and the CCB regulations for any person to conduct any of the lead-based paint activities described in these rules unless the individual has received certification from the Authority and licensure from the CCB, except if such a person, is exempt from CCB licensing requirements.

(5) Applicants for inspector, risk assessor, project designer and supervisor shall pass with a score of 70 or more on a certification examination administered by the Authority for each discipline for which certification is desired.

(6) Individuals may take the certification examination no more than three times within six months of the course completion date of the accredited lead-based paint training course.

(7) If an individual applicant does not complete all certification requirements (including passing the certification examination for required disciplines) within six months of the course completion date of the accredited lead-based paint training course, the individual shall successfully complete the appropriate accredited standard or refresher training course before reapplying for certification.

(8) A certificate for an individual will be issued by the Authority in the form of an identification card and a numbered certificate. This card will identify each discipline for which a person is certified and must be available on demand for inspection at all times while conducting inspection, risk assessment, or abatement activities.

(9) A numbered certificate for a certified firm will be issued by the Authority.

(10) A public agency whose employees perform 'in house' lead-based paint services need not be a certified firm, but shall furnish the Authority with a letter of compliance certifying the following:

(a) The agency will use only certified individuals of the appropriate discipline to conduct lead-based paint activities as described in these rules;

(b) The agency will follow the standards for conducting lead-based paint activities as prescribed in these rules; and

(c) The agency will maintain records of all such activities per these rules.

(d) The letter of compliance will be signed by an individual authorized to sign on the agency's behalf.

(e) Any public agency determined by the Authority to be in violation of this exemption shall be subject to the certification requirements of a non-exempt firm.

(11) A firm or public agency that contracts with a certified firm or public agency to provide lead-based paint activities on its behalf need not be certified.

(a) The contracting firm or public agency shall submit to the Authority a letter of compliance stating the following:

(A) The firm or agency will use only certified firms and certified individuals of the appropriate discipline to conduct lead-based paint activities as described in these rules;

(B) The firm or agency will ensure that the standards for conducting lead-based paint activities as prescribed in these rules will be followed; and

(C) The firm or agency will maintain records of all such activities per these rules.

(D) The letter of compliance will be signed by an individual authorized to sign on the firm or the agency's behalf.

(b) The contracting firm shall submit to the Authority, upon request, a copy of the contract agreement between the contracting firm and the certified firm or firms.

(12) Employees or agents of regulatory agencies are exempt from these rules if:

(a) Those employees or agents are acting in a regulatory capacity;

(b) They are carrying out activities within the scope of the agency's regulatory authority; and

(c) They have been trained in a manner consistent with the public and environmental health objectives of these rules.

333-069-0030
Eligibility

(1) Inspector. To qualify, an individual shall complete all elements on the application form and meet the following eligibility requirements:

(a) Successfully complete and receive a course completion certificate from an Authority accredited training program as an inspector;

(b) Pass the certification examination administered by the Authority for an inspector.

(2) Risk assessor. To qualify, an individual shall complete all elements on the application form and meet the following minimum eligibility requirements:

(a) Successfully complete and receive a course completion certificate from an Authority accredited training program as a risk assessor and inspector;

(b) Pass the certification exam administered by the Authority for a risk assessor;

(c) Have completed one of the following education and applicable experience criteria:

(A) Certification as an industrial hygienist, an engineer, a registered architect, certified safety professional, registered sanitarian, or registered environmental health specialist; or

(B) A bachelor's degree and one year of experience in a related field (e.g. lead, asbestos, environmental remediation work, or construction); or an associates degree and two years experience in a related field (e.g., lead, asbestos, environmental remediation work, or construction); or

(C) A high school diploma (or equivalent), plus at least three years of experience in a related field (e.g. lead, asbestos, environmental remediation work, or construction).

(3) Supervisor. To qualify, an individual shall complete all elements on the application form and meet the following minimum eligibility requirements:

(a) Successfully complete and receive a course completion certificate from an Authority accredited training program as a lead abatement supervisor;

(b) Pass the certification exam administered by the Authority for a supervisor;

(c) Have completed one of the following experience requirements:

(A) One year of experience as a certified lead-based paint abatement worker; or

(B) At least two years of experience in a related field (e.g. lead, asbestos, or environmental remediation work) or in the building trades.

(4) Abatement worker. To qualify, an individual shall complete all elements on the application form and successfully complete and receive a course completion certificate from an Authority accredited training program as a lead abatement worker.

(5) Project designer. To qualify, an individual shall comply with all application requirements and meet the following minimum eligibility requirements:

(a) Successfully complete and receive a course completion certificate from an Authority accredited training program as a lead abatement supervisor and project designer;

(b) Have completed one of the following education and applicable experience criteria:

(A) Bachelor's degree in engineering, architecture, or a related profession, and one year of experience in building construction and design or a related field; or

(B) Four years of experience in building construction and design or a related field; and

(C) Pass the certification examination administered by the Authority for a project designer.

(6) Applicants for certification may complete a refresher course in the same discipline in satisfaction of the training requirement if no more than one year has passed since the original course was completed and the original course was accredited by the Authority, EPA, or an EPA-authorized state or tribal program.

(7) The Authority may certify an individual who has been certified as an inspector, risk assessor, supervisor, project designer, or abatement worker by the EPA or an EPA-authorized state or tribal program upon receiving evidence that the individual has:

(a) Completed and received a course completion certificate from an accredited training course specific to the position for which the individual has applied and the course is accredited by the EPA or by a state or tribal program authorized by the EPA under 40 CFR 745.234;

(b) Met or exceeded all other eligibility requirements specified in OAR 333-069-0030 specific to the position applied for;

(c) Met all application requirements in OAR 333-069-0040; and

(d) Completed any additional requirements established by the Authority.

(8) Applicants for certification based on certification from another state or tribal program must document to the Authority that they have read and understand the certification and work practice standards as described in these rules.

(9) Certification based on a valid lead-based paint certification issued by the EPA or an EPA-authorized state or tribal program shall be issued with an expiration date not to exceed the date of expiration listed on the certification.

333-069-0040
Application Requirements

(1) No person, firm or public agency shall conduct lead-based paint activities in or on target housing or child-occupied facilities without first applying to the Authority for and receiving certification to conduct such activities.

(2) Applications for certification or permit shall be accompanied with a check or money order made out to the 'Oregon Health Authority' in the amount as described in OAR 333-069-0090.

(3) Applications for a person shall be submitted on forms prescribed by the Authority and shall be accompanied, as appropriate, by:

(a) Documentation of applicant's training, experience, and education including:

(A) Lead-based paint training course completion certificate issued by an Authority-accredited training program.

(B) Documentation of experience must include name and address of employer, name and telephone number of supervisor; or indicate if self-employed. Documentation must also include employment dates, description of specific duties performed, estimated percentage of time associated with conducting inspections and assessing health, safety or environmental hazards. This documentation must be signed by supervisor or employer verifying, under penalty of perjury, that the information is true and correct. A self-employed individual must submit a notarized affidavit attesting to the work experience claimed for the purposes of application.

(C) Evidence of completion of educational requirements under OAR 333-069-0030, such as a transcript or diploma, if applicable.

(b) Two current, passport size photos.

(c) Applicant's name, printed or typed, date, and signature, verifying, under penalty of perjury, that all information submitted is true and correct.

(4) Applications for a certification or permit shall be submitted on forms prescribed by the Authority. Application materials can be obtained from the Authority's website.

(5) Applications for certification of a firm shall be accompanied by a letter of compliance certifying the following:

(a) The firm will employ only certified employees of the appropriate discipline to conduct lead-based paint activities as prescribed in these rules.

(b) The firm will follow the standards for conducting lead-based paint activities as prescribed in these rules.

(c) The firm shall maintain all records pursuant to these rules.

(d) The letter of compliance shall be signed by an officer of the firm, or an individual authorized to sign on the firm's behalf.

(6) Certified individuals, firms and permit holders shall notify the Authority within 30 calendar days of any change to the current application.

(7) For the purposes of application, photocopies of original documents are acceptable.

333-069-0050
Renewal and Recertification

(1) To maintain a permit or certification in a particular discipline, application for recertification shall be made annually to the Authority. Applicants shall submit completed application forms available from the Authority, postmarked 60 days or more before the date the current certification expires, and shall pay the appropriate fee per OAR 333-069-0090.

(2) Recertification is required for individuals by June 30, no more than three years after the issue date of an original certification or recertification, whichever is most recent. To obtain recertification, an individual shall fulfill the following:

(a) Submit to the Authority an application for recertification that shall include two current passport-size photos and the appropriate fee per OAR 333-069-0090; and

(b) Submit to the Authority a copy of the course completion certificate from an accredited lead-based paint standard or refresher training course in the appropriate discipline.

(3) An individual whose Authority certification has been expired for more than six months must complete a standard or refresher course in that discipline and pass a qualifying examination administered by the Authority. An individual whose Authority certification has been expired for more than one year shall successfully complete a standard course in that discipline and pass a qualifying examination administered by the Authority.

333-069-0060
Certification Procedures

(1) The Authority shall inform the applicant, in writing, when his/her application is granted, denied or incomplete and of the additional information and/or documentation that is required to complete the application.

(a) If granted, a certificate shall be mailed to the applicant and the effective date shall be the issuance date of certification or recertification.

(b) A unique certification number will be assigned to each certificate holder.

(c) If an application is denied, the Authority shall state, in writing, the reasons for denial.

(d) An application may be withdrawn at any time by written request to the Authority.

(2) The Authority may take into consideration various factors in determining whether to grant or deny a permit or certification including, but not limited to:

(a) Failure to satisfy eligibility requirements for certification;

(b) Failure to satisfy training requirements;

(c) Failure to provide required documentation or information requested by the Authority;

(d) History of citations or violations of existing regulations or standards;

(e) History of revocation of a certificate;

(f) Making false or misleading statements in the application.

(3) Certification and permits shall be non-transferable.

(4) All certifications and permits shall expire on June 30.

333-069-0070
Work Practice Standards

(1) When performing any lead-based paint activity described by a certified and licensed individual as an inspection, lead hazard screen, risk assessment or abatement, a certified and licensed person must perform that activity in compliance with these rules, documented methodologies, procedures and work practice standards.

(2) Inspection. An inspection shall be conducted only by a person certified by the Authority and licensed by the CCB as an inspector or risk assessor. Persons exempt from CCB licensing requirements shall be certified by the Authority. Employees of public agencies who conduct 'in-house' lead-based paint activities are exempt from licensing by the CCB.

(a) Locations shall be selected according to documented methodologies and tested for the presence of lead as follows:

(A) In target housing and child-occupied facilities, each component with a distinct painting history shall be tested, except those components determined to have been replaced after 1978 or to not contain lead-based paint; and

(B) In a multi-family dwelling or child-occupied facility, each component with a distinct painting history in every common area shall be tested, except those components determined to have been replaced after 1978 or to not contain lead-based paint.

(b) Paint shall be tested for the presence of lead using documented methodologies which incorporate sampling quality control procedures and all paint chip, dust, and soil samples shall be analyzed for detectable levels of lead by a laboratory accredited under the National Lead Laboratory Accreditation Program.

(c) Inspection reports shall be prepared and include at least:

(A) Inspection date;

(B) Building address;

(C) Date of construction;

(D) Apartment identification (numbers, letters, names if applicable);

(E) Name, address and telephone number of owner or owners of each unit;

(F) Name, signature, and certification number of each inspector and/or risk assessor conducting testing;

(G) Name, address and telephone number of the certified firm employing each inspector and/or risk assessor;

(H) Each testing method and device and/or sampling procedure employed for paint analysis, including sample quality control data, and if used, the serial number of any X-ray fluorescence (XRF) device; and

(I) Specific locations of each painted component tested and the results of the inspection expressed in appropriate units for the sampling method used.

(3) Lead hazard screen. A lead hazard screen shall be conducted only by a person certified by the Authority and licensed by the CCB as a risk assessor, except if such a person, is exempt from CCB licensing requirements, and shall be conducted as follows:

(a) Background information shall be collected about the physical characteristics of the target housing or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to one or more children under six years of age.

(b) A visual inspection shall be conducted to determine the presence of any deteriorated paint and locate at least two dust sampling locations.

(c) If deteriorated paint is present, each deteriorated paint surface determined, using documented methodologies, to be in poor condition and to have a distinct painting history shall be tested for the presence of lead.

(d) In residential dwellings, two composite dust samples shall be collected, one from the floors and the other from the windows, in rooms, hallways or stairwells where one or more children under six years of age are likely to come in contact with dust.

(e) In multi-family dwellings and child-occupied facilities, floor and window composite dust sampling shall be conducted as specified in OAR 333-069-0070(3)(d). In addition, composite dust samples shall be collected in common areas where one or more children under six years of age are likely to come in contact with dust.

(f) All dust samples shall be collected using documented methodologies that incorporate sample quality control procedures and analyzed by a laboratory accredited under the National Lead Laboratory Accreditation Program to determine detectable lead.

(g) A lead hazard screen report shall be prepared by the risk assessor and include:

(A) Information in a risk assessment report as specified in section (4) of this rule, including paragraphs (4)(i)(A) through (4)(i)(N) and excluding paragraphs (4)(i)(O) through (4)(i)(R) of this rule. Additionally, any background information collected pursuant to the lead hazard screen shall be included.

(B) Any recommendations for follow-up risk assessment and other further actions.

(4) Risk assessment. A risk assessment of target housing or child-occupied facility shall be conducted only by a person certified by the Authority and licensed by the CCB as a risk assessor. Persons exempt from CCB licensing requirements shall be certified by the Authority. Employees of public agencies who conduct 'in-house' lead-based paint activities are exempt from licensing by the CCB. A risk assessment shall be conducted as follows:

(a) A visual inspection shall be conducted to locate the existence of deteriorated paint, assess the extent and cause of deterioration, and other potential lead-based hazards.

(b) Background information shall be collected regarding the physical characteristics and occupant use patterns that may cause lead-based paint exposure to one or more children under six years of age.

(c) The following surfaces which are determined, using documented methodologies, to have a distinct painting history, shall be tested for the presence of lead:

(A) Each friction surface or impact surface with visibly deteriorated paint.

(B) All other surfaces with visibly deteriorated paint.

(d) In residential dwellings, dust samples (either composite or single-surface samples) from the interior window sill(s) and floor shall be collected and analyzed for lead concentration in all living areas where one or more children under six years of age are most likely to come in contact with dust.

(e) For multi-family dwellings and child-occupied facilities, the samples required in subsection (4)(d) of this rule shall be taken. In addition, interior window sill and floor dust samples (either composite or single-surface samples) shall be collected and analyzed for lead concentration in the following locations:

(A) Common areas adjacent to sampled target house or child-occupied facility; and

(B) Other common areas in the building where the risk assessor determines that one or more children under six years of age are likely to come in contact with dust.

(f) For child-occupied facilities, interior window sill and floor dust samples (either composite or single-surface samples) shall be collected and analyzed in each room, hallway or stairwell utilized by one or more children under six years of age, and in other common areas in the child-occupied facility where the risk assessor determines one or more children under six years of age are likely to come in contact with dust.

(g) Soil samples shall be collected and analyzed for lead concentrations from the following locations:

(A) Exterior play areas where bare soil is present; and

(B) The remainder of the yard (i.e., non-play areas) where bare soil is present.

(h) Any paint, dust or soil sampling or testing shall be conducted using documented methodologies that incorporate sample quality control procedures and analyzed by a laboratory accredited under the National Lead Laboratory Accreditation Program to determine detectable lead.

(i) The certified risk assessor shall prepare a risk assessment report which shall include at a minimum the following information:

(A) Assessment date;

(B) Address of each building;

(C) Date of construction of buildings;

(D) Apartment identification (numbers, letters, names if applicable);

(E) Name, address and telephone number of each owner of each building;

(F) Name, signature, and certification number of each risk assessor conducting the assessment;

(G) Name, address and telephone number of the certified firm employing each risk assessor;

(H) Name, address and telephone number of each laboratory conducting analysis of collected samples;

(I) Results of the visual inspection;

(J) Testing method and sampling procedure employed for paint analysis;

(K) Specific locations of each painted component tested for the presence of lead;

(L) All data collected from on-site testing, including quality control data, and if used, the serial number of any X-ray fluorescence (XRF) device;

(M) All results of laboratory analysis on collected paint, soil, and dust samples;

(N) Any other sampling results;

(O) Any background information collected pursuant to subsection (4)(b) of this rule;

(P) To the extent used as part of the lead-based paint hazard determination, the results of any previous inspections or analyses for the presence of lead-based paint, or other assessments of lead-based paint related hazards;

(Q) A description of the location, type, and severity of identified lead-based paint hazards and any other potential lead hazards; and

(R) A description of interim controls and/or abatement options for each identified lead-based paint hazard and a recommended prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure.

(5) Abatement. An abatement shall be conducted only by a person certified by the Authority and licensed by the CCB. Persons exempt from CCB licensing requirements shall be certified by the Authority. Employees of public agencies who conduct 'in-house' lead-based paint activities are exempt from licensing by the CCB. Abatement shall be conducted as follows:

(a) A certified and licensed supervisor or project designer is required for each abatement project and shall be onsite during all work site preparation and during post-abatement cleanup of work areas. At all other times, the certified supervisor or project designer shall be onsite or available by telephone, pager, or answering service, and be able to be present at the work site in no more than two hours.

(b) A certified and licensed project designer is required for each abatement project that:

(A) Consists of 10 or more target housing units built prior to 1960;

(B) Consists of 20 or more target housing units built during or after 1960; or

(C) Consists of 25,000 square feet or more of target housing.

(c) The certified and licensed supervisor or project designer, as well as, the certified and licensed firm employing that supervisor shall ensure that all abatement activities are conducted according to the requirements of these rules and all federal, state and local requirements.

(d) A certified and licensed project designer may replace and assume the responsibilities of a certified and licensed supervisor required for an abatement project. If a certified and licensed project

designer provides supervision on an abatement project, the project designer shall be responsible for preparing the occupant protection plan and the abatement report.

(e) Any firm or individual conducting lead-based paint abatement activities in target housing or child-occupied facilities must notify the Authority at least seven business days before the start date of the project by completing and submitting a notice of abatement form available from the Authority.

(A) The notice of abatement shall specify the time of day that abatement activities will start and the date on which abatement activities will be completed.

(B) Amendments to or cancellations of the original notice of abatement, including completion-date changes must be submitted 24 hours prior to the original start date.

(C) In the event of an emergency, an original or amended notice of abatement describing the emergency must be submitted. Notification for lead-based paint abatement activities required in response to an elevated blood lead level (EBLL) determination, or federal, state, tribal, or local emergency abatement order should be received by the Authority as early as possible before, but must be received no later than the start date of the lead-based paint abatement activities. Should the start date and/or location provided to the Authority change, an updated notification must be received by the Authority on or before the start date provided in the notice of abatement to the Authority. Documentation showing evidence of an EBLL determination or a copy of the federal, state, tribal, or local emergency abatement order must be included in the written notification to take advantage of this abbreviated notification period.

(D) A request for waiver of the seven-business day advance notice requirement must be submitted in writing and granted in writing by the Authority before work under the waiver can start.

(E) The Authority may reject a notice of abatement form that has not been completed in full and signed by the applicant.

(f) A written occupant protection plan shall be developed prior to all abatement projects, be prepared by a certified and licensed supervisor or project designer, be unique to each target housing or child-occupied facility, describe the measures and management procedures that will be taken during the abatement to protect the building occupants from exposure to any lead-based paint hazards. The written occupant protection plan shall be present at the project site and must be made available on demand for inspection.

(g) A scope of work for the abatement project shall be present at the project site and must be made available on demand for inspection.

(h) These work practices shall be restricted during abatement:

(A) Open-flame burning or torching of lead-based paint is prohibited;

(B) Uncontained hydro blasting or high-pressure washing of lead-based paint is prohibited;

(C) Machine sanding or grinding or abrasive blasting or sandblasting of lead-based paint is prohibited unless used with High Efficiency Particulate Air (HEPA) exhaust control which removes particles of 0.3 microns or larger from the air at 99.97 percent or greater efficiency;

(D) Dry scraping of lead-based paint is permitted only in conjunction with heat guns or around electrical outlets or when treating defective paint spots totaling no more than two square feet in any room, hallway or stairwell or totaling no more than 20 square feet on exterior surfaces; and

(E) Operating a heat gun on lead-based paint is permitted only at temperatures below 1100 degrees Fahrenheit.

(i) When soil abatement is conducted:

(A) If the soil is removed:

(i) The soil shall be replaced by soil with a lead concentration as close to local background as practicable, but no greater than 400 ppm.

(ii) The soil that is removed shall not be used as top soil at another residential property or child-occupied facility.

(B) If the soil is not removed, the soil shall be permanently covered as defined in these rules.

(j) The following clearance procedures shall be performed only by a certified and licensed inspector or risk assessor and according to the following procedures:

(A) A visual inspection shall be performed to determine if deteriorated painted surfaces and/or visible amounts of dust, debris or residue are still present. If deteriorated painted surfaces or visible amounts of dust, debris or residue are present, these conditions must be eliminated prior to the continuation of the clearance procedures.

(B) If exterior work on a project cannot be completed due to inclement weather or other factors, the project supervisor may apply in writing to the Authority for authorization of a preliminary clearance.

(i) The application must include the following:

(I) The project address;

(II) The name and certification number of the abatement project supervisor or project designer;

(III) A description of the conditions that justify issuance of a waiver;

(IV) A description of the abatement work that remains to be done on the project;

(V) A schedule for completion of the abatement work that remains to be done; and

(VI) A plan for monitoring and controlling potential lead-based paint contamination until work can be completed.

(ii) At the conclusion of all work on a project for which preliminary clearance examination has been authorized, the project supervisor shall present the Authority with documentation that clearance testing has been performed on exterior and interior areas according to these rules and that all results are below clearance examination standards.

(C) Following the visual inspection and any post-abatement clean up required by paragraph (5)(j)(A) of this rule, clearance testing for lead in dust and/or soil shall be conducted. Clearance testing may be conducted by employing single-surface sampling techniques.

(D) Clearance testing shall be performed using documented methodologies that incorporate sample quality control procedures and shall be taken a minimum of one hour after completion of final cleanup activities.

(E) Post-abatement clearance examination activities shall be conducted based upon the extent or manner of work activities conducted in or on the target housing or child-occupied facility as follows:

(i) After conducting an abatement with containment between containment and non-containment areas, one dust sample shall be taken from one interior window sill and from one window trough (if present) and one dust sample shall be taken from the floors of no less than four rooms, hallways or stairwells within the containment area. In addition, one dust sample shall be taken from the floor outside the containment area. If a room containment consists of more than one critical barrier, one dust sample shall be taken outside each critical barrier. If there are fewer than four rooms, hallways or stairwells within the containment area, then all rooms, hallways or stairwells shall be sampled.

(ii) After conducting an abatement with no containment, two dust samples shall be taken from no fewer than four rooms, hallways or stairwells in the residential dwelling or child-occupied facility. One dust sample shall be taken from one interior window sill and from one window trough (if present) and one dust sample shall be taken from the floor of each room, hallway or stairwell selected. If there are fewer than four rooms, hallways or stairwells within the target housing or child-occupied facility then all rooms, hallways or stairwells shall be sampled.

(iii) Following exterior paint abatement, a visual inspection shall be conducted. All horizontal surfaces in the outdoor living area closest to the abated surfaces shall be found to be cleaned of visible dust and debris. The surfaces shall be recleaned when visible dust and debris is present. The visual inspection shall be conducted to determine the presence of paint chips on the dripline or next to the foundation below any exterior abated surface. Paint

chips, if present, shall be removed from the site and disposed of according to federal, state and local requirements.

(F) The rooms, hallways or stairwells selected for sampling shall be selected according to documented methodologies.

(G) The certified and licensed inspector or risk assessor shall compare residual lead levels (as determined by laboratory analysis) from each single surface dust sample with clearance examination standards as defined in these rules for lead in dust on floors and interior window sills, and window troughs, divided by half the number of subsamples in the composite sample. If the residual lead level in a single surface dust sample equals or exceeds the applicable clearance examination standard or if the residual lead level in a composite dust sample equals or exceeds the applicable clearance examination standard divided by half the number of subsamples in the composite sample, the components represented by the failed sample shall be recleaned and retested until clearance examination standards are met.

(k) In a multi-family dwelling with similarly constructed and maintained residential dwellings, random sampling for the purposes of clearance examination may be conducted provided:

(A) The certified individuals who work on or clean the residential dwellings do not know which residential dwelling will be selected for the random sample.

(B) The randomly selected residential dwellings shall be sampled and evaluated according to subsection (5)(j) of this rule.

(C) A sufficient number of residential dwellings are selected for dust sampling to provide a 95 percent level of confidence that no more than five percent or 50 of the residential dwellings (whichever is smaller) in the randomly sampled population exceeds the appropriate clearance examination standards.

(l) An abatement report shall be prepared by a certified and licensed supervisor or project designer and shall include as a minimum the following information:

(A) Start and completion dates of abatement;

(B) The name, address and telephone number of each certified firm conducting the abatement and the name of each supervisor or project designer assigned to the abatement project;

(C) The occupant protection plan;

(D) The name, address and signature of each certified and licensed inspector or risk assessor conducting the clearance examination and the date(s) that the clearance examination was performed;

(E) The results of the clearance examination and all soil analyses and the name of each laboratory conducting analysis of collected samples; and

(F) A detailed written description of the abatement, including abatement methods, location of rooms and/or components where abatement occurred, reason for selecting particular abatement methods for each component, and any suggested monitoring of encapsulants or enclosures.

(m) A clearance examination report shall be prepared by a certified inspector or risk assessor. The clearance examination report shall include the following information:

(A) The property address where the clearance examination occurred;

(B) The abatement cleanup completion date and time;

(C) The date and time of the clearance examination;

(D) Name and certification number of each inspector or risk assessor conducting the clearance;

(E) The signature of the inspector or risk assessor conducting the clearance;

(F) Name, address, telephone number, and certification number of the certified firm employing the inspector or risk assessor;

(G) Results of the visual inspection;

(H) Identification of containment or non-containment applications;

(I) Identification of location(s) where the clearance examination sample(s) were collected;

(J) Name, address, and telephone number of the laboratory analyzing the collected samples;

(K) All results of laboratory analysis on collected samples, including quality control results; and

(L) Documented methodology used for sampling.

(6) Sampling. Any paint chip, dust, or soil samples collected pursuant to these work practice standards shall be collected by a certified and licensed inspector or risk assessor. Persons exempt from CCB licensing requirements shall be certified by the Authority. Employees of public agencies who conduct 'in-house' lead-based paint activities are exempt from licensing by the CCB. Such samples shall be analyzed by a laboratory accredited under the National Lead Laboratory Accreditation Program.

(7) Composite sample. Composite dust sampling may only be conducted when conducting a lead hazard screen, risk assessment, or post abatement activities. If conducted, the composite dust samples shall consist of at least two subsamples, every component that is being tested shall be included in the sampling, and shall not consist of subsamples from more than one type of component.

(8) Reports or plans. All lead-based paint activity reports or plans shall be maintained by the certified firm or individual who prepared the report for no fewer than three years and six months. Also, the certified firm or individual shall provide copies of these reports to the building owner or client who contracted for the services, unless otherwise specified by contract, within 30 days of the lead-based paint activity, or within 15 days if a child under six years of age with a confirmed EBLL $\geq$10 μg/dL is an occupant of the building.

(9) Certified individuals and firms shall, upon request, make available to the Authority records and documents regarding regulated lead-based paint activities so that the Authority may inspect said records and documents for the purposes of monitoring compliance with these rules. The Authority shall respect the proprietary nature of business records.

(10) Signage. Every work site where lead-based paint abatement is being conducted shall bear signage warning of lead-based paint hazards.

(a) The text on warning signage shall warn of "Lead-Based Paint Hazards" and be readable from 30 feet.

(b) If the Authority determines that a paint-lead hazard, dust-lead hazard, or soil-lead hazard exists at target housing or pre-1978 child-occupied facilities, the Authority shall post signage to that effect on the building exterior in one or more visible locations.

(c) Signage posted by the Authority warning of lead hazards must remain in place until the lead hazard or hazards determined by the Authority have been remediated per clearance examination standards.

(11) Determinations.

(a) Lead-based paint is present:

(A) On any surface that is tested and found to contain lead equal to or in excess of 1.0 milligrams per square centimeter or equal to or in excess of 0.5 percent by weight; and

(B) On any surface similar to a surface tested in the same room equivalent that has a similar painting history and is found to be lead-based paint.

(b) A paint-lead hazard is present:

(A) On any friction surface that is subject to abrasion and where the lead dust levels on the nearest horizontal surface (e.g., the window sill or floor) are equal to or greater than the dust hazard levels identified in OAR 333-069-0015(9);

(B) On any chewable lead-based paint surface on which there is evidence of teeth marks;

(C) Where there is any damaged or otherwise deteriorated lead-based paint on an impact surface that is caused by impact from a related building component (such as a door knob that knocks into a wall or a door that knocks against a door frame); and

(D) If there is any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

(c) A dust lead-hazard is present in a residential dwelling or child-occupied facility:

(A) In a residential dwelling on floors and interior window sills when the weighted arithmetic mean lead loading for all

surfaces on floors, interior window sills and window troughs is equal to or greater than 40 μg/ft^2 for floors, 250 μg/ft^2 for interior window sills, and 400 μg/ft^2 for window troughs;

(B) On floors or interior window sills in an unsampled residential dwelling in a multi-family dwelling, if a dust-lead hazard is present on floors or interior window wills, respectively, in at least one sampled residential unit on the property; and

(C) On floors or interior window sills in an unsampled common area in a multi-family dwelling, if a dust-lead hazard is present on floors or interior window sills, respectively in at least one sampled common area in the same common area group on the property.

(d) A soil-lead hazard is present in a residential dwelling or child-occupied facility:

(A) In a play area when the soil-lead concentration from a play area sample of bare soil is equal to or greater than 400 ppm; or

(B) When the arithmetic mean lead concentration from a composite sample (or arithmetic mean of composite samples) of bare soil from the remainder of the yard for each residential building on a property is equal to or greater than 1,200 ppm.

333-069-0080
Denial, Suspension or Revocation of Certification

(1) The Authority may deny issuance of, suspend, or revoke certification for an individual or a firm for circumstances including but not limited to the following:

(a) Performing work requiring certification at a job site without having a current valid certificate identification card available at the job site for inspection;

(b) Permitting the duplication or use of the individual's own certificate by another;

(c) Performing work for which appropriate certification has not been received from the Authority;

(d) Having been subject to a final administrative order imposing a civil penalty or a criminal conviction for engaging in a prohibited act under Authority or CCB rules;

(e) Failing to comply with relevant local, state, or federal statutes or regulations including execution of a consent agreement in settlement of an enforcement action;

(f) Failing to comply with work practices and standards set forth in these rules and other generally accepted work practices;

(g) Obtaining certification through fraudulent representation of documentation satisfying eligibility requirements;

(h) Failing to renew certification or to recertify in a timely manner;

(i) Gaining admission to and completing education through fraudulent representation of initial or previous education documentation;

(j) Obtaining certification through fraudulent representation of certification requirements such as education, training, professional registration, or experience;

(k) Performing work requiring certification at a job site with individuals who are not certified;

(l) Failing to maintain required records; and

(m) Failing to comply with these rules including execution of a consent agreement in settlement of an enforcement action.

(2) The Authority may deny issuance of, suspend, or revoke certification for an individual for circumstances including but not limited to the following:

(a) Obtaining training documentation through fraudulent means, and/or;

(b) Gaining admission to and completing education through fraudulent representation of initial or previous education documentation.

(3) The Authority may deny issuance of, suspend, or revoke certification for a firm for circumstances including but not limited to the following:

(a) Performing work requiring certification at a job site with individuals who are not certified;

(b) Failing to maintain required records.

(4) Hearings on the denial, suspension or revocation of a certificate shall be conducted as a contested case in accordance with ORS 183.310 through 183.540.

333-069-0085
Schedule of Penalties

The Authority may assess penalties, not to exceed the actions or amount shown in the following guidelines:

(1) A level one violation includes, but is not limited to, the following violations:

(a) Offering to perform or performing lead-based paint activities without Authority certification and CCB licensing, unless specifically exempted by these rules.

(b) Clearance examination inconsistencies including, but not limited to, the following:

(A) Failure to conduct clearance examination;

(B) Allowing rehabitation before clearance has been achieved;

(C) Allowing rehabitation when lead hazard levels exceed the standard;

(c) The collection of samples as described in these rules by a non-certified individual or firm;

(d) Obtaining certification via fraud or duplication of certification documents;

(e) Conducting lead-based paint activities with a revoked, suspended or expired certification;

(f) Employing uncertified individuals to conduct lead-based paint activities;

(g) Failure to comply with a consent agreement or an administrative order;

(h) Falsification of results of lead-hazard sampling;

(i) Removing paint from target housing or child-occupied facilities without a permit;

(j) Use of prohibited abatement methods.

(2) A level two violation includes, but is not limited to, the following violations:

(a) Failure to comply with prescribed work practice standards;

(b) Improper collection or handling of samples or sampling information collected for an inspection, risk assessment, clearance, or lead-hazard screen;

(c) Failure to use a National Lead Laboratory Accreditation Program laboratory for analysis of samples referred to in subsection (2)(b) of this rule;

(d) Incomplete, missing or late reports;

(e) Failure to provide notice of abatement, or notice given in a manner that obstructs proper oversight;

(f) Failure to provide client with report of lead-based paint activity in a timely manner, as specified for in these rules;

(g) Failure to maintain or to provide for Authority inspection lead-based paint activities reports and documents;

(h) Performance by a certified individual of lead-based paint activity outside of the scope of that individual's certification;

(3) A level three violation includes, but is not limited to, the following violations:

(a) Conducting lead-based paint activities without a valid certification badge;

(b) Conducting in-house lead-based paint activities by a public agency without having submitted a letter of compliance to the Authority;

(c) Conducting lead-based paint activities that have been contracted for by a non-certified firm or agency, without the firm or agency having submitted a letter of compliance to the Authority;

(d) Conducting lead-based paint abatement without an occupant protection plan;

(4) The penalties for levels one, two and three as described in this rule will be assessed according to the following schedule:

(a) Level one:

(A) First offense: notice of noncompliance and up to $1,000.

(B) Second offense: notice of noncompliance, a fine of up to $3,000 and suspension of certification for up to 90 days.

(C) Third offense: notice of noncompliance, a fine of up to $5000 and either suspension of certification for up to 180 days or revocation of certification.

(b) Level two:

(A) First offense: notice of noncompliance and a fine of up to $500.

(B) Second offense: notice of noncompliance and a fine of up to $2,000.

(C) Third offense: notice of noncompliance, a fine of up to $5,000 and suspension of certification for up to 30 days.

(c) Level three:

(A) First offense: notice of noncompliance.

(B) Second offense: notice of noncompliance and/or a letter of warning.

(C) Third offense: notice of noncompliance and/or a letter of warning and a fine of up to $100.

(5) Violations that are not specifically addressed in sections (1) through (4) of this rule, such as in the case of serial violations of different levels, shall be assessed appropriate penalties by the Authority in accordance with the hazard to public health produced by the activity and the compliance history of the violator.

(6) Removal of signage. It shall be a violation to remove a sign posted by the Authority to warn the public of lead hazards, and such action shall be punishable by a fine of $100 per day.

(7) The Authority may revoke, suspend, or refuse to issue or reissue the certification or permit of any individual or firm who fails to pay on demand a civil penalty that has become due and payable.

(8) Procedures, including a hearing, pursuant to the assessment of a civil penalty shall be conducted according to ORS 183.745.

Fees

The following fees are established:

(1) Firms shall pay a non-refundable certification or recertification application fee of $85 for a one-year certification.

(2) Inspectors, risk assessors, supervisors, and project designers shall pay a non-refundable certification or recertification fee of $85 for a one year certification.

(3) Workers shall pay a non-refundable certification or recertification fee of $50 for a one-year certification.

(4) The fee for applications for certification received by the Authority between April 1 and June 30 shall be as follows: Worker, $25; all other disciplines, $45.

(5) The application fee for a permit for painting shall be $5.

DIVISION 70

PRE-RENOVATION EDUCATION AND RENOVATION, REPAIR AND PAINTING ACTIVITIES INVOLVING LEAD-BASED PAINT

333-070-0075
Authority, Purpose, Applicability

(1) Authority. These rules are promulgated in accordance with and under the authority of ORS 431.920.

(2) Purpose:

(a) The purpose of these rules is to address Oregon's need for a qualified and properly trained workforce to perform renovation, repair and painting of target housing and child-occupied facilities, and to safeguard the environment and protect the health of building occupants from lead-based paint hazards.

(b) These rules prescribe the requirements for certification of individuals and firms who perform for compensation renovation, repair and painting in target housing and child occupied facilities.

(c) These rules will establish work practice standards for the performance of renovation, repair and painting activities for certified individuals and certified renovation firms and will require that activities be performed only by certified individuals and certified renovation firms.

(d) These rules prescribe the requirements to ensure that owners and occupants of target housing and child-occupied facilities receive information on lead-based paint hazards before these renovations begin.

(3) Applicability:

(a) These rules apply to all certified individuals and certified renovation firms who perform for compensation renovation, repair and painting activities in target housing and child-occupied facilities as defined in OAR 333-070-0085, except for the following:

(A) Renovations in target housing or child-occupied facilities in which a written determination from a State of Oregon certified lead inspector or risk assessor that the components affected by the renovation are free of paint or other surface coatings that contain lead equal to or in excess of 1.0 milligrams/per square centimeter (mg/cm2) or 0.5 percent by weight.

(B) Renovations in target housing or child-occupied facilities in which a certified renovator tests each component affected by the renovation using an Environmental Protection Agency (EPA) recognized test kit as defined in OAR 333-070-0085. The renovator must follow the kit manufacturer's instructions. This determines that the components are free of paint or other surface coatings that contain lead equal to or in excess of 1.0 mg/cm2 or 0.5 percent by weight. If the components make up an integrated whole, such as the individual stair treads and risers of a single staircase, the renovator is required to test only one of the individual components, unless the individual components appear to have been repainted or refinished separately.

(b) The information distribution requirements in OAR 333-070-0095 do not apply to emergency renovation operations. Emergency renovations other than interim controls are also exempt from the warning sign, containment, waste handling, training, and certification requirements in OAR 333-070-0105 to the extent necessary to respond to the emergency. Emergency renovations are not exempt from the cleaning requirements of OAR 333-070-0090, which must be performed by certified renovators or individuals trained in accordance with OAR 333-070-0100, the cleaning verification requirements of OAR 333-070-0090, which must be performed by certified renovators, and the recordkeeping requirements of OAR 333-070-0110. Once the immediate emergency is over, lead safe work practices and all the requirements of these rules shall be in effect.

(c) These rules:

(A) Require that renovation, repair and painting activities must be performed by certified renovators and individuals who have on the job training by a certified renovator working for a certified renovation firm.

(B) Prescribe the requirements for, and the manner of, certifying competency of applicants for certification as a certified individual and of the certified renovation firms employing such individuals.

(C) Determine the work practice standards for renovation, repair and painting activities, and those actions or circumstances that constitute failure to achieve or maintain competency, or that otherwise are contrary to the public interest, for which the Authority may deny, suspend, or revoke certification.

(D) Establish the fees to the extent necessary to defray costs of those activities prescribed herein.

(d) A certified renovation firm who is licensed by the Construction Contractors Board (CCB) is not required to be certified by the Authority under these rules, but is subject to the work practice standards in these rules.

333-070-0085
Definitions

As used in these rules unless otherwise required by context:

(1) "Accredited training program" means a training program accredited or provisionally accredited by the Authority, EPA, or an EPA-authorized state or tribal program to provide training for individuals engaged in renovation, repair and painting activities.

(2) "Accreditation" means the process whereby the Authority has reviewed and approved a training program's written application with associated materials for accreditation, and has conducted an onsite audit finding the training program in compliance as specified in these rules.

(3) "Approved" means approved in writing by the Authority.

(4) "Audit' means a classroom evaluation of ongoing training. An audit involves verifying the course content, specific time requirements for each subject, hands-on training, classroom conditions, attendance size and other measures of the adequacy of the training provided.

(5) "Authority" means the Oregon Health Authority.

(6) "Certificate of mailing" means a United States Postal Service document that indicates when a piece of mail was presented to the Postal Service for mailing.

(7) "Certified dust sampling technician" means a technician who has successfully completed a dust sampling course accredited by the Authority, EPA, or an EPA-authorized state or tribal program.

(8) "Certified individual" means an individual certified by the Authority as a renovator or dust sampling technician.

(9) "Certified renovation firm" means a company, partnership, corporation, sole proprietorship, association, or other entity that has been certified by the Authority to conduct renovation under ORS 431.920 or licensed by the CCB under ORS 701.515.

(10) "Certified renovator" means a renovator who has successfully completed a renovator course accredited by the Authority, EPA, or an EPA-authorized state or tribal program.

(11) "Child-occupied facility" means a building, or a portion of a building, constructed prior to 1978, visited regularly by the same child, under age six, on at least two different days within any week (Sunday through Saturday), provided that each day's visit lasts at least three hours and the combined weekly visit lasts at least six hours, and the combined annual visits last at least sixty hours. Child-occupied facilities may include, but are not limited to, day-care centers, preschools and kindergarten classrooms. Child-occupied facilities may be located in target housing or in public or commercial buildings. With respect to common areas in public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only those common areas that are routinely used by children under age six, such as restrooms and cafeterias. In addition, with respect to exteriors of public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only the exterior sides of the building that are immediately adjacent to the child-occupied facility or the common areas routinely used by children under age six.

(12) "Cleaning verification card" means a card developed and distributed, or otherwise approved, by EPA for the purpose of determining, through comparison of wet and dry disposable cleaning cloths with the card, whether post-renovation cleaning has been properly completed.

(13) "Clearance examination standards" means values that indicate the maximum amount of lead permitted in dust on a surface or in soil following completion of a renovation activity. Standards for lead in dust are 40 micrograms per square foot ($\mu g/ft^2$) on floors, 250 $\mu g/ft^2$ on interior window sills, and 400 $\mu g/ft^2$ on window troughs. The values for lead in soil are 400 parts per million (ppm) in play areas and 1,200 ppm in the remainder of the yard.

(14) "Common areas" means portion(s) of a building that are generally accessible to all occupants. This may include, but is not limited to, hallways, stairways, laundry and recreational rooms, playgrounds, community centers, garages, and boundary fences. With respect to common areas in public or commercial buildings that contain child-occupied facilities, the child-occupied facility encompasses only those common areas that are routinely used by children under age six, such as restrooms and cafeterias. Common areas that children under age six only pass through, such as hallways, stairways, and garages are not common areas.

(15) "Component or building component" means specific design or structural elements or fixtures of a building or residential dwelling that are distinguished from each other by form, function, and location. These include, but are not limited to: interior components such as ceilings, crown molding, walls, chair rails, doors, door trim, floors, fireplaces, radiators and other heating units, shelves, shelf supports, stair treads, stair risers, stair stringers, newel posts, railing caps, balustrades, windows and trim (including sashes, window heads, jambs, sills or stools and troughs), built-in cabinets, columns, beams, bathroom vanities, counter tops, and air conditioners; and exterior components such as painted roofing, chimneys, flashing, gutters and downspouts, ceilings, soffits, fascias, rake boards, corner boards, bulkheads, doors and door trim, fences, floors, joists, lattice work, railings and railing caps, siding, handrails, stair risers and treads, stair stringers, columns, balustrades, windowsills or stools and troughs, casings, sashes and wells, and air conditioners.

(16) "Concentration" means the relative content of a specific substance contained within a larger mass, such as the amount of lead (in micrograms per gram or parts per million by weight) in a sample of dust or soil.

(17) "Containment" means a process or arrangement of materials to protect workers, occupants, the public, and the environment by controlling exposure to the lead-contaminated dust and debris created during renovation activities.

(18) "Course completion certificate" means documentation issued by an accredited training program to an individual as proof of successful completion of a Authority-accredited renovator or dust sampling technician training course or refresher training course.

(19) "Course completion date" means the final date of classroom instruction and/or student examination of an accredited renovator or dust sampling technician training course.

(20) "Critical barrier" means a containment structure that allows for the passage of persons or materials while maintaining containment.

(21) "Demonstration testing" means the observation and scoring of a student's job task and equipment use skills taught during a course or refresher training course.

(22) "Desk audit" means an audit of the training program to document proper records keeping, filing procedures and notifications required by the Authority.

(23) "Deteriorated paint" means any interior or exterior paint or other coating that is peeling, chipping, chalking, cracking, flaking, or any paint or coating located on an interior or exterior surface or fixture that is otherwise damaged or separated from the substrate.

(24) "Distinct painting history" means the application history, as indicated by the visual appearance or a record of application, over time, of paint or other surface coatings to a component or room.

(25) "Documented methodologies" are written methods or protocols used to sample for the presence of lead in paint, dust, and soil as recommended in U.S. Department of Housing and Urban Development "Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing" and "EPA's Residential Sampling for Lead: Protocols for Dust and Soil Sampling".

(26) "Dripline" means the area within three feet surrounding the perimeter of a building.

(27) "Dry disposable cleaning cloth" means a commercially available dry, electro-statically charged, white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or counter tops.

(28) "Dust-lead hazard" means surface dust in a residential dwelling or child-occupied facility that contains a mass-per-area concentration of lead equal to or exceeding 40 $\mu g/ft^2$ on floors, 250 $\mu g/ft^2$ on interior window sills, and 400 $\mu g/ft^2$ in window troughs based on wipe samples.

(29) "Emergency" means a situation in which failure to act promptly would likely result in immediate harm to persons or property.

(30) "Emergency renovation operations" means renovation activities, such as operations necessitated by non-routine failures of equipment, that were not planned but result from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, or threatens equipment or property with significant damage. Interim controls performed in response to an elevated blood lead level in a resident child are also emergency renovations.

(31) "EPA" means the United States Environmental Protection Agency.

(32) "EPA-authorized program" means a state or tribal program authorized by EPA to administer and enforce the provisions of 40 CFR § 745.324 and 40 CFR § 745.326.

(33) "Friction surface" means an interior or exterior surface that is subject to abrasion or friction, including, but not limited to, certain window, floor, and stair surfaces.

(34) "Guest instructor" means an individual who is responsible for providing less than 30 percent of training in any course.

(35) "Hands-on training" means training during which students practice skills that they will be expected to perform at the worksite.

(36) "HEPA vacuum" means a vacuum cleaner which has been designed with a high-efficiency particulate air (HEPA) filter as the last filtration stage. A HEPA filter is a filter that is capable of capturing particles of 0.3 microns with 99.97 percent efficiency. The vacuum cleaner must be designed so that all the air drawn into the machine is expelled through the HEPA filter with none of the air leaking past it.

(37) "Impact surface" means an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of door frames.

(38) "Inspection" means a surface-by-surface investigation to determine the presence of lead-based paint and the provision of a report, in writing, explaining the results of the investigation.

(39) "Interim controls" means a set of measures designed to temporarily reduce human exposure or likely exposure to lead-based paint hazards, including specialized cleaning, repairs, maintenance, painting, temporary containment, ongoing monitoring of lead-based paint hazards or potential hazards, and the establishment and operation of management and resident education programs.

(40) "Interactive/participatory teaching methods" mean instruction which consists of active participation of the students, such as brainstorming, hands-on training, demonstration and practice, small group problem-solving, learning games, discussions, risk mapping, field visits, walk-throughs, problem-posing, group work assignments, homework review sessions, question-and-answer periods, skits, or role-playing sessions. Lecture is not considered an interactive/participatory teaching method.

(41) "Job tasks" mean the specific activities performed in the context of work.

(42) "Lead-based paint" means paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

(43) "Lead-based paint hazard" means deteriorated lead-based paint, dust-lead hazard or soil-lead hazard as identified in these rules.

(44) "Lead-contaminated dust" means surface dust in residential dwellings or child-occupied facilities that contains an area or mass concentration of lead in excess of levels determined by the appropriate federal agency to pose a threat of adverse health effects in pregnant women or young children.

(45) "Minor repair and maintenance activities" means activities, including minor heating, ventilation or air conditioning work, electrical work, and plumbing, that disrupts six square feet or less of painted surface per room for interior activities, or 20 square feet or less of painted surface for exterior activities where none of the work practices prohibited or restricted by OAR 333-070-0090 are used and where the work does not involve window replacement or demolition of painted surface areas. When removing painted components, or portions of painted components, the entire surface area removed is the amount of painted surface disturbed. Jobs, other than emergency renovations, performed in the same room within the same 30 days are the same job for the purpose of determining whether the job is a minor repair and maintenance activity.

(46) "Multi-family housing" means a housing property consisting of more than four dwelling units.

(47) "Paint in poor condition" means more than 10 square feet of deteriorated paint on exterior components with large surface areas; or more than two square feet of deteriorated paint on interior components with large surface areas (e.g., walls, ceilings, floors, doors); or more than 10 percent of the total surface area of the component is deteriorated on interior or exterior components with small surface areas (e.g., window sills, baseboards, soffits, trim).

(48) "Paint-lead hazard" means any of the following:

(a) Any lead-based paint on a friction surface that is subject to abrasion and where the lead dust levels on the nearest horizontal surface underneath the friction surface (e.g., the window sill, or floor) are equal to or greater than the dust-lead hazard levels identified in these rules.

(b) Any damaged or otherwise deteriorated lead-based paint on an impact surface that is caused by impact from a related building component (such as a door knob that knocks into a wall or a door that knocks against its door frame).

(c) Any chewable lead-based painted surface on which there is evidence of teeth marks.

(d) Any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

(49) "Paint stabilization" means repairing any physical defect in the substrate of a painted surface that is causing paint deterioration, removing loose paint and other material from the surface to be treated, and applying a new protective coating or paint.

(50) "Pamphlet" means the EPA pamphlet titled Renovate Right: Important Lead Hazard Information for Families, Child Care Providers and Schools or any state pamphlet approved by EPA pursuant to 40 CFR 745.326 that is developed for the same purpose. This includes reproductions of the pamphlet when copied in full and without revision or deletion of material from the pamphlet (except for the addition or revision of state or local sources of information.

(51) "Permanent" means having an expected design life of 20 years.

(52) "Principal instructor" means the individual who has the primary responsibility for organizing and teaching a particular course.

(53) "Proficiency test" means any alternative to a conventional written examination that is used to measure a trainee's mastery of

course content. An oral examination offered to a trainee with a disability is an example of a proficiency test.

(54) "Provisional accreditation" means the Authority has reviewed and finds acceptable a training program's written application for accreditation, but has not conducted an on-site audit as specified in these rules.

(55) "Public agency" means an entity that functions as part of a governmental body or organization at the local, state, or federal level.

(56) "Recognized test kit" means a commercially available kit recognized by EPA under 40 CFR 745.88 as being capable of allowing a user to determine the presence of lead at levels equal to or in excess of 1.0 milligrams per square centimeter, or more than 0.5 percent lead by weight, in a paint chip, paint powder, or painted surface.

(57) "Refresher renovator of dust sampling technician training course" means a minimum training program accredited by the Authority to update an individual's knowledge and skills so that they can effectively and safely continue to practice in the field.

(58) "Renovation" means the modification of any existing structure, or portion thereof, that results in the disturbance of painted surfaces, unless that activity is performed as part of an abatement as defined by these rules. The term renovation includes, but is not limited to, the removal or modification of painted surfaces or painted components (e.g., modification of painted doors, surface preparation activity such as sanding, scraping, or other such activities that may generate paint dust); the removal of large structures (e.g., walls, ceiling, large surface re-plastering, major re-plumbing); and window replacement, weatherization projects (e.g., cutting holes in painted surfaces to install blown-in insulation or to gain access to attics, planning thresholds to install weather-stripping), and interim controls that disturb painted surfaces. A renovation performed for the purpose of converting a building, or part of a building, into target housing or a child-occupied facility is a renovation under this subpart. The term renovation does not include minor repair and maintenance activities.

(59) "Residential building" means a building containing one or more residential dwellings.

(60) "Residential dwelling" means:

(a) A detached single family dwelling unit, including attached structures such as porches and stoops; or

(b) A single family dwelling unit in a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be occupied, in whole or in part, as the home or residence of one or more persons.

(61) "Room" means a separate part of the inside of a building, such as a bedroom, living room, dining room, kitchen, bathroom, laundry room, or utility room. To be considered a separate room, the room must be separated from adjoining rooms by built-in walls or archways that extend at least six inches from an intersecting wall. Half walls or bookcases count as room separators if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls. A screened in porch that is used as a living area is a room.

(62) "RRP" means the U.S. EPA Renovation Repair and Painting Rule under 40 CFR § 745 Subpart E-Residential Property Renovation.

(63) "Site Visit' means a visit by the Authority to audit a training program and includes but is not limited to a review of: records, including course completion forms and attendance records; facilities; instructional curriculum; examination design, administration and security procedures and results, including those of demonstration testing; classroom instruction; audio-visual materials; course content; and coverage.

(64) "Soil lead hazard" means bare soil on residential property or on the property of a child-occupied facility that contains total lead equal to or exceeding 400 ppm in a play area or 1,200 ppm in the remainder of the yard based on soil samples.

(65) "Target housing" means any housing constructed prior to 1978, except housing for the elderly or persons with disabilities (unless one or more children under age six resides or is expected to reside in such housing for the elderly or persons with disabilities) or any zero-bedroom dwelling.

(66) "These rules" mean OAR 333-070-0075 through 333-070-0160.

(67) "Training hour" means 60 minutes of lead-based paint related training which may include a break of not more than 10 minutes.

(68) "Training instructor" means the individual responsible for organization of the course and oversight of the teaching of all course material, and who teaches at least 70 percent of the course.

(69) "Training manager" means the individual responsible for administering a training program and monitoring the performance of principal instructors and guest instructors.

(70) "Visual inspection" means:

(a) For interiors, that a certified renovator determines whether dust, debris, or residue is still present.

(b) For exteriors, that a certified renovator determines whether dust or debris is still present in and below the work area, including windowsills and the ground.

(71) "Wet disposable cleaning cloth" means a commercially available, pre-moistened white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or counter tops.

(72) "Wet mopping system" means a device with the following characteristics: A long handle, a mop head designed to be used with disposable absorbent cleaning pads, a reservoir for cleaning solution, and a built-in mechanism for distributing or spraying the cleaning solution onto a floor, or a method of equivalent efficacy.

(73) "Work area" means the area that the certified renovator establishes to contain the dust and debris generated by a renovation.

Stat. Auth.: ORS 431.920
Stats. Implemented: ORS 431.918
Hist.: PH 8-2010, f. & cert. ef. 4-26-10; PH 4-2011, f. & cert. ef. 6-16-11

333-070-0090
Work Practice Standards

All renovations must be performed in accordance with the work practice standards in this rule unless the renovation qualifies for one of the exceptions identified in OAR 333-070-0075(3)(a).

(1) Standards for renovation activities.

(a) Renovations must be performed by certified renovation firms using certified renovators as directed in OAR 333-070-0100.

(b) The responsibilities of certified renovation firms are set forth in OAR 333-070-0105.

(c) The responsibilities of certified renovators are set forth in OAR 333-070-0100.

(2) Occupant protection.

(a) A certified renovation firm shall:

(A) Post signs clearly defining the work area and warning occupants and other persons not involved in renovation activities to remain outside of the work area. To the extent practicable, these signs must be in the primary language of the occupants.

(B) Post signs before beginning the renovation and keep them in place and readable until the renovation and the post-renovation cleaning verification has been completed.

(C) Post signs at each entry to the renovation project work area, at a minimum.

(b) If warning signs have been posted in accordance with paragraph (2)(a)(A) of this rule, additional signs are not required.

(3) Containing the work area. A certified renovation firm shall:

(a) Isolate the work area so that no dust or debris leaves the work area while the renovation is being performed, before beginning the renovation;

(b) Maintain the integrity of the containment by ensuring that any plastic or other impermeable materials are not torn or displaced, and taking any other steps necessary to ensure that no dust or debris leaves the work area while the renovation is being performed; and

(c) Ensure that containment is installed in such a manner that it does not interfere with occupant and worker egress in an emergency.

(4) Interior renovations. A certified renovation firm shall:

(a) Remove all objects from the work area, including furniture, rugs, and window coverings, or cover them with plastic sheeting or other impermeable material with all seams and edges taped or otherwise sealed;

(b) Close and cover all ducts opening in the work area with taped-down plastic sheeting or other impermeable material;

(c) Close windows and doors in the work area;

(d) Cover doors with plastic sheeting or other impermeable material. Doors used as an entrance to the work area must be covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area;

(e) Cover the floor surface, including installed carpet, with taped-down plastic sheeting or other impermeable material in the work area six feet beyond the perimeter of surfaces undergoing renovation or a sufficient distance to contain the dust, whichever is greater; and

(f) Use precautions to ensure that all personnel, tools, and other items, including the exteriors of containers of waste, are free of dust and debris before leaving the work area.

(5) Exterior renovations. A certified renovation firm shall:

(a) Close all doors and windows within 20 feet of the renovation. On multi-story buildings, close all doors and windows within 20 feet of the renovation on the same floor as the renovation, and close all doors and windows on all floors below that are the same horizontal distance from the renovation;

(b) Ensure that doors within the work area that will be used while the job is being performed are covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area;

(c) Cover the ground with plastic sheeting or other disposable impermeable material extending 10 feet beyond the perimeter of surfaces undergoing renovation or a sufficient distance to collect falling paint debris, whichever is greater, unless the property line prevents 10 feet of such ground covering; and

(d) In adverse weather conditions (e.g. windy conditions), the certified renovation firm must take extra precautions in containing the work area to ensure that dust and debris from the renovation does not contaminate other buildings or other areas of the property or migrate to adjacent properties.

(6) Prohibited and restricted practices. The work practices listed below are prohibited during a renovation:

(a) Open-flame burning or torching of lead-based paint;

(b) The use of machines that remove lead-based paint through high speed operation such as sanding, grinding, power planing, needle gun, abrasive blasting, or sandblasting, unless such machines are used with HEPA exhaust control; and

(c) Operating a heat gun on lead-based paint is prohibited unless the temperature is below 1100 degrees Fahrenheit.

(7) Waste from renovations. A certified renovation firm shall:

(a) Contain waste from a renovation to prevent releases of dust and debris before the waste is removed from the work area for storage or disposal. If a chute is used to remove waste from the work area, it must be covered;

(b) Store and contain waste that has been collected from renovation activities in an enclosure, or behind a barrier that prevents release of dust and debris out of the work area and prevents access to dust and debris, at the conclusion of each work day and at the conclusion of the renovation; and

(c) Contain the waste to prevent release of dust and debris when transporting waste from renovation activities.

(8) Cleaning the work area. After a renovation has been completed, the certified renovation firm shall clean the work area until no dust, debris or residue remains.

(9) Interior and exterior renovations. A certified renovation firm shall:

(a) Collect all paint chips and debris and, without dispersing any of it, seal this material in a heavy-duty bag;

(b) Remove the protective sheeting;

(c) Mist the sheeting before folding it, fold the dirty side inward, and either tape shut to seal or seal in heavy-duty bags. Sheeting used to isolate contaminated rooms from non-contaminated rooms must remain in place until after the cleaning and removal of other sheeting; and

(d) Dispose of sheeting as waste.

(10) Additional cleaning for interior renovations. A certified renovation firm shall clean all objects and surfaces in the work area and within two feet of the work area in the following manner, cleaning from higher to lower:

(a) Walls. Clean walls starting at the ceiling and working down to the floor by either vacuuming with a HEPA vacuum or wiping with a damp cloth. Dust bags from HEPA machines must be properly contained and disposed. Changing of vacuum bag must occur in containment and wrapped and taped in plastic for disposal.

(b) Remaining surfaces. Thoroughly vacuum all remaining surfaces and objects in the work area, including furniture and fixtures, with a HEPA vacuum. The HEPA vacuum must be equipped with a beater bar when vacuuming carpets and rugs.

(c) Wipe all remaining surfaces and objects in the work area, except for carpeted or upholstered surfaces, with a damp cloth. Mop uncarpeted floors thoroughly, using a mopping method that keeps the wash water separate from the rinse water, such as the two-bucket mopping method, or using a wet mopping system.

(11) Standards for post-renovation cleaning verification of interiors. A certified renovation firm shall have a certified renovator:

(a) Perform a visual inspection to determine whether dust, debris or residue is still present. If dust, debris or residue is present, these conditions must be removed by re-cleaning and another visual inspection must be performed.

(b) After a successful visual inspection:

(A) Verify that each windowsill in the work area has been adequately cleaned, using the following procedure:

(i) Wipe the windowsill with a wet disposable cleaning cloth that is damp to the touch. If the cloth matches or is lighter than the cleaning verification card, the windowsill has been adequately cleaned.

(ii) If the cloth does not match and is darker than the cleaning verification card, re-clean the windowsill as directed in subparagraph (A)(i) of this subsection, then either use a new cloth or fold the used cloth in such a way that an unused surface is exposed, and wipe the surface again. If the cloth matches or is lighter than the cleaning verification card, that windowsill has been adequately cleaned.

(iii) If the cloth does not match and is darker than the cleaning verification card, wait for one hour or until the surface has dried completely, whichever is longer, and wipe the windowsill with a dry disposable cleaning cloth. After this wipe, the windowsill has been adequately cleaned.

(B) Wipe uncarpeted floors and countertops within the work area with a wet disposable cleaning cloth. Floors must be wiped using an application device with a long handle and a head to which the cloth is attached. The cloth must remain damp at all times while it is being used to wipe the surface for post-renovation cleaning verification. If the surface within the work area is greater than 40 square feet, the surface within the work area must be divided into roughly equal sections that are each less than 40 square feet. Wipe each such section separately with a new wet disposable cleaning cloth. If the cloth used to wipe each section of the surface within the work area matches the cleaning verification card, the surface has been adequately cleaned.

(i) If the cloth used to wipe a particular surface section does not match the cleaning verification card, re-clean that section of the surface as directed in paragraph (b)(B) of this section, then use a new wet disposable cleaning cloth to wipe that section again. If the cloth matches the cleaning verification card, that section of the surface has been adequately cleaned.

(ii) If the cloth used to wipe a particular surface section does not match the cleaning verification card after the surface has been re-cleaned, wait for one hour or until the entire surface within the work area has dried completely, whichever is longer.

(iii) After waiting for the entire surface within the work area to dry, wipe each section of the surface that has not yet achieved post-renovation cleaning verification with a dry disposable cleaning cloth. After this wipe, that section of the surface has been adequately cleaned.

(c) Remove the warning signs when the work area passes the post-renovation cleaning verification.

(12) Standards for post-renovation cleaning verification of exteriors. A certified renovation firm shall have a certified renovator:

(a) Perform a visual inspection to determine whether dust, debris or residue is still present on surfaces in and below the work area, including windowsills and the ground. If dust, debris or residue is present, these conditions must be eliminated and another visual inspection must be performed.

(b) Remove the warning signs when the area passes the visual inspection.

(13) Optional dust clearance testing. Cleaning verification need not be performed if the contract between the certified renovation firm and the person contracting for the renovation or another federal, state or local law or regulation requires:

(a) The certified renovation firm to perform dust clearance sampling at the conclusion of a renovation covered by this rule.

(b) The dust clearance samples are required to be collected by a certified inspector, risk assessor or dust sampling technician.

(c) The certified renovation firm is required to re-clean the work area until the dust clearance sample results are below the dust clearance standards in OAR 333-070-0085.

(14) Activities conducted after post-renovation cleaning verification. Activities that do not disturb paint, such as applying paint to walls that have already been prepared, are not regulated by this rule if they are conducted after post-renovation cleaning verification has been performed.

333-070-0095
Information Distribution Requirements for the Pre-Renovation Notification Rule (406).

(1) Renovations in dwelling units. No more than 60 days before beginning renovation activities in any residential dwelling unit of target housing, a certified renovation firm performing the renovation shall:

(a) Provide the owner of the unit with the pamphlet; and:

(A) Obtain, from the owner, a written acknowledgment that the owner has received the pamphlet; or

(B) Obtain a certificate of mailing at least seven days prior to the renovation.

(b) If the owner does not occupy the dwelling unit, in addition to the requirements in subsection (a) of this section, a certified renovation firm shall provide an adult occupant of the unit with the pamphlet; and:

(A) Obtain, from the adult occupant, a written acknowledgment that the occupant has received the pamphlet; or

(B) Certify in writing that a pamphlet has been delivered to the dwelling and that the certified renovation firm performing the renovation has been unsuccessful in obtaining a written acknowledgment from an adult occupant. A certification must include:

(i) The address of the unit undergoing renovation;

(ii) The date and method of delivery of the pamphlet;

(iii) The name of the individual delivering the pamphlet;

(iv) The reason for lack of acknowledgment (e.g., occupant refuses to sign, no adult occupant available);

(v) The signature of a representative of the certified renovation firm performing the renovation; and

(vi) The date of signature.

(C) If receipt can not be obtained from the adult occupant, obtain a certificate of mailing at least seven days prior to the renovation.

(2) Renovations in common areas. No more than 60 days before beginning renovation activities in common areas of multi-unit target housing, the certified renovation firm performing the renovation shall:

(a) Provide the owner with the pamphlet, and:

(A) Obtain, from the owner, a written acknowledgment that the owner has received the pamphlet; or

(B) Obtain a certificate of mailing at least seven days prior to the renovation.

(b) Comply with one of the following:

(A) Notify the affected units in writing of the proposed renovation and make the pamphlet available upon request prior to the start of renovation. Such notification shall be accomplished by distributing written notification to each affected unit. The notice shall:

(i) Describe the general nature and locations of the planned renovation activities;

(ii) Include the expected starting and ending dates; and

(iii) Contain a statement of how the occupant can obtain the pamphlet and a copy of the records required by OAR 333-070-0110, at no cost to the occupants; or

(B) While the renovation is ongoing, post informational signs describing the general nature and locations of the renovation and the anticipated completion date. These signs must be posted in areas where they are likely to be seen by the occupants of all of the affected units. The signs must be accompanied by a posted copy of the pamphlet or information on how interested occupants can review a copy of the pamphlet or obtain a copy from the certified renovation firm at no cost to occupants. The signs must also include information on how interested occupants can review a copy of the records required by OAR 333-070-0110 or obtain a copy from the renovation firm at no cost to the occupants.

(c) Prepare, sign, and date a statement describing the steps performed to notify all occupants of the intended renovation activities and to provide the pamphlet.

(d) If the scope, locations, or expected starting and ending dates of the planned renovation activities change after the initial notification, and the certified renovation firm provided written initial notification to each affected unit, the certified renovation firm performing the renovation must provide further written notification to the owners and occupants providing revised information on the ongoing or planned activities. This subsequent notification must be provided before the certified renovation firm performing the renovation initiates work beyond that which was described in the original notice.

(3) Renovations in child-occupied facilities. No more than 60 days before beginning renovation activities in any child-occupied facility, the certified renovation firm performing the renovation shall:

(a) Provide the owner of the building with the pamphlet, and:

(A) Obtain, from the owner, a written acknowledgment that the owner has received the pamphlet; or

(B) Obtain a certificate of mailing at least seven days prior to the renovation.

(b) In addition to the requirements in subsection (a) of this section, if the operator of the child-occupied facility is not the owner of the building, provide the operator of the child-occupied facility with the pamphlet, and:

(A) Obtain, from the operator, a written acknowledgment the operator has received the pamphlet;

(B) Certify in writing that a pamphlet has been delivered to the operator and that the certified renovation firm performing the renovation has been unsuccessful in obtaining a written acknowledgment from the operator. Such certification shall comply with the requirements in paragraph (1)(b)(B) of this rule; or

(C) Obtain a certificate of mailing at least seven days prior to the renovation.

(c) Provide the parents and guardians of children using the child-occupied facility with the pamphlet and information describing

the general nature and locations of the renovation and the anticipated completion date by:

(A) Mailing or hand-delivering the pamphlet and the renovation information to each parent or guardian of a child using the child-occupied facility; or

(B) While the renovation is ongoing, post informational signs describing the general nature and locations of the renovation and the anticipated completion date. These signs must be posted in areas where they can be seen by the parents or guardians of the children frequenting the child-occupied facility. The signs must be accompanied by a posted copy of the pamphlet or information on how interested parents or guardians of children frequenting the child-occupied facility can review a copy of the pamphlet or obtain a copy from the renovation firm at no cost to the parents or guardians. The signs must also include information on how interested parents or guardians of children frequenting the child-occupied facility can review a copy of the records required by OAR 333-070-0110 or obtain a copy from the renovation firm at no cost to the parents or guardians; and

(C) Prepare, sign, and date a statement describing the steps performed to notify all parents and guardians of the intended renovation activities and to provide the pamphlet.

(4) Written acknowledgment. A written acknowledgment required by paragraphs (1)(a)(A), (1)(b)(A), (2)(a)(A), (4)(a)(A) and (4)(b)(A) of this rule must:

(a) Include the owner or occupant's name and a statement from the owner or occupant acknowledging receipt of the pamphlet prior to the start of renovation, the address of the unit undergoing renovation, the signature of the owner or occupant as applicable, and the date of signature;

(b) Be on a separate sheet of paper or part of any written contract or service agreement for the renovation; and

(c) Be written in the same language as the text of the contract or agreement for the renovation or, in the case of non-owner occupied target housing, in the same language as the lease or rental agreement or the pamphlet.

333-070-0100
Renovator Certification and Dust Sampling Technician Certification and Responsibilities

(1) Renovator certification allows a certified individual to perform renovations covered by these rules.

(2) Dust sampling technician certification allows the individual to perform dust clearance sampling under OAR 333-070-0090. Optional dust sampling, procedures and determinations are contained in 333-069-0070(5)(j)(D); and sections (6) and (11).

(3) Renovator certification and dust sampling technician certification.

(a) To become a certified renovator or certified dust sampling technician, an individual must successfully complete the appropriate course accredited by the Authority, EPA, or an EPA-authorized state or tribal program. The course completion certificate serves as proof of certification.

(b) Individuals who have successfully completed an accredited abatement worker or supervisor course, or individuals who have successfully completed an EPA, HUD, or EPA/HUD model renovation training course may take an accredited refresher renovator training course in lieu of the initial renovator training course to become a certified renovator.

(c) To become a certified dust sampling technician, a certified inspector or risk assessor need only to take the dust sampling technician refresher course.

(d) To maintain renovator certification or dust sampling technician certification, an individual must complete a renovator or dust sampling technician refresher course accredited by the Authority, EPA or an EPA-authorized program within five years of the date the individual completed the initial course described in OAR 333-0070-0100. If the individual does not complete a refresher course within this time, the individual must re-take the initial course to become certified again.

(4) Renovator responsibilities. Certified renovators are responsible for ensuring compliance with OAR 333-070-0090 at all renovations to which they are assigned. A certified renovator shall:

(a) Perform all of the tasks described in OAR 333-070-0090 and either perform or direct workers to perform, all of the tasks described in 333-070-0090.

(b) Provide training to workers on the work practices they will be using in performing their assigned tasks.

(c) Be physically present at the work site:

(A) At the time the signs required by OAR 333-070-0090(2) are posted;

(B) While the work area containment required by OAR 333-070-0090(3) is being established; and

(C) While the work area cleaning required by OAR 333-070-0090(8) is performed.

(d) Regularly direct work being performed by other individuals to ensure that the work practices are being followed, including maintaining the integrity of the containment barriers and ensuring that dust or debris does not spread beyond the work area.

(e) Be available, either on-site or by telephone, at all times that renovations are being conducted.

(f) Use an EPA recognized test kit when requested by the party contracting for renovation services to determine whether components to be affected by the renovation contain lead-based paint. If the components make up an integrated whole, such as the individual stair treads and risers of a single staircase, the renovator is required to test only one of the individual components, unless the individual components appear to have been repainted or refinished separately.

(g) Have, at the work site, copies of their initial course completion certificate and their most recent refresher course completion certificate.

(h) Prepare the records required by OAR 333-070-0110.

(5) Dust sampling technician responsibilities. When performing optional dust clearance sampling as referenced in OAR 333-069-0070, paragraph (5)(j)(D); and sections (6) and (11) a certified dust sampling technician shall:

(a) Collect dust samples in accordance with 40 CFR § 745.227(e)(8), send the collected samples to a laboratory recognized by the EPA under § 405(b) of the Toxic Substances Control Act, National Lead Laboratory Accreditation Program, and compare the results to the clearance levels in accordance with 40 CFR § 745.227(e)(8)(C)(vii); and

(b) Have, at the work site, copies of their initial course completion certificate and their most recent refresher course completion certificate.

333-070-0105
Certified Renovation Firm Certification and Responsibilities

(1) Initial certification.

(a) Firms that perform renovations for compensation shall:

(A) Apply to the Authority for certification to perform renovations or dust sampling by submitting a completed "Application for Certified Renovation Firms," signed by an authorized agent of the firm; and

(B) Pay the correct amount of fees.

(b) An application will be considered complete if it contains all of the information requested on the form and includes the correct amount of fees.

(c) If the Authority receives an incomplete application, it will request that the applicant submit the missing information or fee within 30 days. If an applicant fails to submit the requested information or the fee, the application will be returned to the applicant. An applicant who has had its application returned may reapply at any time.

(d) Within 30 days of declaring an application complete, the Authority shall:

(A) Approve the application if the Authority determines that the environmental compliance history of the applicant, its principals, or its key employees shows a willingness and ability to maintain compliance with environmental statutes or regulations; or

(B) Deny the application if the Authority determines that the environmental compliance history of the applicant, its principals, or its key employees demonstrates an unwillingness or inability to maintain compliance with environmental statutes or regulations.

(e) If the Authority approves the application, the Authority shall issue the applicant a certificate with an expiration date not more than five years from the date the application is approved.

(f) If the Authority denies the application it shall send the applicant a letter giving the reason for denying the application.

(2) Recertification.

(a) To maintain its certification, a certified renovation firm shall apply for recertification every five years, by submitting a timely and complete "Application for Certified Renovation Firms" with the required fee to the Authority.

(A) An application for recertification is timely if it is postmarked 60 days or more before the date the certified renovation firm's current certification expires. If the certified renovation firm's application is complete and timely, the certified renovation firm's current certification will remain in effect until its expiration date or until the Authority has made a final decision to approve or deny the recertification application, whichever is later.

(B) If the certified renovation firm submits a complete recertification application less than 60 days before its current certification expires, and the Authority does not approve the application before the expiration date, the certified renovation firm's current certification will expire and the certified renovation firm will not be able to conduct renovations until the Authority approves its recertification application.

(C) If the certified renovation firm fails to obtain recertification before the certified renovation firm's current certification expires, the certified renovation firm may not perform renovations or dust sampling and must apply for initial certification under section (1) of this rule.

(b) A recertification application will be considered complete if it contains all of the information requested on the form and includes the correct amount of fees.

(c) If the Authority receives an incomplete application, it will request a certified renovation firm to submit the missing information or fee within 30 days. If an applicant fails to submit the requested information or the fee, the application will be returned to the applicant.

(d) Within 60 days of declaring an application for recertification complete, the Authority shall:

(A) Approve a certified renovation firm's recertification application if the Authority determines that the environmental compliance history of the certified renovation firm, its principals, or its key employees shows a willingness and ability to maintain compliance with environmental statutes or regulations; or

(B) Deny a certified renovation firm's recertification application if the Authority determines that the environmental compliance history of the certified renovation firm, its principals, or its key employees demonstrates an unwillingness or inability to maintain compliance with environmental statutes or regulations.

(e) If the Authority approves a certified renovation firm's recertification application, the Authority shall issue the certified renovation firm a certificate with an expiration date not more than five years from the date the application is approved.

(f) If the Authority denies the recertification application it shall send the certified renovation firm a letter giving the reason for denying the application.

(3) Amendment of certification.

(a) A certified renovation firm shall amend its application for certification within 30 days of the date a change occurs to information included in the certified renovation firm's most recent application.

(b) If the certified renovation firm fails to amend its certification within 30 days of the date the change occurs, the certified renovation firm may not perform renovations or dust sampling until its certification is amended.

(c) To amend a certification, a certified renovation firm must submit a completed "Application for Certified Renovation Firms," signed by an authorized agent of the certified renovation firm, noting on the form that it is submitted as an amendment and indicating the information that has changed.

(d) If additional information is needed to process the amendment, the Authority will request the certified renovation firm to submit the necessary information. The certified renovation firm's certification is not amended until the certified renovation firm submits all the required information and the Authority has approved the amendment.

(e) Amending a certification does not affect the certification expiration date.

(4) The Authority will not refund the application fees if a certified renovation firm's application for initial or recertification is denied.

(5) A certified renovation firm that is denied initial certification or recertification shall have the right to a contested case hearing under ORS Chapter 183.

(6) A certified renovation firm that is denied initial or recertification may reapply for certification at any time by filing a new, complete application that includes the correct amount of fees.

(7) Certified renovation firm responsibilities. Certified renovation firms performing renovations shall ensure that:

(a) All individuals performing renovation activities on behalf of the certified renovation firm are either certified renovators or have been trained by a certified renovator as described in OAR 333-070-0100;

(b) A certified renovator is assigned to each renovation performed by the certified renovation firm and discharges all of the certified renovator responsibilities identified in OAR 333-070-0100;

(c) All renovations performed by the certified renovation firm are performed in accordance with the work practice standards as described in OAR 333-070-0090;

(d) The pre-renovation education requirements of OAR 333-070-0095 have been performed;

(e) The recordkeeping requirements of OAR 333-070-0110 are met; and

(f) The certified renovator is in compliance with the responsibilities as identified in OAR 333-070-0100 and 333-070-0090.

333-070-0110
Certified Renovation Firm Recordkeeping and Reporting Requirements

(1) A certified renovation firm performing renovations must retain and, if requested, make available to the Authority all records required by these rules necessary to demonstrate compliance with these rules for a period of three years following completion of the renovation. The three-year retention requirement does not supersede longer obligations required by other provisions for retaining the same documentation.

(2) Records that must be retained pursuant to this rule shall include (where applicable):

(a) Records or reports certifying that a determination had been made by an inspector or risk assessor that lead-based paint is not present on the components affected by the renovation. These records or reports include:

(A) Reports prepared by a certified inspector or certified risk assessor (certified by the Authority, EPA, or an EPA-authorized state or tribal program);

(B) Records prepared by a certified renovator after using EPA-recognized test kits, including an identification of the manufacturer and model of any test kits used, a description of the components that were tested including their locations, and the result of each test kit used.

(b) Signed and dated acknowledgments of receipts;

(c) Certifications of attempted delivery as described;

(d) Certificates of mailing;

(e) Records of notification activities performed regarding common area renovations and renovations in child-occupied facilities;

(f) Documentation of compliance with OAR chapter 333, division 70, including documentation that a certified renovator was assigned to the project, that the certified renovator provided on-the-job training for workers used on the project, that the certified renovator performed or directed workers who performed all of the tasks as described in this rule and that the certified renovator performed the post-renovation cleaning verification. If the certified renovation firm was unable to comply with all of the requirements of this rule due to an emergency, the certified renovation firm must document the nature of the emergency and the provisions of the rule that were not followed. This documentation must include a copy of the certified renovator's training certificate, and a certification by the certified renovator assigned to the project that:

(A) Training was provided to workers (topics must be identified for each worker);

(B) Warning signs were posted at the entrances to the work area;

(C) If test kits were used, that the specified brand of kits was used at the specified locations and that the results were as specified;

(D) The work area was contained by:

(i) Removing or covering all objects in the work area (interiors);

(ii) Closing and covering all HVAC ducts in the work area (interiors);

(iii) Closing all windows in the work area (interiors) or closing all windows in and within 20 feet of the work area (exteriors);

(iv) Closing and sealing all doors in the work area (interiors) or closing and sealing all doors in and within 20 feet of the work area (exteriors);

(v) Covering doors in the work area that were being used to allow passage but prevent spread of dust;

(vi) Covering the floor surface, including installed carpet, with taped-down plastic sheeting or other impermeable material in the work area six feet beyond the perimeter of surfaces undergoing renovation or a sufficient distance to contain the dust, whichever is greater (interiors) or covering the ground with plastic sheeting or other disposable impermeable material anchored to the building extending 10 feet beyond the perimeter of surfaces undergoing renovation or a sufficient distance to collect falling paint debris, whichever is greater, unless the property line prevents 10 feet of such ground covering, weighted down by heavy objects (exteriors);

(vii) Installing (if necessary) vertical containment to prevent migration of dust and debris to adjacent property (exteriors);

(viii) Waste was contained on-site and while being transported off-site.

(E) The work area was properly cleaned after the renovation by:

(i) Picking up all chips and debris, misting protective sheeting, folding it dirty side inward, and taping it for removal;

(ii) Cleaning the work area surfaces and objects using a HEPA vacuum and/or wet cloths or mops (interiors);

(iii) The certified renovator performed the post-renovation cleaning verification (the results of which must be briefly described, including the number of wet and dry cloths used).

(3) When the final invoice for the renovation is delivered or within 30 days of the completion of the renovation, whichever is earlier, the renovation firm must provide information pertaining to compliance with this subpart to the following persons:

(a) The owner of the building; and

(b) An adult occupant of the residential dwelling, if the renovation took place within a residential dwelling, or an adult representative of the child-occupied facility, if the renovation took place within a child-occupied facility.

(4) When performing renovations in common areas of multi-unit target housing, renovation firms must post the information required by this subpart or instructions on how interested occupants can obtain a copy of this information. This information must be posted in areas where it is likely to be seen by the occupants of all of the affected units.

(5) The information required to be provided by OAR 333-070-0110(2) may be provided by completing the sample form titled "Sample Renovation Recordkeeping Checklist" or a similar form containing the test kit information required by OAR 333-070-0075(3)(a)(B) and the training and work practice compliance information required by 333-070-0090 and 333-070-0100.

(6) If dust clearance sampling is performed in lieu of cleaning verification as permitted by OAR 333-070-0090(13), the renovation firm must provide, when the final invoice for the renovation is delivered or within 30 days of completion of the renovation, whichever is earlier, a copy of the dust sampling report to:

(a) The owner of the building; and

(b) An adult occupant of the residential dwelling, if the renovation took place within a residential dwelling, or an adult representative of the child-occupied facility, if the renovation took place within a child-occupied facility.

(7) When performing renovations in common areas of multi-unit target housing, renovation firms must post these dust sampling reports or information on how interested occupants of the housing being renovated can obtain a copy of the report. This information must be posted in areas where they are likely to be seen by the occupants of all of the affected units.

333-070-0115
Inspections and Enforcement

(1) The Authority may:

(a) Enter private or public property at any reasonable time with consent of the owner or custodian of the property to inspect, investigate, evaluate or conduct tests or take specimens or samples for testing, as necessary to determine compliance with ORS 431.920;

(b) Issue subpoenas to determine compliance with ORS 431.920;

(c) Suspend, revoke or modify a certification to perform lead-based paint activities or renovation if the holder of the certification fails to comply with state or federal statutes or regulations related to lead-based paint;

(d) Suspend, revoke or modify a certified renovator's certification if the renovator fails to comply with state or federal statutes or regulations related to lead-based paint; and

(e) Issue civil penalties not to exceed $5,000 per violation for a violation of ORS 431.920, or any of these rules, including failure or refusal to permit entry or inspection in accordance with this rule.

(A) In issuing civil penalties the Authority shall consider whether:

(i) The Authority made repeated attempts to obtain compliance;

(ii) The certified firm or individual has a history of noncompliance with environmental statutes or regulations;

(iii) The violation poses a serious risk to the public's health;

(iv) The certified firm or individual gained financially from the noncompliance; and

(v) There are mitigating factors, such as a certified firm's or individual's cooperation with an investigation or actions to come into compliance.

(B) The Authority shall document its consideration of the factors in paragraph (1)(e)(A) of this rule.

(C) Each day a violation continues is an additional violation.

(D) A civil penalty imposed under this rule shall comply with ORS 183.745.

(2) An individual who is issued a notice of suspension, revocation or modification shall have the right to a contested case hearing under ORS Chapter 183.

(3) The Authority shall maintain a publicly available list of individuals whose certification has been suspended, revoked, modified, or reinstated.

(4) Unless a final order specifies otherwise:

(a) An individual whose certification has been suspended must take a refresher training course (renovator or dust sampling technician) prior to certification being reinstated.

(b) An individual whose certification has been revoked shall take an initial renovator or dust sampling technician course in order to become certified again.

(c) A certified renovation firm whose certification has been revoked may reapply for certification after one year from the date of revocation.

(d) If the certified renovation firm's certification has been suspended and the suspension ends less than five years after the certified renovation firm was initially certified or re-certified, the certified renovation firm does not need to do anything to re-activate its certification once the period of suspension has expired.

333-070-0120
Certification Fees and Refunds

(1) Fees for the certification of certified renovation firms.

(a) Certification: $250

(b) Recertification: $250

(2) Fee Waivers. A renovation firm that has applied to EPA for certification or is certified by the EPA may request a waiver of the certification fee if the firm:

(a) Is required to be certified by the Authority; and

(b) Provides documentation that the date of application to EPA for certification or the date of certification is prior to May 3, 2010.

(3) Refund policy.

(a) An incomplete application shall be returned with the application fee minus a $50 administration fee.

(b) If an applicant requests that a complete application be withdrawn within 30 days of its receipt by the Authority, the Authority shall refund the applicant $200 minus a $50 administration fee.

(c) No fees will be refunded if the Authority has begun to process an application.

(4) Lost certificate. A $15 fee will be charged for the replacement of a certified renovation firm certificate.

(5) Certificate replacement. Certified renovation firms seeking certificate replacement must submit the replacement application form and a payment of $15 in accordance with the instructions provided with the application package.

333-070-0125
Training Program Accreditation Required

(1) A training program may seek accreditation to offer courses in either of the following disciplines: renovator or dust sampling technician. A training program may also seek accreditation to offer refresher courses for each of the above listed disciplines.

(2) Application process. The following are procedures a training program must follow to receive Authority accreditation to offer renovator courses or dust sampling technician courses:

(a) A training program seeking accreditation shall submit a written application with the appropriate fee to the Authority containing the following information:

(A) The training program's name, address, and telephone number;

(B) A list of courses for which it is applying for accreditation. For the purposes of this section, courses taught in different languages are considered different courses, and each must independently meet the accreditation requirements; and

(C) A statement signed by the training program manager certifying that the training program meets the requirements established in OAR 333-070-0130 and 333-070-0135. If a training program uses EPA model training materials, or training materials approved by an EPA-authorized program, the training program manager shall include a statement certifying that as well.

(b) If a training program does not use EPA model training materials or training materials approved by an EPA-authorized program, its application for accreditation shall also include:

(A) A copy of the student and instructor manuals, or other materials to be used for each course;

(B) A copy of the course agenda for each course; and

(C) When applying for accreditation of a course in a language other than English, a signed statement from a qualified, independent translator that they have compared the course to the English language version and found the translation to be accurate.

(c) All training programs shall include in their application for accreditation the following:

(A) A description of the facilities and equipment to be used for lecture and hands-on training;

(B) A copy of the course test blueprint for each course;

(C) A description of the activities and procedures that will be used for conducting the assessment of hands-on skills for each course; and

(D) A copy of the quality control plan as described in section (4) of OAR 333-070-0135.

(d) If the Authority receives an incomplete application, it will request that the applicant submit the missing information or fee within 30 days. If an applicant fails to submit the requested information or the fee, the application will be returned to the applicant. An applicant who has had its application returned may reapply at any time.

(e) If a training program meets the requirements in OAR 333-070-0130 and 333-070-0135, then the Authority will approve the application for accreditation no more than 60 days after receiving a complete application from the training program. In the case of approval, a certificate of accreditation shall be sent to the applicant.

(f) If the Authority denies the application it shall send the applicant a letter giving the reason for denying the application. An individual whose application is denied shall have the right to a contested case hearing under ORS Chapter 183.

(g) If the applicant's application is denied, the program may reapply for accreditation at any time.

(3) A training program may apply for accreditation to offer courses or refresher courses in as many disciplines as it chooses. A training program may seek accreditation for additional courses at any time as long as the program can demonstrate that it meets the requirements of OAR 333-070-0130 and 333-070-0135.

(4) A training program must not provide, offer, or claim to provide renovator or dust sampling technician courses without applying for and receiving accreditation from the Authority.

(5) Refresher courses only.

(a) A training program seeking accreditation to offer refresher training courses only shall submit a written application to the Authority containing the following information:

(A) The refresher training program's name, address, and telephone number;

(B) A list of courses for which it is applying for accreditation;

(C) A statement signed by the training program manager certifying that:

(i) The refresher training program meets the minimum requirements established by section (18) of OAR 333-070-0135; and

(ii) The training program uses EPA-developed model training materials, or training materials approved by a state or Indian tribe that has been authorized by the EPA under 40 CFR §745.324 to develop its refresher training course materials, if applicable.

(D) If the refresher training course materials are not based on EPA-developed model training materials or training materials approved by an authorized state or Indian tribe:

(i) A copy of the student and instructor manuals to be used for each course; and

(ii) A copy of the course agenda for each course.

(E) A description of the facilities and equipment to be used for lecture and hands-on training;

(F) A copy of the course test blueprint for each course;

(G) A description of the activities and procedures that will be used for conducting the assessment of hands-on skills for each course (if applicable); and

(H) A copy of the quality control plan as described in section (4) of OAR 333-070-0135.

(b) If the Authority receives an incomplete application, it will request that the applicant submit the missing information or fee within 30 days. If an applicant fails to submit the requested information or the fee, the application will be returned to the applicant. An applicant who has had its application returned may reapply at any time.

(c) If a refresher training program meets the requirements in section (5) of this rule, then the Authority will approve the application for accreditation no more than 60 days after receiving a complete application from the training program. In the case of approval, a certificate of accreditation shall be sent to the applicant.

(d) If the Authority denies the application it shall send the applicant a letter giving the reason for denying the application. An applicant who receives a denial shall have the right to a contested case hearing under ORS Chapter 183.

(6) Accreditation shall be valid for four years and shall not be transferrable.

(7) The Authority may accredit a training program that has been accredited by the EPA or an EPA-authorized state or tribal program upon receiving evidence of that accreditation and that the training program has:

(a) Completed any additional requirements established by the Authority; and

(b) The training manager has read and understands the accreditation standards as described in these rules.

(8) Accreditation based on a valid accreditation issued by EPA or an EPA-authorized state or tribal program shall be issued with an expiration date not to exceed the date of expiration listed on the EPA or EPA-authorized state or tribal accreditation.

333-070-0130
Minimum Personnel Requirements for Training Program Accreditation

For a training program to obtain accreditation from the Authority to offer renovator courses or dust sampling technician courses, the program shall:

(1) Employ a training manager who has:

(a) At least two years of experience, education, or training in teaching workers or adults; or

(b) A bachelor's or graduate degree in building construction technology, engineering, industrial hygiene, safety, public health, education, business administration or program management or a related field; or

(c) Two years of experience in managing a training program specializing in environmental hazards; and

(d) Demonstrated experience, education, or training in the construction industry including: lead or asbestos abatement, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene.

(2) Designate a qualified principal instructor for each course who has:

(a) Demonstrated experience, education, or training in teaching workers or adults;

(b) Successfully completed at least 16 hours of any EPA-accredited or EPA-authorized Lead-Based Paint Activities or Lead Renovation, Repair and Painting training program; and

(c) Demonstrated experience, education, or training in lead or asbestos abatement, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene.

(3) Have a principal instructor responsible for the organization of the course and oversight of the teaching of all course material. The training manager may designate guest instructors as needed to provide instruction specific to the lecture, hands-on activities, or work practice components of a course.

(4) Have documents that serve as evidence that training managers and principal instructors have the education, work experience, training requirements or demonstrated experience, specifically listed in sections (1) and (2) of this rule. This documentation need not be submitted with the accreditation application, but, if not submitted, shall be retained by the training program as required by the recordkeeping requirements contained in OAR 333-070-0150. Those documents include the following:

(a) Official academic transcripts or diploma as evidence of meeting the education requirements.

(b) Resumes, letters of reference, or documentation of work experience, as evidence of meeting the work experience requirements.

(c) Certificates from lead-specific training courses, as evidence of meeting the training requirements.

(5) Ensure the availability of, and provide adequate facilities for, the delivery of the lecture, course test, hands-on training, and assessment activities. This includes providing training equipment that reflects current work practices and maintaining or updating the equipment and facilities as needed.

333-070-0135
Minimum Curriculum Requirements for Training Program Accreditation

(1) In order to become accredited in the following disciplines a training program shall provide training courses that meet the following training hour requirements:

(a) The renovator course must provide a minimum of eight training hours, with a minimum of two hours devoted to hands-on training activities. Hands-on training activities must cover renovation methods that minimize the creation of dust and lead-based paint hazards, interior and exterior containment and cleanup methods, and post-renovation cleaning verification.

(b) The dust sampling technician course shall provide a minimum of eight training hours, with a minimum of two hours devoted to hands-on training activities. Hands-on training activities must cover dust sampling methodologies.

(2) A student shall be required to pass a course test or a proficiency test and a hands-on-skill assessment for each course offered.

(a) The training manager is responsible for maintaining the validity and integrity of the hands-on skills assessment or proficiency test to ensure that it accurately evaluates the trainees' performance of the work practices and procedures associated with the course topics contained in sections (16), (17) and (18) of this rule.

(b) The training manager is responsible for maintaining the validity and integrity of the course test to ensure that it accurately evaluates the trainees' knowledge and retention of the course topics.

(c) The course test shall be developed in accordance with the test blueprint submitted with the training accreditation application.

(3) The training program shall issue unique course completion certificates to each individual who passes the training course. The course completion certificate shall include:

(a) The name, a unique identification number, and address of the individual;

(b) The name of the particular course that the individual completed;

(c) Dates of course completion/test passage; and

(d) For renovator and dust sampling technician course completion certificates, a photograph of the individual.

(4) The training manager shall develop and implement a quality control plan. The plan shall be used to maintain and improve the quality of the training program over time. This plan shall contain at least the following elements:

(a) Procedures for periodic revision of training materials and the course test to reflect innovations in the field.

(b) Procedures for the training manager's annual review of principal instructor competency.

(5) Courses offered by the training program must teach the work practice standards contained in OAR 333-070-0090, in such a manner that trainees are provided with the knowledge needed to perform the renovations they will be responsible for conducting.

(6) The training manager shall be responsible for ensuring that the training program complies at all times with all of the requirements in this rule.

(7) The Authority may audit the training program to verify the contents of the application for accreditation as described in OAR 333-070-0130 and 333-070-0135.

(8) The training manager shall provide the Authority with notification of all renovator or dust sampling technician courses offered. The original notification must be received by the Authority at least seven business days prior to the start date of any renovator or dust sampling technician course.

(9) The training manager shall provide the Authority updated notification when renovator or dust sampling technician courses will begin on a date other than the start date specified in the notification, as follows:

(a) For renovator or dust sampling technician courses beginning prior to the start date provided to the Authority, an updated notification must be received by the Authority at least seven business days before the new start date.

(b) For renovator or dust sampling technician courses beginning after the start date provided to the Authority, an updated notification must be received by the Authority at least two business days before the start date.

(10) The training manager shall update the Authority of any change in location of renovator or dust sampling technician courses at least seven business days prior to the start date.

(11) The training manager shall update the Authority regarding any course cancellations, or any other change to the original notification. Updated notifications must be received by the Authority at least two business days prior to the start date.

(12) Each notification required by sections (8) through (11) of this rule, including updates shall include the following:

(a) Notification type (original, update, cancellation);

(b) Training program name, the Authority accreditation number, address, and telephone number;

(c) Course discipline, type (initial/ refresher), and the language in which instruction will be given;

(d) Date(s) and time(s) of training;

(e) Training location(s), telephone number, and address;

(f) Principal instructor's name; and

(g) Training manager's name and signature.

(13) Renovator or dust sampling training courses may not begin on a date, or at a location other than that specified in the original notification unless an updated notification identifying a new start date or location is submitted, in which case the course must begin on the new start date and/or location specified in the updated notification.

(14) The training manager shall provide the Authority notification after the completion of any renovator or dust sampling technician course. This notice must be received by the Authority no later than 10 business days following course completion. The notification shall include the following:

(a) Training program name, accreditation number, address, and telephone number;

(b) Course discipline and type (initial/refresher);

(c) Date(s) of training;

(d) The following information for each student who took the course:

(A) Name;

(B) Address;

(C) Date of birth;

(D) Course completion certificate number;

(E) Course test score; and

(F) A digital photograph of the student;

(e) Training manager's name and signature.

(15) Notifications required by this rule can be accomplished by using an Authority approved form or can be provided in writing with the information.

(a) All notifications shall be in writing and submitted to the Authority:

(A) By mail through the U.S. Postal Service or other commercial delivery service;

(B) By facsimile;

(C) In person; or

(D) Electronically via electronic mail or through the Authority's web-based system if one is established.

(b) A training program providing notifications through the U.S. Postal Service should allow three additional business days for delivery in order to ensure that the Authority receives the notification by the required date.

(c) Instructions for notifications and sample forms can be obtained from the Authority's website at www.healthoregon.org/lead.

(16) Renovator Training Course. A renovator training course shall include the following subjects:

(a) Role and responsibility of a renovator;

(b) Background information on lead and its adverse health effects;

(c) Background information on, HUD, OSHA, and other federal, state, and local regulations and guidance that pertains to lead-based paint and renovation activities;

(d) Procedures for using EPA recognized test kits to determine whether paint is lead-based paint;

(e) Renovation methods to minimize the creation of dust and lead-based paint hazards;

(f) Interior and exterior containment and cleanup methods;

(g) Methods to ensure that the renovation has been properly completed, including cleaning verification, and clearance testing;

(h) Waste handling and disposal;

(i) Providing on-the-job training to other workers; and

(j) Record preparation.

(17) Dust sampling technician. A dust sampling technician course shall include the following subjects:

(a) Role and responsibility of a dust sampling technician;

(b) Background information on lead and its adverse health effects;

(c) Background information on federal, state, and local regulations and guidance that pertains to lead-based paint and renovation activities;

(d) Dust sampling methodologies;

(e) Clearance standards and testing; and

(f) Report preparation.

(18) Requirements for the accreditation of refresher training programs. A training program may seek accreditation to offer refresher training courses in either of the following disciplines: renovator and dust sampling technician. To obtain the Authority accreditation to offer refresher training, a training program shall meet the following minimum requirements:

(a) Each refresher course shall review the curriculum topics of the full-length courses listed under sections (16) and (17) of this rule, as appropriate. In addition, to become accredited to offer refresher training courses, training programs shall ensure that their courses of study include, at a minimum, the following:

(A) An overview of current safety practices relating to lead-based paint in general, as well as specific information pertaining to the appropriate discipline.

(B) Current laws and regulations relating to lead-based paint in general, as well as specific information pertaining to the appropriate discipline.

(C) Current technologies relating to lead-based paint in general, as well as specific information pertaining to the appropriate discipline.

(D) Refresher courses for renovator and dust sampling technician must last a minimum of four training hours.

(E) For each course offered, the training program shall conduct a hands-on assessment (if applicable), and at the completion of the course, a course test.

(19) A training program may apply for accreditation of a refresher course concurrently with its application for accreditation of a corresponding training course as described in OAR 333-070-0135(1).

333-070-0140
Re-Accreditation of Training Programs

(1) Unless reaccredited, a training program's accreditation (including refresher training accreditation) shall expire four years after the date of issuance. If a training program meets the requirements of this rule, the training program shall be reaccredited.

(2) A training program seeking reaccreditation shall submit an application to the Authority no later than 60 days before its accreditation expires. If a training program does not submit its application for reaccreditation by that date, the Authority cannot guarantee that the program will be reaccredited before the end of the accreditation period.

(3) The training program's application for reaccreditation shall contain:

(a) The training program's name, address, and telephone number.

(b) A list of courses for which it is applying for reaccreditation.

(c) A description of any changes to the training facility, equipment or course materials since its last application was approved that adversely affects the student's ability to learn.

(d) A statement signed by the program manager stating:

(A) That the training program complies at all times with all requirements in OAR 333-070-0130 and 333-070-0135 as applicable; and

(B) The recordkeeping and reporting requirements of OAR 333-070-0150 shall be followed.

(e) A payment of appropriate fees in accordance with these rules.

(4) The Authority may audit the training program to verify the contents of the application for reaccreditation as described in OAR 333-070-0140.

(5) If the Authority receives an incomplete application, it will request that the applicant submit the missing information or fee within 30 days. If an applicant fails to submit the requested information or the fee, the application will be returned to the applicant. An applicant who has had its application returned may reapply at any time.

(6) If a training program meets the requirements in section (2) of this rule, then the Authority will approve the application for reaccreditation no more than 60 days after receiving a complete application from the training program. In the case of approval, a certificate of accreditation shall be sent to the applicant.

(7) If the Authority denies the application it shall send the applicant a letter giving the reason for denying the application. An applicant whose application is denied shall have the right to a contested case hearing under ORS Chapter 183.

333-070-0145
Suspending, Revoking, or Denying a Training Program's Accreditation; Civil Penalties

(1) The Authority may:

(a) Enter private or public property at any reasonable time with consent of the owner or custodian of the property to inspect or investigate as necessary to determine compliance with ORS 431.920;

(b) Issue subpoenas to determine compliance with ORS 431.920;

(c) Suspend, revoke, or deny an accreditation if the holder of the accreditation fails to comply with state or federal statutes or regulations related to lead-based paint; and

(d) Issue civil penalties not to exceed $5,000 per violation for a violation of ORS 431.920, or any of these rules, including failure or refusal to permit entry or inspection in accordance with this rule.

(A) In issuing civil penalties the Authority shall consider whether:

(i) The Authority made repeated attempts to obtain compliance;

(ii) The training program has a history of noncompliance with environmental statutes or regulations;

(iii) The violation poses a serious risk to the public's health;

(iv) The training program gained financially from the noncompliance; and

(v) There are mitigating factors, such as the training program's cooperation with an investigation or actions to come into compliance.

(B) The Authority shall document its consideration of the factors in paragraph (1)(d)(A) of this rule.

(C) Each day a violation continues is an additional violation.

(D) A civil penalty imposed under this rule shall comply with ORS 183.745.

(2) An accredited training program that is issued a notice of suspension, revocation or denial shall have the right to a contested case hearing under ORS Chapter 183.

(3) The Authority shall maintain a publicly available list of training programs whose accreditation has been suspended, revoked, denied, or reinstated.

(4) Unless a final order specifies otherwise:

(a) An accredited training program whose accreditation has been revoked may reapply for reaccreditation after one year from the date of revocation.

(b) If the training program's accreditation has been suspended and the suspension ends less than four years after the training program was initially accredited or reaccredited, the training program does not need to do anything to reactivate its accreditation once the period of suspension has expired.

333-070-0150
Training Program Record Keeping Requirements

An accredited training program shall:

(1) Maintain, and make available to the Authority upon request, the following records:

(a) All documents that demonstrate the qualifications of the training manager and principal instructors.

(b) Current curriculum/course materials and documents reflecting any changes made to these materials.

(c) The course test blueprint.

(d) Information regarding how the hands-on assessment is conducted including, but not limited to:

(A) Who conducts the assessment;

(B) How the skills are graded;

(C) What facilities are used;

(D) The pass/fail rate;

(E) The quality control plan as described in section (4) of OAR 333-070-0135; and

(F) Results of the students' hands-on skills assessments and course tests, and a record of each student's course completion certificate.

(e) Any other material not listed above in this section that was submitted to the Authority as part of the program's application for accreditation.

(2) Retain the records required at the address specified on the training program accreditation application or as amended for a minimum of three years and six months.

(3) If a training program modifies its application by changing its address, it shall also notify the Authority in writing within 30 days of its intent to transfer records to the new address.

333-070-0160
Accreditation Fees

The following fees are established:

(1) Course Fee Schedule:

(a) Course — Accreditation Fee — Reaccreditation fee:

(b) Renovator Initial — $560 — $340:

(c) Dust Sampling Technician Initial — $560 — $340:

(d) Renovator Refresher — $400 — $310:

(e) Dust Sampling Technician Refresher — $400 — $310

(2) Student Fee Schedule:

(a) Course — Fee:

(b) Renovator Initial — $17:

(c) Renovator Refresher — $17:

(d) Dust Sampling Technician Initial — $17:

(e) Dust Sampling Refresher — $17.

(f) The student fee is to be paid by the training program at the completion of each training course. The $17 fee is per student that successfully completes the course. The fee shall be paid by the training program to the Authority within 10 days after completion of the training course.

(3) Fee Waivers. A training program, that has applied for accreditation by the EPA to provide Renovator or Dust Sampling Technician training may request a waiver of the accreditation fees if the training program provides documentation that the date of application for accreditation by EPA or date of accreditation is prior to May 3, 2010.

(4) Firms with current accreditation by EPA or an EPA-authorized state or tribal program shall pay a prorated fee of the appropriate fee listed above, divided by 48, times the number of months remaining in the current accreditation, beginning with the month following application to the Authority.

DIVISION 71

SPECIAL INPATIENT CARE FACILITIES

333-071-0000
Licensing Procedures and Definitions

As used in OAR chapter 333, division 71, unless the context requires otherwise, the following definitions apply:

(1) "Health Care Facility" (HCF) has the meaning given the term in ORS 442.015, and includes but is not limited to the following classifications:

(a) "Hospital" means an establishment with an organized medical staff with permanent facilities that include inpatient beds, and with medical services, including physician services and continuous nursing services under the supervision of registered nurses, to provide diagnosis and medical or surgical treatment primarily for, but not limited to, acutely ill patients and accident victims, or to provide treatment for the mentally ill or to provide treatment in special inpatient care facilities. "Special inpatient care facilities" are facilities with inpatient beds and other facilities designed and utilized for special health care purposes, to include but not be limited to: Rehabilitation center, college infirmary, chiropractic facility, facility for the treatment of alcoholism or drug abuse, freestanding hospice facility, infirmary for the homeless, critical access hospital, or inpatient care facility meeting the requirements of ORS 441.065, and any other establishment falling within a classification established by the Division, after determination of the need for such classification and the level and kind of health care appropriate for such classification.

(b) An "ambulatory surgical center" or ambulatory surgical facility means a health care facility without patient beds, not sponsored by a hospital which performs outpatient surgery not routinely or customarily performed in a physician's or dentist's office, and is able to meet health facility licensure requirements. In the case of outpatient surgery involving termination of pregnancy, procedures routinely and customarily done in physicians' offices are the following:

(A) Dilation and curettage;

(B) Suction curettage;

(C) Sharp curettage;

(D) Dilation and evacuation.

(c) A "hospital associated ambulatory surgery center" means an ambulatory surgical service that is separately identifiable; physically, administratively and financially independent, distinct from other operations of the hospital, and is not located proximate to or adjoining the hospital's campus. The hospital associated ambulatory surgery center performs surgery not routinely or customarily performed in the physician's or dentist's office, and is able to meet health facility licensure requirements. In the case of outpatient surgery involving termination of pregnancy, procedures routinely and customarily done in physicians' offices are the following:

(A) Dilation and curettage;

(B) Suction curettage;

(C) Sharp curettage;

(D) Dilation and evacuation.

(d) "Freestanding birth center" means a health care facility licensed for the primary purpose of performing low risk deliveries.

(2) "Authentication" means verification that an entry in the patient medical record is genuine.

(3) "Certified Nursing Assistant" (CNA) means a person who holds a current, valid Oregon CNA certificate by meeting the requirements specified by the Oregon State Board of Nursing; and who assists licensed nursing personnel in the provision of nursing care.

(4) "Certified Registered Nurse Anesthetist" (CRNA) means a registered nurse licensed by the Oregon State Board of Nursing as a certified registered nurse anesthetist.

(5) "Certified Nurse Midwife" (CNMW) means a registered nurse certified by the Oregon State Board of Nursing (OSBN) as a nurse practitioner midwife.

(6) "Chiropractor" means a person licensed under ORS Chapter 684 to practice chiropractic.

(7) "Critical Access Hospital" means an acute care inpatient facility located in an eligible rural area and which meets those requirements as delineated by the Office of Rural Health and approved by the Health Care Financing Administration (HCFA).

(8) "Division" means the Oregon Health Authority, Public Health Division.

(9) "Freestanding Hospice Facility" (FSHF) means a health care facility which:

(a) Only admits patients who have been certified by the attending physician to be terminally ill, to have a life expectancy not to exceed 12 months, and have given up active treatment aimed at cure; and

(b) Complies with ORS Sections 443.850 and 443.860.

(10) "Governing Body" means the body or person legally responsible for the direction and control of the operation of the facility.

(11) "Governmental Unit" means the state, or any county, municipality, or other political subdivision, or any related department, division, board or other agency.

(12) "Health Care Facility Licensing Law" means ORS 441.005 to 441.990 and rules thereunder.

(13) " Infirmary for the Homeless" means a facility designed to provide inpatient medical care to indigent, homeless members of the community.

(14) "Inpatient Beds" means a bed in a facility available for occupancy by a patient who will or may be cared for and treated on an overnight basis.

(15) "Licensed" means that the person or facility to whom the term applies is currently licensed, certified or registered by the proper authority to follow his or her profession or vocation within the State of Oregon, and when applied to a health care facility means that the facility is currently and has been duly and regularly licensed by the state Public Health Division.

(16) "Licensed Nurse" means a Registered Nurse (RN) or a Licensed Practical Nurse (LPN).

(17) "Licensed Practical Nurse" (LPN) means a person licensed under ORS Chapter 678 to practice practical nursing.

(18) "Major Alteration" means changes other than repair or replacement of building materials and equipment with materials and equipment of a similar type.

(19) "Naturopath" means a person licensed under ORS Chapter 685 to practice naturopathy.

(20) "New Construction" means a new building or an addition to an existing building.

(21) "NFPA" means National Fire Protection Association.

(22) "Nurse Practitioner" (NP) means a registered nurse who has been certified by the Oregon State Board of Nursing (OSBN) as qualified to practice in an expanded specialty role within the practice of nursing.

(23) "Nursing Assistant" means a person who assists licensed nursing personnel in the provision of nursing care.

(24) "Oregon Sanitary Code" means the Food Sanitation Rules, OAR 333-150-0000 through 333-168-0020 except 333-157-0000 through 333-158-0030.

(25) "Patient audit" means review of the medical record and/or physical inspection of a patient.

(26) "Person" means an individual, a trust or estate, a partnership, corporation, (including associations, joint stock, companies and insurance companies, a state or a political subdivision or instrumentality including a municipal corporation) of a state.

(27) "Physician" means a person licensed under ORS Chapter 677 to practice medicine.

(28) "Physician's Assistant" means a person who is registered as a physician's assistant in accordance with ORS Chapter 677.

(29) "Podiatrist" means a person licensed under ORS Chapter 677 to practice podiatry.

(30) "Podiatry" means the diagnosis or the medical, physical or surgical treatment of ailments of the human foot, except treatment involving the use of a general or spinal anesthetic unless the treatment is performed in a hospital certified in the manner described in subsection (2) of ORS 441.055 and is under the supervision of or in collaboration with a physician licensed to practice medicine by the Board of Medical Examiners for the State of Oregon. "Podiatry" does not include the administration of general or spinal anesthetics or the amputation of the foot.

(31) "Registered Nurse" (RN) means a person licensed under ORS Chapter 678.

333-071-0005
Issuance of License

(1) Application for a license to operate a health care facility shall be in writing on a form provided by the Division including demographic, ownership and administrative information. The form shall specify such information required by the Division.

(2) No person or health care facility licensed pursuant to the provisions of ORS Chapter 441, shall in any manner or by any means assert, represent, offer, provide or imply that such person or facility is or may render care or services other than that which is permitted by or which is within the scope of the license issued to such person or facility by the Division nor shall any service be offered or provided which is not authorized within the scope of the licensed issued to such person or facility.

(3) Each application for license renewal shall accurately reflect only the number of beds the facility is then presently capable of operating considering existing equipment, and ancillary service capability of the facility and the physical requirements as specified within these rules and regulations. The number of beds to be licensed shall not exceed the number of beds reflected in the license to be renewed unless approved by the Division.

(4) Separate licenses are not required for separate buildings operated as an integrated unit by the same management. Special inpatient care beds and other services approved by the Division may be included within the scope of the license of the hospital and do not require a separate license.

(5) The license shall be conspicuously posted in the area where patients are admitted.

(6) No license shall be issued or renewed for any Health Care Facility that offers or proposes to develop a new health service subject to ORS 442.320, unless a certificate of need has first been issued therefore pursuant to 442.340.

(7) A facility license that has been suspended or revoked may be reissued after the Division determines that compliance with HCF laws has been achieved satisfactorily.

(8) Submission of Plans, OAR 333-071-0140, shall also apply.

Annual License Fee

The following license fee applies to special inpatient facilities, (alcohol and drug abuse treatment facilities, college infirmaries, christian science facility, chiropractic facilities, freestanding hospice facilities, infirmaries for the homeless, critical access hospitals):

(1) Less than twenty-six beds, the annual license fee will be $750.

(2) Twenty-six beds or more beds and fewer than 50 beds, the annual license fee will be $1,000.

(3) Fifty or more beds and fewer than 100 beds, the annual license fee will be $1,900.

(4) One hundred or more beds and fewer than 200 beds, the annual license fee will be $2,900.

(5) More than two hundred beds, the annual license fees will be $3,400.

Denial or Revocation of License

(1) A license for any health care facility may be denied, suspended or revoked by the Division when the Division finds that there has been a substantial failure to comply with the provisions of Health Care Facility licensing law.

(2) A person or persons in charge of a health care facility shall not permit, aid or abet any illegal act affecting the welfare of the patient.

(3) A license shall be denied, suspended or revoked in any case where the State Fire Marshal or representative of the State Fire Marshal, certified that there is a failure to comply with all applicable laws, lawful ordinances, and rules relating to safety from fire.

(4) A license may be suspended or revoked for failure to comply with a Division order arising from a health care facility's substantial lack of compliance with the rules or statutes.

333-071-0030
Classification

(1) The various types of health care facilities within the provisions of ORS Chapter 441 are classified as follows:

(a) Hospital Classifications:

(A) General Hospital;

(B) Mental Hospital or Psychiatric Hospital;

(C) Orthopedic Hospital;

(D) Special Inpatient Care Facility:

(i) Chiropractic Facility;

(ii) Alcohol and/or Drug Abuse Treatment Facility;

(iii) Infirmary: College Infirmary or Student Health Center;

(iv) Rehabilitation Center;

(v) Christian Science Facility;

(vi) Infirmary for the Homeless;

(vii) Freestanding Hospice Facility;

(viii) Critical Access Hospital.

(b) Ambulatory Surgical Center;

(c) Hospital Associated Ambulatory Surgical Center;

(d) Freestanding Birthing Center.

(2) The classification of each health care facility shall be so designated on the license.

(3) Health care facilities licensed by the Division shall neither assume a descriptive title or be held out under any descriptive title other than the classification title established by the Division and under which the facility is licensed. This not only applies to the name on the facility but where stationery, advertising and other representations are involved: General Hospitals may be described as hospitals without modifications by the term "general."

(4) No change in the licensed classification of any health care facility, as set out in this rule, shall be allowed by the Division unless such facility shall file a new application, accompanied by the required license fee, with the Division, if the Division finds that the applicant and facility comply with HCF laws and the regulations of the Division relating to the new classification for which application for licensure is made, the Division shall issue a license for such classification.

Division Procedures

Inspections and investigations:

(1) Complaints:

(a) Any person may make a complaint to the Public Health Division regarding violations of health care facility, laws or regulations. A complaint investigation will be carried out as soon as practicable and may include but not be limited to, as applicable to facts alleged: Interview of the complainant, patient(s), witnesses, and HCF management and staff; observations of the patient(s), staff performance, patient environment and physical environment; and review of documents and records.

(b) Copies of all complaint investigations, which are not exempt from disclosure, will be available from the Division provided that the identity of any patient referred to in an investigation will not be disclosed without legal authorization.

(2) Inspections:

(a) The Division may, in addition to any inspections conducted pursuant to complaint investigations, conduct at least one general inspection of each HCF to determine compliance with HCF laws during each calendar year and at such other times as the Division deems necessary.

(b) Inspections may include but not be limited to those procedures stated in subsection (1)(a) of this rule.

(c) The inspection may include a patient audit, the results of which shall be summarized on the licensing survey form.

(d) When documents and records are requested under section (1) or (2) of this rule, the HCF shall make the requested materials available to the investigator for review and copying.

333-071-0050
Governing Body Responsibility

The governing body of each health care facility shall be responsible for the operation of the facility, the selection of the medical staff and the quality of care rendered in the facility. The governing body shall:

(1) Ensure that all health care personnel for whom state licenses or registration are required are currently licensed or registered;

(2) Ensure that physicians, nurse practitioners, and physicians' assistants admitted to practice in the facility are granted privileges consistent with their individual training, experience and other qualifications;

(3) Ensure that procedures for granting, restricting and terminating privileges exist and that such procedures are regularly reviewed to assure their conformity to applicable law; and

(4) Ensure that physicians, nurse practitioners, and physicians' assistants admitted to practice in the facility are organized into a medical staff insofar as applicable in such a manner as to effectively review the professional practices of the facility for the purposes of reducing morbidity and mortality and for the improvement of patient care.

(5) In a Critical Access Hospital, the governing body shall be responsible for the development of a plan by which a person, presenting for services when no patients and staff members are in the facility, is able to contact a health care practitioner who is either a doctor of medicine or osteopathy, a physician assistant, or a nurse practitioner. The governing body shall ensure that a practitioner with training or experience in emergency care is on call and immediately available by telephone or radio contact, and available on site within 30 minutes, on a 24-hours a day basis.

(6) This section is not applicable to facilities meeting the requirements of ORS 441.065.

333-071-0055
Medical Staff

(1) The physicians, nurse practitioners and physician assistants organized into a medical staff pursuant to OAR 333-071-0050 shall propose medical staff by-laws to govern the medical staff. The bylaws shall include, but not be limited to the following:

(a) Procedures for physicians, nurse practitioners and physician assistants admitted to practice in the facility to organize into a medical staff;

(b) Procedures for insuring that physicians, nurse practitioners and physician assistants admitted to practice in the facility are granted privileges consistent with their individual training, experience and other qualifications;

(c) Provisions establishing a frame work for the medical staff to nominate, elect, appoint or remove officers and other persons to carry out medical staff activities with accountability to the governing body;

(d) Procedures for insuring that physicians, nurse practitioners and physician assistants admitted to practice in the facility are currently licensed by the Oregon Medical Board for the State of Oregon or the Oregon State Board of Nursing;

(e) Procedures for insuring that the facility's procedures for granting, restricting and terminating privileges are followed and that such procedures are regularly reviewed to assure their conformity to applicable law; and

(f) Procedures for insuring that physicians, nurse practitioners and physician assistants provide services within the scope of the privileges granted by the governing body.

(2) Amendments to medical staff bylaws shall be accomplished through a cooperative process involving both the medical staff and the governing body. Medical staff bylaws shall be adopted, repealed or amended when approved by the medical staff and the governing body. Approval shall not be unreasonably withheld by either. Neither the medical staff nor the governing body shall withhold approval if such repeal, amendment, or adoption is mandated by law, statute or regulation or is necessary to obtain or maintain accreditation or to comply with fiduciary responsibilities or if the failure to approve would subvert the state moral or ethical purposes of this institution.

(3) Physicians and all other health care practitioners with individual admitting privileges are subject to applicable provisions of the medical staff bylaws and rules governing admission and staff privileges.

(4) This section is not applicable to facilities meeting the requirements of ORS 441.065.

333-071-0057
Personnel

(1) Health care facility shall maintain a sufficient number of qualified personnel to provide effective patient care and all other related services.

(2) There shall be written personnel policies and procedures which shall be made available to personnel.

(3) Provisions shall be made for orientation.

(4) Provisions shall be made for an annual continuing education plan.

(5) There shall be a job description for each position which delineates the qualifications, duties, authority and responsibilities inherent in each position.

(6) There shall be an annual work performance evaluation for each employee with appropriate records maintained.

(7) There shall be an employee health program for the protection of patients.

(a) Pursuant to OAR 333-019-0205:

(A) A person who is diagnosed to have a health care facility restrictable disease shall not engage, as long as she/he is communicable, in any occupation in which he/she provides personal care to or has direct contact with patients in a health care facility. This restriction is removed by the written certification of the local health officer (or designee or) a licensed medical doctor (in concurrence with the local health officer) that the person is no longer communicable.

(B) Examples of health care facility restrictable diseases include but are not restricted to:

(i) Amebiasis;
(ii) Chickenpox;
(iii) Cholera;
(iv) Diphtheria;
(v) Hepatitis A;
(vi) Measles;
(vii) Meningococcal Disease;
(viii) Mumps;
(ix) Pediculosis;
(x) Pertussis;
(xi) Plague;
(xii) Rubella;
(xiii) Salmonellosis;
(xiv) Scabies;
(xv) Shigellosis;
(xvi) Staphylococcal Infections;
(xvii) Streptococcal Infections;
(xviii) Tuberculosis, active pulmonary.

(C) The infection control committee of the health care facility shall adopt policies to restrict the working of employees with health care facility restrictable diseases. When measures have been taken to prevent the transmission of disease and these measures are in accordance with written procedures approved by the infection control committee of the facility after consultation with the local health officer, infectious employees may work in a health care facility. Nothing in these rules prohibits health care facilities and local health departments from adopting additional or more stringent rules for exclusion from these facilities.

(b) Pursuant to OAR 333-019-0405:

(A) Any employee working in a health care facility who does not have a documented history of a positive tuberculin test shall have a Mantoux method tuberculin test applied and interpreted within two weeks of first employment.

(B) If the tuberculin test is negative, the employee does not need to have further routine tuberculin skin tests, except as outlined in paragraph (7)(b)(F) of this rule.

(C) If the tuberculin test is positive or if the employee has a previously documented positive tuberculin skin test, and if the employee has not had adequate chemotherapy, the employee shall have a chest X-ray and medical evaluation to identify communicable tuberculosis within two weeks of first employment.

(D) Tuberculin positive employees who do not have communicable tuberculosis and who complete one year of isoniazid preventive therapy tuberculosis and who complete one year of isoniazid preventive therapy (or adequate anti-tuberculosis chemotherapy) shall be released from further routine tuberculosis screening activities.

(E) Tuberculin positive employees who do not have communicable tuberculosis shall have a medical evaluation for the presence of any of the following risk factors: evidence of inadequately treated past tuberculosis disease, history of close exposure to a case of communicable pulmonary tuberculosis within the previous two years, acquired immunodeficiency syndrome, history of a negative tuberculin test within the previous two years, diabetes mellitus (severe or poorly controlled), diseases associated with severe immunologic deficiencies, immuno-suppressive therapy, silicosis, gastrectomy, or excessive alcohol intake. Tuberculin positive employees with any of these risk factors who have not completed one year of isoniazid preventive therapy shall have annual chest X-rays for the duration of their employment. Tuberculin positive employees who have not completed one year of isoniazid preventive therapy and who do not have any of the risk factors shall be released from further tuberculosis surveillance. The facility shall

have a policy to assure that a change in risk status of such an individual will be identified.

(F) Tuberculin negative employees of health care facilities whose work has the potential for frequent or periodic close exposure to persons with communicable tuberculosis or laboratory specimens of M. tuberculosis shall have periodic tuberculin tests at intervals to be specified by the facility's infection control committee, or by the facility's administrative policy when there is no infection control committee.

(G) An employee whose employment never requires him/her to be in a room where patients or residents might enter, and who does not handle clinical specimens or other material from patients or their rooms, may be exempted from the requirements of paragraph (b)(A)–(F) of this section. An example of such an employee would be an administrative person or research worker whose place of work is remote from patient or residential care areas and who does not come in contact with clinical specimens.

(H) In the event that a case of communicable tuberculosis is diagnosed in an employee or patient of a health care facility, the facility shall conduct an investigation to identify contacts. The local health department shall assist in the investigation and shall assure that the investigation follows the guidelines of the American Thoracic Society referred to in OAR 333-017-0005(3).

(I) The actions taken under paragraphs (b)(A) through (H) of this section and all results thereof shall be fully documented for each employee. Such documentation is subject to review by authorized representatives of the Division.

(8)(a) Any person admitted to a facility for treatment of alcoholism, or rehabilitation center, who does not have a documented history of a positive tuberculin test shall have a Mantoux method tuberculin test within two weeks of first admission. If the admission tuberculin test is negative, the patient is not required to have periodic tuberculin tests.

(b) If an admission tuberculin skin test is positive, or if the patient has had a previously documented positive tuberculin test, and the patient has not had adequate chemotherapy, the patient shall have a chest X-ray and medical evaluation to identify communicable tuberculosis unless such an X-ray and evaluation has been performed within the preceding three months. If communicable tuberculosis is suspected or diagnosed, the patient shall be cared for in general accordance with AFB isolation as follows: In health care facilities, cases of current pulmonary tuberculosis shall be placed in AFB isolation or the appropriate disease-specific precautions until they have been determined to be non-infectious by the infection control committee of the facility or the local health officer (or designee). In health care facilities, suspected cases of pulmonary tuberculosis shall be placed in AFB isolation until the diagnosis of infectious pulmonary tuberculosis has been excluded by the attending licensed medical doctor.

(c) The admission skin test and chest X-ray requirements in subsections (8)(a) and (b) do not apply to persons readmitted to the same facility after having been directly discharged to a hospital and readmitted directly from the hospital.

(d) The tuberculin positive patient who does not have tuberculosis disease shall be offered isoniazid preventive therapy according to the American Thoracic Society guidelines. Tuberculin positive patients who have not completed one year of isoniazid preventive therapy shall have annual chest X-rays while at the facility. Such patients who are under age 65, and do not have any of the risk factors described in subsection (7)(a)(C) of this rule shall be released from further routine tuberculosis surveillance following three negative yearly chest X-rays.

(e) The actions taken under subsections (8)(a) through (d) of this rule and all results thereof shall be fully documented for each patient. Such documentation is subject to review by authorized representatives of the Division.

(9) Only subsections (1)–(6) of this rule apply to facilities meeting the requirements of ORS 441.065.

333-071-0060
Medical Records

(1) A medical record shall be maintained for every patient admitted for care in all Health Care Facilities.

(2) A legible reproducible medical record in ink or typescript shall include at least the following (if applicable):

(a) Admitting identification data including date of admission.

(b) Chief compliant.

(c) Pertinent family and personal history.

(d) Medical history, physical examination report and provisional diagnosis:

(A) If a patient is readmitted within a month's time for the same condition, the previous medical history and physical examination report, with an interval note, will suffice.

(B) If a medical history and physical examination report which complies with the above requirements has been completed within 7 days prior to admission, it may be used as the admission history and physical as provided in the medical staff rules and regulations.

(e) Clinical laboratory reports as well as reports on any special examinations. (The original report shall be authenticated and recorded in the patient's medical record.)

(f) X-ray reports shall be recorded in the medical record and shall bear the identification (authentication) of the originator of the interpretation.

(g) Signed or authenticated report of consultant when such services have been obtained.

(h)(A) All entries in a patient's medical record must be dated, timed and authenticated. Verification of an entry requires use of a unique identifier, i.e., signature, code, thumb print, voice print, or other means, which allows identification of the individual responsible for the entry.

(B) Verbal orders may be accepted by those individuals authorized by law and/or scope of practice and by medical staff rules and regulations and shall be countersigned or authenticated by the prescriber within 24 hours, except in the case of Freestanding Hospice Facilities, in which verbal orders must be countersigned by the house physician in 72 hours and by the attending physician within seven days.

(C) A single signature or authentication of the physician, dentist, podiatrist or other individual authorized within the scope of his or her professional license on the medical record does not suffice to cover the entire content of the record.

(i) Records of assessment and intervention, including graphic charts and medication records and appropriate personnel notes.

(j) Summary including final diagnosis.

(k) Date of discharge and discharge note.

(l) Autopsy report if applicable.

(m) Such signed documents as may be required by law.

(3) The completion of the medical record shall be the responsibility of the attending practitioner. The dentist, podiatrist or other individual authorized within the scope of his or her professional license shall complete those portions of the record which pertain to his/her portion of the patient's care. The appropriate individual shall separately sign or authenticate the history and physical examination, operative report, progress notes, orders and the summary. In a facility using unlicensed house officers, the attending physician shall countersign, without 24 hours, all entries written by such house officers. Externs working in a program may be considered house officers. The physician, dentist, podiatrist or other individual authorized within the scope of his or her professional license shall also authenticate any clinical entries which he/she makes himself/herself. A single signature or authentication of the physician, dentist, podiatrist or other individual authorized within the scope of his or her professional license on the face sheet of the medical record does not suffice to cover the entire content of the record:

(a) Medical records shall be completed by the physician, dentist, podiatrist or other individual authorized within the scope of his or her professional license within four weeks following the patient's discharge.

(b) If a patient is transferred to another health care facility, transfer information shall accompany the patient. Transfer information shall include but not be limited to facility from which transferred, name of physician to assume care, date and time of discharge, current medical findings, current nursing assessment, current history and physical, diagnosis, orders from a physician for immediate care of the patient, operative report, if applicable; TB test, if applicable; other information germane to patient's condition. If discharge summary is not available at time of transfer, it shall be transmitted as soon as available.

(4) Diagnoses and operations shall be expressed in standard terminology.

(5) The medical records shall be filed in a manner which renders them easily retrievable. Medical records shall be protected against unauthorized access, fire, water and theft.

(6) Medical records are the property of the health care facility. The medical record, either in original, electronic or microfilm form, shall not be removed from the institution except where necessary for a judicial or administrative proceeding. Authorized personnel of the Division shall be permitted to review medical records. When a health care facility uses off-site storage for medical records, arrangements must be made for delivery of these records to the health care facility when needed for patient care or other health care facility activities. Precautions must be taken to protect patient confidentiality.

(7) All medical records shall be kept for a period of at least ten years after the date of last discharge. Original medical records may be retained on paper, microfilm, electronic or other media.

(8) If a health care facility changes ownership all medical records in original, electronic or microfilm form shall remain in the facility or related institution, and it shall be the responsibility of the new owner to protect and maintain these records.

(9) If any facility shall be finally closed, its medical records may be delivered and turned over to any other facility or facilities in the vicinity willing to accept and retain the same as provided in section (7) of this rule.

(10) All original clinical records or photographic or electronic facsimile thereof, not otherwise incorporated in the medical record, such as X-rays, electrocardiograms, electroencephalograms, and radiological isotope scans shall be retained for seven years after patient's last discharge if professional interpretations of such graphics are included in the medical records.

(11) If a qualified medical record practitioner, RRA (Registered Record Administrator) or ART (Accredited Record Technician) is not the Director of the Medical Records Department, periodic and at least annual consultation must be provided by a qualified medical records consultant, RRA/ART. The visits of the medical records consultant shall be of sufficient duration and frequency to review medical record systems and assure quality records of the patients. Contract for such services shall be available to the Division.

(12) A current written policy on the release of medical record information including patient access to his/her medical record shall be maintained in the medical records department.

(13) This section is not applicable to facilities meeting the requirements of ORS 441.065.

333-071-0065
Quality Assurance

The governing body must ensure that there is an effective, written, facility-wide quality assurance program to evaluate and monitor the quality and appropriateness of patient care, including contracted services. Written documentation of quality assurance activities shall be recorded at least quarterly. This section does not apply to those facilities meeting the requirements of ORS 441.065.

333-071-0070
Medically Related Patient Care Services

(1) Medically-related patient care services: The facility must have an ongoing plan consistent with available community and facility resources, to provide or make available social work, psychological, and educational services to meet the medically-related needs of its patients. The facility also must have an effective, ongoing discharge planning program that facilitates the provision of follow-up care.

(a) Discharge planning must be initiated in a timely manner.

(b) Patients, along with necessary medical information, must be transferred or referred to appropriate facilities, agencies, or outpatient services, as needed, for follow-up or ancillary care.

(2) This section does not apply to facilities meeting the requirements of ORS 441.065.

333-071-0073
Physician Services

(1) No patient shall be admitted to the facility except on the order of a physician or a nurse practitioner. The admitting medical staff member for the facility shall provide sufficient information at the time of admission to establish that care can be provided to meet the needs of the patient. Admission medical information shall include a statement concerning the admitting diagnosis and general condition of the patient. Other pertinent medical information, orders for medication, diet and treatments shall also be provided, and a medical history and a physical.

(2) Orders pertinent to the care of the patient shall be initiated, dated, timed and signed by the practitioner ordering the care. The disposition of these orders shall be documented in the patient's medical record.

(3) Visits from practitioners shall be according to patient's needs. Initial and ongoing assessments shall be performed for each patient and the results and observations recorded in the medical record.

(4) A M.D. or D.O. physician or nurse practitioner to whom admitting privileges have been granted shall be responsible, as permitted by the individual's scope of practice, for the care of any medical problem that may be present on admission or that may arise during an inpatient stay for dental, podiatric or other purpose. Patients in a Critical Access Hospital will have care provided by a member of the medical staff under the individual's scope of practice.

(5) No medication or treatment shall be given except on the order of one duly authorized to give such orders within the State of Oregon.

(6) Each facility shall provide for one or more appropriate practitioners on the medical staff to be called in the event of an emergency.

(7) This section does not apply to facilities meeting the requirements of ORS 441.065.

333-071-0075
Nursing Care Management

(1) The nursing care of each patient in a health care facility shall be the responsibility of a registered nurse (R.N.).

(2) The nurse will only provide services to the clients for which she/he is educationally and/or experientially prepared and for which competency has been maintained.

(3) The R.N. shall be responsible and accountable for managing the nursing care of her/his assigned patients. She/he shall coordinate the nursing functions and tasks for those patients with the functions and tasks of physicians and other health care

providers. The responsible R.N. shall ensure that the following activities are completed:

(a) Summarize the admission status of the patient within 4 hours;

(b) Develop and document, within 8 hours, a plan of care for nursing services for the patient, based on the patient assessment and realistic, understandable, achievable patient goals consistent with ORS 851-045-0010, Standards of R.N. Scope of Practice.

(c)(A) Observe and report to the nurse manager and the patient's practitioner when appropriate, any significant changes in the patient's condition that warrant interventions that have not been previously prescribed or planned for;

(B) When the R.N. questions the efficacy, need or safety of continuation of medications being administered by that R.N. to a patient therein, the R.N. shall report that question to the practitioner authorizing the medication and shall seek further instructions concerning the continuation of the medication.

(4)(a) The Health Care Facility shall maintain documentation of certification of CNA's, which shall be available on request to Division personnel.

(b) CNAs must be certified by the Oregon State Board of Nursing prior to assuming nursing assistant duties.

(c) The Health Care Facility shall maintain documentation that Certified Medication Aides (CMAs) hold current certification with the Oregon State Board of Nursing. This documentation shall be available on request to Division personnel.

(5) This section does not apply to facilities meeting the requirements of ORS 441.065.

Nurse Executive

(1) In a freestanding Hospice Facility, the nurse executive position shall be full-time (40 hours per week). Time spent in professional association workshops, seminars and continuing education may be counted as his/her duties in considering whether or not he/she is full-time.

(2) In all Special Inpatient Care Facilities, the nurse executive shall have had progressive responsibility in managing in a health care setting. The nurse executive shall be a registered nurse licensed in Oregon with a baccalaureate degree or other advanced degree or appropriate equivalent experience, with emphasis in management preferred.

(3) In all Special Inpatient Care Facilities, the nurse executive shall have written administrative authority, responsibility and accountability for assuring functions and activities of the nursing services department and shall participate in the development of any policies that affect the nursing services department. This includes budget formation, implementation and evaluation. The nurse executive shall ensure the:

(a) Development and maintenance of a nursing service philosophy, objective, standards of practice, policy and procedure manuals and job descriptions for each level of nursing service personnel;

(b) Development and maintenance of personnel policies of recruitment, orientation, in-service education, supervision, evaluation and termination of nursing service staff or ensure it is done by another department;

(c) Development and maintenance of policies and procedures for determination of nursing staff's capacity for providing nursing care for any patient seeking admission to the facility;

(d) Development and maintenance of a quality assurance program for nursing service;

(e) Coordination of nursing service departmental function and activities with the function and activities of other departments;

(f) Ensure participation with the administrator and other department directors in development and maintenance of practices and procedures that promote infection control, fire safety and hazard reduction.

(4) In all Special Inpatient Care Facilities, whenever the nurse executive is not available in person or by phone, she/he shall designate in writing a specific registered nurse or nurses, licensed to practice in Oregon, to be available in person or by phone to direct the functions and activities of the nursing services department.

(5) This section does not apply to facilities meeting the requirements of ORS 441.065.

Nursing Services

(1) The facility shall provide a nursing service department which provides 24-hours, 7 days per week, nursing care, except in the case of College Infirmary which must provide 24 hour nursing only during periods of operation and except in the case of a Critical Access Hospital which must provide 24-hour nursing only when inpatients are present in the facility.

(2) The nursing services department shall be under the direction of a Nurse Executive who is a registered nurse, licensed to practice in Oregon.

(3) The facility shall be responsible for developing, and implementing under the direction of the Nurse Executive, a written staffing plan consistent with the scope of practice for R.N.'s and L.P.N.'s:

(a) Each staffing plan shall make allowances for sickness, vacations, vacancies and other absences and shall list the service(s) or persons to be called for replacement of nursing personnel. Nursing care required by different types of patients shall be the major consideration in determining number, quality and categories of nursing personnel needed.

(b) Each staffing plan shall establish minimum numbers of nursing staff personnel (licensed nurses and nursing assistants) on specified shifts. In no case shall fewer than one registered nurse and one other nursing care staff member be on duty when a patient is present.

(4) This section does not apply to facilities meeting the requirements of ORS 441.065.

Surgical Services in Critical Access Hospitals (CAH)

Surgical services, if provided, must be performed in a safe manner by qualified practitioners who have been granted clinical privileges by the governing body of the Critical Access Hospital in accordance with the designation requirements under paragraph (1) of this section.

(1) Designation of qualified practitioners. The CAH designates the practitioners who are allowed to perform surgery for CAH patients, in accordance with its approved policies and procedures, and with State scope of practice laws. Surgery is performed only by:

(a) A doctor of medicine or osteopathy, including an osteopathic practitioner;

(b) A doctor of dental surgery or dental medicine; or

(c) A doctor of podiatric medicine.

(2) Anesthetic risk and evaluation. A qualified practitioner must examine the patient immediately before surgery to evaluate the risk of anesthesia and of the procedure to be performed. Before discharge from the CAH, each patient must be evaluated for proper anesthesia recovery by a qualified practitioner.

(3) Administration of anesthesia. The CAH designates the person who is allowed to administer anesthesia to CAH patients in accordance with its approved policies and procedures and with State scope of practice laws. Anesthetics must be administered by:

(a) A qualified anesthesiologist;

(b) A doctor of medicine or osteopathy other than an anesthesiologist;

(c) A doctor of dental surgery or dental medicine;

(d) A doctor of podiatric medicine;

(e) A certified registered nurse anesthetist;

(f) A supervised trainee in an approved anesthesia educational program.

(4) Discharge. All patients are discharged in the company of a responsible adult, except those exempted by the practitioner who performed the surgical procedure.

Blood and Blood Products in Critical Access Hospitals

The facility provides, either directly or under arrangements, the following:

(1) Services for the procurement, safekeeping, and transfusion of blood, including the availability of blood products needed for emergencies on a 24-hours a day basis.

(2) If blood banking services are provided under an arrangement, the arrangement is approved by the facility's medical staff and by the persons directly responsible for the operation of the facility.

Dietary

An organized dietary department shall be directed by qualified personnel and shall conform to the requirements in the Oregon Food Sanitation Rules, OAR 333-150-0000, and 333-160-0000 and shall meet the following criteria:

(1) The facility shall employ supportive personnel competent to carry out the functions of the dietary service;

(2) The quality and appropriateness of nutritional care provided by the dietetic service shall be regularly reviewed and evaluated;

(3) Services of a consulting dietician shall be obtained;

(4) Arrangements may be made for outside services. All food services shall meet the requirements of the Oregon Food Sanitation Rules.

333-071-0100
Accommodations for Patients

(1) There shall be provided for each patient a good bed: mattress and pillow with a protective cover and necessary bed coverings; and other appropriate furniture.

(2) Freestanding Hospice Facilities shall also provide the following:

(a) Bedside table and chair;

(b) A reading light;

(c) An electrically operated call system which registers at the nurses' station. The call system cord shall be secured in a manner which will prevent the patient from injuring him/herself with it.

(3) According to his/her needs, each patient shall be provided with individual equipment, such as bedpans, bedpan covers, urinals, washbasins, emesis basins, mouthwash cups, soap, washcloths, towels and drinking glasses. Single patient use items must be identified with patient name and/or room number and disposed of upon patient discharge.

(4) Equipment such as wheelchairs, walkers, geri chairs, and crutches shall be readily available for patients needing this equipment.

(5) Separate storage space for clothing, toilet articles, and other personal belongings of patients shall be provided.

(6) In multiple-bed rooms, opportunity for patient privacy shall be provided by flame retardant curtains or screen. Cubicle curtains or screens are not required for beds assigned to pediatric patients.

(7) The use of torn or unclean bed linen is prohibited.

(8) After the discharge of any patient, the bed, bed furnishing, bedside furniture and equipment shall be thoroughly cleansed and disinfected prior to re-use. Mattresses shall be professionally renovated when necessary.

(9) Hot water bags and electric heating pads or blankets may be used only on the written order of the physician.

333-071-0105
Building Requirements

(1) Patient Care Units:

(a) In the care of rehabilitation centers, a minimum of 80 square feet of floor space per bed is required in semi-private rooms and wards.

(b) In all other Special Inpatient Care Facilities, a minimum of 70 square feet of floor space per bed is required in semi-private rooms and wards.

(c) 100 square feet of floor space shall be provided in private rooms.

(d) No more than four beds shall be placed in each patient room.

(e) All rooms shall be entered from an exit corridor.

(f) All patient rooms shall have one or more windows, the overall size shall be not less than one-tenth the room floor area. The windows shall be fitted so as to provide natural ventilation, or a mechanical ventilation system shall be provided including a system for exhausting smoke directly to the exterior in accordance with the provisions of NFPA 90A, 1985 edition.

(g) Storage space for clothing, toilet articles, and other personal belongings of the patient shall be provided.

(2) If social space and space for patient dining is necessary to support the program needs, a minimum of 30 square feet per patient is required.

(3) A room or space for group therapy activities is required, if applicable.

(4) A room shall be available for examination and treatment of patients. (May be omitted if the unit is connected to or a part of a general hospital).

(5) Separate consultation room(s) as necessary to support the program needs of the facility shall be provided. (Consultation may

be performed in the examination/treatment room when the number of alcohol treatment beds is less than 16).

(6) If Physical Therapy Services are provided by the facility, the following elements shall be present:

(a) Treatment Area(s). It shall have space and equipment for thermotherapy, diathermy, ultrasonics and hydrotherapy. Provisions shall be made for a cubicle curtain around each individual treatment area. Provisions shall include handwashing facilities, (one lavatory or sink may serve more than one cubicle);

(b) Exercise area;

(c) Storage for clean linen, supplies, and equipment;

(d) Storage for soiled linen and equipment;

(e) Service sink;

(f) Wheelchair and stretcher storage.

(7) If Occupational Therapy Services are provided by the facility, the following elements shall be present:

(a) Therapy area shall include sink;

(b) Storage for supplies and equipment;

(c) Treatment area.

(8) In facilities for the treatment of alcoholism and drug abuse, a minimum of one patient room for detoxification, located to allow direct observation by nursing staff, shall be provided. Windows in detoxification rooms shall be of a security type that can only be opened by keys or tools that are under the control of the staff. An adjoining or closely available toilet room and handwashing lavatory is also required serving detoxification patients only. The detoxication area must comply with the Group I, Division 3 of the State Structural Specialty Code.

(9) Degree of security required shall be as determined by the program, but operation of such shall be restricted to inhibit possible tendency for escape, suicide, and to limit potential for self-inflicted injury.

(10) Where glass fragments may create a hazard, safety glazing and/or other appropriate security measures are recommended.

(11) Additional Requirements:

(a) An Administrative center or nurses station;

(b) Storage for administrative supplies;

(c) Charting facilities for nurses and doctors;

(d) Toilet room for staff;

(e) Janitor closet;

(f) Clean storage room or enclosed cabinet spaces for clean supplies and linen storage;

(g) Separate enclosed soiled utility or holding room for soiled linens and refuse;

(h) Equipment storage room; (May be combined with clean supply room if space allows for both functions.);

(i) Linen Services:

(A) On-Site Processing. If linen is to be processed on the site, the following shall be provided:

(i) Laundry processing room with commercial-type equipment which can process seven days' needs within a regularly scheduled work week. Handwashing facilities shall be provided. Soiled linen receiving, holding and sorting area;

(ii) Storage for laundry supplies;

(iii) Clean linen inspection and mending room or area;

(iv) Clean linen storage, issuing, and holding room or area;

(v) Cart sanitizing facilities and cart storage area. The sanitizing facilities may be combined with those required for dietary facilities.

(B) If linen is processed off-site, following shall be provided:

(i) Soiled linen holding room;

(ii) Clean linen receiving, holding, inspection, and storage room(s);

(iii) Cart sanitizing facilities and cart storage area. The sanitizing facilities may be combined with those required for dietary facilities.

(12) The building shall be kept clean and in good repair.

(13) Rehabilitation centers must provide handicap accessibility for the patient's activities of daily living.

333-071-0110
Pharmacy

(1) Special Inpatient Care Facilities are subject to ORS Chapter 689 and all the rules thereunder as applicable.

(2) Pharmacy services shall be in accordance with ORS Chapter 689 and OAR 855-041-0105 through 855-041-0140.

(3) Provision shall be made for convenient and prompt 24-hour distribution of drugs to patients. This may be from a medicine preparation room or unit, a self-contained medicine dispensing unit, or by another approved system meeting the rules of the Board of Pharmacy. If used, a medicine preparation room or unit shall be under the nursing staff's visual control and contain a work counter, refrigerator and locked storage for biologicals and drugs. A medicine dispensing unit may be located at the nurses' station, in the clean workroom, or in an alcove or other space under direct control of nursing or pharmacy staff.

(4) Storage and disposal of drugs: Old medications, including special prescriptions for patients who have left the facility, shall be disposed of by incineration or other equally effective method, except narcotics and other drugs under the drug abuse law, which shall be handled in the manner prescribed by the Drug Enforcement Administration of the United State Department of Justice.

(5) Dispensing of drugs: Drugs shall not be supplied or given to either inpatients or outpatients, unless ordered by a physician or individual authorized within the scope of his or her professional license to prescribe drugs; and such order shall be in writing over the physician's or other authorized individual's signature or authentication.

(6) In a Special Inpatient Care Facility having a drug room and no pharmacy, the drug room must be supervised by a licensed pharmacist who provides his or her services with sufficient professionalism, quality and availability to adequately protect the safety of the patients and to properly serve the needs of the facility, pursuant to OAR 855-041-0135.

(7) This section does not apply to facilities meeting the requirements of ORS 441.065.

333-071-0115
Infection Control

(1) Each Health Care Facility shall establish an active facility-wide infection control program. In the hospital the program shall be under the direction of a multi-disciplinary committee which shall be responsible for investigating, controlling and preventing infections in the facilities. This committee shall include representation from major departments and services and shall provide for consultation from other departments and services. Each Health Care Facility shall be responsible for developing written policies and for annual review of such policies, relating to at least the following:

(a) Identification of existing or potential infections in patients and employes.

(b) Control of factors affecting the transmission of infections.

(c) Provisions for orienting and educating all employes and volunteers on the cause, transmission, and prevention of infections.

(d) Collection, analysis, and use of data relating to infections in the hospital.

(2) Each Health Care Facility shall be responsible for the implementation of policies under section (1) of this rule.

(3) All Health Care Facilities shall maintain compliance with the current publication of the rules of the Division for the control of communicable diseases.

(4) Written isolation procedures in accordance with Center for Communicable Disease Control Guidelines universal precautions shall be established and followed by all Health Care Facility personnel for control and prevention of cross-infection between patients, departments and services. Guidelines can be obtained

from U.S. Department of Health and Human Services, Public Health Center for Disease Control, Atlanta, GA 30333. Any guidelines published and distributed by the Division shall also be taken into consideration.

333-071-0120
Sanitary Precautions

(1) Provisions shall be made for the proper cleaning of linen and other washable goods and proper disposal of all refuse.

(2) All garbage and refuse shall be stored and disposed of in a manner that will not create a nuisance or a public health hazard and by a method approved by the Local Health Officer.

(3) Measures shall be taken to prevent the entry of rodents, flies, mosquitoes, and other insects. Adequate measures shall include but are not limited to preventing their entry through doors, windows, or other outside opening.

(4) The walls and floors shall be of a durable and cleanable composition necessary to maintain a sanitary environment appropriate to the use of the area. The building shall be kept clean and in good repair.

Stat. Auth.: ORS 441.055
Stats. Implemented: ORS 441.055
Hist.: HD 17-1987(Temp), f. 10-13-87, ef. 10-15-87 thru 4-15-88; HD 11-1988, f. & cert. ef. 5-27-88

333-071-0125
Safety and Emergency Precautions

(1) Telephone communication to summon help in case of fire or other emergency shall be available.

(2) In accordance with ORS Chapter 479 and the rules thereunder all requirements of the State Fire Marshal shall be met.

(3) When required, emergency power facilities shall be tested monthly and shall be in readiness at all times for use in all areas required in NFPA 99 and the National Electrical Code.

(4) Emergency preparedness:

(a) The health care facility shall develop, maintain, update, train, and exercise an emergency plan for the protection of all individuals in the event of an emergency, in accordance with the regulations as specified in **Oregon Fire Code** (OAR chapter 837, division 40).

(A) The health care facility shall conduct at least two drills every year that document and demonstrate that employees have practiced their specific duties and assignments, as outlined in the emergency preparedness plan.

(b) The emergency plan shall include the contact information for local emergency management.

(c) The summary of the emergency plan shall be sent to the Authority within one year of the filing of this rule. New facilities that have submitted licensing documents to the state before this provision goes into effect will have one year from the date of license application to submit their plan. All other new facilities shall have a plan prior to licensing. The Authority shall request updated plans as needed.

(d) The emergency plan shall address all applicable hazards that may include, but is not limited to, the following:

(A) Chemical emergencies;
(B) Dam failure;
(C) Earthquake;
(D) Fire;
(E) Flood;
(F) Hazardous material;
(G) Heat;
(H) Hurricane;
(I) Landslide;
(J) Nuclear power plant emergency;
(K) Pandemic;
(L) Terrorism; or
(M) Thunderstorms.

(e) The emergency plan shall address the provision of sufficient supplies for patients and staff to shelter in place for a minimum of four days under the following conditions:

(A) Extended power outage;
(B) No running water;
(C) Replacement of food or supplies is unavailable; and
(D) Staff members do not report to work as scheduled.

(f) The emergency plan shall address evacuation, including:

(A) Identification of individual positions' duties while vacating the building, transporting, and housing residents;
(B) Method and source of transportation;
(C) Planned relocation sites;
(D) Method by which each patient will be identified by name and facility of origin by people unknown to them;
(E) Method for tracking and reporting the physical location of specific patients until a different entity resumes responsibility for the resident; and
(F) Notification to the Authority about the status of the evacuation.

(g) The emergency plan shall address the clinical and medical needs of the patients, including provisions to provide:

(A) Storage of and continued access to medical records necessary to obtain care and treatment of patients, and the use of paper forms to be used for the transfer of care or to maintain care on-site when electronic systems are not available;
(B) Continued access to pharmaceuticals, medical supplies and equipment, even during and after an evacuation; and
(C) Alternative staffing plans to meet the needs of the patients when scheduled staff members are unavailable. Alternative staffing plans may include, but is not limited to, on-call staff, the use of travelers, the use of management staff, or the use of other emergency personnel.

(h) The emergency plan shall be made available as requested by the Authority and during licensing and certification surveys. Each plan will be re-evaluated and revised as necessary or when there is a significant change in the facility or population of the health care facility.

(i) A checklist for inpatient health care facilities has been developed in conjunction with the Office of the State Fire Marshal to assist facilities in developing emergency plans and ensuring compliance with the State Fire Marshal's administrative rules.

Plumbing and Sanitation Requirements

(1)(a) Separate men's and women's toilet facilities shall be provided at a rate of one per eight patient beds conveniently located to serve patients and provide for individual privacy, except in the case of Freestanding Hospice Facilities, which shall provide the following:

(b) Each patient shall have access to a toilet room without entering the general corridor area. One toilet room shall serve no more than four beds and no more than two patient rooms. The toilet room shall contain a toilet and a lavatory. The lavatory may be omitted from a toilet room which serves a single-bed room if the patient room contains a lavatory.

(2) Adequate handwashing facilities, including hot and cold running water, soap and single use sanitary towels shall be provided for the total facility population. A handwashing facility shall be available in or in a reasonable proximity to each toilet room and in close proximity to the administrative center or nurses' station.

(3) Bathing facilities for patients shall be provided to include at least one shower or tub for each 12 beds, serving patient rooms not containing bathing facilities directly adjoining the room. Rehabilitation Centers shall make available special bathing facilities for the physically disabled.

(4) Partitions between fixtures shall be provided when there are multiple toilet and/or bathing facilities. These partitions shall be at least six feet in height and provide for privacy closure.

Exceptions to Rules (All HCFs)

(1) While all Health Care Facilities are required to maintain continuous compliance with the Division's rules, these requirements do not prohibit the use of alternative concepts, methods, procedures, techniques, equipment, facilities, personnel qualifications or the conducting of pilot projects or research. Requests for exceptions to the rules must be:

(a) Submitted to the Division in writing; and

(b) Identify the specific rule for which an exception is requested; and

(c) The special circumstances relied upon to justify the exception; and

(d) What alternatives were considered, if any, and why alternatives (including compliance) were not selected; and

(e) Demonstrate that the proposed exception is desirable to maintain or improve the health safety of the patients, and will not jeopardize patient health and safety; and

(f) The proposed duration of the exception.

(2) Upon finding that the facility has satisfied the conditions of this rule, the Division may grant an exception.

(3) The facility may implement an exception only after written approval from the Public Health Division.

DIVISION 72

HEALTH CARE PRACTITIONER REFERRALS

333-072-0200
Purpose

The purpose of these rules is to establish notice requirements for patient choice and financial interest as required in ORS 441.098 when health practitioners refer patients for diagnostic testing or health care treatment or services.

Stat. Auth.: ORS 441.098
Stats. Implemented: ORS 441.098
Hist.: PH 15-2014, f. & cert. ef. 6-2-14

333-072-0205
Applicability

These rules do not apply to a referral for a diagnostic test or health care treatment or service:

(1) When a patient is receiving inpatient hospital services or emergency department services if the referral is for a diagnostic test or health care treatment or service to be provided while the patient is in the hospital or emergency department.

(2) When a referral is made to a particular facility after the initial referral of the patient to that facility, when notice was provided at the initial referral in accordance with these rules.

(3) When a patient has been directed or transferred to a facility for emergency department services.

(4) When a patient is being directed back to the referring practitioner by the practitioner or facility who received the referral.

Stat. Auth.: ORS 441.098
Stats. Implemented: ORS 441.098
Hist.: PH 15-2014, f. & cert. ef. 6-2-14

333-072-0210
Definitions

As used in OAR 333-072-0200 through 333-072-0225 the following definitions apply:

(1) "Emergency department services" means services provided in the part of a licensed hospital facility open 24 hours a day to provide acute care treatment and services for a wide range of illnesses and injuries.

(2) "Facility" means a hospital, outpatient clinic owned by a hospital, ambulatory surgical center, freestanding birthing center as defined in ORS 442.015, or a facility that receives Medicare reimbursement as an independent diagnostic testing facility.

(3) "Financial interest" means the direct or indirect ownership interest of five percent or more held by a health practitioner or the practitioner's immediate family member.

(4)(a) "Health practitioner" means a physician, podiatric physician and surgeon, dentist, direct entry midwife, certified nurse practitioner, licensed registered nurse who is certified by the Oregon State Board of Nursing as a nurse midwife nurse practitioner, licensed physician assistant or medical imaging licensee under ORS 688.405 to 688.605.

(b) "Health practitioner" does not include a provider in health maintenance organizations as that term is defined in ORS 750.005.

(5) "Immediate family member" means a health practitioner's spouse, domestic partner, child, stepchild, mother, father or sibling.

(6) "Inpatient hospital services" means all medical and nursing services provided to persons who require 24-hour supervision because of acute or chronic medical or psychiatric illness.

(7) "Outpatient clinic owned by a hospital" means a satellite or mobile satellite indorsed under a hospital's license under OAR 333-500-0025.

(8) "Physician" has the meaning given that term in ORS 677.010.

(9) "Referral" means the direction of a patient to a facility for a diagnostic test or health care treatment or service.

(10) "These rules" means OAR 333-072-0200 through 333-072-0225.

Stat. Auth.: ORS 441.098
Stats. Implemented: ORS 441.098
Hist.: PH 15-2014, f. & cert. ef. 6-2-14

333-072-0215
Requirements for Notification of Patient Choice

(1) A referral for a diagnostic test or health care treatment or service shall be based on the patient's clinical needs and personal health choices.

(2) A health practitioner may not deny, limit or withdraw a referral solely because the patient chooses to have the diagnostic test or health care treatment or service at a facility other than the one recommended by the health practitioner.

(3) A health practitioner or the practitioner's designee shall provide written or oral notice of patient choice at the time the patient establishes care with the practitioner. The notice shall include the following:

(a) The patient has a choice and when referred to a facility for a diagnostic test or health care treatment or service the patient may receive the diagnostic test or health care treatment or service at a facility other than the one recommended by the health practitioner.

(b) If the patient chooses to have the diagnostic test, health care treatment or service at a facility different from the one recommended by a practitioner, the patient is responsible for determining the extent or limitation of coverage for the diagnostic test, health care treatment or service at the facility chosen by the patient.

(c) A health practitioner may not deny, limit or withdraw a referral solely because the patient chooses to have the diagnostic test or health care treatment or service at a facility other than the one recommended by the health practitioner.

(4) Health practitioners shall also post notice of patient choice in a conspicuous place. The posted notice shall include the information set forth in subsections (3)(a) and (b) of this rule.

(5) At the time of referral health practitioners may provide written or oral notice of patient choice. The notice shall include the information set forth in subsection (3)(a) of this rule.

(6) Practitioners must document all oral notifications.

333-072-0220
Requirement for Notice of Financial Interest

If a health practitioner refers a patient for a diagnostic test or health care treatment or service to a facility in which the health practitioner or an immediate family member has a financial interest of five percent or more, the practitioner or the practitioner's designee shall provide notice of that financial interest orally and in writing at the time of the referral.

Stat. Auth.: ORS 441.098
Stats. Implemented: ORS 441.098
Hist.: PH 15-2014, f. & cert. ef. 6-2-14

333-072-0225
Violations and Enforcement

(1) A health practitioner who fails to comply with these rules shall be subject to investigation and disciplinary action in accordance with ORS 441.098.

(2) When investigating an allegation that notice was not provided in accordance with ORS 441.098 and these rules, the Oregon Health Licensing Agency and a health professional regulatory board may:

(a) Review documentation of a health practitioner's policies and procedures for provision of notice and accept the policies and procedures as proof that notice was given in accordance with the policies.

(b) Rely on the practitioner's documentation of notice as proof that notice was given, if no policies or procedures exist.

333-076-0101
Definitions

As used in OAR chapter 333, division 76 unless the context requires otherwise, the following definitions apply:

(1) "Ambulatory Surgical Center" (ASC) means:

(a) A facility or portion of a facility that operates exclusively for the purpose of providing surgical services to patients who do not require hospitalization and for whom the expected duration of services does not exceed 24 hours following admission.

(b) Ambulatory surgical center does not mean:

(A) Individual or group practice offices of private physicians or dentists that do not contain a distinct area used for outpatient surgical treatment on a regular and organized basis, or that only provide surgery routinely provided in a physician's or dentist's office using local anesthesia or conscious sedation; or

(B) A portion of a licensed hospital designated for outpatient surgical treatment.

(2) "Authentication" means verification that an entry in the patient medical record is genuine.

(3) "CMS" means Centers for Medicare and Medicaid Services.

(4) "Certified ambulatory surgical center" means a facility that is licensed by the Division and is certified by the CMS as meeting the conditions for coverage for ambulatory surgical services, 42 CFR 416, Subpart C.

(5) "Certified Nurse Anesthetist" (CRNA) means a registered nurse certified by the Council on Certification of Nurse Anesthetists and licensed by the Oregon State Board of Nursing (OSBN).

(6) "Certified Nursing Assistant" (CNA) means a person who is certified by the Oregon State Board of Nursing (OSBN) to assist licensed nursing staff in the provision of nursing care.

(7) "Conditions for Coverage" mean the applicable federal regulations that ASCs are required to comply with in order to participate in the federal Medicare and Medicaid programs.

(8) "Conscious sedation" has the same meaning as "moderate sedation."

(9) "Deemed" means a health care facility that has been inspected by an approved accrediting organization and has been approved by the CMS as meeting CMS Conditions of Participation.

(10) "Deep sedation" means an induced controlled state of depressed consciousness in which the patient experiences a partial loss of protective reflexes, as evidenced by the inability to respond purposefully either to physical stimulation or to verbal command and the patient's ability to independently and continuously maintain an airway may be impaired.

(11) "Direct ownership" has the meaning given the term 'ownership interest' in 42 CFR 420.201.

(12) "Division" means the Public Health Division of the Oregon Health Authority.

(13) "Financial interest" means a five percent or greater direct or indirect ownership interest.

(14) "General anesthesia" means an induced controlled state of unconsciousness in which the patient experiences complete loss of protective reflexes, as evidenced by the inability to independently maintain an airway, the inability to respond purposefully to physical stimulation, or the inability to respond purposefully to verbal command.

(15) "Governing body" means the body or person legally responsible for the direction and control of the operation of the facility.

(16) "Health Care Facility" (HCF) has the meaning given the term in ORS 442.015.

(17) "Health Care Facility Licensing Law" means ORS 441.015-441.990 and rules thereunder.

(18) "High complexity non-certified""‘ means a facility that is licensed by the Division, is not CMS certified, and performs surgical procedures involving deep sedation or general anesthesia.

(19) "Hospital" has the meaning given that term in ORS 442.015.

(20) "Indirect ownership" has the meaning given the term 'indirect ownership interest' in 42 CFR 420.201.

(21) "Licensed" means that the person or facility to whom the term is applied is currently licensed, certified or registered by the proper authority to follow his or her profession or vocation within the State of Oregon, and when applied to a health care facility means that the facility is currently and has been duly and regularly licensed by the Division.

(22) "Licensed Nurse" means a Registered Nurse (RN) or a Licensed Practical Nurse (LPN).

(23) "Licensed Practical Nurse" (LPN) means a person licensed under ORS chapter 678 to practice practical nursing.

(24) "Local anesthesia" means the administration of an agent that produces a transient and reversible loss of sensation in a circumscribed portion of the body.

(25) "Moderate complexity non-certified" means a facility licensed by the Division, is not CMS certified, and performs procedures requiring not more than conscious sedation.

(26) "Moderate sedation" means an induced controlled state of minimally depressed consciousness in which the patient retains the ability to independently and continuously maintain an airway and to respond purposefully to physical stimulation and to verbal command. Formerly referred to as conscious sedation.

(27) "New construction" means a new building or an addition to an existing building.

(28) "NFPA" means National Fire Protection Association.

(29) "Nursing staff" means a person licensed by the OSBN as a registered nurse (RN), licensed practical nurse (LPN) or certified as a nursing assistant (CNA).

(30) "Patient audit" means review of the medical record or physical inspection of a patient.

(31) "Person" means an individual, a trust or estate, or a partnership or corporation (including associations, joint stock companies and insurance companies, a state or a political subdivision or instrumentality including a municipal corporation).

(32) "Physician" means a person licensed under ORS chapter 677 to practice medicine by the Oregon Medical Board.

(33) "Podiatrist" means a person licensed under ORS chapter 677 to practice podiatry.

(34) "Podiatry" means the diagnosis or the medical, physical or surgical treatment of ailments of the human foot, except treatment involving the use of a general or spinal anesthetic unless the treatment is performed in a hospital certified in the manner described in subsection (2) of ORS 441.055 and is under the supervision of or in collaboration with a physician licensed to practice medicine by the Oregon Medical Board. "Podiatry" does not include the administration of general or spinal anesthetics or the amputation of the foot.

(35) "Registered Nurse" (RN) means a person licensed as a Registered Nurse under ORS chapter 678.

333-076-0106
Issuance of License and Fees

(1) As used in this rule, the term "deemed status" means an ASC that has been inspected by a CMS-approved national accrediting organization, has been found to meet or exceed all applicable Medicare conditions, and CMS finds the ASC to be in compliance.

(2) Application for a license to operate an ASC shall be in writing on a form provided by the Division, including demographic, ownership and administrative information. The form shall specify such information required by the Division.

(3) For purposes of determining the correct license fee required under ORS 441.020 and this rule:

(a) "Procedure room" means a room where surgery or invasive procedures are performed; and

(b) "Invasive procedure" means a procedure requiring insertion of an instrument or device into the body through the skin or a body orifice for diagnosis or treatment, and operative procedures in which skin or mucous membranes and connective tissue are incised, or an instrument is introduced through a natural body orifice.

(4) Upon receipt of an application and the license fee as described in ORS 441.020, the Division shall review the application and conduct an on-site inspection of the ASC.

(5) In lieu of an onsite inspection required under section (3) of this rule, the Division may accept:

(a) CMS certification by a federal agency or accrediting organization; or

(b) A survey conducted within the previous three years by an accrediting organization approved by the Division, if:

(A) The certification or accreditation is recognized by the Division as addressing the standards and conditions for coverage requirements of the CMS and other standards set by the Division and an ASC provides the Division with a letter from CMS indicating its deemed status;

(B) The ASC notifies the Division of any exit interview conducted by the federal agency or accrediting body and permits the Division to participate; and

(C) The ASC provides copies of all documentation concerning the certification or accreditation requested by the Division.

(6) If the deemed status of an ASC changes, the ASC administrator must notify the Division.

(7) No person or ASC licensed pursuant to the provisions of ORS chapter 441, shall in any manner or by any means assert, represent, offer, provide or imply that such person or facility is or may render care or services other than that which is permitted by or which is within the scope of the license issued to such person or facility by the Division nor shall any service be offered or provided which is not authorized within the scope of the license issued to such person or facility.

(8) The Division shall issue a license to an ASC that:

(a) Submits a completed application as described in section (1) of this rule;

(b) Submits the license fee as described in ORS 441.020;

(c) Successfully completes the survey requirements established in this rule or provides documentation acceptable to the Division under section (4) of this rule; and

(d) Is found by the Division to be in compliance with applicable statutes and these rules.

(9) In determining whether to license an ASC pursuant to ORS 441.025, the Division shall consider only factors relating to the health and safety of individuals to be cared for therein and the ability of the operator of the ASC to safely operate the facility, and shall not consider whether the ASC is or will be a governmental, charitable, or other nonprofit institution or whether it is or will be an institution for profit.

(10) The license shall be conspicuously posted in the area where patients are admitted.

(11) A facility license that has been suspended or revoked may be reissued after the Division determines that compliance with HCF laws has been achieved satisfactorily.

Stat. Auth.: ORS 441.025
Stats. Implemented: ORS 441.022 & 441.025

333-076-0108
Expiration and Renewal of License

Each license to operate an ASC shall expire on December 31 following the date of issue, and if a renewal is desired, the licensee shall make application at least 30 days prior to the expiration date upon a form prescribed by the Division as described in OAR 333-076-0106.

333-076-0109
Denial or Revocation of a License

(1) A license for any ASC may be denied, suspended or revoked by the Division when the Division finds that there has been a substantial failure to comply with the provisions of Health Care Facility licensing law.

(2) A person or persons in charge of an ASC shall not permit, aid or abet any illegal act affecting the welfare of the license.

(3) A license shall be denied, suspended or revoked in any case where the State Fire Marshal certifies that there was failure to comply with all applicable laws, lawful ordinances and rules relating to safety from fire.

(4) A license may be suspended or revoked for failure to comply with a Division order arising from an ASC's substantial lack of compliance with the rules or statutes.

Stat. Auth.: ORS 441.025

Hist.: HD 3-1990, f. 1-8-90, cert. ef. 1-15-90; PH 26-2010, f. 12-14-10, cert. ef. 12-15-10

333-076-0110
Return of Facility License

Each license certificate in the licensee's possession shall be returned to the Division immediately on the suspension or revocation of the license, failure to renew the license by December 31, or if operation is discontinued by the voluntary action of the licensee.

Stat. Auth.: ORS 441.025

Hist.: HD 3-1990, f. 1-8-90, cert. ef. 1-15-90

333-076-0111
Classification

(1) Ambulatory surgical centers shall be classified as follows:

(a) Certified;

(b) High complexity non-certified; and

(c) Moderate complexity non-certified.

(2) The classification of each ASC shall be so designated on the license.

(3) ASCs licensed by the Division shall neither assume a descriptive title nor be held out under any descriptive title other than the classification title established by the Division and under which the facility is licensed. This not only applies to the name on the facility but where stationery, advertising and other representations are involved.

(4) No change in the licensed classification of any ASC, as set out in this rule, shall be allowed by the Division unless such facility shall file a new application, accompanied by the required license fee, with the Division. If the Division finds that the applicant and facility comply with HCF laws and the regulations of the Division relating to the new classification for which application for licensure is made, the Division shall issue a license for such classification.

333-076-0114
Inspections and Complaint Investigations

(1) Complaints:

(a) Any person may make a complaint to the Division regarding violation of health care facility laws or regulations. A complaint investigation will be carried out as soon as practicable and may include but not be limited to, as applicable to facts alleged: interviews of the complainant, patient(s), witnesses, and ASC management and staff; observations of the patient(s), staff performance, patient environment and physical environment; and review of documents and records;

(b) An ASC shall post a notice in the facility, in a prominent place and size that must include, but is not limited to the following: "If you have concerns about this ambulatory surgical center and the services provided here, contact the Public Health Division, Health Care Regulation and Quality Improvement Program: 800 NE Oregon Street, Suite 305, Portland OR 97232; 971-673-0540."

(c) Information obtained by the Division during an investigation of a complaint or reported violation is confidential and not subject to public disclosure under ORS 192.410 to 192.505. Upon the conclusion of the investigation, the Division may publicly release a report of its findings but may not include information in the report that could be used to identify the complainant or any patient at the ASC.

(d) The Division may use any information obtained during an investigation in an administrative or judicial proceeding concerning the licensing of an ASC, and may report information obtained during an investigation to a health professional regulatory board as defined in ORS 675.160 as that information pertains to a licensee of the board.

(2) Inspections:

(a) The Division will, in addition to any inspections conducted pursuant to complaint investigations, conduct at least one general inspection of each ASC to determine compliance with HCF laws at least once every three years and at such other times as the Division deems necessary. The Division may accept certificates from accrediting organizations approved by the Division as evidence of compliance with acceptable standards in lieu of ASC inspections;

(b) Facilities providing approved accrediting organization certificates as evidence of compliance shall also be required to provide to the Division (or to have previously provided) with each license application (and license renewal application):

(A) All approved accrediting organizations survey and inspection reports; and

(B) Written evidence of all corrective actions underway, or completed, in response to approved accrediting organizations recommendations; including all progress reports.

(c) Inspections will include but not be limited to those procedures stated in subsection (1)(a) of this rule;

(d) The inspection may include a patient audit, the results of which shall be summarized on the licensing survey form;

(e) When documents and records are requested under section (1) or (2) of this rule, the ASC shall make the requested materials available to the investigator for review and copying.

Stat. Auth.: ORS 441.025
Stats. Implemented: ORS 441.025, 441.060 & 441.086

333-076-0115
Governing Body Responsibility

The governing body of each ASC shall be responsible for the operation of the facility, the selection of the medical staff and the quality of care rendered in the facility. The governing body shall:

(1) Insure that all health care personnel for whom state licenses or registration are required are currently licensed or registered;

(2) Insure that physicians admitted to practice in the facility are granted privileges consistent with their individual training, experience and other qualifications;

(3) Insure that procedures for granting, restricting and terminating privileges exist and that such procedures are regularly reviewed to assure their conformity to applicable law;

(4) Insure that physicians admitted to practice in the facility are organized into a medical staff insofar as applicable in such a manner as to effectively review the professional practices of the facility for the purposes of reducing morbidity and mortality and for the improvement of patient care; and

(5) Insure that a physician is not denied medical staff membership or privileges at the facility solely on the basis that the physician holds medical staff membership or privileges at another ASC.

333-076-0120
Medical Staff

(1) The physicians organized into a medical staff pursuant to OAR 333-076-0115 shall propose medical staff bylaws to govern the medical staff. The bylaws shall include, but not be limited to the following:

(a) Procedures for physicians admitted to practice in the facility to organize into a medical staff;

(b) Procedures for insuring that physicians admitted to practice in the facility are granted privileges consistent with their individual training, experience and other qualifications;

(c) Provisions establishing a framework for the medical staff to nominate, elect, appoint or remove officers and other persons to carry out medical staff activities with accountability to the governing body;

(d) Procedures for insuring that physicians admitted to practice in the facility are currently licensed by the Oregon Medical Board;

(e) Procedures for insuring that the facility's procedures for granting, restricting and terminating privileges are followed and that such procedures are regularly reviewed to assure their conformity to applicable law; and

(f) Procedures for insuring that physicians provide services within the scope of the privileges granted by the governing body.

(2) Amendments to medical staff bylaws shall be accomplished through a cooperative process involving both the medical staff and the governing body. Medical staff bylaws shall be adopted, repealed or amended when approved by the medical staff and the governing body. Approval shall not be unreasonably withheld by either. Neither the medical staff nor the governing body shall withhold approval if such repeal, amendment or adoption is mandated by law, statute or regulation or is necessary to obtain or maintain accreditation or to comply with fiduciary responsibilities or if the failure to approve would subvert the stated moral or ethical purposes of this institution.

Personnel

(1) As used in this rule, "person" means any:

(a) ASC employee;

(b) ASC contractor;

(c) Health care practitioner granted privileges by the ASC; or

(d) ASC volunteer or student.

(2) The facility shall maintain a sufficient number of qualified personnel to provide effective patient care and all other related services.

(3) There shall be written personnel policies and procedures which shall be made available to personnel.

(4) Provisions shall be made for orientation.

(5) Provisions shall be made for an annual continuing education plan.

(6) There shall be a job description for each position which delineates the qualifications, duties, authority and responsibilities inherent in each position.

(7) There shall be an annual work performance evaluation for each employee with appropriate records maintained.

(8) There shall be an employee health screening program for the purpose of protecting patients and employees from communicable diseases, including but not limited to requiring tuberculosis testing for employees in accordance with section (10) of this rule.

(9) An ASC shall restrict the work of employees with restrictable diseases in accordance with OAR 333-019-0010.

(10) Each ASC shall formally assess the risk of tuberculosis transmission among ASC employees, contractors, health care practitioners granted privileges by the ASC, volunteers or students, and shall comply with the "*Guidelines for Preventing the Transmission of Mycobacterium tuberculosis in Health-Care Settings*," published by the Centers for Disease Control and Prevention (Morbidity and Mortality Weekly Report, vol. 54, number RR-17, December 30,

2005 or by following recommendations otherwise approved by the Division.

(11) An ASC shall obtain documentation that tuberculosis (TB) testing has been conducted in a manner consistent with the CDC guidelines for any person who enters an ASC and who has contact with patients, enters rooms that patients may enter, or who handles clinical specimens or other material from patients or their rooms.

(a) An ASC shall require documentation of baseline TB screening conducted in accordance with the CDC Guidelines, within six weeks of the date of hire, date of executed contract or date of being granted ASC credentials.

(b) For persons hired, contracted with or granted ASC privileges prior to December 15, 2010, an ASC shall obtain documentation of compliance with CDC Guidelines by February 1, 2011.

(12) An ASC that is classified as "potential ongoing transmission" under CDC Guidelines shall consult with the Oregon TB control program within the Division, for guidance on the extent of TB testing required.

(13) If an ASC learns that a person or a patient at the hospital is diagnosed with communicable TB, the ASC shall notify the local public health authority and conduct an investigation to identify contacts. If the Division or local public health authority conducts its own investigation, an ASC shall cooperate with that investigation and provide the Division or local public health authority with any information necessary for it to conduct its investigation.

(14) An ASC shall notify the local public health administrator of its intent to discharge a patient known to have active TB disease.

(15) The actions taken under this rule and all results thereof shall be fully documented for each employee. Such documentation is subject to review by authorized representatives of the Division.

Policies and Procedures

The governing body shall have a formal organizational plan with written policies, procedures and by-laws that are enforced and that clearly set forth the organizational plan with written responsibilities, accountability and relationships of professional and other personnel including volunteers.

(1) The clinical services of each ASC shall be under the supervision of a manager who shall be an RN or a physician.

(2) The following are written policies and procedures that the ASC shall develop and implement:

(a) Types of procedures that may be performed in the facility;

(b) Types of anesthesia that may be used including storage procedures. Where inhalation anesthetics and medical gases are used there shall be procedures to assure safety in storage and use;

(c) Criteria for evaluating patient before admission and before discharge or transfer;

(d) Nursing service activities;

(e) Infection control;

(f) Visitor's conduct and control;

(g) Criteria and procedures for admission of physicians, dentists, or other individuals within the scope of his or her license, to the staff;

(h) Content and form of medical records;

(i) Procedures for storage and dispensing of clean and sterile supplies and equipment and the processing and sterilizing of all supplies, instruments and equipment used in procedures unless disposable sterile packs are used;

(j) Procedures for the disposal of pathological and other potentially infectious waste and contaminated supplies. Guidelines established by the Division shall be used in developing these procedures;

(k) Procedures for the procurement, storage and dispensing of drugs;

(l) If the program calls for the serving of snacks or other foods procedures shall be written covering space, equipment and supplies. Arrangements may be made for outside services. All food services shall meet the requirements of the Food Sanitation Rules, OAR 333-150-0000;

(m) Procedures for the cleaning, storage and handling of soiled linen and the storage and handling of clean linen;

(n) Policies and procedures relating to routine laboratory testing;

(o) A policy and procedure which assures at least annual training in emergency procedures, including, but not limited to:

(A) Procedures for fire and other disaster;

(B) Infection control measures; and

(C) For staff involved in direct patient care, procedures for life threatening situations including, but not limited to, cardiopulmonary resuscitation and the life saving techniques for choking;

(p) Policies and procedures for essential life saving measures and stabilization of a patient and arrangements for transfer to an appropriate facility;

(q) Procedures for notifying patients orally and in writing of any financial interest as required by ORS 441.098;

(r) Requirements for informed consent signed by the patient or legal representative of the patient for diagnostic and treatment procedures; such policies and procedures shall address informed consent of minors in accordance with provisions in ORS 109.610, 109.640, 109.670, and 109.675; and

(s) Requirements for identifying persons responsible for obtaining informed consent and other appropriate disclosures and ensuring that the information provided is accurate.

Nursing Services

(1) An RN shall be responsible for the nursing care provided to the patients.

(2) The number and types of nursing staff and surgical technologists shall be based on the needs of the patients and the types of services performed.

(3) At least one RN and one other nursing staff or medical assistant shall be on duty at all times patients are present.

(4) Nurses who supervise the recovery area shall have current training in resuscitation techniques and other emergency procedures.

333-076-0137
Surgery Services

(1) For purposes of this rule:

(a) "Circulating nurse" means a registered nurse who is responsible for coordinating the nursing care and safety needs of the patient in the operating room and who also meets the needs of the operating room team members during surgery.

(b) "Rural or medically underserved community" means a geographic area of Oregon that is 10 or more miles from the geographic center of a population center of 40,000 or more individuals.

(c) "Surgical technology" means intraoperative surgical patient care that involves:

(A) Preparing an operating room for surgical procedures by ensuring that surgical equipment is functioning properly and safely;

(B) Preparing an operating room and the sterile field for surgical procedures by preparing sterile supplies, instruments and equipment using sterile techniques;

(C) Anticipating the needs of a surgical team based on knowledge of human anatomy and pathophysiology and how those fields relate to the surgical patient and the patient's surgical procedure; and

(D) Performing tasks as directed in an operating room, including:

(i) Passing instruments, equipment or supplies;

(ii) Sponging or suctioning of an operative site;

(iii) Preparing and cutting suture material;

(iv) Transferring fluids or drugs;

(v) Handling specimens;

(vi) Holding retractors and other equipment;

(vii) Applying electrocautery to clamps on bleeders;

(viii) Connecting drains to suction apparatus;

(ix) Applying dressings to closed wounds; and

(x) Assisting in counting supplies and instruments, including sponges and needles.

(2) An ASC, regardless of classification, shall comply with this rule.

(3) An ASC shall have operating rooms that conform to the applicable requirements in OAR 333-076-0185.

(4) An ASC's operating rooms must be supervised by an experienced registered nurse or doctor of medicine or osteopathy.

(5) The duties of a circulating nurse performed in an operating room of an ASC shall be performed by a registered nurse licensed under ORS 678.010 through 678.410. In all cases requiring general anesthesia, a circulating nurse shall be assigned to, and present in, an operating room for the duration of the surgical procedure unless it becomes necessary for the circulating nurse to leave the operating room as part of the surgical procedure. While assigned to a surgical procedure, a circulating nurse may not be assigned to any other patient or procedure.

(6) Nothing in section (5) precludes a circulating nurse from being relieved during a surgical procedure by another circulating nurse assigned to continue the surgical procedure.

(7) In order for a person to practice surgical technology at an ASC, the ASC governing body shall ensure that the following provisions are met by the individual:

(a) Documentation showing that the person has completed a training program for surgical technologists in a branch of the armed forces of the United States or in the United States Public Health Service Commissioned Corp and completes 16 hours of continuing education as described in section (11) of this rule every two years; or

(b) Completion of a surgical technology education program accredited by the Commission on Accreditation of Allied Health Education Program (CAAHEP) or the Accrediting Bureau of Health Education Schools (ABHES) and certification as a surgical technologist issued by the National Board of Surgical Technology and Surgical Assisting (NBSTSA); or

(c) Documentation that a person has practiced surgical technology at least two years between January 1, 2014 and January 1, 2017 in a hospital, ambulatory surgical center or as an employee of a federal government agency or institution and completes 16 hours of continuing education as described in section (11) of this rule every two years.

(8) Notwithstanding subsection (7)(b), an ASC may allow a person who is not certified by the NBSTSA to practice surgical technology at the hospital for 12 months after the person completes an educational program accredited by the CAAHEP or ABHES.

(9) An ASC located in a rural or medically underserved community may allow a person to practice surgical technology at the ASC who does not meet the requirements specified in section (7) of this rule until July 1, 2017. After July 1, 2017, a person not meeting the requirements specified in section (7) of this rule, may work at an ASC in a rural or medically underserved community while the person is attending an educational program accredited by the CAAHEP or ABHES. Such persons are exempt from the educational requirements for three years from the date on which the person began practicing at the ASC.

(10) These rules do not prohibit a licensed practitioner from performing surgical technology if the practitioner is acting within the scope of the practitioner's license and an ASC allows the practitioner to perform such duties.

(11)(a) The continuing education requirements described in subsections (7)(a) and (7)(c) shall:

(A) Consist of 16 hours every two years;

(B) Be tracked by the surgical technologist and is subject to audit by the ASC in which the person is practicing; and

(C) Be relevant to the medical-surgical practice of surgical technology.

(b) Continuing education may include but is not limited to:

(A) Continuing education credits approved by the Association for Surgical Technologist;

(B) Healthcare sponsored conferences, forums, seminars, symposiums or workshops;

(C) Online distance learning courses;

(D) Live lectures at national conferences; or

(E) College courses.

(12) An ASC shall conduct a random audit of a representative sample of the surgical technologists employed by the ASC every two years to verify compliance with educational requirements.

(13) The requirements identified in sections (7), (8), and (10) through (12) of this rule become effective on July 1, 2016.

Anesthesia Services (If Provided)

(1) General or spinal anesthesia shall be administered only by a physician or a certified nurse anesthetist. Either the physician or the CRNA shall be present for the administration of general or spinal anesthetics, during anesthesia, and the recovery of the patients when any general or spinal anesthesia is used.

(2) In all areas where flammable anesthetics are used, such rooms shall be equipped and maintained in compliance with provisions of the current issue of NFPA 99, Standard for Health Care Facilities, unless the governing body's written policy forbids the use or storage of flammable anesthetics in the facility.

333-076-0145
Storage, Disposal and Dispensing of Drugs

(1) In an ASC that does not have a pharmacy on the premises, stock quantities of prescription drugs, including local anesthetics shall be stored on the premises only when such drugs have been obtained for dispensation or administration to his/her respective patients by a physician, dentist, podiatrist or other person authorized within the scope of his/her license to so dispense or administer such drugs. Prescribed drugs already prepared for patients in the ASC may also be stored on the premises.

(2) Old medications, including special prescriptions for patients who have left the facility, shall be disposed of by incineration or other equally effective method, except narcotics and other drugs under the drug abuse law, which shall be handled in the manner prescribed by the Drug Enforcement Administration of the United States Department of Justice.

(3) Drugs shall not be administered to patients unless ordered by a physician, dentist, podiatrist or individual authorized within the scope of his or her professional license to prescribe drugs; and

such order shall be in writing over the physician's or other authorized individual's signature or authentication.

(4) Prescription drugs dispensed by a physician shall be personally dispensed by the physician. Nonjudgmental dispensing functions may be delegated to staff assistants when the accuracy and completeness of the prescription is verified by the physician.

(5) The dispensing physician shall label prescription drugs with the following information:

(a) Name of patient;

(b) The name and address of the dispensing physician;

(c) Date of dispensing;

(d) The name of the drug. If the dispensed drug does not have a brand name, the prescription label shall indicate the generic name of the drug dispensed along with the name of the drug distributor or manufacturer, its quantity per unit and the directions for its use stated in the prescription. However, if the drug is a compound, the quantity per unit need not be stated;

(e) Cautionary statements, if any, as required by law; and

(f) When applicable, and as determined by the Oregon Board of Pharmacy, an expiration date after which the patient should not use the drug.

(6) Prescription drugs shall be dispensed in containers complying with the federal Poison Prevention Packaging Act unless the patient requests a noncomplying container.

(7) Pharmacist and pharmacy personnel providing services to the ASC are subject to ORS Chapter 689 and the rules thereunder.

Care of Patients

(1) Each patient shall be evaluated for all risk factors before a surgical procedure may be performed in accordance with 42 CFR 416.42 and 416.52.

(2) Each patient shall be observed for post-operative complications under the direct supervision of a licensed registered nurse. Patients shall be observed for post-procedure complications until their conditions are stable.

(3) No medications or treatments shall be given without the order of a physician or other individual authorized within the scope of his/her license.

(4) At the time of discharge from the ASC, each patient must be evaluated by a physician, or by an anesthetist as defined by 45 CFR 410.69(b) for proper anesthesia recovery.

(5) Written instruction shall be given to patients on discharge covering signs and symptoms of complications as well as any necessary follow-up instructions for routine and/or emergency care.

(6) Each facility shall adopt and observe written patient care policies.

(7) Patient care policies shall be evaluated annually and rewritten as needed. Documentation of the evaluation is required.

333-076-0165
Medical Records

(1) A medical record shall be maintained for every patient admitted for care.

(2) A legible reproducible medical record shall include at least the following (if applicable):

(a) Admitting identification data including date of admission;

(b) Chief complaint;

(c) Pertinent family and personal history;

(d) History and physical. This history and physical shall be completed no more than 30 days prior to the initiation of any procedure. Sufficient time shall be allowed between examination and the initiation of any procedure, to permit review of tests;

(e) Clinical laboratory reports as well as reports on any special examinations. (The original report shall be authenticated and recorded in the patient's medical record.);

(f) X-ray reports shall be recorded in the medical record and shall bear the identification (authentication) of the originator of the interpretation;

(g) Signed or authenticated report of consultant when such services have been obtained;

(h) All entries in patient's medical record must be dated, timed, and authenticated:

(A)Verification of an entry requires use of a unique identifier, i.e., signature, code, thumbprint, voice print or other means, which allows identification of the individual responsible for the entry;

(B) Verbal orders may be accepted by those individuals authorized by law and by medical staff rules and regulations and shall be countersigned or authenticated within two business days by the ordering health care practitioner or another health care practitioner who is responsible for the care of the patient;

(C) A single signature or authentication of the physician, dentist, podiatrist or other individual authorized within the scope of his or her professional license on the medical record does not suffice to cover the entire content of the record.

(i) Records of assessment and intervention, including but not limited to preprocedure vital sign records, graphic charts, medication records and appropriate personnel notes;

(j) Anesthesia record including records of anesthesia, analgesia and medications given in the course of the operation and postanesthetic condition, signed or authenticated by the person making the entry;

(k) A record of operation dictated or written immediately following surgery and including a complete description of the operation procedures and findings, postoperative diagnostic impression, and a description of the tissues and appliances, if any, removed;

(l) Postanesthesia Recovery (PAR) progress notes including but not limited to vital sign records and other appropriate clinical notes;

(m) Pathology report on tissues and appliances, if any, removed at the operation. The following tissues and appliances may be exempted from pathology exam:

(A) Specimens that, by their nature or condition, do not permit fruitful examination, including but not limited to a cataract, ortho-

pedic appliance, foreign body, or portion of rib removed only to enhance operative exposure;

(B) Therapeutic radioactive sources, the removal of which shall be guided by radiation safety monitoring requirements;

(C) Traumatically injured members that have been amputated and for which examination for either medical or legal reasons is not considered necessary;

(D) Specimens known to rarely, if ever, show pathological change, and the removal of which is highly visible postoperatively, including but not limited to the foreskin from circumcision of a newborn infant;

(E) Placentas that are grossly normal and have been removed in the course of operative and nonoperative obstetrics;

(F) Teeth, provided that the number, including fragments, is recorded in the medical record.

(n) Summary including final diagnosis;

(o) Date of discharge and discharge note;

(p) Autopsy report if applicable;

(q) Informed consent forms that document:

(A) The name of the ASC where the procedure or treatment was undertaken;

(B) The specific procedure or treatment for which consent was given;

(C) The name of the health care practitioner performing the procedure or administering the treatment;

(D) That the procedure or treatment, including the anticipated benefits, material risks, and alternatives was explained to the patient or the patient's representative or why it would have been materially detrimental to the patient to do so, giving due consideration to the appropriate standards of practice of reasonable health care practitioners in the same or a similar community under the same or similar circumstances;

(E) The manner in which care will be provided in the event that complications occur that require health services beyond what the ASC has the capability to provide. If the ASC has entered into agreements with more than one hospital, the patient must be provided with the most likely possible option, but that the transfer hospital may be dependent on the type of problem encountered.

(F) The signature of the patient or the patient's legal representative; and

(G) The date and time the informed consent was signed by the patient or the patient's legal representative;

(r) Documentation of the disclosures required in ORS 441.098;

(s) Such signed documents as may be required by law.

(3) The completion of the medical record shall be the responsibility of the attending physician:

(a) Medical records shall be completed by the physician, dentist, podiatrist or other individual authorized within the scope of his or her professional license within four weeks following the patient's discharge;

(b) If a patient is transferred to another health care facility, transfer information shall accompany the patient. Transfer information shall include but not be limited to facility from which transferred, name of physician to assume care, date and time of discharge, current medical findings, current nursing assessment, current history and physical, diagnosis, orders from a physician for immediate care of the patient, operative report, if applicable; TB test, if applicable; other information germane to patient's condition. If discharge summary is not available at time of transfer, it shall be transmitted as soon as available.

(4) Diagnoses and operations shall be expressed in standard terminology.

(5) The medical records shall be filed in a manner which renders them easily retrievable. Medical records shall be protected against unauthorized access, fire, water and theft.

(6) Medical records are the property of the ASC. The medical record, either in original, electronic or microfilm form, shall not be removed from the institution except where necessary for a judicial or administrative proceeding. Authorized personnel of the Division shall be permitted to review medical records. When an ASC uses off-site storage for medical records, arrangements must be made for delivery of these records to the health care facility when needed for patient care or other health care facility activities. Precautions must be taken to protect patient confidentiality.

(7) All medical records shall be kept for a period of at least 10 years after the date of last discharge. Original medical records may be retained on paper, microfilm, electronic or other media.

(8) If an ASC changes ownership all medical records in original, electronic or microfilm form shall remain in the ASC or related institution, and it shall be the responsibility of the new owner to protect and maintain these records.

(9) If any ASC shall be finally closed, its medical records may be delivered and turned over to any other health care facility in the vicinity willing to accept and retain the same as provided in section (7) of this rule.

(10) All original clinical records or photographic or electronic facsimile thereof, not otherwise incorporated in the medical record, such as x-rays, electrocardiograms, electroencephalograms, and radiological isotope scans shall be retained for seven years after patient's last discharge if professional interpretations of such graphics are included in the medical records.

(11) A current written policy on the release of medical record information including patient access to his/her medical record shall be maintained in the facility.

(12) The Division may require the facility to obtain periodic and at least annual consultation from a qualified medical records consultant, RHIA/RHIT. The visits of the medical records consultant shall be of sufficient duration and frequency to review medical record systems and assure quality records of the patients. Contract for such services shall be available to the Division upon request.

333-076-0170
Quality Assessment and Performance Improvement

(1) The governing body of an ASC must ensure that there is an effective, facility-wide quality assessment and performance improvement program that demonstrates measurable improvement in patient health outcomes, and improves patient safety by using quality indicators or performance measures associated with improved health outcomes and by the identification and reduction of medical errors.

(2) The ASC must measure, analyze, and track quality indicators, adverse patient events, infection control and other aspects of performance that includes care and services furnished in the ASC. Written documentation of quality assessment and performance improvement activities shall be recorded at least quarterly.

(3) After an analysis of the causes for adverse events, the ASC must develop and implement facility-wide preventive strategies and ensure that staff are trained in and familiar with these strategies.

(4) The ASC must set priorities for its performance improvement activities that:

(a) Focus on high risk, high volume and problem prone areas;

(b) Consider incidence, prevalence and severity of problems in those areas; and

(c) Affect health outcomes, patient safety and quality of care.

(5) An ASC already in operation and not certified by CMS on December 15, 2010 must be in compliance with this section by June 15, 2011.

333-076-0175
Infection Control

(1) Each ASC shall establish and maintain an active facility-wide infection control program for the control and prevention of infection. The program shall be managed by a qualified individual and overseen by a multi-disciplinary committee which shall be

responsible for investigating, controlling and preventing infections in the facility.

(2) Each ASC shall be responsible for developing written policies and for annual review of such policies, relating to at least the following:

(a) Identification of existing or potential infections in patients, employees, medical staff, and health care practitioners with ASC privileges;

(b) Control of factors affecting the transmission of infections and communicable diseases;

(c) Provisions for orienting and educating all employees, medical staff, health care practitioners with ASC privileges and volunteers on the cause, transmission, and prevention of infections;

(d) Collection, analysis, and use of data relating to infections in the ASC.

(3) Each ASC shall be responsible for the development, implementation and annual review of policies under section (2) of this rule.

(4) An ASC shall comply with all rules of the Division for the control of communicable diseases.

(5) Written isolation procedures in accordance with current Universal Precautions for Prevention of Transmission of HIV and Other Bloodborne Infections shall be established and followed by all ASC personnel for control and prevention of cross-infection. Guidelines can be obtained from U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, Atlanta, GA 30333. Any guidelines published and distributed by the Division shall also be taken into consideration.

333-076-0180
Inservice Training for Nurses

(1) Each year the inservice training agenda for nurses shall include at least the following:

(a) Infection control measures;

(b) Emergency procedures including, but not limited to, procedures for fire and other disaster;

(c) Procedures for life-threatening situations including, but not limited to, cardiopulmonary resuscitation and the life-saving techniques for choking victims; and

(d) Other special needs of the patient population.

(2) The facility shall assure that each licensed/certified employee is knowledgeable of the laws/rules governing his/her performance and that employees function within those performance standards.

(3) Documentation of such training shall include the date, content, duration and names of attendees.

Hist.: HD 3-1990, f. 1-8-90, cert. ef. 1-15-90; PH 26-2010, f. 12-14-10, cert. ef. 12-15-10

333-076-0185
Physical Environment

(1) Applicability. OAR 333-076-0185 shall apply to:

(a) An ambulatory surgical center not licensed on April 1, 2012; or

(b) A major alteration to an ambulatory surgical center for which plans were not submitted to the Division on or before April 1, 2012; provided, however, that OAR 333-076-0185 shall apply only to the major alteration and shall not apply to any other area of the ambulatory surgical center.

(2) For the purpose of this rule the following definitions apply:

(a) "Major alteration" means any structural change to the foundation, floor, roof, or exterior or load bearing wall of a building, or the extension of an existing building to increase its floor area, where such structural change or extension affects patient care or safety. "Major alteration" also means the modification of an existing building that results in a change in use, even if the modification does not include any structural change to the building, where such modification affects patient care or safety. "Major alteration" does not include cosmetic upgrades to the interior or exterior of an existing building, including but not limited to changes to wall finishes, floor coverings and casework.

(b) "Change in use" means altering the purpose of an existing room. "Change in use" does not include the sale of an ASC if the new owner provides services in the same class of operating rooms pursuant to section (15) of this rule.

(3) Notification of Alteration: If an ASC proposes any of the following alterations the ASC must notify the Division. The Division shall determine, on a case-by-case basis, whether such alterations constitute a "change in use". If an alteration affects patient care, patient safety, is a change of use, or includes any of the following, the alteration is subject to this rule:

(a) Addition of surgical services, to the extent the additional surgical services can not be performed in the class of operating rooms existing in the ASC pursuant to section (15) of this rule;

(b) Replacement of equipment in the ASC that is permanently connected to major building components, such as: power, heating, ventilation, air conditioning, plumbing or medical gas; and

(c) Addition of doors to pre-operative holding areas or post-anesthesia care units.

(4) Functional Program.

(a) An ASC shall provide a description of its functional program when plans are submitted for review, along with additional requirements found in OAR 333-675-0000.

(b) The functional program describes in detail the purpose of the project, department relationships and flow of patients, staff, visitors and supplies as applicable, size and function of each space, description of those services necessary for the complete operation of the ASC, type of anesthesia used, average recovery time, special design feature(s), occupant load, numbers of staff and patients, visitors and vendors, issue of privacy/confidentiality for patients, level of medical gas system per NFPA 99, and type of central electrical system.

(5) Location. Building entrances used to reach outpatient services shall be at grade level, clearly marked, and located so patients need not go through other activity areas. Travel patterns shall preclude unrelated traffic within the unit.

(6) Mixed Uses. An ASC is a distinct entity and must be separate and distinguishable from any other health care facility or office-based physician practice, but the ASC may share a reception area, waiting room and public toilet rooms with the other health care facility or office-based physician practice. Medicare-certified ASCs are subject to specific requirements related to sharing spaces with another health care facility or office-based physician practice. An ASC that is Medicare-certified must be distinct from any other health care facility or office-based physician practice as required in 42 CFR 416.2 and 42 CFR 416.44(a)(2) and (b).

(7) Conformance to Building and Fire and Life Safety Codes. ASCs shall conform to the editions of the **Oregon State Building Code**, as defined in ORS 455.010(8), under which they were constructed. ASCs to be certified for Medicare reimbursement shall meet standards of the **National Fire Protection Association (NFPA) #101 and #99 Codes**.

(8) Administrative and Public Areas. An ASC shall have:

(a) An entrance sheltered from inclement weather and accessible to the disabled. If a separate door is provided for the discharge of patients, it must be sheltered from inclement weather and shall be accessible to the disabled;

(b) A reception counter or desk;

(c) Toilet(s) for public use conveniently accessible from the waiting area without passing through patient care or staff work areas or suites;

(d) Telephone access for local phone calls for patients;

(e) Conveniently accessible drinking water;

(f) Conveniently accessible wheelchair storage;

(g) Space(s) for private interviews relating to financing and credit discussions;

(h) Space for business transactions, records storage and administrative and professional staff to work, including but not limited to space designated for computers, printers, fax machines, and copiers if required by the functional program;

(i) Secure and safe storage for medical records of all media type, located to maintain the confidentiality of records and either restricted to staff movement or remote from treatment and public areas. Space required shall be defined by the functional program;

(j) Special storage for staff personal effects with locking drawers or cabinets; and

(k) General storage for supplies and equipment as identified in the functional program.

(9) Environmental Services Room (Housekeeping Closet). An ASC shall have an environmental services room that contains a floor receptor or service sink and storage space for housekeeping supplies and equipment, and that is at least 16 square feet.

(10) Layout. An ASC shall provide three areas — unrestricted, semi-restricted, and restricted — that are defined by the physical activities performed in each area.

(a) Unrestricted area. For the purpose of this rule, unrestricted areas shall include a central control point established to monitor the entrance of patients, personnel, and materials into the restricted areas. (Street clothes are permitted in this area, and traffic is not limited.)

(b) Semi-restricted area. For the purpose of this rule, semi-restricted areas shall include the peripheral support areas of the surgical suite, where traffic is limited to authorized personnel and patients, and where personnel are required to wear surgical attire and hair coverings. A semi-restricted area includes but is not limited to:

(A) Storage areas for clean and sterile supplies;

(B) Work areas for storage and processing of instruments;

(C) Corridors leading to the restricted areas of the surgical suite; and

(D) Scrub sink areas.

(c) Restricted area. For the purpose of this rule, restricted areas are areas where surgical attire and hair coverings are required, and where masks are required due to the presence of open sterile supplies or scrubbed people. A restricted area includes but is not limited to:

(A) Operating and other procedure rooms; and

(B) The clean core (if required by the functional program).

(d) Signs shall be provided at all entrances to restricted areas indicating surgical attire required.

(11) Special Patient Care Rooms. In ASCs with a functional program that includes treatment of patients with known infectious disease or populations with known compromised or suppressed immune systems, the need for and number of airborne infection isolation rooms and protective environment rooms shall be determined by an infection control risk assessment (ICRA).

(a) Airborne Infection Isolation (AII) Room. For the purpose of this rule, Airborne Infection Isolation refers to the isolation of patients infected with organisms spread by airborne droplet nuclei and shall have:

(A) Only one bed and a hand-washing station (placement of an additional hand-washing station outside the room entrance shall be permitted);

(B) An area for gowning and storage of clean and soiled materials located either directly outside or inside the entry door to the patient room;

(C) A separate room with a toilet and hand-washing station;

(D) Perimeter walls, a ceiling, and floor, including penetrations, that are sealed tightly so that air does not infiltrate the environment from the outside or from other spaces;

(E) Self-closing devices on all room exit doors;

(F) Doors with edge seals;

(G) Window treatments and privacy curtains:

(i) Window treatments and privacy curtains shall be smooth-surfaced, easy-to-clean, wipeable, and non-pleated;

(ii) Fabric drapes and curtains shall not be used for window treatments;

(iii) Use of fabric privacy curtains shall be permitted if they are washable. A wipeable fabric with a smooth surface is preferable.

(b) Anteroom. An anteroom to a patient isolation room is not required; however, if an anteroom is part of the design concept, it shall meet the following requirements:

(A) Space for persons to don personal protective equipment before entering the patient room; and

(B) Doors with self-closing devices.

(c) Protective Environment (PE) Rooms. For the purpose of this rule, Protective Environment Room refers to a patient room that is designed to protect a high risk, immunocompromised patient from human and environmental airborne pathogens.

(A) When determined by an Infection Control Risk Assessment (ICRA) and the functional program, special design considerations and ventilation shall be required to ensure the protection of patients who are highly susceptible to infection; and

(B) The room(s) shall meet the requirements of subsection (11)(a) except for paragraph (C).

(12) Non-invasive Procedure & Consultation Room. A non-invasive procedure and consultation room is not a "procedure room" for purposes of ORS 441.020. A non-invasive procedure and consultation room shall have:

(a) A minimum clear floor area of 120 square feet with a minimum room dimension of 10 feet;

(b) A room arrangement that permits a minimum clear dimension of 3 feet at each side and at the foot of the bed;

(c) A hand-washing station;

(d) A counter or shelf space for writing or electronic documentation; and

(e) Visual and acoustical privacy for private medical consultations and confidential communication with patients and their families/legal guardians.

(13) Sterilization Facilities: An ASC shall have space and a system for sterilizing equipment and supplies either on-site or off-site. If located on site, sterilization facilities shall be located in a semi-restricted area and shall include a separate area for cleaning and decontamination of instruments prior to sterilization. Sterilization facilities shall include, but are not limited to, a high-speed sterilizer or other sterilizing equipment for immediate or emergency use, as required by the functional program.

(a) When sterilization is provided off-site, a room for the adequate handling (receiving and distribution) and on-site storage of sterile supplies, that meet paragraph (13)(c)(C) of this rule shall be provided.

(b) Provisions shall be made for sanitizing clean and soiled carts or vehicles consistent with the needs of the particular transportation system.

(c) An on-site processing facility shall include:

(A) A decontamination room for the exclusive use of the surgical suite. If the room has a door or pass through opening for decontaminated instruments between the decontamination room and a clean workroom it shall have a self closing door, but it may not have a direct connection with an operating room. A decontamination room shall include:

(i) A flushing-rim clinical sink or equivalent flush-rim fixture unless the decontamination room is used only for temporary holding of soiled material;

(ii) A hand-washing station; and

(iii) A work counter unless the decontamination room is used only for temporary holding of soiled material.

(B) A clean assembly/workroom that is physically separated from soiled work areas that has adequate space for the designated number of work areas as defined in the functional program as well as space for storage of clean supplies, sterilizer carriages (if used), and instrumentation. Access to this area shall be restricted. A clean/assembly workroom shall contain:

(i) A hand-washing station;

(ii) Workspace; and

(iii) Equipment for terminal sterilizing of medical and surgical equipment and supplies.

(C) Storage for sterile supplies and packs, including provisions for ventilation, humidity, and temperature control.

(i) The sterile supply storage area shall have a floor area as required per the functional program.

(ii) As described in paragraph (13)(c)(B) of this rule, location of the sterile supply storage in an area within the clean assembly/workroom shall be permitted if it is a permanently designated area.

(14) Linen Services. Designated space in the post-anesthesia recovery area(s) shall be provided for clean and soiled linen.

(a) On-site Processing Area. If the functional program requires linen to be processed on site, the area shall:

(A) Be large enough to accommodate a washer, a dryer, and any plumbing equipment needed to meet the temperature requirements of 160 degrees;

(B) Be divided into distinct soiled (sort and wash) and clean (dry and fold) areas;

(C) Have storage for laundry supplies and clean linen; and

(D) Have a hand-washing station within 10 feet without passing through a door.

(b) Off-site Laundry Service Areas. If the functional program requires linen to be processed off site, the area within the ASC shall have a:

(A) Soiled linen holding area or designated and dedicated area for a soiled laundry cart; and

(B) Clean linen storage area that protects linen from soil or damage.

(15) Operating Rooms. The size and location of the operating rooms shall depend on the level of care and equipment specified in the functional program.

(a) Class A Operating Room. For the purpose of this rule, a Class A operating room is for surgery and other procedures that require minimal sedation including but not limited to minor surgical procedures performed under topical and local infiltration blocks with or without oral or intramuscular preoperative sedation. A surgical procedure performed in a Class A operating room could also be performed in a Class B or C operating room.

(A) Space requirements. Class A operating rooms shall have a minimum clear floor area of 150 square feet within a minimum clear dimension of 12 feet.

(B) Clearances. There shall be a minimum clear distance of 3 feet 6 inches at each side, the head, and the foot of the operating table.

(C) Location. Class A operating rooms may be accessed from the semi-restricted corridors of the surgical suite or from an unrestricted corridor adjacent to the surgical suite.

(b) Class B Operating Room. For the purposes of this rule a Class B operating room is for surgery and other procedures that require conscious sedation. A procedure performed in a Class B operating room could also be performed in a Class C operating room.

(A) Space requirements. Class B operating rooms shall have a minimum clear floor area of 250 square feet with a minimum clear dimension of 15 feet.

(B) Clearances. Room arrangement shall permit a minimum clear dimension of 3 feet 6 inches at each side, the head, and the foot of the operating table.

(C) Location. Class B operating rooms shall be accessed from the semi-restricted corridors of the surgical suite.

(c) Class C Operating Room. For the purpose of this rule a Class C operating room is for surgery and procedures that require general anesthesia or deep sedation.

(A) Space requirements. Class C operating rooms shall have a minimum clear floor area of 400 square feet and a minimum clear dimension of 18 feet.

(B) Clearances. Room arrangement shall permit a minimum clear dimension of 4 feet at each side, the head, and the foot of the operating table.

(C) Location. Class C operating rooms shall be accessed from the semi-restricted corridors of the surgical suite.

(d) Each operating room shall have access to at least one medical image viewer located as required by the functional program.

(e) All operating rooms shall be equipped with an emergency communication system designed and installed to effectively summon additional qualified staff support with no more than push activation of an emergency call switch.

(f) An operating room is considered a procedure room for the purposes of determining the appropriate fee under ORS 441.020.

(16) Pre-operative Support Areas.

(a) Location. Pre-operative holding areas shall be under direct visual control of the nursing staff. Pre-operative holding can be shared with post-operative if the functional program defines patient management.

(A) For a Class A operating room the minimum number of patient stations within the pre-operative holding areas is as follows:

(i) At least one patient station if the operating room is accessed from the semi-restricted area.

(ii) None if the operating room is accessed from an unrestricted area and the functional program allows for pre-operative care to be carried out in the operating room.

(B) For a Class B operating room, at least one patient station within the pre-operative holding areas is required. A patient station may consist of a bed, chair or stretcher.

(C) For Class C operating room, at least one patient station per Class C operating room is required.

(D) In an ASC with Class B and Class C operating rooms, area shall be provided to accommodate stretcher and chair space.

(b) Area. Each pre-operative holding area shall provide a minimum clear floor area of 80 square feet for each patient station.

(c) Clearances. Each pre-operative holding area shall have a minimum clear dimension of 5 feet between patient and 4 feet between patient and adjacent walls (at the stretcher's or chair's side and foot).

(d) Patient privacy. Provisions such as cubicle curtains shall be made for patient privacy.

(e) Hand-washing station. Hands-free or wrist blade-operable controls shall be available, with at least one station for every six positions or fewer and for each major fraction thereof. Hand-washing stations shall be uniformly distributed to provide convenient access from each patient position. Travel distance to a hand-washing station shall not exceed 20 feet, and shall be located without passing through a door. Travel distances shall be calculated from the foot of the patient station to the hand-washing station.

(f) Documentation space. A counter, table, area for a desk, or storage for a movable table shall be provided.

(g) Change Area. A separate area(s) shall be provided for outpatients to change from street clothing to hospital gowns and prepare for surgery. If the ASC has four or fewer operating rooms, the change area can also be a holding area(s). The change area shall include the following:

(A) Lockers, or acceptable provisions made for securing patients' personal effects; and

(B) Toilet(s). The patient toilet room(s) shall be separate from public use toilet(s) and located to permit access from pre- and post-operative holding areas.

(17) Recovery Areas.

(a) When determining the number of recovery positions required, an ASC shall take into consideration the types of surgery and procedures performed in the ASC, the types of anesthesia used, average recovery periods, and anticipated staffing levels.

(b) Recovery areas shall be accessible directly from the semi-restricted area. If pre-operative holding areas, Phase 2 areas and recovery areas are required per the functional program, these spaces may be shared if the number of patient positions meet the most restrictive requirements of both pre and post operative areas.

(c) Nurse Control Station. The nurse control station shall have direct sightline to patients in acute recovery stations.

(d) If pediatric surgery is practiced, the functional program and physical environment design shall address the following:

(A) Locations of pediatric recovery stations;

(B) Space for parents;

(C) Sound attenuation; and

(D) Proximity of patient stations to a nursing station.

(e)(A) Post-anesthesia recovery positions. Room(s) for post-anesthesia recovery in an ASC shall be provided in accordance with the functional program;

(B) Number. A minimum of one recovery station per operating room shall be provided. A recovery area analysis shall determine the need for additional recovery stations. In the absence of a recovery area analysis approved by the Division, the minimum number of post-anesthesia recovery positions shall be as follows:

(i) Three recovery positions for each Class C operating room;

(ii) Two recovery positions for each Class B operating room;

(iii) One recovery position for each Class A operating room.

(f) Area. When a patient cubicle is used for each patient care station, a minimum clear floor area of 80 square feet shall be provided. Space shall also be provided for additional equipment described in the functional program.

(g) Clearances. Each post-anesthesia recovery area shall provide a minimum clear dimension of 5 feet between patient stretchers or beds, 4 feet between patient stretchers or beds and adjacent walls (at the stretcher's sides and foot), and at least 3 feet from the foot of the stretcher or bed to the closed cubicle curtain.

(h) Patient privacy. Provisions for patient privacy such as cubicle curtains shall be made.

(i) Hand-washing station. Hands-free or wrist blade-operable controls shall be available, with at least one station for every six positions or fewer and for each major fraction thereof. Hand-washing stations shall be uniformly distributed to provide convenient access from each patient position. Travel distance to a hand-washing station shall not exceed 20 feet, and shall be located without passing through a door. Travel distances shall be calculated from the foot of the patient station to the hand-washing station.

(j) Patient toilet room(s). In an ASC with three or more operating rooms, a dedicated patient toilet room shall be provided in the recovery area.

(k) Support areas for post-anesthesia recovery rooms. If the post-anesthesia recovery room(s) is located immediately adjacent to the surgical suite, sharing of these support areas shall be permitted;

(A) Supply storage. Storage space shall be determined by the functional program, however, at least 15 cubic feet needs to be provided.

(B) Receptacles for soiled linen and waste holding shall be provided and meet the requirements of NFPA 101, 20.7.5.5.

(C) Documentation space. A counter, table, area for a desk, or storage for a movable table shall be provided.

(D) Drug distribution station. Each recovery area shall have a drug distribution station that includes:

(i) An area for the storage and preparation of medications administered to patients;

(ii) A refrigerator for pharmaceuticals and double-locked storage for controlled substances if required by the functional program; and

(iii) Convenient access to a hand-washing station without passing through a door.

(E) Nourishment facilities within a recovery area shall have:

(i) A sink, work counter, refrigerator, storage cabinets, and equipment for serving nourishment as required by the functional program; and

(ii) A hand-washing station that is located in the nourishment area or adjacent to the nourishment area.

(18) Phase 2 Recovery.

(a) A Phase 2 recovery area shall be provided if required by the functional program.

(b) Location of the Phase 2 recovery area within the post-anesthesia recovery area shall be permitted, but the Phase 2 area shall be an identifiably separate and distinct part of the post-anesthesia recovery area. Phase 2 recovery stations can be shared with recovery stations if the functional program defines patient management.

(c) Area. When a patient cubicle is used for each patient care station, the design shall provide a minimum of 50 square feet for each patient in a lounge chair with space for additional equipment described in the functional program.

(d) Clearances.

(A) The design shall provide a minimum clear dimension of 4 feet between the sides of adjacent lounge chairs and between the foot of the lounge chairs and the nearest obstruction.

(B) When permanent partitions (full or partial height or width) are used to partially define the patient care station (rather than cubicle curtains), a minimum clear dimension of 3 feet shall be provided on the side of the lounge chair.

(e) Patient privacy. Provisions for patient visual privacy such as cubicle curtains shall be made.

(f) Hand-washing station. Hands-free or wrist blade-operable controls shall be available, with at least one station for every six positions or fewer and for each major fraction thereof. Hand-washing stations shall be uniformly distributed to provide convenient access from each patient position. Travel distance to a hand-washing station shall not exceed 20 feet, and shall be located without passing through a door. Travel distances shall be calculated from the foot of the patient station to the hand-washing station;

(g) Patient toilet room(s). In an ASC with two or fewer operating rooms, a patient toilet room shall be provided in or adjacent to the Phase 2 recovery area. In an ASC with three or more operating rooms, a patient toilet room shall be provided in the Phase 2 recovery area.

(h) Support areas for Phase 2 recovery (if provided) shall provide the following:

(A) Clear sightlines and easy access from the post-anesthesia recovery area to the nurse control station;

(B) Storage space for supplies and equipment;

(C) Documentation space. A counter, table, area for a desk, or storage for a movable table; and

(D) Space for family members.

(19) Support for the Surgical Service Areas: The following shall be provided in the surgical service areas:

(a) Visual surveillance by nursing staff of all traffic entering the semi-restricted corridor (the passage used to access operating rooms and ancillary semi-restricted areas) per the functional program;

(b) Medication storage. Drug storage shall be provided. A refrigerator for pharmaceuticals and double-locked storage for controlled substances shall be provided if required by the functional program;

(c) Scrub facilities. With the exception of ASCs providing exclusively gastrointestinal endoscopy services, an ASC shall have a scrub station(s) trimmed with foot, knee, or electronic controls. Single-lever wrist blades shall not be permitted. Scrub station(s) shall be provided at the entrance to each operating room. A scrub station may serve two operating rooms if it is located on the same wall, and between the two entrances. Scrub stations shall be arranged to minimize splatter on nearby personnel or supply carts. A dedicated hand wash station with hands-free controls shall be provided in each room used for gastrointestinal endoscopy services.

(d) Equipment and supply storage. Equipment storage room(s) shall be provided for equipment and supplies used in the surgical service areas. The combined area of equipment and clean clinical supply storage room(s) shall have a minimum floor area of 50 square feet for each operating room(s) up to two and an additional 25 square feet per additional operating room. Equipment storage room(s) shall be located within the semi-restricted area;

(e) Anesthesia supply storage. An area shall be provided for storing anesthesia equipment and supplies, as defined by the functional program. This space shall be located within the semi-restricted area;

(f) Medical gas storage. An area shall be provided for the storage of medical gas(es) used in the ASC, including adequate space for reserve cylinders. Such space shall meet **National Fire Protection Association 99** standards;

(g) Stretcher storage area. In an ASC that provides Class B and C operating rooms, a stretcher storage area for at least one stretcher shall be provided. This storage area shall be convenient for use and located outside the required width of the exit access corridor;

(h) Staff lounge and toilet facilities. Staff lounge toilet facilities shall be provided in an ASC with three or more operating rooms. The toilet room shall be near the recovery area;

(i) Staff lockers. Appropriate change area(s) shall be provided for male and female staff working within the surgical suite (a unisex locker area with one or more private changing rooms shall be permitted.) For an ASC that provides services in Class B and C operating rooms, this area(s) shall be designed to effect a one-way traffic pattern so that personnel entering from outside the surgical suite can change and move directly into the suite's semi-restricted corridor. As least one staff shower shall be provided that is conveniently accessible to the surgical suite and recovery areas;

(j) Environmental services room (housekeeping closet). An environmental services room shall be provided exclusively for the surgical suite. This room shall contain a floor receptor or service sink and storage space for housekeeping supplies and equipment and shall be at least 16 square feet;

(k) Emergency equipment/supply storage. Provisions shall be made for access to and use of emergency resuscitation equipment and supplies (crash cart(s) and anesthesia carts) within 60 feet and at least one per floor of patient care areas;

(l) Fluid waste disposal. Fluid waste disposal facilities shall be provided and shall be located so that they are convenient to the operating rooms and recovery areas. A clinical sink or equivalent equipment in a soiled workroom shall meet this requirement in the operating room area, and a toilet equipped with a bedpan-cleaning device or a separate clinical sink shall meet the requirement in the recovery area.

(20) Details and Finishes:

(a) Corridor width. Public corridors shall have a minimum width of 5 feet, except that corridors connecting the operating room section and the post anesthesia care unit and at least one ambulance transfer exit, where patients are transported on stretchers or beds, shall have a minimum width of 6 feet. The semi-restricted corridor shall have a minimum width of 8 feet in areas used to transport patients on gurneys between pre-operative, procedure, and post-anesthesia recovery areas. Passages and corridors used exclusively for staff access shall be a minimum of 3 feet 8 inches in clear width. Items such as provisions for drinking water, telephone booths, vending machines, etc., shall not restrict corridor traffic or reduce the corridor width below the required minimum. In-corridor storage or parking space for portable equipment shall not overlap required corridor widths. Width shall also meet OFC 1018.2.

(b) Doors and door hardware. The minimum door width for patient use shall be 3 feet. Door openings requiring gurney/stretcher access shall have a minimum clear width of 3 feet 8 inches;

(c) Hand-washing stations. Hand sanitation dispensers shall be provided in addition to hand-washing stations. The number and location of both hand-washing stations and hand sanitation dispensers shall be determined by ICRA;

(A) Hand-washing stations used by medical and nursing staff, patients, and food handlers shall be trimmed with valves that can be operated without hands. Single-lever or wrist blade devices shall be permitted. Sensor-regulated water fixtures shall meet user need for temperature and length of time the water flows. Electronic faucets shall be capable of functioning during loss of normal power. Knee control, foot pedal, electronic or other devices that allow operation without use of the hands are acceptable.

(B) Sinks in hand-washing stations shall be designed with deep basins to prevent splashing to areas where direct patient care is provided, particularly those surfaces where sterile procedures are performed and medications are prepared.

(C) The area of the basin shall not be less than 144 square inches with a minimum 9 inch width or length.

(d) Clinical sinks.

(A) Handles on clinical sinks shall be at least 6 inches long.

(B) Clinical sinks shall have an integral trap wherein the upper portion of the water trap provides a visible seal.

(e) Provisions for hand drying shall be required at all hand-washing stations except scrub sinks.

(A) Hand-washing stations shall include a hand-drying device that does not require hands to contact the dispenser.

(B) If provided, hand towels shall be directly accessible to sinks.

(f) Cleansing agents. Hand-washing stations shall include liquid or foam soap dispensers.

(g) Toilet rooms for patient use in surgery and recovery areas shall be equipped with doors and hardware that permit access from the outside in emergencies. When such rooms have only one opening, the doors shall open outward or be otherwise designed to open without pressing against a patient who may have collapsed within the room.

(h) Radiation protection requirements for X-ray and gamma ray installations shall conform with National Council on Radiation Protection and Measurements (NCRP) reports 102, 147, and 151 and all applicable state requirements. Testing is to be coordinated with the Division's Radiation Protection Services program to prevent duplication of test observations or construction inspections. Provision shall be made for testing completed installations before use. All defects shall be corrected before approval.

(i) The minimum ceiling height of an ASC shall be 7 feet 10 inches, with the following exceptions:

(A) Ceiling height in corridors, storage rooms, toilet rooms, and other minor rooms shall not be less than 7 feet 8 inches;

(B) Radiographic and other rooms containing ceiling-mounted equipment shall have ceilings of sufficient height to accommodate the equipment and fixtures; and

(C) Boiler rooms shall have ceiling clearances not less than 2 feet 6 inches above the main boiler header and connecting pipe.

(j) Ceilings. Ceiling finishes shall be appropriate for the areas in which they are located and shall be as follows:

(A) Semi-restricted areas.

(i) Ceiling finishes in semi-restricted areas such as clean corridors, central sterile supply spaces, specialized radiographic rooms, and Class A operating rooms shall be smooth, scrubbable, nonabsorptive, nonperforated, capable of withstanding cleaning with chemicals, and without crevices that can harbor mold and bacteria growth.

(ii) Perforated, tegular, serrated, or highly textured tiles shall not be used.

(B) Restricted areas.

(i) Ceilings in restricted areas such as operating rooms shall be monolithic, scrubbable, and capable of withstanding chemicals. Cracks or perforations in these ceilings are not allowed.

(ii) All access openings in ceilings in restricted areas shall be gasketed.

(C) Mechanical and electrical rooms. Suspended ceilings may be omitted in mechanical and electrical rooms/spaces unless required for fire safety purposes.

(k) Floor finishes shall be appropriate for the areas in which they are located and shall:

(A) Be easy to maintain, readily cleanable and appropriately wear-resistant;

(B) In all areas such as clean corridors, central sterile supply spaces, specialized radiographic rooms, and Class A operating rooms, be washable, smooth and able to withstand chemical cleaning;

(C) In areas such as operating rooms, environmental services rooms, and soiled holding or utility rooms, be scrubbable, able to withstand chemical cleaning, and monolithic, with an integral base of at least 6 inches;

(D) In clinical areas, be constructed of materials that allow the easy movement of all required wheeled equipment;

(E) Provide smooth transitions between different flooring materials;

(F) Allow for ease of ambulation and self-propulsion. Carpet and carpet with padding in patient areas shall be glued down or

stretched taut and free of loose edges or wrinkles that might create hazards or interfere with the operation of lifts, wheelchairs, walkers, wheeled carts, or patients utilizing orthotic devices;

(G) In all areas subject to wet cleaning methods, not be physically affected by germicidal or other types of cleaning solutions;

(H) Be slip-resistant for flooring surfaces in wet areas (e.g., kitchens, showers and baths), ramps, entries from exterior to interior space, and areas that include water for patient services; and

(I) Joints for flooring openings for pipes, ducts, and conduits shall be tightly sealed to minimize entry of pests. Joints of structural elements shall be similarly sealed.

(l) Wall finishes shall be cleanable and washable. In the vicinity of plumbing fixtures, wall finishes shall be smooth and moisture resistant.

(A) Wall finishes in areas such as clean corridors, central sterile supply spaces, specialized radiographic rooms, and minor surgical procedure rooms shall be washable, smooth, and able to withstand chemical cleaning.

(B) Wall finishes in areas such as operating rooms, delivery rooms, and trauma rooms shall be scrubbable, able to withstand chemical cleaning, and monolithic.

(C) Wall finish treatments shall not create ledges or crevices that can harbor dust and dirt.

(D) Wall surfaces in wet areas (e.g. environmental services rooms) shall be monolithic and all seams shall be covered or sealed.

(E) Wall bases in areas routinely subjected to wet cleaning shall be monolithic and coved with the floor, tightly sealed to the wall, and constructed without voids.

(F) Wall areas penetrated by pipes, ducts, and conduits shall be tightly sealed to minimize the entry of rodents and insects. Joints of structural elements shall be similarly sealed.

(G) Sharp, protruding corners shall be avoided.

(H) Wall protection devices and corner guards shall be durable and scrubbable.

(21) Elevators. Electric or hydraulic elevators are required if the ASC has patient spaces located on other than the grade-level entrance floor. The elevator shall be sized to accept a gurney or stretcher plus an attendant.

(a) Dimensions. Cars shall have a minimum inside floor dimension of not less than 5 feet.

(b) Leveling device. Elevators shall be equipped with a two-way automatic level-maintaining device with an accuracy of ±one-half inch.

(c) Elevator controls:

(A) Elevator call buttons and controls shall not be activated by heat or smoke. Light beams, if used for operating door reopening devices without touch, shall be used in combination with door-edge safety devices and shall be interconnected with a system of smoke detectors so the light control feature will be overridden or disengaged should it encounter smoke at any landing.

(B) Elevator controls, alarm buttons, and telephones shall be accessible to wheelchair occupants and usable by the blind.

(d) Emergency power must comply with NFPA 99 requirements.

(22) Mechanical system design.

(a) In new construction, the mechanical system shall be designed and constructed for overall efficiency in accord with the **Oregon Mechanical Specialty Code** and the **Oregon Energy Efficiency Specialty Code**, as enforced by the Oregon Building Codes Division or local jurisdictions having authority.

(b) Efficiency. The mechanical system shall be designed for overall efficiency and appropriate life-cycle cost.

(c) Use of recognized energy-saving mechanisms such as variable-air-volume (VAV) systems, load shedding, programmed controls for unoccupied periods (nights and weekends, etc.), and use of natural ventilation may be considered.

(d) Air-handling systems shall be designed with an economizer cycle where appropriate to use outside air.

(e) VAV systems. The energy-saving potential of VAV systems is recognized, and the standards herein are intended to maximize appropriate use of such systems. Any system used for occupied areas shall include provisions to avoid air stagnation in interior spaces where thermostat demands are met by temperatures of surrounding areas. Reference Table 1 contains minimum ventilation and airflow requirements.

(f) Recirculating rooms units (such as induction unit and unit ventilators) may be used in individual rooms for heating and cooling purposes except as noted in Table 1. Outdoor air requirements shall be met by separate air handling systems with proper filtration. Reference Table 2 contains the filtration requirements.

(g) Vibration isolators. Mechanical equipment, ductwork, and piping shall be mounted on vibration isolators.

(h) System valves. Supply and return mains and risers for cooling, heating, and steam systems shall be equipped with valves to isolate the various sections of each system. Each piece of equipment shall have valves at the supply and return ends.

(i) Testing and documentation.

(A) Prior to licensure of an ASC, all systems shall be tested and operated to demonstrate to the owner or its designated representative that the installation and performance of these systems conform to design intent. Test results shall be documented for maintenance files.

(B) Upon completion of the installation, the owner of an ASC shall ensure that a complete set of manufacturer's operating, maintenance, and preventive maintenance instructions; a parts list; and complete procurement information, including equipment numbers and descriptions, has been obtained.

(C) An ASC shall ensure that staff who operate the systems shall be provided with instructions for proper operation of systems and equipment. Required information shall include all safety or code ratings as needed.

(23) Ventilation and space-conditioning requirements. All rooms and areas used for patient care shall have ventilation per Table 1. Although natural ventilation shall be permitted, mechanical ventilation shall be provided in all patient care rooms and areas in an ASC.

(24) HVAC Requirements for Specific Locations.

(a) Airborne infection isolation (AII) rooms. These special ventilation areas have an inward air movement relationship to adjacent areas where a patient with airborne infectious diseases may be a risk to the surrounding area. If AII rooms are required per the functional program, the HVAC design must meet the requirements of OAR 333-535-0300.

(b) Protective environment (PE) rooms. These special ventilation areas have an outward air movement relationship to adjacent areas where the patient may be at risk from the surrounding areas. If PE rooms are provided per the functional program, the PE rooms must meet the requirements of OAR 333-535-0300.

(c) Operating rooms.

(A) Air distribution.

(i) Operating room air supply shall be from ceiling outlets near the center of the work area for effective air movement control. Laminar flow design diffusers shall be used in Class B and C operating rooms as required by the functional program.

(ii) Each operating room shall have a minimum of two air inlets located as remotely from each other as possible. The return air inlets shall be located near the floor level in Class B and C operating rooms.

(B) Ventilation rates.

(i) The ventilation systems for Class B and C operating rooms shall operate at all times, except during maintenance and conditions requiring shutdown by the building's fire alarm system.

(ii) During unoccupied hours, operating room air change rates may be reduced, provided that the positive room pressure is maintained as required and the required air changes are automatically re-established any time the space is being utilized.

(iii) Ventilation systems serving Class A Operating Rooms and Class B Operating Rooms used for Endoscopy may be shut off during unoccupied periods if these areas will not have an inward air pressure relationship to adjacent areas.

(C) Humidity and smoke venting requirements in anesthetizing locations shall be designed per NFPA 99.

(d) Anesthesia storage rooms. The ventilation systems for inhalation anesthesia storage rooms shall conform to the requirements for medical gas storage as described in NFPA 99.

(e) ETO sterilizer space. The space that houses ethylene oxide (ETO) sterilizers shall be designed per OAR 333-535-0300.

(25) Thermal Insulation and Acoustical Provisions. Insulation shall be provided within the building to conserve energy, protect personnel, prevent vapor condensation, and reduce noise.

(a) Renovation.

(A) Existing accessible insulation within areas of ASCs to be modernized shall be inspected, then repaired, or replaced, as determined by inspection.

(B) If existing lined ductwork is reworked in a renovation project, the liner seams and punctures shall be resealed.

(b) Duct linings exposed to air movement shall not be used in ducts serving operating rooms, recovery rooms, central sterile processing, and protective environment rooms. This requirement shall not apply to terminal units and sound attenuators that have coverings over such lining meeting ASTM C1071.

(26) HVAC Air Distribution.

(a) Return air systems. For all areas in Table 1, return air shall be via ducted systems. The bottoms of ventilation openings shall be at least 6 inches above the floor.

(b) Humidifiers, if provided, shall meet the requirements of OAR 333-535-0300.

(c) Construction requirements. Ducts that penetrate construction intended to protect against X-ray, magnetic, RFI, or other radiation shall not impair the effectiveness of the protection.

(d) Exhaust systems.

(A) To enhance the efficiency of recovery devices required for energy conservation, combined exhaust systems shall be permitted unless otherwise noted.

(B) Local exhaust systems shall be used whenever possible in place of dilution ventilation to reduce exposure to hazardous gases, vapors, fumes, or mists.

(C) Fans serving exhaust systems shall be located at the discharge end and shall be readily serviceable.

(D) Airborne infection isolation rooms and other rooms containing contaminated exhaust such as bronchoscopy, decontamination, and sterilizer equipment rooms shall not be served by exhaust systems incorporating air to air heat recovery such as heat wheels. Heat recovery systems are acceptable if there is complete isolation of air streams, such as run-around loops.

(e) Fresh air intakes shall be located at least 25 feet from exhaust outlets of ventilating systems, combustion equipment stacks, medical-surgical vacuum systems, plumbing vents, or areas that may collect vehicular exhaust or other noxious fumes. Plumbing vents that terminate above the level of the top of the air intake may be located as close as 10 feet.

(f) New and remodeled ventilation system installations shall be designed and balanced at project completion to provide directional flow as shown in Table 1. A log shall be prepared showing actual ventilation rates at each supply, return and exhaust grill, and be made available to Division on request.

(g) Ventilation Hoods. If lab exhaust hoods, safety cabinets or fume hoods are required per the functional program, these systems shall meet the requirements of OAR 333-535-0300.

(27) HVAC Filters.

(a) Filter requirements. Air handling system filtration shall meet the requirements of Table 2.

(b) Filter frames. Filter frames shall be durable and proportioned to provide an airtight fit with the enclosing ductwork. All joints between filter segments and enclosing ductwork shall have gaskets or seals to provide a positive seal against air leakage.

(28) Plumbing Systems.

(a) Standards. Unless otherwise specified herein, all plumbing systems shall be designed and installed in accordance with the Oregon Plumbing Specialty Code.

(b) Testing and documentation.

(A) All plumbing systems shall be tested to demonstrate that equipment installation and operation is appropriate and functional. Test results shall be documented for maintenance files.

(B) Upon completion of the installation, the owner shall be furnished with a complete set of manufacturer's operating, maintenance, and preventative maintenance instructions; a parts list; and complete procurement information, including equipment numbers and descriptions.

(C) Operating staff persons shall be provided with instructions for proper operation of systems and equipment. Required information shall include all safety or code ratings as needed.

(29) Plumbing and Other Piping Systems.

(a) General piping and valves.

(A) All piping, except control-line tubing, fire sprinkler, sanitary waste, vent, and condensate drain shall be identified.

(B) All valves shall be tagged, and a valve schedule shall be developed for permanent record and reference.

(b) Potable water supply systems. The following standards shall apply to potable water supply systems:

(A) Valves. Each water service main, branch main, riser, and branch to a group of fixtures shall have valves.

(i) Stop valves shall be provided for each fixture.

(ii) Appropriate panels for access shall be provided at all valves where required.

(B) Dead-end piping (risers with no flow, branches with no fixture) shall not be installed. In renovation projects, dead-end piping shall be removed. Empty risers, mains, and branches installed for future use shall be permitted and shall be valved at the connection to the main.

(c) Hot water systems. The following standards shall apply to hot water systems. These requirements do not apply to ASCs that do not perform invasive operations or procedures.

(A) Hot water distribution systems serving patient care areas shall be under constant recirculation to provide continuous hot water at each hot water outlet. Non-recirculated fixture branch piping shall not exceed 25 ft in length.

(B) Provisions shall be included in the domestic hot water system to limit *Legionella* bacteria and opportunistic waterborne pathogens.

(C) Domestic hot water system in an ASC with Class C operating rooms shall provide backup equipment for hot water and sterilizer needs.

(d) Plumbing Fixtures.

(A) Hand-washing stations used by medical and nursing staff, patients, and food handlers shall be trimmed with valves that can be operated without hands. Single-lever or wrist blade devices shall be permitted. Sensor-regulated water fixtures shall meet user need for temperature and length of time the water flows. Electronic faucets shall be capable of functioning during loss of normal power when the ASC is required to have an emergency generator.

(B) Clinical sinks shall have an integral trap wherein the upper portion of the water trap provides a visible seal. Handles on clinical sink faucets shall be at least 6 inches long.

(30) Hemodialysis piping. Where the functional program includes hemodialysis, the requirements of OAR 333-700-0130 shall be met.

(31) Drainage systems.

(a) Piping.

(A) Drain lines from sinks used for acid waste disposal shall be made of acid-resistant material. Drain lines from automatic blood-cell counters using sodium azide shall be made of copper and lead free materials.

(B) Drainage piping shall not be installed within the ceiling or exposed in Class B and C operating rooms. Where exposed overhead drain piping in these areas is unavoidable, special provisions such as FM 1680 fittings or drain pans shall be made to protect the space below from leakage, condensation, or dust particles.

(b) Floor drains.

(A) Floor drains shall not be installed in operating rooms, except as permitted in dedicated cystoscopy rooms.

(B) If a floor drain is installed in a dedicated cystoscopy room, it shall contain a non-splash, horizontal-flow flushing bowl beneath the drain plate.

(c) Plaster traps. Where plaster traps are used, provisions shall be made for appropriate access and cleaning.

(32) Medical Gas and Vacuum Systems. Station outlets shall be provided per Table 3. The use of portable medical gas systems shall be considered for ASCs with Class A operating rooms per the functional program.

(a) Medical gas and vacuum systems. When provided, piped in medical gas and vacuum systems shall be installed, tested, and verified prior to use in accordance with NFPA 99, Gas and Vacuum System Chapter and Other Health Care Facility Chapter. When additions or modifications are made to a system, the new and existing components in the immediate zone or area located upstream (for vacuum systems) and downstream (for medical gas systems) of the altered section shall be tested and verified.

(b) Anesthesia scavenging system. Each space routinely used for administering inhalation anesthesia shall be served by a scavenging system to vent waste gases. Gases from the scavenging system shall be exhausted directly to the outside. If the medical vacuum system is used, the gas collecting system shall be arranged so that it does not interfere with the patient's respiratory system. The anesthesia evacuation system may be a dedicated air exhaust system, provided the part used for anesthesia gas scavenging exhausts directly to the outside and is not part of the recirculation system.

(33) Communications Systems.

(a) Locations for terminating telecommunications and information system devices shall be provided.

(b) A space shall be provided for central equipment locations. Special air conditioning and voltage regulation shall be provided when recommended by the manufacturer.

(34) Electronic Safety and Security Systems and Fire Alarm System. Any fire alarm system shall be as required by NFPA 101 and installed per NFPA 72.

(35) Electrical Systems.

(a) Applicable standards.

(A) All electrical material, systems, and equipment, including conductors, controls, and signaling devices, shall be installed in compliance with applicable sections of OESC and NFPA 99. In addition, an ASC must meet the specific ambulatory health care requirements found at NFPA 99 (Other Health Care Facilities Chapter).

(B) All electrical material and equipment shall be listed as complying with available standards of listing agencies or other similar established standards where such standards are required.

(b) Testing and documentation.

(A) Electrical installations, including alarm and communication systems, shall be tested to demonstrate that equipment installation and operation is appropriate and functional. Test results shall be documented for maintenance files.

(B) Upon completion of the installation, a complete set of manufacturer's operating, maintenance, and preventative maintenance instructions; a parts list; and complete procurement information, including equipment numbers and descriptions shall be available on site.

(C) Operating staff persons shall be provided with instructions for proper operation of systems and equipment. Required information shall include all safety or code ratings as needed.

(D) Essential electrical system, grounding system, and receptacles shall be tested per NFPA 99.

(36) Electrical Distribution and Transmission.

(a) Switchboards.

(A) Main switchboards shall be located in an area separate from plumbing and mechanical equipment and shall be accessible to authorized persons only.

(B) Switchboards shall be convenient for use and readily accessible for maintenance.

(C) Switchboards shall be located in dry, ventilated spaces free from corrosive or explosive fumes or gases or any flammable material.

(b) Panelboards.

(A) Panelboards serving normal lighting and appliance circuits shall be located on the same floor as the circuits they serve.

(B) Panelboards serving critical branch emergency circuits shall be located on each floor.

(C) Panelboards serving life safety emergency circuits may also serve one floor above and/or below.

(c) Ground-fault circuit interrupters.

(A) Ground-fault circuit interrupters (GFCIs) shall comply with OESC.

(B) When GFCIs are used in critical care areas, provisions shall be made to ensure that other essential equipment is not affected by activation of one interrupter.

(37) Power Generating and Storing Equipment.

(a) Emergency electrical service. Emergency lighting and power shall be provided in accordance with **NFPA 99**, **NFPA 101**, and **NFPA 110**.

(b) Emergency generator systems are required in an ASC that administers inhalation anesthetics and where a patient requires electrical life support equipment as part of the surgical protocol. An ASC that is required to have an emergency generator system must also meet the specific ambulatory health care requirements found at NFPA 99 (Other Health Care Facilities Chapter).

(38) Lighting.

(a) Lighting shall conform to the recommended lighting standards for public buildings contained in the OSSC (Means of Egress Illumination), Illuminating Engineering Society (IES) RP-29 Hospitals and Health Care Facilities. Approaches to buildings and parking lots, and all occupiable spaces within the building shall have illuminated fixtures as necessary.

(b) Procedure rooms. A portable or fixed examination light shall be provided for procedure rooms.

(c) Operating rooms. Operating rooms shall have general lighting in addition to special lighting units provided at surgical tables. General lighting and special lighting shall be on separate circuits.

(39) Receptacles (Convenience Outlets).

(a) Duplex grounded-type receptacles (convenience outlets) shall be installed in all areas in sufficient quantities for tasks to be performed as needed. Duplex receptacles shall be provided per Table 4.

(b) Emergency system receptacles. Electrical receptacle cover plates or electrical receptacles supplied from the emergency systems shall be distinctively colored or marked for identification. If color is used for identification purposes, the same color shall be used throughout the ASC.

(40) Call Systems.

(a) General. Signaling and nurse call equipment shall be provided in an ASC with Class B and C operating rooms and shall include the following types of call stations: patient stations, staff assist, bath stations, and code call stations.

(A) Call station locations shall be as required in Table 5.

(B) Call stations shall report to an attended location with electronically supervised visual and audible annunciation.

(C) Call system master stations shall be located at the nurse control station and shall provide audible/visual prompting and display all pending calls.

(D) In addition to these rules, call systems shall meet the requirements of Underwriters Laboratory (UL) 1069: *Standards for Hospital Signaling and Nurse Call Equipment* and state and local requirements.

(E) Alternate technologies including radio frequency systems, shall be permitted for call systems in an ASC with Class A operating rooms.

(b) Patient stations. Patient stations shall be provided to allow each patient to summon assistance from the nursing staff. Use of a dual call station shall be permitted when beds are located adjacent to each other.

(A) The patient station shall be equipped with the following:

(i) A visible signal once it has been activated. An indicator light or call assurance lamp that remains lighted until a call is cancelled shall be provided. In rooms containing two or more patient stations, call assurance lamps shall be provided at each station; and

(ii) A reset switch for canceling a call.

(B) The patient station shall activate a visible signal in the corridor at the patient's door or at the nurse station within the room with the patients under constant visual surveillance and at the master station.

(c) Bath stations. Bath stations shall be located to the side of toilets within 12 inches of the front of the toilet bowl and 3 to 4 feet above the floor. A bath station with a pull string that can be activated by a patient lying on the floor shall be provided at each room containing a patient water closet, tub, or shower. An alarm in these areas shall be able to be turned off only at the bath station where it is initiated.

(d)(A) Code call stations. Commonly referred to as a "Code Blue," code call stations are meant for use during a life-threatening situation to summon assistance from others throughout the unit or department.

(B) The code call station shall be equipped with a continuous audible or visual confirmation to the person who initiated the code call.

(e) Staff assist call stations. Staff assist call stations are meant for use during a non-life threatening situation to summon assistance from others throughout the unit or department.

Ambulatory Surgical Centers ASC

333-076-0190
Emergency Preparedness

(1) The ASC shall develop, maintain, update, train and exercise an emergency plan for the protection of all individuals in the event of an emergency, in accordance with the regulations as specified in **Oregon Fire Code** (Oregon Administrative Rules chapter 837, division 40).

(a) The ASC shall conduct at least two drills every year that document and demonstrate that employees have practiced their specific duties and assignments, as outlined in the emergency preparedness plan.

(2) The emergency plan shall include the contact information for local emergency management. Each facility shall have documentation that the local emergency management office has been contacted and that the facility has a list of local hazards identified in the county hazard vulnerability analysis.

(3) The summary of the emergency plan shall be sent to the Division within one year of the filing of this rule. New facilities that have submitted licensing documents to the state before this provision goes into effect will have one year from the date of license application to submit their plan. All other new facilities shall have a plan prior to licensing. The Division shall request updated plans as needed.

(4) The emergency plan shall address all local hazards that have been identified by local emergency management that may include, but is not limited to, the following:

(a) Chemical emergencies;

(b) Dam failure;

(c) Earthquake;

(d) Fire;

(e) Flood;

(f) Hazardous material;

(g) Heat;

(h) Hurricane;

(i) Landslide;

(j) Nuclear power plant emergency;

(k) Pandemic;

(l) Terrorism; or

(m) Thunderstorms.

(5) The emergency plan shall address the availability of sufficient supplies for staff and patients to shelter in place or at an agreed upon alternative location for a minimum of two days, in coordination with local emergency management, under the following conditions:

(a) Extended power outage;

(b) No running water;

(c) Replacement of food or supplies is unavailable;

(d) Staff members do not report to work as scheduled; and

(e) The patient is unable to return to the pre-treatment shelter.

(6) The emergency plan shall address evacuation, including:

(a) Identification of individual positions' duties while vacating the building, transporting, and housing residents;

(b) Method and source of transportation;

(c) Planned relocation sites;

(d) Method by which each patient will be identified by name and facility of origin by people unknown to them;

(e) Method for tracking and reporting the physical location of specific patients until a different entity resumes responsibility for the patient; and

(f) Notification to the Division about the status of the evacuation.

(7) The emergency plan shall address the clinical and medical needs of the patients, including provisions to provide:

(a) Storage of and continued access to medical records necessary to obtain care and treatment of patients, and the use of paper forms to be used for the transfer of care or to maintain care on-site when electronic systems are not available.

(b) Continued access to pharmaceuticals, medical supplies and equipment, even during and after an evacuation; and

(c) Alternative staffing plans to meet the needs of the patients when scheduled staff members are unavailable. Alternative staffing plans may include, but is not limited to, on-call staff, the use of travelers, the use of management staff, or the use of other emergency personnel.

(8) The emergency plan shall be made available as requested by the Division and during licensing and certification surveys. Each plan will be re-evaluated and revised as necessary or when there is a significant change in the facility or population of the ASC.

Violations

In addition to non-compliance with any health care facility licensing law or conditions for coverage, it is a violation to:

(1) Refuse to cooperate with an investigation or survey, including but not limited to failure to permit Division staff access to the ASC, its documents or records;

(2) Fail to implement an approved plan of correction;

(3) Fail to comply with all applicable laws, lawful ordinances and rules relating to safety from fire;

(4) Refuse or fail to comply with an order issued by the Division;

(5) Refuse or fail to pay a civil penalty; or

(6) Fail to comply with rules governing the storage of medical records following the closure of an ASC.

333-076-0255
Informal Enforcement

(1) If, during an investigation or survey Division staff document violations of health care facility licensing laws or conditions for coverage, the Division may issue a statement of deficiencies that cites the law alleged to have been violated and the facts supporting the allegation.

(2) A signed plan of correction must be received by the Division within 10 business days from the date the statement of deficiencies was mailed to the ASC. A signed plan of correction will not be used by the Division as an admission of the violations alleged in the statement of deficiencies.

(3) An ASC shall correct all deficiencies within 60 days from the date of the exit conference, unless an extension of time is requested from the Division. A request for such an extension shall be submitted in writing and must accompany the plan of correction.

(4) The Division shall determine if a written plan of correction is acceptable. If the plan of correction is not acceptable to the Division, the Division shall notify the ASC administrator in writing and request that the plan of correction be modified and resubmitted no later than 10 working days from the date the letter of non-acceptance was mailed to the administrator.

(5) If the ASC does not come into compliance by the date of correction reflected on the plan of correction or 60 days from date of the exit conference, whichever is sooner, the Division may propose to deny, suspend, or revoke the ASC license, or impose civil penalties.

333-076-0260
Formal Enforcement

(1) If, during an investigation or survey Division staff document substantial failure to comply with health care facility licensing laws, conditions for coverage or if an ASC fails to pay a civil penalty imposed under ORS 441.170, the Division may issue a Notice of Proposed Suspension or Notice of Proposed Revocation in accordance with ORS 183.411 through 183.470.

(2) The Division may issue a Notice of Imposition of Civil Penalty for violations of health care facility licensing laws.

(3) At any time the Division may issue a Notice of Emergency License Suspension under ORS 183.430(2).

(4) If the Division revokes an ASC license, the order shall specify when, if ever, the ASC may reapply for a license.

333-076-0265
Civil Penalties, Generally

(1) A licensee that violates a health care facility licensing law, including OAR 333-076-0250 (violations), is subject to the imposition of a fine not to exceed $500 per day per violation.

(2) In addition to the penalties under section (1) of this rule, civil penalties may be imposed for violations of ORS 441.015 to 441.063, 441.086 or program rules.

(3) In determining the amount of a civil penalty the Division shall consider whether:

(a) The Division made repeated attempts to obtain compliance;

(b) The licensee has a history of noncompliance with health care facility licensing laws;

(c) The violation poses a serious risk to the public's health;

(d) The licensee gained financially from the noncompliance; and

(e) There are mitigating factors, such as a licensee's cooperation with an investigation or actions to come into compliance.

(4) The Division shall document its consideration of the factors in section (3) of this rule.

(5) Each day a violation continues is an additional violation.

(6) A civil penalty imposed under this rule shall comply with ORS 183.745.

333-076-0270
Approval of Accrediting Organizations

(1) An accrediting organization must request approval by the Division to ensure that ASCs meet state licensing standards.

(2) An accrediting organization shall request approval in writing and shall provide, at a minimum:

(a) Evidence that it is a nationally recognized Medicare accreditation program approved by CMS; or

(b) If the accrediting organization is not approved by CMS, provide:

(A) Documentation of program policies and procedures that its accreditation process meets state licensing standards;

(B) Accreditation history; and

(C) References from a minimum of two health care facilities currently receiving services from the organization.

(3) If the Division finds that an accrediting organization has the necessary qualifications to certify that state licensing standards have been met, the Division will enter into an agreement with the accrediting organization permitting it to accredit ASCs in Oregon.

Birthing Centers

333-076-0450
Definitions

(1) "Free Standing Birth Center" ("Birthing Center" or "Center") means any health care facility (HCF), licensed for the primary purpose of performing low risk deliveries that is not a hospital, or in a hospital, and where births are planned to occur away from the mother's usual residence following normal, uncomplicated pregnancy.

(2) "Division" means the Oregon Health Authority, Public Health Division.

(3) "Low Risk Pregnancy" means a normal, uncomplicated prenatal course as determined by documentation of adequate prenatal care, and anticipation of a normal uncomplicated labor and birth, as defined by reasonable and generally accepted criteria of maternal and fetal health.

(4) "Absolute risk factors" are those conditions that, if present, prohibit care in a birthing center.

(5) "Patient audit" means review of the clinical record and/or physical inspection of a client.

(6) "Reasonable and generally accepted criteria" means criteria or standards of care adopted by professional groups for maternal, fetal and neonatal health care, and generally accepted and followed by the care providers to whom they apply, and accepted by the Division as reasonable.

333-076-0470
Licensing

(1) Application for a license to operate a Birthing Center must be in writing on a form provided by the Division, including demographic, ownership and administrative information. The form must specify such information required by the Division.

(2) No health care facility licensed pursuant to the provisions of ORS Chapter 441, may in any manner or by any means assert, represent, offer, provide or imply that such facility is or may render care or services other than that which is permitted by or that is within the scope of the license issued to such facility by the Division nor may any service be offered or provided that is not

authorized within the scope of the license issued to such facility or licensed practitioner providing services in the facility.

(3) The Birthing Center license must be conspicuously posted in the area where clients are admitted.

(4) A license that has been suspended or revoked may be reissued after the Division determines that compliance with Health Care Facility laws has been achieved satisfactorily.

333-076-0490
Submission of Plans

(1) Any party proposing to make certain alterations or additions to an existing health care facility or to construct new facilities must, before commencing such alteration, addition or new construction, submit plans and specifications to the Division for preliminary inspection and approval of recommendations with respect to compliance with Division rules. Submissions shall be in accord with, OAR 333-675-0000. Plans should also be submitted to the local building division having authority for review and approval in accordance with state building codes.

(2) Centers must keep the Division informed of any changes in ownership, organizational structure, procedures performed and privileges permitted and any information requested on the application form, in writing within 30 days of the change. Failure to notify the Division may result in revocation of license.

333-076-0510
Expiration and Renewal of License

Each license to operate a Birthing Center will expire on December 31 following the date of issue, and if a renewal is desired, the licensee must make application at least 30 days prior to the expiration date upon a form prescribed by the Division as described in OAR 333-076-0470.

333-076-0530
Denial or Revocation of a License

(1) A license for any Birthing Center may be denied, suspended or revoked by the Division when the Division finds that there has been a substantial failure to comply with the provisions of Health Care Facility licensing law.

(2) A person or persons in charge of a Birthing Center must not permit, aid or abet any illegal act affecting the welfare of the license.

(3) A license will be denied, suspended or revoked in any case where the State Fire Marshal certifies that there was failure to comply with all applicable laws, lawful ordinances and rules relating to safety from fire.

(4) A license may be suspended or revoked for failure to comply with a Division order arising from a Center's substantial lack of compliance with the rules or statutes.

333-076-0560
Classification

(1) Health care facilities licensed by the Division may neither assume a descriptive title or be held out under any descriptive title other than the classification title established by the Division and under which the facility is licensed.

(2) No change in the licensed classification of any health care facility, as set out in this rule, may be allowed by the Division unless such facility files a new application, accompanied by the required license fee, with the Division. If the Division finds that the applicant and facility comply with Health Care Facility laws and the regulations of the Division relating to the new classification for which application for licensure is made, the Division may issue a license for such classification.

Division Procedures

Inspections and investigations:

(1) Complaints:

(a) Any person may make a complaint to the Division regarding violation of health care facility laws or regulations. A complaint investigation will be carried out as soon as practicable and may include but not be limited to, as applicable to facts alleged:

(A) Interviews of the complainant, client(s), witnesses, and Center management and staff;

(B) Observations of the client(s), staff performance, client environment and physical environment; and

(C) Review of documents and records.

(b) Copies of all complaint investigations will be available from the Division provided that the identity of any complainant and any client referred to in an investigation will not be disclosed without legal authorization.

(2) Inspections:

(a) The Division may, in addition to any inspections conducted pursuant to complaint investigations, conduct at least one general inspection of each Center to determine compliance with Health Care Facility laws during each calendar year and at such other times as the Division deems necessary;

(b) Inspections may include but not be limited to those procedures stated in subsection (1)(a) of this rule;

(c) The inspection may include a client audit;

(d) When documents and records are requested under sections (1) or (2) of this rule, the Center must make the requested materials available to the investigator for review and copying.

333-076-0650
Service Restrictions

(1) Procedures permitted, including surgical procedures, must be limited to those directly pertaining to pregnancy, labor and delivery care of women experiencing low risk pregnancy. Procedures performed will be consistent with the individual practitioner's licensure and/or scope of practice. Tubal ligation and abortion must not be performed. Table I outlines absolute risk factors that, if present on admission to the birthing center for labor and delivery, would prohibit admission to the birthing center. Table II outlines absolute risk factors that, if they develop during labor and delivery, require transfer of the client to a higher level of care. Table III outlines absolute risk factors that, if they develop during the postpartum period in the mother or infant, would require transfer to a higher level of care. [Tables not included. See ED. NOTE.]

(2) General, spinal, caudal, and/or epidural anesthesia must not be administered in the Center.

(3) Labor shall not be induced, stimulated, or augmented with chemical agents during the first or second stages of labor.

(4) Chemical agents may be administered within the individual practitioner's scope of practice to inhibit labor, as a temporary measure, until referral/transfer of the client is complete.

[ED. NOTE: Tables referenced are available from the agency.]

333-076-0670
Policies and Procedures

Each Center must have a detailed Policies and Procedures Manual in easily accessible form, that has been approved by the governing body or person. In order to be approved by the Division for licensing purposes, these policies and procedures must meet North American Registry of Midwives (NARM) standards. All the above noted policies must be made available to representatives of the Division on request, and subject to their approval. Failure of approval will be adequate reason for the finding of deficiencies that must be corrected for continuation of licensure. The policies must be implemented as applicable, and there must be documented evidence of implementation of the above noted policies. The policies and procedures that will be developed as applicable and implemented include:

(1) A detailed organizational chart that shows the governing body or person, and clearly delineates lines of authority, responsibility and accountability for each position included in the organization, including volunteers.

(2) Staffing — The governing body or person must ensure, through the policies and procedures, that there are adequate numbers of qualified and, where required, licensed or registered personnel on duty and immediately available to provide services intended for mothers and families, and to provide for safe maintenance of the Center.

(3) Detail of procedures to be permitted, and by whom, and method of determining the qualifications and privileges of all personnel. Staff will be required to provide documented evidence of such qualifications. Such evidence must be maintained by the Center.

(4) System for ensuring 24-hour coverage of the Center, including constant attendance by qualified attendants while a client is in the Center.

(5) System for training and for continuing education for all personnel according to their assigned duties and evaluation of skills consistent with the individual practitioners' scopes of practice. All personnel providing direct client care must be trained in cardiopulmonary resuscitation (CPR) and there must be a record of current CPR certification. In addition there must be present at each birth one practitioner trained in care and resuscitation of the newborn.

(6) System delineating how and when the Center will seek consultation with clinical specialists in obstetrics and pediatrics in order to ensure that all services, policies, and procedures meet North American Registry of Midwives (NARM) standards.

(7) Protocol for referral or transfer to appropriate health care facilities all clients whose risk status exceeds that for "low risk pregnancy."

(8) Procedures by which risk status will be assessed during the antepartal, intrapartal, and post partum period, and the identification of medical and social factors which exclude women, fetuses and newborns from the low-risk group; and for the annual review of these methods. Documentation of such assessments must be maintained in client's clinical records. Only those clients for whom prenatal and intrapartum history, physical examination, and laboratory screening procedures have demonstrated a low risk pregnancy and labor will be accepted into the Center for childbirth.

(9) System by which the Center will ensure the presence and continuing maintenance, as recommended by the manufacturer(s), of equipment needed to provide low risk maternity care, and to initiate emergency procedures in life-threatening events to the mother or baby.

(10) Plan and protocols for ensuring that emergency situations in either the mother or newborn are recognized in a timely fashion, and care is provided within the limits of the practitioner's scope of practice.

(11) System delineating how emergency transportation will be promptly available for transport of the mother and/or newborn to a health care facility with the capacity for emergency care of women, in all the stages of labor, and newborns. The written policy must include a listing of situations for the mother and/or newborn that would have the potential to necessitate emergency transfer. The policy must also include the requirement that a transfer plan for each patient be developed.

(12) Systems for ensuring the orientation and education of women and families registering for care at the Center so that they will be informed as to the benefits and risks of the services available to them at the Center and the qualifications and licensure status of practitioners at the Center. They must be fully informed of the risk criteria as defined in OAR 333-076-0650 and provide written consent. The client, as a part of the informed consent, must also agree in advance to transfer to another clinician or appropriate health care facility, should the need occur due to the development of unexpected risk factors after admission to the Center. The client must be informed of the benefits and risks of such a transfer.

(13) System for the sterilization of equipment and supplies, unless only pre-packaged and pre-sterilized items are used.

(14) System to ensure the performance of appropriate laboratory studies and to ensure that the results are available in a timely manner.

(15) System for the storage and administration of drugs. All medications must be prescribed and/or administered within the individual practitioner's licensure and/or scope of practice.

(16) System to ensure the timely administration of Rh immune globulin to the mother, where applicable.

(17) System to ensure the timely appropriate administration of Vitamin K to the newborn, according to rules of the Division.

(a) The purpose of ORS 433.303 to 433.314 is to protect newborn infants against hemorrhagic disease of the newborn.

(b) The Vitamin K forms suitable for use are forms of Vitamin K1 (Phytonadione), available in injectable or oral forms: as Mephyton for oral use, or as aquamephyton or konakion for injectable use. The Vitamin K dose is to be administered within the first 24 hours of delivery. Menadione (Vitamin K3) is not recommended for prophylaxis and treatment of hemorrhagic disease of the newborn.

(c) The dose of any of the Vitamin K1 forms to be administered is one dose of 0.5 to 1.0 mg., if given by injection, or one dose of 1.0 to 2.0 mg. if given orally.

(d) A parent may, after being provided a full and clear explanation, decline to permit the administration of Vitamin K based on religious tenets and practices. In this event, the parent must sign a form acknowledging his/her understanding of the reason for administration of Vitamin K and possible adverse consequences in the presence of a person who witnessed the instruction of the parent, and who must also sign the form. The form must become a part of the clinical record of the newborn infant.

(18) System to ensure the timely and appropriate collection of blood from the newborn for testing by the Oregon State Public Health Laboratory, Newborn Screening Program, for the Metabolic Diseases listed in 333-024-0210.

(19) System to ensure that pulse oximetry screening is performed on every newborn infant delivered at the Birthing Center before the infant is discharged in conformance with the following requirements:

(a) The pulse oximetry screening must be performed using evidence-based guidelines such as those recommended by Strategies for Implementing Screening for Critical Congenital Heart Disease, AR Kemper et al., Pediatrics 2011;128(5): e1259–1267.

(b) The Birthing Center must have policies and procedures based on the guidelines required by subsection (a) of this section for:

(A) Determining what is considered a positive screening result; and

(B) Determining what follow-up services, treatment or referrals must be provided if a newborn infant has a positive screening result.

(c) A Federal Drug Administration (FDA) approved motion tolerant pulse oximeter must be used.

(d) The pulse oximetry screening must be performed no sooner than 24 hours after birth or as close to discharge of the newborn infant as possible.

(e) Before performing pulse oximetry screening on newborn infants, individuals must have received training on how to correctly operate the pulse oximeter and the policies and procedures associated with the screening. The Birthing Center must document this training.

(f) If a newborn infant is admitted to a hospital as the result of a transfer from the Birthing Center before a pulse oximetry screening is performed, the hospital from which the newborn infant is discharged to home is responsible for performing the screening.

(g) The Birthing Center must provide the following notifications and document them in the newborn infant's medical record:

(A) Prior to the pulse oximetry screening, notify a parent or legal representative of the newborn about the reasons for the screening and the risks and consequences of not screening.

(B) Following the pulse oximetry screening, notify the health care provider responsible for the newborn infant and the infant's primary care provider of the results of the screening.

(C) Following the pulse oximetry screening and prior to discharge, notify a parent or legal representative of the newborn infant of the screening result, an explanation of its meaning and, if it is a positive screening result, provide information about the importance of timely diagnosis and intervention.

(h) A parent or legal representative of a newborn infant may decline pulse oximetry screening and, if screening is declined, the Birthing Center must document the declination in the newborn infant's medical record.

(i) Following the pulse oximetry screening, the Birthing Center, in accordance with the applicable standard of care, must provide any appropriate follow-up services or treatment for the newborn infant if necessary or provide a referral to a parent or legal representative of the newborn for follow-up services or treatment if necessary.

(j) The Birthing Center must document in the newborn infant's medical record that the screening was performed, the screening result, the names of the health care providers who were notified of the screening result, and any follow-up services or treatment or referral for services or treatment.

(k) No newborn infant may be refused screening because of the inability of a parent or legal representative to pay for the screening.

(20) Protocol delineating the steps to ensure the prompt and safe evacuation of the Center in the event of emergency situations, such as fire. The Center must ensure the evaluation of staff in managing such situations by periodic drills for fire, and/or other emergencies. Such drills must be documented.

(21) System of infection control to address the prevention and early recognition of the possibility of infection, and timely and acceptable methods of control. This includes written documentation of the problem, and measures taken for control, and must at least meet the requirements of the rules of the Division. Documentation must also include methods for the control and prevention of cross-infection between clients and services in accordance with 2003 Center for Disease Control and Prevention "Guidelines for Environmental Infection Control in Health-Care Facilities."

(22) System to be used for the prevention of Ophthalmia Neonatorum in the newborn OAR 333-019-0036(2). Prophylaxis for Gonococcal Ophthalmia Neonatorum:

(a) The practitioner attending the birth of an infant must, after evaluating the infant as being at risk and within two hours of delivery, instill appropriate prophylactic antibiotic ointment from single patient use applicators into each eye of the newborn infant;

(b) Parent(s) refusing to allow prophylaxis for their infant(s) must be informed, by the attending Health Care Provider, of the risks attendant to such action and must sign a witnessed affidavit to testify that they have been so informed and nonetheless refuse to allow prophylaxis.

(c) If Vitamin K and/or Gonococcal Ophthalmia Neonatorum Prophylaxis cannot be administered by the individual delivering the newborn, methods must be described to ensure that these services are arranged by referral.

(23) System to ensure that appropriate vital records are filed according to the rules of the Division.

(24) System for a semi-annual clinical record audit to evaluate the care process and outcome.

Stat. Auth.: ORS 441.025 & 442.015
Stats. Implemented: ORS 441.025 & 442.015
Hist.: HD 26-1985, f. & ef. 10-28-85; HD 2-1990, f. 1-8-90, cert. ef. 1-15-90, Renumbered from 333-076-0420; PH 15-2006, f. & cert. ef. 6-27-06; PH 18-2013(Temp), f. 12-31-13, cert. ef. 1-1-14 thru 6-29-14; PH 18-2014, f. & cert. ef. 6-17-14

333-076-0690
Health and Medical Records

Health and Clinical Records must be developed according to procedures outlined in the Policy and Procedures Manual as a legal record and an instrument for the continuity of care and must include:

(1) Contents — The records of each client must contain:

(a) Demographic data, initial prenatal physical examination, laboratory tests and evaluation of risk status;

(b) Continuous periodic prenatal examination and evaluation of risk status;

(c) A signed informed consent (refer also to OAR 333-076-0670(12));

(d) History, physical examination and risk assessment on admission to the Center in labor (including assessment of mother and fetus);

(e) Continuous assessment of the mother and fetus during labor and delivery;

(f) Labor summary;

(g) The emergency transport plan for the client;

(h) Physical assessment of newborn, including Apgar scores and vital signs;

(i) Post partum evaluation of the mother;

(j) Discharge summary for mother and newborn;

(k) Documentation of consultation, referral, and/or transfer;

(l) Signed documents as may be required by law; and

(m) Records of newborn and stillborn infants must include, in addition to the requirement for medical records, the following information:

(A) Date and hour of birth, birth weight and length of infant, period of gestation, sex, and condition of infant on delivery;

(B) Mother's name;

(C) Record of ophthalmic prophylaxis and Vitamin K administration or refusal of same; and

(D) Progress notes including:

(i) Temperature, weight and feeding data;

(ii) Number, consistency and color of stools;

(iii) Urinary output;

(iv) Condition of eyes and umbilical cord;

(v) Condition and color of skin; and

(vi) Motor behavior.

(2) All entries in a client's labor record must be dated, timed, and authenticated. Verification of an entry requires use of a unique identifier, i.e., signature, code, thumbprint, voice print or other means, that allows identification of the individual responsible for the entry.

(3) A single signature or authentication of the responsible practitioner on the clinical record does not suffice to cover the entire content of the record.

(4) The completion of the clinical record must be the responsibility of the attending practitioner.

(5) The Center will ensure that the prenatal and intrapartal records are available at the time of admission and in the event of transfer to the care of another clinician or health care facility.

(6) Storage — The records will be stored in such a way as to minimize the chance of their destruction by fire or other source of loss or damage and to ensure prevention of access by unauthorized persons.

(7) Records are the property of the Center, and will be kept confidential unless released by the permission of the client. An exception is that they may be reviewed by representatives of the Division, and will be provided in copy form to such representatives on request.

(8) All clinical records must be kept for a period of at least twenty-one years after the date of last discharge. Original clinical records may be retained on paper, microfilm, electronic or other media.

(9) If a Center changes ownership all clinical records in original, electronic, or microfilm form must remain in the Center, and it must be the responsibility of the new owner to protect and maintain these records.

(10) If a Birthing Center must be closed, its clinical records may be delivered and turned over to any other health care facility in the vicinity willing to accept and maintain the same as provided in section (8) of this rule.

(11) If a qualified clinical record practitioner, RHIA (Registered Health Information Administrator) or RHIT (Registered Health Information Technician) is not the Director of the Clinical Records Department, the Division may require the Center to obtain periodic and at least annual consultation from a qualified clinical records consultant, RHIA/RHIT. The visits of the clinical records consultant must be of sufficient duration and frequency to review clinical record systems and assure quality records of the clients. Contract for such services must be available to the Division.

333-076-0710
Physical Facility

(1) Design — The Center may be an adaptation of a house. It must include birthing rooms of adequate size to meet the needs to accomplish the procedures specified in the Policies and Procedures and must meet applicable codes for ordinary construction and for water supply and sewage disposal. The building and equipment must be kept clean and in good repair. The Center must include:

(a) Toilet facilities for staff, mothers and families;

(b) Bath facilities;

(c) Hand washing facilities and single use towel dispensers adjacent or closely available to all examining or birth rooms;

(d) Examination areas;

(e) Laundry facilities (unless laundry is done elsewhere);

(f) Kitchen facilities;

(g) Adequate storage areas for emergency equipment;

(h) Separate storage for clean/sterile supplies and equipment;

(i) Storage areas for laboratory equipment and sterilizing, if applicable;

(j) Space for resuscitation of the newborn; and

(k) Reception and family facilities.

(2) Client Environment:

(a) There must be provided for each client a good bed, mattress and pillow with protective coverage, and necessary bed coverings;

(b) No towels, wash cloths, bath blankets, or other linen which comes directly in contact with the client will be interchangeable from one client to another unless it is first laundered;

(c) The use of torn or unclean bed linen is prohibited; and

(d) After the discharge of any client, the bed, bed furnishings, bedside furniture and equipment must be thoroughly cleaned and disinfected prior to reuse. Mattresses must be professionally renovated when necessary.

(3) Provision must be made for the safe disposal of any bodily wastes that result from procedures performed in accordance with Centers for Disease Control and Prevention recommendations and state law.

(4) Fire and Safety — State and local fire and life-safety codes apply with specific attention to demonstration of adequate ingress and egress of occupants, placement of smoke alarms, emergency lighting, fire extinguishers or sprinkler systems, fire escape routes, and fire reporting plans. The Center must have an emergency plan in effect on premises available to all staff. There must be evidence of an annual fire inspection.

(5) Emergency Access — Hallways and doorways must be so sized and arranged as to ensure the reasonable access of equipment in the event of the need for emergency transport.

(6) Emergency preparedness:

(a) The health care facility shall develop, maintain, update, train, and exercise an emergency plan for the protection of all individuals in the event of an emergency, in accordance with the regulations as specified in Oregon Fire Code (OAR 837-040).

(A) The health care facility shall conduct at least two drills every year that document and demonstrate that employees have practiced their specific duties and assignments, as outlined in the emergency preparedness plan.

(b) The emergency plan shall include the contact information for local emergency management. Each facility shall have documentation that the local emergency management office has been contacted and that the facility has a list of local hazards identified in the county hazard vulnerability analysis.

(c) The summary of the emergency plan shall be sent to the Authority within one year of the filing of this rule. New facilities that have submitted licensing documents to the state before this provision goes into effect will have one year from the date of license application to submit their plan. All other new facilities shall have a plan prior to licensing. The Authority shall request updated plans as needed.

(d) The emergency plan shall address all local hazards that have been identified by local emergency management and may include, but is not limited to, the following:

(A) Chemical emergencies;

(B) Dam failure;

(C) Earthquake;

(D) Fire;

(E) Flood;

(F) Hazardous material;

(G) Heat;

(H) Hurricane;

(I) Landslide;

(J) Nuclear power plant emergency;
(K) Pandemic;
(L) Terrorism; or
(M) Thunderstorms.
(e) The emergency plan shall address the availability of sufficient supplies for staff and patients to shelter in place or at an agreed upon alternative location for a minimum of two days, in coordination with local emergency management, under the following conditions:
(A) Extended power outage;
(B) No running water;
(C) Replacement of food or supplies is unavailable;
(D) Staff members do not report to work as scheduled; and
(E) The patient is unable to return to the pre-treatment shelter.
(f) The emergency plan shall address evacuation, including:
(A) Identification of individual positions' duties while vacating the building, transporting, and housing residents;
(B) Method and source of transportation;
(C) Planned relocation sites;
(D) Method by which each patient will be identified by name and facility of origin by people unknown to them;
(E) Method for tracking and reporting the physical location of specific patients until a different entity resumes responsibility for the patient; and
(F) Notification to the Authority about the status of the evacuation.
(g) The emergency plan shall address the clinical and medical needs of the patients, including provisions to provide:
(A) Storage of and continued access to medical records necessary to obtain care and treatment of patients, and the use of paper forms to be used for the transfer of care or to maintain care on-site when electronic systems are not available.
(B) Continued access to pharmaceuticals, medical supplies, and equipment, even during and after an evacuation; and
(C) Alternative staffing plans to meet the needs of the patients when scheduled staff members are unavailable. Alternative staffing plans may include, but is not limited to, on-call staff, the use of travelers, the use of management, or the use of other emergency personnel.
(h) The emergency plan shall be made available as requested by the Authority and during licensing and certification surveys. Each plan will be re-evaluated and revised as necessary or when there is a significant change in the facility or population of the health care facility.

DIVISION 80

ORGAN PROCUREMENT ORGANIZATIONS TISSUE BANKS — EYE BANKS

333-080-0040
Definitions

(1) As used in this section of Oregon Administrative Rules:
(a) "Entity" means an individual, corporation, business trust, partnership, limited liability company, association, joint venture or an instrumentality of an entity.
(b) "Eye bank" means an entity that is licensed or regulated under federal or state law to engage in the recovery, screening, testing, processing, storage or distribution of human eyes or parts of human eyes.
(c) "Health care facility" has the meaning given that term in ORS 442.015.
(d) "Organ procurement organization" means an entity designated by the United States Secretary of Health and Human Services as an organ procurement organization.
(e) "Tissue bank" means an entity that is licensed or regulated under federal or state law to engage in the recovery, screening, testing, processing, storage or distribution of tissue for transplants.
(2) Tissue banks and eye banks must be registered with and regulated by the United States Food and Drug Administration.
(3) A health care facility that performs organ transplants must:
(a) Be a member of the Organ Procurement and Transplantation Network established by the National Organ Transplant Act of 1984;
(b) Be regulated by the United States Department of Health and Human Services; and
(c) Use an organ procurement organization to obtain organs for transplants.
(4) A health care facility that performs tissue or corneal transplants must obtain the tissue or corneas from a tissue bank or an eye bank that is registered with and regulated by the United States Food and Drug Administration.

333-080-0050
Registration and Civil Penalties

(1) An organ procurement organization, tissue bank or eye bank may not do business in Oregon unless it has registered with the Oregon Health Authority. Registration with the Authority must be completed within 30 days after the implementation of these rules on July 1, 2008.
(a) The Authority shall develop a registration form and the transplant organizations shall, at least 30 days prior to implementation, obtain and mail the required form to the Authority.
(2) Each organ procurement organization, tissue bank and eye bank shall provide to the Authority, at least every three years, current documentation of designation, certification and inspection as evidence of compliance with national standards and requirements under federal law.
(3) The Authority may impose a civil penalty not to exceed $1,000 against an organ procurement organization, tissue bank or eye bank doing business in this state for failure to:
(a) Register with the Authority;
(b) Report loss of designation, accreditation or certification within 60 days of the loss; or
(c) Supply the Authority with requested current documentation of designation, certification and inspection.
(d) For the first violation the civil penalty shall be $250;
(e) For the second violation the civil penalty shall be $500;
(f) For the third and any subsequent violations, the civil penalty shall be $1000.
(4) Civil penalties under this section shall be imposed in the manner provided under ORS 183.745.

DIVISION 81

NONTRANSPLANT ANATOMICAL RESEARCH RECOVERY ORGANIZATIONS

333-081-0000
Purpose

The purpose of these rules is to establish standards for licensure of Nontransplant Anatomical Research Recovery Organizations.

Stat. Auth.: ORS 438.705-438.720 & 438.994
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0005
Definitions

As used in OAR 333-081-0000 through 333-081-0090 the following definitions apply:

(1) "Accrediting body" means an entity that is approved by the Public Health Division and meets the requirements of ORS 438.720(2).

(2) "Anatomical material" has the meaning given that term in ORS 438.705(1).

(3) "Division" means the Public Health Division of the Oregon Health Authority.

(4) "Donor" has the meaning given that term in ORS 97.953.

(5) "Human Remains" has the meaning given that term in ORS 97.010.

(6) "Nontransplant anatomical research recovery organization" or "NARRO" has the meaning given that term in ORS 438.705(3) and is defined as follows:

(a) A NARRO means a person that engages in the recovery or distribution of anatomical material from a donor for research or education purposes other than transplanting the anatomical material or therapy.

(b) A NARRO does not include:

(A) A hospital or other health care facility as those terms are defined in ORS 442.015;

(B) A public corporation as defined in ORS 353.010;

(C) A public or private institution of higher education; or

(D) A clinical laboratory, as defined in ORS 438.010, that is:

(i) Licensed under ORS 438.010 to 438.510; and

(ii) Owned or controlled by, or under common ownership with, a hospital described in paragraph (A) of this subsection.

(7) "Survey" means an inspection of the premises or records of either an applicant for licensure as a NARRO or of a licensed NARRO in order to determine the extent to which that entity is in compliance with ORS 438.710 and 438.715 and these rules.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0010
Application for Licensure

(1) Persons meeting the definition of a NARRO as set out in ORS 438.705(3) and OAR 333-081-0005(5) may not act as a NARRO or hold themselves out as a NARRO unless licensed as such by the Division.

(2) An applicant wishing to apply for a license to operate a NARRO shall submit an application on the most current form prescribed by the Division and pay the application fee specified in OAR 333-081-0035.

(3) An applicant that has obtained accreditation from an accrediting body approved by the Division shall provide proof of accreditation to the Division with its license application and shall include:

(a) All of the approved accrediting body survey and inspection reports; and

(b) Written evidence of all corrective actions underway or completed in response to the approved accrediting body recommendations including progress reports.

(4) If any of the information delineated in a NARRO's most recent application changes at a time other than the annual renewal date, it must submit a revised application to the Division within 30 calendar days of the change.

(5) Notwithstanding section (4) of this rule, a NARRO must submit a revised application to the Division 30 calendar days prior to any of the following changes:

(a) Change in ownership or management, acquisition by or of, or merger with another NARRO;

(b) Change in facilities because of expansion, relocation, renovations or structural changes that affect NARRO operations; and

(c) Change in the scope of operations of the NARRO.

(6) In order to allow the Division to determine whether any of the changes reported in accordance with section (4) or (5) of this rule may affect NARRO compliance with NARRO licensing laws and rules, the Division may request NARRO documents, records or other materials for review or it may conduct an on-site inspection.

(7) If a NARRO loses accreditation, it shall immediately notify the Division and surrender its license in accordance with OAR 333-081-0045.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0015
Review of License Application

(1) Following receipt of a completed application and the required fee, the Division must conduct a survey in accordance with OAR 333-081-0050 to determine whether the NARRO is in compliance with ORS 438.710 & 438.715 and these rules.

(2) In lieu of conducting a survey, the Division may accept proof of accreditation by an accrediting body approved by the Division.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0020
Approval of License Application

(1) The Division must notify an applicant in writing if a license application is approved and must include a copy of the license.

(2) The Division will issue a license only for the premises and person(s) named in the application and it may not be transferred or assigned.

(3) A licensed NARRO must post the license in a conspicuous location where it is viewable by the public.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994

333-081-0030
Expiration and Renewal of License

(1) An initial or renewed license expires two years after the date of issuance or renewal.

(2) If the ownership of a NARRO changes, a new license is required.

(3) If renewal or a new license is sought because of a change of ownership, the licensee shall make application at least 45 days prior to the change of ownership using a form prescribed by the Division.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0035
Fees

(1) The fee for an initial or renewed NARRO license is $1,750.

(2) All application fees are non-refundable.

Stat. Auth.: ORS 438.710
Stats. Implemented: ORS 438.710
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0040
Denial, Suspension or Revocation of License

(1) A license for a NARRO may be denied, suspended or revoked by the Division if a licensed NARRO has failed to comply with Oregon Laws 2013, chapter 356, sections 2 and 3, OAR 333-081-0080 or for violations of laws, regulations or administrative rules that governs how it obtains, processes and distributes donor material.

(2) If the Division intends to suspend or revoke a NARRO license, it shall do so in accordance with ORS 183.411 through 183.470.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0045
Return of License

Each license certificate in the licensee's possession shall be returned to the Division immediately upon the suspension or revocation of the license, failure to renew the license by the date of expiration, loss of accreditation or if operation is discontinued by the voluntary action of the licensee.

Stat. Auth.: ORS 438.705-438.720 & 438.994
Stats. Implemented: ORS 438.705-438.720 & 438.994

333-081-0050
Surveys

(1) The Division must, in addition to any investigations conducted pursuant to OAR 333-081-0065, conduct at least one survey of each NARRO prior to licensure and once every two years thereafter as a requirement of licensing and at such other times as the Division deems necessary.

(2) In lieu of an on-site inspection required by section (1) of this rule, the Division may accept proof of accreditation by an accrediting body approved by the Division if the NARRO:

(a) Gives the Division sufficient advance notice to allow the Division to participate in any exit interviews conducted by the accrediting body; and

(b) Provides the Division with copies of all documentation concerning the accreditation that it requests.

(3) A NARRO must permit Division staff access to its premises during a survey.

(4) A survey may include, but is not limited to:

(a) Interviews of NARRO management and staff;

(b) On-site observations of the NARRO premises, staff performance and activities; and

(c) Review of documents, records and other materials required to be kept by OAR 333-081-0070.

(5) A NARRO shall make all requested documents and records available to the surveyor for review and copying.

(6) Following a survey, Division staff may conduct an exit conference with a NARRO agency owner, administrator, or designee. During an exit conference, Division staff must:

(a) Inform the NARRO owner, administrator or designee of the preliminary findings of the inspection; and

(b) Give the owner, administrator or designee a reasonable opportunity to submit additional facts or other information to the surveyor in response to those findings.

(7) Following a survey, Division staff must prepare and provide the NARRO owner or administrator specific and timely written notice of the findings.

(8) If no deficiencies are found during a survey, the Division must issue written findings to the NARRO owner or administrator indicating that fact.

(9) Upon conclusion of a survey the Division must, upon request, publicly release the written documents described in sections (7) and (8) of this rule in accordance with the Oregon Public Records Act.

(10) If deficiencies are found, the Division must take informal or formal enforcement action in accordance with OAR 333-081-0085 and 333-081-0090.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0055
Approval of Accrediting Bodies

(1) If the Division finds that an accrediting body has the necessary qualifications to certify that state licensing standards have been met, the Division will accept accreditation from the accrediting body in accordance with the requirements of OAR 333-081-0050(2).

(2) In order to allow the Division to make the finding set forth in section (1) of this rule, the accrediting body must request approval in writing using the most recent approval form provided by the Division and shall provide, at a minimum:

(a) Documentation of program policies and procedures that show that its accreditation process at least meets the requirements set out in Oregon Laws 2013, chapter 356, section 4(2) and these rules;

(b) Documentation evidencing that the accrediting body has the resources and expertise to successfully carry out the accreditation process; and

(c) An attestation that it, or any of its owners or employees, does not have a direct or indirect financial interest in any of the NARROs that it seeks to accredit.

Stat. Auth.: ORS 438.720
Stats. Implemented: ORS 438.720
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0060
Complaints

(1) Any person may make a complaint to the Division regarding an allegation as to violations of Oregon Laws 2013, chapter 356, sections 2 and 3 or these rules.

(2) Upon conclusion of an investigation, the Division shall, upon request, publicly release a report of its findings in accordance with the Oregon Public Records Act. The Division may use any information obtained during an investigation in an administrative or judicial proceeding concerning the licensing of a NARRO.

(3) If a complaint involves an allegation of criminal conduct or an allegation that is within the jurisdiction of another local, state, or federal agency, the Division shall refer the matter to that agency.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994

333-081-0065
Investigations

(1) As soon as practicable after receiving a complaint, taking into consideration the nature of the complaint, Division staff must begin an investigation.

(2) An investigation may include but is not limited to:

(a) Interviews of the complainant, persons identified by the complainant as having knowledge of the facts alleged in the complaint, NARRO management and staff, and other persons having knowledge of the practices of the NARRO; and

(b) On-site observations of staff performance and of the physical environment of the NARRO facility; and

(c) Review of documents, records and other materials.

(3) A NARRO must permit Division staff access to its premises during an investigation.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0070
Records

(1) A NARRO must keep and maintain a legible, reproducible record of each donor from whom it obtains anatomical material. This record must include at least the following:

(a) Documentation showing that the donor donated the anatomical material for the purpose of research or education. However, if the decision to donate is made after the donor's death, documentation that the donation was made by a person authorized to make an anatomical gift under the process set out in ORS 97.965 and that this person donated the anatomical material for the purpose of research or education is required;

(b) The name, address and phone number of each person that had possession of the donor's anatomical material before the organization took possession of the anatomical material;

(c) Documentation of the disposition of the donor's anatomical material by the NARRO, including the name, address and phone

number of each person to whom it provides anatomical material from the donor; and

(d) A copy of the disclosure given to a relative or personal representative of the donor if any anatomical material is returned to them as required by OAR 333-081-0075(2).

(2) The NARRO must keep and maintain a legible, reproducible record of the notice required by ORS 438.715(4) and OAR 333-081-0075 and provided to each individual from whom the NARRO agrees to accept an offer of the donation of anatomical material. If an offer of anatomical material is not subsequently rescinded or rejected, this record must be included in the donor record for each individual.

(3) The records required by sections (1) and (2) of this rule must be kept and maintained by the NARRO for a minimum of 10 years from the date that the NARRO takes possession of the donor's anatomical material and shall be kept and maintained in the following manner:

(a) It must be kept in a manner that renders it easily and completely retrievable;

(b) Reasonable precautions must be taken to protect the record from unauthorized access and from destruction including, but not limited to, fire, water, and theft;

(c) Authorized employees of the Division must be permitted to review the records upon request;

(d) If a NARRO changes ownership, all records must remain with the successor NARRO and it shall be the responsibility of the new owner to protect and maintain these records; and

(e) Before a NARRO terminates its business, it must notify the Division where the records will be stored and, if the location changes, those responsible must notify the Division of each successive location.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0075
Notice

(1) As required by ORS 438.715(4), when a NARRO accepts an offer from an individual to donate anatomical material it must provide that individual notice that clearly explains:

(a) How the NARRO intends to dispose of the anatomical material if donated, and whether and how any anatomical material may be returned;

(b) Whether or not the NARRO guarantees the coverage of costs related to transporting and disposing of the anatomical material and, if all costs will not be covered, what costs will be the responsibility of the individual making the donation; and

(c) What costs will be covered by the NARRO and what costs will be the responsibility of the individual making the donation if the individual or relative or personal representative subsequently rescinds, or the NARRO later rejects, the offer of anatomical material.

(2) If a NARRO returns any anatomical material to a relative or personal representative of a donor, the NARRO must provide that person with a notice that discloses whether all or part of the donor's body is being returned.

(3) The notice required by sections (1) and (2) of this rule must be in writing and be printed in at least 14-point type.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0080
NARRO Duties

In addition to the requirements set out in these rules, a NARRO shall dispose of any anatomical material not returned to a relative or personal representative of the donor in accordance with all laws pertaining to the disposition of human remains. This requirement does not apply to anatomical material that the NARRO has recovered or distributed for research or educational purposes.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0085
Informal Enforcement

(1) If during an investigation or survey Division staff document violations of NARRO licensing rules or laws, the Division may issue a statement of deficiencies that cites the law or rule alleged to have been violated and the facts supporting the allegation.

(2) Upon receipt of a statement of deficiencies, a NARRO shall be provided an opportunity to dispute the Division's survey findings but must still comply with sections (3) and (4) of this rule. The following conditions apply:

(a) If a NARRO desires an informal conference to dispute the Division's survey findings, the NARRO must submit a request in writing to the Division within 10 business days after receipt of the statement of deficiencies. The written request must include a detailed explanation of why the NARRO believes the statement of deficiencies is incorrect;

(b) A NARRO may not seek a delay of any enforcement action against it on the grounds the informal dispute resolution has not been completed; and

(c) If a NARRO is successful in demonstrating some or all of the deficiencies should not have been cited, the Division must withdraw or reissue the statement of deficiencies, removing such deficiencies and rescinding or modifying any remedies issued for such deficiencies. A reissued statement of deficiencies must include a statement that it supersedes the previous statement of deficiencies and shall clearly identify the date of the superseded statement of deficiencies.

(3) A signed plan of correction from a NARRO must be mailed to the Division within 10 business days from the date the statement of deficiencies was received by the NARRO. A signed plan of correction will not be used by the Division as an admission of the violations alleged in the statement of deficiencies.

(4) A NARRO must correct all deficiencies within 60 days from the date of the receipt of the statement of deficiencies, unless an extension of time is granted by the Division. A request for such an extension must be submitted in writing and must accompany the plan of correction.

(5) The Division must determine if a written plan of correction is acceptable. If the plan of correction is not acceptable to the Division, the Division must notify the NARRO owner or administrator in writing:

(a) Identifying which provisions in the plan the Division finds unacceptable;

(b) Citing the reasons the Division finds the provisions unacceptable; and

(c) Requesting that the plan of correction be modified, resubmitted and received by the Division no later than 10 business days from the date notification of non-compliance was received by the NARRO owner or administrator.

(6) If the NARRO does not come into compliance by either the date of correction reflected in the plan of correction or a Division approved extension as provided for in section (4) of this rule, or 60 days from the date of receipt of the statement of deficiencies, whichever is sooner, the Division may propose to deny, suspend or revoke the agency license or impose civil penalties.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994
Hist.: PH 6-2014, f. 1-30-14, cert. ef. 2-1-14

333-081-0090
Formal Enforcement

(1) If during an investigation or survey Division staff document ongoing or substantial failure to comply with NARRO laws or rules, or if a NARRO fails to pay a civil penalty imposed under ORS 438.994(1) and these rules, the Division may issue a Notice of Proposed Suspension or Notice of Proposed Revocation in accordance with ORS 183.411 through 183.470.

(2) The Division may impose civil penalties for violations of ORS 438.710 or 438.715 or these rules, in accordance with ORS 183.745. Civil penalties imposed under this rule shall not exceed $1000 per violation.

(3) At any time the Division may issue a Notice of Emergency License Suspension under ORS 183.430.

(4) If the Division revokes a NARRO license, the order shall specify when, if ever, the NARRO may reapply for a license.

Stat. Auth.: ORS 438.710 & 438.720
Stats. Implemented: ORS 438.705-438.720 & 438.994

DIVISION 95

LEAD HAZARDS

Environmental Inspection, Testing and Assessment in Private Residential Buildings

333-095-0000
Definitions

As used in OAR 333-095-0000 through 333-095-0030, unless the context requires otherwise:

(1) "Administrator" means the Administrator of the Oregon Public Health Division or any authorized representative. Authorized representatives include employees of the Public Health Division and employees of the affected county health agency having jurisdiction.

(2) "Division" means the Public Health Division of the Oregon Health Authority.

(3) "Dwelling" means any enclosed space that is wholly or partially used or intended to be used for living, sleeping, cooking, or eating purposes by humans, and includes all grounds and other buildings on the affected property.

(4) "Imminent Hazard" means a condition or combination of conditions such that a person or persons are potentially exposed to lead containing materials that are likely to cause acute illness or serious impairment.

(5) "Inspection" means an on-site investigation that may include visual observations, interviews with persons, technical tests and measurements, documentation of conditions, taking of photographs, and collection of samples for testing elsewhere.

(6) "Lead Hazard" means any condition or combination of conditions in which metallic lead, combined lead or ionic lead is present in or around a dwelling and could potentially be inhaled or ingested by persons.

(7) "Owner" and "Operator" mean any person or persons who jointly or severally hold legal title to or are purchasing any dwelling or premise on contract; or who are responsible for the care or control of any dwelling or premise as owner, agent of the owner, executor, administrator, trustee, or guardian. For purposes of public ownership, "owner" is defined as the chief executive officer of the government entity which owns, leases or otherwise controls the property.

(8) "Person" means any individual, partnership, association, firm, corporation, or joint venture; and includes agencies of municipal, county, state and federal government.

(9) "Premise" or "Premises" means any dwelling or other place of habitation; school; care facility; public or governmental institution; or place of volunteer employment. Premises include the grounds and any other buildings associated with and used by the occupants. These rules do not include employee exposures or workplace conditions that effect only employees who are subject to Federal OSHA or Oregon OSHA jurisdiction.

(10) "Screening" means medical and administrative procedures by which the concentration of lead in the blood of persons is measured.

Stat. Auth.: ORS 413.042
Stats. Implemented: ORS 431.110 - 431.180
Hist.: HD 1-1993, f. & cert. ef. 2-12-93

333-095-0010
Purpose

It is the purpose of these rules to:

(1) Ensure that inspection of dwellings and other nonoccupational premises thought to pose elevated risk of lead exposure to occupants can be performed;

(2) Ensure that investigations and assessments can be done thoroughly and promptly when screening or other evidence indicates a need for such inspections; and

(3) Ensure that persons who are likely to be exposed to hazardous levels of environmental lead are advised of the hazard.

Stat. Auth.: ORS 413.042
Stats. Implemented: ORS 431.110 - 431.180
Hist.: HD 1-1993, f. & cert. ef. 2-12-93

333-095-0020
Investigations

When results from screening tests, or other medical or diagnostic evidence, or environmental evidence indicates that occupants of any dwelling or other premises are or may be suffering from elevated lead levels, the Division may inspect the dwelling or premises to identify sources of lead exposure. Inspections may also be initiated to follow-up on any other evidence that any dwelling or premise presents a serious risk of lead exposure to any occupant. The owner(s) and occupant(s) of any such dwelling or premise shall allow access to authorized lead investigators of the Division or of the local health department having jurisdiction, so long as the access is requested during regular working hours and appropriate identification and credentials are shown by the inspector(s). Access shall be allowed to all parts of the dwelling and premises. Inspectors may test or collect samples for testing any part of the dwelling or premises and may photograph or otherwise document the conditions found.

Stat. Auth.: ORS 413.042
Stats. Implemented: ORS 431.110 - 431.180
Hist.: HD 1-1993, f. & cert. ef. 2-12-93

333-095-0030
Notification of Occupants

If investigation and testing of any premise reveals the presence of hazardous levels of lead in forms that present exposure hazards to occupants, the Administrator may notify such occupants of the hazards.

Stat. Auth.: ORS 413.042
Stats. Implemented: ORS 431.110 - 431.180
Hist.: HD 1-1993, f. & cert. ef. 2-12-93

DIVISION 100

CONTROL OF RADIATION IN OREGON

General Requirements

333-100-0001
Scope

Except as otherwise specifically provided, these rules apply to all persons who acquire receive, possess, use, transfer, own, or dispose of any source of radiation; provided, however, that nothing in these rules shall apply to any person to the extent such person is subject to regulation by the U.S. Nuclear Regulatory Commission.

NOTE: Attention is directed to the fact that state regulation of source material, byproduct material, and special nuclear material in quantities not sufficient to form a critical mass is subject to the provisions of the agreement between the state and the U.S. Nuclear Regulatory Commission and to 10 CFR Part 150 of the Commission's regulations.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 4-2007, f. & cert. ef. 3-1-07

333-100-0005
Definitions

The following definitions apply to OAR chapter 333 divisions 100, 102, 103, 106, 111, 116, 118, 119, 120, 121, 122, 123, and 124. Additional definitions used only in a certain division can be found in that division.

(1) "Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

(2) "Accelerator" means any machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of 1 MeV. For purposes of this definition, "particle accelerator" is an equivalent term.

(3) "Accelerator-produced material" means any material made radioactive by a particle accelerator.

(4) "Act" means Oregon Revised Statutes 453.605 through 453.807.

(5) "Activity" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the becquerel (Bq), defined as one disintegration per second, and the curie (Ci), defined as 3.7 x 1010 disintegrations per second.

(6) "Adult" means an individual 18 or more years of age.

(7) "Agreement State" means any state with which the U.S. Nuclear Regulatory Commission or the U.S. Atomic Energy Commission has entered into an effective agreement under subsection 274b. of the Atomic Energy Act of 1954, as amended (73 Stat. 689). States not entering an agreement under the Act are considered a non-agreement state.

(8) "Airborne radioactive material" means any radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors, or gases.

(9) "Airborne radioactivity area" means a room, enclosure, or area in which airborne radioactive material, composed wholly or partly of licensed material, exist in concentrations:

(a) In excess of the derived air concentrations (DACs) specified in Appendix B, Table I, column 3, to 10 CFR Part 20.1001 to 20.2401; or

(b) To such a degree that an individual present in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.

(10) "ALARA" (acronym for "As Low As Reasonably Achievable") means making every reasonable effort to maintain exposures to radiation as far below the dose limits in this part as is practical consistent with the purpose for which the licensed activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed materials in the public interest.

(11) "Alert" means events may occur, are in progress, or have occurred that could lead to a release of radioactive material but that the release is not expected to require a response by offsite response organizations to protect persons offsite.

(12) "Annual" means occurring every year or within a consecutive twelve month cycle.

(13) "Annual Limit on Intake" (ALI) means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the Reference Man that could result in a committed effective dose equivalent of 0.05 Sv (5 rem) or a committed dose equivalent of 0.5 Sv (50 rem) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given in Appendix B, Table I, Columns 1 and 2, to 10 CFR Part 20.1001 to 20.2401.

(14) "As Low As Reasonably Achievable" see "ALARA."

(15) "Authority" means the Oregon Health Authority.

(16) "Background radiation" means radiation from cosmic sources; naturally occurring radioactive materials, including radon, except as a decay product of source or special nuclear material, and including global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. "Background radiation" does not include sources of radiation from radioactive or special nuclear materials regulated by the Authority.

(17) "Becquerel" (Bq) means one disintegration per second.

(18) "Bioassay" means the determination of kinds, quantities or concentrations, and, in some cases, the locations, of radioactive material in the human body, whether by direct measurement (in vivo counting) or by analysis and evaluation of materials excreted or removed from the human body. For purposes of these rules, "radiobioassay" is an equivalent term.

(19) "Brachytherapy" means a method of radiation therapy in which sealed sources are utilized to deliver dose at a distance of up to a few centimeters, by surface, intracavitary, or interstitial application.

(20) "Byproduct material" means:

(a) Any radioactive material, except special nuclear material, yielded in, or made radioactive by, exposure to the radiation incident to the process of producing or utilizing special nuclear material;

(b) The tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content, including discrete surface wastes resulting from uranium solution extraction process. Underground ore bodies depleted by such solution extraction operations do not constitute "byproduct material" within this definition;

(c) Any discrete source of radium-226 that is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity; or

(d) Any material that:

(A) Has been made radioactive by use of a particle accelerator; and

(B) Is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity; and

(C) Any discrete source of naturally occurring radioactive material, other than source material, that:

(i) The Nuclear Regulatory Commission, in consultation with the Administrator of the Environmental Protection Agency, the Secretary of Energy, the Secretary of Homeland Security, and the head of any other appropriate state and federal agency, determines would pose a threat similar to the threat posed by a discrete source of radium-226 to the public health and safety or the common defense and security; and

(ii) Before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical, or research activity.

(21) "Calendar quarter" means not less than 12 consecutive weeks nor more than 14 consecutive weeks. The first calendar quarter of each year must begin in January and subsequent calendar quarters must be so arranged such that no day is included in more than one calendar quarter and no day in any one year is omitted from inclusion within a calendar quarter. No licensee or registrant may change the method observed for determining calendar quarters except at the beginning of a calendar year.

(22) "Calibration" means the determination of:

(a) The response or reading of an instrument relative to a series of known radiation values over the range of the instrument; or

(b) The strength of a source of radiation relative to a standard.

(23) "CFR" means Code of Federal Regulations.

(24) "Chelating agent" means amine polycarboxylic acids, hydroxy-carboxylic acids, gluconic acid, and polycarboxylic acids.

(25) "Class" means a classification scheme for inhaled material according to its rate of clearance from the pulmonary region of the lung. For purposes of these rules, "lung class" or "inhalation class" are equivalent terms. Materials are classified as D, W, or Y, which applies to a range of clearance half-times:

(a) For Class D, Days, of less than 10 days;

(b) For Class W, Weeks, from 10 to 100 days; and

(c) For Class Y, Years, of greater than 100 days.

(26) "Clinical laboratory" means a laboratory licensed pursuant to ORS 438.110 through 438.140.

(27) "Collective dose" means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

(28) "Committed dose equivalent" (HT, 50) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

(29) "Committed effective dose equivalent" (HE, 50) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues (HE, 50 = ∑WT,HT,50).

(30) "Contamination" (Radioactive) means deposition or presence of radioactive material in any place where it is not desired, and particularly in any place where its presence can be harmful. The harm may be in compromising the validity of an experiment or a procedure, or in being a source of danger to persons. Contamination may be divided into two types: Fixed and removable. Removable contamination may be transferred easily from one object to another by light rubbing or by the use of weak solvents such as water or alcohol. Removable contamination is evaluated and recorded in units of microcuries or dpm. Fixed contamination is not easily transferred from one object to another and requires mechanical or strong chemicals to remove it from its current location. Fixed contamination is evaluated and recorded in units of mR/hr.

(31) "Curie" means that amount of radioactive materials which disintegrates at the rate of 37 billion atoms per second.

(32) "Declared pregnant woman" means a woman who has voluntarily informed the licensee, in writing, of her pregnancy and the estimated date of conception. The declaration remains in effect until the declared pregnant woman withdraws the declaration in writing or is no longer pregnant.

(33) "Decommission" means to remove (as a facility) safely from service and reduce residual radioactivity to a level that permits:

(a) Release of the property for unrestricted use and termination of license; or

(b) Release of the property under restricted conditions and termination of the license.

(34) "Deep dose equivalent" (Hd) which applies to external whole body exposure, means the dose equivalent at a tissue depth of 1 centimeter (1000 mg/cm2).

(35) "Depleted uranium" means source material uranium in which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present. Depleted uranium does not include special nuclear material.

(36) "Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by Reference Man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. For purposes of these rules, the condition of light work is an inhalation rate of 1.2 cubic meters of air per hour for 2,000 hours in a year. DAC values are given in Table I, Column 3, of Appendix B to 10 CFR Part 20.1001 to 20.2401.

(37) "Derived air concentration-hour" (DAC-hour) means the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of 0.05 Sv (5 rem).

(38) "Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of these rules, "radiation dose" is an equivalent term.

(39) "Dose equivalent" (HT) means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem (see "Rem"). (See OAR 333-100-0070(2) for SI equivalent sievert.)

(40) "Dose limits" means the permissible upper bounds of radiation doses established in accordance with these rules. For purposes of these rules, "limits" is an equivalent term.

(41) "Dosimetry processor" means an individual or an organization that processes and evaluates individual monitoring equipment in order to determine the radiation dose delivered to the equipment.

(42) "Effective dose equivalent" (HE) means the sum of the products of the dose equivalent to the organ or tissue (HT) and the weighting factor (WT) applicable to each of the body organs or tissues that are irradiated (HE = WT HT).

(43) "Electronic product" means any manufactured product or device or component part of such a product or device that is capable of generating or emitting electromagnetic or sonic radiation such as, but not limited to, X-rays, ultrasonic waves, microwaves, laser light or ultraviolet light.

(44) "Embryo/fetus" means the developing human organism from conception until the time of birth.

(45) "Entrance or access point" means any opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed or registered radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

(46) "Exclusive use" (also referred to in other regulations as "sole use" or "full load") means the sole use of a conveyance by a single consignor and for which all initial, intermediate, and final loading and unloading are carried out in accordance with the direction of the consignor or consignee.

(47) "Explosive material" means any chemical compound, mixture, or device that produces a substantial instantaneous release of gas and heat spontaneously or by contact with sparks or flame.

(48) "Exposure" means:

(a) The quotient of dQ by dm where "dQ" is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass "dm" are completely stopped in air. The SI unit of exposure is the coulomb per kilogram.

(b) Being exposed to ionizing radiation or to radioactive material.

(49) "Exposure rate" means the exposure per unit of time, such as roentgen per minute (R/min) and milliroentgen per hour (mR/hr).

(50) "External dose" means that portion of the dose equivalent received from any source of radiation outside the body.

(51) "Extremity" means hand, elbow, arm below the elbow, foot, knee, or leg below the knee.

(52) "Eye dose equivalent" means the external dose equivalent to the lens of the eye at a tissue depth of 0.3 centimeter (300 mg/cm2).

(53) "Fixed gauge" means a measuring or controlling device that is intended to be mounted at a specific location, stationary, not to be moved, and is not portable.

(54) "Former U.S. Atomic Energy Commission (AEC) or U.S. Nuclear Regulatory Commission (NRC) licensed facilities" means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants, or critical mass experimental facilities where AEC or NRC licenses have been terminated.

(55) "General license" means a license granted by rule, in contrast to an issued license, to acquire, own, possess, use, or transfer radioactive material or a device that contains radioactive material.

(56) "Generally applicable environmental radiation standards" means standards issued by the U.S. Environmental Protection Agency (EPA) under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.

(57) "Gray" (Gy) means the International System of Units (SI), unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram (100 rad). (See OAR 333-100-0070(2))

(58) "Hazardous waste" means those wastes designated as hazardous by U.S. Environmental Protection Agency regulations in 40 CFR Part 261.

(59) "Healing arts" means:

(a) The professional disciplines authorized by the laws of this state to use X-rays or radioactive material in the diagnosis or treatment of human or animal disease. For the purposes of this division they are Medical Doctors, Osteopaths, Dentists, Veterinarians, Chiropractors, and Podiatrists; or

(b) Any system, treatment, operation, diagnosis, prescription, or practice for the ascertainment, cure, relief, palliation, adjustment, or correction of any human disease, ailment, deformity, injury or unhealthy or abnormal physical or mental condition.

(60) "Human use" means the internal or external administration of radiation or radioactive material to human beings.

(61) "Individual" means any human being.

(62) "Individual monitoring" means:

(a) The assessment of dose equivalent by the use of devices designed to be worn by an individual;

(b) The assessment of committed effective dose equivalent by bioassay (see Bioassay) or by determination of the time-weighted air concentrations to which an individual has been exposed, that is, DAC-hours; or

(c) The assessment of dose equivalent by the use of survey data.

(63) "Individual monitoring devices" means devices designed to be worn by a single individual for the assessment of dose equivalent such as film badges, thermoluminescent dosimeters (TLDs), pocket ionization chambers, and personal ("lapel") air sampling devices.

(64) "Inhalation class" (see "Class").

(65) "Inspection" means an official examination or observation including, but not limited to, tests, surveys, and monitoring to determine compliance with rules, regulations, orders, requirements, and conditions of the Authority.

(66) "Interlock" means a device arranged or connected such that the occurrence of an event or condition is required before a second event or condition can occur or continue to occur.

(67) "Internal dose" means that portion of the dose equivalent received from radioactive material taken into the body.

(68) "Ionizing radiation" means any electromagnetic or particulate radiation capable of producing ions, directly or indirectly, in its passage through matter. It includes any or all of the following: Alpha particles, beta particles, electrons, positrons, gamma rays, X-rays, neutrons, high-speed electrons, high-speed protons, fission fragments and other atomic and subatomic particles; but not sound or radio waves, or visible, infrared, or ultraviolet light.

(69) "Laser" means any device which, when coupled with an appropriate laser energy source, can produce or amplify electromagnetic radiation by the process of controlled stimulated emission.

(70) "License" means a license issued by the Authority in accordance with rules adopted by the Authority.

(71) "Licensed material" means radioactive material received, possessed, used, transferred or disposed of under a general or specific license granted or issued by the Authority. For the purpose of meeting the definition of a Licensing State by the Conference of Radiation Control Program Directors, Inc. (CRCPD), Naturally Occurring and Accelerator Produced Radioactive Material (NARM) refers only to discrete sources of NARM. Diffuse sources of NARM are excluded from consideration by the CRCPD for Licensing State designation purposes.

(72) "Licensee" means any person who is licensed by the Authority in accordance with these rules and the Act.

(73) "Licensing state" means any state with rules or regulations equivalent to the Suggested State Regulations for Control of Radiation relating to, and having an effective program for, the regulatory control of NARM.

(74) "Limits" (dose limits) means the permissible upper bounds of radiation doses.

(75) "Lost or missing licensed or registered source of radiation" means licensed or registered source(s) of radiation whose location is unknown. This definition includes licensed material that has been shipped but has not reached its planned destination and whose location cannot be readily traced in the transportation system.

(76) "Lung class" (see "Class").

(77) "Major processor" means a user processing, handling, or manufacturing radioactive material exceeding Type A quantities as unsealed sources or material, or exceeding four times Type B quantities as sealed sources, but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs. Type A and B quantities are defined in division 118 of this chapter.

(78) "Member of the public" means an individual, except when that individual is receiving an occupational dose.

(79) "Minor" means an individual less than 18 years of age.

(80) "Monitoring" means the measurement of radiation, radioactive material concentrations, surface area activities or quantities of radioactive material and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of these rules, "radiation monitoring" and "radiation protection monitoring" are equivalent terms.

(81) "NARM" means any naturally occurring or accelerator-produced radioactive material. It does not include byproduct, source, or special nuclear material.

(82) "Natural radioactivity" means radioactivity of naturally occurring nuclides.

(83) "Naturally-occurring radioactive material" (NORM) means any nuclide that is found in nature as a radioactive material (and not technologically produced).

(84) "Natural thorium" means thorium with the naturally occurring distribution of thorium isotopes (essentially 100 weight percent thorium-232).

(85) "Natural uranium" means a mixture of the uranium isotopes 234, 235 and 238 (approximately 0.7 weight percent uranium- 235 and the remainder by weight essentially uranium-238), found in nature, that is neither enriched nor depleted in the isotope uranium 235.

(86) "Nonstochastic effect" means a health effect that varies with the dose and a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect. For purposes of these rules, "deterministic effect" is an equivalent term.

(87) "Normal form radioactive material" means radioactive material that has not been demonstrated to qualify as "special form radioactive material". See "Special form."

(88) "NRC" is the acronym for Nuclear Regulatory Commission.

(89) "Nuclear Regulatory Commission" ("NRC" or "Commission") means the U.S. Nuclear Regulatory Commission or its duly authorized representatives.

(90) "Package" means the packaging together with its radioactive contents as presented for transport.

(91) "Particle accelerator" means any machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of one MeV.

(92) "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof, and any legal successor, representative, agent, or agency of the foregoing.

(93) "Personnel monitoring equipment" means devices such as film badges, pocket dosimeters, and thermoluminescent dosimeters designed to be worn or carried by an individual for the purpose of estimating the dose received by the individual. See "Individual monitoring devices."

(94) "Pharmacist" means an individual licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico to practice pharmacy.

(95) "Physician" means an individual licensed by the Oregon Medical Board to dispense drugs in the practice of medicine.

(96) "Planned special exposure" means an infrequent exposure to radiation, separate from and in addition to the annual occupational dose limits.

(97) "Portable gauge" means a measuring or controlling device that is intended to be portable and is not fixed to a specific location. All portable gauges require a specific license (there is no general license granted for portable generally licensed devices in the State of Oregon).

(98) "Program" means the Radiation Protection Services section of the Public Health Division of the Oregon Health Authority.

(99) "Pyrophoric liquid" means any liquid that ignites spontaneously in dry or moist air at or below 130OF (54.4OC).

(100) "Pyrophoric solid" means any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and, when ignited, burns so vigorously and persistently as to create a serious transportation, handling, or disposal hazard. Included are spontaneously combustible and water-reactive materials.

(101) "Qualified expert" means an individual, approved by the Authority, who has demonstrated, pursuant to these rules, that he/she possesses the knowledge, skills, and training to measure ionizing radiation, to evaluate radiation parameters, to evaluate safety techniques, and to advise regarding radiation protection needs. The individual must:

(a) Be certified in the appropriate field by the American Board of Radiology, the American Board of Health Physics, the American Board of Medical Physics or the American Board of Nuclear Medicine Science; or

(b) Hold a master's or doctor's degree in physics, biophysics, radiological physics, health physics, or medical physics and have completed one year of documented, full time training in the appropriate field and also one year of documented, full time work experience under the supervision of a qualified expert in the appropriate field. To meet this requirement, the individual must have performed the tasks required of a qualified expert during the year of work experience; or

(c) Receive approval from the Authority for specific activities.

(102) "Quality factor" (Q) means the modifying factor (listed in Tables 1004(b).1 and 1004(b).2 of 10 CFR Part 20.1004 provided at the end of this division) that is used to derive dose equivalent from absorbed dose.

(103) "Quarter" means a period of time equal to one-fourth of the year observed by the licensee, approximately 13 consecutive weeks, providing that the beginning of the first quarter in a year coincides with the starting date of the year and that no day is omitted or duplicated in consecutive quarters.

(104) "Rad" means the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 erg per gram or 0.01 joule per kilogram (0.01 gray). See OAR 333-100-0070(2) for SI equivalent gray.

(105) "Radiation" means:

(a) Ionizing radiation including gamma rays, X-rays, alpha and beta particles, protons, neutrons, and other atomic or nuclear particles or rays;

(b) Any electromagnetic radiation which can be generated during the operations of electronic products and which the Authority has determined to present a biological hazard to the occupational or public health and safety but does not include electromagnetic radiation which can be generated during the operation of an electronic product licensed by the Federal Communications Commission;

(c) Any sonic, ultrasonic or infrasonic waves which are emitted from an electronic product as a result of the operation of an electronic circuit in such product and which the Authority has determined to present a biological hazard to the occupational or public health and safety.

(106) "Radiation area" means any area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.05 mSv (0.005 rem) in one hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates.

(107) "Radiation machine" means any device capable of producing radiation except those which produce radiation only from radioactive material.

(108) "Radiation safety officer" means:

(a) An individual who has the knowledge, responsibility, and authority to apply appropriate radiation protection rules; or

(b) The representative of licensee management, authorized by the Authority, and listed on the specific license as the radiation safety officer, who is responsible for the licensee's radiation safety program.

(109) "Radioactive material" means any solid, liquid, or gas that emits radiation spontaneously.

(a) Radioactive material, as used in these rules, includes: byproduct material, naturally occurring radioactive material, accelerator produced material, and source material, as defined in this rule.

(b) Radioactive material, as used in these rules, does not include special nuclear material.

(110) "Radioactive waste" means radioactive material that is unwanted or is unusable, as defined in division 50 of chapter 345. No radioactive material may be disposed of in Oregon except as provided in division 50 of chapter 345.

(111) "Radioactivity" means the transformation of unstable atomic nuclei by the emission of radiation.

(112) "Reference Man" means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health workers to standardize results of experiments and to relate biological insult to a common base. A description of the Reference Man is contained in the International Commission on Radiological Protection report, ICRP Publication 23, "Report of the Task Group on Reference Man."

(113) "Registrant" means any person who is registered with the Authority and is legally obligated to register with the Authority pursuant to these rules and the Act.

(114) "Registration" means the identification of any material or device emitting radiation, and the owner of such material or device must furnish information to the Authority in accordance with the rules adopted by the Authority.

(115) "Regulations of the U.S. Department of Transportation" means the regulations in 49 CFR Parts 100-189 and Parts 390-397.

(116) "Rem" means the special unit of any of the quantities expressed as dose equivalent. The dose equivalent rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 sievert).

(117) "Research and development" means:

(a) Theoretical analysis, exploration, or experimentation; or

(b) The extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes. Research and development does not include the internal or external administration of radiation or radioactive material to human beings.

(118) "Respiratory protective equipment" means an apparatus, such as a respirator, used to reduce an individual's intake of airborne radioactive materials.

(119) "Restricted area" means an area to which access is limited by the licensee or registrant for the purpose of protecting individuals against undue risks from exposure to sources of radiation. A restricted area does not include areas used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.

(120) "Roentgen" means the special unit of exposure. One roentgen (R) equals 2.58 x 10-4 Coulombs/kilogram of air (see "Exposure" and division 120).

(121) "Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks, and leach fields owned or operated by the licensee.

(122) "Screening" means the use of a systematic approach to obtain cursory examinations of a person or group of persons without regard to specific clinical indications.

(123) "Sealed source" means radioactive material that is encased in a capsule designed to prevent leakage or escape of the radioactive material.

(124) "Sealed Source and Device Registry" means the national registry that contains all the registration certificates, generated by both the U.S. Nuclear Regulatory Commission and Agreement States, that summarize the radiation safety information for sealed sources and devices and describe the licensing and use conditions approved for the product.

(125) "Shallow dose equivalent" (Hs), which applies to the external exposure of the skin or an extremity, means the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm2) averaged over an area of one square centimeter.

(126) "SI" means the abbreviation for the International System of Units.

(127) "Sievert" means the International System of Units (SI), unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 Sv = 100 rem). (See OAR 333-100-0070(2)).

(128) "Site boundary" means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee or registrant.

(129) "Source material" means:

(a) Uranium or thorium or any combination of uranium and thorium in any physical or chemical form; or

(b) Ores that contain by weight one-twentieth of one percent (0.05 percent) or more of uranium, thorium, or any combination thereof. Source material does not include special nuclear material.

(130) "Source material milling" means any activity that result in the production of byproduct material, as defined by this rule.

(131) "Source of radiation" means any radioactive material or any device or equipment emitting, or capable of producing, radiation. Source of radiation, pursuant to this rule, includes, but is not limited to, radiation facilities, radiation producing machines, radiation producing devices, radioactive material sealed and unsealed form (normal form and special form), and radioactive material uses.

(132) "Special form radioactive material" means radioactive material that satisfies the following conditions:

(a) It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

(b) The piece or capsule has at least one dimension not less than five millimeters (0.2 inch); and

(c) It satisfies the test requirements specified by the U.S. Nuclear Regulatory Commission. A special form encapsulation designed in accordance with the U.S. Nuclear Regulatory Commission requirements in effect on June 30, 1983, and constructed prior to July 1, 1985, and a special form encapsulation designed in accordance with the Nuclear Regulatory Commission requirements in effect on March 31. 1996, and constructed prior to April 1, 1998, may continue to be used. Any other special form encapsulation either designed or constructed after April 1, 1998, must meet requirements of this definition applicable at the time of its design or construction.

(133) "Special nuclear material" means:

(a) Plutonium, uranium-233, uranium enriched in the isotope 233 or in the isotope 235, and any other material that the U.S. Nuclear Regulatory Commission, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determines to be special nuclear material, but does not include source material; or

(b) Any material artificially enriched by any of the foregoing but does not include source material.

(134) "Special nuclear material in quantities not sufficient to form a critical mass" means uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; uranium-233 in quantities not exceeding 200 grams; plutonium in quantities not exceeding 200 grams; or any combination of them in accordance with the following formula: For each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination must not exceed one.

For example, the following quantities in combination does not exceed the limitation and are within the formula: * * 175 (grams U-235)/350 + 50 (grams U-233)/200 + 50 (grams Pu)/200 = 1.

(135) "Specific activity of a radionuclide" means the radioactivity of the radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the radioactivity per unit mass of the material.

(136) "Stochastic effect" means health effects that occur randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without threshold. Hereditary effects and cancer incidence are examples of stochastic effects.

(137) "Supervision" as used in these rules, means the responsibility for, and control of, the application, quality, radiation safety and technical aspects of all sources of radiation possessed, used and stored through authorization granted by the Authority.

(138) "Survey" means an evaluation of the radiological conditions and potential hazards incident to the production, use, transfer, release, disposal, or presence of sources of radiation. When appropriate, such evaluation includes, but is not limited to, tests, physical examinations, and measurements of levels of radiation or concentrations of radioactive material present.

(139) "Termination" means:

(a) The end of employment with the licensee or registrant or, in the case of individuals not employed by the licensee or registrant, the end of work assignment in the licensee's or registrant's restricted area in a given calendar quarter, without expectation or specific scheduling of re-entry into the licensee's or registrant's restricted area during the remainder of that calendar quarter; or

(b) The closure of a registered or licensed facility and conclusion of licensed or registered activities, pursuant to a registration or specific license.

(140) "Test" means the process of verifying compliance with an applicable rule.

(141) "These rules," mean all parts of the Oregon Administrative Rules promulgated under ORS 453.605 through 453.807.

(142) "Total effective dose equivalent" (TEDE) means the sum of the deep dose equivalent for external exposures and the committed effective dose equivalent for internal exposures.

(143) "Total organ dose equivalent" (TODE) means the sum of the deep dose equivalent (DDE) and the committed dose equivalent (CDE) to the organ receiving the highest dose as described in OAR 333-120-0650(1)(d).

(144) "Transport index" means the dimensionless number (rounded up to the first decimal place) placed on the label of a package to designate the degree of control to be exercised by the carrier during transportation. The transport index is the number expressing the maximum radiation level in millirem per hour at one meter from the external surface of the package.

(145) "U.S. Department of Energy" means the Department of Energy established by Public Law 95-91, August 4, 1977, 91 Stat. 565, 42 U.S.C. 7101 et seq., to the extent that the Department exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers and components and transferred to the U.S. Energy Research and Development Admin-

istration and to the Administrator thereof pursuant to sections 104(b), (c) and (d) of the Energy Reorganization Act of 1974 (Public Law 93-438, October 11, 1974, 88 Stat. 1233 at 1237 42 U.S.C. 5814, effective January 19, 1975) and retransferred to the Secretary of Energy pursuant to section 301(a) of the Department of Energy Organization Act (Public Law 95-91, August 4, 1977, 91 Stat. 565 at 577-578, 42 U.S.C. 7151, effective October 1, 1977).

(146) "Unrefined and unprocessed ore" means ore in its natural form prior to any processing, such as grinding, roasting, beneficiating, or refining. Processing does not include sieving or encapsulation of ore or preparation of samples for laboratory analysis.

NOTE: "Ore" refers to fuel cycle materials pursuant to 10 CFR Part 150.

(147) "Unrestricted area" means an area, access to which is neither limited nor controlled by the licensee or registrant. For purposes of these rules, "uncontrolled area" is an equivalent term.

(148) "Uranium — depleted, enriched" means:

(a) "Depleted uranium" means uranium containing less uranium-235 than the naturally occurring distribution of uranium isotopes.

(b) "Enriched uranium" means uranium containing more uranium-235 than the naturally occurring distribution of uranium isotopes.

(149) "Validation certificate" means the official document issued upon payment to the Authority of the appropriate fee listed in division 103 of this chapter. The license or registration is subject and void without the annual validation certificate.

(150) "Waste" means radioactive waste.

(151) "Week" means seven consecutive days starting on Sunday.

(152) "Weighting factor" (WT) for an organ or tissue (T) means:

(a) The proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of WT are:

(A) Gonads 0.25;

(B) Breast 0.15;

(C) Red Bone Marrow 0.12;

(D) Lung 0.12;

(E) Thyroid 0.03;

(F) Bone Surfaces 0.03;

(G) Remainder 0.30 (see note below);

(H) Whole Body 1.00.

NOTE: Assignment of 0.30 for the remaining organs results from a weighting factor of 0.06 for each of five "remainder" organs, excluding the skin and the lens of the eye, that receive the highest doses.

(b) For the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, WT = 1.0, has been specified. The use of other weighting factors for external exposure may be approved on a case-by-case basis until such time as specific guidance is issued.

(153) "Whole body" means, for purposes of external exposure, head, trunk including male gonads, arms above the elbow, or legs above the knee.

(154) "Worker" means an individual engaged in work under a license or registration issued by the Authority and controlled by a licensee or registrant, but does not include the licensee or registrant.

(155) "Working level" (WL) means any combination of short-lived radon progeny in one liter of air that will result in the ultimate emission of 1.3 x 105 MeV of potential alpha particle energy. The short-lived radon-222 progeny are: polonium-218, lead-214, bismuth-214, and polonium-214; and for radon-220 the progeny are: polonium-216, lead-212, bismuth-212, and polonium-212.

(156) "Working level month" (WLM) means an exposure to one working level for 170 hours (2,000 working hours per year divided by 12 months per year is approximately equal to 170 hours per month.)

(157) "Year" means the period of time beginning in January used to determine compliance with the provisions of these rules. The licensee or registrant may change the starting date of the year used to determine compliance by the licensee or registrant provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.

333-100-0020
Prohibited Uses

(1) Hand-held fluoroscopic screens shall not be used unless they have been listed in the Registry of Sealed Source and Devices or accepted for certification by the U.S. Food and Drug Administration, Center for Devices and Radiological Health.

(2) Shoe-fitting fluoroscopic devices shall not be used.

(3) Sources of radiation shall not be used to expose any individual solely for training or demonstration purposes.

(4) Sources of radiation shall not be used for the purpose of screening or inspecting individuals for concealed weapons, hazardous materials, stolen property, illegal goods or contraband.

(5) No person shall intentionally apply or allow to be applied, either directly or indirectly, ionizing radiation to human beings except by, or under the supervision of, persons licensed by the State of Oregon to practice the healing arts and who are authorized to use radiation on humans. Notwithstanding this restriction, the Authority recognizes practitioners of the healing arts to be as outlined in ORS 676.110, that is:

(a) Podiatrists, Chiropractors, Dentists, Naturopath, Osteopaths, Medical Doctors, and Veterinarians;

(b) Nurse Practitioners and Physician Assistants may prescribe X-ray when doing so within the bounds of their independent rules;

(c) Dental Professionals are permitted to prescribe and review intraoral radiographs, in accordance with the Oregon Board of Dentistry administrative rules, chapter 818.

(d) No person shall be allowed to use X-ray producing equipment without first meeting the requirements of OAR 333-106-0045(16) or 333-106-0055.

(6) No person shall intentionally or unintentionally expose another individual to radiation other than ionizing radiation in such a way as to adversely affect the health or safety of that individual. Notwithstanding this restriction, the use of radiation other than ionizing radiation by persons licensed by the State of Oregon to practice the healing arts and who are authorized to use radiation shall be allowed.

(7) Dental units with a Kilovolt peak (kVp) of 50 and below are prohibited from being sold, leased, transferred or lent.

(a) Existing diagnostic dental X-ray systems less than 55 kVp shall not be used on minors.

(b) After October 1, 2011, registrants may not use diagnostic dental X-ray systems with a fixed, nominal kVp of less than 55.

333-100-0025
Exemptions

(1) General Provision. The Agency may, upon application or upon its own initiative, grant such exemptions or exceptions from the requirements of these rules as it determines are authorized by law and will not result in undue hazard to public health and safety or property.

(2) U.S. Department of Energy Contractors and U.S. Nuclear Regulatory Commission Contractors. Any U.S. Department of Energy contractor or subcontractor and any U.S. Nuclear Regulatory Commission contractor or subcontractor of the following categories operating within this state is exempt from these rules to the extent that such contractor or subcontractor under his contract receives, possesses, uses, transfers or acquires sources of radiation:

(a) Prime contractors performing work for the U.S. Department of Energy at U.S. Government-owned or controlled sites, including the transportation of sources of radiation to or from such sites and the performance of contract services during temporary interruptions of such transportation;

(b) Prime contractors of the U.S. Department of Energy performing research in, or development, manufacture, storage, testing, or transportation of, atomic weapons or components thereof;

(c) Prime contractors of the U.S. Department of Energy using or operating nuclear reactors or other nuclear devices in a United States Government-owned vehicle or vessel; and

(d) Any other prime contractor or subcontractor of the U.S. Department of Energy or of the U.S. Nuclear Regulatory Commission when the state and the U.S. Nuclear Regulatory Commission jointly determine:

(A) That the exemption of the prime contractor or subcontractor is authorized by law; and

(B) That, under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to the public health and safety.

333-100-0035
Violations

An injunction or other court order may be obtained prohibiting any violation of any provision of the Act or any rule or order issued thereunder. Any person who willfully violates any provision of the Act or any rule or order issued thereunder may be guilty of a crime and, upon conviction, may be punished by fine or imprisonment or both, as provided by ORS 453.990.

Maintenance of Records

Each record required by this division must be legible throughout the retention period. For the purposes of these rules and unless otherwise specified, records must be retained a minimum of five years. The record may be the original or a reproduced copy or a microfilm provided that the copy or microfilm is authenticated by authorized personnel and that the microfilm is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability of producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, and specifications, must include all pertinent information such as stamps, initials, and signatures. The licensee must maintain adequate safeguards against tampering with and loss of records.

333-100-0060
Inspections

(1) Each licensee and registrant must afford to the Agency at all reasonable times opportunity to inspect sources of radiation and radioactive material and the premises and facilities wherein such sources of radiation and radioactive material are used or stored.

(2) Each licensee and registrant must make available to the Agency for inspection, upon reasonable notice, records maintained pursuant to the rules in this chapter.

(3) Within the available resources of the Agency, X-Ray Machine Registrants must be inspected at the following frequency based upon the class of x-ray machine(s) registered:

(a) Every Year: Hospitals and Radiologists.

(b) Every Two Years: Chiropractors, Medical and Osteopaths.

(c) Every Three Years: Academic, Dental, Industrial, Podiatry, and Veterinary.

(4) Not withstanding the above, the Agency may inspect more frequently as deemed necessary to protect public health and safety.

333-100-0065
Tests

Each licensee and registrant must perform, or permit the Authority to perform, such tests as the Authority deems appropriate or necessary for the administration of the rules in this division and divisions 101, 105, 106, 108, 109, 112, 113, 115, 116, 117, 119, 121, 122, and 123 of this chapter including, but not limited to, tests of:

(1) Sources of radiation and radioactive material;

(2) Facilities wherein sources of radiation and radioactive material are used or stored;

(3) Radiation detection and monitoring instruments; and

(4) Other equipment and devices used in connection with the utilization or storage of licensed or registered sources of radiation and radioactive material.

333-100-0070
Units of Exposure and Dose

The Metric Conversion Act of 1975 (PL 94-168) urged the increasing awareness and use of the International System of Units (SI). The generally accepted regulatory values in the narrative portions of this document are followed by the SI equivalents in parentheses. Where appropriate, schedules and appendices are provided with notes concerning conversion factors. The inclusion of the SI equivalent is for informational purposes only.

(1) The unit of exposure is the coulomb per kilogram (C/kg). One roentgen is equal to 2.58×10^{-4} coulomb per kilogram of air.

(2) The units of radiation dose are:

(a) Gray (Gy) is the SI unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram (100 rad);

(b) Rad is the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 erg per gram or 0.01 joule per kilogram (0.01 Gy);

(c) Rem is the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 Sv).

(d) Sievert is the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 Sv = 100 rem).

(e) As used in these regulations, the quality factors for converting absorbed dose to dose equivalent are shown in 10 CFR 20 Part 20.1004 Table 1004(b).1.

(3) If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in rem per hour or sieverts per hour, as provided in (2)(c) of this rule, one rem (0.01 Sv) of neutron radiation of unknown energies may, for purposes of the regulations in this part, be assumed to result from a total fluence of 25 million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee may use the fluence rate per unit dose equivalent or the appropriate Q value from 10 CFR 20 part 20.1004 Table 1004(b).2 (at the end of this division) to convert a measured tissue dose in gray or rad to dose equivalent in sievert rem.

[ED. NOTE: Tables referenced are available from the agency.]

333-100-0080
Deliberate Misconduct

(1) Any licensee or any employee of a licensee; and any contractor (including a supplier or consultant), subcontractor, or any employee of a contractor or subcontractor, of any licensee, who knowingly provides to any licensee, contractor, or subcontractor, components, equipment, materials, or other goods or services, that relate to a licensee's activities subject to this part; may not:

(a) Engage in deliberate misconduct that causes or, but for detection, would have caused, a licensee to be in violation of any rule, regulation, or order, or any term, condition, or limitation of any license, issued by the Authority; or

(b) Deliberately submit to the Authority, a licensee, or a licensee's contractor or subcontractor, information that the person submitting the information knows to be incomplete or inaccurate in some respect material to the Authority.

(2) A person who violates subsection (1)(a) or (1)(b) of this rule may be subject to enforcement action in accordance with OAR 333-100-0035.

(a) For purposes of subsection (1)(a) of this rule, deliberate misconduct by a person means an intentional act or omission that the person knows:

(A) Would cause a licensee to be in violation of any rule, regulation, or order, or any term, condition, or limitation, of any license issued by the Authority; or

(B) Constitutes a violation of a requirement, procedure, instruction, contract, purchase order or policy of a licensee, contractor, or subcontractor.

DIVISION 101

REGISTRATION OF RADIATION MACHINES, GENERAL LICENSE RADIOACTIVE MATERIALS, LICENSING OF RADIATION SERVICES, AND ACCREDITATION OF HOSPITAL RADIOLOGY INSPECTORS

333-101-0001
Purpose and Scope

(1) This division provides for the registration of radiation machines, general license radioactive materials, and for the licensing of persons providing radia-tion machine, radioactive material, or tanning installation, consultation, servicing, and/or services, and hospital radiology inspectors performing hospital X-ray machine inspections, unless such activities are subject to other divisions of these Rules.

(2) In addition to the requirements of this division, all licensees, registrants, and accredited individuals are subject to the applicable provisions of other portions of these rules.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-101-0003
Definitions

(1) "Facility" means the location, building, vehicle, or complex under one administrative control, at which one or more devices or sources of radiation (X-ray, radioactive materials, or non-ionizing radiation) are installed.

(2) "Health Physics Consultant" means a person, business, facility, or institution providing health physics knowledge and skills for a fee. A health physics consultant may not use or possess radioactive material without specific license authorization pursuant to OAR 333-102-0200.

(3) "Inoperable" means disabling equipment such that ionizing radiation cannot be produced. This is accomplished by removing the X-ray tube, removal of the control unit, removal of the power supply or physical removal of the power cord on a free standing unit.

(4) "Storage" means a condition in which a device or source is not being used for an extended period of time, and has been made inoperable.

(5) "Vendor" means a person, business, facility, or institution providing a product or service for a fee. Radiation vendors include, but are not limited to, machine salespersons, repair and technical personnel, training providers or marketing representatives who sell, demonstrate, or market X-ray machines or tanning beds and provide advice, consultation, service, or technical information to registrants.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.685 & 453.761

333-101-0005
Application for Registration of Radiation Machines

No X-ray machine shall be operated unless the registration application has been submitted by the registrant to the Authority. Each person having a radiation machine must:

(1) Apply, in writing, for registration of such machines with the Authority prior to the operation of a radiation machine. All operable radiation machines must be registered and the appropriate fee, which is listed in division 103 of these rules, must be paid. Registration fees received by the Authority shall be refundable up to 10 calendar days if the application is withdrawn. Hospitals wishing to register any radiation machine must meet the additional requirements of OAR 333-101-0200. To avoid radiation machine registration and fees, the X-ray tube must be removed or the machine must be disassembled. Application for registration must be completed on forms furnished by the Authority and must contain the following information or such other information as may be required:

(a) Name of the owner or person having administrative control and responsibility for use. "Person" is defined in OAR 333-100-0005 to include "organization";

(b) Address and telephone number where the machine is located and used except that a central headquarters address may be given for a mobile machine used at various temporary field locations;

(c) A description of the type, model and control panel serial number of the radiation machine (state I.D. number if issued) and its rated capacity in peak kilovolts and maximum milliamperes;

(d) A description of the use (dental, medical, industrial, veterinary, research, etc.) of the machine;

(e) Date of application and signature of registrant;

(f) The individual and the signature of the individual designated under section (3) of this rule;

(g) If the facility is mobile, the geographic areas within the state to be covered; and

(h) Name of the radiation machine supplier, installer and service agent.

(2) The registrant must notify the Authority within 30 days of any change which increases the radiation output or rating of the radiation machine or of any other change which renders the information required in section (1) of this rule no longer accurate.

(3) When required by the Authority, the registrant must designate an individual who will be responsible for radiation protection for the machine. Such individual must:

(a) Be qualified by training and experience concerning all hazards and precautions involved in operating the machine for which he or she is responsible;

(b) Recommend a detailed program of radiation safety for effective compliance with the applicable requirements of these rules;

(c) Give instructions concerning hazards and safety practices to individuals who may be occupationally exposed to radiation from the machine; and

(d) Make surveys and carry out other procedures as required by these rules.

(4) When, in the opinion of the Authority, the individual designated to be responsible for radiation safety does not have qualifications sufficient to insure safe use of the machine for which he or she is responsible, the Authority may order the registrant to designate another individual who meets the requirements of this division.

(5) Each registrant must prohibit any person from furnishing radiation machine servicing or services as described in OAR 333-101-0020(4) to his radiation machine facility until such person pro-

vides evidence that he has been licensed with the Authority as a provider of services in accordance with 333-101-0020.

Stat. Auth.: ORS 453.605 - 453.807

333-101-0007
Application for General License Registration for Radioactive Materials Gauges, In Vitro Testing, Source Material, Reference and Calibration Sources, and Reciprocal Recognition of Specific Radioactive Materials License

Except for specific licensees granted a general license under OAR 333-102-0340 for reciprocal use of specific license radioactive material, each person, pursuant to 333-102-0103, 333-102-0115(1), 333-102-0125, or 333-102-0130, having general license radioactive material must:

(1) Apply for registration of such materials with the Authority within thirty (30) days of possession of such device, in vitro radioactive material used for testing, or source material. Application for registration must be completed on forms furnished by the Authority and must include the name of the general license supplier, installer, and service agent.

(2) The general license registrant must notify the Authority within thirty (30) days of any change in information required in section (1) of this rule.

(3) Each general license registrant must prohibit any person from furnishing servicing or services to any general license device until such person provides evidence that the servicing agent has been registered with the Authority as a provider of services in accordance with OAR 333-101-0020.

(4) Each general license granted pursuant to OAR 333-102-0340 must provide the specific information required pursuant to that rule.

Stat. Auth.: ORS 453.605 - ORS 453.807
Stats. Implemented: ORS 453.605 - ORS 453.807

333-101-0010
Exemptions

(1) Electronic equipment that produces radiation incidental to its operation for other purposes is exempt from the registration and notification requirements of this division, providing dose equivalent rate averaged over an area of 10 square centimeters does not exceed 5 microSv (0.5 millirem) per hour at five centimeters from any accessible surface of such equipment. The production, testing or factory servicing of such equipment is not exempt.

(2) Radiation machines while in transit or inoperable are exempt from the requirements of this division. For the purposes of registration and fees, the Authority considers an X-ray unit to be inoperable only if the machine's X-ray tube (insert) has been removed or the machine disassembled. With the X-ray tube in place, and the machine assembled, the unit is considered to be operable. If a machine is "in storage," it must be registered and charged a registration fee. However, an "inoperable" machine need not be registered or assessed a fee.

(3) Domestic television receivers are exempt from the requirements of this division.

(4) Electron microscopes are exempt from the requirements of this division, provided that the dose equivalent rate, averaged over an area of 10 square centimeters, does not exceed 5 microSv (0.5 millirem) per hour at five centimeters from any accessible surface of the equipment.

NOTE: Electron microscope: A type of microscope which uses electrons to produce magnified images and may therefore produce ionizing radiation incidental to its use.

(5) Electron beam welding machines and electron beam furnaces are exempt from the requirements of this division, provided that the dose equivalent rate, averaged over an area of 10 square centimeters, does not exceed 5 microSv (0.5 millirem) per hour at five centimeters from any accessible surface of the equipment.

(6) Persons licensed under OAR 333-102-0200 or equivalent specific licenses rules under an Agreement State or the U.S. Nuclear Regulatory Commission are exempt from this requirement.

333-101-0015
Transfer or Disposal of Radiation Producing Machines or Equipment

Whenever radiation producing machines or equipment, including general license devices containing radioactive material, are transferred or disposed of, the Authority must be notified in writing by the registrant within 30 days of the date of such transfer or disposal, and include the name and address of the person to whom it was transferred or its final disposition.

NOTE: General License radioactive materials can only be transferred pursuant to requirements in OAR 333-102.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755

333-101-0020
Application for License of Sales, Services, Consultation, and Servicing For Radiation Machines

(1) Each person who is engaged in the business of training, selling, leasing, transferring, lending, installing or offering to install radiation machines or tanning beds, or is engaged in the business of furnishing or offering to furnish radiation machines, X-ray automatic film processor, X-ray processing chemicals, radioactive material (unless such activities are authorized under a specific license), or tanning servicing or services in this state, must apply for license of such services with the Authority within 30 days following the effective date of this rule or thereafter prior to furnishing or offering to furnish any such services.

(2) Application for a license must be completed on forms furnished by the Authority and must contain the following information or such other information as may be required:

(a) Name, address and telephone number of the following:

(A) The individual or the company to be licensed; and

(B) The owner(s) of the company.

(b) The services that shall be provided;

(c) The area of the state and other states to be covered;

(d) A list of the individuals qualified to provide these services; and

(e) The date of application and signature of the individual responsible for the company, beneath a statement of the items specified in OAR 333-101-0020(3).

(3) Each person applying for license under this division must specify:

(a) That they have read and understand the requirements of these rules;

(b) The services for which they are applying for license;

(c) The training and experience that qualify them or their technical staff to discharge the services for which they are applying for license;

(A) Training for radiation machine vendors must include, but must not be limited to, a minimum of one day of training in radiation use and safety.

(B) The training specified in OAR 333-101-0020(3)(c)(A) must be taught by an Authority approved instructor. Approval shall be based upon the following criteria;

(i) Current Radiologic Technologist license with the Oregon Board of Radiologic Technology and a minimum of two years of work experience in Radiologic Technology; and

(ii) Experience in the use of radiation measurement instruments; or

(iii) "Qualified Expert" as defined in OAR 333-100-0005; or

(iv) "Health Physics Consultant" as defined in OAR 333-101-0003.

(C) Subjects to be covered must include but not be limited to:
(i) Nature of X-rays;
(ii) Radiation units;
(iii) Biological effects of X-ray radiation;
(iv) Principals of radiation protection;
(v) Radiation survey instruments;
(vi) Personnel monitoring equipment; and
(vii) Applicable federal and state radiation regulations.

(d) The type of measurement instruments to be used, frequency of calibration, source of calibration; and

(e) The type of personnel dosimeters supplied, frequency of reading and replacement or exchange schedule.

(4) All radiation machine vendors who install or repair radiation machines must have measurement instruments that assure compliance with all X-ray machine, or tanning bed installation requirements according to all applicable federal standards, as well as instruments to properly check items such as collimation, HVL, kVp, mA, time, and radiation output, or assure these tests are made by a qualified expert as needed, and that the information is included in the installation report.

(5) For the purpose of OAR 333-101-0020, services may include but must not be limited to:

(a) Sales or leasing of radiation machines, installation and servicing of radiation machines and associated radiation machine components;

(b) Calibration of radiation machines;

(c) Calibration and use of radiation measurement instruments or devices;

(d) Radiation protection or health physics consultations or surveys;

(e) Personnel dosimetry services (not otherwise licensed under these rules);

(f) Installation and servicing of automatic X-ray film processors; and

(g) Providing X-ray film processing chemicals.

(6) No individual shall perform services that are not specifically stated for that individual on the notice of licensure (certificate of validation or acknowledgment of validation) issued by the Authority.

333-101-0023
Application for License of Sales, Consulting Services, and Servicing for Radioactive Materials Devices under General License

(1) Each person who is engaged in the business of selling, installing, surveying, consulting, training, or servicing radioactive material in general license measuring, gauging, or controlling devices, or selling In Vitro testing kits, or source material, or is engaged in the business of furnishing or offering to furnish radioactive material consulting services in this state, must apply for license of such services with the Authority within 30 days following the effective date of this rule or thereafter prior to furnishing or offering to furnish any such services.

(2) Application for a license must be completed on forms furnished by the Authority.

(3) Each person applying for license under this division must specify:

(a) That they have read and understand the requirements of these rules;

(b) The services for which they are applying for license; and

(c) The training and experience that qualify them or their technical staff to discharge the services for which they are applying for license.

(4) All vendors must have measurement instruments that will assure compliance with all applicable standards, as well as instruments to properly check items such as collimation, time, and radiation output, or assure these tests are made by a qualified expert, and that the information is included in the installation report.

(5) For the purpose of OAR 333-101-0020, services may include but must not be limited to:

(a) Installation and/or servicing of radiation machines and associated radiation machine components;

(b) Calibration of general license radioactive material used for measuring, gauging, or controlling;

(c) Radiation protection or health physics consultations or surveys; and

(d) Personnel dosimetry services (not otherwise licensed under these rules).

(6) No individual shall perform services that are not specifically stated for that individual on the license application (certificate of validation or acknowledgement of validation) issued by the Authority.

(7) Persons licensed under OAR 333-102-0200 (specific radioactive materials license) are exempt from these requirements.

333-101-0025
Out-of-State Radiation Machines

(1) Whenever any radiation machine is to be brought into the state for any temporary use (a period not in excess of 30 days), the person proposing to bring such machine into the state must give written notice to the Authority (at least two working days) before such machine is to be used in the state. The notice must include:

(a) The type of radiation machine;

(b) The nature, duration and scope of use;

(c) The exact locations where the radiation machine is to be used; and

(d) The States in which this machine is registered.

(2) If for a specific case, the two working-day period would impose an undue hardship on the person, upon application to the Authority, permission to proceed sooner may be granted.

(3) The person referred to in section (1) of this rule must:

(a) Comply with all applicable rules of the Authority;

(b) Supply the Authority with such other information as the Authority may reasonably request; and

(c) Not operate within the state on a temporary basis in excess of 180 calendar days per year.

(4) Notwithstanding sections (1), (2) and (3) of this rule, registered general licenses for out-of-state radioactive material under specific license may be brought into the state for use at temporary jobsites only under the provisions of OAR 333-102-0340.

333-101-0035
Issuance of Notice of Registration for X-ray Machines

(1) Upon a determination that an applicant meets the requirements of the rules, the Authority must issue a registration and/or a validation certificate.

(2) The Authority may incorporate in the notice of registration at the time of issuance or thereafter by appropriate rule, regulation or order, such additional requirements and conditions with respect to the registrant's receipt, possession, use and transfer of radiation machines as it deems appropriate or necessary.

(3) Prior to issuance of an X-ray machine registration to a hospital, the X-ray machine will be approved by an X-ray machine inspector employed by the Authority, or inspected by an accredited radiology inspector.

(4) Prior to issuance of an X-ray machine registration to a facility other than a hospital, the X-ray machine must be approved by an X-ray machine inspector employed by the Authority.

333-101-0040
Expiration of Notice of Registration

(1) Except as provided by OAR 333-101-0045(2) each notice of registration shall expire at the end of the specified day in the month and year stated therein.

(2) An X-ray machine registration shall terminate if the X-ray machine is relocated for use in a physical surrounding other than the physical surrounding it occupied when originally registered.

Renewal of Notice of Registration

(1) Application for renewal of registration must be filed in accordance with OAR 333-101-0005 or 333-101-0020.

(2) In any case in which a registrant has filed an application in proper form for renewal, not less than 30 days prior to the expiration of his existing notice of registration, such existing notice of registration shall not expire until the application status has been determined by the Authority.

333-101-0060
Assembler and/or Transfer Obligation

(1) Any person who sells, leases, transfers, lends, disposes, assembles or installs radiation machines in this state must notify the Authority within 15 days of:

(a) The name and address of persons who have received these machines;

(b) The manufacturer, model and serial number of each radiation machine transferred; and

(c) The date of the transfer of each radiation machine.

(2) No person shall make, sell, lease, transfer, lend, assemble or install radiation machines or the supplies used in connection with such machines unless such supplies and equipment when properly placed in operation and used must meet the requirements of these rules.

(3) In the case of diagnostic x-ray systems which contain certified components, a copy of the assembler's report prepared in compliance with requirements of the federal diagnostic X-ray standard (21 CFR 1020.30(d)) must be submitted to the Authority within 15 days following completion of the assembly. Such report must suffice in lieu of any other report by the assembler.

333-101-0065
Additional Requirements

(1) No person shall use a radiation machine unless that machine is registered with the Oregon Health Authority in accordance with OAR 333-101-0005 or is exempt from the registration under OAR 333-101-0010 or 333-101-0025.

(2) No registrant shall use a radiation machine unless a current certificate of validation has been issued for that machine.

(3) The registrant must comply with any additional requirements or conditions listed on the then current certificate of validation on which the Authority has deemed appropriate or necessary to minimize danger to public health and safety or property.

333-101-0070
X-ray Machine Registration Fee Proration

(1) Not withstanding the registration requirements of division 103 of these rules, the Authority must, at the written request of the X-ray machine owner, adjust the registration expiration date of any X-ray machine to coincide with the registration expiration date of other X-ray machines currently registered to the machine owner.

(2) When requested in writing the Authority must prorate the registration fee according to the following:

(a) If a machine is registered for 19 to 24 months in a biennium, the registration fee shall be 100 percent;

(b) If a machine is registered for 13 to 18 months in a biennium the registration fee shall be 75 percent;

(c) If a machine is registered for 7 to 12 months in a biennium the registration fee shall be 50 percent;

(d) If a machine is registered for 1 day to 6 months in a biennium the registration fee shall be 25

333-101-0080
X-ray Machine Registration Denial

(1) The Authority may deny the registration or may grant a provisional registration permitting temporary operation pending compliance with Authority standards for any of the following:

(a) The X-ray machine does not comply with one or more standards adopted by rule by the Authority;

(b) The equipment associated with the operation of the X-ray machine does not comply with one or more standards adopted by rule by the Authority;

(c) The physical surroundings associated with the operation of the X-ray machine does not comply with one or more standards adopted by rule by the Authority.

(2) The Authority may deny, condition, suspend or revoke a X-ray machine registration if the Authority believes that the X-ray machine or the physical surroundings or the equipment used in conjunction with the operation of the X-ray machine presents a danger to the health or safety of the operator or the public.

Stat. Auth.: ORS 453.761

333-101-0090
Investigation and Civil Penalty

(1) If after an investigation by an Authority-employed X-ray machine inspector, the Authority has reason to believe that an act prohibited by division 101 of these rules has been committed, the Authority may impose a civil penalty not to exceed $5,000. The Authority reserves the right to pursue other remedies against alleged violators and may take any other disciplinary action at its discretion that it finds proper.

(2) In establishing the amount of the penalty for each violation, the Authority must consider, but not be limited to, the following factors:

(a) The gravity and magnitude of the violation;

(b) The person's, as defined in OAR 333-100-0005, previous record of complying or failing to comply with division 101 of these rules;

(c) The person/company's history in taking all feasible steps or in following all procedures necessary or appropriate to correct the violation; and

(d) Such other considerations as the Authority may consider appropriate.

(3) Civil penalties must be imposed in the manner provided by ORS 183.090.

333-101-0200
Hospital X-ray Machine Registration

(1) Prior to issuance of an X-ray machine registration to a hospital, the X-ray machine must be approved by an X-ray machine inspector employed by the Authority or inspected by an Authority-accredited hospital radiology inspector; and

(2) If inspection is performed by an accredited hospital radiology inspector, the test results must be reviewed and approved by the Authority; and

(3) All standards adopted by rule of the Authority are met; and

(4) A properly completed registration application has been submitted by the X-ray machine owner; and

(5) All required fees have been paid.

333-101-0210
Hospital Radiology Inspector

An accredited hospital radiology inspector is an individual who has a combination of education and experience as indicated in OAR 333-101-0220. This individual must have been tested on knowledge of Authority radiation rules governing the X-ray machine inspection program, including but not limited to, safety requirements and inspection procedures. Those individuals with current accreditation are then allowed at a participating hospital's request, to complete the annual Authority radiation inspection.

Stat. Auth.: ORS 453.780 - 453.785
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 3-1996, f. & cert. ef. 8-9-96

333-101-0220
Hospital Radiology Inspector Qualifications

(1) All applicants for licensure as hospital radiology inspectors must possess at a minimum one of the following combinations of education and experience:

(a) One year of experience using X-ray machines and associated auxiliary equipment, and at least one of the following:

(A) Certification by the American Board of Radiology or the American Board of Health Physics;

(B) A doctoral degree in a physical or biological science; or

(C) A doctor of medicine degree or a degree recognized by the Authority as an equally qualified health professional degree.

(b) Two years of experience using X-ray machines and associated auxiliary equipment, and a master's degree in a physical or biological science.

(c) Four years of experience using X-ray machines and associated auxiliary equipment, and a bachelor's degree in a physical or biological science.

(d) Six years of experience using X-ray machines and associated auxiliary equipment, and an associate's degree in a physical or biological science.

(2) Experience of an applicant includes, but is not limited to, measuring ionizing radiation, evaluating radiation safety and documenting radiation protection needs in a diagnostic radiology setting.

(3) In addition to meeting the education and experience requirements of this section, applicants must be tested on knowledge of Authority rules governing the X-ray machine inspection program, including but not limited to, safety requirements and inspection procedures.

(4) Applicants must also complete such additional written or practical testing as the Authority may require.

(5) An accreditation must not be issued or renewed to an applicant unless the applicant has paid all required fees.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - ORS 453.807

333-101-0230
Hospital Radiology Inspector Testing

(1) The Authority must offer quarterly examinations for licensure. A schedule of examination dates and times will be available upon request. The Authority reserves the right to alter or adjust examination dates, times and locations as it deems necessary and will notify applicants whenever possible.

(2) Testing will be done by the Authority or the Authority's representative and upon passing the test, the Authority will issue a radiology inspector accreditation.

(3) Applicants must qualify for examination upon compliance with all applicable provisions of OAR 333-101-0020. Applicants must not be allowed to sit for the examination if documentation is incomplete or incorrect.

(4) Documentation must be submitted to the Authority office within seven days of the examination date. No accreditation will be issued without proper documentation.

(5) Applicants providing documentation to the Authority must submit the official transcript in a sealed envelope, issued from the school or training organization. The school must attest to the documents authenticity and accuracy.

(6) Applicants taking the examination must present photographic identification, such as a driver's license, before sitting for the examination.

(7) Each applicant must complete a written examination to test the applicant's knowledge in the following subjects:

(a) Licensure and registration requirements and applicable radiation rules including:

(A) Registrant's administrative responsibilities;

(B) Registrant's X-ray machine operator responsibilities;

(C) Registrant's X-ray machine responsibilities;

(D) Registrant's responsibilities regarding film, film processing, and all quality control related to the hospital radiology department; and

(E) Hospital radiology inspector responsibilities.

(b) Authority inspection procedures and practice application;

(c) The basic principles of radiation safety; and

(d) Inspection equipment and tools.

(8) The applicant must pass the examination by a score of at least 75 percent.

(9) All examinations must be prescheduled.

333-101-0240
Hospital Radiology Inspector Accreditation

(1) Accreditation as a radiology inspector shall be valid for two years and shall expire in the second year on the last day of the month of issuance unless renewed.

(2) An accreditation may be renewed if the radiology inspector has complied with the continuing education requirements specified in OAR 333-101-0260 and has paid the renewal fee.

(3) An accreditation for the current period must be provided by the Authority.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 3-1996, f. & cert. ef. 8-9-96; PH 12-2006, f. & cert. ef. 6-16-06

333-101-0250
Hospital Radiology Inspector Accreditation Revocation

The Authority may condition, suspend, revoke, or refuse to renew accreditation of a radiology inspector for the following reasons:

(1) Knowingly falsifying information included on the inspection report form supplied by the Authority.

(2) Substantially failing to comply with Authority procedures.

(3) Failing to meet Authority accuracy requirements.

Stat. Auth.: ORS 453.790
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 3-1996, f. & cert. ef. 8-9-96

333-101-0260
Hospital Radiology Inspector Continuing Education

(1) Each radiology inspector requesting an accreditation renewal must complete 10 clock hours of continuing education every two years from the date of accreditation to qualify for renewal of accreditation.

(2) Accreditation will not be renewed without receipt of the required continuing education report, by the Authority.

(3) Accredited hospital radiology inspectors failing to obtain 10 clock hours of continuing education every two years, must reapply, complete 5 hours of continuing education for the current year, and successfully pass a written examination.

(4) Continuing education includes attendance or participation at a radiology instructional program presented, organized or under the auspices of any organization or association. For example, lectures, post-secondary school, or post-graduate courses, scientific sessions at conventions, or correspondence courses.

(5) Subject matter must be related to the law and rules regulating hospital radiology inspectors, and the regulatory concept pertaining to radiation machines and their use in the State of Oregon.

(6) Documentation must include the name of the sponsoring institution/association or organization, title of presentation, description of content, name of instructor or presenter, date, clock hours, and a statement of attendance or completion provided by the sponsor.

(7) Submission to the Authority of proof of participation in continuing education is the responsibility of the hospital radiology inspector. Such proof must be held by the hospital accredited radiology inspector until submitted to the Authority biennially at the time of renewal.

(8) Hours obtained in excess of the 10 required for each two-year period must not be carried forward as credit for the subsequent two-year continuing education requirement.

Stat. Auth.: ORS 453.605 - 453.807

333-101-0270
Hospital Responsibilities Re: X-ray Machines

Each hospital that is utilizing the services of an accredited radiology inspector must comply with the following and any other applicable sections of these rules:

(1) Contact the Authority, in writing, for information and authorization to allow the hospital to use the services of an accredited radiology inspector:

(a) Contact must be made three months prior to the facility's one year inspection due date or before March 1 of each renewal year by the registrant;and

(b) Contact with the Authority must be remade and a new authorization given by the Authority for every renewal period.

(2) Continually have available the services of an accredited radiology inspector or notify the Authority if they have terminated the services of the accredited radiology inspector.

(3) Records of safety inspections must be dept for two years after completion of the last inspection.

(4) Have procedures in place and followed which comply with all applicable parts of divisions 100, 101, 106, 109, 111, and 120 of these rules.

(5) Have an inspection and safety program in place which complies with all applicable parts of divisions 100, 101, 106, 109, 111 and 120 of these rules.

(6) Make records, X-ray machines, and related equipment available for inspection by the Authority during normal working hours.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-101-0280
Authority Responsibilities Regarding the Radiology Inspection

The Authority responsibilities must include the following as well as other applicable sections of these rules:

(1) Do annual audits of hospital programs to monitor accredited radiology inspector results and to monitor changes in the performance of registered X-ray machines during the registration period.

(2) Evaluate registrant test results provided by the accredited radiology inspectors.

(3) Grant or deny X-ray machine registrations, accreditation of hospital radiology inspectors and issue documents of registration and accreditation.

(4) Deny, condition, suspend, or revoke an X-ray machine registration or radiology inspector accreditation.

(5) Grant a provisional registration permitting temporary operation pending compliance with Authority standards.

(6) Investigate any alleged prohibited act and resolve complaints against accredited radiology inspectors and their employers.

(7) Impose civil penalties.

(8) Develop programs to evaluate hazards associated with the use of X-ray machines.

(9) Develop testing, training and continued education standards for accreditation of radiology inspectors.

(10) Promulgate standards and make regulations relating to the registration of X-ray machines, accreditation of radiology inspectors, X-ray machine operation, physical surroundings and equipment related to the operation of the X-ray machines, operator training, and approved X-ray machine operating practices.

(11) Test applicants for radiology inspector accreditation.

(12) Collect and disseminate information relating to X-ray machine users.

(13) Provide technical assistance and safety information to X-ray machine users.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-101-0290
Accredited Hospital Radiology Inspector Responsibilities

The accredited radiology inspector's responsibilities must include the following and compliance with any other applicable sections of these rules:

(1) Be currently accredited by the Authority as an accredited hospital radiology inspector.

(2) Each accredited hospital radiology inspector conducting a registration inspection on a hospital X-ray machine must collect information and do tests in the manner required by the Authority.

(3) Each accredited hospital radiology inspector must make calculations in the manner prescribed by the Authority and must enter the results and such other information as the Authority may require, on a form provided by the Authority.

(4) Each accredited hospital radiology inspector must make all inspection records and results available for audit or investigation by Authority inspectors.

(5) Accredited hospital radiology inspectors must not misrepresent in any way, a device identifying an X-ray machine registration.

(6) Accredited hospital radiology inspectors must not alter, obscure, deface, or remove a device identifying registration of an X-ray machine.

(7) Accredited hospital radiology inspectors must possess equipment appropriate and capable of doing the testing, monitoring, etc., required by applicable Authority standards.

(8) Assure all X-ray output and scatter radiation monitoring equipment have been calibrated within the past 12 months with X-rays in the same energy range as the diagnostic equipment being evaluated. Such calibration must be traceable to the National Institute of Standards and Technology (NIST).

DIVISION 102

LICENSING OF RADIOACTIVE MATERIAL

333-102-0001
Purpose and Scope

(1) This division prescribes rules applicable to all persons in the State of Oregon governing licensing of radioactive material, and for exemptions from licensing requirements. No person may receive, produce, possess, use, transfer, own or acquire byproduct material except as authorized in a specific or general license pursuant to this division or divisions 105, 113, 115, 116, 117, or 121 of this chapter.

(2) In addition to the requirements of division 102, all licensees are subject to applicable requirements in divisions 100, 103, 111, 118, and 120 of this chapter. The requirements of this division are in addition to, and not in substitution for, other requirements of this chapter. In any conflict between the requirements in this division and a specific requirement in another division of the rules in this chapter, the specific requirement governs.

(3) This division establishes general licenses for the possession and use of source material and depleted uranium, for radioactive material contained in certain items, and for ownership of radioactive material.

(4) This division gives notice to all persons who knowingly provide to any licensee, contractor, or subcontractor, components, equipment, materials, or other goods or services, that relate to a licensee's activities subject to this division, that they may be individually subject to Authority actions pursuant to OAR 333-100-0035 or 333-100-0040.

(5) This division prescribes requirements for the issuance of specific licenses to persons who manufacture or initially transfer items containing radioactive material for sale or distribution to persons granted a general license by this division or to persons authorized by the US Nuclear Regulatory Commission to distribute to persons exempted from licensing requirements, and it prescribes certain rules governing holders of these licenses. In addition, this division prescribes requirements for the issuance of specific licenses to persons who introduce radioactive material into a product or material owned by or in the possession of the licensee or another and rules governing holders of such licenses. Further, this division describes procedures and prescribes requirements for the issuance of certificates of registration (governing radiation safety information about a product) to manufacturers or initial transferors of sealed source or devices containing sealed sources, which are to be used by persons specifically licensed under this division or equivalent regulations of an Agreement State or the US Nuclear Regulatory Commission.

(6) The Authority may engage the services of qualified persons in order to assist the Authority in meeting the requirements of this chapter, including, but not limited to, evaluating information that may be required under OAR 333-102-0200(6).

(7) Information provided to the Authority by an applicant for a license or by a licensee or information required by statute or by the Authority's rules, orders, or license conditions to be maintained by the applicant or the licensee must be complete and accurate in all material respects.

(8) Each applicant or licensee must notify the Authority of information identified by the applicant or licensee as having for the regulated activity a significant implication for public health and safety. An applicant or licensee violates this rule only if the applicant or licensee fails to notify the Authority of information that the applicant or licensee has identified as having a significant implication for public health and safety. Notification must be provided to the Authority within two working days of identifying the information. This requirement is not applicable to information that already is required to be provided to the Authority by other reporting or updating requirements.

Exemptions

333-102-0005
Unimportant Quantities of Source Material

(1) Any person is exempt from this division to the extent that such person receives, possesses, uses, owns or transfers source material in any chemical mixture, compound, solution or alloy in which the source material is by weight less than 1/20 of one percent (0.05 percent) of the mixture, compound, solution or alloy.

(2) Any person is exempt from this division to the extent that such person receives, possesses, uses or transfers unrefined and unprocessed ore containing source material; provided that, except as authorized in a specific license, such person must not refine or process such ore.

(3) Any person is exempt from this division and divisions 111 and 120 to the extent that such person receives, possesses, uses or transfers:

(a) Any quantities of thorium contained in:

(A) Incandescent gas mantles;

(B) Vacuum tubes;

(C) Welding rods;

(D) Electric lamps for illuminating purposes provided that each lamp does not contain more than 50 milligrams of thorium;

(E) Germicidal lamps, sun lamps and lamps for outdoor or industrial lighting provided that each lamp does not contain more than two grams of thorium;

(F) Rare earth metals and compounds, mixtures and products containing not more than 0.25 percent by weight thorium, uranium or any combination of these; or

(G) Personnel neutron dosimeters, provided that each dosimeter does not contain more than 50 milligrams of thorium.

(b) Source material contained in the following products:

(A) Glazed ceramic tableware manufactured before August 27, 2013, provided that the glaze contains not more than 20 percent by weight source material;

(B) Piezoelectric ceramic containing not more than two percent by weight source material;

(C) Glassware containing more than two percent by weight source material or , for glassware manufactured before August 27, 2013, not more than ten percent by weight source material; but not including commercially manufactured glass brick, pane glass, ceramic tile or other glass or ceramic used in construction; or

(D) Glass enamel or glass enamel frit containing not more than ten percent by weight source material imported or ordered for importation into the United States, or initially distributed by manufacturers in the United States, before July 25, 1983.

(c) Photographic film, negatives and prints containing uranium or thorium;

(d) Any finished product or part fabricated of, or containing tungsten-thorium or magnesium-thorium alloys, provided that the thorium content of the alloy does not exceed four percent by weight and that this exemption must not be deemed to authorize the chemical, physical or metallurgical treatment or processing of any such product or part;

(e) Uranium contained in counterweights installed in aircraft, rockets, projectiles and missiles or stored or handled in connection with installation or removal of such counterweights, provided that:

(A) Each counterweight has been impressed with the following legend clearly legible through any plating or other covering: "DEPLETED URANIUM";

NOTE: The requirements specified in paragraphs (3)(e)(A) and (3)(e)(B) of this rule need not be met by counterweights manufactured prior to December 31, 1969 provided, that such counterweights were manufactured under a specific license issued by the Atomic Energy Commission and are impressed with the legend required by paragraph(3)(e)(B) of this rule in effect on June 30, 1969.

(B) Each counterweight is durably and legibly labeled or marked with the identification of the manufacturer and the statement: "UNAUTHORIZED ALTERATIONS PROHIBITED"; and

(C) This exemption must not be deemed to authorize the chemical, physical or metallurgical treatment or processing of any such counterweights other than repair or restoration of any plating or other covering.

(f) Natural or depleted uranium metal used as shielding constituting part of any shipping container, provided that:

(A) The shipping container is conspicuously and legibly impressed with the legend "CAUTION — RADIOACTIVE SHIELDING — URANIUM"; and

(B) The uranium metal is encased in mild steel or equally fire resistant metal of minimum wall thickness of 1/8 inch (3.2 mm).

(g) Thorium or uranium contained in finished optical lenses and mirrors, provided that each lens does not contain more than 10 percent by weight of thorium or uranium or, for lenses manufactured before August 27, 2013, 30 percent by weight of thorium; and that this exemption must not be deemed to authorize either:

(A) The shaping, grinding or polishing of such lens or mirrors or manufacturing processes other than the assembly of such lens or mirror into optical systems and devices without any alteration of the lens or mirror; or

(B) The receipt, possession, use or transfer of uranium or thorium contained in contact lenses, or in spectacles, or in eyepieces in binoculars or other optical instruments.

(h) Thorium contained in any finished aircraft engine part containing nickel-thoria alloy, provided that:

(A) The thorium is dispersed in the nickel-thoria alloy in the form of finely divided thoria (thorium dioxide); and

(B) The thorium content in the nickel-thoria alloy does not exceed four percent by weight.

(4) The exemptions in section (3) of this rule do not authorize the manufacture of any of the products described.

(5) No person may initially transfer for sale or distribution a product containing source material to persons exempt under this rule, U.S. Nuclear Regulatory Commission or equivalent regulations of an Agreement State, unless authorized by a license issued under OAR 333-102-0300 and 333-102-0305 to initially transfer such products for sale or distribution.

(a) Persons initially distributing source material in products covered by the exemptions in this rule before August 27, 2013, without specific authorization may continue such distribution for one year beyond this date. Initial distribution may also be continued until the Authority takes final action on a pending application for license or license amendment to specifically authorize distribution submitted no later than one year beyond this date.

(b) Persons authorized to manufacture, process, or produce these materials or products containing source material by an Agreement State, and persons who import finished products or parts, for sale or distribution must be authorized by a license issued under OAR 333-102-0300 and 333-102-0305 for distribution only and are exempt from the requirements of divisions 111 and 120 of this chapter, and OAR 333-102-0200(2) and (3).

Exemptions — Byproduct Material Other than Source Material

333-102-0010
Exempt Concentrations

(1) Except as provided in sections (3) or (4) of this rule, any person is exempt from this division to the extent that such person receives, possesses, uses, transfers, owns or acquires products containing radioactive material introduced in concentrations not in excess of those listed in 10 CFR Part 30.70.

(2) This section shall not be deemed to authorize the import of byproduct material or products containing byproduct material.

(3) A manufacturer, processor, or producer of a product or material is exempt from the requirements for a license outlined in OAR 333-102-0005 to the extent that transfers of radioactive material contained in a product or material in concentrations not in excess of those specified in 10 CFR Part 30.70 and introduced into the product or material by a licensee holding a specific license issued by an Agreement State, or the Nuclear Regulatory Commission, expressly authorizing such introduction. This exemption does not apply to the transfer of byproduct material contained in any food, beverage, cosmetic, drug, or other commodity or product designed for ingestion or inhalation by, or application to, a human being.

(4) No person may introduce byproduct material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under section (1) of this rule or equivalent regulations of the U.S. Nuclear Regulatory Commission, any Agreement State, or Licensing State except in accordance with a specific license issued pursuant to OAR 333-102-0245 or the general license granted by OAR 333-102-0340.

NOTE: 10 CFR Part 30.70 Schedule A is available from the Public Health Division, Radiation Protection Services.

Exempt Items

333-102-0015
Certain Items Containing Byproduct Material

(1) Except for persons who apply radioactive material to, or persons who incorporate radioactive material into the following products, any person is exempt from these rules to the extent that he or she receives, possesses, uses, transfers, owns or acquires the following products:

NOTE: Authority to transfer possession or control by the manufacturer, processor, or producer of any equipment, device, commodity, or other product containing byproduct material whose subsequent possession, use, transfer, and disposal by all other persons are exempted from regulatory requirements may be obtained only from the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

(a) Timepieces or hands or dials containing not more than the following specified quantities of radioactive material and not exceeding the following specified levels of radiation:

(A) 25 millicuries (925 MBq) of tritium per timepiece;

(B) Five millicuries (185 MBq) of tritium per hand;

(C) 15 millicuries (555 MBq) of tritium per dial (when used, bezels must be considered as part of the dial);

(D) 100 microcuries (3.7 MBq) of promethium-147 per watch or 200 microcuries (7.4 MBq) of promethium-147 per any other timepiece;

(E) 20 microcuries (0.74 MBq) of promethium-147 per watch hand or 40 microcuries (1.48 MBq) of promethium-147 per other timepiece hand;

(F) 60 microcuries (2.22 MBq) of promethium-147 per watch dial or 120 microcuries (4.44 MBq) of promethium-147 per other timepiece dial (when used, bezels must be considered as part of the dial);

(G) 0.15 microcurie (5.55 kBq) of radium per timepiece;

(H) 0.03 microcurie (1.11 kBq) of radium per hand;

(I) 0.09 microcurie (3.33 kBq) of radium per dial (when used, bezels must be considered as part of the dial);

(J) The radiation dose rate from hands and dials containing promethium-147 will not exceed, when measured through 50 milligrams per square centimeter of absorber:

(i) For wrist watches, 0.1 millirad (one Gy) per hour at 10 centimeters from any surface;

(ii) For pocket watches, 0.1 millirad (one Gy) per hour at one centimeter from any surface; and

(iii) For any other timepiece, 0.2 millirad (two Gy) per hour at 10 centimeters from any surface.

(K) One microcurie (37 kBq) of radium-226 per timepiece in intact timepieces manufactured prior to November 30, 2007.

(b) Precision balances containing not more than one millicurie (37 MBq) of tritium per balance or not more than 0.5 millicurie (18.5 MBq) of tritium per balance part manufactured before December 17, 2007;

(c) Marine compasses containing not more than 750 millicuries (27.8 GBq) of tritium gas and other marine navigational instruments containing not more than 250 millicuries (9.25 GBq) of tritium gas manufactured before December 17, 2007;

(d) Electron tubes: Provided, that each tube does not contain more than one of the following specified quantities of radioactive material:

(A) 150 millicuries (5.55 GBq) of tritium per microwave receiver protector tube or 10 millicuries (370 MBq) of tritium per any other electron tube;

(B) One microcurie (37 kBq) of cobalt-60;

(C) Five microcuries (185 kBq) of nickel-63;

(D) 30 microcuries (1.11 MBq) of krypton-85;

(E) Five microcuries (185 kBq) of cesium-137; or

(F) 30 microcuries (1.11 MBq) of promethium-147.

(G) And provided further, that the radiation dose rate from each electron tube containing radioactive material will not exceed one millirad (10 Gy) per hour at one centimeter from any surface when measured through seven milligrams per square centimeter of absorber.

NOTE: For purposes of, subsection (1)(d) of this rule "electron tubes" include spark gap tubes, power tubes, gas tubes including glow lamps, receiving tubes, microwave tubes, indicator tubes, pick-up tubes, radiation detection tubes and any other completely sealed tube that is designed to conduct or control electrical currents.

(e) Ionizing radiation measuring instruments containing, for purposes of internal calibration or standardization, one or more sources of radioactive material, provided that:

(A) Each source contains no more than one exempt quantity set forth in 10 CFR Part 30.71 Schedule B; and

(B) Each instrument contains no more than 10 exempt quantities. For purposes of this requirement, an instrument's source(s) may contain either one or different types of radionuclides and an individual exempt quantity may be composed of fractional parts of one or more of the exempt quantities in 10 CFR Part 30.71 Schedule B provided that the sum of such fractions must not exceed unity.

(C) For americium-241, 0.05 microcuries (1.85 kBq) is considered an exempt quantity under paragraph (1)(e)(A) of this rule. Ionization chamber smoke detectors containing not more than one microcurie (uCi) of americium-241 per detector in the form of a foil and designed to protect life and property from fires.

(f) Static elimination devices that contain, as a sealed source or sources, byproduct material consisting of a total of not more than 500 microcuries (18.5 MBq) of polonium 210 per device.

(g) Ion generating tubes designed for ionization of air that contain, as a sealed source or sources, byproduct material consisting of a total of not more than 500 millicuries(18.5 MBq) of polonium 210 per device or of a total of not more than 50 millicuries (1.85 GBq) of hydrogen 3 (tritium) per device.

(h) Such devices authorized before October 23, 2012 for use under the general license then provided in 10 CFR Part 31.3 and equivalent regulations of Agreement States and manufactured, tested, and labeled by the manufacturer in accordance with the specifications contained in a specific license issued by the Nuclear Regulatory Commission.

(2) The exemptions contained in this rule must not authorize any of the following:

(a) The manufacture of any product listed;

(b) The application or removal of radioactive luminous material to or from meters and timepieces or hands and dials therefore;

(c) The installation into automobile locks of illuminators containing tritium or promethium-147 or the application of tritium to balances of precision or parts thereof;

(d) Human use, or the use in any device or article, except timepieces, which is intended to be placed on or in the human body;

(e) As applied to radioactive material exempted under section (1) of this rule, the production, packaging, repackaging or transfer of radioactive material for purposes of commercial distribution or the incorporation of radioactive material into products intended for commercial distribution.

333-102-0025

Gas and Aerosol Detectors Containing Byproduct Material

(1) Except for persons who manufacture, process, produce or initially transfer for sale or distribution gas and aerosol detectors containing byproduct material, any person is exempt from the requirements for a license and from the rules in this division and in divisions 105, 113, 115, 116, 117, 120, and 121 of this chapter to the extent that such person receives, possesses, uses, transfers, owns or acquires byproduct material in gas and aerosol detectors designed to protect health, safety, or property and manufactured, processed, produced, or initially transferred in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to 10 CFR Parts 32.26 of; or a Licensing State pursuant to OAR 333-102-0260, which authorizes the initial transfer of the product for use under this rule. This exemption also covers gas and aerosol detectors manufactured or distributed before November 30, 2007 in accordance with a specific license issued by a state under comparable provisions to OAR 333-102-0260 authorizing distribution to persons who are exempt from regulatory requirements.

(2) Any person who desires to manufacture, process, or produce gas and aerosol detectors containing byproduct materials, or to initially transfer such products for use under section (1) of this rule shall apply for a license under OAR 333-102-0260 and for a certificate of registration in accordance with 10 CFR Part 32.210.

(3) Gas and aerosol detectors containing NARM previously manufactured and distributed in accordance with a specific license issued by a Licensing State must be considered exempt under section (1) of this rule, provided that the device is labeled in accordance with the specific license authorizing distribution and provided further that they meet the requirements of OAR 333-102-0260.

333-102-0030

Self-Luminous Products Containing Tritium, Krypton-85, or Promethium-147

(1) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147, and except as

provided in section (3) of this rule, any person is exempt from the requirements for a license set forth in divisions 105, 113, 115, 116, 117, 120, 121 and 124 of this chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires tritium, krypton-85, or promethium-147 in self-luminous products manufactured, processed, produced, or initially transferred in accordance with a specific license issued pursuant to OAR 333-102-0245, which authorizes the initial transfer of the product for use under this section.

(2) Any person who desires to manufacture, process, or produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147 for use under section (1) of this rule, shall apply for a license under OAR 333-102-0245 and for a certificate of registration in accordance with 10 CFR Part 32.210.

(3) The exemption in section (1) of this rule does not apply to tritium, krypton-85, or promethium-147 used in products primarily for frivolous purposes or in toys or adornments.

333-102-0032
Self Luminous Products and Sources Containing Radium-226

(1) A general license is hereby issued to any person to acquire, receive, possess, use, or transfer in accordance with the provisions of sections (1), (2), and (3) of this rule, radium-226 contained in the following products manufactured prior to November 30, 2007.

(a) Antiquities originally intended for use by the general public. For the purposes of this subsection, antiquities mean products originally intended for use by the general public and distributed in the late 19th and early 20th centuries, such as radium emanator jars, revigators, radium water jars, radon generators, refrigerator cards, radium bath salts, and healing pads.

(b) Intact timepieces containing greater than 0.037 megabecquerel (1 microcurie), nonintact timepieces, and timepiece hands and dials no longer installed in timepieces.

(c) Luminous items installed in air, marine, or land vehicles.

(d) All other luminous products provided that no more than 100 items are used or stored at the same location at any one time.

(e) Small radium sources containing no more than 0.037 megabecquerel (1 microcurie) of radium-226. For the purposes of this subsection, "small radium sources" means discrete survey instrument check sources, sources contained in radiation measuring instruments, sources used in educational demonstrations (such as cloud chambers and spinthariscopes), electron tubes, lightning rods, ionization sources, static eliminators, or as designated by the Nuclear Regulatory Commission.

(2) Persons who acquire, receive, possess, use, or transfer byproduct material under the general license issued in section (1) of this rule are exempt from the provisions of the rules in this division and in divisions 105, 113, 115, 116, 117, 120, 121 and 124 of this chapter, to the extent that the receipt, possession, use, or transfer of byproduct material is within the terms of the general license; provided, however, that this exemption shall not be deemed to apply to any such person specifically licensed under this chapter.

(3) Any person who acquires, receives, possesses, uses or transfers byproduct material in accordance with the general license in section (1) of this rule:

(a) Shall notify the Authority should there be any indication of possible damage to the product so that it appears it could result in a loss of the radioactive material. A report containing a brief description of the event, and the remedial action taken, must be furnished to the Authority within 30 days.

(b) Shall not abandon products containing radium-226. The product, and any radioactive material from the product, may only be disposed of according to 10 CFR Part 20.2008 or by transfer to a person authorized by a specific license to receive the radium-226 in the product or as otherwise approved by the Nuclear Regulatory Commission.

(c) Shall not export products containing radium-226 except in accordance with 10 CFR Part 110.

(d) Shall dispose of products containing radium-226 at a disposal facility authorized to dispose of radioactive material in accordance with any federal or state solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005, by transfer to a person authorized to receive radium-226 by a specific licensee or equivalent regulations of an Agreement State, or as otherwise approved by the Authority.

(e) Shall respond to written requests from the Authority to provide information relating to the general licensee within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by a written authorization to the Authority

(f) The general license in section (1) of this rule does not authorize the manufacture, assembly, disassembly, repair or import of products containing radium-226, except that timepieces may be disassembled and repaired.

333-102-0033
Certain Industrial Devices

(1) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere, any person is exempt from the requirements for a license set forth in rules in this division and in divisions 105, 113, 115, 116, 117, 120, and 121 of this chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires byproduct material, in these certain detecting, measuring, gauging, or controlling devices and certain devices for producing an ionized atmosphere, and manufactured, processed, produced, or initially transferred in accordance with a specific license issued under this division, which authorizes the initial transfer of the device for use under this section. This exemption does not cover sources not incorporated into a device, such as calibration and reference sources.

(2) Any person who desires to manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material for use under section (1) of this rule shall apply for a license under this division and for a certificate of registration in accordance with 10 CFR Part 32.210.

333-102-0035
Exempt Quantities

(1) Except as provided in sections (2), (3) and (5) of this rule, any person is exempt from these rules to the extent that such person receives, possesses, uses, transfers, owns or acquires radioactive material in individual quantities, each of which does not exceed the applicable quantity set forth in 10 CFR Part 30.71 Schedule B.

(2) This rule does not authorize the production, packaging or repackaging of radioactive material for purposes of commercial distribution or the incorporation of radioactive material into products intended for commercial distribution.

(3) Any person who possesses radioactive material received or acquired under the general license formerly provided in OAR 333-102-0015(1)(g) is exempt from the requirements for a license set forth in this rule to the extent that such person possesses, uses, transfers or owns such byproduct material. .

(4) No person may, for purposes of commercial distribution, transfer radioactive material in the individual quantities set forth in 10 CFR Part 30.71 Schedule B, knowing or having reason to believe that such quantities of radioactive material will be transferred to persons exempt under this rule or equivalent regulations of the U.S. Nuclear Regulatory Commission, any Agreement State or Licensing State, except in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to section 32.18 of 10 CFR Part 32 or by the Authority pursuant to OAR 333-102-0255, which license states that the radioactive material may be transferred by the licensee to persons exempt under this rule or the equivalent regulations of the U.S. Nuclear Regulatory Commission, any Agreement State or Licensing State.

(5) No person may, for purposes of producing an increased radiation level, combine quantities of byproduct material covered by this exemption so that the aggregate quantity exceeds the limits set forth in 10 CFR Part 30.71, Schedule B, except for byproduct material combined within a device placed in use before May 3, 1999, or as otherwise permitted by the regulations in this rule.

NOTE: Authority to transfer possession or control by the manufacturer, processor or producer or any equipment, device, commodity or other product containing byproduct material whose subsequent possession, use, transfer and disposal by all other persons are exempted from regulatory requirements may be obtained only from the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

In Vivo Testing in Humans for H. Pylori Using Carbon-14 Labeled Urea

(1) Except as provided in sections (3) and (4) of this rule, any person is exempt from the requirements for a specific license pursuant to this division and divisions 116 of this chapter provided that such person receives, possesses, uses, transfers, owns, or acquires capsules containing 37 kBq (1 microcurie) carbon-14 urea (allowing for nominal variation that may occur during the manufacturing process) each, for "in vivo" diagnostic use for humans.

NOTE: "Nominal variation" as used in this context means + 10% of the reported per capsule dose.

(2) Any person who desires to use the capsules for research involving human subjects must apply for and receive a specific license pursuant to division 102 of this chapter.

(3) Any person who desires to manufacture, prepare, process, produce, package, repackage, or transfer for commercial distribution such capsules must apply for and receive a specific license pursuant to 10 CFR 32.21.

(4) Nothing in this rule relieves persons from complying with applicable FDA, other Federal, and State requirements governing receipt, administration, and use of drugs.

Licenses

333-102-0075
Types of Licenses

Licenses for radioactive materials are of two types: General and specific.

(1) General licenses provided in this division are granted as being effective without the filing of applications with the Authority or the issuance of licensing documents to particular persons, except Depleted Uranium subject to OAR 333-102-0106, Measuring, Gauging, and Controlling devices subject to OAR 333-102-0115, and In Vitro Clinical or Laboratory Testing subject to OAR 333-102-0130.

(2) Specific licenses require the submission of an application to the Authority and the issuance of a specific licensing document by the Authority. The licensee is subject to all applicable portions of these rules as well as any limitations specified in the licensing document. Specific licenses are issued to named persons upon applications filed pursuant to OAR 333-102-0200 and divisions 105, 113, 115, 116, 117, and 121 of this chapter.

(3) General licenses granted by OAR 333-102-0101, 333-102-0106, 333-102-0115, and 333-102-0130 require the submission of an application to the Authority for registration pursuant to 333-101-0007, payment of a fee in accordance with 333-103-0015, and the issuance of a registration (licensing document or general license acknowledgment) by the Authority.

(4) General licenses are subject to OAR 333-100-0005 (Definitions), 333-100-0025 (Exemptions), 333-100-0030 (Additional Requirements), 333-100-0055 (Records), 333-100-0060(1) and 333-100-0060(2) (Inspections), 333-100-0065 (Tests), 333-102-0305(1) through 333-102-0305(8) (Terms and Conditions of Licenses), 333-102-0330 (Transfers), 333-102-0335 (Modification, Revocation, and Termination of Licenses), and divisions 103, 111, 118, and 120 of this chapter unless indicated otherwise in the language of the general license.

NOTE: Attention is directed particularly to the provisions of the regulations in division 120 of this chapter that relate to the labeling of containers and notification of incidents.

(5) Any record required by this division must be legible throughout the retention period specified by each Authority rule. The record may be the original or a reproduced copy or a microform provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, specifications, must include all pertinent information such as letters, stamps, initials, and signatures. The licensee must maintain adequate safeguards against tampering with and loss of records.

General Licenses

333-102-0101
General Licenses — Small Quantities of Source Material

(1) A general license is hereby issued authorizing commercial and industrial firms, research, educational and medical institutions, and state and local government agencies to use and transfer uranium and thorium, in their natural isotopic concentrations and in the form of depleted uranium, for research, development, educational, commercial, or operations purposes in the following forms and quantities:

(a) No more than 1.5 kg (3.3 lb) of uranium and thorium in dispersible forms such as gaseous, liquid, or powder, at any one time. Any material processed by the general licensee that alters the chemical or physical form of the material containing source material must be accounted for as a dispersible form. A person authorized to possess, use, and transfer source material under this paragraph may not receive more than a total of 7 kg (15.4 lb) of uranium and thorium in any one calendar year. Persons possessing source material in excess of these limits as of August 27, 2013, may continue to possess up to 7 kg (15.4 lb) of uranium and thorium at any one time for one year beyond this date, or until the Commission takes final action on a pending application submitted on or beforeAugust 27, 2014, for a specific license for such material; and receive up to 70 kg (154 lb) of uranium or thorium in any one calendar year until December 31, 2014, or until the Commission takes final action on a pending application submitted on or before August 27, 2014, for a specific license for such material; and

(b) No more than a total of 7 kg (15.4 lb) of uranium and thorium at any one time. A person authorized to possess, use, and transfer source material under this section may not receive more than a total of 70 kg (154 lb) of uranium and thorium in any one calendar year. A person may not alter the chemical or physical form of the source material possessed under this section unless it is accounted for under the limits of subsection (1)(a) of this rule; or

(c) No more than 7 kg (15.4 lb) of uranium, removed during the treatment of drinking water, at any one time. A person may not remove more than 70 kg (154 lb) of uranium from drinking water during a calendar year under this section; or

(d) No more than 7 kg (15.4 lb) of uranium and thorium at laboratories for the purpose of determining the concentration of uranium and thorium contained within the material being analyzed at any one time. A person authorized to possess, use, and transfer source material under this section may not receive more than a total of 70 kg (154 lb) of source material in any one calendar year.

(2) Any person who receives, possesses, uses, or transfers source material in accordance with the general license in section (1) of this rule:

(a) Is prohibited from administering source material, or the radiation therefrom, either externally or internally, to human beings except as may be authorized by the Authority in a specific license.

(b) Shall not abandon such source material. Source material may be disposed of as follows:

(A) A cumulative total of 0.5 kg (1.1 lb) of source material in a solid, non-dispersible form may be transferred each calendar year, by a person authorized to receive, possess, use, and transfer source material under this general license to persons receiving the material for permanent disposal. The recipient of source material transferred under the provisions of this paragraph is exempt from the requirements to obtain a license under this rule to the extent the source material is permanently disposed. This provision does not apply to any person who is in possession of source material under a specific license issued under this chapter; or

(B) In accordance with OAR 333-120-0500, Waste Disposal – General Requirements.

(c) Is subject to the provisions in OAR 333-100-0080, 333-102-0001, 333-102-0005, 333-102-0075, 333-102-0101, 333-102-0305, 333-102-0330, 333-102-0350, and 333-102-0353.

(d) Shall not export such source materials except in accordance with 10 CFR Part 110.

(3) Any person who receives, possesses, uses, or transfers source material in accordance with section (1) of this rule shall conduct activities so as to minimize contamination of the facility and the environment. When activities involving such source material are permanently ceased at any site, if evidence of significant contamination is identified, the general licensee shall notify the Authority about such contamination and may consult with the Authority as to the appropriateness of sampling and restoration activities to ensure that any contamination or residual source material remaining at the site where source material was used under this general license is not likely to result in exposures that exceed the limits in 10 CFR Parts 20.1402.

(4) Any person who receives, possesses, uses, or transfers source material in accordance with the general license granted in section (1) of this rule is exempt from the provisions of division 111 and 120 of this chapter and 10 CFR Part 21 to the extent that such receipt, possession, use, and transfer are within the terms of this general license, except that such person shall comply with the provisions of CFR 10 Parts 20.1402 and 20.2001 to the extent necessary to meet the provisions of subsection (2)(b) and section (3) of this rule. However, this exemption does not apply to any person who also holds a specific license issued under this division.

(5) No person may initially transfer or distribute source material to persons generally licensed under subsection (1)(a) or section (2) of this rule, or equivalent regulations of an Agreement State, unless authorized by a specific license issued in accordance with OAR 333-102-0102 or equivalent provisions of an Agreement State. This prohibition does not apply to analytical laboratories returning processed samples to the client who initially provided the sample. Initial distribution of source material to persons generally licensed by section (1) of this rule before August 27, 2013 without specific authorization may continue for one year beyond this date. Distribution may also be continued until the Commission takes final action on a pending application for license or license amendment to specifically authorize distribution submitted on or before August 27, 2014.

(6) A general license is hereby granted authorizing the receipt of title to source material without regard to quantity. This general license does not authorize any person to receive, possess, use or transfer source material.

(7) Persons who receive, acquire, possess or use source material pursuant to the general license granted by section (1) of this rule must develop and maintain procedures to establish physical control over the source material and prevent transfer of such source material to persons not authorized to receive the source material.

(8) A person who receives, acquires, possesses or uses source material pursuant to the general license granted by section (1) of this rule:

(a) Must not introduce such source material, in any form, into a chemical, physical, or metallurgical treatment or process;

(b) Must not abandon such source material; and

(c) Must transfer or dispose of such source material only by transfer in accordance with the provisions of OAR 333-102-0330 or 333-120-0500.

333-102-0102
Requirements for License to Initially Transfer Source Material for Use Under the Small Quantities of Source Materials General License

An application for a specific license to initially transfer source material for use under OAR 333-102-0101, or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State shall be approved if:

(1) The applicant satisfies the general requirements specified in OAR 333-102-0200; and

(2) The applicant submits adequate information on, and the Authority approves the methods to be used for quality control, labeling, and providing safety instructions to recipients.

333-102-0103 [Renumbered to **333-102-0106**]

333-102-0104
Conditions of Licenses to Initially Transfer Source Material for Use Under the 'Small Quantities of Source Material' General License: Quality Control, Labeling, Safety Instructions, and Records and Reports

(1) Each person licensed under OAR 333-102-0102 shall label the immediate container of each quantity of source material with the type of source material and quantity of material and the words "radioactive material".

(2) Each person licensed under OAR 333-102-0102 shall ensure that the quantities and concentrations of source material are as labeled and indicated in any transfer records.

(3) Each person licensed under OAR 333-102-0102 shall provide the information specified in this rule to each person to whom source material is transferred for use under OAR 333-102-0101, equivalent provisions in Agreement State or the U.S. Nuclear Regulatory Commission's regulations. This information must be transferred before the source material is transferred for the first time in each calendar year to the particular recipient. The required information includes:

(a) A copy of OAR 333-102-0101 and OAR 333-102-0330, or relevant equivalent regulations of the Agreement State or the U.S. Nuclear Regulatory Commission; and

(b) Appropriate radiation safety precautions and instructions relating to handling, use, storage, and disposal of the material.

(4) Each person licensed under OAR 333-102-0102 shall report transfers as follows:

(a) File a report with the Authority. The report shall include the following information:

(A) The name, address, and license number of the person who transferred the source material;

(B) For each general licensee under OAR 333-102-0101:

(i) Equivalent Agreement State provisions or the Nuclear Regulatory Commission regulations to whom greater than 50 grams (0.11 lb) of source material has been transferred in a single calendar quarter;

(ii) The name and address of the general licensee to whom source material is distributed:

(iii) A responsible agent, by name and position, and phone number, of the general licensee to whom the material was sent; and

(iv) The type, physical form, and quantity of source material transferred.

(C) The total quantity of each type and physical form of source material transferred in the reporting period to all such generally licensed recipients.

(b) File a report with each responsible Agreement State or U.S. Nuclear Regulatory Commission agency that identifies all persons, operating under provisions equivalent to OAR 333-102-0101, to whom greater than 50 grams (0.11 lb) of source material has been transferred within a single calendar quarter. The report shall include the following information specific to those transfers made to the Agreement State being reported to:

(A) The name, address, and license number of the person who transferred the source material; and

(B) The name and address of the general licensee to whom source material was distributed; a responsible agent, by name or position and phone number of the general licensee to whom the material was sent; and the type, physical form, and quantity of source material transferred.

(C) The total quantity of each type and physical form of source material transferred in the reporting period to all such generally licensed recipients within the Agreement State or U.S. Nuclear Regulatory Commission's jurisdiction.

(c) Submit each report by January 31 of each year covering all transfers for the previous calendar year. If no transfers were made to persons generally licensed under OAR 333-102-0101 or equivalent Agreement State or U.S. Nuclear Regulatory Commission's provisions during the current period, a report shall be submitted to the Authority indicating so. If no transfers have been made to general licensees in a particular Agreement State or U.S. Nuclear Regulatory Commission's jurisdiction during the reporting period, this information shall be reported to the responsible Agreement State agency upon request of the agency

(5) Each person licensed under OAR 333-102-0102 shall maintain all information that supports the reports required by this rule concerning each transfer to a general licensee for a period of one year after the event is included in a report to the Authority, Agreement State agency, or the U.S. Nuclear Regulatory Commission.

333-102-0106
General Licenses — Depleted Uranium in Industrial Products and Devices

(1) A general license is hereby granted to receive, acquire, possess, use or transfer, in accordance with the provisions of sections (2), (3), (4) and (5), depleted uranium contained in industrial products or devices for the purpose of providing a concentrated mass in a small volume of the product or device.

(2) The general license in section (1) of this rule applies only to industrial products or devices that have been manufactured either in accordance with a specific license issued to the manufacturer of the products or devices pursuant to OAR 333-102-0235 or in accordance with a specific license issued to the manufacturer by the U.S. Nuclear Regulatory Commission or an Agreement State that authorizes manufacture of the products or devices for distribution to persons granted a general license by the U.S. Nuclear Regulatory Commission or an Agreement State.

(3) Persons who receive, acquire, possess or use depleted uranium pursuant to the general license established by section (1) of this rule must apply for registration of the general license pursuant to OAR 333-101-0007, and submit the required fee pursuant to 333-103-0015. Applicants will receive a validation certificate from the Authority. Application for registration must be submitted within 30 days after the first receipt or acquisition of such depleted uranium.

(a) The general licensee must provide the following information in accordance with the registration application required by OAR 333-101-0007 and such other information as may be required by that form:

(A) Name and address of the general licensee;

(B) A statement that the general licensee has developed and will maintain procedures designed to establish physical control over the depleted uranium described in section (1) of this rule and designed to prevent transfer of such depleted uranium in any form, including metal scrap, to persons not authorized to receive the depleted uranium; and

(C) Name and title, address, and telephone number of the individual duly authorized to act for and on behalf of the general licensee in supervising the procedures identified in subsection (3)(b) of this rule.

(b) The general licensee possessing or using depleted uranium under the general license established by section (1) of this rule must report any changes in information in writing to the Authority within 30 days after the effective date of such change.

(4) A person who receives, acquires, possesses or uses depleted uranium pursuant to the general license established by section (1) of this rule:

(a) Must not introduce such depleted uranium, in any form, into a chemical, physical or metallurgical treatment or process, except a treatment or process for repair or restoration of any plating or other covering of the depleted uranium;

(b) Must not abandon such depleted uranium;

(c) Must transfer or dispose of such depleted uranium only by transfer in accordance with the provisions of OAR 333-102-0330. In the case where the transferee receives the depleted uranium pursuant to the general license granted by section (1) of this rule, the transferor must furnish the transferee a copy of this rule and a copy of the general license registration application required by 333-101-0007. In the case where the transferee receives the depleted uranium pursuant to a general license contained in the U.S. Nuclear Regulatory Commission's or Agreement State's regulation equivalent to section (1) of this rule, the transferor must furnish the transferee a copy of this rule and a copy of the general license registration application required by 333-101-0007 accompanied by a note explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or Agreement State under requirements substantially the same as those in this rule;

(d) Must report in writing to the Authority, within 30 days of any transfer, the name and address of the person receiving the depleted uranium pursuant to such transfer; and

(e) Must not export such depleted uranium except in accordance with a license issued by the U.S. Nuclear Regulatory Commission pursuant to 10 CFR Part 110.

(5) Any person receiving, acquiring, possessing, using or transferring depleted uranium pursuant to the general license established by section (1) of this rule is exempt from the requirements of divisions 111 and 120 of this chapter with respect to the depleted uranium covered by that general license.

General Licenses — Radioactive Material Other than Source Material

333-102-0110
Luminous Safety Devices for Aircraft

(1) A general license is hereby granted to own, receive, acquire, possess and use tritium or promethium-147 contained in luminous safety devices for use in aircraft, provided:

(a) Each device contains not more than 370 GBq (10 curies) of tritium or 11.1 GBq (300 millicuries) of promethium-147; and

(b) Each device has been manufactured, assembled or imported in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, or each device has been manufactured or assembled in accordance with the specifications contained in a specific license issued by the Authority or any Agreement State to the manufacturer or assembler of such device pursuant to licensing requirements equivalent to those in 10 CFR Part 32.53.

(2) Persons who own, receive, acquire, possess or use luminous safety devices pursuant to the general license in section (1) of this rule are exempt from the requirements of divisions 111 and 120 of this chapter except that they must comply with the provisions of 333-120-0700 and 333-120-0710.

(3) This general license does not authorize the manufacture, assembly or repair of luminous safety devices containing tritium or promethium-147.

(4) This general license does not authorize the ownership, receipt, acquisition, possession or use of promethium-147 contained in instrument dials.

(5) This general license is subject to the provisions of OAR 333-100-0005 (Definitions), 333-100-0025 (Exemptions), 333-100-0030 (Additional Requirements), 333-100-0055 (Records), 333-100-0060(1) and 333-100-0060(2) (Inspections), 333-100-0065 (Tests), 333-102-0305(1) through 333-102-0305(7) (Terms and Conditions of Licenses), 333-102-0330 (Transfer of Material), 333-102-0335 (Modification, Revocation, and Termination of Licenses), and division 118 of this chapter.

333-102-0115
Certain Measuring, Gauging and Controlling Devices

(1) A general license is hereby issued to commercial and industrial firms and to research, educational and medical institutions, individuals in the conduct of their business, and state or local government agencies to own, receive, acquire, possess, use or transfer in accordance with the provisions of OAR 333-103-0015 and sections (2), (3) and (4) of this rule, radioactive material, excluding special nuclear material, contained in devices designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation leakage, or qualitative or quantitative chemical composition, or for producing light or an ionized atmosphere.

(2) The general license in section (1) of this rule applies only to radioactive material contained in devices that have been manufactured or initially transferred and labeled in accordance with the specifications contained in a specific license issued by the Authority pursuant to OAR 333-102-0200 or in accordance with the specifications contained in a specific license issued by the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State, that authorizes distribution of devices to persons generally licensed by the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State.

(3) The devices must have been received from one of the specific licensees described in section (2) of this rule or through a transfer made in accordance with subsection (4)(i) of this rule.

NOTE: Regulations under the Federal Food, Drug and Cosmetic Act authorizing the use of radioactive control devices in food production require certain additional labeling thereon which is found in 21 CFR 179.21.

(4) Any person who owns, receives, acquires, possesses, uses or transfers radioactive material in a device pursuant to the general license in section (1) of this rule:

(a) Must assure that all labels affixed to the device at the time of receipt, and bearing a statement that removal of the label is prohibited, are maintained thereon and must comply with all instructions and precautions provided by such labels;

(b) Must assure that the device is tested for leakage of radioactive material and proper operation of the on-off mechanism and indicator, if any, at no longer than six-month intervals or at such other intervals as are specified in the label; however:

(A) Devices containing only krypton need not be tested for leakage of radioactive material; and

(B) Devices containing only tritium or not more than 100 microcuries (3.7 MBq) of other beta or gamma emitting material or

10 microcuries (0.37 MBq) of alpha emitting material and devices held in storage in the original shipping container prior to initial installation need not be tested for any purpose.

(c) Must assure that tests required in subsection (4)(b) of this rule and other testing, installation servicing and removing from installation involving the radioactive materials, its shielding or containment, are performed:

(A) In accordance with the instructions provided by the labels; or

(B) By a person holding an applicable specific license from the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State to perform such activities.

(d) Must maintain records showing compliance with the requirements of subsections (4)(b) and (4)(c) of this rule. The records must show the results of tests. The records also must show the dates of performance of, and the names of persons performing, testing, installation servicing and removal from installation concerning the radioactive material, its shielding or containment. The licensee must retain these records as follows:

(A) Records of tests for leakage of radioactive material required by subsection (4)(b) of this rule must be maintained as required in OAR 333-100-0057.

(B) Records of tests of the on-off mechanism and indicator required by subsection (4)(b) of this rule must be maintained as required in OAR 333-100-0057.

(C) Records which are required by subsection (4)(c) of this rule must be maintained as required in OAR 333-100-0057.

(e) Upon the occurrence of a failure of or damage to, or any indication of a possible failure of or damage to, the shielding of the radioactive material or the on-off mechanism or indicator, or upon the detection of 0.005 microcurie (185 Bq) or more of removable radioactive material, the licensee must immediately suspend operation of the device until it has been repaired by the manufacturer or other person holding an applicable specific license from the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State to repair such devices. The device and any radioactive material from the device may only be disposed of by transfer to a person authorized by a specific license to receive the radioactive material in the device or as otherwise approved by the Authority. A report containing a brief description of the event and the remedial action taken; and, in the case of detection of 0.005 microcurie or more removable radioactive material or failure of or damage to a source likely to result in contamination of the premises or the environs, a plan for ensuring that the premises and environs are acceptable for unrestricted use, must be submitted to the Authority within 30 days. Under these circumstances, the criteria set out in OAR 333-120-0190, as determined by the Authority, on a case-by-case basis;

(f) Must not abandon the device containing radioactive material;

(g) Except as provided in subsection (4)(i) of this rule, must transfer or dispose of the device containing radioactive material only by export as provided by subsection (4)(l) of this rule, by transfer to another general licensee as authorized in subsection (4)(i) of this rule, or by transfer to a specific licensee of the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State whose specific license authorizes the individual to receive the device; and

(A) Must furnish to the Authority, within 30 days after transfer of a device to a specific licensee or export, a report containing identification of the device by manufacturer's name, model number, serial number, the date of transfer, and the name, address and license number of the person receiving the device;

(B) The general licensee must obtain written Authority approval before transferring the device to any other specific licensee not specifically identified in subsection (4)(g) of this rule.

(h) A holder of a specific license may transfer a device for possession and use under its own specific license without prior approval, if the holder:

(A) Verifies that the specific license authorized the possession and use, or applies for and obtains an amendment to the license authorizing the possession and use;

(B) Removes, alters, covers, or clearly and unambiguously augments the existing label so that the device is labeled in compliance with OAR 333-120-0430, however the manufacturer model and serial numbers must be retained;

(C) Obtains manufacturer's or initial transferor's information concerning maintenance that are applicable under the specific license (such as leak testing procedures); and

(D) Reports the transfer under OAR 333-102-0115(4)(g)(A).

(i) Must transfer the device to another general licensee only:

(A) Where the device remains in use at a particular location. In such case the transferor must give the transferee a copy of this rule and any safety documents identified in the label on the device and within 30 days of the transfer, report to the Authority the manufacturer's (or initial transferor's) name, model number, serial number of the device transferred, the date of transfer, the name and address of the transferee and the location of use, and the name, title and phone number of the individual who is a point of contact between the Authority and the transferee. This individual must have the knowledge and authority to take actions to ensure compliance with the appropriate rules and requirements concerning the possession and use of these devices; or

(B) Where the device is held in storage in the original shipping container at its intended location of use prior to initial use by a general licensee.

(j) Must comply with the provisions of OAR 333-120-0700 and 333-120-0710 for reporting radiation incidents, theft or loss of licensed material but shall be exempt from the other requirements of divisions 111 and 120 of this chapter;

(k) Must submit the required Authority form and receive from the Authority a validated registration certificate acknowledging the general license and verifying that all provisions of these rules have been met. The form must be submitted within 30 days after the first receipt or acquisition of such device. The general licensee must develop and maintain procedures designed to establish physical control over the device as described in this rule and designed to prevent transfer of such devices in any form, including metal scrap, to persons not authorized to receive the devices.

(l) Shall not export a device containing radioactive material except in accordance with 10 CFR Part 110.

(5) The general license in section (1) of this rule does not authorize the manufacture of devices containing radioactive material.

(6) The general license provided in section (1) of this rule is subject to the provisions of OAR 333-100-0040 through 333-100-0055, 333-102-0335, 333-103-0015 and 333-118-0050.

(7) The general licensee possessing or using devices licensed under the general license established by section (1) of this rule must report in writing to the Authority any changes in information furnished by the licensee on the required Authority form. The report must be submitted within 30 days after the effective date of such change.

(8) The licensee must appoint an individual responsible for having knowledge of the appropriate regulations and requirements and the authority for taking required actions to comply with appropriate regulations and requirements. The general licensee, through this individual, must ensure the day-to-day compliance with appropriate regulations and requirements. This appointment does not relieve the general licensee of any of its responsibility in this regard.

(9)(a) A device distributed or otherwise received as a generally licensed device must be registered with the Authority. Each address for a location of use, as described under subsection (9)(b) of this rule, represents a separate general licensee and requires a separate registration and fee. Devices containing more than 37 MBq (1 mCi) of cesium-137, 3.7 MBq (0.1 mCi) of strontium-90, 37 MBq (1 mCi) of cobalt-60, any quantity of americium-241, 3.7 MBq (0.1 mCi) of radium 226 or any other transuranic (i.e., element with atomic number greater than uranium (92)), based on

the activity indicated on the label are required to have a specific license.

(b) In registering devices, the general licensee must furnish the following information and any other information specifically requested by the Authority:

(A) Name and mailing address of the general licensee;

(B) Information about each device. The manufacturer (or initial transferor), model number, serial number, the radioisotope and activity (as indicated on the label);

(C) Name, title, and telephone number of the responsible person designated as a representative of the general licensee under section (8) of this rule.

(D) Address or location at which the device(s) are used and stored. For portable devices, the address of the primary place of storage.

(E) Certification by the responsible representative of the general licensee that the information concerning the device(s) has been verified through a physical inventory and checking of label information.

(F) Certification by the responsible representative of the general licensee that they are aware of the requirements of the general license.

(10) General licensees must report changes to their mailing address or the location of use (including a change in name of general licensee) to the Authority within 30 days of the effective date of the change.

(11) Generally licensed devices that are not in use for longer than two years must be transferred to an authorized recipient or disposed of as radioactive waste. Shutters must be locked in the closed position on devices that are not being used or are in storage. The testing required by subsection (4)(b) of this rule need not be performed during the period of storage only. However, when devices are put back into service or transferred to another person, and have not been tested within the required test interval, they must be tested for leakage before use or transfer and the shutter tested before use.

(12) Persons generally licensed by an Agreement State with respect to devices meeting the criteria in section (9) of this rule are not subject to registration requirements if the devices are used in areas subject to NRC jurisdiction for a period less than 180 consecutive days in any calendar year. The Nuclear Regulatory Commission does not require registration information from such licensees.

(13) The general license in section (1) of this rule does not authorize the manufacture or import of devices containing radioactive material.

Ownership of Radioactive Material

A general license is hereby granted to own radioactive material without regard to quantity. Notwithstanding any other provisions of this division, this general license does not authorize the manufacture, production, transfer, receipt, possession or use of radioactive material.

333-102-0125
Calibration and Reference Sources

(1) A general license is hereby granted to those persons listed in subsections (1)(a) and (1)(b) of this rule to own, receive, acquire, possess, use, and transfer, in accordance with the provisions of sections (4) and (5) of this rule, americium-241, plutonium, or radium-226, in the form of calibration or reference sources:

(a) Any person who holds a specific license issued by the Authority that authorizes receipt, possession, use, and transfer of radioactive material; and

(b) Any person who holds a specific license issued by the U.S. Nuclear Regulatory Commission that authorizes receipt, possession, use, and transfer of special nuclear material.

(2) A general license is hereby granted to own, receive, possess, use and transfer plutonium in the form of calibration or reference sources in accordance with the provisions of sections (4) and (5) of this rule to any person who holds a specific license issued by the Authority that authorizes receipt, possession, use, and transfer of radioactive material.

(3) A general license is hereby granted to own, receive, possess, use and transfer radium-226 in the form of calibration or reference sources in accordance with the provisions of sections (4) and (5) of this rule to any person who holds a specific license issued by the Authority that authorizes receipt, possession, use, and transfer radioactive material.

(4) The general licenses in sections (1), (2), and (3) of this rule apply only to calibration or reference sources that have been manufactured in accordance with the specifications contained in a specific license issued to the manufacturer or importer of the sources by the U.S. Nuclear Regulatory Commission pursuant to section 32.57 of 10 CFR Part 32 or section 70.39 of 10 CFR Part 70 or that have been manufactured in accordance with the specifications contained in a specific license issued to the manufacturer by the Authority, any Agreement State or Licensing State pursuant to licensing requirements equivalent to those contained in section 32.57 of 10 CFR Part 32, or section 70.39 of 10 CFR Part 70.

(5) The general licenses provided in sections (1), (2) and (3) of this rule are subject to the provisions of OAR 333-100-0005 (Definitions), 333-100-0025 (Exemptions), 333-100-0030 (Additional Requirements), 333-100-0055 (Records), 333-100-0060(1) and 333-100-0060(2) (Inspections), 333-100-0065 (Tests), 333-102-0305(1) through 333-102-0305(8) (Terms and Conditions of Licenses), 333-102-0330 (Transfers), 333-102-0335 (Modification, Revocation, and Termination of Licenses), and divisions 111, and 120 of this chapter. In addition, persons who own, receive, acquire, possess, use or transfer one or more calibration or reference sources pursuant to these general licenses:

(a) Must not possess at any one time, at any one location of storage or use, more than five microcuries (185 kBq) each of americium-241, of plutonium-238, plutonium-239, or of radium-226 in such sources; and

(b) Each license issued under this rule shall affix to each source or source storage container a label containing sufficient information relative to safe use and storage of the source and shall include the following statement or a substantially similar statement that contains the information called for in the following statement:

The receipt, possession, use, and transfer of this source, Model _____, Serial No. _____, are subject to a general license and the regulations of the U.S. Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority. Do not remove this label.

CAUTION - RADIOACTIVE MATERIAL -THIS SOURCE CONTAINS (AMERICIUM-241) (PLUTONIUM) or (RADIUM 226) DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE. _____ Name of manufacturer or importer

NOTE: Show only the name of the appropriate material.

(c) Must not transfer, abandon or dispose of such source except by transfer to a person authorized by a specific license from the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State to receive the source;

(d) Must store such source, except when the source is being used, in a closed container adequately designed and constructed to contain americium-241, plutonium, or radium-226 that might otherwise escape during storage; and

(e) Must not use such source for any purpose other than the calibration of radiation detectors or the standardization of other sources.

(6) These general licenses do not authorize the manufacture of calibration or reference sources containing americium-241, plutonium, or radium-226.

(7) Each licensee licensed under the provisions of 10 CFR Part 32.57 shall perform a dry wipe test as outlined in 10 CFR Part 32.59.

333-102-0130
General License for Use of Radioactive Material for Certain In Vitro Clinical or Laboratory Testing

(1) A general license is hereby granted to any physician, veterinarian, clinical laboratory, or hospital to receive, acquire, possess, transfer or use, for any of the following stated tests, in accordance with sections (2), (3), (4), (5) and (6) of this rule, the following radioactive materials in prepackaged units for use in In Vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals:

(a) Iodine-125 in units not exceeding ten microcuries (370 kBq) each for use in in vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals;

(b) Iodine-131, in units not exceeding ten microcuries (370 kBq) each for use in in vitro clinical or laboratory tests not involving internal or external administration of byproduct material, or the radiation therefrom, to human beings or animals;

(c) Carbon-14, in units not exceeding ten microcuries (370 kBq) each for use in in vitro clinical or laboratory tests not involving internal or external administration of byproduct material, or the radiation therefrom, to human beings or animals;

(d) Hydrogen-3 (tritium) in units not exceeding 50 microcuries (1.85 MBq) each for use in in vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals;

(e) Iron-59 in units not exceeding 20 microcuries (740 kBq) each for use in in vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals;

(f) Selenium-75, in units not exceeding ten microcuries (370 kBq) each for use in in vitro clinical or laboratory tests not involving internal or external administration of byproduct material, or the radiation therefrom, to human beings or animals;

(g) Mock iodine-125 reference or calibration sources, in units not exceeding 0.05 microcuries (1.85 kBq) of iodine-129 and 0.005 microcuries (185 Bq) of americium-241 each for use in in vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals.

(2) A person may not receive, acquire, possess, use or transfer radioactive material under the general license granted by section (1) of this rule unless that person:

(a) Has filed the required Authority application for registration pursuant to OAR 333-101-0007 and submitted the registration fee pursuant to 333-103-0015 and received from the Authority a validated license with certification number assigned; or

(b) Has a license that authorizes the medical use of radioactive material that was issued under OAR chapter 333, division 116.

(3) A person who receives, acquires, possesses or uses radioactive material pursuant to the general license established by section (1) of this rule must comply with the following:

(a) The general licensee must not possess at any one time, at any one location of storage or use a total amount of iodine-125, iodine-131, selenium-75, cobalt-57 and/or iron-59 in excess of 200 microcuries (7.4 MBq);

(b) The general licensee must store the radioactive material, until used, in the original shipping container or in a container providing equivalent radiation protection;

(c) The general licensee must use the radioactive material only for the uses authorized by section (1) of this rule;

(d) The general licensee must dispose of the mock iodine-125 reference or calibration sources described in subsection (1)(g) of this rule as required by OAR 333-120-0500 and section (6);

(e) The general licensee must not transfer the radioactive material to a person who is not authorized to receive it pursuant to a license issued by the Authority, the U.S. Nuclear Regulatory Commission, any Agreement State or Licensing State, nor transfer the radioactive material in any manner other than in the unopened, labeled shipping container as received from the supplier.

(4) The general licensee must not receive, acquire, possess or use radioactive material pursuant to section (1) of this rule:

(a) Except as prepackaged units that are labeled in accordance with the provisions of an applicable specific license issued by the U.S. Nuclear Regulatory Commission, any Agreement State or any Licensing State that authorizes the manufacture and distribution of iodine-125, iodine-131, carbon-14, hydrogen-3 (tritium), selenium-75, cobalt-57, iron-59 or mock iodine-125 for distribution to persons generally licensed under section (1) of this rule or its equivalent; and

(b) Unless one of the following statements, as appropriate, or a substantially similar statement which contains the information called for in one of the following statements, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:

(A) This radioactive material may be received, acquired, possessed and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation there from, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of the United States Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

_____

Name of Manufacturer

(B) This radioactive material may be received, acquired, possessed and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation there from, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of a Licensing State.

_____

Name of Manufacturer

(5) The registrant possessing or using radioactive material granted by the general license of section (1) of this rule must report in writing to the Authority any changes in the information furnished on the required Authority form. The report must be furnished within 30 days after the date of such change.

(6) Any person using radioactive material pursuant to the general license granted by section (1) of this rule is exempt from the requirements of divisions 111 and 120 of this chapter with respect to radioactive material covered by that general license, except that such persons using mock iodine-125 described in subsection (1)(g) of this rule must comply with provisions of OAR 333-120-0500, 333-120-0700 and 333-120-0710.

333-102-0135
Ice Detection Devices

(1) A general license is hereby issued to own, receive, acquire, possess, use and transfer strontium-90 contained in ice detection devices, provided each device contains not more than 50 microcuries (1.85 MBq) of strontium-90 and each device has been manufactured or imported in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission or each device has been manufactured in accordance with the specifications contained in a specific license issued by the Authority or an Agreement State to the manufacturer of such device pursuant to licensing requirements equivalent to those in section 32.61 of 10 CFR Part 32.

(2) Persons who own, receive, acquire, possess, use or transfer strontium-90 contained in ice detection devices pursuant to the general license granted by section (1) of this rule:

(a) Must, upon occurrence of visually observable damage, such as a bend or crack or discoloration from overheating to the device, discontinue use of the device until it has been inspected, tested for leakage and repaired by a person holding a specific license from the Authority, the U.S. Nuclear Regulatory Commission or any other Agreement State to manufacture or service such devices; or shall dispose of the device pursuant to the provisions of OAR 333-120-0500;

(b) Must assure that all labels affixed to the device at the time of receipt, and which bear a statement which prohibits removal of the labels, are maintained thereon; and

(c) Are exempt from the requirements of divisions 111 and 120 of this chapter except that such persons must comply with the provisions of OAR 333-120-0500, 333-120-0700, and 333-120-0710.

(3) This general license does not authorize the manufacture, assembly, disassembly or repair of strontium-90 in ice detection devices.

(4) This general license is subject to the provisions of OAR 333-100-0005 (Definitions), 333-100-0025 (Exemptions), 333-100-0030 (Additional Requirements), 333-100-0055 (Records), 333-100-0060(1) and 333-100-0060(2) (Inspections), 333-100-0065 (Tests), 333-102-0305(1) through 333-102-0305(8) (Terms and Conditions of Licenses), 333-102-0330 (Transfer of material), 333-102-0335 (Modification, Revocation, and Termination of Licenses) and division 118 of this chapter.

333-102-0190
Application for Specific Licenses

(1) Applications for specific licenses must be filed on a form prescribed by the Authority. Information contained in previous applications, statements or reports filed with the Authority, the US Nuclear Regulatory Commission, or an Agreement State or a Licensing State or the Atomic Energy Commission may be incorporated by reference, provided that the reference is clear and specific.

(2) The Authority may at any time after the filing of the original application, and before the expiration of the license, require further statements in order to enable the Authority to determine whether the application shall be granted or denied or whether a license shall be modified or revoked.

(3) Each application must be signed by the applicant or licensee or a person duly authorized to act for and on the applicant's or licensee's behalf.

(4) Each applicant for a specific license is required to have a permanent in-state office with a copy of all required records available for inspection by the Authority.

(5) An application for a license filed pursuant to the rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter will be considered also as an application for licenses authorizing other activities for which licenses are required by the Act, provided that the application specifies the additional activities for which licenses are requested and complies with rules of the Authority and the US Nuclear Regulatory Commission as to applications for such licenses.

(6) Each new application for a radioactive material license must be accompanied by the fee prescribed by OAR 333-103-0010. Fees received by the Authority shall be refundable up to 10 calendar days if the application is withdrawn. No fee will be required to accompany an application for renewal or amendment of a license, except as provided in OAR 333-103-0010.

(7) An application for a license to receive and possess radioactive material for the conduct of any activity that the Authority has determined, pursuant to Subpart A of Part 51 of 10 CFR (Environmental Protection Regulations applicable to materials licensing), will significantly affect the quality of the environment, must be filed at least nine months prior to commencement of con-

struction of the plant or facility in which the activity will be conducted and must be accompanied by any Environmental Report required pursuant to Subpart A of 10 CFR Part 51.

(8) An application for a specific license to use byproduct material in the form of a sealed source or in a device that contains the sealed source must either:

(a) Identify the source or device by manufacturer and model number as registered with the US Nuclear Regulatory Commission under 10 CFR Part 32.210 or with an Agreement State; or for a source or a device containing radium-226 or accelerator-produced radioactive material with a state under provisions comparable to 10 CFR Parts 32.210; or

(b) Contain the information identified in 10 CFR Part 32.210(c); or

(c) For sources or devices manufactured prior to October 23, 2012 that are not registered with the Nuclear Regulatory Commission or an Agreement State which the applicant is unable to provide all categories of information specified in 10 CFR Part 32.210(c) the applicant must provide:

(A) All available information identified in 10 CFR Part 32.210(c) concerning the source and if applicable the device; and

(B) Sufficient additional information to demonstrate that there is reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and property. Information must include a description of the source or device, description of radiation safety features, intended use and associated operating experience and the results of a recent leak test:

(i) For sealed sources and devices allowed to be distributed without registration of safety information in accordance with 10 CFR Part 32.210(g)(1), the applicant may supply only the manufacturer, model number, and radionuclide and quantity; or

(ii) If it is not feasible to identify each sealed source and device individually, the applicant may propose constraints on the number and type of sealed sources and devices to be used and the conditions under which they will be used, in lieu of identifying each sealed source and device.

(9) As provided by OAR 333-102-0200, certain applications for specific licenses filed under this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter must contain a proposed decommissioning funding plan or a certification of financial assurance for decommissioning as follows:

(10)(a) Each application to possess radioactive materials in unsealed form, on foils or plated sources, or sealed in glass in excess of the quantities in 10 CFR 30.72, "Schedule C — Quantities of Radioactive Materials Requiring Consideration of the Need for an Emergency Plan for Responding to a Release," must contain either:

(A) An evaluation showing that the maximum dose to a person offsite due to a release of radioactive materials shall not exceed one rem effective dose equivalent or five rems to the thyroid; or

(B) An emergency plan for responding to a release of radioactive material.

(b) One or more of the following factors may be used to support an evaluation submitted under paragraph (10)(a)(A) of this rule:

(A) The radioactive material is physically separated so that only a portion could be involved in an accident;

(B) All or part of the radioactive material is not subject to release during an accident because of the way it is stored or packaged;

(C) The release fraction in the respirable size range shall be lower than the release fraction shown in 10 CFR Part 30.72 (Schedule C — Quantities of Radioactive Materials Requiring Consideration of the Need for an Emergency Plan for Responding to a Release) due to the chemical or physical form of the material;

(D) The solubility of the radioactive material shall reduce the dose received;

(E) Facility design or engineered safety features in the facility shall cause the release fraction to be lower than shown in 10 CFR Part 30.72;

(F) Operating restrictions or procedures shall prevent a release fraction as large as that shown in 10 CFR Part 30.72; or

(G) Other factors appropriate for the specific facility.

(c) An emergency plan for responding to a release of radioactive material submitted under paragraph (10)(a)(B) of this rule must include the following information:

(A) Facility description. A brief description of the licensee's facility and area near the site.

(B) Types of accidents. An identification of each type of radio-active materials accident for which protective actions may be needed.

(C) Classification of accidents. A classification system for classifying accidents as alerts or site area emergencies.

(D) Detection of accidents. Identification of the means of detecting each type of accident in a timely manner.

(E) Mitigation of consequences. A brief description of the means and equipment for mitigating the consequences of each type of accident, including those provided to protect workers onsite, and a description of the program for maintaining the equipment.

(F) Assessment of releases. A brief description of the methods and equipment to assess releases of radioactive materials.

(G) Responsibilities. A brief description of the responsibilities of licensee personnel if an accident occurs, including identification of personnel responsible for promptly notifying offsite response organizations and the Authority; also responsibilities for developing, maintaining, and updating the plan.

(H) Notification and coordination. A commitment to and a brief description of the means to promptly notify offsite response organizations and request offsite assistance, including medical assistance for the treatment of contaminated injured onsite workers when appropriate. A control point must be established. The notification and coordination must be planned so that unavailability of some personnel, parts of the facility, and some equipment will not prevent the notification and coordination. The licensee also must commit to notify the Authority immediately after notification of the appropriate offsite response organizations and not later than one hour after the licensee declares an emergency.

NOTE: These reporting requirements do not supersede or release licensees of complying with the requirements under the Emergency Planning and Community Right-to-Know Act of 1986, Title III, Pub. L. 99-499 or other state or federal reporting requirements.

(I) Information to be communicated. A brief description of the types of information on facility status, radioactive releases, and recommended protective actions, if necessary, to be given to offsite response organizations and to the Authority.

(J) Training. A brief description of the frequency, performance objectives and plans for the training that the licensee will provide workers on how to respond to an emergency including any special instructions and orientation tours the licensee can offer to fire, police, medical and other emergency personnel. The training must familiarize personnel with site-specific emergency procedures. Also, the training must thoroughly prepare site personnel for their responsibilities in the event of accident scenarios postulated as most probable for the specific site, including the use of team training for such scenarios.

(K) Safe shutdown. A brief description of the means of restoring the facility to a safe condition after an accident.

(L) Exercises. Provisions for conducting quarterly communications checks with offsite response organizations and biennial onsite exercises to test response to simulated emergencies. Quarterly communications checks with offsite response organizations must include the check and update of all necessary telephone numbers. The licensee must invite offsite response organizations to participate in the biennial exercises. Participation of offsite response organizations in biennial exercises although recommended is not required. Exercises must use accident scenarios postulated as most probable for the specific site and the scenarios must not be known to most exercise participants. The licensee must critique each exercise using individuals not having direct implementation responsibility

for the plan. Critiques of exercises must evaluate the appropriateness of the plan, emergency procedures, facilities, equipment, training of personnel, and overall effectiveness of the response. Deficiencies found by the critiques must be corrected.

(M) Hazardous chemicals. A certification that the applicant has met its responsibilities under the Emergency Planning and Community Right-to-Know Act of 1986, title III, Pub. L. 99-499, if applicable to the applicant's activities at the proposed place of use of the byproduct material.

(N) An application from a medical facility, educational institution, or federal facility to produce Positron Emission Tomography (PET) radiopharmaceutical drugs for noncommercial transfer to licensees in its consortium authorized for medical use under 10 CFR Part 35 or division 116 of this chapter or equivalent Agreement State requirements shall include:

(i) A request for authorization for the production of PET radionuclides or evidence of an existing license issued under 10 CFR Part 30 or Agreement State requirements for a PET radionuclide production facility within its consortium from which it receives PET radionuclides.

(ii) Evidence that the applicant is qualified to produce radiopharmaceutical drugs for medical use by meeting one of the criteria in 10 CFR 32.72(a)(2).

(iii) Identification of individual(s) authorized to prepare the PET radiopharmaceutical drugs if the applicant is a pharmacy, and documentation that each individual meets the requirements of an authorized nuclear pharmacist as specified in OAR 333-116-0880 and 333-116-0910.

(iv) Information identified in 10 CFR Part 32.72(a)(3) on the PET radiopharmaceutical to be non-commercially transferred to members of its consortium.

(v) Each applicant for a license for byproduct material shall protect Safeguards Information against unauthorized disclosure in accordance with the requirements in 10 CFR Parts 73.21, 73.22 and 73.23 as applicable.

(d) The licensee must allow the offsite response organizations expected to respond in case of an accident 60 days to comment on the licensee's emergency plan before submitting it to the Authority. The licensee must provide any comments received within the 60 days to the Authority with the emergency plan.

333-102-0200
General Requirements for the Issuance of Specific Licenses

An application for a specific license, will be approved if:

(1) The application is for a purpose authorized by the Act;

(2) The applicant is qualified by training and experience to use the material for the purpose requested in such manner as to protect health and minimize danger to life or property;

(3) The applicant's proposed equipment and facilities are adequate to protect health and minimize danger to life or property;

(4) The applicant satisfies any applicable special requirements contained in divisions 102, 105, 113, 115, 116, 117, or 121 of this chapter; and

(5) In the case of an application for a license to receive and possess radioactive material for the conduct of any activity which the Authority determines will significantly affect the quality of the environment, the Authority Manager or designee, before commencement of construction of the plant or facility in which the activity will be conducted, on the basis of information filed and evaluations made pursuant to Subpart A of Part 51 of 10 CFR, has concluded, after weighing the environmental, economic, technical, and other benefits against environmental costs and considering available alternatives, that the action called for is the issuance of the proposed license, with any appropriate conditions to protect environmental values. Commencement of construction prior to such conclusion must be grounds for denial of a license to receive and possess byproduct material in such plant or facility. As used in this rule, the term "commencement of construction" means any clearing of land, excavation, or other substantial action that can adversely affect the environment of a site. The term does not mean site exploration, necessary roads for site exploration, borings to determine foundation conditions, or other preconstruction monitoring or testing to establish background information related to the suitability of the site or the protection of environmental values. Upon a determination that an application meets the requirements of the Act, and the rules of the Authority, the Authority will issue a specific license authorizing the possession and use of radioactive material ("Radioactive Materials License").

(6) Financial assurance and recordkeeping for decommissioning following the specific requirements listed below:

(a) 10 CFR 30.35 and 30.36 for radioactive material that is not source or special nuclear material; or

(b) 10 CFR 40.36 for source material; or

(c) 10 CFR 70.25 for special nuclear material.

333-102-0203
Definitions

The following definitions apply for Radioactive Material Licenses issued pursuant to this division and divisions 105, 113, 115, 117, and 121 of this chapter:

NOTE: Unless otherwise specified in this rule, the licenses described in this rule are limited by conditions of the radioactive materials license issued pursuant to OAR 333-102-0200, and other applicable rules in this chapter.

(1) "Analytical Leak Test" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(a), authorizing possession of environmental samples, sealed source leak-test, contamination wipe and samples for radioanalytical measurements. This license does not authorize collection of samples, or decommissioning or decontamination activities.

(2) "Assets" means anything of material value or usefulness. In the context of a materials license, assets include all existing capital, effects, possessions, and belongings and all probable future economic benefits obtained or controlled by a particular entity.

(3) "Basic License" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(b) authorizing the receipt, possession, use, transfer, and disposal of sources of radiation or radioactive materials incident to gauge service, teletherapy service, medical afterloader service, and other licensed service activities; pre-packaged waste pickup (not packaging), storage of materials prior to license termination, instrument quality control servicing or calibration (excluding activities authorized by 333-103-0010(2)(m)), or other minor activities not otherwise specified in these rules, such as authorization for "systems," as defined in these rules, pursuant to that definition.

(4) "Beneficiating" means subjecting a product to any process that can increase or concentrate any component (including the radioactive materials) to benefit the product.

(5) "Brachytherapy" means a Healing Arts facility-specific license issued pursuant to OAR 333-103-0010(2)(c) authorizing the use of brachytherapy sources for in vivo application of radiation in accordance with 333-116-0420. Brachytherapy includes radioactive material sealed sources in seeds, needles, plaques, or other localized medical devices, but excludes remote afterloaders.

(6) "Broad Scope A" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(d), authorizing activities in 333-102-0900(1)(a), under the authority of a Radiation Safety Committee.

(7) "Broad Scope B" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(e) authorizing activities described in 333-102-0900(1)(b), under the authority of a Radiation Safety Officer.

(8) "Broad Scope C" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(f) authorizing activities described in 333-102-0900(1)(c), under the authority of an authorized user.

(9) "Commencement of construction" means taking any action defined as "construction" or any other activity at the site of a facility subject to the regulations in this division that has a reasonable nexus to radiological health and safety.

(10) "Construction" means the installation of foundations, or in-place assembly, erection, fabrication, or testing for any structure, system, or component of a facility or activity subject to the regulations in this division that are related to radiological safety or security. The term "construction" does not include:

(a) Changes for temporary use of the land for public recreational purposes;

(b) Site exploration, including necessary borings to determine foundation conditions or other preconstruction monitoring to establish background information related to the suitability of the site, the environmental impacts of construction or operation, or the protection of environmental values;

(c) Preparation of the site for construction of the facility, including clearing of the site, grading, installation of drainage, erosion and other environmental mitigation measures, and construction of temporary roads and borrow areas;

(d) Erection of fences and other access control measures that are not related to the safe use of, or security of, radiological materials subject to this division;

(e) Excavation;

(f) Erection of support buildings (for example, construction equipment storage sheds, warehouse and shop facilities, utilities, concrete mixing plants, docking and unloading facilities, and office buildings) for use in connection with the construction of the facility;

(g) Building of service facilities (for example, paved roads, parking lots, railroad spurs, exterior utility and lighting systems, potable water systems, sanitary sewerage treatment facilities, and transmission lines);

(h) Procurement or fabrication of components or portions of the proposed facility occurring at other than the final, in-place location at the facility; or

(i) Taking any other action that has no reasonable nexus to radiological health and safety.

(11) "Current assets" means cash or other assets or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

(12) "Decontamination and Decommissioning" means:

(a) A facility specific license issued pursuant to OAR 333-103-0010(2)(w) authorizing activities that result in returning a site to its original pre-license condition prior to termination of licensed activities; and

(b) Activities performed pursuant to OAR 333-102-0335 on any portion of a site prior to license termination.

(13) "Diagnosis" means examination, determination, identification, study, or analysis of a medical condition.

(14) "Distribution" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(g), authorizing transfer or distribution (sale) of general or specific license radioactive material to persons granted a general license or issued a specific license, or, in the case of NARM, to persons exempt from the rules in this chapter.

(15) "Exempt Source" means radioactive material, exempt from the rules in this chapter.

(16) "Facility" means location of licensed activities under the direct control of licensee management. If a "facility," as used in this division, includes multiple separate addresses, the Authority may determine how the scope of licensed activities, pursuant to OAR 333-102-0190, 333-102-0300, 333-102-0305, 333-102-0315, 333-102-0320, or 333-102-0325, is authorized.

(17) "Fixed Gauge" means a source-specific license for measuring, gauging, or controlling devices pursuant to OAR 333-103-0010(2)(h). The fixed gauge license also includes X-ray & Hybrid Gauges pursuant to division 115 of this chapter that contain either an X-ray source or a radioactive sealed source.

(18) "General License" means a granted license, as opposed to an issued license, effective under these rules, to acquire, own, possess, use, or transfer radioactive material or a device that contains radioactive material.

(19) "General License Depleted Uranium" means the general license granted subject to receipt of the registration application pursuant to OAR 333-101-0007, and fee, pursuant to 333-103-0015, for depleted uranium used for shielding or counter weights and issued pursuant to 333-102-0106.

(20) "General License Device" means the general license for in vitro materials granted subject to receipt of the registration application pursuant to OAR 333-101-0007, and fee, pursuant to 333-103-0015, for measuring, gauging.

(21) "General License In Vitro Laboratory" means the general license granted by OAR 333-102-0130, subject to receipt of the registration application pursuant to 333-101-0007, and fee, pursuant to 333-103-0015, for in vitro materials granted a general license by 333-102-0130.

(22) "General License Source Material" means the general license granted for use and possession of source material pursuant to OAR 333-102-0101.

(23) "General License for Certain Devices and Equipment" means the general license granted for use and possession of devices consisting of not more than 500 microcuries of polonium-210 or not more than 50 millicuries of tritium (H-3) per device, pursuant to 10 CFR 31.3.

(24) "General License for Luminous Devices for Aircraft" means the general license granted for use and possession of devices containing not more than ten curies of tritium or not more than 300 millicuries of promethium-147.

(25) "General License for Ownership of Radioactive Material and Limits of Possession" means the general license granted to own material that is not necessarily possessed; conversely, material that is possessed is, by grant of general license, not necessarily owned, pursuant to the general license in OAR 333-102-0120.

(26) "General License for Calibration and Reference Sources" means the general license granted to possess not more than five microcuries (185 kBq) of americium-241, plutonium-238, plutonium-239, or radium-226, pursuant to the general license in OAR 333-102-0125.

(27) "General License for Ice Detection Devices" means the general license granted to possess not more than 50 microcuries (1.85 MBq) of strontium-90, pursuant to the general license in OAR 333-102-0135.

(28) "Generators and Kits" means "Imaging and Localization."

(29) "Healing Arts Specific License" means a specific license authorizing activities in division 116 of this chapter.

(30) "High Doserate Remote Afterloader" means a source-specific license issued pursuant to OAR 333-103-0010(2)(i) authorizing the use of sources in accordance with 333-116-0475, which may be either mobile or stationary, and which deliver a doserate in excess of two Gray (200 rad) per hour at the point or surface where the dose is prescribed. A device may be designated as being high, medium, or pulsed dose remote afterloader or mobile high, medium, or pulsed doserate remote afterloader.

(31) "Hybrid Gauge" means a fixed gauging device that contains both a sealed source and an X-ray source, pursuant to division 115 of this chapter.

(32) "In Vitro Laboratory" means a Healing Arts facility-specific license, under management of a physician or Healing Arts specialist, issued pursuant to OAR 333-103-0010(2)(k) authorizing the use of prepackaged radioactive materials in quantities greater than those authorized by the General License granted by 333-102-0130(2).

(33) Imaging and Localization means a Healing Arts facility-specific license issued pursuant to OAR 333-103-0010(2)(j) authorizing the use of generators and kits for nuclear medicine imaging and localization in accordance with 333-116-0320 or positron emission tomography studies in accordance with 333-116-0800 through 333-116-0880.

(34) "Industrial Radiography" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(l) authorizing activities in division 105 of this chapter.

(35) "Instrument Calibration" means a source-specific radioactive materials license issued pursuant to OAR 333-103-0010(2)(m) for sources of radiation used to calibrate instruments.

(36) "Investigational New Drug" means a Healing Arts facility-specific license issued pursuant to OAR 333-103-0010(2)(n) authorizing the use of any investigational product or device approved by the US Food and Drug Administration (FDA) for human use research, diagnosis, or therapy, in accordance with the rules in this chapter.

(37) "Irradiator-Other" means an irradiator with greater than 10,000 curies (370 TBq) licensed pursuant to OAR 333-103-0010(2)(w) and 333-103-0010(7), designed to produce extremely high dose rates as authorized by division 121 of this chapter.

(38) "Irradiator Self-shielded or Other — Less than 10,000 Curies" means a source-specific license issued pursuant to OAR 333-103-0010(2)(o) authorizing self-shielded irradiators, including blood irradiators, panoramic irradiators, and converted teletherapy units, with less than 10,000 Ci (370 TBq) activity.

(39) "Liabilities" means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.

(40) "Lot Tolerance Percent Defective" means, expressed in percent defective, the poorest quality in an individual inspection lot that can be accepted.

(41) "Low Doserate Remote Afterloader Device" means a Healing Arts source-specific license issued pursuant to OAR 333-103-0010(2)(b) authorizing devices 333-116-0475, which remotely deliver a doserate of less than two Gray (200 rad) per hour at the point or surface where the dose is prescribed.

(42) "Manufacturing or Compounding" means a facility-specific radioactive materials license issued pursuant to OAR 333-103-0010(2)(p) authorizing manufacture, fabrication, assembly, construction, combining, processing, concentrating, beneficiating, or processing items or products using or containing radioactive materials into a finished product containing radioactive material in accordance with applicable requirements in division 102 of this chapter.

(43) "Manufacturing or Compounding and Distribution" means activities performed as defined in sections (14) and (42) of this rule and require separate specific licenses for each activity.

(44) "Mobile Nuclear Medicine Service" means a facility-specific Healing Arts license issued pursuant to OAR 333-116-0120 authorizing the medical use of radioactive material at specified temporary locations.

(45) "Nationally Tracked Source" means a sealed source containing a quantity equal to or greater than Category 1 or 2 levels of any radioactive material listed in 10 CFR 20 Appendix E.

(46) "Naturally occurring radioactive material (NORM)" means radioactive material in the uranium or thorium decay series existing in nature in concentrations less than 0.05 percent source material.

(47) "Net working capital" means current assets minus current liabilities.

(48) "Net worth" means total assets minus total liabilities and is equivalent to owner's equity.

(49) "Neutron Howitzer" means a device that contains a sealed source containing Special Nuclear Material (see definition in OAR 333-100-0005) that generates neutrons that are used for analytical, teaching, or research purposes.

(50) "Neutron Production" denotes a process in which neutrons are produced, either by natural or artificial means.

(51) "NORM (no processing)" means a facility-specific license pursuant to OAR 333-103-0010(2)(r) authorizing possession, use, and transfer of NORM in accordance with division 117 of this chapter.

NOTE: NORM licenses authorize licensable quantities of radioactive material in the uranium or thorium decay series. Licensable quantities of NORM are derived from disposal limits in OAR chapter 345, division 50. Any material that contains NORM requires a specific license unless exempted in OAR chapter 345, division 50. Zircon sand is used as the NORM model for licensing purposes. Quantities of zircon sand in excess of 20,000 pounds in a year constitute a licensable quantity of NORM. NORM materials that are not zircon are based on the zircon model.

(52) "Nuclear Laundry" means a laundry facility designed specifically to clean or launder clothing contaminated with licensed radioactive materials. Nuclear Laundry facilities must have process and waste management control procedures to prevent reconcentrating of licensed materials in sewers, drains, premises, and the environment. Nuclear Laundry activities are authorized pursuant to OAR 333-103-0010(2)(w), "Radioactive Material Not Otherwise Specified Facility," see 333-102-0203(61).

(53) "Nuclear Pharmacy" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(s) for activities authorized by 333-102-0285 and the Oregon Board of Pharmacy rules, to compound Radiopharmaceutical and distribute (sell or transfer) to persons specifically licensed to receive such compounds or products.

NOTE: Nuclear Pharmacies, pursuant to policy provisions of chapter 345 division 50 may collect syringes containing residual licensed material from spent patient doses, since the syringe is considered to be a transport device under the administrative control of the pharmacy rather than the licensed material transferred as the dose. Residual licensed material may be considered either to be exempt pursuant to Table 1 of division 50 or under the authority of a division license if the receding licensee stores syringes for decay. In either case, the division license specifies which disposal method is being used by the pharmacy and licensee to avoid compatibility conflicts with division 50 requirements.

(54) "Other Measuring Device" means a source-specific license issued pursuant to OAR 333-103-0010(2)(t), authorizing analytical instruments, gas chromatograph electron capture detectors, and other non-portable analytical instruments, including those devices that contain multiple sources but are configured and used as a "system," in accordance with the definition in this rule.

NOTE: General license gas chromatograph detectors that formerly were granted a general license by OAR 333-102-0115, but which required a registration fee pursuant 333-103-0015(2)(b), now are subject to the specific license in 333-103-0010(2)(t).

(55) "Pool-type Irradiator" means an irradiator with greater than 10,000 curies (370 TBq) in which water provides the radiation shielding, authorized in accordance with division 121 of this chapter.

(56) "Portable Gauge" means a source-specific license issued pursuant to OAR 333-103-0010(2)(u) for sources used in devices that can be transported and used at temporary job sites.

NOTE: Any device that meets the definition of "portable gauge" and is transported or used at temporary job sites within the state of Oregon, requires an application for and issuance of an Oregon specific license subject to OAR 333-103-0010(2)(u).

(57) "Positron Emission Tomography" (PET) means a licensed healing arts activity authorized by OAR 333-116-0800 and included in the facility specific license issued pursuant to 333-103-0010(2)(j). PET nuclides, which are NARM, are subject to all Oregon rules.

(58) "Possession or Storage of Industrial Wastes Containing Radioactive Material" means activities subject to division 110 of this chapter for the production or storage of wastes that are exempt from division 50 of chapter 345 facility siting requirements, and were generated under a current NRC, Agreement State, or Licensing State specific radioactive materials license.

(59) "Possession or Storage of Uranium Tailings" means activities incident to uranium processing or milling operations resulting in the production of tailings.

(60) "Principal Activities" means activities authorized by the license that are essential to achieving the purpose(s) for which the license was issued or amended. Storage during which no licensed material is accessed for use or disposal and activities incidental to decontamination or decommissioning are not principal activities.

(61) "Processing" means chemically or physically changing a licensed material from one physical form to another form or specie (for example, breaking an ore down into its components resulting in "tailings"; milling a raw licensed material and combining to form another product or material. See "Beneficiating"; "Manufacturing or Compounding").

(62) "Radiation Source" means source of radiation (see definition of "Source of radiation" in OAR 333-100-0005).

(63) "Radioactive Material Not Otherwise Specified Facility" means a license issued pursuant to OAR 333-103-0010(2)(w) authorizing activities that includes, but are not limited to, complex licensable activities such as facility decontamination and decommissioning, nuclear laundry activities, uranium mill tailings storage, storage of industrial wastes containing radioactive materials, large irradiator management, and other complex activities not otherwise specified in these rules.

(64) "Radioactive Materials License" means the document, pursuant to OAR 333-102-0300, issued after an application, pursuant to 333-102-0190, has been accepted as adequate, that specifies radioactive materials, use authorizations, safety procedures, and use locations.

(65) "Radiopharmaceutical Therapy" means a Healing Arts facility-specific license issued pursuant to OAR 333-103-0010(2)(v) authorizing the use of Radiopharmaceutical for therapy in accordance with 333-116-0360.

(66) "Remote Afterloader" means a medical device that moves a sealed source to an interstitial (in vivo) location without exposing the practitioner to the radiation dose. Remote afterloader sources may be manipulated using computer software and engineering techniques.

(67) "Research & Development" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(x) authorizing research and development activities, as defined in 333-100-0005, but does not authorize additional specific sources of radiation, which must be licensed separately pursuant to 333-103-0010 and 333-103-0015.

(68) "Responsible Representative" means

(a) The person designated as having responsibility for general license device or general license material;

(b) The person management has selected to certify general license inventory; and

(c) The individual responsible to the Authority and to management to ensure that all regulatory elements are adequate.

(69) "Sealed Source/Device Evaluation" means the review of a licensee's prototype source or device prior to registration by the Nuclear Regulatory Commission in the Sealed Source and Device Catalog.

NOTE: The Authority no longer has authority to review sources or devices. All source or device reviews must be forwarded to the NRC for review. Authority to conduct device or source evaluations was rescinded by the NRC in 1998.

(70) "Site Area Emergency" means events may occur, are in progress, or have occurred that could lead to a significant release of radioactive material and that could require a response by offsite response organizations to protect persons offsite.

(71) "Sealed Sources for Diagnosis" means a Healing Arts source-specific license issued pursuant to OAR 333-103-0010(2)(y) authorizing the use of sealed sources for diagnosis in accordance with 333-116-0400.

(72) "Special Nuclear Material" means:

(a) Plutonium, uranium 233, uranium enriched in the isotope 233 or in the isotope 235, and any other material which the NRC, pursuant to the provisions of section 51 of the act, determines to be special nuclear material, but does not include source material; or

(b) Any material artificially enriched by any of the foregoing but does not include source material.

(73) "Specific License Radioactive Material" means radioactive material that requires authorization in a specific license document pursuant to OAR 333-102-0075(2) where materials must be annotated on the specific license, and validated with a specific license fee pursuant to 333-103-0010(2)(a) through 333-103-0010(2)(hh) (see "Radioactive Materials License").

(74) "System," as used in this division, means multiple separate (individual) sources of radiation (sealed radioactive sources), which together, rather than independently, achieve a desired functionality. Such "system" is subject to one specific license fee or general license registration fee, as the case may be.

(75) "Tangible Net Worth" means the tangible assets that remain after deducting liabilities; such assets may not include intangibles such as goodwill and rights to patents or royalties.

(76) "Teletherapy" means a Healing Arts source-specific license issued pursuant to OAR 333-103-0010(2)(cc) authorizing teletherapy procedures in accordance with OAR 333-116-0480. This license also includes other high dose rate external beam therapy devices such as the "gamma knife."

(77) "Temporary Job Site" means any location, where specific license material is used that is either:

(a) Not the specific location of the licensee if an in-state licensee; or

(b) Any location in the state if an out-of-state specific licensee pursuant to a specific radioactive materials license.

NOTE: Persons authorized for temporary jobsites in Oregon must have a specific license for such activities.

(78) "Therapy" means a process that is meant to be restorative, promotes healing, or is beneficial to a patient in a healing arts context.

(79) "Unique" means a specific license issued pursuant to OAR 333-103-0010(2)(dd) to agencies in the Oregon Health Authority.

(80) "Uptake and Dilution" means a Healing Arts facility-specific license issued pursuant to OAR 333-103-0010(2)(ee) authorizing activities in 333-116-0300 for uptake, dilution, and excretion studies.

(81) "Use and Possession of Source Material " means a facility-specific radioactive materials license issued pursuant to OAR 333-103-0010(2)(z) to possess, use, process, or transfer source material, as defined in OAR 333-100-0005, in quantities greater than general license quantities or in concentrations greater than 0.05 percent source material.

NOTE: This definition was amended to avoid confusion between the definition of "source material" in division 100 of this chapter and the specific license (billable object) in division 103 of this chapter.

(82) "Use of Xenon Gas" means a Healing Arts facility-specific license issued pursuant to OAR 333-103-0010(2)(ff) authorizing the use of Xe-133 for diagnosis pursuant to 333-116-0280.

(83) "Waste Packaging" means a facility-specific license issued pursuant to OAR 333-103-0010(2)(gg), authorizing packaging, collection, storage, and transfer of radioactive waste. This specific license does not authorize storage of radioactive wastes, but does authorize temporary job sites.

(84) "Well Logging" means a license issued pursuant to OAR 333-103-0010(2)(hh) authorizing the possession, use, transfer, or disposal of sources of radiation used for well logging activities authorized by division 113 of this chapter.

NOTE: Unless specifically authorized in this rule or in a radioactive materials license that authorizes temporary job sites, specific licenses must be used only at one authorized site.

[ED. NOTE: Appendices referenced are available from the agency.]

333-102-0235

Requirements for License to Manufacture, or Initially Transfer Radioactive Material Contained in Devices Granted a General License Under OAR 333-102-0115

(1) An application for a specific license to manufacture, or initially transfer devices containing radioactive material, excluding

special nuclear material, to persons granted a general license by OAR 333-102-0115 or equivalent regulations of the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State will be approved if:

(a) The applicant satisfies the general requirements of OAR 333-102-0200;

(b) The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control, labels, proposed uses, installation, servicing, leak testing, operating and safety instructions, and potential hazards of the device to provide reasonable assurance that:

(A) The device can be safely operated by persons not having training in radiological protection;

(B) Under ordinary conditions of handling, storage, and use of the device, the radioactive material contained in the device will not be released or inadvertently removed from the device; and it is unlikely that any person will receive in one year a dose in excess of ten percent of the annual limits specified in OAR 333-120-0100; and

(C) Under accident conditions (such as fire and explosion) associated with handling, storage and use of the device, it is unlikely that any person may receive an external radiation dose or dose commitment in excess of the dose to the appropriate organ as specified in Column IV of the table in 10 CFR Part 32.24:

(i) Whole body, head and trunk, active blood-forming organs, gonads, or lens of eye 150 mSv (15 rem);

(ii) Hands and forearms, feet and ankles, localized areas of skin averaged over areas no larger than one square centimeter two Sv (200 rem);

(iii) Other organs 500 mSv (50 rem).

(c) Each device bears a durable, legible, clearly visible label or labels approved by the Authority, which contain in a clearly identified and separate statement:

(A) Instructions and precautions necessary to assure safe installation, operation and servicing of the device (documents such as operating and service manuals may be identified in the label and used to provide this information);

(B) The requirements, or lack of requirement, for leak testing, or for testing of any on-off mechanism and indicator, including the maximum time interval for such testing, and the identification of radioactive material by isotope, quantity of radioactivity, and date of determination of the quantity; and

(C) The information called for in the following statement in the same or substantially similar form:

> The receipt, possession, use and transfer of this device, Model _____, Serial No. _____, are subject to a general license or the equivalent and the regulations of the U.S. Nuclear Regulatory Commission or of a State with which the U.S. Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority. This label must be maintained on the device in a legible condition. Removal of this label is prohibited.
>
> CAUTION — RADIOACTIVE MATERIAL
>
> _____
>
> (Name of manufacturer or initial transferor)

(D) Each device having a separable source housing that provides the primary shielding for the source also bears, on the source housing, a durable label containing the device model number and serial number, the isotope and quantity, the words, "Caution-Radioactive Material," the radiation symbol described in OAR 333-120-0400, and the name of the manufacturer or initial distributor.

(E) Each device meeting the criteria of OAR 333-102-0115(9)(a), bears a permanent label, such as being embossed, etched, stamped, or engraved, affixed to the source housing if separable, or the device if the source housing is not separable, that includes the words, "Caution-Radioactive Material," and, if practicable, the radiation symbol described in OAR 333-120-0400.

(F) The device has been registered in the Sealed Source and Device Registry

(2) In the event the applicant desires that the device be required to be tested at intervals longer than six months, either for proper operation of the on-off mechanism and indicator, if any, or for leakage of radioactive material or both, the applicant must include in this application sufficient information to demonstrate that such longer interval is justified by performance characteristics of the device or similar devices, and by design features that have a significant bearing on the probability or consequences of leakage of radioactive material from the device or failure of the on-off mechanism and indicator. In determining the acceptable interval for the test for leakage of radioactive material, the Authority will consider information that includes, but is not limited to:

(a) Primary containment (source capsule);

(b) Protection of primary containment;

(c) Method of sealing containment;

(d) Containment construction materials;

(e) Form of contained radioactive material;

(f) Maximum temperature withstood during prototype tests;

(g) Maximum pressure withstood during prototype tests;

(h) Maximum quantity of contained radioactive material;

(i) Radiotoxicity of contained radioactive material; and

(j) Operating experience with identical devices or similarly designed and constructed devices.

(3) In the event the applicant desires that the general licensee under OAR 333-102-0115, or under equivalent rules of the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State, be authorized to install the device, collect the sample to be analyzed by a specific licensee for leakage of radioactive material, service the device, test the on-off mechanism and indicator, or remove the device from installation, the applicant must include in the application written instructions to be followed by the general licensee, estimated calendar quarter doses associated with such activity or activities, and the bases for these estimates. The submitted information must demonstrate that performance of this activity or activities by an individual untrained in radiological protection, in addition to other handling, storage, and use of devices under the general license, is unlikely to cause that individual to receive a dose in excess of ten percent of the annual limits specified in OAR 333-120-0100.

(4) Prior to transfer of a device to a person granted a general license by OAR 333-102-0115(1), the licensee must:

(a) Furnish a copy of the general license contained in OAR 333-102-0115 to each person to whom the licensee directly, or through an intermediate person, transfers radioactive material in a device for use pursuant to the general license contained in 333-102-0115;

(b) Furnish a copy of the general license contained in the U.S. Nuclear Regulatory Commission, Agreement State or Licensing State's rules equivalent to OAR 333-102-0115. Alternatively, a copy of the general license contained in 333-102-0115 must be furnished to each person to whom directly, or through an intermediate person, is transfers radioactive material in a device for use pursuant to the general license of the U.S. Nuclear Regulatory Commission, the Agreement State or the Licensing State. If a copy of the general license in 333-102-0115 is furnished to such person, it must be accompanied by a note explaining that the use of the device is regulated by the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State under requirements substantially the same as those in 333-102-0115;

(c) Report to the Authority all transfers of such devices to persons for use under the general license in OAR 333-102-0115. Such report must identify each general licensee by name and address, an individual by name or position who may constitute a point of contact between the Authority and the general licensee, the type and model number of device transferred, and the quantity and type of radioactive material contained in the device. If one or more intermediate persons will temporarily possess the device at the intended place of use prior to its possession by the user, the report must include identification of each intermediate person by name, address, contact and relationship to the intended user. If no transfers have been made to persons granted a general license by 333-102-0115 during the reporting period, the report must so indicate. The report must cover each calendar quarter and must be filed within 30 days after the end of each quarter;

(d) Furnish reports to other agencies:

(A) Report to the U.S. Nuclear Regulatory Commission all transfers of such devices to persons for use under the U.S. Nuclear Regulatory Commission general license in section 31.5 of 10 CFR Part 31. Reports must be submitted on the NRC form "Transfers of Industrial Devices Report" or on a clear and legible report containing all of the data required by the form. The required information includes:

(i) The identity of each general licensee by name and address;

(ii) The name and phone number of the person designated by the general licensee to be responsible for ensuring compliance with the appropriate regulations and requirements;

(iii) The date of transfer;

(iv) The type, model number, and serial number of the device transferred; and

(v) The quantity and type of byproduct material contained in the device.

(B) If one or more intermediate persons will temporarily possess the device at the intended place of use prior to its possession by the user, the report must include the same information for each intermediate person, and clearly designate that person as an intermediate person.

(C) If the device transferred replaced another returned by the general licensee, report also the type, model number, and serial number of the one returned.

(D) If no transfers have been made to persons generally licensed under 10 CFR 31.5 or OAR 333-102-0115 during the reporting period, the report must so indicate.

(E) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.

(F) The report must clearly identify the specific licensee submitting the report and include the license number of the specific licensee.

(e) Report to the responsible Agreement or Licensing State Authority all transfers of such devices to persons for use under a general license in an Agreement State's regulations equivalent to OAR 333-102-0115. Such reports must identify all of the information in 333-102-0235(4)(d) of this rule, including each general licensee by name and address, an individual by name or position who may constitute a point of contact between the Authority and the general licensee, the type and model of the device transferred, and the quantity and type of radioactive material contained in the device. If one or more intermediate persons will temporarily possess the device at the intended place of use prior to its possession by the user, the report must include identification of each intermediate person by name, address, contact and relationship to the intended user. The report must be submitted within 30 days after the end of each calendar quarter in which such device is transferred to the person granted a general license;

(f) If no transfers have been made to U.S. Nuclear Regulatory Commission's licensees during the reporting period, this information must be reported to the U.S. Nuclear Regulatory Commission;

(g) If no transfers have been made to persons granted a general license within a particular Agreement State during the reporting period, this information must be reported to the responsible Agreement State Agency upon request of the Authority;

(h) Keep records showing the name, address and the point of contact for each general licensee to whom directly, or through an intermediate person is transferred radioactive material in devices for use pursuant to the general license provided in OAR 333-102-0115 or equivalent regulations of the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State. The records must show the date of each transfer, the isotope and the quantity of radioactive material in each device transferred, the identity of any intermediate person and compliance with the reporting requirements of subsection (4)(h) of this rule. Records required by this rule must be maintained for a period of three years following the estimated useful life of the device or the date of final disposition, if known;

(i) Furnish a list of the services that only can be performed by a specific licensee, and information on acceptable disposal options, including estimated costs of disposal, to each person to whom he directly, or through an intermediate person, transfers radioactive material in a device for use under the general license granted in OAR 333-102-0115;

(j) Furnish the name, address, and phone number of the contact at the Agreement State regulatory agency from which additional information may be obtained. If a copy of the general license in OAR 333-102-0115 is furnished to such person, it must be accompanied by a note explaining that use of the device is regulated by the Agreement State.

(k) Label each device transferred if more than one year after the effective date of this rule in accordance with the labeling requirements in 10 CFR Part 32.51(a)(3) through (5).

(l) If a notification of bankruptcy has been made under 10 CFR Part 30.34(h) or the license is to be terminated, provide, upon request, to the NRC and to any appropriate Agreement State, records of final disposition required under 10 CFR Part 32.52(c).

(5) License Conditions.

(a) If a device containing radioactive material is to be transferred for use under the general license contained in OAR 333-102-0115, each person that is licensed under this rule must provide the information specified in this section to each person to whom a device is to be transferred. This information must be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person. The required information includes:

(A) A copy of the general license contained in OAR 333-102-0115; if 333-102-0115(4)(b) through (d) or 333-102-0115(8) do not apply to the particular device, those sections may be omitted;

(B) A copy of OAR 333-102-0115, 333-100-0055, 333-100-0057, 333-120-0700 and 333-120-0710;

(C) A list of the services that can only be performed by a specific licensee;

(D) Information on acceptable disposal options including estimated costs of disposal; and

(b) If radioactive material is to be transferred in a device for use under an equivalent general license of an Agreement State, each person that is licensed under this rule must provide the information specified in this section to each person to whom a device is to be transferred. This information must be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person. The required information includes:

(A) A copy of the Agreement State's regulations equivalent to OAR 333-102-0115, 333-100-0055, 333-100-0057, 333-120-0700 and 333-120-0710 or a copy of 10 CFR Secs. 31.5, 31.2, 30.51, 20.2201, and 20.2202. If a copy of the Nuclear Regulatory Commission regulations is provided to a prospective general licensee in lieu of the Agreement State's regulations, it must be accompanied by a note explaining that use of the device is regulated by the Agreement State. If certain sections of the regulations do not apply to the particular device, those sections may be omitted;

(B) A list of the services that can only be performed by a specific licensee;

(C) Information on acceptable disposal options including estimated costs of disposal; and

(D) The name or title, address, and phone number of the contact at the Agreement State regulatory agency or the Nuclear Regulatory Commission from which additional information may be obtained.

Special Requirement for a Specific License to Manufacture, Assemble, Repair or Distribute Commodities, Products or Devices Which Contain Radioactive Material

333-102-0245
Introduction of Radioactive Material in Exempt Concentrations into Products or Materials, and Transfer of Ownership or Possession: Requirements for License

An application for a specific license authorizing the introduction of radioactive material into a product or material owned by or in the possession of the licensee or another and the transfer of ownership or possession of the product or material containing the radioactive material: will be approved if the applicant:

(1) Satisfies the general requirements specified in OAR 333-102-0200, provided however, that the requirements of OAR 333-102-0200(2) and (3) do not apply to an application for a license to introduce byproduct material into a product or material owned by or in the possession of the licensee or another and the transfer of ownership or possession of the product.

(2) Provides a description of the product or material into which the radioactive material will be introduced, intended use of the radioactive material, and the product or material into which it is introduced, method of introduction, initial concentration of the radioactive material in the product or material, control methods to assure that no more than the specified concentration is introduced into the product or material, estimated time interval between introduction and transfer of the product or material, and estimated concentration of the radioiosotopes in the product or material at the time of transfer.

(3) Provides reasonable assurance that the concentrations of radioactive material at the time of transfer will not exceed the concentrations in 10 CFR Part 30.70 Schedule A, that reconcentrating of the radioactive material in concentrations exceeding those in 10 CFR Part 30.70 Schedule A is not likely, that use of lower concentrations is not feasible, and that the product or material is not likely to be incorporated in any food, beverage, cosmetic, drug or other commodity or product designed for ingestion or inhalation by, or application to, a human being.

(4) No person may introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under 10 CFR Part 30.14 or equivalent regulations of an Agreement State, except in accordance with a license issued pursuant to 10 CFR Part 32.11, or the general license provided in 10 CFR Part 150.20 (reciprocity).

(5) Each person licensed under this rule must maintain records of transfer of material and file reports with the Authority as required in OAR 333-102-0247.

(6) Each licensee who manufactures a nationally tracked source shall assign a unique serial number to each nationally tracked source. Serial numbers must be composed only of alpha-numeric characters.

333-102-0247
Records and Material Transfer Reports

Each person licensed under OAR 333-102-0235 to initially transfer devices to generally licensed persons must comply with the requirements of this rule.

(1) The licensee must report on a quarterly basis all transfers of devices to persons for use under the general license in OAR 333-102-0115 and all receipts of devices from persons licensed under 333-102-0115 to the Authority.

(a) The required information for transfers to general licensees includes:

(A) The identity of each general licensee by name and mailing address for the location of use. If there is no mailing address for the location of use, an alternate address for the general licensee must be submitted along with information on the actual location of use;

(B) The name, title, and phone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements;

(C) The date of transfer;

(D) The type, model number, and serial number of the device transferred; and

(E) The quantity and type of byproduct material contained in the device.

(b) If one or more intermediate persons will temporarily possess the device at the intended place of use before its possession by the user, the report must include the same information for both the intended user and each intermediate person, and clearly designate the intermediate person(s).

(c) For devices received from an OAR 333-102-0115 general licensee, the report must include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.

(d) If the licensee makes changes to a device possessed by an OAR 333-102-0115 general licensee, such that the label must be changed to update required information, the report must identify the general licensee, the device, and the changes to information on the device label.

(e) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.

(f) The report must clearly identify the specific licensee submitting the report and include the license number of the specific licensee.

(g) If no transfers have been made to or from persons generally licensed under OAR 333-102-0115 during the reporting period, the report must so indicate.

(2) The licensee must report all transfers of devices to persons for use under a general license in an Agreement State's regulations that are equivalent to OAR 333-102-0115 and all receipts of devices from general licensees in the Agreement State's jurisdiction to the responsible Agreement State Agency.

(a) The required information for transfers to general licensees includes:

(A) The identity of each general licensee by name and mailing address for the location of use. If there is no mailing address for the location of use, an alternate address for the general licensee must be submitted along with information on the actual location of use.

(B) The name, title, and phone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements;

(C) The date of transfer;

(D) The type, model number, and serial number of the device transferred; and

(E) The quantity and type of byproduct material contained in the device.

(b) If one or more intermediate persons will temporarily possess the device at the intended place of use before its possession by the user, the report must include the same information for both the intended user and each intermediate person, and clearly designate the intermediate person(s).

(c) For devices received from a general licensee, the report must include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.

(d) If the licensee makes changes to a device possessed by a general licensee, such that the label must be changed to update required information, the report must identify the general licensee, the device, and the changes to information on the device label.

(e) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.

(f) The report must clearly identify the specific licensee submitting the report and must include the license number of the specific licensee.

(g) If no transfers have been made to or from a particular Agreement State during the reporting period, this information must be reported to the responsible Agreement State Agency upon request of the Authority.

(3) The licensee must maintain all information concerning transfers and receipts of devices that supports the reports required by this section. Records required by this section must be maintained in accordance with OAR 333-100-0057.

333-102-0250
Manufacture and Distribution of Radioactive Material for Certain In Vitro Clinical or Laboratory Testing Under a General License

An application for a specific license to manufacture or distribute radioactive material for use under the general license specified in OAR 333-102-0130 or equivalent may be approved if:

(1) The applicant satisfies the general requirements specified in OAR 333-102-0200.

(2) The radioactive material is to be prepared for distribution in prepackaged units of:

(a) Carbon-14 in units not exceeding ten microcuries (370 kBq) each;

(b) Cobalt-57 in units not exceeding ten microcuries (370 kBq) each;

(c) Hydrogen-3 (tritium) in units not exceeding 50 microcuries (1.85 MBq) each;

(d) Iodine-125 in units not exceeding ten microcuries (370 kBq) each;

(e) Mock iodine-125 in units not exceeding 0.05 microcurie (1.85 kBq) of iodine-129 and 0.005 microcurie (185 Bq) of americium-241 each;

(f) Iodine-131 in units not exceeding ten microcuries (370 kBq) each;

(g) Iron-59 in units not exceeding 20 microcuries (740 kBq) each;

(h) Selenium-75 in units not exceeding ten microcuries (370 kBq) each;

(i) Cobalt-57 in units not exceeding 0.37 megabecquerel (10 microcuries) each.

(3) Each prepackaged unit bears a durable, clearly visible label:

(a) Identifying the radioactive contents as to chemical form and radionuclide and indicating that the amount of radioactivity does not exceed ten microcuries (370 kBq) of iodine-125, iodine-131, carbon-14, cobalt-57 or selenium-75; 50 microcuries (1.85 MBq) of hydrogen-3 (tritium); 20 microcuries (740 kBq) of iron-59; or mock iodine-125 in units not exceeding 0.05 microcurie (1.85 kBq) of iodine-129 and 0.005 microcurie (185 Bq) of americium-241 each or colbalt-57 in units not exceeding 0.37 megabecquerel (10 microcuries); and

(b) Displaying the radiation caution symbol described in OAR 333-120-0400 and the words, CAUTION, RADIOACTIVE MATERIAL and Not for Internal or External Use in Humans or Animals.

(4) One of the following statements, as appropriate, or a substantially similar statement which contains the information called for in one of the following statements, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:

(a) This radioactive material may be received, acquired, possessed and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation there from, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of the U.S. Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

_____
Name of manufacturer

(b) This radioactive material may be received, acquired, possessed and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation there from, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of a Licensing State.

_____
Name of manufacturer

(5) The label affixed to the unit, or the leaflet or brochure which accompanies the package, contains adequate information as to the precautions to be observed in handling and storing such radioactive material. In the case of the mock iodine-125 reference or calibration source, the information accompanying the source must also contain directions to the licensee regarding the waste disposal requirements in OAR 333-120-0500.

333-102-0255
Licensing the Distribution of Radioactive Material in Exempt Quantities

(1) An application for a specific license to distribute NARM to persons exempted from these rules pursuant to OAR 333-102-0035 will be approved if:

(a) The radioactive material is not contained in any food, beverage, cosmetic, drug or other commodity designed for ingestion or inhalation by, or application to, a human being;

(b) The radioactive material is in the form of processed chemical elements, compounds or mixtures, tissue samples, bioassay samples, counting standards, plated or encapsulated sources or similar substances, identified as radioactive and to be used for its radioactive properties, but is not incorporated into any manufactured or assembled commodity, product or device intended for commercial distribution; and

(c) The applicant submits copies of prototype labels and brochures and the Authority approves such labels and brochures.

(2) The license issued under this rule is subject to the following conditions:

(a) No more than ten exempt quantities may be sold or transferred in any single transaction. However, an exempt quantity may be composed of fractional parts of one or more of the exempt quantity provided the sum of the fractions must not exceed unity;

(b) Each exempt quantity must be separately and individually packaged. No more than ten such packaged exempt quantities must be contained in any outer package for transfer to persons exempt pursuant to OAR 333-102-0035. The outer package must be such that the dose rate at the external surface of the package does not exceed 0.5 millirem (5 microSv) per hour;

(c) The immediate container of each quantity or separately packaged fractional quantity of radioactive material must bear a durable, legible label which:

(A) Identifies the radionuclide and the quantity of radioactivity; and

(B) Bears the words Radioactive Material.

(d) In addition to the labeling information required by subsection (2)(c) of this rule, the label affixed to the immediate container, or an accompanying brochure, must:

(A) State that the contents are exempt from Licensing State requirements;

(B) Bear the words, Radioactive Material — Not for Human Use — Introduction into Foods, Beverages, Cosmetics, Drugs or Medicinals or into Products Manufactured for Commercial Distribution is Prohibited — Exempt Quantities Should Not Be Combined; and

(C) Set forth appropriate additional radiation safety precautions and instructions relating to the handling, use, storage and disposal of the radioactive material.

(3) Each person licensed under this rule must maintain records identifying, by name and address, each person to whom radioactive material is transferred for use under OAR 333-102-0035 or the equivalent rules of any Agreement State or Licensing State and stating the kinds and quantities of radioactive material transferred. An annual summary report stating the total quantity of each radionuclide transferred under the specific license must be filed with the Authority. Each report must cover the year ending June 30, and must be filed within 30 days thereafter. If no transfers of radioactive material have been made pursuant to this rule during the reporting period, the report must so indicate.

NOTE: Authority to transfer possession or control by the manufacturer, processor or producer of any equipment, device, commodity or other product containing byproduct material whose subsequent possession, use, transfer and disposal by all other persons are exempted from regulatory requirements may be obtained only from the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

333-102-0285
Manufacture, Preparation, or Transfer for Commercial Distribution of Radiopharmaceutical Drugs Containing Byproduct Material for Medical Use Under Division 116

(1) An application for a specific license to manufacture, prepare, or transfer for commercial distribution radiopharmaceutical drugs containing radioactive material for use by persons authorized pursuant to division 116 of this chapter may be approved if:

(a) The applicant satisfies the general requirements specified in OAR 333-102-0200;

(b) The applicant submits evidence that the applicant is at least one of the following:

(A) Registered or licensed with the U.S. Food and Drug Administration (FDA) as the owner or operator of a drug establishment that engages in the manufacture, preparation, propagation, compounding, or processing of a drug under 21 CFR 207.20(a);

(B) Registered or licensed with a state agency as a drug manufacturer;

(C) Licensed as a pharmacy by a state Board of Pharmacy;

(D) Operating as a nuclear pharmacy within a federal medical institution; or

(E) A Positron Emission Tomography (PET) drug production facility registered with a state agency.

(c) The applicant submits information on the radionuclide, chemical and physical form; the maximum activity per vial, syringe, generator, or other container of the radiopharmaceutical drug; and the shielding provided by the packaging to show it is appropriate for the safe handling and storage of the radiopharmaceutical drugs by medical use licensees; and

(d) The applicant satisfies the following labeling requirements:

(A) A label is affixed to each transport radiation shield, whether it is constructed of lead, glass, plastic, or other material, of a radiopharmaceutical drug to be transferred for commercial distribution. The label must include the radiation symbol and the words CAUTION, RADIOACTIVE MATERIAL or DANGER, RADIOACTIVE MATERIAL; the name of the radiopharmaceutical drug or its abbreviation; and the quantity of radioactivity at a spec-

ified date and time. For radiopharmaceutical drugs with a half-life greater than 100 days, the time may be omitted.

(B) A label is affixed to each syringe, vial, or other container used to hold a radiopharmaceutical drug to be transferred for commercial distribution. The label must include the radiation symbol and the words CAUTION, RADIOACTIVE MATERIAL or DANGER, RADIOACTIVE MATERIAL and an identifier that ensures that the syringe, vial, or other container can be correlated with the information on the transport radiation shield label.

(2) A licensee described by paragraphs (1)(b)(C) or (D) of this rule:

(a) May prepare radiopharmaceutical drugs for medical use, as defined in OAR 333-116-0020, provided that the radiopharmaceutical drug is prepared either by an authorized nuclear pharmacist, as specified in subsections (2)(b) and (2)(d) of this rule, or an individual under the supervision of an authorized nuclear pharmacist as specified in OAR 333-116-0100.

(b) May allow a pharmacist to work as an authorized nuclear pharmacist if:

(A) This individual qualifies as an authorized nuclear pharmacist as defined in OAR 333-116-0020;

(B) This individual meets the requirements specified in OAR 333-116-0910, 333-116-0760, 333-116-0915 and the licensee has received an approved license amendment identifying this individual as an authorized nuclear pharmacist; or

(C) This individual is designated as an authorized nuclear pharmacist in accordance with subsection (2)(d) of this rule.

(c) The actions authorized in subsections (2)(a) and (2)(b) of this rule are permitted in spite of more restrictive language in license conditions.

(d) May designate a pharmacist (as defined in OAR 333-116-0020) as an authorized nuclear pharmacist if:

(A) The individual was a nuclear pharmacist preparing only radiopharmaceutical drugs containing accelerator-produced radioactive material; and

(B) The individual practiced at a pharmacy at a government agency or federally recognized Indian Tribe before November 30, 2007 or at all other pharmacies before August 8, 2009, or an earlier date as noticed by the Nuclear Regulatory Commission.

(e) Shall provide to the Authority a copy of:

(A) Each individual's certification by a specialty board whose certification process has been recognized by the Commission or an Agreement State as specified in OAR 333-116-0910 with the written attestation signed by a preceptor as required by OAR 333-116-0680(2)(b); or

(B) The Commission or Agreement State license; or

(C) Commission master materials licensee permit; or

(D) The permit issued by a licensee or Commission master materials permittee of broad scope or the authorization from a commercial nuclear pharmacy authorized to list its own authorized nuclear pharmacist; or

(E) Documentation that only accelerator-produced radioactive materials were used in the practice of nuclear pharmacy at a government agency or federally recognized Indian Tribe before November 30, 2007 or at all other locations of use before August 8, 2009, or an earlier date as noticed by the NRC; and

(F) A copy of the state pharmacy licensure or registration no later than 30 days after the date that the licensee allows pursuant to paragraphs (2)(b)(A) and (2)(b)(C) of this rule, which allows the individual to work as an authorized nuclear pharmacist.

(3) A licensee shall possess and use instrumentation to measure the radioactivity of radiopharmaceutical drugs. The licensee shall have procedures for use of the instrumentation. The licensee shall measure, by direct measurement or by combination of measurements and calculations, the amount of radioactivity in dosages of alpha-, beta-, or photon-emitting radiopharmaceutical drugs prior to transfer for commercial distribution. In addition, the licensee shall:

(a) Perform tests before initial use, periodically, and following repair, on each instrument for accuracy, linearity, and geometry dependence, as appropriate for the use of the instrument and make adjustments when necessary; and

(b) Check each instrument for constancy and proper operation at the beginning of each day of use.

(4) Nothing in this rule relieves the licensee from complying with applicable FDA, other federal and state requirements governing radiopharmaceutical drugs.

NOTE: Although the Authority does not regulate the manufacture and distribution of reagent kits that do not contain radioactive material, it does regulate the use of such reagent kits for the preparation of radio pharmaceuticals containing radioactive material as a part of its licensing and regulation of the users of radioactive material. Any manufacturer of reagent kits that do not contain radioactive material, who desires to have the reagent kits approved by the Authority for use by persons licensed for medical use pursuant to OAR chapter 333, division 116 or by persons authorized under a group license, or equivalent, by the U.S. Nuclear Regulatory Commission or any other Agreement State, may submit the pertinent information specified in this rule.

333-102-0290

Manufacture and Distribution of Sources or Devices Containing Byproduct Material for Medical Use

(1) An application for a specific license to manufacture and distribute sources and devices containing byproduct material to persons licensed pursuant to division 116 of this chapter for use as a calibration, transmission, or reference source, or for the uses listed in OAR 333-116-0400, 333-116-0420, 333-116-0480 and 333-116-0485 will be approved if:

(a) The applicant satisfies the general requirements in OAR 333-102-0200.

(b) The applicant submits sufficient information regarding each type of source or device pertinent to an evaluation of its radiation safety, including:

(A) The radioactive material contained, its chemical and physical form and amount;

(B) Details of design and construction of the source or device;

(C) Procedures for, and results of, prototype tests to demonstrate that the source or device will maintain its integrity under stresses likely to be encountered in normal use and accidents;

(D) For devices containing radioactive material, the radiation profile of a prototype device;

(E) Details of quality control procedures to assure that production sources and devices meet the standards of the design and prototype tests;

(F) Procedures and standards for calibrating sources and devices;

(G) Legend and methods for labeling sources and devices as to their radioactive content; and

(H) Instructions for handling and storing the source or device from the radiation safety standpoint; these instructions are to be included on a durable label attached to the source or device or attached to a permanent storage container for the source or device. Provided, that instructions that are too lengthy for such a label may be summarized on the label and printed in detail on a brochure that is referenced on the label.

(c) The label affixed to the source or device, or to the permanent storage container for the source or device, contains information on the radionuclide, quantity, date of assay and a statement that the U.S. Nuclear Regulatory Commission has approved distribution of the (name of source or device) to persons licensed to use radioactive material identified in OAR 333-116-0190, 333-116-0400, or 333-116-0420, as appropriate, and to persons who hold an equivalent license issued by an Agreement State or the US Nuclear Regulatory Commission. However, labels worded in accordance with requirements that were in place on March 30, 1987 may be used until March 30, 1989.

(d) The source or device has been registered in the Sealed Source and Device Registry.

(2) In the event the applicant desires that the source or device be required to be tested for leakage of radioactive material at intervals longer than six months:

(a) The applicant must include in the application sufficient information to demonstrate that such longer interval is justified by performance characteristics of the source or device or similar sources or devices and by design features that have a significant bearing on the probability or consequences of leakage of radioactive material from the source; and

(b) In determining the acceptable interval for test of leakage of radioactive material, the Authority will consider information that includes, but is not limited to:

(A) Primary containment or source capsule;

(B) Protection of primary containment;

(C) Method of sealing containment;

(D) Containment construction materials;

(E) Form of contained radioactive material;

(F) Maximum temperature withstood during prototype tests;

(G) Maximum pressure withstood during prototype tests;

(H) Maximum quantity of contained radioactive material;

(I) Radiotoxicity of contained radioactive material; and

(J) Operating experience with identical sources or devices similarly designed and constructed sources or devices.

333-102-0293

Requirements for License to Manufacture and Distribute Industrial Products Containing Depleted Uranium for Mass-Volume Applications

(1) An application for a specific license to manufacture industrial products or devices containing depleted uranium for use pursuant to OAR 333-102-0106 or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State will be approved if:

(a) The applicant satisfies the general requirements specified in OAR 333-102-0200;

(b) The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking, proposed uses and potential hazards of the industrial product or device to provide reasonable assurance that possession, use or transfer of the depleted uranium in the product or device is not likely to cause any individual to receive in any period of one calendar quarter a radiation dose in excess of ten percent of the limits specified in OAR 333-120-0100; and

(c) The applicant submits sufficient information regarding the industrial product or device and the presence of depleted uranium for a mass-volume application in the product or device to provide reasonable assurance that unique benefits will accrue to the public because of the usefulness of the product or device.

(2) In the case of an industrial product or device whose unique benefits are questionable, the Authority will approve an application for a specific license under this rule only if the product or device is found to combine a high degree of utility and low probability of uncontrolled disposal and dispersal of significant quantities of depleted uranium into the environment.

(3) The Authority may deny any application for a specific license under this rule if the end use(s) of the industrial product or device cannot be reasonably foreseen.

(4) Each person licensed pursuant to section (1) of this rule must:

(a) Maintain the level of quality control required by the license in the manufacture of the industrial product or device; and in the installation of the depleted uranium into the product or device;

(b) Label or mark each unit to:

(A) Identify the manufacturer of the product or device and the number of the license under which the product or device was manufactured, the fact that the product or device contains depleted uranium and the quantity of depleted uranium in each product or device; and

(B) State that the receipt, possession, use and transfer of the product or device are subject to a general license or the equivalent and the regulations of the U.S. Nuclear Regulatory Commission or an Agreement State.

(c) Assure that the depleted uranium before being installed in each product or device has been impressed with the following legend clearly legible through any plating or other covering: Depleted Uranium.

(A) Furnish a copy of the general license contained in OAR 333-102-0106 to each person to whom he transfers depleted uranium in a product or device for use pursuant to the general license contained in 333-102-0106; or

(B) Furnish a copy of the general license contained in the U.S. Nuclear Regulatory Commission's or Agreement State's regulation equivalent to OAR 333-102-0106 and a copy of the U.S. Nuclear Regulatory Commission's or Agreement State's certificate, or alternatively, furnish a copy of the general license contained in 333-102-0106 to each person to whom depleted uranium in a product or device is transferred for use pursuant to the general license of the U.S. Nuclear Regulatory Commission or an Agreement State, with a note explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or Agreement State under requirements substantially the same as those in 333-102-0106.

(d) Report to the Authority all transfers of industrial products or devices to persons for use under the general license in OAR 333-102-0106. Such report must identify each general licensee by name and address, an individual by name or position who may constitute a point of contact between the Authority and the general licensee, the type and model number of device transferred and the quantity of depleted uranium contained in the product or device. The report must be submitted within 30 days after the end of each calendar quarter in which such a product or device is transferred to the generally licensed person. If no transfers have been made to persons granted a general license by OAR 333-102-0106 during the reporting period, the report must so indicate.

(e) Report to the U.S. Nuclear Regulatory Commission all transfers of industrial products or devices to persons for use under the U.S. Nuclear Regulatory Commission general license in section 40.25 of 10 CFR Part 40.

(A) Report to the responsible state agency all transfers of devices manufactured and distributed pursuant to OAR 333-102-0115 for use under a general license in that state's regulations equivalent to 333-102-0106.

(B) Such report must identify each general licensee by name and address, an individual by name or position who may constitute a point of contact between the Authority and the general licensee, the type and model number of the device transferred and the quantity of depleted uranium contained in the product or device. The report must be submitted within 30 days after the end of each calendar quarter in which such product or device is transferred to the generally licensed person.

(C) If no transfers have been made to U.S. Nuclear Regulatory Commission licensees during the reporting period, this information must be reported to the U.S. Nuclear Regulatory Commission.

(f) If no transfers have been made to general licensees within a particular Agreement State during the reporting period, this information must be reported to the responsible Agreement State Agency upon the request of that Agency.

(g) Keep records showing the name, address and point of contact for each general licensee to whom he transfers depleted uranium in industrial products or devices for use pursuant to the general license provided in OAR 333-102-0101(4) or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State. The records must be maintained until inspection

by the Authority and must show the date of each transfer, the quantity of depleted uranium in each product or device transferred and compliance with the report requirements of section (9) of this rule.

(h) Licensees required to submit emergency plans by OAR 333-102-0190(10) must follow the emergency plan approved by the Commission. The licensee may change the plan without Commission approval if the changes do not decrease the effectiveness of the plan. The licensee must furnish the change to the Director of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555 and to affected offsite response organizations within six months after the change is made. Proposed changes that decrease the effectiveness of the approved emergency plan may not be implemented without application to and prior approval by the Authority.

Sealed Source or Device Evaluation

No sealed source or device containing radioactive material may be authorized on a specific license or general license until radiation safety information for that sealed source or device has been evaluated by the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State.

333-102-0300
Issuance of Specific Licenses

(1) Upon a determination that an application meets the requirements of the Act and these rules, the Authority shall issue a specific license authorizing the proposed activity in such form and containing such conditions and limitations as it deems appropriate or necessary.

(2) The Authority may incorporate in any license at the time of issuance, or thereafter by appropriate rule, regulation or order, such additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of radioactive material subject to this division as it deems appropriate or necessary in order to:

(a) Minimize danger to public health and safety or property;

(b) Require such reports and the keeping of such records and to provide for such inspections of activities under the license as may be appropriate or necessary; and

(c) Prevent loss or theft of material subject to this division.

(3) Whenever the Authority denies an application for a new license or a license renewal, the Authority shall notify the applicant in writing stating the grounds for denial. Upon denial, the applicant may request a hearing pursuant to OAR 333-102-0345.

333-102-0305
Specific Terms and Conditions of License

(1) Each license issued pursuant to the rules in this division and divisions 103, 105, 113, 115, 116, 117, 120, 121 and 124 of this chapter are subject to all the provisions of the Act, now or hereafter in effect, and to all rules, regulations and orders of the Authority.

(2) No license issued or granted pursuant to the rules in this division and divisions 103, 105, 113, 115, 116, 117, 120 and 121 of this chapter nor any right may be transferred, assigned or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of any license to any person, unless the Authority, after securing full information, shall find that the transfer is in accordance with the provisions of the Act, and shall give its consent in writing.

(3) An application for transfer of license must include:

(a) The identity, technical and financial qualification of the proposed transferee; and

(b) Financial assurance for decommissioning as required by 10 CFR Part 30.35.

(4) Each person licensed by the Authority pursuant to the rules in this division and divisions 103, 105, 113, 115, 116, 117, 120 and 121 of this chapter must confine the use and possession of the radioactive material to the locations and purposes authorized in the license. Except as otherwise provided in the license, a license issued pursuant to the rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter shall carry with it the right to receive, acquire, own, and possess radioactive material. Preparation for shipment and transport of radioactive material must be in accordance with the provisions of division 118 of this chapter.

(5) Each license issued pursuant to the rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter shall be deemed to contain the provisions set forth in section 183b.-d., inclusive, of the Atomic Energy Act of 1954, as amended, whether or not these provisions are expressly set forth in the license.

(6) The Authority may incorporate, in any license issued pursuant to the rules in this division and divisions 103, 105, 113, 115, 116, 117, 120 and 121 of this chapter, at the time of issuance, or thereafter by appropriate rule, regulation or order, such additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of radioactive material as it deems appropriate or necessary in order to:

(a) Promote the common defense and security;

(b) Protect health or to minimize danger to life or property;

(c) Protect restricted data; and

(d) Require such reports and the keeping of such records, and to provide for such inspections of activities under the license as may be necessary or appropriate to effectuate the purposes of the Act and regulations thereunder.

(7) Licensees required to submit emergency plans by OAR 333-102-0190(10) must follow the emergency plan approved by the Authority. The licensee may change the approved plan without Authority approval only if the changes do not decrease the effectiveness of the plan. The licensee must furnish the change to the Authority and to affected offsite response organizations within six months after the change is made. Proposed changes that decrease, or potentially decrease, the effectiveness of the approved emergency plan may not be implemented without prior application to and prior approval by the Authority.

(8) Each licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from strontium-82/rubidium-82 generators must test the generator eluates for molybdenum-99 breakthrough or strontium-82 and strontium-85, respectively, in accordance with OAR 333-116-0330. The licensee must record the results of each test and retain each record for three years after the record is made.

(9)(a) Each general licensee subject to the registration requirement in OAR 333-101-0007 and each specific licensee must notify the Authority in writing immediately following the filing of a voluntary or involuntary petition for bankruptcy under any chapter of Title 11 (Bankruptcy) of the United States Code by or against:

(A) The licensee;

(B) An entity (as that term is defined in 11 U.S.C. 101(15)) controlling the licensee or listing the license or licensee as property of the estate; or

(C) An affiliate (as that term is defined in 11 U.S.C. 101(2)) of the licensee.

(b) This notification must indicate:

(A) The bankruptcy court in which the petition for bankruptcy was filed; and

(B) The date of the filing of the petition.

(10) Sealed sources or detector cells containing licensed material must not be opened or sources removed from source holders or detector cells by the licensee.

(11) No licensee may acquire licensed radioactive material in a sealed source or in a device that contains a sealed source unless the source or device has been registered with the U.S. Nuclear Regulatory Commission under 10 CFR 32.210 or with an Agreement State.

(12) Any sealed source fabricated by a licensee must be registered, inspected, and tested for construction defects, leakage, and contamination prior to any use or transfer as a sealed source in accordance with requirements in 10 CFR 32.210.

(13) Each licensee must conduct a physical inventory at intervals not to exceed six months to account for all radioactive material received and possessed by licensee. Inventories must include the types and quantities of radioactive material, location of materials, date of receipt, and the date of the inventory; and for sealed sources, the inventory must include the types and quantities of sealed sources, sealed source manufacturer, model number, serial number, date of receipt, condition of sealed sources, and the date of the inventory. Records of the inventories required by this section must be kept until inspection by the Authority.

(14) Each licensee must transport radioactive material or deliver radioactive material to a carrier for transport in accordance with the provisions of Parts 170 through 189 of Title 49, Code of Federal Regulations and in accordance with division 118 of this chapter, "Transportation of Radioactive Material."

(15) Each licensee possessing a device licensed pursuant to OAR 333-103-0010(2)(h) must perform an inspection of all devices at intervals not to exceed six months. Inspections must include condition of labeling and posting of each radiation device, and corrective actions taken if any; condition of shutter operation, if applicable, of each device, and corrective actions taken if any; and location of each device. Records of the inspections required by this section must be kept until inspection by the Authority.

(16) No licensee may open or remove radioactive material from sealed sources or detector cells containing licensed radiation sources.

(17) No person may repair, modify, dismantle, or effect any change in licensed devices or radiation sources, nor modify nor alter labels affixed to licensed devices by the manufacturer

(18) Installation, initial radiation survey, relocation, removal from service, maintenance, and repair of fixed gauging devices containing radioactive sealed sources, and installation, replacement, and disposal of sealed sources must be performed only by persons specifically authorized by the Authority, the U.S. Nuclear Regulatory Commission, or another Agreement state to perform such services. Records of all surveys must be maintained for inspection by the Radiation Protection Services section.

(19) If the licensee has previously determined that monitoring for internal exposure pursuant to OAR 333-120-0130, 333-120-0210, or 333-120-0320 is required, the data and results of this evaluation must be placed in the worker's exposure records and included the worker's Oregon Form Z report.

(20) Testing for leakage or contamination of sealed sources must be in accordance with requirements in OAR 333-120-0460. In the absence of a certificate from a transferor indicating that a test has been made within six months prior to the transfer, a sealed source or detector cell received from another person must not be put into use until tested.

(21) Detector cells must be used only in conjunction with a properly operating temperature control mechanism that prevents foil temperatures from exceeding manufacturer's specifications. Exhaust from detector cells must be vented to keep exposures to personnel and the public as low as reasonably achievable pursuant to OAR 333-120-0180.

(22) Licensees who possess sealed sources used for testing at field sites must possess at such locations transport documents, a current copy of the specific radioactive materials license, specific license validation certificates, the current leak test certificate, and the licensee's operating and emergency procedures. Licensed materials stored in an unrestricted area must be secured from unauthorized removal from the place of storage in accordance with provisions of OAR 333-120-0250 and 333-120-0260.

(23) Any specific licensee is authorized to receive, possess, use, transfer, and import up to 999 kilograms of uranium contained as shielding for specific licensed radioactive material authorized by license.

(24) A licensee may store, pursuant to OAR 333-120-0500, radioactive waste for decay in storage before disposal in accordance with 333-116-0290.

(25) Licensed materials in an unrestricted area and not in storage must be tended under the constant surveillance and immediate control of the licensee.

(26) Except as otherwise specified in a radioactive materials license, the licensee must have available and follow the instructions contained in the manufacturer's instruction manual for the chromatography device.

(27) In lieu of using the conventional radiation caution colors (magenta or purple on yellow background) as provided in OAR 333-120-0400(2), the licensee is hereby authorized to label detector cells and cell baths, containing licensed radioactive material and used in gas chromatography devices, with conspicuously etched or stamped radiation caution symbols without a color requirement.

(28) If a radiography licensee plans to use, during normal industrial radiographic operations subject to division 105 of this chapter, two or more exposure devices at one jobsite, the licensee must require at least one Radiographer or Radiographer Instructor authorized user for each exposure device, and the total number of authorized personnel (radiographers and assistant radiographers) at the temporary jobsite must not be less than n+1 where n=the number of cameras.

(29) Security requirements for portable devices containing licensed radioactive materials. Each portable device containing licensed radioactive materials must be secured using a minimum of two independent physical controls that form two separate tangible barriers to prevent unauthorized removal or use, whenever the portable device is not under the direct control and constant surveillance of the licensee.

(30) Authorization under OAR 333-102-0190(10)(c)(N) to produce Positron Emission Tomography (PET) radiopharmaceutical drugs for noncommercial transfer to medical use licensees in its consortium does not relieve the licensee from complying with applicable FDA, other federal, and state requirements governing radiopharmaceutical drugs.

(31) Each licensee authorized under OAR 333-102-0190(10)(c)(N) to produce PET radiopharmaceutical drugs for noncommercial transfer to medical use licensees in its consortium shall:

(a) Satisfy the labeling requirements in OAR 333-102-0285(1)(d) for each PET radiopharmaceutical drug transport radiation shield and each syringe, vial, or other container used to hold a PET radiopharmaceutical drug intended for noncommercial distribution to members of its consortium.

(b) Possess and use instrumentation to measure the radioactivity of the PET radiopharmaceutical drugs intended for noncommercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check, and instrument adjustment requirements in OAR 333-102-0285(3).

(32) A licensee that is a pharmacy authorized under OAR 333-102-0190(10)(c)(N) to produce PET radiopharmaceutical drugs for noncommercial transfer to medical use licensees in its consortium shall require that any individual that prepares PET radiopharmaceutical drugs shall be:

(a) An authorized nuclear pharmacist who meets the requirements in OAR 333-116-0910; or

(b) An individual under the supervision of an authorized nuclear pharmacist as specified in OAR 333-116-0100.

(33) A pharmacy, authorized under OAR 333-102-0190(10)(c)(N) to produce PET radiopharmaceutical drugs for noncommercial transfer to medical use licensees in its consortium

that allows an individual to work as an authorized nuclear pharmacist, shall meet the requirements of 333-116-0910.

333-102-0310
Expiration and Termination of Licenses and Decommissioning of Sites and Separate Buildings or Outdoor Areas

(1)(a) Except as provided in subsection (1)(b) of this rule, each specific license must expire at the end of the day on the expiration date stated in the license unless the licensee has filed an application for renewal under OAR 333-102-0315 before the expiration date stated in the existing license (or, for those licenses subject to subsection (1)(b) of this rule, before the deemed expiration date in that section). If an application for renewal has been filed before the expiration date stated in the existing license (or, for those licenses subject to subsection (2)(a) of this rule, before the deemed expiration date in that section), the existing license expires at the end of the day on which the Authority makes a final determination to deny the renewal application or, if the determination states an expiration date, the expiration date stated in the determination.

(b) Each specific license that has an expiration date after July 1, 1995, and is not one of the licenses described in subsection (1)(c) of this rule, shall be deemed to have an expiration date that is five years after the expiration date stated in the current license.

(c) The following specific licenses are not subject to, or otherwise affected by, the provisions of subsection (1)(b) of this rule:

(A) Specific licenses for which, on February 15, 1996, an evaluation or an emergency plan is required in accordance with OAR 333-102-0190(10);

(B) Specific licenses whose holders are subject to the financial assurance requirements specified in OAR 333-102-0200(6), and on February 15, 1996, the holders either:

(i) Have not submitted a decommissioning funding plan or certification of financial assurance for decommissioning; or

(ii) Have not received written notice that the decommissioning funding plan or certification of financial assurance for decommissioning is acceptable;

(C) Specific licenses who need an environmental assessment or environmental impact statement pursuant to OAR 333-102-0200(5);

(D) Specific licenses whose holders have not had at least one Authority inspection of licensed activities before February 15, 1996;

(E) Specific licenses whose holders, as the result of the most recent Authority inspection of licensed activities conducted before February 15, 1996, have been:

(i) Cited for a serious health and safety noncompliance;

(ii) Subject to an Order issued by the Authority; or

(iii) Subject to a Confirmatory Action Letter issued by the Authority.

(F) Specific licenses with expiration dates before July 1, 1995, for which the holders have submitted applications for renewal under OAR 333-102-0315.

(2) Each specific license revoked by the Authority expires at the end of the day on the date of the Commission's final determination to revoke the license, or on the expiration date stated in the determination, or as otherwise provided by Authority Order.

(3) Each specific license continues in effect, beyond the expiration date if necessary, with respect to possession of radioactive material or source material until the Authority notifies the licensee in writing that the license is terminated. During this time, the licensee must:

(a) Limit actions involving material to those related to decommissioning; and

(b) Continue to control entry to restricted areas until they are suitable for release in accordance with Authority requirements.

(4) Within 60 days of the occurrence of any of the following, consistent with the administrative directions in OAR 333-100-0045, each licensee must provide notification to the Authority in writing of such occurrence, and either begin decommissioning its site, or any separate building or outdoor area that contains residual radioactivity so that the building or outdoor area is suitable for release in accordance with Authority requirements, or submit within 12 months of notification a decommissioning plan, if required by subsection (7)(a) of this rule, and begin decommissioning upon approval of that plan if:

(a) The license has expired pursuant to sections (1) or (2) of this rule; or

(b) The licensee has decided to permanently cease principal activities, as defined in OAR 333-102-0203, at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Authority requirements; or

(c) No principal activities under the license have been conducted for a period of 24 months; or

(d) No principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Authority requirements.

(5) Coincident with the notification required by section (4) of this rule, the licensee must maintain in effect all decommissioning financial assurances established by the licensee pursuant to OAR 333-102-0200(6) in conjunction with a license issuance or renewal or as required by this rule. The amount of the financial assurance must be increased, or may be decreased, as appropriate, to cover the detailed cost estimate for decommissioning established pursuant to paragraph (7)(d)(E) of this rule.

(a) Any licensee who has not provided financial assurance to cover the detailed cost estimate submitted with the decommissioning plan must do so when this rule becomes effective November 24, 1995.

(b) Following approval of the decommissioning plan, a licensee may reduce the amount of the financial assurance as decommissioning proceeds and radiological contamination is reduced at the site with the approval of the Authority.

(6) The Authority may grant a request to extend the time periods established in section (4) of this rule if the Authority determines that this relief is not detrimental to the public health and safety and is otherwise in the public interest. The request must be submitted no later than 30 days before notification pursuant to section (4) of this rule. The schedule for decommissioning set forth in section (4) of this rule may not commence until the Authority has made a determination on the request.

(7)(a) A decommissioning plan must be submitted if required by license condition or if the procedures and activities necessary to carry out decommissioning of the site or separate building or outdoor area have not been previously approved by the Authority and these procedures could increase potential health and safety impacts to workers or to the public, such as in any of the following cases:

(A) Procedures may involve techniques not applied routinely during cleanup or maintenance operations;

(B) Workers that may be entering areas not normally occupied where surface contamination and radiation levels are significantly higher than routinely encountered during operation;

(C) Procedures could result in significantly greater airborne concentrations of radioactive material or source material than are present during operation; or

(D) Procedures could result in significantly greater releases of radioactive material or source material to the environment than those associated with operation.

(b) The Authority may approve an alternate schedule for submittal of a decommissioning plan required pursuant to section (4) of this rule if the Authority determines that the alternative schedule is necessary to the effective conduct of decommissioning operations

and presents no undue risk from radiation to the public health and safety and is otherwise in the public interest.

(c) Procedures such as those listed in subsection (7)(a) of this rule with potential health and safety impacts may not be carried out prior to approval of the decommissioning plan.

(d) The proposed decommissioning plan for the site or separate building or outdoor area must include:

(A) A description of the conditions of the site or separate building or outdoor area sufficient to evaluate the acceptability of the plan;

(B) A description of planned decommissioning activities;

(C) A description of methods used to ensure protection of workers and the environment against radiation hazards during decommissioning;

(D) A description of the planned final radiation survey; and

(E) An updated detailed cost estimate for decommissioning, comparison of that estimate with present funds set aside for decommissioning, and a plan for assuring the availability of adequate funds for completion of decommissioning.

(F) For decommissioning plans calling for completion of decommissioning later than 24 months after plan approval, the plan must include a justification for the delay based on the criteria in section (9) of this rule.

(e) The proposed decommissioning plan will be approved by the Authority if the information therein demonstrates that the decommissioning will be completed as soon as practicable and that the health and safety of workers and the public will be adequately protected.

(8)(a) Except as provided in section (9) of this rule, licensees must complete decommissioning of the site or separate building or outdoor area as soon as practicable but no later than 24 months following the initiation of decommissioning.

(b) Except as provided in section (9) of this rule, when decommissioning involves the entire site, the licensee must request license termination as soon as practicable but no later than 24 months following the initiation of decommissioning.

(9) The Authority may approve a request for an alternative schedule for completion of decommissioning of the site or separate building or outdoor area, and license termination if appropriate, if the Authority determines that the alternative is warranted by consideration of the following:

(a) Whether it is technically feasible to complete decommissioning within the allotted 24-month period;

(b) Whether sufficient waste disposal capacity is available to allow completion of decommissioning within the allotted 24-month period;

(c) Whether a significant volume reduction in wastes requiring disposal will be achieved by allowing short-lived radionuclides to decay;

(d) Whether a significant reduction in radiation exposure to workers can be achieved by allowing short-lived radionuclides to decay; and

(e) Other site-specific factors which the Authority may consider appropriate on a case-by-case basis, such as the regulatory requirements of other government agencies, lawsuits, groundwater treatment activities, monitored natural ground-water restoration, actions that could result in more environmental harm than deferred cleanup, and other factors beyond the control of the licensee.

(10) As the final step in decommissioning, the licensee must:

(a) Certify the disposition of all licensed material, including accumulated wastes, by submitting a completed NRC Form 314 or equivalent information; and

(b) Conduct a radiation survey of the premises where the licensed activities were carried out and submit a report of the results of this survey, unless the licensee demonstrates in some other manner that the premises are suitable for release in accordance with the criteria for decommissioning in 10 CFR Part 20, Subpart E. The licensee must, as appropriate:

(A) Report levels of gamma radiation in units of millisieverts (microroentgen) per hour at one meter from surfaces, and report levels of radioactivity, including alpha and beta, in units of megabecquerels (disintegrations per minute or microcuries) per 100 square centimeters — removable and fixed — for surfaces, megabecquerels (microcuries) per milliliter for water, and becquerels (picocuries) per gram for solids such as soils or concrete; and

(B) Specify the survey instrument(s) used and certify that each instrument is properly calibrated and tested.

(11) Specific licenses, including expired licenses, will be terminated by written notice to the licensee when the Authority determines that:

(a) Radioactive material or source material has been properly disposed;

(b) Reasonable effort has been made to eliminate residual radioactive contamination, if present; and

(c)(A) A radiation survey has been performed that demonstrates that the premises are suitable for release or establishes the level of residual activity in accordance with the criteria for decommissioning in 10 CFR Part 20, Subpart E; or

(B) The licensee has provided sufficient financial assurance to enable an independent third party, including a governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site. Acceptable financial assurance mechanisms are:

(i) Funds placed into an account separate from the licensee's assets and outside of the licensee's control before the start of decommissioning operations; or

(ii) A statement of intent containing a cost estimate for decommissioning or an amount based on the table in paragraph (d) of 10 CFR section 30.35(d), and indicating that funds for decommissioning will be obtained when necessary; or

(iii) An arrangement deemed acceptable by the governmental entity that is assuming custody and ownership of a site.

(C) Alternate criteria for license termination. The Authority will terminate a license using alternate criteria greater than the dose criterion of OAR 333-102-0310, if the licensee:

(i) Provides assurance that public health and safety shall continue to be protected and that it is unlikely that the total effective dose equivalent from all combined man-made sources other than medical sources shall be more than 100 millirem per year (1 millisievert per year) by submitting an analysis of possible sources of exposure;

(ii) Has employed restrictions on site use in minimizing exposures at the site;

(iii) Reduces doses to ALARA levels considering any detriments such as traffic accidents potentially expected to result from decontamination and waste disposal; and

(D) Has submitted a decommissioning or license termination plan to the Authority indicating the licensee's intent to decommission as specified in OAR 333-102-0310, and specifying that the licensee proposes to decommission by use of alternate criteria. The licensee shall document in the license termination or decommissioning plan how the advice of individuals and institutions in the community who could be affected by the decommissioning has been sought and addressed, as appropriate, following analysis of that advice in:

(i) Participation by representatives of a broad cross section of community interests who could be affected by the decommissioning;

(ii) An opportunity for a comprehensive, collective discussion on the issues by the participants represented; and

(iii) A publicly available summary of the results of all such discussions, including a description of the individual viewpoints of the participants on the issues and the extent of agreement and disagreement on the issues.

(E) The use of alternate criteria to terminate a license requires the approval of the Authority after consideration of any comments provided by the U. S. Environmental Protection Agency and any public comments submitted.

(F) Other information submitted by the licensee is sufficient to demonstrate that the premises are suitable for release in accordance with the criteria for decommissioning in 10 CFR Part 20, Subpart E.

(d) The licensee has kept records of receipt, transfer, and disposal of radioactive material or source material, pursuant to OAR 333-100-0055 that meet the following criteria:

(A) The licensee must retain each record of receipt of radioactive material or source material as long as the material is possessed and for three years following transfer or disposal of the material.

(B) The licensee who transferred the material must retain each record of transfer for three years after each transfer unless a specific requirement in another part of the rules in this chapter dictates otherwise.

(C) The licensee who disposed of the material must retain each record of disposal of byproduct material until the Authority terminates each license that authorizes disposal of the material.

333-102-0315
Application for Renewal of Licenses

(1) Application for renewal of a specific license must be filed in accordance with OAR 333-102-0190.

(2) In any case in which a licensee, not less than 30 days prior to expiration of the existing license, has filed an application in proper form for renewal or for a new license authorizing the same activities, such existing license shall not expire until final action by the Authority.

(3) Unless otherwise specified, specific licenses shall expire after five years.

(4) The Authority shall require reapplication when the license expires.

(5) The Authority may grant, upon written request from a licensee, extension of the license expiration date up to five years from the original expiration date. Notwithstanding any licensee request, the Authority is not required, and may deny, any license extension, based on review of licensed activities.

333-102-0320
Amendment of Licenses at Request of Licensee

Application for amendment of a license must be filed in accordance with OAR 333-102-0190 and must specify the respects in which the licensee desires the license to be amended and the grounds for such amendment.

333-102-0327
Specifically Licensed Items — Registration of Product Information

(1) Any manufacturer or initial distributor of a sealed source or device containing a sealed source whose product is intended for use under a specific license may submit a request to the U.S. Nuclear Regulatory Commission, Office of Nuclear Material Safety and Safeguards for evaluation of radiation safety information about its product and for its registration.

(2) The request for review must be made in duplicate and sent to the Director, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

NOTE: The U.S. Nuclear Regulatory Commission charges a fee for processing a sealed source or device evaluation request. Contact the U.S. Nuclear Regulatory Commission directly for current fee structure.

(3) The request for review of a sealed source or a device must include sufficient information about the design, manufacture, prototype testing, quality control program, labeling, proposed uses and leak testing and, for a device, the request must also include sufficient information about installation, service and maintenance, operating and safety instructions, and its potential hazards, to provide reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and property.

(4) The U.S. Nuclear Regulatory Commission normally evaluates a sealed source or a device using radiation safety criteria in accepted industry standards. The U.S. Nuclear Regulatory Commission uses criteria and standards sufficient to ensure that the radiation safety properties of the device or sealed source are adequate to protect health and minimize danger to life and property.

(5) After completion of the evaluation, the U.S. Nuclear Regulatory Commission, issues a certificate of registration to the person making the request. The certificate of registration acknowledges the availability of the submitted information for inclusion in an application for a specific license proposing use of the product.

(6) The person submitting the request for evaluation and registration of safety information about the product shall manufacture and distribute the product in accordance with:

(a) The statements and representations, including quality control program, contained in the request; and

(b) The provisions of the registration certificate.

333-102-0330
Transfer of Material

(1) No licensee may transfer radioactive material except as authorized pursuant to this rule.

(2) Except as otherwise provided in the license and subject to the provisions of sections (3) and (4) of this rule, any licensee may transfer radioactive material:

(a) To the Authority;

NOTE: A licensee may transfer radioactive material to the Authority only after receiving prior approval in writing from the Authority.

(b) To the U.S. Department of Energy;

(c) To any person exempt from the rules in this division to the extent permitted under such exemption;

(d) To any person authorized to receive such material under terms of a general license or its equivalent, or a specific license or equivalent licensing document, issued by the Authority, the U.S. Nuclear Regulatory Commission, any Agreement State or any Licensing State, or to any person otherwise authorized to receive such material by the Federal Government or any agency thereof, the Authority, an Agreement State or a Licensing State; or

(e) As otherwise authorized by the Authority in writing.

(3) Before transferring radioactive material to a specific licensee of the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State, or to a general licensee who is required to register with the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State prior to receipt of the radioactive material, the licensee transferring the material must verify that the transferee's license authorizes the receipt of the type, form and quantity of radioactive material to be transferred.

(4) Any of the following methods for the verification required by section (3) of this rule are acceptable:

(a) The transferor may possess and read a current copy of the transferee's specific license or registration certificate;

(b) The transferor may possess a written certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency and expiration date;

(c) For emergency shipments, the transferor may accept oral certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency and expiration date; provided, that the oral certification is confirmed in writing within 10 days;

(d) The transferor may obtain other information compiled by a reporting service from official records of the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State regarding the identity of licensees and the scope and expiration dates of licenses and registration;

(e) When none of the methods of verification described in subsections (4)(a) through (4)(d) of this rule are readily available or when a transferor desires to verify that information received by one of such methods is correct or up-to-date, the transferor may obtain and record confirmation from the Authority, the U.S. Nuclear Regulatory Commission, the licensing agency of an Agreement State or a Licensing State that the transferee is licensed to receive the radioactive material.

(5) Shipment and transport of radioactive material must be in accordance with the provisions of division 118 of this chapter.

333-102-0335
Modification, Revocation and Termination of Licenses

(1) The terms and conditions of each license issued pursuant to the rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter shall be subject to amendment, revision or modification or by reason of amendments to the Act, or by reason of rules, regulations and orders issued in accordance with the terms of the Act by the Authority.

(2) Any license may be revoked, suspended or modified, in whole or in part, for any material false statement in the application or any statement of fact required under section 182 of the Act, or because of conditions revealed by such application or statement of fact or any report, record or inspection or other means that would warrant the Authority to refuse to grant a license on an original application, or for violation of, or failure to observe any of the terms and conditions of the Act or of any rule, regulation or order of the US Nuclear Regulatory Commission or the Authority.

(3) Except in cases of willfulness or those in which the public health, interest or safety requires otherwise, no license shall be modified, suspended or revoked unless, prior to the institution of proceedings therefore, facts or conduct which may warrant such action shall have been called to the attention of the licensee in writing and the licensee shall have been accorded an opportunity to demonstrate or achieve compliance with all lawful requirements.

(4) The Authority may terminate a specific license upon request submitted by the licensee to the Authority in writing.

333-102-0340
Reciprocal Recognition of Licenses

(1) Subject to these rules, any person who holds a specific license from the U.S. Nuclear Regulatory Commission, an Agreement State, or a licensing state, and issued by the Authority having jurisdiction where the licensee maintains an office for directing the licensed activity and at which radiation safety records are normally maintained, is hereby granted a general license to conduct the activities authorized in such licensing document within this state for a period not in excess of 180 consecutive days in any calendar year, provided that:

(a) The licensing document does not limit the activity authorized by such document to specified installations or locations;

(b) The out-of-state licensee has notified the Authority using the Notification of Entry to Perform Activities Under Oregon Reciprocity Application form at least three days prior to engaging in such activity and has paid the applicable registration fee pursuant to OAR 333-103-0030. Such notification shall indicate the location, period and type of proposed possession and use within the state, and shall be accompanied by a copy of the pertinent licensing document. If, for a specific case, the three-day period imposes an undue hardship on the out-of-state licensee, the licensee may, upon application to the Authority, obtain permission to proceed sooner. The Authority may waive the requirement for filing additional written notifications during the remainder of the calendar year following the receipt of the initial notification from a person engaging in activities under the general license granted by subsection (1)(a) of this rule;

(c) The out-of-state licensee complies with all applicable rules of the Authority and with all the terms and conditions of the licensing document, except any such terms and conditions that may be inconsistent with applicable rules of the Authority or laws of the State of Oregon;

(d) The out-of-state licensee supplies such other information as the Authority may request; and

(e) The out-of-state licensee shall not transfer or dispose of radioactive material possessed or used under the general license provided in subsection (1)(a) of this rule except by transfer to a person:

(A) Specifically licensed by the Authority or by the U.S. Nuclear Regulatory Commission to receive such material; or

(B) Exempt from the requirements for a license for such material under OAR 333-102-0010(2).

(2) Notwithstanding the provisions of section (1) of this rule, any person who holds a specific license issued by the U.S. Nuclear Regulatory Commission, pursuant to 10 CFR 31.6 or equivalent regulations of an Agreement State, authorizing the holder of the license to manufacture, transfer, install or service a device described in OAR 333-102-0115(1) within the State of Oregon is hereby granted a general license to install, transfer, demonstrate or service such a device in this state provided that:

(a) Such person shall register the general license pursuant to OAR 333-101-0007;

(b) File a report with the Authority within 30 days after the end of each calendar quarter in which any device is transferred to or installed in this state. Each such report shall identify each general licensee to whom such device is transferred by name and address, the type of device transferred and the quantity and type of radioactive material contained in the device;

(c) Ensure that the device has been manufactured, labeled, installed and serviced in accordance with applicable provisions of the specific license issued to such person by the U.S. Nuclear Regulatory Commission or an Agreement State;

(d) Ensure that any labels required to be affixed to the device under rules of the licensing authority also include the statement "Removal of this label is prohibited"; and

(e) The holder of the specific license shall furnish to each general licensee to whom such device is transferred, or on whose premises such a device is installed, a copy of the general license contained in OAR 333-102-0115 or in equivalent rules of the Authority having jurisdiction over the manufacture and distribution of the device.

(3) The Authority may withdraw, limit or qualify its acceptance of any specific license or equivalent licensing document issued by the U.S. Nuclear Regulatory Commission or an Agreement State, or any product distributed pursuant to such licensing document,

upon determining that such action is necessary in order to prevent undue hazard to public health and safety or property. The Authority may deny the licensee to perform activities under Oregon reciprocity.

(4) The out-of-state licensee shall at all times during work at any work location within the state have available the pertinent licensing document, the applicable sections of the State of Oregon radiation regulations, a complete source inventory, pertinent U.S. Department of Transportation documentation, leak test records, instrument calibration records, personnel training records, and necessary documentation required by applicable special requirements of these regulations.

(5) While working in Oregon, the out-of-state licensee shall notify the Authority (in writing, indicating date and court) immediately following the filing of a voluntary or involuntary petition for bankruptcy under any chapter of Title 11 (bankruptcy) of the United States code by or against:

(a) The licensee;

(b) An entity (as that term is defined in II U.S.C 101(14)) controlling the licensee or listing the license or licensee as property of the estate; or

(c) An affiliate (as that term is defined in II U.S.C. 101(2)) of the license.

(6) If multiple work crews or persons work concurrently at more than one work location under a general license granted pursuant to this rule, each day worked at each location shall count toward the limit of 180 consecutive days in a calendar year.

(7) Each general licensee granted authorization to conduct activities within the State of Oregon pursuant to this rule, based upon an acceptable licensing document, will receive acknowledgment from the Authority. This acknowledgment shall be kept at the site of use.

(8) Each general licensee granted authorization to conduct activities within the State of Oregon pursuant to this rule based upon an acceptable licensing document is subject to the reciprocity fee and may be inspected by the Authority. The fee for the general license granting reciprocity shall:

(a) Be charged as provided by division 103 of this chapter; and

(b) Shall not be charged more often than once during each calendar year.

(9) Each general licensee operating within the state under reciprocity in areas of exclusive federal jurisdiction shall comply with the applicable provisions of 10 CFR 150.20.

Special Procedures in Regulatory Review

(1) The provisions of ORS Chapter 183 governing contested cases are applicable in any case where the Authority proposes to refuse to issue, renew, modify, amend, revise, revoke or suspend a general or specific license or to find noncompliance with or to refuse to grant exemption from a regulation of the Authority.

(2) In any case where the Authority proposes to grant, issue, renew, modify, amend or revise a general or specific license, or to find compliance or to grant exemption from a regulation of the Authority and the Assistant Director of the Public Health Division determines that such action would first merit public notice and opportunity for hearing, the following procedures shall be applicable:

(a) Notice of the proposed action shall be published in the Secretary of State's bulletin or a newspaper of general circulation in the state, which notice shall provide that within 15 days of the day of publication of the notice, any person whose interest may be affected by the outcome of the proceeding, or who represents a public interest in the results of the proceeding, may file a petition to be made a party and given an opportunity for hearing in the matter. The notice of proposed action shall set forth:

(A) The nature of the action proposed;

(B) The manner in which and the location at which inspection may be made of the Authority records pertaining to the proposed action; and

(C) A reference of the Authority's rules governing institution and conduct of hearings in radiation control proceedings.

(b) If no request for hearing is filed within the time prescribed in the notice, the proposed action shall be taken;

(c) If a hearing is requested, the person requesting to participate as a party must file a petition requesting party status and opportunity for hearing, setting forth the same information required of a person requesting party status in a contested case when the Authority has given notice that it intends to hold a contested case hearing pursuant to OAR 137-003-0005(6). The same procedures for determining party status under OAR 137-003-0005 shall be followed upon receipt of the petition;

(d) If the Authority allows party status, it shall in the same order set the time for a contested case hearing and provide notice of the order to the petitioner and all parties;

(e) A contested case shall proceed in accordance with the provisions of ORS Chapter 183 governing contested cases.

333-102-0350
Reporting Requirements

(1) Immediate report. Each licensee must notify the Authority as soon as possible but not later than four hours after the discovery of an event that prevents immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed regulatory limits or releases of licensed material that could exceed regulatory limits (events may include fires, explosions, toxic gas releases, etc.).

(2) Twenty-four hour report. Each licensee must notify the Authority within 24 hours after the discovery of any of the following events involving licensed material:

(a) An unplanned contamination event that:

(A) Requires access to the contaminated area, by workers or the public, to be restricted for more than 24 hours by imposing additional radiological controls or by prohibiting entry into the area;

(B) Involves a quantity of material greater than five times the lowest annual limit on intake specified in appendix B of Secs. 20.1001–20.2401 of 10 CFR part 20 for the material; and

(C) Has access to the area restricted for a reason other than to allow isotopes with a half-life of less than 24 hours to decay prior to decontamination.

(b) An event in which equipment is disabled or fails to function as designed when:

(A) The equipment is required by regulation or license condition to prevent releases exceeding regulatory limits, to prevent exposures to radiation and radioactive materials exceeding regulatory limits, or to mitigate the consequences of an accident;

(B) The equipment is required to be available and operable when it is disabled or fails to function; and

(C) No redundant equipment is available and operable to perform the required safety function.

(c) An event that requires unplanned medical treatment at a medical facility of an individual with spreadable radioactive contamination on the individual's clothing or body.

(d) An unplanned fire or explosion damaging any licensed material or any device, container, or equipment containing licensed material when:

(A) The quantity of material involved is greater than five times the lowest annual limit on intake specified in appendix B of Secs. 20.1001–20.2401 of 10 CFR part 20 for the material; and

(B) The damage affects the integrity of the licensed material or its container.

(3) Preparation and submission of reports. Reports made by licensees in response to the requirements of this rule must be made as follows:

(a) Licensees must make reports required by sections (1) and (2) of this rule by telephone to the Authority. To the extent that the information is available at the time of notification, the information provided in these reports must include:

NOTE: The 24-hour telephone number for the Authority is 971-673-0490.

(A) The caller's name and call back telephone number;

(B) A description of the event, including date and time;

(C) The exact location of the event;

(D) The isotopes, quantities, and chemical and physical form of the licensed material involved; and

(E) Any personnel radiation exposure data available.

(b) Written report. Each licensee who makes a report required by sections (1) or (2) of this rule must submit a written follow-up report within 30 days of the initial report. Written reports prepared pursuant to other regulations may be submitted to fulfill this requirement if the reports contain all of the necessary information and the appropriate distribution is made. These written reports must be faxed or sent to the Department with Attention to Manager, Radiation Protection Services, Center for Health Protection, 800 NE Oregon Street, Suite 640, Portland, OR 97232. The reports must include the following:

(A) A description of the event, including the probable cause and the manufacturer and model number (if applicable) of any equipment that failed or malfunctioned;

(B) The exact location of the event;

(C) The isotopes, quantities, and chemical and physical form of the licensed material involved;

(D) Date and time of the event;

(E) Corrective actions taken or planned and the results of any evaluations or assessments; and

(F) The extent of exposure of individuals to radiation or to radioactive materials without identification of individuals by name.

(4) The provisions of this rule apply to licensees subject to the notification requirements in OAR 333-102-0200(5).

333-102-0355
Records

(1) Each person who receives radioactive material pursuant to a license issued in accordance with the rules in this division and divisions 103, 105, 113, 115, 116, 117, 120 and 121 of this chapter must keep records showing the receipt, transfer, and disposal of the radioactive material as follows:

(a) The licensee must retain each record of receipt of radioactive material as long as the material is possessed and for three years following transfer or disposal of the material.

(b) The licensee who transferred the material must retain each record of transfer for three years after each transfer unless a specific requirement in another division of the rules in this chapter dictates otherwise.

(c) The licensee who disposed of the material must retain each record of disposal of radioactive material until the Authority terminates each license that authorizes disposal of the material.

(2) The licensee must retain each record that is required by the rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter or by license condition for the period specified by the appropriate rule or license condition. If a retention period is not otherwise specified by rule or license condition, the record must be retained until the Authority terminates each license that authorizes the activity that is subject to the recordkeeping requirement.

(3)(a) Records that must be maintained pursuant to this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter may be the original or a reproduced copy or microform if such reproduced copy or microform is duly authenticated by authorized personnel and the microform is capable of producing a clear and legible copy after storage for the period specified by Authority rules. The record also may be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, or specifications, must include all pertinent information such as stamps, initials, and signatures. The licensee must maintain adequate safeguards against tampering with and loss of records.

(b) If there is a conflict between the Authority's rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter, license condition, or other written Authority approval or authorization pertaining to the retention period for the same type of record, the retention period specified in the rules in this division and divisions 105, 113, 115, 116, 117, and 121 of this chapter for such records must apply unless the Authority, pursuant to OAR 333-102-0003, has granted a specific exemption from the record retention requirements specified in the rules in this division or divisions 105, 113, 115, 116, 117, and 121 of this chapter.

(4) Prior to license termination, each licensee authorized to possess radioactive material with a half-life greater than 120 days, in an unsealed form, must forward the following records to the program office:

(a) Records of disposals of licensed material made prior to January 28, 1981; and

(b) Records required by OAR 333-120-0620(2)(d).

NOTE: Prior to Oregon Department of Energy's Energy Facility Siting Council rules for burial of small quantities of licensed materials in soil was permitted without specific Authority authorization.

(5) If licensed activities are transferred or assigned in accordance with OAR 333-102-0305(2), each licensee authorized to possess radioactive material, with a half-life greater than 120 days, in an unsealed form, must transfer the following records to the new licensee and the new licensee will be responsible for maintaining these records until the license is terminated:

(a) Records of disposal of licensed material made under OAR 333-120-0510 (including burials authorized before January 28, 1981), 333-120-0520, 333-120-0530, 333-120-0540; and

(b) Records required by OAR 333-120-0620(2)(d).

(6) Prior to license termination, each licensee must forward the records required by OAR 333-102-0200(6) to the Authority.

Right to Cause the Withholding or Recall of Byproduct Material

The Authority may cause the withholding or recall of byproduct material from any licensee who is not equipped to observe or fails to observe such safety standards to protect health as may be established by the Authority, or who uses such materials in violation of law or regulation of the Authority, or in a manner other than as disclosed in the application therefore or approved by the Authority.

333-102-0365
Third Party Method

If the applicant consents, the Authority may enter into third party agreements for the applicant to engage and pay for the services of a third party contractor to prepare an environmental impact analysis required by OAR 333-102-0190 and/or to furnish an opinion of independent experts, satisfactory to the Authority, in respect to the completeness and adequacy of any information or data furnished by the applicant and on any aspect of the applicant's project or effects thereof.

(1) When the license applicant pays for a third party agreement, the monies paid for the consultant must not be considered as specific license fees, pursuant to OAR 333-103-0010 of this chapter.

(2) In proceeding under the third party agreement, the Authority shall carry out the following practices:

(a) Such contractor shall be chosen solely by the Authority.

(b) The Authority shall manage the contract.

(c) The consultant must be selected based on the consultant's ability and relevant and applicable work experience and an absence of conflict of interest. Third party contractors shall be required to execute a disclosure statement showing that they have no financial or other conflicting interest in the outcome of the project.

(d) The Authority shall specify the information to be developed and supervise the gathering, analysis and presentation of the information. The Authority shall have sole authority for approval and modification of the statement, analysis, and conclusions included in third party's report.

(e) The Authority has the single right of refusal of the final application and the Authority is not obligated to approve the application or issue a license.
