Special Requirements for Specific Licenses of Broad Scope

This rule prescribes requirements for the issuance of specific licenses of broad scope for radioactive material and certain rules governing holders of such licenses.

(1) The different types of broad scope licenses are set forth below:

(a) A "Type A specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of the radioactive material specified in the license, but not exceeding quantities specified in the license, for any authorized purpose. The quantities specified are usually in the multicurie range;

(b) A "Type B specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of radioactive material specified in 10 CFR, Part 33.100, Schedule A, for any authorized purpose. The possession limit for a Type B license of broad scope, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in 10 CFR, Part 33.100, Schedule A, Column I. If two or more radionuclides are possessed thereunder, the possession limit for each is determined as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in 10 CFR, Part 33.100, Schedule A Column I, for that radionuclide. The sum of the ratios for all radionuclides possessed under the license must not exceed unity;

(c) A "Type C specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of radioactive material specified in 10 CFR, Part 33.100, Schedule A, for any authorized purpose. The possession limit for a Type C license of broad scope, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in 10 CFR, Part 33.100, Schedule A, Column II. If two or more radionuclides are possessed thereunder, the possession limit is determined for each as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in 10 CFR, Part 33.100, Schedule A, Column II, for that radionuclide. The sum of the ratios for all radionuclides possessed under the license must not exceed unity.

(2) An application for a Type A specific license of broad scope will be approved if:

(a) The applicant satisfies the general requirements specified in OAR 333-102-0200;

(b) The applicant has engaged in a reasonable number of activities involving the use of radioactive material; and

(c) The applicant has established administrative controls and provisions relating to organization and management, procedures, record keeping, material control and accounting and management review that are necessary to assure safe operations, including:

(A) The establishment of a radiation safety committee composed of such persons as a radiation safety officer, a representative of management and persons trained and experienced in the safe use of radioactive material;

(B) The appointment of a radiation safety officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters; and

(C) The establishment of appropriate administrative procedures to assure:

(i) Control of procurement and use of radioactive material;

(ii) Completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, training and experience of the user and the operating or handling procedures; and

(iii) Review, approval and recording by the radiation safety committee of safety evaluations of proposed uses prepared in accordance with subparagraph (2)(c)(C)(ii) of this rule prior to use of the radioactive material.

(3) An application for a Type B specific license of broad scope will be approved if:

(a) The applicant satisfies the general requirements specified in OAR 333-102-0200; and

(b) The applicant has established administrative controls and provisions relating to organization and management, procedures, record keeping, material control and accounting, and management review that are necessary to assure safe operations, including:

(A) The appointment of a radiation safety officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters; and

(B) The establishment of appropriate administrative procedures to assure:

(i) Control of procurement and use of radioactive material;

(ii) Completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, training and experience of the user and the operating or handling procedures; and

(iii) Review, approval and recording by the radiation safety officer of safety evaluations of proposed uses prepared in accordance with subparagraph (3)(b)(B)(ii) of this rule prior to use of the radioactive material.

(4) An applicant for a Type C specific license of broad scope will be approved if:

(a) The applicant satisfies the general requirements specified in OAR 333-102-0200;

(b) The applicant submits a statement that radioactive material will be used only by, or under the direct supervision of, individuals who have received:

(A) A college degree at the bachelor level, or equivalent training and experience, in the physical or biological sciences or in engineering; and

(B) At least 40 hours of training and experience in the safe handling of radioactive material, and in the characteristics of ionizing radiation, units of radiation dose and quantities, radiation detection instrumentation and biological hazards of exposure to radiation appropriate to the type and forms of radioactive material to be used.

(c) The applicant has established administrative controls and provisions relating to procurement of radioactive material, procedures, record keeping, material control and accounting, and management review necessary to assure safe operations.

(5) Specific licenses of broad scope are subject to the following conditions:

(a) Unless specifically authorized, persons licensed pursuant to this rule must not:

(A) Conduct tracer studies in the environment involving direct release of radioactive material;

(B) Receive, acquire, own, possess, use or transfer devices containing 100,000 curies (3.7 PBq) or more of radioactive material in sealed sources used for irradiation of materials;

(C) Conduct activities for which a specific license issued by the Authority under OAR 333-102-0235, 333-102-0245, 333-102-0250, 333-102-0255, 333-102-0260, 333-102-0265, 333-102-0270, 333-102-0275, 333-102-0285, 333-102-0290, 333-102-0293, or chapter 333 divisions 105, 110, 113, 115, 116, or 117 is required; or

(D) Add or cause the addition of radioactive material to any food, beverage, cosmetic, drug or other product designed for ingestion or inhalation by, or application to, a human being.

(b) Each Type A specific license of broad scope issued under this division shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety committee;

(c) Each Type B specific license of broad scope issued under this division shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety officer;

(d) Each Type C specific license of broad scope issued under this division shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals who satisfy the requirements of section (4) of this rule.

Specific Terms and Conditions for Broad Licenses

(1) No licensee may use radioactive material in or on human beings or in field applications where radioactive material is released except as specifically authorized by license.

(2) Experimental animals administered radioactive materials or their products must not be used for human consumption.

(3) Licensees must conduct a physical inventory every six months to account for all radioactive material received and possessed under the license. The records of the inventories must be maintained until inspection by the Radiation Protection Services Section, and must include the quantities and kinds of radioactive material, location of sealed sources and the date of the inventory.

DIVISION 103

FEES

333-103-0001
Purpose and Scope

(1) The rules in this division establish fees for sources of radiation and provide for their payment. Sources of radiation, as defined in OAR 333-100-0005, include, but are not limited to, radiation facilities, radiation producing machines, radiation producing devices, radioactive material in sealed and unsealed form (normal form and special form), and radioactive material uses.

(2) Except as otherwise specifically provided, the rules in this division apply as follows:

(a) Radiation producing machines, radiation facility registration, radiation machine vendors and/or services, accredited hospital radiology inspectors, and non-ionizing sources of radiation are subject to OAR chapter 333, divisions 101, 105, 106, 108, 109, 111, 112, 115, 119, 122 or 123;

(b) Radioactive materials pursuant to OAR chapter 333 divisions 102, 105, 110, 113, 115, 116, 117 or 121;

(c) General licenses and registrations pursuant to divisions 101 and 102 of this chapter;

(d) Microwave Oven Service Licensees;

(e) Radiological Analyses; and

(f) Tanning Device Registrations.

333-103-0003
Definitions

As used in this division, the following definitions apply:

(1) "License" ("Acknowledgment of Validation," "Validation Certificate," "Certificate of Validation") means the document issued that validates receipt of payment for a specific license or registration fee.

(2) "Registration Fee" means:

(a) The fee paid to the Authority for registering Radiation Producing Machines; or

(b) The fee paid to the Authority to validate a general license registration issued pursuant to OAR 333-102-0101, 333-102-0103, 333-102-0115, 333-102-0130 or 333-102-0340

(3) "Specific License Fee" means:

(a) The annual fee payable, to validate specific licenses for sources of radiation; or

(b) The fee paid upon application to the Authority for an Oregon Radioactive Materials License to license specific licensed sources of radiation pursuant to OAR 333-103-0010; or

(c) The fee paid to license additional sources of radiation pursuant to OAR 333-103-0010.

Stat. Auth.: ORS 453.757

Stats. Implemented: ORS 453.757

333-103-0005
Biennial Fee for Radiation Machines

(1) For the purpose of this division, a radiation machine is defined under OAR 333-100-0005.

(2) Each radiation machine shall be validated biennially by a radiation machine fee in the following amounts:

(a) Hospital, radiologist, chiropractic, osteopathic or medical X-ray machine, $285;

(b) Hospital X-ray machine when X -ray machine inspection is performed by an accredited hospital radiology inspector rather than an Authority inspector, $145;

(c) Industrial or podiatry X-ray machine, $190;

(d) Dental, academic or veterinary X-ray machine, $140.

(3) The radiation machine fee shall be due and payable for each radiation machine on or before October 1 of each biennium.

(4) A certificate of validation or acknowledgment of validation for the current biennium must be posted on or near the radiation machine by the registrant.

(5) In any case in which a registrant has submitted the proper fee prior to the expiration of a validation certificate, such existing validation certificate shall not expire until the issuance of a new validation certificate for the current biennium.

(6) Upon written request and approval by the Authority, fees for new licenses or additional machines may be prorated on a biennial quarterly basis for the current biennium.

333-103-0010
Annual Fee for Specific Licenses

(1)(a) Each specific license listed in section (2) of this rule, as defined in OAR 333-102-0203, shall be licensed pursuant to sections (2), (3), (4), (5) and (6) of this rule by a specific license fee.

(b) Upon written request and approval by the Authority, fees for new licenses or additional sources may be prorated on a quarterly basis for the current fiscal year.

(2) Each specific license type appearing in the following fee schedule shall be licensed separately with a specific license fee as indicated:

(a) Analytical/Leak Test/Fixed X-ray Fluorescence, $690(F);
(b) Basic License, $1,220(F);
(c) Brachytherapy, $2,755(F);
(d) Broad Scope A, $3,000(F);
(e) Broad Scope B, $2,755(F);
(f) Broad Scope C, $1,370(F);
(g) Distribution, $1,370(F);
(h) Fixed Gauge, $345(S);
(i) High, medium and low doserate brachytherapy, $3,000(S);
(j) Imaging and Localization, $1,370(F);
(k) In Vitro Laboratory, $455(F);
(l) Industrial Radiography:
(A) Fixed Facility, $3,000(F);
(B) Field Use, $3,000(F);
(m) Instrument Calibration, $1,035(S);
(n) Investigational New Drug, $2,065(F);
(o) Irradiator Self-Shielded, $1,370(S);
(p) Manufacturing/Compounding, $3,000(F);
(q) Mobile Nuclear Medicine, $3,000(F);
(r) NORM (no processing), $920(F);
(s) Nuclear Pharmacy, $3,000(F);
(t) Other Measuring Device, $200(S). Six sources or more, for attenuation purposes, may apply for a basic license;
(u) Portable Gauge:
(A) X-ray Fluorescence, $690(S);
(B) All other portable gauges, $920(S);
(v) Radiopharmaceutical Therapy, $2,065(F);
(w) RAM/NOS Facility, $3,000(F);
(x) Research & Development, $2,065(F);
(y) Sealed Sources for Diagnosis, $690(S);
(z) Source Material, $3,000(F);
(aa) Special Nuclear Material (sealed), $1,370(S);
(bb) Special Nuclear Material (unsealed), $3,000(F);
(cc) Teletherapy (external beam), $3,000(S);
(dd) Unique, No Fee;
(ee) Uptake and Dilution, $920(F);
(ff) Use of Xenon Gas, $920(F);
(gg) Waste Packaging, $3,000(F);
(hh) Well Logging, $2,065(S);

NOTE: (F) means facility; (S) means source.

(3) Each specific license validation fee shall be due and payable:

(a) Based on the following fee schedule:

(A) Validation fees for licenses expiring July through September are due by October 1 each year.

(B) Validation fees for licenses expiring October through December are due by January 1 each year.

(C) Validation fees for licenses expiring January through March are due by April 1 each year; and,

(D) Validation fees for licenses expiring April through June are due by July 1 each year.

(b) For each specific license source of radiation listed in section (2) of this rule for which application pursuant to OAR 333-102-0190 for an Oregon Radioactive Materials License has been made;

(c) For each additional specific license source of radiation in an amendment to an existing Oregon Radioactive Materials License pursuant to OAR 333-102-0320.

(4) A license for each specific license issued pursuant to section (3) of this rule shall be provided by the Authority. The certificate of validation for the current fiscal year shall be retained by the licensee and attached to the license pursuant to requirements in OAR 333-111-0005.

(5) The specific license fee that validates specific sealed sources also validates possession of one additional sealed source during source exchange (one new source and one spent source) for a period not to exceed 30 calendar days.

(6) Sealed sources manufactured and distributed as reference sources that do not exceed 100 times the quantity in 30.71 Schedule B of 10 CFR Part 30 are exempt from specific license fees and validation if used pursuant to a specific license listed in section (2) of this rule. The license validation fee for reference sources that exceed 100 times the quantity in 30.71 Schedule B of 10 CFR Part 30 or reference sources authorized alone without additional licensed radioactive material shall be $1,220, pursuant to subsection (2)(b) of this rule.

333-103-0015
Annual Registration Fee for General Licenses and Devices

(1) Any general license granted by the Authority must be validated annually by the general license registration fee listed in section (2) of this rule, unless otherwise exempted by subsection (2)(e) of this rule. Validation must be confirmed by verifying, correcting, and adding to the information provided in a request for registration received from the Authority. General License registration fees as defined in OAR 333-103-0003 shall:

(a) Validate each general licensed source of radiation due October 1 of each year for sources of radiation; and

(b) Validate each new application to register general license material pursuant to OAR 333-101-0007.

(2) The general licenses appearing in the following fee schedule shall be registered on the appropriate Authority form and shall be validated annually by a general license registration fee:

(a) Each healing arts facility that uses radioactive material for In Vitro laboratory or clinical testing authorized by OAR 333-102-0130, $200;

(b) Each radiation source in a generally licensed measuring, gauging or controlling device authorized pursuant to OAR 333-102-0115(1), $200;

(c) For radioactive material contained in devices designed and manufactured for the purpose of producing light, except Tritium exit signs, or an ionized atmosphere that exceed the limits in OAR 333-102-0105, $82 per device for the first 12 devices after which a Basic Specific License is required.

(d) Each general licensee possessing or using depleted uranium for the purpose of providing a concentrated mass in a small volume of the product or device pursuant to OAR 333-102-0103, $200;

(e) Each General Licensee possessing or using source material for research, development, educational, commercial or operational purpose pursuant to OAR 333-102-0101, $300;

(f) General licenses not specifically identified in subsections (2)(a), (2)(b), (2)(c) and (2)(d) of this rule are exempt from the payment of an annual general license registration fee.

(g) Each out-of-state or NRC specific licensee granted a general license pursuant to OAR 333-102-0340 to conduct activities within the State of Oregon for a period not to exceed 180 consecutive days in a calendar year must pay a registration validation fee as required by OAR 333-103-0030(1).

(h) State and local government agencies are required to register each generally licensed device but are exempt from the fees required in this rule.

(3) Notwithstanding subsection (2)(g) of this rule, the general license fee shall be due and payable on or before October 1 of each year.

(4) A certificate of validation for the then current fiscal year shall be provided by the Authority. The certificate for the then current fiscal year must be retained by the licensee and attached to the general license.

(5) Upon written request and approval by the Authority, fees for new licenses or additional sources may be prorated on a quarterly basis for the fiscal year.

Biennial Fee for Microwave Oven Service Licensees

(1) Each license issued by the Authority for microwave oven service shall be subject to a biennial $112 specific license fee.

(2) The license fee shall be due and payable on or before October 1 of each biennium.

(3) A certificate of validation or acknowledgement of validation for the then current fiscal biennium shall be provided by the Authority. The current certificate of validation must be retained by the licensee.

(4) Unless validated by the biennial fee, each license shall be deemed to expire on September 30 of each biennium.

(5) Upon written request and approval by the Authority, fees for new licenses may be prorated on a biennial quarterly basis for the current biennium.

Annual Fee for Tanning Devices

(1) Each tanning device must be validated annually by a tanning device fee of $150.

(2) The tanning device fee shall be due and payable for each tanning device on or before January 1 of each year.

(3) A certificate of validation or acknowledgment of validation for the then current fiscal year must be posted on or near the tanning device, by the registrant.

(4) In any case in which a registrant has submitted the proper fee prior to the expiration of a validation certificate, such existing validation certificate shall not expire until the issuance of a new validation certificate for the then current fiscal year.

(5) Upon written request and approval by the Authority, fees for new licenses or additional tanning devices may be prorated on a quarterly basis for the current fiscal year.

333-103-0030

Reciprocal Recognition Fee

(1) Any radiation machine or radioactive material source brought into the state for use under reciprocity must pay a fee equal to 100 percent of the appropriate license or registration validation fee, listed in OAR 333-103-0005 or 333-103-0010, not to exceed $3,000 in a year.

(2) Reciprocal fees shall be due and payable prior to entry into the state.

(3) An acknowledgment of fee payment, such as a certificate of validation, shall be provided by the Authority. The acknowledgment of fee payment must be retained by the licensee or registrant and attached to the license or registration.

(4) Reciprocal fees shall not be transferred or refunded.

(5) Reciprocal fees shall expire 12 months from the issue date.

(6) Any use of radioactive material in Oregon pursuant to OAR 333-102-0340 exceeding 180 consecutive days may be required to apply for an Oregon specific radioactive materials license pursuant to OAR 333-102-0190.

Fees For Radiological Analyses

(1) An individual, agency, or company that requests that the Authority's Radiation Laboratory perform radiological analyses on samples must pay a fee to the Authority in accordance with the schedule in section (2) of this rule. The responsible individual submitting the sample(s) must first obtain a request form from the Authority. This form contains the fee schedule and the types of radiological analyses offered. That individual must then submit the completed form along with the sample and the appropriate fee to the Authority. The Authority submits the results by return mail in accordance with the estimated time as per section (3) of this rule.

(2) Fee Schedule:

(a) Gamma Isotopic:

(A) Liquid — $310;

(B) Solid — $355;

(b) Low-level Iodine-131 — $265;

(c) Tritium (H-3) — $115.

(3) The analyses results shall be available in approximately five working days for Gamma Isotopic analyses.

NOTE: If the Authority cannot complete the analyses according to the schedule in section (3) of this rule, the Authority must notify the customer as soon as possible.

(4) A $100 surcharge shall be added to the fee for a one-day completion schedule for a Gamma Isotopic analysis.

333-103-0050

Fees for Accredited Hospital Radiology Inspectors

(1) Each accreditation for a radiology inspector shall be subject to an accreditation fee of $264.

(2) Each accreditation issued by the Authority for a radiology inspector shall be subject to a biennial renewal fee of $264.

(3) Each accreditation shall expire in the second year on the last day of the month of issuance unless renewed.

DIVISION 105

RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL RADIOGRAPHIC OPERATIONS

333-105-0001
Purpose

This division prescribes requirements for the industrial use of sources of radiation and radiation safety requirements for persons using these sources of radiation in industrial radiography.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0003
Scope

The provisions and requirements of this division are in addition to, and not in substitution for, other requirements of these rules. In particular, the general requirements of divisions 100, 102, 111, 118, and 120 of this chapter apply to applicants and licensees, subject to this division. Divisions 102 and 118 of these rules apply to licensing and transportation of radioactive material, respectively. This rule does not apply to medical uses addressed in division 116.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0005
Definitions

As used in this division, the following definitions apply:

(1) "Annual refresher safety training" means a review conducted or provided by the licensee for its employees on radiation safety aspects of industrial radiography. The review must include, as a minimum, a review of radiation safety aspects of industrial radiography, any results of internal audits, Authority inspections, new procedures or equipment, new or revised regulations, and accidents or errors that have been observed. The review must also provide opportunities for employees to ask safety questions.

(2) "ANSI" means the American National Standards Institute.

(3) "Associated equipment" means equipment that is used in conjunction with a radiographic exposure device to make radiographic exposures that drives, guides, or comes in contact with the source, (e.g., guide tube, control tube, control (drive) cable, removable source stop, "J" tube and collimator when it is used as an exposure head.

(4) "Camera" see "Radiographic exposure device".

(5) "Certifying entity" means an independent certifying organization meeting the requirements in Appendix A of division 105 or an Agreement State regulatory program meeting the requirements in **Appendix A**, Sections II and III.

(6) "Collimator" means a radiation shield that is placed on the end of the guide tube or directly onto a radiographic exposure device to restrict the size, shape, and direction of the radiation beam when the sealed source is cranked into position to make a radiographic exposure.

(7) "Control drive cable" means the cable that is connected to the source assembly and used to drive the source to and from the exposure location.

(8) "Control drive mechanism" means a device that enables the source assembly to be moved into and out of the exposure device.

(9) "Control tube" means a protective sheath for guiding the control cable. The control tube connects the control drive mechanism to the radiographic exposure device.

(10) "Drive cable" see "Control cable".

(11) "Exposure head" means a device that locates the gamma radiography sealed source in the selected working position. An exposure head also is known as a source stop or end cap.

(12) "Field station" means a facility from which sources of radiation may be stored or used and from which equipment is dispatched.

(13) "Guide tube" (projection sheath) means a flexible or rigid tube, or "J" tube, for guiding the source assembly and the attached control cable from the exposure device to the exposure head. The guide tube may also include the connections necessary for attachment to the exposure device and to the exposure head.

(14) "Hands-on experience" means experience in all of those areas considered to be directly involved in the radiography process, and includes taking radiographs, calibration of survey instruments, operational and performance testing of survey instruments and devices, film development, posting of radiation areas, preparing radiographic sources for transport, set-up of radiography equipment, posting of records and radiation area surveillance, etc., as applicable. In addition the Radiation Safety Officer experience must include source exchange and source retrieval. Excessive time spent in only one or two of these areas, such as film development or radiation area surveillance, should not be counted toward the 2000 hours of hands-on experience required for a radiation safety officer in 333-105-0520 or the hands-on experience for a radiographer as required by 333-105-0530.

(15) "Independent certifying organization" means an independent organization that meets all of the criteria of Appendix A of this part.

(16) "Industrial radiography" means a nondestructive examination of the structure of materials using ionizing radiation to make radiographic images.

(17) "Lay-barge radiography" means industrial radiography performed on any water vessel used for laying pipe.

(18) "Lixiscope" means a portable light-intensified imaging device using a sealed source.

(19) "Offshore platform radiography" means industrial radiography conducted from a platform over a body of water.

(20) "Permanent radiographic installation" means an enclosed shielded room, cell, or vault, not located at a temporary jobsite, in which radiography is performed.

(21) "Personal supervision" means supervision in which the radiographer is physically present at the site where sources of radiation and associated equipment are being used, watching the performance of the radiographer's assistant and in such proximity that immediate assistance can be given if required.

(22) "Pigtail" see "Source assembly".

(23) "Pill" see "Sealed source".

(24) "Practical examination" means a demonstration through application of the safety rules and principles in industrial radiography including use of all procedures and equipment to be used by radiographic personnel.

(25) "Projection sheath" see "Guide tube".

(26) "Projector" see "Radiographic exposure device".

(27) "Radiation safety officer for industrial radiography" means an individual with the responsibility for the overall radiation safety program on behalf of the licensee and who meets the requirements of 333-105-0520.

(28) "Radiographer" means any individual who performs or who, in attendance at the site where sources of radiation are being used, personally supervises industrial radiographic operations and who is responsible to the licensee for assuring compliance with the requirements of these rules and the conditions of the license or registration.

(29) "Radiographer certification" means written approval received from a certifying entity stating that an individual has satisfactorily met the radiation safety, testing, and experience criteria in 333-105-0530.

(30) "Radiographer's assistant" means any individual who, under the direct supervision of a radiographer, uses radiographic exposure devices, sources of radiation, related handling tools or radiation survey instruments in industrial radiography.

(31) "Radiographer instructor" means any radiographer who has been authorized by the Authority to provide on-the-job training to radiographer trainees in accordance with OAR 333-105-0530(3).

(32) "Radiographer trainee" means any individual who, under the direct supervision of a radiographer instructor, uses sources of radiation, related handling tools or radiation survey instruments during the course of his instruction.

(33) "Radiographic exposure device" (also called a camera or a projector) means any instrument containing a sealed source fastened or contained therein, in which the sealed source or shielding thereof may be moved or otherwise changed from a shielded to unshielded position for purposes of making a radiographic exposure.

(34) "Radiographic operations" means all activities performed with a radiographic exposure device. Activities include using, transporting (except when being transported by common or contract carriers), storing at a temporary job site, performing surveys to confirm the adequacy of boundaries, setting up equipment, and any activity inside restricted area boundaries. Transporting a radiation machine is not considered a radiographic operation.

(35) "Radiographic personnel" means any radiographer, radiographer's assistant, radiographer instructor or radiographer trainee.

(36) "Radiography" see "Industrial radiography".

(37) "Residential location" means any area where structures in which people lodge or live are located and the grounds on which such structures are located including, but not limited to, houses, apartments, condominiums and garages.

(38) "S-tube" means a tube through which the radioactive source travels when inside a radiographic exposure device.

(39) "Sealed source" means any radioactive material that is encased in a capsule designed to prevent leakage or escape of the radioactive material.

(40) "Shielded position" means the location within the radiographic exposure device, source changer, or storage container that, by manufacturer's design, is the proper location for storage of the sealed source.

(41) "Source assembly" means an assembly that consists of the sealed source and a connector that attaches the source to the control cable. The source assembly may also include a stop ball used to secure the source in the shielded position.

(42) "Source changer" means a device designed and used for replacement of sealed sources in radiographic exposure devices. They also may be used for transporting and storing sealed sources.

(43) "Storage area" means any location, facility or vehicle that is used to store and secure a radiographic exposure device, a radiation machine, or a storage container when it is not used for radiographic operations. Storage areas are locked or have a physical barrier to prevent accidental exposure, tampering with or unauthorized removal of the device, container, source, or machine.

(44) "Storage container" means a device in which sealed sources are secured and stored.

(45) "Temporary jobsite" means any location where radiographic operations are performed and where sources of radiation may be stored other than those location(s) of use authorized on the license or registration.

(46) "Transport container" means a package that is designed to provide radiation safety and security when sealed sources are transported and which meets all applicable requirements of the U.S. Department of Transportation.

(47) "Underwater radiography" means radiographic operations performed when the radiographic exposure device or radiation machine and/or related equipment are beneath the surface of the water.

[ED. NOTE: Appendices referenced are available from the agency.]

333-105-0050
Exemptions

Industrial uses of lixiscopes are exempt from the requirements of this division if the dose rate 18 inches from the source of radiation to any individual does not exceed two millirem per hour. Devices that exceed this limit must meet the applicable requirements of this division and the licensing or registration requirements of division 101 or division 102 of these rules, as applicable.

333-105-0075
Licensing and Registration Requirements for Industrial Radiography Operations

The Authority will approve an application for a specific license for the use of licensed material if the applicant meets the following requirements:

(1) The applicant satisfies the general requirements specified in 333-102-0200 for radioactive material and any special requirements contained in this division;

(2) The applicant submits an adequate program for training radiographers and radiographer's assistants that meets the requirements of 333-105-0530:

(a) After July 1, 2003, the applicant need not describe the initial training and examination program for radiographers in the subjects outlined in 333-105-0530(7).

(b) From December 1, 2002 to July 1, 2003, the applicant may affirm that all individuals acting as industrial radiographers will be certified in radiation safety by a certifying entity before commencing duty as radiographers. This affirmation substitutes for a description of its initial training and examination program for radiographers in the subjects outlined in 333-105-0530(7).

(3) The applicant submits procedures for verifying and documenting the certification status of radiographers and for ensuring that the certification of individuals acting as radiographers remains valid;

(4) The applicant submits written operating and emergency procedures as described in 333-105-0540;

(5) The applicant submits a description of a program for inspections of the job performance of each radiographer and radiographer's assistant at intervals not to exceed 6 months as described in 333-105-0530(5);

(6) The applicant submits a description of the applicant's overall organizational structure as it applies to the radiation safety responsibilities in industrial radiography, including specified delegation of authority and responsibility;

(7) The applicant submits the qualifications of the individual(s) designated as the radiation safety officer as described in 333-105-0520(1);

(8) If an applicant intends to perform leak testing of sealed sources or exposure devices containing depleted uranium (DU) shielding, the applicant must describe the procedures for performing the test. The description must include the:

(a) Methods of collecting the samples;

(b) Qualifications of the individual who analyzes the samples;

(c) Instruments to be used; and

(d) Methods of analyzing the samples.

(9) If the applicant intends to perform calibrations of survey instruments and alarming ratemeters, the applicant must describe methods to be used and the experience of the person(s) who will perform the calibrations. All calibrations must be performed according to the procedures described and at the intervals prescribed in 333-105-0450 and 333-105-0560(7)(d);

(10) The applicant identifies and describes the location(s) of all field stations and permanent radiographic installations;

(11) The applicant identifies the location(s) where all records required by this and other divisions of these rules will be maintained;

(12) If a license application includes underwater radiography, a description of:

(a) Radiation safety procedures and radiographer responsibilities unique to the performance of underwater radiography;

(b) Radiographic equipment and radiation safety equipment unique to underwater radiography; and

(c) Methods for gas-tight encapsulation of equipment; and

(13) If an application includes offshore platform and/or lay-barge radiography, a description of:

(a) Transport procedures for radioactive material to be used in industrial radiographic operations;

(b) Storage facilities for radioactive material; and

(c) Methods for restricting access to radiation areas.

(14) A license will be issued if sections (1) through (13) of this rule, as applicable, are met.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

Equipment Control

333-105-0420
Performance Requirements for Industrial Radiography Equipment

Equipment used in industrial radiographic operations must meet the following minimum criteria:

(1) Each radiographic exposure device, source assembly or sealed source, and all associated equipment must meet the requirements specified in American National Standard Institute, N432-1980 "Radiological Safety for the Design and Construction of Apparatus for Gamma Radiography," (published as NBS Handbook 136, issued January 1981). This publication may be purchased from the American National Standards Institute, Inc., 25 West 43rd Street, New York, New York 10036, Telephone (212) 642-4900.

(2) In addition to the requirements specified in section (1) of this rule, the following requirements apply to radiographic exposure devices, source changers, source assemblies and sealed sources:

(a) The licensee must ensure that each radiographic exposure device has attached to it a durable, legible, clearly visible label bearing the:

(A) Chemical symbol and mass number of the radionuclide in the device;

(B) Activity and the date on which this activity was last measured;

(C) Model or product code and serial number of the sealed source;

(D) Name of the manufacturer of the sealed source; and

(E) Licensee's name, address, and telephone number.

(b) Radiographic exposure devices intended for use as Type B packages must meet the applicable transportation requirements of division 118 of these rules.

(c) Modification of radiographic exposure devices, source changers, and source assemblies and associated equipment is prohibited, unless approved by the Authority or other approval body.

(3) In addition to the requirements specified in sections (1) and (2) of this rule, the following requirements apply to radiographic exposure devices, source assemblies, and associated equipment that allow the source to be moved out of the device for radiographic operations or to source changers;

(a) The coupling between the source assembly and the control cable must be designed in such a manner that the source assembly will not become disconnected if cranked outside the guide tube. The coupling must be such that it cannot be unintentionally disconnected under normal and reasonably foreseeable abnormal conditions.

(b) The device must automatically secure the source assembly when it is cranked back into the fully shielded position within the device. This securing system may only be released by means of a deliberate operation on the exposure device.

(c) The outlet fittings, lock box, and drive cable fittings on each radiographic exposure device must be equipped with safety plugs or covers which must be installed during storage and transportation to protect the source assembly from water, mud, sand or other foreign matter.

(d) Each sealed source or source assembly must have attached to it or engraved on it, a durable, legible, visible label with the words:

"DANGER – RADIOACTIVE."

The label may not interfere with the safe operation of the exposure device or associated equipment.

(e) The guide tube must be able to withstand a crushing test that closely approximates the crushing forces that are likely to be encountered during use, and be able to withstand a kinking resistance test that closely approximates the kinking forces that are likely to be encountered during use.

(f) Guide tubes must be used when moving the source out of the device.

(g) An exposure head or similar device designed to prevent the source assembly from passing out of the end of the guide tube must be attached to the outermost end of the guide tube during industrial radiography operations.

(h) The guide tube exposure head connection must be able to withstand the tensile test for control units specified in ANSI N432-1980.

(i) Source changers must provide a system for ensuring that the source will not be accidentally withdrawn from the changer when connecting or disconnecting the drive cable to or from a source assembly.

(4) All radiographic exposure devices and associated equipment in use after January 10, 1996, must comply with the requirements of this division; and

(5) As an exception to section (1) of this rule, equipment used in industrial radiographic operations need not comply with 8.9.2(c) of the Endurance Test in American National Standards Institute N432-1980, if the prototype equipment has been tested using a torque value representative of the torque that an individual using the radiography equipment can reasonably exert on the lever or crankshaft of the drive mechanism.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 19-2015, f. 9-30-15, cert. ef. 10-1-15

333-105-0430
Limits on External Radiation Levels From Storage Containers and Source Changers

The maximum exposure rate limits for storage containers and source changers are two millisieverts (200 mrem) per hour at any exterior surface, and 0.1 millisieverts (10 mrem) per hour at one meter from any exterior surface with the sealed source in the shielded position.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0440
Locking of Sources of Radiation, Storage Containers and Source Changers

(1) Each radiographic exposure device must have a lock or outer locked container designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. The exposure device and/or its container must be kept locked (If a keyed lock, the key must be removed at all times) when not under the direct surveillance of a radiographer or a radiographer's assistant except at permanent radiographic installations as stated in 333-105-0580. In addition, during radiographic operations the sealed source assembly must be secured in the shielded position each time the source is returned to that position.

(2) Each sealed source storage container and source changer must have a lock or outer locked container designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. Storage containers and source changers must be kept locked (If a keyed lock, the key must be removed at all times) when containing sealed sources except when under the direct surveillance of a radiographer or a radiographer's assistant.

(3) The control panel of each radiation machine must be equipped with a lock that will prevent the unauthorized use of an x-ray system or the accidental production of radiation. The radiation

machine must be kept locked and the key removed at all times except when under the direct visual surveillance of a radiographer or a radiographer's assistant.

333-105-0450
Radiation Survey Instruments

(1) The licensee must keep sufficient calibrated and operable radiation survey instruments at each location where sources of radiation are present to make the radiation surveys required by this division and by division 120 of these rules. Instrumentation required by this section must be capable of measuring a range from 0.02 millisieverts (2 mrem) per hour through 0.01 sievert (1 rem) per hour.

(2) The licensee must have each radiation survey instrument required under section (1) of this rule calibrated:

(a) At energies appropriate for use and at intervals not to exceed six months or after instrument servicing, except for battery changes;

(b) For linear scale instruments, at two points located approximately one-third and two-thirds of full-scale on each scale; for logarithmic scale instruments, at mid-range of each decade, and at two points of at least one decade; and for digital instruments, at three points between 0.02 and ten millisieverts (2 and 1000 mrem) per hour; and

(c) So that an accuracy within plus or minus 20 percent of the true radiation dose rate can be demonstrated at each point checked.

(3) The licensee must maintain records of the results of the instrument calibrations in accordance with 333-105-0620.

333-105-0460
Leak Testing and Replacement of Sealed Sources

(1) The replacement of any sealed source fastened to or contained in a radiographic exposure device and leak testing of any sealed source must be performed by persons authorized to do so by the Authority, the Nuclear Regulatory Commission, or another Agreement State.

(2) The opening, repair, or modification of any sealed source must be performed by persons specifically authorized to do so by the Authority, the Nuclear Regulatory Commission, or another Agreement State.

(3) Testing and recordkeeping requirements.

(a) Each licensee who uses a sealed source must have the source tested for leakage at intervals not to exceed six months. The leak testing of the source must be performed using a method approved by the Authority, the Nuclear Regulatory Commission, or by another Agreement State. The wipe sample should be taken from the nearest accessible point to the sealed source where contamination might accumulate. The wipe sample must be analyzed for radioactive contamination. The analysis must be capable of detecting the presence of 185 becquerel (0.005 microCurie) of radioactive material on the test sample and must be performed by a person specifically authorized by the Authority, the Nuclear Regulatory Commission, or another Agreement State to perform the analysis.

(b) The licensee must maintain records of the leak tests in accordance with 333-105-0630.

(c) Unless a sealed source is accompanied by a certificate from the transferor that shows that it has been leak tested within six months before the transfer, it may not be used by the licensee until tested for leakage. Sealed sources that are in storage and not in use do not require leak testing, but must be tested before use or transfer to another person if the interval of storage exceeds six months. Leak test results must be received prior to use or transfer.

(4) Any test conducted pursuant to section (2) and (3) of this rule that reveals the presence of 185 Becquerel (0.005 microCurie) or more of removable radioactive material must be considered evidence that the sealed source is leaking. The licensee must immediately withdraw the equipment involved from use and must have it decontaminated and repaired or disposed of in accordance with Authority rules. A report must be filed with the Authority within five days of any test with results that exceed the threshold in this paragraph, describing the equipment involved, the test results, and the corrective action taken.

(5) Each exposure device using depleted uranium (DU) shielding and an "S" tube configuration must be tested for DU contamination at intervals not to exceed 12 months. The analysis must be capable of detecting the presence of 185 becquerel (0.005 microCurie) of radioactive material on the test sample and must be performed by a person specifically authorized by the Authority, the Nuclear Regulatory Commission, or another Agreement State to perform the analysis. Should such testing reveal the presence of DU contamination, the exposure device must be removed from use until an evaluation of the wear of the S-tube has been made. Should the evaluation reveal that the S-tube is worn through, the device may not be used again. DU shielded devices do not have to be tested for DU contamination while not in use and in storage. Before using or transferring such a device, however, the device must be tested for DU contamination, if the interval of storage exceeds 12 months. A record of the DU leak-test must be made in accordance with 333-105-0630.

333-105-0470
Quarterly Inventory

(1) Each licensee must conduct a quarterly physical inventory to account for all sources of radiation, and for devices containing depleted uranium received and possessed under the license.

(2) The licensee must maintain records of the quarterly inventory in accordance with 333-105-0640.

333-105-0480
Inspection and Maintenance of Radiation Machines, Radiographic Exposure Devices, Transport and Storage Containers, Associated Equipment, Source Changers, and Survey Instruments

(1) The licensee must perform visual and operability checks on survey meters, radiation machines, radiographic exposure devices, transport and storage containers, associated equipment and source changers before each day's use, or work shift, to ensure that:

(a) The equipment is in good working condition;

(b) The sources are adequately shielded; and

(c) Required labeling is present.

(2) Survey instrument operability must be performed using check sources or other appropriate means.

(3) If equipment problems are found, the equipment must be removed from service until repaired.

(4) Each licensee must have written procedures for and perform inspection and routine maintenance of radiation machines, radiographic exposure devices, source changers, associated equipment, transport and storage containers, and survey instruments at intervals not to exceed three months or before the first use thereafter to ensure the proper functioning of components important to safety. If equipment problems are found, the equipment must be removed from service until repaired.

(5) The licensee's inspection and maintenance program must include procedures to assure that Type B packages are shipped and

maintained in accordance with the certificate of compliance or other approval.

(6) Records of equipment problems and of any maintenance performed under this rule must be made in accordance with 333-105-0660.

333-105-0490
Permanent Radiographic Installations

(1) Each entrance that is used for personnel access to the high radiation area in a permanent radiographic installation must have either:

(a) An entrance control of the type described in OAR 333-120-0220 that causes the radiation level upon entry into the area to be reduced; or

(b) Both conspicuous visible and audible warning signals to warn of the presence of radiation. The visible signal must be actuated by radiation whenever the source is exposed. The audible signal must be actuated when an attempt is made to enter the installation while the source is exposed or the machine is energized.

(2) The alarm system must be tested for proper operation with a radiation source each day before the installation is used for radiographic operations. The test must include a check of both the visible and audible signals. Entrance control devices that reduce the radiation level upon entry as designated in section (1)(a) of this rule must be tested monthly. If an entrance control device or an alarm is operating improperly, it must be immediately labeled as defective and repaired within seven calendar days. The facility may continue to be used during this seven-day period, provided the licensee implements the continuous surveillance requirements of 333-105-0580 and uses an alarming rate-meter. Test records for entrance controls and audible and visual alarms must be maintained in accordance with 333-105-0670.

333-105-0500
Labeling, Storage, and Transportation

(1) The licensee may not use a source changer or a container to store radioactive material unless the source changer or the storage container has securely attached to it a durable, legible, and clearly visible label bearing the standard trefoil radiation caution symbol conventional colors, i.e., magenta, purple or black on a yellow background, having a minimum diameter of 25 mm, and the wording:

CAUTION RADIOACTIVE MATERIAL
NOTIFY CIVIL AUTHORITIES
or "DANGER"

(2) The licensee may not transport radioactive material unless the material is packaged, and the package is labeled, marked, and accompanied with appropriate shipping papers in accordance with rules set out in division 118.

(3) Radiographic exposure devices, source changers, storage containers, and radiation machines, must be physically secured to prevent tampering or removal by unauthorized personnel. The licensee must store radioactive material in a manner that will minimize danger from explosion or fire.

(4) The licensee must lock and physically secure the transport package containing radioactive material in the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal.

(5) The licensee's name and city or town where the main business office is located must be prominently displayed with a durable, clearly visible label(s) on both sides of all vehicles used to transport radioactive material or radiation machines for temporary job site use.

Radiation Safety Requirements

333-105-0510
Conducting Industrial Radiographic Operations

(1) Whenever radiography is performed at a location other than a permanent radiographic installation, the radiographer must be accompanied by at least one other qualified radiographer or an individual who has at a minimum met the requirements of 333-105-0530(3). The additional qualified individual must observe the operations and be capable of providing immediate assistance to prevent unauthorized entry. Radiography may not be performed if only one qualified individual is present.

(2) All radiographic operations must be conducted in a permanent radiographic installation unless otherwise specifically authorized by the Authority.

(3) Except when physically impossible, collimators must be used in industrial radiographic operations that use radiographic exposure devices that allow the source to be moved out of the device.

(4) A licensee may conduct lay-barge, offshore platform, or underwater radiography only if procedures have been approved by the Authority, the Nuclear Regulatory Commission, or by another Agreement State.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0520
Radiation Safety Officer

The radiation safety officer must ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the licensee's program.

(1) The minimum qualifications, training, and experience for radiation safety officers for industrial radiography are as follows:

(a) Completion of the training and testing requirements of 333-105-0530(1);

(b) 2000 hours of hands-on experience as a qualified radiographer in industrial radiographic operations; and

(c) Formal training in the establishment and maintenance of a radiation protection program.

(2) The Authority will consider alternatives when the radiation safety officer has appropriate training and experience in the field of ionizing radiation, and in addition, has adequate formal training with respect to the establishment and maintenance of a radiation safety protection program.

(3) The specific duties and authorities of the radiation safety officer include:

(a) Establishing and overseeing all operating, emergency, and ALARA procedures as required by division 120 of these rules and reviewing them regularly to ensure that they conform to Authority rules and to the license or registration conditions;

(b) Overseeing and approving the training program for radiographic personnel to ensure that appropriate and effective radiation protection practices are taught;

(c) Ensuring that required radiation surveys and leak tests are performed and documented in accordance with the rules, including any corrective measures when levels of radiation exceed established limits;

(d) Ensuring that personnel monitoring devices are calibrated, if applicable, and used properly; that records are kept of the monitoring results; and that timely notifications are made as required by division 120 of these rules; and

(e) Ensuring that operations are conducted safely and for implementing corrective actions including terminating operations.

(4) Licensees will have two years from the effective date of this rule to meet the requirements of section (1) and (2) of this rule.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0530
Training

(1) The licensee may not permit any individual to act as a radiographer until the individual:

(a) Has received training in the subjects outlined in section (7) of this rule, in addition to on the job training consisting of hands-on experience under the supervision of a radiographer and is certified through a radiographer certification program. . The on the job training must include a minimum of two months (320 hours) of active participation in the performance of industrial radiography utilizing radioactive material and/or one month (160 hours) of active participation in the performance of industrial radiography utilizing radiation machines. Individuals performing industrial radiography utilizing radioactive materials and radiation machines must complete both segments of the on the job training (3 months or 480 hours); or

(b) The licensee may, until July 1, 2003, allow an individual who has not met the requirements of subsection (1)(a) of this rule, to act as a radiographer after the individual has received at least 40 hours of training in the subjects outlined in section (7) of this rule and demonstrated an understanding of these subjects by successful completion of a written examination that was previously submitted to and approved by the Authority, the Nuclear Regulatory Commission, or another Agreement State, in addition to on the job training consisting of hands-on experience under the supervision of a radiographer. The on the job training must include a minimum of two months (320 hours) of active participation in the performance of industrial radiography utilizing radioactive material and/or one month (160 hours) of active participation in the performance of industrial radiography utilizing radiation machines. Individuals performing industrial radiography utilizing radioactive materials and radiation machines must complete both segments of the on the job training (3 months or 480 hours).

(2) In addition, the licensee may not permit any individual to act as a radiographer until the individual:

(a) Has received copies of and instruction in the requirements described in the rules contained in this division, and applicable sections of divisions 120, 111, and 118 of these rules, in the license or registration under which the radiographer will perform industrial radiography, and the licensee's operating and emergency procedures;

(b) Has demonstrated an understanding of items in subsection (2)(a) of this rule by successful completion of a written or oral examination;

(c) Has received training in the use of the licensee's radiographic exposure devices, sealed sources, in the daily inspection of devices and associated equipment, and in the use of radiation survey instruments; and

(d) Has demonstrated understanding of the use of the equipment described in subsection (2)(c) of this rule by successful completion of a practical examination.

(3) The licensee may not permit any individual to act as a radiographer's assistant until the individual:

(a) Has received copies of and instruction in the requirements described in the rules contained in this, and applicable sections of divisions 120, 111, and 118 of these regulation, in the license or registration under which the radiographer's assistant will perform industrial radiography, and the licensee's operating and emergency procedures;

(b) Has demonstrated an understanding of items in subsection (3)(a) of this rule by successful completion of a written or oral examination;

(c) Under the personal supervision of a radiographer, has received training in the use of the licensee's radiographic exposure devices and sealed sources, in the daily inspection of devices and associated equipment, and in the use of radiation survey instruments; and

(d) Has demonstrated understanding of the use of the equipment described in subsection (3)(c) of this rule by successful completion of a practical examination.

(4) The licensee must provide annual refresher safety training, as defined in OAR 333-105-0005, for each radiographer and radiographer's assistant at intervals not to exceed 12 months.

(5) Except as provided in subsection (5)(d) of this rule, the radiation safety officer or designee must conduct an inspection program of the job performance of each radiographer and radiographer's assistant to ensure that the Authority's rules, license requirements, and operating and emergency procedures are followed. The inspection program must:

(a) Include observation of the performance of each radiographer and radiographer's assistant during an actual industrial radiographic operation, at intervals not to exceed six months; and

(b) Provide that, if a radiographer or a radiographer's assistant has not participated in an industrial radiographic operation for more than six months since the last inspection, the radiographer must demonstrate knowledge of the training requirements of subsection (2)(c) of this rule and the radiographer's assistant must demonstrate knowledge of the training requirements of subsection (3)(c) of this rule by a practical examination before these individuals can next participate in a radiographic operation.

(c) The Authority may consider alternatives in those situations where the individual serves as both radiographer and radiation safety officer.

(d) In those operations where a single individual serves as both radiographer and radiation safety officer, and performs all radiography operations, an inspection program is not required.

(6) The licensee must maintain records of the above training to include certification documents, written, oral and practical examinations, refresher safety training and inspections of job performance in accordance with OAR 333-105-0680.

(7) The licensee must include the following subjects required in section (1) of this rule:

(a) Fundamentals of radiation safety including:

(A) Characteristics of gamma and x-radiation;

(B) Units of radiation dose and quantity of radioactivity;

(C) Hazards of exposure to radiation;

(D) Levels of radiation from sources of radiation; and

(E) Methods of controlling radiation dose (time, distance, and shielding);

(b) Radiation detection instruments including:

(A) Use, operation, calibration, and limitations of radiation survey instruments;

(B) Survey techniques; and

(C) Use of personnel monitoring equipment;

(c) Equipment to be used including:

(A) Operation and control of radiographic exposure equipment, remote handling equipment, and storage containers, including pictures or models of source assemblies (pigtails);

(B) Operation and control of radiation machines;

(C) Storage, control, and disposal of sources of radiation; and

(D) Inspection and maintenance of equipment.

(d) The requirements of pertinent state and federal rules; and

(e) Case histories of accidents in radiography.

(8) Licensees will have one year from the effective date of this rule to comply with the additional training requirements specified in subsections (2)(a) and (3)(a) of this rule.

[ED. NOTE: Appendices referenced are available from the agency.]

333-105-0540
Operating and Emergency Procedures

(1) Operating and emergency procedures must include, as a minimum, instructions in the following:

(a) Appropriate handling and use of sources of radiation so that no person is likely to be exposed to radiation doses in excess of the limits established in division 120 of these rules;

(b) Methods and occasions for conducting radiation surveys;

(c) Methods for posting and controlling access to radiographic areas;

(d) Methods and occasions for locking and securing sources of radiation;

(e) Personnel monitoring and the use of personnel monitoring equipment;

(f) Transporting equipment to field locations, including packing of radiographic exposure devices and storage containers in the vehicles, placarding of vehicles when required, and control of the equipment during transportation as described in division 118 of these rules;

(g) The inspection, maintenance, and operability checks of radiographic exposure devices, radiation machines, survey instruments, alarming ratemeters, transport containers, and storage containers;

(h) Steps that must be taken immediately by radiography personnel in the event a pocket dosimeter is found to be off-scale or an alarming ratemeter alarms unexpectedly;

(i) The procedure(s) for identifying and reporting defects and noncompliance, as required by 333-105-0740;

(j) The procedure for notifying proper persons in the event of an accident or incident;

(k) Minimizing exposure of persons in the event of an accident or incident, including a source disconnect, a transport accident, or loss of a source of radiation;

(l) Source recovery procedure if licensee will perform source recoveries; and

(m) Maintenance of records.

(2) The licensee must maintain copies of current operating and emergency procedures in accordance with 333-105-0690 and 333-105-0730.

333-105-0550
Supervision of Radiographer's Assistants

The radiographer's assistant must be under the direct visual supervision of a radiographer when using radiographic exposure devices, associated equipment or sources of radiation, or when conducting radiation surveys required by 333-105-0570(2) to determine that the sealed source has returned to the shielded position or the radiation machine is off after an exposure. The personal supervision must include:

(1) The radiographer's physical presence at the site where the sources of radiation are being used;

(2) The availability of the radiographer to give immediate assistance if required; and

(3) The radiographer's direct observation of the assistant's performance of the operations referred to in this section.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0560
Personnel Monitoring

(1) The licensee may not permit any individual to act as a radiographer or a radiographer's assistant unless, at all times during radiographic operations, each individual wears, on the trunk of the body, a combination of direct reading dosimeter, an alarming ratemeter, and a personnel dosimeter that is processed and evaluated by an accredited National Voluntary Laboratory Accreditation Program (NVLAP) processor. At permanent radiographic installations where other appropriate alarming or warning devices are in routine use, or during radiographic operations using radiation machines, the use of an alarming ratemeter is not required.

(a) Pocket dosimeters must have a range from zero to two millisieverts (200 mrem) and must be recharged at the start of each shift. Electronic personal dosimeters may only be used in place of ion-chamber pocket dosimeters.

(b) Each personnel dosimeter must be assigned to and worn by only one individual.

(c) Film badges must be exchanged and processed at periods not to exceed one month and other personnel dosimeters processed and evaluated by an accredited NVLAP processor must be replaced at periods not to exceed three months.

(d) After replacement, each personnel dosimeter must be returned to the supplier for processing within 14 calendar days of the end of the monitoring period, or as soon as practicable. In circumstances that make it impossible to return each personnel dosimeter in 14 calendar days, such circumstances must be documented and available for review by the Authority.

(2) Direct reading dosimeters such as pocket dosimeters or electronic personal dosimeters, must be read and the exposures recorded at the beginning and end of each shift, and records must be maintained in accordance with 333-105-0700.

(3) Pocket dosimeters, or electronic personal dosimeters, must be checked at periods not to exceed 12 months for correct response to radiation, and records must be maintained in accordance with 333-105-0700(1). Acceptable dosimeters must read within plus or minus 20 percent of the true radiation exposure.

(4) If an individual's pocket dosimeter is found to be off-scale, or the electronic personal dosimeter reads greater than two millisieverts (200 mrem), the individual's personnel dosimeter must be sent for processing within 24 hours. In addition, the individual may not resume work associated with the use of sources of radiation until a determination of the individual's radiation exposure has been made. This determination must be made by the radiation safety officer or the radiation safety officer's designee. The results of this determination must be included in the records maintained in accordance with 333-105-0700.

(5) If a personnel dosimeter is lost or damaged, the worker must cease work immediately until a replacement personnel dosimeter is provided and the exposure is calculated for the time period from issuance to loss or damage of the personnel dosimeter. The results of the calculated exposure and the time period for which the personnel dosimeter was lost or damaged must be included in the records maintained in accordance with 333-105-0700.

(6) Dosimetry reports received from the accredited NVLAP personnel dosimeter processor must be retained in accordance with 333-105-0700.

(7) Each alarming ratemeter must:

(a) Be checked to ensure that the alarm functions properly before using at the start of each shift;

(b) Be set to give an alarm signal at a preset dose rate of five millisieverts (500 mrem per hour) with an accuracy of plus or minus 20 percent of the true radiation dose rate;

(c) Require special means to change the preset alarm function; and

(d) Be calibrated at periods not to exceed 12 months for correct response to radiation. The licensee must maintain records of alarming ratemeter calibrations in accordance with 333-105-0700(2).

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-105-0570
Radiation Surveys

The licensee must:

(1) Conduct all surveys with a calibrated and operable radiation survey instrument that meets the requirements of 333-105-0450;

(2) Conduct a survey of the radiographic exposure device and the guide tube after each exposure when approaching the device or the guide tube. The survey must determine that the sealed source has returned to its shielded position before exchanging films, repositioning the exposure head, or dismantling equipment. Radiation machines must be surveyed after each exposure to determine that the machine is off;

(3) Conduct a survey of the radiographic exposure device whenever the source is exchanged and whenever a radiographic exposure device is placed in a storage area as defined in 333-105-0005, to ensure that the sealed source is in its shielded position; and

(4) Maintain records in accordance with 333-105-0710.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0580
Surveillance

During each radiographic operation, the radiographer must ensure continuous direct visual surveillance of the operation to protect against unauthorized entry into a radiation area or a high radiation area, as defined in division 100 of these rules, except at permanent radiographic installations where all entryways are locked and the requirements of 333-105-0490 are met.

333-105-0590
Posting

All areas in which industrial radiography is being performed must be conspicuously posted as required by OAR 333-120-0410. The exceptions listed in 333-120-0420 do not apply to industrial radiographic operations.

Recordkeeping Requirements

333-105-0600
Records for Industrial Radiography

Each licensee must maintain a copy of its license, documents incorporated by reference, and amendments to each of these items until superseded by new documents approved by the Authority, or until the Authority terminates the license.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0610
Records of Receipt and Transfer of Sources of Radiation

(1) Each licensee must maintain records showing the receipts and transfers of sealed sources, devices using Depleted Uranium (DU) for shielding, and radiation machines, and retain each record for three years after it is made.

(2) These records must include the date, the name of the individual making the record, radionuclide, number of Becquerel (Curies) or mass (for DU), and manufacturer, model, and serial number of each source of radiation and/or device, as appropriate.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0620
Records of Radiation Survey Instruments

Each licensee must maintain records of the calibrations of its radiation survey instruments that are required under 333-105-0450 and retain each record for three years after it is made.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0630
Records of Leak Testing of Sealed Sources and Devices Containing DU

Each licensee must maintain records of leak test results for sealed sources and for devices containing DU. The results must be stated in units of Becquerels (microcuries). The licensee must retain each record for three years after it is made or until the source in storage is removed.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0640
Records of Quarterly Inventory

(1) Each licensee must maintain records of the quarterly inventory of sources of radiation, including devices containing DU as required by 333-105-0470, and retain each record for three years.

(2) The record must include the date of the inventory, name of the individual conducting the inventory, radionuclide, number of Becquerel (curies) or mass (for DU) in each device, location of sources of radiation and/or devices, and manufacturer, model, and serial number of each source of radiation and/or device, as appropriate.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0650
Utilization Logs

(1) Each licensee must maintain utilization logs showing for each source of radiation the following information:

(a) A description, including the make, model, and serial number of the radiation machine or the radiographic exposure device, transport, or storage container in which the sealed source is located;

(b) The identity and signature of the radiographer to whom assigned;

(c) The location and dates of use, including the dates removed and returned to storage; and

(d) For permanent radiographic installations, the dates each radiation machine is energized.

(2) The licensee must retain the logs required by section (1) of this rule for three years.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0660
Records of Inspection and Maintenance of Radiation Machines, Radiographic Exposure Devices, Transport and Storage Containers, Associated Equipment, Source Changers, and Survey Instruments

(1) Each licensee must maintain records specified in 333-105-0480 of equipment problems found in daily checks and quarterly inspections of radiation machines, radiographic exposure devices, transport and storage containers, associated equipment, source

changers, and survey instruments; and retain each record for three years after it is made.

(2) The record must include the date of check or inspection, name of inspector, equipment involved, any problems found, and what repair and/or maintenance, if any, was performed.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-105-0680
Records Of Training and Certification

Each licensee must maintain the following records for three years after the individual terminates employment:

(1) Records of training of each radiographer and each radiographer's assistant. The record must include radiographer certification documents and verification of certification status, copies of written tests, dates of oral and practical examinations, the names of individuals conducting and receiving the oral and practical examinations, and a list of items tested and the results of the oral and practical examinations; and

(2) Records of annual refresher safety training and semi-annual inspections of job performance for each radiographer and each radiographer's assistant. The records must list the topics discussed during the refresher safety training, the dates the annual refresher safety training was conducted, and names of the instructors and attendees. For inspections of job performance, the records must also include a list showing the items checked and any non-compliance observed by the radiation safety officer or designee.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0690
Copies of Operating and Emergency Procedures

Each licensee must maintain a copy of current operating and emergency procedures until the Authority terminates the license or registration. Superseded material must be retained for three years after the change is made.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0700
Records of Personnel Monitoring

Each licensee must maintain the following exposure records specified in 333-105-0560:

(1) Direct reading dosimeter readings and yearly operability checks required by 333-105-0560(2) and 333-105-0560(3) for three years after the record is made;

(2) Records of alarming ratemeter calibrations for three years after the record is made;

(3) Reports received from the film badge or TLD processor until the Authority terminates the license or registration; and

(4) Records of estimates of exposures as a result of off-scale personal direct reading dosimeters, or lost or damaged film badges or TLD's, until the Authority terminates the license or registration.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0710
Records of Radiation Surveys

Each licensee must maintain a record of each exposure device survey conducted before the device is placed in storage as specified in 333-105-0570(3). Each record must be maintained for three years after it is made.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0720
Form of Records

Each record required by this division must be legible throughout the specified retention period. The record may be the original or a reproduced copy or a microform provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of reproducing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, must include all pertinent information, such as stamps, initials, and signatures. The licensee must maintain adequate safeguards against tampering with and loss of records.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-105-0730
Location Of Documents and Records

(1) Each licensee must maintain copies of records required by this division and other applicable divisions of these rules at the location specified in 333-105-0410(11).

(2) Each licensee must also maintain current copies of the following documents and records sufficient to demonstrate compliance at each applicable field station and each temporary job site:

(a) The license or registration authorizing the use of sources of radiation;

(b) A copy of divisions 100, 120, 105 & 111 of this chapter;

(c) Utilization logs for each source of radiation dispatched from that location as required by 333-105-0650.

(d) Records of equipment problems identified in daily checks of equipment as required by 333-105-0660(1);

(e) Records of alarm system and entrance control checks required by 333-105-0670, if applicable;

(f) Records of dosimeter readings as required by 333-105-0700;

(g) Operating and emergency procedures as required by 333-105-0690;

(h) Evidence of the latest calibration of the radiation survey instruments in use at the site, as required by 333-105-0620;

(i) Evidence of the latest calibrations of alarming ratemeters and operability checks of dosimeters as required by 333-105-0700;

(j) Survey records as required by 333-105-0710 and 333-120-0620 as applicable, for the period of operation at the site;

(k) The shipping papers for the transportation of radioactive materials required by division 118 of these rules; and

(l) When operating under reciprocity pursuant to OAR 333-102-0340, a copy of the applicable State license or registration, or Nuclear Regulatory Commission license authorizing the use of sources of radiation.

Stat. Auth.: ORS 453.635

Notifications

333-105-0740
Notifications

(1) In addition to the reporting requirements specified in 10 CFR 30.50 and in division 120 of these rules, each licensee must provide a written report to the Authority within 30 days of the occurrence of any of the following incidents involving radiographic equipment:

(a) Unintentional disconnection of the source assembly from the control cable;

(b) Inability to retract the source assembly to its fully shielded position and secure it in this position;

(c) Failure of any component, which is critical to safe operation of the device, to properly perform its intended function; or

(d) An indicator on a radiation machine fails to show that radiation is being produced.

(2) The licensee must include the following information in each report submitted under section (1) of this rule, and in each report of overexposure submitted under OAR 333-120-0720 which involves failure of safety components of radiography equipment:

(a) Description of the equipment problem;

(b) Cause of each incident, if known;

(c) Name of the manufacturer and model number of equipment involved in the incident;

(d) Place, date, and time of the incident;

(e) Actions taken to establish normal operations;

(f) Corrective actions taken or planned to prevent recurrence; and

(g) Names and qualifications of personnel involved in the incident.

(3) Any licensee conducting radiographic operations or storing sources of radiation at any location not listed on the license or registration for a period in excess of 180 days in a calendar year, must notify the Authority prior to exceeding the 180 days.

333-105-0750
Reciprocity

(1) All reciprocal recognition of licenses and registrations by the Authority will be granted in accordance with OAR 333-102-0340.

(2) Reciprocal recognition by the Authority of an individual radiographer certification will be granted provided that:

(a) The individual holds a valid certification in the appropriate category issued by a certifying entity, as defined in 333-105-0005;

(b) The requirements and procedures of the certifying entity issuing the certification affords the same or comparable certification standards as those afforded by 333-105-0530(1);

(c) The applicant presents the certification to the Authority prior to entry into the state; and

(d) No escalated enforcement action is pending with the Nuclear Regulatory Commission or in any other state.

(3) Certified individuals who are granted reciprocity by the Authority must maintain the certification upon which the reciprocal recognition was granted, or prior to the expiration of such certification, must meet the requirements of 333-105-0530(1).

333-105-0760
Specific Requirements for Radiographic Personnel Performing Industrial Radiography

(1) At a job site, the following must be supplied by the licensee:

(a) At least one operable, calibrated survey instrument for each exposure device or radiation machine in use;

(b) A current whole body personnel monitor (TLD or film badge) for each person performing radiographic operations;

(c) An operable, calibrated pocket dosimeter with a range of zero to 200 milliroentgens for each person performing radiographic operations;

(d) An operable, calibrated, alarming ratemeter for each person performing radiographic operations using a radiographic exposure device; and

(e) The appropriate barrier ropes and signs.

(2) Each radiographer at a job site must have on their person a valid certification ID card issued by a certifying entity.

(3) Industrial radiographic operations must not be performed if any of the items in section (1) and (2) of this rule are not available at the job site or are inoperable.

(4) During an inspection, the Authority may terminate an operation if any of the items in section (1) and (2) of this rule are not available or operable, or if the required number of radiographic personnel are not present. Operations must not be resumed until all required conditions are met.

DIVISION 106

X-RAYS IN THE HEALING ARTS

333-106-0001
Purpose and Scope

This Division establishes requirements, for which a registrant is responsible, for use of X-ray equipment by or under the supervision of an individual authorized by and licensed in accordance with state statutes to engage in the healing arts or veterinary medicine. The provisions of this Division are in addition to, and not in substitution for, other applicable provisions of these rules.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-106-0005
Definitions

As used in this division, the following definitions apply:

(1) "Accessible Surface" means the external surface of the enclosure or housing provided by the manufacturer.

(2) "Added Filtration" means any filtration that is in addition to the inherent filtration.

(3) "Aluminum Equivalent" means the thickness of type 1100 aluminum alloy affording the same attenuation, under specified conditions, as the material in question.

NOTE: The nominal chemical composition of type 1100 aluminum alloy is 99.00 percent minimum aluminum, 0.12 percent copper.

(4) "Applications Training" means a vendor or manufacturer providing training for specific X-ray equipment.

(5) "A.R.R.T." means the American Registry of Radiologic Technologists.

(6) "Assembler" means any person engaged in the business of assembling, replacing, or installing one or more components into an X-ray system or subsystem. The term includes the owner of an X-ray system or his or her employee or agent who assembles components into an X-ray system that is subsequently used to provide professional or commercial services.

(7) "Attenuation Block" means a block or stack, having dimensions 20 centimeters (cm) by 20 cm by 3.8 cm, of type 1100 aluminum alloy or other materials having equivalent attenuation.

(8) "Authority approved instructor" means an individual who has been evaluated and approved by the Authority to teach Radiation Safety.

(9) "Authority approved training course" means a course of training that has been evaluated and approved by the Authority.

(10) "Automatic Exposure Control (AEC)" means a device that automatically controls one or more technique factors in order to obtain at a pre-selected location(s) a required quantity of radiation. (See also "Photo timer".)

(11) "Barrier" (see "Protective Barrier").

(12) "Beam Axis" means a line from the source through the centers of the X-ray fields.

(13) "Beam-Limiting Device" means a device that provides a means to restrict the dimensions of the X-ray field.

(14) "Beam Monitoring System" means a system designed to detect and measure the radiation present in the useful beam.

(15) "C-arm X-ray system" means an X-ray system in which the image receptor and X-ray tube housing are connected by a common mechanical support system in order to maintain a desired spatial relationship. This system is designed to allow a change in the projection of the beam through the patient without a change in the position of the patient.

(16) "Cephalometric Device" means a device intended for the radiographic visualization and measurement of the dimensions of the human head.

(17) "Certified Components" means components of X-ray systems that are subject to the X-ray Equipment Performance Standards promulgated under Public Law 90-602, the Radiation Control Agency for Health and Safety Act of 1968.

(18) "Certified System" means any X-ray system that has one or more certified component(s).

(19) "Changeable Filters" means any filter, exclusive of inherent filtration, which can be removed from the useful beam through any electronic, mechanical or physical process.

(20) "Coefficient of Variation (C)" means the ratio of the standard deviation to the mean value of a set of observations.

(21) "Computed tomography (CT)" means the production of a tomogram by the acquisition and computer processing of X-ray transmission data.

(22) "Computed radiography (CR)" means creating an X-ray image using plates consisting of a photo stimulable phosphor (PSP) that when exposed to radiation and then processed by a scanner, provides the information to a computer for display and manipulation.

(23) "Contact Therapy System" means an X-ray system used for therapy with the tube port placed in contact with or within five centimeters of the surface being treated.

(24) "Control Panel" means that part of the X-ray control upon which are mounted the switches, knobs, pushbuttons and other hardware necessary for manually setting the technique factors.

(25) "Cooling Curve" means the graphical relationship between heat units stored and cooling time.

(26) "Dead-Man Switch" means a switch so constructed that a circuit closing contact can be maintained only by continuous pressure on the switch by the operator.

(27) "Detector" (see "Radiation detector").

(28) "Diagnostic X-ray imaging system" means an assemblage of components for the generation, emission, and reception of X-rays and the transformation, storage, and visual display of the resultant X-ray image.

(29) "Diagnostic Source Assembly" means the tube housing assembly with a beam-limiting device attached.

(30) "Diagnostic-Type Protective Tube Housing" means a tube housing so constructed that the leakage radiation measured at a distance of one meter from the source does not exceed 100 milliroentgens (mR) in one hour when the tube is operated at its leakage technique factors.

(31) "Diagnostic X-ray System" means an X-ray system designed for irradiation of any part of the human body or animal body for the purpose of diagnosis or visualization.

(32) "Direct Digital Radiography (DR)"" means creating an X-ray image by sending signals directly from a digital image receptor to a computer for display and manipulation.

(33) "Direct Scattered Radiation" means that scattered radiation which has been deviated in direction only by materials irradiated by the useful beam (see "Scattered radiation").

(34) "Entrance Exposure Rate" means the exposure free in air per unit of time.

(35) "Field Emission Equipment" means equipment which uses a tube in which electron emission from the cathode is due solely to the action of an electric field.

(36) "Filter" means material placed in the useful beam to absorb preferentially selected radiations.

(37) "Fluoroscopic Benchmark" means a standard based upon the average cumulative fluoroscopic on-time normally found to be used for a specific fluoroscopic procedure at the site.

(38) "Fluoroscopic Imaging Assembly" means a subsystem in which X-ray photons produce a visible image. It includes the image receptor(s) such as the image intensifier and spot-film device, electrical interlocks, if any, and structural material providing linkage between the image receptor and diagnostic source assembly.

(39) "Fluoroscopic X-ray equipment operator" means any individual who, adjusts technique factors, activates the exposure switch or button of a fluoroscopic X-ray machine or physically positions patients or animals. Human holders, used solely for immobilization purposes (example being veterinarian human holders) are excluded from this rule.

(40) "Focal Spot" means the area projected on the anode of the tube by the electrons accelerated from the cathode and from which the useful beam originates.

(41) "General Purpose Radiographic X-ray System" means any radiographic X-ray system which, by design, is not limited to radiographic examination of specific anatomical regions.

(42) "Gonad Shield" means a protective barrier for the testes or ovaries.

(43) "Half-Value Layer (HVL)" means the thickness of specified material which attenuates the beam of radiation to an extent such that the exposure rate is reduced to one-half of its original value. In this definition, the contribution of all scattered radiation, other than any which might be present initially in the beam concerned, is deemed to be excluded.

(44) "Healing arts screening" means the testing of human beings using X-ray machines for the detection or evaluation of health indications when such tests are not specifically and individually ordered by an Oregon licensed practitioner of the healing arts legally authorized to prescribe such X-ray tests for the purpose of diagnosis or treatment.

(45) "Heat Unit" means a unit of energy equal to the product of the peak kilovoltage, milliamperes and seconds, example being kVp x mA x second.

(46) "HVL" (see "Half-value layer").

(47) "Image Intensifier" means a device, installed in its housing, which instantaneously converts an X-ray pattern into a corresponding light image of higher energy density.

(48) "Image Receptor" means any device, such as a fluorescent screen or radiographic film, which transforms incident photons either into a visible image or into another form which can be made into a visible image by further transformations.

(49) "Inherent Filtration" means the filtration of the useful beam provided by the permanently installed components of the tube housing assembly.

(50) "Interlock" means a device arranged or connected such that the occurrence of an event or condition is required before a second event or condition can occur or continue to occur.

(51) "Irradiation" means the exposure of matter to ionizing radiation.

(52) "Kilovolt-Peak" (see "Peak tube potential").

(53) "kV" means kilovolts.

(54) "kVp" (see "Peak tube potential").

(55) "kWs" means kilowatt second.

(56) "Lead Equivalent" means the thickness of lead affording the same attenuation, under specified conditions, as the material in question.

(57) "Leakage Radiation" means radiation emanating from the diagnostic or therapeutic source assembly except for:

(a) The useful beam; and

(b) Radiation produced when the exposure switch or timer is not activated.

(58) "Leakage Technique Factors" means the technique factors associated with the diagnostic or therapeutic source assembly which are used in measuring leakage radiation. They are defined as follows:

(a) For diagnostic source assemblies intended for capacitor energy storage equipment, the maximum rated peak tube potential and the maximum-rated number of exposures in an hour for operation at the maximum rated peak tube potential with the quantity of charge per exposure being 10 millicoulombs, example being 10 milliampere seconds (mAs), or the minimum obtainable from the unit, whichever is larger.

(b) For diagnostic source assemblies intended for field emission equipment rated for pulsed operation, the maximum-rated peak tube potential and the maximum-rated number of X-ray pulses in an hour for operation at the maximum-rated peak tube potential.

(c) For all other diagnostic or therapeutic source assemblies, the maximum-rated peak tube potential and the maximum-rated continuous tube current for the maximum-rated peak tube potential.

(59) "Light Field" means that area of the intersection of the light beam from the beam-limiting device and one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the illumination is one-fourth of the maximum in the intersection.

(60) "Line-Voltage Regulation" means the difference between the no-load and the load line potentials expressed as a percent of the load line potential.

(61) "mA" means milliampere.

(62) "mAs" means milliampere second.

(63) "Maximum Line Current" means the root-mean-square current in the supply line of an X-ray machine operating at its maximum rating.

(64) "Mobile Equipment" (see "X-ray Equipment").

(65) "Non-radiologist practitioner" means an individual who practices medicine as a medical doctor (M.D.), doctor of osteopathic medicine (D.O), doctor of chiropractic medicine (D.C.), doctor of podiatric medicine (D.P.M.) or doctor of veterinary medicine (D.V.M.); and

(a) Are not specifically certified in diagnostic or therapeutic use of X-rays; and

(b) Are currently licensed by their respective Oregon licensing board.

(66) "Operator" means an individual who, under the supervision of a practitioner of the healing arts, handles ionizing radiation equipment, physically positions patients or animals, determines exposure parameters or applies the radiation for the diagnostic or therapeutic purposes intended.

(67) "Patient" means an individual subjected to healing arts examination, diagnosis, or treatment.

(68) "Peak Tube Potential" means the maximum value of the potential difference across the X-ray tube during an exposure.

(69) "Phantom" means a volume of material behaving in a manner similar to tissue with respect to the attenuation and scattering of radiation. This requires that both the atomic number (Z) and the density of the material be similar to that of tissue.

(70) "Photo timer" means a method for controlling radiation exposures to image receptors by measuring the amount of radiation which reaches a radiation monitoring device(s). The radiation monitoring device(s) is a part of an electronic circuit which controls the duration of time the tube is activated (see also "Automatic exposure control").

(71) "PID" (see "Position indicating device").

(72) "Portable Equipment" (see "X-ray Equipment").

(73) "Position Indicating Device" means a device on dental X-ray equipment used to indicate the beam position and to establish a definite source-surface (skin) distance. It may or may not incorporate or serve as a beam-limiting device.

(74) "Primary Dose Monitoring System" means a system which will monitor useful beam during irradiation and which will terminate irradiation when a pre-selected number of dose monitor units have been acquired.

(75) "Primary Protective Barrier" (see "Protective barrier").

(76) "Protective Apron" means an apron made of radiation absorbing materials used to reduce radiation exposure.

(77) "Protected Area" means an area shielded with primary or secondary protective barriers or an area removed from the radiation source such that the exposure rate within the area due to normal operating procedures and workload does not exceed any of the following limits:

(a) 2 milliroentgens (mR) in any one hour; or

(b) 100 mR in any one year.

(c) See OAR 333-120-0180 for additional information.

(78) "Protective Barrier" means a barrier of radiation absorbing material(s) used to reduce radiation exposure. The types of protective barriers are as follows:

(a) "Primary protective barrier" means the material, excluding filters, placed in the useful beam, for protection purposes, to reduce the radiation exposure;

(b) "Secondary protective barrier" means a barrier sufficient to attenuate the stray radiation to the required degree.

(79) "Protective Glove" means a glove made of radiation absorbing materials used to reduce radiation exposure.

(80) "Qualified Expert" means an individual, approved by the Authority, who has demonstrated, pursuant to these rules, that he/she possesses the knowledge, skills, and training to measure ionizing radiation, to evaluate radiation parameters, to evaluate safety techniques, and to advise regarding radiation protection needs. The individual shall:

(a) Be certified in the appropriate field by the American Board of Radiology, the American Board of Health Physics, the American Board of Medical Physics or the American Board of Nuclear Medicine Science; or

(b) Hold a master's or doctor's degree in physics, biophysics, radiological physics, health physics, or medical physics and have completed one year of documented, full time training in the appropriate field and also one year of documented, full time work experience under the general supervision of a qualified expert in the appropriate field. To meet this requirement, the individual shall have performed the tasks required of a qualified expert during the year of work experience; or

(c) Receive approval from the Authority for specific activities.

(81) "Quality Control Program" means a program directed at film processing and radiographic image quality whereby periodic monitoring of film processing is performed. Test films are compared against control film, either visually or by use of a densitometer, to determine if density or contrast have changed. Steps can then be taken to investigate such change and correct the problem. The X-ray machine itself can also be involved in the quality control program, as can other components of the imaging chain.

(82) "Radiation Detector" means a device which in the presence of radiation provides a signal or other indication suitable for use in measuring one or more quantities of incident radiation.

(83) "Radiation Therapy Simulation System" means a radiographic or fluoroscopic system intended for localizing the volume to be exposed during radiation therapy and confirming the position and size of the therapeutic irradiation field.

(84) "Radiograph" means an image receptor on which the image is created directly or indirectly by a pattern and results in a permanent record.

(85) "Radiographic Imaging System" means any system whereby a permanent or semipermanent image is recorded on an image receptor by the action of ionizing radiation.

(86) "Radiological Physicist" means an individual who:

(a) Is certified by the American Board of Radiology in therapeutic radiological physics, radiological physics, or x- and gamma-ray physics; or

(b) Has a bachelor's degree in one of the physical sciences or engineering and three years full-time experience working in therapeutic radiological physics under the direction of a physicist certified by the American Board of Radiology. The work duties

must include duties involving the calibration and spot checks of a medical accelerator or a sealed source teletherapy unit; or

(c) Has a master's or a doctor's degree in physics, biophysics, radiological physics, health physics, or engineering; has had one year's full-time training in therapeutic radiological physics; and has had one year's full-time work experience in a radiotherapy facility where the individual's duties involve calibration and spot checks of a medical accelerator or a sealed source teletherapy unit.

(87) "Radiologist" or "Oral Radiologist" means a physician or dentist trained in the diagnostic use of X-rays and who is;

(a) Currently licensed by their respective Oregon licensing board; and

(b) Board certified by the American Board of Radiology (ABR) or American Osteopathic Board of Radiology (AOBR) or American Chiropractic Board of Radiology (DACBR) or Royal College of Physicians and Surgeons of Canada (RCPSC) or the American Board of Oral and Maxillo-Facial Radiology (ABOMFR) and currently licensed to practice medicine or dentistry in Oregon; or

(c) ABR board eligible after successfully completing the Accreditation Council for Graduate Medical Education accredited diagnostic radiology residency program.

(88) "Radiology Physician's Assistant" (R.P.A.)/ "Registered Radiology Assistant" (R.R.A.).

(a) An R.P.A. means an American Registry of Radiologic Technologists (A.R.R.T.) technologist who has successfully completed an advanced training program and is certified by the Certification Board for Radiology Practitioner Assistants (CBRPA).

(b) An R.R.A means an A.R.R.T. technologist who has successfully completed an advanced training program and is certified by A.R.R.T.

(89) "R.T." means a radiologic technologist certified in radiography and currently licensed by the Oregon Board of Medical Imaging.

(90) "Rating" means the operating limits as specified by the component manufacturer.

(91) "Recording" means producing a permanent form of an image resulting from X-ray photons.

(92) "Registrant," as used in this division, means any person who owns or possesses and administratively controls an X-ray system which is used to deliberately expose humans, animals or materials to the useful beam of the system and is required by the provisions contained in divisions 100 and 101 of this chapter to register with the Authority.

(93) "Response Time" means the time required for an instrument system to reach 90 percent of its final reading when the radiation-sensitive volume of the instrument system is exposed to a step change in radiation flux from zero, sufficient to provide a steady state midscale reading.

(94) "Scattered Radiation" means radiation that, during passage through matter, has been deviated in direction (see "Direct Scattered Radiation").

(95) "Screening" means the use of a systematic approach to obtain cursory examinations of a person or group of persons without regard to specific clinical indications.

(96) "Secondary Dose Monitoring System" means a system which will terminate irradiation in the event of failure of the primary system.

(97) "Secondary Protective Barrier" (see "Protective barrier").

(98) "Shutter" means a device attached to the tube housing assembly which can totally intercept the useful beam and which has a lead equivalency not less than that of the tube housing assembly.

(99) "SID" (see "Source-image receptor distance").

(100) "Source" means the focal spot of the X-ray tube.

(101) "Source-Image Receptor Distance" means the distance from the source to the center of the input surface of the image receptor.

(102) "Spot Check" means a procedure which is performed to assure that a previous calibration continues to be valid.

(103) "Spot Film" means a radiograph which is made during a fluoroscopic examination to permanently record conditions which exist during that fluoroscopic procedure.

(104) "Spot-Film Device" means a device intended to transport or position a radiographic image receptor between the X-ray source and fluoroscopic image receptor. It includes a device intended to hold a cassette over the input end of an image intensifier for the purpose of making a radiograph.

(105) "SSD" means the distance between the source and the skin of the patient.

(106) "Stationary Equipment" (see "X-ray Equipment").

(107) "Stray Radiation" means the sum of leakage and scattered radiation.

(108) "Supervision" means the supervising individual routinely reviews and monitors the work being performed. There are three categories of supervision:

(a) "General Supervision" means that the supervisor is not required to be on-site, but must be available for direct communication, either in person, by telephone, or other electronic means.

(b) "Direct Supervision" means that the supervisor is physically present in the building and immediately available to furnish assistance as needed.

(c) "Personal Supervision" means that the supervisor is physically present in the room during the performance of the procedure at all times.

(109) "Technique Factors" means the conditions of operation. They are specified as follows:

(a) For capacitor energy storage equipment, peak tube potential in kV and quantity of charge in mAs;

(b) For field emission equipment rated for pulsed operation, peak tube potential in kV and number of X-ray pulses;

(c) For all other equipment, peak tube potential in kV and either tube current in mA and exposure time in seconds, or the product of tube current and exposure time in mAs.

(110) "Termination of Irradiation" means the stopping of irradiation in a fashion which will not permit continuance of irradiation without the resetting of operating conditions at the control panel.

(111) "Traceable to a National Standard" means that a quantity or a measurement has been compared to a national standard directly or indirectly through one or more intermediate steps and that all comparisons have been documented.

(112) "Tube" means an X-ray tube, unless otherwise specified.

(113) "Tube Housing Assembly" means the tube housing with tube installed. It includes high-voltage and filament transformers and other appropriate elements when such are contained within the tube housing.

(114) "Tube Rating Chart" means the set of curves which specify the rated limits of operation of the tube in terms of the technique factors.

(115) "Unprotected Area" means any area in which the exposure rate, due to the use of the radiation machine under normal operating procedures and workload, exceeds any of the following limits:

(a) Two mR in any one hour;

(b) 100 mR in any seven consecutive days; or

(c) 500 mR in any one year.

(116) "Useful Beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam limiting device when the exposure controls are in a mode to cause the system to produce radiation.

(117) "Variable-Aperture Beam-Limiting Device" means a beam-limiting device which has capacity for stepless adjustment of the X-ray field size at a given SID.

(118) "Visible Area" means that portion of the input surface of the image receptor over which the incident X-ray photons are producing a visible image.

(119) "Wedge Filter" means an added filter effecting continuous progressive attenuation on all or part of the useful beam.

(120) "X-ray Control" means a device which controls input power to the X-ray high-voltage generator and the X-ray tube. It includes equipment such as exposure switches (control), timers,

photo timers, automatic brightness stabilizers and similar devices, which control the technique factors of an X-ray exposure.

(121) "X-ray Equipment" means an X-ray system, subsystem, or component thereof. Types of equipment are as follows:

(a) "Mobile equipment" means X-ray equipment mounted on a permanent base with wheels and casters for moving while completely assembled and intended to be taken from one geographical location to another or from one room to another;

(b) "Portable equipment" means X-ray equipment designed to be hand-carried but not hand-held during operations.

(c) "Stationary equipment" means X-ray equipment which is installed in a fixed location; such as bolted to the floor or wall;

(d) "Transportable" means X-ray equipment installed in a vehicle or trailer;

(e) "Hand-held unit" means a self-contained X-ray machine designed so that it can be held in one or two hands to perform intraoral radiography or other Authority approved radiography.

(122) "X-ray equipment operator" means any individual who handles, adjusts technique factors, activates the exposure switch/or button of an X-ray machine, or physically positions patients or animals for a radiograph (see "Operator").

(123) "X-ray Field" means that area of the intersection of the useful beam and any one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the exposure rate is one-fourth of the maximum in the intersection.

(124) "X-ray High-Voltage Generator" means a device which transforms electrical energy from the potential supplied by the X-ray control to the tube operating potential. The device may also include means for transforming alternating current to direct current, filament transformers for the X-ray tube(s), high-voltage switches, electrical protective devices and other appropriate elements.

(125) "X-ray System" means an assemblage of components for the controlled production of X-rays. It includes minimally an X-ray high-voltage generator, an X-ray control, a tube housing assembly, a beam-limiting device and the necessary supporting structures. Additional components which function with the system are considered integral parts of the system.

(126) "X-ray Subsystem" means any combination of two or more components of an X-ray system for which there are requirements specified in this division.

(127) "X-ray Tube" means any electron tube which is designed to be used primarily for the production of X-rays.

General Requirements

333-106-0010
Administrative Controls

(1) Registrants shall be responsible for directing the operation of the X-ray system(s) under their administrative control. The registrant or the registrant's agent shall assure that the requirements of this rule are met in the operation of the X-ray system(s).

(2) An X-ray system and/or the operation of the X-ray system which does not meet the provisions of these rules shall not be operated for diagnostic or therapeutic purposes.

(3) For X-ray equipment manufactured after July 31, 1974, the registrant shall assure that the equipment will remain in compliance with the **Code of Federal Regulations**, **Title 21**.

Stat. Auth.: ORS 453.605 - 453.755

Stats. Implemented: ORS 453.605 - 453.755

333-106-0015
Technique Chart

A useable up-to-date chart shall be provided in the vicinity of the diagnostic X-ray system's control panel which specifies, for all examinations performed with that system, the following information:

(1)(a) Patient's anatomical size in centimeters versus technique factors to be utilized.

(b) For veterinary X-rays, the patient's anatomical size in centimeters or weight in pounds versus technique factors to be used.

(2) Film-screen combination to be used.

(3) Type and focal distance of the grid to be used, if any.

(4) Source to image receptor distance to be used.

(5) Indication of radiographic examinations requiring gonad shielding, except in the case of veterinary use.

(6) Units utilizing phototimers shall have a chart indicating cell choice, optimum kVp and density setting as well as other applicable requirements of this rule.

(7) Units utilizing automatic techniques that are incorporated in the X-ray machine are considered to meet the requirements of sections (1), (2), (3) and (4) of this rule.

(8) In cases where machine use is restricted to intraoral radiography, or one operator and less than three techniques, the registrant is exempt from the requirements of this rule.

Stat. Auth.: ORS 453.605 - 453.807

Stats. Implemented: ORS 453.605 - 453.807

333-106-0020
Written Rules and Procedures

For safe operation of the registrants X-ray system the following apply when required in writing by the Authority:

(1) Written safety procedures:

(a) Shall be mandatory for hospitals and radiologists;

(b) Shall include any equipment limitations or restrictions;

(c) Shall include any restrictions of the operating technique required for the safe operation of the X-ray system.

(2) Written procedures shall be available for review at any time to all individuals operating X-ray equipment.

(3) The operator shall be able to demonstrate familiarity with these procedures.

Stat. Auth.: ORS 453.605 - 453.807

Stats. Implemented: ORS 453.752 - 453.807

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-106-0025
Protection of Patients and Personnel

(1) Except for patients who cannot be moved out of the unprotected area, only the staff and ancillary personnel required for the medical procedure or training shall be in the unprotected area during the radiographic exposure.

(2) Other than the patient being examined, all individuals shall be positioned such that no part of the body will be struck by the useful beam unless protected by 0.5 millimeter (mm) lead equivalent.

(3) Staff and ancillary personnel shall be protected from the direct scatter radiation by protective aprons or whole body protective barriers of not less than 0.25 mm lead equivalent.

(4) Patients who cannot be removed from the room shall be protected from the direct scatter radiation by whole body protective barriers of 0.25 mm lead equivalent or shall be so positioned that the nearest portion of the body is at least two meters from both the tube head and the nearest edge of the image receptor.

Stat. Auth.: ORS 453.605 - 453.807

Stats. Implemented: ORS 453.605 - 453.807

333-106-0030
Gonad Shielding

(1) Gonad shielding of not less than 0.5 mm lead equivalent shall be used for patients, who have not passed the reproductive age, during radiographic procedures in which the gonads are in the

useful beam, except for cases in which this would interfere with the diagnostic procedure. In addition:

(a) Collimation shall not be used as a substitute for proper shielding;

(b) Should the situation arise where by gonadal shielding would compromise the diagnosis, a sticker stating "Gonadal shielding would interfere with the diagnostic procedure" (or the equivalent) shall be placed on the film to identify the reason this procedure does not comply with section (1) of this rule.

(2) A written policy regarding gonad shielding shall be provided to each individual operating X-ray equipment. This policy shall include but not be limited to:

(a) Definition of age of patients requiring gonad shielding;

(b) A listing of radiographic procedures requiring gonad shielding for both males and females; and

(c) Other pertinent data that would help insure compliance, such as type and location of placement of gonad shielding.

(3) The registrant shall provide a means to assure that the requirements of section (1) of this rule are followed.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-106-0035
Deliberate Exposures Restricted

Persons shall not be exposed to the useful beam except for healing art purposes until the patient has been evaluated, and a medical need for the X-ray/s is determined, and has been authorized by a physician or Dental Professional licensed to practice the healing arts. Any useful diagnostic information obtained from each exposure shall be reviewed by a practitioner of the healing arts. This provision specifically prohibits deliberate exposure for the following purposes:

(1) Exposure of an individual for training, demonstration or other purposes unless there are also healing arts requirements and proper prescription has been provided.

(2) Exposure of an individual for the purpose of healing arts screening:

(a) Any person proposing to conduct a healing arts screening program shall not initiate such a program without prior approval of the Authority;

(b) When requesting such approval, that person shall submit the following information.

(A) Name and address of the applicant and, where applicable, the names and addresses of agents within this state;

(B) Diseases or conditions for which the X-ray examinations are to be used in diagnoses;

(C) A detailed description of the X-ray examinations proposed in the screening program to include the estimated total radiation dose received by the individual(s) participating in the screening program;

(D) Description of the population to be examined in the screening program, i.e., age, sex, physical conditions, and other appropriate information;

(E) An evaluation of any known alternate methods not involving ionizing radiation which could achieve the goals of the screening program and why these methods are not used instead of the X-ray examinations;

(F) An evaluation by a qualified expert of the X-ray system(s) to be used in the screening program. The evaluation by the qualified expert shall show that such system(s) do satisfy all requirements of these rules;

(G) A description of the diagnostic film quality control program;

(H) A copy of the technique chart for the X-ray examination procedures to be used;

(I) The qualifications of each individual who will be operating the X-ray system(s);

(J) The qualifications of the individual who will be supervising the operators of the X-ray system(s). The extent of supervision and the method of work performance evaluation shall be specified;

(K) The name and address of the individual who will interpret the radiograph(s);

(L) A description of the procedures to be used in advising the individuals screened and their private practitioners of the healing arts of the results of the screening procedure and any further medical needs indicated;

(M) A description of the procedures for the retention or disposition of the radiographs and other records pertaining to the X-ray examinations.

(3) If any information submitted to the Authority under subsection (2)(b) changes, the Authority shall be immediately notified.

(4) Mammography screening shall be exempt from the requirements of section (2) of this rule if the following conditions are met:

(a) The requirements set forth in OAR 333-106-0700 to 333-106-0750 of these rules are satisfied.

(b) All other applicable rules are met.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-106-0040
Patient Holding and Restraint

(1) When a patient or film must be provided with auxiliary support during a radiation exposure:

(a) Mechanical holding devices shall be provided and used when the technique permits. The safety rules, required by OAR 333-106-0020, shall list individual projections where holding devices cannot be used.

(b) Written safety procedures, as required by OAR 333-106-0020, shall indicate the requirements for selecting a holder and the procedure the holder shall follow.

(c) The human holder shall be protected, as required by OAR 333-106-0025.

(2) No individual shall be used routinely to hold film or patients.

(3) Occupationally exposed personnel are prohibited from holding human patients during radiographic examination.

(4) The Authority may require a separate record to be maintained which would include the name of the human holder, date of the examination, number of exposures and technique factor used for the exposure(s).

(5) In those cases where the patient must hold the film, except during intraoral examinations, any portion of the body other than the area of clinical interest exposed to the useful beam shall be protected by not less than 0.5 mm lead equivalent material.

(6) Holding of patients shall be permitted only when it is otherwise impossible to obtain the necessary radiograph.

(7) Individuals stressing joints shall be exempt from section (3) of this rule.

333-106-0045
Use of Best Procedures and Equipment

(1) Procedures and auxiliary equipment designed to minimize patient and personnel exposure commensurate with the needed diagnostic information shall be utilized.

(2) The speed of film or screen and film combinations shall be the fastest speed consistent with the diagnostic objective of the examinations.

(3) The radiation exposure to the patient shall be the minimum exposure required to produce images of good diagnostic quality, see Tables 1, 2 and 3. The referenced tables are available on the Program's website: www.healthoregon.org/rps.

(4) Portable or mobile X-ray equipment shall be used only for examinations where it is impractical to transfer the patient(s) to a

stationary X-ray installation due to the medical status of the patient or the inability of the patient to be left alone during the imaging procedure except as permitted under section (5) of this rule.

(5) Hand-held dental units may be used at facilities or programs as defined in ORS 680.205(1) and (2).

(6) X-ray systems subject to OAR 333-106-0301 shall not be utilized in procedures where the source to patient distance is less than 30 centimeters (cm).

(7) Cardboard cassettes without screens shall not be used (dental intraoral excluded).

(8) The number of radiographs taken for any radiographic examination should be the minimum number needed to adequately diagnose the clinical condition.

(9) Use of techniques designed to compensate for anatomical thickness variations after the primary beam has exited the patient is specifically prohibited. This includes "split screen" imaging techniques whereby multiple speed intensifying screens are placed in the same cassette, or any techniques which rely on attenuation of secondary (remnant) radiation for compensatory purposes. Lead lined grids, which are designed to reduce scattered radiation are excluded from this provision.

(10) Filter slot covers shall be provided for the X-ray operator's protection.

(11) Facilities shall determine or cause to be measured the typical patient exposure for their most common radiographic examinations. The exposures shall be recorded as milliroentgens measured in free air at the point of skin entrance for an average patient. These exposure amounts must then be compared to existing guidelines and rules, and if they exceed such guidelines or rules, action must be taken to reduce the exposure while at the same time maintaining or improving diagnostic image quality. In addition, typical patient exposure values shall be posted in the radiographic examination rooms so that they are readily available to administrators, X-ray operators, patients and practitioners.

(12) Protective equipment including aprons, gloves and shields shall be checked annually for defects, such as holes, cracks and tears to assure reliability and integrity. A record of this test shall be made and maintained for inspection by the Authority. If such defect is found, equipment shall be replaced or removed from service until repaired. Fluoroscopy shall only be used for this purpose if a visual and manual check indicated a potential problem.

(13) Dental X-ray machines designed and manufactured to be used for dental purposes shall be restricted to dental use only.

(14) An X-ray quality control program shall be implemented when required by the Authority.

(15) All X-ray equipment must be capable of functioning at the manufacturer's intended specifications.

(16) All patients' radiographic images or copies shall be made available for review by any practitioner of the healing arts, currently licensed by the appropriate Oregon licensing board, upon request of the patient.

333-106-0050
Personnel Monitoring

All individuals who are associated with the operation of an X-ray system are subject to the requirements of OAR 333-120-0100 and 333-120-0210. In addition:

(1) When protective clothing or devices are worn on portions of the body and a personnel monitoring device(s) is required, at least one such monitoring device shall be utilized as follows:

(a) When an apron is worn, the monitoring device shall be worn at the collar outside of the apron;

(b) The dose to the whole body based on the maximum dose attributed to the most critical organ (which are the gonads, the blood-forming organs, head and trunk or lens of the eye), shall be recorded in the reports required by OAR 333-120-0650(3). If more than one device is used and a record is made of the data, each dose shall be identified with the area where the device was worn on the body.

(2) Exposure of a personnel monitoring device to deceptively indicate a dose delivered to an individual is prohibited.

333-106-0055
X-ray Operator Training

(1) The registrant shall assure that individuals who will be operating the X-ray equipment by physically positioning patients or animals, determining exposure parameters, or applying radiation for diagnostic purposes shall have adequate training in radiation safety.

(a) Radiation safety training records shall be maintained by the registrant for each individual who operates X-ray equipment. Records must be legible and meet the requirements in OAR 333-120-0690.

(b) When requested by the Authority, radiation safety training records shall be made available.

(2) Dental X-ray operators who meet the following requirements are considered to have met the requirements in section (1) of this rule:

(a) Currently licensed by the Oregon Board of Dentistry as a dentist or dental hygienist; or

(b) Is a dental assistant who is certified by the Oregon Board of Dentistry in radiologic proficiency.

(c) Dental radiology students in an approved Oregon Board of Dentistry dental radiology course are permitted to take dental radiographs on human patients during their clinical training, under the direct supervision of a dentist or dental hygienist currently licensed, or a dental assistant who has been certified in radiologic proficiency by the Oregon Board of Dentistry.

(3) Veterinary X-ray operators who meet the following requirements are considered to have met the requirements in section (1) of this rule:

(a) Currently licensed by the Oregon Veterinary Medical Examining Board as a veterinarian or a certified veterinary technician.

(b) Veterinary students enrolled in a radiology course approved by the Oregon Veterinary Medical Examining Board are permitted to take radiographs on animal patients during their clinical training under the direct supervision of a veterinarian or a certified veterinary technician who is currently licensed.

(4) Diagnostic medical X-ray operators who meet the following requirements are considered to have met the requirements of section (1) of this rule:

(a) Holds a current license from the Oregon Board of Medical Imaging; or

(b) Holds a current limited X-ray machine operator permit from the Oregon Board of Medical Imaging; or

(c) Is a student in an approved school of Radiologic Technology as defined in ORS 688.405 while practicing Radiologic Technology under the direct supervision of a radiologist who is currently licensed with the Oregon Medical Board or a radiologic technologist who is licensed with the Oregon Board of Medical Imaging; or

(d) Is a student in an Oregon Board of Medical Imaging approved limited permit program under a radiologic technologist who is licensed by the Oregon Board of Medical Imaging.

(5) All other types of X-ray operators must have completed an Authority approved radiation use and safety course.

(6) At a minimum, an Authority approved training course shall cover the following subjects:

(a) Nature of X-rays:

(A) Interaction of X-rays with matter;
(B) Radiation units;
(C) X-ray production;
(D) Biological effects of X-rays; and
(E) Risks of radiation exposure.
(b) Principles of the X-ray machine:
(A) External structures and operating console;
(B) Internal structures:
(i) Anode; and
(ii) Cathode.
(C) Operation of an X-ray machine;
(D) Tube warm up;
(E) Factors affecting X-ray emission:
(i) mA;
(ii) kVp;
(iii) Filtration; and
(iv) Voltage waveform.
(c) Principles of radiation protection:
(A) Collimation;
(B) Types of personal protection equipment and who must wear it;
(C) ALARA;
(D) Time, distance, shielding;
(E) Operator safety;
(F) Personal dosimetry:
(i) Types of dosimetry;
(ii) Proper placement of dosimetry; and
(iii) Situations that require dosimetry.
(G) Occupational and non-occupational dose limits.
(d) Radiographic technique:
(A) Factors affecting technique choice:
(i) Thickness of part;
(ii) Body composition;
(iii) Pathology; and
(iv) Film versus computed radiography (CR) and digital radiography (DR).
(B) How to develop an accurate chart;
(C) Low dose techniques;
(D) Pediatric techniques (does not apply to veterinary); and
(E) AEC Techniques.
(e) Darkroom:
(A) Safelights;
(B) Chemical storage;
(C) Film storage; and
(D) Darkroom cleanliness.
(f) Image processing:
(A) Automatic film processing;
(B) Dip tank film processing;
(C) Computed radiography (CR) processing; and
(D) Digital radiography (DR) processing.
(g) Image critique:
(A) Reading room conditions;
(B) Light box conditions;
(C) Image identification;
(D) Artifacts;
(E) Exposure indicators for CR and DR;
(F) Technical parameter evaluation; and
(G) Positioning evaluation.
(h) Veterinary X-ray use (for veterinary courses only):
(A) Types of animal restraints;
(B) Small animal versus large animal;
(C) Film holders; and
(D) Portable X-ray machine safety.
(i) Applicable federal and state radiation regulations including those portions of chapter 333, divisions 100, 101, 103, 106, 111, 120, and 124.

(7) In addition to the training outlined in section (6) of this rule, medical X-ray equipment operators using diagnostic radiographic equipment on human patients, and who are not regulated by the Oregon Board of Medical Imaging, must have 100 hours or more of instruction in radiologic technology including, but not limited to:

(a) Anatomy physiology, patient positioning, exposure and technique; and

(b) Appropriate types of X-ray examinations that the individual will be performing; and in addition

(c) Receive 200 hours or more of X-ray laboratory instruction and practice in the actual use of an energized X-ray unit, setting techniques and practicing positioning of the appropriate diagnostic radiographic procedures that they intend to administer.

(8) All X-ray operators shall be able to demonstrate competency in the safe use of the X-ray equipment and associated X-ray procedures.

(9) When required by the Authority, applications training must be provided to the operator before use of X-ray equipment on patients.

(a) Records of this training must be maintained and made available to the Authority for inspection.

(b) The training may be in any format such as hands-on training by a manufacturer's representative, video or DVD instruction, or a training manual.

(10) X-ray equipment operators who have received their radiation safety training outside of Oregon will be considered to have met the training requirements in section (5) of this rule, if the Authority's or applicable Oregon Licensing Board's evaluation of their training or training and experience, reveals that they substantially meet the intent of section (6) of this rule.

333-106-0060
Radiation Use and Safety Instructor Qualifications

The training required in OAR 333-106-0055(1) must be taught by an Authority approved instructor. Approval will be based upon the following criteria.

(1) A medical use and safety instructor is an individual who is currently:

(a) Licensed as a Radiologic Technologist and approved as an education provider by the Oregon Board of Medical Imaging; or

(b) A dental radiation use and safety instructor is an individual who is currently licensed by the Oregon Board of Dentistry as a Dentist, a Hygienist, or has been approved by the Oregon Board of Dentistry as a radiation use and safety instructor.

(2) A veterinarian radiation use and safety instructor is an individual who is currently:

(a) Licensed by the Oregon Veterinary Medical Examining board as a Veterinarian, or a Veterinary Technician; or

(b) Is currently licensed as a Radiologic Technologist by the Oregon Board of Medical Imaging, and has completed training specific to veterinarian radiography, including training in animal restraint, and has a minimum of two years of experience in taking veterinary radiographs.

(3) On a case by case basis, if an evaluation by the Authority reveals the individual has alternative qualifications that are substantially equivalent to the qualifications listed in subsections (1)(a), (1)(b), (2)(a) or (2)(b) of this rule or is an individual who is qualified under OAR 333-106-0005(80) as a qualified expert, or OAR 333-101-0230 as a Hospital Radiology Inspector.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 32-2014, f. 12-22-14, cert. ef. 1-1-15

333-106-0101
Diagnostic X-ray Systems

In addition to other requirements of this division, all diagnostic X-ray systems shall meet the following requirements:

(1) Warning Label. The control panel containing the main power switch shall bear the warning statement, legible and accessible to view: "WARNING: This X-ray unit may be dangerous to patient and operator unless safe exposure factors and operating instructions are observed."

(2) The state shall attach an identification number to each X-ray control panel or an appropriate location:

(a) Identification numbers shall not be removed without written permission of the Authority;

(b) Identification numbers shall not be defaced.

(3) Mobile and portable X-ray systems shall meet the requirements of a stationary system when used for greater than seven consecutive days in the same location.

(4) Battery Charge Indicator. On battery-powered X-ray generators, visual means shall be provided on the control panel to indicate whether the battery is in a state of charge adequate for proper operation.

(5) Leakage Radiation from the Diagnostic Source Assembly. The leakage radiation from the diagnostic source assembly measured at a distance of one meter in any direction from the source shall not exceed 100 mR (25.8 C/kg) in one hour when the X-ray tube is operated at its leakage technique factors. Compliance shall be determined by measurements averaged over an area of 100 square cm with no linear dimension greater than 20 cm.

(6) Radiation from Components Other Than the Diagnostic Source Assembly. The radiation emitted by a component other than the diagnostic source assembly shall not exceed 2 mR (0.516 C/kg) in one hour at 5 cm from any accessible surface of the component when it is operated in an assembled X-ray system under any conditions for which it was designed. Compliance shall be determined by measurements averaged over an area of 100 square cm with no linear dimension greater than 20 cm.

(7) Beam Quality:

(a) Half-Value Layer (HVL): The HVL of the useful beam for a given X-ray tube potential shall not be less than the values shown in Table 4. If it is necessary to determine such HVL at an X-ray tube potential which is not listed in Table 4, linear interpolation or extrapolation may be made; The referenced table is available on the Program's website: www.healthoregon.org/rps.

(A) The HVL required in subsection (7)(a) of this rule is considered to have been met if it can be demonstrated that the aluminum equivalent of the total filtration in the primary beam is not less than that shown in Table 5. The referenced table is available on the Program's website: www.healthoregon.org/rps.

(B) In addition to the requirements of section (5) of this rule, all intraoral dental radiographic systems manufactured on and after December 1, 1980, shall have a minimum HVL not less than 1.5 mm aluminum (Al) equivalent filtration permanently installed in the useful beam;

(C) Beryllium window tubes shall have a minimum of 0.5 mm Al equivalent filtration permanently installed in the useful beam;

(D) For capacitor energy storage equipment, compliance with the requirements of section (5) of this rule shall be determined with the maximum quantity of charge per exposure;

(E) The required minimal aluminum equivalent filtration shall include the filtration contributed by all materials, which are always, present between the source and the patient.

(b) Filtration Controls. For X-ray systems which have variable kVp and variable filtration for the useful beam, a device shall link the kVp selector with the filter(s) and shall prevent an exposure unless the minimum amount of filtration required by subsection (5)(a) of this rule is in the useful beam for the given kVp, which has been selected.

(8) Multiple Tubes. Where two or more radiographic tubes are controlled by one exposure switch, the tube or tubes, which have been selected, shall be clearly indicated prior to initiation of the exposure. This indication shall be both on the X-ray control panel and at or near the tube housing assembly, which has been selected.

(9) Mechanical Support of Tube Head. The tube housing assembly supports shall be adjusted such that the tube housing assembly remains stable during an exposure unless the tube housing movement is a designed function of the X-ray system.

(10) Technique Indicators:

(a) The technique factors to be used during an exposure shall be indicated before the exposure begins. If automatic exposure controls are used, the technique factors, which are set prior to the exposure, shall be indicated;

(b) The requirement of subsection (10)(a) of this rule may be met by permanent marking on equipment having fixed technique factors.

(11) There shall be provided for each X-ray machine a means for determining the proper SID.

(12) X-ray film developing requirements. Compliance with this section is required of all healing arts registrants and is designed to ensure that patient and operator exposure is minimized and to produce optimum image quality and diagnostic information:

(a) Manual processing of films.

(A) The relationship between temperature of the developer and development time indicated in Table 6 or the manufacturer's recommendations must be used with standard developing chemistry. The referenced table is available on the Program's website: www.healthoregon.org/rps.

(B) Processing of film. All films shall be processed in such a fashion as to achieve adequate sensitometric performance. This criterion shall be adjudged to have been met if:

(i) Film manufacturer's published recommendations for time and temperature are followed; or

(ii) Each film is developed in accordance with the time-temperature chart (see subsection (12)(a) of this rule).

(C) Chemical-film processing control.

(i) Chemicals shall be mixed in accordance with the chemical manufacturer's recommendations;

(ii) Developer replenisher shall be periodically added to the developer tank based on the recommendations of the chemical or film manufacturer. Solution may be removed from the tank to permit the addition of an adequate volume of replenisher.

(D) All processing chemicals shall be completely replaced at least every two months or as indicated by the manufacturer.

(E) Devices shall be available which will:

(i) Give the actual temperature of the developer; and

(ii) Give an audible or visible signal indicating the termination of a preset development time (in minutes or seconds).

(b) Automatic film processing. Films shall be processed in such a manner that the degree of film development is the same as being achieved by proper adherence to subsection (12)(a) of this rule (manual processing).

(c) Darkrooms. Darkrooms shall be constructed so that film being processed, handled, or stored will be exposed only to light which has passed through an appropriate safelight filter.

(d) Safelights shall be mounted in accordance with manufacturer's recommendations.

(e) Light bulbs used in safelights shall be the type and wattage recommended by the manufacturer.

(f) Safelight lenses shall be the type recommended for use by the film manufacturer.

(g) Rapid film processing. Special chemicals have been designed for use in Endodontics. These chemicals have special development requirements and do not permit as large of a margin of error in darkroom technique as do standard developing chemicals. Failure to precisely follow manufacturer's recommendations can easily lead to overexposure and underdevelopment. Darkroom procedures shall include:

(A) The manufacturer's time temperature development is crucial and shall be followed exactly;

(B) Caution: A timer capable of accurately measuring the short development times required shall be used;

(C) If rapid chemical processing is used for general radiography all applicable requirements of section (12) of this rule shall be followed.

(h) The Authority shall make such tests as may be necessary to determine compliance with this section.

[ED. NOTE: Tables referenced are available from the agency.]

333-106-0105
Information and Maintenance Record and Associated Information

(1) The registrant shall maintain the following information for each X-ray and automatic film processing system for inspection by the Authority:

(a) Model, serial numbers and manufacturer's user manuals for all X-ray systems and automatic film processors;

(b) Tube rating charts and cooling curves;

(c) Records of surveys, calibrations maintenance, and modification performed on the X-ray system(s) with names of persons who perform such services;

(d) A scale drawing of the room in which a stationary X-ray system is located with such drawing indicating the current use of areas adjacent to the room and an estimate of the extent of occupancy by individuals in such areas. In addition, the drawing shall include:

(A) The result of a survey for radiation levels present at the operator's position and at pertinent points outside the room at specified test conditions; or

(B) The type and thickness of materials, or lead equivalency, of each protective barrier.

(e) A copy of all correspondence with this Authority regarding that X-ray system;

(f) Provisions in section (1) of this rule shall pertain to X-ray systems placed in service after the effective date of these rules.

(2) X-ray Log. Each facility shall maintain an X-ray log containing the patient's name, the type of examinations, and the dates the examinations were performed and the name of the X-ray operator. The X-ray log must have a cover page containing the printed names of all X-ray operators and a sample of their signed initials. The following facilities are exempt from these requirements:

(a) Dental facilities that maintain patient records showing the type and date of the examination and the operator's name;

(b) Industrial facilities doing industrial X-ray only;

(c) Veterinary facilities;

(d) Hospitals or clinics who employ only fully licensed X-ray operators;

(e) Doctors' offices or clinics with only 1 X-ray operator, or 1 X-ray exam;

(f) Academic, when not X-raying humans.

333-106-0110
Plan Review

When required by the Authority, and:

(1) Prior to construction, the floor plans and equipment arrangement of all new installations, or modifications of existing installations, utilizing X-rays for diagnostic or therapeutic purposes must be submitted to the Authority for review and approval. The required information is as set out in division 120.

(2) The Authority may require the applicant to utilize the services of a qualified expert to determine the shielding requirements prior to the plan review and approval.

(3) The approval of such plans shall not preclude the requirement of additional modifications should a subsequent analysis of operating conditions indicate the possibility of an individual receiving a dose in excess of the limits prescribed in division 120.

333-106-0120
Information on Radiation Shielding for Plan Reviews — Optional

In order to provide an evaluation or technical advice on shielding requirements for a radiation installation, the following information must be submitted:

(1) The plans should show, as a minimum, the following:

(a) The normal location of the X-ray system's radiation port; the port's travel and traverse limits; general direction(s) of the useful beam; locations of any windows and doors; the location of the operator's booth; and the location of the X-ray control panel;

(b) The structural composition and thickness or lead equivalent of all walls, doors, partitions, floor, and ceiling of the room(s) concerned;

(c) The dimensions of the room(s) concerned;

(d) The type of occupancy of all adjacent areas inclusive of space above and below the room(s) concerned. If there is an exterior wall, show distance to the closest area(s) where it is likely that individuals may be present;

(e) The make and model of the X-ray equipment and the maximum technique factors;

(f) The type of examination(s) or treatment(s) which will be performed with the equipment.

(2) Information on the anticipated workload of the X-ray system(s).

(3) If the services of a qualified expert have been utilized to determine the shielding requirements, a report, including all basic assumptions used, shall be submitted with the plans.

333-106-0130
Design Requirements for an Operator's Booth

(1) Space Requirements when required by OAR 333-106-0110 of these rules:

(a) The operator shall be allotted not less than 7.5 square feet (0.697 m2) of unobstructed floor space in the booth;

(b) The operator's booth may be any geometric configuration with no dimension of less than 2 feet (0.61 m);

(c) The space shall be allotted excluding any encumbrance by the X-ray control panel, such as overhang, cables, or other similar encroachments;

(d) The booth shall be located or constructed such that unattenuated direct scatter radiation originating on the examination table or at the wall cassette not reach the operator's station in the booth.

(2) Structural Requirements:

(a) The booth walls shall be permanently fixed barriers of at least seven feet (2.13 m) high;

(b) When a door or movable panel is used as an integral part of the booth structure, it must have an interlock which will prevent an exposure when the door or panel is not closed;

(c) Shielding shall be provided to meet the requirements of division 120 of these rules.

(3) X-ray Exposure Control Placement: The X-ray exposure control for the system shall be fixed within the booth and:

(a) Shall be at least 40 inches (1.02 m) from any open edge of the booth wall which is nearest to the examining table;

(b) Shall allow the operator to use the majority of the available viewing windows.

(4) Viewing System Requirements:

(a) Each booth shall have at least one viewing device which will:

(A) Be so placed that the operator can view the patient during any exposure; and

(B) The device shall be so placed that the operator can have full view of any occupant of the room and should be so placed that the operator can view any entry into the room. If any door which allows access to the room cannot be seen from the booth, then that door must have an interlock controlling the exposure which will prevent the exposure if the door is not closed.

(b) When the viewing system is a window, the following requirements also apply:

(A) The viewing area shall be at least one square foot (0.0929 m2);

(B) The design of the booth shall be such that the operator's expected position when viewing the patient and operating the X-ray system is at least 18 inches (0.457 m) from the edge of the booth;

(C) The material constituting the window shall have the same lead equivalence as that required in the booth's wall in which it is mounted.

(c) When the viewing system is by mirrors, the mirror(s) shall be so located as to accomplish the general requirements of subsection (4)(a) of this rule;

(d) When the viewing system is by electronic means:

(A) The camera shall be so located as to accomplish the general requirements of subsection (4)(a) of this rule;

(B) There shall be an alternate viewing system as a backup for the primary system.

Fluoroscopic X-ray Systems Requirements

333-106-0201
Fluoroscopic X-ray Systems

All fluoroscopic X-ray systems shall meet the following requirements:

(1) Primary Barrier:

(a) The fluoroscopic imaging assembly shall be provided with a primary protective barrier which intercepts the entire cross section of the useful beam at any SID;

(b) The X-ray tube used for fluoroscopy shall not produce X-rays unless the barrier is in position to intercept the entire useful beam.

(2) Nonimage intensified types of fluoroscopes shall not be used.

(3) Image-Intensified Fluoroscopy and Spot Filming:

(a) For image-intensified fluoroscopic equipment, neither the length nor the width of the X-ray field in the plane of the image receptor shall exceed that of the visible area of the image receptor by more than three percent of the SID. The sum of the excess length and the excess width shall be no greater than four percent of the SID. In addition:

(A) Means shall be provided to permit further limitation of the field. Beam-limiting devices manufactured after May 22, 1979, and incorporated in equipment with a variable SID or a visible area of greater than 300 square cm shall be provided with means for stepless adjustment of the X-ray field;

(B) All equipment with a fixed SID and a visible area of 300 square cm or less shall be provided with either stepless adjustment of the X-ray field or with means to further limit the X-ray field size at the plane of the image receptor to 125 square cm or less. Stepless adjustment shall, at the greatest SID, provide continuous field sizes from the maximum obtainable to a field size of 5 cm by 5 cm or less;

(C) For equipment manufactured after February 25, 1978, when the angle between the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the X-ray beam is perpendicular to the plane of the image receptor; and

(D) Compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor. For rectangular X-ray fields used with circular image reception, the error in alignment shall be determined along the length and width dimensions of the X-ray field which pass through the center of the visible area of the image receptor.

(b) Spot-film devices which are certified components shall meet the following additional requirements:

(A) Means shall be provided between the source and the patient for adjustment of the X-ray field size in the plane of the film to the size of that portion of the film which has been selected on the spot-film selector. Such adjustment shall be automatically accomplished except when the X-ray field size in the plane of the film is smaller than that of the selected portion of the film. For spot film devices manufactured after June 21, 1979, if the X-ray field size is less than the size of the selected portion of the film, the means for adjustment of the field size shall be only at the operator's option;

(B) It shall be possible to adjust the X-ray field size in the plane of the film to a size smaller than the selected portion of the film. The minimum field size at the greatest SID shall be equal to, or less than, 5 cm by 5 cm;

(C) The center of the X-ray field in the plane of the film shall be aligned with the center of the selected portion of the film to within two percent of the SID; and

(D) On spot-film devices manufactured after February 25, 1978, if the angle between the plane of the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the X-ray beam is perpendicular to the plane of the image receptor, and compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor.

(c) If a means exists to override any of the automatic X-ray field size adjustments required in section (3) of this rule, that means:

(A) Shall be designed for use only in the event of system failure;

(B) Shall incorporate a signal visible at the fluoroscopist's position which will indicate whenever the automatic field size adjustment is overridden; and

(C) Shall be clearly and durably labeled as follows: "FOR X-RAY FIELD LIMITATION SYSTEM FAILURE"

333-106-0205
Activation of the Fluoroscopic Tube

(1) X-ray production in the fluoroscopic mode shall be controlled by a device which requires continuous pressure by the fluoroscopist for the entire time of any exposure. When recording serial fluoroscopic images, the fluoroscopist shall be able to terminate the X-ray exposure(s) at any time, but means may be provided to permit completion of any single exposure of the series in process.

(2) Proper training in the operation of fluoroscopic X-ray equipment is required for all operators and shall include but not be limited to the following:

(a) Principles and operation of the fluoroscopic X-ray machine:

(A) Generating X-rays;

(B) kVp and mA;

(C) Image intensification;

(D) High level control versus standard operating mode;

(E) Magnification (multi-field);

(F) Automatic Brightness Control (ABC);

(G) Pulsed versus continuous X-ray dose rates;

(H) Image recording modes;

(I) Imaging Systems (TV and Digital); and

(J) Contrast, noise and resolution.

(b) Radiation units:

(A) Traditional units;

(B) SI units; and

(C) Dose Area Product.

(c) Typical fluoroscopic outputs:

(A) Patient skin entrance dose;

(B) Standard Roentgen per minute (R/min) dose rates; and

(C) High level/Boost enable Roentgen per minute (R/min) dose rates.

(d) Dose reduction techniques for fluoroscopy:

(A) Collimation;

(B) X-ray tube and image intensifier placement;

(C) Patient size versus technique selection;
(D) Grid use;
(E) Last image hold;
(F) Additional beam filtration;
(G) Gantry angles;
(H) Use of spacer cone; and
(I) Pulsed fluoroscopy.
(e) Factors affecting personnel dose:
(A) Patient dose;
(B) Scatter radiation;
(C) Tube and image intensifier placement; and
(D) Time, distance and shielding.
(f) Protective devices:
(A) Lead aprons and gloves;
(B) Thyroid collars;
(C) Protective glasses;
(D) Leaded drapes;
(E) Bucky slot cover; and
(F) Protective shields/barriers.
(g) Radiation exposure monitoring:
(A) Personnel monitors;
(B) Placement of personnel monitors; and
(C) Occupational and non-occupational dose limits.
(h) Biological effects of X-ray radiation:
(A) X-rays and particulate matter;
(B) Absorption variables (field size, dose rate, as an example);
(C) Scatter radiation;
(D) Cell sensitivity;
(E) Acute effects; and
(F) Latent effects.
(i) Applicable regulations:
(A) Federal; and
(B) Oregon Administrative Rules for the Control of Radiation to include, but not limited to, chapter 333, divisions 101, 103, 106, 111 and 120.

(3) The operation of fluoroscopic equipment shall be performed by a properly trained operator. The following categories of operators are considered to have met the training requirements in section (2) of this rule:

(a) Radiologists currently licensed in Oregon;

(b) Non-Radiologist practitioners who have successfully completed a training program from an Authority approved resource or have been operating fluoroscopic equipment prior to April 11, 2005;

(c) Radiologic Technologists who have a permanent or temporary license from the Oregon Board of Medical Imaging (OBMI) to practice radiography;

(d) Physician assistants who have a fluoroscopy permit from the Oregon Board of Medical Imaging;

(e) R.P.A.s and R.R.A.s who are licensed by the OBMI; and

(f) Students currently enrolled in an approved school of Radiologic Technology as defined in ORS 688.405.

(4) Supervision requirements for operators of fluoroscopic equipment. The operation of fluoroscopic equipment by properly trained operators must comply with the following supervisory requirements:

(a) Radiologists may operate fluoroscopic equipment with no supervision.

(b) Non-radiologist practitioners who have had proper training in the use and operation of fluoroscopic X-ray equipment may operate fluoroscopic equipment without supervision provided that the registrant arranges to have a radiologist or medical or health physicist assist in:

(A) Developing fluoroscopic and radiation safety policies and procedures;

(B) Conducting an on-site practical evaluation of the Non-Radiologist practitioner's knowledge of radiation safety practices and ability to operate the fluoroscopic equipment; and

(C) At least annually, review the registrant's fluoroscopy program. The review includes an evaluation of the fluoroscopic on-times Quality Assurance reports, condition of fluoroscopic equipment and compliance with current rules. The registrant shall correct any deficiencies noted by the review.

(c) Radiologic Technologists who have a permanent or temporary license from the OBMI to practice radiography may operate fluoroscopic equipment under the personal or direct supervision of a radiologist or a non-radiologist practitioner who has had proper training in the use and operation of fluoroscopic X-ray equipment.

(d) Physician assistants with fluoroscopy permits may operate fluoroscopic equipment if:

(A) The supervising physician with whom the physician assistant has entered into a practice agreement is in the room where the fluoroscopic procedure is taking place at the time that the procedure is taking place; or

(B) The supervising physician with whom the physician assistant has entered into a practice agreement is in the building where the fluoroscopic procedure is taking place, and a radiographer with a license from the Oregon Board of Medical Imaging is in the room where the procedure is taking place, at the time that the procedure is taking place.

(e) R.R.A.s or R.P.A.s may operate fluoroscopic equipment under the direct supervision of a radiologist.

(f) Physician assistants licensed with the Oregon Medical Board while completing specific clinical experience pre-requisites to become eligible to take the OBMI fluoroscopy permit examination, may operate fluoroscopy equipment under personal supervision of the physician assistant's supervising physician, licensed radiologist, licensed radiographer or medical physicist.

(g) Students currently enrolled in an approved school of Radiologic Technology as defined in ORS 688.405, may operate fluoroscopic equipment under the personal supervision of a radiologist or an R.T. while in the clinical phase of training.

(5) The operation of fluoroscopic equipment is restricted to the healing arts exclusively for the purpose of localization and to assist physicians in obtaining images for diagnostic purposes.

(6) Overhead fluoroscopy is not to be used as a positioning tool for radiographic examinations except for those fluoroscopic examinations specified in the registrant's written policies/procedures for fluoroscopy.

(7) All images formed by the use of fluoroscopy shall be viewed, directly or indirectly, and interpreted by a radiologist, cardiologist, non-radiologist practitioner or other qualified specialist. R.R.A.s and R.P.A.s may issue a preliminary report; however, the final report must be issued by their supervising radiologist.

(8) Written procedures for fluoroscopic X-ray equipment operators shall be available at the worksite and include:

(a) A list of all individuals who are permitted to operate fluoroscopic X-ray equipment at the facility;

(b) A list of the fluoroscopic X-ray equipment that each operator is qualified to operate;

(c) Written procedures regarding the set up and operation of each fluoroscopic X-ray machine registered to the facility;

(d) Written radiation safety procedures pertaining to the use and operation of fluoroscopy; and

(e) The name and title of the individual who is responsible for overseeing the fluoroscopy program.

(9) Facilities shall determine, or cause to be determined, the typical patient entrance exposure rate for their most common fluoroscopic examinations. The determination shall be made using an attenuation block as described in OAR 333-106-0005(7) using measurement protocol in compliance with OAR 333-106-0210 and expressed in Roentgens per minute (R/min.) or milliRoentgens per minute (mR/min.). In addition, these entrance exposure rates shall be posted in the room where fluoroscopic examinations are conducted so that they are readily available to administrators, X-ray operators, patients and practitioners.

(10) Facilities that utilize fluoroscopy shall maintain a record of the cumulative fluoroscopic exposure time used for each examination. The record must indicate the patient's name, the type of examination, the date of the examination, the fluoroscopist's name, the fluoroscopic room in which the examination was done and the

total cumulative fluoroscopic on-time for each fluoroscopic examination and:

(a) Established cumulative fluoroscopic on-time benchmarks for at least two (if applicable) of the most common types of fluoroscopic examinations performed at the facility's site in each of the following categories:

(A) Routine procedures performed on adults;

(B) Routine procedures performed on children;

(C) Orthopedic procedures performed in surgery;

(D) Urologic procedures performed in surgery;

(E) Angiographic procedures performed; and

(F) Interventional cardiac studies.

(b) Develop and perform periodic (not to exceed 12 month intervals) quality assurance studies to determine the status of each individual fluoroscopist's cumulative on-time in relation to the fluoroscopic benchmarks established for individual fluoroscopic examinations;

(c) Take appropriate action when the established benchmarks are consistently exceeded. The Radiation Safety Committee (RSC) must review the results of the cumulative fluoroscopic on-time Quality Assurance Study and take corrective action regarding those individuals who have exceeded the benchmarks established by the facility for a particular procedure more than 10 percent of the total times the individual performed the procedure during the study period. Documentation of the RSC review, as well as any corrective actions taken, must be available for Authority review. Corrective actions, at a minimum, include:

(A) Notification of the individual; and

(B) Recommendation that the individual undergo additional coaching and training in the safe use of fluoroscopic equipment in order to assist them in reducing their cumulative fluoroscopic on-times.

Stat. Auth.: ORS 453.605 - 453.807

Stats. Implemented: ORS 453.605 - 453.807

333-106-0210
Fluoroscopic Entrance Exposure Rates

(1) Fluoroscopic equipment manufactured before May 19, 1995 that is provided with Automatic Exposure Rate Control (AERC) shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 10 roentgens (R) (2.58 mC/kg) per minute, at a point where the center of the useful beam enters the patient, except:

(a) During the recording of fluoroscopic images; or

(b) When optional high-level control is provided. When so provided, the equipment shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 5 R (1.29 mC/kg) per minute at a point where the center of the useful beam enters the patient, unless the high-level control is activated. Special means of activation of high-level controls shall be required. The high-level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(2) Fluoroscopic equipment that is not provided with AERC shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 5 R (1.29 mC/kg) per minute at a point where the center of the useful beam enters the patient, except:

(a) During the recording of fluoroscopic images; or

(b) When optional high-level control is activated. Special means of activation of high-level controls shall be required. The high-level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(3) Equipment with both an AERC mode and a manual mode. Fluoroscopic equipment that is provided with both an AERC and a manual mode shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 10 R (2.58 mC/kg) per minute in either mode at a point where the center of the useful beam enters the patient, except:

(a) During the recording of fluoroscopic images; or

(b) When the mode or modes have an optional high-level control, in which case that mode or modes shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 5 R (1.29 mC/kg) per minute at a point where the center of the useful beam enters the patient, unless the high-level control is activated. Special means of activation of high-level controls shall be required. The high-level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(4) Exemptions. Fluoroscopic radiation therapy simulation systems are exempt from the requirements set forth in sections (1), (2), and (3) of this rule.

(5) For fluoroscopic equipment manufactured on and after May 19, 1995, the following requirements will apply:

(a) Fluoroscopic equipment operable at any combination of tube potential and current that will result in an exposure rate in excess of 5 R (1.29 mC/kg) per minute at a point where the center of the useful beam enters the patient shall be equipped with AERC. Provision for manual selection of the technique factors may be provided.

(b) Fluoroscopic equipment shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 10 R (2.58 mC/kg) per minute at a point where the center of the useful beam enters the patient except:

(A) During the recording of fluoroscopic images from an X-ray image-intensifier tube using photographic film or a video camera when the X-ray source is operated in a pulsed mode.

(B) When an optional high-level control is activated, the equipment shall not be operable at any combination of tube potential and current that will result in an exposure rate in excess of 20 R per minute at a point where the center of the useful beam enters the patient. Special means of activation of high-level

controls shall be required. The high-level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high-level control is being employed.

(6) Measuring compliance. Compliance with the requirements of this rule shall be determined as follows:

(a) Movable grids and compression devices shall be removed from the useful beam during the measurement;

(b) If the source is below the table, exposure rate shall be measured 1 cm above the tabletop or cradle;

(c) If the source is above the table, the exposure rate shall be measured at 30 cm above the tabletop with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement;

(d) For a C-arm type of fluoroscope, the exposure rate shall be measured 30 cm from the input surface of the fluoroscopic imaging assembly, with the source positioned at any available SID, provided that the end of the beam-limiting device or spacer is no closer than 30 cm from the input surface of the fluoroscopic imaging assembly;

(e) For a lateral type fluoroscope, the exposure rate shall be measured at a point 15 cm from the centerline of the X-ray table and in the direction of the X-ray source with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement. If the tabletop is moveable, it shall be positioned as closely as possible to the lateral X-ray source, with the end of the beam-limiting device or spacer no closer than 15 cm to the centerline of the X-ray table.

(7) Exemptions. Fluoroscopic radiation therapy simulation systems are exempt from the requirement set forth in section (5) of this rule.

(8) Periodic measurement of entrance exposure rate shall be performed as follows:

(a) Such measurement shall be made annually or after any maintenance of the system which might affect the exposure rate; and

(b) Results of these measurements shall be posted where any fluoroscopist may have ready access to such results while using the fluoroscope and in the record required in OAR 333-106-0105(1)(c). The measurement results shall be stated in roentgens per minute and include the technique factors used in determining such results. The name of the person performing the measurements and the date the measurements were performed shall be included in the results; and

(c) Personnel monitoring devices may be used to perform the measurements required by subsection (8)(a) of this rule, provided the measurements are made as described in subsection (8)(d) of this rule;

(d) Conditions of periodic measurement of entrance exposure rate are as follows:

(A) The measurement shall be made under the conditions that satisfy the requirements of section (6) of this rule; and

(B) The kVp shall be the kVp typical of clinical use of the X-ray system; and

(C) The X-ray system(s) that incorporates automatic exposure control shall have sufficient material placed in the useful beam to produce a milliamperage typical of the use of the X-ray system or the worst case; and

(D) X-ray system(s) that do not incorporate an automatic exposure control shall utilize a milliamperage typical of the clinical use of the X-ray system.

NOTE: Materials should be placed in the useful beam when conducting these periodic measurements to protect the imaging system.

333-106-0215
Fluoroscopic Barrier Transmitted Radiation Rate Limits

(1) The exposure rate due to transmission through the primary protective barrier with the attenuation block in the useful beam, combined with radiation from the image intensifier, if provided, shall not exceed two mR (0.516 uC/kg) per hour at 10 cm from any accessible surface of the fluoroscopic imaging assembly beyond the plane of the image receptor for each roentgen per minute of entrance exposure rate.

(2) Measuring Compliance of Barrier Transmission:

(a) The exposure rate due to transmission through the primary protective barrier combined with radiation from the image intensifier shall be determined by measurements averaged over an area of 100 square cm with no linear dimension greater than 20 cm;

(b) If the source is below the tabletop, the measurement shall be made with the input surface of the fluoroscopic imaging assembly positioned 30 cm above the tabletop;

(c) If the source is above the tabletop and the SID is variable, the measurement shall be made with the end of the beam-limiting device or spacer as close to the tabletop as it can be placed, provided that it shall not be closer than 30 cm;

(d) Movable grids and compression devices shall be removed from the useful beam during the measurement; and

(e) The attenuation block shall be positioned in the useful beam 10 centimeters from the point of measurement of entrance exposure rate and between this point and the input surface of the fluoroscopic imaging assembly.

333-106-0225
Fluoroscopic Source-to-Skin Distance

The source-to-skin distance shall not be less than:

(1) 38 cm on stationary fluoroscopes manufactured on or after August 1, 1974;

(2) 35.5 cm on stationary fluoroscopes manufactured prior to August 1, 1974;

(3) 30 cm on all mobile fluoroscopes; and

(4) 20 cm for image intensified fluoroscopes used for specific surgical application. The written safety procedures must provide precautionary measures to be adhered to during the use of this device.

Stat. Auth.: ORS 453.605 - 453.807

333-106-0230
Fluoroscopic Timer

(1) Means shall be provided to present the cumulative on-time of the fluoroscopic tube.

(2) The maximum cumulative time of the timing device shall not exceed five minutes without resetting.

(3) A signal audible to the fluoroscopist, or the appropriate operator, shall indicate the completion of any preset cumulative on-time; or if no audible signal is provided, the exposure shall terminate.

333-106-0235
Mobile Fluoroscopes

In addition to the other requirements of OAR 333-106-0201 through 333-106-0245 of these rules, mobile fluoroscopes shall provide intensified imaging.

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-106-0240
Fluoroscopic Control of Scattered Radiation

(1) Fluoroscopic table designs when combined with procedures utilized shall be such that no unprotected part of any staff or ancillary individual's body shall be exposed to unattenuated scattered radiation which originates from under the table. The attenuation required shall not be less than 0.25 mm lead equivalent.

(2) Equipment configuration when combined with procedures shall be such that no portion of any staff or ancillary individual's body, except the extremities, shall be exposed to the unattenuated scattered radiation emanating from above the tabletop unless that individual:

(a) Is at least 120 cm from the center of the useful beam; or

(b) The radiation has passed through not less than 0.25 mm lead equivalent material including, but not limited to, drapes, Bucky-slot cover, sliding or folding panel, or self-supporting curtains, in addition to any lead equivalency provided by the protective apron referred to in OAR 333-106-0025;

(c) Upon application to the Authority, providing adequate justification, exceptions to this section may be made in some special procedures where a sterile field will not permit the use of the normal protective barriers or where the protective barriers would interfere with the procedures.

333-106-0245
Fluoroscopic Radiation Therapy Simulation Systems

Radiation therapy simulation systems shall be exempt from all the requirements of OAR 333-106-0201 through 333-106-0245 provided that:

(1) Such systems are designed and used in such a manner that no individual other than the patient is in the X-ray room during periods of time when the system is producing X-rays; and

(2) Systems which do not meet the requirements of OAR 333-106-0230 are provided with a means of indicating the cumulative time that an individual patient has been exposed to X-rays. Procedures shall require in such cases that the timer be reset between examinations.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

Additional Requirements for Radiographic Machines

333-106-0301
Beam Limitation for Radiographic Systems Other Than Fluoroscopic, Dental Intraoral, Veterinary Systems, or Computed Tomography(CT)

(1) The useful beam shall be limited to the area of clinical interest.

(2) General Purpose Stationary and Mobile X-ray Systems:

(a) There shall be provided a means for stepless adjustment of the size of the X-ray field, where the adjustment of each dimension of the field is independent of the other;

(b) A method shall be provided for visually defining the perimeter of the X-ray field. The total misalignment of the edges of the visually defined field with the respective edges of the X-ray field along either the length or width of the visually defined field shall not exceed two percent of the distance from the source to the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the X-ray beam;

(c) Evidence of compliance with subsections (2)(a) and (b) of this rule shall be shown on each radiograph taken, either by imaging part of the collimator on the radiograph or by imaging collimator nubs or pointers;

(d) Beam-defining lights used for visually defining perimeters of the X-ray field shall have an illumination great enough to be visualized by the operator under ambient light conditions;

(e) The Authority may grant an exemption on noncertified X-ray systems to subsections (2)(a) and (b) of this rule provided the registrant makes a written application for such exemption and in that application:

(A) Demonstrates it is impractical to comply with subsections (2)(a) and (b) of this rule; and

(B) The purpose of subsections (2)(a) and (b) of this rule will be met by other methods.

(3) In addition to the requirements of section (2) of this rule, all stationary general purpose X-ray systems shall meet the following requirements:

(a) A method shall be provided to indicate when the axis of the X-ray beam is perpendicular to the plane of the image receptor, to align the center of the X-ray field with respect to the center of the image receptor to within two percent of the SID, and to indicate the SID to within two percent;

(b) The beam-limiting device shall indicate numerically the field size in the plane of the image receptor to which it is adjusted; and

(c) Indication of field size dimensions and SID's shall be specified in inches or centimeters, and shall be such that aperture adjustments result in X-ray field dimensions in the plane of the image receptor which correspond to those indicated by the beam-limiting device to within two percent of the SID when the beam axis is indicated to be perpendicular to the plane of the image receptor.

(4) Radiographic equipment designed for only one image receptor size at a fixed SID shall be provided with means to limit the field at the plane of the image receptor to dimensions no greater than those of the image receptor, and to align the center of the X-ray field with the center of the image receptor to within two percent of the SID, or shall be provided with means to both size and align the X-ray field such that the X-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor.

(5) Special Purpose X-ray Systems:

(a) Means shall be provided to limit the X-ray field in the plane of the image receptor so that such field does not exceed each dimension of the image receptor by more than two percent of the SID when the axis of the X-ray beam is perpendicular to the plane of the image receptor;

(b) Means shall be provided to align the center of the X-ray field with the center of the image receptor to within two percent of the SID, or means shall be provided to both size and align the X-ray field such that the X-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor. Compliance shall be determined with the axis of the X-ray beam perpendicular to the plane of the image receptor;

(c) Subsections (5)(a) and (b) of this rule may be met with a system that meets the requirements for a general purpose X-ray system as specified in section (2) of this rule or, when alignment means are also provided, may be met with either:

(A) An assortment of removable, fixed-aperture, beam-limiting devices sufficient to meet the requirement for each combination of image receptor size and SID for which the unit is designed with each such device having clear and permanent markings to indicate the image receptor size and SID for which it is designed; or

(B) A beam-limiting device having multiple fixed apertures sufficient to meet the requirement for each combination of image receptor size and SID for which the unit is designed. Permanent,

clearly legible markings shall indicate the image receptor size and SID for which each aperture is designed and shall indicate which aperture is in position for use.

333-106-0305
Radiation Exposure Control Devices

(1) Timers. Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses or a preset radiation exposure to the image receptor. In addition:

(a) Termination of exposure shall cause automatic resetting of the timer to its initial setting or to zero;

(b) It shall not be possible to make an exposure when the timer is set to a zero or "off" position if either position is provided.

(2) X-ray Exposure Control:

(a) An X-ray exposure control shall be incorporated into each X-ray system such that an exposure can be terminated by the operator at any time except for:

(A) Exposure of 0.5 second or less; or

(B) During serial radiography when means shall be provided to permit completion of any single exposure of the series in process.

(b) Each X-ray exposure control shall be located in such a way as to meet the following requirements:

(A) Stationary X-ray systems shall be required to have the X-ray exposure control permanently mounted in a protected area so that the operator is required to remain in that protected area during the entire exposure; and

(B) The operator's protected area shall provide visual indication of the patient during the X-ray procedure; and

(C) Mobile and portable X-ray systems which are:

(i) Used for greater than one week in the same location, i.e., a room or suite, shall meet the requirements of paragraph (2)(b)(A) of this rule;

(ii) Used for greater than one hour and less than one week at the same location, i.e., a room or suite, shall meet the requirement of subparagraph (2)(b)(C)(i) of this rule or be provided with a 6.5 feet (1.98 m) high protective barrier which is placed at least 6 feet (1.83 m) from the tube housing assembly and at least 6 feet (1.83 m) from the patient; or

(iii) Used to make an exposure(s) of a patient at the use location shall meet the requirement of subparagraph (2)(b)(C)(i) or (ii) of this rule or be provided with a method of X-ray control which permits the operator to be at least 12 feet (3.66 m) from the tube housing assembly during an exposure.

(c) The X-ray control shall provide visual indication observable at or from the operator's protected position whenever X-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.

(3) Automatic Exposure Controls. When an automatic exposure control is provided:

(a) Indication shall be made on the control panel when this mode of operation is selected;

(b) If the X-ray tube potential is equal to or greater than 50 kVp, the minimum exposure time for field emission equipment rated for pulsed operation shall be equal to or less than a time interval equivalent to two pulses;

(c) The minimum exposure time for all equipment other than that specified in subsection (3)(b) of this rule shall be equal to or less than 1/60 second or a time interval required to deliver 5 mAs, whichever is greater;

(d) Either the product of peak X-ray tube potential, current, and exposure time shall be limited to not more than 60 kWs per exposure, or the product of X-ray tube current and exposure time shall be limited to not more than 600 mAs per exposure except that, when the X-ray tube potential is less than 50 kVp, the product of X-ray tube current and exposure time shall be limited to not more than 2000 mAs per exposure; and

(e) A visible signal shall indicate when an exposure has been terminated at the limits required by subsection (3)(d) of this rule, and manual resetting shall be required before further automatically timed exposures can be made.

(4) Reproducibility. With a timer setting of 0.5 seconds or less, the average exposure period (T) shall be greater than or equal to five times the maximum exposure period (Tmax) minus the minimum exposure period (Tmin) when four timer tests are performed: (T)> 5 (Tmax - Tmin).

333-106-0310
Source-to-Skin Distance

(1) All mobile or portable radiographic systems shall be provided with means to limit the source-to-skin distance to equal to or greater than 30 cm. This is considered to have been met when the collimator or cone provides the required limits.

(2) Any device provided to limit the SSD must be durable and securely fastened to the system.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-106-0315
Exposure Reproducibility

The coefficient of variation of exposure shall not exceed 0.05 when all technique factors are held constant. This requirement shall be deemed to have been met if, when four exposures are made at identical technique factors, the value of the average exposure (E) is greater than or equal to five times the maximum exposure (Emax) minus the minimum exposure (Emin). E >5 (Emax - Emin).

333-106-0320
Radiation from Capacitor Energy Storage Equipment in Standby Status

Radiation emitted from the X-ray tube when the exposure switch or timer is not activated shall not exceed a rate of two milliroentgens (0.516 uC/kg) per hour at five centimeters from any accessible surface of the diagnostic source assembly, with the beam-limiting device fully open.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755

333-106-0325
Intraoral Dental Radiographic Systems

In addition to the provisions of OAR 333-106-0010 through 333-106-0101, the requirements of this rule apply to X-ray equipment and facilities where intraoral dental radiography is conducted. Requirements for extraoral dental radiographic systems are covered in OAR 333-106-0301 through 333-106-0320. Intraoral dental radiographic systems must meet the following requirements:

(1) Source-to-Skin Distance (SSD). X-ray systems designed for use with an intraoral image receptor shall be provided with means to limit source-to-skin distance, to not less than 18cm.

(2) Beam Limitation. Radiographic systems designed for use with an intraoral image receptor shall be provided with means to limit the X-ray beam such that:

(a) If the minimum source-to-skin distance (SSD) is 18 centimeters or more, the X-ray field, at the minimum SSD, shall be

containable in a circle having a diameter of no more than seven centimeters; or

(b) If the minimum SSD is less than 18 centimeters, the X-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than six centimeters.

(3) Radiation Exposure Control (Timers). Means shall be provided to control the radiation exposure through the adjustment of exposure time in seconds, milliseconds (ms) or, number of pulses, or current/milliamps (mA), or the product of current and exposure time (mAs) or adjustment of kVp. In addition:

(a) Exposure Initiation. Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, such as the depression of a switch. Radiation exposure shall not be initiated without such an action; and

(b) It shall not be possible to make an exposure when the timer is set to a "0" or "off" position if either position is provided;

(c) Exposure Indication. Means shall be provided for visual indication, observable at or from the operator's protected position, whenever X-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.

(d) Timer Reproducibility. With a timer setting of 0.5 second or less, the average exposure time (T) shall be greater than or equal to five times the minimum exposure time (Tmax) minus the minimum exposure time (Tmin) when four timer tests are performed: (T) >5 (Tmax - Tmin).

(A) Means shall be provided to terminate the exposure at a preset, time interval, mAs, number of pulses, or radiation to the image receptor.

(B) An X-ray exposure control shall be incorporated into each system such that an exposure can be terminated by the operator at any time, except for exposures of 0.5 second or less.

(C) Termination of an exposure shall cause automatic resetting of the timer to its initial setting or to "0".

(4) Radiation Exposure Control Location and Operator Protection. Each X-ray control must be located in such a way as to meet the following requirements:

(a) The exposure switch shall be able to be operated in a protected area, as defined in OAR 333-106-0005(77), and the operator shall remain in that protected area during the entire exposure; and

(b) The operator's protected area shall provide visual indication of the patient during the X-ray procedure.

(c) Mobile and portable X-ray systems which are:

(A) Used for greater than one week in the same location, such as a room or suite, shall meet the requirements of subsections (4)(a) and (4)(b) of this rule.

(B) Used for less than one week at the same location, such as a room or suite, shall be provided with:

(i) Either a protective barrier of at least 6.5 feet (2 meters) high for operator protection; or

(ii) A means to allow the operator to be at least nine feet (2.7 meters) from the tube housing assembly while making exposures; or

(iii) A full length protective apron, of not less than 0.25 millimeter lead equivalent for operator protection, when using a hand-held dental intraoral X-ray machine.

(5) Exposure Reproducibility. The coefficient of variation shall not exceed 0.05 when all technique factors are held constant. This requirement shall be deemed to have been met if, when four exposures are made at identical technique factors, the value of the average exposure (E) is greater than or equal to five times the maximum exposure (Emax) minus the minimum exposure (Emin): E >5 (Emax - Emin)

(6) Accuracy.

(a) Deviation of technique factors from the indicated values for kVp and exposure time (if time is independently selectable) shall not exceed the limits specified for that system by its manufacturer.

(b) kVp Limitations. Dental X-ray machines with a nominal fixed kVp of less than 55 kVp shall not be used to make diagnostic dental radiographs on humans.

(7) Administrative Controls.

(a) Patient and film holding devices shall be used when the techniques permit;

(b) The tube housing and the PID shall not be hand held during an exposure;

(c) The X-ray system shall be operated in such a manner that the useful beam at the patient's skin does not exceed the requirements of section (2) of this rule or its updated version;

(d) Dental fluoroscopy without image intensification shall not be used; and

(e) Pointed cones shall not be utilized unless specific authorization has been granted by the Authority.

(8) Hand-held X-ray systems.

(a) Registrants must provide for security and safe storage while not in use. A report must be filed with the Authority within 72 hours if the hand-held unit is lost or stolen.

(b) The image receptor used with hand-held dental X-ray systems must either be:

(A) A speed class of intra-oral film designated as "E/F", "F" or faster; or

(B) A digitally acquired image (CR or DR).

(c) The hand-held X-ray system must be equipped with a permanently attached backscatter shield of 0.25 mm Pb equivalent.

(d) The backscatter shield must be designed to appropriately protect the operator during an exposure. The manufacturer of the hand-held unit must provide documentation to the Authority of the design specifications of the backscatter shield's protection to the operator prior to sale and distribution in the State of Oregon.

(e) The hand-held unit must be capable of a minimum of 60 kVp and 2.0 mA.

(f) Hand-held units not meeting the requirements of subsections (8)(c), (8)(d) and (8)(e) of this rule may not be sold, distributed or used in the State of Oregon.

(9) Hand-held dental X-ray administrative controls.

(a) The hand-held unit shall not be used for patient examinations in hallways and waiting rooms.

(b) The unit can only be operated in an enclosed room when possible. All individuals except the X-ray operator and the patient must leave the room and stand behind a protective barrier or be at least six feet from the X-ray source if a protective barrier is not available during radiographic exposures.

(c) Operators must complete machine specific applications training as described in OAR 333-106-0055(9) before using a hand-held unit. Training on the safe use of the unit shall be documented and include at a minimum:

(A) Proper positioning of the unit to ensure an adequate protected position;

(B) Limitations on the use of position indicating devices that require longer distances to the patient's face;

(C) Diagrams such as drawings, illustrations, or schematics of protected position and location in relationship to the unit;

(D) Diagrams such as drawings, illustrations, or schematics of the effect of improper distance or removal of shielding device; and

(E) Diagrams such as drawings, illustrations, schematics of common examples of improper positioning of the unit and or location of the operator.

(d) An appropriate receptor holder must be used during the X-ray exposure.

(e) A PID must be used during the X-ray exposure.

(f) A hand-held unit shall be held without any motion during a patient examination. A tube stand may be utilized to immobilize the hand-held unit during a patient examination.

Computed Tomography X-ray Systems

333-106-0345
Purpose and Scope

(1) OAR 333-106-0350 through 333-106-0369 establishes requirements governing the use of computed tomography (CT) scanners in the healing arts; and

(2) Applies to all registrants who use a CT scanner for the intentional exposure of humans for diagnostic imaging.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 24-2014, f. & cert. ef. 8-15-14

333-106-0350
Definitions

In addition to the definitions provided in division 100 and 106 of these rules, the following definitions shall be applicable to OAR 333-106-0350 through 333-106-0369.

(1) "Annual" means a period of 12 consecutive months, not to exceed a period of 14 months.

(2) "Computed tomography (CT)" means the production of a tomogram by the acquisition and computer processing of X-ray transmission data. Computed tomography includes the capability of producing axial tomograms.

(3) "Computed Tomography Dose Index" means the integral from -7T to +7T of the dose profile along a line perpendicular to the tomographic plane divided by the product of the nominal tomographic section thickness and the number of tomograms produced in a single scan. This definition assumes that the dose profile is centered around z = 0 and that, for a multiple tomogram system, the scan increment between adjacent scans is nT.

(4) "Contrast scale" or "CS" means the change in the linear attenuation coefficient per CTN relative to water.

(5) "CT conditions of operation" means all selectable parameters governing the operation of a CT X-ray system including, but not limited to, nominal tomographic section thickness, filtration, and the technique factors as defined in OAR 333-106-0005.

(6) "CT gantry" means the tube housing assemblies, beam-limiting devices, detectors, and the supporting structures and frames which hold these components.

(7) "CT number" means the number used to represent the X-ray attenuation associated with each elemental area of the CT image.

(8) "CT scanner" means a CT machine capable of performing CT scans of the head, other body parts, or full body patient procedures including PET/CT and SPECT/CT hybrid scanners if used for diagnostic CT procedures.

(9) "CTDIvol" (see computed tomography dose index).

(10) CTN (see CT number).

(11) "Dose-length product (DLP)" is the CTDIvol multiplied by the scan length (image thickness multiplied by the number of adjacent, non-overlapped images in the acquisition in centimeters.

(12) "Dose profile" means the dose as a function of position along a line.

(13) "Elemental area" means the smallest area within a tomogram for which the X-ray attenuation properties of a body are depicted (see also picture element.)

(14) "Multiple tomogram system" means a computed tomography X-ray system which obtains X-ray transmission data simultaneously during a single scan to produce more than one tomogram.

(15) "Noise" means the standard deviation of the fluctuations in CTN expressed as a percentage of the attenuation coefficient of water.

(16) "Nominal tomographic section thickness" means the full width at half-maximum of the sensitivity profile taken at the center of the cross-sectional volume over which X-ray transmission data are collected.

(17) "Picture element" means an elemental area of a tomogram.

(18) "Positron emission tomography (PET)" means an imaging technique that uses positron-emitting radionuclides to produce 3-dimensional images of functional processes in the body.

(19) "Qualified CT medical physicist" means an individual qualified in accordance with OAR 333-106-0367.

(20) "Reference plane" means a plane which is displaced from and parallel to the tomographic plane.

(21) "Scan" means the complete process of collecting X-ray transmission data for the production of a tomogram. Data can be collected simultaneously during a single scan for the production of one or more tomograms.

(22) "Scan increment" means the amount of relative displacement of the patient with respect to the CT X-ray system between successive scans measured along the direction of such displacement.

(23) "Scan sequence" means a preselected set of two or more scans performed consecutively under preselected CT conditions of operation.

(24) "Scan time" means the period of time between the beginning and end of X-ray transmission data accumulation for a single scan.

(25) "Single photon emission computed tomography (SPECT)" means an imaging technique that uses radionuclides to produce 3-dimensional images of functional processes in the body.

(26) "Single Tomogram System" means a CT X-ray system which obtains X-ray transmission data during a scan to produce a single tomogram.

(27) "Tomogram" means the depiction of the attenuation properties of a section through a body.

(28) "Tomographic plane" means that geometric plane which is identified as corresponding to the output tomogram.

(29) "Tomographic section" means the volume of an object whose X-ray attenuation properties are imaged in a tomogram.

(30) "Traceable to a national standard" means an instrument is calibrated at either the National Institute of Standards and Technology (NIST) or at a calibration laboratory that participates in a proficiency program with the NIST at least once every two years and the results of the proficiency test conducted within 24 months of calibration show agreement within plus or minus three percent of the national standard in the appropriate energy range.

333-106-0355
CT Equipment Requirements

(1) CT equipment requirements shall comply with the Food and Drug Administration's 21 CFR in the following areas:

(a) Information to be provided for users — Part 1020.33(c);

(b) Quality Assurance — Part 1020.33(d);

(c) Control and indication of conditions of operation — Part 1020.33(f);

(d) Tomographic plane indication and alignment — Part 1020.33(g);

(e) Beam-on and status indicators — Part 1020.33(h);

(f) Scan increment accuracy — Part 1020.33(i); and

(g) CT number mean and standard deviation — Part 1020.33(j).

(2) CT equipment shall be maintained in compliance with the requirements of section (1) of this rule.

333-106-0360
Facility Design Requirements

(1) A fixed CT scanner room shall be a permanent part of the building or equipment. Portable shields shall not be used for permanent installations.

(2) The CT scanner shall be situated in a protected area and is subject to design approval by a qualified expert. National Council on Radiation Protection and measurements (NCRP) Report #147 shall be used as guidance for determining adequate shielding.

(3) The control panel for a fixed CT scanner shall be in a protected area.

(4) Movable barriers with electrical interlocks shall not be approved in lieu of compliance with section (3) of this rule.

(5) The operator of a fixed CT scanner shall be able to see and communicate with the patient from the protective area at the control panel. When an observation window is provided, it shall have a lead equivalence at least equal to that required of the control barrier in which it is installed.

(6) Mobile or portable CT scanners used routinely in one location shall be considered a fixed installation and shall comply with the requirements of sections (1) through (5) of this rule.

(7) CT scanners mounted in a vehicle or trailer must meet requirements of sections (1) through (5) of this rule.

333-106-0361
Radiation Protection Surveys

(1) The registrant must ensure that radiation protection surveys are performed at new facilities, at existing facilities not previously surveyed, and anytime the CT scanner is replaced, moved or structural changes are made in the room.

(2) In new facilities, a radiation protection survey must be completed prior to the first clinical use following installation.

(3) The radiation protection survey must be performed by a qualified CT medical physicist as defined in OAR 333-106-0367 or a qualified expert as defined in OAR 333-100-0005.

(4) Surveys must be conducted with an operable radiation survey instrument that has been calibrated according to manufacturer's specifications, not to exceed 24 months. If manufacturer specifications are not available, then the radiation survey instrument shall be calibrated every 12 months.

(5) The qualified CT medical physicist or qualified expert must verify that:

(a) Radiation levels in restricted areas are not likely to cause personnel to receive exposures in excess of the limits specified in OAR 333-120-0100(1); and

(b) Radiation levels in unrestricted areas do not exceed the limits specified in OAR 333-120-0180 and 333-120-0190.

(6) The radiation protection survey record must be documented and indicate all instances where the facility, in the opinion of the qualified medical physicist or qualified expert, is in violation of applicable regulations. The survey record must also include the:

(a) Date of the measurements;

(b) Reason the survey is required;

(c) Manufacturer's name, model number and serial number of the CT scanner;

(d) Manufacturer's name, model number and serial number of the instrument(s) used to measure radiation levels and the date last calibrated;

(e) Floor plan of the areas surrounding the exam room that were surveyed;

(f) Measured dose rate at several points in each area expressed in mSv/hr or mR/hr;

(g) Calculated maximum level of radiation over a period of one week for each restricted and unrestricted area;

(h) Signature of the individual responsible for conducting the survey; and

(i) The survey must be available for review at the time of inspection.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-106-0362
Operating Procedures and Conditions of Operation

(1) Within six months following the effective date of these rules, the CT facility shall establish default scanning protocols in consultation with a qualified CT medical physicist.

(2) Default scanning protocols shall be password protected or a written policy shall be in place that prohibits anyone from changing protocols without documented approval from the CT medical director, lead CT technologist or supervising CT radiologist.

(a) Each facility shall establish a policy to review all of their default CT protocols at least annually to ensure they are correct and are the intended protocols.

(b) Written and signed documentation of this annual review shall be kept and made available for inspection for each CT unit at the facility.

(3) The CT operator shall ensure all technique factors and dose indices are appropriate for the protocol being used and the patient being imaged. This may be accomplished by reviewing dose indicator devices if available or dose indices such as the technique factors.

(4) The facility shall establish a written policy for retaking CT exams on patients.

(5) Staff shall not be required by the licensee or registrant to hold patients during CT examinations.

(6) When a patient must be held in position for a CT procedure, mechanical supporting or restraining devices shall be used unless contraindicated. If the patient must be held by an individual, this individual shall wear a protective apron of 0.5 millimeter minimum lead equivalence and be so positioned that no part of his or her body shall be in the path of the primary beam and that his or her body is as far as possible from the edge of the primary beam.

(7) Only individuals whose presence is necessary are allowed in a CT scan room during exposure. Each individual, except the patient, shall be protected by at least 0.5 millimeter lead equivalent aprons or a whole body protective barrier.

(8) A CT scanner shall not be left unattended without locking the apparatus, room, or building in some manner which must prevent use of the apparatus by unauthorized persons.

333-106-0363
Quality Control Program

(1) The registrant shall ensure that a CT quality assurance phantom is available for testing the CT system.

(2) Instructions on the use of the phantom shall be provided. The instructions shall include a schedule of tests appropriate for the CT system, the allowable variations for the test parameters, and a method to store the test results.

(3) Within six months following the effective date of these rules, a CT facility shall establish and implement a quality control program under the direction of a CT medical physicist.

(4) Evaluations and tests shall be performed following written procedures and methods.

(5) Corrective action shall be taken and documented according to instructions provided by the qualified CT medical physicist if the results of an evaluation or test fall outside the control limits.

(6) The qualified CT medical physicist shall determine the frequency of each test. An on-site CT Radiologic Technologist shall be identified to be responsible for the ongoing quality control testing.

(7) The ongoing quality control evaluation must include, at a minimum, the following:

(a) Water CT number accuracy check and standard deviation (noise);

(b) Artifact evaluation;

(c) Visual checklist; and

(d) Printer quality control (if used for primary interpretation).

Stat. Auth.: ORS 453.605 - 453.807

333-106-0364
Initial and Annual Qualified CT Medical Physicist Scanner Performance Evaluations

(1) A CT medical physicist shall complete an initial performance evaluation of the CT scanner before use on patients and annually thereafter.

(2) A performance evaluation of the CT system shall be performed after any change in the equipment which might cause a change in the radiation output or image quality.

(3) A calibrated dosimetry system shall be used to measure the radiation output of a CT scanner. Calibration of the dosimetry system shall be within the preceding 24 months, or per manufacturer's specifications, and shall be traceable to a national standard.

(4) A performance evaluation shall include the following, as a minimum:

(a) Alignment light accuracy;

(b) Alignment of table to gantry;

(c) Gantry tilt, as appropriate;

(d) Slice localization from scanned projection radiograph;

(e) Table travel accuracy;

(f) Image thickness;

(g) Radiation beam width;

(h) Image quality, including the following:

(A) Gray level performance of CT acquisition display monitors,

(B) Low-contrast performance,

(C) Image uniformity,

(D) Noise,

(E) Artifact evaluation, and

(F) Spatial resolution;

(i) CT number uniformity;

(j) Dosimetry, including the following:

(A) Dose indicator such as computed tomography dose index (CTDI¬vol), and

(B) Patient radiation dose for representative examinations.

(k) A safety evaluation, including the following:

(A) Visual inspection,

(B) Audible and visual signals, and

(C) Posting requirements.

(l) A review of clinical protocols shall include at a minimum:

(A) An evaluation of scanner features, including kV, mAs, detector configuration, reconstructed scan width, pitch, reconstruction algorithm, and other features such as dose reduction options, including automatic exposure controls, iterative reconstruction techniques, etc. to ensure they are being properly utilized; and

(B) A review of the following clinical protocols, if they are used on the CT scanner:

(i) Pediatric head (one year old);

(ii) Pediatric abdomen (five years old; 40–50 pounds or approximately 20 kilograms);

(iii) Adult head;

(iv) Adult abdomen (70 kilograms);

(v) High-resolution chest;

(vi) Brain perfusion; and

(vii) Low dose lung cancer screening exam.

(m) A review of the facility's ongoing quality control program, including test results and corrective action.

(5) Evaluations and tests shall be performed following written procedures and methods found in the latest ACR CT Quality Control Manual.

(6) The qualified CT medical physicist shall prepare a report that includes the following:

(a) A summary of the performance evaluation required under section (1) of this rule;

(b) Recommendations for necessary improvements; and

(c) The type of dosimetry system used, including the date of the last calibration.

(7) The report required under section (6) of this rule shall be provided to the CT facility within 30 days after completion of the evaluation and shall be made available to the Authority upon request.

(8) The facility shall keep written documentation of actions taken in response to the recommendations from the performance evaluation report.

(9) Records of preventive maintenance and repair shall be retained for each CT scanner and be made available to the Authority upon request.

Stat. Auth.: ORS 453.605 - 453.807

333-106-0366
Dose Limits

The CTDIvol for the following CT examinations on standard phantoms shall not exceed the dose limits listed below:

(1) Adult head, 80 mGy;

(2) Adult abdomen, 30 mGy;

(3) Pediatric abdomen (five years of age or 40 pounds, 20 mGy; and

(4) Pediatric head, 40 mGy.

Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 24-2014, f. & cert. ef. 8-15-14

333-106-0367
Records and Report Retention

A facility with a CT scanner shall maintain records and reports on file and shall make the records and reports available for review by the Authority as follows:

(1) Records documenting the qualifications of all personnel who worked at the facility as an operator or CT medical physicist.

(2) Records of personnel no longer employed by the facility shall be kept on file until the next inspection following the employee's termination has been completed and the Agency has determined that the facility is in compliance with the CT personnel requirements.

(3) A report of a CT medical event required under OAR 333-106-0368 shall be maintained on file for at least seven years.

(4) Initial and annual CT medical physicist performance evaluation reports required under OAR 333-106-0364 shall be maintained on file for at least five years.

(5) Records of the results from the ongoing quality control evaluation required under OAR 333-106-0363 shall be maintained on file for at least three years.

Stat. Auth.: ORS 453.605 - 453.807

333-106-0368
Qualified CT Medical Physicist

In order to perform a CT survey or provide consultative services on a CT unit, a person must be approved by the Authority, under the provisions of OAR 333-101-0020, as a provider of radiation services in CT. In addition, the qualified CT medical physicist shall meet the requirements outlined below:

(1) Initial qualifications. Before beginning to provide consultation to a CT facility, a medical physicist shall meet one of the following:

(a) Be certified in diagnostic radiological physics or radiological physics by the American Board of Radiology, or in diagnostic imaging physics by the American Board of Medical Physics, or in diagnostic radiology physics by the Canadian College of Physicists in Medicine; or

(b) Have a graduate degree in medical physics, radiological physics, physics, or other relevant physical science or engineering discipline from an accredited institution and have formal coursework in the biological sciences with at least one course in biology or radiation biology and one course in anatomy, physiology, or similar topics related to the practice of medical physics, and have three years of documented experience in a clinical CT environment. An accredited institution is a college or university accredited by a regional accrediting organization that has been recognized either by the U.S. department of education (USDE) or by the council for higher education accreditation (CHEA) or both. Individuals with non-U.S. degrees shall provide documentation that their foreign degrees are equivalent to those granted from an approved institution in the U.S. and that the granting institution is equivalent to a regionally accredited institution in the USA; or

(c) CT medical physicists who, prior to August 1, 2014, have been actively working in the area of CT in the State of Oregon and are specifically approved by the Authority to provide CT medical

physics services in Oregon, are exempt from the requirements in subsections (a) and (b) this section.

(2) Continuing experience. After the second anniversary of the date when the requirements of section (1) of this rule were completed, the medical physicist shall have evaluated at least two CT scanners in the prior 24-month period.

(3) Continuing education. After the third anniversary of the date when the requirements of section (1) of this rule were completed, the CT medical physicist shall have earned at least 15 continuing medical education units; at least half shall be category 1, in the prior 36-month period. The continuing education shall include credits pertinent to CT.

(4) Re-establishing qualifications. A CT medical physicist who fails to maintain the required continuing experience or continuing education requirements shall reestablish his or her qualifications before resuming the independent evaluation of CT scanners and facilities, as follows:

(a) A CT medical physicist who fails to meet the continuing experience requirements of section (2) of this rule shall evaluate two CT scanners under the supervision of a medical physicist, to meet the requirements of section (2) of this rule.

(b) A CT medical physicist who fails to meet the continuing education requirements of section (3) of this rule shall obtain a sufficient number of additional continuing education credits to meet the requirements of section (3) of this rule.

(5) Documentation of continuing education and continuing experience shall be kept on file and made available to an inspector upon request.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 24-2014, f. & cert. ef. 8-15-14

333-106-0369
Report and Notification of a CT Medical Event

(1) A CT facility shall notify the Authority within 48 hours of any CT medical event in which a patient who has undergone a CT study has incurred a deterministic radiation injury, such as epilation or erythema.

(2) The registrant shall submit a written report to the Authority within 30 days after the CT medical event is discovered.

(3) The written report shall include all of the following:

(a) The registrant's name, address, facility registration number, and machine registration tag number as they appear on the registration certificate;

(b) The name of the individual who determined a CT medical event occurred;

(c) The dates of occurrence and discovery of the CT medical event;

(d) A narrative description of the CT medical event, including an estimated dose to the patient, if possible, and body part involved;

(e) The cause of the CT medical event;

(f) The effect on the individual who received the exposure;

(g) A narrative detailing corrective action taken or planned to prevent a recurrence;

(h) Certification that the registrant notified the individual or the individual's responsible relative or guardian and, if not, why not; and

(i) The name and signature of the person preparing the report.

(4) The report shall not contain the name of the individual who is the subject of the CT medical event or any other information that could lead to identification of the individual.

(5) The registrant shall consult with the referring physician prior to notifying the individual that they were involved in a CT medical event.

(a) The registrant shall ensure that the individual was notified of the CT medical event no later than one week after the discovery unless unforeseen circumstances exist.

(b) The registrant shall not delay any appropriate medical care for the individual, including any necessary remedial care as a result of the CT medical event.

(c) If verbal notification is necessary, the registrant shall inform the individual or legal guardian that a written description of the CT medical event can be obtained from the registrant.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 24-2014, f. & cert. ef. 8-15-14

333-106-0370
Operator Requirements

(1) Computed Tomography (CT) X-ray systems shall be operated by individuals who:

(a) Are registered with the American Registry of Radiologic Technologists (A.R.R.T); and

(b) Have received additional CT system training; and

(c) Meet the clinical experience requirements for CT established by A.R.R.T.; and

(d) Are currently licensed by the Oregon Board of Medical Imaging.

(2) Individuals who are registered with the A.R.R.T. and credentialed as an R.T. (R) and (CT) are considered to have met the CT training requirement in section (1) of this rule and clinical experience requirement in subsection (1)(c) of this rule.

(3) Those individuals who have met the requirements of section (1) of this rule prior to the effective date of this rule are considered to have met subsection (1)(a) of this rule.

(4) Technologists operating CT systems must do so under the direction of a radiologist.

(5) Positron Emission-Computed Tomography (PET/CT) or Single Photon Emission-Computed Tomography (SPECT/CT) systems shall be operated by a technologist licensed by the Oregon Board of Medical Imaging who is:

(a) Any registered radiographer with the credential R.T. (R); or

(b) Registered radiation therapist with the credential R.T. (T);

(c Registered certified nuclear medicine technologist with the credentials R.T. (N); or

(d) Certified Nuclear Medicine Technologist (CNMT) by the Nuclear Medicine Technologist Certification Board (NMTCB).

(6) The individuals mentioned in section (5) of this rule must also have successfully completed appropriate additional education and training and demonstrated competency in the use and operation of PET/CT or SPECT/CT systems.

(7) Appropriate additional training is considered training that covers the topic areas outlined in the PET/CT curriculum developed by the Multi-Organizational Curriculum Project Group sponsored by the American Society of Radiologic Technologists and the Society of Nuclear Medicine Technologists, or equivalent training approved by the Authority and:

(a) Includes the content specified in the PET/CT curriculum for the area(s) that the individual is not already trained or certified in; or

(b) Individuals meeting the requirements of section (5) of this rule and who have successfully completed training that the Authority has evaluated and judged to be substantially equivalent to that specified in subsection (7)(a) of this rule.

(8) R.T. (N)s or CNMTs who have become certified in Computed Tomography through the American Registry of Radiologic Technologists are considered to have met the training requirements in section (5) of this rule.

(9) Technologists operating PET/CT or SPECT/CT systems must do so under the direction of an authorized user licensed to perform imaging and localization studies in accordance with OAR 333-116-0320.

Veterinary X-ray Systems

333-106-0601
Veterinary Medicine Radiographic Installations Additional Requirements

(1) Equipment:

(a) The protective tube housing shall be of the diagnostic type;

(b) Collimating devices shall be provided and used for collimating the useful beam to the area of clinical interest;

(c) All X-ray equipment sold after October 1991 must be equipped with a variable adjustable collimator and beam-defining light that meets all of the requirements of OAR 333-106-0301(1), (2) and (3);

(d) The total filtration permanently in the useful beam shall not be less than 0.5 mm Al equivalent for machines operating up to 50 kVp, 1.5 mm Al equivalent for machines operating between 50 and 70 kVp, and 2.5 mm Al equivalent for machines operating above 70 kVp;

(e) A device shall be provided to terminate the exposure after a preset time or exposure;

(f) A dead-man type of exposure switch shall be provided, together with an electrical cord of sufficient length, so that the operator can stand out of the useful beam and at least 12 feet (3.66 m) from the animal during all X-ray exposures.

(2) Structural Shielding: All wall, ceiling and floor areas shall be equivalent to or provided with applicable protective barriers to assure compliance with division 120.

(3) Operating Procedures:

(a) All individuals shall stand well away from the useful beam and the animal during radiographic exposures;

(b) No individual shall be in the X-ray room while exposures are being made unless such individual's assistance is required;

(c) When an animal must be held in position during radiography, mechanical supporting or restraining devices shall be available and used as appropriate.

(d) If the animal must be held by an individual, that individual shall be protected with appropriate shielding devices, such as protective gloves and apron, and that individual shall be so positioned that no part of the body will be struck by the useful beam. The exposure of any individual used for this purpose shall be monitored with appropriate personnel monitoring devices.

Mammography Requirements

333-106-0700
Mammography X-Ray Systems Definitions

In addition to the definitions provided in division 100 and 106 of this chapter, the following definitions shall be applicable to the rules in this division.

(1) "Air Kerma" means the sum of the initial energies of all the charged particles liberated by uncharged ionizing particles in a given mass of air. The unit used to measure the quantity of kerma is the gray (Gy). For X-rays with energies below 300 kiloelectronvolts (keV), 1Gy=100 rad and is equivalent to 114 (R) of exposure.

(2) "FDA" means the Food and Drug Administration.

(3) An "image receptor support surface" means that portion of the image receptor support which is the X-ray input surface and is used to support the patient's breast during mammography.

(4) "Interpreting physician" means a licensed physician who interprets mammographic images and meets the qualifications of OAR 333-106-0750(2).

(5) "Lead Interpreting Physician" means a physician who interprets mammographic images, meets the qualifications of OAR 333-106-0750(2), and who has the general responsibility for ensuring that the registrant's quality assurance program meets all applicable rules and regulations.

(6) "Mammographic screening" means the use of radiation to test women for the detection of diseases of the breast when such tests are not specifically and individually ordered by a licensed practitioner of the healing arts legally authorized to prescribe such tests for the purposes of diagnosis. Screening is considered as self-referral by asymptomatic women without physicians orders (see OAR 333-100-0020(5)(6) and 333-106-0035(3)).

(7) "Mammography" means radiography of the breast.

(8) "Mammography equipment evaluation" means an onsite assessment of a mammography unit(s) or image processor performance by a medical physicist for the purpose of making a preliminary determination as to whether the equipment meets all of the applicable state and federal standards.

(9) "Mammography unit(s)" means an assemblage of components for the production of X-rays for use during mammography, including, at a minimum; An X-ray generator, an X-ray control, a tube housing assembly, a beam limiting device, and the supporting structures for these components.

(10) "Medical Physicist" means a person trained in evaluating the performance of mammography equipment and quality assurance programs and meets the qualifications of OAR 333-106-0750(3).

(11) "MQSA" means the Mammography Quality Standards Act of 1992.

(12) "Phantom" means a test object used to simulate radiographic characteristics of compressed breast tissue and containing components that radiographically model aspects of breast disease and cancer. (The "FDA accepted phantom" meets this requirement.)

(13) "Quality Assurance" is a comprehensive concept that comprises all of the management practices instituted by the registrant or the registrant's representative/s to ensure that:

(a) Every imaging procedure is necessary and appropriate to the clinical problem at hand;

(b) The images generated contain information critical to the solution of that problem;

(c) The recorded information is correctly interpreted and made available in a timely fashion to the patient's physician;

(d) The examination results in the lowest possible radiation exposure, cost, and inconvenience to the patient, consistent with subsection (13)(b) of this rule.

(14) "Quality Assurance Program" includes such facets as efficacy studies, continuing education, quality control, preventive maintenance, and calibration of equipment.

(15) "Quality Control" means a series of distinct technical procedures that ensure the production of a satisfactory product,such as a high quality screening or diagnostic image.

(16) "Quality Control Technologist" means an individual who is qualified under MQSA, and who is responsible for those quality assurance responsibilities not assigned to the Lead Interpreting Physician or to the Medical Physicist.

(17) "Resting period" means the period of time necessary to bleed out air that has been trapped between the radiographic film and intensifying screen during the loading process in the darkroom. This period of time is usually measured in minutes and determined by the individual manufacturer of the intensifying screen/mammography cassette combination.

(18) "Standard Breast" means a 4.2 cm thick compressed breast, consisting of 50 percent adipose, and 50 percent glandular tissue.

(19) "Survey" means an onsite physics consultation and evaluation of a registrant's mammography equipment, and quality assurance program performed by a medical physicist.

333-106-0710
Equipment Standards

Only x-ray systems meeting the design and performance standards required under Mammography Quality Standards Act (MQSA) shall be used, unless otherwise specified in the following rules.

(1) System design. The x-ray system shall be specifically designed for mammography.

(2) Image receptor.

(a) Image receptor systems shall be specifically designed, or appropriate for mammography.

(b) Systems using screen-film image receptors shall provide, at a minimum, image receptor sizes of 18 X 24 and 24 X 30 cm.

(c) An adequate number of image receptors shall be provided to accommodate the resting period recommended by the manufacturer.

(3) Target/filter. The x-ray system shall have the capability of providing kVp/target/filter combinations compatible with image receptor systems meeting the following requirements;

(a) When more than one focal spot is provided, the system shall indicate, prior to exposure, which focal spot is selected.

(b) When more than one target is provided, the system shall indicate, prior to exposure, the preselected target material.

(c) When the target material and/or focal spot is selected by a system algorithm that is based on the exposure or on a test exposure, the system shall display, after exposure, the target material and/or focal spot actually used during the exposure.

(4) Beam quality: When used with screen-film image receptors, and the contribution to filtration made by the compression device is included, the useful beam shall have a minimum half-value layer (HVL). The minimum HVL, for mammography equipment designed to operate below 50 kVp, is determined by dividing the actual kVp by 100, and is expressed in mm Al equivalent.

(5) Resolution: Until October 28, 2002, focal spot condition shall be evaluated either by determining system resolution or by measuring focal spot dimensions. After October 28, 2002, facilities shall evaluate focal spot condition only by determining system resolution.

(a) Each x-ray system used for mammography, in combination with the mammography screen-film combination used, shall provide a minimum resolution of 11 Cycles/mm (line-pairs/mm) when a high contrast resolution bar test pattern is oriented with the bars perpendicular to the anode-cathode axis, and a minimum resolution of 13 line-pairs/mm when the bars are parallel to that axis.

(b) The bar pattern shall be placed 4.5 cm above the image receptor support surface, centered with respect to the chest wall edge of the image receptor, and with the edge of the pattern within 1 cm of the chest wall edge of the image receptor.

(6) Compression.

(a) All mammography systems shall incorporate a compression device capable of compressing the breast with a force of at least 25 pounds.

(b) Effective October 28, 2002, the maximum compression force for the initial power drive shall be between 25 pounds and 45 pounds.

(c) All mammography systems shall be equipped with different sized compression paddles that match the sizes of all full field image receptors provided for the system. The compression paddle shall:

(A) Be flat and parallel to the image receptor support and shall not deflect from parallel by more than 1.0 cm at any point on the surface of the compression paddle when compression is applied. If the compression paddle is not designed to be flat and parallel to the image receptor support during compression, it shall meet the manufacturer's design specifications and maintenance requirements;

(B) Have a chest wall edge that is straight and parallel to the edge of the image receptor support;

(C) Clearly indicate the size and available positions of the detector at the x-ray input surface of the compression paddle;

(D) Not extend beyond the chest wall edge of the image receptor support by more than 1 percent of the SID when tested with the compression paddle placed above the support surface at a distance equivalent to a standard breast thickness;

(E) Shall not be visible, at its vertical edge, on the image.

(d) When equipped with a compression paddle height digital display, the display shall accurately represent the actual height of the compression paddle to within +- 0.5 cms. Testing shall be performed according to manufacturer's specifications.

(7) System capabilities. A mammographic x-ray system utilizing screen-film image receptors shall:

(a) Be equipped with moving grids matched to all image receptor sizes provided.

(b) Provide an AEC mode that is operable in all combinations of equipment configuration provided, e.g., grid, non-grid, magnification; and various target-filter combinations.

(A) The automatic exposure control shall be capable of maintaining film optical density (OD) within +0.30 of the mean optical density when thicknesses of a homogeneous material are varied over a range of 2 to 6 cms and the kVp is varied appropriately for such thicknesses over the kVp range used clinically. If this requirement cannot be met, a technique chart shall be developed showing appropriate techniques (kVp and density control settings) for different thicknesses and compositions that must be used so that optical densities within + 0.30 of the average under photo- timed conditions can be produced.

(B) After October 28, 2002, the AEC shall be capable of maintaining film optical density (OD) to within + 0.15 of the mean optical density when thicknesses of a homogeneous material are varied over a range of 2 to 6 cm and the kVp is varied appropriately for such thicknesses over the kVp range used clinically.

(8) Breast entrance kerma and AEC reproducibility. The coefficient of variation for both air kerma and mAs shall not exceed 0.05.

(9) Collimation.

(a) All mammography systems shall have beam-limiting devices that allow the entire chest wall edge of the x-ray field to extend to the chest wall edge of the image receptor and provide means to assure that the X-ray field does not extend beyond any edge of the image receptor by more than 2 percent of the SID. Under no circumstances, shall the x-ray field extend beyond the non-chest wall edges of the image receptor support.

(b) The total misalignment of the edges of the visually defined light field with the respective edges of the X-ray field either along the length or width of the visually defined field shall not exceed 2 percent of the SID.

(10) Kilovoltage peak (kVp) accuracy and reproducibility;

(a) The kVp, shall be accurate within + 5 percent of the indicated or selected kVp at the lowest clinical kVp that can be measured by a kVp test device, and the most commonly used, and highest available clinical kVp; and

(b) At the most commonly used clinical settings of kVp, the coefficient of variation of reproducibility of the kVp shall be equal to or less than 0.02.

(11) Dose. The average glandular dose delivered during a single cranio-caudal view of an FDA accepted phantom simulating a standard breast, shall not exceed 250 millirad (mRad) (2.5 milliGy). The dose shall be determined with technique factors and conditions used, by the registrant, clinically for a standard breast. The testing protocol used shall be the same as used by MQSA.

(a) If the average glandular dose exceeds 250 mRad (2.5 milliGray) but is no greater than 275 mRad (2.75 milliGray), patient mammography may be continued until the cause of the problem is determined and corrected. Correction must be completed within 30 working days of when the registrant became aware of the problem. If correction has not been completed within 30 working days, and the registrant has not requested an extension in writing from the Authority, patient mammography must cease until correction of the dose problem has occurred.

(b) If the average glandular dose exceeds 275 mRad (2.5 milliGray), patient mammography must cease until the cause of the dose problem is determined and corrected.

333-106-0720
Quality Assurance Program

(1) The registrant shall have a written, on-going equipment quality assurance program specific to mammographic imaging, covering all components of the diagnostic X-ray imaging system. The quality assurance program shall include the testing required in section (5) of this rule, as well as the evaluation of the test results and corrective actions necessary to ensure consistently high-quality images with minimum patient exposure. Responsibilities under this requirement are as follows:

(a) The registrant shall identify in policy/procedure, by name, a Lead Interpreting Physician meeting the requirements of OAR 333-106-0750(2), whose responsibilities at a minimum must include:

(A) Ensuring that the registrant's quality assurance program meets all associated rules and regulations;

(B) Ensuring that an effective quality assurance program exists;

(C) Providing frequent feedback to mammography technologists regarding film quality and quality control procedures;

(D) Reviewing the Quality Control Technologist's test data at least every three months, or more if consistency has not been shown or problems are evident;

(E) Reviewing the Medical Physicist's annual survey report or equipment evaluation results.

(b) The registrant shall identify in policy/procedure, by name, and have the services of, a Medical Physicist who meets the requirements of OAR 333-106-0750(3). The Medical Physicist shall assist in overseeing the equipment quality assurance practices of the registrant. At a minimum, the Medical Physicist shall be responsible for the annual surveys, mammography equipment evaluations, and associated reports meeting all the requirements of MQSA.

(c) The registrant shall identify in policy/procedure, by name, a single qualified Quality Control Technologist meeting the requirements of OAR 333-106-0750(1), who shall be responsible for:

(A) Equipment performance monitoring functions;

(B) Analyzing the monitoring results to determine if there are problems requiring correction;

(C) Carrying out or arranging for the necessary corrective actions when results of quality control tests including those specified in section (5) of this rule, indicate the need; and

(D) The Quality Control Technologist may be assigned other tasks associated with the quality assurance program that are not assigned to the Lead Interpreting Physician or Medical Physicist. These additional tasks must be documented in written policy/procedure.

(2) Annual Survey. At intervals not to exceed 12 to 14 months, the registrant shall have a Medical Physicist meeting the requirements of OAR 333-106-0750(3) conduct a survey to evaluate the mammography equipment, and the effectiveness of the quality assurance program required in section (1) of this rule. Records of annual surveys shall be maintained for a minimum of two years, and shall be available on-site for Authority review.

(3) Annual survey/or equipment evaluation corrective actions. Corrective action shall be completed within 30 working days of when the registrant received written or verbal notice of recommendations or failures on their annual survey/or equipment evaluation report, unless otherwise noted in these rules or a written request for extension has been submitted to and approved by the Authority.

(a) Correction of equipment related failures or recommendations shall be demonstrated by a repeat test using the same test methodology and documentation, or a test accepted as the equivalent by the Authority, that was used to initially identify the problem.

(b) When the results of a quality control test/s fail to meet applicable action limits defined in these rules, the appropriate action regarding the suspension or continuation of mammography as defined in these rules or in MQSA, shall be taken.

(4) Quality assurance records. The registrant shall ensure that:

(a) Records concerning employee qualifications to meet assigned quality assurance tasks, mammography technique and procedures, policies, previous inspection findings, and radiation protection are maintained until inspected by the Authority.

(b) Quality control monitoring data and records, problems detected by the analysis of that data, corrective actions, and records of the Lead Interpreting Physician's periodic reviews of the Quality Control Technologist's monitoring data taken must be maintained for a minimum of two years.

(5) Equipment quality control tests frequency. The registrant shall ensure that the following quality control tests are performed when applicable equipment or components are initially installed or replaced and performed thereafter at least as often as the frequency specified in Table 7. The referenced table is available on the Program's website: www.healthoregon.org/rps.

(6) Testing methods and action limits for quality control tests shall meet the most current requirements of MQSA, in addition to the following:

(a) Screen/film contact. Screen film contact tests shall be performed on all screens used clinically, using a 40-mesh test tool and four cm thick sheet of acrylic. Screens demonstrating one or more areas of poor contact that are greater than one cm in diameter, that are not eliminated by screen cleaning, and remain in the same location during subsequent tests, shall not be used for mammography. Screen/film contact shall be such that any areas of poor contact, regardless of size, shall not detract from image quality.

(b) Processor performance. A processor performance test shall be performed by sensitometric means and evaluated daily, after the solution temperature in the processor has reached proper temperature, and just prior to processing any clinical mammograms. The test shall be an assessment of the base plus fog, mid-density, density difference, and developer temperature.

(A) Sensitometers and densitometers used to evaluate processor performance shall be calibrated per the manufacturer's recommended calibration procedures for such devices. A record of the calibration shall be maintained until inspected by the Authority. Densitometers shall be checked against the instrument control strip at least monthly.

(B) The mid-density and density difference action limits must be within + 0.15 of the control operating level.

(C) The base plus fog (B+F) action limit must be within + 0.03 of the control operating level.

(D) If the mid-density or the density difference fall outside of the + 0.10 control limit but within the + 0.15 control limit for a period of three days (a trend), steps must be taken to determine the cause and correct the problem;

(E) If the mid-density or the density difference falls outside of the + 0.15 control limit, mammograms must not be processed through the processor until the cause of the problem is determined, corrected, and a repeat test is done demonstrating that the mid-density aor density difference are within the + 0.15 control limit;

(F) Processor quality control graphs must be in the format of the registrant's accrediting body or equivalent, and indicate test date/s, mid-density and density difference action limits, base plus fog action limit, film brand, type and emulsion number in use, the date when chemistry changes occurred and corrective action(s) taken when limits are exceeded;

(G) Cross over records and calculations must be maintained until reviewed by the Authority during the annual inspection. New mid-density or density difference operating levels must be charted on a new graph page.

(H) Re-establishment of operating levels must be done in accordance with the accrediting body's protocol regarding the appropriateness of this procedure or at the specific direction of the facility's medical physicist.

(I) While re-establishing operating levels (five day average), the facility must chart each day's results against its old operating control levels. At the end of the five days, a new chart must be established, indicating the new calculated operating limits. During the five day average, the facility cannot be cited for having exceeded the old processor operating levels; and

(J) When collecting data for the five day average, a phantom image test shall be conducted each day to verify the adequacy of

image quality. Should the phantom image test exceed either the 0.20 background optical density limit or the + 0.05 density difference limit, mammography must be suspended until the cause of the problem is identified and corrected, and a repeat phantom image test is shown to be within limits.

(7) Primary/secondary barrier transmission evaluation must be conducted upon initial X-ray system installation and significant modification of the system or the facility.

(8) Image quality. The mammography system must be capable of producing an image of the phantom demonstrating the following:

(a) A minimum score of 4 fibers, 3 speck groups, and 3 masses (or the most current minimum score established by the accrediting body and accepted by the FDA);

(b) Background density action limits within ± 0.20 of the control level;

(c) Density difference action limits within ± 0.05 of the control level;

(d) Milliampere seconds (mAs) within ± 15 percent of the control level;

(e) Demonstrating a level of contrast sufficient enough to clearly help define fibril, speck, and mass edges;

(f) Without objectionable levels of image noise or quantum mottle that obscure the visualization of fibrils, specks, or masses;

(g) Demonstrating reasonably sharp fibril, and mass margins;

(h) With a minimum optical density (measured at the center of the phantom) of 1.20;

(i) Phantom image test records must be in the most current format of the registrant's accrediting body or the equivalent, and indicate the exposure mode, kVp, and photo-cell used for the test as well as remarks indicating the corrective action that was taken when limits were exceeded;

(j) When phantom image results do not meet the requirements defined in subsections (8)(a), (b), (c), (d), (e), (f), (g), or (h) of this rule, corrective action must occur, and a repeat phantom image test must be performed demonstrating compliance, before further mammography examinations are performed using the X-ray machine.

(11) Darkroom fog. Darkroom fog levels shall not exceed 0.05 in optical density difference when sensitized film is exposed to darkroom conditions with safelight on for two minutes. Film shall be sensitized by exposing it to sufficient light from an appropriate intensifying screen so that after processing, an optical density of at least 1.20 is achieved.

(a) If the darkroom fog optical density difference exceeds 0.05 but is less than 0.10, mammography may be continued until the problem is corrected.

(b) If the darkroom fog optical density difference exceeds 0.10, mammography must be curtailed until the problem is corrected and the density difference no longer exceeds 0.05.

(12) Repeat rate. Corrective actions shall be recorded and the results of these corrective actions shall be assessed if the reject rate exceeds five percent or changes by two percent from the previously measured rate. The reject rate shall be based on repeated clinical images.

[ED. NOTE: Tables referenced are available from the agency.]

333-106-0730
Additional Requirements

(1) Masks. Masks shall be provided on the view boxes to block extraneous light from the viewer's eye when the illuminated surface of the view box is larger than the area of clinical interest.

(2) Film processors utilized for mammography shall be:

(a) Used with X-ray film for mammography that has been designated by the film manufacturer as appropriate for mammography.

(b) Use chemical solutions that are capable of developing the films used by the facility in a manner equivalent to the minimum requirements specified by the film manufacturer.

(c) Be adjusted to and operated at the specifications recommended by the mammographic film manufacturer, or at other settings such that the sensitometric performance is at least equivalent.

(3) Instruments and devices. The following instruments and devices shall be available and properly maintained;

(a) FDA accepted image quality phantom;

(b) 21 step sensitometer;

(c) Densitometer.

(4) Image retention. Clinical images shall be retained for a minimum of five years or not less than 10 years if no additional mammograms of the patient are performed.

(5) Mobile Mammography. In addition to meeting the requirements of this rule as well as OAR 333-106-0710, 333-106-0720, 333-106-0730, and 333-106-0750, registrants shall ensure that for a mammography system that is used at more than one location:

(a) The film processor is operated in accordance with the requirements of OAR 333-106-0720 of these rules, and is located where the mammography examinations are performed (batch processing is prohibited).

(b) The following tests are conducted, evaluated and documented after every move and before any mammography examinations are conducted, in order to verify that the unit's performance continues to meet quality requirements:

(A) Phantom image;

(B) The measured radiation output or the data from the post exposure mAs display does not deviate by more than 10 percent of the established operating level.

(6) Technique charts. Mammography technique charts shall posted in the vicinity of the mammography system's X-ray control. The technique chart shall indicate;

(a) Technique factors for 3, 3-5, 5-7, and > 7 cm compressed breast thicknesses for fatty, 50 percent fatty-50 percent dense, and dense breast tissue;

(b) The target/filter combination to be used;

(c) The kVp to be selected for the patient sizes and breast tissue compositions indicated in subsection (6)(a) of this rule, or if an auto-kVp mode is used, indicate the post kVp that is selected;

(d) The exposure mode to be used (i.e. auto-kVp, manual, etc.);

(e) The manual technique factors to be used for small, medium, and large sized breast tissue specimens, and Implanted breasts;

(f) The film/screen combination to be used;

(g) The date that the technique chart was last reviewed for accuracy and the name of the reviewer.

333-106-0735
Breast Density Notification

(1) As used in this rule:

(a) "Breast Density" refers to the relative amount of different tissues present in the breast. A dense breast has less fat than glandular and connective tissue. Mammogram films of breasts with higher density are harder to read and interpret than those of less dense breasts. (Source: National Cancer Institute).

(b) "Facility" has the meaning given that term in 42 U.S.C. 263b and includes but is not limited to a hospital, outpatient department, clinic, radiology practice, or mobile unit, an office of a physician, or other facility that conducts breast cancer screening or diagnosis through mammography activities. "Facility" does not include a facility of the Department of Veterans Affairs.

(c) "Mammography activities" means the operation of equipment to produce a mammogram, the processing of the film, the initial interpretation of the mammogram and the viewing conditions for that interpretation.

(2) In all cases where a mammogram shows a patient has extreme or heterogeneous breast density, the facility shall incorporate the following notification within the lay summary mammography report provided to the patient:

DENSE BREAST TISSUE NOTIFICATION

Your mammogram shows that your breast tissue is dense. Dense breast tissue is common and is not abnormal. However, dense breast tissue can make it harder to evaluate the results of your mammogram and may also be associated with an increased risk of breast cancer. This information about the results of your mammogram is given to you to raise your awareness and to promote discussion with your health care provider. Together, you can decide if you may benefit from further screening. A report of your results was sent to your health care provider.

(3) The Dense Breast Tissue Notification statement and guidelines shall be included in the facility's policy on how they communicate mammography results to the patient and their health care providers.

333-106-0750
Mammography Personnel Qualifications

(1) Operator qualifications. In order to use any mammography X-ray machine the operator of the mammography X-ray unit must have the following qualifications:

(a) Have a current license issued by the Oregon Board of Medical Imaging; and

(b) Have prior to the effective date of these rules qualified as a radiologic technologist under the MQSA interim rules or completed 40 contact hours of documented training specific to mammography under the supervision of a qualified instructor. The hours of documented training shall include, but not be limited to:

(A) Training in breast anatomy and physiology, positioning and compression, quality assurance/quality control techniques, imaging patients with breast implants;

(B) The performance of 25 examinations under the personal supervision of an individual qualified under this section; and

(C) At least eight hours of training in each mammography modality to be used by the technologist in performing mammography exams; and

(D) Be currently registered and in good standing with the American Registry of Radiologic Technologist (ARRT); and

(E) Be certified in mammography by the ARRT or the equivalent; or

(F) Provide documented evidence that an ARRT mammography certification test is scheduled. Technologists meeting the requirements of subsection (1)(a) and paragraphs (1)(b)(A), (B), (C), and (D) of this rule may work under the supervision (supervision means that a fully qualified technologist is on-site and readily available to answer questions or assist) of a technologist, meeting all of the requirements of this rule, for up to one year while waiting to take the certification test.

(2) Interpreting Physician qualifications. All physicians interpreting mammograms shall meet MQSA qualifications and hold a current license to practice medicine in the State of Oregon.

(3) Medical Physicist qualifications. All Medical Physicists conducting surveys and equipment evaluations of mammography facilities and providing oversight of their quality assurance programs shall;

(a) Meet MQSA requirements; and

(b) Be currently licensed as a vendor by the Authority.

DIVISION 108

RADIATION SAFETY REQUIREMENTS FOR ANALYTICAL X-RAY EQUIPMENT

333-108-0001
Purpose and Scope

This Division provides special requirements for analytical X-ray equipment. The requirements of this Division are in addition to, and not in substitution for, applicable requirements in other Divisions of these rules.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-108-0005
Definitions

As used in this Division, the following definitions apply:

(1) "Analytical X-ray equipment" means equipment used for X-ray diffraction or fluorescence analysis.

(2) "Analytical X-ray system" means a group of components utilizing X-rays or gamma-rays to determine the elemental composition or to examine the microstructure of materials.

(3) "Fail-safe characteristics" means a design features which cause beam port shutters to close, or otherwise prevent emergence of the primary beam, upon the failure of a safety or warning device.

(4) "Local components" mean part of an analytical X-ray system and include areas that are struck by X-rays such as radiation source housings, port and shutter assemblies, collimators, sample holders, cameras, goniometers, detectors and shielding, but do not include power supplies, transformers, amplifiers, readout devices and control panels.

(5) "Normal operating procedures" mean step-by-step instructions necessary to accomplish the analysis. These procedures shall include sample insertion and manipulation, equipment alignment, routine maintenance by the registrant or licensee and data recording procedures which are related to radiation safety.

(6) "Open-beam configuration" means an analytical X-ray system in which an individual could accidentally place some part of the body in the primary beam path during normal operation.

(7) "Primary beam" means radiation which passes through an aperture of the source housing by a direct path from the X-ray tube or a radioactive source located in the radiation source housing.

Stat. Auth.: ORS 453.605 - 453.807

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

Equipment Requirements

333-108-0010
Safety Device

A device which prevents the entry of any portion of an individual's body into the primary X-ray beam path or which causes the beam to be shut off upon entry into its path shall be provided on all open-beam configurations. A registrant or licensee may apply to the Authority for an exemption from the requirement of a safety device. Such application shall include:

(1) A description of the various safety devices that have been evaluated;

(2) The reason each of these devices cannot be used; and

(3) A description of the alternative methods that will be employed to minimize the possibility of an accidental exposure, including procedures to assure that operators and others in the area will be informed of the absence of safety devices.

Stat. Auth.: ORS 453.605 - 453.775

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-108-0015
Warning Devices

(1) Open-beam configurations shall be provided with a readily discernible indication of:

(a) X-ray tube "on-off" status located near the radiation source housing, if the primary beam is controlled in this manner; and/or

(b) Shutter "open-closed" status located near each port on the radiation source housing, if the primary beam is controlled in this manner.

(2) Warning devices shall be labeled so that their purpose is easily identified. On equipment installed after January 1, 1978, warning devices shall have fail-safe characteristics.

Stat. Auth.: ORS 453.605 - 453.775

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-108-0020
Ports

Unused ports on radiation source housings shall be secured in the closed position in a manner which will prevent casual opening.

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-108-0025
Labeling

All analytical X-ray equipment shall be labeled with a readily discernible sign or signs bearing the radiation symbol and the words:

(1) **CAUTION — HIGH INTENSITY X-RAY BEAM**, or words having a similar intent, on the X-ray source housing; and

(2) **CAUTION RADIATION — THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED**, or words having a similar intent, near any switch that energizes an X-ray tube if the radiation source is an X-ray tube; or

(3) **CAUTION — RADIOACTIVE MATERIAL**, or words having a similar intent, on the source housing in accordance with OAR 333-120-0400 if the radiation source is a radionuclide.

333-108-0030
Shutters

On open-beam configurations installed after January 1, 1978, each port on the radiation source housing shall be equipped with a shutter that cannot be opened unless a collimator or a coupling has been connected to the port.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-108-0035
Warning Lights

(1) An easily visible warning light labeled with the words **X-RAY ON**, or words having a similar intent, shall be located:

(a) Near any switch that energizes an X-ray tube and shall be illuminated only when the tube is energized; or

(b) In the case of a radioactive source, near any switch that opens a housing shutter and shall be illuminated only when the shutter is open.

(2) On equipment installed after January 1, 1978, warning lights shall have fail-safe characteristics.

333-108-0040
Radiation Source Housing

Each radiation source housing shall be subject to the following requirements:

(1) Each X-ray tube housing shall be equipped with an interlock that shuts off the tube if it is removed from the radiation source housing or if the housing is disassembled.

(2) Each radioactive source housing or port cover or each X-ray tube housing shall be so constructed that, with all shutters closed, the radiation measured at a distance of five centi-meters from its surface is not capable of producing a dose in excess of 2.5 millirem (0.025 mSv) in one hour. For systems utilizing X-ray tubes, this limit shall be met at any specified tube rating.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-108-0045
Generator Cabinet

Each X-ray generator shall be supplied with a protective cabinet which limits leakage radiation measured at a distance of five centimeters from its surface such that it is not capable of producing a dose in excess of 0.25 millirem (2.5 μSv) in one hour.

Stat. Auth.: ORS 453.605 - 453.775

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

Area Requirements

333-108-0101
Radiation Levels

The local components of an analytical X-ray system shall be located and arranged and shall include sufficient shielding or access control such that no radiation levels exist in any area surrounding the local component group which could result in a dose to an individual present therein in excess of the dose limits given in OAR 333-120-0180. For systems utilizing X-ray tubes, these levels shall be met at any specified tube rating.

Stat. Auth.: ORS 453.605 - 453.775

333-108-0105
Surveys

(1) Radiation surveys, as required by OAR 333-120-0200, of all analytical X-ray systems sufficient to show compliance with OAR 333-108-0101 shall be performed:

(a) Upon installation of the equipment and at least once every 12 months thereafter;

(b) Following any change in the initial arrangement, number or type of local components in the system;

(c) Following any maintenance requiring the disassembly or removal of a local component in the system;

(d) During the performance of maintenance and alignment procedures if the procedures require the presence of a primary X-ray beam when any local component in the system is disassembled or removed;

(e) Any time a visual inspection of the local components in the system reveals an abnormal condition; and

(f) Whenever personnel monitoring devices show a significant increase over the previous monitoring period or the readings are approaching the limits specified in OAR 333-120-0100.

(2) Radiation survey measurements shall not be required if a registrant can demonstrate compliance with OAR 333-108-0101 to the satisfaction of the Authority.

Stat. Auth.: ORS 453.605 - 453.775

333-108-0110
Posting

Each area or room containing analytical X-ray equipment shall be conspicuously posted with a sign or signs bearing the radiation symbol and the words **CAUTION — X-RAY EQUIPMENT**, or words having a similar intent in accordance with OAR 333-120-0400.

Stat. Auth.: ORS 453.605 - 453.775

333-108-0115
Operating Requirements

(1) Procedures. Normal operating procedures shall be written and available to all analytical X-ray equipment workers. No individual shall be permitted to operate analytical X-ray equipment in any manner other than that specified in the procedures unless such individual has obtained written approval of the radiation safety officer.

(2) Bypassing. No individual shall bypass a safety device or interlock unless such individual has obtained the approval of the radiation safety officer. Such approval shall be for a specified period of time. When a safety device or interlock has been bypassed, a readily discernible sign bearing the words, **SAFETY DEVICE NOT WORKING**, or words having a similar intent, shall be placed on the radiation source housing.

(3) Repair or Modification of X-ray Tube Systems. Except as specified in OAR 333-108-0115(2), no operation involving removal of covers, shielding materials or tube housings or modifications to shutters, collimators or beam stops shall be performed without ascertaining that the tube is off and will remain off until safe conditions have been restored. The main switch, rather than interlocks, shall be used for routine shutdown in preparation for repairs.

(4) Radioactive Source Replacement, Testing or Repair. Radioactive source housings shall be opened for source replacement, leak testing or other maintenance or repair procedures only by individual authorized to specifically conduct such procedures under a license issued by the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State.

333-108-0201
Personnel Requirements

(1) Instruction. No individual shall be permitted to operate or maintain analytical X-ray equipment unless such individual has received instruction in and demonstrated competence as to:

(a) Identification of radiation hazards associated with the use of the equipment;

(b) Significance of the various radiation warning, safety devices and interlocks incorporated into the equipment, or the reasons they have not been installed on certain pieces of equipment and the extra precautions required in such cases;

(c) Proper operating procedures for the equipment;

(d) Recognition of symptoms of an acute localized exposure; and

(e) Proper procedures for reporting an actual or suspected exposure.

(2) Each licensee or registrant shall maintain, for inspection by the Authority, records of training which demonstrate that the requirements of this rule have been met

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807

333-108-0205
Personnel Monitoring

(1) Finger or wrist dosimetric devices shall be provided to and shall be used by:

(a) Analytical X-ray equipment workers using systems having an open-beam configuration and not equipped with a safety device; and

(b) Personnel maintaining analytical X-ray equipment if the maintenance procedures require the presence of a primary X-ray beam when any local component in the analytical X-ray system is disassembled or removed.

(2) Reported dose values shall not be used for the purpose of determining compliance with OAR 333-120-0100 of these rules unless evaluated by a qualified expert.

DIVISION 109

RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL AND MANUFACTURING USE OF PARTICLE ACCELERATORS

333-109-0001
Purpose and Scope

(1) This division establishes procedures for the registration and the use of particle accelerators.

(2) In addition to the requirements of this division, all registrants are subject to the requirements of divisions 100, 101, 120 and 111 of these rules. Registrants engaged in industrial radiographic operations are also subject to the requirements of divisions 105 and 108 of these rules, and registrants engaged in the healing arts are also subject to the requirements of division 106 of these rules. Registrants whose operations result in the production of radioactive material are also subject to the requirements of division 102 of these rules.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0002
Registration Requirements

No person may receive, possess, use, transfer, own, or acquire a particle accelerator unless they apply for, and are granted, a registration issued pursuant to division 333-101.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-109-0003
General Requirements for the Issuance of a Registration for Particle Accelerators

In addition to the requirements of division 101 of these rules, a registration application for use of a particle accelerator will be approved only if the Authority determines that:

(1) The applicant is qualified by reason of training and experience to use the accelerator in question for the purpose requested in accordance with this division and divisions 120 and 111 of these rules in such a manner as to minimize danger to public health and safety or property;

(2) The applicant's equipment, facilities, operating and emergency procedures are adequate to protect health and minimize danger to public health and safety or property;

(3) The issuance of the registration will not be harmful to the health and safety of the public;

(4) The applicant has appointed a qualified radiation safety officer;

(5) The applicant and/or the applicant's staff has substantial experience in the use of particle accelerators and training sufficient for application to its intended uses;

(6) The applicant has established a radiation safety committee to approve, in advance, proposals for uses of particle accelerators, whenever deemed necessary by the Authority;

(7) The applicant has an adequate training program for operators of particle accelerators;

(8) A shielding design, by a qualified expert licensed to do shielding design in Oregon, must be submitted with the registration application;

(9) For all new accelerators, a record indicating that a radiation safety survey has been conducted prior to the use of the accelerator, must be sent to the Authority as soon as practical after the registration application is submitted; and

(10) Copies of the facility's operating and emergency procedures must be submitted with the registration application.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0005
Equipment

(1) A label bearing essentially the words CAUTION — RADIATION — THIS MACHINE PRODUCES RADIATION WHEN ENERGIZED must be placed near any switch which energizes any portion of the machine. All labels must be the conventional colors (magenta or purple on yellow background) and bear the conventional radiation symbol.

(2) Any apparatus used in beam alignment procedures must be designed in such a way that excessive radiation will not strike the operator.

(3) Any switch or device which may cause the radiation machine to produce radiation when actuated must be located on a control panel or console, and must cause a warning light immediately adjacent to such switch or device to light; this light must remain lit when, and only when, the associated control circuit is energized.

(4) A lock must be provided on the control panel or console that prevents unauthorized operation of the accelerator.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0010
Administrative Responsibilities

(1) A person at each facility must be designated to be responsible for maintaining radiation safety. This person, designated the radiation safety officer, must be responsible for the following:

(a) Establishing and maintaining operational procedures so that the radiation exposure of each worker is kept as far below the maximum permissible dose as is practical;

(b) Instructing all personnel who work with or near radiation producing machines, in safety practices;

(c) Maintaining a system of personnel monitoring;

(d) Arranging for establishment of radiation control areas, including placement of appropriate radiation warning signs and/or devices;

(e) Providing for radiation safety inspection of radiation producing machines, including operation of all safety devices on a routine basis;

(f) Reviewing modifications to apparatus, shielding and safety interlocks;

(g) Investigating and reporting to proper authorities any case of excessive exposure to personnel and taking remedial action;

(h) Being familiar with all applicable rules for the control of ionizing radiation; and

(i) Terminating operations at the facility because of radiation safety considerations.

(2) No individual must be permitted to act as an operator of an accelerator until such person has:

(a) Received an acceptable amount of training in radiation safety as approved by the radiation safety officer;

(b) Has received copies of and instruction in this division, the applicable requirements of divisions 120 and 111 of these rules and:

(A) Pertinent registration conditions; and

(B) Operating and emergency procedures; and

(C) Must have demonstrated understanding of documents and information required in this rule;

(c) Demonstrated competence to in the use of the accelerator, related equipment and radiation survey instruments which will be employed; and

(d) Been approved by the radiation safety officer. Each operator must be responsible for:

(A) Keeping radiation exposure to all individuals as low as is practical;

(B) Being familiar with safety procedures as they apply to each machine;

(C) Wearing of personnel monitoring devices, if applicable; and

(D) Notifying the radiation safety officer of known or suspected excessive radiation exposures to any individual.

(3) The radiation safety committee or the radiation safety officer must have the authority to terminate the operations at a particle accelerator facility if such action is deemed necessary to minimize danger to public health and safety or property.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0015
Operating Procedures

(1) Particle accelerators, when not in operation must be secured to prevent unauthorized use.

(2) Written operating procedures pertaining to radiation safety must be established for each accelerator facility by the radiation safety officer.

(3) Written emergency procedures pertaining to radiation safety must be established by the radiation safety officer. These must list the telephone number(s) of the radiation safety officer and must include the following actions to be taken in case of a known, or suspected, accident involving radiation exposures:

(a) Notifying the radiation safety officer; and

(b) Arranging for medical examination.

(4) Personnel must not expose any part of their body to the radiation beam.

(5) Accelerator must not be left unattended while energized unless access to radiation areas or high radiation areas is physically prevented.

(6) All safety and warning devices, including interlocks, must be checked for proper operation at intervals not to exceed three months. Results of such tests must be maintained at the accelerator facility for inspection by the Authority.

(7) Records of personnel monitoring results and safety device tests must be maintained for inspection by the Authority.

(8) An appropriate radiation monitor must be used within an accelerator target room and other high radiation areas. This may be:

(a) An area monitor with an easily observable indicator that warns of radiation levels above a predetermined limit in accessible areas; and/or

(b) A personal radiation monitor of the “chirpie” type carried into the room; and/or

(c) A portable survey instrument carried into the room.

(9) Personal radiation dosimeters that measure the expected radiations and are of sufficient range to be useful under normal and accident conditions shall be worn by all persons designated by the radiation safety officer.

(10) Records of all radiation protection surveys, inspections and maintenance performed on the accelerator and related components must be kept current and on file at each accelerator facility, and maintained for inspection by the Authority.

(11) The safety interlock system must not be used to turn off the accelerator beam except in an emergency.

(12) Electrical circuit diagrams of the accelerator and the associated safety interlock systems must be kept current and maintained for inspection by the Authority and must be available to the operator at each accelerator facility.

(13) If, for any reason, it is necessary to intentionally bypass a safety interlock or interlocks, such action must be:

(a) Authorized by the radiation safety committee or radiation safety officer;

(b) Recorded in a permanent log and a notice posted at the accelerator control console; and

(c) Terminated as soon as possible.

(14) A copy of the current operating and the emergency procedures must be maintained at the accelerator control panel.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

Radiation Safety Requirements for the Use of Particle Accelerators

333-109-0025
Shielding and Safety Design Requirements

(1) A qualified expert, acceptable to the Authority, must be consulted in the design of a particle accelerator installation and called upon to perform a radiation survey when the accelerator is first capable of producing radiation.

(2) Each particle accelerator installation must be provided with such primary and/or secondary barriers as are necessary to assure compliance with OAR 333-120-0100 and 333-109-0030.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0030
Particle Accelerator Controls and Interlock Systems

(1) Instrumentation, readouts and controls on the particle accelerator control console must be clearly identified and easily discernible.

(2) Each entrance into a target room or other high radiation area must be provided with a safety interlock that shuts down the machine under conditions of barrier penetration.

(3) Each safety interlock must be on a circuit which must allow it to operate independently of all other safety interlocks.

(4) All safety interlocks must be designed so that any defect or component failure in the safety interlock system prevents operation of the accelerator.

(5) When a safety interlock system has been tripped, it must only be possible to resume operation of the accelerator by manually resetting controls at the position where the safety interlock has been tripped and, lastly, at the main control console.

(6) A scram button or other emergency power cutoff switch must be located and easily identifiable in all high radiation areas. Such a cutoff switch must include a manual reset so that the accelerator cannot be restarted from the accelerator control console without resetting the cutoff switch.

(7) All safety interlocks must not be dependent upon the operation of a single circuit; i.e., they must be of redundant or fail-safe design.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0035
Warning Devices

(1) Each location designated as a high radiation area, and each entrance to such location, must be equipped with easily observable warning lights that operate when, and only when, radiation is being produced.

(2) Except in facilities designed for human exposure, each high radiation area must have an audible warning device which must be activated for 15 seconds prior to the possible creation of such high radiation area. Such warning device must be clearly discernible in all high radiation areas.

(3) Barriers, temporary or otherwise and pathways leading to high radiation areas must be posted in accordance with OAR 333-120-0400.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0040
Radiation Monitoring Requirements

(1) There must be available at each particle accelerator facility appropriate portable monitoring equipment which is operable and has been appropriately calibrated for the radiations being produced at the facility. Such equipment must be tested for proper operation daily and calibrated at intervals not to exceed one year and after each servicing and repair.

(2) A radiation protection survey must be performed and documented by a qualified expert, acceptable to the Authority, when changes have been made in shielding, operation, equipment or occupancy of adjacent areas.

(3) Radiation levels in all high radiation areas must be continuously monitored. The monitoring devices must be electrically independent of the accelerator control and safety interlock systems and capable of providing a readout at the control panel.

(4) All area monitors must be calibrated at intervals not to exceed one year and after each servicing and repair.

(5) Whenever applicable, periodic surveys must be made to determine the amount of airborne particulate radioactivity present.

(6) Whenever applicable, periodic smear surveys must be made to determine the degree of contamination.

(7) All surveys must be made in accordance with the written procedures established by a qualified expert, acceptable to the Authority or the radiation safety officer.

(8) Records of all radiation protection surveys, calibrations and instrumentation tests must be maintained at the accelerator facility for inspection by the Authority.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06

333-109-0045
Ventilation Systems

(1) Ventilation systems must be provided to ensure that personnel entering any area where airborne radioactivity may be produced will not be exposed to airborne radioactive materials in excess of those limits specified in 10 CFR Part 20 Table 1 of Appendix B to 20.1001 to 20.2401.

(2) A registrant, as required by OAR 333-120-0190, must not vent, release or otherwise discharge airborne radioactive material to an unrestricted area which exceed the limits specified in 10 CFR Part 20 **Table 2** Appendix B to 20.1001 to 20.2401, except as authorized pursuant to OAR 333-104-0035. For purposes of this rule concentrations may be averaged over a period not greater than one year. Every effort should be made to maintain releases of radioactive material to unrestricted areas as far below these limits as is reasonably achievable.

[ED. NOTE: Tables referenced are available from the agency.]

DIVISION 110

RADIATION SAFETY REQUIREMENTS FOR RADIOACTIVE TAILINGS AND PONDS

333-110-0001
Scope

The rules in this division establish requirements for radioactive tailings and ponds containing radioactive material from industrial processes. The provisions of this division are in addition to, and not in substitution for, other applicable provisions of these rules and any specific license issued pursuant to OAR 333-102-0300. The rules in this division do not apply to activities regulated by the Uranium Mill Tailings Radiation Control Act of 1978.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-110-0005
Definitions

As used in this division, these terms have the definitions as set forth below:

(1) "Radioactive" means:

(a) Concentrations of radioactive material in excess of those concentrations listed in **10 CFR Part 30.70**, **Schedule A**; or

(b) Concentrations of naturally occurring radioactive material or other radioactive material not listed in **10 CFR Part 30.70**,

Schedule A, which the Authority has determined to present a biological hazard to the occupational or public health and safety.

(2) "Tailings" means any material produced, other than the primary product, in any industrial activity including mining, milling, processing and production.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-110-0010
Specific Requirements for Tailings and Ponds

Unless specifically provided otherwise by the Authority, the following requirements for tailings and pond areas shall be fulfilled:

(1) Access to such areas shall be controlled and posted as specified by the Authority.

(2) These areas shall be maintained in such a manner that excessive erosion of, or environmental hazards from, radioactive material does not occur:

(a) Pile edges adjacent to a river, creek or other water course shall be stabilized to prevent erosion;

(b) Drainage ditches sufficient to prevent erosion from surface runoff water shall be provided.

(3) Prior written approval from the Authority shall be obtained before the surface area of the land shall be put to use.

(4) With the exception of reprocessing at the site, approval by the Authority must be obtained prior to removal of any material from these areas.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-110-0015
Sale or Transfer of the Site

The Authority shall be given written notice 30 days in advance of any contemplated transfer of right, title or interest in the site by deed, lease or other conveyance. The written notice shall contain the name and address of the proposed purchaser or transferee.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-110-0020
Abandonment of the Site

Prior to abandonment of the site, the requirements of this rule shall be fulfilled:

(1) Piles shall be stabilized against wind and water erosion and contoured in a manner which will prevent collection of water.

(2) In addition to the above requirements, any material which has been removed from the pile by natural forces shall be returned to the pile.

(3) Ponds shall be drained and covered with materials that prevent blowing of dust. Water drained from the ponds shall be disposed of in a manner approved by the Authority.

(4) Detailed plans for compliance with sections (1), (2) and (3) of this rule shall be submitted to the Authority for review and approval.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-110-0025
Waiver

Upon application to the Authority, certain requirements of this Division may be waived or modified if it can be shown that the requirements are unnecessary or impractical in specific cases.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

DIVISION 111

NOTICES, INSTRUCTIONS AND REPORTS TO WORKERS; INSPECTIONS

333-111-0001
Purpose and Scope

This division establishes requirements for notices, instructions and reports by licensees or registrants to individuals engaged in activities under a license or registration and options available to such individuals in connection with Authority inspections of licensees or registrants to ascertain compliance with the provisions of the act and rules, orders and licenses issued thereunder regarding radiological working conditions. The rules in this division apply to all persons who receive, possess, use, own or transfer sources of radiation registered with or licensed by the Authority pursuant to divisions 100, 101 and 102 of this chapter.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 14-2008, f. & cert. ef. 9-15-08

333-111-0005
Posting of Notices to Workers

(1) Each licensee or registrant shall post current copies of the following documents:

(a) The rules in this division and division 120 of this chapter;

(b) The license, certificate of validation, conditions or documents incorporated into the license by reference and amendments thereto;

(c) The operating procedures applicable to activities under the license or registration; and

(d) Any notice of noncompliance involving radiological working conditions, proposed imposition of civil penalty or order issued pursuant to division 100 of this chapter, and any response from the licensee or registrant.

(2) If posting of a document specified in subsection (1)(a), (b) or (c) of this rule is not practicable, the licensee or registrant may post a notice which describes the document and states where it may be examined, provided that such document is readily available to workers at the licensee's or registrant's facility.

(3) Authority "Notice to Employees" shall be posted by each licensee or registrant as required by these rules.

(4) Documents, notices or forms posted pursuant to this rule shall appear in a sufficient number of places to permit individuals engaged in work under the license or registration to observe them on the way to or from any particular work location to which the document applies, shall be conspicuous and shall be replaced if defaced or altered.

(5) Authority documents posted pursuant to subsection (1)(d) of this rule shall be posted within two working days after receipt of the documents from the Authority. The licensee's or registrant's response, if any, shall be posted within two working days after dispatch from the licensee or registrant. Such documents shall remain posted for a minimum of five working days or until action correcting the violation has been completed, whichever is later.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; HD 15-1994, f. & cert. ef. 5-6-94; PH 14-2008, f. & cert. ef. 9-15-08

333-111-0010
Instructions to Workers

All individuals working in or frequenting any portion of a restricted area:

(1) Shall be kept informed of the storage, transfer or use of sources of radiation in such portions of the restricted area;

(2) Shall be instructed in the health protection problems associated with exposure to radiation or radioactive material, in precautions or procedures to minimize exposure and in the purposes and functions of protective devices employed;

(3) Shall be instructed in, and instructed to observe, to the extent within the worker's control, the applicable provisions of

these rules and licenses for the protection of personnel from exposures to radiation or radioactive material occurring in such areas;

(4) Shall be instructed of their responsibility to report promptly to the licensee or registrant any condition which may constitute, lead to or cause a violation of Authority rules and licenses or unnecessary exposure to radiation or radioactive material;

(5) Shall be instructed in the appropriate response to warnings made in the event of any unusual occurrence or malfunction that may involve exposure to radiation or radioactive material; and

(6) Shall be advised as to the radiation exposure reports which workers shall be furnished pursuant to OAR 333-111-0015.

(7) Refresher training shall be provided at intervals not to exceed three years covering the topics identified in OAR 333-111-0010.

NOTE: The extent of these instructions shall be commensurate with potential radiological health protection problems in the restricted area.

Stat. Auth.: ORS 453.605 - 453.807

Stats. Implemented: ORS 453.745

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 14-2008, f. & cert. ef. 9-15-08

333-111-0015
Notifications and Reports to Individuals

(1) Radiation exposure data for an individual and the results of any measurements, analyses and calculations of radioactive material deposited or retained in the body of an individual shall be reported to the individual as specified in this rule. The information reported shall include data and results obtained pursuant to these rules, orders or license conditions, as shown in records maintained by the licensee or registrant pursuant to OAR 333-120-0650. Each notification and report shall:

(a) Be in writing;

(b) Include the appropriate identifying data such as the name of the licensee or registrant, the name of the individual and the individual's social security number;

(c) Include the individual's exposure information; and

(d) Contain the following statement: "This report is furnished to you under the provisions of rules entitled Oregon Rules for the Control of Radiation, division 111. You should preserve this report for further reference."

(2) Each licensee or registrant shall make dose information available to workers as shown in records maintained by the licensee or registrant under the provisions of OAR 333-120-0650. The licensee shall provide an annual report to each individual monitored under 333-120-0210 of the dose received in that monitoring year if:

(a) The individual's occupational dose exceeds 1 mSv (100 mrem) TEDE or 1 mSv (100 mrem) to any individual organ or tissue; or

(b) The individual requests his or her annual dose report.

(3) At the request of a worker formerly engaged in work controlled by the licensee or registrant, each licensee or registrant shall furnish to the worker a report of the worker's exposure to radiation or radioactive material. Such report shall be furnished within 30 days from the time the request is made or within 30 days after the exposure of the individual has been determined by the licensee or registrant, whichever is later; shall cover, within the period of time specified in the request, each calendar quarter in which the worker's activities involved exposure to radiation from radioactive material licensed by, or radiation machines registered with the Authority; and shall include the dates and locations of work under the license or registration in which the worker participated during this period.

(4) When a licensee or registrant is required by OAR 333-120-0710, 333-120-0720 or 333-120-0730 to report to the Authority any exposure of an individual to radiation or radioactive material, the licensee or the registrant shall also provide the individual a report on the exposure data included in the report to the Authority. Such reports shall be transmitted at a time not later than the transmittal to the Authority.

(5) At the request of a worker who is terminating employment in a given calendar quarter with the licensee or registrant in work involving radiation dose, or of a worker who, while employed by another person, is terminating assignment to work involving radiation dose in the licensee's or registrant's facility in that calendar quarter, each licensee or registrant shall provide to each such worker, or to the worker's designee, at termination, a written report regarding the radiation dose received by that worker from operations of the licensee or registrant during that specifically identified calendar quarter or fraction thereof, or provide a written estimate of that dose if the finally determined personnel monitoring results are not available at that time. Estimated doses shall be clearly indicated as such.

Stats. Implemented: ORS 453.605 - 453.755

Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; HD 15-1994, f. & cert. ef. 5-6-94; PH 14-2008, f. & cert. ef. 9-15-08; PH 10-2011, f. 9-30-11, cert. ef. 10-1-11

333-111-0020
Presence of Representatives of Licensees or Registrants and Workers During Inspection

(1) Each licensee or registrant shall afford to the Authority at all reasonable times opportunity to inspect materials, machines, activities, facilities, premises and records pursuant to these rules.

(2) During an inspection, Authority inspectors may consult privately with workers as specified in OAR 333-111-0025. The licensee or registrant may accompany Authority inspectors during other phases of an inspection.

(3) If, at the time of inspection, an individual has been authorized by the workers to represent them during Authority inspections, the licensee or registrant shall notify the inspectors of such authorization and shall give the workers' representative an opportunity to accompany the inspectors during the inspection of physical working conditions.

(4) Each workers' representative shall be routinely engaged in work under control of the licensee or registrant and shall have received instructions as specified in OAR 333-111-0010.

(5) Different representatives of licensees or registrants and workers may accompany the inspectors during different phases of an inspection if there is no resulting interference with the conduct of the inspection. However, only one workers' representative at a time may accompany the inspectors.

(6) With the approval of the licensee or registrant and the workers' representative, an individual who is not routinely engaged in work under control of the licensee or registrant, for example, a consultant to the licensee or registrant or to the workers' representative, shall be afforded the opportunity to accompany Authority inspectors during the inspection of physical working conditions.

(7) Notwithstanding the other provisions of this rule, Authority inspectors are authorized to refuse to permit accompaniment by any individual who deliberately interferes with a fair and orderly inspection. With regard to areas containing information classified by an agency of the U.S. Government in the interest of national security, an individual who accompanies an inspector may have access to such information only if authorized to do so. With regard to any area containing proprietary information, the workers' representative for that area shall be an individual previously authorized by the licensee or registrant to enter that area.

333-111-0025
Consultation with Workers During Inspection

(1) Authority inspectors may consult privately with workers concerning matters of occupational radiation protection and other matters related to applicable provisions of these rules and licenses to the extent the inspectors deem necessary for the conduct of an effective and thorough inspection.

(2) During the course of an inspection, any worker may bring privately to the attention of the inspectors, either orally or in writing, any past or present condition which the worker has reason to believe may have contributed to or caused any violation of the Act, these rules or license condition, or any unnecessary exposure

of an individual to sources of radiation under the licensee's or registrant's control. Any such notice in writing shall comply with the requirements of OAR 333-111-0030(1).

(3) The provisions of section (2) of this rule shall not be interpreted as authorization to disregard instructions pursuant to OAR 333-111-0010.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 14-2008, f. & cert. ef. 9-15-08

333-111-0030
Requests by Workers for Inspections

(1) Any worker or representative of workers believing that a violation of the Act, these rules or license conditions exists or has occurred in work under a license or registration with regard to radiological working conditions in which the worker is engaged may request an inspection by giving notice of the alleged violation to the Authority. Any such notice shall be in writing, shall set forth the specific grounds for the notice and shall be signed by the worker or representative of the workers. A copy shall be provided to the licensee or registrant by the Authority no later than at the time of inspection except that, upon the request of the worker giving such notice, their name and the name of individuals referred to therein shall not appear in such copy or on any record published, released or made available by the Authority, except for good cause shown.

(2) If, upon receipt of such notice, the Authority determines that the complaint meets the requirements set forth in section (1) of this rule, and that there are reasonable grounds to believe that the alleged violation exists or has occurred, an inspection shall be made as soon as practicable to determine if such alleged violation exists or has occurred. Inspections pursuant to this rule need not be limited to matters referred to in the complaint.

(3) No licensee, registrant or contractor or subcontractor of a licensee or registrant shall discharge or in any manner discriminate against any worker because such worker has filed any complaint or instituted or caused to be instituted any proceeding under these rules or has testified or is about to testify in any such proceeding or because of the exercise by such worker on behalf of himself or others of any option afforded by this division.

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 14-2008, f. & cert. ef. 9-15-08

333-111-0035
Inspections Not Warranted; Informal Review

(1) If the Authority determines, with respect to a complaint under OAR 333-111-0030, that an inspection is not warranted because there are no reasonable grounds to believe that a violation exists or has occurred, the Authority shall notify the complainant in writing of such determination. The complainant may obtain review of such determination by submitting a written statement of position with the Assistant Director of the Public Health Division. The Authority will provide the licensee or registrant with a copy of such statement by certified mail, excluding at the request of the complainant, the name of the complainant. The licensee or registrant may submit an opposing written statement of position with the Assistant Director of the Public Health Division. The Authority will provide the complainant with a copy of such statement by certified mail.

(2) Upon the request of the complainant, the Assistant Director of the Public Health Division may hold an informal conference in which the complainant and the licensee or registrant may orally present their views. An informal conference may also be held at the request of the licensee or registrant, but disclosure of the identity of the complainant will be made only following receipt of written authorization from the complainant. After considering all written or oral views presented, the Assistant Director of the Public Health Division shall affirm, modify or reverse the determination of the Authority and furnish the complainant and the licensee or registrant a written notification of the decision and the reason therefore.

(3) If the Authority determines that an inspection is not warranted because the requirements of OAR 333-111-0030(1) have not been met, the complainant shall be notified in writing of such determination. Such determination shall be without prejudice to the filing of a new complaint meeting the requirements of OAR 333-111-0030(1).

Stat. Auth.: ORS 453.605 - 453.755
Stats. Implemented: ORS 453.605 - 453.755

DIVISION 112

REQUIREMENTS FOR MICROWAVE OVEN USE AND SERVICE

333-112-0001
Purpose and Scope

(1) The purpose of this division is to assure adequate servicing and repair of microwave ovens and to prevent public and occupational exposure to microwave radiation from leaking microwave ovens which the Authority has determined to present a biological hazard to occupational and public health and safety.

(2) The requirements of this division apply to any person or facility that operates microwave ovens or that provides repair or other service for microwave ovens used in homes, restaurants, hospitals, schools or other establishments where the public could be exposed.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-112-0005
Definitions

As used in this division, these terms have the definitions set forth below:

(1) "Microwave oven" means an electronic product designed to heat or cook food through the application of electromagnetic energy at frequencies assigned by the Federal Communica-tions Commission in the normal industrial, scientific and medical heating bands ranging from 890 megahertz to 6,000 megahertz.

(2) "Cavity" means that portion of the microwave oven in which food may be heated or cooked.

(3) "Door" means the movable barrier which prevents access to the cavity during operation and the function of which is to prevent emission of microwave energy from the passage or opening which provides access to the cavity.

(4) "External surface" means the outside surface of the cabinet or enclosure provided by the manufacturer as part of the microwave oven, including doors, door handles, latches and control knobs.

(5) "Licensee" means any person (facility) that provides service for microwave ovens.

(6) "Service" means the testing, repair, maintenance, modification, replacement or adjustment of any microwave oven or any part or component thereof.

(7) "Stirrer" means that feature of a microwave oven which is intended to provide uniform heating of the load by constantly changing the standing wave pattern within the cavity or moving the load.

(8) "Technician" means any individual that performs service on microwave ovens

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85

333-112-0010
Licensing of Microwave Oven Repair Facilities

(1) No person or facility shall provide service for microwave ovens except as authorized by a specific license issued by the

Authority. A license application will be approved or an annual validation certificate issued when the Authority determines that:

(a) The applicant's proposed test equipment satisfies the requirements of OAR 333-112-0020;

(b) The applicant's proposed procedures pertaining to oven repair and instruction of personnel are adequate to ensure compliance with these rules.

(2) License applications shall be made on forms furnished by the Authority.

(3) In addition to the requirements of this division, all licensees are subject to the requirements of divisions 100 and 111 of these rules.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

Requirements for Microwave Oven Service Licensees

333-112-0015
Service Responsibilities

(1) The licensee shall test each microwave oven serviced for leakage in accordance with measurement and test procedures described in OAR 333-112-0020. The test shall be performed before, if the oven is operational, and after servicing of the oven has been completed.

(2) No licensee shall provide service for a microwave oven in such a manner as to cause leakage from the oven in excess of those limits specified in OAR 333-112-0040.

(3) The licensee shall notify the Authority within 20 days of any microwave oven that is found to be leaking microwave radiation in excess of the limits specified in OAR 333-112-0040. The notification shall include:

(a) The maximum power density measured with procedures described in OAR 333-112-0020;

(b) The name of the manufacturer of the oven;

(c) The date the leakage was corrected and the oven was brought into compliance with OAR 333-112-0040;

(d) The reason why the leakage was not corrected and brought into compliance with OAR 333-112-0040; or

(e) The name and address of the owner.

(4) A copy of the notification required by section (3) of this rule shall be supplied to the owner or user of the microwave oven at the time the notification is sent to the Authority.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91

333-112-0020
Measurement and Test Procedures

(1) Leakage levels shall be determined by measurements of microwave power density made with an instrument system which:

(a) Reaches 90 percent of its steady-state reading within three seconds when the system is subjected to a stepped input signal;

(b) Has a radiation detector with an effective aperture of 25 square centimeters or less as measured in a plane wave, having no dimension exceeding ten centimeters;

(c) Is capable of measuring microwave oven leakage levels with an accuracy of plus 25 percent and minus 20 percent (plus or minus one decibel);

(d) Has been calibrated at least within the last 12 months.

(2) Measurements shall be made in accordance with the manufacturer's leakage test procedures or with the microwave oven operating at its maximum output and containing a load of 275 plus or minus 15 milliliters of tap water, initially at room temperature, placed within the cavity at the center of the load-carrying surface provided by the manufacturer. The water container for the latter procedure shall be a low form 600 milliliter beaker, or substantially similar vessel, having an inside diameter of approximately 8.5 centimeters and made of an electrically nonconductive material, such as glass or plastic.

(3) Measurements shall be made with the door fully closed, as well as with the door fixed in any other position which allows the oven to operate.

(4) Measurements shall be made at points five centimeters or less from external surfaces of the oven.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85

333-112-0025
Training of Service Personnel

The licensee shall ensure that each technician who services microwave ovens in his or her employ is instructed in the test procedures, compliance criteria and all requirements of this division.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

333-112-0030
Personnel Monitoring for Cataracts

It is recommended that each individual who performs servicing of microwave ovens have his or her eyes examined for cataract formations. The testing for cataracts should be by a licensed ophthalmologist and should be performed at the beginning of employment and annually thereafter.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85

333-112-0035
Records

The licensee shall maintain records showing the results of leakage measurements on each microwave oven serviced. The records shall be maintained for inspection by the Authority and shall be so filed as to be readily available for review. The records shall contain at least the following information:

(1) The name of the individual who performed the service.

(2) The date the service was completed.

(3) The maximum leakage levels before and after servicing as applicable.

(4) The location of the maximum leakage levels.

Stat. Auth.: ORS 453.605 - 453.745

333-112-0040
Operation of Microwave Ovens

(1) No person shall operate or direct the operation of a microwave oven that has been determined to leak microwave radiation in excess of the following limits:

(a) For ovens manufactured after October 1, 1971, leakage in excess of five milliwatts per square centimeter at any point five centimeters or more from the external surface of the oven;

(b) For ovens manufactured before October 1, 1971, leakage in excess of ten milliwatts per square centimeter at any point five centimeters or more from the external surface of the oven.

(2) Microwave ovens shall be considered to be in compliance with section (1) of this rule if the maximum power density of microwave radiation leakage measured in the test procedures specified in OAR 333-112-0020 does not exceed the microwave radiation leakage limits specified in section (1) of this rule measured through at least one stirrer cycle.

DIVISION 113

RADIATION SAFETY REQUIREMENTS FOR WIRELINE SERVICE OPERATIONS AND SUB-SURFACE TRACER STUDIES

333-113-0001
Purpose and Scope

(1) The rules in this division establish radiation safety requirements for persons using sources of radiation for well logging operations including mineral logging, radioactive markers and subsurface

tracer studies. The requirements of this division are in addition to, and not in substitution for, the requirements of divisions 100, 102, 111 and 120 of these rules.

(2) The rules in this division apply to all licensees or registrants who use sources of radiation for well logging operations including mineral logging, radioactive markers or subsurface tracer studies.

(3) The requirements set out in this division do not apply to the issuance of a license authorizing the use of licensed material in tracer studies involving multiple wells, such as field flooding studies, or to the use of sealed sources auxiliary to well logging but not lowered into wells.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0005
Definitions

As used in this division, the following definitions apply:

(1) "Energy compensation source (ECS)" means a small sealed source, with an activity not exceeding 3.7 MBq (100 microcuries), used within a well logging tool, or other tool components, to provide a reference standard to maintain the tool's calibration when in use.

(2) "Field Station" means a facility where radioactive sources may be stored or used and from which equipment is dispatched to temporary jobsites.

(3) "Fresh water aquifer," for the purpose of this part, means a geologic formation that is capable of yielding fresh water to a well or spring.

(4) "Injection Tool" means a device used for controlled subsurface injection of radioactive tracer material.

(5) "Irretrievable well logging source" means any sealed source containing licensed material that is pulled off or not connected to the wireline that suspends the source in the well and for which all reasonable effort at recovery has been expended.

(6) "Licensed material" means byproduct, source, or special nuclear material received, processed, used, or transferred under a license issued by the Authority under the rules in this chapter.

(7) "Logging assistant" means any individual who, under the personal supervision of a logging supervisor, handles sealed sources or tracers that are not in logging tools or shipping containers or who performs surveys required by 333-113-0401.

(8) "Logging Supervisor" means the individual who uses licensed material or provides personal supervision of the use of licensed sources of radiation at the well site and who is responsible to the licensee for assuring compliance with the requirements of Authority rules and the conditions of the license.

(9) "Logging Tool" means a device used subsurface to perform well-logging.

(10) "Mineral Logging" means any logging performed for the purpose of mineral exploration other than oil or gas.

(11) "Personal Supervision" means guidance and instruction by a logging supervisor who is physically present at the jobsite and watching the performance of the operation in such proximity that contact can be maintained and immediate assistance given as required.

(12) "Radioactive Marker" means radioactive material placed subsurface or on a structure intended for subsurface use for the purpose of depth determination or direction orientation. For purposes of these rules, this term includes radioactive collar markers and radioactive iron nails.

(13) "Safety review" means a periodic review provided by the licensee for its employees on radiation safety aspects of well logging. The review may include, as appropriate, the results of internal inspections, new procedures or equipment, accidents or errors that have been observed, and opportunities for employees to ask safety questions.

(14) "Sealed source" means any licensed material that is encased in a capsule designed to prevent leakage or escape of the licensed material

(15) "Source Holder" means a housing or assembly into which a radioactive source is placed for the purpose of facilitating the handling and use of the source in well-logging operations.

(16) "Subsurface Tracer Study" means the release of unsealed license material or a substance tagged with licensed radioactive material for the purpose of tracing the movement or position of the tagged substance in the well-bore or adjacent formation.

(17) "Surface casing for protecting fresh water aquifers" means a pipe or tube used as a lining in a well to isolate fresh water aquifers from the well.

(18) "Temporary Jobsite" means a location where radioactive materials are present for the purpose of performing well logging operations or subsurface tracer studies.

(19) "Tritium neutron generator target source" means a tritium source used within a neutron generator tube to produce neutrons for use in well logging applications.

(20) "Uranium Sinker Bar" means a weight containing depleted uranium used to pull a logging tool down toward the bottom of a well.

(21) "Well" means a drilled hole in which well logging operations and subsurface tracer studies are performed. As used in this division, "well" includes drilled holes for the purpose of oil, gas, mineral, groundwater or geological exploration.

(22) "Well-Logging" means all operations involving the lowering and raising of measuring devices or tools which may contain sources of radiation into well-bores or cavities for the purpose of obtaining information about the well or adjacent formations that are used in oil, gas, mineral, groundwater or geological exploration.

(23) "Wireline" means a cable containing one or more electrical conductors which is used to lower and raise logging tools in the well-bore.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0007
Specific Licenses For Well Logging

(1) A person, as defined in 333-100-0005 must file an application for a specific license authorizing the use of radioactive materials for well logging in accordance with 333-102-0190.

(2) The Authority will approve an application for a specific license for the use of radioactive material in well logging if the applicant meets the following requirements:

(a) The applicant must satisfy the general requirements specified in 333-102-0200 for radioactive material and any special requirements contained in this division.

(b) The applicant must develop a program for training well logging supervisors and well logging assistants and submit to the Authority a description of this program which specifies the:

(A) Initial training;

(B) On-the-job training;

(C) Annual safety reviews provided by the licensee;

(D) Means the applicant will use to demonstrate the logging supervisor's knowledge and understanding of and ability to comply with the Authority's rules and licensing requirements and the applicant's operating and emergency procedures; and

(E) Means the applicant will use to demonstrate the logging assistant's knowledge and understanding of and ability to comply with the applicant's operating and emergency procedures.

(c) The applicant must submit to the Authority written operating and emergency procedures as described in 333-113-0205 or an outline or summary of the procedures that includes the important radiation safety aspects of the procedures.

(d) The applicant must establish and submit to the Authority its program for annual inspections of the job performance of each logging supervisor to ensure that the Authority's rules, license requirements, and the applicant's operating and emergency procedures are followed. Inspection records must be retained in accordance with 333-100-0057.

(e) The applicant must submit a description of its overall organizational structure as it applies to the radiation safety responsibilities

in well logging, including specified delegations of authority and responsibility.

(f) If an applicant wants to perform leak testing of sealed sources, the applicant must identify the manufacturers and the model numbers of the leak test kits to be used. If the applicant wants to analyze its own wipe samples, the applicant must establish procedures to be followed and submit a description of these procedures to the Authority. The description must include the:

(A) Instruments to be used;

(B) Methods of performing the analysis; and

(C) Pertinent experience of the person who will analyze the wipe samples.

Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0010
Agreement With Well Owner of Operator

(1) No licensee must perform well logging operations with a sealed source(s) unless, prior to commencement of the operation, the licensee has a written agreement with the well operator, well owner, drilling contractor or landowner. This written agreement must identify who will meet the following requirements:

(a) In the event that a well to be logged, using radioactive material, penetrates a potable aquifer or contains potable water, that well must be cased from top to bottom prior to the well-logging;

(b) In the event a sealed source is lodged downhole, a reasonable effort at recovery will be made;

(c) No person shall attempt to recover a sealed source in a manner which, in the licensee's opinion, could result in its rupture; and

(d) In the event a decision is made to abandon the sealed source down hole, the requirements of OAR 333-113-0501(3) must be met within 30 days.

NOTE: A written agreement between the licensee and the well owner or operator is not required if the licensee and the well owner, or operator, are part of the same corporate structure or otherwise similarly affiliated.

(2) The licensee must retain a copy of the written agreement after the completion of the well logging operation in accordance with 333-100-0057.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

Equipment Control

333-113-0101
Limits on Levels of Radiation

Sources of radiation must be used, stored and transported in such a manner that the requirements of division 120 of this chapter are met.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0105
Storage Precautions

(1) Each source of radiation, except accelerators, must be provided with a storage and/or transport container. The container must be provided with a lock, or tamper seal for calibration sources, to prevent unauthorized removal of, or exposure to, the source of radiation.

(2) Sources of radiation must be stored in a manner which will minimize danger from explosion and/or fire.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0110
Transport Precautions

(1) The licensee may not transport licensed material unless the material is packaged, labeled, marked, and accompanied with appropriate shipping papers in accordance with rules set out in 49 CFR Parts 171 to 178.

(2) Security precautions during storage and transportation.

(a) The licensee must store each source containing licensed material in a storage container or transportation package. The container or package must be locked and physically secured to prevent tampering or removal of licensed material from storage by unauthorized personnel. The licensee must store licensed material in a manner which will minimize danger from explosion or fire.

(b) The licensee must lock and physically secure the transport package containing licensed material in the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal of the licensed material from the vehicle.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0115
Radiation Survey Instruments

(1) The licensee or registrant must maintain sufficient calibrated and operable radiation survey instruments, capable of detecting beta and gamma radiation, at each field station and temporary jobsite to make physical radiation surveys as required by this division and by OAR 333-120-0200. Instrumentation must be capable of measuring 0.001 mSv (0.1 mrem) per hour through at least 0.5 mSv (50 mrem) per hour.

(2) Each radiation survey instrument must be calibrated:

(a) At intervals not to exceed six months and after each instrument servicing;

(b) For linear scale measurements, at least two points located approximately 1/3 and 2/3 of full-scale on each scale; for logarithmic scale instruments, at midrange of each decade and at two points of at least one decade; and for digital instruments, at appropriate points; and

(c) So that accuracy within 20 percent of the true radiation level can be demonstrated on each scale.

(3) Calibration records must be maintained in accordance with 333-100-0057.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0120
Leak Testing of Sealed Sources

(1) Testing and Record Keeping Requirements. Each licensee using sealed sources of radioactive material must have the sources tested for leakage at intervals not to exceed six months. Records of leak test results must be kept in units of microcuries (Bq) and maintained in accordance with 333-100-0057.

(2) Method of Testing. Tests for leakage must be performed only by persons specifically authorized to perform such tests by the Authority, the U.S. Nuclear Regulatory Agency, an Agreement State or a Licensing State. The test sample must be taken from the surface of the source, source holder or from the surface of the device in which the source is stored or mounted and on which one might expect contamination to accumulate. The test sample must be analyzed for radioactive contamination and the analysis must be capable of detecting the presence of 0.005 microcurie (185 Bq) of radioactive material on the test sample.

(3) Interval of Testing. Each sealed source of radioactive material must be tested at intervals not to exceed six months. In the absence of a certificate from a transferor indicating that a test has been made prior to the transfer, the sealed source must not be put into use until tested. If, for any reason, it is suspected that a sealed source may be leaking, it must be removed from service immediately and tested for leakage as soon as practical.

(4) Leaking or Contaminated Sources.

(a) If the test reveals the presence of 0.005 microcurie (185 Bq) or more of leakage or contamination, the licensee must immediately withdraw the source from use and have it decontaminated, repaired or disposed of in accordance with these rules.

(b) The licensee must check the equipment associated with the leaking source for radioactive contamination and, if contaminated, have it decontaminated or disposed of in accordance with these rules.

(c) A report describing the leaking source and equipment involved, the test results and the corrective action taken must be filed with the Authority within 30 days of discovery.

(5) Exemptions. The following sources are exempted from the periodic leak test requirements of sections (1) through (4) of this rule:

(a) Hydrogen-3 sources;

(b) Sources of radioactive material with a half-life of 30 days or less;

(c) Sealed sources of radioactive material in gaseous form;

(d) Sources of beta and/or gamma emitting radioactive material with an activity of 100 microcuries (3.7 MBq) or less;

(e) Sources of alpha emitting radioactive material with an activity of ten microcuries (0.370 MBq) or less;

(f) Each ECS that is not exempt from testing in accordance with section (5)(e) of this rule must be tested at intervals not to exceed three years. In the absence of a certificate from a transferor that a test has been made within the three years before the transfer, the ECS may not be used until tested; and

(g) Any source in storage and not being used need not be tested. When the source is removed from storage for use or transfer to another person, it must be tested before use or transfer unless it has been tested for leakage within six months before the date of use or transfer.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-113-0125
Physical Inventory

Each licensee or registrant must conduct a semiannual physical inventory to account for all sources of radiation. Records of inventories must be maintained in accordance with 333-100-0057 and must include the quantities and kinds of sources of radiation, the location where sources of radiation are assigned, the date of the inventory and the name of the individual conducting the inventory. Physical inventory records may be combined with leak test records.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-113-0130
Utilization Records

Each licensee or registrant must be maintained in accordance with 333-100-0057 showing the following information for each source of radiation:

(1) Make, model number and a serial number or a description of each source of radiation used. In the case of unsealed licensed material used for subsurface tracer studies, the radionuclide and quantity of activity used in a particular well and the disposition of any unused tracer materials;

(2) The identity of the well-logging supervisor or field unit to whom assigned;

(3) Locations where used and dates of use; and

(4) In the case of tracer material and radioactive markers, the utilization record must indicate the radionuclide and activity used in a particular well.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-113-0135
Design, Performance and Certification Criteria for Sealed Sources

(1) Each sealed source, except those containing radioactive material in gaseous form, used in well logging operations and manufactured after May 1, 1983 must be certified by the manufacturer, or other testing organization acceptable to the Authority, to meet the following minimum criteria:

(a) Be of doubly encapsulated construction;

(b) Contain radioactive material whose chemical and physical forms are as insoluble and nondispersible as practical; and

(c) Has been individually pressure tested to at least 24,600 pounds per square inch absolute (1.695 x 107 pascals) without failure.

(2) For sealed sources, except those containing radioactive material in gaseous form, acquired after May 1, 1984 in the absence of a certificate from a transferor certifying that an individual sealed source meets the requirements of section (1) of this rule, the sealed source must not be put into use until such determinations and testing have been performed.

(3) Each sealed source, except those containing radioactive material in gaseous form, used in well logging operations after May 1, 1985 must be certified by the manufacturer, or other testing organization acceptable to the Authority, as meeting the sealed source performance requirements for oil well-logging as contained in the **American National Standard N43.6**, "Classification of Sealed Radioactive Sources," (formerly N542, ANSI/NBS 126).

(4) After source disposal certification documents must be maintained in accordance with 333-100-0057. If the source is abandoned downhole, the certification documents must be maintained until the Authority authorizes disposition.

[Publications: Publications referenced are available from the agency.]

333-113-0140
Labeling

(1) Each source, source holder or logging tool containing radioactive material must bear a durable, legible and clearly visible marking or label, which has, as a minimum, the standard radiation caution symbol specified in 333-120-0400, without the conventional color requirement, and the following wording:

DANGER
RADIOACTIVE
or
CAUTION
RADIOACTIVE

This labeling must be on the smallest component transported as a separate piece of equipment.

(2) Each container used to store or transport radioactive materials must have permanently attached to it a durable, legible and clearly visible label that has, as a minimum, the standard radiation caution symbol and the following wording:

DANGER
RADIOACTIVE
or
CAUTION
RADIOACTIVE
NOTIFY CIVIL AUTHORITIES OR
(NAME OF COMPANY)

(3) The licensee may use a uranium sinker bar in well logging applications only if it is legibly impressed with the words:

"CAUTION — RADIOACTIVE — DEPLETED URANIUM" and
"NOTIFY CIVIL AUTHORITIES (or COMPANY NAME) IF FOUND."

Stat. Auth.: ORS 453.635

333-113-0145
Inspection and Maintenance

(1) Each licensee or registrant must conduct, at intervals not to exceed six months, a visual check of source holders, logging

tools, source handling tools, storage containers, transport containers and injection tools to ensure proper labeling and physical condition. Records of inspection and maintenance must be maintained in accordance with 333-100-0057.

(2) If any inspection conducted pursuant to section (1) of this rule reveals defects or damage to labeling or components, the device must be removed from service until repairs have been made.

(3) If a sealed source is stuck in the source holder, the licensee must not perform any operation, such as drilling, cutting or chiseling, on the source holder unless the licensee is specifically approved by the U.S. Nuclear Regulatory Agency, an Agreement State or a Licensing State to perform this operation.

(4) The repair, opening or modification of any sealed source must be performed only by persons specifically authorized to do so by the Authority, the U.S. Nuclear Regulatory Agency, an Agreement State or a Licensing State.

(5) Removal of a sealed source from a source holder or logging tool, and maintenance on sealed sources or holders in which sealed sources are contained may not be performed by the licensee unless a written procedure has been developed and approved either by the Authority, the Nuclear Regulatory Agency or by an Agreement State or a Licensing State.

333-113-0150
Use of a Sealed Source in a Well without a Surface Casing

The licensee may use a sealed source in a well without a surface casing for protecting fresh water aquifers only if the licensee follows a procedure for reducing the probability of the source becoming lodged in the well. The procedure must be approved by the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State.

Requirements for Personnel Safety

333-113-0201
Training Requirements

(1) No licensee or registrant shall permit any individual to act as a logging supervisor as defined in this division until such individual has:

(a) Received, in a course recognized by the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State, instruction in the subjects outlined in OAR 333-113-0203 and demonstrated an understanding thereof;

(b) Read and received instruction in the rules contained in this division and the applicable rules of divisions 100, 120 and 111 of these rules or their equivalent, conditions of appropriate license or certificate of registration, and the licensee's or registrant's operating and emergency procedures, and demonstrated an understanding thereof;

(c) Demonstrated competence to use sources of radiation, related handling tools and radiation survey instruments which will be used on the job by a field evaluation; and

(d) Has demonstrated understanding of the requirements in section (1)(a) and (1)(b) of this rule by successfully completing a written exam.

(2) No licensee or registrant shall permit any individual to assist in the handling of sources of radiation until such individual has:

(a) Read or received instruction in the licensee's or registrant's operating and emergency procedures and demonstrated an understanding thereof;

(b) Demonstrated competence to use, under the personal supervision of the logging supervisor, the sources of radiation, related handling tools and radiation survey instruments which will be used on the job; and

(c) The licensee must provide safety reviews for logging supervisors and logging assistants at least once during each calendar year.

(3) The licensee or registrant must maintain employees training records until inspection by the Authority following termination of the individual's employment.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-113-0203
Subjects to be Included in Training Courses for Logging Supervisors

(1) Fundamentals of radiation safety:
(a) Characteristics of radiation;
(b) Units of radiation dose and quantity of radioactivity;
(c) Significance of radiation dose:
(A) Radiation protection standards;
(B) Biological effects of radiation dose.
(d) Levels of radiation from sources of radiation;
(e) Methods of minimizing radiation dose:
(A) Working time;
(B) Working distances;
(C) Shielding.
(f) Radiation safety practices including prevention of contamination and methods of decontamination.
(2) Radiation detection instrumentation to be used:
(a) Use of radiation survey instruments:
(A) Operation;
(B) Calibration;
(C) Limitations.
(b) Survey techniques;
(c) Use of personnel monitoring equipment.
(3) Equipment to be used:
(a) Handling equipment;
(b) Sources of radiation;
(c) Storage and control of equipment;
(d) Operation and control of equipment.
(4) The Requirements of pertinent federal and state regulations.
(5) The licensee's or registrant's written operating and emergency procedures.
(6) The licensee's or registrant's record keeping procedures.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0205
Operating and Emergency Procedures

The licensee's or registrant's operating and emergency procedures must include instructions in at least the following:

(1) Handling and use of sources of radiation to be employed so that:

(a) No individual is likely to be exposed to radiation doses in excess of the standards established in division 120 of these rules; and

(b) Use of sealed sources in wells without surface casing for protecting fresh water aquifers, if appropriate.

(2) Methods and occasions for conducting radiation and contamination surveys. (See 333-113-0401).

(3) Methods and occasions for locking and securing sources of radiation.

(4) Personnel monitoring and the use of personnel monitoring equipment.

(5) Transportation to temporary jobsites and field stations, including the packaging and placing of sources of radiation in vehicles, placarding of vehicles and securing sources of radiation during transportation to prevent accidental loss, tampering, or unauthorized removal;

(6) Minimizing exposure of individuals in the event of an accident. Including, but not limited to, unshielded sources and inhalation or ingestion of licensed tracer materials.

(7) Procedure for notifying proper personnel in the event of an accident.

(8) Maintenance of records.

(9) Use, inspection and maintenance of source holders, logging tools, source handling tools, storage containers, transport containers and injection tools.

(10) Procedures to be followed in the event a sealed source is lodged downhole.

(11) Procedures to be used for picking up, receiving and opening packages containing radioactive material.

(12) For the use of tracers, decontamination of the environment, equipment and personnel.

(13) Maintenance of records generated by logging personnel at temporary jobsites.

(14) Notifying proper persons in the event of an accident.

(15) Actions to be taken if a sealed source is ruptured, including actions to prevent the spread of contamination and minimize inhalation and ingestion of radioactive material and actions to obtain suitable radiation survey instruments as required by OAR 333-113-0115.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0210
Personnel Monitoring

(1) The licensee must not permit an individual to act as a logging supervisor or logging assistant unless that person wears, at all times during the handling of licensed radioactive materials, a personnel dosimeter that is processed and evaluated by an accredited National Voluntary Laboratory Accreditation Program (NVLAP) processor. Each personnel dosimeter must be assigned to and worn by only one individual. Film badges must be replaced at least monthly and other personnel dosimeters replaced at least quarterly. After replacement, each personnel dosimeter must be promptly processed.

(2) The licensee must provide bioassay services to individuals using licensed materials in subsurface tracer studies if required by the license.

(3) Personnel monitoring records must be maintained in accordance with 333-100-0057 and for inspection until the Authority authorizes disposition.

Precautionary Procedures in Logging and Subsurface Tracer Studies

333-113-0301
Security

(1) A logging supervisor must be physically present at a temporary jobsite whenever licensed materials are being handled or are not stored and locked in a vehicle or storage place. The logging supervisor may leave the jobsite in order to obtain assistance if a source becomes lodged in a well.

(2) During well logging, except when radiation sources are below ground or in shipping or storage containers, the logging supervisor or other individual designated by the logging supervisor must maintain direct surveillance of the operation to prevent unauthorized entry into a restricted area, as defined in 333-100-0005.

Stat. Auth.: ORS 453.635

333-113-0305
Handling Tools

The licensee must provide and require the use of tools that will assure remote handling of sealed sources other than low activity calibration sources.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0310
Subsurface Tracer Studies

(1) Protective gloves and other appropriate protective clothing and equipment must be used by all personnel handling radioactive tracer material. Precautions must be taken to avoid ingestion or inhalation of radioactive materials.

(2) No licensee shall cause the injection of radioactive material into potable aquifers without prior written authorization from the Authority.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0315
Particle Accelerators

No licensee or registrant shall permit above-ground testing of particle accelerators, designed for use in well-logging, which results in the production of radiation, except in areas or facilities so controlled or shielded that the requirements of OAR 333-120-0100 and 333-105-0030 as applicable, are met.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-113-0325
Energy Compensation Source

The licensee may use an Energy Compensation Source (ECS) which is contained within a logging tool, or other tool components, only if the ECS contains quantities of licensed material not exceeding 3.7 MBq (100 microcuries).

(1) For well logging applications with a surface casing for protecting fresh water aquifers, use of the ECS is only subject to the requirements of 333-113-0120, 333-113-0125 and 333-113-0130.

(2) For well logging applications without a surface casing for protecting fresh water aquifers, use of the ECS is only subject to the requirements of 333-113-0010, 333-113-0120, 333-113-0125, 333-113-0130, 333-113-0150 and 333-113-0501.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0335
Tritium Neutron Generator Target Source

(1) Use of a tritium neutron generator target source, containing quantities not exceeding 1,110 GBq (30 curies) and in a well with a surface casing to protect fresh water aquifers, is subject to the requirements of this division except 333-113-0010, 333-113-0135 and 333-113-0501.

(2) Use of a tritium neutron generator target source, containing quantities exceeding 1,110 GBq (30 curies) or in a well without a surface casing to protect fresh water aquifers, is subject to the requirements of this division except 333-113-0135.

Radiation Surveys and Records

333-113-0401
Radiation Surveys

(1) Radiation surveys must be made and recorded for each area where radioactive materials are used and stored.

(2) Radiation surveys must be made and recorded before transport for the radiation levels in all occupied positions and on the exterior of each vehicle used to transport radioactive material. Such surveys must include each source of radiation or combination of sources to be transported in the vehicle.

(3) If the sealed source assembly is removed from the logging tool before departing the jobsites, the logging tool detector must be energized, or a survey meter used, to assure that the logging tool is free of contamination.

(4) Radiation surveys must be made and recorded at the jobsite or well-head for each tracer operation, except those using hydrogen-3, carbon-14 and sulfur-35. These surveys must include measurements of radiation levels before and after the operation.

(5) If the licensee has reason to believe that, as a result of any operation involving a sealed source, the encapsulation of the sealed source could be damaged by the operation, the licensee must conduct a radiation survey, including a contamination survey, during and after the operation.

(6) The licensee must make a radiation survey at the temporary jobsite before and after each subsurface tracer study to confirm the absence of contamination.

(7) Records required pursuant to sections (1) through (6) of this rule must include the dates, the identification of individual(s) making the survey, the identification of survey instruments(s) used and an exact description of the location of the survey. Records of these surveys must be maintained in accordance with 333-100-0057.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0403
Radioactive Contamination Control

(1) If the licensee detects evidence that a sealed source has ruptured or licensed materials have caused contamination, the licensee must initiate immediately the emergency procedures required by 333-113-0205.

(2) If contamination results from the use of licensed material in well logging, the licensee must decontaminate all work areas, equipment, and unrestricted areas.

(3) During efforts to recover a sealed source lodged in the well, the licensee must continuously monitor, with an appropriate radiation detection instrument or a logging tool with a radiation detector, the circulating fluids from the well, if any, to check for contamination resulting from damage to the sealed source.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-113-0405
Documents and Records Required at Field Stations

Each licensee or registrant must maintain, for inspection by the Authority, the following documents and records for the specific devices and sources used at the field station:

(1) Appropriate license, certificate of registration or equivalent document(s);

(2) Operating and emergency procedures;

(3) Applicable rules;

(4) Records of the latest survey instrument calibrations pursuant to OAR 333-113-0115;

(5) Records of the latest leak test results pursuant to OAR 333-113-0120;

(6) Records of quarterly inventories required pursuant to OAR 333-113-0125;

(7) Utilization records required pursuant to OAR 333-113-0130;

(8) Records of inspection and maintenance required pursuant to OAR 333-113-0145;

(9) Survey records required pursuant to OAR 333-113-0401; and

(10) Training records required pursuant to OAR 333-113-0201.

Stat. Auth.: ORS 453.635

333-113-0410
Documents and Records Required at Temporary Jobsites

Each licensee or registrant conducting operations at a temporary jobsite must have the following documents and records available at that site for inspection by the Authority:

(1) Operating and emergency procedures;

(2) Survey records required pursuant to OAR 333-113-0401 for the period of operation at the site;

(3) Evidence of current calibration for the radiation survey instruments in use at the site;

(4) When operating in the state under reciprocity, a copy of the appropriate license, certificate of registration or equivalent document(s);

(5) Shipping papers for the transportation of radioactive material;

(6) Copy of the license;

(7) Current leak test; and

(8) Validation certificate.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 4-1985, f. & ef. 3-20-85; HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

Notification

333-113-0501
Notification of Incidents, Abandonment and Lost Sources

(1) Notification of incidents and sources lost in other than well logging operations must be made in accordance with appropriate provisions of division 120 of these rules.

(2) Whenever a sealed source or device containing radioactive material is lodged downhole the licensee must:

(a) Monitor at the surface for the presence of radioactive contamination with a radiation survey instrument or logging tool during logging tool recovery operations;

(b) If the environment, any equipment, or personnel are contaminated with licensed material, they must be decontaminated before release from the site or release for unrestricted use; and

(c) Notify the Authority immediately by telephone and subsequently, within 30 days, by confirmatory letter if the licensee knows or has reason to believe that a sealed source has been ruptured. This letter must identify the well or other location, describe the magnitude and extent of the escape of radioactive material, assess the consequences of the rupture and explain efforts planned or being taken to mitigate these consequences.

(3) When it becomes apparent that efforts to recover the radioactive source will not be successful, the licensee must:

(a) Notify the Authority by telephone of the circumstances that resulted in the inability to retrieve the source:

(A) Obtain Authority approval to implement abandonment procedures; or

(B) That the licensee implemented abandonment before receiving Authority approval because the licensee believed there was an immediate threat to public health and safety;

(b) Advise the well-operator of requirements specified in these rules regarding abandonment and an appropriate method of abandonment, that must include:

(A) The immobilization and sealing in place of the radioactive source with a cement plug;

(B) The setting of a whipstock or other deflection device unless the source is not accessible to any subsequent drilling operations; and

(C) The mounting of a permanent identification plaque at the surface of the well, containing the appropriate information required by section (4) of this rule.

(c) Notify the Authority by telephone, giving the circumstances of the loss and request approval of the proposed abandonment procedures; and

(d) File a written report with the Authority within 30 days of the abandonment. The report must contain the following information:

(A) Date of occurrence;

(B) A description of the well logging source involved, including the radionuclide and its quantity, and chemical and physical form;

(C) Surface location and identification of the well;

(D) Results of efforts to immobilize and seal the source in place;

(E) A brief description of the attempted recovery effort;

(F) Depth of the source;

(G) Depth of the top of the cement plug;

(H) Depth of the well;

(I) The immediate threat to public health and safety justification for implementing abandonment if prior Authority approval was not obtained in accordance with section (3)(a)(b) of this rule;

(J) Any other information, such as a warning statement, contained on the permanent identification plaque; and

(K) The names of state agencies receiving a copy of this report.

(4) Whenever a sealed source containing radioactive material is abandoned downhole, the licensee must provide a permanent plaque for posting the well or well-bore. This plaque must:

(a) Be constructed of long-lasting material, such as stainless steel or monel; and

(b) Contain the following information engraved on its face:

(A) The word CAUTION;

(B) The radiation symbol without the conventional color requirement;

(C) The date of abandonment;

(D) The name of the well-operator or well-owner;

(E) The well name and well identification number(s) or other designation;

(F) The sealed source(s) by radionuclide and activity;

(G) The source depth and the depth to the top of the plug;

(H) An appropriate warning, depending on the specific circumstances of each abandonment and approved by the Authority; and

(I) The size of the plaque should be convenient for use on active or inactive wells, e.g., a seven-inch square. Letter size of the word "CAUTION" should be approximately twice the letter size of the rest of the information, e.g., 1/2-inch and 1/4-inch letter size, respectively.

(5) The licensee must immediately notify the Authority by telephone and subsequently by confirming letter if the licensee knows or has reason to believe that radioactive material has been lost in or to an underground potable aquifer. Such notice must designate the well location and must describe the magnitude and extent of loss of radioactive material, assess the consequences of such loss and explain efforts planned or being taken to mitigate these consequences.

(6) The licensee may apply to the Authority for a variance to the requirements of this division for abandonment of an irretrievable well logging source. The request must include the reason these rules cannot be followed and the proposed acceptable alternative. The request must be signed by both the licensee and the well owner/operator.

DIVISION 114

TRAINING FOR EMERGENCY RESPONSE TO RADIOACTIVE MATERIAL INCIDENTS

333-114-0001
General

The purpose of these rules is to insure that the response to a radioactive material accident be both swift and appropriate to minimize damage to any person, property, domestic animals, wildlife or the environment.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.755
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

333-114-0005
Definitions

For the purposes of ORS 469.611 and these rules:

(1) "Certified Training" means radiological safety training in which performance has been demonstrated through the satisfactory completion of an authorized exam.

(2) "Authorized Exam" means an exam, either written or oral; or a performance demonstration that has been authorized by the Authority as adequate to demonstrate the competency of a particular skill level. Whenever possible authorized exams will be developed consistent with the programs and policies with the Oregon Department of Energy, Oregon Department of Environmental Quality, State Fire Accreditation Board, and the Board on Police Standards and Training.

(3) "Skill Level" means:

(a) "Radiological Monitor (RM)" means person who has demonstrated competency through the satisfactory completion of an authorized (RM) exam and therefore is qualified to be a member of a radiological response team. An RM must be recertified every four years;

(b) "Regional Radiological Technical Assistant (RRTA)" means a person who has demonstrated competency through the satisfactory completion of an authorized RRTA exam. An RRTA is also qualified to instruct employees of emergency services agencies in the proper response to transportation accident involving radioactive materials. An RRTA must be recertified every two years;

(c) "Radiological Officer (RO)" means a person who has demonstrated competency through the satisfactory completion of an authorized RO exam and therefore is qualified to advise a community before during and after a nuclear attack and/or incident. A RO must be recertified every three years;

(d) "Radiological Monitor Instructor (RMI)" means a person who has demonstrated competency through the satisfactory completion of an authorized RMI exam and therefore is qualified to be an instructor of "Radiological Monitoring." An RMI must be recertified every three years.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.775
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

333-114-0010
Training

In order to receive certification in radiological safety training from the Oregon State Public Health Division a person must satisfactorily complete the authorized exam administered by an authorized Public Health Division representative. A county will receive certification of training after it has qualified two Regional Radiological Technical Assistants, and completed a radioactive/hazardous materials emergency response exercise as defined in these rules. An "emergency services agency," as defined in ORS 401.025, will receive certification of training after it has qualified one Radiological Monitor per duty shift.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.775
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

333-114-0015
Radioactive/Hazardous Materials Emergency Response Exercise

This is defined as a practice response to an accident involving radioactive or other hazardous materials. The exercise should involve all organizations that would normally be present in a real incident, including but not limited to: Firefighting, law enforcement, prehospital and hospital emergency medical care, highway maintenance and state technical support agencies.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.775
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

DIVISION 115

RADIATION SAFETY REQUIREMENTS FOR X-RAY AND HYBRID GAUGES

333-115-0001
Purpose and Scope

This division provides special requirements for X-ray and hybrid gauges. The requirements of this division are in addition to, and not substitutions for, applicable requirements in divisions 100, 101, 102, 111, and 120 of these rules.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1995, f. & cert. ef. 4-26-95

333-115-0005
Definitions

(1) "X-Ray Gauge" means an X-ray producing device designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density level or interface location.

(2) "Fail-Safe Characteristics" mean design features which cause beam port shutters to close or which otherwise prevent emergence of the primary beam upon failure of a safety or warning device.

(3) "Primary Beam" means ionizing radiation which passes through an aperture of the source housing by a direct path from the X-ray tube or a radioactive source located in the radiation source housing.

(4) "Hybrid Gauge" means a gauging device utilizing both X-ray and radioactive material sources.

(5) "Open-Beam Configuration" means a gauging system in which an individual could accidentally place some part of the body in primary beam path during normal operation.

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

Equipment Requirements

333-115-0010
Safety Device

(1) Except where impractical, an interlocking device which prevents the entry of any portion of an individual's body into the primary beam, or causes the primary beam to be shut off upon entry into its path, shall be provided.

(2) In cases where the primary radiation beam is not intercepted by the detector device under all conditions of operation, protective measures shall be provided, such as auxiliary shielding, to avoid exposure to any individual from the transmitted primary radiation.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87

333-115-0015
Warning Devices

A sign bearing the words, "**Warning — X-rays (or ionizing radiation) — Do not place hands in jaws of gauge**," or equivalent, shall be so located that it is visible to any person operating, aligning or adjusting a gauging device.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87

333-115-0020
Ports

Unused ports on radiation source housings shall be secured in the closed position in a manner which will prevent casual opening.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87

333-115-0025
Labeling

All gauges shall be labeled with a readily discernible sign or signs bearing the radiation symbol and the words:

(1) **CAUTION — HIGH INTENSITY X-RAY BEAM**, or words having a similar intent on the X-ray source housing; and

(2) **CAUTION RADIATION — THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED**, or words having a similar intent, near any switch that energizes an X-ray tube if the radiation source is an X-ray tube; and

(3) **CAUTION — RADIOACTIVE MATERIAL**, on the source housing if the radiation source is a radionuclide.

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

333-115-0030
Shutters

A visible indication of the status of the shutter shall be provided, e.g., red light indicating beam on, green light indicating beam off. This device shall be tested to ensure operations will not continue without a proper functioning warning device. On equipment installed after January 1, 1978, this device shall be of fail-safe design.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87

333-115-0035
Warning Lights

(1) An easily visible light labeled with the words "**BEAM ON**," or words having a similar intent, shall be located:

(a) Near any switch that energizes an X-ray tube and shall be illuminated only when the tube is energized; or

(b) In the case of a radioactive source, near any switch that opens a housing shutter and which shall be illuminated only when the shutter is open.

(2) On equipment installed after January 1, 1978, warning lights shall have fail-safe characteristics.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

Area Requirements

333-115-0101
Radiation Levels

The local components of a gauge shall be so located and arranged and shall include sufficient shielding or access control that no radiation levels exists in any area surrounding the local component groups which could result in a dose to an individual present therein in excess of the dose limits given in OAR 333-120-0180. For systems using X-ray tubes, these levels shall be met at any specified tube rating.

Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1995, f. & cert. ef. 4-26-95

333-115-0105
Surveys

(1) Radiation surveys, as required by OAR 333-120-0200, of all X-ray and Hybrid gauges sufficient to show compliance with OAR 333-115-0101 shall be performed:

(a) Upon installation of the equipment;

(b) A review of all safety devices shall be performed at least quarterly to insure their proper operation (i.e., signs, labels, interlocks, etc.);

(c) Annual surveys and monitoring to insure that operations are conducted safely;

(d) Following any change in the initial arrangement, number or type of local components in the system;

(e) Following any maintenance requiring the disassembly or removal of a local component in the system;

(f) Any time a visual inspection of the local components in the system reveals an abnormal condition;

(g) Whenever personnel monitoring devices show a significant increase over the previous monitoring period or when the readings are approaching the radiation dose limits specified in OAR 333-120-0100.

(2) Records of all reviews and surveys shall be maintained for inspection by the Authority.

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95

333-115-0110
Posting

Each area or room containing any gauge shall be conspicuously posted with a sign or signs bearing the radiation symbol and the words **CAUTION — X-RAY EQUIPMENT**, or words having similar intent.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87

333-115-0115
Security

When not in operation, the equipment shall be secured in such a way as to be accessible to, or operable by, only authorized personnel.

Personnel Requirements

333-115-0201
Instructions

(1) No person shall be permitted to operate or maintain X-ray or Hybrid gauges unless such person has received instruction in and demonstrated competence with regard to:

(a) Identification of radiation hazards associated with the use of the equipment;

(b) Significance of the various radiation warning and safety devices incorporated into the equipment, or the reasons they have not been installed on certain pieces of equipment and the extra precautions required in such cases;

(c) Proper operating procedures for equipment;

(d) Symptoms of an acute localized exposure; and

(e) Proper procedures for reporting an active or suspected exposure.

(2) Each licensee or registrant shall maintain, for inspection by the Authority, records of training which demonstrate that the requirements of this rule have been met.

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 10-1987, f. & ef. 7-28-87; HD 1-1991, f. & cert. ef. 1-8-91

333-115-0205
Personnel Monitoring

Finger or wrist dosimetric devices shall be provided to and shall be used by all personnel working with open beam gauging equipment.

Stat. Auth.: ORS 453.605 - 453.807
Stats. Implemented: ORS 453.605 - 453.807

DIVISION 116

USE OF RADIONUCLIDES IN THE HEALING ARTS

333-116-0010
Purpose and Scope

This division contains the requirements and provisions for the production, preparation, compounding and use of radionuclides in the healing arts and for issuance of licenses authorizing the medical use of this material in Oregon. These requirements and provisions provide for the radiation safety of workers, the general public, patients, and human research subjects. The requirements and provisions of this division are in addition to, and not in substitution for, others in these rules. The requirements and provisions of these rules apply to applicants and licensees subject to this division unless specifically exempted.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-116-0020
Definitions

As used in this division, the following definitions apply:

(1) "Address of use" means the building or buildings identified on the license as the location(s) where radioactive material may be received, used, or stored.

(2) "Area of use" means location(s) at the address of use set aside for the purpose of receiving, using or storing radioactive material.

(3) "Attestation" means required training, experience and appropriate board certification is validated using the Nuclear Regulatory Commission's form 313A.

(4) "Authorized Medical Physicist" means an individual who:

(a) Meets the requirements in OAR 333-116-0730, or 333-116-0905 and 333-116-0760; or

(b) Is identified as an authorized medical physicist or teletherapy physicist on:

(A) A specific medical use license issued by the Authority or an Agreement State or the US Nuclear Regulatory Commission;

(B) A medical use permit issued by a Commission master material licensee;

(C) A permit issued by a Commission or Agreement State broad scope medical use licensee; or

(D) A permit issued by a Commission master material license broad scope medical use permittee.

(5) "Authorized nuclear pharmacist" means a pharmacist who:

(a) Meets the requirements in OAR 333-116-0910 and 333-116-0915;

(b) Is identified as an authorized nuclear pharmacist on an Authority, Agreement State, or U.S. Nuclear Regulatory Commission license that authorizes the use of radioactive material in the practice of nuclear pharmacy;

(c) Is identified as an authorized nuclear pharmacist on a license issued by an Authority, Agreement State, or U.S. Nuclear Regulatory Commission specific licensee of broad scope that is authorized to permit the use of radioactive material in the practice of nuclear pharmacy; or

(d) Is approved as an authorized nuclear pharmacist by a nuclear pharmacy licensed (authorized) by the Authority, the U.S. Nuclear Regulatory Commission, or an Agreement State to approve authorized nuclear pharmacists.

(6) "Authorized user" means a physician, dentist or podiatrist who:

(a) Meets the requirements listed in OAR 333-116-0660, 333-116-0670, 333-116-0680, 333-116-0683, 333-116-0687, 333-116-0690, 333-116-0700, 333-116-0710, 333-116-0720, and 333-116-0740;

(b) Is identified as an authorized user on an Authority, Agreement State, Licensing State or U.S. Nuclear Regulatory Commission license that authorizes the medical use of radioactive material; or

(c) Is identified as an authorized user on a permit issued by an Authority, Agreement State, or U.S. Nuclear Regulatory Commission licensee of broad scope that is authorized to permit the medical use of radioactive material.

(7) "Black Box" means the radiopharmaceutical production purification system used in a PET facility.

(8) "Brachytherapy" means a method of radiation therapy in which sources are used to deliver a radiation dose at a distance of up to a few centimeters by surface, intracavitary, intraluminal, or interstitial application.

(9) "Brachytherapy source" means an individual sealed source or a manufacturer-assembled source train or a combination of these sources that is designed to deliver a therapeutic dose of radiation within a few centimeters, by surface, intracavitary, or interstitial application that is not designed to be disassembled by the user.

(10) "Dedicated check source" means a radioactive source that is used to assure the constant operation of a radiation detection or measurement device over several months or years. This source may also be used for other purposes.

(11) "Dental use" means the intentional external administration of the radiation from radioactive material to human beings in the practice of dentistry in accordance with a license issued by a State or Territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico.

(12) "Dentist" means an individual licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico to practice dentistry.

(13) "Diagnostic clinical procedures manual" means a collection of written procedures that describes each method (and other instructions and precautions) by which the licensee performs diagnostic clinical procedures; where each diagnostic clinical procedure has been approved by the authorized user and includes the radiopharmaceutical, dosage, and route of administration.

(14) "High dose-rate remote afterloader" means a device that remotely delivers a brachytherapy source, with a dose rate in excess of two gray (200 rad) per hour, to the point or surface where the dose is prescribed.

(15) "Human Research Subject" means a living person that an authorized user, conducting research, obtains data resulting from the intentional internal or external administration of radioactive material, or the radiation from radioactive material, to the individual. For the purpose of these rules, unless otherwise noted, the term patient applies to a human research subject.

(16) "Low dose-rate remote afterloader" means a device that remotely delivers a brachytherapy source, with a dose rate of less than two gray (200 rad) per hour, to the point or surface where the dose is prescribed.

(17) "Management" means the chief executive officer or that individual's designee.

(18) "Manual Brachytherapy", as used in this part, means a type of brachytherapy in which the brachytherapy sources (e.g., seeds, ribbons) are manually placed on, or in close proximity, to the treatment site or inserted directly into the tissue volume.

(19) "Medical Event" means an event where a patient or human research subject: (a) Receives a dose that differs from the prescribed dose by:

(A) The total dose delivered differs from the prescribed dose by 20 percent or more; or

(B) The total dosage delivered differs from the prescribed dosage by 20 percent or more or falls outside the prescribed dosage range; or

(C) The fractionated dose delivered differs from the prescribed dose, for a single fraction, by 50 percent or more; or

(D) A dose that would have resulted from the prescribed dosage by more than 0.05 Sv (5 rem) effective dose equivalent, 0.5 Sv (50 rem) to an organ or tissue, or 0.5 Sv (50 rem) shallow dose equivalent to the skin; or

(E) An administration of a wrong radiopharmaceutical drug containing radioactive material; or

(F) An administration of a radiopharmaceutical drug containing radioactive material by the wrong route of administration; or

(G) An administration of a dose or dosage to the wrong individual or human research subject; or

(H) An administration of a dose or dosage delivered by the wrong mode of treatment; or

(I) A dose to the skin or an organ or tissue other than the treatment site that exceeds by 0.5 Sv (50 rem) to an organ or tissue and 50 percent or more of the dose expected from the administration defined in the written directive (excluding, for permanent implants, seeds that were implanted in the correct site but migrated outside the treatment site).

(b) An event resulting from intervention of a patient or human research subject in which the administration of radioactive material or radiation from radioactive material results or will result in unintended permanent functional damage to an organ or a physiological system, as determined by a physician shall be considered as a medical event.

(c) A leaking sealed source shall be considered as a medical event.

(20) "Medical institution" means an organization in which more than one medical discipline is practiced.

(21) "Medical use" means the intentional internal or external administration of radioactive material, or the radiation from radioactive material to patients or human research subjects under the supervision of an authorized user.

(22) "Ministerial change" means a change that is made, after ascertaining the applicable requirements, by persons in authority in conformance with the requirements and without making a discretionary judgment about whether those requirements should apply in the case at hand.

(23) "Mobile nuclear medicine service" means the transportation and medical use of radioactive material.

(24) "Nuclear Pharmacist" means an authorized nuclear pharmacist, as defined in OAR 333-116-0020, who has received additional training, pursuant to OAR 333-116-0910 and 333-116-0915 in the management and handling of radiopharmaceutical drugs and is authorized by license to receive, use, transfer, and dispose of such radiopharmaceutical drugs.

(25) "Output" means the exposure rate, dose rate or a quantity related in a known manner to these rates from a teletherapy unit for a specified set of exposure conditions.

(26) "Patient Intervention" means actions taken by a patient or human research subject, whether intentional or unintentional, interrupt or terminate the administration of radioactive materials or radiation.

(27) "PET" means Positron Emission Tomography.

(28) "PET Isotope Nuclear Pharmacy" means a licensed facility that compounds radiopharmaceuticals using positron emitting isotopes for use at licensed medical facilities.

(29) "PET cyclotron facility" means a facility that manufactures short-lived radioisotopes for use in compounding radiopharmaceuticals at a PET Isotope Nuclear Pharmacy.

(30) "PET Medical Facility" means a clinical nuclear medicine facility that utilizes positron-emitting isotopes for diagnostic imaging.

(31) "Pharmacist" means an individual licensed by a state or territory of the United States, The District of Columbia, or the Commonwealth of Puerto Rico to practice pharmacy.

(32) "Physician" means a medical doctor or doctor of osteopathy licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico to prescribe drugs in the practice of medicine.

(33) "Podiatric use" means the intentional external administration of the radiation from byproduct material to human beings in the practice of podiatry in accordance with a license issued by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico.

(34) "Podiatrist" means an individual licensed by a state or territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico to practice podiatry.

(35) "Positron Emission Tomography (PET) facility" means a facility comprised of an accelerator that produces positron-emitting isotopes, a radiopharmacy that specializes in preparation of PET radiopharmaceuticals, and/or a clinic that uses PET isotopes for medical diagnostic purposes.

(36) "Preceptor" means an individual who provides, directs, or verifies training and experience required for an individual to become an authorized user, an authorized medical physicist, an authorized nuclear pharmacist, or a Radiation Safety Officer. The preceptor must have previously met all of the applicable requirements and be so named on a radioactive materials license issued by the Authority, the Nuclear Regulatory Commission, an Agreement State or licensing state.

(37) "Prescribed dosage" means the specified activity or range of activity of a radiopharmaceutical or radioisotope as documented:

(a) In a written directive; or

(b) Either in the diagnostic clinical procedures manual or in any appropriate record in accordance with the directions of the authorized user for diagnostic procedures.

(38) "Prescribed dose" means:

(a) For gamma stereotactic radiosurgery, the total dose as documented in the written directive;

(b) For teletherapy, the total dose and dose per fraction as documented in the written directive;

(c) For manual brachytherapy, either the total source strength and exposure time or the total dose, as documented in the written directive; or

(d) For remote brachytherapy afterloaders, the total dose and dose per fraction as documented in the written directive.

(39) "Pulsed dose-rate remote afterloader" means a special type of remote afterloading device that uses a single source capable of delivering dose rates in the "high dose rate" range, but is used to simulate the radiobiology of a low dose rate treatment by inserting the source for a given fraction of each hour.

(40) "Radiation Safety Officer" means an individual who:

(a) Meets the requirements in OAR 333-116-0640, 333-116-0650, 333-116-0740 and 333-116-0760; or

(b) Is identified as a Radiation Safety Officer on:

(A) A specific medical use license issued by the Nuclear Regulatory Commission or Agreement State; or

(B) A medical use permit issued by a Nuclear Regulatory Commission master material licensee.

(41) "Recordable Event" (See Medical Event).

(42) "Sealed source" means any radioactive material that is encased in a capsule designed to prevent leakage or escape of the radioactive material.

(43) "Stereotactic Radiosurgery" means the use of external radiation in conjunction with a stereotactic guidance device to very precisely deliver a dose to a tissue volume.

(44) "Structured educational program" means an educational program designed to impart particular knowledge and practical education through interrelated studies and supervised training.

(45) "Teletherapy" means therapeutic irradiation in which the source of radiation is at a distance from the body.

(46) "Teletherapy physicist" means the individual identified as the qualified teletherapy physicist on an Authority license.

(47) "Therapeutic Dosage" means a dosage of unsealed byproduct material that is intended to deliver a radiation dose to a patient or human research subject for palliative or curative treatment.

(48) "Therapeutic Dose" means a radiation dose delivered from a source containing byproduct material to a patient or human research subject for palliative or curative treatment.

(49) "Treatment site" means the anatomical description of the tissue intended to receive a radiation dose, as described in a written directive.

(50) "Unit dosage" means a dosage intended for medical use in a single patient or human research subject that has been obtained from a manufacturer or preparer licensed by the Authority as a nuclear pharmacy.

(51) "Visiting authorized user" means an authorized user who is not identified on the license of the licensee being visited.

(52) "Written directive" means an order in writing for a specific patient, dated and signed by an authorized user prior to the administration of a radiopharmaceutical or radiation, except as specified in OAR 333-116-0125(1)(e), containing the following information:

(a) For any administration of quantities greater than 1.11 megabecquerels (30 uCi) of either sodium iodide I-125 or I-131: the dosage;

(b) For a therapeutic administration of a radiopharmaceutical other than sodium iodide I-125 or I-131: the radiopharmaceutical, dosage, and route of administration;

(c) For gamma stereotactic radiosurgery: target coordinates, collimator size, plug pattern, and total dose;

(d) For teletherapy: the total dose, dose per fraction, treatment site, and overall treatment period;

(e) For high-dose-rate remote afterloading brachytherapy: the radioisotope, treatment site, and total dose; or

(f) For all other brachytherapy:

(A) Prior to implantation: the radioisotope, number of sources, and source strengths; and

(B) After implantation but prior to completion of the procedure: the radioisotope, treatment site, and total source strength and exposure time (or, equivalently, the total dose).

FDA, Other Federal, and State Requirements

Nothing in this part relieves the licensee from complying with applicable FDA, other Federal, and State requirements governing radiopharmaceutical drugs or devices.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 4-2007, f. & cert. ef. 3-1-07; PH 10-2011, f. 9-30-11, cert. ef. 10-1-11

333-116-0027
Implementation

(1) A licensee must implement the provisions in division 333-116 no later June 15, 2006.

(2) When a requirement in division 333-116 differs from the requirement in an existing license condition, the more restrictive requirement must govern until there is a license amendment or license renewal.

(3) Any existing license condition, not affected by a requirement in division 333-116, remains in effect until the license is amended or renewed.

(4) If a license condition exempted a licensee from a provision of division 333-116 on June 15, 2006, it will continue to exempt a licensee from the corresponding provision in division 333-116.

(5) If a license condition cites provisions in division 333-116 that will be deleted on June 15, 2006, then the license condition remains in effect until the license is amended or renewed to modify or remove the condition.

(6) Licensees must continue to comply with any license condition that requires it to implement procedures required by OAR 333-116-0525, 333-116-0580, 333-116-0583, and 333-116-0587 until there is a license amendment or renewal that modifies the license condition.

Stat. Auth.: ORS 453.635

Hist.: PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-116-0030
License Required

(1) No person shall manufacture, produce, acquire, receive, possess, use or transfer radioactive material for medical use except in accordance with a specific or general license issued pursuant to this division or as otherwise provided in this division.

(2) Unless prohibited by license condition, a specific license is not needed for an individual to:

(a) Receive, possess, use or transfer radioactive material in accordance with the rules in this division under the supervision of an authorized user as provided in OAR 333-116-0100; or

(b) Prepare unsealed byproduct material for medical use in accordance with the rules in this division under the supervision of an authorized nuclear pharmacist or authorized user as provided in OAR 333-116-0100.

(3) Notwithstanding the above requirements, any licensee licensed pursuant to this rule also is authorized to use radioactive material under the general license in OAR 333-102-0130 for the specified *in vitro* uses without filing the form as required by 333-102-0130(2); the licensee is subject to the other provisions of 333-102-0130.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; HD 1-1995, f. & cert. ef. 4-26-95; PH 4-2007, f. & cert. ef. 3-1-07

333-116-0035
Application for License, Amendment, or Renewal

(1) An application must be signed by the management of the facility.

(2) An application for a license for medical use of radioactive material as described in OAR 333-116-0300, 333-116-0320, 333-116-0360, 333-116-0400, 333-116-0420 and 333-116-0480 and medical use of byproduct material as described in OAR 333-116-0485 must be made by filing a "Radioactive Materials License Application: Medical." A request for a license amendment or renewal may be submitted in letter format.

(3) Licensing of remote afterloaders as described in OAR 333-116-0480 requires a separate "Radioactive Materials License Application: The Medical License application must be completed and submitted to the Authority. A request for a license amendment or renewal may be submitted in letter format.

(4) An application for a license for medical use of radioactive material as described in OAR 333-116-0800, Licensing and Registration of Positron Emission Tomography (PET) Facilities, must be made by filing a "Radioactive Materials License Application: Medical."

(a) In addition to the information required in the "Radioactive Materials License Application: Medical," the application must also include information regarding any radiation safety aspects of the medical use of the radioactive material that is not addressed in this division, as well as any specific information necessary for:

(A) Radiation safety precautions and instructions;

(B) Training and experience of proposed users;

(C) Methodology for measurement of dosages or doses to be administered to patients or human research subjects; and

(D) Calibration, maintenance, and repair of equipment necessary for radiation safety.

(b) The applicant of licensee must also provide any other information requested by the Authority in its review of the application.

NOTE: An applicant that satisfies the requirements specified in OAR 333-102-0900 may apply for a Broad Scope A specific license.

333-116-0040
License Amendments

A licensee must apply for and must receive a license amendment:

(1) Before receiving or using radioactive material for a method or type of medical use not permitted by the license issued under this division;

(2) Before permitting anyone to work as an authorized user, authorized nuclear pharmacist, or authorized medical physicist under the license except:

(a) For an authorized user; an individual who meets the requirements in OAR 333-116-0760, 333-116-0660, 333-116-0670, 333-116-0680, 333-116-0683, 333-116-0687, 333-116-0690, 333-116-0710 and 333-116-0720.

(b) For an authorized nuclear pharmacist; an individual who meets the requirements in OAR 333-116-0910 and 333-116-0760.

(c) For an authorized medical physicist; an individual who meets the requirements in OAR 333-116-0905 and 333-116-0760.

(d) An individual Identified as an authorized user, authorized nuclear pharmacist, or an authorized medical physicist on a Nuclear Regulatory Commission or Agreement State license that authorizes the use of radioactive material in medical use or in the practice of nuclear pharmacy.

(3) Before changing the Radiation Safety Officer except as provided in OAR 333-116-0090;

(4) Before receiving radioactive material in excess of the amount authorized on the license;

(5) Before adding to or changing the areas of use or mailing address identified on the license; and

(6) Before revising procedures required by OAR 333-116-0495, 333-116-0580, 333-116-0583, and 333-116-0587 as applicable where such revision reduces radiation safety.

333-116-0045
Provisions for Research Involving Human Subjects.

(1) A licensee may conduct research involving human research subjects only if it uses the byproduct materials specified in, and for the uses authorized by its license.

(2) If the research is conducted, funded, supported, or regulated by a federal agency that has implemented the Federal Policy for the Protection of Human Subjects (Federal Policy), the licensee shall, before conducting research:

(a) Obtain review and approval of the research from an Institutional Review Board, as defined and described in the Federal Policy; and

(b) Obtain "informed consent," as defined and described in the Federal Policy, from the human research subject.

(3) If the research is not conducted, funded, supported, or regulated by another federal agency that has implemented the Federal Policy, the licensee shall, before conducting research, submit a license amendment request to the Authority and receive approval by amendment. The amendment request must include a written commitment that the licensee must, before conducting research;

(a) Obtain review and approval of the research from an Institutional Review Board, as defined and described in the Federal Policy; and

(b) Obtain informed consent, as defined and described in the Federal Policy, from the human research subject.

(4) Nothing in this rule relieves licensees from complying with other requirements in this division.

333-116-0050
Notifications

(1) A licensee must provide to the Authority a copy of the board certification, the Nuclear Regulatory Commission or Agreement State license, or the permit issued by a licensee of Broad Scope for each individual no later than 30 days after the date that the licensee permits the individual to work as an authorized user, or an authorized nuclear pharmacist pursuant to OAR 333-116-0040(2)(a) through (d).

(2) A licensee must notify the Authority by letter no later than 30 days after:

(a) An authorized user, an authorized nuclear pharmacist, a Radiation Safety Officer or an authorized medical physicist permanently discontinues performance of duties under the license or has a name change;

(b) The licensee's mailing address changes;

(c) The licensee's name changes, but the name does not constitute a transfer of control of the license as described in OAR 333-102-0305; or

(d) The licensee has added to or changed the areas where radioactive material is used in accordance with OAR 333-116-0200 and 333-116-0300.

(3) The licensee must mail the documents required in this division to the Authority for review.

333-116-0055
Exemptions Regarding Type a Specific Licenses of Broad Scope

A licensee possessing a Type A specific license of broad scope for medical use is exempt from:

(1) The provisions of OAR 333-116-0040(2);

(2) The provisions of OAR 333-116-0040(5) regarding additions to or changes in areas of use only at the addresses specified in the license;

(3) The provisions of OAR 333-116-0050(1);

(4) The provisions of OAR 333-116-0050(2)(a) for an authorized user, or authorized nuclear pharmacist, and

(5) The provisions of OAR 333-116-0140(1).

333-116-0057
License Issuance

(1) The Authority must issue a license for the medical use of radioactive material if:

(a) The applicant has filed a "Radioactive Materials License Application: Medical" in accordance with the instructions in OAR 333-116-0035;

(b) The applicant has paid any applicable fee as provided in division 103 of these rules;

(c) The Authority finds the applicant equipped and committed to observe the safety standards established by the Authority in these rules for the protection of the public health and safety; and

(d) The applicant meets the requirements of division 102 of these rules.

(2) The Authority must issue a license for mobile services if the applicant:

(a) Meets the requirements in section (1) of this rule; and

(b) Assures that individuals or human research subjects to whom radiopharmaceuticals or radiation from implants will be administered may be released following treatment in accordance with OAR 333-116-0460.

333-116-0090
Authority and Responsibilities for the Radiation Protection Program

(1) In addition to the radiation protection program requirements of OAR 333-120-0020, a licensee's management must approve in writing:

(a) Requests for a license application, renewal, or amendment before submittal to the Authority;

(b) Any individual before allowing that individual to work as an authorized user, authorized nuclear pharmacist, or authorized medical physicist; and

(c) Radiation protection program changes that do not require a license amendment and are permitted under OAR 333-116-0123.

(2) A licensee's management must appoint a Radiation Safety Officer, who agrees, in writing, to be responsible for implementing the radiation protection program. The licensee, through the Radiation Safety Officer, must ensure that radiation safety activities are being performed in accordance with licensee-approved procedures and regulatory requirements.

(3) For up to 60 days each year, a licensee may permit an authorized user or an individual qualified to be a Radiation Safety Officer, under OAR 333-116-0650, 333-116-0740 and 333-116-0760, to function as a temporary Radiation Safety Officer and to perform the functions of a Radiation Safety Officer, as provided in section (7) of this rule, if the licensee takes the actions required in

sections (2), (5), (7) and (8) of this rule and notifies the Authority in accordance with OAR 333-116-0050(2).

(4) A licensee may simultaneously appoint more than one temporary Radiation Safety Officer in accordance with section (3) of this rule, if needed to ensure that the licensee has a temporary Radiation Safety Officer that satisfies the requirements to be a Radiation Safety Officer for each of the different types of uses of byproduct material permitted by the license.

(5) A licensee must establish the authority, duties, and responsibilities of the Radiation Safety Officer in writing.

(6) A licensee must provide the Radiation Safety Officer sufficient authority, organizational freedom, time, resources, and management prerogative, to:

(a) Identify radiation safety problems;

(b) Initiate, recommend, or provide corrective actions;

(c) Stop unsafe operations; and

(d) Verify implementation of corrective actions.

(7) Licensees that are authorized for two or more different types of uses of radioactive material under OAR chapter 333, division 116, must establish a Radiation Safety Committee to oversee all uses of radioactive material permitted by the license. The Committee must include an authorized user of each type of use permitted by the license, the Radiation Safety Officer, a representative of the nursing service, and a representative of management who is neither an authorized user nor a Radiation Safety Officer. The Committee may include other members the licensee considers appropriate.

(8) A licensee's Radiation Safety Committee must meet at intervals not to exceed six months. The licensee must maintain minutes of each meeting in accordance with OAR 333-100-0057.

(9) A licensee must retain a record of actions taken under sections (1), (2) and (5) of this rule in accordance with OAR 333-100-0057. These records must be retained for the life of the license.

333-116-0100
Supervision

(1) A licensee who permits the receipt, possession, use or transfer of radioactive material by an individual under the supervision of an authorized user as allowed by OAR 333-116-0030 must:

(a) In addition to the requirements in OAR 333-111-0010, instruct the supervised individual in the licensee's written radiation protection procedures, written directive procedures, the licensee's written quality management program, the Oregon Rules for the Control of Radiation and the license conditions appropriate to that individual's use of radioactive material; and

(b) Require the supervised individual to follow the instructions of the supervising authorized user for medical uses of radioactive material, written radiation protection procedures, written directive procedures, regulations of division 333-116, and license conditions with respect to the medical use of radioactive material.

(2) A licensee that permits the preparation of radioactive material for medical use by an individual under the supervision of an authorized nuclear pharmacist or physician who is an authorized user, as allowed by OAR 333-116-0030(3) must:

(a) In addition to the requirements in OAR 333-111-0010, instruct the supervised individual in the preparation of radioactive material for medical use, as appropriate to that individual's use of radioactive material; and

(b) Require the supervised individual to follow the instructions of the supervising authorized user or authorized nuclear pharmacist regarding the preparation of radioactive material for medical use, the written radiation protection procedures established by the licensee and division 333-116, and license conditions.

(3) A licensee that permits supervised activities under sections (1) and (2) of this rule is responsible for the acts and omissions of the supervised individual.

333-116-0105
Written Directives

(1) A written directive must be prepared, dated and signed by an authorized user prior to administration of I-131 sodium iodide greater than 1.11 Megabecquerels (MBq) (30 microcuries (uCi)), or any therapeutic dosage of a radiopharmaceutical, or any therapeutic dose of radiation from radioactive material.

(2) The written directive must contain the patient or human research subject's name and the following:

(a) For any administration of quantities greater than 1.11 MBq (30 uCi) of sodium iodide I-131 or I-125; the dosage;

(b) For a therapeutic administration of a radiopharmaceutical other than sodium iodide I-131: the radiopharmaceutical dosage, and route of administration;

(c) For gamma stereotactic radiosurgery: target coordinates (including gamma angle), collimator size, plug pattern, total dose for the treatment, and the total treatment volume for each anatomically distinct treatment site;

(d) For teletherapy: the total dose, dose per fraction, number of fractions, treatment site, and overall treatment period;

(e) For remote afterloading brachytherapy: the radionuclide, treatment site, dose per fraction, number of fractions, and total dose; or

(f) For all other brachytherapy:

(A) Prior to implantation: treatment site, the radionuclide, number of sources and source strengths or dose; and

(B) After implantation but prior to completion of the procedure: the radionuclide, treatment site, and total source strength and exposure time (or equivalently, the total dose).

(3) A written revision to an existing written directive may be made if the revision is dated and signed by an authorized user before the administration of the dosage of unsealed byproduct material, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose, or the next fractional dose.

(4) If, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive is acceptable. The oral revision must be documented as soon as possible in the patient's record. A revised written directive must be signed by the authorized user within 48 hours of the oral revision.

(5) The licensee must retain the written directive in accordance with OAR 333-100-0057.

333-116-0107
Procedures for Administrations Requiring a Written Directive

(1) For any administration requiring a written directive, the licensee must develop, implement, and maintain written procedures to provide high confidence that:

(a) The patient's or human research subject's identity is verified before each administration; and

(b) Each administration is in accordance with the written directive.

(2) The procedures required by section (1) of this rule must, at a minimum, address the following items applicable to the licensee's use of radioactive material:

(a) Verifying the identity of the patient or human research subject;

(b) Verifying that the specific details of the administration are in accordance with the written directive and, if applicable, the treatment plan;

(c) Checking both manual and computer-generated dose calculations; and

(d) Verifying that any computer-generated dose calculations are correctly transferred into the consoles of therapeutic medical devices.

(3) The licensee must retain a copy of procedures in accordance with OAR 333-100-0057.

Stat. Auth.: ORS 453.635

333-116-0110
Visiting Authorized User

(1) A licensee may permit any visiting authorized user to use licensed material for medical use under the terms of the licensee's license for 60 days each year if:

(a) The visiting authorized user has the prior written permission of the licensee's management and, if the use occurs on behalf of an institution, the institution's Radiation Safety Committee;

(b) The licensee has a copy of the Authority license or a license issued by the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State, that identifies the visiting authorized user by name as an authorized user for medical use; and

(c) Only those procedures for which the visiting authorized user is specifically authorized by the Authority license are performed by that individual.

(2) A licensee need not apply for a license amendment in order to permit a visiting authorized user to use licensed material as described in section (1) of this rule.

(3) A licensee must retain copies of the records specified in this rule in accordance with OAR 333-100-0057.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-116-0120
Mobile Nuclear Medicine Service Administrative Requirements

(1) The Authority will only license mobile nuclear medicine services in accordance with OAR 333-116-0300, 333-116-0320, and 333-116-0400 of this division and OAR 333-102-0130.

(2) Mobile nuclear medicine service licensees must:

(a) Obtain a letter signed by the management of each client for which services are rendered that authorizes use of licensed radioactive material at the client's address of use. This letter must clearly delineate the authority and responsibility of both the client and the mobile medical service. If the client is licensed, the letter must document procedures for notification, receipt, storage and documentation of transfer of radioactive material delivered to the client's address for use by the mobile medical service. The mobile nuclear medicine service licensee must retain the letter for three years after the last provision of service.

(b) Check instruments used to measure the activity of unsealed byproduct material for proper function before use at each client's address or on each day of use, whichever is more frequent. At a minimum, the check for proper function must include a constancy check;

(c) Check survey instruments for proper operation with a dedicated check source before use at each client's address; and

(d) Survey all areas of use to ensure compliance with the requirements in division 333-120 before leaving a client's address.

(3) If a mobile nuclear medicine service provides services that the client also is authorized to provide, the client is responsible for assuring that services are conducted in accordance with the rules in this division while the mobile nuclear medicine service is under the client's direction.

(4) A mobile nuclear medicine service may not order radioactive material to be delivered directly from the manufacturer or the distributor to the client's address of use unless the client has a radioactive materials license. Radioactive material delivered to the client's address of use must be received and handled in conformance with the client's license.

(5) A mobile medical service licensee must, at a minimum, maintain the following documents onboard each mobile unit:

(a) Current operating and emergency procedures;

(b) Copy of the current license;

(c) Copies of the letter required by section (2) of this rule;

(d) Current calibration records for each survey instrument and diagnostic equipment or dose delivery device in use; and

(e) Survey records covering uses associated with the mobile unit during, at a minimum, the preceding 90 calendar days.

(6) A licensee must retain copies of the records specified in this rule in accordance with OAR 333-100-0057. The records required for subsections (2)(b), (2)(c) and (2)(d) of this rule must include the date of the survey or test, the results of the survey or test, the instrument used to make the survey or source used to perform the test, and the name of the individual who performed the survey or test.

333-116-0123
Radiation Safety Program Changes

(1) A licensee may revise its radiation protection program without Authority approval if:

(a) The revision does not require a license amendment under OAR 333-116-0040;

(b) The revision is in compliance with the regulations and the license;

(c) The revision has been reviewed and approved by the Radiation Safety Officer, licensee management and, if applicable, the Radiation Safety Committee; and

(d) The affected individuals are instructed on the revised program before the changes are implemented.

(2) A licensee must retain a record of each change in accordance with OAR 333-100-0057. The record must include the effective date of the change, a copy of the old and new radiation safety procedures, the reason for the change, a summary of radiation safety matters that were considered before making the change, the signature of the Radiation Safety Officer, and the signatures of the affected authorized users and of management, or, in a medical institution, the Radiation Safety Committee's chairman and the management representative.

333-116-0125
Quality Management Program

(1) Each applicant or licensee under this division, as applicable, must establish and maintain a written quality management program to provide high confidence that radioactive material or radiation from radioactive material will be administered as directed by the authorized user. The quality management program must include written policies and procedures to meet the following specific objectives:

(a) That, prior to administration, a written directive (see NOTE below) is prepared for:

(A) Any teletherapy radiation dose;

(B) Any gamma stereotactic radiosurgery radiation dose;

(C) Any brachytherapy radiation dose;

(D) Any administration of quantities greater than 1.11 megabecquerels (30 uCi) of either sodium iodide I-125 or I-131; or

(E) Any therapeutic administration of a radiopharmaceutical, other than sodium iodide I-125 or I-131;

(b) That, prior to each administration, the patient's identity is verified by more than one method as the individual named in the written directive;

(c) That final plans of treatment and related calculations for brachytherapy, teletherapy, and gamma stereotactic radiosurgery are in accordance with the respective written directives;

(d) That each administration is in accordance with the written directive; and

(e) That any unintended deviation from the written directive is identified and evaluated, and appropriate action is taken.

NOTE: If, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive will be acceptable, provided that the oral revision is documented immediately in the patient's record and a revised written directive is signed by the authorized user within 48 hours of the oral revision. Also, a written revision to an existing written directive may be made for any diagnostic or therapeutic procedure provided that the revision is dated and signed by an authorized user prior to the administration of the radiopharmaceutical dosage, the brachytherapy dose, the gamma stereotactic radiosurgery dose, the teletherapy dose, or the next teletherapy fractional dose. If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral directive will be acceptable, provided that the information contained in the oral directive is documented immediately in the patient's record and a written directive is prepared within 24 hours of the oral directive.

(2) The licensee shall:

(a) Develop procedures for and conduct a review of the quality management program including, since the last review, an evaluation of:

(A) A representative sample of patient administrations,

(B) All recordable events, and

(C) All medical events to verify compliance with all aspects of the quality management program; these reviews shall be conducted at intervals no greater than 12 months;

(b) Evaluate each of these reviews to determine the effectiveness of the quality management program and, if required, make modifications to meet the objectives of subsection (2)(a) of this rule; and

(c) Retain records of each review, including the evaluations and findings of the review, in an auditable form for three years.

(3) The licensee shall evaluate and respond, within 30 days after discovery of the recordable event, to each recordable event by:

(a) Assembling the relevant facts including the cause;

(b) Identifying what, if any, corrective action is required to prevent recurrence; and

(c) Retaining a record, in an auditable form, for five years or until inspected by the Authority, of the relevant facts and what corrective action, if any, was taken.

(4) The licensee shall retain:

(a) Each written directive; and

(b) A record of each administered radiation dose or radiopharmaceutical dosage where a written directive is required in subsection (1)(a) of this rule, in an auditable form, for five years, or until inspected by the Authority, after the date of administration.

(5) The licensee may make modifications to the quality management program to increase the program's efficiency provided the program's effectiveness is not decreased. The licensee shall furnish the modification to the Authority within 30 days after the modification has been made.

(6) Each applicant for a new license, as applicable, shall submit to the Authority in accordance with OAR 333-102-0190 a quality management program as part of the application for a license and implement the program upon issuance of the license by the Authority.

Suppliers

A licensee may use for medical use only:

(1) Radioactive material manufactured, produced, labeled, prepared, compounded, packaged and distributed in accordance with a license issued pursuant to these rules or the equivalent rules of another Agreement State, a Licensing State or the U.S. Nuclear Regulatory Commission.

(2) Reagent kits, radiopharmaceuticals, and/or radiobiologics that have been manufactured, labeled, packaged and distributed in accordance with an approval issued by the U.S. Department of Health and Human Services, Food and Drug Administration.

(3) Radiopharmaceuticals compounded from a prescription in accordance with the regulations of the state Board of Pharmacy.

(4) Teletherapy and brachytherapy sources manufactured and distributed in accordance with a license issued pursuant to these regulations, or the equivalent regulations of another Agreement State, a Licensing State, or the Nuclear Regulatory Commission.

(5) Sealed sources or devices non-commercially transferred from a 10 CFR, Part 35 licensee or Agreement State medical licensee.

General Technical Requirements

333-116-0150
Quality Control of Imaging Equipment

(1) Each licensee must establish written quality control procedures for all diagnostic equipment used to obtain images from radionuclide studies. As a minimum the quality control procedures and frequencies must include quality control procedures recommended by equipment manufacturers or procedures which have been approved by the Authority. The licensee must conduct quality control procedures in accordance with written procedures.

(2) Copies of procedures and records generated from implementing these procedures must be maintained in accordance with OAR 333-100-0057.

333-116-0160
Possession, Use, Calibration and Check of Dose Calibrators

(1) A medical use licensee authorized to administer either radiopharmaceuticals or unsealed radioactive materials must possess a dose calibrator and use it to measure the amount of activity of radionuclides prior to administration to each patient or human research subject. The licensee must also develop, implement and maintain written procedures for proper calibration and operation of the dose calibrator.

(2) At a minimum, a licensee must:

(a) Check each dose calibrator for constancy and proper operation with a dedicated check source at the beginning of each day of use. To satisfy the requirement of this rule, the check must be done on a frequently used setting with a sealed source of not less than 1.85 megabecquerels (50 uCi) of any photon-emitting radionuclide with a half-life greater than 90 days. The results of this test must be within +ten percent of the sources stated activity. Sources used for the daily constancy test must be determined by the manufacturer to be within +five percent of the stated activity and traceable to the National Institute of Standards and Technology or other standards recognized as being equivalent by the National Institute of Standards and Technology.

(b) Test each dose calibrator for accuracy upon installation and at intervals not to exceed 12 months thereafter by assaying at least two sealed sources containing different photon-emitting radionuclides 1.85 megabecquerels (50 uCi) each, at least one of

which has a principal photon energy between 100 keV and 500 keV. All sources used to satisfy the accuracy test must be determined by the manufacturer to be within +five percent of the stated activity and traceable to the National Institute of Standards and Technology or other standards recognized as being equivalent by the National Institute of Standards and Technology;

(c) Test each dose calibrator for linearity upon installation and at intervals not to exceed three months thereafter over the range of use between 1.1 megabecquerels (30 microcuries) and the highest dosage that will be administered; and

(d) Test each dose calibrator for geometry dependence upon installation over the range of volumes and volume configurations for which it will be used. The licensee must keep a record of this test for the duration of the use of the dose calibrator.

(3) A licensee must mathematically correct dosage readings for any geometry or linearity error that exceeds 10 percent if the dosage is greater than 1.1 megabecquerels (30 microcuries) and must repair or replace the dose calibrator if the accuracy or constancy error exceeds 10 percent.

(4) A licensee must also perform checks and tests required by section (2) of this rule following adjustment or repair of the dose calibrator and prior to use.

(5) A licensee must retain a record of each check and test required by section (2) of this rule in accordance with OAR 333-100-0057. The records required by section (2) of this rule must include:

(a) For constancy, the model and serial number of the dose calibrator, the identity and calibrated activity of the radionuclide contained in the check source, the date of the check, the activity measured, the instrument settings and the initials of the individual who performed the check;

(b) For accuracy, the model and serial number of the dose calibrator, the model and serial number of each source used and the identity of the radionuclide contained in the source and its activity, the date of the test, the results of the test, the instrument settings and the signature of the Radiation Safety Officer;

(c) For linearity, the model and serial number of the dose calibrator, the calculated activities, the measured activities, the date of the test and the signature of the Radiation Safety Officer; and

(d) For geometry dependence, the model and serial number of the dose calibrator, the configuration and calibrated activity of the source measured, the activity of the source, the activity measured and the instrument setting for each volume measured, the date of the test and the signature of the Radiation Safety Officer.

333-116-0165
Possession, Use Calibration, and Check of Instruments to Measure Dosages of Alpha- or Beta-emitting Radionuclides

(1) For other than unit dosages, a licensee must possess and use instrumentation to measure the radioactivity of alpha- or beta-emitting radionuclides. A licensee must measure, by direct measurement or by combination of measurements and calculations, the amount of radioactivity in dosages of alpha- or beta-emitting radionuclides prior to administration to each patient or human research subject.

(2) A licensee must develop, implement, and maintain written procedures for use of the instrumentation. At a minimum, a licensee must:

(a) Perform tests before initial use, and following repair, on each instrument for accuracy, linearity, and geometry dependence, unless it is not appropriate for the use of the instrument; and make adjustments when necessary;

(b) Perform accuracy annually;

(c) Perform linearity tests annually over the range of medical use; and

(d) Check each instrument for constancy and proper operation at the beginning of each day of use.

(3) Accuracy tests must be performed with source(s) that are traceable to National Institute of Standards and Technology (NIST) or by a supplier who has compared the source to a source that was calibrated by NIST.

(4) A licensee must retain a record of each check and test required by this rule in accordance with OAR 333-100-0057.

333-116-0170
Calibration and Check of Survey Instrument

(1) A licensee must ensure that the survey instruments used to show compliance with OAR chapter 333, divisions 116 and 120 have been calibrated before first use, annually and following repair.

(2) To satisfy the requirements of section (1) of this rule the licensee must:

(a) Calibrate all required scale readings up to 10 millisieverts (1000 mrem) per hour with a radiation source;

(b) For each scale that must be calibrated, calibrate two readings separated by at least 50 percent of scale reading; and

(c) Conspicuously note on the instrument the date of calibration.

(3) To satisfy the requirements of section (2) of this rule, the licensee must:

(a) Consider a point as calibrated if the indicated exposure rate differs from the calculated exposure rate by not more than 10 percent; and

(b) Consider a point as calibrated if the indicated exposure rate differs from the calculated exposure rate by not more than 20 percent if a correction chart or graph is conspicuously attached to the instrument.

(4) A licensee must check each survey instrument for proper operation with the dedicated check source before each use. (5) The licensee must retain a record of each calibration required in section (1) of this rule in accordance with OAR 333-100-0057. The record must include:

(a) A description of the calibration procedure; and

(b) A description of the source used and the certified exposure rates from the source and the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration and the date of calibration.

(6) To meet the requirements of sections (1), (2) and (3) of this rule, the licensee may obtain the services of individuals licensed by the Authority, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State to perform calibrations of survey instruments. Records of calibrations which contain information required by section (5) of this rule must be maintained by the licensee calibration in accordance with OAR 333-100-0057.

333-116-0180
Determination of Dosages of Unsealed Radioactive Material for Medical Use

A licensee must:

(1) Assay, within 30 minutes before medical use, the activity of each radiopharmaceutical dosage that contains more than 370 kilobecquerels (10 uCi) of an alpha-, beta-, or photon-emitting radionuclide;

(2) For a dosage of an alpha- or beta-emitting radionuclide prepared by the licensee, this determination must be made by direct measurement or by a combination of measurements and calculations.

(3) A licensee must not use a dosage if the dosage differs from the prescribed dosage by more than 20 percent, unless authorized in writing by an authorized user.

(4) Retain a record of the assays required by this rule in accordance with OAR 333-100-0057. The record must contain the:

(a) Generic name, trade name or abbreviation of the radiopharmaceutical, its lot number and expiration dates and the radionuclide;

(b) Patient's name and identification number if one has been assigned;

(c) Prescribed dosage and activity of the dosage at the time of assay or a notation that the total activity is less than 370 kilobecquerels (10 uCi);

(d) Date and time of the assay;

(e) Date and time of administration; and

(f) Initials of the individual who performed the assay.

333-116-0190
Authorization for Calibration and Reference Source

Any person authorized by OAR 333-116-0030 for medical use of radioactive material may receive, possess and use the following radioactive material for check, calibration and reference use:

(1) Sealed sources manufactured and distributed by persons specifically licensed pursuant to OAR 333-102-0290 or equivalent provisions of the U.S. Nuclear Regulatory Commission (NRC) Agreement State or Licensing State and that do not exceed 1.11GBq (30 mCi) each;

(2) Any radioactive material listed in OAR 333-116-0300, 333-116-0320 or 333-116-0360 with a half-life of 100 days or less in individual amounts not to exceed 1.11GBq (30 mCi), except Y-90 sources not to exceed 2.8 GBq (75 mCi);

(3) Any radioactive material listed in OAR 333-116-0300, 333-116-0320 or 333-116-0360 with a half-life greater than 100 days in individual amounts not to exceed 7.4 MBq (200 uCi) each; and

(4) Technetium-99m in amounts as needed.

Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08; PH 4-2010, f. & cert. ef. 2-16-10; PH 24-2014, f. & cert. ef. 8-15-14; PH 32-2014, f. 12-22-14, cert. ef. 1-1-15

333-116-0200
Requirements for Possession of Sealed Sources and Brachytherapy Sources

(1) A licensee in possession of any sealed source or brachytherapy source must follow the radiation safety and handling instructions supplied by the manufacturer or equivalent instructions approved by the Authority, and must maintain the instructions for the duration of source use in a legible form convenient to users.

(2) A licensee in possession of a sealed source must assure that:

(a) The source is tested for leakage before its first use unless the licensee has a certificate from the supplier indicating that the source was tested within six months before transfer to the licensee; and

(b) The source is tested for leakage at intervals not to exceed six months or at intervals approved by the Authority, another Agreement State, a Licensing State or the U.S. Nuclear Regulatory Commission in the Sealed Source and Device Registry (SS&D).

(3) To satisfy the leak test requirements of this division, the licensee must assure that:

(a) Leak tests are capable of detecting the presence of 185 Bq (0.005 uCi) of radioactive material on the test sample, or in the case of radium, the escape of radon at the rate of 37 Bq (0.001 uCi) per 24 hours;

(b) Test samples are taken from the source or from the surfaces of the device in which the source is mounted or stored on which radioactive contamination might be expected to accumulate; and

(c) For teletherapy units, test samples are taken when the source is in the "off" position.

(4) A licensee must retain leak test records in accordance with OAR 333-100-0057. The records must contain the model number and serial number if assigned, of each source tested, the identity of each source radionuclide and its estimated activity, the measured activity of each test sample expressed in microcuries (Bq), a description of the method used to measure each test sample, the date of the test and the signature of the Radiation Safety Officer.

(5) If the leak test reveals the presence of 185 Bq (0.005 uCi) or more of removable contamination, the licensee must:

(a) Immediately withdraw the sealed source from use and store it in accordance with the requirements of these rules; and

(b) File a report within five days of receiving the leakage test results with the Authority describing the equipment involved, the test results and the action taken.

(6) A licensee need not perform a leak test on the following sources:

(a) Sources containing only radioactive material with a half-life of less than 30 days;

(b) Sources containing only radioactive material as a gas;

(c) Sources containing 3.7 MBq (100 uCi) or less of beta or photon-emitting material or 370 kBq (10 uCi) or less of alpha-emitting material;

(d) Seeds of iridium-192 encased in nylon ribbon; and

(e) Sources stored and not being used. The licensee must, however, test each such source for leakage before any use or transfer unless it has been tested for leakage within six months before the date of use or transfer.

(7) A licensee in possession of a sealed source or brachytherapy source must conduct a semi-annual physical inventory of all such sources in its possession. The licensee must retain each inventory record in accordance with OAR 333-100-0057. The inventory records must contain the model number of each source and serial number if one has been assigned, the identity of each source radionuclide and its estimated activity, the location of each source, date of the inventory and the signature of the Radiation Safety Officer.

Labeling of Vials and Syringes

Each syringe and vial that contains unsealed byproduct material must be labeled to identify the radiopharmaceutical drug. Each syringe shield and vial shield must also be labeled unless the label on the syringe or vial is visible when shielded. The label must include the radiopharmaceutical name or abbreviation, the type of diagnostic study or therapy procedure to be performed and the patient's name.

333-116-0250
Surveys for Contamination and Ambient Radiation Dose Rate

(1) A licensee must survey with an appropriate radiation detection survey instrument, at the end of each day of use, all areas where radiopharmaceuticals are routinely prepared for use or administered. Radiation surveys are not required in areas where patients or human research subjects are confined when they cannot be released under OAR 333-116-0260. Radiation surveys are

required when patients receive a therapeutic dose or brachytherapy implant and prior to release.

(2) A licensee must survey with an appropriate radiation detection survey instrument at least once each week all areas where radiopharmaceuticals or radioactive wastes are stored.

(3) A licensee must conduct the surveys required by section (1) and (2) of this rule so as to be able to measure dose rates as low as 1 uSv (0.1 mrem) per hour.

(4) A licensee must establish dose rate action levels for the surveys required by sections (1) and (2) of this rule and must require that the individual performing the survey immediately notify the Radiation Safety Officer if a dose rate exceeds an action level.

(5) A licensee must survey for removable contamination each day of use all areas where radiopharmaceuticals are routinely prepared for use or administered and each week where radioactive materials are stored.

(6) A licensee must conduct the surveys required by section (5) of this rule so as to be able to detect contamination on each wipe sample of 33.3 Bq (2000 dpm).

(7) A licensee must establish removable contamination action levels for the surveys required by section (5) of this rule and must require that the individual performing the survey immediately notify the Radiation Safety Officer if contamination exceeds action levels.

(8) A licensee must retain a record of each survey required by this rule in accordance with OAR 333-100-0057. The record must include the date of the survey, a sketch of each area surveyed, action levels established for each area, the measured dose rate at several points in each area expressed in Sv mrem per hour or the removable contamination in each area expressed in Bq (dpm) per 100 square centimeters, the serial number and the model number of the instrument used to make the survey or analyze the samples and the initials of the individual who performed the survey.

Surveys Of Patients And Human Research Subjects Treated With A Remote Afterloader Unit

(1) Before releasing a patient or a human research subject from licensee control, a licensee shall survey the patient or the human research subject and the remote afterloader unit with a portable radiation detection survey instrument to confirm that the source(s) has been removed from the patient or human research subject and returned to the safe shielded position.

(2) A licensee shall retain a record of these surveys in accordance with OAR 333-100-0057.

333-116-0260
Release of Patients Containing Therapeutic Quantities of Byproduct material or Permanent Implants

(1) The licensee may authorize the release from its control of any individual who has been administered unsealed byproduct material or implants containing byproduct material if the total effective dose equivalent to any other individual from exposure to the released individual is not likely to exceed five millisieverts (0.5 rem).

Note: The current revision of NUREG-1556, Vol. 9, ``Consolidated Guidance About Materials Licenses: Program-Specific Guidance About Medical Licenses'' describes methods for calculating doses to other individuals and contains tables of activities not likely to cause doses exceeding 5 mSv (0.5 rem).

(2) The licensee must provide the released individual, or the individual's parent or guardian, with instructions, including written instructions, on actions recommended to maintain radiation exposures to other individuals as low as is reasonably achievable if the total effective dose equivalent to any other individual is likely to exceed one millisievert (0.1 rem). If the dose to a breast-feeding infant or child could exceed one millisievert (0.1 rem) assuming there were no interruption of breast-feeding, the instructions must also include:

(a) Guidance on the interruption or discontinuation of breast-feeding; and

(b) Information on the potential consequences, if any, of failure to follow the guidance.

(3) The licensee must maintain a record of the basis for authorizing the release of an individual, for a minimum of five years after the date of release in accordance with OAR 333-100-0057.

(4) The licensee must maintain a record, for a minimum of five years after the date of release, in accordance with OAR 333-100-0057, that instructions were provided to a breast-feeding woman if the radiation dose to the infant or child from continued breast-feeding could result in a total effective dose equivalent exceeding five millisieverts (0.5 rem).

333-116-0290
Decay-In-Storage

(1) A licensee may hold radioactive material with a physical half-life of less than 120 days for decay-in-storage before disposal in ordinary trash and is exempt from the requirements of OAR 333-120-0500 of these rules if the licensee:

(a) Holds radioactive material for decay a minimum of 10 half-lives;

(b) Monitors radioactive material at the container surface before disposal as ordinary trash and determines that its radioactivity cannot be distinguished from the background radiation level with an appropriate radiation detection survey instrument for the radiation being monitored, set on its most sensitive scale and with no interposed shielding;

(c) Removes or obliterates all radiation labels, except radiation labels on materials that are within containers and that will be managed as biomedical waste after they have been released from the licensee; and

(d) Separates and monitors each generator column individually with all radiation shielding removed to ensure that its contents have decayed to background radiation level before disposal.

(2) For radioactive material disposed in accordance with these rules the licensee must retain a record of each disposal until inspection by the Authority. The record must include the date of the disposal, the date on which the radioactive material was placed in storage, the model and serial number of the survey instrument used, the background dose rate, the radiation dose rate measured at the surface of each waste container and the name of the individual who performed the survey.

(3) Iodine-125 waste in microcurie amounts may be held for a minimum of five half-lives. Such waste must be surveyed with an appropriate instrument prior to disposal to confirm that waste is indistinguishable from background.

333-116-0300
Use of Unsealed Radioactive Material for Uptake, Dilution or Excretion Studies for Which a Written Directive Is Not Required

(1) A licensee may use any unsealed radioactive material for a diagnostic use involving measurements of uptake, dilution or excretion that:

(a) The Food and Drug Administration (FDA) has accepted a "Notice of Claimed Investigational Exemption for a New Drug" (IND) or approved a "New Drug Application" (NDA); and

(b) Is obtained from a manufacturer or preparer licensed under OAR 333-102-0285 or equivalent Nuclear Regulatory Commission or Agreement State requirements; or

(c) Is prepared and compounded by an authorized nuclear pharmacist, a physician who is an authorized user, or an individual under the supervision of either as specified in OAR 333-116-0100, 333-116-0670 and 333-116-0670(3)(B); or

(d) Is prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

(2) A licensee using a radiopharmaceutical specified in section (1) of this rule for a clinical procedure other than one specified in the product label or package insert instructions for use must comply with the product label or package insert instructions regarding physical form, route of administration and dosage range.

333-116-0310
Possession of Survey Instrument

A licensee authorized to use radioactive material for uptake, dilution and excretion studies must have in its possession a portable radiation detection survey instrument capable of detecting dose rates over the range one Sv (0.1 mrem) per hour to one mSv (100 mrem) per hour. The instrument must be operable and calibrated in accordance with OAR 333-116-0170.

Imaging and Localization

333-116-0320
Use of Radiopharmaceuticals, Generators and Reagents Kits for Imaging and Localization Studies for Which a Written Directive Is Not Required

(1) A licensee may use any radioactive material in a diagnostic radiopharmaceutical, except aerosol or gaseous form, or any generator or reagent kit for preparation and diagnostic use of a radiopharmaceutical containing radioactive material for:

(a) Which the Food and Drug Administration has accepted a "Notice of Claimed Investigational Exemption for a New Drug" (IND) or approved a "New Drug Application" (NDA); or

(b) Which is prepared and compounded by an authorized nuclear pharmacist, a physician who is an authorized user, or an individual under the supervision of either as specified in OAR 333-116-0100, 333-116-0670 or 333-116-0680; or

(c) Obtained from a manufacturer or preparer licensed under divisions 333-102 and 333-116 or equivalent Nuclear Regulatory Commission or Agreement State requirements.

(2) A licensee using radiopharmaceuticals specified in section (1) of this rule for clinical procedures other than one specified in the product label or package insert instructions must comply with the product label or package insert regarding physical form and dosage range.

(3) A licensee must elute generators in compliance with OAR 333-116-0330 and prepare radiopharmaceuticals from kits in accordance with the manufacturer's instructions.

(4) Technetium-99m pentetate as an aerosol for lung function studies is not subject to the restrictions in section (1) of this rule. Provided the conditions of OAR 333-116-0340 are met, a licensee must use radioactive aerosols or gases only if specific application is made to and approved by the Authority.

333-116-0330
Permissible Molybdenum-99, Strontium-82, and Strontium-85 Concentration

(1) A licensee must not administer to humans a radiopharmaceutical containing more than 0.15 kBq (0.15 uCi) of molybdenum-99 per MBq (mCi) of technetium-99m; or

(2) More than 0.02 kilobecquerel of strontium-82 per megabecquerel of rubidium-82 chloride injection (0.02 microcurie of strontium-82 per millicurie of rubidium-82 chloride); or more than 0.2 kilobecquerel of strontium-85 per megabecquerel of rubidium-82 chloride injection (0.2 microcurie of strontium-85 per millicurie of rubidium-82).

(3) A licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators must measure the molybdenum-99 concentration of the first eluate after receipt of a generator to demonstrate compliance with section (1) of this rule.

(4) A licensee that uses a strontium-82/rubidium-82 generator for preparing a rubidium-82 radiopharmaceutical shall, before the first patient use of the day, measure the concentration of radionuclides strontium-82 and strontium-85 to demonstrate compliance with section (1) of this rule.

(5) A licensee who must measure molybdenum concentration or strontium-82 and strontium-85 must retain a record of each measurement in accordance with OAR 333-100-0057. The record must include, for each elution or extraction of technetium-99m, the measured activity of the technetium expressed in MBq (mCi), the measured activity of the molybdenum expressed in kBq (uCi), the ratio of the measures expressed as kBq (uCi) of molybdenum per MBq (mCi) of technetium, the date of the test and the initials of the individual who performed the test.

(6) A licensee must report immediately to the Authority each occurrence of molybdenum-99 concentration exceeding the limits specified in section (1) of this rule.

333-116-0340
Control of Aerosols and Gases

(1) A licensee who administers radioactive aerosols or gases must do so with a system that will keep airborne concentrations within the limits prescribed by OAR 333-120-0130 and 333-120-0180.

(2) The system must either be directly vented to the atmosphere through an air exhaust or provide for collection and decay or disposal of the aerosol or gas in a shielded container.

(3) A licensee must only administer radioactive gases in rooms that are at negative pressure compared to surrounding rooms.

(4) Before receiving, using or storing a radioactive gas, the licensee must calculate the amount of time needed after a release to reduce the concentration in the area of use to the occupational limit listed in 10 CFR Part 20 Appendix B to 20.1001 to 20.2401. The calculation must be based on the highest activity of gas handled in a single container and the measured available air exhaust rate.

(5) A licensee must post the time calculated in accordance with section (4) of this rule at the area of use and require that, in case of a gas spill, individuals evacuate the room until the posted time has elapsed.

(6) A licensee must check the operation of collection systems before each use and measure the ventilation rates in areas of use at intervals not to exceed six months. Records of these checks and measurements must be maintained for five years or until inspected by the Authority.

(7) A copy of the calculations required in section (4) of this rule must be recorded and retained for the duration of the license.

333-116-0360
Use of Unsealed Radioactive Materials or Radiopharmaceuticals for Which a Written Directive is Required

A licensee may use for therapeutic administration any unsealed radioactive material or radiopharmaceutical prepared for medical use that:

(1) Has been granted acceptance or approval by the Food and Drug Administration; and

(2) Has been prepared by an authorized nuclear pharmacist, a physician who is an authorized user on a license from the Authority, other Agreement State, or the U.S. Nuclear Regulatory Commission and meets the specified requirements in OAR 333-116-0670 or 333-116-0680; or

(3) Has been manufactured and distributed under a license from the Authority, other Agreement State, or the U.S. Nuclear Regulatory Commission; or

(4) Obtained from and prepared by the Authority or Nuclear Regulatory Commission or Agreement State licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA; or

(5) Prepared by the licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA.

333-116-0370
Safety Instruction

(1) A licensee must provide oral and written radiation safety instruction for all personnel caring for patients or human research subjects undergoing radiopharmaceutical therapy who cannot be released under OAR 333-116-0260. Refresher training must be provided at intervals not to exceed one year.

(2) To satisfy section (1) of this rule, the instruction must describe the licensee's procedures for:

(a) Patient or human research subject control;

(b) Visitor control; including

(A) Routine visitation to hospitalized individuals in accordance with OAR 333-120-0180(1)(a); and

(B) Visitation authorized in accordance with OAR 333-120-0180(3).

(c) Contamination control;

(d) Waste control; and

(e) Notification of the Radiation Safety Officer or authorized user in case of the patient's death or medical emergency.

(3) A licensee must maintain, in accordance with OAR 333-100-0057, a list of individuals receiving instruction required by section (1) of this rule, a description of the instruction, the date of instruction and the name of the individual who gave the instruction.

Stat. Auth.: ORS 453.635

333-116-0380
Safety Precautions

(1) For each patient or human research subject receiving radiopharmaceutical therapy and hospitalized for compliance with OAR 333-116-0260 or 333-116-0190, a licensee must:

(a) Provide a private room with a private sanitary facility;

(b) Post the door with a "Caution: Radioactive Material" sign and note on the door or on the patient's chart where and how long visitors may stay in the patient's room;

(c) Authorize visits by individuals under age 18 only on a case-by-case basis with the approval of the authorized user after consultation with the Radiation Safety Officer;

(d) Promptly after administration of the dosage, measure the dose rates in contiguous restricted and unrestricted areas with a radiation measurement survey instrument to demonstrate compliance with the requirements of OAR 333-120-0180 of these rules and retain until inspection by the Authority a record of each survey that includes the time and date of the survey, a plan of the area or list of points surveyed, the measured dose rate at several points expressed in mrem per hour, the instrument used to make the survey and the initials of the individual who made the survey;

(e) Either monitor material and items removed from the room to determine that any contamination cannot be distinguished from the natural background radiation level with an appropriate radiation detection survey instrument set on its most sensitive scale and with no interposed shielding, or handle materials and items as radioactive waste;

(f) Instruct the patient or human research subject and, where appropriate, the individual's family, orally and in writing concerning radiation safety precautions that will help to keep radiation dose to household members and the public as low as reasonably achievable before authorizing release of the individual;

(g) Survey the room and private sanitary facility for removable contamination with an appropriate radiation detection survey instrument before assigning another patient to the room. The room must not be reassigned until removable contamination is less than 33.3 Bq (2000 dpm) per 100 square centimeters; and

(h) Measure the thyroid burden of each individual who helped prepare or administer a liquid dosage of iodine-131 within three days after administering the dosage. A record of each thyroid burden measurement must be retained in accordance with OAR 333-120-0650 of these rules. Each record must contain the date of

measurement, the name of the individual whose thyroid burden was measured, the calculated thyroid burden, the effective dose equivalent, the name of the individual who made the measurements and the signature of the Radiation Safety Officer. Other procedures acceptable to the Authority may be used for individuals who only prepare, but do not administer, doses of stabilized I-131.

(2) A licensee must notify the Radiation Safety Officer or the authorized user immediately if the patient or human research subject dies or has a medical emergency.

333-116-0420
Use of Sources for Manual Brachytherapy

A licensee must use only brachytherapy sources for therapeutic medical uses:

(1) As approved in the Sealed Source and Device Registry; or

(2) In research with an active Investigational Device Exemption (IDE) application accepted by the Food and Drug Administration and are manufactured, labeled, packaged and distributed under a specific license issued by the Nuclear Regulatory Commission or an Agreement State.

333-116-0425
Surveys After Source Implant and Removal

(1) Immediately after implanting sources in a patient or a human research subject, the licensee must make a survey to locate and account for all sources that have not been implanted.

(2) Immediately after removing the last temporary implant source from a patient or a human research subject, the licensee must make a survey of the room and the patient or the human research subject with an appropriate radiation detection survey instrument to confirm that all sources have been removed.

(3) A licensee must retain a record of the surveys required by sections (1) and (2) of this rule in accordance with OAR 333-100-0057.

333-116-0430
Safety Instructions

(1) The licensee must provide oral and written radiation safety instruction to all personnel caring for a patient receiving implant therapy. Refresher training must be provided at intervals not to exceed one year.

(2) To satisfy section (1) of this rule, the instruction must describe:

(a) Size and appearance of the brachytherapy sources;

(b) Safe handling and shielding instructions in case of a dislodged source;

(c) Procedures for patient control;

(d) Procedures for visitor control including both:

(A) Routine visitation to hospitalized individuals in accordance with OAR 333-120-0180(1)(a); and

(B) Visitation authorized in accordance with OAR 333-120-0180(3); and

(e) Procedures for notification of the Radiation Safety Officer or authorized user if the patient dies or has a medical emergency.

(3) A licensee must retain a record of individuals receiving instruction required by section (1) of this rule in accordance with OAR 333-100-0057. The record must contain a description of the instruction, the date of instruction and the name of the individual who gave the instruction.

333-116-0440
Safety Precaution

(1) A licensee must, for each patient or human research subject receiving implant therapy:

(a) Not place the patient or human research subject in the same room with a patient or human research subject who is not receiving radiation therapy;

(b) Post the patient's or human research subject's door with a "Caution: Radioactive Materials" sign and note on the door or in the patient's chart where and how long visitors may stay in the patient's room;

(c) Authorize visits by individuals under age 18 only on a case-by-case basis with the approval of the authorized user after consultation with the Radiation Safety Officer;

(d) Promptly after implanting the sources, survey the dose rates in contiguous restricted and unrestricted areas with a radiation measurement survey instrument to demonstrate compliance with OAR 333-120-0180 of these rules. Retain a record of each survey in accordance with OAR 333-100-0057. Each record must include the time and date of the survey, a sketch of the area or list of points surveyed, the measured dose rate at several points expressed in microsieverts (mrem) per hour, the instrument used to make the survey and the initials of the individual who made the survey; and

(e) Instruct the patient or human research subject and, where appropriate, the patient's or human research subject's family, orally and in writing concerning radiation safety precautions that will help to keep the radiation dose to household members and the public as low as reasonably achievable before releasing the patient if the patient was administered a permanent implant.

(2) A licensee shall have applicable emergency response equipment available near each treatment room to respond to a source:

(a) Dislodged from the patient; and

(b) Lodged within the patient following removal of the source applicators.

(3) A licensee must notify the Radiation Safety Officer or authorized user immediately if the patient or human research subject dies or has a medical emergency.

333-116-0445
Calibration Measurements of Brachytherapy Sources

(1) Before the first medical use of a brachytherapy source on or after July 1, 2006, a licensee must have:

(a) Determined the source output or activity using a dosimetry system that meets the requirements of OAR 333-116-0560(1);

(b) Determined source positioning accuracy within applicators; and

(c) Used published protocols currently accepted by nationally recognized bodies to meet the requirements of section (1) of this rule.

(2) Instead of a licensee making its own measurements as required in this rule, the licensee may use measurements provided by the source manufacturer or by a calibration laboratory accredited by the American Association of Physicists in Medicine that are made in accordance with section (1) of this rule.

(3) A licensee must mathematically correct the outputs or activities determined in section (1) of this rule for physical decay at intervals consistent with one percent physical decay.

(4) Only an authorized medical physicist must calculate the activity of each strontium-90 source that is used to determine the treatment times for ophthalmic treatments. The decay must be based on the activity determined under section (1) of this rule.

(5) A licensee must retain a record of each calibration in accordance with OAR 333-100-0057. Each record must include:

(a) The date of the calibration;

(b) The manufacturer's name, model number, and serial number for the source and the instruments used to calibrate the source;

(c) The source output or activity;

(d) The source positioning accuracy within the applicators; and

(e) The name of the individual, the source manufacturer, or the calibration laboratory that performed the calibration.

(6) Records of decay of strontium-90 sources for ophthalmic treatments must maintain a record of the activity of a strontium-90 source for the life of the source. The record must include:

(a) The date and initial activity of the source; and

(b) For each decay calculation, the date and the source activity.

333-116-0447
Decay of Strontium-90 Sources for Ophthalmic Treatments

(1) Only an authorized medical physicist shall calculate the activity of each strontium-90 source that is used to determine the treatment times for ophthalmic treatments. The decay must be based on the activity determined under OAR 333-116-0445.

(2) A licensee shall retain a record of the activity of each strontium-90 source in accordance with OAR 333-100-0057.

333-116-0450
Brachytherapy Sources Inventory

(1) A licensee must maintain accountability at all times for all brachytherapy sources in storage or use.

(2) As soon as possible after removing sources from a patient or human research subject, the licensee must return brachytherapy sources to a secure storage area.

(3) A licensee must retain the records required in sections (1) and (2) of this rule in accordance with OAR 333-100-0057.

(a) For temporary implants, the record must include:

(A) The number and activity of sources removed from storage, the time and date they were removed from storage, the name of the individual who removed them from storage, and the location of use; and

(B) The number and activity of sources returned to storage, the time and date they were returned to storage, and the name of the individual who returned them to storage.

(b) For permanent implants, the record must include:

(A) The number and activity of sources removed from storage, the date they were removed from storage, and the name of the individual who removed them from storage;

(B) The number and activity of sources not implanted, the date they were returned to storage, and the name of the individual who returned them to storage; and

(C) The number and activity of sources permanently implanted in the patient or human research subject.

333-116-0460
Release of Patients Treated with Temporary Implant

(1) Immediately after removing the last temporary implant source from a patient or human research subject, the licensee must make a radiation survey of the patient or human research subject with an appropriate radiation detection survey instrument to confirm that all sources have been removed. The licensee must not release from confinement for medical care a patient or human research subject treated by temporary implant until all sources have been removed.

(2) A licensee must retain a record of patient surveys which demonstrate compliance with section (1) of this rule in accordance with OAR 333-100-0057. Each record must include the date of the survey, the name of the patient, the dose rate from the patient expressed as Sv (mrem) per hour and measured within one meter from the patient and the initials of the individual who made the survey.

333-116-0470
Possession of Survey Instruments

A licensee authorized to use radioactive material for implant therapy must have in its possession a portable radiation detection survey instrument capable of detecting dose rates over the range 1 uSv (0.1 mrem) per hour to 1 mSv (100 mRem)per hour and a portable radiation measurement survey instrument capable of measuring dose rates over the range 10 uSv (1 mrem) per hour to 10

mSv (1000 mrem) per hour. The instruments must be operable and calibrated in accordance with OAR 333-116-0170.

333-116-0475
Therapy Related Computer Systems

(1) The licensee shall perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance testing must include, as applicable, verification of:

(a) The source-specific input parameters required by the dose calculation algorithm;

(b) The accuracy of dose, dwell time, and treatment time calculations at representative points;

(c) The accuracy of isodose plots and graphic displays; and

(d) The accuracy of the software used to determine sealed source positions from radiographic images.

(2) Acceptance testing must be performed when new software is installed, for each software revision and when new computer hardware or treatment planning system hardware is installed or repaired.

(3) Records of acceptance testing must be retained in accordance with OAR 333-100-0057.

333-116-0480
Use of a Sealed Source in a Remote Afterloader Unit, Teletherapy Unit, or Gamma Stereotactic Radiosurgery Unit

A licensee must use sealed sources in photon emitting remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units for therapeutic medical uses:

(1) As approved in the Sealed Source and Device Registry; or

(2) In research in accordance with an active Investigational Device Exemption (IDE) application accepted by the FDA and are manufactured, labeled, packaged and distributed under a specific license issued by the Nuclear Regulatory Commission or an Agreement State.

Installation, Maintenance, Adjustment and Repair

(1) Only a person specifically licensed by the Nuclear Regulatory Commission or an Agreement State must install, maintain, adjust, or repair a remote afterloader unit, teletherapy unit, or gamma stereotactic radiosurgery unit that involves work on the source(s) shielding, the source(s) driving unit, or other electronic or mechanical component that could expose the source(s), reduce the shielding around the source(s), or compromise the radiation safety of the unit or the source(s).

(2) Except for low dose-rate remote afterloader units, only a person specifically licensed by the Nuclear Regulatory Commission or an Agreement State must install, replace, relocate, or remove a sealed source or source contained in other remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units.

(3) For a low dose-rate remote afterloader unit, only a person specifically licensed by the Nuclear Regulatory Commission or an Agreement State or an authorized medical physicist must install, replace, relocate, or remove a sealed source(s) contained in the unit.

(4) A licensee must retain a record of the installation, maintenance, adjustment, and repair of remote afterloader units, teletherapy units, and gamma stereotactic radiosurgery units in accordance with OAR 333-100-0057. For each installation, maintenance, adjustment and repair, the record must include the date, description of the service, and name(s) of the individual(s) who performed the work.

333-116-0495
Safety Procedures and Instructions for Remote Afterloader Units, Teletherapy Units, and Gamma Stereotactic Radiosurgery Units

(1) A licensee must:

(a) Secure the unit, the console, the console keys, and the treatment room when not in use or unattended;

(b) Permit only individuals approved by the authorized user, Radiation Safety Officer, or authorized medical physicist to be present in the treatment room during treatment with the source(s);

(c) Prevent dual operation of more than one radiation producing device in a treatment room if applicable; and

(d) Develop, implement, and maintain written procedures for responding to an abnormal situation when the operator is unable to place the source(s) in the shielded position, or remove the patient or human research subject from the radiation field with controls from outside the treatment room. These procedures must include:

(A) Instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions;

(B) The process for restricting access to and posting of the treatment area to minimize the risk of inadvertent exposure; and

(C) The names and telephone numbers of the authorized users, the authorized medical physicist, and the Radiation Safety Officer to be contacted if the unit or console operates abnormally.

(2) A copy of the procedures required by subsection (1)(d) of this rule must be physically located at the unit console.

(3) A licensee must post instructions at the unit console to inform the operator of:

(a) The location of the procedures required by subsection (1)(d) of this rule; and

(b) The names and telephone numbers of the authorized users, the authorized medical physicist, and the Radiation Safety Officer to be contacted if the unit or console operates abnormally.

(4) A licensee must provide instruction, initially and at least annually, to all individuals who operate the unit, as appropriate to the individual's assigned duties in:

(a) The procedures identified in subsection (1)(d) of this rule; and

(b) The operating procedures for the unit.

(5) A licensee must ensure that operators, authorized medical physicists, and authorized users participate in drills of the emergency procedures, initially and at least annually.

(6) A licensee must retain a record of individuals receiving instruction required by section (4) of this rule in accordance with OAR 333-100-0057.

(7) A licensee must retain a copy of the procedures required by subsections (1)(d) and (4)(b) of this rule until the licensee no longer possesses the remote afterloader, teletherapy unit, or gamma stereotactic radiosurgery unit.

333-116-0500
Amendment

In addition to the requirements specified in OAR 333-116-0040, a licensee must apply for and must receive a license amendment before:

(1) Making any change in the treatment room shielding;

(2) Making any change in the location of the teletherapy unit within the treatment room;

(3) Using the teletherapy unit in a manner that could result in increased radiation levels in areas outside the teletherapy treatment room;

(4) Relocating the teletherapy unit; or

(5) Allowing an individual not listed on the licensee's license to perform the duties of the teletherapy physicist.

333-116-0525
Safety Precautions for Remote Afterloader Units, Teletherapy Units, and Gamma Stereotactic Radiosurgery Units

(1) A licensee must control access to the treatment room by a door at each entrance.

(2) A licensee must equip each entrance to the treatment room with an electrical interlock system that will:

(a) Prevent the operator from initiating the treatment cycle unless each treatment room entrance door is closed;

(b) Cause the source(s) to be shielded when an entrance door is opened; and

(c) Prevent the source(s) from being exposed following an interlock interruption until all treatment room entrance doors are closed and the source(s) on-off control is reset at the console.

(3) A licensee must require any individual entering the treatment room to assure, through the use of appropriate radiation monitors, that radiation levels have returned to ambient levels.

(4) Except for low-dose remote afterloader units, a licensee must construct or equip each treatment room with viewing and intercom systems to permit continuous observation of the patient or the human research subject from the treatment console during irradiation.

(5) For licensed activities where sources are placed within the patient's or human research subject's body, a licensee must only conduct treatments which allow for expeditious removal of a decoupled or jammed source.

(6) In addition to the requirements specified in sections (1) through (5) of this rule, a licensee must:

(a) For medium dose-rate and pulsed dose-rate remote afterloader units, require:

(A) An authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who has been trained in the operation and emergency response for the unit to be physically present during the initiation of all patient treatments involving the unit; and

(B) An authorized medical physicist and either an authorized user or an individual, under the supervision of an authorized user, who has been trained to remove the source applicator(s) in the event of an emergency involving the unit, to be immediately available during continuation of all patient treatments involving the unit.

(b) For high dose-rate remote afterloader units, require:

(A) An authorized user and an authorized medical physicist to be physically present during the initiation of all patient treatments involving the unit; and

(B) An authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who has been trained in the operation and emergency response for the unit, to be physically present during continuation of all patient treatments involving the unit.

(c) For gamma stereotactic radiosurgery units, require an authorized user and an authorized medical physicist to be physically present throughout all patient treatments involving the unit.

(d) Notify the Radiation Safety Officer, or his/her designee, and an authorized user as soon as possible if the patient or human research subject has a medical emergency or dies.

(7) A licensee must have applicable emergency response equipment available near each treatment room to respond to a source:

(a) Remaining in the unshielded position; or

(b) Lodged within the patient following completion of the treatment.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-116-0530
Possession of Survey Instrument

A licensee authorized to use radioactive material in a teletherapy therapy unit must have in its possession either both a portable radiation detection survey instrument capable of detecting dose rates over the range one Sv (0.1 mrem) per hour to 100 mrem (one mSv) per hour and a portable radiation measurement survey instrument capable of measuring dose rates over the range ten Sv (1 mrem) per hour to ten mSv (1000 mrem) per hour. The instruments must be operable and calibrated in accordance with OAR 333-116-0170.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-116-0540
Radiation Monitoring Device

(1) A licensee must have in each teletherapy room a permanent radiation monitor capable of continuously monitoring beam status.

(2) Each radiation monitor must be capable of providing visible evidence of a teletherapy unit malfunction that results in an exposed or partially exposed source. The visible indicator of high radiation levels must be observable by an individual prior to entering the teletherapy room.

(3) Each radiation monitor must be equipped with a backup power supply separate from the power supply to the teletherapy unit. This backup power supply may be a battery system or other type of uninterruptible power supply (UPS).

(4) Each radiation monitor must be checked with a dedicated check source for proper operation each day before the teletherapy unit is used for treatment of patients.

(5) A licensee must maintain a record of the check required by section (4) of this rule until inspection by the Authority. The record must include the date of the check, notation that the monitor indicates when the source is exposed and the initials of the individual who performed the check.

(6) If a radiation monitor is inoperable, the licensee must require any individual entering the teletherapy room to use a survey instrument or audible alarm personal dosimeter to monitor for any malfunction of the source exposure mechanism that may result in an exposed or partially exposed source. The instrument or dosimeter must be checked with a dedicated check source for proper operation at the beginning of each day of use. The licensee must keep a record as described in section (4) of this rule.

(7) If a radiation monitor is inoperable, the licensee must require any individual entering the teletherapy room to use a survey instrument or audible alarm personal dosimeter to monitor for any malfunction of the source exposure mechanism. The instrument or dosimeter must be checked with a dedicated check source for proper operation at the beginning of each day of use. The licensee must keep a record as described in section (5) of this rule.

(8) A licensee must promptly repair or replace the radiation monitor if it is inoperable.

333-116-0550
Viewing System

A licensee must construct or equip each teletherapy room to permit continuous observation of the patient from the teletherapy unit console during irradiation.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-116-0560
Dosimetry Equipment

(1) Except for low dose-rate remote afterloader sources where the source output or activity is determined by the manufacturer, a licensee must have a calibrated dosimetry system available for use. To satisfy this requirement, one of the following two conditions must be met.

(a) The system must have been calibrated using a system or source traceable to the National Institute of Standards and Technology (NIST) and published protocols accepted by nationally recognized bodies; or by a calibration laboratory accredited by the American Association of Physicists in Medicine (AAPM). The calibration must have been performed within the previous two years and after any servicing that may have affected system calibration; or

(b) The system must have been calibrated within the previous four years; 18 to 30 months after that calibration, the system must have been intercompared at an intercomparison meeting with another dosimetry system that was calibrated within the past 24 months by the National Institute of Standards and Technology or by a calibration laboratory accredited by the AAPM. The intercomparison meeting must be sanctioned by a calibration laboratory or radiologic physics center accredited by the AAPM. The results of the intercomparison meeting must show that the calibration factor of the licensee's system had not changed by more than two percent. The licensee must not use the intercomparison result to change the calibration factor. When intercomparing dosimetry systems to be used for calibrating sealed sources for therapeutic units, the licensee must use a comparable unit with beam attenuators or collimators, as applicable, and sources of the same radionuclide as the source used at the licensee's facility.

(2) The licensee must have available for use a dosimetry system for spot-check output measurements, if applicable. To meet this requirement, the system may be compared with a system that has been calibrated in accordance with section (1) of this rule. This comparison must have been performed within the previous year and after each servicing that may have affected system calibration. The spot-check system may be the same system used to meet the requirement in section (1) of this rule.

(3) The licensee must retain a record of each calibration, intercomparison and comparison for the duration of the license. For each calibration, intercomparison or comparison, the record must include the date, the model numbers and serial numbers of the instruments that were calibrated, intercompared or compared as required by sections (1) and (2) of this rule, the correction factors that were deduced, the names and credentials of the individuals who performed the calibration, intercomparison or comparison, and evidence that the intercomparison meeting was sanctioned by a calibration laboratory or radiologic physics center accredited by AAPM.

Full Calibration Measurement

(1) A licensee authorized to use a teletherapy unit for medical use must perform full calibration measurements on each teletherapy unit:

(a) Before the first medical use of the unit; and

(b) Before medical use under the following conditions:

(A) Whenever spot-check measurements indicate that the output differs by more than five percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;

(B) Following replacement of the radioactive source or following reinstallation of the teletherapy unit in a new location;

(C) Following any repair of the teletherapy unit that includes removal of the radioactive source or major repair of the components associated with the source exposure assembly; and

(c) At intervals not exceeding one year.

(2) To satisfy the requirement of section (1) of this rule, full calibration measurements must include determination of:

(a) The output within three percent for the range of field sizes and for the distance or range of distances used for medical use;

(b) The coincidence of the radiation field and the field indicated by the light beam localizing device;

(c) The uniformity of the radiation field and its dependence on the orientation of the useful beam;

(d) Timer accuracy, constancy, and linearity;

(e) On-off error; and

(f) The accuracy of all distance measuring and localization devices in medical use.

(3) A licensee must use the dosimetry system described in OAR 333-116-0560(1) to measure the output for one set of exposure conditions. The remaining radiation measurements required in subsection (2)(a) of this rule may then be made using a dosimetry system that indicates relative dose rates.

(4) A licensee must make full calibration measurements required by section (1) of this rule in accordance with published protocols accepted by nationally recognized bodies.

(5) A licensee must correct mathematically the outputs determined in subsection (2)(a) of this rule for physical decay for intervals not exceeding one month for cobalt-60 and intervals not exceeding six months for cesium-137, or at intervals consistent with one percent decay for all other nuclides.

(6) Full calibration measurements required by section (1) of this rule and physical decay corrections required by section (5) of this rule must be performed by a teletherapy or medical physicist certified to perform such measurements and named on the licensee's license or authorized by a license issued by the Nuclear Regulatory Commission or an Agreement State to perform such services.

(7) A licensee must retain a record of each calibration in accordance with OAR 333-100-0057. The record must include the date of the calibration, the manufacturer's name, model number, and serial number for both the teletherapy unit and the source, the model numbers and serial numbers of the instruments used to calibrate the teletherapy unit, tables that describe the output of the unit over the range of field sizes and for the range of distances used in radiation therapy, a determination of the coincidence of the radiation field and the field indicated by the light beam localizing device, the measured timer accuracy for a typical treatment time, the calculated on-off error, the estimated accuracy of each distance measuring or localization device and the signature of the teletherapy physicist.

Full Calibration Measurements on Remote Afterloader Units

(1) A licensee authorized to use a remote afterloader unit for medical use must perform full calibration measurements on each unit:

(a) Before the first medical use of the unit;

(b) Before medical use under the following conditions:

(A) Following replacement of the source or following reinstallation of the unit in a new location outside the facility; and

(B) Following any repair of the unit that includes removal of the source or major repair of the components associated with the source exposure assembly; and

(c) At intervals not exceeding three months for high dose-rate, medium dose-rate, and pulsed dose-rate remote afterloader units with sources whose half-life exceeds 75 days; and

(d) At intervals not exceeding one year for low dose-rate remote afterloader units.

(2) To satisfy the requirement of section (1) of this rule, full calibration measurements must include, as applicable, determination of:

(a) The output within five percent;

(b) Source positioning accuracy to within one millimeter;

(c) Source retraction with backup battery upon power failure;

(d) Length of the source transfer tubes;

(e) Timer accuracy and linearity over the typical range of use;

(f) Length of the applicators; and

(g) Function of the source transfer tubes, applicators, and transfer tube-applicator interfaces.

(3) A licensee must use the dosimetry system described in OAR 333-116-0560(1) to measure the output.

(4) A licensee must make full calibration measurements required by section (1) of this rule in accordance with published protocols accepted by nationally recognized bodies.

(5) In addition to the requirements for full calibrations for low dose-rate remote afterloader units in section (2) of this rule, a licensee must perform an autoradiograph of the source(s) to verify inventory and source(s) arrangement at intervals not exceeding one quarter.

(6) For low dose-rate remote afterloader units, a licensee may use measurements provided by the source manufacturer that are made in accordance with sections (1) through (5) of this rule.

(7) A licensee must mathematically correct the outputs determined in subsection (2)(a) of this rule for physical decay at intervals consistent with one percent physical decay.

(8) Full calibration measurements required by subsection (2)(a) of this rule and physical decay corrections required by subsection (2)(g) of this rule must be performed by the authorized medical physicist.

(9) A licensee must retain a record of each calibration in accordance with OAR 333-100-0057.

Full Calibration Measurements on Gamma Stereotactic Radiosurgery Units

(1) A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use must perform full calibration measurements on each unit:

(a) Before the first medical use of the unit;

(b) Before medical use under the following conditions:

(A) Whenever spot-check measurements indicate that the output differs by more than five percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;

(B) Following replacement of the sources or following reinstallation of the gamma stereotactic radiosurgery unit in a new location; and

(C) Following any repair of the gamma stereotactic radiosurgery unit that includes removal of the sources or major repair of the components associated with the source assembly; and

(c) At intervals not exceeding one year, with the exception that relative helmet factors need only be determined before the first medical use of a helmet and following any damage to a helmet.

(2) To satisfy the requirement of subsection (1)(a) of this rule, full calibration measurements must include determination of:

(a) The output within +/-three percent;

(b) Relative helmet factors;

(c) Isocenter coincidence;

(d) Timer accuracy and linearity over the range of use;

(e) On-off error;

(f) Trunnion centricity;

(g) Treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;

(h) Helmet microswitches;

(i) Emergency timing circuits; and

(j) Stereotactic frames and localizing devices (trunnions).

(3) A licensee must use the dosimetry system described in OAR 333-116-0560(1) to measure the output for one set of exposure conditions. The remaining radiation measurements required in subsection (2)(a) of this rule may be made using a dosimetry system that indicates relative dose rates.

(4) A licensee must make full calibration measurements required by section (1) of this rule must be performed in accordance with published protocols accepted by nationally recognized bodies.

(5) A licensee must mathematically correct the outputs determined in subsection (2)(a) of this rule at intervals not exceeding one month for cobalt-60 and at intervals consistent with one percent physical decay for all other radionuclides.

(6) Full calibration measurements required by section (1) of this rule and physical decay corrections required by section (5) of this rule must be performed by the authorized medical physicist.

(7) A licensee must retain a record of each calibration in accordance with OAR 333-100-0057.

333-116-0580
Periodic Spot-Checks for Teletherapy Units

(1) A licensee authorized to use teletherapy units for medical use must perform output spot-checks on each teletherapy unit at intervals not to exceed one month that include the determination of:

(a) Timer constancy, accuracy, and linearity over the range of use;

(b) On-off error;

(c) The coincidence of the radiation field and the field indicated by the light beam localizing device;

(d) The accuracy of all distance measuring and localization devices used for medical use;

(e) The output for one typical set of operating conditions measured with the dosimetry system described in OAR 333-116-0560; and

(f) The difference between the measurement made in section (1) of this rule and the anticipated output, expressed as a percentage of the anticipated value obtained at last full calibration corrected mathematically for physical decay.

(2) A licensee must use the dosimetry system described in OAR 333-116-0560 to make the measurement required in section (1) of this rule.

(3) A licensee must perform measurements required by section (1) of this rule in accordance with procedures established by the teletherapy or medical physicist. That individual is not required to actually perform the output spot-check measurements.

(4) A licensee must have the teletherapy or medical physicist review the results of each output spot-check within 15 days of each measurement. The teletherapy or medical physicist must promptly

notify the licensee in writing of the results of each output spot-check. The licensee must keep a copy of each written notification in accordance with OAR 333-100-0057.

(5) A licensee authorized to use a teletherapy unit for medical use must perform safety spot-checks of each teletherapy facility at intervals not to exceed one month and after each source installation to assure proper operation of:

(a) Electrical interlocks at each teletherapy room entrance;

(b) Electrical or mechanical stops installed for the purpose of limiting use of the primary beam of radiation restriction of source housing angulation or elevation, carriage or stand travel and operation of the beam on-off mechanism;

(c) Beam condition indicator lights on the teletherapy unit, on the control console and in the facility;

(d) Viewing systems;

(e) Treatment room doors from inside and outside the treatment room; and

(f) Electrically assisted treatment room doors with the teletherapy unit electrical power turned "off".

(6) A licensee must lock the control console in the "off" position if any door interlock malfunctions. No licensee must use the unit until the interlock system is repaired unless specifically authorized by the Authority.

(7) A licensee must promptly repair any system identified in section (5) of this rule that is not operating properly.

(8) A licensee must retain a record of each spot-check required by sections (1) and (5) of this rule in accordance with OAR 333-100-0057. The record must include, the date of the spot-check, the manufacturer's name, model number and serial number for both the teletherapy unit and source, the manufacturer's name, model number and serial number of the instrument used to measure the output of the teletherapy unit, the measured timer accuracy, the calculated on-off error, a determination of the coincidence of the radiation field and the field indicated by the light beam localizing device, the measured timer accuracy for a typical treatment time, the calculated on-off error, the estimated accuracy of each distance measuring or localization device, the difference between the anticipated output and the measured output, notations indicating the operability of each entrance door electrical interlock, each electrical or mechanical stop, each beam condition indicator light, the viewing system and doors and the signature of the individual who performed the periodic spot-check.

333-116-0583
Periodic Spot-checks for Remote Afterloader Units

(1) A licensee authorized to use a remote afterloader unit for medical use must perform spot-checks of each remote afterloader facility and on each unit:

(a) Before the first use of a high dose-rate, medium dose-rate, or pulsed dose-rate remote afterloader unit on a given day;

(b) Before each patient treatment with a low dose-rate remote afterloader unit; and

(c) After each source installation.

(2) A licensee must perform the measurements required by section (1) of this rule in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot check measurements.

(3) A licensee must have the authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist must notify the licensee as soon as possible in writing of the results of each spot-check.

(4) To satisfy the requirements of section (1) of this rule, spot-checks must, at a minimum, assure proper operation of:

(a) Electrical interlocks at each remote afterloader unit room entrance;

(b) Source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;

(c) Viewing and intercom systems in each high dose-rate, medium dose-rate, and pulsed dose-rate remote afterloader facility;

(d) Emergency response equipment;

(e) Radiation monitors used to indicate the source position;

(f) Timer accuracy;

(g) Clock (date and time) in the unit's computer; and

(h) Decayed source(s) activity in the unit's computer.

(5) If the results of the checks required in section (4) of this rule indicate the malfunction of any system, a licensee must lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.

(6) A licensee must retain a record of each check required by section (4) of this rule in accordance with OAR 333-100-0057. The record must include, as applicable:

(a) The date of the spot-check;

(b) The manufacturers name, model number for the remote afterloader and source;

(c) An assessment of timer accuracy;

(d) Notations indicating the operability of each entrance door electrical interlock, radiation monitors, source exposure indicator lights, viewing and intercom systems, and clock and decayed source activity in the unit's computer; and

(e) The name of the individual who performed the periodic spot-check and the signature of the authorized medical physicist who reviewed the record of the spot-check.

(7) A licensee must retain a copy of the procedures required by section (4) of this rule until the licensee no longer possesses the remote afterloader unit.

333-116-0585
Additional Technical Requirements for Mobile Remote Afterloader Units

(1) A licensee providing mobile remote afterloader service must:

(a) Check survey instruments before medical use at each address of use or on each day of use, whichever is more frequent; and

(b) Account for all sources before departure from a client's address of use.

(2) In addition to the periodic spot-checks required by OAR 333-116-0583, a licensee authorized to use mobile afterloaders for medical use must perform checks on each remote afterloader unit before use at each address of use. At a minimum, checks must be made to verify the operation of:

(a) Electrical interlocks on treatment area access points;

(b) Source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;

(c) Viewing and intercom systems;

(d) Applicators, source transfer tubes, and transfer tube-applicator interfaces;

(e) Radiation monitors used to indicate room exposures;

(f) Source positioning (accuracy); and

(g) Radiation monitors used to indicate whether the source has returned to a safe shielded position.

(3) In addition to the requirements for checks in section (2) of this rule, a licensee must ensure overall proper operation of the remote afterloader unit by conducting a simulated cycle of treatment before use at each address of use.

(4) If the results of the checks required in section (2) of this rule indicate the malfunction of any system, a licensee must lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.

(5) A licensee must retain a record of each check required by section (2) of this rule in accordance with OAR 333-100-0057. The record must include:

(a) The date of the check;

(b) The manufacturer's name, model number, and serial number of the remote afterloader unit;

(c) Notations accounting for all sources before the licensee departs from a facility;

(d) Notations indicating the operability of each entrance door electrical interlock, radiation monitors, source exposure indicator lights, viewing and intercom system, applicators, source transfer tubes, and transfer tube applicator interfaces, and source positioning accuracy; and

(e) The signature of the individual who performed the check.

333-116-0587

Periodic Spot-checks for Gamma Stereotactic Radiosurgery Units

(1) A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use must perform spot-checks of each gamma stereotactic radiosurgery facility and on each unit:

(a) Monthly;

(b) Before the first use of the unit on a given day; and

(c) After each source installation.

(2) A licensee must:

(a) Perform the measurements required by section (1) of this rule in accordance with written procedures established by the authorized medical physicist. That individual need not actually perform the spot check measurements.

(b) Have the authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist must notify the licensee as soon as possible in writing of the results of each spot-check.

(3) To satisfy the requirements of subsection (1)(a) of this rule, spot-checks must, at a minimum:

(a) Assure proper operation of:

(A) Treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;

(B) Helmet microswitches;

(C) Emergency timing circuits; and

(D) Stereotactic frames and localizing devices (trunnions).

(b) Determine:

(A) The output for one typical set of operating conditions measured with the dosimetry system described in OAR 333-116-0560;

(B) The difference between the measurement made in paragraph (3)(b)(A) of this rule and the anticipated output, expressed as a percentage of the anticipated output (i.e., the value obtained at last full calibration corrected mathematically for physical decay);

(C) Source output against computer calculation;

(D) Timer accuracy and linearity over the range of use;

(E) On-off error; and

(F) Trunnion centricity.

(4) To satisfy the requirements of subsections (1)(b) and (1)(c) of this rule, spot-checks must assure proper operation of:

(a) Electrical interlocks at each gamma stereotactic radiosurgery room entrance;

(b) Source exposure indicator lights on the gamma stereotactic radiosurgery unit, on the control console, and in the facility;

(c) Viewing and intercom systems;

(d) Timer termination;

(e) Radiation monitors used to indicate room exposures; and

(f) Emergency off buttons.

(5) A licensee must arrange for the repair of any system identified in section (3) of this rule that is not operating properly as soon as possible.

(6) If the results of the checks required in section (4) of this rule indicate the malfunction of any system, a licensee must lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.

(7) A licensee must retain a record of each check required by sections (3) and (4) of this rule in accordance with OAR 333-100-0057. The record must include:

(a) The date of the spot-check;

(b) The manufacturer's name, model number, and serial number for the gamma stereotactic radiosurgery unit and the instrument used to measure the output of the unit;

(c) An assessment of timer linearity and accuracy;

(d) The calculated on-off error;

(e) A determination of trunnion centricity;

(f) The difference between the anticipated output and the measured output;

(g) An assessment of source output against computer calculations;

(h) Notations indicating the operability of radiation monitors, helmet microswitches, emergency timing circuits, emergency off buttons, electrical interlocks, source exposure indicator lights, viewing and intercom systems, timer termination, treatment table retraction mechanism, and stereotactic frames and localizing devices (trunnions); and

(i) The name of the individual who performed the periodic spot-check and the signature of the authorized medical physicist who reviewed the record of the spot-check.

(8) A licensee must retain a copy of the procedures required by section (2) until the licensee no longer possesses the gamma stereotactic radiosurgery unit.

Radiation Surveys Therapeutic Treatment Units

(1) In addition to the survey requirement in OAR 333-120-0200, a person licensed under this rule must make surveys to ensure that the maximum radiation levels and average radiation levels from the surface of the main source safe with the source(s) in the shielded position do not exceed the levels stated in the Sealed Source and Device Registry.

(2) The licensee must make the survey required by section (1) of this rule at installation of a new source and following repairs to the source(s) shielding, the source(s) driving unit, or other electronic or mechanical component that could expose the source, reduce the shielding around the source(s), or compromise the radiation safety of the unit or the source(s).

(3) A licensee must retain a record of the radiation surveys required by section (1) of this rule for the duration of use of the unit. The record must include:

(a) The date of the measurements;

(b) The manufacturer's name, model number and serial number of the treatment unit, source, and instrument used to measure radiation levels;

(c) Each dose rate measured around the source while the unit is in the off position and the average of all measurements; and

(d) The signature of the individual who performed the test.

333-116-0600
Safety Checks and Five-year Inspection for Teletherapy and Gamma Stereotactic Radiosurgery Units

(1) A licensee must have each teletherapy unit and gamma stereotactic radiosurgery unit fully inspected and serviced during source replacement or at intervals not to exceed five years, whichever comes first, to assure proper functioning of the source exposure mechanism.

(2) This inspection and servicing may only be performed by persons specifically licensed to do so by the Nuclear Regulatory Commission or an Agreement State.

(3) If the results of the checks required in section (1) of this rule indicate the malfunction of any system, the licensee must lock the control console in the "off" position and not use the unit except as may be necessary to repair, replace or check the malfunctioning system.

(4) A licensee must retain, in accordance with OAR 333-100-0057, a record of the facility checks following installation of a source. The record must include notations indicating the operability of each entrance door interlock, each electrical or mechanical stop, each beam condition indicator light, the viewing system and doors and the signature of the Radiation Safety Officer. In addition each record must contain:

(a) The inspector's radioactive materials license number;

(b) The date of inspection;

(c) The manufacturer's name and model number and serial number of both the treatment unit and source;

(d) A list of components inspected and serviced, and the type of service; and

(e) The signature of the inspector.

333-116-0605
Therapy-Related Computer Systems

The licensee must perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance testing must include, as applicable, verification of:

(1) The source-specific input parameters required by the dose calculation algorithm;

(2) The accuracy of dose, dwell time, and treatment time calculations at representative points;

(3) The accuracy of isodose plots and graphic displays;

(4) The accuracy of the software used to determine sealed source positions from radiographic images; and

(5) The accuracy of electronic transfer of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.

333-116-0610
Modification of Teletherapy Unit or Room Before Beginning a Treatment Program

(1) If the survey required by OAR 333-116-0590 indicates that any individual member of the public is likely to receive a dose in excess of the limits specified in 333-120-0180, before beginning the treatment program the licensee must:

(a) Either equip the unit with stops or add additional radiation shielding to ensure compliance with OAR 333-120-0180;

(b) Perform the survey required by OAR 333-116-0590 again; and

(c) Include in the report required by OAR 333-116-0620 the results of the initial survey, a description of the modification made to comply with subsection (1)(a) of this rule, and the results of the second survey.

(2) As an alternative to the requirements set out in subsection (1)(a) of this rule a licensee may request a license amendment under OAR 333-120-0180(3) that authorizes radiation levels in unrestricted areas greater than those permitted by 333-120-0180(1). A licensee may not begin the treatment program until the license amendment has been issued.

333-116-0620
Reports of Teletherapy Surveys, Checks, Tests and Measurements

A licensee must furnish a copy of the records required in OAR 333-116-0590, 333-116-0600, 333-116-0610 and the output from the teletherapy source expressed as rem (Sv) per hour at one meter from the source and determined during the full calibration required in OAR 333-116-0570 to the Authority within 30 days following completion of the action that initiated the record requirement.

333-116-0640
Radiation Safety Officer Training and Experience Requirements

Except as provided in OAR 333-116-0740, the licensee shall require an individual fulfilling the responsibilities of the Radiation Safety Officer as provided in OAR 333-116-0090 to be an individual who:

(1) Is certified by a specialty board whose certification process has been recognized by the Commission or an Agreement State and who meets the requirements in sections (4) and (5) of this rule. (The names of board certifications which have been recognized by the Commission or an Agreement State are posted on the NRC's webpage.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a)(A) Hold a bachelor's or graduate degree from an accredited college or university in physical science or engineering or biological science with a minimum of 20 college credits in physical science;

(B) Have five or more years of professional experience in health physics (graduate training may be substituted for no more than two years of the required experience) including at least three years in applied health physics; and

(C) Pass an examination administered by diplomats of the specialty board, which evaluates knowledge and competence in radiation physics and instrumentation, radiation protection, mathematics pertaining to the use and measurement of radioactivity, radiation biology, and radiation dosimetry; or

(b)(A) Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;

(B) Have two years of full-time practical training and supervised experience in medical physics:

(i) Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the Commission or an Agreement State; or

(ii) In clinical nuclear medicine facilities providing diagnostic and therapeutic services under the direction of physicians who meet the requirements for authorized users in OAR 333-116-0670, 333-116-0680 or 333-116-0740;

(C) Pass an examination, administered by diplomats of the specialty board, that assesses knowledge and competence in clinical diagnostic radiological or nuclear medicine physics and in radiation safety; or

(2) Has completed a structured educational program consisting of 200 hours of classroom and laboratory training as follows:

(a) Radiation physics and instrumentation;

(b) Radiation protection;

(c) Mathematics pertaining to the use and measurement of radioactivity;

(d) Radiation biology;

(e) Radiopharmaceutical chemistry;

(f) Radiation dosimetry; and

(g) One year of full time experience in radiation safety at a medical institution under the supervision of the individual identified as the Radiation Safety Officer on an Authority, Agreement State, Licensing State or U.S. Nuclear Regulatory Commission license that authorizes similar type(s) of medical use of radioactive material involving the following:

(A) Shipping, receiving, and performing related radiation surveys;

(B) Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters, and instruments used to measure radionuclides;

(C) Securing and controlling byproduct material;

(D) Using administrative controls to avoid mistakes in the administration of byproduct material;

(E) Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures;

(F) Using emergency procedures to control byproduct material; and

(G) Disposing of radioactive material; or

(3)(a) Is a medical physicist who has been certified by a specialty board whose certification process has been recognized by the Nuclear Regulatory Commission or an Agreement State under OAR 333-116-0905(1) and has experience in radiation safety for similar types of use of byproduct material for which the licensee is seeking the approval of the individual as Radiation Safety Officer and who meets the requirements in sections (4) and (5) of this rule; or

(b) Is an authorized user, authorized medical physicist, or authorized nuclear pharmacist identified on the licensee's license and has experience with the radiation safety aspects of similar types of use of byproduct material for which the individual has Radiation Safety Officer responsibilities; and

(4) Has obtained written attestation, signed by a preceptor Radiation Safety Officer, that the individual has satisfactorily completed the requirements in section (5) and in paragraphs (1)(a)(A) and (1)(b)(B) or paragraphs (1)(b)(A) and (1)(b)(B) or section (2), or subsections (3)(a) or (3)(b) of this rule, and has achieved a level of radiation safety knowledge sufficient to function independently as a Radiation Safety Officer for a medical use licensee; and

(5) Has training in the radiation safety, regulatory issues, and emergency procedures for the types of use for which a licensee seeks approval. This training requirement may be satisfied by completing training that is supervised by a Radiation Safety Officer, authorized medical physicist, authorized nuclear pharmacist, or authorized user, as appropriate, who is authorized for the type(s) of use for which the licensee is seeking approval.

333-116-0660

Training for Uptake, Dilution or Excretion Studies

Except as provided in OAR 333-116-0740, the licensee shall require the authorized user of a radiopharmaceutical listed in 333-116-0300 to be a physician who:

(1) Is certified by a medical specialty board whose certification process has been recognized by the Nuclear Regulatory Commission or an Agreement State and who meets the requirements in section (4) of this rule (The names of board certifications recognized by the NRC or an Agreement State are posted on the NRC's website). To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a) Complete 60 hours of training and experience in basic radionuclide handling techniques applicable to the medical use of unsealed byproduct material for uptake, dilution, and excretion studies. The training and experience must include paragraphs (3)(a)(A) through (3)(b)(F) of this rule; and

(b) Pass an examination administered by diplomats of the specialty board that assesses knowledge and competence in radiation safety, radionuclide handling and quality control; or

(2) Is an authorized user under OAR 333-116-0670, 333-116-0680, or equivalent Nuclear Regulatory Commission or Agreement State requirements; or

(3) Has completed 60 hours of training and experience, including a minimum of eight hours of classroom and laboratory training, in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed byproduct material for uptake, dilution, and excretion studies. The training and experience must include:

(a) Classroom and laboratory training in the following areas:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity;

(D) Chemistry of byproduct material for medical use; and

(E) Radiation biology; and

(b) Work experience, under the supervision of an authorized user who meets the requirements in OAR 333-116-0660, 333-116-0670, 333-116-0680 and 333-116-0740 or Nuclear Regulatory Commission or equivalent Agreement State requirements, involving:

(A) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

(B) Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;

(C) Calculating, measuring and safely preparing patient or human research subject dosages;

(D) Using administrative controls to prevent a medical event involving the use of unsealed byproduct material;

(E) Using procedures to contain spilled byproduct material safely and using proper decontamination procedures; and

(F) Administering dosages of radiopharmaceutical drugs to patients or human research subjects; and

(4) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements, in OAR 333-116-0740, 333-116-0660, 333-116-0670, or 333-116-0680, or Nuclear Regulatory Commission or equivalent Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection (1)(a) or section (3) of this rule and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under 333-116-0300.

333-116-0670
Training for Imaging and Localization Studies

Except as provided in OAR 333-116-0740, the licensee shall require an authorized user of unsealed byproduct material for the uses authorized under OAR 333-116-0320 to be a physician who:

(1) Is certified by a medical specialty board whose certification process has been recognized by the Commission or an Agreement State and who meets the requirements in section (4) of this rule. (The names of board certifications that have been recognized by the Commission or an Agreement State are posted on the NRC's website). To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a) Complete 700 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed byproduct material for imaging and localization studies as described in subsection (3)(a) through paragraph (2)(b)(G) of this rule; and

(b) Pass an examination administered by diplomats of the specialty board, which assesses knowledge and competence in radiation safety, radionuclide handling and quality control; or

(2) Is an authorized user under OAR 333-116-0680 and meets the requirements in OAR 333-116-0670(3)(b)(G) or equivalent Nuclear Regulatory Commission or Agreement State requirements; or

(3) Has completed 700 hours of training and experience, including a minimum of 80 hours of classroom and laboratory training in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed byproduct material for imaging and localization studies.

(a) The training and experience must include at a minimum classroom and laboratory training in the following areas:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity;

(D) Chemistry of byproduct material for medical use; and

(E) Radiation biology; and

(b) Work experience, under the supervision of an authorized user, who meets the requirements in this rule or OAR 333-116-0670, 333-116-0680, 333-116-0740 and 333-116-0670(3)(b)(G) or equivalent Nuclear Regulatory Commission or Agreement State requirements, involving:

(A) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

(B) Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;

(C) Calculating, measuring, and safely preparing patient or human research subject dosages;

(D) Using administrative controls to prevent a medical event involving the use of unsealed byproduct material;

(E) Using procedures to safely contain spilled radioactive material and using proper decontamination procedures;

(F) Administering dosages of radioactive drugs to patients or human research subjects; and

(G) Eluting generator systems appropriate for preparation of radiopharmaceutical drugs for imaging and localization studies, measuring and testing the eluate for radionuclidic purity, and processing the eluate with reagent kits to prepare labeled radiopharmaceutical drugs; and

(4) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in this rule or OAR 333-116-0670(3)(b)(G), 333-116-0680, 333-116-0740 or equivalent Nuclear Regulatory Commission or Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection (1)(a) or section (3) of this rule and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under OAR 333-116-0300 and 333-116-0320.

333-116-0680
Training for Use of Unsealed Byproduct Material for Which a Written Directive is Required

Except as provided in OAR 333-116-0740, the licensee must require an authorized user of unsealed byproduct material for the uses authorized under 333-116-0360 to be a physician who:

(1) Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in paragraph (2)(b)(F) and subsection (2)(c) of this rule. (Specialty boards whose certification processes have been recognized by the NRC or an Agreement State shall be posted on the NRC's webpage). To be recognized, a specialty board shall require all candidates for certification to:

(a) Successfully complete residency training in a radiation therapy or nuclear medicine training program or a program in a related medical specialty. These residency training programs must include 700 hours of training and experience as described in subsection (2)(a) through paragraph (2)(b)(E). Eligible training programs must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education, the Royal College of Physicians and Surgeons of Canada, or the Committee on Post-Graduate Training of the American Osteopathic Association; and

(b) Pass an examination, administered by diplomats of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, quality assurance, and clinical use of unsealed byproduct material for which a written directive is required; or

(2) Has completed 700 hours of training and experience, including a minimum of 200 hours of classroom and laboratory training in basic radionuclide handling techniques applicable to the medical use of unsealed byproduct material requiring a written directive. The training and experience must include:

(a) Classroom and laboratory training in the following areas:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity;

(D) Chemistry of byproduct material for medical use; and

(E) Radiation biology; and

(b) Work experience, under the supervision of an authorized user who meets the requirements in OAR 333-116-0740, and sections (1) and (2) of this rule, or NRC or equivalent Agreement State requirements. A supervising authorized user, who meets the requirements in section (2) of this rule, must have experience in administering dosages in the same dosage category or categories as given in OAR 333-116-0680(2)(b)(F) as the individual requesting authorized user status. The work experience must involve:

(A) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

(B) Performing quality control procedures on instruments used to determine the activity of dosages, and performing checks for proper operation of survey instruments;

(C) Calculating, measuring and safely preparing patient or human research subject dosages;

(D) Using administrative controls to prevent a medical event involving the use of unsealed byproduct material;

(E) Using procedures to contain spilled byproduct material safely and using proper decontamination procedures; and

(F) Administering dosages of radiopharmaceutical drugs to patients or human research subjects involving a minimum of three cases in each of the following categories for which the individual is requesting authorized user status:

(i) Oral administration of less than or equal to 1.22 Gigabecquerels (33 millicuries) of sodium iodide I-131;

(ii) Oral administration of greater than 1.22 Gigabecquerels (33 millicuries) of sodium iodide I-131;

NOTE: Experience with at least three cases in subparagraph (ii) also satisfies the requirement in subparagraph (i).

(iii) Parenteral administration of any beta emitter or a photon-emitting radionuclide with a photon energy less than 150 keV; or

(iv) Parenteral administration of any other radionuclide; and

(c) Has obtained written attestation that the individual has satisfactorily completed the requirements in sections (1) and (2) and paragraph (2)(b)(F) of this rule, and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under OAR 333-116-0360. The written attestation must be signed by a preceptor authorized user who meets the requirements in 333-116-0740, 333-116-0680 or equivalent NRC or Agreement State requirements. The preceptor authorized user, who meets the requirements in section (2) of this rule, must have experience in administering dosages in the same dosage category or categories as given in 333-116-0680(2)(b)(F)(i), (ii), (iii), or (iv) as the individual requesting authorized user status.

333-116-0683

Training for the Oral Administration of Sodium Iodide I-131 Requiring a Written Directive in Quantities Less Than or Equal to 1.22 Gigabecquerels (33 millicuries)

Except as provided in OAR 333-116-0740, the licensee shall require an authorized user for the oral administration of sodium iodide I-131 requiring a written directive and the total treatment quantity is less than or equal to 1.22 Gigabecquerels (33 millicuries), to be a physician who:

(1) Is certified by a medical specialty board whose certification process includes all of the requirements in section (3) of this rule and whose certification has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (3)(c) of this rule. (The names of board certifications which have been recognized by the NRC or an Agreement State are posted on the NRC's webpage); or

(2) Is an authorized user under OAR 333-116-0680 for uses listed in 333-116-0680(2)(b)(F)(i) or (ii) or 333-116-0687, or equivalent Agreement State requirements; or

(3) Has successfully completed 80 hours of classroom and laboratory training, applicable to the medical use of sodium iodide I-131 for procedures requiring a written directive.

(a) The training must include:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity;

(D) Chemistry of byproduct material for medical use; and

(E) Radiation biology; and

(b) Has work experience, under the supervision of an authorized user who meets the requirements in OAR 333-116-0680, 333-116-0683, 333-116-0687, 333-116-0740 or equivalent NRC or Agreement State requirements. A supervising authorized user who meets the requirements in 333-116-0680(2) must have experience in administering dosages as specified in 333-116-0680(2)(b)(F)(i) or (ii). The work experience must involve:

(A) Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;

(B) Calibrating instruments used to determine the activity of dosages and performing checks for proper operation for survey meters;

(C) Calculating, measuring and safely preparing patient or human research subject dosages;

(D) Using administrative controls to prevent a medical event involving the use of byproduct material;

(E) Using procedures to contain spilled byproduct material safely and using proper decontamination procedures; and

(F) Administering dosages to patients or human research subjects, that includes at least three cases involving the oral administration of less than or equal to 1.22 Gigabecquerels (33 millicuries) of sodium iodide I-131; and

(c) Has obtained written attestation that the individual has satisfactorily completed the requirements in subsections (3)(a) and (3)(b) of this rule and has achieved a level of competency sufficient to function independently as an authorized user for medical uses authorized under OAR 333-116-0360. The written attestation must be signed by a preceptor authorized user who meets the requirements in OAR 333-116-0740, 333-116-0680, 333-116-0683, 333-116-0687 or equivalent NRC or Agreement State requirements. A preceptor authorized user, who meets the requirement in OAR 333-116-0680(2), must also have experience in administering dosages as specified in OAR 333-116-0680(2)(b)(F)(i) or (ii).

333-116-0687

Training for Oral Administration of Sodium Iodide I-131 Requiring a Written Directive in Quantities Greater than 1.22 Gigabecquerels (33 millicuries)

Except as provided in OAR 333-116-0740, the licensee must require an authorized user for the oral administration of sodium iodide I-131 requiring a written directive in quantities greater than 1.22 Gigabecquerels (33 millicuries), to be a physician who:

(1) Is certified by a medical specialty board whose certification process includes all of the requirements in subsection (3)(a) and (3)(b) of this rule and whose certification has been recognized by the NRC or an Agreement State, and who meets the requirements in subsection (3)(c) of this rule. (The names of board certifications which have been recognized by the NRC or an Agreement State are posted on the NRC's webpage); or

(2) Is an authorized user under OAR 333-116-0680 for uses listed in OAR 333-116-0680(2)(b)(F)(ii), or equivalent NRC or Agreement State requirements; or

(3) Has successfully completed 80 hours of classroom and laboratory training, applicable to the medical use of sodium iodide I-131 for procedures requiring a written directive.

(a) The training must include:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity;

(D) Chemistry of byproduct material for medical use; and

(E) Radiation biology; and

(b) Has work experience, under the supervision of an authorized user who meets the requirements in OAR 333-116-0680, 333-116-0687, 333-116-0740, or equivalent NRC or Agreement State requirements. A supervising authorized user, who meets the requirements in OAR 333-116-0680(2), must have experience in administering dosages as specified in OAR 333-116-0680(2)(b)(F)(ii). The work experience must involve:

(A) Ordering, receiving and unpacking radioactive materials safely and performing the related radiation surveys;

(B) Calibrating instruments used to determine the activity of dosages and performing checks for proper operation for survey meters;

(C) Calculating, measuring and safely preparing patient or human research subject dosages;

(D) Using administrative controls to prevent a medical event involving the use of byproduct material;

(E) Using procedures to contain spilled byproduct material safely and using proper decontamination procedures; and

(F) Administering dosages to patients or human research subjects, that includes at least three cases involving the oral administration of greater than 1.22 Gigabecquerels (33 millicuries) of sodium iodide I-131; and

(c) Has obtained written attestation that the individual has satisfactorily completed the requirements in subsections (3)(a) and (3)(b) of this rule, and has achieved a level of competency sufficient to function independently as an authorized user for medical uses authorized under OAR 333-116-0360. The written attestation must be signed by a preceptor authorized user who meets the requirements in 333-116-0680, 333-116-0687, 333-116-0740, or equivalent Agreement State requirements. A preceptor authorized user, who meets the requirements in 333-116-0680(2), must have experience in administering dosages as specified in 333-116-0680(2)(b)(F)(ii).

333-116-0690
Training for Therapeutic Use of Brachytherapy Source

Except as provided in OAR 333-116-0740, the licensee must require the authorized user using manual brachytherapy sources specified in OAR 333-116-0420 for therapy to be a physician who:

(1) Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State, and who meets the requirements in subsection (2)(d) of this rule. (The names of board certifications which have been recognized by the NRC or an Agreement State are posted on the NRC's webpage.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a) Successfully complete a minimum of three years of residency training in a radiation oncology program approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-Graduate Training of the American Osteopathic Association; and

(b) Pass an examination, administered by diplomats of the specialty board, that tests knowledge and competence in radiation safety, radionuclide handling, treatment planning, quality assurance and clinical use of manual brachytherapy; or

(2) Has completed a structured educational program in basic radionuclide handling techniques applicable to the use of manual brachytherapy sources that includes:

(a) 200 hours of classroom and laboratory training in the following areas:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity; and

(D) Radiation biology; and

(b) 500 hours of work experience, under the supervision of an authorized user who meets the requirements in this rule, OAR 333-116-0740 or equivalent NRC or Agreement State requirements at a medical institution, involving:

(A) Ordering, receiving and unpacking radioactive materials safely and performing the related radiation surveys;

(B) Checking survey meters for proper operation;

(C) Preparing, implanting and removing brachytherapy sources;

(D) Maintaining running inventories of material on hand;

(E) Using administrative controls to prevent a medical event involving the use of byproduct material; and

(F) Using emergency procedures to control byproduct material; and

(c) Has completed three years of supervised clinical experience in radiation oncology, under an authorized user who meets the requirements in OAR 333-116-0740, 333-116-0690, or equivalent NRC or Agreement State requirements, as part of a formal training program approved by the Residency Review Committee for Radiation Oncology of the Accreditation Council for Graduate Medical Education, or the Royal College of Physicians and Surgeons of Canada, or the Committee on Postdoctoral Training of the American Osteopathic Association. This experience may be obtained concurrently with the supervised work experience required by subsection (2)(b) of this rule; and

(d) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in OAR 333-116-0740, 333-116-0690, or equivalent NRC or Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection (1)(a), or subsections (2)(a), (2)(b) and (2)(c) of this rule and has achieved a level of competency sufficient to function independently as an authorized user of manual brachytherapy sources for the medical uses authorized under 333-116-0420.

333-116-0700
Training for Ophthalmic Use of Strontium-90

Except as provided in OAR 333-116-0740, the licensee must require the authorized user using only strontium-90 for ophthalmic radiotherapy to be a physician who:

(1) Is an authorized user under OAR 333-116-0690 or equivalent Nuclear Regulatory Commission or Agreement State requirements; or

(2) Has completed 24 hours of classroom and laboratory training applicable to the medical use of strontium-90 for ophthalmic radiotherapy.

(a) The training must include:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity; and

(D) Radiation biology; and

(b) Supervised clinical training in ophthalmic radiotherapy under the supervision of an authorized user at a medical institution that includes the use of strontium-90 for the ophthalmic treatment of five individuals. This supervised clinical training must involve:

(A) Examination of each individual to be treated;

(B) Calculation of the dose to be administered;

(C) Administration of the dose;

(D) Follow up and review of each individual's case history; and

(E) Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in OAR 333-116-0740, 333-116-0690, 333-116-0700, or equivalent Nuclear Regulatory Commission or Agreement State requirements, that the individual has satisfactorily completed the requirements in section (2) of this rule and has achieved a level of competency sufficient to function independently as an authorized user of strontium-90 for ophthalmic use.

333-116-0710
Training for Use of Sealed Sources for Diagnosis

Except as provided in OAR 333-116-0740 the licensee must require the authorized user using a sealed source in a device specified in OAR 333-116-0400 to be a physician, dentist or podiatrist who:

(1) Is certified in:

(a) Radiology, diagnostic radiology with special competence in nuclear radiology, radiation oncology or therapeutic radiology by the American Board of Radiology; or

(b) Nuclear medicine by the American Board of Nuclear Medicine; or

(c) Diagnostic radiology or radiology by the American Osteopathic Board of Radiology.

(2) Has completed eight hours of instruction in basic radioisotope handling techniques specifically applicable to the use of the device. To satisfy the requirement for instruction, the training must include:

(a) Radiation physics, mathematics pertaining to the use and measurement of radioactivity and instrumentation;

(b) Radiation biology;

(c) Radiation protection and training in the use of the device for the purposes authorized by the license; and

(d) Training in the use of the device for the uses requested.

333-116-0715

Training for the Parenteral Administration of Unsealed Byproduct Material Requiring a Written Directive

Except as provided in OAR 333-116-0740, the licensee shall require an authorized user for the parenteral administration requiring a written directive, to be a physician who:

(1) Is an authorized user under OAR 333-116-0680 for uses listed in 333-116-0680(2)(b)(F)(iii) or 333-116-0680(2)(b)(F)(iv) or equivalent Agreement State requirements; or

(2) Is an authorized user under OAR 333-116-0690 or 333-116-0720, or equivalent Agreement State or Nuclear Regulatory Commission requirements and who meets the requirements in section (4) of this rule; or

(3) Is certified by a medical specialty board whose certification process has been recognized by the Nuclear Regulatory Commission or an Agreement State under OAR 333-116-0690 or 333-116-0720, and who meets the requirements in section (4) of this rule.

(4) Has successfully completed 80 hours of classroom and laboratory training, applicable to parenteral administrations, for which a written directive is required, of any beta emitter, or any photon-emitting radionuclide with a photon energy less than 150 keV, or parenteral administration of any other radionuclide for which a written directive is required.

(a) The training must include:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity;

(D) Chemistry of byproduct material for medical use; and

(E) Radiation biology; and

(b) Has work experience, under the supervision of an authorized user who meets the requirements in OAR 333-116-0680, 333-116-0715, 333-116-0740 or equivalent Nuclear Regulatory Commission or Agreement State requirements, in the parenteral administration, for which a written directive is required, of any beta emitter, or any photon-emitting radionuclide with a photon energy less than 150 keV, or parenteral administration of any other radionuclide for which a written directive is required. A supervising authorized user who meets the requirements in 333-116-0680 must have experience in administering dosages as specified in 333-116-0680(2)(b)(F)(iii) or 333-116-0680(2)(b)(F)(iv). The work experience must involve:

(A) Ordering, receiving, and unpacking radioactive materials safely, and performing the related radiation surveys;

(B) Performing quality control procedures on instruments used to determine the activity of dosages, and performing checks for proper operation of survey meters;

(C) Calculating, measuring, and safely preparing patient or human research subject dosages;

(D) Using administrative controls to prevent a medical event involving the use of unsealed byproduct material;

(E) Using procedures to contain spilled byproduct material safely, and using proper decontamination procedures; and

(F) Administering dosages to patients or human research subjects, that include at least three cases involving the parenteral administration, for which a written directive is required, of any beta emitter, or any photon-emitting radionuclide with a photon energy less than 150 keV and at least three cases involving the parenteral administration of any other radionuclide, for which a written directive is required; and

(c) Has obtained written attestation that the individual has satisfactorily completed the requirements in sections (2) or (3) of this rule, and has achieved a level of competency sufficient to function independently as an authorized user for the parenteral administration of unsealed byproduct material requiring a written directive. The written attestation must be signed by a preceptor authorized user who meets the requirements in OAR 333-116-0680, 333-116-0715, 333-116-0740 or equivalent Agreement State requirements. A preceptor authorized user, who meets the requirements in 333-116-0680, must have experience in administering dosages as specified in 333-116-0680(2)(b)(F)(iii) or 333-116-0680(2)(b)(F)(iv).

333-116-0720

Training for Use of Remote Afterloader Units, Teletherapy Units, and Gamma Stereotactic Radiosurgery Units

Except as provided in OAR 333-116-0740, the licensee must require the authorized user of a sealed source specified in OAR 333-116-0480 to be a physician who:

(1) Is certified by a medical specialty board whose certification process has been recognized by the Nuclear Regulatory Commission (NRC) or an Agreement State and who meets the requirements in subsection (2)(c) and section (3) of this rule. (The names of board certifications which have been recognized by the Commission or an Agreement State are posted on the NRC's webpage.) To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a) Successfully complete a minimum of three years of residency training in a radiation therapy program approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-Graduate Training of the American Osteopathic Association; and

(b) Pass an examination, administered by diplomats of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, treatment planning, quality assurance, and clinical use of stereotactic radiosurgery, remote afterloaders and external beam therapy; or

(2) Has completed a structured educational program in basic radionuclide techniques applicable to the use of a sealed source in a therapeutic medical unit:

(a) Which includes the following:

(A) 200 hours of classroom and laboratory training in the following areas:

(i) Radiation physics and instrumentation;

(ii) Radiation protection;

(iii) Mathematics pertaining to the use and measurement of radioactivity; and

(iv) Radiation biology; and

(B) 500 hours of work experience, under the supervision of an authorized user who meets the requirements in OAR 333-116-0720, 333-116-0740 or equivalent Nuclear Regulatory Commission or Agreement State requirements at a medical institution, involving:

(i) Reviewing full calibration measurements and periodic spot-checks;

(ii) Preparing treatment plans and calculating treatment doses and times;

(iii) Using administrative controls to prevent a medical event involving the use of byproduct material;

(iv) Implementing emergency procedures to be followed in the event of the abnormal operation of the medical unit or console;

(v) Checking and using survey meters; and

(vi) Selecting the proper dose and how it is to be administered; and

(b) Has completed three years of supervised clinical experience in radiation therapy, under an authorized user who meets the requirements in OAR 333-116-0720, 333-116-0740 or equivalent Nuclear Regulatory Commission or Agreement State requirements, as part of a formal training program approved by the Residency Review Committee for Radiation Oncology of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Postdoctoral Training of the American Osteopathic Association. This experience may be obtained concurrently with the supervised work experience required by paragraph (2)(a)(B) of this rule; and

(c) Has obtained written attestation that the individual has satisfactorily completed the requirements in subsections (1)(a) or (2)(a) and (2)(b), and section (3) of this rule, and has achieved a level of competency sufficient to function independently as an authorized user of each type of therapeutic medical unit for which the individual is requesting authorized user status. The written attestation must be signed by a preceptor authorized user who meets the requirements in OAR 333-116-0720, 333-116-0740 or equivalent Nuclear Regulatory Commission or Agreement State requirements for an authorized user for each type of therapeutic medical unit for which the individual is requesting authorized user status; and

(3) Has received training in device operation, safety procedures, and clinical use for the type(s) of use for which authorization is sought. This training requirement may be satisfied by satisfactory completion of a training program provided by the vendor for new users or by receiving training supervised by an authorized user or authorized medical physicist, as appropriate, who is authorized for the type(s) of use for which the individual is seeking authorization.

333-116-0730
Training for Teletherapy or Brachytherapy Physicist

The licensee must require the teletherapy physicist to:

(1) Be certified by the American Board of Radiology in:

(a) Therapeutic radiological physics; or

(b) Roentgen ray and gamma ray physics; or

(c) X-ray and radium physics; or

(d) Radiological physics; or

(2) Be certified by the American Board of Medical Physics in radiation oncology physics; or

(3) Hold a master's or doctor's degree in physics, biophysics, radiological physics or health physics and have completed one year of full time training in therapeutic radiological physics and also one year of full time work experience under the supervision of a teletherapy or brachytherapy physicist at a medical institution. To meet this requirement, the individual must have performed the tasks listed in OAR 333-116-0200, 333-116-0570, 333-116-0580 and 333-116-0590 under the supervision of a teletherapy or brachytherapy physicist during the year of work experience.

Specific Requirements for Positron Emission Tomography (PET) Facilities

333-116-0800
Licensing and Registration of Positron Emission Tomography (PET) Facilities

(1) Each component of a PET facility (accelerator, radiopharmacy, and clinic) must be separately licensed pursuant to OAR 333-101-0005, 333-102-0200, 333-103-0005 or 333-103-0010.

(2) The licensee or registrant must receive applicable Authority authorization at least 30 days prior to the production of any accelerator-produced radioactive material or any change in accelerator configuration, shielding, location, room shielding or configuration, nuclide production method, ventilation systems, rabbit or other delivery systems, operating or emergency procedures, radiation safety personnel, authorized users or operators, or other applicable provisions authorized pursuant to these rules.

333-116-0810
Supervision of PET Facilities

(1) Management must ensure that there is a qualified Radiation Safety Officer (RSO) who must oversee the radiation safety aspects of the PET facility and be responsible for radiation safety of the accelerator facility, pharmacy, and PET clinic.

(a) In the case of separate licenses for different components in a PET facility, there must be a cooperative consortium of management and radiation safety personnel that acts as directors for the facility.

(b) Management, whether singular or in consortium, must write a statement of authority and responsibility for all staff handling or controlling the production and use of PET isotopes.

(2) The RSO must be assisted by personnel specifically trained and designated for the area of concern, whether accelerator operation, pharmaceutical production, or PET clinic.

333-116-0820
Other Applicable Requirements

(1) The licensee must ensure that any radiopharmaceutical for which an Investigational New Drug (IND) status does not exist, or which must be used for research purposes in humans, is reviewed by an Institutional Review Board (IRB) or Human Subjects Review Board or Committee. The licensee must establish procedures, reviews, quality assurance, and emergency procedures for all procedures reviewed by the IRB. The IRB, the PET Radiation Safety Committee or subcommittee, and the PET or facility Radiation Safety Officer must review and approve any and all PET procedures, unless otherwise authorized in a radioactive materials license pursuant to OAR 333-102-0200.

(2) Transfers of radioisotopes must be in accordance with requirements in OAR 333-102-0330.

(3) PET facility radiation protection programs, occupational dose limits, radiation dose limits for the public, surveys and monitoring, restricted area control, storage of radioactive materials, internal exposure control, precautionary procedures, waste disposal, records, and reports must meet all applicable requirements of division 333-120.

333-116-0830
Accelerator Facility Requirements

((1) Accelerators must meet all requirements of division 333-109. Shielded-room accelerators must be equipped with interlocks and personnel control; self-shielded accelerators must be shielded such that personnel access is prevented during operation.

(2) Non-ionizing radiation must meet requirements of division 333-112.

(3) Target maintenance and repair, contamination control, and emergency actions must be conducted pursuant to division 333-120.

(4) There must be an Understanding of Transfer (UOT) when isotopes are transferred from one licensee or entity to another for processing, specifying at what point control is transferred to personnel handling radiochemical production or radiopharmacy operation.

(5) Radiation surveys must be made prior to any accelerator operation or isotope production with a radiation survey instrument calibrated in accordance with requirements in OAR 333-116-0390. Periodic surveys must be done throughout times of operation to ensure that radiation levels meet all applicable requirements in division 333-120 (Radiation Protection Standards).

(6) Ventilation controls must be implemented to ensure compliance with all applicable local, state, and federal requirements. Controls must include monitoring of stacks and computer modeling of air emissions to confirm compliance with standards.

(7) Real-time (integrating) monitors must be used to confirm requirements in OAR 333-120-0100, 333-120-0160, 333-120-0170, and 333-120-0180.

(8) Contamination wipes for radioactive material must be made pursuant to requirements in OAR 333-116-0250;

(9) Dosimetry must address both gamma and beta doses in all areas of the facility. Licensees and registrants must monitor extremities to ensure compliance with OAR 333-120-0100. Bioassays, as defined in 333-100-0005, are not required, but there must be evaluation of internal exposures, pursuant to 333-120-0130, based on calculated releases and monitoring.

333-116-0840
Safety Considerations and Quality Management for PET Facilities

(1) The licensee must establish and implement a Quality Management program pursuant to OAR 333-116-0125 for PET products, as well as other production and calibration products.

(2) PET instrumentation and other equipment unique to the PET process must meet all applicable radiation protection standards pursuant to division 120 of these rules.

(3) Area monitors must be visible and audible to accelerator operators. Monitors must be checked for proper operation daily.

(4) Wasted targets must be treated as radioactive waste and must be properly dismantled, shielded, stored, and disposed.

(5) Accelerator shielding design and safety must meet requirements of OAR 333-109-0025.

(6) Shielding around guide-bends, targets, hot-cells, purification manifolds, etc. must ensure that limits in OAR 333-120-0180 and 333-120-0190 have been met in all areas of beam and nuclide production.

(7) Security provisions for unauthorized access, janitorial services, maintenance, visitors, tours, and personnel-in-training must conform to requirements in OAR 333-120-0180, 333-120-0250 and 333-120-0260.

333-116-0850
Radiopharmacy and Radiochemical Production

(1) All preparations used in humans must meet the Oregon State Board of Pharmacy standards, as well as applicable federal Food and Drug Administration (FDA) requirements.

(a) All research products to be used in humans must be reviewed and approved by the licensee's or consortium Institutional Review Board (IRB).

(b) No research radiopharmaceutical must be used in a human being until its pyrogenicity and purity have been shown to meet applicable standards.

(2) Pharmacy or chemistry personnel must work directly under the supervision of a physician who meets the training criteria in OAR 333-116-0670.

(3) There must be no transfers between or among licensees unless there is a signed Memorandum or Understanding of Transfer. Such memorandum must preclude any transfers from one licensee entity to another if there is incomplete information, purity questions, or non-approval from the IRB.

(4) There must be a detailed description of the shielding and operation of the "black box" (hot cell).

(5) There must be operating and emergency, training, and survey procedures for ease of movement of the product within the pharmacy production area. Emergency procedures must address potential high dose rate emergencies such as stuck rabbit (transport container), pneumatic tube contamination, manifold leak or spill, hot cell emergency, or other incident.

(6) Equipment and procedures must include:

(a) Hood with continuous stack monitoring system and procedures to confirm air emission standards compliance;

(b) Remote handling equipment for very high dose rates (all handling must be done remotely);

(c) Dose calibration, system validation, and calibration standards, for all individual doses;

(d) Ba-133 must not be used as a calibration source;

(e) Dose calibrator linearity check using a positron emitter (beta shield must be evaluated to prevent interference with annihilation measurement);

(f) Product delivery system design, shielding, carrier, and emergency procedures;

(g) Leak tests (hermeticity) of delivery container;

(h) Labeling requirements, transportation manifests, and packaging for outside deliveries;

(i) Transportation requirements pursuant to division 333-118;

(j) Inventory control, "cradle to grave" tracking, and communication with PET clinic;

(k) Waste disposal procedures.

333-116-0870
Rubidium-82 Generator

Rubidium-82 generators require quality assurance procedures for equipment, patient injection, waiting area, imaging, and post-imaging care. There also must be a procedure for spills, and a handling procedure for liquid quality assurance sources for early model PET cameras. Dose calibration procedures are the same as in OAR 333-116-0850(6).

333-116-0880
Training and Experience for PET, PET/CT and SPECT/CT Personnel

(1) Pharmacy or chemistry personnel must have 40 extra hours above Nuclear Pharmacy requirements and 40 hours specific to PET. The 40 hours can be divided equally between didactic and practical applications.

(2) Authorized users who meet training requirements for human use in OAR 333-116-0670 must complete an additional 40 hours at an accepted PET training center.

(3) Technical personnel working under an authorized user must have basic radiation safety training, plus 40 additional hours specific to PET.

(4) Positron Emission-Computed Tomography (PET/CT) or Single Photon Emission-Computed Tomography (SPECT/CT) systems must be operated by technologists licensed by the Oregon Board of Medical Imaging who are:

(a) Any registered radiographer with the credential R.T. (R);

(b) Registered radiation therapist with the credential R.T. (T);

(c) Registered certified nuclear medicine technologist with the credentials R.T. (N); or

(d) Certified Nuclear Medicine Technologist (CNMT) by the Nuclear Medicine Technologist Certification Board (NMTCB).

(5) The individuals mentioned in section (4) of this rule must also have successfully completed appropriate additional education and training and demonstrated competency in the use and operation of PET/CT or SPECT/CT systems.

(6)(a) Appropriate additional training is considered training that covers the topic areas outlined in the PET/CT curriculum developed by the Multi-Organizational Curriculum Project Group sponsored by the American Society of Radiologic Technologists and the Society of Nuclear Medicine Technologists, or equivalent training approved by the Authority; and

(b) Includes the content specified in the PET/CT curriculum for the area(s) that the individual is not already trained or certified in; or

(c) Individuals meeting the requirements of section (4) of this rule and who have successfully completed training that the Authority has evaluated and judged to be substantially equivalent to that specified in subsection (6)(a) of this rule.

(7) An R.T. (N) or CNMT certified in Computed Tomography through the American Registry of Radiologic Technologists is considered to have met the training requirements in section (4) of this rule.

(8) Technologists operating PET/CT or SPECT/CT systems must do so under the direction of an authorized user licensed to perform imaging and localization studies in accordance with OAR 333-116-0320.

333-116-0905
Training for Authorized Medical Physicist

Except as provided in OAR 333-116-0740, the licensee shall require the authorized medical physicist to be an individual who:

(1) Is certified by a specialty board whose certification process has been recognized by the Commission or an Agreement State and who meets the requirements in subsection (2)(b) and section (3) of this rule. To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a) Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;

(b) Have two years of full-time practical training and supervised experience in medical physics:

(A) Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the Commission or an Agreement State; or

(B) In clinical radiation facilities providing high-energy, external beam therapy (photons and electrons with energies greater than or equal to one million electron volts) and brachytherapy services under the direction of physicians who meet the requirements for authorized users in OAR 333-116-0740, 333-116-0690 or 333-116-0720; and

(c) Pass an examination, administered by diplomats of the specialty board, that assesses knowledge and competence in clinical radiation therapy, radiation safety, calibration, quality assurance, and treatment planning for external beam therapy, brachytherapy, and stereotactic radiosurgery; or

(2) Holds a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university; and has completed one year of full-time training in medical physics and an additional year of full-time work experience under the supervision of an individual who meets the requirements for an authorized medical physicist for the type(s) of use for which the individual is seeking authorization.

(a) This training and work experience must be conducted in clinical radiation facilities that provide high-energy, external beam therapy (photons and electrons with energies greater than or equal to one million electron volts) and brachytherapy services and must include:

(A) Performing sealed source leak tests and inventories;

(B) Performing decay corrections;

(C) Performing full calibration and periodic spot checks of external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and

(D) Conducting radiation surveys around external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and

(b) Has obtained written attestation that the individual has satisfactorily completed the requirements in subsections (1)(a) and (1)(b) of this rule, or subsection (2)(a) and section (3) of this rule, and has achieved a level of competency sufficient to function independently as an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status. The written attestation must be signed by a preceptor authorized medical physicist who meets the requirements in this rule, OAR 333-116-0740, 333-116-0905, or equivalent Agreement State requirements for an authorized medical

physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status; and

(3) Has training for the type(s) of use for which authorization is sought that includes hands-on device operation, safety procedures, clinical use, and the operation of a treatment planning system. This training requirement may be satisfied by satisfactorily completing either a training program provided by the vendor or by training supervised by an authorized medical physicist authorized for the type(s) of use for which the individual is seeking authorization.

333-116-0910
Training for an Authorized Nuclear Pharmacist

Except as provided in OAR 333-116-0740, the licensee shall require the authorized nuclear pharmacist to be a pharmacist who:

(1) Is certified by a specialty board whose certification process has been recognized by the Commission or an Agreement State and who meets the requirements in subsection (2)(b) of this rule. To have its certification process recognized, a specialty board shall require all candidates for certification to:

(a) Have graduated from a pharmacy program accredited by the American Council on Pharmaceutical Education (ACPE) or have passed the Foreign Pharmacy Graduate Examination Committee (FPGEC) examination;

(b) Hold a current, active license to practice pharmacy;

(c) Provide evidence of having acquired at least 4000 hours of training/experience in nuclear pharmacy practice. Academic training may be substituted for no more than 2000 hours of the required training and experience; and

(d) Pass an examination in nuclear pharmacy administered by diplomats of the specialty board, that assesses knowledge and competency in procurement, compounding, quality assurance, dispensing, distribution, health and safety, radiation safety, provision of information and consultation, monitoring patient outcomes, research and development; or

(2)(a) Has completed 700 hours in a structured educational program consisting of both:

(A) 200 hours of classroom and laboratory training in the following areas:

(i) Radiation physics and instrumentation;

(ii) Radiation protection;

(iii) Mathematics pertaining to the use and measurement of radioactivity;

(iv) Chemistry of byproduct material for medical use; and

(v) Radiation biology; and

(B) Supervised practical experience in a nuclear pharmacy involving:

(i) Shipping, receiving, and performing related radiation surveys;

(ii) Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters, and, if appropriate, instruments used to measure alpha- or beta-emitting radionuclides;

(iii) Calculating, assaying, and safely preparing dosages for patients or human research subjects;

(iv) Using administrative controls to avoid medical events in the administration of byproduct material; and

(v) Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures; and

(b) Has obtained written attestation, signed by a preceptor authorized nuclear pharmacist, that the individual has satisfactorily completed the requirements in subsections (1)(a), (1)(b), and (1)(c) or (2)(a) of this rule and has achieved a level of competency sufficient to function independently as an authorized nuclear pharmacist.

333-116-0915
Training for Experienced Nuclear Pharmacists

A licensee may apply for and must receive a license amendment identifying an experienced nuclear pharmacist before it allows this individual to work as an authorized nuclear pharmacist. A pharmacist who has completed a structured educational program as specified in OAR 333-116-0910(2)(a) before December 2, 1994, and who is working in a nuclear pharmacy would qualify as an experienced nuclear pharmacist. An experienced nuclear pharmacist need not comply with the requirements on preceptor statement in 333-116-0910(2)(b) and recentness of training in 333-116-0760 to qualify as an authorized nuclear pharmacist.

Stat. Auth.: ORS 453.635

333-116-1000
Report and Notification of a Medical Event

(1) A licensee must report any medical event as defined in OAR 333-116-0020(19), except for an event that results from patient intervention..

(2) The licensee must notify by telephone the Authority no later than the next calendar day after discovery of the medical event.

(3) The licensee must submit a written report to the Authority within 15 days after discovery of the medical event.

(a) The written report must include:

(A) The licensee's name;

(B) The name of the prescribing physician;

(C) A brief description of the event;

(D) Why the event occurred;

(E) The effect, if any, on the individual(s) who received the administration;

(F) What actions, if any, have been taken or are planned to prevent recurrence; and

(G) Certification that the licensee notified the individual (or the individual's responsible relative or guardian), and if not, why not.

(b) The report may not contain the individual's name or any other information that could lead to identification of the individual.

(4) The licensee must provide notification of the event to the referring physician and also notify the individual who is the subject of the medical event no later than 24 hours after its discovery, unless the referring physician personally informs the licensee either that he or she will inform the individual or that, based on medical judgment, telling the individual would be harmful. The licensee is not required to notify the individual without first consulting the referring physician. If the referring physician or the affected individual cannot be reached within 24 hours, the licensee must notify the individual as soon as possible thereafter. The licensee may not delay any appropriate medical care for the individual, including any necessary remedial care as a result of the medical event, because of any delay in notification. To meet the requirements of this rule, the notification of the individual who is the subject of the medical event may be made instead to that individual's responsible relative or guardian. If a verbal notification is made, the licensee must inform the individual, or appropriate responsible relative or guardian that a written description of the event can be obtained from the licensee upon request. The licensee must provide such a written description if requested.

(5) Aside from the notification requirement, nothing in this section affects any rights or duties of licensees and physicians in relation to each other, to individuals affected by the medical event, or to that individual's responsible relatives or guardians.

333-116-1015
Report and Notification of a Dose to an Embryo/Fetus or a Nursing Child

(1) A licensee must report any dose to an embryo/fetus that is greater than 50 mSv (5 rem) dose equivalent that is a result of an administration of byproduct material or radiation from byproduct material to a pregnant individual unless the dose to the embryo/fetus was specifically approved, in advance, by the authorized user.

(2) A licensee must report any dose to a nursing child that is a result of an administration of radioactive material to a breast-feeding individual who:

(a) Is greater than 50 mSv (5 rem) total effective dose equivalent; or

(b) Has resulted in unintended permanent functional damage to an organ or a physiological system of the child, as determined by a physician.

(3) The licensee must notify the Authority by telephone no later than the next calendar day after discovery of a dose to the embryo/fetus or nursing child that requires a report in sections (1) or (2) of this rule.

(4) The licensee must submit a written report to the Authority within 15 days after discovery of a dose to the embryo/fetus or nursing child that requires a report in sections (1) or (2) of this rule.

(a) The written report must include:

(A) The licensee's name;

(B) The name of the prescribing physician;

(C) A brief description of the event;

(D) Why the event occurred;

(E) The effect, if any, on the embryo/fetus or the nursing child;

(F) What actions, if any, have been taken or are planned to prevent recurrence; and

(G) Certification that the licensee notified the pregnant individual or mother (or the mother's or child's responsible relative or guardian), and if not, why not.

(b) The report must not contain the individual's or child's name or any other information that could lead to identification of the individual or child.

(5) The licensee must provide notification of the event to the referring physician and also notify the pregnant individual or mother, both hereafter referred to as the mother, no later than 24 hours after discovery of an event that would require reporting under sections (1) or (2) of this rule, unless the referring physician personally informs the licensee either that he or she will inform the mother or that, based on medical judgment, telling the mother would be harmful. The licensee is not required to notify the mother without first consulting with the referring physician. If the referring physician or mother cannot be reached within 24 hours, the licensee must make the appropriate notifications as soon as possible thereafter. The licensee may not delay any appropriate medical care for the embryo/fetus or for the nursing child, including any necessary remedial care as a result of the event, because of any delay in notification. To meet the requirements of this rule, the notification may be made to the mother's or child's responsible relative or guardian instead of the mother. If a verbal notification is made, the licensee must inform the mother, or the mother's or child's responsible relative or guardian, that a written description of the event can be obtained from the licensee upon request. The licensee must provide such a written description if requested.

333-116-1030
Report Of A Leaking Source

A licensee must file a report with the Authority within five days if a leak test required by OAR 333-116-0200 reveals the presence of 185 Bq (0.005 uCi) or more of removable contamination. The written report must include:

(1) The model number and serial number of the leaking source, if assigned;

(2) The radionuclide and its estimated activity;

(3) The results of the test;

(4) The date of the test; and

(5) The action taken.

DIVISION 117

REGULATION AND LICENSING OF NATURALLY OCCURRING RADIOACTIVE MATERIALS (NORM)

333-117-0010
Purpose

This division establishes radiation protection standards for the possession, use, transfer and disposal of naturally occurring radioactive materials (NORM) not subject to regulation under the Atomic Energy Act of 1954, as amended.

Stat. Auth.: ORS 453.605 - 453.775
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91

333-117-0020
Scope

(1) These rules apply to any person who engages in the extraction, mining, beneficiating, processing, use, transfer or disposal of NORM in such a manner as to technologically alter the natural sources of radiation or their potential exposure pathways to humans.

(2) The Rules in this division address the introduction of NORM into products in which neither the NORM nor the radiation emitted from the NORM is considered to be beneficial to the products. The manufacture and distribution of products containing NORM in which the NORM and/or its associated radiation(s) is considered to be a beneficial attribute are licensed under the provisions of division 102.

(3) This division also addresses waste management and disposal standards which apply to both inactive and active sites and facilities.

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91

333-117-0030
Definitions

As used in this division, the following definitions apply:

(1) "Beneficial Attribute" or "Beneficial to the Product" means that the radioactivity of the product is necessary to the use of the product.

(2) "Beneficiating" means the processing of materials for the purpose of altering the chemical or physical properties to improve the quality, purity or assay grade of a desired product.

(3) "General Environment" means the total terrestrial, atmospheric and aquatic environments outside sites within which any activity, operation or process authorized by a general or specific license issued under this Division is performed.

(4) "Naturally Occurring Radioactive Material (NORM)" means any nuclide which is radioactive in its natural physical state (i.e., not man-made), but does not include source or special nuclear material.

(5) "Working Level (WL)" means any combination of short-lived radon decay products in one liter of air that will result in the ultimate emission of alpha particles with a total energy of 130 billion electron volts. (2.1×10^{-8}J).

Stat. Auth.: ORS 453.605 - 453.745
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91

333-117-0040
Exemptions

(1) Persons who receive, possess, use, process, transfer, distribute and dispose of NORM are exempt from the requirements of these Rules if: The materials contain or are contaminated at concentrations less than five picocuries per gram (185 Bq/kg) of radium, 0.05 percent by weight of uranium or thorium or 150 picocuries per gram (5.55 kBq/kg) of any other NORM radionuclide, provided that these concentrations are not exceeded at any time.

(2) Persons who receive products or materials containing NORM distributed in accordance with a specific license issued by the Agency pursuant to OAR 333-117-0220(2) or an equivalent license issued by another Licensing State are exempt from these rules.

(3) The manufacturing, distribution, use and disposal of the following products/materials are exempt from the requirements of these rules:

(a) Potassium and potassium compounds which have not been isotopically enriched in the radionuclide K-40; and

(b) Brazil nuts.

(4) The wholesale and retail distribution (including custom blending), possession and use of the following products/material are exempt from the requirements of these:

(a) Phosphate and potash fertilizer;

(b) Phosphogypsum for agricultural uses; and

(c) Materials used for building construction if such materials contain NORM which has not been technologically enhanced.

(5) The possession and use of natural gas and natural gas products as a fuel are exempt from the requirements of these rules. The distribution of natural gas and the manufacturing and distribution of natural gas products are exempt from the specific license requirements of this division but are subject to the general license requirements in OAR 333-117-0100 and 333-117-0130.

333-117-0050
Effective Date

The provision and requirements of this division shall take effect January 1990 and shall apply to all facilities or sites owned or controlled by a person on that date. Products distributed and disposals made prior to that date are not subject to the provisions of this division.

Stat. Auth.: ORS 453.605 - 453.745

General License

333-117-0100
General License

(1) A general license is hereby issued to mine, extract, receive, possess, own, use, process and dispose of NORM not exempted in OAR 333-117-0040 without regard to quantity. This general license does not authorize the manufacturing or distribution of products containing NORM in concentrations greater than those specified in OAR 333-117-0040(1).

(2) Facilities and equipment contaminated with NORM in excess of the levels set forth in **Table 1** of this division shall not be released for unrestricted use. The decontamination or maintenance of such equipment and facilities shall only be performed by persons specifically licensed by the Agency or another Licensing State to conduct such work. Each general licensee shall establish written procedures for the evaluation (or screening) of equipment and components to ensure that the levels in **Table 1** of this division are not exceeded.

(3) No person shall transfer land for unrestricted use where the concentration of radium-226 or radium-228 in soil averaged over any 100 square meters exceeds the background level by more than:

(a) Five pCi/gm, averaged over the first 15 cm of soil below the surface; and

(b) Fifteen pCi/gm, averaged over 15 cm thick layers of soil more than 15 cm below the surface.

(4) Equipment contaminated with NORM in excess of the levels set forth in **Table 1** of this division may be released for maintenance and/or overhaul provided the recipient is specifically licensed to perform the activity on contaminated equipment. The decontamination or maintenance of equipment, facilities and land, as described in OAR 333-117-0200(2) shall only be performed by persons specifically licensed by the Agency or another Licensing State to conduct such work.

[ED. NOTE: Tables referenced are available from the agency.]

333-117-0110
Protection of Workers During Operations

Each person subject to the general license in OAR 333-117-0100 shall conduct operations in compliance with the standards for radiation protection set out in division 111 and division 120, except for releases of radioactivity in effluents, which shall be governed by 333-117-0120 and disposal, which shall be governed by 333-117-0130.

Stat. Auth.: ORS 453.605 - 453.745

333-117-0120
Protection of the General Population from Releases of Radioactivity

Concentrations of radioactive material which may be released to the general environment in groundwater, surface water, air, soil, plants and animals shall not result in an annual dose above background exceeding an equivalent of 25 millirem (0.25 mSv) to the whole body or 75 millirem (0.75 mSv) to the critical organ of any member of the public. Doses due to radon-220, radon-222 and their respective decay products, are excluded from these limits. Effort shall be made to maintain releases of radioactivity in effluents to the general environment as low as is reasonably achievable.

333-117-0130
Disposal and Transfer of Waste for Disposal

Each person subject to the general license in OAR 333-117-0100 shall manage and dispose of wastes containing NORM in accordance with the applicable requirements of the U.S. Environmental Protection Agency for disposal of such wastes or in a manner equivalent to the requirements for uranium and thorium byproduct materials in **40 CFR 192** or shall transfer wastes for disposal to a land disposal facility licensed by the U.S. Nuclear Regulatory Commission or an Agreement State or a Licensing State. Records of disposal including manifests, shall be maintained pursuant to the provisions of division 120. Transfers of waste containing NORM for disposal shall be made only to a person specifically licensed to receive such waste.

Specific License

333-117-0200
Specific License

(1) Unless otherwise exempted under the provisions of division 102 of the Rules, the manufacturing and distribution of any material or product containing NORM shall be specifically licensed pursuant to the requirements of this division or pursuant to equivalent regulations of another Licensing State.

(2) Persons conducting the following activities involving equipment and facilities contaminated with NORM in excess of the levels set forth in **Table 1** of this division shall be specifically licensed pursuant to the requirements of this division:

(a) Decontamination of equipment, facilities and land;

(b) Maintenance of equipment and facilities involving the exposure of individuals to radiation or radioactive materials; or

(c) Disposal of the resulting waste.

Filing Application for Specific Licenses

(1) Applications for specific licenses shall be filed in a manner and on a form prescribed by the Agency.

(2) The Agency may at any time after the filing of the original application, and before the expiration of the license, require further statements in order to enable the Agency to determine whether the application should be granted or denied or whether a license should be modified or revoked.

(3) Each application shall be signed by the applicant or licensee or a person duly authorized to act for and on his behalf.

(4) An application for a license may include a request for a license authorizing one or more activities.

(5) In an application, the applicant may incorporate by reference information contained in previous application, statements or reports filed with the Agency provided such references are clear and specific.

(6) Applications and documents submitted to the Agency may be made available for public inspection except that the Agency may withhold any document or part thereof from public inspection if disclosure of its content is not required in the public interest and would adversely affect the interest of a person concerned.

333-117-0220

Requirements for the Issuance of Specific Licenses

(1) A license application will be approved if the Agency determines that:

(a) The applicant is qualified by reason of training and experience to use the material in question for the purpose requested in accordance with these rules in such a manner as to minimize danger to public health and safety or property;

(b) The applicant's proposed equipment, facilities and procedures are adequate to minimize danger to public health and safety or property;

(c) The issuance of the license will not be inimical to the health and safety of the public; and

(d) The applicant satisfies any applicable special requirement in this division.

(2) An application for a specific license to decontaminate or perform maintenance on equipment and facilities contaminated with NORM in excess of the levels set forth in **Table 1** of this division and to dispose of the resulting waste will be approved if:

(a) The applicant satisfies the general requirements specified in section (1) of this rule; and

(b) The applicant has adequately addressed the following items in the application:

(A) Procedures and equipment for protection of workers;

(B) An evaluation of the radiation levels and concentrations of contamination expected during normal operations;

(C) Operating and emergency procedures, including procedures for waste reduction and quality assurance of items released for unrestricted use; and

(D) Method of disposing of the radioactive material removed from contaminated equipment and facilities.

(3) An application for a specific license to manufacture and/or initially transfer products or materials containing NORM to persons exempted from these rules pursuant to OAR 333-117-0040(2) will be approved if:

(a) The applicant satisfies the general requirements specified in section (1) of this rule;

(b) The NORM is not contained in any food, beverage, cosmetic, drug or other commodity designed for ingestion or inhalation by or application to, a human being; and

(c) The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking and conditions of handling, storage, use and disposal of the NORM material or product to demonstrate that the material or product will meet the safety criteria set forth in OAR 333-117-0230. The information shall include:

(A) A description of the material or product and its intended use or uses;

(B) The type, quantity and concentration of NORM in each material or product;

(C) The chemical and physical form of the NORM in the material or product and changes in chemical and physical form that may occur during the useful life of the material or product;

(D) An analysis of the solubility in water and body fluids of the NORM in the material or product;

(E) The details of manufacture and design of the material or product relating to containment and shielding of the NORM and other safety features under normal and severe conditions of handling, storage, use, reuse and disposal of the material or product;

(F) The degree of access of human beings to the material or product during normal handling, use and disposal;

(G) The total quantity of NORM expected to be distributed annually in the material or product;

(H) The expected useful life of the material or product;

(I) The proposed method of labeling or marking each unit of the material or product with identification of the manufacturer and/or initial transferor of the product and the radionuclide(s) and quantity of NORM in the material or product;

(J) Procedures for prototype testing of the material or product to demonstrate the effectiveness of the containment, shielding and other safety features under both normal and severe conditions of handling, storage, use, reuse and disposal;

(K) Results of the prototype testing of the material or product, including any change in the form of the NORM contained in it, the extent to which the NORM may be released to the environment, any change in radiation levels and any other changes in safety features;

(L) The estimated external radiation doses and dose commitments relevant to the safety criteria in OAR 333-117-0230 and the basis for such estimates;

(M) A determination that the probabilities with respect to doses referred to in OAR 333-117-0230 meet the criteria;

(N) Quality control procedures to be followed in the production of production lots of material or product and the quality control standards the material or product will be required to meet; and

(O) Any additional information, including experimental studies and tests, required by the Agency to facilitate a determination of the safety of the material or product.

(4) Notwithstanding the provisions of OAR 333-117-0230(2) the Agency may deny an application for a specific license if the end uses of the product are frivolous or cannot be reasonably foreseen.

333-117-0230

Safety Criteria

An applicant for a license under OAR 333-117-0220(3) shall demonstrate that the product is designed and will be manufactured so that:

(1) In normal use and disposal it is unlikely that the external radiation dose in any one year, or the dose commitment resulting from the intake of radioactive material, excluding radon and radon decay products, in any one year, to a suitable sample of the group of individuals expected to be most highly exposed to radiation or

radioactive material from the material or product, will exceed the doses in **Column I** of **Table 2**.

(2) In normal handling and storage of the quantities of the material or product likely to accumulate in one location during marketing, distribution, installation and servicing of the material or product it is unlikely that the external radiation dose in any one year, or the dose commitment resulting from the intake of radioactive material, excluding radon, in any one year, to a suitable sample of the group of individuals expected to be most highly exposed to radiation or radioactive material from the material or product, will exceed the doses in **Column II** of **Table 2**.

(3) In normal use, disposal, handling and storage, it is unlikely that the radon released from the material or product will result in an average radon concentration in air of more than 0.4 picocurie per liter (14.8 Bq/m3).

(4) It is unlikely that there will be a significant reduction in the effectiveness of the containment, shielding or other safety features of the material or product from wear and abuse likely to occur in normal handling and use of the material or product during its useful life.

Issuance of Specific Licenses

(1) Upon a determination that an application meets the requirements of the Act and rules of the Agency, the Agency will issue a specific license authorizing the proposed activity in such form and containing such conditions and limitations as it deems appropriate or necessary.

(2) The Agency may incorporate in any license at the time of issuance or thereafter by amendment, such additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of radioactive material subject to this division as it deems appropriate or necessary in order to:

(a) Minimize danger to public health and safety or property;

(b) Require such reports and the keeping of such records and to provide for such inspections of activities under the license as may be appropriate or necessary; and

(c) Prevent loss or theft of material subject to this division.

333-117-0250

Conditions of Licenses Issued Under OAR 333-117-0220

(1) General Terms and Conditions:

(a) Each license issued pursuant to this division shall be subject to all the provisions of the Act, now or hereafter in effect, and to all rules, regulations and orders of the Authority;

(b) No license issued or granted under this division and no right to possess or utilize radioactive material granted by any license issued pursuant to this division shall be transferred, assigned or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of any license to any person unless the Authority shall, after securing full information find that the transfer is in accordance with the provisions of the Act and shall give its consent in writing;

(c) Each person licensed by the Authority pursuant to this division shall confine use and possession of the material licensed to the locations and purposes authorized in the license;

(d) Each person licensed by the Authority pursuant to this division is subject to the general license provisions of OAR 333-117-0110, 333-117-0120 and 333-117-0130;

(e) Each licensee shall notify the Authority, in writing, immediately following the filing of a voluntary or involuntary petition for bankruptcy under any chapter of Title 11 (Bankruptcy) of the **United States Code (11 U.S.C.)** by or against:

(A) A licensee;

(B) An entity (as that term is defined in **11 U.S.C. 101 (14)**) controlling a licensee or listing the license of licensee as property of the estate; or

(C) An affiliate (as that term is defined in **11 U.S.C. 101 (2)**) of the licensee.

(f) The notification indicated in subsection(1)(e) of this rule must:

(A) Indicate the bankruptcy court in which the petition for bankruptcy was filed; and

(B) The date of the filing of the petition.

(2) Quality Control, Labeling and Reports of Transfer. Each person licensed under OAR 333-117-0220(2) shall:

(a) Carry out adequate control procedures in the manufacture of the material or product to assure that each production lot meets the quality control standards approved by the Authority;

(b) Label or mark each unit so that the manufacturer, processor, producer or initial transferor of the material or product and the NORM in the material or product can be identified; and

(c) Maintain records identifying, by name and address, each person to whom NORM is transferred for use under OAR 333-117-0040(2) or the equivalent regulations of another Licensing State and stating the kinds, quantities and uses of NORM transferred. An annual summary report stating the total quantity of each radionuclide transferred under the specific license shall be filed with the Authority. Each report shall cover the year ending December 31, and shall be filed within 30 days thereafter. If no transfers of radioactive material have been made pursuant to OAR 333-117-0220(2) during the reporting period, the report shall so indicate.

333-117-0260

Expiration and Termination of Licenses

(1) Except as provided in OAR 333-117-0270(2) and subsection (4)(c) of this rule, each specific license shall expire at the end of the specified day in the month and year stated therein.

(2) Each licensee shall notify the Authority immediately, in writing, and request termination of the license when the licensee decides to terminate all activities involving materials authorized under the license. This notification and request for termination of the license must include the reports and information specified in paragraph (4)(a)(D) of this rule. The licensee is subject to the provisions of sections (4) and (5) of this rule, as applicable.

(3) No less than 30 days before the expiration date specified in a specific license, the licensee shall either:

(a) Submit an application for license renewal under OAR 333-117-0270; or

(b) Notify the Authority in writing, under section (2) of this rule, if the licensee decides to discontinue all activities involving NORM.

(4) If a licensee does not submit an application for license renewal under OAR 333-117-0270, the licensee shall on or before the expiration date specified in the license:

(a) Terminate use of NORM;

(b) Remove radioactive contamination to the extent practicable;

(c) Properly dispose of NORM;

(d) Submit a record of disposal of radioactive material and radiation survey(s) to confirm the absence of NORM or to establish the levels of residual radioactive contamination, unless the licensee demonstrates the absence of residual radioactive contamination in some other manner. The licensee shall, as appropriate;

(e) Report levels of radiation in units of microrad per hour of beta and gamma radiation at one centimeter and gamma radiation at one meter from surfaces and report levels of radioactivity in units of disintegrations per minute (or microcuries) per 100 square centimeters removable and fixed on surfaces, microcuries per milliliter in water and picocuries per gram in contaminated solids such as soils or concrete; and

(f) Specify the instruments(s) used and certify that each instrument is properly calibrated and tested.

(5) If no radioactivity attributable to activities conducted under the license is detected, the licensee shall submit a certification that no detectable radioactive contamination was found. If the Authority determines that the information submitted under subsection (4)(b) of this rule and paragraph (4)(a)(D) of this rule is adequate and surveys confirm the findings, the Authority will notify the licensee in writing that the license is terminated.

(6) If detectable levels of residual radioactivity attributable to activities conducted under the license are found, the license continues in effect beyond the expiration date, if necessary, with respect to possession of residual NORM until the Authority notifies the licensee in writing that the license is terminated. During this time, the licensee is subject to the provisions of section (5) of this rule and OAR 333-103-0010. In addition to the information submitted under paragraph (4)(a)(D) of this rule, the licensee shall submit a plan, if appropriate, for decontaminating the location(s) and disposing of the residual NORM.

(7) Each licensee who possesses residual radioactive material under subsection (4)(c) of this rule shall:

(a) Be limited to actions involving NORM related to preparing the location(s) for release for unrestricted use; and

(b) Continue to control entry to restricted areas until the location(s) are suitable for release for unrestricted use and the Authority notifies the licensee in writing that the license is terminated.

333-117-0270
Renewal of Licenses

(1) Applications for renewal of specific licenses shall be filed in accordance with OAR 333-117-0210.

(2) In any case in which a licensee, not less than 30 days prior to expiration of his existing license, has filed an application in proper form for renewal or for a new license authorizing the same activities, such existing license shall not expire until final action by the Authority.

Stat. Auth.: ORS 453.605 - 453.807

333-117-0300
Modification and Revocation of Licenses

(1) The terms and conditions of all licenses shall be subject to amendment, revision or modification or the license may be suspended or revoked by reason of amendments to the Act or by reason of rules, regulations and orders issued by the Authority.

(2) Any license may be revoked, suspended or modified, in whole or in part, for any material false statement in the application or any statement of fact required under provisions of the Act or because of conditions revealed by such application or statement of fact or any report, record or inspection or other means which would warrant the Authority to refuse to grant a license on an original application or for violation of, or failure to observe any of the terms and conditions of the Act or of the license or of any rule, regulation or order of the Authority.

(3) Except in cases of willfulness or those in which the public health, interest or safety requires, otherwise, no license shall be modified, suspended or revoked unless, prior to the institution of proceedings therefor, facts or conduct which may warrant such action shall have been called to the attention of the licensee in writing and the licensee shall have been accorded an opportunity to demonstrate or achieve compliance with all lawful requirements.

Reciprocity

333-117-0370
Reciprocal Recognition of Licenses

Subject to these Rules any person who holds a specific license from a Licensing State and issued by the authority having jurisdiction where the licensee maintains an office for directing the licensed activity and at which radiation safety records are normally maintained, is hereby granted a general license to conduct the activities authorized in such licensing document within this state for a period not in excess of 180 days in any calendar year provided that:

(1) The licensing document does not limit the activity authorized by such document to specified installations or locations.

(2) The out-of-state licensee notifies the Authority in writing at least three days prior to engaging in such activity. Such notification shall indicate the location, period and type of proposed possession and use within the state, and shall be accompanied by a copy of the pertinent licensing document. If, for a specific case, the three day period would impose an undue hardship on the out-of-state licensee, the licensee may, upon application to the Authority, obtain permission to proceed sooner. The Authority may waive the requirement for filing additional written notifications during the remainder of the calendar year following the receipt of the initial notification from a person engaged in activities under the general license provided in section (1) of this rule.

(3) The out-of-state licensee complies with all applicable rules of the Authority and with all the terms and conditions of the licensing document, except any such terms and conditions which may be inconsistent with applicable rules of the Authority.

(4) The out-of-state licensee supplies such other information as the Authority may request.

(5) The out-of-state licensee shall not transfer or dispose of NORM possessed or used under the general license provided in section (1) of this rule except by transfer to a person:

(a) Specifically licensed by the Authority or by another Licensing State to receive such material; or

(b) Exempt from the requirements for a license for such material under OAR 333-117-0040.

DIVISION 118

TRANSPORTATION OF RADIOACTIVE MATERIAL

333-118-0010
Purpose and Scope

The rules in this division apply to any licensee authorized by specific or general license to receive, possess, use, or transfer licensed material, if the licensee delivers that material to a carrier for transport, transports the material outside the site of usage as specified in the license, or transports that material on public highways. No provision of this part authorizes possession of licensed material.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-118-0020
Definitions

As used in this division, the following definitions apply:

(1) "A1" means the maximum activity of special form radioactive material permitted in a Type A package. This value is either listed in Appendix A to10 CFR Part 71, Table A-1, or may be derived in accordance with the procedures prescribed in Appendix A to10 CFR Part 71.

(2) "A2" means the maximum activity of radioactive material, other than special form material, LSA, and SCO material, permitted in a Type A package. This value is either listed in Appendix A to10 CFR Part 71, Table A-1, or may be derived in accordance with the procedures prescribed in Appendix A to10 CFR Part 71.

(3) "Carrier" means a person engaged in the transportation of passengers or property by land or water as a common, contract, or private carrier, or by civil aircraft.

(4) "Closed transport vehicle" means a transport vehicle equipped with a securely attached exterior enclosure that during normal transportation restricts the access of unauthorized persons to the cargo space containing the radioactive material. The enclosure may be either temporary or permanent but shall limit access from top, sides, and ends. In the case of packaged materials, it may be of the "see-through" type.

(5) "Consignment" means each shipment of a package or groups of packages or load of radioactive material offered by a shipper for transport.

(6) "Conveyance" means for transport by public highway or rail any transport vehicle or large freight container; or for transport by water any vessel, or any hold, compartment, or defined deck area of a vessel including any transport vehicle on board the vessel; or for transport by aircraft.

(7) "Criticality Safety Index (CSI)" means the dimensionless number (rounded up to the next tenth) assigned to and placed on the label of a fissile material package, to designate the degree of control of accumulation of packages containing fissile material during transportation. Determination of criticality safety index is described in 10 CFR 71.22, 71.23, and 71.59.

(8) "Deuterium" means for the purposes of 10 CFR Parts 71.15 and 71.22, deuterium and any deuterium compounds, including heavy water, in which the ratio of deuterium atoms to hydrogen atoms exceeds 1:5000.

(9) "Exclusive use" means the sole use of a conveyance by a single consignor and for which all initial, intermediate, and final loading and unloading are carried out in accordance with the direction of the consignor or consignee. The consignor and the carrier must ensure that any loading or unloading is performed by personnel having radiological training and resources appropriate for safe handling of the consignment. The consignor must issue specific instructions, in writing, for maintenance of exclusive use shipment controls, and include them with the shipping paper information provided to the carrier by the consignor.

NOTE: The term "exclusive use" is used interchangeably with the terms "sole use" or "full load" in other regulations, such as Title 49 of the Code of Federal Regulations.

(10) "Fissile material" means the radionuclides plutonium-239, plutonium-241, uranium-233, and uranium-235, or any combination of these radionuclides. Fissile material means the fissile nuclides themselves, not material containing fissile nuclides. Unirradiated natural uranium and depleted uranium, and natural uranium or depleted uranium that has been irradiated in thermal reactors only, are not included in this definition. Certain exclusions from fissile material controls are provided in 10 CFR 71.15.

NOTE: Authority jurisdiction is limited to special nuclear material in quantities not sufficient to form a critical mass as defined in division 100 of this chapter.

(11) "Fissile material package" means a fissile material packaging together with its fissile material contents.

(12) "Graphite" means for the purposes of 10 CFR 71.15 and 71.22 and graphite with a boron equivalent content less than five parts per million and density greater than 1.5 grams per cubic centimeter.

(13) "Indian tribe" means an Indian or Alaska Native tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 479a.

(14) "Licensed material" means radioactive or special nuclear material received, possessed, used, or transferred under a general or specific license issued by the Authority.

NOTE: The definition of licensed material in this division is used in the same way as in 49 CFR 173.403.

(15) "Low specific activity (LSA) material" means radioactive material with limited specific activity that is nonfissile or is exceptedunder 10 CFR 71.15, and that satisfies the descriptions and limits set forth below. Shielding materials surrounding the LSA material may not be considered in determining the estimated average specific activity of the package contents. LSA material must be in one of three groups:

(a) LSA-I:

(A) Ores containing only naturally occurring radionuclides, such as uranium and thorium, that are not intended to be processed for the use of these radionuclides;

(B) Solid unirradiated natural uranium, depleted uranium, natural thorium, or their solid or liquid compounds or mixtures;

(C) Radioactive material, other than fissile material, for which the A2 value is unlimited; or

(D) Other radioactive material in which the activity is distributed throughout and the estimated average specific activity does not exceed 30 times the value for exempt material activity concentration determined in accordance with 10 CFR 71, Appendix A.

(b) LSA-II:

(A) Water with tritium concentration up to 0.8 TBq/liter (20.0 Ci/liter); or

(B) Material in which the radioactive material is distributed throughout, and the average specific activity does not exceed 10-4 A2/g for solids and gases, and 10-5 A2/g for liquids.

(c) LSA-III. Solids (consolidated wastes, activated materials) in which:

(A) The radioactive material is distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, and ceramic);

(B) The radioactive material is relatively insoluble, or it is intrinsically contained in a relatively insoluble material, so that, even under loss of packaging, the loss of radioactive material per package by leaching, when placed in water for seven days, shall not exceed 1E-1 A2; and

(C) The estimated average specific activity of the solid does not exceed 2E-3 A2 per gram.

(16) "Low toxicity alpha emitters" means natural uranium, depleted uranium, natural thorium; uranium-235, uranium-238, thorium-232, thorium-228 or thorium-230 when contained in ores or physical or chemical concentrates or tailings; or alpha emitters with a half-life of less than 10 days.

(17) "Natural thorium" means thorium with the naturally occurring distribution of thorium isotopes (essentially 100 weight percent thorium-232).

(18) "Normal form radioactive material" means radioactive material that has not been demonstrated to qualify as "special form radioactive material."

(19) "Package" means the packaging together with its radioactive contents as presented for transport.

(a) Fissile material package or Type AF package, Type BF package, Type B(U)F package, or Type B(M)F package means a fissile material packaging together with its fissile material contents.

(b) Type A package means a Type A packaging together with its radioactive contents. A Type A package is defined and must comply with the DOT regulations in 49 CFR part 173.

(c) Type B package means a Type B packaging together with its radioactive contents. On approval, a Type B package design is designated by NRC as B(U) unless the package has a maximum normal operating pressure of more than 700 kPa (100 lbs/in2)

gauge or a pressure relief device that may allow the release of radioactive material to the environment under the tests specified in 10 CFR 71.73 (hypothetical accident conditions), in which case it shall receive a designation B(M). B(U) refers to the need for unilateral approval of international shipments; B(M) refers to the need for multilateral approval of international shipments. There is no distinction made in how packages with these designations may be used in domestic transportation. To determine their distinction for international transportation, see DOT regulations in 49 CFR Part 173. A Type B package approved before September 6, 1983, was designated only as Type B. Limitations on its use are specified in 10 CFR 71.19.

(20) "Packaging" means the assembly of components necessary to ensure compliance with the packaging requirements of 10 CFR Part 71.4. It may consist of one or more receptacles, absorbent materials, spacing structures, thermal insulation, radiation shielding, and devices for cooling or absorbing mechanical shocks. The vehicle, tie-down system, and auxiliary equipment may be designated as part of the packaging.

(21) "Regulations of the U.S. Department of Transportation" means the regulations in 49 CFR Parts 100-189 and Parts 390-397.

(22) "Regulations of the U.S. Nuclear Regulatory Commission" means the regulations in 10 CFR 71.

(23) "Special form radioactive material" means radioactive material that satisfies the following conditions:

(a) It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

(b) The piece or capsule has at least one dimension not less than five millimeters (0.2 inch.); and

(c) It satisfies the requirements of 10 CFR Part 71.75. A special form encapsulation designed in accordance with the requirements of 10 CFR Part 71.4 in effect on June 30, 1983 (see 10 CFR Part 71, revised as of January 1, 1983), and constructed before July 1, 1985 and a special form encapsulation designed in accordance with the requirements of 10 CFR Part 71.4 in effect on March 31, 1996 (see 10 CFR Part 71, revised as of January 1, 1983), and constructed before April 1, 1998, may continue to be used. Any other special form encapsulation must meet the specifications of this definition.

(24) "Specific activity" of a radionuclide means the radioactivity of a radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the radioactivity per unit mass of the material.

(25) "State" means a state of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

(26) "Surface contaminated object (SCO)" means a solid object that is not itself classed as radioactive material, but which has radioactive material distributed on any of its surfaces. SCO must be in one of two groups with surface activity not exceeding the following limits:

(a) SCO-I: a solid object on which:

(A) The non-fixed contamination on the accessible surface averaged over 300 cm2 (or the area of the surface if less than 300 cm2) does not exceed 4 Bq/cm2 (10-4 microcurie/cm2) for beta, gamma and low toxicity alpha emitters, or 0.4 Bq/cm2 (10-5 microcurie/cm2) for all other alpha emitters;

(B) The fixed contamination on the accessible surface averaged over 300 cm2 (or the area of the surface if less than 300 cm2) does not exceed 4x104 Bq/cm2 (1.0 microcurie/cm2) for beta, gamma and low toxicity alpha emitters, or 4x103 Bq/cm2 (0.1 microcurie/cm2) for all other alpha emitters; and

(C) The non-fixed contamination plus the fixed contamination on the inaccessible surface averaged over 300 cm2 (or the area of the surface if less than 300 cm2) does not exceed 4x104 Bq/cm2 (1 microcurie/cm2) for beta, gamma and low toxicity alpha emitters, or 4x103 Bq/cm2 (0.1 microcurie/cm2) for all other alpha emitters.

(b) SCO-II: a solid object on which the limits for SCO-I are exceeded and on which:

(A) The nonfixed contamination on the accessible surface averaged over 300 cm2 (or the area of the surface if less than 300 cm2) does not exceed 400 Bq/cm2 (10-2 microcurie/cm2) for beta and gamma and low toxicity alpha emitters or 40 Bq/cm2 (10-3 microcurie/cm2) for all other alpha emitters;

(B) The fixed contamination on the accessible surface averaged over 300 cm2 (or the area of the surface if less than 300 cm2) does not exceed 8 x 105 Bq/cm2 (20 microcuries/cm2) for beta and gamma and low toxicity alpha emitters, or 8 x 104 Bq/cm2 (2 microcuries/cm2) for all other alpha emitters; and

(C) The nonfixed contamination plus the fixed contamination on the inaccessible surface averaged over 300 cm2 (or the area of the surface if less than 300 cm2) does not exceed 8 x 105 Bq/cm2 (20 microcuries/cm2) for beta and gamma and low toxicity alpha emitters, or 8 x 104 Bq/cm2 (2 microcuries/cm2) for all other alpha emitters.

(27) "Transport index (TI)" means the dimensionless number, (rounded up to the next tenth) placed on the label of a package to designate the degree of control to be exercised by the carrier during transportation. The transport index is the number determined by multiplying the maximum radiation level in millisievert (mSv) per hour at one meter (3.3 ft) from the external surface of the package by 100 (equivalent to the maximum radiation level in millirem per hour at one meter (3.3 ft)).

(28) "Tribal official" means the highest ranking individual that represents Tribal leadership, such as the Chief, President, or Tribal Council leadership.

(29) "Type A quantity" means a quantity of radioactive material, the aggregate radioactivity of which does not exceed A1 for special form radioactive material or A2 for normal form radioactive material, where A1 and A2 are given in 10 CFR Part 71 Appendix A or may be determined by procedures described in 10 CFR Part 71 Appendix A.

(30) "Type A package" means a packaging that, together with its radioactive contents limited to A1 or A2 as appropriate, meets the requirements of 49 CFR 173.410 and 173.412 and is designed to retain the integrity of containment and shielding under normal conditions of transport as demonstrated by the tests set forth in 173.465 or 173.466, as appropriate.

(31) "Type B package" means a Type B packaging together with its radioactive contents.

NOTE: A Type B package design is designated as B(U) or B(M). B(U) refers to the need for unilateral approval of international shipments; B(M) refers to the need for multilateral approval. There is no distinction made in how packages with these designations may be used in domestic transportation. To determine their distinction for international transportation, refer to 49 CFR Part 173. A Type B package approved prior to September 6, 1983, was designated only as Type B. Limitations on its use are specified in OAR 333-118-0035.

(32) "Type B packaging" means a packaging designed to retain the integrity of containment and shielding when subjected to the normal conditions of transport and hypothetical accident test conditions set forth in 10 CFR Part 71.

(33) "Type B quantity" means a quantity of radioactive material greater than Type A quantity.

NOTE: 10 CFR Part 71 Appendix A referred to or incorporated by reference in this rule is attached to this division or available from the Authority.

(34) "Unirradiated uranium" means uranium containing not more than 2E+3 Bq of plutonium per gram of uranium-235, not more than 9E+6 Bq of fission products per gram of uranium-235, and not more than 5E-3 g of uranium-236 per gram of uranium-235.

(35) "Uranium — natural, depleted, enriched":

(a) "Natural uranium" means uranium isotopes with the naturally occurring distribution of uranium, isotopes (which is approximately 0.711 weight percent uranium-235, and the remainder by weight essentially uranium-238).

(b) "Depleted uranium" means uranium containing less uranium-235 than the naturally occurring distribution of uranium isotopes.

(c) "Enriched uranium" means uranium containing more uranium-235 than the naturally occurring distribution of uranium isotopes.

General Regulatory Provisions

333-118-0030
Requirement for License

No person shall transport radioactive material or deliver radioactive material to a carrier for transport except as authorized in a general or specific license issued by the Authority or as exempted in OAR 333-118-0040.

Stat. Auth.: ORS 453.635

Stats. Implemented: ORS 453.605 - 453.807

Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 4-2007, f. & cert. ef. 3-1-07

333-118-0040
Exemptions

(1) Common and contract carriers, freight forwarders, warehouse workers, and the U.S. Postal Service are exempt from the regulations in this division and divisions 102, 105, 113, 116, 121 and 125, and the requirements for a license to the extent that they transport or store radioactive material in the regular course of their carriage for others or storage incident thereto. Common and contract carriers who are not subject to the requirements of the U.S. Department of Transportation or U.S. Postal Service are subject to OAR 333-118-0030 and other applicable requirements of these rules.

(2) Any licensee is exempt from the requirements of this division to the extent that the licensee delivers to a carrier for transport a package containing radioactive material having a specific activity not greater than (0.002 microcurie per gram 70 Becquerels per gram (Bq/g).

(3) Any physician licensed under division 116 or by an Agreement State or the Nuclear Regulatory Commission to dispense radiopharmaceuticals in the practice of medicine, is exempt from OAR 333-118-0050 with respect to transporting licensed material for use in the practice of medicine.

Stat. Auth.: ORS 453.635

Stats. Implemented: ORS 453.605 - 453.807

333-118-0050
Transportation of Licensed Material

(1) Each licensee who transports licensed material outside the site of usage, as specified in the Authority license, or where transport is on public highways, or who delivers licensed material to a carrier for transport shall:

(a) Comply with the applicable requirements, appropriate to the mode of transport, of the regulations of the U.S. Department of Transportation in 49 CFR Parts 107, 171-180, and 390-397, appropriate to the mode of transportation. The licensee shall particularly note the regulations of U.S. Department of Transportation in the following areas:

(A) Packaging — 49 CFR Part 173: Subparts A, B and I.

(B) Marking and labeling — 49 CFR Part 172: Subpart D, 172.400 through 172.407, and 172.436 through 172.441 of Subpart E.

(C) Placarding — 49 CFR Part 172: Subpart F, especially 172.500 through 172.519, and 172.556, and Appendices B and C.

(D) Accident reporting — 49 CFR Part 171: 171.15 and 171.16.

(E) Shipping papers and emergency information — 49 CFR Part 172: Subparts C and G.

(F) Hazardous material employee training — 49 CFR Part 172: Subpart H.

(G) Security plans — 49 CFR Part 172: Subpart I

(H) Hazardous material shipper/carrier registration — 49 CFR Part 107: Subpart G.

(b) The licensee also shall comply with applicable U.S. Department of Transportation regulations pertaining to the following modes of transportation:

(A) Rail — 49 CFR Part 174: Subparts A through D and K.

(B) Air — 49 CFR Part 175.

(C) Vessel — 49 CFR Part 176: Subparts A through F and M.

(D) Public highway — 49 CFR Part 177 and Parts 390 through 397.

(c) Assure that any special instructions needed to safely open the package are sent to or have been made available to the consignee.

(2) If, for any reason, the regulations of the U.S. Department of Transportation are not applicable to a shipment of licensed material, the licensee shall conform to the standards and requirements of 49 CFR Parts 170 through 189 appropriate to the mode of transport and to the same extent as if the shipment were subject to the regulations.

333-118-0051
Deliberate Misconduct

(1) This rule applies to any:

(a) Licensee;

(b) Certificate holder;

(c) Quality assurance program approval holder;

(d) Applicant for a license, certificate, or quality assurance program approval;

(e) Contractor (including a supplier or consultant) or subcontractor, to any person identified in subsection (1)(d) of this section; or

(f) Employees of any person identified in subsections (1)(a) through (e) of this rule.

(2) A person identified in subsections (1)(a) through (f) of this rule who knowingly provides to an entity any components, materials, or other goods or services that relate to a licensee's, certificate holder's, quality assurance program approval holder's, or applicant's activities subject to this rule may not:

(a) Engage in deliberate misconduct that causes or would have caused, if not detected, a licensee, certificate holder, quality assurance program approval holder, or any applicant to be in violation of any rule, regulation, or order; or any term, condition or limitation of any license, certificate, or approval issued by the Authority; or

(b) Submit to the Authority, a licensee, a certificate holder, quality assurance program approval holder, an applicant for a license, certificate or quality assurance program approval, or a licensee's, applicant's, certificate holder's, or quality assurance program approval holder's contractor or subcontractor, information that the person knows to be incomplete or inaccurate.

(3) A person who violates section (2) of this rule may be subject to enforcement action by the Authority.

(4) For the purposes of section (2) of this rule, deliberate misconduct means an intentional act or omission that the person knows:

(a) Would cause a licensee, certificate holder, quality assurance program approval holder, or applicant for a license, certificate, or quality assurance program approval to be in violation of any rule, regulation, or order; or any term, condition, or limitation of any license or certificate issued by the Authority; or

(b) Constitutes a violation of a requirement, procedure, instruction, contract, purchase order, or policy of a licensee, certificate holder, quality assurance program approval holder, applicant, or the contractor or subcontractor of any of them.

Stat. Auth.: ORS 453.635

333-118-0052
Exemption for Low Level Materials

A licensee is exempt from all the requirements of division 118 with respect to shipment or carriage of the following low-level materials:

(1) Natural material and ores containing naturally occurring radionuclides that are not intended to be processed for use of these radionuclides, provided the activity concentration of the material does not exceed 10 times the values specified in 10 CFR Parts 71, Appendix A, Table A-2.

(2) Materials for which the activity concentration is not greater than the activity concentration values specified in 10 CFR Parts 71, Appendix A, Table A-2, or for which the consignment activity is not greater than the limit for an exempt consignment found in 10 CFR Parts 71, Appendix A, Table A-2.

[ED. NOTE: Tables referenced are available from the agency.]

333-118-0053
Exemption from Classification as Fissile Material

Fissile material meeting the requirements of at least one section of this rule are exempt from classification as fissile material and from the fissile material package standards of 10 CFR Parts 71.55 and 71.59, but are subject to all other requirements of this rule, except as noted.

(1) Individual package containing two grams or less fissile material.

(2) Individual or bulk packaging containing 15 grams or less of fissile material provided the package has at least 200 grams of solid nonfissile material for every gram of fissile material. Lead, beryllium, graphite, and hydrogenous material enriched in deuterium may be present in the package but must not be included in determining the required mass for solid nonfissile material.

(3) Low concentrations of solid fissile material commingled with solid nonfissile material, provided that:

(a) There is at least 2000 grams of solid nonfissile material for every gram of fissile material; and

(b) There is no more than 180 grams of fissile material distributed within 360 kg of contiguous nonfissile material.

(4) Lead, beryllium, graphite, and hydrogenous material enriched in deuterium may be present in the package but must not be included in determining the required mass of solid nonfissile material.

(5) Uranium enriched in uranium-235 to a maximum of one percent by weight, and with total plutonium and uranium-233 content of up to one percent of the mass of uranium-235, provided that the mass of any beryllium, graphite, and hydrogenous material enriched in deuterium constitutes less than five percent of the uranium mass.

(6) Liquid solutions of uranyl nitrate enriched in uranium-235 to a maximum of two percent by mass, with a total plutonium and uranium-233 content not exceeding 0.002 percent of the mass of uranium, and with a minimum nitrogen to uranium atomic ratio (N/U) of two. The material must be contained in at least a DOT Type A package.

(7) Packages containing, individually, a total plutonium mass of not more than 1000 grams, of which not more than 20 percent by mass may consist of plutonium-239, plutonium-241, or any combination of these radionuclides.

General Licenses

333-118-0060
General Licenses for Carriers

(1) A general license is hereby issued to any common or contract carrier not exempt under OAR 333-118-0040 to receive, possess, transport, and store radioactive material in the regular course of their carriage for others or storage incident thereto, provided the transportation and storage is in accordance with the applicable requirements, appropriate to the mode of transport, of the U.S. Department of Transportation, insofar as such requirements relate to the loading and storage of packages, placarding of the transporting vehicle, and incident reporting.

NOTE: Notification of an incident shall be filed with, or made to, the Authority as prescribed in 49 CFR, regardless of and in addition to the notification made to the U.S. Department of Transportation or other agencies.

(2) A general license is hereby issued to any private carrier to transport radioactive material, provided the transportation is in accordance with the applicable requirements, appropriate to the mode of transport, of the U.S. Department of Transportation, insofar as such requirements relate to the loading and storage of packages, placarding of the transporting vehicle, and incident reporting.

(3) Persons who transport radioactive material pursuant to the general licenses in sections (1) or (2) of this rule are exempt from the requirements of divisions 111 and 120 of these rules to the extent that they transport radioactive material.

333-118-0070
General License: Nuclear Regulatory Commission-Approved Packages

(1) A general license is hereby issued to any licensee of the Authority to transport, or to deliver to a carrier for transport, licensed material in a package for which a license, Certificate of Compliance (CoC), or other approval has been issued by the U.S. Nuclear Regulatory Commission.

(2) This general license applies only to a licensee who:

(a) Has a quality assurance program approved by the Nuclear Regulatory Commission as satisfying the provisions of 10 CFR Part 71, Subpart H and applicable requirements in OAR 333-118-0200;

(b) Has a copy of the specific license, certificate of compliance, or other approval by the Nuclear Regulatory Commission of the package and has the drawings and other documents referenced in the approval relating to the use and maintenance of the packaging and to the actions to be taken prior to shipment;

(c) Complies with the terms and conditions of the license, certificate, or other approval by the Nuclear Regulatory Commission, as applicable, and the applicable requirements of division 118; and

(d) Prior to the licensee's first use of the package, has registered with the U.S. Nuclear Regulatory Commission outlined in 10 CFR Part 71.17.

(3) The general license in section (1) of this rule applies only when the package approval authorizes use of the package under this general license.

(4) For previously approved Type B packages which are not designated as either B(U) or B(M) in the Certificate of Compliance, this general license is subject to additional restrictions in OAR 333-118-0080. For a Type B or fissile material package, the design of which was approved by Nuclear Regulatory Commission before April 1, 1996, the general license is subject to additional restrictions of OAR 333-118-0080.

333-118-0080
General License: Previously Approved Packages

(1) A Type B package previously approved by the U.S. Nuclear Regulatory Commission, but not designated as B(U) or B(M) in the Certificate of Compliance, may be used under the general license of OAR 333-118-0070 with the following additional limitations:

(a) Fabrication of the packaging was satisfactorily completed before August 31, 1986, as demonstrated by application of its model number in accordance with U.S. Nuclear Regulatory Commission regulations at 10 CFR 71.85(c); and

(b) The package may not be used for a shipment to a location outside the United States except when approved under special arrangement in accordance with 49 CFR 173.471. A package used for a shipment to a location outside the United States is subject to multilateral approval, as defined in U.S. Department of Transportation regulations at 49 CFR 173.403; and

(c) A serial number that uniquely identifies each packaging which conforms to the approved design is assigned to, and legibly and durably marked on, the outside of each packaging.

(2) A Type B(U) package, a Type B(M) package, a low specific activity (LSA) material package or a fissile material package, previously approved by the Nuclear Regulatory Commission but without the designation "-85" in the identification number of the Nuclear Regulatory Commission certificate of compliance, may be used under the general license of OAR 333-118-0070 with the following additional conditions:

(a) Fabrication of the package is satisfactorily completed by April 1, 1999, as demonstrated by application of its model number in accordance with Nuclear Regulatory Commission regulations at 10 CFR 71.85(c);

(b) A package used for a shipment to a location outside the United States is subject to multilateral approval except approved under special arrangement in accordance with U.S. Department of Transportation regulations at 49 CFR 173.403; and

(c) A serial number that uniquely identifies each packaging which conforms to the approved design is assigned to, and legibly and durably marked on, the outside of each packaging.

333-118-0090
General License: U.S. Department of Transportation Specification Container

(1) A general license is issued to any licensee of the Authority to transport, or to deliver to a carrier for transport, licensed material in a specification container containing a fissile material or a Type B quantity of radioactive material as specified in 49 CFR Parts 173 and 178.

(2) This general license applies only to a licensee who has a quality assurance program required by OAR 333-118-0200 and approved by the Authority.

(a) Has a copy of the specification;

(b) Complies with the terms and conditions of the specification and the applicable requirements of division 118; and

(c) Has a quality assurance program required by OAR 333-118-0200.

(3) The general license in this rule is subject to the limitation that the specification container may not be used for a shipment to a location outside the United States except by multilateral approval as defined in 49 CFR 173.403.

General License: Use of Foreign Approved Package

(1) A general license is issued to any licensee of the Authority to transport, or to deliver to a carrier for transport, licensed material in a package the design of which has been approved in a foreign national competent authority certificate which has been revalidated by the U.S. Department of Transportation as meeting the applicable requirements of 49 CFR 171.12.

(2) This general license applies only to international shipments.

(3) This general license applies only to a licensee who:

(a) Has a copy of the applicable certificate, the revalidation, and the drawings and other documents referenced in the certificate relating to the use and maintenance of the packaging and to the actions to be taken prior to shipment;

(b) Complies with the terms and conditions of the certificate and revalidation and with the applicable requirements of this division.

(c) Has a quality assurance program approved by the Nuclear Regulatory Commission.

333-118-0125
External Radiation Standards for All Packages

Each package of radioactive materials offered for transportation must be designed and prepared for shipment so that under conditions normally incident to transportation the radiation level does not exceed 2 mSv/h (200 mrem/h) at any point on the external surface of the package, and the transport index does not exceed 10. A package that exceeds the radiation level must be transported by exclusive use shipment only, and the radiation levels for such shipment must be in accordance with 10 CFR Part 71.47.

Operating Controls and Procedures

333-118-0130
Fissile Material: Assumptions as to Unknown Properties of Fissile Material

When the isotopic abundance, mass, concentration, degree of irradiation, degree of moderation, or other pertinent property of fissile material in any package is not known, the licensee shall package the fissile material as if the unknown properties had credible values that would cause the maximum neutron multiplication.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 4-2007, f. & cert. ef. 3-1-07

333-118-0140
Preliminary Determinations

Prior to the first use of any packaging for the shipment of radioactive material:

(1) The licensee shall show that there are no cracks, pinholes, uncontrolled voids, or other defects that could significantly reduce the effectiveness of the packaging;

(2) Where the maximum normal operating pressure will exceed 35 kilopascals (five pounds per square inch (psi)) gauge, the licensee shall test the containment system at an internal pressure at least 50 percent higher than the maximum normal operating pressure to show that the system will maintain its structural integrity at that pressure;

(3) The licensee shall determine that the packaging meets 10 CFR Part 71.85(b); and

(4) The licensee shall conspicuously and durably mark the packaging with its model number, serial number, gross weight, and a package identification number as assigned by the U.S. Nuclear Regulatory Commission.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 1-1991, f. & cert. ef. 1-8-91; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 4-2007, f. & cert. ef. 3-1-07; PH 4-2010, f. & cert. ef. 2-16-10

333-118-0150
Routine Determinations

Prior to each shipment of licensed material, the licensee shall ensure that the package with its contents satisfies the applicable requirements of this division and of the license. The licensee shall determine that:

(1) The package is proper for the contents to be shipped.

(2) The package is in unimpaired physical condition except superficial defects such as marks or dents.

(3) Each closure device of the packaging, including any required gasket, is properly installed and secured and free of defects.

(4) Any system for containing liquid is adequately sealed and has adequate space or other specified provision for expansion of the liquid.

(5) Any pressure relief device is operable and set in accordance with written procedures.

(6) The package has been loaded and closed in accordance with written procedures.

(7) Any structural part of the package which could be used to lift or tie down the package during transport is rendered inoperable for that purpose unless it satisfies design requirements specified in 10 CFR 71.45.

(8) For fissile material, any moderator or neutron absorber, if required, is present and in proper condition.

(9) The level of non-fixed (removable) radioactive contamination on the external surfaces of each package offered for shipment is as low as reasonably achievable and within the limits specified in Department of Transportation regulations outlined in 49 CFR Part 173.443.

(a) External radiation levels around the package and around the vehicle, if applicable, cannot exceed the limits specified in 10 CFR Part 71.47 at anytime during transportation; and

(b) Accessible package surface temperatures cannot exceed the limits specified in 10 CFR Part 71.43(g) at any time during transportation.

(10) External radiation levels around the package and around the vehicle, if applicable, cannot exceed the limit specified in 10 CFR Part 71.45 at any time during transport.

(11) Accessible package surfaces temperatures cannot exceed the limits specified in 10 CFR Part 71.43.

333-118-0160
Air Transport of Plutonium

(1) Notwithstanding the provisions of any general licenses and notwithstanding any exemptions stated directly in this division or included indirectly by citation of the U.S. Department of Transportation regulations 49 CFR Chapter I, as may be applicable, the licensee shall assure that plutonium in any form is not transported by air, or delivered to a carrier for air transport, unless:

(a) The plutonium is contained in a medical device designed for individual human application;

(b) The plutonium is contained in a material in which the specific activity is less than or equal to the activity concentration values for plutonium specified in 10 CFR Part 71, Appendix A, Table A-2 and in which the radioactivity is essentially uniformly distributed;

(c) The plutonium is shipped in a single package containing no more than an A2 quantity of plutonium in any isotope or form and is shipped in accordance with OAR 333-118-0050 and 10 CFR Part 71.5; or

(d) The plutonium is shipped in a package specifically authorized for the shipment of plutonium by air in the Certificate of Compliance for that package issued by the Nuclear Regulatory Commission Part.

(2) Nothing in OAR 333-118-0160(1)(a) is to be interpreted as removing or diminishing the requirements in 10 CFR Part 73.24.

(3) For a shipment of plutonium by air, which is subject to OAR 333-118-0160(1)(d), the licensee shall, through special arrangement with the carrier, require compliance with 49 CFR 175.704, U.S. Department of Transportation regulations applicable to the air transport of plutonium.

333-118-0170
Shipment Records

Each licensee shall maintain for a period of three years after shipment, or until inspected by the Authority, a record of each shipment of licensed material not exempt under OAR 333-118-0040, showing, where applicable:

(1) Identification of the packaging by model and serial number;

(2) Verification that the packaging, as shipped, had no significant defects;

(3) Volume and identification of coolant;

(4) Type and quantity of licensed material in each package, and the total quantity of each shipment;

(5) Date of the shipment;

(6) Name and address of the transferee;

(7) Address to which the shipment was made; and

(8) Results of the determinations required by OAR 333-118-0150.

333-118-0180
Reports

The licensee shall report to the Authority within 30 days:

(1) Any instance in which there is significant reduction in the effectiveness of any approved Type B or fissile packaging during use; and

(2) Details of any defects with safety significance in the Type B or fissile packaging after first use, with the means employed to repair the defects and prevent their recurrence or

(3) Instances in which the conditions of approval in the certificate of compliance were not observed in making a shipment.

DIVISION 119

REGISTRATION OF TANNING FACILITIES

333-119-0001
Purpose and Scope

(1) The purpose of this division is to regulate tanning facilities to minimize the risks associated with tanning by artificial Ultraviolet light. These risks include, but may not be limited to:

(a) Sunburn;
(b) Premature aging of the skin;
(c) Skin cancer;
(d) Retinal damage;
(e) Formation of cataracts;
(f) Suppression of the immune system;
(g) Damage to the vascular system; and
(h) Improper sanitation of tanning devices.

(2) The requirements of this division apply to any tanning facility that operates any tanning devices. Physicians' phototherapy devices are exempted, see OAR 333-119-0130(2).

(3) In addition to the requirements of this division, all registrants are subject to the applicable provisions of other parts of these rules.

Stat. Auth.: ORS 431.925 - 431.955
Stats. Implemented: ORS 431.925 - 431.955

333-119-0010
Definitions

(1) "Authority" means the Oregon Health Authority.

(2) "Customer" means any member of the public who is provided access to a tanning device in exchange for a fee or other compensation, or any individual who, in exchange for a fee or other compensation, is afforded use of a tanning device as a condition or benefit of membership or access.

(3) "Employee" means any individual, including a minor whether lawfully or unlawfully employed, who engages to furnish services for remuneration, financial or otherwise, subject to the

direction and control of an employer and includes any individual who is required to have workers' compensation coverage.

(4) "EPA" means the U.S. Environmental Protection Agency.

(5) "FDA" means the U.S. Food and Drug Administration.

(6) "Fitzpatrick Skin Type Scale" means a numerical classification diagram used as a way to classify the response of different types of skin to ultraviolet (UV) light.

(7) "Formal Training" means a course of instruction reviewed and approved by the Authority and which is conducted or presented under formal classroom conditions or online by a qualified expert possessing adequate knowledge and experience to offer a curriculum, associated training, and certification testing pertaining to and associated with the correct use of tanning equipment. Operator training shall cover ultraviolet radiation and effects on the skin, photosensitivity, FDA and State of Oregon regulations, eye protection, and equipment maintenance.

(8) "Handrails" means a suitable physical aid that will help to maintain proper exposure distance.

(9) "Identification" means:

(a) A government-issued photo identification that displays the individual's date of birth; or

(b) A government or non-government issued photo identification when submitted with a completed Oregon Underage Tanning Medical Recommendation form.

(10) "Individual" means any human being.

(11) "Minor" means any individual under the age of 18 years old.

(12) "Operator" means the person who is an employee (defined by the Oregon Occupational Safety and Health Division, OAR 437-003-0011(2)) or contractor of the tanning facility who has received a certificate from an approved formal training course and who is responsible for any of the following:

(a) Determining customer's skin type;

(b) Determining the suitability for use of a tanning device;

(c) Providing information regarding the dangers of ultraviolet radiation exposure including photoallergic reactions and photosensitizing agents;

(d) Assuring that all required forms are understood and properly signed by the customer;

(e) Maintaining required exposure records;

(f) Recognizing and reporting injuries or alleged injuries to the registrant;

(g) Determining the customer's exposure schedule;

(h) Setting timers which control the duration of exposure;

(i) Instructing the customer in the proper use of protective eyewear;

(j) Verifying and documenting age of clients; and

(k) Sanitizing tanning devices.

(13) "Other Compensation" means the payment or exchange of goods, services or anything of value for use of the tanning device or devices.

(14) "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, any other state or political subdivision or agency thereof, and any legal successor, representative, agent or agency of these entities.

(15) "Phototherapy Device" means equipment that emits ultraviolet radiation used by a health care professional in the treatment of disease or illness.

(16) "Program" means the Radiation Protection Services section of the Public Health Division.

(17) "Protective Eyewear" means suitable eyewear that protects the eye from ultraviolet radiation and allows adequate vision.

(18) "Public Places" means the area where members of the public may assemble and are not directly affected by tanning operations.

(19) "Recommendation" means a written directive using a form provided by the Authority and signed by a licensed physician.

(20) "Registrant" means a tanning facility registered with the Authority as required by provisions of this division.

(21) "Registration" means registration with the Authority in accordance with provisions of this division.

(22) "Remote" means a timer that is placed away from the tanning device so it can only be programmed by the tanning operator.

(23) "Safe Level" means not more than 50 colonies of microorganisms per four square inches of equipment surface.

(24) "Sanitize" means the effective bactericidal treatment of surfaces of equipment and devices by an EPA or FDA registered product that provides a sufficient concentration of chemicals, and enough time to reduce the bacterial count, including pathogens, to a safe level.

(25) Skin Types:

(a) "Type 1" means skin burns easily and severely (painful burn); tans little or none and peels.

(b) "Type 2" means skin burns easily and severely (painful burn); tans minimally or lightly and also peels.

(c) "Type 3" means skin burns moderately and tans about average.

(d) "Type 4" means skin burns minimally, tans easily and above average with each exposure; exhibits immediate pigment darkening reaction.

(e) "Type 5" means skin rarely burns, tans easily and substantial; always exhibits immediate pigment darkening reaction

(26) "Storage" means when a tanning device is not actively being used, as evidenced by the removal of all tanning lamps and lack of connection to a power supply.

(27) "Tanning Device" means any equipment used for tanning of the skin, that emits electromagnetic radiation with wavelengths in the air between 200 and 400 nanometers including, but not limited to, a sunlamp, Ultraviolet Lamp, tanning booth, facial unit, UVA wand, or tanning bed. "Tanning device" also means any accompanying equipment, including, but not limited to, protective eyewear, timers, ballasts, starters, lamps, reflectors, cooling fans, acrylics, comfort pillows and handrails.

(28) "Tanning Facility" means any location, place, area, structure, or business that provides persons access to any tanning device.

(29) "Timer" means an electronic device designed specifically to terminate tanning sessions at a preset time interval.

(30) "Ultraviolet Radiation" means radiation that has a wavelength between two hundred nanometers and four hundred nanometers.

333-119-0020
Registration

(1) Prior to the operation of any tanning device used by the public for a fee or other compensation, the owner or operator shall file an application with the Authority and pay applicable fee(s) in the amount and in the manner specified in OAR 333-103-0025 to register each tanning device.

(2) If the owner or operator owns or operates more than one such tanning facility, the owner or operator shall file a separate application for each such facility owned or operated.

(3) Registration application shall be made on forms furnished by the Authority.

(4) A validation certificate or acknowledgement of validation will be issued by the Authority.

(5) The certificate issued by the Authority shall be effective for one year beginning January 1 through December 31.

(6) The certificate shall be displayed in a conspicuous open public area of the tanning facility.

(7) The Authority will provide an identification number that will be affixed by an Authority inspector to each tanning device during the initial or follow-up facility inspection:

(a) Identification numbers shall not be removed without written permission of the Authority; and

(b) Identification numbers shall not be defaced.

(8) The registrant shall notify the Authority in writing before making any change that would render the information contained in the application for registration or the validation of registration no longer accurate.

(9) No registration may be transferred from one person to another person, from one tanning facility to another tanning facility, or from one tanning device to another tanning device.

(10) Failure to properly register a tanning device is subject to the imposition of a civil penalty per ORS 431.950 and ORS 431.262.

(11) The Authority may require tanning facility registrants to complete and update application forms and information concerning tanning devices.

General Requirements

333-119-0030
Administrative Responsibilities

(1) The registrant shall be responsible for directing the operation of the tanning facility that has been registered with the Authority. That individual or individual's agent shall assure that the provisions of these rules are met in the operation of tanning devices.

(2) A tanning device which does not meet the provisions of these rules shall not be operated and may be tagged "Out of Service for Non-compliance with OAR 333-119 Requirements" by Authority inspectors. Devices tagged as non-compliant shall not be operated until written authorization is received by the registrant from the Authority.

(3) The registrant shall assure that the tanning facility will comply with all applicable federal laws and regulations.

(4) In addition to the requirements of this division, all registrants are subject to the applicable requirements of divisions 100, 103 and 111 of this chapter.

(5) The Authority Inspection Findings report shall be conspicuously posted in public view until all items of non-compliance have been corrected and a written Authority release from this requirement is received by the registrant.

(6) The registrant shall post in a conspicuous place the Authority "Notice To The Public".

(7) The registrant shall ensure that the "Warning", "Notice to the Public" and "Persons Under Age 18" signs are not covered or obscured, and are easily seen by clients at either the main reception area of the establishment or in each tanning device room.

(8) The registrant shall notify the Authority of any injury for which medical attention was sought or obtained from the use of a registered tanning device within one working day after learning of the occurrence, and provide the Authority any information about the incident the Authority deems necessary.

333-119-0040
Construction and Operation of Tanning Facilities

Unless otherwise ordered or approved by the Authority, each tanning facility shall be constructed, operated and maintained to meet the following minimum requirements:

(1) All tanning facilities shall be equipped with convenient toilet facilities and dressing rooms. Such toilet facilities shall include a toilet and hand washing sinks. Such toilet and dressing rooms shall be properly maintained, as well as meet all state and local codes.

(2) Rooms or other enclosures containing tanning devices shall be maintained below 100 degrees Fahrenheit (38 degrees Centigrade) during operation.

(3) Tanning facilities shall be constructed, operated and maintained in accordance with applicable city, county and state codes.

(4) Clean sanitary towels shall be provided to all patrons using tanning facilities.

(5) A hamper or receptacle must be provided for all soiled towels and linen.

(6) No pets or animals are permitted in tanning facilities other than service animals.

333-119-0041
Cleaning and Sanitation

(1) All areas of the tanning facility, including tanning devices, equipment and apparatus, shall be maintained in a clean and sanitary manner by the facility operator.

(2) The tanning device(s) and protective eyewear shall be sanitized after each client use, by the facility operator.

(3) A clean paper or cloth towel shall be used each time the tanning device is sanitized.

(4) An operator cannot require the consumer to sanitize the tanning equipment or protective eyewear and shall not post any signs requesting such sanitation be performed by the consumer.

(5) The sanitizer must contain a concentration of Quaternary Ammonium between 400ppm-800ppm.

(6) A test kit that accurately measures the concentration of the sanitizing solution in parts per million (ppm) shall be used to measure the strength of the sanitizing solution when the concentrate and water dilution is initially prepared and tested weekly thereafter to ensure sufficient strength remains within the sanitizing solution.

Specific Requirements

333-119-0050
Warning Statement

(1) At each customer's initial visit to a tanning facility, and at least annually thereafter, the customer shall be provided a written statement to review and sign, which warns the customer that:

(a) Not wearing appropriate protective eyewear may cause damage to the eyes; and

(b) Overexposure to the tanning process may cause burns; and

(c) Repeated exposure to the tanning process may cause skin cancer or premature aging of the skin or both; and

(d) Abnormal skin sensitivity or burning may result from the tanning process if the customer is also consuming or using certain foods, cosmetics or medications (such as tranquilizers, antibiotics, diuretics, blood pressure medication or birth control pills); and

(e) Any person taking a prescription or over-the-counter drug should consult a physician before using a tanning device; and

(f) The frequency and duration of tanning sessions must not exceed tanning device manufacturer recommendations; and

(g) Frequent users should be regularly screened for skin cancer by a physician.

(2) An Authority approved tanning client card may be used to satisfy the requirement of section (1) of this rule.

(3) The warning language in the written statement must be in 14 point or larger font.

Stat. Auth.: ORS 431.925 - 431.955
Stats. Implemented: ORS 431.925 - 431.955
Hist.: HD 15-1991, f. & cert. ef. 10-1-91; HD 15-1994, f. & cert. ef. 5-6-94; PH 14-2008, f. & cert. ef. 9-15-08; PH 32-2014, f. 12-22-14, cert. ef. 1-1-15

333-119-0060
Warning Sign

(1) The registrant shall conspicuously post the warning sign described in section (2) of this rule within one meter (39.37 inches) of each tanning device and in such a manner that the sign is clearly visible, not obstructed by any barrier, equipment or other object, and can be easily viewed by the customer before operating the tanning device.

(2) The warning sign in section (1) of this rule shall meet the following requirements:

(a) The sign shall be printed on paper or similar material no smaller than 8.5 inches by 11 inches. Signs are available for printing on the Authority's website.

(b) The major sign heading shall be labeled "DANGER" and the section entitled "FAILURE" shall be a minimum of Times New Roman, bold with a minimum font size of 40.

(c) The body text shall be a minimum of Times New Roman with a minimum font size of 20.

DANGER — ULTRAVIOLET RADIATION
Avoid overexposure. As with natural sunlight, overexposure can cause eye and skin injury and allergic reactions. Repeated exposure may cause premature aging of the skin and/or skin cancer.
Frequent users should be regularly screened for skin cancer.
FAILURE TO USE PROTECTIVE EYEWEAR MAY RESULT IN SEVERE BURNS OR LONG-TERM INJURY TO THE EYES.
Medications or cosmetics may increase your sensitivity to the Ultraviolet radiation. Consult a physician before using sunlamp or tanning device if you are using medications or have a history of skin problems or believe yourself to be especially sensitive to sunlight.
If you do not tan in the sun, you are unlikely to tan from the use of this product.
Tanning session frequency and time shall not exceed the device manufacturer's recommendations.

333-119-0070
Protective Eyewear

(1) The registrant shall make available protective eyewear for use during tanning sessions.

(2) The protective eyewear in section (1) of this rule shall meet the requirements of 21 Code of Federal Regulations (CFR) Part 1040, Section 1040.20(c)(4).

(3) Tanning facility operators shall ensure, before each tanning session, that clients have approved protective eyewear.

333-119-0080
Training of Personnel

(1) The registrant shall ensure that tanning devices are operated only while an adequately trained operator is present at the tanning facility.

(2) All operators of registered tanning devices must successfully complete an Authority approved tanning training course prior to commencement of tanning operations.

(3) Approved training will include, at a minimum, content covering the rules of this division, skin typing, recognition of overexposure, as well as any other topic determined by the Authority to be critical to client protection.

333-119-0090
Protection of Consumers

The registrant and operators are responsible for protecting the customers from overexposure to Ultraviolet Light by ensuring that:

(1) Only one customer may occupy the tanning room. In the case of a customer using a tanning device who may need the aid or assistance from another person, that individual must also be provided with and wear protective eyewear.

(2) No customer under the age of 18 years shall be allowed to use a tanning device without a completed Oregon Underage Tanning Medical Recommendation form completed by a licensed physician and identification. The recommendation:

(a) Must identify the physician and client and describe the recommended tanning session frequency(s) and duration(s);

(b) Must identify dates for starting and ending of the tanning sessions; and

(c) Cannot exceed the exposure scheduled per OAR 333-119-0100(14)(b).

(3) A sign shall be posted in conspicuous view at or near the reception area with the following text in a minimum of at least 36 point type:

"PERSONS UNDER AGE 18 ARE NOT ALLOWED TO USE A TANNING DEVICE WITHOUT A WRITTEN RECOMMENDATION FROM A LICENSED PHYSICIAN"

(4) Each person using a tanning device shall be instructed by the operator on the maximum exposure time and proper exposure distance, as recommended by the manufacturer of the device. The operator shall also instruct the customer as to the location and proper operation of the tanning device's emergency shut off switch.

(5) Infants and minors are not permitted to be in the tanning device room during exposure by parents or guardians.

(6) Tanning operators shall limit exposure time to the device manufacturer's recommendations. The maximum exposure time recommended by the manufacturer of the device shall not be exceeded in any 24-hour period.

(7) A copy of the manufacturer's recommended exposure schedule shall be maintained at the remote timer controls for each device.

(8) At the time of their initial visit, all clients shall have their skin type determined according to the Fitzpatrick Skin Type Scale, and their skin type recorded in the client record.

(9) Tanning operators shall maintain a list of the common photosensitizing agents as provided by the Public Health Division, FDA, or other appropriate authorities, available for review by customers.

(10) Tanning facilities are prohibited from controlling the use of tanning devices solely with token timer systems or a mechanical timer system.

Stat. Auth.: ORS 431.925 - 431.955
Stats. Implemented: ORS 431.930
Hist.: HD 15-1991, f. & cert. ef. 10-1-91; HD 15-1994, f. & cert. ef. 5-6-94; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 14-2008, f. & cert. ef. 9-15-08; PH 4-2010, f. & cert. ef. 2-16-10; PH 10-2011, f. 9-30-11, cert. ef. 10-1-11; PH 14-2013, f. 12-26-13, cert. ef. 1-1-14; PH 32-2014, f. 12-22-14, cert. ef. 1-1-15

333-119-0100
Equipment

(1) The registrant shall use only tanning devices manufactured in accordance with the specifications set forth in 21 CFR Part 1040, Section 1040.20, "Sunlamp Products and Ultraviolet Lamps Intended for Use in Sunlamp Products."

(2) Each tanning device shall be labeled in accordance with 21 CFR Part 1040.

(3) Adequate means shall be provided to enable a customer to summon assistance from the exposure position.

(4) All persons hired for servicing and repair of tanning devices shall be State of Oregon licensed electricians.

(5) State of Oregon electrical codes must be observed during service and repair actions.

(6) Replacement lamps shall be certified by the manufacturer as equivalent to the original lamp type as specified by the manufacturer, or certified as an equivalent lamp per 21 CFR 1040.20.

(7) If equivalent lamps are used instead of the Original Equipment Manufacturer (OEM) required lamps, a copy of the equivalency certification, provided by the lamp supplier, shall be maintained for review by the Authority during inspections.

(8) Lamps removed from a tanning device shall be disposed of in a safe and proper manner to prevent unauthorized and unsafe use as lighting devices. Used tanning lamps are prohibited from being resold for any purpose.

(9) If the ultraviolet tanning device is not in an individual cubicle, then a suitable screen, curtain, or other shield shall be provided, maintained, and used to prevent unnecessary exposure to ultraviolet radiation of persons not using the device.

(10) Each tanning device shall have a timer that complies with the requirements of 21 CFR Part 1040, Section 1040.20 (c)(2).

(11) The maximum timer interval shall not exceed the manufacturer's maximum recommended exposure time, or 20 minutes, whichever is less.

(12) A tanning facility shall use the following exposure schedule for tanning devices originally designed with a 30 minute maximum exposure time that have been reduced to a 20 minute maximum exposure time. A copy of this exposure schedule must be affixed to the tanning device, and a copy maintained at the timer controls.

(a) Skin type 1:

(A) Week 1: 1–3 minutes;

(B) Week 2: 4–6 minutes;

(C) Week 3: 7–10 minutes;

(D) Week 4: 11–15 minutes.

(b) Skin type 2 and 3:

(A) Week 1: 4 minutes;

(B) Week 2: 8 minutes;

(C) Week 3: 12 minutes;

(D) Week 4: 16 minutes;

(E) Weekly maintenance: 20 minutes.

(c) Skin Type 4 and 5:

(A) Week 1: 4 minutes;

(B) Week 2: 12 minutes;

(C) Week 3: 16 minutes;

(D) Week 4: 20 minutes;

(E) Weekly maintenance: 20 minutes.

(13) Tanning device timers shall be controlled by a trained operator. A remote timer control system shall be used for this purpose.

(14) Each tanning device shall be equipped with a functional emergency shut-off mechanism to allow manual termination of the UV exposure by the customer, as required by 21 CFR 1040.20(c)(3).

(15) Each timer must be functional and accurate to within ± 10 percent.

(16) The registrant shall ensure that the timer is checked annually for accuracy and the results recorded.

(17) The registrant shall ensure that the emergency shut-off is tested annually for proper function and results recorded.

(18) All tanning devices shall be maintained to the minimum requirements of the manufacturer.

333-119-0110
Records and Reports

(1) The registrant shall maintain a record of each customer's total number of tanning visits, dates and durations of tanning exposures.

(2) The registrants shall maintain a record of each customer's signature and acknowledgement that they understand the potential risks involved with exposure to ultraviolet radiation and overexposure, and that they have reviewed a photosensitizing drug list.

(3) The registrant shall maintain and have available when requested by the Authority, all completed Oregon Underage Tanning Medical Recommendation forms with copies of the identification used for each minor allowed to use a tanning device.

(4) Upon their initial visit, all tanning clients must present acceptable identification as proof of age. The type of identification, identification number, client's name, and date of birth shall be recorded by the registrant in the client's record. When requested by the Authority, records shall be available for review.

(5) The registrant shall maintain a record of operator training as required in OAR 333-119-0080(3).

(6) The registrant shall maintain a copy of the owner's manual for each tanning device.

(7) Records shall be maintained showing the method of disposal of all tanning devices and lamps.

(8) All required records shall be maintained in a location and format as to be readily available for review during inspections conducted by the Authority.

333-119-0120
Advertising

(1) Registrants shall not claim or distribute promotional materials that claim using a tanning device is safe, free from risk or that using the device will result in medical or health benefits. Only cosmetic claims can be promoted.

(2) No person, in any advertisement, shall refer to the fact that such person, or such person's facility is registered with the Authority pursuant to the provisions of this division, and no person shall state or imply that any activity under such registration has been approved by the Authority.

333-119-0130
Exemptions

(1) The Authority may, upon application therefore or upon its own initiative, grant such exemptions or exceptions from the requirements of the rules in this section as it determines are authorized by law and will not result in undue hazard to public health and safety.

(2) A phototherapy device used by or under the direct supervision of a physician licensed under ORS Chapter 677 is exempt from the requirements of this division.

(3) Any individual is exempt from the provisions of this division to the extent that such individual owns a tanning device exclusively for personal use.

(4) Tanning devices, while in transit or storage, are exempt from the registration provisions of this division.

333-119-0140
Denial, Revocation, Termination of Registration

(1) The Authority may deny, suspend or revoke registration issued pursuant to this division:

(a) For any written false statement in the application for registration or in any statement of fact as required by provisions of this division; or

(b) Because of conditions revealed by the application or any report, record, inspection or other means which would warrant the Authority to refuse to grant a registration; or

(c) For operation of the tanning facility in a manner that causes or threatens to cause hazard to the public health or safety; or

(d) For failure to allow authorized representatives of the Authority to enter the tanning facility at reasonable times for the purpose of determining compliance with the provisions of this division, or an order of the Authority; or

(e) For violation of, or failure to observe any of the terms and conditions of the rules in this division, or an order of the Authority; or

(f) For failure to properly dispose of used tanning lamps and thus allowing possible use in an unauthorized or hazardous manner.

(2) Except in cases of willfulness or cases in which the public health, interest or safety requires otherwise, prior to the institution of proceedings for suspension or revocation of a registration, the Authority shall:

(a) Call to the attention of the registrant, in writing, the facts or conduct which may warrant such actions; and

(b) Provide reasonable opportunity for the registrant to demonstrate or achieve compliance with all lawful requirements.

(3) Any person aggrieved by a decision by the Authority to deny a registration or to suspend or revoke a registration after issuance may request a hearing.

(4) The Authority may terminate a registration upon receipt of a written request for termination from the registrant.

(5) The Authority may, by rule, regulation, or order, impose upon any registrant such requirements in addition to those established in this regulation as it deems appropriate or necessary to minimize danger to public health and safety or property.

333-119-0200
Vendor Responsibilities

(1) Any person who sells, leases, transfers, or lends tanning devices in this state shall notify the Authority of the following within 30 days after each sale or installation:

(a) Name and address of persons who have received these devices;

(b) The manufacturer model and serial numbers of each device; and

(c) The date of transfer.

(2) No person shall make, sell, lease, transfer, lend or install tanning devices or the supplies used in connection with such devices unless such supplies and equipment when placed in operation and use, will meet the requirements of these rules.

(3) State of Oregon identification numbers shall not be removed, altered or defaced by any vendor doing business in this state, without written permission of the Authority.

(4) Vendors of tanning devices, replacement lamps, sanitizers, protective eyewear, UV light measurement devices, calibration of measurement equipment, remote timer systems, computer control systems, repair or cleaning services, parts supplies, or operator training are required to apply for a license for sales, services and servicing as specified in OAR 333-101-0020. Vendor license application forms will be furnished by the Authority. Vendors are prohibited from providing tanning equipment installation, servicing and/or services prior to the Authority issuing a licensing certificate to the vendor.

(5) Vendors providing operator training services are required to apply for a license for services as specified in OAR 333-101-0020. The Authority will furnish license application forms. Prior to offering training services, vendors shall submit to the Authority the following:

(a) A list of qualified on-site training personnel including a curriculum vitae or resume outlining training experiences;

(b) A copy of all training materials to be used; and

(c) A copy of examinations to be used.

(6) Upon approval, a letter will be sent to the training service vendor giving permission to offer tanning operator training within the State of Oregon.

(7) The Authority shall be notified prior to training material revisions. The Authority shall review and approve all changes made to the training materials.

(8) Vendors shall maintain records of course completion and test results for a period of at least three years from the date of the operator training course. A copy of the list of persons successfully completing operator training shall be furnished to the Authority and include the following:

(a) Name of persons trained;

(b) Individual test scores; and

(c) Associated tanning facility, name and address.

(9) The Authority shall be provided access to audit any operator training courses offered within the State of Oregon without charge.

DIVISION 120

STANDARDS FOR PROTECTION AGAINST RADIATION

General Provisions

333-120-0000
Purpose

(1) This division establishes standards for protection against ionizing radiation resulting from activities conducted under licenses and registrations issued by the Authority. These rules are issued

under ORS 453.605 to 453.807, and the State of Oregon's agreement with the U.S. Nuclear Regulatory Commission.

(2) It is the purpose of the rules in this division to control the receipt, possession, use, transfer, and disposal of licensed radioactive material and sources of radiation by any licensee or registrant in such a manner that the total dose to an individual (including doses resulting from licensed and unlicensed radioactive material and from radiation sources other than background radiation) does not exceed the standards for protection against radiation prescribed in this division. However, nothing in this division shall be construed as limiting actions that may be necessary to protect health and safety.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 4-2007, f. & cert. ef. 3-1-07

333-120-0010
Scope

The rules in this division apply to persons licensed or registered by the Authority to receive, possess, use, transfer, or dispose of licensed radioactive material or registered devices. The limits in this division do not apply to doses due to background radiation, to exposure of patients to radiation for the purpose of medical diagnosis or therapy, or to voluntary participation in medical research programs.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 4-2007, f. & cert. ef. 3-1-07

333-120-0015
Definitions

(1) "Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

(2) "Activity" is the rate of disintegration (transformation) or decay of radioactive material. The units of activity are the becquerel (Bq) and the Curie (Ci). The becquerel is equal to one disintegration per second (dps) and the Curie is equal to 3.7x1010 dps.

(3) "Accelerator produced radioactive material" means any material made radioactive by a particle accelerator.

(4) "Adult" means an individual 18 or more years of age.

(5) "Airborne radioactive material" means radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors, or gases.

(6) "Airborne radioactivity area" means a room, enclosure, or area in which the airborne radioactive materials, composed wholly or partly of licensed material, exist in concentrations:

(a) In excess of the derived air concentrations (DACs) specified in 10 CFR 20 Appendix B; or

(b) To such a degree that an individual present in the area without respiratory protective equipment could exceed, during the hours present in a week, and intake of 0.6 percent of the annual limit of intake (ALI) or 12 DAC hours.

(7) "Air-purifying respirator" means a respirator with an air-purifying filter, cartridge, or canister that removes specific air contaminants by passing ambient air through the air-purifying element.

(8) "ALARA" (acronym for "as low as is reasonably achievable") means making every reasonable effort to maintain exposures to radiation as far below the dose limits in this division as is practical consistent with the purpose for which the licensed activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to the use of licensed materials in the public interest.

(9) "Annual limit on intake" (ALI) means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the reference man that would result in a committed effective dose equivalent of 0.05 Sv (5 rem) or a committed dose equivalent of 0.5 Sv (50 rem) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given on page 1 of Tables 1, 2, and 3, Appendix B to 10 CFR Part 20.

(10) "Assigned protection factor (APF)" means the expected workplace level of respiratory protection that would be provided by a properly functioning respirator or a class of respirators to properly fitted and trained users. Operationally, the inhaled concentration can be estimated by dividing the ambient airborne concentration by the APF.

(11) "Atmosphere supplying respirator" means a respirator that supplies the respirator user with breathing air from a source independent of the ambient atmosphere, and includes supplied-air respirators (SARs) and self-contained breathing apparatus (SCBA) units.

(12) "Background radiation" means radiation from cosmic sources; naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material); and global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. "Background radiation" does not include radiation from radioactive or special nuclear materials regulated by the Authority.

(13) "Bioassay" (radiobioassay) means the determination of kinds, quantities or concentrations, and, in some cases, the locations of radioactive material in the human body, whether by direct measurement (in vivo counting) or by analysis and evaluation of materials excreted or removed from the human body.

(14) "Byproduct material" means:

(a) Any radioactive material (except special nuclear material) yielded in or made radioactive by exposure to the radiation incident to the process of producing or using special nuclear material.

(b) The tailings or wastes produced by the extraction or concentration of uranium or thorium from ore processed primarily for its source material content, including discrete surface wastes resulting from uranium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute ''byproduct material'' within this definition.

(c) Any discrete source of radium-226 that is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity. Any material that has been made radioactive by use of a particle accelerator and is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity.

(d) Any discrete source of naturally occurring radioactive material, other than source materials, that:

(A) The Commission, in consultation with the Administrator of the Environmental Protection Agency, the Secretary of Energy, the Secretary of Homeland Security, and the head of any other appropriate federal agency determines a threat to the public health and safety or the common defense, is similar to the threat posed by a discrete source of radium-226 material to the public health and safety or the common defense and security; and

(B) Before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical or research activity.

(15) "Class" means a classification scheme for inhaled material according to its rate of clearance from the pulmonary region of the lung. Materials are classified as D, W, or Y, which applies to a range of clearance half-times: for Class D, Days, of less than 10 days; for Class W, Weeks, from 10 to 100 days; and for Class Y, Years, of greater than 100 days. For purposes of these regulations, "lung class" and "inhalation class" are equivalent terms.

(16) "Collective dose" is the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

(17) "Committed dose equivalent" (HT,50) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

(18) "Committed effective dose equivalent" (HE,50) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to these organs or tissues (HE,50) = The Sum of WTHT,50.

(19) "Controlled area" means an area, outside of a restricted area but inside the site boundary, access to which can be limited by the licensee for any reason.

(20) "Consortium" means an association of medical use licensees and a PET radionuclide production facility in the same geographical area that jointly own or share in the operation and maintenance cost of the PET radionuclide production facility that produces PET radionuclides for use in producing radiopharmaceutical drugs within the consortium for noncommercial distributions among its associated members for medical use. The PET radionuclide production facility within the consortium must be located at an educational institution or a federal facility or a medical facility.

(21) Constraint (dose constraint) means a value above which specified licensee actions are required.

(22) "Critical Group" means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.

(23) "Declared pregnant woman" means a woman who has voluntarily informed the licensee, in writing, of her pregnancy and the estimated date of conception. The declaration remains in effect until the declared pregnant woman withdraws the declaration in writing or is no longer pregnant.

(24) "Decommission" means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits:

(a) Release of the property for unrestricted use and termination of the license; or

(b) Release of the property under restricted conditions and termination of the license.

(25) "Deep-dose equivalent" (Hd), which applies to external whole-body exposure, is the dose equivalent at a tissue depth of one cm (1000 mg/cm2).

(26) "Demand respirator" means an atmosphere-supplying respirator that admits breathing air to the facepiece only when a negative pressure is created inside the facepiece by inhalation.

(27) "Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by the reference man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. For purposes of these regulations, the condition of light work is an inhalation rate of 1.2 cubic meters of air per hour for 2,000 hours in a year. DAC values are given in Table I, Column 3, of 10 CFR 20 Appendix B.

(28) "Derived air concentration-hour" (DAC-hour) means the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee or registrant may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of 0.05 Sv (5 rem).

(29) "Discrete Source" means a radionuclide that has been processed so that its concentration within a material has been purposely increased for use for commercial, medical or research activities.

(30) "Disposable respirator" means a respirator for which maintenance is not intended and that is designed to be discarded after excessive breathing resistance, sorbent exhaustion, physical damage, or end-of-service-life renders it unsuitable for use. Examples of this type of respirator are a disposable half-mask respirator or a disposable escape-only self-contained breathing apparatus (SCBA).

(31) "Distinguishable from background" means that the detectable concentration of a radionuclide is statistically different from the background concentration of that radionuclide in the vicinity of the site or, in the case of structures, in similar materials using adequate measurement technology, survey, and statistical techniques.

(32) "Dose or radiation dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, or total effective dose equivalent, as defined in this rule.

(33) "Dose equivalent" (HT) means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the rem and sievert (Sv).

(34) "Dosimetry processor" means an individual or an organization that processes and evaluates individual monitoring devices in order to determine the radiation dose delivered to the monitoring devices.

(35) "Effective Dose Equivalent" (HE) is the sum of the products of the dose equivalent to the organ or tissue (HT) and the weighting factor (WT) applicable to each of the body organs or tissues that are irradiated (HE = The Sum of WTHT).

(36) "Embryo/fetus" means the developing human organism from conception until the time of birth.

(37) "Entrance or access point" means any location through which an individual could gain access to radiation areas or to radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

(38) "Exposure" means being exposed to ionizing radiation or to radioactive material.

(39) "External dose" means that portion of the dose equivalent received from radiation sources outside the body.

(40) "Extremity" means hand, elbow, arm below the elbow, foot, knee, or leg below the knee.

(41) "Eye dose equivalent" applies to the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeter (300 mg/cm 2). (See "lens dose equivalent").

(42) "Filtering facepiece (dust mask)" means a negative pressure particulate respirator with a filter as an integral part of the facepiece or with the entire facepiece composed of the filtering medium, not equipped with elastomeric sealing surfaces and adjustable straps.

(43) "Fit factor" means a quantitative estimate of the fit of a particular respirator to a specific individual, and typically estimates the ratio of the concentration of a substance in ambient air to its concentration inside the respirator when worn.

(44) "Fit test" means the use of a protocol to qualitatively or quantitatively evaluate the fit of a respirator on an individual.

(45) "Generally applicable environmental radiation standards" means standards issued by the Environmental Protection Agency (EPA) under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.

(46) "Helmet" means a rigid respiratory inlet covering that also provides head protection against impact and penetration.

(47) "High radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving a dose equivalent in excess of one mSv (0.1 rem) in one hour at 30 centimeters from the radiation source or 30 centimeters from any surface that the radiation penetrates.

(48) "Hood" means a respiratory inlet covering that completely covers the head and neck and may also cover portions of the shoulders and torso.

(49) "Individual" means any human being.

(50) "Individual monitoring" means:

(a) The assessment of dose equivalent by the use of devices designed to be worn by an individual;

(b) The assessment of committed effective dose equivalent by bioassay (see Bioassay) or by determination of the time-weighted air concentrations to which an individual has been exposed, i.e. DAC-hours; or

(c) The assessment of dose equivalent by the use of survey data.

(51) "Individual monitoring devices" (individual monitoring equipment) means devices designed to be worn by a single individual for the assessment of dose equivalent such as film badges, thermoluminescence dosimeters (TLDs), pocket ionization chambers, and personal ("lapel") air sampling devices.

(52) "Internal dose" means that portion of the dose equivalent received from radioactive material taken into the body.

(53) "Lens dose equivalent (LDE)" applies to the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeter (300 mg/cm 2).

(54) "Loose fitting facepiece" means a respiratory inlet covering that is designed to form a partial seal with the face.

(55) "Member of the public" means any individual except when that individual is receiving an occupational dose.

(56) "Minor" means an individual less than 18 years of age.

(57) "Monitoring (radiation monitoring, radiation protection monitoring)" means the measurement of radiation levels, concentrations, surface area concentrations or quantities of radioactive material and the use of the results of these measurements to evaluate potential exposures and doses.

(58) "Nationally Tracked Source" means a sealed source containing a quantity equal to or greater than Category 1 or Category 2 levels of radioactive material listed in 10 CFR Part 20, Appendix E. In this context a sealed source is defined as radioactive material that is sealed in a capsule or closely bonded in a solid form and that is not exempt from regulatory control. It does not mean material encapsulated solely for disposal, or nuclear material contained in any fuel rod, or fuel pellet.

(a) Category 1 nationally traced sources are those containing radioactive material at a quantity equal to or greater than Category 1 threshold.

(b) Category 2 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 2 threshold but less than the Category 1 threshold.

(59) "Negative pressure respirator (tight fitting)" means a respirator in which the air pressure inside the facepiece is negative during inhalation with respect to the ambient air pressure outside the respirator.

(60) "Nonstochastic effect" means a health effect, the severity of which varies with the dose and for which a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect. For purposes of these regulations, "deterministic effect" is an equivalent term.

(61) "Occupational dose" means the dose received by an individual in the course of employment in which the individual's assigned duties involve exposure to radiation or to radioactive material from licensed and unlicensed sources of radiation, whether in the possession of the licensee or other person. Occupational dose does not include dose received from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material for medical purposes and released under OAR 333-116-0260, from voluntary participation in medical research programs, or as a member of the public.

(62) "Particle accelerator" means any machine capable of accelerating electrons, protons, deuterons or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of 1 mega-electron volt. For purposes of this definition, "accelerator" is an equivalent term.

(63) "Planned special exposure" means an infrequent exposure to radiation, separate from and in addition to the annual occupational dose limits.

(64) "Positive pressure respirator" means a respirator in which the pressure inside the respiratory inlet covering exceeds the ambient air pressure outside the respirator.

(65) "Powered air purifying respirator" (PAPR) means an air purifying respirator that uses a blower to force the ambient air through air purifying elements to the inlet covering.

(66) "Pressure demand respirator" means a positive pressure atmosphere-supplying respirator that admits breathing air to the facepiece when the positive pressure is reduced inside the facepiece by inhalation.

(67) "Public dose" means the dose received by a member of the public from exposure to radiation or radioactive material released by a licensee, or to any other source of radiation under the control of a licensee. Public dose does not include occupational dose or doses received from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material for medical purposes and released under OAR 333-116-0260, or from voluntary participation in medical research programs.

(68) "Qualitative fit test (QLFT)" means a pass/fail fit test to assess the adequacy of respirator fit that relies on the individual's response to the test agent.

(69) "Quantitative fit test (QNFT)" means an assessment of the adequacy of respirator fit by numerically measuring the amount of leakage into the respirator.

(70) "Quarter" means a period of time equal to one-fourth of the year observed by the licensee, approximately 13 consecutive weeks, providing that the beginning of the first quarter in a year coincides with the starting date of the year and that no day is omitted or duplicated in consecutive quarters.

(71) "Radiation" (ionizing radiation) means alpha particles, beta particles, gamma rays, X-rays, neutrons, high-speed electrons, high-speed protons, and other particles capable of producing ions. Radiation, as used in this part, does not include non-ionizing radiation, such as radio- or microwaves, or visible, infrared, or ultraviolet light.

(72) "Radiation area" means an area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.05 mSv (0.005 rem) in one hour at 30 centimeters from the radiation source or from any surface that the radiation penetrates.

(73) "Reference man" means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health employees to standardize results of experiments and to relate biological insult to a common base. A description of the reference man is contained in the International Commission on Radiological Protection report, ICRP Publication 23, "Report of the Task Group on Reference Man."

(74) "Residual radioactivity" means radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site.

(75) "Restricted area" means an area, access to which is limited by the licensee for the purpose of protecting individuals against undue risks from exposure to radiation and radioactive materials. Restricted area does not include areas used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.

(76) "Respiratory protective equipment" means an apparatus, such as a respirator, used to reduce an individual's intake of airborne radioactive materials.

(77) "Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks, and leach fields owned or operated by the licensee or registrant.

(78) "Self-contained breathing apparatus" (SCBA) means an atmosphere-supplying respirator for which the breathing air source is designed to be carried by the user.

(79) "Shallow-dose equivalent" (HS), which applies to the external exposure of the skin of the whole body or the skin of an extremity, is taken as the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm2) averaged over an area of one square centimeter.

(80) "Site boundary" means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee.

(81) "Stochastic effect" means a health effect that occurs randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without threshold. Hereditary effects and cancer incidence are examples of stochastic effects. For purposes of these regulations, "probabilistic effect" is an equivalent term.

(82) "Supplied-air respirator" (SAR) or airline respirator means an atmosphere-supplying respirator for which the source of breathing air is not designed to be carried by the user.

(83) "Survey" means an evaluation of the radiological conditions and potential hazards incident to the production, use, transfer, release, disposal, or presence of radioactive material or other sources of radiation. When appropriate, such an evaluation includes a physical survey of the location of radioactive material and measurements or calculations of levels of radiation, or concentrations or quantities of radioactive material present.

(84) "Tight-fitting facepiece" means a respiratory inlet covering that forms a complete seal with the face.

(85) "Total Effective Dose Equivalent" (TEDE) means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).

(86) "Unrestricted area" means an area, access to which is neither limited nor controlled by the licensee.

(87) "User seal check" means an action conducted by the respirator user to determine if the respirator is properly seated to the face. Examples include negative pressure check, positive pressure check, irritant smoke check, or isoamyl acetate check.

(88) "Very high radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving an absorbed dose in excess of five gray (500 rad) in one hour at one meter from a source of radiation or from any surface that the radiation penetrates. At very high doses received at high dose rates, units of absorbed dose, gray and rad, are appropriate, rather than units of dose equivalent, sievert and rem.

(89) "Waste" means those low-level radioactive wastes containing source, special nuclear or byproduct material that are acceptable for disposal in a land disposal facility. For the purposes of this definition, low-level radioactive waste means radioactive waste not classified as high-level radioactive waste, transuranic waste, spent nuclear fuel or byproduct material as defined in subsections (14)(b), (14)(c), and (14)(d) of this rule.

(90) "Weighting factor" (WT) for an organ or tissue means the proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of WT are:

Organ Dose Weighting Factors

Organ or Tissue	WT
Gonads	0.25
Breast	0.15
Red bone marrow	0.12
Lung	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder	0.30 (see (a) below)
Whole Body	1.00 (see (b) below)

(a) 0.30 results from 0.06 for each of five "remainder" organs, excluding the skin and the lens of the eye that receives the highest doses.

(b) For the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, WT = 1.0, has been specified. The use of other weighting factors for external exposure will be approved on a case-by-case basis until such time as specific guidance is issued.

(91) "Whole body" means, for purposes of external exposure, head, trunk (including male gonads), arms above the elbow, or legs above the knee.

(92) "Working level" (WL) is any combination of short-lived radon daughters (for radon-222: polonium-218, lead-214, bismuth-214, and polonium-214; and for radon-220: polonium-216, lead-212, bismuth-212, and polonium-212) in one liter of air that will result in the ultimate emission of 1.3x105 MeV of potential alpha particle energy.

(93) "Working level month" (WLM) means an exposure to one working level for 170 hours (2,000 working hours per year/12 months per year equals approximately 170 hours per month).

333-120-0017
Implementation

(1) Any existing license or registration condition that is more restrictive than OAR 333-120 remains in force until there is an amendment or renewal of the license or registration.

(2) If a license or registration condition exempts a licensee or registrant from a provision of OAR 333-120 in effect on or before July 1, 2006, it also exempts the licensee or registrant from the corresponding provision of OAR 333-120.

(3) If a license or registration condition cites provisions of OAR 333-120 in effect prior to July 1, 2006, which do not correspond to any provisions of OAR 333-120, the license or registration condition remains in force until there is an amendment or renewal of the license or registration that modifies or removes this condition.

333-120-0020
Radiation Protection Programs

(1) Each licensee or registrant must develop, document, and implement a radiation protection program commensurate with the scope and extent of licensed or registered activities and sufficient to ensure compliance with the provisions of this division. (See OAR 333-120-0610 for record keeping requirements relating to these programs.)

(2) Each licensee or registrant must use, to the extent practicable, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable (ALARA).

(3) Each licensee or registrant must periodically (at least annually) review the radiation protection program content and implementation.

(4) To implement the ALARA requirements of section (2) of this rule, and notwithstanding the requirements in OAR 333-120-0180, a constraint on air emissions of radioactive material to the environment, excluding Radon-222 and its daughters, must be established by licensees such that the individual member of the public likely to receive the highest dose will not be expected to receive a total effective dose equivalent in excess of ten mrem (0.1 mSv) per year from these emissions. If a licensee subject to this requirement exceeds this dose constraint, the licensee must report the excess as provided in OAR 333-120-0720 and promptly take appropriate corrective action to ensure against recurrence.

Radiation Dose Limits

333-120-0100
Occupational Dose Limits For Adults

(1) Each licensee or registrant must control the occupational dose to individual adults, except for planned special exposures under OAR 333-120-0150, to the following dose limits:

(a) An annual limit, which is the more limiting of:

(A) The total effective dose equivalent being equal to 0.05 Sv (5 rem); or

(B) The sum of the deep-dose equivalent and the committed dose equivalent to any individual organ or tissue other than the lens of the eye being equal to 0.5 Sv (50 rem).

(b) The annual limits to the lens of the eye, to the skin, and to the extremities that are:

(A) A lens dose equivalent of 0.15 Sv (15 rem); and

(B) A shallow-dose equivalent of 0.50 Sv (50 rem) to the skin of the whole body or to the skin of any extremity.

(2) Doses received in excess of the annual limits, including doses received during accidents, emergencies, and planned special exposures, must be subtracted from the limits for planned special exposures, as defined in OAR 333-100-0005, that the individual may receive during the current year OAR 333-120-0150(5)(a) and during the individual's lifetime OAR 333-120-0150(5)(b).

NOTE: A licensee or registrant may permit a radiation worker to receive more than 0.05 Sv (5 rem) per year TEDE or 0.5 Sv (50 rem) to the skin, extremities, or organ, or 0.15 Sv (15 rem) to the lens of the eye during a planned special exposure (PSE) only if: (a) there are no other alternatives available or practical; (b) the PSE is authorized in writing before it occurs; (c) the individuals who will be exposed are told the reason for the PSE, the dose they are expected to receive, the risks from that dose and the conditions under which they will be working (e.g. radiation or contamination levels), and how to keep their doses ALARA; (d) the licensee or registrant determines the worker's prior doses (lifetime history); (e) the total dose expected from the PSE plus any previous doses over the annual limit do not exceed the standard annual dose limits, or five times the standard limits in the worker's lifetime; (f) the licensee or registrant maintains the appropriate records and files the appropriate reports; and (g) after the PSE, the licensee or registrant records the dose received and notifies the worker in writing of the dose received within 30 days after the PSE. The dose received from the PSE does not affect the worker's ability to receive the standard annual doses but is included in the worker's lifetime history and added to any future PSEs.

(3) When the external exposure is determined by measurement with an external personal monitoring device, the deep-dose equivalent must be used in place of the effective dose equivalent, unless the effective dose equivalent is determined by a dosimetry method approved by the Authority. The assigned deep-dose equivalent must be for the part of the body receiving the highest exposure. The assigned shallow-dose equivalent must be the dose averaged over the contiguous ten square centimeters of skin receiving the highest exposure. The deep-dose equivalent, lens-dose equivalent, and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable:

(a) The deep-dose equivalent, lens dose equivalent and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable; or

(b) When a protective apron is worn while working with medical fluoroscopic equipment and monitoring is conducted as specified in OAR 333-120-0210(1)(e) the effective dose equivalent for external radiation must be determined as follows:

(A) When only one individual monitoring device is used and it is located at the neck outside the protective apron, the reported deep dose equivalent must be the effective dose equivalent for external radiation; or

(B) When only one individual monitoring device is used and it is located at the neck outside the protective apron, and the reported dose exceeds 25 percent of the limit specified in section (1) of this rule the reported deep dose equivalent value multiplied by 0.3 must be the effective dose equivalent for external radiation; or

(C) When individual monitoring devices are worn, both under the protective apron at the waist and outside the protective apron at the neck, the effective dose equivalent for external radiation must be assigned the value of the sum of the deep dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by 1.5 and the deep dose equivalent reported for the individual monitoring device located at the neck outside the protective apron multiplied by 0.04.

(4) Derived air concentration (DAC) and annual limit on intake (ALI) values are presented in 10 CFR Part 20 Table 1 of Appendix B to 20.1001 to 20.2401 and may be used to determine the individual's dose (OAR 333-120-0650) and to demonstrate compliance with the occupational dose limits.

(5) In addition to the annual dose limits, the licensee must limit the soluble uranium intake by an individual to 10 milligrams in a week in consideration of chemical toxicity (see 10 CFR Part 20 footnote 3 of Appendix B to 20.1001 to 20.2401).

(6) When monitoring is required by OAR 333-120-0210 each licensee or registrant must reduce the dose that an individual may be allowed to receive in the current year by the amount of occupational dose received while employed by any other person (OAR 333-120-0630(5)).

(7) The licensee must reduce the dose that an individual may be allowed to receive in the current year by the amount of occupational dose received while employed by any other person.

[ED. NOTE: Appendices referenced are available from the agency.]

Hist.: HD 15-1994, f. & cert. ef. 5-6-94; HD 1-1995, f. & cert. ef. 4-26-95; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08; PH 10-2011, f. 9-30-11, cert. ef. 10-1-11

333-120-0110
Compliance with Requirements for Summation of External and Internal Doses

(1) If the licensee is required to monitor under OAR 333-120-0210(1) and (2), the licensee must demonstrate compliance with the dose limits by summing external and internal doses. If the licensee is required to monitor only under OAR 333-120-0210(1) or only under 333-120-0210(2), then summation is not required to demonstrate compliance with the dose limits. The licensee may demonstrate compliance with the requirements for summation of external and internal doses by meeting one of the conditions specified in section (2) of this rule and the conditions in sections (3) and (4) of this rule.

NOTE: The dose equivalents for the lens of the eye, the skin, and the extremities are not included in the summation, but are subject to separate limits.

(2) Intake by Inhalation. If the only intake of radionuclides is by inhalation, the total effective dose equivalent limit is not exceeded if the sum of the deep-dose equivalent divided by the total effective dose equivalent limit, and one of the following, does not exceed unity:

(a) The sum of the fractions of the inhalation ALI for each radionuclide; or

(b) The total number of derived air concentration-hours (DAC-hours) for all radionuclides divided by 2,000; or

(c) The sum of the calculated committed effective dose equivalents to all significantly irradiated organs or tissues (T) calculated from bioassay data using appropriate biological models and expressed as a fraction of the annual limit.

NOTE: An organ or tissue is deemed to be significantly irradiated if, for that organ or tissue, the product of the weighting factors, WT, and the committed dose equivalent, HT,50, per unit intake is greater than ten percent of the maximum weighted value of HT50 (i.e. WTHT50) per unit intake for any organ or tissue.

(3) Intake by Oral Ingestion. If the occupationally exposed individual also receives an intake of radionuclides by oral ingestion greater than ten percent of the applicable oral ALI, the licensee

must account for this intake and include it in demonstrating compliance with the limits.

(4) Intake Through Wounds or Absorption Through Skin. The licensee must evaluate and, to the extent practical, account for intakes through wounds or skin absorption. The intake through intact skin has been included in the calculation of DAC for hydrogen-3 and does not need to be further evaluated.

333-120-0120
Determination of External Dose from Airborne Radioactive Material

Licensees must, when determining the dose from airborne radioactive material, include the contribution to the deep-dose equivalent, lens dose equivalent, and shallow-dose equivalent from external exposure to the radioactive cloud (10 CFR, Part 20, Appendix B, Footnotes 1 and 2 to 20.1001 to 20.2401).

NOTE: Airborne radioactivity measurements and DAC values should not be used as the primary means to assess the deep-dose equivalent when the airborne radioactive material includes radionuclides other than noble gases or if the cloud of airborne radioactive material is not relatively uniform. The determination of the deep-dose equivalent to an individual should be based upon measurements using instruments or individual monitoring devices.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-120-0130
Determination of Internal Exposure

(1) For purposes of assessing dose used to determine compliance with occupational dose equivalent limits, the licensee must, when required under OAR 333-120-0210, take suitable and timely measurements of:

(a) Concentrations of radioactive materials in air in work areas; or

(b) Quantities of radionuclides in the body; or

(c) Quantities of radionuclides excreted from the body; or

(d) Combinations of these measurements.

(2) Unless respiratory protective equipment is used, as provided in OAR 333-120-0320 or the assessment of intake is based in bioassays, the licensee must assume that an individual inhales radioactive material at the airborne concentration in which the individual is present.

(3) When specific information on the physical and biochemical properties of the radionuclides taken into the body or the behavior or the material in an individual is known, the licensee may:

(a) Use that information to calculate the committed effective dose equivalent, and, if used, the licensee must document that information in the individual's record; and

(b) Upon prior approval of the Authority, adjust the DAC or ALI values to reflect the actual physical and chemical characteristics of airborne radioactive material (e.g. aerosol size distribution or density); and

(c) Separately assess the contribution of fractional intakes of Class D, W, or Y compounds of given radionuclide (see 10 CFR Part 20 Appendix B to 20.1001 to 20.2401) to the committed effective dose equivalent.

(4) If the licensee chooses to assess intakes of Class Y material using the measurements given in sections (1), (2) or (3) of this rule, the licensee may delay the recording and reporting of the assessments for periods up to seven months, unless otherwise required by OAR 333-120-0710 or 333-120-0720, in order to permit the licensee to make additional measurements basic to the assessments.

(5) If the identity and concentration of each radionuclide in a mixture are known, the fraction of the DAC applicable to the mixture for use in calculating DAC-hours must be either:

(a) The sum of the ratios of the concentration to the appropriate DAC value (e.g. D, W, Y) from 10 CFR Part 20 Appendix B to 20.1001 to 20.2401 for each radionuclide in the mixture; or

(b) The ratio of the total concentration for all radionuclides in the mixture to the most restrictive DAC value for any radionuclide in the mixture.

(6) If the identity of each radionuclide in a mixture is known, but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture must be the most restrictive DAC of any radionuclide in the mixture.

(7) When a mixture of radionuclides in air exists, licensees may disregard certain radionuclides in the mixture if:

(a) The licensee uses the total activity of the mixture in demonstrating compliance with the dose limits in OAR 333-120-0100 and in complying with the monitoring requirements in 333-120-0210(2); and

(b) The concentration of any radionuclide disregarded is less than 10 percent of its DAC; and

(c) The sum of these percentages for all of the radionuclides disregarded in the mixture does not exceed 30 percent.

(8) When determining the committed effective dose equivalent, the following information may be considered:

(a) In order to calculate the committed effective dose equivalent, the licensee may assume that the inhalation of one ALI, or an exposure of 2,000 DAC-hours, results in a committed effective dose equivalent of 0.05 Sv (5 rem) for radionuclides that have their ALIs or DACs based on the committed effective dose equivalent.

(b) When the ALI (and the associated DAC) is determined by the nonstochastic organ dose limit of 0.50 Sv (50 rem), the intake of radionuclides that would result in a committed effective dose equivalent of 0.05 Sv (5 rem) (the stochastic ALI) is listed in parentheses in 10 CFR Part 20 Table 1 of Appendix B to 20.1001 to 20.2401. In this case, the licensee may, as a simplifying assumption, use the stochastic ALIs to determine committed effective dose equivalent. However, if the licensee uses the stochastic ALIs, the licensee also must demonstrate that the limit in OAR 333-120-0100(1)(a)(B) is met.

333-120-0150
Planned Special Exposures

A licensee or registrant may authorize an adult worker to receive doses in addition to and accounted for separately from the doses received under the limits specified in OAR 333-120-0100 provided that each of the following conditions is satisfied:

(1) The licensee or registrant authorizes a planned special exposure only in an exceptional situation when alternatives that might avoid the higher exposure are unavailable or impractical.

(2) The licensee or registrant (and employer if the employer is not the licensee or registrant) specifically authorizes the planned special exposure, in writing, before the exposure occurs.

(3) Before a planned special exposure, the licensee or registrant ensures that the individuals involved are:

(a) Informed of the purpose of the planned operation;

(b) Informed of the estimated doses and associated potential risks and specific radiation levels or other conditions that might be involved in performing the task; and

(c) Instructed in the measures to be taken to keep the dose ALARA considering other risks that may be present.

(4) Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant ascertains prior doses, as required by OAR 333-120-0630(2), during the lifetime of the individual for each individual involved.

(5) Subject to OAR 333-120-0100(2), the licensee or registrant does not authorize a planned special exposure that would cause an

individual to receive a dose from all planned special exposures and all doses in excess of the limits to exceed:

(a) The numerical values of any of the dose limits in OAR 333-120-0100(1) in any year; and

(b) Five times the annual dose limits in OAR 333-120-0100(1) during the individual's lifetime.

(6) The licensee or registrant maintains records of the conduct of a planned special exposure in accordance with OAR 333-120-0640 and submits a written report in accordance with OAR 333-120-0730.

(7) The licensee or registrant records the best estimate of the dose resulting from the planned special exposure in the individual's record and informs the individual, in writing, of the dose within 30 days from the date of the planned special exposure. The dose from planned special exposures is not to be considered in controlling future occupational dose of the individual under OAR 333-120-0100(1) but is to be included in evaluations required by 333-120-0100(4) and (5).

333-120-0160
Occupational Dose Limits for Minors

The annual occupational dose limits for minors are 10 percent of the annual dose limits specified for adult workers in OAR 333-120-0100.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-120-0170
Dose to an Embryo/Fetus

(1) The licensee or registrant must ensure that the dose equivalent to an embryo/fetus during the entire pregnancy, due to occupational exposure of a declared pregnant woman does not exceed five mSv (0.5 rem). Records must be kept in accordance with OAR 333-120-0650.

NOTE: A woman is not a declared pregnant woman unless she says so in writing without being coerced. Unless a woman, who also is a radiation worker, has declared her pregnancy as required, she is to be treated as any other radiation worker. Pursuant to Title VII of the Civil Rights Act of 1964, as amended, no employer may restrict a fertile female's job because of concern for the health of the fetus that a woman might conceive. The court held that sex-specific fetal-protection policies are forbidden. Additionally, a female worker legally can declare pregnancy if she does not yet have documented medical proof. The document, "Instruction Concerning Prenatal Radiation Exposure," discusses declared pregnancy. It is available from Public Health Division, Radiation Protection Services Suite 640, 800 N.E. Oregon St., Portland, OR 97232, phone (971) 673-0490.

(2) The licensee or registrant must make efforts to avoid substantial variation above a uniform monthly exposure rate to a declared pregnant woman so as to satisfy the limit in section (1) of this rule.

(3) The dose equivalent to an embryo/fetus must be taken as the sum of:

(a) The deep-dose equivalent to the declared pregnant woman; and

(b) The dose equivalent to the embryo/fetus from radionuclides in the embryo/fetus and radionuclides in the declared pregnant woman, If the dose equivalent to the embryo/fetus is found to have exceeded 0.5 rem (5 mSv), or is within 0.05 rem (0.5 mSv) of this dose, by the time the woman declares the pregnancy to the licensee, the licensee shall be deemed to be in compliance with subsection (3)(a) of this rule if the additional dose equivalent to the embryo/fetus does not exceed 0.05 rem (0.5 mSv) during the remainder of the pregnancy.

(4) If the dose equivalent to the embryo/fetus is found to have exceeded five mSv (0.5 rem), or is within 0.5 mSv (0.05 rem), by the time the woman declares the pregnancy to the licensee or registrant, the licensee or registrant shall be deemed to be in compliance with section (1) of this rule if the additional dose to the embryo/fetus does not exceed 0.5 mSv (0.05 rem) during the remainder of the pregnancy.

NOTE: If a pregnant radiation worker declares in writing to the licensee that she is pregnant, the dose limit to the embryo/fetus is five mSv (0.5 rem) during the entire pregnancy. The dose that is controlled is the dose to the embryo/fetus, not the dose to the woman, although for external penetrating radiation, the two are virtually synonymous.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; HD 1-1995, f. & cert. ef. 4-26-95; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-120-0180
Dose Limits for Individual Members of the Public

(1) Each licensee or registrant must conduct operations so that:

(a) The total effective dose equivalent to individual members of the public from the licensed or registered operation does not exceed one mSv (0.1 rem) in a year, exclusive of the dose contributions from background, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released in accordance with OAR 333-116-0260, from voluntary participation in medical research programs, and the licensee's disposal of radioactive material into sanitary sewerage in accordance with OAR 333-120-0520; and

(b) The dose in any unrestricted area from external sources, exclusive of the dose contributions from patients administered radioactive material and released in accordance with OAR 333-116-0260, does not exceed 0.02 mSv (0.002 rem) in any one hour.

(2) If the licensee or registrant permits members of the public to have access to controlled areas, the limits for members of the public continue to apply to those individuals.

(3) Notwithstanding subsection (1)(a) of this rule, a licensee may permit visitors to an individual who cannot be released, under OAR 333-116-0260, to receive a radiation dose greater than 0.1 rem (1 mSv) if:

(a) The radiation dose received does not exceed 0.5 rem (5 mSv); and

(b) The authorized user, as defined in OAR 333-116-0020, has determined prior to the visit that it is appropriate.

(4) A licensee, registrant or applicant may apply for prior Authority authorization to operate up to an annual dose limit for an individual member of the public of five mSv (0.5 rem). The licensee, registrant or applicant must include the following information in this application:

(a) Demonstration of the need for and the expected duration of operations in excess of the limit in section (1) of this rule; and

(b) The licensee's or registrant's program to assess and control dose within the five mSv (0.5 rem) annual limit; and

(c) The procedures to be followed to maintain the dose as low as is reasonably achievable.

(5) In addition to the requirements of this division, a licensee or registrant subject to the provisions of EPA's generally applicable environmental radiation standards in 40 CFR Part 190 must comply with those standards.

(6) The Authority may impose additional restrictions on radiation levels in unrestricted areas and on the total quantity of radionuclides that a licensee or registrant may release in effluents in order to restrict the collective dose.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-120-0190
Compliance with Dose Limits for Individual Members of the Public

(1) The licensee or registrant must make or cause to be made, as appropriate, surveys of radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unre-

stricted and controlled areas to demonstrate compliance with the dose limits for individual members of the public in OAR 333-120-0180.

(2) A licensee or registrant must show compliance with the annual dose limit in OAR 333-120-0180 by:

(a) Demonstrating by measurement or calculation that the total effective dose equivalent to the individual likely to receive the highest dose from the licensed or registered operation does not exceed the annual dose limit; or

(b) Demonstrating that:

(A) The annual average concentrations of radioactive material released in gaseous and liquid effluents at the boundary of the unrestricted area do not exceed the values specified in 10 CFR Part 20 Table 2 of **Appendix B** to 20.1001 to 20.2401; and

(B) If an individual were continually present in an unrestricted area, the dose from external sources would not exceed 0.02 mSv (0.002 rem) in an hour and 0.5 mSv (0.05 rem) in a year.

(3) Upon approval from the Authority, the licensee or registrant may adjust the effluent concentration values in 10 CFR Part 20 Table 2 of **Appendix B** to 20.1001 to 20.2401 for members of the public, to take into account the actual physical and chemical characteristics of the effluents (e.g aerosol size distribution, solubility, density, radioactive decay equilibrium, chemical form).

Surveys and Monitoring

333-120-0200
General

(1) Each licensee or registrant must make or cause to be made, surveys that:

(a) Are necessary for the licensee or registrant to comply with the rules in this division; and

(b) Are reasonable under the circumstances to evaluate:

(A) The magnitude and extent of radiation levels; and

(B) The concentrations or quantities of radioactive material; and

(C) The potential radiological hazards that could be present.

(2) Notwithstanding OAR 333-120-0620, records from surveys describing the location and amount of subsurface residual radioactivity identified at the site must be kept with records important for decommissioning. Records must be retained in accordance with 10 CFR parts 30.35(g), 40.36(f), and 70.25

(3) The licensee or registrant must ensure that instruments and equipment used for quantitative radiation measurements (such as dose rate and effluent monitoring) are calibrated at intervals not to exceed 12 months for the radiation measured, except when a more frequent interval is specified in another applicable division or a license condition.

(4) All personnel dosimeters (except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to the extremities) that require processing to determine the radiation dose and that are used by licensees or registrants to comply with OAR 333-120-0100, with other applicable provisions of this division or with conditions specified in a license must be processed and evaluated by a dosimetry processor:

(a) Holding current personnel dosimetry accreditation from the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology; and

(b) Approved in this accreditation process for the type of radiation or radiations included in the NVLAP program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored.

(5) The licensee or registrant must ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device.

333-120-0210
Conditions Requiring Individual Monitoring of External and Internal Occupational Dose

Each licensee or registrant must monitor exposures to radiation and radioactive material at levels sufficient to demonstrate compliance with the occupational dose limits of this division. As a minimum:

(1) Each licensee or registrant must monitor occupational exposure to radiation and must supply and require the use of individual monitoring devices by:

(a) Adults likely to receive, in one year from sources external to the body, a dose in excess of 10 percent of the limits in OAR 333-120-0100(1);

(b) Minors likely to receive, in one year from sources external to the body, a dose in excess of 10 percent of any of the applicable limits in OAR 333-120-0160 or 333-120-0170;

(c) Declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of one mSv (0.1 rem);

(d) Individuals entering a high or very high radiation area; and

(e) Individuals working with medical fluoroscopic equipment.

(A) An individual monitoring device used for the dose to an embryo/fetus of a declared pregnant woman, pursuant to OAR 333-120-0170(1), must be located under the protective apron at the waist.

(B) An individual monitoring device used for lens dose equivalent must be located at the neck, or an unshielded location closer to the lens, outside the protective apron.

(C) When only one individual monitoring device is used to determine the effective dose equivalent for external radiation pursuant to OAR 333-120-0100(3)(b) it must be located at the neck outside the protective apron. When a second individual monitoring device is used, for the same purpose, it must be located under the protective apron at the waist. The second individual monitoring device is required for a declared pregnant woman.

(2) Each licensee or registrant must monitor (OAR 333-120-0130) the occupational intake of radioactive material by and assess the committed effective dose equivalent to:

(a) Adults likely to receive, in one year, an intake in excess of 10 percent of the applicable ALI(s) in 10 CFR Part 20 Table 1, Columns 1 and 2, of Appendix B to 20.1001 to 20.2401; and

(b) Minors likely to receive, in one year, from radiation sources external to the body, a deep dose equivalent in excess of one mSv (0.1 rem), a lens dose equivalent in excess of 0.15 rem (1.5 mSv), or a shallow dose equivalent to the skin or to the extremities in excess of 0.5 rem (5 mSv).

(c) Declared pregnant women likely to receive, during the entire pregnancy, from radiation sources external to the body, a committed effective dose equivalent in excess of 0.1 rem (1 mSv).

[ED. NOTE: Appendices referenced are available from the agency.]

333-120-0215
Location of Individual Monitoring Devices

Each licensee or registrant must ensure that individuals who are required to monitor occupational doses in accordance with OAR 333-120-0210(1) wear individual monitoring devices as follows:

(1) An individual monitoring device used for monitoring the dose to the whole body must be worn at the unshielded location of the whole body likely to receive the highest exposure. When a pro-

tective apron is worn, the location of the individual monitoring device is typically at the neck (collar);

(2) An individual monitoring device used for monitoring the dose to an embryo/fetus of a declared pregnant woman, pursuant to OAR 333-120-0170(1), must be located at the waist under any protective apron being worn by the woman;

(3) An individual monitoring device used for monitoring the lens dose equivalent, to demonstrate compliance with OAR 333-120-0100(1)(b)(A), must be located at the neck (collar), outside any protective apron being worn by the monitored individual, or at an unshielded location closer to the eye;

(4) An individual monitoring device used for monitoring the dose to the extremities, to demonstrate compliance with OAR 333-120-0100(1)(b)(B), must be worn on the extremity likely to receive the highest exposure. Each individual monitoring device must be oriented to measure the highest dose to the extremity being monitored.

Control of Exposure from External Sources in Restricted Areas

333-120-0220
Control of Access to High Radiation Areas

(1) The licensee or registrant must ensure that each entrance or access point to a high radiation area has one or more of the following features:

(a) A control device that, upon entry into the area, causes the level of radiation to be reduced below that level at which an individual might receive a deep-dose equivalent of one mSv (0.1 rem) in one hour at 30 centimeters from the radiation source or from any surface that the radiation penetrates;

(b) A control device that energizes a conspicuous visible or audible alarm signal so that the individual entering the high radiation area and the supervisor of the activity are made aware of the entry; or

(c) Entryways that are locked, except during periods when access to the areas is required, with positive control over each individual entry.

(2) In place of the controls required by section (1) of this rule for a high radiation area, the licensee or registrant may substitute continuous direct or electronic surveillance that is capable of preventing unauthorized entry.

(3) A licensee or registrant may apply to the Authority for approval of alternative methods for controlling access to high radiation areas.

(4) The licensee or registrant must establish the controls required by sections (1) and (3) of this rule in a way that does not prevent individuals from leaving a high radiation area.

(5) Control is not required for each entrance or access point to a room or other area that is a high radiation area solely because of the presence of radioactive materials prepared for transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation (49 CFR) provided that:

(a) The packages do not remain in the area longer than three days; and

(b) The dose rate at one meter from the external surface of any package does not exceed 0.1 mSv (0.01 rem) per hour.

(6) Control of entrance or access to rooms or other areas in hospitals is not required solely because of the presence of patients containing radioactive material, provided that there are personnel in attendance who will take the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the limits established in this division and to operate within the ALARA provisions of the licensee's or registrant's radiation protection program.

(7) The licensee or registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a high radiation area as described in this rule if the licensee or registrant has met all the specific requirements for access and control specified in other applicable divisions of chapter 333, such as, 333-105 for industrial radiography, 333-106 for x-rays in the healing arts, and 333-109 for particle accelerators.

333-120-0230
Control of Access to Very High Radiation Areas

(1) In addition to the requirements in OAR 333-120-0220, the licensee or registrant must institute additional measures to ensure that an individual is not able to gain unauthorized or inadvertent access to areas in which radiation levels could be encountered at five gray (500 rad) or more in one hour at one meter from a radiation source or any surface through which the radiation penetrates.

(2) The licensee or registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a very high radiation area as described in OAR 333-120-0220 if the licensee or registrant has met all the specific requirements for access and control specified in OAR chapter 333, division 105 (industrial radiography), division 106 (X-rays in the healing arts), division 109 (particle accelerators), and division 123 (therapeutic radiation machines).

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 3-2003, f. & cert. ef. 3-27-03; PH 31-2004(Temp), f. & cert. ef. 10-8-04 thru 4-5-05; PH 36-2004, f. & cert. ef. 12-1-04; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 14-2008, f. & cert. ef. 9-15-08

333-120-0240
Control of Access to Very High Radiation Areas — Irradiators

This rule applies to licensees or registrants with sources of radiation in non-self-shielded irradiators. It does not apply to sources of radiation that are used in teletherapy, in industrial radiography, or in completely self-shielded irradiators in which the source of radiation is both stored and operated within the same shielding radiation barrier and, in the designed configuration of the irradiator, is always physically inaccessible to any individual and cannot create high levels of radiation in an area that is accessible to any individual.

(1) Each area in which there may exist radiation levels in excess of five gray (500 rad) in one hour at one meter from a sealed radioactive source that is used to irradiate materials must meet the following requirements.

(a) Each entrance or access point must be equipped with entry control devices which:

(A) Function automatically to prevent any individual from inadvertently entering the area when very high radiation levels exist; and

(B) Permit deliberate entry into the area only after a control device is actuated that causes the radiation level within the area, from the sealed source, to be reduced below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of one mSv (0.1 rem) in one hour; and

(C) Prevent operation of the source if the source would produce radiation levels in the area that could result in a deep-dose equivalent to an individual in excess of one mSv (0.1 rem) in one hour.

NOTE: This rule applies to radiation from accelerators, and byproduct, source, NARM, or special nuclear radioactive materials that are used in sealed sources in non-self-shielded irradiators. This rule does not apply to radioactive or X-ray sources that are used in teletherapy or medical accelerators, in radiography, or in completely self-shielded irradiators in which the source is both stored and operated within the same shielding radiation barrier and, in the designed configuration of the irradiator, is always physically inaccessible to any individual and cannot create high levels of radiation in an area that is accessible to any individual. This rule also does not apply to sources from which the radiation is incidental to

some other use.

(b) Additional control devices must be provided so that, upon failure of the entry control devices to function as required by subsection (1)(a) of this rule:

(A) The radiation level within the area, from the sealed source, or radiation source is reduced below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of one mSv (0.1 rem) in one hour; and

(B) Conspicuous visible and audible alarm signals are generated to make an individual attempting to enter the area aware of the hazard and at least one other authorized individual, who is physically present, familiar with the activity, and prepared to render or summon assistance, aware of the failure of the entry control devices.

(c) The licensee or registrant must provide control devices so that, upon failure or removal of physical radiation barriers other than the radiation source's shield or shielded storage container:

(A) The radiation level from the radiation source is reduced below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of one mSv (0.1 rem) in one hour; and

(B) Conspicuous visible and audible alarm signals are generated to make potentially affected individuals aware of the hazard and the licensee/registrant or at least one other individual, who is familiar with the activity and prepared to render or summon assistance, aware of the failure or removal of the physical barrier.

(d) When the shield for the stored source is a liquid, the licensee or registrant must provide means to monitor the integrity of the shield and to signal, automatically, loss of adequate shielding.

(e) Physical radiation barriers that comprise permanent structural components, such as walls, that have no credible probability of failure or removal in ordinary circumstances need not meet the requirements of subsections (1)(c) and (d) of this rule.

(f) Each area must be equipped with devices that will automatically generate conspicuous visible and audible alarm signals to alert personnel in the area before the source can be put into operation and in sufficient time for any individual in the area to operate a clearly identified control device, which must be installed in the area and which can prevent the source from being put into operation.

(g) Each area must be controlled by use of such administrative procedures and such devices as are necessary to ensure that the area is cleared of personnel prior to each use of the radiation source.

(h) Each area must be checked by a radiation measurement to ensure that, prior to the first individual's entry into the area after any use of the source, the radiation level from the source in the area is below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of one mSv (0.1 rem) in one hour.

(i) The entry control devices required in subsection (1)(a) of this rule must have been tested for proper functioning. Records of required testing must be maintained in accordance with OAR 333-120-0680.

(A) Testing must be conducted prior to initial operation with the source of radiation on any day (unless operations were continued uninterrupted from the previous day); and

(B) Testing must be conducted prior to resumption of operation of the source of radiation after any unintended interruption; and

(C) The licensee or registrant must submit and adhere to a schedule for periodic tests of the entry control and warning systems.

(j) The licensee or registrant may not conduct operations, other than those necessary to place the source in safe condition or to affect repairs on controls, unless control devices are functioning properly.

(k) Entry and exit portals that are used in transporting materials to and from the irradiation area, and that are not intended for use by individuals, must be controlled by such devices and administrative procedures as are necessary to physically protect and warn against inadvertent entry by any individual through these portals. Exit portals for processed materials must be equipped to detect and signal the presence of any loose radiation sources that are carried toward such an exit and to automatically prevent loose radiation sources from being carried out of the area.

(2) Persons holding licenses or registrations or applicants for licenses or registrations for radiation sources that are within the purview of section (1) of this rule and that will be used in a variety of positions or in locations, such as open fields or forests, that make it impracticable to comply with certain requirements of section (1) of this rule, such as those for the automatic control of radiation levels, may apply to the Authority for approval of the use of alternative safety measures. Any alternative safety measures must provide a degree of personnel protection at least equivalent to those specified in section (1) of this rule. At least one of the alternative measures must include an entry-preventing interlock control based on a measurement of the radiation that ensures the absence of high radiation levels before an individual can gain access to the area where such radiation sources are used.

(3) The entry control devices required by sections (1) and (2) of this rule must be established in such a way that no individual will be prevented from leaving the area.

Storage and Control of Licensed Material

333-120-0250

Security of Stored Material

(1) The licensee must secure from unauthorized removal or access licensed materials that are stored in controlled or unrestricted areas.

(2) The registrant must secure registered radiation machines from unauthorized removal.

(3) The registrant must use devices or administrative procedures to prevent unauthorized use of registered radiation machines.

Stat. Auth.: ORS 453.635

Stats. Implemented: ORS 453.605 - 453.807

Respiratory Protection and Controls to Restrict Internal Exposure in Restricted Areas

333-120-0300
Use of Process or Other Engineering Controls

The licensee must use, to the extent practicable, process or other engineering controls (e.g., containment or ventilation) to control the concentrations of radioactive material in air.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-120-0310
Use of Other Controls

(1) When it is not practicable to apply process or other engineering controls to control the concentrations of radioactive material in air to values below those that define an airborne radioactivity area, the licensee must, consistent with maintaining the total effective dose equivalent ALARA, increase monitoring and limit intakes by one or more of the following means:

(a) Control of access;

(b) Limitations of exposure times;

(c) Use of respiratory protection equipment; or

(d) Other controls.

(2) If the licensee performs an ALARA analysis to determine whether or not respirators should be used, the licensee may consider safety factors other than radiological factors. The licensee should also consider the impact of respirator use on workers' industrial health and safety.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

333-120-0320
Use of Individual Respiratory Protection Equipment

(1) If the licensee uses respiratory protection equipment to limit intakes pursuant to OAR 333-120-0310:

(a) The licensee must use only respiratory protection equipment that is tested and certified or had certification extended by the National Institute for Occupational Safety and Health/Mine Safety and Health Administration (NIOSH/MSHA).

(b) The licensee may use equipment that has not been tested or certified by NIOSH/MSHA, has not had certification extended by NIOSH/MSHA, or for which there is no schedule for testing or certification, the licensee must submit an application for authorized use of that equipment, including a demonstration by testing, or a demonstration on the basis of reliable test information, that the material and performance characteristics of the equipment are capable of providing the proposed degree of protection under anticipated conditions of use.

(c) The licensee must implement and maintain a respiratory protection program that includes:

(A) Air sampling sufficient to identify the potential hazard, permit proper equipment selection, and estimate exposures; and

(B) Surveys and bioassays, as appropriate, to evaluate actual intakes; and

(C) Testing of respirators for operability immediately prior to each use; and

(D) Written procedures regarding:

(i) Monitoring, including air sampling and bioassays;

(ii) Supervision and training of respirator users;

(iii) Fit testing;

(iv) Respirator selection;

(v) Breathing air quality;

(vi) Inventory and control;

(vii) Storage, issuance, maintenance, repair, testing, and quality assurance of respiratory protection equipment;

(viii) Recordkeeping; and

(ix) Limitations on periods of respirator use and relief from respirator use; and

(E) Determination by a physician prior to initial fitting and use of respirators, and at least every 12 months thereafter, that the individual user is physically able to use the respiratory protection equipment.

(F) Fit testing, with fit factor > 10 times the APF for negative pressure devices, and a fit factor > 500 for any positive pressure, continuous flow, and pressure-demand devices, before the first field use of tight fitting, face-sealing respirators and periodically thereafter at a frequency not to exceed one year. Fit testing must be performed with the facepiece operating in the negative pressure mode.

(d) The licensee must issue a written policy statement on respirator usage covering:

(A) The use of process or other engineering controls, instead of respirators; and

(B) The routine, nonroutine, and emergency use of respirators; and

(C) The periods of respirator use and relief from respirator use.

(e) The licensee must advise each respirator user that the user may leave the area at any time for relief from respirator use in the event of equipment malfunction, physical or psychological distress, procedural or communication failure, significant deterioration of operating conditions, or any other conditions that might require such relief.

(f) The licensee must use equipment within limitations for type and mode of use and must provide proper visual, communication, low temperature work environments, the concurrent use of safety or radiological protection equipment and other special capabilities (such as adequate skin protection) when needed. The licensee must ensure equipment is used in such a way as not to interfere with the proper operation of the respirator.

(2) In estimating exposure of individuals to airborne radioactive materials, the licensee or registrant may make allowance for respiratory protection equipment used to limit intakes pursuant to OAR 333-120-0310, provided that the following conditions, in addition to those in section (1) of this rule, are satisfied:

(a) The licensee selects respiratory protection equipment that provides a protection factor (10 CFR Part 20 Appendix A to 20.1001 to 20.2401) greater than the multiple by which peak concentrations of airborne radioactive materials in the working area are expected to exceed the values specified in 10 CFR Part 20 Table 1, Column 3 of Appendix B to 20.1001 to 20.2401. If the selection of a respiratory protection device with a protection factor greater than the peak concentration is inconsistent with the goal specified in OAR 333-120-0310 of keeping the total effective dose equivalent ALARA, the licensee or registrant may select respiratory protection equipment with a lower protection factor only if such a selection would result in keeping the total effective dose equivalent ALARA. The concentration of radioactive material in the air that is inhaled when respirators are worn may be initially estimated by dividing the average concentration in air, during each period of uninterrupted use, by the protection factor. If the exposure is later found to be greater than estimated, the corrected value must be used; if the exposure is later found to be less than estimated, the corrected value may be used; and

(b) The licensee must obtain authorization from the Authority before assigning respiratory protection factors in excess of those specified in 10 CFR Part 20 Appendix A to 20.1001 to 20.2401. The Authority may authorize a licensee to use higher protection factors on receipt of an application that:

(A) Describes the situation for which a need exists for higher protection factors; and

(B) Demonstrates that the respiratory protection equipment provides these higher protection factors under the proposed conditions of use.

(3) The licensee must use as emergency devices only respiratory protection equipment that has been specifically certified or had certification extended for emergency use by NIOSH/MSHA.

(4) The licensee must notify the Authority, in writing, at least 30 days before the date that respiratory protection equipment is first used under the provisions of either sections (1) or (2) of this rule.

(5) Standby rescue persons are required whenever one-piece atmosphere-supplying suits, or any combination of supplied air respiratory protection device and personnel protective equipment are used from which an unaided individual would have difficulty extricating himself or herself. The standby persons must be equipped with respiratory protection devices or other apparatus appropriate for the potential hazards. The standby rescue persons must observe or otherwise maintain continuous communication with the workers (visual, voice, signal line, telephone, radio, or other suitable means), and be immediately available to assist them in case of a failure of the air supply or for any other reason that requires relief from distress. A sufficient number of standby rescue persons must be immediately available to assist all users of this type of equipment and to provide effective emergency rescue if needed.

(6) Atmosphere-supplying respirators must be supplied with respirable air of grade D quality or better as defined by the Compressed Gas Association in publication G-7.1, "Commodity Specification for Air," 1997. Grade D quality air criteria include:

(a) Oxygen content (v/v) of 19.5-23.5%;

(b) Hydrocarbon (condensed) content of five milligrams per cubic meter of air or less;

(c) Carbon monoxide (CO) content of 10 ppm or less;

(d) Carbon dioxide content of 1,000 ppm or less; and

(e) Lack of noticeable odor.

(7) The licensee must ensure that no objects, materials or substances, such as facial hair, or any conditions that interfere with the facepiece seal or valve function, and that are under the control of the respirator wearer, are present between the skin of the wearer's face and the sealing surface of a tight-fitting respirator facepiece.

(8) In estimating the dose to individuals from intake of airborne radioactive materials, the concentration of radioactive material in the air that is inhaled when respirators are worn is initially assumed to be the ambient concentration in air without respiratory protection, divided by the assigned protection factor. If the dose is later found to be greater than the estimated dose, the corrected value must be used. If the dose is later found to be less than the estimated dose, the corrected value may be used.

333-120-0330
Further Restrictions on the Use of Respiratory Protection Equipment

The Authority may impose restrictions in addition to those in OAR 333-120-0310 and 333-120-0320, and **10 CFR**, **Part 20**, **Appendix A** to 20.1001 to 20.2401 to:

(1) Ensure that the respiratory protection program of the licensee is adequate to limit exposures of individuals to airborne radioactive materials; and

(2) Limit the extent to which a licensee may use respiratory protection equipment instead of process or other engineering controls.

Application for Use of Higher Assigned Protection Factors

The licensee shall obtain authorization from the Authority before using assigned protection factors in excess of those specified in 10 CFR Part 20, Appendix A. The Authority may authorize a licensee to use higher assigned protection factors on receipt of an application that:

(1) Describes the situation for which a need exists for higher protection factors; and

(2) Demonstrates that the respiratory protection equipment provides these higher protection factors under the proposed conditions of use.

Precautionary Procedures

333-120-0400
Caution Signs

(1) Standard radiation symbol: Unless otherwise authorized by the Authority, the symbol prescribed by this division must use the colors magenta, purple, or black on yellow background. The symbol prescribed by this division is the three-bladed design: [Symbol not included. See ED. NOTE.]

(a) Cross-hatched area is to be magenta, or purple, or black; and

(b) The background is to be yellow.

(2) Exception To Color Requirements For Standard Radiation Symbol. Notwithstanding the requirements of section (1) of this rule, licensees and registrants are authorized to label sources, source holders, or device components containing sources of licensed materials that are subjected to high temperatures, with conspicuously etched or stamped radiation caution symbols and without a color requirement.

(3) Additional Information On Signs and Labels. In addition to the contents of signs and labels prescribed in this division, the licensee may provide, on or near the required signs and labels, additional information, as appropriate, to make individuals aware of potential radiation exposures and to minimize the exposures.

[ED NOTE: Symbol referenced is available from the agency.]

333-120-0410
Posting Requirements

(1) Posting of radiation areas: The licensee or registrant must post each radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, Radiation Area."

(2) Posting of high radiation areas: The licensee or registrant must post each high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, High Radiation Area" or "Danger, High Radiation Area."

(3) Posting of very high radiation areas: The licensee or registrant must post each very high radiation area with a conspicuous sign or signs bearing the radiation symbol and words "Grave Danger, Very High Radiation Area."

(4) Posting of airborne radioactivity areas: The licensee must post each airborne radioactivity area with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, Airborne Radioactivity Area" or "Danger, Airborne Radioactivity Area."

(5) Posting of areas or rooms in which licensed material is used or stored: The licensee must post each area or room in which there is used or stored an amount of licensed material exceeding ten times the quantity of such material specified in 10 CFR, Part 20, Appendix C to 20.1001 to 20.2401 with a conspicuous sign or signs bearing the radiation symbol and the words "Caution, Radioactive Material(s)" or "Danger, Radioactive Material(s)."

[Publications: Publications referenced are available from the agency.]

Stat. Auth.: ORS 453.635

333-120-0420
Exceptions to Posting Requirements

(1) A licensee is not required to post caution signs in areas or rooms containing radioactive materials for periods of less than eight hours, if all of the following conditions are met:

(a) The materials are constantly attended during these periods by an individual who takes the precautions necessary to prevent the exposure of individuals to radiation or radioactive materials in excess of the limits established in this division; and

(b) The area or room is subject to the licensee's control.

(2) Rooms or other areas in hospitals that are occupied by patients are not required to be posted with caution signs pursuant to OAR 333-120-0410 provided that:

(a) A patient being treated with a permanent implant or therapeutic radiopharmaceutical could be released from confinement pursuant to OAR 333-116-0260 and 333-116-0265 of this chapter; and

(b) There are personnel in attendance who will take the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the limits established in this division and to operate within the ALARA provisions of the licensee's radiation protection program.

(3) A caution sign is not required to be posted in a room or area containing a sealed source, provided the radiation level at 30 centimeters from the surface of the source container or housing does not exceed 0.05 mSv (0.005 rem) per hour.

333-120-0430
Labeling Containers

(1) The licensee must ensure that each container of licensed material bears a durable, clearly visible label bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL." The label must also provide sufficient information (such as the radionuclide(s) present, an estimate of the quantity of radioactivity, the date for which the activity is estimated, radiation levels, kinds of materials, and mass enrichment) to permit individuals handling or using the containers, or working in the vicinity of the containers, to take precautions to avoid or minimize exposures.

(2) Each licensee must, prior to removal or disposal of empty uncontaminated containers to unrestricted areas, remove or deface the radioactive material label or otherwise clearly indicate that the container no longer contains radioactive materials.

Hist.: HD 15-1994, f. & cert. ef. 5-6-94; HD 24-1994, f. & cert. ef. 9-6-94; PH

(3) Each registrant must ensure that each radiation machine is labeled in a conspicuous manner which cautions individuals that radiation is produced when it is energized.

333-120-0440
Exemptions to Labeling Requirements

A licensee is not required to label:

(1) Containers holding licensed material in quantities less than the quantities listed in 10 CFR, Part 20, Appendix C to 20.1001 to 20.2401; or

(2) Containers holding licensed material in concentrations less than those specified in 10 CFR, Part 20, Table 3 of Appendix B to 20.1001 to 20.2401; or

(3) Containers attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the limits established by this division; or

(4) Containers when they are in transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation (49 CFR); or

12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07

NOTE: Labeling of packages containing radioactive materials is required

by the U.S. Department of Transportation (DOT) if the amount and type of radioactive material exceeds the limits for an excepted quantity or article as defined and limited by DOT regulations 49 CFR 173.403(m) and (w) and 173.421-173.424.

(5) Containers that are accessible only to individuals authorized to handle or use them, or to work in the vicinity of the containers, if the contents are identified to these individuals by a readily available written record (examples of containers of this type are containers in locations such as water-filled canals, storage vaults, or hot cells). The record must be retained as long as the containers are in use for the purpose indicated on the records; or

(6) Installed manufacturing or process equipment, such as reactor components, piping, and tanks.

333-120-0450
Procedures for Receiving and Opening Packages

(1) Each licensee who expects to receive a package containing quantities of radioactive material in excess of a Type A quantity, as defined in 49 CFR 173.435 Table of A1 and A2 Values for Radionuclides, must make arrangements to receive:

(a) The package when the carrier offers it for delivery; or

(b) Notification of the arrival of the package at the carrier's terminal and to take possession of the package expeditiously.

(2) Each licensee must:

(a) Monitor the external surfaces of a labeled package for radioactive contamination unless the package contains only radioactive material in the form of a gas or in special form as defined in OAR 333-118-0020;

(b) Monitor the external surfaces of a labeled package for radiation levels; and

NOTE: Labeled with a Radioactive White I, Yellow II, or Yellow III label as specified in U.S. Department of Transportation regulations, 49 CFR 172.403 and 172.436-440.

(c) Monitor all packages known to contain radioactive material for radioactive contamination and radiation levels if there is evidence of degradation of package integrity, such as packages that are crushed, wet, or damaged.

(3) The licensee must perform the monitoring required by section (2) of this rule as soon as practicable after receipt of the package, but not later than three hours after the package is received at the licensee's facility if it is received during the licensee's normal working hours, or not later than three hours from the beginning of the next working day if it is received after working hours.

(4) The licensee must immediately notify the final delivery carrier and the Authority, by telephone when:

(a) Removable radioactive surface contamination exceeds the limits of OAR 333-118-0150 **Table 3**;

(b) External radiation levels exceed the limits of OAR 333-118-0150(11).

(5) Each licensee must:

(a) Establish, maintain, and retain written procedures for safely opening packages in which radioactive material is received; and

(b) Ensure that the procedures are followed and that due consideration is given to special instructions for the type of package being opened.

(6) Licensees transferring special form sources in licensee-owned or licensee-operated vehicles to and from a work site are exempt from the contamination monitoring requirements of section (2) of this rule, but are not exempt from the survey requirement in section (2) of this rule for measuring radiation levels, which is required to ensure that the source is still properly lodged in its shield.

[ED. NOTE: Tables referenced are available from the agency.]

333-120-0460
Testing for Leakage or Contamination of Sealed Sources

(1) The licensee in possession of any sealed source must assure that:

(a) Each sealed source, except as specified in section (2) of this rule is tested for leakage or contamination and the test results are received before the sealed source is put into use unless the licensee has a certificate from the transferor indicating that the sealed source was tested within six months before transfer to the licensee; and

(b) Each sealed source that is not designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed six months or at alternative intervals approved by the Authority, an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission; and

(c) Each sealed source that is designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed three months or at alternative intervals approved by the Authority, an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission; and

(d) For each sealed source that is required to be tested for leakage or contamination, at any other time there is reason to suspect that the sealed source might have been damaged or might be leaking, the licensee must assure that the sealed source is tested for leakage or contamination before further use; and

(e) Tests for leakage for all sealed sources, except brachytherapy sources manufactured to contain radium-226, must be capable of detecting the presence of 185 Bq (0.005 uCi) of radioactive material on a test sample. Test samples must be taken from the sealed source or from the surfaces of the container in which the sealed source is stored or mounted on which one might expect contamination to accumulate. For a sealed source contained in a device, test samples are obtained when the source is in the "off" position; and

(f) The test for leakage for brachytherapy sources manufactured to contain radium-226 must be capable of detecting an absolute leakage rate of 37 Bq (0.001 uCi) of radon-222 in a 24 hour period when the collection efficiency for radon-222 and its daughters has been determined with respect to collection method, volume and time; and

(g) Tests for contamination from radium-226 daughters must be taken on the interior surface of brachytherapy source storage containers and must be capable of detecting the presence of 185 Bq (0.005 uCi) of a radium daughter which has a half-life greater than four days.

(2) A licensee need not perform test for leakage or contamination on the following sealed sources:

(a) Sealed sources containing only radioactive material with a half-life of less than 30 days; or

(b) Sealed sources containing only radioactive material as a gas; or

(c) Sealed sources containing 3.7 MBq (100 uCi) or less of beta or photon-emitting material or 370 kBq (10 uCi) or less of alpha-emitting material; or

(d) Sealed sources containing only hydrogen-3; or

(e) Seeds of iridium-192 encased in nylon ribbon; or

(f) Sealed sources, except teletherapy and brachytherapy sources, which are stored, not being used, and identified as in storage. The licensee must, however, test each such sealed source for leakage or contamination and receive the test results before any use or transfer unless it has been tested for leakage or contamination within six months before the date of use or transfer.

(3) Tests for leakage or contamination from sealed sources must be performed by persons specifically authorized by the Authority, an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission to perform such services.

(4) Test results must be kept in units of becquerel or microcurie and maintained for inspection by the Authority.

(5) The following must be considered evidence that a sealed source is leaking:

(a) The presence of 185 Bq (0.005 uCi) or more of removable contamination on any test sample; or

(b) Leakage of 37 Bq (0.001 uCi) of radon-222 per 24 hours for brachytherapy sources manufactured to contain radium-226; or

(c) The presence of removable contamination resulting from the decay of 185 Bq (0.005 uCi) or more of radium-226.

(6) The licensee must immediately withdraw a leaking sealed source from use and must take action to prevent the spread of contamination. The leaking sealed source must be repaired or disposed of in accordance with this division.

(7) Reports of test results for leaking or contaminated sealed sources must be made pursuant to OAR 333-120-0720(1)(e).

Waste Disposal

333-120-0500
General Requirements

(1) A licensee must dispose of licensed radioactive material only:

(a) By transfer to an authorized recipient as provided in OAR 333-102-0330; or

(b) By decay in storage; or

(c) By release in effluents within the limits in OAR 333-120-0520; or

(d) As authorized under OAR 333-120-0520, 333-120-0530, 333-120-0540 and 333-120-0545.

(2) A person must be specifically licensed to receive waste containing licensed material from other persons for:

(a) Treatment prior to disposal; or

(b) Treatment or disposal by incineration; or

(c) Decay in storage; or

(d) Disposal at a land disposal facility licensed under 10 CFR, Part 61 (U.S. Nuclear Regulatory Commission) or equivalent Agreement State regulations; or

(e) Storage until transferred to a storage or disposal facility authorized to receive the waste.

(3) As authorized under the provisions of Oregon Revised Statutes.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807
Hist.: HD 15-1994, f. & cert. ef. 5-6-94; PH 12-2006, f. & cert. ef. 6-16-06; PH 4-2007, f. & cert. ef. 3-1-07; PH 20-2010, f. & cert. ef. 9-1-10

333-120-0510
Method for Obtaining Approval of Proposed Disposal Procedures

A licensee or applicant for a license may apply to the Authority for approval of proposed procedures, not otherwise authorized in the rules of this division, to dispose of licensed material generated in the licensee's activities. Each application must include:

(1) A description of the waste containing licensed material to be disposed of, including the physical and chemical properties important to risk evaluation, and the proposed manner and conditions of waste disposal; and

(2) An analysis and evaluation of pertinent information on the nature of the environment; and

(3) The nature and location of other potentially affected licensed and unlicensed facilities; and

(4) Analyses and procedures to ensure that doses are maintained ALARA and within the dose limits in this division.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.605 - 453.807

333-120-0520
Disposal by Release into Sanitary Sewerage

(1) A licensee may discharge licensed material into sanitary sewerage if each of the following conditions is satisfied:

(a) The material is readily soluble (or is readily dispersible biological material) in water; and

(b) The quantity of licensed or other radioactive material that the licensee releases into the sewer in one month divided by the average monthly volume of water released into the sewer by the licensee does not exceed the concentration listed in 10 CFR Part 20 Table 3 of Appendix B to 20.1001 to 20.2401; and

(c) If more than one radionuclide is released, the following conditions also must be satisfied:

(A) The licensee must determine the fraction of the limit in 10 CFR Part 20 Table 3 of Appendix B to 20.1001 to 20.2401 represented by discharges into sanitary sewerage by dividing the actual monthly average concentration of each radionuclide released by the licensee into the sewer by the concentration of that radionuclide listed in 10 CFR Part 20 Table 3 of Appendix B to 20.1001 to 20.2401; and

(B) The sum of the fractions for each radionuclide required by paragraph (1)(c)(A) of this rule does not exceed unity; and

(d) The total quantity of licensed and other radioactive material that the licensee releases into the sanitary sewerage system in a year does not exceed 185 GBq (5 Curies) of hydrogen-3, 37 GBq (1 Curie) of carbon-14, and 37 GBq (1 Curie) of all other radioactive materials combined.

(2) Excreta from individuals undergoing medical diagnosis or therapy with radioactive material is not subject to the limitations contained in section (1) of this rule.

333-120-0540
Disposal of Specific Wastes

(1) A licensee may dispose of the following licensed material as if it were not radioactive:

(a) 1.85 kBq (0.05 uCi), or less, of hydrogen-3 or carbon-14 per gram of medium used for liquid scintillation counting; and

(b) 1.85 kBq (0.05 uCi), or less, of hydrogen-3 or carbon-14 per gram of animal tissue, averaged over the weight of the entire animal.

(2) A licensee may not dispose of tissue under subsection (1)(b) of this rule in a manner that would permit its use either as food for humans or as animal feed.

(3) The licensee must maintain records in accordance with OAR 333-120-0670.

333-120-0545
Disposal of Certain Byproduct Material

(1) Licensed material as defined in subsections (c) and (d) of the definition of byproduct material outlined in OAR 333-120-0015(14) may be disposed of in accordance with 10 CFR Part 61

even though it is not defined as low-level radioactive waste. Therefore, any licensed byproduct material being disposed of at a facility or transferred for ultimate disposal at a facility licensed under 10 CFR Part 61 of this chapter must meet the requirements of OAR 333-120-0550.

(2) A licensee may dispose of byproduct material as defined in sections (c) and (d) of the definition of byproduct material outlined in OAR 333-120-0015(14) at a disposal facility authorized in accordance with any federal or state solid or hazardous waste laws including the Solid Waste Disposal Act as authorized under the Energy Policy Act of 2005.

333-120-0550
Transfer for Disposal and Manifests

(1) The requirements of this rule and 10 CFR Part 20 Appendix G to 20.1001 to 20.2401 are designed to control transfers of low-level radioactive waste intended for disposal at a land disposal facility (as defined in 10 CFR Part 61), establish a manifest tracking system, and supplement existing requirements concerning transfers and recordkeeping for those wastes.

(2) Each shipment of radioactive waste intended for disposal at a licensed land disposal facility must be accompanied by a shipment manifest as specified in 10 CFR Part 20 section I of Appendix G to 20.1001 to 20.2401.

(3) Each shipment manifest must include a certification by the waste generator as specified in 10 CFR Part 20 section II of Appendix G to 20.1001 to 20.2401.

(4) Each person involved in the transfer for disposal and disposal of waste, including the waste generator, waste collector, waste processor, and disposal facility operator, must comply with the requirements specified in 10 CFR Part 20 section III of Appendix G to 20.1001 to 20.2401.

(5) Any licensee shipping byproduct material defined in subsections (c) and (d) of the definition of byproduct material outlined in OAR 333-120-0015(14) intended for ultimate disposal at a land disposal facility licensed under 10 CFR Part 61 must document the information required on the Nuclear Regulatory Commission's Uniform Low-Level Radioactive Waste Manifest and transfer this recorded manifest information to the intended consignee in accordance with 10 CFR Part 20, Appendix G

333-120-0600
General Provisions

(1) Each licensee must use the SI units becquerel, gray, sievert and coulomb per kilogram, or the special units curie, rad, rem, including multiples and subdivisions, and must clearly indicate the units of all quantities on records required by this division.

(2) The licensee must make a clear distinction among the quantities entered on the records required by this division (e.g. total effective dose equivalent, shallow-dose equivalent, lens dose equivalent, deep-dose equivalent, committed effective dose equivalent).

333-120-0610
Records of Radiation Protection Programs

(1) Each licensee must maintain records of the radiation protection program, including:

(a) The provisions of the program; and

(b) Audits and other reviews of program content and implementation.

(2) The licensee must retain the records required by subsection (1)(a) of this rule until the Authority terminates each pertinent license or registration requiring the record. The licensee must retain the records required by subsection (1)(b) of this rule for five years or until inspected by the Authority.

333-120-0620
Records of Surveys and Leak Tests

(1) Each licensee or registrant must maintain records showing the results of surveys, sealed source leak tests, and calibrations required by OAR 333-120-0200, 333-120-0450(2) and 333-120-0460. The licensee or registrant must retain these records in accordance with OAR 333-100-0057.

(2) The licensee or registrant must retain each of the following records until the Authority terminates each pertinent license or registration requiring the record:

(a) Records of the results of surveys to determine the dose from external sources and used, in the absence of or in combination with individual monitoring data, in the assessment of individual dose equivalents. This includes records of survey results to determine the dose from external sources and used, in the absence of or in combination with individual monitoring data, in the assessment of individual dose equivalents required under the standards for protection against radiation in effect prior to January 1, 1994; and

(b) Records of the results of measurements and calculations used to determine individual intakes of radioactive material and used in the assessment for internal dose. This includes records documenting the results of measurements and calculations used to determine individual intakes of radioactive material and used in the assessment of internal dose required under the standards for protection against radiation in effect prior to January 1, 1994; and

(c) Records showing the results of air sampling, surveys, and bioassays required pursuant to OAR 333-120-0320(1)(c)(A) and (B). This includes records documenting the results of air sampling, surveys, and bioassays required under the standards for protection against radiation in effect prior to January 1, 1994; and

(d) Records of the results of measurements and calculations used to evaluate the release of radioactive effluents to the environment. This includes records documenting the results of measurements and calculations used to evaluate the release of radioactive effluents to the environment required under the standards for protection against radiation in effect prior to January 1, 1994.

(3) Records of Tests for Leakage or Contamination of Sealed Sources. Records of tests for leakage or contamination of sealed sources required by OAR 333-120-0460, must be kept in units of becquerels or microcuries and maintained for inspection by the Authority in accordance with 333-100-0057.

333-120-0630
Determination of Prior Occupational Dose

(1) For each individual likely to receive, in a year, an occupational dose requiring monitoring pursuant to OAR 333-120-0210, the licensee or registrant must:

(a) Determine the occupational radiation dose received during the current year; and

(b) Attempt to obtain the records of lifetime cumulative occupational radiation dose.

(2) Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant must determine:

(a) The internal and external doses from all previous planned special exposures; and

(b) All doses in excess of the limits (including doses received during accidents and emergencies) received during the lifetime of the individual.

(3) In complying with the requirements of section (1) or (2) of this rule, a licensee or registrant may:

(a) Accept, as a record of the occupational dose that the individual received during the current year, a written signed statement from the individual, or from the individual's most recent employer for work involving radiation exposure, that discloses the nature and the amount of any occupational dose that the individual may have received during the current year; or

(b) Accept, as the record of lifetime cumulative radiation dose, an up-to-date NRC Form 4, or equivalent, signed by the individual and counter-signed by an appropriate official of the most recent employer for work involving radiation exposure, or the individual's current employer (if the individual is not employed by the licensee or registrant); and

(c) Obtain reports of the individual's dose equivalent(s) from the most recent employer for work involving radiation exposure, or the individual's current employer (if the individual is not employed by the licensee or registrant) by telephone, telegram, electronic media, or letter. The licensee or registrant must request a written verification of the dose data if the authenticity of the transmitted report cannot be established.

(4) The licensee or registrant must record the exposure history, as required by section (1) of this rule, on NRC Form 4, or other clear and legible record, of all the information required on NRC Form 4. The form or record must show each period in which the individual received occupational exposure to radiation or radioactive material and must be signed by the individual who received the exposure. For each period for which the licensee or registrant obtains reports, the licensee or registrant must use the dose shown in the report in preparing NRC Form 4. For any period in which the licensee or registrant does not obtain a report, the licensee or registrant must place a notation on NRC Form 4 indicating the periods of time for which data are not available.

(5) If the licensee or registrant is unable to obtain a complete record of an individual's current and previously accumulated occupational dose, the licensee or registrant must assume:

(a) In establishing administrative controls under OAR 333-120-0100(6) for the current year, that the allowable dose limit for the individual is reduced by 1.25 rem (12.5 mSv) for each quarter for which records were unavailable and the individual was engaged in activities that could have resulted in occupational radiation exposure; and

(b) That the individual is not available for planned special exposures.

(6) The licensee or registrant must retain the records on NRC Form 4 or equivalent until the Authority terminates each pertinent license or registration requiring this record. The licensee or registrant must retain records used in preparing NRC Form 4 in accordance with OAR 333-100-0057.

333-120-0640
Records of Planned Special Exposures

(1) For each use of the provisions of OAR 333-120-0150 for planned special exposures, the licensee must maintain records that describe:

(a) The exceptional circumstances requiring the use of a planned special exposure; and

(b) The name of the management official who authorized the planned special exposure and a copy of the signed authorization; and

(c) What actions were necessary; and

(d) Why the actions were necessary; and

(e) How doses were maintained ALARA; and

(f) What individual and collective doses were expected to result, and the doses actually received in the planned special exposure.

(2) The licensee must retain the records until the Authority terminates each pertinent license or registration requiring these records.

(3) Upon termination of the license or registration, the licensee or registrant must permanently store records on Authority Form Y or equivalent, or must make provision with the Authority for transfer to the Agency.

[ED. NOTE: Forms referenced are available from the agency.]

333-120-0650
Records of Individual Monitoring Results

(1) Recordkeeping Requirement. Each licensee must maintain records of doses received by all individuals for whom monitoring was required pursuant to OAR 333-120-0210 and records of doses received during planned special exposures, accidents, and emergency conditions. These records must include, when applicable:

(a) The deep-dose equivalent to the whole body, lens dose equivalent, shallow-dose equivalent to the skin, and shallow-dose equivalent to the extremities; and

(b) The estimated intake or body burden of radionuclides (OAR 333-120-0110); and

(c) The committed effective dose equivalent assigned to the intake or body burden of radionuclides; and

(d) The specific information used to calculate the committed effective dose equivalent pursuant to OAR 333-120-0130(3); and

(e) The total effective dose equivalent when required by OAR 333-120-0110; and

(f) The total of the deep-dose equivalent and the committed dose to the organ receiving the highest total dose.

NOTE: Assessments of dose equivalent and records made using units in effect before the licensee's adoption of this division need not be changed.

(2) Recordkeeping Frequency: The licensee must make entries of the records specified in section (1) of this rule at least annually.

(3) Recordkeeping Format. The licensee must maintain the records specified in section (1) of this rule using NRC form 5 or equivalent, in accordance with the instructions for NRC's Form 5, or in clear and legible records containing all the information required by NRC's Form 5.

(4) Privacy Protection. The records required under this rule are protected from public disclosure because of their personal privacy nature. These records are protected and if transferred to the Authority, are protected under ORS Chapter 192.

(5) The licensee must maintain the records of dose to an embryo/fetus with the records of dose to the declared pregnant woman, as defined in OAR 333-100-0005. The declaration of pregnancy must also be kept on file, but may be maintained separately from the dose records.

(6) The licensee must retain each required form or record until the Authority authorizes disposition.

NOTE: The following information is required on Form 5, Occupational Exposure Record for a Monitoring Period: Name; identification number and type (Social Security Number (SSN), Passport Number (PPN), Canadian Social Insurance Number (CSI), Work Permit Number (WPN), INDEX Identification Number (IND), or Other (OTH)); sex; date of birth; monitoring period; licensee name; license or registration number; is dose is official record or estimate; if dose is routine or planned special exposure; intake, list radionuclide, class, mode, total intake (Ci); external dose(s), DDE (Deep Dose Equivalent in rems), LDE (Lens Dose Equivalent in rems), SDE(WB) (Shallow Dose Equivalent Whole Body in rems), SED(ME) (Shallow Dose Equivalent Maximum Extremity in rems), CEDE (Committed Effective Dose Equivalent in rems), CDE (Committed Dose Equivalent in rems), TEDE (Total Effective Dose Equivalent in rems) and TODE Total Organ Dose Equivalent in rems).

333-120-0660
Records of Dose to Individual Members of the Public

(1) Each licensee must maintain records sufficient to demonstrate compliance with the dose limit for individual members of the public (OAR 333-120-0180).

(2) The licensee must retain the records required by section (1) of this rule until the Authority terminates each pertinent licensee requiring the record.

NOTE: The following information is required on Form 5, Occupational Exposure Record for a Monitoring Period: Name; identification number and type of number, such as SSN; sex; date of birth; monitoring period; licensee name; license or registration number; if dose is official record or estimate; if dose is routine or planned special exposure; intakes, list radionuclide, class, mode, and total intake (Ci); external dose(s), DDE, LDE, SDE (WB), SDE(ME), CEDE, CDE, TEDE and TODE; signature of monitored individual and date signed; certifying organization and signature.

333-120-0670
Records of Waste Disposal

(1) Each licensee shall maintain records of the disposal of licensed materials made under OAR 333-120-0510, 333-120-0520, 333-120-0530, 333-120-0540, 10 CFR Part 61, and disposal by burial in soil, including burials authorized before January 28, 1981.

(2) The licensee shall maintain the records required by section (1) of this rule until the Authority terminates each pertinent license requiring the record. Requirements for disposition of these records, prior to license termination are located in OAR 333-100-0055, 333-102-0355 and 10 CFR Part 72.80 for licensed activities.

333-120-0680
Records of Testing Entry Control Devices for Very High Radiation Areas

(1) Each licensee must maintain records of tests made under OAR 333-120-0240(1)(i) on entry control devices for very high radiation areas. These records must include the date, time, and results of each such test of function.

(2) The licensee must retain the records required by section (1) of this rule in accordance with OAR 333-100-0057.

333-120-0690
Form of Records

Each record required by this division must be legible throughout the specified retention period. The record may be the original or a reproduced copy or a microform provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, must include all pertinent information, such as stamps, initials, and signatures. The licensee or registrant shall maintain adequate safeguards against tampering with and loss of records.

Reports

333-120-0700
Reports of Theft or Loss of Licensed Material

(1) Telephone reports: Each licensee or registrant must report by telephone to the Authority as follows:

(a) Immediately after its occurrence becomes known to the licensee or registrant, any lost, stolen, or missing licensed or registered device, or licensed material in an aggregate quantity equal to or greater than 1,000 times the quantity specified in 10 CFR Part 20 Appendix C to 20.1001 to 20.2401, under such circumstances that it appears to the licensee or registrant that an exposure could result to persons in unrestricted areas; or

(b) Within 30 days after the occurrence of any lost, stolen, or missing licensed or registered device, or licensed radioactive material, becomes known to the licensee or registrant, all licensed or registered material in a quantity greater than ten times the quantity specified in 10 CFR Part 20 Appendix C to 20.1001 to 20.2401 that is still missing at this time.

(2) Written Reports: Each licensee or registrant required to make a report under section (1) of this rule must make a written report to the Authority, within 30 days after making the telephone report, setting forth the following information:

(a) A description of the device or licensed material involved, including kind, quantity, and chemical and physical form; and

(b) A description of the circumstances under which the loss or theft occurred; and

(c) A statement of disposition, or probable disposition, of the device or licensed material involved; and

(d) Exposures of individuals to radiation, circumstances under which the exposures occurred, and the possible total effective dose equivalent to persons in unrestricted areas; and

(e) Actions that have been taken, or will be taken, to recover the material; and

(f) Procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of a device or licensed material; and

(g) Subsequent to filing the written report, the licensee must also report any additional substantive information on the loss or theft within 30 days after the licensee learns of such information.

(3) The licensee must prepare any report filed with the Authority pursuant to this rule so that names of individuals who may have received exposure to radiation are stated in a separate and detachable part of the report.

333-120-0710
Notification of Incidents

(1) Immediate notification: Notwithstanding any other requirements for notification, each licensee, or registrant, must immediately report any event involving a device or licensed radioactive material possessed by the licensee, or registrant, which may have caused or threatens to cause any of the following conditions:

(a) An individual to receive:

(A) A total effective dose equivalent of 0.25 Sv (25 rem) or more; or

(B) A lens dose equivalent of 0.75 Sv (75 rem) or more; or

(C) A shallow-dose equivalent to the skin or extremities of 2.5 gray (250 rad) or more; or

(b) The release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake five times the occupational annual limit on intake (the provisions of this rule do not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures).

(2) Twenty-four hour notification: Each licensee or registrant must, within 24 hours of discovery of the event, report any event involving loss of control of a device or licensed material possessed by the licensee that may have caused, or threatens to cause, any of the following conditions:

(a) An individual to receive in a period of 24 hours:

(A) A total effective dose equivalent exceeding 0.05 Sv (5 rems); or

(B) A lens dose equivalent exceeding 0.15 Sv (15 rems); or

(C) A shallow-dose equivalent to the skin or extremities exceeding 0.5 Sv (50 rems); or

(b) The release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake in excess of one occupational annual limit on intake (the provisions of this rule do not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures).

(3) The licensee must prepare any report filed with the Authority pursuant to this rule so that names of individuals who have received exposure to radiation or radioactive material are stated in a separate and detachable part of the report.

(4) Reports made by licensees, or registrants, in response to the requirements of subsections (1)(a) and (b) of this rule must be made by telephone and either by telegram, electronic mail, or facsimile to the Authority.

(5) The provisions of this rule do not include doses that result from planned special exposures, that are within the limits for planned special exposures, and that are reported under OAR 333-120-0730.

333-120-0720
Reports of Exposures, Radiation Levels, Leak Tests, and Concentrations of Radioactive Material Exceeding the Limits

(1) Reportable events: In addition to the notification required by OAR 333-120-0710, each licensee must submit a written report within 30 days after learning of any of the following occurrences:

(a) Any incident for which notification is required by OAR 333-120-0710; or

(b) Doses in excess of any of the following:

(A) The occupational dose limits for adults in OAR 333-120-0100; or

(B) The occupational dose limits for a minor in OAR 333-120-0160; or

(C) The limits for an embryo/fetus of a declared pregnant woman (as defined in OAR 333-100-0005) in 333-120-0170; or

(D) The limits for an individual member of the public in OAR 333-120-0180; or

(E) Any applicable limit in the license; or

(F) The ALARA constraints for air emissions established under 333-120-0020(4); or

(c) Levels of radiation or concentrations of radioactive material in:

(A) A restricted area in excess of any applicable limit in the license; or

(B) An unrestricted area in excess of ten times any applicable limit set forth in this division or in the license (whether or not involving exposure of any individual in excess of the limits in OAR 333-120-0180); or

(d) For licensee subject to the provisions of EPA's generally applicable environmental radiation standards in 40 CFR Part 190, levels of radiation or releases of radioactive material in excess of those standards, or of license conditions related to those standards.

(e) Leaking or contaminated sealed sources in excess of limits in OAR 333-120-0460, must be reported within five days to the Authority describing the equipment involved, the test results and the corrective action taken.

(f) Erroneous overexposure dosimetry reports that resulted from non-personnel exposures;

(2) Contents of reports: Each report required by section (1) of this rule must describe the extent of exposure of individuals to radiation and radioactive material, including, as appropriate:

(a) Estimates of each individual's dose; and

(b) The levels of radiation and concentrations of radioactive material involved; and

(c) The cause of the elevated exposures, dose rates, or concentrations; and

(d) Corrective steps taken or planned to ensure against a recurrence, including the schedule for achieving conformance with applicable limits, generally applicable environmental standards, and associated license conditions; and

(e) For each individual exposed: the name, Social Security account number, and date of birth. The report must be prepared so that this information is stated in a separate and detachable part of the report.

NOTE: With respect to the limit for the embryo/fetus (OAR 333-120-0170) the identifiers should be those of the declared pregnant woman, as defined in OAR 333-100-0005.

(3) All licensees who make reports under section (1) this rule must submit the report in writing to the Authority.

(4) The Authority must prohibit the removal or expungement of any permanent dosimetry report submitted to the licensee or registrant. Evaluated erroneous personnel dose record changes to licensee or registrant records must be recorded only on Form 5 and retained by the licensee or registrant.

[ED. NOTE: Forms referenced are available from the agency.]

333-120-0730
Reports of Planned Special Exposures and Individual Monitoring

(1) The licensee must submit a written report to the Authority within 30 days following any planned special exposure conducted in accordance with OAR 333-120-0150 informing the Authority that a planned special exposure was conducted and indicating the date the planned special exposure occurred and the information required by OAR 333-120-0640.

(2) The following licensees must have available for inspection by the Authority a written report documenting results of individual monitoring carried out by the licensee for each individual for whom monitoring was required pursuant to OAR 333-120-0210 during that year.

(a) Licensees authorized to possess or use radioactive material for purposes of radiography pursuant to division 102 and 105 of these rules; or

(b) Licensees who receive radioactive waste from other persons for disposal pursuant to 10 CFR Part 61; or

(c) Licensees who possess or use at any time, for processing or manufacturing for distribution pursuant to division 102 or 116 of these rules, radioactive material in quantities exceeding any one of the following quantities:

Quantity of Radionuclide in Curies:

(A) Cesium-137 — 1;

(B) Cobalt-60 — 1;

(C) Gold-198 — 100;

(D) Iodine-131 — 1;

(E) Iridium-192 — 10;

(F) Krypton-85 — 1,000;

(G) Promethium-147 — 10;

(H) Technetium-99m — 1,000.

The Authority may require as a license condition, or by rule, regulation, or order pursuant to OAR 333-100-0030, reports from licensees who are licensed to use radionuclides not on this list, in quantities sufficient to cause comparable radiation levels.

NOTE: The licensee may include additional data for individuals for whom monitoring was provided but not required. The licensee shall use NRC's Form 5 or electronic media containing all the information required by NRC's Form 5.

[ED. NOTE: Forms referenced are available from the agency.]

Reports to Individuals Exceeding Dose Limits

When a licensee or registrant is required, pursuant to the provisions of OAR 333-120-0720 or 333-120-0730, to report to the Authority any exposure of an identified occupationally exposed individual or an identified member of the public to radiation or radioactive material, the licensee or registrant must also provide the individual a report on his or her exposure data included in the report submitted to the Authority. This report must be transmitted at a time no later than the transmittal to the Authority.

DIVISION 121

LICENSING AND RADIATION SAFETY REQUIREMENTS FOR IRRADIATORS

333-121-0001
Purpose and Scope

(1) This division contains requirements for the issuance of a license authorizing the use of sealed sources containing radioactive material in irradiators used to irradiate objects or materials using gamma radiation. This division also contains radiation safety requirements for operating irradiators. The requirements of this division are in addition to other requirements of these regulations. In particular, the provisions of divisions 100, 102, 120, and 111 of chapter 333 apply to applications and licenses subject to this division. Nothing in this division relieves the licensee from complying with other applicable federal, state and local regulations governing the siting, zoning, land use, and building code requirements for industrial facilities.

(2) The regulations in this division apply to panoramic irradiators that have either dry or wet storage of the radioactive sealed sources and to underwater irradiators in which both the source and the product being irradiated are under water. Irradiators whose dose rates exceed 5 grays (500 rads) per hour at 1 meter from the radioactive sealed sources in air or in water, as applicable for the irradiator type, are covered by this division.

(3) The regulations in this division do not apply to self-contained dry-source-storage irradiators in which both the source and the area subject to irradiation are contained within a device and are not accessible by personnel; medical radiology or teletherapy; radiography for the irradiation of materials for nondestructive testing purposes; gauging; or open-field, agricultural, irradiations.

Stat. Auth.: ORS 453.675

333-121-0010
Definitions

(1) "Annually" means at intervals not to exceed one year.

(2) "Commencement of construction" means taking any action defined as "construction" or any other activity at the site of a facility subject to the regulations in this division that has a reasonable nexus to radiological health and safety.

(3) "Construction" means the installation of foundations, or in-place assembly, erection, fabrication, or testing for any structure, system, or component of a facility or activity subject to the regulations in this division that are related to radiological safety or security. The term "construction" does not include:

(a) Changes for temporary use of the land for public recreational purposes;

(b) Site exploration, including necessary borings to determine foundation conditions or other preconstruction monitoring to establish background information related to the suitability of the site, the environmental impacts of construction or operation, or the protection of environmental values;

(c) Preparation of the site for construction of the facility, including clearing of the site, grading, installation of drainage, erosion and other environmental mitigation measures, and construction of temporary roads and borrow areas;

(d) Erection of fences and other access control measures that are not related to the safe use of, or security of, radiological materials subject to this division;

(e) Excavation;

(f) Erection of support buildings (such as construction equipment storage sheds, warehouse and shop facilities, utilities, concrete mixing plants, docking and unloading facilities, and office buildings) for use in connection with the construction of the facility;

(g) Building of service facilities (such as paved roads, parking lots, railroad spurs, exterior utility and lighting systems, potable water systems, sanitary sewerage treatment facilities, and transmission lines);

(h) Procurement or fabrication of components or portions of the proposed facility occurring at other than the final, in-place location at the facility; or

(i) Taking any other action that has no reasonable nexus to radiological health and safety.

(4) "Doubly encapsulated sealed source" means a sealed source in which the radioactive material is sealed within an inner capsule and that capsule is sealed within an outer capsule.

(5) "Irradiator" means a facility that uses radioactive sealed sources for the irradiation of objects or materials and in which radiation dose rates exceeding 5 grays (500 rads) per hour exist at 1 meter from the sealed radioactive sources in air or water, as applicable for the irradiator type, but does not include irradiators in which both the sealed source and the area subject to irradiation are contained within a device and are not accessible to personnel.

(6) "Irradiator operator" means an individual who has successfully completed the training and testing described in OAR 333-121-0300 and is authorized by the terms of the license to operate the irradiator without a supervisor present.

(7) "Irradiator operator supervisor" means an individual who meets the requirements for an irradiator operator and who physically oversees operation of the irradiator by an individual who is currently receiving training and testing described in OAR 333-121-0300.

(8) "Panoramic dry-source-storage irradiator" means an irradiator in which the irradiations occur in air in areas potentially

accessible to personnel and in which the sources are stored in shields made of solid materials. The term includes beam-type dry-source-storage irradiators in which only a narrow beam of radiation is produced for performing irradiations.

(9) "Panoramic irradiator" means an irradiator in which the irradiations are done in air in areas potentially accessible to personnel. The term includes beam-type irradiators.

(10) "Panoramic wet-source-storage irradiator" means an irradiator in which the irradiations occur in air in areas potentially accessible to personnel and in which the sources are stored under water in a storage pool.

(11) "Pool irradiator" means any irradiator at which the sources are stored or used in a pool of water including panoramic wet-source-storage irradiators and underwater irradiators.

(12) "Product conveyor system" means a system for moving the product to be irradiated to, from, and within the area where irradiation takes place.

(13) "Radiation room" means a shielded room in which irradiations take place. Underwater irradiators do not have radiation rooms.

(14) "Sealed source" means any radioactive material that is used as a source of radiation and is encased in a capsule designed to prevent leakage or escape of the byproduct material.

(15) "Seismic area" means any area where the probability of a horizontal acceleration in rock of more than 0.3 times the acceleration of gravity in 250 years is greater than 10 percent, as designated by the US Geological Survey.

(16) "Underwater irradiator" means an irradiator in which the sources always remain shielded under water and humans do not have access to the sealed sources or the space subject to irradiation without entering the pool.

333-121-0020
Application for a Specific License

(1) Applications for specific licenses shall be filed on a form prescribed by the Authority and satisfy the general requirements specified in OAR 333-102-0200.

(2) The Authority may at any time after the filing of the original application, and before the expiration of the license, require further statements in order to enable the Authority to determine whether the application should be granted or denied or whether a license should be modified or revoked.

(3) Each application shall be signed by the applicant or licensee or a person duly authorized to act for and on his behalf.

(4) An application for a license may include a request for a license authorizing one or more activities.

(5) In the application, the applicant may incorporate by reference information contained in previous applications, statements, or reports filed with the Authority provided such references are clear and specific.

(6) Applications and documents submitted to the Authority may be made available for public inspection except that the Authority may withhold any document or part thereof from public inspection if disclosure of its content is not required in the public interest and would adversely affect the interest of a person concerned.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06; PH 32-2014, f. 12-22-14, cert. ef. 1-1-15

333-121-0030
Specific Licenses for Irradiators

The Authority will approve an application for a specific license for the use of licensed material in an irradiator if the applicant meets the requirements contained in this section.

(1) The applicant must satisfy the general requirements specified in division 102 of these regulations and the requirements contained in this division.

(2) The application must describe the training provided to irradiator operators including:

(a) Classroom training;

(b) On-the-job or simulator training;

(c) Safety reviews;

(d) Means employed by the applicant to test each operator's understanding of the Authority's regulations and licensing requirements and the irradiator operating, safety, and emergency procedures; and

(e) Minimum training and experience of personnel who may provide training.

(3) The application must include an outline of the written operating and emergency procedures listed in OAR 333-121-0310 that describes the radiation safety aspects of the procedures.

(4) The application must describe the organizational structure for managing the irradiator, specifically the radiation safety responsibilities and authorities of the radiation safety officer and those management personnel who have radiation safety responsibilities or authorities. In particular, the application must specify who, within the management structure, has the authority to stop unsafe operations. The application must also describe the training and experience required for the position of radiation safety officer.

(5) The application must include a description of the access control systems required by OAR 333-121-0110 the radiation monitors required by 333-121-0140 the method of detecting leaking sources required by 333-121-0340 including the sensitivity of the method, and a diagram of the facility that shows the locations of all required interlocks and radiation monitors.

(6) If the applicant intends to perform leak testing, the applicant must establish procedures for performing leak testing of dry-source-storage sealed sources and submit a description of these procedures to the Authority. The description must include the:

(a) Methods of collecting the leak test samples;

(b) Qualifications of the individual who collects the samples;

(c) Instruments to be used; and

(d) Methods of analyzing the samples.

(7) If licensee personnel are to load or unload sources, the applicant must describe the qualifications and training of the personnel and the procedures to be used. If the applicant intends to contract for source loading or unloading at its facility, the loading or unloading must be done by a person specifically authorized by the Authority, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State to load or unload irradiator sources.

(8) The applicant must describe the inspection and maintenance checks, including the frequency of the checks required by OAR 333-121-0350.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807

333-121-0040
Start of Construction

The applicant may not begin construction of a new irradiator prior to the submission to the Authority of both an application for a license for the irradiator and any fee required by the applicable state requirement or statute. As used in this division, the term "construction" includes the construction of any portion of the permanent irradiator structure on the site but does not include: engineering and design work, purchase of a site, site surveys or soil testing, site preparation, site excavation, construction of warehouse or auxiliary structures, and other similar tasks. Any activities undertaken prior to the issuance of a license are entirely at the risk of the applicant and have no bearing on the issuance of a license with respect to the requirements of the appropriate state statute, rules, regulations, and orders issued under the appropriate state statute.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0050
Applications for Exemptions

Any application for a license or for amendment of a license authorizing use of a teletherapy-type unit for irradiation of materials

or objects may include proposed alternatives for the requirements of this division. The Authority will approve the proposed alternatives if the applicant provides adequate rationale for the proposed alternatives and demonstrates that they are likely to provide an adequate level of safety for workers and the public.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0060
Request for Written Statements

Each license is issued with the condition that the licensee will, at any time before expiration of the license, upon the Authority's request, submit a written statement to enable the Authority to determine whether the license should be modified, suspended, or revoked.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0100
Performance Criteria for Sealed Sources

(1) Requirements for sealed sources installed after September 1, 2002:

(a) Must have been evaluated in accordance with 10 CFR 32.210 or the equivalent state regulation;

(b) Must be doubly encapsulated;

(c) Must use radioactive material that is as nondispersible as practical and that is as insoluble as practical if the source is used in a wet-source-storage or wet-source-change irradiator;

(d) Must be encapsulated in a material resistant to general corrosion and to localized corrosion, such as 316L stainless steel or other material with equivalent resistance if the sources are for use in irradiator pools; and

(e) In prototype testing of the sealed source, must have been leak tested and found leak-free after each of the tests described in OAR 333-121-0100(2) through 333-121-0100(7) of this rule.

(2) Temperature. The test source must be held at -40°C for 20 minutes, 600°C for one hour, and then be subjected to thermal shock test with a temperature drop from 600°C to 20°C within 15 seconds.

(3) Pressure. The test source must be twice subjected for at least five minutes to an absolute external pressure of 2 million newtons per square meter.

(4) Impact. A 2 kilogram steel weight, 2.5 centimeters in diameter, must be dropped from a height of 1 meter onto the test source.

(5) Vibration. The test source must be subjected three times for ten minutes each to vibrations sweeping from 25 hertz to 500 hertz with a peak amplitude of five times the acceleration of gravity. In addition, each test source must be vibrated for 30 minutes at each resonant frequency found.

(6) Puncture. A 50 gram weight and pin, 0.3 centimeter pin diameter, must be dropped from a height of 1 meter onto the test source.

(7) Bend. If the length of the source is more than 15 times larger than the minimum cross-sectional dimension, the test source must be subjected to a force of 2000 newtons at its center equidistant from two support cylinders, the distance between which is ten times the minimum cross-sectional dimension of the source.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0110
Access Control

(1) Each entrance to a radiation room at a panoramic irradiator must have a door or other physical barrier to prevent inadvertent entry of personnel if the sources are not in the shielded position. Product conveyor systems may serve as barriers as long as they reliably and consistently function as a barrier. It must not be possible to move the sources out of their shielded position if the door or barrier is open. Opening the door or barrier while the sources are exposed must cause the sources to return promptly to the shielded position. The personnel entrance door or barrier must have a lock that is operated by the same key used to move the sources. The control panel lock must be designed so that the key cannot be removed unless the sources have been returned to the shielded position. The doors and barriers must not prevent any individual in the radiation room from leaving.

(2) In addition, each entrance to a radiation room at a panoramic irradiator must have an independent backup access control to detect personnel entry while the sources are exposed. Detection of entry while the sources are exposed must cause the sources to return to their fully shielded position and must also activate a visible and audible alarm to make the individual entering the room aware of the hazard. The alarm must also alert at least one other individual who is on-site of the entry. That individual must be trained on how to respond to the alarm and prepared to promptly render or summon assistance.

(3) A radiation monitor must be provided to detect the presence of high radiation levels in the radiation room of a panoramic irradiator before personnel entry. The monitor must be integrated with personnel access door locks to prevent room access when radiation levels are high. Attempted personnel entry while the monitor measures high radiation levels must activate the alarm described in OAR 333-121-0110(2) of this rule. The monitor may be located in the entrance, normally referred to as the maze, but not in the direct radiation beam.

(4) Before the sources move from their shielded position in a panoramic irradiator, the source control must automatically activate conspicuous visible and audible alarms to alert people in the radiation room that the sources will be moved from their shielded position. The alarms must give individuals enough time to leave the room before the sources leave the shielded position.

(5) Each radiation room at a panoramic irradiator must have a clearly visible and readily accessible control that would allow an individual in the room to make the sources return to their fully shielded position.

(6) Each radiation room of a panoramic irradiator must contain a control that prevents the sources from moving from the shielded position unless the control has been activated and the door or barrier to the radiation room has been closed within a preset time after activation of the control.

(7) Each entrance to the radiation room of a panoramic irradiator and each entrance to the area within the personnel access barrier of an underwater irradiator must have a sign bearing the radiation symbol and the words, "Caution (or danger) radioactive material." Panoramic irradiators must also have a sign stating "Grave danger, very high radiation area," but the sign may be removed, covered, or otherwise made inoperative when the sources are fully shielded.

(8) If the radiation room of a panoramic irradiator has roof plugs or other movable shielding, it must not be possible to operate the irradiator unless the shielding is in its proper location. The requirement may be met by interlocks that prevent operation if shielding is not placed properly or by an operating procedure requiring inspection of shielding before operating.

(9) Underwater irradiators must have a personnel access barrier around the pool which must be locked to prevent access when the irradiator is not attended. Only operators or facility management must have access to keys that operate the personnel access barrier. There must be an intrusion alarm to detect unauthorized entry when the personnel access barrier is locked. Activation of the intrusion alarm must alert an individual who is not necessarily on-site but who is prepared to respond or summon assistance.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0120
Shielding

(1) The radiation dose rate in areas that are normally occupied during operation of a panoramic irradiator may not exceed 0.02

millisievert (2 mrem) per hour at any location 30 centimeters or more from the wall of the room when the sources are exposed. The dose rate must be averaged over an area not to exceed 100 square centimeters having no linear dimension greater than 20 centimeters. Any area where the radiation dose rate exceeds 0.02 millisievert (2 mrem) per hour must be locked, roped off, or posted.

(2) The radiation dose at 30 centimeters over the edge of the pool of a pool irradiator may not exceed 0.02 millisievert (2 mrem) per hour when the sources are in the fully shielded position.

(3) The radiation dose rate at 1 meter from the shield of a dry-source-storage panoramic irradiator when the source is shielded may not exceed 0.02 millisievert (2 mrem) per hour and at 5 centimeters from the shield may not exceed 0.2 millisievert (20 mrem) per hour.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0130
Fire Protection

(1) The radiation room at a panoramic irradiator must have heat and smoke detectors. The detectors must activate an audible alarm. The alarm must be capable of alerting a person who is prepared to summon assistance promptly. The sources must automatically become fully shielded if a fire is detected.

(2) The radiation room at a panoramic irradiator must be equipped with a fire extinguishing system capable of extinguishing a fire without the entry of personnel into the room. The system for the radiation room must have a shut-off valve to control flooding into unrestricted areas.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0140
Radiation Monitors

(1) Irradiators with automatic product conveyor systems must have a radiation monitor with an audible alarm located to detect loose radioactive sources that are carried toward the product exit. If the monitor detects a source, an alarm must sound and product conveyors must stop automatically. The alarm must be capable of alerting an individual in the facility who is prepared to summon assistance. Underwater irradiators in which the product moves within an enclosed stationary tube are exempt from the requirements of this paragraph.

(2) Underwater irradiators that are not in a shielded radiation room must have a radiation monitor over the pool to detect abnormal radiation levels. The monitor must have an audible alarm and a visible indicator at entrances to the personnel access barrier around the pool. The audible alarm may have a manual shut-off. The alarm must be capable of alerting an individual who is prepared to respond promptly.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0150
Control of Source Movement

(1) The mechanism that moves the sources of a panoramic irradiator must require a key to actuate. Actuation of the mechanism must cause an audible signal to indicate that the sources are leaving the shielded position. Only one key may be in use at any time, and only operators or facility management may possess it. The key must be attached to a portable radiation survey meter by a chain or cable. The lock for source control must be designed so that the key may not be removed if the sources are in an unshielded position. The door to the radiation room must require the same key.

(2) The console of a panoramic irradiator must have a source position indicator that indicates when the sources are in the fully shielded position, when they are in transit, and when the sources are exposed.

(3) The control console of a panoramic irradiator must have a control that promptly returns the sources to the shielded position.

(4) Each control for a panoramic irradiator must be clearly marked as to its function.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0160
Irradiator Pools

(1) For licenses initially issued after April 11, 2005, irradiator pools must either:

(a) Have a water-tight stainless steel liner or a liner metallurgically compatible with other components in the pool; or

(b) Be constructed so that there is a low likelihood of substantial leakage and have a surface designed to facilitate decontamination. In either case, the licensee must have a method to safely store the sources during repairs of the pool.

(2) For licenses initially issued after April 11, 2005, irradiator pools must have no outlets more than 0.5 meter below the normal low water level that could allow water to drain out of the pool. Pipes that have intakes more than 0.5 meter below the normal low water level and that could act as siphons must have siphon breakers to prevent the siphoning of pool water.

(3) A means must be provided to replenish water losses from the pool.

(4) A visible indicator must be provided in a clearly observable location to indicate if the pool water level is below the normal low water level or above the normal high water level.

(5) Irradiator pools must be equipped with a purification system designed to be capable of maintaining the water during normal operation at a conductivity of 20 microsiemens per centimeter or less and with a clarity so that the sources can be seen clearly.

(6) A physical barrier, such as a railing or cover, must be used around or over irradiator pools during normal operation to prevent personnel from accidentally falling into the pool. The barrier may be removed during maintenance, inspection, and service operations.

(7) If long-handled tools or poles are used in irradiator pools, the radiation dose rate to the operator at the handling areas of the tools may not exceed 0.02 millisievert (2 mrem) per hour.

333-121-0170
Source Rack Protection

If the product to be irradiated moves on a product conveyor system, the source rack and the mechanism that moves the rack must be protected by a carrier or guides to prevent products and product carriers from hitting or touching the rack or mechanism.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0180
Power Failures

(1) If electrical power at a panoramic irradiator is lost for longer than ten seconds, the sources must automatically return to the shielded position.

(2) The lock on the door of the radiation room of a panoramic irradiator must remain locked in the event of a power failure.

(3) During a power failure, the area of any irradiator where sources are located may be entered only when using an operable and calibrated radiation survey meter.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675

333-121-0190
Design Requirements

Irradiators whose construction begins after September 1, 2002, must meet the design requirements of this rule.

(1) Shielding. For panoramic irradiators, the licensee must design shielding walls to meet generally accepted building code requirements for reinforced concrete and design the walls, wall penetrations, and entranceways to meet the radiation shielding

requirements of OAR 333-121-0120. If the irradiator will use more than 2 x 1017 becquerels (5 million Ci) of activity, the licensee must evaluate the effects of heating of the shielding walls by the irradiator sources.

(2) Foundations. For panoramic irradiators, the licensee must design the foundation, with consideration given to soil characteristics, to ensure it is adequate to support the weight of the facility shield walls.

(3) Pool integrity. For pool irradiators, the licensee must design the pool to assure that it is leak resistant, that it is strong enough to bear the weight of the pool water and shipping casks, that a dropped cask would not fall on sealed sources, that all outlets or pipes meet the requirements of OAR 333-121-0160(2) and that metal components are metallurgically compatible with other components in the pool.

(4) Water handling system. For pool irradiators, the licensee must verify that the design of the water purification system is adequate to meet the requirements of OAR 333-121-0160(5). The system must be designed so that water leaking from the system does not drain to unrestricted areas without being monitored.

(5) Radiation monitors. For all irradiators, the licensee must evaluate the location and sensitivity of the monitor to detect sources carried by the product conveyor system as required by OAR 333-121-0140(1). The licensee must verify that the product conveyor is designed to stop before a source on the product conveyor would cause a radiation overexposure to any person. For pool irradiators, if the licensee uses radiation monitors to detect contamination under OAR 333-121-0340(2), the licensee must verify that the design of radiation monitoring systems to detect pool contamination includes sensitive detectors located close to where contamination is likely to concentrate.

(6) Source rack. For pool irradiators, the licensee must verify that there are no crevices on the source or between the source and source holder that would promote corrosion on a critical area of the source. For panoramic irradiators, the licensee must determine that source rack drops due to loss of power will not damage the source rack and that source rack drops due to failure of cables, or alternate means of support, will not cause loss of integrity of sealed sources. For panoramic irradiators, the licensee must review the design of the mechanism that moves the sources to assure that the likelihood of a stuck source is low and that, if the rack sticks, a means exists to free it with minimal risk to personnel.

(7) Access control. For panoramic irradiators, the licensee must verify from the design and logic diagram that the access control system will meet the requirements of OAR 333-121-0110.

(8) Fire protection. For panoramic irradiators, the licensee must verify that the number, locations, and spacing of the smoke and heat detectors are appropriate to detect fires and that the detectors are protected from mechanical and radiation damage. The licensee must verify that the design of the fire extinguishing system provides the necessary discharge patterns, densities, and flow characteristics for complete coverage of the radiation room and that the system is protected from mechanical and radiation damage.

(9) Source return. For panoramic irradiators, the licensee must verify that the source rack will automatically return to the fully shielded position if power is lost for more than ten seconds.

(10) Seismic. For panoramic irradiators to be built in seismic areas, the licensee must design the reinforced concrete radiation shields to retain their integrity in the event of an earthquake by designing to the seismic requirements of an appropriate source such as the American Concrete Institute Standard ACI 318-89, "Building Code Requirements for Reinforced Concrete," Chapter 21, "Special Provisions for Seismic Design," or local building codes, if current.

(11) Wiring. For panoramic irradiators, the licensee must verify that electrical wiring and electrical equipment in the radiation room are selected to minimize failures due to prolonged exposure to radiation.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807

333-121-0200
Construction Monitoring and Acceptance Testing

The requirements of this section must be met for irradiators whose construction begins after September 1, 2002. The requirements must be met prior to loading sources.

(1) Shielding. For panoramic irradiators, the licensee must monitor the construction of the shielding to verify that its construction meets design specifications and generally accepted building code requirements for reinforced concrete.

(2) Foundations. For panoramic irradiators, the licensee must monitor the construction of the foundations to verify that their construction meets design specifications.

(3) Pool integrity. For pool irradiators, the licensee must verify that the pool meets design specifications and must test the integrity of the pool. The licensee must verify that outlets and pipes meet the requirements of OAR 333-121-0160(2).

(4) Water handling system. For pool irradiators, the licensee must verify that the water purification system, the conductivity meter, and the water level indicators operate properly.

(5) Radiation monitors. For all irradiators, the licensee must verify the proper operation of the monitor to detect sources carried on the product conveyor system and the related alarms and interlocks required by OAR 333-121-0140(1). For pool irradiators, the licensee must verify the proper operation of the radiation monitors and the related alarm if used to meet 333-121-0340(2). For underwater irradiators, the licensee must verify the proper operation of the over-the-pool monitor, alarms, and interlocks required by 333-121-0140(2).

(6) Source rack. For panoramic irradiators, the licensee must test the movement of the source racks for proper operation prior to source loading; testing must include source rack lowering due to simulated loss of power. For all irradiators with product conveyor systems, the licensee must observe and test the operation of the conveyor system to assure that the requirements in OAR 333-121-0170 are met for protection of the source rack and the mechanism that moves the rack; testing must include tests of any limit switches and interlocks used to protect the source rack and mechanism that moves that rack from moving product carriers.

(7) Access control. For panoramic irradiators, the licensee must test the completed access control system to assure that it functions as designed and that all alarms, controls, and interlocks work properly.

(8) Fire protection. For panoramic irradiators, the licensee must test the ability of the heat and smoke detectors to detect a fire, to activate alarms, and to cause the source rack to automatically become fully shielded. The licensee must test the operability of the fire extinguishing system.

(9) Source return. For panoramic irradiators, the licensee must demonstrate that the source racks can be returned to their fully shielded positions without power.

(10) Computer systems. For panoramic irradiators that use a computer system to control the access control system, the licensee must verify that the access control system will operate properly if power is lost and must verify that the computer has security features that prevent an irradiator operator from commanding the computer to override the access control system when the system is required to be operable.

(11) Wiring. For panoramic irradiators, the licensee must verify that the electrical wiring and electrical equipment that were installed meet the design specifications.

333-121-0300
Training

(1) Before an individual is permitted to act as an irradiator operator without a supervisor present, the individual must be instructed in:

(a) The fundamentals of radiation protection applied to irradiators. This must include the differences between external radiation and radioactive contamination, units of radiation dose, dose limits,

why large radiation doses must be avoided, how shielding and access controls prevent large doses, how an irradiator is designed to prevent contamination, the proper use of survey meters and personnel dosimeters, other radiation safety features of an irradiator, and the basic function of the irradiator;

(b) The requirements of division 111 and division 121 of these regulations that are relevant to the irradiator;

(c) The operation of the irradiator;

(d) Those operating and emergency procedures listed in OAR 333-121-0310 that the individual is responsible for performing; and

(e) Case histories of accidents or problems involving irradiators.

(2) Before an individual is permitted to act as an irradiator operator without a supervisor present, the individual must pass a written test on the instruction received consisting primarily of questions based on the licensee's operating and emergency procedures that the individual is responsible for performing and other operations necessary to safely operate the irradiator without supervision.

(3) Before an individual is permitted to act as an irradiator operator without a supervisor present, the individual must have received on-the-job training or simulator training in the use of the irradiator as described in the license application. The individual must also demonstrate the ability to perform those portions of the operating and emergency procedures that he or she is to perform.

(4) The licensee must conduct safety reviews for irradiator operators at least annually. The licensee must give each operator a brief written test on the information. Each safety review must include, to the extent appropriate, each of the following:

(a) Changes in operating and emergency procedures since the last review, if any;

(b) Changes in regulations and license conditions since the last review, if any;

(c) Reports on recent accidents, mistakes, or problems that have occurred at irradiators, if any;

(d) Relevant results of inspections of operator safety performance;

(e) Relevant results of the facility's inspection and maintenance checks; and

(f) A drill to practice an emergency or abnormal event procedure.

(5) The licensee must evaluate the safety performance of each irradiator operator at least annually to ensure that regulations, license conditions, and operating, safety, and emergency procedures are followed. The licensee must discuss the results of the evaluation with the operator and must instruct the operator on how to correct any mistakes or deficiencies observed.

(6) Individuals who will be permitted unescorted access to the radiation room of the irradiator or the area around the pool of an underwater irradiator, but who have not received the training required for operators and the radiation safety officer, must be instructed and tested in any precautions they should take to avoid radiation exposure, any procedures or parts of procedures listed in OAR 333-121-0310 that they are expected to perform or comply with, and their proper response to alarms required in this division. Tests may be oral.

(7) Individuals who must be prepared to respond to alarms required by OAR 333-121-0110(2), 333-121-0130(1), 333-121-0140(1) and 333-121-0340(2) must be trained and tested on how to respond. Each individual must be retested at least annually. Tests may be oral.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0310
Operating and Emergency Procedures

(1) The licensee must have and follow written operating procedures for:

(a) Operation of the irradiator, including entering and leaving the radiation room;

(b) Use of personnel dosimeters;

(c) Surveying the shielding of panoramic irradiators;

(d) Monitoring pool water for contamination while the water is in the pool and before release of pool water to unrestricted areas;

(e) Leak testing of sources;

(f) Inspection and maintenance checks required by OAR 333-121-0350;

(g) Loading, unloading, and repositioning sources, if the operations will be performed by the licensee; and

(h) Inspection of movable shielding required by OAR 333-121-0110(8), if applicable.

(2) The licensee must have and follow emergency or abnormal event procedures, appropriate for the irradiator type, for:

(a) Sources stuck in the unshielded position;

(b) Personnel overexposures;

(c) A radiation alarm from the product exit portal monitor or pool monitor;

(d) Detection of leaking sources, pool contamination, or alarm caused by contamination of pool water;

(e) A low or high water level indicator, an abnormal water loss, or leakage from the source storage pool;

(f) A prolonged loss of electrical power;

(g) A fire alarm or explosion in the radiation room;

(h) An alarm indicating unauthorized entry into the radiation room, area around pool, or another alarmed area;

(i) Natural phenomena, including an earthquake, a tornado, flooding, or other phenomena as appropriate for the geographical location of the facility; and

(j) The jamming of automatic conveyor systems.

(3) The licensee may revise operating and emergency procedures without Authority approval only if all of the following conditions are met:

(a) The revisions do not reduce the safety of the facility;

(b) The revisions are consistent with the outline or summary of procedures submitted with the license application;

(c) The revisions have been reviewed and approved by the radiation safety officer; and

(d) The users or operators are instructed and tested on the revised procedures before they are put into use.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0320
Personnel Monitoring

(1) Irradiator operators must wear a personnel dosimeter that is processed and evaluated by an accredited National Voluntary Laboratory Accreditation Program (NVLAP) processor while operating a panoramic irradiator or while in the area around the pool of an underwater irradiator. The personnel dosimeter processor must be accredited by the National Voluntary Laboratory Accreditation Program for high energy photons in the normal and accident dose ranges, see 333-120-0200(3). Each personnel dosimeter must be assigned to and worn by only one individual. Film badges must be processed at least monthly, and other personnel dosimeters must be processed at least quarterly.

(2) Other individuals who enter the radiation room of a panoramic irradiator must wear a dosimeter, which may be a pocket dosimeter. For groups of visitors, only two people who enter the radiation room are required to wear dosimeters. If pocket dosimeters are used to meet the requirements of the paragraph, a check of their response to radiation must be done at least annually. Acceptable dosimeters must read within ±20% of the true radiation dose.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0330
Radiation Surveys

(1) A radiation survey of the area outside the shielding of the radiation room of a panoramic irradiator must be conducted with the sources in the exposed position before the facility starts to operate. A radiation survey of the area above the pool of pool irradiators

must be conducted after the sources are loaded but before the facility starts to operate. Additional radiation surveys of the shielding must be performed at intervals not to exceed three years and before resuming operation after addition of new sources or any modification to the radiation room shielding or structure that might increase dose rates.

(2) If the radiation levels specified in OAR 333-121-0120 are exceeded, the facility must be modified to comply with the requirements in OAR 333-121-0120.

(3) Portable radiation survey meters must be calibrated at least annually to an accuracy of ±20% for the gamma energy of the sources in use. The calibration must be done at two points on each scale or, for digital instruments, at one point per decade over the range that will be used. Portable radiation survey meters must be of a type that does not saturate and read zero at high radiation dose rates.

(4) Water from the irradiator pool, other potentially contaminated liquids, and sediments from pool vacuuming must be monitored for radioactive contamination before release to unrestricted areas. Radioactive concentrations must not exceed those specified in 10 CFR 20, Table II, Column 2 or Table III of Appendix B, "Annual Limits on Intake (ALIs) and Derived Air Concentrations (DAC) of Radionuclides for Occupational Exposure; Effluent Concentrations; Concentrations for Release to Sanitary Sewerage."

(5) Before releasing resins for unrestricted use, they must be monitored before release in an area with a background level less than 0.5 microsievert (0.05 mrem) per hour. The resins may be released only if the survey does not detect radiation levels above background radiation levels. The survey meter used must be capable of detecting radiation levels of 0.5 microsievert (0.05 mrem) per hour.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0340
Detection of Leaking Sources

(1) Each dry-source-storage sealed source must be tested for leakage at intervals not to exceed six months using a leak test kit or method approved by the Authority, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State. In the absence of a certificate from a transferor that a test has been made within the six months before the transfer, the sealed source may not be used until tested. The test must be capable of detecting the presence of 200 becquerels (0.005 uCi) of radioactive material and must be performed by a person approved by the Authority, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State to perform the test.

(2) For pool irradiators, sources may not be put into the pool unless the licensee tests the sources for leaks or has a certificate from a transferor that leak test has been done within the six months before the transfer. Water from the pool must be checked for contamination each day the irradiator operates. The check may be done either by using a radiation monitor on a pool water circulating system or by analysis of a sample of pool water. If a check for contamination is done by analysis of a sample of pool water, the results of the analysis must be available within 24 hours. If the licensee uses a radiation monitor on a pool water circulating system, the detection of above normal radiation levels must activate an alarm. The alarm set-point must be set as low as practical, but high enough to avoid false alarms. The licensee may reset the alarm set-point to a higher level if necessary to operate the pool water purification system to clear up contamination in the pool if specifically provided for in written emergency procedures.

(3) If a leaking source is detected, the licensee must arrange to remove the leaking source from service and have it decontaminated, repaired, or disposed of by an Authority, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State licensee that is authorized to perform these functions. The licensee must promptly check its personnel, equipment, facilities, and irradiated product for radioactive contamination. No product may be shipped until the product has been checked and found free of contamination. If a product has been shipped that may have been inadvertently contaminated, the licensee must arrange to locate and survey that product for contamination. If any personnel are found to be contaminated, decontamination must be performed promptly. If contaminated equipment, facilities, or products are found, the licensee must arrange to have them decontaminated or disposed of by an Authority, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State licensee that is authorized to perform these functions. If a pool is contaminated, the licensee must arrange to clean the pool until the contamination levels do not exceed the appropriate concentration in Table 2, Column 2, Appendix B of 10 CFR 20. See 333-120-0700 for reporting requirements.

Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0350
Inspection and Maintenance

(1) The licensee must perform inspection and maintenance checks that include, as a minimum, each of the following at the frequency specified in the license or license application:

(a) Operability of each aspect of the access control system required by OAR 333-121-0110.

(b) Functioning of the source position indicator required by OAR 333-121-0150(2).

(c) Operability of the radiation monitor for radioactive contamination in pool water required by OAR 333-121-0340(2) using a radiation check source, if applicable.

(d) Operability of the over-pool radiation monitor at underwater irradiators as required by OAR 333-121-0140(2).

(e) Operability of the product exit monitor required by OAR 333-121-0140(1).

(f) Operability of the emergency source return control required by OAR 333-121-0150(3).

(g) Visual inspection of leak-tightness of systems through which pool water circulates.

(h) Operability of the heat and smoke detectors and extinguisher system required by OAR 333-121-0130, without turning extinguishers on.

(i) Operability of the means of pool water replenishment required by OAR 333-121-0160(3).

(j) Operability of the indicators of high and low pool water levels required by OAR 333-121-0160(4).

(k) Operability of the intrusion alarm required by OAR 333-121-0110(9) if applicable.

(l) Functioning and wear of the system, mechanisms, and cables used to raise and lower sources.

(m) Condition of the barrier to prevent products from hitting the sources or source mechanism as required by OAR 333-121-0170.

(n) Amount of water added to the pool to determine if the pool is leaking.

(o) Electrical wiring on required safety systems for radiation damage.

(p) Pool water conductivity measurements and analysis as required by OAR 333-121-0360(2).

(2) Malfunctions and defects found during inspection and maintenance checks must be repaired within time frames specified in the license or license application.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0360
Pool Water Purity

(1) Pool water purification system must be run sufficiently to maintain the conductivity of the pool water below 20 microsiemens per centimeter under normal circumstances. If pool water conductivity rises above 20 microsiemens per centimeter, the licensee must take prompt actions to lower the pool water conductivity and must take corrective actions to prevent future recurrences.

(2) The licensee must measure the pool water conductivity frequently enough, but no less than weekly, to assure that the conductivity remains below 20 microsiemens per centimeter. Conductivity meters must be calibrated at least annually.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0370
Attendance During Operation

(1) Both an irradiator operator and at least one other individual, who is trained on how to respond and prepared to promptly render or summon assistance if the access control alarm sounds, must be present on site:

(a) Whenever the irradiator is operated using an automatic product conveyor system; and

(b) Whenever the product is moved into or out of the radiation room when the irradiator is operated in a batch mode.

(2) At a panoramic irradiator at which static irradiations with no movement of the product are occurring, a person who has received the training on how to respond to alarms described in OAR 333-121-0300(7) must be on site.

(3) At an underwater irradiator, an irradiator operator must be present at the facility whenever the product is moved into or out of the pool. Individuals who move the product into or out of the pool of an underwater irradiator need not be qualified as irradiator operators; however, they must have received the training described in OAR 333-121-0300(6) and 333-121-0300(7). Static irradiations may be performed without a person present at the facility.

Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 5-2005, f. & cert. ef. 4-11-05; PH 12-2006, f. & cert. ef. 6-16-06

333-121-0380
Entering and Leaving the Radiation Room

(1) Upon first entering the radiation room of a panoramic irradiator after an irradiation, the irradiator operator must use a survey meter to determine that the source has returned to its fully shielded position. The operator must check the functioning of the survey meter with a radiation check source prior to entry.

(2) Before exiting from and locking the door to the radiation room of a panoramic irradiator prior to a planned irradiation, the irradiator operator must:

(a) Visually inspect the entire radiation room to verify that no one else is in it; and

(b) Activate a control in the radiation room that permits the sources to be moved from the shielded position only if the door to the radiation room is locked within a preset time after setting the control.

(3) During a power failure, the area around the pool of an underwater irradiator may not be entered without using an operable and calibrated radiation survey meter unless the over-the-pool monitor required by OAR 333-121-0140(2) is operating with backup power.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807

333-121-0390
Irradiation of Explosive or Flammable Materials

(1) Irradiation of explosive material is prohibited unless the licensee has received prior written authorization from the Authority. Authorization will not be granted unless the licensee can demonstrate that detonation of the explosive would not rupture the sealed sources, injure personnel, damage safety systems, or cause radiation overexposures of personnel.

(2) Irradiation of more than small quantities of flammable material with a flash point below 140˚F is prohibited in panoramic irradiators unless the licensee has received prior written authorization from the Authority. Authorization will not be granted unless the licensee can demonstrate that a fire in the radiation room could be controlled without damage to sealed sources or safety systems and without radiation overexposures of personnel.

Stat. Auth.: ORS 453.675
Stats. Implemented: ORS 453.675
Hist.: PH 5-2005, f. & cert. ef. 4-11-05

333-121-0500
Records and Retention Periods

The licensee must maintain the following records at the irradiator for the periods specified.

(1) A copy of the license, the license conditions, documents incorporated into the license by reference, and amendments thereto until superseded by new documents or until the Authority terminates the license for documents not superseded.

(2) Records of each individual's training, tests, and safety reviews provided to meet the requirements of OAR 333-121-0300(1), 333-121-0300(2), 333-121-0300(3), 333-121-0300(4), 333-121-0300(6), and 333-121-0300(7) until three years after the individual terminates work.

(3) Records of the annual evaluations of the safety performance of irradiator operators required by 333-121-0300(5) for three years after the evaluation.

(4) A copy of the current operating and emergency procedures required by OAR 333-121-0310 until superseded or the Authority terminates the license. Records of the radiation safety officer's review and approval of changes in procedures as required by 333-121-0310(3)(c) retained for three years from the date of the change.

(5) Film badge and other personnel dosimeters results required by OAR 333-121-0320 until the Authority terminates the license.

(6) Records of radiation surveys required by OAR 333-121-0330 for three years from the date of the survey.

(7) Records of radiation survey meter calibrations required by OAR 333-121-0330 and pool water conductivity meter calibrations required by 333-121-0360(2) until three years from the date of calibration.

(8) Records of the results of leak tests required by OAR 333-121-0340(1) and the results of contamination checks required by 333-121-0340(2) for three years from the date of each test.

(9) Records of inspection and maintenance checks required by OAR 333-121-0350 for three years.

(10) Records of major malfunctions, significant defects, operating difficulties or irregularities, and major operating problems that involve required radiation safety equipment for three years after repairs are completed.

(11) Records of the receipt, transfer and disposal, of all licensed sealed sources as required by 333-102-0330 of these rules.

(12) Records on the design checks required by OAR 333-121-0190 and the construction control checks as required by 333-121-0200 until the license is terminated. The records must be signed and dated. The title or qualification of the person signing must be included.

(13) Records related to decommissioning of the irradiator as required by 333-102-0200(6).

333-121-0510
Reports

(1) In addition to the reporting requirements in other parts of these regulations, the licensee must report the following events if not reported under other parts of these regulations:

(a) Source stuck in an unshielded position.

(b) Any fire or explosion in a radiation room.

(c) Damage to the source racks.

(d) Failure of the cable or drive mechanism used to move the source racks.

(e) Inoperability of the access control system.

(f) Detection of radiation source by the product exit monitor.

(g) Detection of radioactive contamination attributable to licensed radioactive material.

(h) Structural damage to the pool liner or walls.

(i) Water loss or leakage from the source storage pool, greater than the irradiator pool design parameters submitted by the licensee or applicant.

(j) Pool water conductivity exceeding 100 microsiemens per centimeter.

(2) The report must include a telephone report within 24 hours as described in 333-120-0710(2), and a written report within 30 days as described in 333-120-0720.

DIVISION 122

RADIATION SAFETY REQUIREMENTS FOR INDUSTRIAL X-RAY MACHINE OPERATIONS

333-122-0001
Purpose

This division prescribes requirements for the industrial use of x-ray machines and radiation safety requirements for persons using industrial x-ray equipment.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0003
Scope

The provisions and requirements of this division are in addition to the general requirements of divisions 100, 101, 111 and 120.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0005
Definitions

As used in this division, the following definitions apply:

(1) "Annual refresher safety training" means a review conducted or provided by the registrant for its employees on radiation safety aspects of industrial X-ray. The review must include, as a minimum, a review of radiation safety aspects of industrial X-ray, any results of internal audits, Authority inspections, new procedures or equipment, new or revised regulations, and accidents or errors that have been observed. The review must also provide opportunities for employees to ask safety questions.

(2) "ANSI" means the American National Standards Institute.

(3) "Cabinet radiography" means industrial radiography conducted in an enclosure or cabinet so shielded that every location on the exterior meets the dose limits for individual members of the public as specified in OAR 333-120-0180.

(4) "Cabinet X-ray system" means an X-ray system with the X-ray tube installed in an enclosure, hereinafter termed a cabinet that is independent of existing architectural structures except the floor. The cabinet X-ray system is intended to contain at least that portion of a material being irradiated, provide radiation attenuation and exclude personnel from its interior during generation of radiation. This definition includes X-ray systems designed primarily for the inspection of carry-on baggage at airline, railroad and bus terminals and in similar facilities, and all X-ray systems designed primarily for the inspection of letters, periodicals and packages in mailrooms. An X-ray tube used within a shielded part of a building, or X-ray equipment that may temporarily or occasionally incorporate portable shielding, is not considered a cabinet X-ray system.

(5) "Certifiable cabinet X-ray system" means an existing uncertified X-ray system that has been modified to meet the certification requirements specified in 21 CFR 1020.40.

(6) "Certified cabinet X-ray system" means an X-ray system that has been certified in accordance with 21 CFR 1010.2 as being manufactured and assembled pursuant to the provisions of 21 CFR 1020.40.

(7) "Hands-on experience" means experience in all of those areas considered to be directly involved in the X-ray process, and includes taking radiographs, calibration of survey instruments, operational and performance testing of survey instruments and devices, film development, posting of radiation areas, set-up of X-ray equipment, and radiation surveys, as applicable. Trainees undergoing the "hands-on experience" must do so under the direct supervision of a qualified industrial X-ray machine operator.

(8) "Industrial X-ray" means a nondestructive examination of the structure of materials using an X-ray machine to make radiographic images.

(9) "Industrial X-ray instructor" means any industrial X-ray operator who has been authorized by the Authority to provide on-the-job training to industrial X-ray trainees in accordance with OAR 333-122-0200.

(10) "Industrial X-ray trainee" means any individual who, under the direct supervision of an industrial X-ray instructor, uses industrial X-ray machines, related handling tools or radiation survey instruments during the course of his instruction.

(11) "Industrial X-ray operations" means all activities performed with an industrial X-ray machine. Activities include using, setting up equipment, and any activity inside restricted area boundaries.

(12) "Industrial X-ray personnel" means any X-ray operator, X-ray instructor or X-ray trainee.

(13) "Permanent X-ray installation" means an enclosed shielded room, cell, or vault in which industrial X-ray is performed.

(14) "Personal supervision" means supervision in which the X-ray operator is physically present at the site where X-ray machines and associated equipment are being used, watching the performance of the X-ray operator's assistant and in such proximity that immediate assistance can be given if required.

(15) "Practical examination" means a demonstration through application of the safety rules and principles in industrial X-ray including use of all procedures and equipment to be used by industrial X-ray personnel.

(16) "Radiation safety officer for industrial X-ray" means an individual with the responsibility for the overall radiation safety program on behalf of the registrant and who meets the requirements of OAR 333-122-0175.

(17) "Shielded room X-ray using X-ray machines" means an enclosed room or vault in which industrial X-ray is performed the interior of which is not occupied during X-ray operations. The room must be so shielded that every location on the exterior meets conditions for an unrestricted area as specified in OAR 333-120-0180, and the only access is through openings that are interlocked so that the X-ray machine will not operate unless all openings are securely closed.

(18) "X-ray Operator" means any individual who handles, adjusts technique factors, activates the exposure switch or button on an industrial X-ray machine and is qualified under OAR 333-122-0200.

(19) "X-ray operator's assistant" means any individual who, under the direct supervision of an industrial X-ray operator, uses radiographic X-ray machines, related handling tools or radiation survey instruments in industrial X-ray.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807

333-122-0050
Exemptions

(1) Uses of certified and certifiable cabinet x-ray systems and x-ray systems designed primarily for the inspection of baggage, etc. are exempt from the requirements of this division except for the following:

(a) For certified and certifiable cabinet x-ray systems, including those designed to allow admittance of individuals:

(A) No registrant must permit any individual to operate a cabinet x-ray system until the individual has received a copy of and instruction in the operating procedures for the unit. Records that demonstrate compliance with this subparagraph must be maintained for Agency inspection until disposal is authorized by the Authority.

(B) Tests for proper operation of interlocks must be conducted and recorded:

(i) Every six months for those systems that are designed to allow the admittance of individuals; or

(ii) Annually for those systems that are not designed to allow the admittance of individuals.

(C) Records of these tests must be maintained for Authority inspection until disposal is authorized by the Authority.

(D) The registrant must perform an evaluation of the radiation dose limits to determine compliance with 333-120-0180, 333-120-0190 and 21 CFR 1020.40, Cabinet X-Ray Systems (39 Federal Register 12986, April 10, 1974), at intervals not to exceed one year. Records of these evaluations must be maintained for Authority inspection for two years after the evaluation.

(b) Certified cabinet x-ray systems must be maintained in compliance with 21 CFR 1020.40, Cabinet X-Ray Systems (39) Federal Register 12986, April 10, 1974), and no modification must be made to the system unless prior Authority approval has been granted.

(2) Industrial uses of hand-held light intensified imaging devices are exempt from the requirements of this division if the dose rate 18 inches from any area surrounding the source of radiation does not exceed two millirem per hour. Devices that exceed this limit must meet the applicable requirements of this division and the licensing or registration requirements of division 333-101.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0075
Registration Requirements for Industrial Radiographic X-Ray Machine Operations

The Authority will approve an application for a registration for use of radiation machines if the applicant meets the following requirements:

(1) The applicant satisfies the general requirements specified in 333-101-0005 for radiation machine facilities, and any special requirements contained in this division;

(2) The applicant submits an adequate program for training x-ray equipment operators that meets the requirements of 333-122-0200(6) of these rules;

(3) The applicant provides documentation indicating that all industrial x-ray operators have completed the training and hands-on experience required in 333-122-0200(1) of these rules. The training must include all of the subjects in 333-122-0200(6) of these rules;

(4) The applicant provides documentation verifying x-ray equipment operators are currently certified in industrial x-ray by a certifying entity;

(5) The applicant submits written operating and emergency procedures as described in 333-122-0225 of these rules;

(6) The applicant submits a description of a program for inspections of the job performance of each x-ray operator and x-ray operator's assistant at intervals not to exceed six months as described in 333-122-0200(4)(a) of these rules;

(7) The applicant submits a description of the applicant's overall organizational structure as it applies to the radiation safety responsibilities in industrial x-ray, including specified delegation of authority and responsibility;

(8) The applicant submits the qualifications of the individual(s) designated as the radiation safety officer as described in 333-122-0175 of these rules;

(9) If the applicant intends to perform calibrations of survey instruments they must describe methods to be used and the experience of the person(s) who will perform the calibrations. All calibrations must be performed according to the procedures described and at the intervals prescribed in 333-122-0100 of these rules;

(10) The applicant identifies and describes the location(s) of all permanent x-ray installations;

(11) The applicant identifies the location(s) where all records required by this and other divisions of chapter 333 will be maintained; and

(12) A registration will be issued if 333-122-0075(1) through (11) of these rules are met.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0100
Radiation Survey Instruments

(1) The registrant must keep sufficient calibrated and operable radiation survey instruments at each location where industrial x-ray machines are present to make the radiation surveys required by this division and by division 120. Instrumentation required by this rule must be capable of measuring a range from 0.02 milliseiverts (2 mrem) per hour through 0.01 sievert (1 rem) per hour.

(2) The registrant must have each radiation survey instrument required under section (1) of this rule calibrated:

(a) At energies appropriate for use; and

(b) At intervals not to exceed one year or after instrument servicing, except for battery changes; and

(c) For linear scale instruments, at two points located approximately one-third and two-thirds of full-scale on each scale; and for logarithmic scale instruments, at mid-range of each decade, and at two points of at least one decade; and for digital instruments, at 3 points between 0.02 and 10 milliseiverts (2 and 1000 mrem) per hour; and

(d) So that an accuracy within plus or minus 20 percent of the true radiation dose rate can be demonstrated at each point checked.

(3) The registrant must maintain records of the results of the instrument calibrations in accordance with 333-122-0375 of these rules.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0125
Inspection and Maintenance of Industrial X-ray Machines, Associated Equipment, and Survey Instruments

(1) The registrant must perform visual and operability checks on survey meters, radiation machines and associated equipment before each day's use, or work shift, to ensure that the equipment is in good working condition

(2) Survey instrument operability must be performed using check sources or other appropriate means.

(3) If equipment problems are found, the equipment must be removed from service until repaired.

(4) Each registrant must have written procedures for and perform inspection and routine maintenance of industrial x-ray machines, associated equipment, and survey instruments at intervals not to exceed three months or before the first use thereafter to ensure the proper functioning of components important to safety. If equipment problems are found, the equipment must be removed from service until repaired.

(5) Records of equipment problems and of any maintenance performed under this rule must be made in accordance with 333-122-0425.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0150
Permanent Radiographic Installations

(1) Each entrance that is used for personnel access to the high radiation area in a permanent radiographic installation must have either:

(a) An entrance control of the type described in OAR 333-120-0220 that causes the radiation level upon entry into the area to be reduced; and or

(b) Both conspicuous visible and audible warning signals to warn of the presence of radiation. The visible signal must be actuated by radiation whenever the machine is energized. The audible signal must be actuated when an attempt is made to enter the installation while the machine is energized.

(2) The alarm system must be tested for proper operation with an x-ray machine each day before the installation is used for industrial x-ray operations. The test must include a check of both the visible and audible signals. Entrance control devices that reduce the radiation level upon entry as designated in 333-122-0125(1)(a) of these rules must be tested monthly. If an entrance control device or an alarm is operating improperly, it must be immediately labeled as defective and repaired within seven calendar days. The x-ray machine may continue to be used during this seven-day period, provided the registrant implements the continuous surveillance requirements of 333-122-0300 of these rules and uses an alarming rate-meter. Test records for entrance controls and audible and visual alarms must be maintained in accordance with 333-122-0450 of these rules.

(3) Industrial x-ray machines must be physically secured to prevent tampering by unauthorized personnel.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0175
Radiation Safety Officer

The radiation safety officer of an industrial x-ray facility must ensure that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the registrant's program.

(1) Minimum qualifications, training, and experience for radiation safety officers for industrial x-ray. A radiation safety officer must complete:

(a) The training and testing requirements of 333-122-0200(1) of these rules;

(b) 160 hours of hands-on experience as a qualified x-ray operator in industrial x-ray operations; and

(c) A minimum of eight hours of formal training in the establishment and maintenance of a radiation protection program.

(2) The Authority will consider alternative qualifications, training and experience for individuals who want to be a radiation safety officer in the industrial x-ray setting. However, the training and experience must be related to the field of ionizing radiation, and the establishment and maintenance of a radiation safety program.

(3) The specific duties and authorities of the radiation safety officer must include:

(a) Establishing and overseeing all operating, emergency, and ALARA procedures as required by division 333-120 and reviewing them regularly to ensure that they conform to Authority rules and to the registration conditions;

(b) Overseeing and approving the training program for industrial x-ray personnel to ensure that appropriate and effective radiation protection practices are taught;

(c) Ensuring that required radiation surveys are performed and documented in accordance with the rules, including any corrective measures when levels of radiation exceed established limits;

(d) Ensuring that personnel monitoring devices are calibrated, if applicable, and used properly and that records are kept of the monitoring results and that timely notifications are made as required by division 333-120; and

(e) Ensuring that operations are conducted safely and for implementing corrective actions including terminating operations.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0200
Training

(1) The registrant may not permit any individual to act as an industrial x-ray machine operator until the individual has received at least 40 hours of training in the subjects outlined in (6) of this rule, in addition to on the job training consisting of hands-on experience under the supervision of a qualified industrial x-ray machine operator. The on the job training must include a minimum of one month (160 hours) of active participation in the performance of industrial x-ray utilizing x-ray machines.

(2) The registrant may not permit any individual to act as an industrial x-ray machine operator until the individual:

(a) Has received copies of and instruction in the requirements described in the rules contained in this division, and applicable sections of divisions 333-120 and 333-111, in the registration under which the individual will perform industrial radiation machine operation, registrant's operating and emergency procedures;

(b) Has demonstrated an understanding of items in (2)(a) of this rule by successful completion of a written or oral examination;

(c) Has received training in the use of the registrant's radiation machines, associated equipment, and in the use of radiation survey instruments; and

(d) Has demonstrated understanding of the use of the equipment described in (2)(c) of this rule by successful completion of a practical examination.

(3) The registrant must provide annual refresher safety training, as defined in 333-122-0005 of these rules, for each radiation machine operator at intervals not to exceed 12 months.

(4) Except as provided in this rule, the radiation safety officer or designee must conduct an inspection program of the job performance of each industrial x-ray machine operator to ensure that the Authority's rules, registration requirements, and operating and emergency procedures are followed. The inspection program must:

(a) Include observation of the performance of each x-ray machine operator during an actual industrial radiographic x-ray machine operation, at intervals not to exceed six months.

(b) Provide that, if an industrial x-ray machine operator has not participated in an industrial x-ray machine operation for more than six months since the last inspection, the individual must demonstrate knowledge of the training requirements of this rule by a practical examination before these individuals can next participate in a radiation machine operation.

(c) The Authority may consider an alternate individual to conduct the inspection program and observation of the x-ray operator as required in (4)(a) and (b) of this rule, in those situations where the radiation machine operator is also the radiation safety officer.

(d) In those operations where a single individual serves as both x-ray operator and radiation safety officer, and performs all industrial x-ray machine operations, an inspection program is not required.

(5) The registrant must maintain training records including:

(a) Written, oral and practical examinations;

(b) Refresher safety training; and

(c) Inspections of job performance in accordance with 333-122-0475 of these rules.

(6) The training required in (1) of this rule must include the following subjects:

(a) Fundamentals of radiation safety including:

(A) Characteristics of x-radiation;

(B) Units of radiation dose;

(C) Hazards of exposure to radiation; and

(D) Methods of controlling radiation dose (time, distance, and shielding); and

(b) Radiation detection instruments including:

(A) Use, operation, calibration, and limitations of radiation survey instruments;

(B) Survey techniques; and

(C) Use of personnel monitoring equipment; and

(c) Equipment to be used including:

(A) Operation and control of radiation machines; and

(B) Inspection and maintenance of equipment; and

(d) The requirements of pertinent state and federal rules.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0225
Operating and Emergency Procedures

(1) Operating and emergency procedures must include, as a minimum, instructions in the following:

(a) Appropriate use of radiation machines so that no person is likely to be exposed to radiation doses in excess of the limits established in division 120 of these rules;

(b) Methods and occasions for conducting radiation surveys;

(c) Methods for posting and controlling access to radiation areas;

(d) Personnel monitoring and the use of personnel monitoring equipment;

(e) The inspection, maintenance, and operability checks of radiation machines, survey instruments;

(f) Steps that must be taken immediately by x-ray personnel in the event a pocket dosimeter is found to be off-scale;

(g) The procedure(s) for identifying and reporting defects and noncompliance, as required by 333-122-0425 of these rules;

(h) The procedure for notifying proper persons in the event of an accident or incident; and

(i) Maintenance of records.

(2) The registrant must maintain copies of current operating and emergency procedures in accordance with 333-122-0500 and 333-122-0575 of these rules.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0250
Personnel Monitoring

(1) The registrant may not permit any individual to act as a x-ray operator unless, at all times during radiographic operations, each x-ray operator wears, on the trunk of the body, a combination of direct reading dosimeter, and either a film badge or a TLD or other National Voluntary Laboratory Accreditation Program (NVLAP) approved technologies. X-ray operators who only operate cabinet x-ray machines are exempt from the requirement to wear a direct reading dosimeter.

(a) Pocket dosimeters must have a range from zero to 2 milliseiverts (200 mrem) and must be recharged at the start of each shift. Electronic personal dosimeters may only be used in place of ion-chamber pocket dosimeters.

(b) Each film badge and TLD must be assigned to and worn by only one individual.

(c) Film badges and TLD's must be exchanged at periods not to exceed quarterly.

(d) After replacement, each film badge or TLD must be returned to the supplier for processing within 14 calendar days of the end of the monitoring period, or as soon as practicable. In circumstances that make it impossible to return each film badge or TLD in 14 calendar days, such circumstances must be documented and available for review by the Authority.

(2) Direct reading dosimeters such as pocket dosimeters or electronic personal dosimeters, must be read and the exposures recorded at the beginning and end of each shift, and records must be maintained in accordance with 333-122-0525 of these rules.

(3) Pocket dosimeters, or electronic personal dosimeters, must be checked at periods not to exceed 12 months for correct response to radiation, and records must be maintained in accordance with 333-122-0525 of these rules. Acceptable dosimeters must read within plus or minus 20 percent of the true radiation exposure.

(4) If an individual's pocket dosimeter is found to be off-scale, or the electronic personal dosimeter reads greater than 2 milliseiverts (200 mrem), the individual's film badge or TLD must be sent for processing within 24 hours. In addition, the individual may not resume work associated with the use of sources of radiation until a determination of the individual's radiation exposure has been made. This determination must be made by the radiation safety officer or the radiation safety officer's designee. The results of this determination must be included in the records maintained in accordance with 333-122-0525 of these rules.

(5) If a film badge or TLD is lost or damaged, the worker must cease work immediately until a replacement film badge or TLD is provided and the exposure is calculated for the period from issuance to loss or damage of the film badge or TLD. The results of the calculated exposure and the period for which the film badge or TLD was lost or damaged must be included in the records maintained in accordance with 333-122-0525 of these rules.

(6) Reports received from the film badge or TLD processor must be retained in accordance with 333-122-0525 of these rules.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0275
Radiation Surveys

The licensee or registrant must conduct all surveys with a calibrated and operable radiation survey instrument that meets the requirements of 333-122-0100 of these rules.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0300
Surveillance

During each radiographic operation, the radiographer must ensure continuous direct visual surveillance of the operation to protect against unauthorized entry into a radiation area or a high radiation area, as defined in division 333-100, except at permanent radiographic installations where all entryways are locked and the requirements of 333-122-0150 of these rules are met.

Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0400
Utilization Logs

(1) Each registrant must maintain utilization logs showing for each radiation machine the following information:

(a) A description, including the make, model, and serial number of the radiation machine;

(b) The identity and signature of the radiation machine operator; and

(c) For permanent radiographic installations, the dates each radiation machine is energized.

(2) The registrant must retain the utilization logs for three years.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0425
Records of Inspection and Maintenance of Radiation Machines, Associated Equipment, and Survey Instruments

(1) Each registrant must maintain records, specified in 333-122-0125 of these rules, of equipment problems found in daily

checks and quarterly inspections of radiation machines, associated equipment, and survey instruments; and retain each record for three years after it is made.

(2) The record must include the date of check or inspection, name of inspector, equipment involved, any problems found, and what repair and/or maintenance, if any, was performed.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0450
Records of Alarm System and Entrance Control Checks at Permanent Radiographic Installations

Each registrant must maintain records of alarm system and entrance control device tests required by 333-122-0150 of these rules and retain each record for three years after it is made.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0475
Records of Training and Certification

Each registrant must maintain the following records for three years after the individual terminates employment:

(1) Records of training of each x-ray machine operator. The record must include copies of written tests, dates of oral and practical examinations, the names of individuals conducting and receiving the oral and practical examinations, and a list of items tested and the results of the oral and practical examinations; and

(2) Records of annual refresher safety training and semi-annual inspections of job performance for each x-ray machine operator. The records must list the topics discussed during the refresher safety training, the dates the annual refresher safety training was conducted, and names of the instructors and attendees. For inspections of job performance, the records must also include a list showing the items checked and any non-compliance observed by the radiation safety officer or designee.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0500
Copies of Operating and Emergency Procedures

Each registrant must maintain a copy of current operating and emergency procedures until the Authority terminates the registration.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0525
Records of Personnel Monitoring

Each registrant must maintain the following exposure records specified in 333-122-0250 of these rules:

(1) Direct reading dosimeter readings and yearly operability checks required by 333-122-0250(2) and 0250(3) of these rules for three years after the record is made;

(2) Reports received from the film badge or TLD processor until the Authority terminates the license or registration; and

(3) Records of estimates of exposures because of off-scale personal direct reading dosimeters, or lost or damaged film badges or TLD's, until the Authority terminates the license or registration.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0550
Form of Records

Each record required by this division must be legible throughout the specified retention period. The record may be the original, a reproduced copy, or a microform if the copy or microform is authenticated by authorized personnel and that the microform is capable of reproducing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, must include all pertinent information, such as stamps, initials, and signatures. The licensee or registrant must maintain adequate safeguards against tampering with and loss of records.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0575
Location of Documents and Records

Each registrant must also maintain current copies of the following documents and records sufficient to demonstrate compliance at each facility:

(1) A current radiation machine registration certificate;

(2) A copy of divisions 100, 101, 111 and 120 of this chapter;

(3) Records of equipment problems identified in daily checks of equipment as required by 333-122-0125 of these rules;

(4) Records of alarm system and entrance control checks required by 333-122-0450 of these rules, if applicable;

(5) Records of dosimeter readings as required by 333-122-0525 of these rules;

(6) Operating and emergency procedures as required by 333-122-0225 of these rules;

(7) Evidence of the latest calibration of the radiation survey instruments in use at the site, as required by 333-122-0100 of these rules;

(8) Evidence of the latest operability checks of dosimeters as required by 333-122-0525 of these rules; and

(9) Survey records as required by 333-122-0275 of these rules for the period of operation at the site.

Stat. Auth.: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 12-2006, f. & cert. ef. 6-16-06

333-122-0600
Notifications

(1) In addition to the reporting requirements specified in 10 CFR 30.50 and in division 120 of these rules, each registrant must provide a written report to the Authority within 30 days of the occurrence of any of the following incidents involving x-ray equipment:

(a) Failure of any component, which is critical to safe operation of the x-ray machine, to properly perform its intended function; and/or

(b) An indicator on an x-ray machine fails to show that radiation is being produced, an exposure switch fails to terminate production of radiation when turned to the off position, or a safety interlock fails to terminate x-ray production.

(2) The registrant must include the following information in each report submitted under this rule and in each report of overexposure submitted under this division which involves failure of safety components of x-ray machines:

(a) Description of the equipment problem;

(b) Cause of each incident, if known;

(c) Name of the manufacturer and model number of equipment involved in the incident;

(d) Place, date, and time of the incident;

(e) Actions taken to establish normal operations;

(f) Corrective actions taken or planned to prevent recurrence; and

(g) Names and qualifications of personnel involved in the incident.

DIVISION 123

THERAPEUTIC RADIATION MACHINES

333-123-0001
Purpose and Scope

This Division establishes requirements for registrants of therapeutic radiation machines. Nothing in this Division relieves the registrant from complying with other applicable federal, state and local regulations.

Stat. Auth: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807
Hist.: PH 23-2006, f. & cert. ef. 10-19-06

333-123-0005
Definitions

(1) "Absorbed dose (D)" means the mean energy imparted by ionizing radiation to matter. Absorbed dose is determined as the quotient of DE by DM, where DE is the mean energy imparted by ionizing radiation to matter of mass DM. The SI unit of absorbed dose is joule/kg and the special name of the unit of absorbed dose is the gray (Gy). The previously used special unit of absorbed dose (rad) is being replaced by the gray.

(2) "Absorbed dose rate" means absorbed dose per unit time, for machines with timers, or dose monitor unit per unit time for linear accelerators.

(3) "Accessible surface" means surface of equipment or of an equipment part that can be easily or accidentally touched by persons without the use of a tool.

(4) "Added filtration" means any filtration which is in addition to the inherent filtration that is in the primary beam.

(5) "Air kerma (K)" means the kinetic energy released in air by ionizing radiation. Kerma is determined as the quotient of DE/DM, where DE is the sum of the initial kinetic energies of all the charged ionizing particles liberated by uncharged ionizing particles in air of mass DM. The SI unit of air kerma is joule/kg.

(6) "Barrier" has the same meaning as "protective barrier".

(7) "Beam axis" means the axis of rotation of the beam-limiting device.

(8) "Beam-limiting device" means a field defining collimator, integral to the therapeutic radiation machine, which provides a means to restrict the dimensions of the useful beam.

(9) "Beam monitoring system" means the system designed and installed in the radiation head to detect and appropriately measure the radiation present in the useful radiation beam.

(10) "Beam scattering foil" means a thin piece of material (usually metallic) placed in the beam to scatter a beam of electrons in order to provide a more uniform electron distribution in the useful beam.

(11) "Bent beam linear accelerator" means a linear accelerator geometry in which the accelerated electron beam must change direction by passing through a bending magnet.

(12) "Changeable filters" means any filter, exclusive of inherent filtration, that can be removed from the useful beam through any electronic, mechanical, or physical process.

(13) "Contact therapy system" means a therapeutic radiation machine with a short target to skin distance (TSD), usually less than 5 cm.

(14) "Conventional Simulator" means any X-ray system designed to reproduce the geometric conditions of the radiation therapy equipment.

(15) "CT Simulator" means a computed tomography (CT) unit used in conjunction with relevant software which recreates the treatment machine, and that allows import, manipulation, display and storage of images from CT and other imaging modalities.

(16) "Detector" has the same meaning as "radiation detector".

(17) "Dose monitor unit (DMU)" means a unit response from the beam monitoring system from which the absorbed dose can be calculated.

(18) "Electronic brachytherapy" means a method of radiation therapy where an electrically generated source of ionizing radiation is placed in or near the tumor or target tissue to deliver therapeutic radiation dosage.

(19) "Electronic brachytherapy device" means the system used to produce and deliver therapeutic radiation including the X-ray tube, the control mechanism, the cooling system, and the power source.

(20) "Electronic brachytherapy source" means the X-ray tube component used in an electronic brachytherapy device.

(21) "External beam radiation therapy" means therapeutic irradiation in which the source of radiation is at a specified distance from the body.

(22) "Field-flattening filter" means a filter used to homogenize the absorbed dose rate over the radiation field.

(23) "Filter" means material placed in the useful beam to change beam quality in therapeutic radiation machines subject to OAR 333-123-0025(2) and (3).

(24) "Gantry" means that part of a radiation therapy system supporting and allowing movements of the radiation head about a center of rotation.

(25) "Gray (Gy)" means the SI unit of absorbed dose, kerma, and specific energy imparted equal to 1 joule/kg. The previous unit of absorbed dose (rad) is being replaced by the gray. (1 Gy = 100 rad; 1 cGy = 1 rad).

(26) "Half-value layer (HVL)" means the thickness of a specified material which attenuates incident ionizing radiation to an extent such that the air kerma rate, exposure rate or absorbed dose rate is reduced to one-half of the value measured without the material at the same point.

(27) "Intensity Modulated Radiation Therapy (IMRT)" means radiation therapy that uses non-uniform radiation beam intensities, which have been determined by various computer-based optimization techniques.

(28) "Interlock" means a device preventing the start or continued operation of equipment unless certain predetermined conditions prevail.

(29) "Interruption of irradiation" means the stopping of irradiation with the possibility of continuing irradiation without resetting of operating conditions at the control panel.

(30) "Irradiation" means the exposure of a living tissue or matter to ionizing radiation.

(31) "Isocenter" means the center of the sphere through which the useful beam axis passes while the gantry, collimator and couch move through the full range of motions.

(32) "Kilovolt (kV) (kilo electron volt (keV))" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one thousand volts in a vacuum.

Note: Current convention is to use kV for photons and keV for electrons.

(33) "Lead equivalent" means the thickness of the material in question affording the same attenuation, under specified conditions, as lead.

(34) "Leakage radiation" means radiation emanating from the radiation therapy system except for the useful beam.

(35) "Light field" means the area illuminated by light, simulating the radiation field.

(36) "mA" means milliamperes.

(37) "Medical Treatment Event" means an event that meets the criteria in 333-123-0020(1).

(38) "Megavolt (MV) (mega electron volt (MeV))" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one million volts in a vacuum.

Note: Current convention is to use MV for photons and MeV for electrons.

(39) "Monitor unit (MU)" has the same meaning as "dose monitor unit".

(40) "Moving beam radiation therapy" means radiation therapy with any planned displacement of radiation field or patient relative to each other, or with any planned change of absorbed dose distribution. It includes, but is not limited to arc, conformal, intensity modulation and rotational therapy.

(41) "Nominal treatment distance" means:

(a) For electron irradiation, the distance from the scattering foil, virtual source, or exit port of the electron beam to the entrance surface of the irradiated object along the central axis of the useful beam.

(b) For X-ray irradiation, the distance from the virtual source or target to isocenter distance along the central axis of the useful beam. For non-isocentric equipment, this distance must be that specified by the manufacturer.

(42) "Patient" means an individual subjected to machine produced external beam radiation for the purposes of medical therapy.

(43) "Peak tube potential" means the maximum value of the potential difference across the X-ray tube during an exposure.

(44) "Periodic quality assurance check" means a procedure, which is performed at regular intervals to ensure that previously determined machine characteristics continue to be valid.

(45) "Phantom" means an object responding in essentially the same manner as tissue, with respect to absorption or scattering of the incident ionizing radiation in question.

(46) "Practical range of electrons" corresponds to classical electron range where the only remaining contribution to dose is from Bremsstrahlung X-rays.

(47) "Prescribed dose" means the total dose and dose per fraction as documented in the physician's written directive. The prescribed dose is an estimation from measured data from a specified therapeutic machine using assumptions that are clinically acceptable for that treatment technique and historically consistent with the clinical calculations previously used for patients treated with the same clinical technique.

(48) "Primary dose monitoring system" means a system which can monitor the useful beam during irradiation and which can terminate irradiation when a pre-selected number of dose monitor units have been delivered.

(49) "Primary protective barrier" has the meaning given that term in section (50) of this rule, "protective barrier".

(50) "Protective barrier" means a barrier of radiation absorbing material(s) used to reduce radiation exposure. The types of protective barriers are as follows:

(a) Primary protective barrier means the material, excluding filters, placed in the useful beam.

(b) Secondary protective barrier means the material, which attenuates stray radiation.

(51) "Qualified Expert" means an individual qualified in accordance with OAR 333-100-0005.

(52) "Qualified Medical Physicist" means an individual qualified in accordance with OAR 333-123-0015(2)(b).

(53) "Qualified Radiation Therapy Physician" means an individual qualified in accordance with OAR 333-123-0015(1).

(54) "Radiation detector" means a device, which, in the presence of radiation provides, by either direct or indirect means, a signal or other indication suitable for use in measuring one or more quantities of incident radiation.

(55) "Radiation field" has the same meaning as "useful beam".

(56) "Radiation head" means the structure from which the useful beam emerges.

(57) "Redundant beam monitoring system" means a combination of two dose monitoring systems in which each system is designed to terminate irradiation in accordance with a pre-selected number of dose monitor units.

(58) "Scattered primary radiation" means that scattered radiation which has been deviated in direction only by materials irradiated by the useful beam.

(59) "Scattered radiation" means ionizing radiation emitted by interaction of ionizing radiation with matter, the interaction being accompanied by a change in direction of the radiation.

(60) "Secondary dose monitoring system" means a system, which will terminate irradiation in the event of failure of the primary dose monitoring system.

(61) "Secondary protective barrier" has the meaning given that term in section (50) of this rule, "protective barrier".

(62) "Service Engineer" means an individual who is qualified to service the radiation therapy equipment per manufacturer's standards.

(63) "Shadow tray" means a device attached to the radiation head to support auxiliary beam blocking material.

(64) "Shutter" means a device attached to the tube housing assembly which can totally intercept the useful beam and which has a lead equivalency not less than that of the tube housing assembly.

(65) "Sievert (Sv)" means the SI unit of dose equivalence. The unit of dose equivalence is the joule/kg. The previous unit of dose equivalence (rem) is being replaced by the Sievert. [1 Sv=100 rem].

(66) "Simulator (radiation therapy simulation system)" means any X-ray system intended for localizing the tissue volume to be exposed during radiation therapy and establishing the position and size of the therapeutic irradiation field. See Conventional Simulator and Virtual Simulator.

(67) "Source" means the focal point or material from which the radiation emanates.

(68) "Source-skin distance (SSD)" has the same meaning as "target-skin distance".

(69) "Stationary beam radiation therapy" means radiation therapy without displacement of one or more mechanical axes relative to the patient during irradiation.

(70) "Stray radiation" means the sum of leakage and scattered radiation.

(71) "Target" means that part of an X-ray tube or accelerator onto which a beam of accelerated particles is directed to produce ionizing radiation or other particles.

(72) "Target-skin distance (TSD)" means the distance measured along the beam axis from the center of the front surface of the X-ray target or electron virtual source to the surface of the irradiated object or patient.

(73) "Tenth-value layer (TVL)" means the thickness of a specified material which attenuates X-radiation or gamma radiation to an extent such that the air kerma rate, exposure rate, or absorbed dose rate is reduced to one-tenth of the value measured without the material at the same point.

(74) "Termination of irradiation" means the stopping of irradiation in a fashion, which cannot permit continuance of irradiation without the resetting of operating conditions at the control panel.

(75) "Therapeutic radiation machine" is a complex system designed and used for external beam radiation therapy. This system includes some or all of the following: equipment producing ionizing radiation (including, but not limited to X-rays, electrons, protons and neutrons), beam shaping devices, computer control unit, verify and record system, electronic portal imaging, treatment planning computer and other ancillary systems.

(76) "Tube" means an X-ray tube, unless otherwise specified.

(77) "Tube housing assembly" means the tube housing with tube installed. It includes high-voltage and filament transformers and other appropriate elements when such are contained within the tube housing.

(78) "Useful beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam-limiting device when the exposure controls are in a mode to cause the therapeutic radiation machine to produce radiation.

(79) "Virtual source" means a point from which radiation appears to originate.

(80) "Wedge filter" means a filter which effects continuous change in transmission over all or a part of the useful beam.

(81) "Written directive" means an order, written or electronic, for the administration of radiation to a specific patient as specified in OAR 333-123-0045(2).

(82) "X-ray tube" means any electron tube, which is designed to be used primarily for the production of X-rays.

Stat. Auth: ORS 453.605 – 453.807
Stats. Implemented: ORS 453.605 – 453.807

333-123-0010
General Requirements, Operating Procedures, Surveys, Dosimetry, and Instrument Calibration for Facilities Using Therapeutic Radiation Machines

(1) Administrative Controls. The registrant is responsible for directing the operation of the therapeutic radiation machines that they have registered with the Authority. The registrant or the registrant's agent must ensure that the requirements of this Division are met in the operation of the therapeutic radiation machine(s) and:

(a) A therapeutic radiation machine that does not meet the requirements of these rules must not be used for irradiation of patients; and

(b) The use of therapeutic radiation machines shall be by, or under the supervision of, a licensed practitioner of the healing arts who meets the training/experience criteria established by 333-123-0015(1).

(2) Operating Procedures. A copy of the current operating and emergency procedures must be available at each therapeutic radiation authority or clinic and at the therapeutic radiation machine control console; and

(a) Any alterations or changes to existing procedures and new radiation therapy treatment protocols must be approved by the Chief Medical Physicist and the Senior Radiation Therapy Physician or designee; and

(b) The date of the approval and the appropriate signatures must be placed on the first page of each radiation therapy procedure; and

(c) The registrant must retain a copy of all versions of the procedures for 5 years; and

(d) If the Qualified Medical Physicist is not a full-time employee of the registrant, the operating procedures must specify how to contact the Physicist. The procedures must list specific actions to be initiated until the Physicist assumes personal control.

(e) The therapeutic radiation machine must not be used for irradiation of patients unless the requirements of sections (1) and (2) have been met.

(f) Individuals must not be exposed to the useful beam except for medical therapy purposes and unless such exposure has been ordered in writing or electronically by a qualified radiation therapy physician.

(g) This provision specifically prohibits deliberate exposure of an individual for training, demonstration or other non-healing arts purposes.

(h) Therapeutic radiation machines, when not in operation, must be secured to prevent unauthorized use.

(i) When a patient must be held in position for radiation therapy, mechanical supporting or restraining devices must be used.

(j) No individual other than the patient must be in the treatment room during exposures from therapeutic radiation machines operating above 150 kV. At energies less than or equal to 150 kV, any individual, other than the patient, in the treatment room must be protected by a barrier sufficient to meet the requirements of 333-120-0100.

(k) When adjustable beam limiting devices are used, the position and shape of the radiation field must be indicated by a light field.

(l) Written safety procedures and rules must be developed by a Qualified Medical Physicist and must be available in the control area of a therapeutic radiation machine, including any restrictions required for the safe operation of the particular therapeutic radiation machine. The operator must be able to demonstrate familiarity with these rules.

(m) All individuals associated with the operation of a therapeutic radiation machine must be instructed in and must comply with the provisions of the registrant's quality assurance program. In addition to the requirements of 333-123-0015, these individuals are also subject to the requirements of divisions 111 and 120.

(3) Calibration Of Radiation Survey Instruments. Radiation Survey Instrument(s) for Photon and Electron Beam Therapy Systems 1 MV and Above. Each facility location authorized to use a therapeutic radiation machine in accordance with these rules must possess appropriately calibrated portable radiation monitoring equipment. As a minimum, such equipment must include a portable radiation survey instrument capable of measuring dose rates over the range 10 μSv/hr (1 mrem/hr) to 10 mSv/hr (1000 mrem/hr) with an energy response appropriate to the system being surveyed.

(a) The registrant must ensure that the survey instruments, which are used to show compliance with this Division, have been calibrated before first use, at intervals not to exceed 12 months, and following repair; and

(b) To satisfy the requirements of this rule, the registrant must:

(A) Calibrate all required scale readings up to 10 mSv (1000 mrem) per hour with an appropriate radiation source that is traceable to the National Institute of Standards and Technology (NIST); and

(B) The calibration must include at least 2 points on each scale tested. These points should be at approximately 1/3 and 2/3 of full-scale.

(c) To satisfy the requirements of section (3)(b)(B) of this rule, the registrant must:

(A) Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than 10 percent; and

(B) Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than 20 percent if a correction factor or graph is conspicuously attached to the instrument.

(d) The registrant must retain a record of each calibration required in section (3)(a) of this rule for 3 years. The record must include:

(A) A description of the instrument and the calibration procedure; and

(B) A description of the radiation source used and the certified dose rates from the source, and the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration, and the date of calibration.

(e) The registrant may obtain the services of individuals licensed by the Authority, the US Nuclear Regulatory Commission, an Agreement State, or a Licensing State to perform calibrations of survey instruments. Records of calibrations must contain information required by section (3)(d) of this rule and be maintained by the registrant.

(4) Radiation Protection Surveys. The registrant must ensure that radiation protection surveys are performed at new facilities, and existing facilities not previously surveyed. Surveys must be conducted with an operable radiation survey instrument calibrated in accordance with of section (3) of this rule. In new facilities, a radiation protection survey must be completed prior to the first clinical use of a therapeutic radiation machine following installation.

(a) For machines capable of photon output at 10MV or above, registrants must perform or arrange to have performed a radiation survey to monitor neutron dose rates. The radiation survey instrument(s) used must be capable of measuring neutron dose rates over the range of 10 μSv/hr (1 mrem/hr) to 10 mSv/hr (1000 mrem/hr). The radiation survey instrument(s) used to measure must be operable and calibrated in accordance with section (3) of this rule. Neutron monitoring must be done prior to first patient treatment; and

(b) The survey must be performed with the therapeutic radiation machine in a BEAM-ON condition, with the largest clinically available treatment field and with a scattering phantom in the useful beam of radiation; and

(c) The radiation protection survey must be performed by, or under the direction of, a Qualified Medical Physicist or a Qualified Expert as defined in 333-100-0005.

(d) The Qualified Medical Physicist or Qualified Expert must verify that:

(A) Radiation levels in restricted areas are not likely to cause personnel to receive exposures in excess of the limits specified in 333-120-0100(1); and

(B) Radiation levels in unrestricted areas do not exceed the limits specified in 333-120-0180 and 333-120-0190.

(e) In addition, a radiation protection survey must also be performed:

(A) Prior to any subsequent medical use; and

(B) After making any change in the treatment room shielding; and

(C) After making any change in the location of the therapeutic radiation machine within the treatment room; and

(D) After relocating the therapeutic radiation machine; or

(E) Before using the therapeutic radiation machine in a manner that could result in increased radiation levels in areas outside the external beam radiation therapy treatment room.

(f) The radiation protection survey record must indicate all instances where the facility, in the opinion of the Qualified Medical Physicist or a Qualified Expert, is in violation of applicable regulations. The survey record must also include the:

(A) Date of the measurements; and

(B) Reason the survey is required; and

(C) Manufacturer's name, model number and serial number of the therapeutic radiation machine; and

(D) Manufacturer and model of the instrument(s) used to measure radiation levels and date last calibrated; and

(E) A floor plan of the areas surrounding the treatment room that were surveyed; and

(F) Measured dose rate at several points in each area expressed in mSv/hr or mrems/hr; and

(G) Calculated maximum level of radiation over a period of 1 week for each restricted and unrestricted area; and

(H) Signature of the individual responsible for conducting the survey.

(g) If the results of the radiation protection survey indicate any radiation levels in excess of the respective limit specified in 333-120-0180, the registrant must lock the control in the "OFF" position and not use the unit. The control must remain locked:

(A) Except as may be necessary to repair, replace, or test the therapeutic radiation machine, the therapeutic radiation machine shielding, or the treatment room shielding; or

(B) Until the registrant has received a specific exemption from the Authority.

(h) If the radiation protection survey, indicates that an individual in an unrestricted area may be exposed to levels of radiation greater than those permitted by 333-120-0180(1) and (2), before beginning the treatment program the registrant must:

(A) Either equip the unit with beam direction interlocks or add additional radiation shielding to ensure compliance with 333-120-0180(1) and (2); and

(B) Perform the survey required by these rules again; and

(C) Include in the report required by section (4)(f) of this rule the results of the initial survey, a description of the modification made to comply with section (4)(g)(A) of this rule, and the results of the second survey; or

(D) Request and receive a registration amendment under 333-120-0180(3) that authorizes radiation levels in unrestricted areas greater than those permitted by 333-120-0180(1) and (2).

(5) Dosimetry Equipment. The registrant must have a calibrated dosimetry system available for use. The calibration must be traceable to the appropriate national standard. The calibration must have been performed within the previous 24 months and after any servicing that may have affected system calibration and:

(a) The dosimetry system must have been calibrated at an energy appropriate for the radiation being measured.

(b) The registrant must have available for use a dosimetry system for quality assurance check measurements. To meet this requirement, the system may be compared with a system that has been calibrated in accordance with section (5)(a) of this rule. This comparison must have been performed within the previous 12 months and after each servicing that may have affected system calibration. The quality assurance system may be the same system used to meet the requirement in section (5)(a) of this rule.

(c) The registrant must maintain a record of each dosimetry system calibration, intercomparison, and comparison, for the duration of the license and/or registration. For each calibration, intercomparison, or comparison, the record must include:

(A) The date;

(B) The model numbers and serial numbers of the instruments that were calibrated, inter-compared, or compared as required by sections (5)(a) and (b) of this rule;

(C) The correction factors that were determined;

(D) The names of the individuals who performed the calibration, intercomparison, or comparison; and

(E) Evidence that the intercomparison was performed by, or under the direct supervision and in the physical presence of, a Qualified Medical Physicist.

(6) Reports Of External Beam Radiation Therapy Surveys And Measurements. The registrant for any therapeutic radiation machine subject to 333-123-0025 must furnish a copy of the records required in section (5)(c) of this rule to the Authority within 30 days following completion of the action that initiated the record requirement.

(7) Records Retention. All records required in this Division must be retained until disposal is authorized by the Authority unless another retention period is specifically authorized in the rule in this Division.

(a) All required records must be retained in an active file from at least the time of generation until the next Authority inspection.

(b) Any required record generated before the last Authority inspection may be microfilmed or otherwise archived as long as a complete copy of said record can be retrieved until such time as the Authority authorizes final disposal.

(c) The registrant must maintain the following information in a separate file or package for each therapeutic radiation machine, for inspection by the Authority:

(A) Report of acceptance testing; and

(B) Records of all surveys, calibrations, and periodic quality assurance checks of the therapeutic radiation machine required by 333-123-0040, as well as the name(s) and business addresses of person(s) who performed such activities; and

(C) Records of maintenance and/or modifications performed on the therapeutic radiation machine after January 30, 2007, as well as the name(s) of person(s) who performed such services; and

(D) Signature of the Qualified Medical Physicist or service engineer authorizing the return of therapeutic radiation machine to clinical use after service, repair, or upgrade.

333-123-0015
Training and Qualification Requirements for Individuals in the External Beam Radiation Therapy Area

(1) Radiation Therapy Physician. The registrant for any therapeutic radiation machine subject to 333-123-0030 must require that the Radiation Therapy Physician be:

(a) Licensed by an appropriate Oregon medical licensing board; and

(b) Certified in:

(A) Radiology, Therapeutic Radiology or Radiation Oncology by the American Board of Radiology; or

(B) Radiation Oncology by the American Osteopathic Board of Radiology; or

(C) Radiology, with specialization in Radiotherapy, as a British Fellow of the Faculty of Radiology or Fellow of the Royal College of Radiology; or

(D) Therapeutic Radiology by the Canadian Royal College of Physicians and Surgeons; or

(c) Actively pursuing board certification in therapeutic radiology, and completed 200 hours of instruction in basic radiation techniques applicable to the use of an external beam radiation therapy

unit, 500 hours of supervised work experience, and a minimum of 3 years full-time supervised clinical experience.

(A) To satisfy the requirement for instruction, the classroom and laboratory training must include:

(i) Radiation physics and instrumentation; and

(ii) Radiation protection; and

(iii) Mathematics pertaining to the use and measurement of ionization radiation; and

(iv) Radiation biology.

(B) To satisfy the requirement for supervised work experience, training must be under the supervision of a Radiation Therapy Physician qualified pursuant to sections (1)(a) or (b) of this rule and must include:

(i) Review of the full calibration measurements and periodic quality assurance checks; and

(ii) Evaluation of prepared treatment plans and calculation of treatment times and patient treatment settings; and

(iii) Using administrative controls to prevent medical treatment events; and

(iv) Implementing emergency procedures to be followed in the event of the abnormal operation of an external beam radiation therapy unit or console; and

(v) Checking and using radiation survey meters.

(C) To satisfy the requirement for a period of supervised clinical experience, training must include 1 year in a formal training program approved by the Residency Review Committee for Radiology of the Accreditation Council for Graduate Medical Education or the Committee on Postdoctoral Training of the American Osteopathic Association and an additional 2 years of clinical experience in therapeutic radiology under the supervision of a Qualified Radiation Therapy Physician. The supervised clinical experience must include:

(i) Examining individuals and reviewing their case histories to determine their suitability for external beam radiation therapy treatment, and any limitations/contraindications; and

(ii) Selecting proper dose and how it is to be administered; and

(iii) Calculating the external beam radiation therapy doses and collaborating with the Qualified Radiation Therapy Physician in the review of patients' progress and consideration of the need to modify originally prescribed doses and/or treatment plans as warranted by patients' reaction to radiation; and

(iv) Post-administration follow-up and review of case histories.

(d) To demonstrate compliance with sections (1)(a) through (c) of this rule, the individual must obtain written documentation that he or she has satisfactorily completed these requirements and have achieved a level of competency sufficient to function independently as a qualified radiation therapy physician. The documentation must be from the entities or individual(s) specified in this rule.

(e) Notwithstanding the requirements of sections (1)(a) and (b) of this rule, the registrant for any therapeutic radiation machine subject to 333-123-0025 may also submit the training of the prospective Radiation Therapy Physician for Authority review on a case-by-case basis.

(f) A physician must not act as a Radiation Therapy Physician for any therapeutic radiation machine until said physician's training has been reviewed and approved by the appropriate state licensing body.

(g) A registrant may permit any physician to act as a visiting Radiation Therapy Physician under the term of the registrant's Certificate of Registration for up to 60 days per calendar year under the following conditions:

(A) The visiting Radiation Therapy Physician has the prior written permission of the registrant's management and, if the use occurs on behalf of an institution, the institution's Radiation Safety Committee (where applicable); and

(B) The visiting Radiation Therapy Physician meets the requirements established in section (1) of this rule; and

(C) The registrant maintains copies of all records specified in section (1)(i) of this rule for 5 years from the date of the last visit.

(2) Medical Physicist Qualifications. The registrant for any therapeutic radiation machine subject to 333-123-0025 must require that the Medical Physicist(s), who are providing consultative services to them be licensed with the Authority, under the provisions of 333-101-0020, as a provider of radiation services in the area of calibration and compliance surveys of external beam radiation therapy units (The licensing requirement is only applicable to those physicists who provide medical physics consultation to facilities other than those of the registrant of which they are an employee).

(a) All Medical Physicists practicing in therapeutic radiological physics must be certified in Therapeutic Radiological Physics or Radiation Oncology by the:

(A) American Board of Radiology; or

(B) American Board of Medical Physics; or

(C) Canadian College of Physicists in Medicine.

(b) To demonstrate compliance, the individual must obtain written documentation that he or she is Board certified. The documentation must be from the credentialing body.

(c) Medical Physicists who, prior to January 1, 2007, have been actively working in the area of therapeutic radiation in the state of Oregon or licensed with the Authority to provide therapeutic radiation medical physics services in Oregon, are exempt from the certification requirement in section (2)(b) of this rule.

(d) Medical Physicists who, on or after January 1, 2007, wish to work in the area of therapeutic radiation or to be licensed with the Authority to provide therapeutic radiation services, must meet the certification requirements in section (2)(b) of this rule.

(e) Medical Physicists who do not meet the requirements of section (2)(b) of this rule must work under the supervision of a Qualified Medical Physicist.

(3) Therapeutic Radiation Machine Operator's Qualifications. Individuals who will be operating a therapeutic radiation machine for medical use must be registered with the American Registry of Radiologic Technologists (ARRT) as a radiation therapist with the credential RT(T)(ARRT). Individuals who do not meet this criterion must submit evidence that they have satisfactorily completed a radiation therapy technologist training program that complies with the requirements of the Joint Review Committee on Education in Radiologic Technology.

(a) Individuals who have been operating a therapeutic radiation machine prior to January 1, 2007 shall be exempt from the requirement in section (3) of this rule.

(b) The names and training records of all personnel currently operating a therapeutic radiation machine must be kept on file at the facility. Training records of former operators must be retained for a period of at least 2 years beyond the last date they were authorized to operate a therapeutic radiation machine at that facility.

333-123-0020
Reports and Notifications of Unplanned Medical Treatment

(1) A registrant must report any medical treatment event that causes an error in the treatment of a patient. Medical treatment events occur when the administration of an external beam radiation therapy dose:

(a) Administration results or will result in unintended permanent functional organ damage or physiological injury as determined by a Qualified Radiation Therapy Physician; or

(b) Involves the wrong patient, wrong treatment modality, or wrong treatment site; or

(c) Consists of 3 or fewer treatment fractions and the calculated total administered dose differs from the total prescribed dose by more than 10 percent of the total prescribed dose; or

(d) If the calculated weekly administered dose differs from the weekly prescribed dose by more than 30 percent; or

(e) If the calculated total administered dose differs from the total prescribed dose by more than 20 percent of the total prescribed dose.

(2) The registrant must notify the Authority by telephone no later than the next calendar day after the discovery of a medical treatment event.

(3) The registrant must submit a written report to the Authority within 15 days after the discovery of a medical treatment event. The written report must include:

(a) The registrant's name; and

(b) The name of the prescribing physician; and

(c) A brief description of the event; and

(d) Why the event occurred; and

(e) The effect, if any, on the patient(s) who received the administration; and

(f) Actions, if any, that have been taken, or are planned, to prevent recurrence; and

(g) Certification that the registrant notified the patient or the patient's legally authorized representative(s), and if not, why not; and

(h) The report may not contain the individual's name or any other information that could lead to the identification of the individual.

(4) The registrant shall notify the referring physician and also notify, the patient who is the subject of the medical treatment event, or their lawfully authorized representative no later than 24 hours after its discovery unless:

(a) The referring physician personally informs the registrant that he or she will inform the affected patient; or

(b) Based on his or her medical judgment the affected patient will not be informed because it would be harmful to the patient.

(5) The registrant is not required to notify the affected patient without first consulting the referring physician.

(6) If the referring physician or the affected patient cannot be reached within 24 hours, the notification will be as soon as possible.

(7) The registrant may not delay any appropriate medical care for the affected patient, including any necessary remedial care taken because of the medical treatment event.

(8) If a verbal notification is made, the registrant must inform the affected patient, or the patient's lawfully authorized representative(s), that a written description of the event can be obtained from the registrant upon request. The registrant must provide such a written description if requested.

(9) Aside from the notification requirement, nothing in this rule affects any rights or duties of registrants and physicians in relation to each other, to the patient affected by the medical treatment event, or to the patient's lawfully authorized representative(s).

(10) A copy of the record required must be provided to the referring physician if other than the registrant within 15 days after discovery of the medical treatment event.

(11) Records Of Medical Treatment Event. A registrant must retain a record of a medical treatment event, for 3 years. The record must be handled in accordance with the Health Insurance Portability and Accountability Act (HIPAA).

333-123-0025
Requirements for Therapeutic Radiation Machines

(1) Grenz Ray. When the x-ray tube is operated at its maximum rated tube current for the maximum kV, the leakage air kerma rate must not exceed the value specified at the distance specified for that classification of therapeutic radiation machine.

(2) For therapeutic radiation systems which operate at 5kV to 50 kV or are used for Grenz Ray application:

(a) The leakage air kerma rate measured at any position 5 cm from the tube housing assembly must not exceed 1 mGy (100 mRad) in any 1 hour.

(b) A timer with a display must be provided at the treatment control panel. The timer must have a pre-set time selector and an elapsed time or time remaining indicator. The timer must:

(A) Activate with an indication of BEAM-ON and retain it's reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, the timer must be reset; and

(B) Terminate irradiation when a pre-selected time has elapsed; and

(C) Permit accurate pre-setting and determination of exposure times as short as 1 second: and

(D) Must not permit an exposure if set at zero; and

(E) Be accurate to within 1 percent of the selected value or 1 second, whichever is greater.

(c) The control panel, in addition to the displays required by other provisions in these rules, must have:

(A) An indication of whether x-rays are being produced; and

(B) A means for indicating x-ray tube potential and current; and

(C) A means for terminating an exposure at any time; and

(D) A locking device which will prevent unauthorized use of the therapeutic radiation machine; or

(d) There must be a means of determining the central axis target-to-skin distance (TSD) within 1 cm and of reproducing this measurement to within 2 mm thereafter.

(3) Therapeutic Radiation Machines Operating At >50 Kv And <1 Mev. The leakage air kerma rate measured at a distance of 1 m from the target in any direction may not exceed 1 cGy (1 rad) in any 1 hour. This air kerma rate measurement may be averaged over areas no larger than 100 square centimeters. In addition, the air kerma rate at a distance of 5 cm from the surface of the tube housing assembly must not exceed 30 cGy (30 rad) per hour.

(a) For each therapeutic radiation machine, the registrant must determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified in this rule for the specified operating conditions. Records on leakage radiation measurements must be maintained at the installation for inspection by the Authority.

(b) Permanent Beam Limiting Devices. Permanent diaphragms or cones used for limiting the useful beam must provide at least the same degree of attenuation as required for the tube housing assembly.

(c) Adjustable or Removable Beam Limiting Devices. Adjustable or removable beam limiting devices, diaphragms, cones or blocks must not transmit more than 5 percent of the useful beam for the most penetrating beam used.

(d) When adjustable beam limiting devices are used, the position and shape of the radiation field must be indicated by a light field.

(e) Filter System. The filter system must be so designed that:

(A) Filters cannot be accidentally displaced at any possible tube orientation; and

(B) For equipment installed after January 30, 2007, an interlock system prevents irradiation if the proper filter is not in place; and

(C) The air kerma rate escaping from the filter slot does not exceed 1 cGy (1 rad) per hour at 1 m under any operating conditions; and

(D) Each filter is be labeled to indicate the material it is constructed of and its thickness.

(f) Tube Immobilization. The x-ray tube must be so mounted that it cannot accidentally turn or slide with respect to the housing aperture and the tube housing assembly must be capable of being immobilized for stationary portal treatments.

(g) Source Marking. The tube housing assembly must be so marked that it is possible to determine the location of the source to within 5 mm, and such marking must be readily accessible for use during calibration procedures.

(h) Timer. A suitable irradiation control device must be provided to terminate the irradiation after a pre-set time interval.

(i) A timer with a display must be provided at the treatment control panel and the timer must:

(A) Have a pre-set time selector and an elapsed time or time remaining indicator; and

(B) Be a cumulative timer that activates with an indication of BEAM-ON and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it must be necessary to reset the elapsed time indicator; and

(C) Terminate irradiation when a pre-selected time has elapsed, if any dose monitoring system present has not previously terminated irradiation; and

(D) Permit accurate pre-setting and determination of exposure times as short as 1 second; and

(E) Not permit an exposure if set at zero; and

(F) Not activate until the shutter is opened when irradiation is controlled by a shutter mechanism unless calibration includes a timer error correction to compensate for mechanical lag; and

(G) Timer must be accurate to within 1 percent of the selected value or 1 second, whichever is greater.

(j) Control Panel Functions. The control panel, in addition to the displays required by other provisions in this rule, must have:

(A) An indication of whether electrical power is available at the control panel and if activation of the x-ray tube is possible; and

(B) An indication of whether x-rays are being produced; and

(C) A means for indicating x-ray tube potential and current; and

(D) The means for terminating an exposure at any time; and

(E) A locking device which will prevent unauthorized use of the therapeutic radiation machine; and

(F) For therapeutic radiation machines manufactured after January 30, 2007, a positive display of specific filter(s) in the beam.

(k) Multiple Tubes. When a control panel may energize more than one x-ray tube:

(A) It must be possible to activate only one x-ray tube at any time; and

(B) There must be an indication at the control panel identifying which x-ray tube is activated; and

(C) There must be an indication at the tube housing assembly when that tube is energized.

(l) Target-To-Skin Distance (TSD). There must be a means of determining the central axis TSD to within 1 cm and of reproducing this measurement to within 2 mm thereafter.

(m) Shutters. Unless it is possible to bring the x-ray output to the prescribed exposure parameters within 5 seconds (sec) after the x-ray ON switch is energized, the beam must be attenuated by a shutter having a lead equivalency not less than that of the tube housing assembly. In addition, after the unit is at operating parameters, the shutter must be controlled by the operator from the control panel. An indication of shutter position must appear at the control panel.

(4) Photon And Electron Beam Therapeutic Radiation Machines 1 Mv And Above.

(a) Leakage Radiation Outside The Maximum Useful Beam In Photon And Electron Modes. The absorbed dose due to leakage radiation (excluding neutrons) at any point outside the maximum sized useful beam, but within a circular plane of radius 2 meters which is perpendicular to and centered on the central axis of the useful beam at the nominal treatment distance (i.e., patient plane), must not exceed a maximum of 0.2 percent and an average of 0.1 percent of the absorbed dose on the central axis of the beam at the nominal treatment distance. Measurements must be averaged over an area not exceeding 100 square centimeters at a minimum of 16 points uniformly distributed in the plane; and

(b) Except for the area defined in section (3)(a) of this rule, the absorbed dose due to leakage radiation (excluding neutrons) at 1 m from the electron path between the electron source and the target or electron window, must not exceed 0.5 percent of the absorbed dose on the central axis of the beam at the nominal treatment distance. Measurements must be averaged over an area not exceeding 100 square centimeters; and

(c) For equipment manufactured after January 30, 2007, the neutron absorbed dose outside the useful beam must be in compliance with International Electrotechnical Commission (IEC) Document 60601-2-1 dated June 30, 1998; and

(d) For each therapeutic radiation machine, the registrant must determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified in sections (3)(a) through (c) of this rule for the specified operating conditions. Records on leakage radiation measurements must be maintained at the installation for inspection by the Authority.

(e) Leakage Radiation Through Beam Limiting Devices. The attenuation of leakage radiation through a beam-limiting device must meet the following requirements:

(A) Photon Radiation. All adjustable or interchangeable beam limiting devices must attenuate the useful beam such that at the nominal treatment distance and the maximum absorbed dose anywhere in the area shielded by the beam limiting device(s) must not exceed 2 percent (or the amount specified by the manufacturer), of the maximum absorbed dose on the central axis of the useful beam measured in a 100 square centimeters radiation field, or maximum available field size if less than 100 square centimeters; and

(B) Electron Radiation. All adjustable or interchangeable electron applicators must attenuate the radiation, including but not limited to photon radiation generated by electrons incident on the beam limiting device and electron applicator and other parts of the radiation head, such that the absorbed dose in a plane perpendicular to the central axis of the useful beam at the nominal treatment distance must not exceed: and

(C) A maximum of 2 percent and average of 0.5 percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit must apply beyond a line 7 cm outside the periphery of the useful beam; and

(D) A maximum of 10 percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit must apply beyond a line 2 cm outside the periphery of the useful beam.

(f) Measurement Of Leakage Radiation. Measurement of leakage radiation shall be done after installation and before clinical usage and must include:

(A) Photon Radiation. Measurements of leakage radiation through the beam limiting devices must be made with the beam limiting devices closed and any residual aperture blocked by at least 2 tenth value layers of suitable absorbing material. In the case of overlapping beam-limiting devices, the leakage radiation through each set must be measured independently at the depth of maximum dose. Measurements must be made using a radiation detector of area not exceeding 10 square centimeters; and

(B) Electron Radiation. Measurements of leakage radiation through the electron applicators must be made with the electron beam directed into the air and using a radiation detector of area up to but not exceeding 1 square centimeters suitably protected against radiation, which has been scattered from material beyond the radiation detector. Measurements must be made using 1 cm of tissue/water equivalent material for build up.

(g) Filters/Wedges. Each wedge filter that is removable from the system must be clearly marked with an identification number. For removable wedge filters, the nominal wedge angle must appear on the wedge or wedge tray (if permanently mounted to the tray). If the wedge or wedge tray is significantly damaged, the wedge transmission factor must be re-measured; and

(A) For equipment manufactured after January 30, 2007 which utilizes wedge filters, interchangeable field flattening filters, or interchangeable beam scattering foils; and

(B) Irradiation must not be possible until a selection of a filter or a positive selection to use no filter has been made at the treatment control panel, either manually or automatically; and

(C) An interlock system must be provided to prevent irradiation if the wedge, flattening filter or scattering foil selected is not in the correct position; and

(D) A display must be provided at the treatment control panel showing the wedge or beam modifying filter(s) in use; and

(E) An interlock must be provided to prevent irradiation if any filter and/or beam scattering foil selection operation does not agree with the energy/mode selected by the operator at the control panel.

(h) Stray Radiation in the Useful Beam. For equipment manufactured after January 30, 2007, the registrant must determine during acceptance testing, or obtain from the manufacturer, stray x-ray radiation, and absorbed dose at the surface and neutron data. This data must be sufficient to ensure compliance with International Electrotechnical Commission (IEC) Document 60601-2-1 dated June 30, 1998.

(i) Beam Monitors. All therapeutic radiation machines subject to these rules must be provided with redundant beam monitoring systems. The sensors for these systems must be fixed in the useful beam during treatment to indicate the dose monitor unit rate.

(j) Equipment manufactured after January 30, 2007 must be provided with at least 2 independently powered integrating dose meters. Alternatively, common elements may be used if the production of radiation is terminated upon failure of any common element.

(k) Equipment manufactured on or before January 30, 2007 must be provided with at least 1 radiation detector. This detector must be incorporated into a useful beam monitoring system; and

(l) The detector and the system into which that detector is incorporated must meet the following requirements:

(A) Each detector must form part of a beam monitoring system from whose readings in dose monitor units the absorbed dose at a reference point can be calculated; and

(B) Each beam monitoring system must be capable of independently monitoring, interrupting, and terminating irradiation; and

(m) For equipment manufactured after January 30, 2007, the design of the beam monitoring systems must ensure that the:

(A) Malfunctioning of one beam monitoring system must not affect the correct functioning of the other system(s); and

(B) Failure of either system must terminate irradiation or prevent the initiation of radiation.

(n) Each beam monitoring system must have a legible display at the treatment control panel. For equipment manufactured after January 30, 2007, each display must:

(A) Maintain a display of the patient treatment parameters until intentionally reset;

(B) Have only one scale and no electrical or mechanical scale multiplying factors;

(C) Utilize a design such that increasing dose is displayed by increasing numbers; and

(D) In the event of power failure the beam monitoring information required in section (3)(k) of this rule must be displayed at the control panel, and at the time of failure, must be retrievable in at least one system for a 20 minute period of time.

(o) Beam Symmetry. A bent-beam linear accelerator with beam flattening filter(s) subject to this rule must be provided with auxiliary device(s) to monitor beam symmetry;

(A) The integrating dose meters referenced in section (3)(k) of this rule must be able to detect field asymmetry greater than 10 percent; and

(B) The integrating dose meters referenced in section (3)(k) of this rule must be configured to terminate irradiation if the specifications in section (3)(o)(A) of this rule cannot be maintained.

(p) Selection And Display Of Dose Monitor Units. Irradiation must not be possible until a new selection of a number of dose monitor units has been made at the treatment control panel; and

(A) The pre-selected number of dose monitor units must be displayed at the treatment control panel until reset manually for the next irradiation; and

(B) After termination of irradiation, it must be necessary to reset the dosimeter display before subsequent treatment can be initiated; and

(C) For equipment manufactured after January 30, 2007, after termination of irradiation, it must be necessary for the operator to reset the pre-selected dose monitor units before irradiation can be initiated.

(q) Air Kerma Rate/Absorbed Dose Rate. For equipment manufactured after January 30, 2007, a system must be provided from which readings the air kerma rate or absorbed dose rate at a reference point can be calculated. [The radiation detectors specified in section (3)(k) of this rule may form part of this system]. In addition:

(A) The dose monitor unit rate must be displayed at the treatment control panel; and

(B) If the equipment can deliver under any conditions an air kerma rate or absorbed dose rate at the nominal treatment distance more than twice the maximum value specified by the manufacturer, a device must be provided which terminates irradiation when the air kerma rate or absorbed dose rate exceeds a value twice the specified maximum. The dose rate at which irradiation is terminated at must be maintained in a record by the registrant.

(r) If the equipment can deliver, under any fault condition(s), an air kerma rate or absorbed dose rate at the nominal treatment distance of more than 10 times the maximum value specified by the manufacturer:

(A) A device must be provided to prevent the air kerma rate or absorbed dose rate anywhere in the radiation field from exceeding twice the specified maximum value; and

(B) Terminate irradiation if the excess absorbed dose at the nominal treatment distance exceeds 4 Gy (400 rad); and

(C) For each therapeutic radiation machine, the registrant must determine, or obtain from the manufacturer, the maximum value(s) specified in section (3)(p) of this rule for the specified operating conditions. Records of these maximum value(s) must be maintained at the facility for 5 years or until inspected by the Authority.

(s) Termination or Interruption of Irradiation by the Beam Monitoring System or Systems During Stationary Beam Radiation Therapy. Each primary system must terminate irradiation when the pre-selected number of dose monitor units has been detected by the system; and

(A) If the original design of the equipment included a secondary dose monitoring system, that system must be capable of terminating irradiation when not more than 15 percent or 40 dose monitor units above the pre-selected number of dose monitor units set at the control panel has been detected by the secondary dose monitoring system; and

(B) For equipment manufactured after January 30, 2007, an indicator on the control panel must show which monitoring system has terminated irradiation; and

(C) It must be possible to terminate irradiation and equipment movement or go from an interruption condition to termination condition at any time from the operator's protected position at the treatment control panel; and

(D) Interruption Of Radiation. If a therapeutic radiation machine has an interrupt mode, it must be possible to interrupt irradiation and equipment movements at any time from the treatment control panel. Following an interruption it must be possible to restart irradiation by operator action without any reselection of operating conditions. If any change is made of a pre-selected value during an interruption, irradiation and equipment movements must be automatically terminated.

(t) Timer. A suitable irradiation control device must be provided to terminate the irradiation after a pre-set time interval; and

(A) The timer must be provided with a display at the treatment control panel. The timer must have a pre-set time selector and an elapsed time indicator; and

(B) The timer must be a cumulative timer that activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it must be necessary to reset the elapsed time indicator; and

(C) The timer must terminate irradiation when a pre-selected time has elapsed, if the dose monitoring systems have not previously terminated irradiation.

(u) Selection Of Radiation Type. Equipment capable of both x-ray therapy and electron therapy must meet the following additional requirements:

(A) Irradiation must not be possible until a selection of radiation type (x-rays or electrons) has been made at the treatment control panel and the patient's chart has been checked to verify that the selected radiation type is the one specified in the chart; and

(B) The radiation type selected must be displayed at the treatment control panel before and during irradiation.

(v) Interlocks must be provided to:

(A) Ensure that the equipment can principally emit only the radiation type that has been selected; and

(B) Prevent irradiation with x-rays, except to obtain an image, when electron applicators are fitted; and

(C) Prevent irradiation with electrons when accessories specific for x-ray therapy are fitted; and

(D) Prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations carried out at the treatment control panel.

(w) Selection Of Energy. Equipment capable of generating radiation beams of different energies must meet the following requirements:

(A) Irradiation must not be possible until a selection of the appropriate energy has been made at the treatment control panel and the patient's chart has been checked to verify that the selected energy is that which is specified in the patient's chart; and

(B) The nominal energy value selected must be displayed at the treatment control panel until reset manually for the next irradiation. After termination of irradiation, it must be necessary to reset the nominal energy value selected before subsequent treatment can be initiated; and

(C) Irradiation must not be possible until the appropriate flattening filter or scattering foil for the selected energy is in its proper location and the patient's chart has been checked to verify that the flattening filter or scattering foil is that which is specified in the chart; and

(D) For equipment manufactured after January 30, 2007, the selection of energy must comply with International Electrotechnical Commission (IEC) Document 60601-2-1 dated June 30, 1998.

(x) Selection of Stationary Beam Radiation Therapy or Moving Beam Radiation Therapy. Therapeutic radiation machines capable of both stationary beam radiation therapy and moving beam radiation therapy must meet the following requirements:

(A) Irradiation must not be possible until a selection of stationary beam radiation therapy or moving beam radiation therapy has been made at the treatment control panel and the patient's chart has been checked to verify that the selection of stationary or moving beam radiation is that which is specified in the patient's chart; and

(B) The mode of operation must be displayed at the treatment control panel and interlocks must be provided to:

(C) Ensure that the equipment can operate only in the mode that has been selected; and

(D) Prevent irradiation if any selected parameter in the treatment room does not agree with the selected parameter at the treatment control panel.

(y) Moving beam radiation therapy must be controlled to obtain the selected relationships between incremental dose monitor units and incremental movement. For equipment manufactured after January 30, 2007:

(A) An interlock system must be provided to terminate irradiation if the number of dose monitor units delivered in any 10° of rotation or 1 cm of linear motion differs by more than 20 percent from the selected value; and

(B) Where incident radiation beam angle terminates the irradiation in moving beam radiation therapy, the dose monitor units delivered must differ by less than 5 percent from the dose monitor unit value selected; and

(C) An interlock must be provided to prevent motion of more than 5° or 1 cm beyond the selected limits during moving beam radiation therapy; and

(D) An interlock must be provided to require that a selection of direction be made at the treatment control panel in all units, which are capable of both clockwise, and counter-clockwise moving beam radiation therapy; and

(E) Moving beam radiation therapy must be controlled with both primary position sensors and secondary position sensors to obtain the selected relationships between incremental dose monitor units and incremental movement; and

(F) Where the beam monitor system terminates the irradiation in moving beam radiation therapy, the termination of irradiation must be as required by section (3)(y)(A) of this rule; and

(G) An interlock system must be provided to terminate irradiation if movement; and

(H) Interruption occurs during stationary beam radiation therapy; or

(I) Treatment does not start or stop during moving beam radiation therapy unless such stoppage is a pre-planned function.

333-123-0030
Facility Design Requirements for Therapeutic Radiation Machines

(1) Grenz Ray. In addition to shielding adequate to meet the requirements of division 120, treatment rooms must be provided with warning lights, in a readily observable position (preferably at eye level) out side of all access doors to the Grenz Ray room. The warning lights must indicate when the useful beam is "ON" or when the room is being used for Grenz Ray purposes.

(a) Except as provided in 333-106-0025, no individual other than the patient and operator must be in the treatment room during Grenz Ray radiation therapy treatment provided the operator is protected by a barrier sufficient to meet the requirements of division 120.

(b) A method must be provided to secure the room where the Grenz Ray radiation machine is located, against unauthorized entry.

(2) Therapeutic Radiation Machines 50 Kv To < 1 Mev. In addition to shielding adequate to meet requirements of division 120, the treatment room must meet the following design requirements:

(a) Provision must be made for continuous two-way aural communication between the patient and the operator at the control panel; and

(b) There must be continuous observation of the patient during irradiation. The viewing system must be configured such that the operator can observe the patient from the control panel.

(c) Treatment rooms that contain a therapeutic radiation machine capable of operating above 150 kV must meet the following additional requirements:

(A) All protective barriers must be fixed except for entrance doors or beam interceptors; and

(B) The control panel must be located outside the treatment room or in a totally enclosed booth. If within the treatment room, the booth must have a ceiling to provide total enclosure. The booth walls must meet the requirements of a protective barrier as specified in division 120; and

(C) Interlocks must be provided such that all entrance doors, including doors to any interior booths, will be closed before treatment can be initiated or continued. If the radiation beam is interrupted by any door opening, the machine must be incapable of resuming operation with manual reinitiation at the control panel, and the machine must remain inoperable until the door is closed; and

(D) When any door, referred to in section (30)(2)(c)(C) of this rule, is opened while the x-ray tube is activated, the air kerma rate at a distance of 1 meter from the source must be reduced to less than 1 mGy (100 mRad) per hour.

(3) Facility Design Requirements for Therapeutic Radiation Machines Operating > 1 Mv. Each therapeutic radiation machine subject to 333-123-0025 must be provided with such primary

and/or secondary barriers as are necessary to ensure compliance with division 120; and

(a) Facility design information for all new installations of a therapeutic radiation machine or installations of a therapeutic radiation machine of higher energy into a room not previously approved for that energy must be submitted for Authority approval before actual installation of the therapeutic radiation machine.

(b) In addition to shielding adequate to meet requirements of division 120, the following design requirements are made.

(c) Protective Barriers. All protective barriers must be fixed, except for access doors to the treatment room or movable beam interceptors.

(d) Control Panel. In addition to other requirements specified in this Division, the control panel must also:

(A) Be located outside the treatment room; and

(B) Provide an indication of whether electrical power is available at the control panel and if activation of the radiation is possible; and

(C) Provide an indication of whether radiation is being produced; and

(D) Include an access control (locking) device that will prevent unauthorized use of the therapeutic radiation machine.

(e) Viewing Systems. Windows, mirrors, closed-circuit television or an equivalent viewing system must be provided to permit continuous observation of the patient following positioning and during irradiation and must be so located that the operator may observe the patient from the treatment control panel. The therapeutic radiation machine must not be used for patient irradiation unless at least one viewing system is operational.

(f) Aural Communications. Provision must be made for continuous two-way aural communication between the patient and the operator at the control panel. The therapeutic radiation machine must not be used for irradiation of patients unless continuous two-way aural communication is possible.

(g) Room Entrances. Treatment room entrances must be provided with warning lights in a readily observable position near the outside of all access doors, which will indicate when the useful beam is "ON" and when it is "OFF".

(h) Entrance Interlocks. Interlocks must be provided such that all access controls are activated before treatment can be initiated or continued. If the radiation beam is interrupted by any access control, it must not be possible to restore the machine to operation without resetting the access control and reinitiating irradiation by manual action at the control panel;

(i) Beam Interceptor Interlocks. If the shielding material in any protective barrier requires the presence of a beam interceptor to ensure compliance with division 120, locks must be provided to prevent the production of radiation, unless the beam interceptor is in place, whenever the useful beam is directed at the designated barrier(s);

(j) Emergency Cutoff Switches. At least 1 emergency power cutoff switch must be located in the radiation therapy room and must terminate all equipment electrical power including radiation and mechanical motion. All emergency power cutoff switches must include a manual reset so that the therapeutic radiation machine cannot be restarted from the unit's control console without resetting the emergency cutoff switch;

(k) Safety Interlocks. All safety interlocks must be designed so that any defect or component failure in the safety interlock system prevents or terminates operation of the therapeutic radiation machine.

333-123-0035
Calibration, Acceptance Testing and Commissioning of Therapeutic Radiation Machines

(1) Full calibration, acceptance testing and commissioning of a therapeutic radiation machine subject to 333-123-0025 of this rule must be performed by, or under the direct supervision of a Qualified Medical Physicist.

(2) Acceptance testing and commissioning shall be performed in accordance with industry standards of practice and the manufacturer's contractual specifications. Acceptance testing and commissioning shall be conducted before the first medical use following installation or re-installation of the therapeutic radiation machine.

(3) Full calibration must include all applicable parameters in accordance with industry standards of practice, carried out to determine that all parameters of the radiation therapy machine are within acceptable limits:

(a) Before the first medical use after installation or reinstallation; and

(b) Whenever quality assurance check measurements indicate that the radiation output differs by more than 5 percent from the value obtained at the last full calibration and the difference cannot be reconciled. Therapeutic radiation machines with multi-energy and/or multi-mode capabilities must only require measurements for those modes and/or energies that are not within their acceptable range; and

(c) Following any component replacement, major repair, or modification of components that could significantly affect the characteristics of the radiation beam. If the repair, replacement or modification does not affect all modes and/or energies, measurements must be performed on the effected mode/energy that is in most frequent clinical use at the facility. The remaining energies/modes may be validated with periodic quality assurance check procedures against the criteria in 333-123-0040; and

(d) At intervals not exceeding 1 year, although it shall not be necessary to complete all elements of a full calibration at the same time, all applicable parameters (for all energies) shall be completed at intervals not exceeding 12 calendar months.

(4) The registrant must maintain a record of each full calibration for the duration of the registration. The record must include:

(a) The date of the calibration;

(b) The manufacturer's name, model number, and serial number for both the therapeutic radiation machine and the x-ray tube;

(c) The model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine; and

(d) The signature of the Qualified Medical Physicist responsible for performing the calibration.

(5) The calibration record must be maintained in an auditable form for the duration of the registration. The record must include:

(a) The date of the calibration;

(b) The manufacturer's name, model number and serial number for the therapeutic radiation machine;

(c) The model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine; and

(d) The signature of the Qualified Medical Physicist responsible for performing the calibration.

333-123-0040
Quality Assurance And Safety Checks

(1) Periodic quality assurance checks must be performed on all therapeutic radiation machines subject to 333-123-0025 at intervals in accordance with industry standards of practice; and

(a) Quality assurance checks must include determination of central axis radiation output and a representative sampling of periodic quality assurance checks in accordance with the written procedures established by the Qualified Medical Physicist.

(b) Quality assurance checks required in this rule must be conducted using a dosimetry system that has been intercompared within the previous 12 months with the dosimetry system described in 333-123-0010(5) of this rule.

(c) The quality assurance procedures established by the Qualified Medical Physicist must:

(A) Specify the frequency at which tests or measurements are to be conducted; and

(B) Specify equipment required for the test; and

(C) Include the name of personnel conducting the test; and

(D) Include the acceptable tolerance for each parameter measured in the quality assurance check and the response triggered by test results that exceed tolerance levels.

(d) The registrant must have the Qualified Medical Physicist review and sign the results of each radiation output quality assurance check within 1 month of the date that the check was performed. The results of each periodic radiation output check must be reviewed according to the following procedures:

(A) The Radiation Therapy Physician and Qualified Medical Physicist must be immediately notified if any parameter is not within its acceptable tolerance. The therapeutic radiation machine must not be used clinically until the Qualified Medical Physicist has determined that all parameters are within their acceptable tolerances; and

(B) Notwithstanding the other requirements of this rule, the registrant must ensure that no therapeutic radiation machine is used to administer radiation to humans unless the quality assurance checks required by section (1) of this rule have been performed within the 30 day period immediately prior to said administration.

(2) Safety Checks. Therapeutic radiation machines subject to 333-123-0025 of this rule must have applicable safety quality assurance check in accordance with industry standards of practice and performed at intervals not to exceed 1 week to ensure proper functioning and operation of:

(a) Electrical interlocks at each external beam radiation therapy room entrance; and

(b) The "BEAM-ON" and termination switches; and

(c) Beam condition indicator lights on the access door(s), control console, and in the radiation therapy room; and

(d) Viewing and auditory systems; and

(e) If applicable, electrically operated treatment room doors from inside and outside the treatment room; and

(f) At least one emergency power cutoff switch. If more than one emergency cutoff switch is installed and not all switches are tested at once, each switch must be tested on a rotating basis. Safety quality assurance checks of the emergency power cutoff switches may be conducted at the end of the weekly treatment schedule in order to minimize possible stability problems with the therapeutic radiation machine or interruption of patient treatment schedules.

(3) The registrant must promptly repair any system identified in this rule that is not operating properly.

(4) The registrant must maintain a record of each quality assurance check required by section (1) of this rule for 3 years. The record must include:

(a) The date of the quality assurance check;

(b) The manufacturer's name, model number, and serial number of the therapeutic radiation machine control panel;

(c) The record must also include the manufacturer's name, model number and serial number and calibration date for the instrument(s) used to measure the radiation output of the therapeutic radiation machine; and

(d) The signature of the individual who performed the periodic quality assurance check.

(5) Quality assurance for a conventional or virtual simulator must include acceptance testing and periodic verification of system performance in accordance with industry standards of practice for a conventional simulator or computed tomography simulators.

333-123-0045
Quality Assurance Program

(1) Each registrant or applicant subject to 333-123-0025 must develop, implement, and maintain a quality assurance program to assure that radiation will be administered as directed by the Qualified Radiation Therapy Physician and in a manner that is safe for the patient, the general public, and radiation therapy staff.

(2) The program must include:

(a) Written or Electronic Directives:

(A) A written or electronic directive must be dated and signed by an radiation therapy physician before the administration of radiation; and

(B) If because of the patient's condition, a delay in the order to provide a written or electronic revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive will be acceptable, provided that the oral revision is documented as soon as possible in writing in the patient's record and a revised written directive is signed by an authorized user within 48 hours of the oral revision; and

(C) The written directive must contain the patient's full name and patient identification number, the type and energy of the beam, the total dose, dose per fraction, treatment site, and number of fractions; and

(D) A written revision to an existing written directive may be made if the revision is dated and signed by a radiation therapy physician before the administration of the external beam dose, or the next fractional dose; and

(E) The registrant must retain copies of written directives for 3 years; and

(F) Any unintended deviation from the written directive must be identified, evaluated and appropriate corrective action taken to prevent recurrence.

(b) The Quality Assurance program must include a process for ensuring that:

(A) Prior to the administration of each course of radiation treatments, the patient's identity is verified by more than one method as the individual named in the written or electronic directive; and

(B) Each administration is in accordance with the written or electronic directive; and

(C) External beam radiation therapy final plans of treatment and related calculations are in accordance with the respective written or electronic directive; and

(D) Manual or computer generated dose calculations and dose distribution plots are in accordance with the written or electronic directive; and

(E) Monitor units used, are verified and that set-up parameters and machine settings are correctly transferred to the control systems of radiation therapy machines; and

(F) At a minimum, prior to the administration of the first radiation treatment, a Port film or Portal image must be taken to check that the radiation field is properly aligned to the intended treatment area. The Port film or Portal image must be viewed and evaluated and the beam alignment approved by the Radiation Therapy Physician before radiation therapy commences. Thereafter, a weekly Port film or Portal image must be reviewed and signed by a Radiation Therapy Physician.

333-123-0050
Qualified Medical Physicist Support in Facilities Having Therapeutic Radiation Machines with Energies of 1 Mv and Above

(1) The Qualified Medical Physicist is responsible for:

(a) Full calibration(s) required by 333-123-0035(3) and radiation protection surveys required by 333-123-0010(4); and

(b) Supervision and review of dosimetry; and

(c) Beam data acquisition and transfer for computerized dosimetry, and supervision of its use; and

(d) Quality assurance, including quality assurance check review required by 333-123-0040(2)(c); and

(e) Consultation with the authorized user in treatment planning, as needed; and

(f) Performing in a timely manner, calculations/assessments, regarding treatment errors, and report to the responsible user.

(2) Acceptance Testing, Commissioning and Full Calibration Measurements.

(a) Acceptance testing, commissioning and full calibration of a therapeutic radiation machine subject to this rule must be per-

formed by, or under the direct supervision of, a Qualified Medical Physicist.

(b) Acceptance testing must be performed in accordance with the manufacturer's contractual specifications. Commissioning must be performed according to the Medical Physicist's procedures before the first medical use following installation or after reinstallation of the therapeutic radiation machine.

Electronic Brachytherapy

(1) Electronic brachytherapy devices shall be exempt from the requirements in OAR 333-123-0025.

(a) An electronic brachytherapy device that does not meet the requirements of this rule shall not be used for irradiation of patients; and

(b) An electronic brachytherapy device shall only be utilized for human use applications specifically approved by the U.S. Food and Drug Administration (FDA) unless participating in a research study approved by the Authority.

(2) Each facility location authorized to use an electronic brachytherapy device shall possess calibrated portable radiation measurement survey instrument capable of measuring dose rates over the range 10 μSv (1 mrem) per hour to 10 mSv (1000 mrem) per hour. The survey instrument(s) shall be operable and calibrated in accordance with OAR 333-123-0010 for the applicable electronic brachytherapy source energy.

333-123-0060
Facility Design Requirements for Electronic Brachytherapy Devices

(1) In addition to shielding adequate to meet the requirements of division 120 of this chapter, a treatment room where an electronic brachytherapy device is used shall:

(a) Prevent simultaneous operation of more than one therapeutic radiation machine in a treatment room if applicable;

(b) Have a door at any entrance; and

(c) Permit communication with and visual observation of the patient from the treatment control panel during the irradiation from an electronic brachytherapy device.

(2) For electronic brachytherapy devices capable of operating at or below 50 kV, radiation shielding for the staff in the treatment room shall be available, either as a portable shield or as localized shielded material around the treatment site.

(3) For electronic brachytherapy devices capable of operating at greater than 150 kV:

(a) The control panel shall be located outside the treatment room; and

(b) Electrical interlocks shall be provided for all doors providing entrance into the treatment room that can:

(A) Prevent the operator from initiating the treatment cycle if a door remains open;

(B) Cause the source to be shielded when an entrance door is opened; and

(C) Prevent the source from being exposed following an interlock interruption until all treatment room entrance doors are closed and the source on-off control is reset at the console.

333-123-0065
Electrical Safety for Electronic Brachytherapy Devices

(1) A high voltage transformer shall:

(a) Be electrically isolated to prevent electrical and magnetic interference with the surrounding environment and ancillary equipment;

(b) Be isolated from personnel (e.g., operator) and the environment by a protective housing that can only be accessed through a cover requiring a tool for access or with electrical interlocks to prevent operation while open; and

(c) Have appropriate safety labels warning personnel of potential electrical shock and heat related injuries.

(2) Brachytherapy manufactured equipment shall be in compliance with the most current revision of the following International Electrotechnical Commission (IEC) documents:

(a) IEC 60601-1:1998+A1+A2:1995;
(b) IEC 60601-1-2:2001;
(c) IEC 60601-2-8:1999; and
(d) IEC 60601-2-17:2004.

333-123-0070
Control Panel Functions

A control panel must be designed to provide:

(1) An indication of whether electrical power is available at the control panel and if activation of the electronic brachytherapy source is possible;

(2) An indication of whether X-rays are being produced;

(3) A means for displaying electronic brachytherapy source accelerating voltage(kV), beam current(μA), pre-set value of radiation dose(cGy) and real time display of dose delivered;

(4) The means for terminating an exposure at any time; and

(5) An access locking control device that can prevent unauthorized use of the electronic brachytherapy device.

333-123-0075
Timer

An irradiation control device timer shall be provided to terminate the irradiation after a pre-set time interval or integrated charge on a dosimeter-based monitor.

(1) A timer shall be provided at the treatment control panel. The timer shall indicate planned setting and the time elapsed or remaining;

(2) A timer shall not permit an exposure if set at zero;

(3) A timer shall be a cumulative device that activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;

(4) A timer shall terminate irradiation when a pre-selected time has elapsed, if any dose monitoring system has not previously terminated irradiation;

(5) A timer shall permit setting of exposure times as short as 0.1 second;

(6) A timer shall be accurate to within one percent of the selected value or 0.1 second, whichever is greater; and

(7) A redundant treatment monitoring system (backup timer) shall be present at the treatment console to use as the treatment stop criterion in case the primary treatment control device timer malfunctions.

Medical Physicist

A Qualified Medical Physicist who meets the requirements of OAR 333-123-0015 is required in facilities having electronic brachytherapy devices. A Medical Physicist is responsible for:

(1) Evaluation of the output from the electronic brachytherapy source;

(2) Generation of the necessary dosimetric information;

(3) Supervision and review of treatment calculations prior to initial treatment of any treatment site;

(4) Establishing the periodic and day-of-use quality assurance checks and reviewing the data from those checks as required in sections (1) through (6) of this rule and OAR 333-123-0100;

(5) Consultation with a Radiation Therapy Physician in treatment planning as needed; and

(6) Performing calculations and assessments regarding patient treatments that may constitute a misadministration.

333-123-0085
Operating Procedures

(1) Only individuals approved by a Radiation Therapy Physician, Radiation Safety Officer, or Qualified Medical Physicist shall be present in the treatment room during treatment.

(2) Electronic brachytherapy devices shall not be made available for medical use unless the requirements of OAR 333-123-0010(4), 333-123-0090 and 333-123-0095 have been met.

(3) The electronic brachytherapy device shall be inoperable, either by hardware or password, when unattended by qualified staff or service personnel.

(4) During operation, the electronic brachytherapy device operator shall monitor the position of all persons in the treatment room, and all persons entering the treatment room, to prevent entering persons from unshielded exposure from the treatment beam.

(5) If a patient must be held in position during treatment, mechanical supporting or restraining devices shall be used.

(6) Written procedures shall be developed, implemented, and maintained for responding to an abnormal situation. These procedures shall include:

(a) Instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions; and

(b) The names and telephone numbers of the Radiation Therapy Physician, the Qualified Medical Physicist, and the Radiation Safety Officer to be contacted if the device or console operates abnormally.

(7) A copy of the current operating and emergency procedures shall be physically located at the electronic brachytherapy device control console. For control consoles that are integral to the electronic brachytherapy device, the required procedures shall be kept where the operator is located during electronic brachytherapy device operation.

(8) Instructions shall be posted at the electronic brachytherapy device control console to inform the operator of the names and telephone numbers of the authorized users, the Qualified Medical Physicist, and the Radiation Safety Officer to be contacted if the device or console operates abnormally.

(9) A Radiation Therapy Physician shall be notified as soon as possible if the patient receiving brachytherapy treatment has a medical emergency, suffers injury or dies. A Radiation Safety Officer or designee shall be notified as soon as possible if there is any radiation related injury to the patient. A Radiation Safety Officer or a Qualified Medical Physicist shall inform the manufacturer and the Authority of the event.

333-123-0090
Safety Precautions for Electronic Brachytherapy Devices

(1) A Qualified Medical Physicist shall determine which persons in the treatment room require monitoring when the beam is energized.

(2) A Radiation Therapy Physician and a Qualified Medical Physicist shall be physically present during the initiation of all patient treatments involving the electronic brachytherapy device.

(3) A Qualified Medical Physicist and either an authorized user or a Radiation Therapy Physician or electronic brachytherapy device operator, under the supervision of an authorized user, who has been trained in the operation and emergency response for the electronic brachytherapy device, shall be physically present during continuation of all patient treatments involving the electronic brachytherapy device.

(4) When shielding is required by OAR 333-123-0060, the electronic brachytherapy device operator shall use a survey meter to verify proper placement of the shielding immediately upon initiation of treatment. Alternatively, a Qualified Medical Physicist shall designate shield locations sufficient to meet the requirements of division 120 of this chapter for any individual, other than the patient, in the treatment room.

(5) All personnel in the treatment room are required to remain behind shielding during treatment. A Qualified Medical Physicist shall approve any deviation from this requirement and shall designate alternative radiation safety protocols, compatible with patient safety, to provide an equivalent degree of protection.

333-123-0095
Electronic Brachytherapy Source Calibration Measurements

(1) Calibration of the electronic brachytherapy source output for an electronic brachytherapy device shall be performed by, or under the direct supervision of a Qualified Medical Physicist.

(2) Calibration of the electronic brachytherapy source output shall be made for each electronic brachytherapy source annually, or after any repair affecting the X-ray beam generation, or when indicated by the electronic brachytherapy source quality assurance checks.

(3) Calibration of the electronic brachytherapy source output shall utilize a calibration procedure in accordance with OAR 333-123-0010(5). The dosimetry system shall have been calibrated at the applicable electronic brachytherapy source energy.

(4) Calibration of the electronic brachytherapy source output shall include, as applicable, determination of:

(a) The output within two percent of the expected value, if applicable, or determination of the output if there is no expected value;

(b) Timer accuracy and linearity over the typical range of use;

(c) Proper operation of back-up exposure control devices;

(d) Evaluation that relative dose distribution around the source is within the limit recommended by the manufacturer or recommendations from a recognized national professional association in electronic brachytherapy (when available); and

(e) Source positioning accuracy to within 1 mm within the applicator.

(5) Calibration of the X-ray source output shall be in accordance with current published recommendations from a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of a calibration protocol published by a national professional association, the manufacturer's calibration protocol shall be followed.

(6) The registrant shall maintain a record of each calibration in an auditable form for the duration of the registration. The record shall include:

(a) The date of the calibration;

(b) The manufacturer's name, model number and serial number for the electronic brachytherapy device and a unique identifier for its electronic brachytherapy source;

(c) The model numbers and serial numbers of the instrument(s) used to calibrate the electronic brachytherapy device; and

(d) The name and signature of the Qualified Medical Physicist responsible for performing the calibration.

333-123-0100
Periodic and Day-of-Use Quality Assurance Checks for Electronic Brachytherapy Devices

(1) Quality assurance checks shall be performed by the medical physicists on each electronic brachytherapy device subject to this rule.

(a) At the beginning of each day of use; and

(b) After each X-ray tube installation.

(2) The registrant shall perform periodic quality assurance checks required by this rule in accordance with procedures established by a Qualified Medical Physicist.

(3) To satisfy the requirements of this rule, radiation output quality assurance checks shall include at a minimum:

(a) Verification that output of the electronic brachytherapy source falls within three percent of expected values, as appropriate for the device, as determined by:

(A) Output as a function of time; or

(B) Output as a function of setting on a monitor chamber.

(b) Verification of the consistency of the dose distribution to the output within two to three percent of the expected value, if applicable, or determination of the output if there is no expected value of that found during calibration required by OAR 333-123-0095.

(c) Validation of the operation of positioning methods to ensure that the treatment dose exposes the intended location within 1 mm.

(4) The registrant shall use a dosimetry system that has been intercompared within the previous 12 months with the dosimetry system described in OAR 333-123-0010(5) to make the quality assurance checks required in this rule.

(5) The registrant shall review the results of each radiation output quality assurance check according to the following procedures:

(a) A Radiation Therapy Physician and a Qualified Medical Physicist shall be immediately notified if any parameter is not within its acceptable tolerance. The electronic brachytherapy device shall not be made available for subsequent medical use until the Qualified Medical Physicist has determined that all parameters are within their acceptable tolerances.

(b) If all radiation output quality assurance check parameters appear to be within their acceptable range, the quality assurance check shall be reviewed and signed by either a Radiation Therapy Physician or Qualified Medical Physicist within two days.

(c) A Qualified Medical Physicist shall review and sign the results of each radiation output quality assurance check at intervals not to exceed 30 days.

(6) To satisfy the requirements of this rule, safety device quality assurance checks shall, at a minimum, assure:

(a) Proper operation of radiation exposure indicator lights on the electronic brachytherapy device and on the control console;

(b) Proper operation of viewing and intercom systems in each electronic brachytherapy facility, if applicable;

(c) Proper operation of radiation monitors, if applicable;

(d) The integrity of all cables, catheters or parts of the device that carry high voltages; and

(e) Connecting guide tubes, transfer tubes, transfer-tube-applicator interfaces, and treatment spacers are free from any defects that interfere with proper operation.

(7) If the results of the safety device quality assurance checks required in this rule indicate the malfunction of any system, a registrant shall secure the control console in the OFF position and not use the electronic brachytherapy device except as may be necessary to repair, replace, or check the malfunctioning system.

(8) A registrant shall maintain a record of each quality assurance check required by sections (3) and (7) of this rule in an auditable form for three years.

(a) The record shall include:

(A) The date of the quality assurance check;

(B) The manufacturer's name, model number and serial number for the electronic brachytherapy device;

(C) The name and signature of the individual who performed the periodic quality assurance check; and

(D) The name and signature of the Qualified Medical Physicist who reviewed the quality assurance check.

(b) For radiation output quality assurance checks required by this rule, the record shall also include the unique identifier for the electronic brachytherapy source and the manufacturer's name, model number and serial number for the instrument(s) used to measure the radiation output of the electronic brachytherapy device.

333-123-0105
Therapy Related Computer Systems

(1) A registrant shall perform acceptance testing on the treatment planning system of electronic brachytherapy-related computer systems in accordance with current published recommendations from a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of an acceptance testing protocol published by a national professional association, the manufacturer's acceptance testing protocol shall be followed.

(a) Acceptance testing shall be performed by, or under the direct supervision of a Qualified Medical Physicist. At a minimum, the acceptance testing shall include, as applicable, verification of:

(A) The source-specific input parameters required by the dose calculation algorithm;

(B) The accuracy of dose, dwell time, and treatment time calculations at representative points;

(C) The accuracy of isodose plots and graphic displays;

(D) The accuracy of the software used to determine radiation source positions from radiographic images, if applicable; and

(E) If the treatment-planning system is different from the treatment-delivery system, the accuracy of electronic transfers of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.

(2) The position indicators in the applicator shall be compared to the actual position of the source or planned swell positions, as appropriate, at the time of commissioning.

(3) Prior to each patient treatment regimen, the parameters for the treatment shall be evaluated and approved by a Radiation Therapy Physician and a Qualified Medical Physicist for correctness through means independent of that used for determination of the parameters.

333-123-0110
Training

(1) A registrant shall provide instruction, initially and at least annually, to all individuals who operate the electronic brachytherapy device, as appropriate to the individual's assigned duties, in the operating procedures identified in OAR 333-123-0085. If the interval between patients exceeds one year, retraining of the individuals shall be provided.

(2) In addition to the requirements of OAR 333-123-0015(1) for Radiation Therapy Physicians and OAR 333-123-0015(2) for Qualified Medical Physicists, these individuals shall also receive device specific instruction initially from the manufacturer, and annually from either the manufacturer or other qualified trainer. The training shall be of a duration recommended by a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of any training protocol recommended by a national professional association, the manufacturer's training protocol shall be followed. The training shall include, but not be limited to:

(a) Device-specific radiation safety requirements;

(b) Device operations;

(c) Clinical use for the types of use approved by the FDA;

(d) Emergency procedures, including an emergency drill; and

(e) The registrant's Quality Assurance Program.

(3) A registrant shall retain a record of individuals receiving instruction required by this rule for three years. The record shall include:

(a) A list of the topics covered;

(b) The date of the instruction;

(c) The name(s) of the attendee(s); and

(d) The name(s) of the individual(s) who provided the instruction.

333-123-0115
Mobile Electronic Brachytherapy Service

A registrant providing mobile electronic brachtherapy service shall, at a minimum:

(1) Check all survey instruments before medical use at each address of use or on each day of use, whichever is more restrictive;

(2) Account for the electronic brachytherapy source in the electronic brachytherapy device before departure from the client's address; and

(3) Perform, at each location on each day of use, all of the required quality assurance checks specified in OAR 333-123-0100 to assure proper operation of the device.

DIVISION 124

CIVIL PENALTIES

333-124-0001
Purpose and Scope

The rules in this division establish civil penalties for failure to comply with the statutory and administrative rule requirements in divisions 100 through 123.

Stat. Auth.: ORS 431.262, 431.950 & 453.771
Stats. Implemented: ORS 431.262, 431.950 & 453.771
Hist.: PH 4-2010, f. & cert. ef. 2-16-10

333-124-0010
Civil Penalties

(1) The Authority may impose a civil penalty on:

(a) A tanning facility for violations of ORS 431.925 through 431.955 or any rules in divisions 100, 103, 111, 119 and this chapter.

(b) An X-ray machine registrant for a violation of ORS 453.605 through 453.807 or any rules in division 100, 101, 103, 106, 108, 111, 112, 115, 120, 122, 123 of this chapter, and this division.

(c) A radioactive materials licensee for a violation of ORS 453.605 through 453.807 or any rules in divisions 100, 102, 103, 105, 109, 111, 113, 116, 117, 118, 120, 121 of this chapter, and this division.

(2) For a first violation, unless the violation poses a serious public health threat, the Authority shall provide a tanning facility, X-ray machine registrant or radioactive materials licensee with a Notice of Violation that explains the violation and informs the facility, registrant or licensee of the violation and that it must be corrected within a time frame specified in the Notice, or the facility, registrant or licensee may be subject to a civil penalty.

(3) For violations that pose a significant public health threat, or for second or subsequent violations of any level of severity, the Authority may, but is not required to, issue a Notice of Violation as described in section (2) of this rule prior to issuing a Notice of Imposition of Civil Penalty.

(4) Each day that a facility, registrant or licensee is in violation is considered a new violation until the facility, registrant or licensee is in compliance.

(5) Each device that is out of compliance with applicable statutes or rules is a separate violation.

(6) A civil penalty will be imposed based on the severity of the violation and whether it is a first or repeat offense.

(a) Level 1 violation: A violation that has the potential to cause a significant health and safety problem or has caused a significant health and safety problem.

(b) Level 2 violation: A violation that has the potential to cause a moderate health and safety problem or has caused a moderate health and safety problem.

(c) Level 3 violation: A violation that has the potential to cause a minor health and safety problem or has caused a minor health and safety problem.

(d) Level 4 violation: A violation that, if it continues, could result in a condition that may cause a health and safety problem.

(e) Level 5 violation: An action that violates a statute or rule but will not result in a direct health and safety problem. (Minor statutory or administrative rule infraction)

(7) Civil penalty amounts are as follows, except as provided in section (8) of this rule:

(a) Level 1 violation, first offense: $200.00.

(b) Level 1 violation, second offense: $350.00.

(c) Level 1 violation, third and subsequent offenses: $500.00.

(d) Level 2 violation, first offense: $150.00.
(e) Level 2 violation, second offense: $200.00.
(f) Level 2 violation, third and subsequent offenses: $250.00.
(g) Level 3 violation: $100.00.
(h) Level 3 violation, second offense: $150.00.
(i) Level 3 violation, third and subsequent offenses: $200.00.
(j) Level 4 violation, first offense: $75.00.
(k) Level 4 violation, second offense: $100.00.
(l) Level 4 violation, third and subsequent offenses: $125.00.
(m) Level 5 violation, first offense: $50.00.
(n) Level 5 violation, second offense: $75.00.
(o) Level 5 violation, third and subsequent offenses: $100.00.

(8) For failure to properly pay registration or licensing fee in whole within 30 days of the due date, the registrant or licensee will be subject to a civil penalty of:

(a) Three percent of the applicable fee outlined in division 103 of these rules per day per device for the first 30 days, followed by;

(b) Five percent of the applicable fee outlined in division 103 of these rules per day per device for the next 30 days, followed by;

(c) Ten percent of the applicable fee outlined in division 103 of these rules per day per device for the next 30 days or subsequent periods and calculated from the due date until the registration or licensing fee is paid in full.

(9) The Authority will issue a Notice of Intent to Assess Civil Penalties and the Notice will explain the right of the facility to request a hearing, in accordance with ORS 183.745.

Stat. Auth.: ORS 431.262, 431.950 & 453.771

DIVISION 125

MATERIALS SAFETY AND SECURITY

333-125-0001
Nationally Tracked Sources

(1) Purpose and Scope. This rule outlines the reporting requirements for any licensees that possess an aggregated category 1 or category 2 quantity of radioactive material listed in Appendix A to 10 CFR Part 37 to report to the National Source Tracking System (NSTS). The mission of the NSTS is to track category 1 and category 2 radioactive materials from manufacturing through their disposal, decay, or exportation.

(2) Reports of Transactions. Each licensee who manufactures, transfers, receives, disassembles, or disposes of a nationally tracked source shall complete and submit a National Source Tracking Transaction Report as specified in subsections (2)(a) through (2)(e) of this rule for each type of transaction.

(a) Each licensee who manufactures a nationally tracked source shall complete and submit a National Source Tracking Transaction report. The report must include the following information:

(A) The name, address, and license number of the reporting licensee;

(B) The name of the individual preparing the report;

(C) The manufacturer, model, and serial number of the source;

(D) The radioactive material in the source;

(E) The initial source strength in becquerels (curies) at the time of manufacture; and

(F) The manufacture date of the source.

(b) Each licensee that transfers a nationally tracked source to another person shall complete and submit a National Source Tracking Transaction report. The report must include the following information:

(A) The name, address, and license number of the reporting licensee;

(B) The name of the individual preparing the report;

(C) The name and license number of the recipient facility and the shipping address;

(D) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the sources;

(E) The radioactive material in the source;

(F) The initial or current source strength in becquerels (curies);

(G) The date for which the source strength is reported;

(H) The shipping date;

(I) The estimated time of arrival date; and

(J) For nationally tracked sources transferred as waste under a Uniform Low-Level Radioactive Waste Manifest, the waste manifest number and the container identification with the nationally tracked sources.

(c) Each licensee that receives a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(A) The name, address, and license number of the reporting licensee;

(B) The name of the individual preparing the report;

(C) The name, address, and license number of the person that provided the source:

(D) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;

(E) The radioactive material in the source;

(F) The initial or current source strength in becquerels (curies);

(G) The date for which the source strength is reported;

(H) The date of receipt; and

(I) For material received under a Uniform Low-Level radioactive Waste Manifest, the waste manifest number and the container identification with the nationally tracked source.

(d) Each licensee that disassembles a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(A) The name, address, and license number of the reporting licensee;

(B) The name of the individual preparing the report;

(C) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;

(D) The radioactive material in the source;

(E) The initial or current source strength in becquerels (curies);

(F) The date for which the source strength is reported; and

(G) The disassemble date of the source.

(e) Each licensee who disposes of a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(A) The name, address, and license number of the reporting licensee;

(B) The name of the individual preparing the report;

(C) The waste manifest number;

(D) The container identification with the nationally tracked source;

(E) The date of disposal; and

(F) The method of disposal.

(f) The reports discussed in subsections (2)(a) through (2)(e) of this rule must be submitted by the close of the next business day after the transactions. The report must be submitted to the National Source Tracking System by using:

(A) The online National Source Tracking System;

(B) Electronically using a computer readable format;

(C) By facsimile;

(D) By mail to the address on the National Source Tracking Transaction Report Form (NRC Form 748); or

(E) By telephone with follow up by facsimile or mail.

(g) Each licensee shall correct any error in previously filed reports or file a new report for any missed transaction within five business days of the discovery of the error or missed transaction.

Such errors may be detected by a variety of methods such as administrative reviews or by physical inventories required by regulation. In addition, each licensee shall reconcile the inventory of nationally tracked sources possessed by the licensee against that licensee's data in the National Source Tracking System. The reconciliation must be conducted during the month of January in each year. The reconciliation process must include resolving any discrepancies between the National Source Tracking System and the actual inventory by filing the reports identified by subsections (2)(a) through (2)(e) of this rule. By January 31 of each year, each licensee must submit to the National Source Tracking System confirmation that the data in the National Source Tracking System is correct.

(h) Each licensee that possesses Category 1 nationally tracked sources shall report its initial inventory of Category 1 nationally tracked sources to the National Source Tracking System by January 31, 2009. Each licensee that possesses Category 2 nationally tracked sources shall report its initial inventory of Category 2 nationally tracked sources to the National Source Tracking System by January 31, 2009. The information may be submitted by using any of the methods identified by paragraph (2)(f)(A) through (2)(f)(E) of this rule. The initial inventory report must include the following information:

(A) The name, address, and license number of the reporting licensee;

(B) The name of the individual preparing the report;

(C) The manufacturer, model, and serial number of each nationally tracked source or, if not available, other information to uniquely identify the source;

(D) The radioactive material in the sealed source;

(E) The initial or current source strength in becquerels (curies); and

(F) The date for which the source strength is reported.

Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material

333-125-0005
Purpose and Scope

(1) OAR 333-125-0005 through 333-125-0200 contains the physical protection program requirements for any licensees that possess an aggregated category 1 or category 2 quantity of radioactive material listed in Appendix A to 10 CFR Part 37. These requirements provide reasonable assurance of the security of category 1 or 2 quantities of radioactive material by protecting these materials from theft or diversion. Specific requirements for access to material, use of material, transfer of material, and transport of material are included. No provision of this division authorizes the possession of licensed material.

(2) Background investigations, access control program and physical protection during use requirements apply to any person who possesses or uses at any site, an aggregated category 1 or category 2 quantity of radioactive material.

(3) Physical protection in transit applies to any person who under the rules in this division:

(a) Transports or delivers to a carrier for transport in a single shipment, a category 1 or category 2 quantity of radioactive material; or

(b) Imports or exports a category 1 or category 2 quantity of radioactive materials. The rules that establish the physical protection program apply to the domestic portion of the transport.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.635
Hist.: PH 19-2015, f. 9-30-15, cert. ef. 10-1-15

333-125-0010
Definitions

(1) "Access control" means a system for allowing only approved individuals to have unescorted access to the security zone and for ensuring that all other individuals are subject to escorted access.

(2) "Aggregated" means accessible by the breach of a single physical barrier that shall allow access to radioactive material in any form, including any devices that contain the radioactive material, when the total activity equals or exceeds a category 2 quantity of radioactive material.

(3) "Approved individual" means an individual whom the licensee has determined to be trustworthy and reliable for unescorted access in accordance with OAR 333-125-0020 through 333-125-0095 and who has completed the training required by OAR 333-125-0115.

(4) "Background investigation" means the investigation conducted by a licensee or applicant to support the determination of trustworthiness and reliability.

(5) "Category 1 quantity" means a quantity of radioactive material meeting or exceeding the category 1 threshold in Table 1 of Appendix A, Part 37. This is determined by calculating the ratio of the total activity of each radionuclide to the category 1 threshold for that radionuclide and adding the ratios together. If the sum is equal to or exceeds 1, the quantity shall be considered a category 1 quantity. Category 1 quantities of radioactive material do not include the radioactive material contained in any fuel assembly, subassembly, fuel rod, or fuel pellet.

(6) "Category 2 quantity" means a quantity of radioactive material meeting or exceeding the category 2 threshold but less than the category 1 threshold in Table 1 of Appendix A, Part 37. This is determined by calculating the ratio of the total activity of each radionuclide to the category 2 threshold for that radionuclide and adding the ratios together. If the sum is equal to or exceeds 1, the quantity shall be considered a category 2 quantity. Category 2 quantities of radioactive material do not include the radioactive material contained in any fuel assembly, subassembly, fuel rod, or fuel pellet.

(7) "Diversion" means the unauthorized movement of radioactive material subject to the physical protection program to a location different from the material's authorized destination inside or outside of the site at which the material is used or stored.

(8) "Escorted access" means accompaniment while in a security zone by an approved individual who maintains continuous direct visual surveillance at all times over an individual who is not approved for unescorted access.

(9) "Fingerprint orders" means the orders issued by the U.S. Nuclear Regulatory Commission or the legally binding requirements issued by Agreement States that require fingerprints and criminal history records checks for individuals with unescorted access to category 1 and category 2 quantities of radioactive material or safeguards information-modified handling.

(10) "Local law enforcement agency (LLEA)" means a public or private organization that has been approved by a federal, state, or local government to carry firearms and make arrests, and is authorized and has the capability to provide an armed response in the jurisdiction where the licensed category 1 or category 2 quantity of radioactive material is used, stored, or transported.

(11) "Lost or missing licensed material" means licensed material whose location is unknown. It includes material that has been shipped but has not reached its destination and whose location cannot be readily traced in the transportation system.

(12) "Mobile device" means a piece of equipment containing licensed radioactive material that is either mounted on wheels or casters, or otherwise equipped for moving without a need for disassembly or dismounting; or designed to be hand carried. Mobile devices do not include stationary equipment installed in a fixed location.

(13) "Movement control center" means an operations center that is remote from transport activity and maintains position information on the movement of radioactive material, receives reports of attempted attacks or thefts, provides a means for reporting incidents to appropriate agencies and can request and coordinate appropriate aid.

(14) "Nationally Tracked Source" means a sealed source containing a quantity equal to or greater than Category 1 or Category 2 levels of radioactive material listed in 10 CFR Part 20, Appendix E. In this context a sealed source is defined as radioactive material that is sealed in a capsule or closely bonded in a solid form and that is not exempt from regulatory control. It does not mean material encapsulated solely for disposal, or nuclear material contained in any fuel rod, or fuel pellet.

(15) "No-later-than arrival time" means the date and time that the shipping licensee and receiving licensee have established as the time to initiate an investigation if the shipment has not arrived at the receiving facility. The no-later-than arrival time may not be more than six hours after the estimated arrival time for shipments of category 2 quantities of radioactive material.

(16) "Reviewing official" means the individual who shall make the trustworthiness and reliability determination of an individual to determine whether the individual may have, or continue to have, unescorted access to the category 1 or category 2 quantities of radioactive materials that are possessed by the licensee.

(17) "Sabotage" means deliberate damage, with malevolent intent, to category 1 or 2 quantity of radioactive material, a device that contains a category 1 or 2 quantity of radioactive material, or the components of the security system.

(18) "Safe haven" means a readily recognizable and readily accessible site at which security is present or from which, in the event of an emergency, the transport crew can notify and wait for the local law enforcement authorities.

(19) "Security zone" means any temporary or permanent area determined and established by the licensee for the physical protection of category 1 or category 2 of radioactive material.

(20) "Telemetric position monitoring system" means a data transfer system that captures information by instrumentation and measuring devices about the location and status of a transport vehicle or package between the departure and destination locations.

(21) "Trustworthiness and reliability" means the characteristics of an individual considered dependable in judgment, character, and performance, such that unescorted access to category 1 or category 2 quantities of radioactive material by that individual does not constitute an unreasonable risk to the public health and safety or security. A determination of trustworthiness and reliability for this purpose is based upon the results from a background investigation.

(22) "Unescorted access" means solitary access to an aggregated category 1 or category 2 quantity of radioactive material or the devices that contain the material.

Stats. Implemented: ORS 453.635
Hist.: PH 19-2015, f. 9-30-15, cert. ef. 10-1-15

333-125-0015
Specific Exemptions

(1) A licensee that possesses radioactive waste that contains category 1 or category 2 of radioactive material is exempt from the requirements of OAR 333-125-0020 through OAR 333-125-0190. Except that any radioactive waste that contains discrete sources, ion-exchange resins, or activated material that weighs less than 2,000 kg (4,409 lbs) is not exempt from the requirements within this division.

(2) The licensee shall implement the following requirements to secure the radioactive waste:

(a) Use continuous physical barriers that allow access to the radioactive waste only through established access control points;

(b) Use a locked door or gate with monitored alarm at the access control point;

(c) Assess and respond to each actual or attempted unauthorized access to determine whether an actual or attempted theft, sabotage, or diversion occurred:

(A) Immediately notify LLEA and request an emergency response upon determination that there was an actual or attempted theft, sabotage, or diversion of the radioactive waste that contains category 1 or category 2 quantities of radioactive materials; and

(B) As soon as reasonably possible, the licensee shall contact:

(i) The Oregon Health Authority, Radiation Protection Services 24-hour response line at (971) 673-0490; or

(ii) The Oregon Emergency Response System at 1-800-452-0311.

Stat. Auth.: ORS 453.635

Background Investigations and Access Control Program

333-125-0020
Personnel Access Authorization Requirements for Category 1 and 2 Quantities

(1) Each licensee that possesses an aggregated quantity of radioactive materials at or above the category 2 threshold shall establish, implement, and maintain an access authorization program in accordance with OAR 333-125-0020 through 333-125-0095.

(2) An applicant for a new license and each licensee that shall become newly subject upon application for modification of its license shall implement the requirements of OAR 333-125-0020 through 333-125-0095, as appropriate, before taking possession of an aggregated category 1 or category 2 of radioactive material.

(3) Any licensee that has not previously implemented the Security Orders or has been subject to the provisions of OAR 333-125-0020 through 333-125-0095 shall implement the provisions of those rules before aggregating radioactive material to a quantity that equals or exceeds the category 2 threshold.

(4) General performance objective. The licensee's access authorization program must ensure that the individuals specified in section (5) of this rule are trustworthy and reliable.

(5) Applicability. Licensees shall subject the following individuals to an access authorization program:

(a) Any individual whose assigned duties require unescorted access to category 1 or category 2 quantities of radioactive material or to any device that contains the radioactive material; and

(b) Reviewing officials.

(6) Licensees need not subject the categories of individuals listed in OAR 333-125-0085 subsections (1)(a) through (m) to the investigation elements of the access authorization program.

(7) Licensees shall approve for unescorted access to category 1 or category 2 quantities of radioactive material only those individuals with job duties that require unescorted access to category 1 or category 2 quantities of radioactive material.

(8) Licensees may include individuals needing access to safeguards information-modified handling under 10 CFR Part 73 in the access authorization program under OAR 333-125-0020 through 333-125-0095.

333-125-0025
Access Authorization Program Requirements

(1) Granting unescorted access authorization. Licensees shall implement the following requirements under OAR 333-125-0020 through 333-125-0095 for granting initial or reinstated unescorted access authorization:

(a) Individuals who have been determined to be trustworthy and reliable, shall complete the security training required by OAR 333-125-0105 before being allowed unescorted access to category 1 or category 2 of radioactive material.

(b) Reviewing officials shall be the only individuals who may make trustworthiness and reliability determinations that allow individuals to have unescorted access to category 1 or category 2 of radioactive material possessed by the licensee.

(c) Each licensee shall name one or more individuals to be reviewing officials. After completing the background investigation on the reviewing official, the licensee shall provide under oath or affirmation, a certification that the reviewing official is deemed trustworthy and reliable by the licensee. The fingerprints of the named reviewing official must be taken by a law enforcement

agency, federal or state agencies that provide fingerprinting services to the public, or commercial fingerprinting services authorized by a state to take fingerprints. The licensee shall recertify that the reviewing official is deemed trustworthy and reliable every 10 years in accordance with OAR 333-125-0065.

(2) Reviewing officials must be permitted to have unescorted access to category 1 or category 2 quantities of radioactive materials and access to the licensee's safeguards information or safeguards information-modified handling, if the licensee possesses safeguards information or safeguards information-modified handling.

(3) Reviewing officials cannot approve other individuals to act as reviewing officials.

(4) A reviewing official does not need to undergo a new background investigation before being named by the licensee as the reviewing official if:

(a) The individual has undergone a background investigation that included fingerprinting and an FBI criminal history records check and has been determined to be trustworthy and reliable by the licensee; or

(b) The individual is subject to a category listed in OAR 333-125-0085.

333-125-0030
Informed Consent

(1) Licensees may not initiate a background investigation without the informed and signed consent of the subject individual. The consent must include authorization to share personal information with other individuals or organizations as necessary to complete the background investigation. Before a final adverse determination, the licensee shall provide the individual with an opportunity to correct any inaccurate or incomplete information that is developed during the background investigation. Licensees do not need to obtain signed consent from those individuals that meet the requirements of OAR 333-125-0065. A signed consent must be obtained prior to any reinvestigation.

(2) The subject individual may withdraw his or her consent at any time. Licensees shall inform the individual that:

(a) If an individual withdraws his or her consent, the licensee may not initiate any elements of the background investigation that were not in progress at the time the individual withdrew his or her consent; and

(b) The withdrawal of consent for the background investigation is sufficient cause for denial or termination of unescorted access authorization.

333-125-0035
Personal History Disclosure

Any individual who is applying for unescorted access authorization shall disclose the personal history information that is required by the licensee's access authorization program for the reviewing official to make a determination of the individual's trustworthiness and reliability. Refusal to provide, or the falsification of, any personal history information required by this division is sufficient cause for denial or termination of unescorted access.

Stats. Implemented: ORS 453.635
Hist.: PH 19-2015, f. 9-30-15, cert. ef. 10-1-15

333-125-0040
Determination Basis

(1) The reviewing official shall determine whether to permit, deny, unfavorably terminate, maintain, or administratively withdraw an individual's unescorted access authorization based on an evaluation of all of the information collected to meet the requirements within this division.

(2) The reviewing official may not permit any individual to have unescorted access until the reviewing official has evaluated all of the information collected to meet the requirements of this division and determined that the individual is trustworthy and reliable. The reviewing official may deny unescorted access to any individual based on information obtained at any time during the background investigation.

(3) The licensee shall document the basis for concluding whether or not there is reasonable assurance that an individual is trustworthy and reliable.

(4) The reviewing official may terminate or administratively withdraw an individual's unescorted access authorization based on information obtained after the background investigation has been completed and the individual had been granted unescorted access authorization.

(5) Licensees shall maintain a list of persons currently approved for unescorted access authorization. When a licensee determines that a person no longer requires unescorted access or has become ineligible to meet access authorization requirements, the licensee shall remove the person from the approved list as soon as possible, but no later than seven working days, and take prompt measures to ensure that the individual is unable to have unescorted access to the material.

(6) The licensee shall take prompt immediate measures to ensure that the individual is unable to have unescorted access to the material.

333-125-0045
Access Authorization Program Procedures

Licensees shall develop, implement, and maintain written procedures for implementing the access authorization program. The procedures must include provisions for the notification of individuals who are denied unescorted access. The procedures must include provisions for the review, at the request of the affected individual, of a denial or termination of unescorted access authorization. The procedures must contain a provision to ensure that the individual is informed of the grounds for the denial or termination of unescorted access authorization and allow the individual an opportunity to provide additional relevant information.

333-125-0050
Right to Correct and Complete Information

(1) Prior to any final adverse determination, licensees shall provide each individual subject to this division with the right to complete, correct, and explain information obtained as a result of the licensee's background investigation. Confirmation of receipt by the individual of this notification must be maintained by the licensee for a period of one year from the date of the notification.

(2) If an individual reviewing their criminal history record believes that it is incorrect or incomplete in any respect and wishes to change, correct, update, or explain anything in the record, the individual may initiate challenge procedures.

(3) Challenge procedures include direct application by the individual challenging the record to the law enforcement agency that contributed the questioned information or a direct challenge as to the accuracy or completeness of any entry on the criminal history record to the Federal Bureau of Investigation, Criminal Justice Information Services (CJIS) Division, ATTN: SCU, Mod. D-2, 1000 Custer Hollow Road, Clarksburg, WV 26306 as set forth in 28 CFR 16.30 through 16.34. In the latter case, the Federal Bureau of Investigation (FBI) will forward the challenge to the agency that submitted the data, and will request that the agency verify or correct the challenged entry. Upon receipt of an official communication directly from the agency that contributed the original information, the FBI Identification Division makes any changes necessary in accordance with the information supplied by that agency. Licensees must provide at least 10 days for an individual to initiate action to challenge the results of an FBI criminal history records check after the record being made available for his or her

review. The licensee may make a final adverse determination based upon the criminal history records only after receipt of the FBI's confirmation or correction of the record.

Records

(1) The licensee shall retain documentation regarding the trustworthiness and reliability of individual employees for three years from the date the individual no longer requires unescorted access to category 1 or category 2 radioactive materials.

(2) The licensee shall retain a copy of the current access authorization program procedures as a record for three years after the procedure is no longer needed. If any portion of the procedure is superseded, the licensee shall retain the superseded materials for three years after the records have been amended.

(3) The licensee shall retain the list of persons approved for unescorted access authorization for three years after the list is superseded or replaced.

333-125-0060
Initial Investigation

(1) Before allowing an individual unescorted access to materials and devices containing category 1 or category 2 radioactive materials, licensees shall complete a background investigation of the individual seeking unescorted access authorization. The scope of the investigation must encompass at least the seven years preceding the date of the background investigation or since the individual's 18th birthday, whichever is shorter.

(2) The background investigation must include at a minimum:

(a) Fingerprinting and an FBI identification and criminal history records check in accordance with OAR 333-125-0075 through 333-125-0080;

(b) Verification of true identity. Licensees shall verify the true identity of the individual who is applying for unescorted access authorization to verify that the applicant is who he or she claims to be. A licensee shall review official identification documents such as driver's license; passport; government identification; certificate of birth issued by the state, province, or country of birth and compare the documents to personal information data provided by the individual to identify any discrepancy in the information.

(A) Licensees shall document the type, expiration, and identification number of the identification document, or maintain a photocopy of identifying documents on file in accordance with OAR 333-125-0090; and

(B) Licensees shall certify in writing that the identification was properly reviewed, and shall maintain the certification and all related documents for review upon inspection.

(c) Employment history verification. Licensees shall complete employment and military history verification. Licensees shall verify the individual's employment with each previous employer for the most recent seven years before the date of application.

(d) Verification of education. Licensees shall verify that the individual participated in the education process during the claimed period.

(e) Character and reputation determination. Licensees shall complete reference checks to determine the character and reputation of the individual who has applied for unescorted access authorization. Unless other references are not available, reference checks may not be conducted with any person who is known to be a close member of the individual's family, including but not limited to the individual's spouse, parents, siblings, or children, or any individual who resides in the individual's permanent household. Reference checks under this division must be limited to whether the individual has been and continues to be trustworthy and reliable.

(A) The licensee shall also, to the extent possible, obtain independent information to corroborate that provided by the individual such as seeking references not supplied by the individual; and

(B) If a previous employer, educational institution, or any other entity with which the individual claims to have been engaged fails to provide information or indicates an inability or unwillingness to provide information within a time frame deemed appropriate by the licensee but at the least after 10 business days of the request or if the licensee is unable to reach the entity, the licensee shall document the refusal, unwillingness or inability in the record of investigation; and attempt to obtain the information from an alternate source.

333-125-0065
Grandfathering

(1) Individuals who have been determined to be trustworthy and reliable for unescorted access to category 1 or category 2 quantities of radioactive material under the Fingerprint Orders may continue to have unescorted access to category 1 and category 2 quantities of radioactive materials without further investigation. These individuals shall be subject to the reinvestigation requirement outlined in OAR 333-125-0070.

(2) Individuals who have been determined to be trustworthy and reliable under the provisions of 10 CFR Part 73 or the security orders for access to safeguards information, safeguards information-modified handling, or risk-significant material, may have unescorted access to category 1 and category 2 quantities of radioactive material without further investigation.

(3) The licensee shall document that the individual was determined to be trustworthy and reliable under the provisions of 10 CFR Parts 73 or a security order. Security order, in this context, refers to any order that was issued by the NRC that required fingerprints and an FBI criminal history records check for access to safeguards information, safeguards information-modified handling, or risk significant material such as special nuclear material or large quantities of uranium hexafluoride. These individuals shall be subject to the reinvestigation requirement per OAR 333-125-0070.

333-125-0075
Requirements for Criminal History Records Checks of Individuals Granted Unescorted Access

(1) General Performance Objective and Requirements. Except for those individuals listed in OAR 333-125-0085 and those individuals grandfathered under OAR 333-125-0065, each licensee subject to the provision of this division shall fingerprint each individual who is to be permitted unescorted access to category 1 and category 2 quantities of radioactive material.

(2) Licensees shall transmit all collected fingerprints to the NRC for transmission to the FBI. The licensee shall use the information received from the FBI as part of the required background investigation to determine whether to grant or deny unescorted access to category 1 or category 2 quantities of radioactive material for that individual.

(3) The licensee shall notify each affected individual that their fingerprints will be used to secure a review of their criminal history record, and shall inform the individual of the procedures for revising the record or adding explanations to the record.

(4) Fingerprinting is not required if a licensee is reinstating an individual's unescorted access if:

(a) The individual returns to the same facility that granted unescorted access authorization within 365 days of the termination of the individual's unescorted access authorization; and

(b) The previous access was terminated under favorable conditions.

(5) Fingerprints do not need to be taken if an individual who is an employee of a licensee, contractor, manufacturer, or supplier has been granted unescorted access to category 1 or category 2 radioactive material, access to safeguards information, or safeguards information-modified handling by another licensee, based upon a background investigation conducted under OAR 333-125-0020 through 333-125-0095 or the Nuclear Regulatory Commission's Fingerprint Orders or 10 CFR Part 73. An existing criminal history check file may be transferred to another licensee who is conducting a criminal history check for an individual requesting unescorted access in accordance with OAR 333-125-0090(3).

(6) Licensees shall use the information obtained as part of a criminal history records check solely for the purpose of determining an individual's suitability for unescorted access authorization to category 1 or category 2 quantities of radioactive materials, access to safeguards information, or safeguards information-modified handling.

(7) Prohibitions: Licensees may not base a final determination to deny an individual unescorted access authorization to category 1 or category 2 quantities of radioactive materials solely on the basis of information received from the FBI involving:

(a) An arrest more than one year old for which there is no information of the disposition of the case; or

(b) An arrest that resulted in dismissal of the charge or an acquittal.

(8) Licensees may not use information received from a criminal history records check obtained under this division in a manner that can infringe upon the rights of any individual under the First Amendment of the Constitution of the United States, nor shall licensees use the information in any way that can discriminate among individuals on the basis of race, religion, national origin, gender, or age.

333-125-0080
Procedures for Processing of Fingerprint Checks

(1) For the purpose of complying with OAR 333-125-0020 through 333-125-0095, licensees shall submit to the U.S. Nuclear Regulatory Commission, Director, Division of Facilities and Security, 11545 Rockville Pike, ATTN: Criminal History Program/Mail Stop T-03B46M, Rockville, Maryland 20852, one completed, legible standard fingerprint card (Form FD-258, ORIMDNR-COOOZ), electronic fingerprint scan or, where practicable, other fingerprint record for each individual requiring unescorted access to category 1 or category 2 quantities of radioactive material. Copies of these forms may be obtained by writing the Office of Information Services, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, by calling 1-630-829-9565, or by electronic mail to FORMS.Resource@nrc.gov. Guidance on submitting electronic fingerprints can be found at http://www.nrc.gov/site-help/e-submittals.html.

(2) Fees for the processing of fingerprint checks are due upon application. Licensees shall submit payment with the application for the processing of fingerprints through corporate check, certified check, cashier's check, money order, or electronic payment, made payable to "U.S. NRC." For guidance on making electronic payments, contact the Security Branch, Division of Facilities and Security at 301-415-7513. Combined payment for multiple applications is acceptable. The Commission publishes the amount of the fingerprint check application fee on the NRC's public website. (To find the current fee amount, go to the Electronic Submittals page at http://www.nrc.gov/site-help/e-submittals.html and see the link for the Criminal History Program under Electronic Submission Systems.)

(3) The Commission shall forward to the submitting licensee all data received from the FBI as a result of the licensee's application(s) for criminal history records checks.

333-125-0085
Relief from Fingerprinting, Identification, and Criminal History Record Checks and Other Elements of Background Investigations for Designated Categories of Individuals Permitted Unescorted Access to Certain Radioactive Materials

(1) Fingerprinting, and the identification and criminal history records checks required by section 149 of the Atomic Energy Act of 1954, as amended, and other elements of the background investigation are not required for the following individuals prior to granting unescorted access to category 1 or category 2 quantities of radioactive materials:

(a) An employee of the Commission or of the Executive Branch of the U.S. Government who has undergone fingerprinting for a prior U.S. Government criminal history records check;

(b) A member of Congress;

(c) An employee of a member of Congress or Congressional committee who has undergone fingerprinting for a prior U.S. Government criminal history records check;

(d) The Governor of a state or his or her designated state employee representative;

(e) Federal, state, or local law enforcement personnel;

(f) State Radiation Control Program Directors and State Homeland Security Advisors or their designated state employee representatives;

(g) Agreement State employees conducting security inspections on behalf of the NRC under an agreement executed under section 274.i. of the Atomic Energy Act;

(h) Representatives of the International Atomic Energy Agency (IAEA) engaged in activities associated with the U.S. and IAEA Safeguards Agreement who have been certified by the NRC;

(i) Emergency response personnel who are responding to an emergency;

(j) Commercial vehicle drivers for road shipments of category 1 and 2 quantities of radioactive material;

(k) Package handlers at transportation facilities such as freight terminals and railroad yards;

(L) Any individual who has an active federal security clearance, provided that he or she makes available the appropriate documentation. Written confirmation from the agency or employer that granted the federal security clearance or reviewed the criminal history records check must be provided to the licensee. The licensee shall retain this documentation for a period of three years from the date the individual no longer requires unescorted access to category 1 or category 2 quantities of radioactive material; and

(m) Any individual employed by a service provider licensee for which the service provider licensee has conducted the background investigation for the individual and approved the individual for unescorted access to category 1 or category 2 quantities of radioactive material. Written verification from the service provider must be provided to the licensee. The licensee shall retain the documentation for a period of three years from the date the individual no longer requires unescorted access to category 1 or category 2 quantities of radioactive material.

(2) Fingerprinting, and the identification and criminal history records checks required by section 149 of the Atomic Energy Act of 1954, as amended, are not required for an individual who has had a favorably adjudicated U.S. Government criminal history records check within the last five years, under a comparable U.S. Government program involving fingerprinting and an FBI identification and criminal history records check provided that he or she makes available the appropriate documentation. Written confirmation from the agency or employer that reviewed the criminal history records check must be provided to the licensee. The licensee shall retain this documentation for a period of three years from the date the individual no longer requires unescorted access to category 1 or category 2 quantities of radioactive material. These programs include, but are not limited to:

(a) National Agency Check;

(b) Transportation Worker Identification Credentials (TWIC) under 49 CFR Part 1572;

(c) Bureau of Alcohol, Tobacco, Firearms, and Explosives background check and clearances under 27 CFR Part 555;

(d) Health and Human Services security risk assessments for possession and use of select agents and toxins under 42 CFR Part 73;

(e) Hazardous Material security threat assessment for hazardous material endorsement to commercial driver's license under 49 CFR Part 1572; and

(f) Customs and Border Protection's Free and Secure Trade (FAST) Program.

333-125-0090
Protection of Information

(1) Each licensee who obtains background information on an individual under OAR 333-125-0020 through 333-125-0095 shall establish and maintain a system of files and written procedures for protection of the record and the personal information from unauthorized disclosure.

(2) The licensee may not disclose the record or personal information collected and maintained to persons other than the subject individual, his or her representative, or to those who have a need to have access to the information in performing assigned duties in the process of granting or denying unescorted access to category 1 or category 2 quantities of radioactive material, safeguards information, or safeguards information-modified handling. No individual authorized to have access to the information may disseminate the information to any other individual who does not have a need to know.

(3) The personal information obtained on an individual from a background investigation may be provided to another licensee:

(a) Upon the individual's written request to the licensee holding the data to disseminate the information contained in his or her file; and

(b) The recipient licensee verifies information such as name, date of birth, social security number, gender, and other applicable physical characteristics.

(4) The licensee shall make background investigation records obtained under OAR 333-125-0020 through 333-125-0095 available for examination by an authorized representative of the NRC to determine compliance with the regulations and laws.

(5) The licensee shall retain all fingerprint and criminal history records (including data indicating no record) received from the FBI, or a copy of these records if the individual's file has been transferred, on an individual for three years from the date the individual no longer requires unescorted access to category 1 or category 2 quantities of radioactive material.

333-125-0095
Access Authorization Program Review

(1) Each licensee shall be responsible for the continuing effectiveness of the access authorization program. Each licensee shall ensure that access authorization programs are reviewed to confirm compliance with the requirements within OAR 333-125-0020 through 333-125-0095 and that comprehensive actions are taken to correct any noncompliance that is identified. The review program shall evaluate all program performance objectives and requirements. Each licensee shall annually review the access program content and implementation.

(2) The results of the reviews, along with any recommendations, must be documented. Each review report must identify conditions that are adverse to the proper performance of the access authorization program, the cause of the condition(s), and, when appropriate, recommend corrective actions, and corrective actions taken. The licensee shall review the findings and take any additional corrective actions necessary to preclude repetition of the condition, including reassessment of the deficient areas where indicated.

(3) Review records must be maintained for three years.

Physical Protection Requirements During Use

333-125-0100
Security Program

(1) Applicability: Each licensee that possesses an aggregated category 1 or category 2 quantity of radioactive material shall establish, implement, and maintain a security program in accordance with the requirements outlined in this rule through OAR 333-125-0155.

(a) An applicant for a new license and each licensee that becomes newly subject to the requirements of OAR 333-125-0100

through 333-125-0155 upon application for modification of its license shall implement the requirements of OAR 333-125-0100 through 333-125-0155 as appropriate, before taking possession of an aggregated category 1 or category 2 quantity of radioactive material.

(b) Any licensee that has not previously implemented the Security Orders or been subject to the provisions OAR 333-125-0100 through 333-125-0155 shall provide written notification to the Authority at least 90 days before aggregating radioactive material to a quantity that equals or exceeds the category 2 threshold.

(2) General performance objective: Each licensee shall establish, implement, and maintain a security program that is designed to monitor and, without delay, detect, assess, and respond to an actual or attempted unauthorized access to category 1 or category 2 quantities of radioactive material.

(3) Program features: Each licensee's security program must include the program features, as appropriate, described in OAR 333-125-0105 through 333-125-0150.

333-125-0105
General Security Program Requirements

(1) Security plan. Each licensee identified in OAR 333-125-0100(1) shall develop a written security plan specific to its facilities and operations. The purpose of the security plan is to establish the licensee's overall security strategy to ensure the integrated and effective functioning of the security program required by this division. The security plan must, at a minimum:

(a) Describe the measures and strategies used to implement the requirements of OAR 333-125-0100 through 333-125-0155; and

(b) Identify the security resources, equipment, and technology used to satisfy the requirements of this division.

(2) The security plan must be reviewed and approved by the individual with overall responsibility for the security program.

(3) A licensee shall revise its security plan as necessary to ensure the effective implementation of the Authority' requirements. The licensee shall ensure that:

(a) The revision has been reviewed and approved by the individual with overall responsibility for the security program; and

(b) The affected individuals are instructed on the revised plan before the changes

are implemented.

(4) The licensee shall retain a copy of the current security plan as a record for three years after the security plan is no longer required. If any portion of the plan is superseded, the licensee shall retain the superseded material for three years after the record is superseded.

333-125-0110
Security Program Implementation Plan

(1) The licensee shall develop and maintain a written implementation plan that provides procedures on how the requirements of the security plan will be met.

(2) The implementation plan's procedures and revisions must be approved in writing by the individual with overall responsibility for the security program.

(3) The licensee shall retain a copy of the implementation plan's current procedures as a record for three years after the implementation plan is no longer needed. Superseded portions of the plan's procedures must be retained for three years after the record is superseded.

333-125-0115
Security Program Training

(1) Each licensee shall conduct training to ensure that those individuals implementing the security program possess and maintain the knowledge, skills, and abilities to carry out their assigned duties and responsibilities effectively. The training must include instruction in:

(a) The licensee's security program and procedures to secure category 1 or category 2 quantities of radioactive material, and in the purposes and functions of the security measures employed;

(b) The responsibility to report promptly to the licensee any condition that causes or may cause a violation of the Authority's requirements;

(c) The responsibility of the licensee to report promptly to the local law enforcement agency and licensee any actual or attempted theft, sabotage, or diversion of category 1 or category 2 quantities of radioactive material; and

(d) The appropriate response to security alarms.

(2) In determining those individuals who shall be trained on the security program, the licensee shall consider each individual's assigned activities during authorized use and response to potential situations involving actual or attempted theft, diversion, or sabotage of category 1 or category 2 quantities of radioactive material. The extent of the training must be commensurate with the individual's potential involvement in the security of category 1 or category 2 quantities of radioactive material.

(3) Refresher training must be provided at a frequency not to exceed 12 months and when significant changes have been made to the security program. This training must include:

(a) Review of the training requirements in section (1) of this rule and any changes made to the security program since the last training;

(b) Reports on any relevant security issues, problems, and lessons learned;

(c) Relevant results of NRC inspections; and

(d) Relevant results of the licensee's program review and testing and maintenance.

(4) The licensee shall maintain records of the initial and refresher training for three years from the date of the training. The training records must include dates of the training, topics covered, and a list of the licensee's personnel in attendance, and related information.

333-125-0120
Security Program, Protection of Information

(1) Except as provided in section (9) of this rule, licensees authorized to possess category 1 or category 2 quantities of radioactive material shall secure from public disclosure and limit access to their security and implementation plans, and the list of individuals that have been approved for unescorted access.

(2) Efforts to limit access shall include the development, implementation, and maintenance of written policies and procedures for controlling access to, and for proper handling and protection against unauthorized disclosure of the security and implementation plans.

(3) Before granting an individual access to the security plan or implementation plans, the licensee shall:

(a) Evaluate an individual's need to know of the security or implementation plans; and

(b) If the individual has not been authorized for unescorted access to category 1 or category 2 quantities of radioactive material, safeguards information, or safeguards information-modified handling, the licensee must complete a background investigation to determine the individual's trustworthiness and reliability. A trustworthiness and reliability determination shall be conducted by the reviewing official and shall include the background investigation elements contained in OAR 333-125-0060(2)(b) through (2)(e)(B).

(4) Licensees need not subject the following individuals to the background investigation elements for protection of information:

(a) The categories of individuals listed in OAR 333-125-0085(1)(a) through (m); or

(b) Security service provider employees, provided written verification that the employee has been determined to be trustworthy and reliable, by the required background investigation in OAR 333-125-0060(2)(b) through (2)(e)(B) has been provided by the security service provider.

(5) The licensee shall document the basis for concluding that an individual is trustworthy and reliable and allowed access to the security and implementation plans.

(6) Licensees shall maintain a list of persons currently approved for access to the security and implementation plans. When a licensee determines that a person no longer needs access to the security and implementation plans, or no longer meets the access authorization requirements for access to the information, the licensee shall remove the person from the approved list as soon as possible, but no later than seven working days, and take prompt measures to ensure that the individual is unable to obtain the security plan or implementation procedures.

(7) When not in use, the licensee shall store its security and implementation plans in a manner to prevent unauthorized access. Information stored in non-removable electronic form must be password protected.

(8) The licensee shall retain as a record for three years after the document is no longer needed:

(a) A copy of the information protection procedures; and

(b) The list of individuals approved for access to the security plan or implementing procedures.

333-125-0125
Local Law Enforcement Agency Coordination (LLEA)

(1) A licensee subject to OAR 333-125-0100 through 333-125-0155 shall coordinate, to the extent practicable, with a LLEA for responding to threats to the licensee's facility, including any necessary armed response. The information provided to the LLEA must include:

(a) A description of the facilities and the category 1 and category 2 quantities of radioactive materials along with a description of the licensee's security measures that have been implemented to comply with OAR 333-125-0100 through 333-125-0155; and

(b) A notification that the licensee will request a timely armed response by the LLEA to any actual or attempted theft, sabotage, or diversion of category 1 or category 2 quantities of material.

(2) The licensee shall notify the Authority and the NRC regional office at U.S. Nuclear Regulatory Commission, Region IV, Division of Nuclear Materials Safety, 1600 E. Lamar Blvd., Arlington, TX 76011–4511; where electronic mail is appropriate, it shall be addressed to RidsRgn4MailCenter.Resource@nrc.gov.within three business days if:

(a) The LLEA has not responded to the request for coordination within 60 days of the coordination request; or

(b) The LLEA notifies the licensee that the LLEA does not plan to participate in coordination activities.

(3) The licensee shall document its efforts to coordinate with the LLEA. The documentation must be kept for three years.

(4) The licensee shall coordinate with the LLEA at least every 12 months, or when changes to the facility design or operation adversely affect the potential vulnerability of the licensee's material to theft, sabotage, or diversion.

Stat. Auth.: ORS 453.635

333-125-0130
Security Zones

(1) Licensees shall ensure that all aggregated category 1 and category 2 quantities of radioactive material are used or stored within licensee-established security zones. Security zones may be permanent or temporary.

(2) Temporary security zones must be established as necessary to meet the licensee's transitory or intermittent business activities, such as periods of maintenance, source delivery, and source replacement.

(3) Security zones must, at a minimum, allow unescorted access only to approved individuals through:

(a) Isolation of category 1 and category 2 quantities of radioactive materials by the use of continuous physical barriers that allow access to the security zone only through established access control points. A physical barrier is a natural or man-made structure or formation sufficient for the isolation of the category 1 or category 2 quantities of radioactive material within a security zone; or

(b) Direct control of the security zone by approved individuals at all times; or

(c) A combination of continuous physical barriers and direct control.

(4) For category 1 quantities of radioactive material during periods of maintenance, source receipt, preparation for shipment, installation, or source removal or exchange, the licensee shall, at a minimum, provide sufficient individuals approved for unescorted access to maintain continuous surveillance of sources in temporary security zones and in any security zone in which physical barriers or intrusion detection systems have been disabled to allow such activities.

(5) Individuals not approved for unescorted access to category 1 or category 2 quantities of radioactive material must be escorted by an approved individual when in a security zone.

Stat. Auth.: ORS 453.635

333-125-0135
Monitoring, Detection, and Assessment

(1) Licensees shall establish and maintain the capability to continuously monitor and detect without delay all unauthorized entries into its security zones. Licensees shall provide the means to maintain continuous monitoring and detection capability in the event of a loss of the primary power source, or provide for an alarm and response in the event of a loss of this capability to continuously monitor and detect unauthorized entries.

(2) Monitoring and detection must be performed by:

(a) A monitored intrusion detection system that is linked to an onsite or offsite central monitoring facility; or

(b) Electronic devices for intrusion detection alarms that will alert nearby facility personnel; or

(c) A monitored video surveillance system; or

(d) Direct visual surveillance by approved individuals located within the security zone; or

(e) Direct visual surveillance by a licensee designated individual located outside the security zone.

(f) A licensee subject to OAR 333-125-0100 through 333-125-0155 shall also have a means to detect unauthorized removal of the radioactive material from the security zone. This detection capability must provide:

(A) For category 1 quantities of radioactive material, immediate detection of any attempted unauthorized removal of the radioactive material from the security zone. Such immediate detection capability must be provided by:

(i) Electronic sensors linked to an alarm; or

(ii) Continuous monitored video surveillance; or

(iii) Direct visual surveillance.

(g) For category 2 quantities of radioactive material, weekly verification through physical checks, tamper indicating devices, use, or other means to ensure that the radioactive material is present.

(3) Assessment. Licensees shall immediately assess each actual or attempted unauthorized entry into the security zone to determine whether the unauthorized access was an actual or attempted theft, sabotage, or diversion.

(4) Personnel communications and data transmission. For personnel and automated or electronic systems supporting the licensee's monitoring, detection, and assessment systems, licensees shall:

(a) Maintain continuous capability for personnel communication and electronic data transmission and processing among site security systems; and

(b) Provide an alternative communication capability for personnel, and an alternative data transmission and processing capability, in the event of a loss of the primary means of communication or data transmission and processing. Alternative communications and data transmission systems may not be subject to the same failure modes as the primary systems.

(5) Response. Licensees shall immediately respond to any actual or attempted unauthorized access to the security zones, or actual or attempted theft, sabotage, or diversion of category 1 or category 2 quantities of radioactive material at licensee facilities or temporary job sites. For any unauthorized access involving an actual or attempted theft, sabotage, or diversion of category 1 or category 2 quantities of radioactive material, the licensee's response shall include requesting, without delay, an armed response from the LLEA.

333-125-0140
Maintenance and Testing

(1) Each licensee subject to OAR 333-125-0100 through 333-125-0155 shall implement a maintenance and testing program to ensure that intrusion alarms, associated communication systems, and other physical components of the systems used to secure or detect unauthorized access to radioactive material are maintained in operable condition and are capable of performing their intended function when needed. The equipment relied on to meet the security requirements of this division must be inspected and tested for operability and performance at the manufacturer's suggested frequency. If there is no manufacturer's suggested frequency, the testing must be performed at least annually not to exceed 12 months.

(2) The licensee shall maintain records on the maintenance and testing activities for three years.

Requirements for Mobile Devices

(1) Each licensee that possesses mobile devices containing category 1 or category 2 quantities of radioactive material must have two independent physical controls that form tangible barriers to secure the material from unauthorized removal when the device is not under direct control and constant surveillance by the licensee.

(2) For devices in or on a vehicle or trailer, unless the health and safety requirements for a site prohibit the disabling of the vehicle, the licensee shall utilize a method to disable the vehicle or trailer when not under direct control and constant surveillance by the licensee. Licensees shall not rely on the removal of an ignition key to meet this requirement.

333-125-0150
Security Program Review

(1) Each licensee shall be responsible for the continuing effectiveness of the security program. Each licensee shall ensure that the security program is reviewed to confirm compliance with the requirements of this division and that comprehensive actions are taken to correct any noncompliance that is identified. The review must include the radioactive material security program content and implementation. Each licensee shall periodically (at least annually) review the security program content and implementation procedures.

(2) The results of the review, along with any recommendations, must be documented. Each review report must identify conditions that are adverse to the proper performance of the security program, the cause of the condition(s), and, when appropriate, recommend corrective actions, and corrective actions taken. The licensee shall review the findings and take any additional corrective actions necessary to preclude repetition of the condition, including reassessment of the deficient areas where indicated.

(3) The licensee shall maintain the review documentation for three years.

333-125-0155
Reporting of Events

(1) The licensee shall immediately notify the LLEA after determining that an unauthorized entry resulted in an actual or attempted theft, sabotage, or diversion of a category 1 or category 2 quantity of radioactive material. As soon as possible after initiating a response, but not at the expense of causing delay or interfering with the LLEA response to the event, the licensee shall notify the Authority by telephone at (971) 673-0490. In no case shall the notification to the Authority be later than four hours after the discovery of any attempted or actual theft, sabotage, or diversion.

(2) The licensee shall assess any suspicious activity related to possible theft, sabotage, or diversion of category 1 or category 2 quantities of radioactive material and notify the LLEA as appropriate. As soon as possible but not later than four hours after notifying the LLEA, the licensee shall notify the Authority by telephone at (971) 673-0490.

(3) The initial telephonic notification required by section (1) of this rule must be followed within a period of 30 days by a written report submitted to the Authority. The report must include sufficient information for Authority analysis and evaluation, including identification of any necessary corrective actions to prevent future instances.

Physical Protection in Transit

333-125-0165
Additional Requirements for Transfer of Category 1 and Category 2 Quantities of Radioactive Material

(1) A licensee transferring a category 1 or category 2 quantity of radioactive material to a licensee of the Commission or an Agreement State shall meet the license verification provisions listed in subsections (a) through (c) below instead of those listed in OAR 333-102-0330(4).

(a) Any licensee transferring category 1 quantities of radioactive material to a licensee of the Commission or an Agreement State, prior to conducting such transfer, shall verify with the NRC's license verification system or the license issuing authority that the transferee's license authorizes the receipt of the type, form, and quantity of radioactive material to be transferred and that the licensee is authorized to receive radioactive material at the location requested for delivery. If the verification is conducted by contacting the license issuing authority, the transferor shall document the verification. For transfers within the same organization, the licensee does not need to verify the transfer.

(b) Any licensee transferring category 2 quantities of radioactive material to a licensee of the Commission or an Agreement State, prior to conducting such transfer, shall verify with the NRC's license verification system or the license issuing authority that the transferee's license authorizes the receipt of the type, form, and quantity of radioactive material to be transferred. If the verification is conducted by contacting the license issuing authority, the transferor shall document the verification. For transfers within the same organization, the licensee does not need to verify the transfer.

(c) In an emergency where the licensee cannot reach the license issuing authority and the license verification system is non-

functional, the licensee may accept a written certification by the transferee that it is authorized by license to receive the type, form, and quantity of radioactive material to be transferred. The certification must include the license number, current revision number, issuing agency, expiration date, and for a category 1 shipment the authorized address. The licensee shall keep a copy of the certification. The certification must be confirmed by use of the NRC's license verification system or by contacting the license issuing authority by the end of the next business day.

(2) The transferor shall keep a copy of the verification documentation as a record for three years.

333-125-0175
Preplanning and Coordination of Shipment of Category 1 or Category 2 Quantities of Radioactive Material

(1) Each licensee that plans to transport, or deliver to a carrier for transport, licensed material that is a category 1 quantity of radioactive material outside the confines of the licensee's facility or other place of use or storage shall:

(a) Preplan and coordinate shipment arrival and departure times with the receiving licensee;

(b) Preplan and coordinate shipment information with the Governor or the Governor's designee of any state through which the shipment will pass to:

(A) Discuss the state's intention to provide law enforcement escorts; and

(B) Identify safe havens; and

(C) Document the preplanning and coordination activities.

(2) Each licensee that plans to transport, or deliver to a carrier for transport, licensed material that is a category 2 quantity of radioactive material outside the confines of the licensee's facility or other place of use or storage shall coordinate the shipment no-later-than arrival time and the expected shipment arrival with the receiving licensee. The licensee shall document the coordination activities.

(3) Each licensee who receives a shipment of a category 2 quantity of radioactive material shall confirm receipt of the shipment with the originator. If the shipment has not arrived by the no-later-than arrival time, the receiving licensee shall notify the originator.

(4) Each licensee, who transports or plans to transport a shipment of a category 2 quantity of radioactive material, and determines that the shipment will arrive after the no-later-than arrival time provided pursuant to section (2) of this rule, shall promptly notify the receiving licensee of the new no-later-than arrival time.

(5) The licensee shall retain a copy of the documentation for preplanning and coordination and any revision thereof, as a record for three years.

Stat. Auth.: ORS 453.635
Stats. Implemented: ORS 453.635

333-125-0180
Advance Notification of Shipment of Category 1 Quantities of Radioactive Material

(1) As specified in sections (1) and (2) of this rule, each licensee shall provide advance notification to the Authority and the Governor of a state, or the Governor's designee, of the shipment of licensed material in a category 1 quantity, through or across the boundary of the state, before the transport, or delivery to a carrier for transport of the licensed material outside the confines of the licensee's facility or other place of use or storage.

(a) Procedures for submitting advance notification. The notification must be made to the Authority and to the office of each appropriate Governor or Governor's designee. The contact information, including telephone and mailing addresses, of Governors and Governors' designees, is available on the NRC's website at https://scp.nrc.gov/special/designee.pdf. . A list of the contact information is also available upon request from the Director, Division of Material Safety, State, Tribal, and Rulemaking Programs, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington DC 20555-0001.(b) A notification delivered by mail must be postmarked at least seven days before transport of the shipment commences at the shipping facility.

(c) A notification delivered by any means other than mail must reach NRC at least four days before the transport of the shipment commences and must reach the office of the Governor or the Governor's designee at least four days before transport of a shipment within or through the state.

(2) Information to be furnished in advance notification of shipment. Each advance notification of shipment of category 1 quantities of radioactive material must contain the following information, if available at the time of notification:

(a) The name, address, and telephone number of the shipper, carrier, and receiver of the category 1 radioactive material;

(b) The license numbers of the shipper and receiver;

(c) A description of the radioactive material contained in the shipment, including the radionuclides and quantity;

(d) The point of origin of the shipment and the estimated time and date that shipment will commence;

(e) The estimated time and date that the shipment is expected to enter each state along the route;

(f) The estimated time and date of arrival of the shipment at the destination; and

(g) A point of contact, with a telephone number, for current shipment information.

(3)(a) Revision notice. The licensee shall provide any information not previously available at the time of the initial notification, as soon as the information becomes available but not later than commencement of the shipment, to the Governor of the state or the Governor's designee and to the Authority.

(b) A licensee shall promptly notify the Governor of the state or the Governor's designee of any changes to the information provided in accordance with sections (2) and (3) of this rule. The licensee shall also immediately notify the NRC's Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001 of any such changes.

(4) Cancellation notice. Each licensee who cancels a shipment for which advance notification has been sent shall send a cancellation notice to the Governor of each state or to the Governor's designee previously notified and to the Authority. The licensee shall send the cancellation notice before the shipment has commenced or as soon thereafter as possible. The licensee shall state in the notice that it is a cancellation and identify the advance notification that is being cancelled.

(5) Records. The licensee shall retain a copy of the advance notification, any revision and cancellation notices as a record for three years after the notification has been made.

(6) Protection of information. State officials, state employees, and other individuals, whether or not licensees of the U.S Nuclear Regulatory Commission or an Agreement State, who receive schedule information of the kind specified in section (2) of this rule shall protect that information against unauthorized disclosure.

333-125-0185
Requirements for Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material During Shipment

(1)(a) Shipments by road. Each licensee who transports, or delivers to a carrier for transport, in a single shipment, a category 1 quantity of radioactive material shall:

(A) Ensure that movement control centers are established that maintain position information from a remote location. These control centers must monitor shipments 24 hours a day, seven days a week, and have the ability to communicate immediately, in an emergency, with the appropriate law enforcement agencies.

(B) Ensure that redundant communications are established that allow the transport to contact the escort vehicle (when used) and movement control center at all times. Redundant communications may not be subject to the same interference factors as the primary communication.

(C) Ensure that shipments are continuously and actively monitored by a telemetric position monitoring system or an alternative tracking system reporting to a movement control center. A movement control center must provide positive confirmation of the location, status, and control over the shipment. The movement control center must be prepared to promptly implement preplanned procedures in response to deviations from the authorized route or a notification of actual, attempted, or suspicious activities related to the theft, loss, or diversion of a shipment. These procedures will include, but not be limited to, the identification of and contact information for the appropriate LLEA along the shipment route.

(D) Provide an individual to accompany the driver for those highway shipments with a driving time period greater than the maximum number of allowable hours of service in a 24 hour duty day as established by the Department of Transportation Federal Motor Carrier Safety Administration. The accompanying individual may be another driver.

(E) Develop written normal and contingency procedures to address:

(i) Notifications to the communication center and law enforcement agencies;

(ii) Communication protocols. Communication protocols must include a strategy for the use of authentication codes and duress codes and provisions for refueling or other stops, detours, and locations where communication is expected to be temporarily lost;

(iii) Loss of communications; and

(iv) Responses to an actual or attempted theft or diversion of a shipment.

(b) Each licensee who makes arrangements for the shipment of category 1 quantities of radioactive material shall ensure that drivers, accompanying personnel, and movement control center personnel have access to the normal and contingency procedures.

(c) Each licensee that transports category 2 quantities of radioactive material shall maintain constant control and surveillance during transit and have the capability for immediate communication to summon appropriate response or assistance.

(d) Each licensee who delivers to a carrier for transport, in a single shipment, a category 2 quantity of radioactive material shall:

(A) Use carriers that have established package tracking systems. An established package tracking system is a documented, proven, and reliable system routinely used to transport objects of value. In order for a package tracking system to maintain constant control and surveillance, the package tracking system must allow the shipper or transporter to identify when and where the package was last and when it may arrive at the next point of control.

(B) Use carriers that maintain constant control and surveillance during transit and have the capability for immediate communication to summon appropriate response or assistance; and

(C) Use carriers that have established tracking systems that require an authorized signature prior to releasing the package for delivery or return.

(2)(a) Shipments by rail. Each licensee who transports, or delivers to a carrier for transport, in a single shipment, a category 1 quantity of radioactive material shall:

(A) Ensure that rail shipments are monitored by a telemetric position monitoring system or an alternative tracking system reporting to the licensee, third-party, or railroad communications center. The communications center shall provide positive confirmation of the location of the shipment and its status. The communications center shall implement preplanned procedures in response to deviations from the authorized route or to a notification of actual, attempted, or suspicious activities related to the theft or diversion of a shipment. These procedures will include, but not be limited to, the identification of and contact information for the appropriate LLEA along the shipment route.

(B) Ensure that periodic reports to the communications center are made at preset intervals.

(b) Each licensee who transports, or delivers to a carrier for transport, in a single shipment, a category 2 quantity of radioactive material shall:

(A) Use carriers that have established package tracking systems. An established package tracking system is a documented, proven, and reliable system routinely used to transport objects of value. In order for a package tracking system to maintain constant control or surveillance, the package tracking system must allow the shipper or transporter to identify when and where the package was last and when it may arrive at the next point of control.

(B) Use carriers that maintain constant control or surveillance during transit and have the capability for immediate communication to summon appropriate response or assistance; and

(C) Use carriers that have established tracking systems that require an authorized signature prior to releasing the package for delivery or return.

(3) Investigations:

(a) Each licensee who makes arrangements for the shipment of category 1 quantities of radioactive material shall immediately conduct an investigation upon the discovery that a category 1 shipment is lost or missing.

(b) Each licensee who makes arrangements for the shipment of category 2 quantities of radioactive material shall immediately conduct an investigation, in coordination with the receiving licensee, of any shipment that has not arrived by the designated no-later-than arrival time.

Stat. Auth.: ORS 453.635

333-125-0190
Reporting of Events

(1) The shipping licensee shall notify the appropriate LLEA, and the NRC's Operations Center by telephone at (301) 816-5100 within one hour of its determination that a shipment of category 1 quantities of radioactive material is lost or missing. The appropriate LLEA is the law enforcement agency in the area of the shipment's last confirmed location. During the investigation required by OAR 333-125-0185(3), the shipping licensee shall provide agreed upon updates to the NRC's Operations Center on the status of the investigation.

(2) The shipping licensee shall notify the NRC's Operations Center by telephone at (301) 816-5100, within four hours of its determination that a shipment of category 2 quantities of radioactive material is lost or missing. If, after 24 hours of its determination that the shipment is lost or missing, the radioactive material has not been located and secured, the licensee shall immediately notify the NRC's Operations Center.

(3) The shipping licensee shall notify the designated LLEA along the shipment route as soon as possible upon discovery of any actual or attempted theft or diversion of a shipment or suspicious activities related to the theft or diversion of a shipment of a category 1 quantity of radioactive material. As soon as possible after notifying the LLEA, the licensee shall notify the NRC's Operations Center by telephone at (301) 816-5100 upon discovery of any actual or attempted theft or diversion of a shipment, or any suspicious activity related to the shipment of category 1 radioactive material.

(4) The shipping licensee shall notify the NRC's Operations Center by telephone at (301) 816-5100 as soon as possible upon discovery of any actual or attempted theft or diversion of a shipment, or any suspicious activity related to the shipment of a category 2 quantity of radioactive material.

(5) The shipping licensee shall notify the NRC's Operations Center by telephone at (301) 816-5100 and the LLEA as soon as possible upon recovery of any lost or missing category 1 quantities of radioactive material.

(6) The shipping licensee shall notify the NRC's Operations Center by telephone at (301) 816-5100 as soon as possible upon recovery of any lost or missing category 2 quantities of radioactive material.

(7) The initial telephonic notification required by sections (1) through (4) of this rule must be followed within a period of 30 days by a written report submitted to the Authority. A written report is not required for notifications on suspicious activities required by sections (3) and (4) of this rule. The report must set forth the following information:

(a) A description of the licensed material involved, including kind, quantity, and chemical and physical form;

(b) A description of the circumstances under which the loss or theft occurred;

(c) A statement of disposition, or probable disposition, of the licensed material involved;

(d) Actions that have been taken, or will be taken, to recover the material; and

(e) Procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of licensed material.

(8) Subsequent to filing the written report, the licensee shall also report any additional substantive information on the loss or theft within 30 days after the licensee learns of such information.

Form of Records

Each record required by this rule must be legible throughout the retention period. The record may be the original or a reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, and specifications must include all pertinent information such as stamps, initials, and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.

333-125-0200
Record Retention

Licensees shall maintain the records that are required by the regulations in this division for the period specified by the appropriate regulation. If a retention period is not otherwise specified, these records must be retained until the Authority terminates the facility's license. All records related to this division may be destroyed upon the Authority terminating the facility's license.

DIVISION 150

FOOD SANITATION RULES

Definitions and Administration

333-150-0000
Food Sanitation Rule

(1) Authority and Purpose. This rule establishes definitions, sets standards for management and personnel, food protection, and equipment and facilities, water supply, sewage disposal, provides for food establishment plan review, and employee restriction to safeguard public health and provide consumers food that is safe, unadulterated, and honestly presented.

(2) Incorporation by Reference. The requirements in the U.S. Public Health Service, Food and Drug Administration (FDA), Food Code 2009, Chapters 1 through 8 are adopted and incorporated by reference.

(3) Deletions. The following sections, paragraphs or subparagraphs of the 2009 FDA Food Code are deleted in their entirety: 2-102.11(C)(8)(b), 2-102.20, 2-103.11(K), 3-202.18(A)(1)(a)–(e), 4-301.12(C)(5), (D) and (E), 4-501.115, 4-603.16(B) and (C), 4-603.17(B)(1), 8-302.11, 8-302.14(E), 8-401.10(B), 8-401.20, 8-402.20(A)(3), 8-402.40, 8-406.11, 8-501.40 and Annex 1 through 8.

(4) Definitions. Adopt paragraph 1-201.10(B) with the following amendments and additions to read:

(a) "Accredited program":

(A) Means a food protection manager certification program that has been evaluated and listed by an accrediting agency as conforming to national standards for organizations that certify individuals or approved by the Oregon Health Authority (Authority) or Oregon Department of Agriculture.

(B) Refers to the certification process and is a designation based upon an independent evaluation of factors such as the sponsor's mission; organizational structure; staff resources; revenue sources; policies; public information regarding program scope, eligibility requirements, re-certification, discipline and grievance procedures; and test development and administration.

(C) Does not refer to training functions or educational programs.

(b) "Assembly" means the act of putting together foods that do not require further preparation. This includes but is not limited to placing a hot dog on a bun, or placing beans, lettuce, and cheese on a tortilla.

(c) "Authority" means the Oregon Health Authority.

(d) "Base of Operation" means the licensed restaurant, commissary or warehouse that services a mobile unit or vending operation.

(e) "Benevolent Meal Site" means:

(A) A periodic food service operation run by a benevolent organization that provides food to the needy or indigent without charge; and

(B) The meal service does not operate from a permanent kitchen facility.

(f) "Catering" means the preparation of food in an approved food establishment and the transportation of the food for service and consumption at some other site.

(g) "Close" means to summarily stop the operation of a food establishment pursuant to ORS 624.073 and 624.370.

(h) "Code" shall have the same meaning as administrative rule.

(i) "Combination Food Service Establishment" means any food establishment located within a single structure or at a single site, and which is engaged in activities subject to licensing or inspecting requirements of both the Authority and the Oregon Department of Agriculture, and the regulated activities are common to the same operator.

(j) "Commercial warewashing machine" means a machine designed and manufactured specifically for use in a food service establishment such as a restaurant and not for domestic or light-commercial purposes.

(k) "Commissary" means a commissary catering establishment, restaurant, or any other place in which, food, beverage, ingredients, containers, or supplies are kept, handled, packaged, prepared or stored, and from which vending machines or mobile units are serviced. A licensed commissary may only be used for catering if licensed mobile food units or vending machines are serviced by the establishment as specified in ORS 624.310.

(L) "Complete Inspection" means any inspection conducted at the election of the licensing agency evaluating all items on the inspection form.

(m) "Cut leafy greens" means fresh leafy greens whose leaves have been cut, shredded, sliced, chopped, or torn. The term "leafy greens" includes iceberg lettuce, romaine lettuce, leaf lettuce, butter lettuce, baby leaf lettuce (i.e., immature lettuce or leafy greens), escarole, endive, spring mix, spinach, cabbage, kale, arugula and chard. The term "leafy greens" does not include herbs such as cilantro or parsley. The term "cut" does not mean removing and discarding exterior leaves.

(n) "Director" means the Director of the Oregon Health Authority or Oregon Department of Agriculture or authorized representative.

(o) "Disclosure" means a written statement that clearly identifies the animal-derived foods which are, or can be ordered, raw, undercooked, or without otherwise being processed to eliminate pathogens, or items that contain an ingredient that is raw, undercooked, or without otherwise being processed to eliminate pathogens.

(p) "Food establishment" means:

(A) An operation that prepares, assembles, packages, serves, stores, vends, or otherwise provides food for human consumption; or

(B) Any room, building, structure or place, used or intended for use, or operated for storing, preparing, compounding, manufacturing, processing, freezing, packaging, distributing, handling, salvaging or displaying food; or

(C) The ground upon which such place or business is operated or used and so much ground adjacent thereto as is also used in carrying on the business of the establishment. The Authority or Department of Agriculture may prescribe additional areas or places which, although they may not be contiguous or adjacent to the above area or establishment, may be included therein; or

(D) Vehicles, machinery, equipment, utensils, tools, fixtures, implements, and all other articles or items, used in operating or carrying on the business of a food establishment.

(q) "Food establishment" regulated by the Oregon Health Authority includes but is not limited to:

(A) Bars, bed and breakfast facilities, cafeterias if open to the public, catered feeding locations, caterers, coffee shops, commissaries, conveyance used to transport people, hospitals if open to the public, hotels, microbreweries, motels, private clubs if open to the public, restaurants, satellite sites, senior citizen centers, snack bars, taverns, vending locations, warehouses (associated with a mobile food unit), or similar food facilities.

(B) An operation that is conducted in a mobile food unit, temporary food establishments, or permanent facility or location; where consumption is on or off premises; and regardless of whether there is a charge for the food.

(C) The premises of a fraternal, social, or religious organization where food is prepared for the public.

(D) School food service that is provided by a private person, business, or organization; and that serve persons other than enrolled students, invited guests or staff.

(E) That relinquishes possession of food to a consumer directly through a restaurant takeout order.

(r) "Food establishment" regulated by the Oregon Department of Agriculture includes but is not limited to:

(A) Markets, food banks, warehouses (distribution), wineries, microbreweries, grocery stores or other food facilities;

(B) An establishment that predominantly sells foods that are not for immediate consumption, such as take and bake pizza, whole pies and cakes, loaves of bread, and pre-made dinners that must be cooked or reheated;

(C) An establishment that offers only prepackaged or bulk foods that are not potentially hazardous;

(D) A produce stand that offers fresh fruits and vegetables;

(E) A food processing plant;

(F) Mobile food units that are operated by an Oregon Department of Agriculture licensed establishment and located on the property of the Oregon Department of Agriculture licensed establishment;

(G) Outdoor cooking and beverage dispensing area operated by a market that is located on the property of the market and is under the jurisdiction of the Oregon Department of Agriculture; or

(H) Food prepared in a private home that is licensed as a domestic processor.

(s) "Food establishment" does not include:

(A) A private home where food is prepared or served for family and guests, and where the public is not invited.

(B) A private home that receives catered or home-delivered food.

(C) An establishment or organization that prepares or sells the following food items for immediate consumption only:

(i) Candy, candied apples and non-potentially hazardous confections;

(ii) Commercially prepackaged ice cream and frozen desserts sold in individual servings;

(iii) Commercially pickled products, commercially processed jerky, nuts, nutmeats, popcorn, and prepackaged foods such as potato chips, pretzels, and crackers;

(iv) Unopened commercially bottled and canned non-potentially hazardous beverages to include alcoholic beverages;

(v) Coffee and tea, with non-potentially hazardous ingredients;

(vi) Non-potentially hazardous hot or cold beverages prepared from individually packaged powdered mixes and commercially bottled water, not to include fresh squeezed juice;

(vii) Non-potentially hazardous foods or beverages provided by a non-food service business or organization as a courtesy for no charge to customers; and

(viii) Other food items as determined by the Authority or the Oregon Department of Agriculture.

(D) An establishment or organization that prepares or sells the following food items for immediate consumption at an event that are obtained from a licensed food service or processing establishment or prepared onsite:

(i) Non-potentially hazardous baked goods;

(ii) A benevolent organization that serves privately donated breads, rolls, pies, cakes, doughnuts or other pastries not having potentially hazardous (TCS) fillings;

(iii) An establishment or organization exempt under this subparagraph must post a notice in public view that states: "NOTICE: Food served at this location may not have been inspected by the regulatory authority."

(E) Private vehicles used for home deliveries.

(F) Personal chef who prepares food for an individual or private party.

(G) Continental breakfast served by a traveler's accommodation licensed under ORS Chapter 446 and that is limited to the following: individual or bulk dispensed containers of commercially prepared juices; commercially prepared non-potentially hazardous pastries; whole uncut fresh fruit with peel, and coffee and tea with non-potentially hazardous ingredients.

(H) Food service that is provided by a state, county, or other governmental entity.

(I) School food service that is provided by a state, county, or other governmental entity; or is providing food to students, teachers, other school staff, and invited guests.

(J) Any person holding a "one-day, special retail beer or special retail wine license" for a private residence; or anyone who possesses a "temporary" license from the Oregon Liquor Control Commission who serves alcoholic beverages to the public, but

serves only foods exempted under 1-201.10(B) of the 2009 FDA Food Code and uses single-service articles.

(K) A bed and breakfast facility with two or less rooms for rent on a daily basis.

(L) Home delivery of grocery orders.

(M) Institutions that do not serve the public.

(N) Produce stands located on a farmer's own property wherein only produce grown by the farmer is sold and no food processing is done as specified in OAR 603-025-0030(2).

(O) Farm Direct Marketers as defined in OAR 603-025-0225(6).

(P) A domestic processor licensed by the Oregon Department of Agriculture that sells only prepackaged and labeled food at a farmer's market.

(t) "Food processing plant" means a commercial operation or a domestic kitchen licensed by the Oregon Department of Agriculture that manufactures, packages, labels, or stores food for human consumption.

(u) "Integral" means that all equipment associated with a mobile unit must be rigidly and physically attached to the unit without restricting the mobility of the unit while in transit. This does not preclude the use of a barbecue unit in conjunction with a Class IV mobile food unit.

(v) "License" means the same as permit for the purposes of this rule.

(w) "License holder" means the same as permit holder for the purposes of this rule.

(x) "Maximum Contaminant Level (MCL)" means the maximum allowable level of a contaminant in water for consumption delivered to the users of a system, except in the case of turbidity where the maximum allowable level is measured at the point of entry to the distribution system.

(y) "Meat" means the flesh of animals used as food including the dressed flesh of cattle, swine, sheep, or goats and other edible animals, except fish, poultry, and wild game animals as specified under subparagraphs 3-201.17(A)(3), (4) and (5) of the 2009 FDA Food Code.

(z) "Mobile Food Unit" means any vehicle that is self-propelled or that can be pulled or pushed down a sidewalk, street, highway or waterway, on which food is prepared, processed or converted or which is used in selling and dispensing food to the ultimate consumer.

(aa) "Outdoor Beverage Dispensing Operation" means an outdoor area on the premises of a food establishment where beverages are dispensed to consumers.

(bb) "Outdoor Cooking Operation" means an outdoor area on the premises of a food establishment where food is cooked for service to consumers.

(cc) "Personal Chef" means an individual that provides cooking services to private individuals or private groups. A personal chef may purchase food from an approved source, but may not store or prepare food in advance. A personal chef may use their own equipment, utensils and spices.

(dd) "Preparation" means the process whereby food is transformed into a consumable form. This includes, but is not limited to, slicing or dicing vegetables, grating cheese, portioning foods, slicing sandwiches, blending foods, or cooking or reheating foods.

(ee) "Priority item" means a provision in this code whose application contributes directly to the elimination, prevention or reduction to an acceptable level, hazards associated with foodborne illness or injury and there is no other provision that more directly controls the hazard.

(A) "Priority item" includes items with a quantifiable measure to show control of hazards such as cooking, reheating, cooling, and handwashing.

(B) "Priority item" is an item that is denoted in this code with a superscript P-^{P}; and

(C) "Priority item" is an item that carries a weight of five points on the Food Service Inspection Report or Inspectional Guide and is considered a critical violation as referenced in ORS Chapter 624.

(ff) "Priority foundation item" means a provision in this code whose application supports, facilitates or enables one or more priority items.

(A) "Priority foundation item" includes an item that requires the purposeful incorporation of specific actions, equipment or procedures by industry management to attain control of risk factors that contribute to foodborne illness or injury such as personnel training, infrastructure or necessary equipment, HACCP plans, documentation or record keeping, and labeling.

(B) "Priority foundation item" is an item that is denoted in this code with a superscript Pf-^{Pf}; and

(C) "Priority foundation item" is an item that carries a weight of three points on the Food Service Inspection Report or Inspectional Guide and is considered a critical violation as referenced in ORS Chapter 624.

(gg) "Quarterly Sampling" means a sample is taken and submitted according to the following schedule: 1st Quarter is January 1 through March 31, 2nd Quarter is April 1 through June 30, 3rd Quarter is July 1 through September 30 and the 4th Quarter is October 1 through December 31.

(hh) "Raw-to-Finish" means cooking foods that are potentially hazardous when in a raw state to a finished, edible state. This practice includes, but is not limited to, cooking raw hamburgers or barbecuing raw meats.

(ii) "Recheck Inspection" means:

(A) An inspection to determine whether specified corrections have been made or alternative procedures maintained for violations identified in previous inspections; or

(B) An inspection to determine whether specific corrections have been maintained for critical violations creating a significantly increased risk for foodborne illness. Recheck inspections may also be referred to as reinspections or follow-up inspections.

(jj) "Repeat violation" means a violation of a rule which is the same specific problem or process as indicated on the Food Service Inspection Report occurring in two consecutive semi-annual inspections.

(kk) "Sample" means a three ounce or less portion of a food or beverage.

(ll) "Semi-annual inspection" means an unannounced complete inspection conducted twice during the calendar year; one in each half of the year, but not less than 90 days or more than 270 days apart.

(mm) "Temporary food establishment" means the same as ORS 624.010(4) (10) and (11).

(nn) "Transport Vehicle" means a vehicle used to transport foods or utensils from the base of operation to a mobile food unit.

(oo) "Utensil" means a food-contact implement or container used in the storage, preparation, transportation, dispensing, sale, or service of food, such as kitchenware or tableware that is multiuse, single-service, or single-use; gloves used in contact with food; temperature sensing probes of food temperature measuring devices; trays used with highchairs; and probe-type price or identification tags used in contact with food.

(pp) "Vehicle" means any device in, upon or by which any person or property is or may be transported or drawn upon a public highway, and includes vehicles that are propelled or powered by any means. This definition includes watercraft.

(qq) "Violation" means any condition which fails to meet a requirement of ORS Chapter 624 or this rule.

(rr) "Violations creating an imminent danger to public health" means those priority item violations in which at least one of the following conditions exits:

(A) Food and drink is spoiled, unwholesome, or contaminated with pathogenic or fecal organisms, toxic chemicals, insect or rodent parts or excreta, or other harmful substances or articles;

(B) Potentially hazardous foods have been kept at temperatures above 41 degrees Fahrenheit and below 135 degrees Fahrenheit for four hours or more;

(C) A food employee has a reportable disease or medical condition under subpart 2-201 of the 2009 FDA Food Code.

(ss) "Violations creating a potential danger to public health" means all priority and priority foundation item violations other than those that create an imminent danger to public health.

(tt) "Violations creating a significantly increased risk for foodborne illness" include:

(A) Potentially hazardous foods at improper temperatures;

(B) Cross contamination of raw to ready-to-eat foods; and

(C) Poor personal hygiene and handwashing.

(uu) "Warehouse" means any place where food, utensils, single-service articles, cleaning or servicing supplies for vending machines, mobile units, or commissaries are stored.

(vv) "Wild Fresh Mushroom" means a mushroom that has not been processed, dried or cultivated.

(5) Amendments to Federal Regulation. The following amendments or additions are made to the 2009 FDA Food Code, as adopted and incorporated by reference. All references to part, subpart, sections, paragraphs and subparagraphs relate to the 2009 FDA Food Code:

(a) Amend section 2-102.11(B) to read: Being a certified food protection manager who has shown proficiency of required information through passing a test that is part of an accredited program or a training program approved by the Oregon Health Authority or Oregon Department of Agriculture;Pf

(b) Adopt paragraphs 2-102.11(A) and (C) without changes.

(c) Amend section 2-201.11 to read: Responsibility of Person in Charge.

(A) The permit holder shall require food employees to report to the person in charge information about their health and activities as they relate to diseases that are transmissible through food. A food employee or conditional employee shall report the date of onset of symptoms, diagnosis of an illness, or of a diagnosis without symptoms that are listed under 2-201.12.P

(B) The person in charge shall notify the regulatory authority that a food employee is:

(i) Jaundice;Pf or

(ii) Diagnosed with an illness listed in 2-201.12.Pf

(C) A food employee shall:

(i) Report to the person in charge if they have been diagnosed with an illness or are experiencing symptoms specified under 2-201.12;P

(ii) Report to the person in charge if they have been living in the same household or working in a setting where there is a confirmed disease outbreak with an illness specified under 2-201.12;P and

(iii) Comply with exclusions and restrictions specified under section 2-201.12.P

(d) Amend section 2-201.12 to read: Exclusions and Restrictions.

(A) The person in charge shall exclude or restrict a food employee from a food establishment in accordance with the following:

(i) Except when the symptom is from a noninfectious condition, exclude a food employee that has any of the following signs or symptoms caused by illness, infection, or other source that is associated with an acute illness:

(I) Vomiting;P

(II) Diarrhea;P

(III) Sore throat with fever;P or

(IV) Jaundice.P

(B) Exclude or restrict a food employee that has a lesion containing pus such as a boil or infected wound that is open or draining and is:

(i) On the hands or wrists, unless an impermeable cover such as a finger cot protects the lesion and a single use glove is worn over the impermeable cover;P

(ii) On exposed portions of the arms, unless the lesion is protected by an impermeable cover;P or

(iii) On other parts of the body, unless the lesion is covered by a dry, durable, tight-fitting bandage.P

(C) Exclude a food employee from a food establishment if the food employee is diagnosed by a health practitioner or presumptive with:

(i) Norovirus;P

(ii) Hepatitis A virus;P

(iii) Shigella spp.;P

(iv) Enterohemorrhagic or Shiga Toxin-Producing Escherichia coli;P or

(v) Salmonella Typhi.P

(e) Amend section 2-201.13 to read: Removal of Exclusions and Restrictions. The person in charge shall adhere to the following conditions when removing, adjusting, or retaining the exclusion or restriction of a food employee:

(A) Restrictions or exclusions on persons diagnosed or presumptive with Hepatitis A, shigellosis or Shiga-toxigenic Escherichia coli (STEC) or Salmonella typhi infection shall not be lifted until a licensed laboratory has determined that the employee is free of pathogens in accordance with OAR 333-019-0014(4) and 333-019-0046. Such restrictions may be waived or modified at the discretion of the local public health authority.P

(B) Except as specified in (A) of section 2-201.13, the person in charge may remove a restriction or exclusion specified under 2-201.12 if the restricted person:

(i) Is free of the symptoms specified under 2-201.12(A)(1)-(3) for 24 hours;P or

(ii) Provides to the person in charge written medical documentation from a health practitioner that states the symptom is from a noninfectious condition;P or

(iii) The person in charge obtains approval from the local public health authority.P

(C) Reinstate a food employee who was diagnosed or presumptive with an infection from Norovirus if the person in charge obtains approval from the local public health authority and one of the following conditions is met:

(i) The food employee provides to the person in charge written medical documentation from a health practitioner stating the food employee is free of a Norovirus infection;P or

(ii) The food employee's symptoms of vomiting or diarrhea have resolved and more than 48 hours have passed since the food employee became asymptomatic;P or

(iii) The food employee did not develop symptoms and more than 48 hours have passed since the food employee was diagnosed.P

(f) Amend section 2-301.13 to read: Double Handwashing.

(A) After defecating, contacting body fluids and discharges, or handling waste containing fecal matter, body fluids, or body discharges, and before beginning or returning to work, food employees shall wash their hands twice using the cleaning procedure specified in section 2-301.12.P

(B) Except when one handwashing lavatory is allowed under paragraph 5-203.11(A), after using the toilet facility food employees shall wash their hands twice, first at a handwashing lavatory in the toilet facility and again at a handwashing lavatory in the food preparation area.P

(g) Amend paragraph 2-301.14(H) to read: Before donning gloves for working with food unless a glove change is not the result of glove contamination.P

(h) Amend section 2-301.16 to read:

(A) A hand antiseptic and a chemical hand antiseptic solution used as a hand dip shall be used according to labeled directions, be approved for use with food, and be applied to hands that are cleaned as specified under section 2-301.12.Pf

(B) A chemical hand antiseptic solution used as a hand dip shall be maintained clean and at a strength equivalent to at least 100 mg/L chlorine.Pf

(i) Amend paragraph 2-401.11(A) to read: Eating, Drinking, or Using Tobacco. Except as specified in paragraph (B) of section 2-401.11, an employee may not eat, drink, or use any form of tobacco except in designated areas where the contamination of exposed food; clean equipment, utensils, and linens; unwrapped single-service and single-use articles; or other items needing protection can not result.Pf

(j) Amend section 2-401.12 to read: Discharges from the Eyes, Nose, and Mouth. Food employees experiencing persistent sneezing, coughing, or a runny nose that causes discharges from the eyes, nose, or mouth may not work with exposed food; clean equipment, utensils, and linens; or unwrapped single-service or single-use articles.Pf

(k) Amend paragraph 2-402.11(A) to read: Employees shall use effective hair restraints to prevent the contamination of food or food-contact surfaces.

(L) Amend paragraph 2-403.11(A) to read: Except as specified in paragraph (B) of section 2-403.11, food employees may not care for or handle animals that may be present such as patrol dogs, service animals, or pets that are allowed as specified in 6-501.115(B)(2)-(5) and (E).Pf

(m) Amend paragraph 3-201.11(B) to read: Except as specified in paragraphs (J), (K) and (L) of section 3-201.11, food prepared in a private home may not be used or offered for human consumption in a food establishment.P

(n) Add paragraph 3-201.11(H) to read: Game meat which has been donated to a charitable organization and has been inspected and processed as provided in ORS 619.095 may be served for human consumption by that charitable organization.P

(o) Add paragraph 3-201.11(I) to read: Except as required in 3-201.11(A) through (H) of the 2009 FDA Food Code and in accordance with ORS 624.116, any person, business or volunteer group may donate food to a benevolent organization that meets the requirements in ORS 624.101. The Internal Revenue Service (IRS) may issue a "letter of determination" that should be used as the basis for assessing compliance with benevolent status of ORS 624.101. The person, business or volunteer group making the donation shall inspect the food to ensure its fitness for human consumption and discard all food that is unwholesome. The following donated food items are approved for use by benevolent organizations:

(A) Commercially prepared foods, canned goods, and milk products, marine and freshwater fishery products or meat animals; i.e., cattle, sheep, goats, equine, swine, poultry or rabbits obtained from facilities licensed by the Oregon Department of Agriculture or the Oregon Health Authority according to ORS Chapters 603, 616, 621, 622, 624, 625 and 635;P

(B) Home baked bread, rolls, pies, cakes, doughnuts or pastries not having perishable fillings, icings, toppings or glazes;P

(C) Fresh fruit and produce from private gardens or commercial growers;P

(D) Salvageable food which has lost the label or which has been subjected to possible damage due to accident, fire, flood, adverse weather or similar cause. Reconditioning of salvageable food shall be conducted according to the Model Food Salvage Code recommended by the Association of Food and Drug Officials and U.S. Department of Health and Human Services;P

(E) Other food as may be approved by the Oregon Health Authority upon prior notification by the donator or benevolent organization;

(F) Unless alternative language has been approved by the regulatory authority, a notice shall be posted in public view that says: "NOTICE: Food served at this location may not have been inspected by the regulatory authority."Pf

(p) Add paragraph 3-201.11(J) to read: Privately donated breads, rolls, pies, cakes, doughnuts or other pastries not having perishable fillings, icings, toppings or glazes may be used in temporary food establishments operated by benevolent organizations for fund-raising events, provided they meet the requirements under 3-201.11(I)(iv).P

(q) Add paragraph 3-201.11(K) to read: Food prepared in a private home that is licensed as a home processor by the Oregon Department of Agriculture.P

(r) Add paragraph 3-201.11(L) to read: A Benevolent Meal Site may serve food prepared by volunteers in an unlicensed kitchen under the following conditions:

(A) Volunteers must obtain a food handler certificate as required in OAR chapter 333, division 175. If the food is prepared by a group of people at the same location, only the person supervising the food preparation shall be required to obtain a certificate. The person supervising the food preparation shall be at the preparation site at all times;

(B) Volunteers that provide only non-potentially hazardous baked goods as allowed under paragraph (J) of section 3-201.11 or whole, uncut fresh fruits and vegetables are exempt from the food handler certification requirement.

(C) The organization sponsoring the Benevolent Meal Site must obtain a signed statement from the volunteers that they have reviewed and will follow the requirements of section 3-201.11. The signed statement must include the volunteer's name, contact information and the kinds of food donated;

(D) The signed statement shall be maintained at the Benevolent Meal Site and be available for review.

(E) Food Preparation and Service:

(i) The following foods may not be provided: home-canned or home processed foods, wild mushrooms, wild game, shellfish, sport-caught fish, raw milk, raw animal foods, eggs from non-commercial sources, unpasteurized juices, and water and ice from unapproved water systems;P

(ii) Except whole, uncut fresh fruit and vegetables and non-potentially hazardous baked goods as described under paragraph (J) of section 3-201.11, leftover food prepared by volunteers must be returned to the volunteer or discarded.P

(iii) Food obtained from licensed establishments may be donated to other facilities if the food is held under proper temperature control and protected from contamination during serving;

(iv) At least one portable handwashing facility as described in paragraph 5-203.11(C) shall be provided at the service location;Pf

(v) Self-service of food is limited to prepackaged items and condiments dispensed in a sanitary manner;

(vi) A statement must be posted at the meal site in public view that states: "Notice: Food served at this location may not have been inspected by the regulatory authority."Pf

(vii) Food must be stored, prepared, handled, transported and served in a manner that is consistent with the food safety requirements in these rules.

(s) Amend section 3-201.16 to read:

(A) Except as specified in (B), identification of mushroom species picked in the wild shall have a written buyer specification which is to remain on file in the food establishment for a minimum of 90 days from the date of sale or service.Pf This written specification shall include:

(i) Identification by the scientific name and the common name of the mushroom species;Pf

(ii) Identification in the fresh state;Pf

(iii) The name and contact information of the person who identified the mushroom and the mushroom seller;Pf and

(iv) A statement as to the qualifications and training of the identifier, specifically related to mushroom identification.Pf

(B) Paragraph (A) of 3-201.16 does not apply to cultivated wild mushroom species that are grown, harvested, and processed in an operation that is regulated by the food regulatory agency that has jurisdiction over the operation.

(C) The food establishment that sells, uses or serves mushrooms picked in the wild shall ensure the mushrooms are conspicuously identified by a label, placard, or menu notation that states:

(i) The common and usual name of the mushroom;Pf and

(ii) The statement "Wild mushrooms: not an inspected product".Pf

(t) Add subparagraph 3-201.17(A)(5) to read: Except as specified in (A)(1) through (4) of section 3-201.17:

(A) Game meat donated to a charitable organization and inspected by employees of the Oregon Department of Agriculture, Oregon Department of Fish and Wildlife, or State Police as provided for in ORS 619.095 may be served for human consumption by that charitable organization.P

(B) As used in subparagraph (A) of section 3-201.17:

(i) Charitable organization means the Department of Human Services, Oregon Health Authority, Oregon Youth Authority,

Department of Corrections institutions, low-income nutritional centers, public school nutritional centers, senior nutritional centers, state hospitals and other charitable organizations or public institutions approved by the Oregon Department of Fish and Wildlife.

(ii) Game meat includes antelope, bighorn sheep, deer, elk, moose and mountain goat.

(u) Add section 3-201.18 to read: Outdoor Cooking and Beverage Dispensing Operations.

(A) Outdoor cooking and beverage dispensing by a food establishment shall be allowed as a part of the operation when conducted on the premises of the food establishment.Pf

(B) Enclosure of an outdoor cooking and beverage dispensing operation is not required unless necessary to protect food from contamination. The outdoor cooking and beverage dispensing operation must be designed to protect food, equipment, utensils, single-use articles and other items from contamination when not in operation.

(C) Outdoor cooking and beverage dispensing operations must be equipped with or located adjacent to a plumbed handwashing sink. Outdoor cooking and beverage dispensing operations that are not permanently constructed may provide a handwashing system that meets the requirements of 5-203.11(C) if approved by the regulatory authority.Pf

(D) Outdoor cooking shall be limited to the use of a barbeque, hearth oven, tandoori oven, barbeque pit or other similar cooking equipment. The use of equipment such as flat top grills or griddles, woks, steamtables or other cooking, storage or holding devices designed or intended to be used inside of a food service establishment is not allowed.Pf

(E) Other than cooking food, no preparation, assembly, storage or service of food may be done at the outdoor cooking operation. Non-potentially hazardous (non-TCS) condiments may be dispensed at the outdoor cooking operation.Pf

(F) Employees or consumers may be served directly from the outdoor cooking operation if the food is portioned for immediate service. Consumers may not serve themselves from an outdoor cooking operation.

(G) Outdoor beverage dispensing may include alcoholic and other beverages. Consumers may serve themselves from beverage dispensing equipment that meets the requirements of 4-204.13.

(H) Outdoor cooking and beverage dispensing operations must be monitored by food service employees.

(I) Section 3-201.18 does not preclude the service of foods prepared inside the establishment to consumers at outdoor seating areas.

(v) Add paragraph (E) to 3-202.14 to read: Raw milk from goats and sheep that is in compliance with the labeling requirements in OAR 603-024-0543 and the standards defined in OAR 603-024-0041 may be sold in licensed Oregon Department of Agriculture establishments.P

(w) Add subparagraph (C)(3) to 3-203.11 to read: If the establishment serves raw or undercooked shucked molluscan shellfish for immediate consumption, container label information must be maintained in the establishment for 90 days.Pf

(x) Amend section 3-301.11 to read:

(A) Food employees shall wash their hands as specified under sections 2-301.12 and 2-301.13.

(B) Food employees shall minimize bare hand contact with food and shall use suitable utensils such as deli tissue, spatulas, tongs, single-use gloves, or dispensing equipment.P/Pf

(y) Amend paragraph 3-304.12(F) to read: In a container of water if the container is cleaned at a frequency specified under subparagraph 4-602.11(D)(7); and

(A) The water is maintained at a temperature of 135 degrees Fahrenheit or above; or

(B) At 41 degrees Fahrenheit or less.

(z) Add paragraph 3-304.15(E) to read: The use of latex gloves in food service establishments is prohibited.

(aa) Amend section 3-304.17 to read:

(A) Except as specified in paragraph (C) of section 3-304.17, a take-home food container returned to a food establishment may not be refilled at a food establishment with a potentially hazardous food (time/temperature control for safety food).

(B) Except as specified in paragraph (C) of section 3-304.17, a take-home food container refilled with non-potentially hazardous (non-TCS) food shall be cleaned as specified under paragraph 4-603.17(B).

(C) Notwithstanding paragraphs (A) and (B) of section 3-304.17, personal take-out beverage containers, such as thermally insulated bottles, non-spill coffee cups, and promotional beverage glasses, may be refilled by employees or the consumer with a beverage that is a potentially hazardous food (time/temperature control for safety food) if refilling is a contamination-free process as specified under paragraphs 4-204.13(A), (B), and (D).

(bb) Amend section 3-306.11 to read: Except for nuts in the shell and whole, raw fruits and vegetables that are intended for hulling, peeling, or washing by the consumer before consumption, food on display shall be protected from contamination by the use of packaging; counter, service line, or salad bar food guards; display cases; or other effective means.Pf

(cc) Amend section 3-306.12 to read: Condiments, Protection.

(A) Condiments shall be protected from contamination by being kept in dispensers that are designed to provide protection, protected food displays provided with the proper utensils, original containers designed for dispensing, or individual packages or portions.Pf

(B) Condiments at a vending machine location shall be in individual packages or provided in dispensers that are filled at an approved location, such as the food establishment that provides food to the vending machine location, a food processing plant that is regulated by the agency that has jurisdiction over the operation, or a properly equipped facility that is located on the site of the vending machine location.Pf

(dd) Add section 3-307.12 to read: Protection from Contamination, Use of Private Vehicles for Food Deliveries.

(A) Private vehicles may be used for food deliveries if the food is packaged so that it is protected from contamination under Part 3-3 of the 2009 FDA Food Code, and adequate means are provided for maintaining proper food temperatures under section 3-501.16.

(B) Private vehicles shall not be used in any activity that is incompatible with safe and sanitary transportation of food.

(ee) Amend paragraph 3-401.12(C) to read: Heated to a temperature of at least 74 degrees Celsius (165 degrees Fahrenheit) in all parts of the food.P

(ff) Amend paragraph 3-401.14(D) to read: Prior to sale or service, cooked using a process that heats all parts of the food to a temperature and for a time that complies with one of the methods based upon the food being cooked as specified in 3-401.11.P

(gg) Amend subparagraph 3-401.14(F)(5) to read: Describe how foods, after initial heating but prior to cooking as specified in paragraph (D) of section 3-401.14, are to be separated from ready-to-eat foods as specified under 3-302.11(A).Pf

(hh) Amend paragraph 3-402.11 to read:

(A) Except as specified in paragraph (B) of this section, before service or sale in ready-to-eat form, raw, raw-marinated, partially cooked, or marinated-partially cooked fish shall be:

(i) Frozen and stored at a temperature of -20 degrees Celsius (-4 degrees Fahrenheit) or below for a minimum of 168 hours (seven days) in a freezer;P or

(ii) Frozen at -35 degrees Celsius (-31 degrees Fahrenheit) or below until solid and stored at -35 degrees Celsius (-31 degrees Fahrenheit) or below for a minimum of 15 hours;P

(iii) Frozen at -35 degrees Celsius (-31 degrees Fahrenheit) or below until solid and stored at -20 degrees Celsius (-4 degrees Fahrenheit) or below for a minimum of 24 hours.P

(B) Paragraph (A) of this section does not apply to:

(i) Molluscan Shellfish;

(ii) Tuna of the species Thunnus alalunga, Thunnus albacares (Yellowfin tuna), Thunnus atlanticus, Thunnus maccoyii (Bluefin tuna, Southern), Thunnus obesus (Bigeye tuna), or Thunnus thynnus (Bluefin tuna, Northern), or fish species that are listed in

the FDA Fish and Fisheries Products Hazards and Control Guidance, Potential Species-Related & Process Related Hazards and parasites are not a hazard; or

(iii) Aquacultured fish, such as salmon, that:

(I) If raised in open water, are raised in net-pens; or

(II) Are raised in land-based operations such as ponds or tanks; and

(III) Are fed formulated feed, such as pellets, that contains no live parasites infective to the auqacultured fish.

(iv) Fish eggs that have been removed from skein and rinsed.

(ii) Amend section 3-402.12 (B) to read: If the fish are frozen by a supplier, a written agreement or statement from the supplier stipulating that the fish supplied are frozen to a temperature and for a time specified under section 3-402.11 may substitute for the records specified under paragraph (A) of section 3-402.12.Pf

(A) Each invoice received from the supplier shall state the specific fish by species that have been frozen to meet the requirements for parasite destruction specified under section 3-402.11.Pf

(B) The written agreement or statement from the supplier must be updated at least once per year.Pf

(jj) Amend paragraph 3-501.15(B) to read: When placed in cooling or cold holding equipment, food containers in which food is being cooled shall be:

(A) Arranged in the equipment to provide maximum heat transfer through the container walls;Pf and

(B) Loosely covered, or uncovered if protected from overhead contamination as specified under subparagraph 3-305.11(A)(2), during the cooling period to facilitate heat transfer from the surface of the food.Pf

(kk) Amend subparagraph 3-501.17(A) to read: Except when packaging food using a reduced oxygen packaging method as specified under section 3-502.12, and except as specified in paragraphs (D) and (E) of section 3-501.17, refrigerated, ready-to-eat food (time/temperature control for safety food) prepared and held in a food establishment for more than 24 hours shall be clearly marked to indicate the date or day by which the food shall be consumed on premises, sold, or discarded when held at a temperature of 5 degrees Celsius (41 degrees Fahrenheit) or less for a maximum of seven days. The day of preparation shall count as Day 1.Pf

(ll) Amend paragraph 3-501.19(B) to read: If time without temperature control is used as the public health control up to a maximum of four hours.

(mm) Adopt subparagraphs 3-501.19(B)(1)-(4) as written.

(nn) Add subparagraph 3-603.11(B)(3) to read: Food service establishments that serve predominantly raw foods may disclose those items that are not served raw or do not require cooking before consumption.Pf

(oo) Add paragraph 3-701.11(E) to read: Potentially hazardous foods (TCS) that have been kept at temperatures above 41 degrees Fahrenheit or below 135 degrees Fahrenheit for more than four hours shall be discarded.P

(pp) Amend paragraph 4-101.17(A) to read: Except as specified in paragraphs (B), (C), (D) and (E) of section 4-101.17, wood and wood wicker may not be used as a food-contact surface.

(qq) Add paragraph 4-101.17(E) to read: Untreated wood planks, such as cedar, may be used as a cooking surface for grilling or baking.

(rr) Amend section 4-204.14 to read: Vending Machine, Vending Stage Closure. The dispensing compartment of a vending machine including a machine that is designed to vend prepackaged snack food that is not potentially hazardous (time/temperature control for safety food) shall be equipped with a self-closing door or cover if the machine is:

(A) Located in an outside area that does not otherwise afford the protection of an enclosure against the rain, windblown debris, insects, rodents, and other contaminants that are present in the environment; or

(B) Available for self-service during hours when it is not under the full-time supervision of a food employee.

(ss) Amend paragraph 4-301.12(A) to read: Except as specified in paragraphs (C) and (F) of section 4-301.12, a sink with at least three compartments shall be provided for manually washing, rinsing, and sanitizing equipment and utensils.Pf

(tt) Amend subparagraph 4-301.12(C)(5) to read: In establishments licensed by the Oregon Department of Agriculture, two-compartment sinks as specified in paragraphs (D) and (E) of section 4-301.12.

(uu) Add paragraphs 4-301.12(F), (G) and (H) to read: (F) A commercial warewashing machine is allowed in lieu of a manual warewashing sink as required in section 4-301.12.

(A) For mobile food units:

(i) Class I, II and III mobile food units are not required to provide warewashing facilities on the unit, if adequate facilities exist at the commissary.Pf

(ii) Multiple or disposable utensils may be used for food handling on the unit. There shall be at the beginning of each day's business a sufficient supply of clean utensils necessary to properly prepare, assemble, or dispense the food. For mobile food units that do not have a warewashing sink on the unit, this supply shall consist of at least one of each type of utensil for every two hours of operation. If the unit operates less than four hours in a day, the unit shall provide a minimum of two sets of each type of utensil. Utensils shall not be used if they become contaminated.Pf

(iii) Class IV mobile food units must provide a sink with at least three compartments.Pf

(B) For temporary food establishments:

(i) Temporary food establishments are not required to provide warewashing facilities on the premises if multiple utensils are provided as specified in subparagraph (G)(2) of section 4-301.12 and the operator uses a licensed restaurant or commissary as a base of operation.Pf

(vv) Amend subparagraph 4-602.11(D)(7) to read: In-use utensils are intermittently stored in a container of water in which the water is maintained at 57 degrees Celsius (135 degrees Fahrenheit) or more or 5 degrees Celsius (41 degrees Fahrenheit) or less and the utensils and container are cleaned at least every 24 hours or at a frequency necessary to preclude accumulation of soil residues.

(ww) Amend section 4-603.16 to read: Washed utensils and equipment shall be rinsed so that abrasives are removed and cleaning chemicals are removed or diluted through the use of water by using one of the following procedures.

(xx) Adopt paragraphs 4-603.16(A), (D) and (E) as written.

(yy) Amend section 4-603.17 to read:

(A) Except as specified in paragraphs (B) and (C) of this section, returned empty containers intended for cleaning and refilling with food shall be cleaned and refilled in a regulated food processing plant. P

(B) A food-specific container for beverages may be refilled at a food establishment if:

(i) The design of the container and of the rinsing equipment and the nature of the beverage, when considered together, allow effective cleaning at home or in the food establishment;

(ii) Facilities for rinsing before refilling returned containers with fresh, hot water that is under pressure and not recirculated are provided as part of the dispensing system;

(iii) The consumer-owned container returned to the food establishment for refilling is refilled for sale or service only to the same consumer; and

(iv) The container is refilled by:

(I) An employee of the food establishment, or

(II) The owner of the container if the beverage system includes a contamination-free transfer process that can not be bypassed by the container owner.

(C) Consumer-owned containers that are not food-specific may be filled at a water vending machine or system.

(zz) Amend section 5-102.11 to read: Except as specified under section 5-102.12(A), water from a public water system shall meet 40 CFR 141 – National Primary Drinking Water Regulations and OAR chapter 333, division 061.P The following drinking water standards apply to licensed food establishments that are not regulated under OAR chapter 333, division 061:

(A) General Sampling Requirements:

(i) All samples required by this rule must be analyzed and collected as prescribed by OAR 333-061-0036(1)(a) and (b).P

(ii) All samples required by this rule must be analyzed by a laboratory accredited by the Oregon Environmental Laboratory Accreditation Program (ORELAP) and must be handled and documented in accordance with ORELAP standards.P

(iii) Samples submitted to laboratories for analysis shall be clearly identified with the name of the water system, facility license number, sampling date, time, sample location identifying the sample tap, the name of the person collecting the sample and whether it is a routine or a repeat sample.P

(I) Routine: These are samples collected from established sampling locations within a water system at specified frequencies to satisfy monitoring requirements as prescribed in this rule;P

(II) Repeat: These are samples collected as a follow-up to a routine sample that is positive for coliform bacteria or that exceeds the maximum contaminant level for nitrate as specified in OAR 333-061-0030(1);P

(iv) Reporting: All sample results must be submitted to the regulatory authority by the 10th of the month following the end of the applicable sampling period.P

(v) The regulatory authority may collect additional samples to determine compliance with applicable requirements of these rules.P

(B) Sampling for coliform bacteria:

(i) For seasonal establishments, one sample must be collected prior to the operational period of the facility and each subsequent calendar quarter while open to the public. A minimum of two samples shall be required for coliform, regardless of length of operation.P

(ii) For year round facilities, facilities utilizing surface water sources must collect one sample every month. Facilities utilizing groundwater sources must collect one sample every calendar quarter.P

(iii) Domestic kitchens licensed by the Oregon Department of Agriculture must test annually for coliform bacteria. If water is a major ingredient of the product, then additional water testing may be required by the regulatory authority, not to exceed the standards listed in this rule.

(C) Sampling for chemicals:

(i) Every facility must collect one arsenic sample before beginning operation for the first time. This requirement does not apply to facilities that were previously regulated under OAR chapter 333, division 061 and that have sampling results from samples collected prior to January 1, 2003.P

(ii) Every facility must collect one nitrate sample every year while open to the public.P

(D) Additional sampling may be required for coliform bacteria, arsenic, or nitrate at the discretion of the regulatory authority. It is the responsibility of the operator to correct any problems or deficiencies and to assure that water provided to the public does not present a risk to public health.P

(E) MCL Violations: An item is not considered a violation until confirmed by a second sample collected within 24 hours. For coliform bacteria, four repeat samples must be collected within 24 hours of the original positive sample.P

(i) Total coliform: Facilities must report samples positive for total coliform to the regulatory authority within 24 hours of being notified of the sample results.P

(ii) Fecal coliform: Facilities must report samples positive for E. coli to the regulatory authority within 24 hours of being notified of the sample results.P

(I) Facilities must publish public notification for this potential acute health risk as prescribed by OAR 333-061-0042.P

(II) An alternative procedure approved by the regulatory authority must be in place before serving the public.P

(iii) Facilities must report samples that exceed the MCL for nitrate as specified in OAR 333-061-0030(1) to the regulatory authority within at least 24 hours.P

(I) Public notification is required.P

(II) Bottled water must be provided to the public upon request.P

(F) Public Notice: All public notification must be posted conspicuously on site and must include:

(i) A description of the violation or situation of concern;P

(ii) Corrective actions taken to improve water quality;P

(iii) Any potential adverse health effects;P

(iv) The population at risk;P

(v) The alternative measures in place to provide safe drinking water.P

(G) Surface Water Sources: New facilities with surface water sources not regulated under OAR chapter 333, division 061 shall not be licensable after January 1, 2005. Facilities existing prior to January 1, 2005 in compliance with OAR 333-061-0032 may continue to operate.P

(H) Plan Review: All new facilities that are not regulated by OAR chapter 333, division 061 must submit plans to the regulatory authority for review prior to operation. Existing facilities must submit plans to the regulatory authority for review prior to construction or major modification of the system. Systems regulated prior to January 1, 2003 by OAR chapter 333, division 061 are not required to re-submit plans. Plan review must be conducted in accordance with the procedures specified in OAR 333-061-0060.P

(aaa) Add paragraph 5-103.11(C) to read: Hot and cold or tempered water must be provided at all handwashing sinks in the establishment.Pf

(bbb) Amend section 5-104.12 to read:

(A) Water meeting the requirements specified under subparts 5-101, 5-102, and 5-103 of the 2009 FDA Food Code shall be made available for a mobile facility, for a temporary food establishment without a permanent water supply, and for a food establishment with a temporary interruption of its water supply through:

(i) A supply of containers of commercially bottled drinking water;Pf

(ii) One or more closed portable water containers;Pf

(iii) An enclosed vehicular water tank;Pf

(vi) An on-premises water storage tank;Pf or

(v) Piping, tubing, or hoses connected to an adjacent approved source.Pf

(B) If approved by the local public health authority, water for single-event temporary food establishments without a permanent water supply may be obtained from a well that has been tested for coliform bacteria within 60 days prior to the event. The local public health authority may require additional testing or an evaluation of the well and premises as part of the approval process. Sampling, reporting and correction of MCL violations shall be in accordance with the applicable provisions of 5-102.11.Pf

(C) The regulatory authority may grant a temporary variance from requirements of subparts 5-101, 5-102, and 5-103 of the 2009 FDA Food Code by continuing or re-issuing previously issued permits where:

(i) Failure to comply with the code requirements is due to a failure of a community, municipal or public utility water supply system to meet the regulatory authority's requirements;

(ii) The regulatory authority is satisfied that necessary remedial action is ongoing or reasonably imminent in connection with such water supply system; and

(iii) Continuance or re-issuance of the permit is conditional upon the carrying out of such remedial action and the provision of such other measures by the certificate or license holder which will in the judgment of the regulatory authority afford reasonable interim protection to the public health including, but not limited to, adequate warnings to public and personnel as to the safety of the water delivered to the premises from the distribution system and notice of measures to avoid use or consumption of such water or to render it safe for consumption; adequate warnings as to the need for supervision of children and others needing supervision against use of such water; provision of alternative potable water and adequate notification as to its availability; and measures to avoid the use and the availability of water on the premises.Pf

(ccc) Amend paragraph 5-203.11(A) to read: Except as specified in (B),(C), (D) and (E) of section 5-203.11, at least one handwashing sink or the number of handwashing sinks necessary for

their convenient use by employees in areas specified under section 5-204.11 shall be provided. Food establishments opened prior to July 1, 1965 are exempt from this requirement provided that employees can meet the requirements under sections 2-301.12 and 2-301.13.Pf

(ddd) Amend paragraph 5-203.11(C) to read: An adequate number of handwashing stations shall be provided for each temporary food establishment to include:

(A) A minimum of one enclosed container that has a minimum water capacity of five gallons;Pf

(B) A spigot that can be opened to provide a constant flow of water;Pf

(C) Soap;Pf

(D) Water;Pf

(E) Paper towels;Pf and

(F) A collection container for wastewater with a minimum capacity of five gallons.Pf

(eee) Add paragraph 5-203.11(D) and (E) to read: (D) For mobile food units:

(A) Class II, III and IV mobile food units must provide a handwashing sink;Pf

(B) Notwithstanding paragraph 5-203.11(D)(i), Class II and III mobile food units licensed prior to September 4, 2012 may provide a handwashing system as described in paragraph (C) of section 5-203.11 if by January 1, 2018 the unit is upgraded to meet the requirements in paragraph 5-203.11(D)(i). There must be a minimum initial volume of five gallons of water available for handwashing at the beginning of the workday.Pf

(C) Outdoor cooking and beverage dispensing operations must be equipped with or located adjacent to a plumbed handwashing sink. Outdoor cooking and beverage dispensing operations that are not permanently constructed may provide a handwashing system that meets the requirements of paragraph 5-203.11(C) if approved by the regulatory authority.Pf

(fff) Amend section 5-203.12 to read:

(A) Except as specified in paragraph (B) of section 5-203.12, toilet facilities shall be installed according to ORS 455.010 through 455.895 (2010 Oregon Structure Specialty Code) for the number of toilets.Pf

(B) Food establishments with occupancy of 15 or less to include both employees and patrons may have only one toilet fixture and adjacent lavatory on the premises.

(C) Mobile food units shall provide toilet facilities as provided for in section 6-402.11.Pf

(ggg) Add section 5-203.13 (C) to read: For mobile food units, if wet mopping is used as a method for cleaning the floor, then a separate sink must be provided in the unit for cleaning mops and cleaning tools and for the disposal of mop water or similar liquid wastes.

(hhh) Amend paragraph 5-203.15(A) to read: If not provided with an air gap as specified under 5-202.13, a dual check valve with an intermediate vent preceded by a screen of not less than 100 mesh to 25.4 mm (100 mesh to 1 inch) shall be installed upstream from a carbonating device and downstream from any copper in the water supply line.P

(iii) Amend section 5-302.16 to read: A food grade hose shall be used for conveying drinking water from a water tank and shall be:

(jjj) Adopt paragraphs 5-302.16(A) through (E) as written.

(kkk) Add section 5-305.11 to read: Water System Requirements.

(A) A Class IV mobile food unit must have a potable water system under pressure. The system must be of sufficient capacity to furnish enough hot and cold water for food preparation, warewashing, and handwashing, and the requirements of these rules. This supply must consist of a minimum of five gallons of water for handwashing, and 30 gallons or twice the volume of the three-compartment sink, whichever is greater, of water for warewashing.P

(B) Class II and III mobile food units must have a water supply that provides sufficient water for food preparation, handwashing, warewashing or any other requirements as set forth in these rules. If warewashing is conducted on the unit, a minimum of 30 gallons or twice the volume of the three-compartment sink, whichever is greater, of water must be dedicated for this purpose. A minimum of five gallons of water must be provided for handwashing.P

(C) Except relating to handwashing as provided for in subparagragh 5-203.11(D)(2), all mobile food units must be designed with integral potable and waste water tanks on board the unit. A mobile unit may connect to water and sewer if it is available at the operating location, however, the tanks must remain on the unit at all times.Pf

(lll) Add paragraph 5-401.11(C) to read: For a mobile food unit selling only beverages, such as coffee, espresso, or soda, and where most of the potable water supply is used in the product, the waste water retention tank may be at least one half the volume of the potable water storage tank. This determination must be made by the regulatory authority.

(mmm) Amend section 5-402.14 to read: Sewage and other liquid wastes shall be removed from a mobile food establishment at an approved waste servicing area or by a sewage transport vehicle in such a way that a public health hazard or nuisance is not created.Pf

(A) Mobile food units that generate only gray water liquid wastes may hand-carry those wastes to a specific disposal location approved by the regulatory authority.

(B) The waste transport container must be designed and intended to hold and transport gray water without leaks or spills and have a capacity no greater than 20 gallons.Pf

(nnn) Amend subparagraph 6-101.11(B)(2) to read: Walls and ceilings may be constructed of a material that protects the interior from the weather and windblown dust and debris. Benevolent meal sites, as defined in paragraph 1-201.10(B), are exempt from the requirement to provide ceilings or overhead protection.

(ooo) Amend paragraph 6-202.15(E) to read: Paragraph (D) of section 6-202.15 does not apply:

(A) If flying insects or other pests are absent due to the location of the establishment, the weather, or other limiting condition; and

(B) The establishment develops a pest management plan to control the presence of flying insects or other pests. The pest management plan must be approved by the regulatory authority prior to implementation.Pf

(ppp) Amend section 6-202.19 to read: Exterior walking and driving surfaces shall be graded to drain if required by law.

(qqq) Amend section 6-202.110 to read: Outdoor Refuse Areas, Drainage. Outdoor refuse areas shall be constructed in accordance with law and shall be designed and maintained to prevent the accumulation of liquid waste that results from the refuse and from cleaning the area and waste receptacles.

(rrr) Amend section 6-202.111 to read: Except under a domestic kitchen license issued by the Oregon Department of Agriculture, a private home, a room used as living or sleeping quarters, or an area directly opening into a room used as living or sleeping quarters may not be used for conducting food establishment operations.P

(sss) Amend section 6-402.11 to read:

(A) Except for paragraphs (B) through (F) of section 6-402.11, toilet rooms shall be conveniently located and accessible to employees during all hours of operation and shall be an integral part of the building.

(B) A food service establishment may be approved without an integral toilet room under the following conditions:

(i) An integral toilet room is not required by law; and

(ii) A toilet room is located within 500 feet of the food establishment; and

(iii) A written agreement is in place that allows the use of the toilet room; or

(iv) The food service establishment is located in an outdoor mall or shopping center.

(C) Toilet facilities for the customer are required only in establishments constructed or extensively remodeled after May 11, 1974,

(D) Food establishments limited to drive-in or handout service are not required to provide toilet rooms facilities for the customer.

(E) For mobile food units:

(i) On board toilet facilities are not applicable to most mobile food units. If the unit is not so equipped, then the mobile food unit must operate within one-quarter mile or a five-minute walk of an accessible restroom facility. Mobile food units that operate on a designated route, and which do not stop at a fixed location for more than two hours during the workday, shall be exempt from this rule.

(ii) Mobile food units that do not provide on board restroom facilities must have restroom facilities that shall be accessible to employees during all hours of operation. The restroom facilities must have a handwashing system that meets the requirements of sections 5-202.12, 6-301.11, 6-301.12, 6-301.20 and 6-302.11. Employees may use a restroom located in a private home or a portable toilet to satisfy this requirement.

(F) Food service establishments that are constructed in or adjacent to a single family residence are not required to provide a separate restroom for employees, if a restroom in the residence is available during all hours of operation. The restroom facility must meet the requirements of sections 5-202.12, 6-301.11, 6-301.12, 6-301.20 and 6-302.11.

(ttt) Amend section 6-501.111 to read: Controlling Pests.

(A) The premises shall be maintained free of insects, rodents, and other pests.[Pf] The presence of insects, rodents, and other pests shall be controlled to minimize their presence on the premises by:

(i) Routinely inspecting incoming shipments of food and supplies;

(ii) Routinely inspecting the premises for evidence of pests;

(iii) Using methods, if pests are found, such as trapping devices or other means of pest control as specified under sections 7-202.12, 7-206.12, and 7-206.13;[Pf] and

(iv) Eliminating harborage conditions.

(uuu) Amend section 6-501.115 to read: Prohibiting Animals.

(A) Except as specified in paragraph (B), (C), (D) and (E) of section 6-501.115, live animals may not be allowed on the premises of a food establishment.

(B) A food establishment shall permit the use of a service animal by an individual with a disability on its premises unless the service animal poses a direct threat to the health and safety of others.

(i) For purposes of section 6-501.115 the term "direct threat" means a significant risk to the health or safety of others that cannot be eliminated by modification of policies, practices, or procedures or by provision of auxiliary aids or services.

(ii) In determining whether a service animal poses a direct threat to the health or safety of others, a food establishment must make an individualized assessment, based on reasonable judgment that relies on the best available objective evidence, to ascertain: The nature, duration, and severity of the risk; the probability that the potential injury will actually occur; and whether reasonable modifications of policies, practices, or procedures will mitigate the risk.

(iii) A food establishment may ask an individual with a disability to remove a service animal from the premises if:

(I) The animal is out of control and the animal's handler does not take effective action to control it; or

(II) The animal is not housebroken.

(C) Live animals may be allowed in the following situations if the contamination of food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles can not result:

(i) Edible fish or decorative fish in aquariums, shellfish or crustacea on ice or under refrigeration, and shellfish and crustacean in display tank systems;

(ii) Patrol dogs accompanying police or security officers in offices and dining, sales, and storage areas, and sentry dogs running loose in outside fenced areas;

(iii) Pets in the common dining areas of group residences at times other than during meals if:

(I) Effective partitioning and self-closing doors separate the common dining areas from food storage or food preparation areas;

(II) Condiments, equipment, and utensils are stored in enclosed cabinets or removed from the common dining areas when pets are present; and

(III) Dining areas including tables, countertops, and similar surfaces are effectively cleaned before the next meal service.

(iv) In areas that are not used for food preparation, storage, sales, display, or dining, in which there are caged animals or animals that are similarly restricted, such as in a variety store that sells pets or a tourist park that displays animals.

(D) Live or dead fish bait may be stored if contamination of food; clean equipment, utensils, and linens; and unwrapped single-service and single-use articles can not result.

(E) Pet dogs may be allowed in outside seating areas of a food establishment under the following conditions:

(i) The food establishment prepares written procedures that include:

(I) A diagram of the outdoor area to be designated as available to consumers with pet dogs;[Pf]

(II) The establishment's procedure for ensuring that employees do not touch, pet or otherwise handle pet dogs and for immediately cleaning accidents involving dog waste. The procedure must also describe the location of materials and equipment necessary to clean up accidents involving dog waste;[Pf] and

(III) The establishment's procedure for notifying employees and consumers of the requirements of this paragraph.[Pf]

(ii) Pet dogs may not come into contact with serving dishes, utensils and tableware. Pet dogs are also not allowed on chairs, tables and other furnishings.[Pf]

(iii) Employees and consumers may not provide food to pet dogs.[Pf]

(iv) Pet dogs must be on a leash and under control of the consumer at all times.[Pf]

(v) At no time may pet dogs be permitted to travel through the indoor or non-designated outdoor portions of the food establishment.[Pf]

(vvv) Amend subparagraph 7-202.12(A)(4) to read: Additional conditions that may be established by the regulatory authority;[P] and

(www) Add paragraph 8-101.10(C) to read: Plans submitted shall be reviewed and commented on by an environmental health specialist registered in accordance with ORS Chapter 700.

(xxx) Amend section 8-103.10 to read:

(A) The Authority may grant a variance from requirements of this code as follows:

(i) Where it is demonstrated to the satisfaction of the Authority that strict compliance with the rule would be highly burdensome or impractical due to special condition or cause;

(ii) Where the public or private interest in the granting of the variance is found by the Authority to clearly outweigh the interest of the application of uniform rules; and

(iii) Where such alternative measures are provided which in the opinion of the Authority will provide adequate public health and safety protection.

(B) Such variance authority is not conferred upon any Local Public Health Authority notwithstanding contractual authority in administration and enforcement of the food service statutes and rules;

(C) The applicant must include all necessary information to support the variance request, which may include, but is not limited to, required testing, challenge data and research results;

(D) If a variance is granted, the regulatory authority shall retain the information specified under section 8-103.11 in its records for the food establishment;

(E) The Authority shall review variances at least triennially;

(F) Revocation or denial of the variance request shall be subject to the appeal process provided under ORS Chapter 183.

(yyy) Add paragraph 8-103.11(D) to read: If required by the regulatory authority, provide documentation that a recognized process authority has reviewed the variance request and approved the process. Any necessary or required training or documentation must be successfully completed prior to variance approval.[Pf]

(zzz) Add paragraph 8-201.11(D) to read: Notwithstanding paragraphs (A) through (C) of section 8-201.11, vending machines having the sanitary approval of the National Automatic Merchandizing Association shall be exempt from the requirement to submit plans for review and approval.

(aaaa) Amend paragraph 8-302.14(A) to read: The name, mailing address, telephone, number, and signature of the person applying for the permit and the name, mailing address, and location of the food establishment;

(bbbb) Amend paragraph 8-303.30(C) to read: Advisement of the applicant's right of appeal and the process and time frames for appeal that are provided under ORS Chapter 183.

(cccc) Amend paragraph 8-304.10(A) to read: (A) At the time a permit is first issued, the regulatory authority shall provide to the permit holder information on how to obtain a copy of this code so that the permit holder is notified of the compliance requirements and the conditions of retention, as specified under section 8 304.11, that are applicable to the permit.

(dddd) Amend subparagraph 8-304.11(G)(2) to read: The regulatory authority directs the replacement to meet current code requirements after the food establishment has been closed for a minimum of six consecutive months, or

(eeee) Amend paragraph 8-304.11(I) to read: Accept notices issued and served by the regulatory authority as may be authorized under ORS Chapters 183 and 624; and

(ffff) Amend paragraph 8-304.11(J) to read: Be subject to the administrative, civil, injunctive, and criminal remedies as may be authorized under ORS Chapters 183 and 624.

(gggg) Amend paragraph 8-401.10(C) to read: For temporary food establishments:

(A) Except for subparagraph (C)(2) of section 8-401.10, the regulatory authority shall inspect at least once during the operation of a temporary food establishment.

(B) For benevolent single-event temporary food establishments, the regulatory authority shall either:

(i) Inspect; or

(ii) Provide a consultation.

(hhhh) Amend paragraph 8-403.10(A) and (B) to read:

(A) Administrative information about the food establishment's legal identity, street and mailing addresses, type of establishment and operation as specified under 8-302.14(C), inspection date, and employee food handler certificates; and

(B) Specific factual observations of violative conditions or other deviations from this code that require correction by the permit holder including:

(i) Failure of the person in charge to demonstrate the knowledge of foodborne illness prevention, application of HACCP principles, and the requirements of this code as specified under section 2-102.11;

(ii) Failure of food employees, conditional employees, and the person in charge to report a disease or medical condition as specified under section 2-201.11;

(iii) Nonconformance with priority items or priority foundation items of this code;

(iv) Failure of the appropriate food employees to demonstrate their knowledge of, and ability to perform in accordance with, the procedural, monitoring, verification, and corrective action practices required by the regulatory authority as specified under section 8-103.12;

(v) Failure of the person in charge to provide records required by the regulatory authority for determining conformance with a HACCP plan as specified under subparagraph 8-201.14(D)(6); and;

(vi) Nonconformance with critical limits of a HACCP plan.

(iiii) Amend section 8-403.20 to read: The regulatory authority shall specify on the inspection report form the time frame for correction of the violations as specified under sections 8-404.11, and 8-405.11.

(jjjj) Amend paragraph 8-405.11(B) to read: Considering the nature of the potential hazard involved and the complexity of the corrective action needed, the regulatory authority may agree to or specify a longer time frame, not to exceed 14 calendar days after the inspection, for the permit holder to correct violations of a priority item or priority foundation item or HACCP plan deviations.

(kkkk) Amend paragraph 8-501.20(C) to read: (C) Closing the food establishment by summarily suspending a permit to operate as may be provided under ORS Chapter 624.

(llll) Amend paragraph 8-501.30(C) to read: (C) States that the suspected food employee or the permit holder may request an appeal hearing by submitting a timely request as provided under ORS Chapter 183.

DIVISION 157

INSPECTION AND LICENSING PROCEDURES

333-157-0000
Inspection Form Procedures

(1) The Local Public Health Authority shall document violations observed during any sanitation inspection by including the following information on the form approved by the Authority:

(a) The number of the related item on the inspection form;

(b) The point value associated with the item including penalty additions;

(c) Oregon Administrative Rule or Oregon Revised Statute number violated; and

(d) A brief statement of the specific problem and required corrections.

(2) Calculation of Points:

(a) Three point priority foundation items shall be given an additional three point weight when a repeat violation is observed.

(b) Five point priority items shall be given an additional five point weight when a repeat violation is observed.

(c) Additional points shall accumulate and be added to the value of uncorrected items that are repeat violations.

(d) Each three point priority foundation item can accumulate to six points.

(e) Each five point priority item can accumulate to 10 points.

(3) Violations creating a potential danger to public health shall be recorded as in section (1) of this rule and shall specify:

(a) Any alternative procedure as may be approved, the time limit for its use, and that the alternative procedure must be implemented immediately; and

(b) The corrections to be made and the time limit by which the corrections shall be made. In the case where an alternative procedure has not been approved, the time limit by which the correction must be made shall be within but not to exceed 14 days.

(4) Violations creating an imminent or present danger to public health shall be recorded as required in sections (1) and (3) of this rule except when no alternative procedure is approved, the correction shall be required immediately.

(5) If a restaurant obtains a sanitation score of less than 70 upon an unannounced complete inspection, the operator or person in charge shall be notified by a statement on the inspection form that the restaurant shall be closed, if the score of another complete inspection conducted within 30 days is not 70 or above.

(6) Violations creating a significantly increased risk for food borne illness shall require a recheck inspection if found on consec-

utive complete inspections, and for the purposes of enforcement shall be considered uncorrected.

(7) If a restaurant is ordered closed, the closure order as designated by the Authority shall be attached to the inspection form and delivered to the operator or person in charge.

333-157-0010
Approved Alternative Procedures

(1) An alternative procedure may be approved on a temporary basis for a designated time period, if in the judgment of the environmental health specialist the procedure provides interim health and safety protection equal to that provided by the rule. The environmental health specialist may extend the designated time period if justified by unforeseen circumstances. Such an alternative procedure shall not authorize or condone any priority item or priority foundation item violation.

(2) All alternative procedures that have been approved shall be implemented immediately.

333-157-0020
Public Notice of Restaurant Sanitation

(1) The notice of restaurant sanitation shall be based upon the sanitation score calculated on the inspection form at the end of each unannounced complete inspection and shall be posted at a customary entrance to the establishment. If, upon recheck inspection, any priority item or priority foundation item violation listed on the inspection form is not corrected within the designated time limit, the notice of restaurant sanitation posted at the end of the unannounced complete inspection shall be removed, the notice of closure posted, and closure action taken.

(2) A notice of restaurant sanitation that states that the establishment "Complied with the Acceptable Sanitation Standards" shall be assigned to a restaurant that obtains a sanitation score of 70 or more in an unannounced complete inspection provided all priority item and priority foundation item violations have been corrected or remedied by approved alternative procedures. Upon recheck inspection, any uncorrected priority item or priority foundation item violations shall cause the notice of restaurant sanitation to be removed, the notice of closure to be posted, and closure action taken.

(3) A notice of restaurant sanitation that states that the establishment "Failed to Comply with the Acceptable Sanitation Standards" shall be assigned to a restaurant that obtains a sanitation score of less than 70 in an unannounced complete inspection provided all priority item and priority foundation item violations have been corrected or remedied by approved alternative procedures. Such a notice of restaurant sanitation shall remain until the facility is closed or until a sanitation score of 70 or more is obtained upon another inspection conducted within 30 days.

333-157-0025
Communication and Compliance Protocols

Communication and compliance protocols will be provided by the Assistant Director to operators of non-complying food service facilities. This communication will convey current and potential compliance actions, and will include the appropriate use of correspondence, meetings, and officials notices.

333-157-0027
Increased Inspection Schedule

(1) Any restaurant that fails to obtain a minimum acceptable sanitation score of 70 or more for two consecutive, unannounced semi-annual inspections shall be subject to an increased inspection schedule.

(2) Except as provided in section (4) of this rule, this schedule will consist of one complete unannounced inspection a quarter (three month period) as well as any re-check inspections required. This inspection schedule shall begin in the quarter immediately following the second consecutive score of less than 70.

(3) The increased inspection schedule will revert to semi-annual inspections after the facility has obtained four (4) consecutive scores of 70 or above.

(4) At the Assistant Director's option, one of the four required inspections may be an inspection using Hazard Analysis and Critical Control Point (HACCP) principles, as defined in these rules. HACCP based inspections may be announced. Participation by a restaurant in a HACCP-based inspection shall be the equivalent of a score of 70 or above for the purposes of this rule.

(5) The inspecting agency may assess a fee for each quarterly inspection required under this rule of up to one-half of the annual licensing fee otherwise assessable to the restaurant.

Stat. Auth.: ORS 624.100

333-157-0030
Closure of Restaurants

(1) If the administrator closes a restaurant, a statement by the Authority ordering closure and specifying the reasons therefore, and signed by the administrator, shall be attached to the inspection form and delivered to the operator or person in charge:

(a) When a restaurant is closed, the administrator shall post the notice of closure at a customary entrance;

(b) No person except the administrator shall remove or alter this notice;

(c) No person shall operate a restaurant that has been closed.

(2) If a violation which creates an imminent or present danger to public health is not corrected immediately or an approved alternative procedure is not initiated immediately by the operator, the restaurant shall be closed.

(3) If a violation which creates a potential danger to public health has not been corrected within the designated time limit, the restaurant shall be closed.

(4) When a restaurant has been closed because a priority item or priority foundation item violation(s) has not been corrected, it may be reopened after 24 hours if:

(a) A recheck inspection by the administrator confirms that all priority item and priority foundation item violations have been corrected; and

(b) A closure dismissal order designated by the Authority is delivered to the operator or person in charge; and

(c) The closed sign previously posted is removed by the administrator;

(d) A restaurant may be reopened earlier than 24 hours following a voluntary meeting attended by the restaurant operator or person in charge, the administrator, and the inspecting environmental health specialist, at which the provisions of subsections (4)(a) through (c) of this rule are demonstrated to be met;

(e) A restaurant closed and reopened as described in this subsection shall be assigned a notice of restaurant sanitation based on the sanitation score of the unannounced complete inspection that identified the priority item and priority foundation item violations causing the closure.

(5) If a restaurant has obtained a sanitation score of less than 70 on two consecutive complete inspections conducted within 30 days as described in OAR 333-157-0000(5), it shall be closed.

(6) When a restaurant has been closed for failure to obtain a minimum acceptable sanitation score of 70 or more, it may be reopened after 24 hours if:

(a) The operator submits a written plan of correction, specifying the corrections to be made and time limits for their completion, which would achieve a sanitation score of 80 points by the next semi-annual inspection; and

(b) The plan of correction is approved by the administrator; and

(c) A complete inspection after the restaurant has been closed produces a sanitation score of 70 or more.

(d) A closure dismissal order designated by the Authority is delivered to the operator or person in charge; and

(e) The closed sign previously posted is removed by the administrator;

(f) A restaurant may be reopened earlier than 24 hours following a voluntary meeting attended by the restaurant operator or person in charge, the administrator, and the inspecting environmental health specialist, at which the provision of subsections (6)(a) through (e) of this rule are demonstrated to be met;

(g) A restaurant closed and reopened as described in this subsection shall be assigned a notice of restaurant sanitation based on the sanitation score of the complete inspection performed while the restaurant was closed.

(7) Appeals of closures are contested cases pursuant to ORS Chapter 183.

(8) Operators whose facilities have been closed for failure to obtain a minimum acceptable sanitation score of 70 or more, or for failure to correct repeat priority item or priority foundation item violations must agree in writing, as part of reopening the restaurant, to:

(a) Enroll in and successfully complete an approved food manager training course; or

(b) In the event that an extraordinary situation exists whereby an approved food manager training course is not available to the operator, the administrator shall make provision for an alternative type of food manager training using criteria approved by the Authority.

333-157-0045
Civil Penalties

(1) The Authority or a Local Public Health Authority may impose civil penalties on any person for the following willful violations:

(a) Operation of a restaurant, bed and breakfast facility or vending machine without a current license to do so from the Authority or the Local Public Health Authority;

(b) Failure to cease operation of a restaurant, bed and breakfast facility or vending machine that has been closed due to uncorrected priority item violations. This authority shall be limited to those priority item violations identified as creating an imminent or present danger to public health and defined in OAR 333-150-0000 Section 1-201.10.

(2) For the purposes of section (1) of this rule, the term 'willful' means intentional or deliberate.

(3) The maximum civil penalty for each of the violations listed in section (1) of this rule is $500 per day of violation.

(4) Civil penalties shall be imposed in the manner provided by ORS Chapter 183 or the equivalent.

333-157-0073
Temporary Restaurant Definitions

(1) "Intermittent temporary restaurant" means an establishment:

(a) That operates temporarily at a specific location in connection with multiple public gatherings, entertainment events, food product promotions or other events, at least two of which are arranged for by different oversight organizations; and

(b) Where food is prepared or served for consumption by the public.

(2) "Operational review" means the examination of a plan of operation for an establishment in order to ensure that the proposed operation conforms with applicable sanitation standards.

(3) "Oversight organization" means an entity responsible for organizing, managing or otherwise arranging for a public gathering, entertainment event, food product promotion or other event, including but not limited to ensuring the availability of water, sewer and sanitation services.

(4) "Seasonal temporary restaurant" means an establishment:

(a) That operates at a specific location in connection with multiple public gatherings, entertainment events, food product promotions or other events that are arranged for by the same oversight organization; and

(b) Where food is prepared or served for consumption by the public.

(5) "Single-event temporary restaurant" means an establishment:

(a) That operates in connection with a single public gathering, entertainment event, food product promotion or other event; and

(b) Where food is prepared or served for consumption by the public.

(6) "Substantial menu alteration" means a change of menu that increases the complexity of the menu of a seasonal temporary restaurant and intermittent temporary restaurant operation. For purposes of these rules, an increase in complexity occurs when the menu moves from:

(a) Service of ready-to-eat foods that requires no further preparation or cooking; to

(b) Foods that are prepared or cooked on-site and served directly to the consumer that day; to

(c) Foods that must be prepared in the operation in advance and reheated or cooled over the course of multiple days of operation.

333-157-0077
Temporary Restaurant Licensing and Inspection

(1) A person may not operate a single-event, intermittent or seasonal temporary restaurant without first procuring a license to do so from the Local Public Health Authority.

(2)(a) Application for an intermittent or seasonal temporary restaurant license shall be in writing in the form prescribed by the Authority and shall contain the name and address of the applicant, the specific location of the intermittent or seasonal temporary restaurant, a description of the public gatherings, entertainment

events, food product promotions or other events to be served by the intermittent or seasonal temporary restaurant, an operational review and any other information the Authority may require. In addition to the application the applicant for an intermittent or seasonal temporary restaurant license shall pay to the Local Public Health Authority the appropriate license fee under ORS 624.490.

(b) The Local Public Health Authority shall issue a license to a benevolent organization to operate a single-event temporary restaurant if the benevolent organization has notified the Local Public Health Authority orally or in writing that the benevolent organization intends to operate a single-event temporary restaurant. A Local Public Health Authority may not charge a benevolent organization a license fee or inspection fee for a single-event temporary restaurant.

(3)(a) Intermittent and seasonal temporary restaurants must complete and submit an operational plan for review by the Local Public Health Authority prior to obtaining a license and operation of the establishment.

(b) Intermittent and seasonal temporary restaurants that do not complete an operational plan prior to operation may operate under one or more single-event temporary licenses until the operational plan can be completed and approved.

(c) After the operational plan has been completed by the Local Public Health Authority, another operational plan is not required for subsequent licenses, unless deemed necessary by the Local Public Health Authority.

(4) The single-event, intermittent or seasonal temporary restaurant license shall be posted in a conspicuous place on the premises of the licensee.

(5) An intermittent temporary restaurant license shall expire 30 days after issuance.

(6) A seasonal temporary restaurant license shall expire 90 days after issuance.

(7) A single-event temporary restaurant license shall terminate 30 days after issuance unless within 30 days the single-event temporary restaurant is discontinued or moved from the specific location for which the license was issued.

(8) An intermittent or seasonal temporary license shall terminate immediately if:

(a) The intermittent or seasonal temporary restaurant prepares or serves food for consumption by the public that is not in connection with a public gathering, entertainment event, food product promotion or other event held by an oversight organization;

(b) The location of the intermittent or seasonal temporary restaurant changes; or

(c) The menu is substantially altered as defined by OAR 333-157-0073(6).

(d) If a licensed operation undergoes a substantial menu alteration, then a new license and completed operational plan is required.

(9) If the license of an intermittent or seasonal temporary restaurant is terminated under section (8) of this rule, the intermittent or seasonal temporary restaurant may reapply for a license in accordance with section (2) of this rule.

(10) The Local Public Health Authority may suspend, deny or revoke a single-event, intermittent or seasonal temporary restaurant license if it appears, after a reasonable time has been given for correction of a sanitation violation, that the applicant does not meet applicable minimum sanitation standards as described in ORS 624.010 through 624.121 or in OAR 333-150-0000. Any suspension, denial or revocation action shall be taken in accordance with ORS Chapter 183.

(11) The Local Public Health Authority may conduct a reinspection of a seasonal or intermittent temporary restaurant if a priority item or priority foundation item violation is uncorrected and a separate follow-up visit is necessary to determine compliance.

(12) A seasonal or intermittent temporary restaurant that has uncorrected priority item and priority foundation item violations and for which an alternative procedure has not been approved shall be closed in accordance with ORS 624.096.

(13) The renewal of a single-event, intermittent or seasonal temporary restaurant license shall be in accordance with section (2) of this rule.

333-157-0080
Fees

(1) Fees for eating and drinking establishments and other food service activities subject to ORS Chapter 624 shall be as specified in ORS Chapter 624.

(2) Any restaurant providing food or beverage solely to children, elderly persons, indigent or other needy populations shall not be required to pay a restaurant license fee to the Authority if such restaurant is:

(a) Operated by a benevolent organization as defined in ORS 624.101; and

(b) The patrons or recipients are not required to pay the full cost of the food or beverage.

(3) A restaurant that meets the criteria in section (2) of this rule must still obtain a restaurant license and must comply with OAR 333-150-0000.

DIVISION 158

COMBINATION FOOD SERVICE FACILITIES

Combination Facilities Engaged in Activities Subject to Regulation by the Oregon Department of Agriculture and by the Oregon Health Authority

333-158-0000
Licensing and Inspections

The licensing of combination facilities shall be the responsibility of either the Authority or the Oregon Department of Agriculture in accordance with the following criteria:

(1) The establishments subject to these rules are those combination facilities as defined in OAR 333-150-0000 1-201.10(B).

(2) A determination shall be made for each firm covered in OAR 333-150-0000 1-201.10(B) as to which agency shall inspect and license. The determination shall be based upon which agency has statutory responsibility and authority for the predominant activities of the firm.

(3) In those instances where it is determined that either a full or limited service restaurant or other activity for which the Authority has authority, is predominant, the Authority shall perform the inspectional and licensing responsibilities to the exclusion of the Oregon Department of Agriculture.

(4) In those instances where it is determined that the bakery, retail grocery, food processing or other activities for which the Oregon Department of Agriculture has authority, is predominant, the Oregon Department of Agriculture shall perform the inspectional and licensing responsibilities to the exclusion of the Authority.

(5) The determination of the predominant activity at any combination facility subject to this agreement shall be made first by the field environmental health specialists. If agreement is not reached, then it shall be referred to program supervisors of the Local Public Health Authority and the Oregon Department of Agriculture for a determination of predominant activity. If an agreement is not reached among the Local Public Health Authority and the Oregon Department of Agriculture, or if a licensed facility disagrees with the determination, the matter may be appealed to an arbitration panel composed of the administrator of the Food and Dairy Division (or appointee), the administrator of the Center for Health Protection (or appointee), and one representative each from the Conference of Local Health Officials, an association representing the restaurant industry and an association representing the retail

grocery industry. The decision of this panel shall be final except as provided in section (6) of this rule.

(6) Any licensee wishing to contest the determination of predominance by agencies may produce records of gross annual sales to support the protest and be heard by the Local Public Health Authority in accordance with ORS Chapter 183.

(7) Notwithstanding sections (2) through (6) of this rule, if the Local Public Health Authority and the Oregon Department of Agriculture agree that the complexity rather than the predominance of food processing activities should determine the regulating agency, inspectional and licensing responsibilities may be transferred to the Oregon Department of Agriculture to the exclusion of the Local Public Health Authority.

DIVISION 160

DESTRUCTION OF FOOD UNFIT FOR HUMAN CONSUMPTION

333-160-0000
Destruction and Embargo of Mishandled, Adulterated or Spoiled Food and Beverage

Whenever the Authority finds food or beverage for which there is probable cause to believe is adulterated, mishandled, spoiled, or otherwise potentially dangerous to health, the Authority shall immediately notify the person in charge that the product is hazardous; and shall request immediate destruction of the product. If the person in charge agrees, the food or beverage shall be destroyed or removed in a manner specified by the Authority:

(1) If the person in charge will not agree to destruction, an embargo order shall be placed on the food or beverage. The order shall include:

(a) A statement of the reasons for the embargo;

(b) A description of the products, their location and the amount of product embargoed;

(c) The date and time of day when the order is issued, and the signature of the inspecting Environmental Health Specialist.

(2) The product shall be marked, sealed, isolated, and otherwise identified as required by the Authority to ensure that it remains off sale and is not moved prior to final disposition of the embargo.

(3) After placement of an embargo order, samples may be taken for testing by the Authority.

(4) If the order of embargo does not include a notice of hearing; within 48 hours of the placement of an embargo, the person in charge shall be notified in writing that a hearing on the embargo order will be held if requested in writing within ten (10) days of the delivery of the notice.

(5) If a hearing is requested, it shall be held in accordance with ORS 183 and the model rules of the Attorney General for contested cases.

(6) If no hearing is requested as provided in section (4) of this rule, a default order for destruction shall be issued to the person in charge.

(7) Destruction or removal of embargoed product shall be done only under the direct supervision of the Authority. Denaturation may be required where it is necessary to render the product unpalatable or to identify it as unfit for human consumption.

(8) Violation of any embargo or destruction order or removal of any product under embargo is grounds for closure of the facility, revocation or denial of license or criminal penalties provided under ORS 624.990.

DIVISION 162

MOBILE FOOD UNITS, COMMISSARIES AND WAREHOUSES

333-162-0020
Mobile Food Units, General Requirements

(1) Mobile food units shall comply with the applicable requirements in OAR 333-150-0000 and these rules. The Authority may impose additional requirements to protect against health hazards related to the conduct of the mobile food unit operation and may prohibit the sale of potentially hazardous food.

(2) There are four types of mobile food units:

(a) Class I. These mobile food units can serve only intact, packaged foods and non-potentially hazardous drinks. No preparation or assembly of foods or beverages may take place on the unit. Non-potentially hazardous beverages must be provided from covered urns or dispenser heads only. No dispensed ice is allowed;

(b) Class II. These mobile food units may serve foods allowed under Class I and provide hot and cold holding display areas from which unpackaged foods are displayed. Self-service by customers of unpackaged foods is not allowed. Preparation, assembly or cooking of foods is not allowed on the unit;

(c) Class III. These mobile food units may serve any food item allowed under Class I and II mobile food units, and may cook, prepare and assemble food items on the unit. However, cooking of raw animal foods on the unit is not allowed;

(d) Class IV. These mobile food units may serve a full menu.

(3) All operations and equipment shall be an integral part of the mobile food unit. This does not preclude the use of a barbecue unit used in conjunction with a Class IV mobile food unit. The barbecue, however, may only be used under the following conditions:

(a) It must be used in close proximity to the mobile food unit;

(b) Food shall only be cooked on the barbecue. Processing, portioning, preparation, or assembly of food must be conducted from inside the mobile food unit; and

(c) A handwashing system shall be provided adjacent to the barbecue as specified in OAR 333-150-0000 section 5-203.11(C).

(4) Mobile food unit operators may provide seating for customers if a readily accessible restroom is provided. The restroom must have a handwashing facility that provides hot and cold running water and meets the requirements of OAR 333-150-0000 sections 6-301.11, 6-301.12, 6-301.20 and 6-302.11.

(5) Auxiliary storage may be provided if it is limited to impervious, nonabsorbent, covered containers stored in such a manner as to preclude contamination or infestation. Auxiliary storage shall be limited to items necessary for that day's operation. No self-service, assembly or preparation activities may occur from auxiliary storage containers.

333-162-0040
Base of Operation

(1) Mobile food units shall operate from a licensed restaurant, commissary or warehouse.

(2) If only prepackaged goods are sold, a warehouse may be accepted in lieu of a commissary.

(3) Notwithstanding section (1) of this rule, self-contained mobile food units may not be required to have a base of operation if the unit contains all the equipment and utensils necessary to assure the following:

(a) Maintaining proper hot and cold food temperatures during storage and transit;

(b) Providing adequate facilities for cooling and reheating of foods;

(c) Providing adequate handwashing facilities;

(d) Providing adequate warewashing facilities and assuring proper cleaning and sanitizing of the unit;

(e) Obtaining food and water from approved sources;

(f) Sanitary removal of waste water and garbage at approved locations.

(4) The ability to operate without a base of operation shall be determined by the regulatory authority.

(5) A mobile food unit may not serve as a commissary for another mobile food unit or as the base of operation for a caterer.

333-162-0280
Food Transportation, General

(1) During transportation, food and food utensils shall be kept in covered containers or completely wrapped or packaged so as to be protected from contamination. Foods in original individual packages do not need to be overwrapped or covered if the original package is sealed.

(2) Food shall be maintained at required temperatures at all times during transport. Mobile food units that do not maintain food at temperatures required in OAR 333-150-0000 section 3-501.16 may be required to provide an on board power source, such as a battery or generator, to assure maintenance of food at proper temperatures during transit.

(3) Transport vehicles shall not be used in activities incompatible with safe and sanitary food service operations.

333-162-0680
Overhead Protection

Overhead protection shall be provided for mobile food units that are operated outdoors and where food is not covered at all times. The overhead protection shall consist of, but not be limited to, roofing, ceilings, awnings, or umbrellas. Overhead protection is not required for barbecue units that have a lid or covering that will protect foods from contamination. The overhead protection must be easily cleanable.

Inspection and Licensing Procedures Mobile Food Units, Commissaries and Warehouses

333-162-0880
Licensing Procedure

(1) All procedures shall be in accordance with ORS Chapter 624 in the licensure of mobile food units, commissaries and warehouses. Any license issued by the Authority pursuant to ORS 624.320 shall expire and may be reinstated on December 31 of each year.

(2) A permanent license number shall be assigned each operator of mobile food units by the regulatory authority.

(3) Each mobile food unit shall be clearly marked with the licensee's name or a distinctive identifying symbol. The lettering shall be at least two inches in height and of a color contrasting with the background color. If a symbol is used, it shall be at least 12 inches in diameter or of an equivalent size. An accurate scale drawing or photograph of the symbol shall be filed with the regulatory authority.

(4) Each mobile food unit shall be clearly marked with a number for purposes of identifying each unit on inspection reports and other communications.

(5) Stored units are not subject to licensure.

(6) All vehicles used as mobile food units shall be kept in good repair and in a sanitary condition while in use.

333-162-0890
Inspection Form Procedures

(1) Violations that are observed during any sanitation inspection by the Local Public Health Authority shall be described in the space provided on a form approved by the Authority by citing the Oregon Revised Statute or Oregon Administrative Rule number violated, and by giving a brief statement of the specific problem and required corrections.

(2) Priority item or priority foundation item violations shall result in closure of a mobile food unit, commissary or warehouse if the administrator determines that an imminent danger to public health exists, and that the violation cannot be corrected immediately or an approved alternative procedure has not been implemented. For priority item or priority foundation item violations not resulting in closure, the time limit by which the correction must be made shall be within but not to exceed 14 days.

(3) Violations other than those specified in section (2) of this rule shall be corrected by the next semi-annual inspection.

(4) If a mobile food unit, commissary or warehouse is ordered closed, the reason for closure shall be stated on the inspection form and signed by the administrator.

Stat. Auth.: ORS 624.390
Stats. Implemented: ORS 624.390

Hist.: HD 10-1997, f. & cert. ef. 7-8-97; PH 14-2006, f. 6-27-06, cert. ef. 7-1-06; PH 12-2012, f. 8-30-12, cert. ef. 9-4-12

333-162-0910
Closure of Mobile Food Units, Commissaries or Warehouses

(1) If the administrator closes a mobile food unit, commissary or warehouse, a statement by the Authority shall be made on the inspection form specifying the reasons for closure. The inspection form must be signed and delivered to the operator or person in charge within 24 hours.

(2) When a mobile food unit is closed, the administrator shall post the inspection report on the unit. When a commissary or warehouse is closed, the administrator shall post the inspection report inside the facility. No person except the administrator shall remove or alter this inspection report, or operate a mobile food unit that has been closed.

(3) If a priority item or priority foundation item violation presenting an imminent danger to public health is not corrected immediately or an approved alternative procedure has not been implemented, the mobile food unit, commissary or warehouse shall be closed.

(4) If a priority item or priority foundation item violation that does not result in immediate closure at the time of the semi-annual inspection has not been corrected within the designated time limit, the mobile food unit, commissary or warehouse shall be closed.

(5) When a mobile food unit, commissary or warehouse has been closed because a priority item or priority foundation item violation has not been corrected, it may be reopened if a recheck inspection by the administrator confirms that all priority item or priority foundation item violations have been corrected.

(6) The administrator shall, if requested, hold a hearing in accordance with ORS Chapter 183.

333-162-0920
Plan Review

(1) Newly constructed or extensively remodeled mobile food units, commissaries and warehouses must undergo plan review and a pre-operational inspection. Mobile food units having the sanitary approval of a recognized qualified, independent testing laboratory, or approved by the Authority may be accepted without the submission of plans.

(2) Approval from the administrator to operate after the plan review process does not preclude obtaining required permits or approvals from other agencies or jurisdictions of concern.

(3) Mobile food unit operators must obtain approval from the administrator to add to or change menu items served from the mobile food unit;P

(4) Mobile food units that operate on a fixed route must provide an itinerary to the regulatory authority prior to licensure and at the beginning of each licensing period. Mobile food units operating at a specific or multiple locations shall provide a list of all locations to the regulatory authority.

333-162-0940
Warehouses

(1) If only prepackaged goods are sold, a warehouse may be accepted in lieu of a commissary.

(2) Warehouses shall be required to meet only those rules necessary to prevent the contamination of stored foods, single-service articles, utensils and equipment. In general, warehouses shall be exempt from the rules relating to finished walls, ceilings or storage bases, light colored surfaces, restrooms, lavatories and utility facilities, provided foods are protected from contamination from dust, insects, rodents, flooding, drainage, or other contaminants.

(3) Handling of unpackaged foods, dishwashing and ice making are prohibited in a warehouse.

(4) The Assistant Director may impose additional requirements as deemed necessary to prevent the contamination of stored foods, single-service articles, utensils, and equipment.

333-162-1005
Civil Penalties

(1) The Authority or a Local Public Health Authority may impose civil penalties on any person for the following willful violations:

(a) Operation of a mobile food unit, commissary, or warehouse without a current license to do so from the Authority or Local Public Health Authority;

(b) Failure to cease operation of a mobile food unit, commissary, or warehouse that has been closed due to uncorrected priority item violations. This authority shall be limited to those priority item violations identified as creating an imminent or present danger to public health and defined in OAR 333-150-0000 section 1-201.10(B).

(2) For the purposes of section (1) of this rule, the term 'willful' means intentional or deliberate.

(3) The maximum civil penalty for each of the violations listed in section (1) of this rule is $500 per day of violation.

(4) Civil penalties shall be imposed in the manner provided by ORS Chapter 183 or the equivalent.

DIVISION 170

BED AND BREAKFAST FACILITIES

333-170-0000
Definitions

As used in OAR 333-170-0000 to and including 333-170-0130:

(1) "Appurtenant Structure" means a building that belongs to, is accessory or incident to, adjacent, appended or annexed to a single family residence. The single family residence and appurtenant structure must be on the same tax lot. Appurtenant structure includes but is not limited to a carriage house, garage, livery, pool or cabana building, guest cottage, bunkhouse, or similar building converted for human occupancy.

(2) "Bed and Breakfast Facility" means any establishment located in a structure designed for a single family residence and structures appurtenant thereto, regardless of whether the owner or operator of the establishment resides in any of the structures, which:

(a) Has more than two rooms for rent on a daily basis to the public;

(b) Offers a breakfast meal as part of the cost of the room;

(c) Serves one breakfast meal a day to guests, staff and owners, only.

(3) "Breakfast Meal" is the meal served to guests during the a.m. or morning hours each day.

(4) "Designated Employees' Restroom" means toilet room with handwashing lavatory accessible to employees only, during breakfast meal preparation and service.

(5) "Guests' Restroom" means toilet room located in the area of the guest rooms.

333-170-0010
Application of Rules

(1) Except as otherwise set forth in ORS 624.041 and these rules, bed and breakfast facilities shall meet the applicable requirements in OAR 333-150-0000 of the Oregon Food Sanitation Rules.

(2) If more than nine bedrooms or accommodations for 19 or more persons are available on a daily basis, commercial grade dishwashing and separate refrigeration equipment must be provided.

333-170-0030
Equipment Replacement

Bed and Breakfast Facilities shall meet the provisions of OAR 333-150-0000 section 8-304.11 (G) and (H) except that replacement equipment and new equipment acquired after the effective date of these Bed and Breakfast rules may be of residential design, construction and installation. The equipment must be in good repair, capable of being maintained in a sanitary condition, have nontoxic food-contact surfaces and meet all other requirements of these rules.

333-170-0050
Dishwashing

(1) All food service utensils and equipment shall be scraped, cleaned, and/or sanitized as circumstances of use require.

(2) Bed and Breakfast Facilities shall comply with provisions of OAR 333-150-0000 for manual and/or mechanical cleaning and sanitizing of equipment and utensils, however, at the option of the owner or operator a domestic or homestyle dishwasher may be used provided the following performance criteria can be met:

(a) The dishwasher must effectively remove physical soil from all surfaces of dishes;

(b) The dishwasher must sanitize dishes either by the application of enough accumulative heat or by the application of adequate chemical solutions to the surface of the dish;

(c) Machines relying on heat for sanitizing shall produce heat unit equivalents in the final rinse and drying cycles which comply time and temperature relationships or equivalents listed in **Table 1** (155° F. minimum):

TABLE 1
155° F — 150 seconds
161° F — 30 seconds
165° F — 15 seconds
170° F — 5 seconds

(d) If machine or water line mounted thermometers which indicate temperature of the final rinse water as it enters the manifold are not provided, the operator shall provide and daily use a registering thermometer or thermopaper to check the temperature at the dish surface during the final sanitizing rinse and drying cycles;

(e) The dishwasher must be installed and operated according to manufacturer's instructions for the highest level of sanitization possible when sanitizing Bed and Breakfast Facilities' utensils; a copy of the instructions must be available on the premises at all times;

(f) The pressure of the final rinse water supplied to the dishwasher shall not be less than 15 nor more than 25 pounds per square inch, (psi);

(g) There shall be sufficient area or facilities such as portable dish tubs and drain boards for the proper handling of soiled utensils prior to washing and of cleaned utensils after sanitization so as not to interfere with safe food handling, handwashing and the proper use of dishwashing facilities.

333-170-0060
Plumbing

Notwithstanding provisions of OAR 333-150-0000 sections 5-202.11 and 5-402.11, existing food preparation sinks and mechanical dishwashers in Bed and Breakfast Facilities are not required to have indirect sewer connections. However, any new food preparation sinks or dishwashers installed after the effective date of these rules or existing installations in which backflow has been demonstrated may be required to comply with the Oregon State Plumbing Specialty Code. In existing food preparation sinks which are directly plumbed and where food is placed in the sink below the rim then food must be placed in a container where the rim is above the flood rim of the sink. Bed and Breakfast Facilities shall meet OAR 333-150-0000 section 5-203.14, in preventing contamination of the potable water system. New plumbing in a Bed and Breakfast Facility shall be installed and maintained in accordance with the Oregon State Plumbing Specialty Code.

333-170-0110
Food Source

All food intended for consumption by guests shall meet the Oregon Department of Agriculture requirements as being obtained from an approved source. The use of home canned foods and meat and dairy products from unapproved sources is prohibited, and the storage of such food items shall not be allowed in any area where food is prepared or served to guests.

Stat. Auth.: ORS 624.041
Stats. Implemented: ORS 624.041
Hist.: HD 6-1988, f. & cert. ef. 4-4-88; PH 12-2012, f. 8-30-12, cert. ef. 9-4-12

333-170-0120
Laundry Facilities

Bed and Breakfast Facilities shall be exempt from the provisions of OAR 333-150-0000 section 4-803.13 provided that food service laundry be laundered and stored separately from guest or resident laundry and laundry operations are separated from food preparation areas.

333-170-0130
Toilet and Handwashing Facilities

Toilet and handwashing facilities in bed and breakfast facilities shall comply with OAR 333-150-0000 of the Oregon Food Sanitation Rules except as follows:

(1) Bed and breakfast facilities are exempt from OAR 333-150-0000 sections 5-203.12 and 6-402.11 provided an employee restroom can be designated during meal preparation and service, and guests' restrooms are available. New toilet facilities shall be installed according to the Oregon State Plumbing Specialty Code.Pf

(2) Notwithstanding OAR 333-150-0000 section 4-501.16, handwashing facilities may be designated at a sink compartment used for dishwashing provided this sink is not being used to store or wash soiled dishes or prepare food during food preparation and service. Handwashing facilities, in the kitchen, shall be available at all times during food preparation and service. If facility operation results in handwashing facilities being unavailable, then a separate handwashing lavatory in the food preparation area shall be required.Pf

(3) Handwashing signs are required to be properly posted at all sinks designated for employee handwashing.

(4) Guests' restrooms not designated for food service worker use do not need to comply with Oregon Food Sanitation Rules.

DIVISION 175

FOOD HANDLER TRAINING

333-175-0001
Purpose

The food handler training program rules set fees and address requirements for successful completion of a food handler training program and issuance of the certificate. Additionally, these rules set out general provisions regarding food handler training programs and provide guidelines for the relationship between the Oregon Health Authority, Local Public Health Authorities and Designated Agents.

Stat. Auth.: ORS 624.570
Stats. Implemented: ORS 624.570
Hist.: PH 21-2004, f. & cert. ef. 6-18-04

333-175-0011
Program Description — General

The program is a Authority-approved food handler training program provided through mechanisms such as self-training, computer-based training, or instructor-led training. The goal of the food handler training program is to provide food handlers with a basic understanding of food safety that will assist the manager or person in charge to direct the food handler in preparing and serving food safely. A certificate of program completion confirms that the food handler met the learning objectives.

Stat. Auth.: ORS 624.570
Stats. Implemented: ORS 624.570
Hist.: PH 21-2004, f. & cert. ef. 6-18-04; PH 14-2006, f. 6-27-06, cert. ef. 7-1-06

333-175-0021
Definitions

(1) "Approved" means approved by the Oregon Health Authority.

(2) "Assessment" means to determine whether the food worker understood the concepts represented by the learning objectives. The assessment used by the program providers must be provided or approved by the Authority.

(3) "Authority" means the Oregon Health Authority, Foodborne Illness Prevention Program.

(4) "Certificate of Program Completion" confirms that a person has successfully completed the food handler training program.

(5) "Certified Food Manager" means that a manager has successfully completed an Authority-approved food manager program.

(6) "Computer-Based Training" means self-training through the use of a computer program or the Internet.

(7) "Designated Agent" means an individual or organization who/that has been authorized by the Oregon Health Authority or Local Public Health Authority to provide a food handler training program and issue certificates of program completion.

(8) "Food Handler" means those persons involved in the supervision or preparation or service of food in a restaurant or food service facility licensed under ORS 624.020 or 624.320. This includes, but is not limited to, managers, cooks, wait staff, dishwashers, bartenders and bus persons.

(9) "Local Public Health Authority" means those counties to which the Oregon Health Authority has entered into an Intergovernmental Agreement under ORS 624.510.

(10) "Program" means an Authority-approved food handler training program.

(11) "Program Provider" means the Oregon Health Authority, Local Public Health Authority or a Designated Agent.

(12) "Self-Training" means a training process wherein the individual learns without the presence or intervention of a trainer or instructor.

(13) "Trainer" means the person actively delivering food handler training to learners.

Stats. Implemented: ORS 624.570
Hist.: PH 21-2004, f. & cert. ef. 6-18-04; PH 14-2006, f. 6-27-06, cert. ef. 7-1-06; PH 5-2011(Temp), f. & cert. ef. 7-1-11 thru 12-27-11; PH 11-2011, f. & cert. ef. 10-27-11

333-175-0031
Food Handler Training

(1) All food handlers employed in a restaurant, bed and breakfast, mobile unit, commissary, warehouse or vending operation must obtain a certificate of program completion from the Oregon Health Authority, Local Public Health Authority or a Designated Agent within 30 days after the date of hire. A food handler must maintain a current certificate of program completion as long as they are employed as a food handler.

(2) A food handler certificate of program completion expires three years after the date of issuance. When a food handler's certificate of program completion expires, the food handler must successfully complete the program and pay the appropriate fee.

(3) The Oregon Health Authority and Local Public Health Authority may provide food handler training themselves, through a Designated Agent or both.

(4) At least one person involved in the preparation or service of food in a temporary restaurant who has a valid certificate of program completion must be present at all times during the operation of the facility.

(5) A facility listed in section (1) of this rule that is operated by a benevolent organization must have at least one person with a valid food handler certificate of program completion present at all times during the preparation and service of food. This person is responsible for supervising and educating all workers in the sanitary practices used in food service.

Hist.: PH 21-2004, f. & cert. ef. 6-18-04; PH 14-2006, f. 6-27-06, cert. ef. 7-1-06

333-175-0041
Minimum Standards for Program Providers

(1) In order for the Oregon Health Authority or Local Public Health Authority to appoint a Designated Agent, the individual or organization must demonstrate that they have sufficient experience in food safety, food science or food service to be knowledgeable in all areas of the food handler training curriculum, and at a minimum

are a certified food manager or registered environmental health specialist as defined by ORS 700. This staff member must be reasonably involved in the operation or administration of the training program delivery.

(2) Program providers must also have:

(a) The ability to provide training and an assessment; and

(b) The ability to safeguard the training and assessment materials.

(3) The Local Public Health Authority exercising duties pursuant to ORS 624.510 shall ensure that food handler training programs are provided within their jurisdiction. The Local Public Health Authority or Oregon Health Authority who authorized a Designated Agent is responsible for the proper program administration and delivery.

333-175-0051

Content of Food Handler Training Programs

The concept of foodborne illness shall be introduced. The training shall address personal hygiene, contamination, and temperature control to reinforce the notion that the food handler's behaviors can prevent foodborne illness. The following learning objectives must be included in the food handler training program:

(1) Foodborne Illness.

(a) The food handler shall be able to describe foodborne illness as an illness resulting from eating contaminated food.

(b) The food handler shall know food contaminated with organisms (known to cause illness) does not look, smell or taste different from food not contaminated.

(c) The food handler shall know that symptoms vary and may include diarrhea, vomiting, fever, cramping and nausea.

(d) The food handler shall know that depending on the cause, symptoms may develop in a few minutes to several days. Symptoms may last several days and can result in death.

(e) The food handler shall know that foodborne illness is caused by organisms known to cause illness, or is caused by chemicals.

(2) The Role of the Food Handler in Foodborne Illness.

(a) The food handler shall be able to describe the five major mistakes that cause foodborne illness. The five major mistakes are:

(A) Inadequate handwashing;

(B) Employees working while ill;

(C) Cross contamination;

(D) Inadequate final cooking temperatures; and

(E) Inadequate temperature control (allowing foods to be in the danger zone).

(b) The food handler shall be able to describe the activities performed by food handlers that prevent foodborne illness from happening. The activities that prevent foodborne illness are:

(A) Proper handwashing every time hands may have become contaminated;

(B) Food handlers working only when healthy;

(C) Storing and handling of foods in a manner to prevent contamination;

(D) Cook each animal product to its required final cooking temperature; and

(E) Maintaining hot and cold temperatures (keeping foods out of the danger zone).

(3) The Role of Management.

(a) The food handler shall know that the manager sets the tone of what food safety activities occur or don't occur within the facility.

(b) The food handler shall know that the food service management is responsible for training and ensuring that food handlers practice the activities that prevent foodborne illness.

(4) Handwashing.

(a) The food handler shall be able to identify the following as the correct technique for handwashing:

(A) Use warm water and soap;

(B) Scrub hands thoroughly (approximately 15-20 seconds); and

(C) Dry hands with single-use towel, cloth towel roll or air dryer.

(b) The food handler shall be able to identify the following situations for when food handlers must wash their hands:

(A) After handling raw food;

(B) After smoking, eating, or drinking;

(C) After handling dirty dishes or garbage;

(D) After cleaning or using other toxic materials; and

(E) Before putting on gloves.

(c) The food handler shall be able to identify the following situations for when food handlers must wash their hands twice:

(A) After using the toilet and again when entering the work area (double handwash);

(B) After blowing nose, sneezing, coughing, or touching eyes, nose or mouth (double handwash);

(C) Before starting work (double handwash); and

(D) Anytime hands come into contact with bodily fluids including cuts and burns (double handwash).

(d) The food handler shall know that food service gloves are capable of spreading germs and do not substitute for proper handwashing.

(e) The food handler shall know that smoking, eating, and chewing tobacco is prohibited in food preparation and food and utensil storage areas.

(5) Employee Illness.

(a) The food handler shall know to call the person in charge at the food service facility when ill with diarrhea, vomiting, fever, jaundice or sore throat with fever.

(b) The food handler shall know to not work in the food service facility while ill with these symptoms.

(c) The food handler shall know after experiencing vomiting or diarrhea that he or she must not work in food service for 24 hours after symptoms have gone.

(d) The food handler shall know to not handle food with an infected cut or infected burn on the hands and wrists, unless an impermeable cover protects the lesion and a single-use glove is worn over the impermeable cover.

(6) Contamination and Cross Contamination.

(a) The food handler shall be able to define and identify physical contamination as foreign objects accidentally introduced into food. Food items may arrive already contaminated with dirt, and pebbles.

(b) The food handler shall be able to define and identify cross contamination as happening when microorganisms are transferred from one food or surface to another food.

(c) The food handler shall be able to identify methods to prevent cross contamination such as wash, rinse, and sanitize utensils, work surfaces and equipment between uses.

(d) The food handler shall be able to identify the following storage conditions that shall minimize the potential for cross contamination:

(A) Store raw meats below and completely separate from ready-to-eat food in refrigeration units;

(B) Store chemicals, cleansers and pesticides completely separate from food, utensils, and single service items; and

(C) Properly label all chemicals, cleansers and pesticides.

(7) Final Cooking Temperature. The food handler shall be able to identify that cooking to the recommended temperature will kill disease-causing germs.

(8) Temperature Control.

(a) The food handler shall be able to identify that potentially hazardous food will support bacterial growth when held at temperatures between 41 degrees Fahrenheit and 135 degrees Fahrenheit. The danger zone is any temperature between 41 degrees Fahrenheit and 135 degrees Fahrenheit.

(b) The food handler shall be able to identify that food being cooled or heated must move through the danger zone as rapidly as possible.

(c) The food handler shall be able to identify 135 degrees Fahrenheit as the proper temperature for hot holding potentially hazardous food.

(d) The food handler shall be able to identify 41 degrees Fahrenheit as the proper temperature for cold holding.

(e) The food handler shall know that you cannot make food safe to eat when food has been in the danger zone for four hours or more.

333-175-0061
Administration of Food Handler Training Program

(1) Program providers may provide the food handler training program through a trainer-led class and assessment, self-training materials and assessment or other method approved by the Authority.

(2) The Authority must provide or approve all food handler training program materials, including instructional delivery methods, materials and assessment tools based on criteria established by the Authority.

(3) Each food handler training assessment must determine that the food worker met the learning objectives stated in OAR 333-175-0051.

(4) When being assessed, food handlers may refer to the training manual or printed text. Food handlers may also refer to handwritten notes developed onsite during training.

(5) Upon successful completion of the program, the food handler must be allowed to keep the food handler training materials distributed.

(6) Workers with special needs may be allowed the option to take the assessment orally on specific job duties or to receive assistance in reading the assessment.

(7) A restricted certificate of program completion may be issued according to Authority guidelines.

(a) The certificate must identify the specific duties that may be performed by this individual;

(b) Removal of the restrictions can be accomplished by successfully completing the food handler training program. The food handler will then be issued a new certificate of program completion.

(8) Program providers, if requested, must provide food handlers specific feedback on the assessment questions missed.

(9) Program providers will ensure that a knowledgeable person is available to answer questions about the assessment and program content. It is not necessary that the knowledgeable person be present at all times to answer questions.

(10) Program providers will rotate the written assessment versions at least quarterly.

(11) At least triennially or when deemed necessary, the Oregon Health Authority or Local Public Health Authority that approved the Designated Agent will perform an onsite review of the training programs. The review will examine:

(a) Written assessment security, including rotation, physical security, and compliance with availability of reference materials during assessment;

(b) Instructor qualification and availability of qualified assistance for individuals with questions on the training materials.

(12) Annually, program providers will submit information to the Authority on the number of assessments taken for the year and the number of assessments passed by assessment type (e.g., language, written, oral, and online).

(13) Failure to follow rules may result in the removal of the ability of a program provider to provide food worker training:

(a) Upon failure to follow rules, unless immediately correctable, the program provider will develop a remediation plan. The Local Public Health Authority or the Oregon Health Authority that approved the training will follow up within 90 days to ensure that the program provider is in compliance with training requirements. The Local Public Health Authority or the Oregon Health Authority may allow for additional time to achieve compliance with the training requirements;

(b) Continued failure to achieve compliance with the training requirements will result in the termination of the program provider's training approval.

(14) Program provider shall take reasonable measures to ensure identity of food worker being assessed.

333-175-0071
Requirements for Food Handler Training Program Qualifications

(1) Any trainer providing food handler training must either be a Registered Environmental Health Specialist, Registered Environmental Health Specialist Trainee or have a current certificate of completion from an approved food manager training course or the equivalent as determined by the Authority.

(2) Trainer requirements do not apply when food handlers are trained using self-training materials.

Stat. Auth.: ORS 624.570
Stats. Implemented: ORS 624.570

333-175-0081
Successful Completion of Food Handler Training Program

(1) In order to receive a certificate of program completion, a food handler must pass the written assessment with a minimum score of 75%.

(2) If a person successfully completes a food handler training program and pays the appropriate fee, the program provider shall issue a certificate of program completion.

Stat. Auth.: ORS 624.570
Stats. Implemented: ORS 624.570
Hist.: PH 21-2004, f. & cert. ef. 6-18-04; PH 14-2006, f. 6-27-06, cert. ef. 7-1-06

333-175-0091
Reciprocity and Equivalency

(1) A food handler certificate of program completion is valid statewide.

(2) Any person who has a current certification from an Authority-approved food manager training program or is registered as an Environmental Health Specialist or Environmental Health Specialist Trainee as required in ORS Chapter 700 need not obtain a food handler certificate of program completion.

(3) To be accepted in lieu of a food handler certificate of program completion, a food manager certification must be renewed every five years.

Stat. Auth.: ORS 624.570
Stats. Implemented: ORS 624.570

333-175-0101
Fees

(1) Program providers may charge a fee up to a maximum of $10 per person for the administration of the program and the issuance of a certificate of program completion.

(2) Program providers shall not require a fee of any food handler listed in OAR 333-175-0091.

(3) Program providers may charge a fee for food handler materials and deduct the cost from the food handler training and certificate of program completion as long as the total cost does not exceed $10 to each individual.

(4) Notwithstanding sections (1) and (3) of this rule, program providers may assess a new program fee each time a participant takes or retakes all or part of a program or certification assessment.

(5) Program providers may charge a fee not to exceed $5 for duplicate certificates of program completion.

333-175-0111
General

(1) Upon request by the Oregon Health Authority or a Local Public Health Authority, a licensee of a facility licensed under ORS 624.020 or 624.320 shall make available the certificate of program completion for each food handler in the licensed facility. For purposes of complying with this rule, the licensee may keep photocopies of the food handler certificates of program completion.

(2) If a food handler uses their food manager training program certification in lieu of a food handler certificate of program completion, the licensee shall make available to the inspecting authority the food handler's food manager training certification.

(3) Consistent with civil rights and disability laws, all program providers will make reasonable accommodations for training workers with disabilities, including the issuing of restricted certificates of program completion, and providing culturally, developmentally, and linguistically appropriate training.

(4) The Local Public Health Authority that approves a Designated Agent must provide the Oregon Health Authority with the name, address and telephone number of the individual or organization that has been approved. Such notification must be in writing and must occur before the Designated Agent can commence training and/or certification of food workers.

DIVISION 200

EMERGENCY MEDICAL SERVICES AND SYSTEMS

333-200-0000
Purpose

The purpose of these rules is to establish the procedures and standards for the development and maintenance of a comprehensive statewide trauma system as set forth under ORS 431.575 through 431.671.

Stat. Auth.: ORS 431.611
Stats. Implemented: ORS 431.575 – ORS 431.671
Hist.: HD 17-1985(Temp), f. & ef. 9-20-85; HD 5-1987, f. & ef. 6-26-87; PH 27-2015, f. 12-8-15, cert. ef. 1-1-16

333-200-0010
Definitions

As used in OAR 333-200-0000 through 333-200-0295:

(1) "Area Trauma Advisory Board" (ATAB) means an advisory group appointed by the Authority for each established trauma area to represent providers of trauma care and members of the public.

(2) "Authority" means the Oregon Health Authority.

(3) "Categorization" means a process for determining the level of a hospital's trauma care capability and commitment which allows any hospital which meets criteria to receive trauma patients.

(4) "Communications Coverage Area" means a geographic region representing a primary radio service area for emergency medical communications. When primary service areas substantially overlap they will be considered as one coverage area.

(5) "Coordinated Care Organization" has the meaning given that term in OAR 410-141-0000.

(6) "Designation" means a competitive process for determining the level of a hospital's trauma care capability and commitment, allowing the Division to select a limited number of hospitals which meet criteria to receive trauma patients.

(7) "Division" means the Public Health Division of the Oregon Health Authority.

(8) "Emergency Medical Condition" means a medical condition that manifests itself by symptoms of sufficient severity that a prudent layperson possessing an average knowledge of health and medicine would reasonably expect that failure to receive immediate medical attention would place the health of a person, or a fetus, in the case of a pregnant woman, in serious jeopardy.

(9) "Emergency Medical Services Agency" (EMS Agency) has the meaning given that term in OAR 333-265-0000.

(10) "Emergency Medical Responder" means a person who is licensed by the Division as an Emergency Medical Responder.

(11) "Emergency Medical Services Provider" (EMS Provider) means a person who is licensed by the Division as an Emergency Medical Responder or an Emergency Medical Technician.

(12) "Emergency Medical Technician" (EMT) means a person who is licensed by the Division as an Emergency Medical Technician.

(13) "Glasgow Coma Scale" (GCS) means an internationally recognized scoring system for the assessment of head injury severity and degree of coma.

(14) "Hospital" has the meaning set forth in ORS 442.015(15).

(15) "Hospital Catchment Area" means a geographic region representing a primary service area for hospitals. When primary service areas substantially overlap they shall be considered as one catchment area.

(16) "Injury Severity Score" (ISS) means a method for quantifying the degree of anatomic injury. As described in Baker, S.P., O'Neill B., Haddon W. Jr., et al: The Injury Severity Score, Journal of Trauma, 1974, 14: 187-196.

(17) "Level I (Regional) Trauma Hospital" means a hospital which is categorized or designated by the Division as having met the trauma hospital resource standards for a Level I hospital, as described in Exhibit 4. Level I hospitals manage severely injured patients, provide trauma related medical education and conduct research in trauma care.

(18) "Level II (Area) Trauma Hospital" means a hospital categorized or designated by the Division as having met the trauma hospital resource standards for a Level II hospital, as described in Exhibit 4. Level II hospitals manage the severely injured patient.

(19) "Level III (Local) Trauma Hospital" means a hospital categorized or designated by the Division as having met the trauma hospital resource standards for a Level III hospital, as described in Exhibit 4. Level III hospitals provide resuscitation, stabilization, and assessment of the severely injured patient and provide either treatment or transfer the patient to a higher level trauma system hospital as described in Exhibit 5.

(20) "Level IV (Community) Trauma Hospital" means a hospital categorized or designated by the Division as having met the hospital resource standards for a Level IV hospital, as described in Exhibit 4. Level IV hospitals provide resuscitation and stabilization of the severely injured patient prior to transferring the patient to a higher level trauma system hospital.

(21) "Managed Health Care Organization" means a health care provider or a group or organization of medical service providers that provide for the delivery of an agreed upon set of medical or referral services for an enrolled group of individuals and families in a defined geographic area at a fixed periodic rate paid per enrolled individual or family.

(22) "Medical Direction" means physician responsibility for the operation and evaluation of prehospital emergency medical care performed by emergency care providers.

(23) "Off-Line Medical Direction" means the direction provided by a physician to prehospital emergency medical care providers through communications such as written protocols, standing orders, education and quality improvement reviews.

(24) "On-Line Medical Direction" means the direction provided by a physician to prehospital emergency medical care providers through radio, telephone, or other real time communication.

(25) "Oregon Trauma Registry" means the trauma data collection and analysis system operated by the Division.

(26) "Prehospital Response Time" means the length of time between the notification of a provider and the arrival of that provider's emergency medical service unit(s) at the incident scene.

(27) "Stabilization" means that, within reasonable medical probability, no material deterioration of an emergency medical condition is likely to occur.

(28) "State Trauma Advisory Board" (STAB) means an advisory group appointed by the Authority to represent providers of trauma care.

(29) "Trauma Patient" means a person who at any time meets field triage criteria for inclusion in the Oregon Trauma System, as described in Exhibit 2 of these rules.

(30) "Trauma System Hospital" means a hospital categorized or designated by the Division to receive and provide services to trauma patients.

(31) "Trauma System Plan" means a document which describes the policies, procedures and protocols for a comprehensive system of prevention and management of traumatic injuries.

(32) "Triage Criteria" means the parameters established to identify trauma patients for treatment in accordance with the trauma system plan. These criteria are set forth in Exhibit 2.

333-200-0020
Objectives of the Trauma System

The objective of the statewide trauma system is to reduce deaths and disabilities which result from traumatic injuries by:

(1) Identifying the causes of traumatic injuries and recommending, promoting, and coordinating prevention activities;

(2) Developing a statewide trauma system plan to assure timely, quality, definitive care through coordinated identification, transportation and treatment of trauma patients:

(a) The statewide trauma system plan shall be composed of seven area plans; and

(b) Each area trauma system plan shall consist of policies, procedures, and protocols which address each of the following trauma system components:

(A) Communication and dispatch;

(B) Responders and prehospital response times;

(C) Medical direction and treatment;

(D) Triage and transportation;

(E) Hospital resources;

(F) Inter-hospital transfers;

(G) Rehabilitation;

(H) Quality improvement;

(I) Education and research;

(J) Prevention; and

(K) Disaster management.

(3) Adopting the standards, policies and procedures necessary to unify area trauma system plans into a statewide trauma system; and

(4) Promoting quality treatment, education, research and prevention of traumatic injuries utilizing as a model **Resources for Optimal Care of the Injured Patient: Committee on Trauma, American College of Surgeons, 2014 and the Guidelines for Field Triage of Injured Patients, Recommendations of the National Expert Panel on Field Triage, 2011; Centers for Disease Control and Prevention, MMWR, January 13, 2012, Vol. 61, No. 1.**

333-200-0030
State Trauma Advisory Board Functions

(1) The STAB is established in accordance with ORS 431.580.

(2) The STAB shall:

(a) Advise the Division with respect to the development of a comprehensive emergency medical services and trauma system including meeting the objectives established in OAR 333-200-0020;

(b) Advise the Division on the adoption of rules, policies, and procedures regarding the trauma system;

(c) Analyze data related to prevention of injuries, monitoring of the trauma system and recommend improvements where indicated; and

(d) Suggest improvements to the emergency medical services and trauma system.

(3) In satisfying its duties described in section (2) of this rule, the STAB shall:

(a) Make evidence-based decisions that emphasize the standard of care attainable throughout the state and individual communities; and

(b) Seek the advice and input of coordinated care organizations or other managed care organizations.

(4) The Division shall seek the advice of the STAB concerning the approval of area trauma system plans and approval of subsequent protocols for major modifications.

(5) A majority of the members of the STAB shall constitute a quorum in order to conduct business.

(6) Official action taken by the STAB requires the approval of the majority of the members.

333-200-0035
State Trauma Advisory Board Appointments

(1) The STAB shall consist of a minimum of 17 members. These members shall represent each of the seven ATABs. A STAB member may also be a member of an ATAB.

(2) Members of the STAB shall be chosen in accordance with the provisions of ORS 431.580.

(3) Appointment for STAB members shall be as follows:

(a) Terms shall be for four years;

(b) Vacancies shall be filled by the Authority in concurrence with the Governor;

(c) Members may be reappointed but may not serve consecutive terms;

(d) With the exception of Level I trauma hospitals, members may not be appointed from the same trauma hospital in consecutive terms; and

(e) A member serves at the pleasure of the director of the Authority.

(4) The STAB may recommend to the Authority that:

(a) Membership be expanded to improve coordination of the trauma care system; and

(b) Provider specialty positions are considered for board appointment.

(5) A public member who has an economic interest in the provision of emergency medical services or trauma care may not be appointed to serve on the STAB.

333-200-0040
Trauma System Areas

The Division has established seven trauma system areas utilizing county lines, zip codes, township and range, and roads for the purpose of developing, implementing and monitoring the trauma system and not for the purpose of restricting patient referrals. The trauma system areas are illustrated in Exhibit 1 and are:

(1) Area 1: Clackamas County; Clatsop County; Columbia County; Multnomah County; Tillamook County (except zip codes 97122, 97135 and 97149); Washington County; and Yamhill County (zip codes 97115, 97119, 97123, 97132, 97140 and 97148 only);

(2) Area 2: Benton County; Lincoln County; Linn County; Polk County; Marion County; Tillamook County (zip codes 97122, 97135 and 97149 only); and Yamhill County (except zip codes 97115, 97132 and 97148);

(3) Area 3: Coos County; Curry County (zip codes 97450, 97465, and 97476 only); Douglas County; and Lane County;

(4) Area 5: Curry County (zip codes 97406, 97415 and 97444 only); Jackson County; and Josephine County;

(5) Area 6: Gilliam County; Hood River County; Sherman County; and Wasco County (except zip codes 97001, 97057 and 97761);

(6) Area 7: Crook County; Deschutes County; Grant County; Harney County; Jefferson County; Klamath County; Lake County; Wasco County (zip codes 97001, 97057 and 97761 only); and Wheeler County; and

(7) Area 9: Baker County, Malheur County, Morrow County; Umatilla County; Union County; and Wallowa County.

333-200-0050
Area Trauma Advisory Board Functions

(1) Area Trauma Advisory Boards (ATAB) are established in accordance with ORS 431.613;

(2) Each ATAB shall:

(a) Act as liaison between the providers and general public in their area and the STAB and the Division for exchanging information about trauma system issues and developing an area-wide consensus;

(b) Advise the STAB and the Division on the adoption of rules, policies and procedures regarding area trauma system plans;

(c) Recommend to the Division an area trauma system plan which meets the standards and objectives of these rules;

(d) Participate in the promotion and function of the implemented area trauma system plan by making recommendations to the Division and the area trauma care providers; and

(e) Provide an annual report to the Division which describes a review and any recommended modifications of the area trauma system plan.

333-200-0060
Area Trauma Advisory Board Appointments

(1) Each ATAB shall consist of at least 15 members who shall be broadly representative of the trauma area as a whole.

(2) Appointments to the ATABs shall be in accordance with the provisions of ORS 431.613.

(3) Terms of appointment for ATAB members shall be as follows:

(a) Terms shall be for a period of three years;

(b) Vacancies shall be filled by appointment by the Authority in concurrence with the Governor;

(c) Members may serve unlimited terms at the discretion of the Division; and

(d) Members are subject to removal with cause by the Division.

(4) ATABs may recommend to the Division that:

(a) Membership be expanded in order to improve coordination of the area trauma system; and

(b) Provider specialty positions are considered for ATAB appointments.

333-200-0070
Approval of Area Trauma System Plans

(1) Each ATAB shall recommend to the Division an area trauma system plan and, when deemed necessary by the Division or the ATAB, modifications to the plan.

(2) Area trauma system plans shall meet the minimum standards established in OAR 333-200-0080.

(3) The Division may grant waivers from one or more standards contained in OAR 333-200-0080, in an area trauma system plan if the ATAB can demonstrate, or the Division finds that compliance with such standards is inappropriate because of special circumstances which would render compliance unreasonable, burdensome or impractical. Such waivers may be limited in time or may be conditioned as necessary to protect the public welfare.

(4) The Division shall seek the advice of the STAB concerning the approval of area trauma system plans and approval of subsequent proposals for major modifications.

(5) All approved area trauma system plans shall be considered the standard of care for the area covered by the plan.

(6) Each ATAB shall review its area trauma system plan at least once every five years and submit to the Division:

(a) A copy of the plan; and

(b) A description of any proposed changes including a statement about why such changes are necessary.

Stat. Auth.: ORS 431.611

333-200-0080
Standards for Area Trauma System Plans

Area trauma system plans shall describe how each of the following standards are met or exceeded. Interpretation and implementation of the standards as set forth in this rule shall be in general accordance with the guidelines of the **Resources for Optimal Care of the Injured Patient: Committee on Trauma, American College of Surgeons, 2014**. For the purposes of section (4) of this rule, interpretation and implementation of standards shall be in general accordance with the **Guidelines for Field Triage of Injured Patients, Recommendations of the National Expert Panel on Field Triage, 2011; Centers for Disease Control and Prevention, MMWR, January 13, 2012, Vol. 61, No. 1**:

(1) Communications and Dispatch:

(a) System Access: Residents and visitors in a communications coverage area shall be able to access emergency medical services by calling 9-1-1 as set forth in ORS 403.115;

(b) Dispatch Response: Dispatchers for emergency medical care providers shall have protocols which include pre-arrival patient care instructions and which require the dispatch of the appropriate level of available responding units (Basic, Intermediate or Advanced Life Support) based on medical need;

(c) Special Resources: All emergency medical services dispatchers shall maintain an up-to-date list of available law enforcement agencies, fire departments, air and ground ambulance services, quick response units that respond to an ill or injured person to provide initial emergency medical care prior to transportation by an ambulance and special responders for extrication, water rescue, hazardous material incidents and protocols for their use;

(d) Prehospital/Hospital: Ambulances shall have either a UHF or VHF radio that will provide reliable communications between the ambulance and central dispatch, the receiving hospital, and online medical direction. If the information has to be relayed through the dispatching agency, that agency shall be responsible to relay patient information to the hospital; and

(e) Training: There shall be training and certification standards for all tele-communicators that process telephone requests for or dispatch emergency care providers. The authorization to establish

these standards is the responsibility of the Department of Public Safety Standards and Training in accordance with ORS 181.640.

(2) Responders and Prehospital Response Times:

(a) Ambulance Service Areas (ASAs): The existing ASAs shall be described as well as a summary of the ATAB's efforts to promote each county adopting an ASA plan in accordance with ORS 682.062;

(b) Prehospital Response Times: Trauma system patients shall receive prehospital emergency medical care within the following prehospital response time parameters 90 percent of the time:

(A) Urban area, an incorporated community of 50,000 or more population — 8 minutes;

(B) Suburban area, an area which is not urban and which is contiguous to an urban community. It includes the area within a 10-mile radius of that community's center. It also includes areas beyond the 10-mile radius which are contiguous to the urban community and have a population density of 1,000 or more per square mile — 15 minutes;

(C) Rural area, a geographic area 10 or more miles from a population center of 50,000 or more, with a population density of greater than six persons per square mile — 45 minutes;

(D) Frontier area, the areas of the state with a population density of six or fewer persons per square mile and are accessible by paved roads — 2 hours; and

(E) Search and rescue area, the areas of the state that are primarily forest, recreational or wilderness lands that are not accessible by paved roads or not inhabited by six or more persons on a year round basis. — No established prehospital response time.

(c) Field Command: A uniform policy shall assign responsibility for directing the care of the trauma patient in the prehospital setting in cases of response by multiple providers to assure scene control by the most qualified responder;

(d) Utilization of Air Ambulance: Protocols for the medical direction, activation and utilization of air ambulance service(s) shall be established;

(e) Prehospital Care Report Form: All prehospital emergency care providers shall use a patient care report form as defined in OAR 333-255-0000; and

(f) Utilization of Oregon Trauma System Identification Bracelet: All prehospital emergency medical care providers shall use the official Public Health Division numbered Trauma System Identification Bracelet when the patient meets trauma system entry criteria or is entered into the Trauma System and notify the receiving trauma hospital of the incoming patient. The prehospital emergency medical care provider shall record the number on the patient's prehospital care report.

(3) Medical Direction and Treatment:

(a) Protocols, Policies and Procedures: Providers in each trauma system area shall function under an effective and coordinated set of off-line prehospital trauma protocols and on-line medical direction trauma policies and procedures which address basic, intermediate and advanced levels of care. Off-line treatment protocols shall clearly describe all treatment and transportation procedures and identify those procedures which require on-line medical authorization. Medical direction policies and procedures must assure consistent area-wide coordination, data collection and area-wide quality improvement responsibility;

(b) Hospital Status: In the event that on-line medical direction serves two or more categorized or designated hospitals, there shall be a system for medical direction to continuously determine the current status of hospital trauma care capabilities; and

(c) Physician Qualifications: On-line medical direction physicians must be qualified for this role by virtue of training, experience and interest in prehospital trauma care as demonstrated through emergency medicine and Advanced Trauma Life Support (ATLS) training in accordance with the American College of Surgeons ATLS course.

(4)(a) Triage and Transportation: Triage and transportation protocols shall be written to ensure that patients who at any time meet field triage criteria as set forth in Exhibit 2 will be transported directly to a categorized trauma hospital as described under OAR 333-200-0090. The protocols must be based on field triage criteria (Exhibit 2) and identify the following:

(A) Which patients are appropriate for transport to a Level I, II, III or IV trauma hospital based on the capabilities of the hospitals in the ATAB;

(B) Conditions in which an ambulance may bypass a Level III or IV trauma hospital in order to transport directly to a Level I or II trauma hospital; and

(C) Conditions in which air transport should be considered for transport directly to a Level I or II trauma hospital.

(b) Triage and transportation protocols shall be followed unless otherwise advised by on-line medical direction or under the following circumstances:

(A) If unable to establish and maintain an adequate airway, the patient shall be taken to the nearest hospital to obtain definitive airway control. Upon establishing and maintaining airway control, the patient shall be immediately transferred to a Level I or Level II trauma hospital;

(B) If the scene time plus transport time to a Level I or Level II trauma hospital is significantly greater than the scene time plus transport time to a closer Level III or Level IV trauma hospital;

(C) If the hospital is unable to meet hospital resource standards as defined in Exhibit 4, when there are multiple patients involved, or the patient needs specialty care; or

(D) If on-line medical direction overrides these standards for patients with special circumstances, such as membership in a health maintenance organization, and if the patient's condition permits.

(E) Application of paragraphs (B), (C), and (D) of this subsection must not delay definitive medical or surgical treatment.

(5) Hospital Resources:

(a) Trauma System Hospital Identification: Either the categorization or designation method of identifying trauma system hospitals as described under OAR 333-200-0090(1), (3) and (4) shall be recommended to the Division; and

(b) Resource Criteria: Trauma system hospitals shall meet or exceed the trauma hospital resource standards as set forth in Exhibit 4 and hospital activation criteria as set forth in Exhibit 3. Area criteria that exceed the criteria set forth in Exhibit 4 shall be accompanied by an informational statement of the additional costs that a hospital will incur to meet these standards.

(6) Inter-hospital Transfers:

(a) Identification of Patients: ATAB-wide criteria which meet or exceed any of the criteria set forth in Exhibit 5 of these rules shall be established to identify patients who should be transferred to a Level I or II trauma system hospital or specialty care center.

(b) When it is determined that a patient transfer is warranted:

(A) The transfer shall take place after the stabilization of the patient's emergency medical condition has been provided within the capabilities of the local hospital, which may include operative intervention; and

(B) The transfer to a Level I or II trauma hospital shall not be delayed for diagnostic procedures that have no impact on the transfer process or the immediate need for resuscitation.

(c) In all situations regarding an inter-hospital transfer, the decision to retain or transfer the patient shall be based on medical knowledge, experience and resources available to the patient.

(d) The hospital's trauma performance improvement and patient safety process shall monitor all cases meeting inter-hospital transfer criteria. The Division, through annual reports and site surveys, shall monitor this performance category.

(7) Inter-hospital Transfers with Health Maintenance Organizations:

(a) Trauma system hospitals shall facilitate the transfer of a member of a health maintenance organization or other managed health care organization when the emergency medical condition of the member permits and no deterioration of that condition is likely to result from or occur during the transfer of the patient. Trauma system hospitals shall transfer a patient in accordance with the provisions of ORS 431.611(2)(a) and (b) and any other applicable laws or regulations.

(b) A patient will be deemed stabilized, if the treating physician attending to the patient in the trauma hospital has determined, within reasonable clinical confidence, that the emergency medical condition has been resolved.

(c) Hospitals or health maintenance organizations may not attempt to influence patients and families, prior to the patient's stabilization, into making decisions affecting their trauma treatment by informing them of financial obligations if they remain in the trauma facility.

(d) Health maintenance organizations and non-designated trauma facilities shall report follow-up information to the transferring trauma system hospital and all required data as set forth in the Oregon Trauma Registry Data Dictionary; and

(e) Hospitals or health maintenance organizations that receive or transfer trauma patients shall participate in regional quality improvement activities.

(8) Rehabilitation Resources:

(a) Capabilities for trauma rehabilitation in each trauma system area and transfer procedures to other rehabilitation facilities shall be described; and

(b) Rehabilitation resources for burns, pediatrics, neurotrauma and extended care shall be included.

(9) Quality improvement:

(a) Provisions shall be made for at least quarterly review of medical direction, prehospital emergency medical care and hospital care of trauma cases:

(A) Area-wide criteria for identifying trauma cases for audit shall be described and shall include all trauma related deaths;

(B) Responsibility for identifying and reviewing all trauma cases meeting audit criteria shall be assigned; and

(C) Quarterly reports shall be submitted to the Division by the ATAB or its representative on confidential forms.

(b) The ATAB, STAB, all Area and State Quality Improvement Committee(s) and the Division shall meet in executive session as set forth in ORS 192.660 when discussing individual patient cases; and

(c) No member of any ATAB, the STAB, or any committee, subcommittee or task force thereof, shall disclose information or records protected by ORS 431.627 or 41.675 to unauthorized persons. Any person violating these rules shall be immediately removed by the Division from membership on any trauma system committee, subcommittee or task force thereof.

(10) Education and Research:

(a) Trauma Training: Trauma system hospitals shall provide or assist in the provision of prehospital trauma management courses to all EMS Providers involved in the prehospital emergency medical care of severely injured patients; and

(b) Research: In areas with Level I hospitals, clinical and basic research in trauma and publication of results involving surgical and nonsurgical specialists, nurses, and allied health professionals engaged in trauma care, shall be promoted.

(11) Prevention:

(a) Public Education: Public education and awareness activities shall be developed by trauma system hospitals to increase understanding of the trauma system and injury prevention. These activities shall be appropriate to the size and resources of the area; and

(b) Development and Evaluation: Trauma prevention activities to identify and address area problems shall be supported.

(12) Disaster Management: Provisions for addressing triage of trauma system patients to non-trauma hospitals during a natural or manmade disaster must be addressed and include:

(a) Implementation and termination of the disaster management plan; and

(b) Reporting requirements of the Oregon Trauma Registry and Oregon Trauma Program.

333-200-0090
Trauma Hospital Approval and Categorization

(1) The Division shall approve trauma system hospitals by levels of care capability as defined by the standards contained in Exhibit 4 and by any criteria contained in the approved area plan. Approval will be renewed every three years if the hospital submits an application for renewal, and if the Division's review finds that the hospital continues to meet the prescribed standards in Exhibit 4.

(2) Upon determining the level of a hospital's trauma care capability and whether prescribed hospital resource standards have been met in accordance with OAR 333-200-0080, the Division shall categorize a trauma system hospital as a Level I, Level II, Level III or Level IV trauma hospital. A trauma hospital may also be categorized as a Level I or Level II Pediatric Trauma Center and must meet prescribed pediatric trauma care standards in Exhibit 4. The Division may accept ACS verification in accordance with OAR 333-200-0250.

(3) For area trauma system plans prescribing categorization of hospitals, the Division shall approve all hospitals which meet the standards of the area trauma system plan.

(4) For area trauma system plans prescribing designation of hospitals, the Division shall approve selected hospitals which meet the standards of the area trauma system plan. The Division shall select hospitals based on the assessment that the best interests of the patients of the area are served by the particular applicant and expected patient volume. Competing applicants shall be judged on the on-site survey assessments of which hospital(s) provides the highest quality of compliance with the standards in Exhibit 4.

(5) A trauma system's hospital categorization may be transferable to a successor operator if the successor provides written acknowledgment that the successor will comply with all of the responsibilities and obligations imposed upon the transferor and under these rules including probationary status, and the successor agrees to be substituted in pending proceedings regarding the approval status. The Division may decline, at its discretion, to transfer approval if it reasonably believes the successor cannot meet the standards, rules, policies or protocols set forth in the approved area plan.

(6) A trauma system hospital may, without cause, terminate its trauma system hospital status upon 90-days written notice to the Division and the ATAB's list of interested parties.

Trauma Hospital Application

(1) Application for a hospital to be categorized as a Level I, II, III or IV trauma hospital shall be submitted in writing on a form prescribed by the Division.

(2) The application process shall provide for at least 60 days in which to complete and submit proposals to the Division with all supporting information and documents.

(3) The Division's evaluation of the application shall include:

(a) A review of the hospital's proposal by the Division or survey team; and

(b) An onsite survey by the Division and survey team of the hospital.

(4) The application shall become the property of the Division and upon completion of the approval process is not subject to disclosure in accordance with ORS 431.627.

(5) The applicant shall have the right to withdraw its application at any time prior to dispositive action by the Division.

333-200-0245
Trauma Survey and Survey Team

(1) In accordance with OAR 333-200-0235, the Division shall conduct an on-site survey using a survey team composed of persons selected by the Division.

(2) No person may serve as a member of the survey team that has any actual or potential personal, organizational or financial conflict of interest in the hospital under consideration.

(3) The Division shall provide the proposed list of survey team members to the applicant prior to conducting a survey. An applicant wishing to contest a member of the survey team shall provide written notice to the Division within 10 calendar days of receiving the proposed list. The written notice must identify concerns and provide information that demonstrates a clear and convincing basis for the concern.

(4) The quality of each hospital's compliance with the standards set forth in Exhibit 4 shall be evaluated during an on-site survey. Members of the survey team shall:

(a) Evaluate medical records, staff rosters and schedules, minutes from quality improvement committee meetings, and other documents relevant to trauma care;

(b) Evaluate equipment and premises;

(c) Conduct informal interviews with hospital personnel; and

(d) Report the findings and interpretations of the survey to the Division.

(5) During an on-site survey, administrative staff, faculty, medical staff, employees and representatives are prohibited from having any contact with any survey team member, except as directed by the Division. A violation of this provision may be grounds for immediate termination of the survey.

(6) The Division may review, inspect, evaluate, and audit patient trauma discharge summaries, trauma patient care logs, trauma patient care records, trauma quality improvement committee minutes and other documents relevant to trauma care of any hospital at any time to verify compliance with trauma system standards as set forth in these rules. The confidentiality of such records shall be maintained by the Division in accordance with state law.

(7) Information gathered during an on-site survey by the survey team including oral and written reports and deliberations shall be confidential in accordance with ORS 431.627(3).

(8) A written report of the on-site survey findings will be provided to the applicant only within 60 days of completing the on-site survey and shall be confidential in accordance with ORS 431.627(3).

333-200-0250
Hospitals Seeking Verification from American College of Surgeons

(1) Notwithstanding OAR 333-200-0235 and 333-200-0245, a hospital seeking verification from the American College of Surgeons (ACS) shall submit the following information to the Division:

(a) Notification of intent to seek verification;

(b) Notification of the date and time of the site visit to be conducted by ACS;

(c) A copy of the ACS Preview Review Questionnaire; and

(d) Any additional information necessary to determine compliance with state specific standards.

(2) A Division representative shall be present at the verification site visit and may request additional information to determine compliance with state specific standards.

(3) In accordance with OAR 333-200-0295, the Division shall provide a written report of the on-site survey findings and a corrective action plan shall be submitted by the hospital, if applicable.

(4) A hospital shall submit a copy of the ACS verification report to the Division upon receipt.

(5) The Division may accept ACS verification if the verification is recognized by the Division as addressing the ACS trauma system standards and any additional state standards identified in these rules.

333-200-0255
Waivers

(1) The Division may grant waivers from standards that are established in OAR 333-200-0080, OAR 333-200-0265 or Exhibit 4. Such waivers may be limited in time or may be conditioned as the Division considers necessary to protect the safety and welfare of the public.

(2) If a hospital seeks a waiver to the Division's rules, it must submit a request in writing that includes, at a minimum, the following information:

(a) The specific rule for which a waiver is requested;

(b) The special circumstances relied upon to justify the waiver;

(c) Any alternatives that were considered and the reasons those alternatives were not selected;

(d) How the proposed waiver will maintain or improve patient health and safety without jeopardizing patient health and safety; and

(e) The proposed duration of the waiver.

(3) After reviewing the written request, the Division shall issue its decision in writing.

(4) Applicants may not implement any waiver request until approved in writing by the Division.

333-200-0265
Trauma System Hospital Responsibilities

A trauma system hospital shall:

(1) Be responsible for all expenses incurred by the hospital in planning, developing and participating in the trauma system, including attorney fees and costs;

(2) Be responsible for all expenses incurred when a re-survey of the hospital is conducted by the Division or its designee(s);

(3) Comply with all requirements in these rules, all current state and area trauma system standards, and all policies, protocols and procedures as set forth in the approved area trauma system plan;

(4) Meet or exceed the standards for hospital resources as set forth in Exhibit 4 and hospital activation and transfer criteria as set forth in Exhibits 3 and 5;

(5) Provide the resources, personnel, equipment and response required by these rules;

(6) Provide care to trauma system patients which is consistent with the standards advocated by the Advanced Trauma Life Support Course, American College of Surgeons, Committee on Trauma;

(7) Report to the Oregon Trauma Registry all required data as set forth in the Oregon Trauma Registry Abstract Manual for each and every trauma patient as defined in these rules:

(a) Data must be reported within 60 days of death or discharge of that patient; and

(b) Data shall be submitted in electronic media using a format prescribed by the Division.

(c) The Division may, at its sole discretion, permit data submission by alternative means where use of the Division's prescribed format would impose a severe hardship on the reporting institution.

(8) Participate in evaluation and research studies as prescribed by the Division;

(9) Record patient resuscitation data using the official state trauma resuscitation flow sheet. If using a form other than the official form, that form must contain at least the same information; and

(10) Identify and submit to the Division the name of the individual that will serve as the Trauma Registrar, Trauma Coordinator or Trauma Program Manager, and Trauma Medical Director. Any changes to persons serving in these roles must be reported to the Division within 60 days.

Hist.: PH 27-2015, f. 12-8-15, cert. ef. 1-1-16

333-200-0285
Violations

(1) No person, emergency medical service, medical clinic, or hospital shall by any means advertise, assert, represent, offer, provide or imply that such person, service, clinic or hospital is a trauma system hospital or has the capabilities for providing treatment to trauma patients beyond the status for which the approval has been granted.

(2) No trauma system hospital shall in any manner advertise or publicly assert that its trauma approval affects the hospital's care capabilities for non-trauma system patients, nor that the approval should influence the referral of non-trauma system patients.

(3) Where a hospital is greater than three months in arrears in reporting required trauma patient data, the Division may contract with an independent data collection and abstraction service to perform the data collection. The Division shall assess the trauma system hospital for all costs associated with such collection of required data.

333-200-0295
Enforcement

(1) Following an on-site survey, a member of the survey team may conduct an exit conference with the applicant or his or her designee. During the exit conference, a survey team member shall:

(a) Inform the applicant or designee of the preliminary findings of the survey; and

(b) Give the person a reasonable opportunity to submit additional facts or other information to the surveyor in response to those findings.

(2) Following the survey, a determination shall be made and Division staff shall prepare and provide the applicant or his or her designee specific and timely written notice of the findings. An applicant shall have 30 days from receipt of the survey report to request a reconsideration of the categorization.

(3) If during a survey, the survey team documents non-compliance with trauma rules or laws, the deficiencies will be identified in the survey report and the laws alleged to have been violated and the facts supporting the allegation.

(a) A corrective action plan must be mailed to the Division within 45 to 60 calendar days from the date the survey report was received by the applicant.

(b) The Division shall prescribe the time frame an applicant has to correct all deficiencies. The time frame shall be based on the seriousness of the deficiencies and whether any deficiencies affect patient safety.

(c) The Division may determine that a focused review is necessary within one year of the date of the on-site survey in order to determine that the deficiencies identified in the survey report have been corrected.

(4) Upon receipt of the Division's written survey report, an applicant shall be provided an opportunity to dispute any findings including identified deficiencies. If an applicant desires an informal conference to dispute the survey findings, the applicant shall notify the Division in writing within 10 calendar days after receipt of the written survey report. The written request must include a detailed explanation of why the applicant believes the findings are inaccurate.

(5) The Division shall determine if a corrective action plan is acceptable. If the plan of correction is not acceptable to the Division, the Division shall notify the applicant in writing or by telephone:

(a) Identifying which provisions in the plan the Division finds unacceptable;

(b) Citing the reasons the Division finds them unacceptable; and

(c) Requesting that the plan of correction be modified and resubmitted no later than 30 calendar days from the date the letter of non-acceptance was received by the applicant.

(6) The Division may re-survey a trauma system hospital, immediately suspend or revoke a trauma system hospital approval or place a hospital on probation under any of the following circumstances:

(a) Substantial failure, for any reason, of a hospital to comply with these rules, all current state and area trauma system standards, and all policies, protocols and procedures as set forth in the approved area trauma system plan; or

(b) Submission of reports to the Division that are incorrect or incomplete in any material aspect.

(7) Except as set forth in OAR 333-200-0285(3), occasional failure of a trauma system hospital to meet its obligations will not be grounds for probation, suspension or revocation by the Division if the circumstances under which the failure occurred:

(a) Do not reflect an overall deterioration in quality of and commitment to trauma care; and

(b) Are corrected immediately by the hospital.

(8) Failure of a trauma system hospital to timely and accurately report to the Division all data required by rule or statute is grounds for suspension or revocation as a trauma hospital.

(9) A hospital which is dissatisfied with the decision of the Division regarding revocation, suspension, or probation in section (6) or (8) of this rule may request a contested case hearing pursuant to ORS Chapter 183.

DIVISION 205

TRAUMA SYSTEM HOSPITAL DESIGNATION IN TRAUMA AREA # 1

333-205-0000
Purpose

These rules establish standards for the approval and designation of Level I trauma system hospitals in Trauma Area #1. These rules establish standards in addition to OAR 333-200-0000 through 333-200-0295. For all standards addressed in both OAR 333-200-0000 through 333-200-0295 and 333-205-0000 through 333-205-0050,

the rules contained in OAR 333-205-0000 through 333-205-0050 shall apply.

333-205-0010

Designation

(1) The designation method of selecting Level I trauma system hospitals shall be implemented in accordance with the provisions of OAR 333-200-0090(1) and (4), 333-200-0235, and 333-200-0245.

(2) Written notification of the trauma system hospital designation shall be provided to the applicant by the Division. An applicant shall have 30 days from the receipt of notification of non-designation to file a request with the Division for reconsideration.

333-205-0040
Number of Facilities

(1) The Division shall designate a sufficient number of Level I trauma system hospitals to assure resources within ATAB 1 are routinely available to treat at least four major trauma patients within a 90-minute time period. Major trauma means serious injury caused by external forces which results in death or an injury severity score of 16 or greater, a three day hospital length of stay, or requires intensive care admission or major surgical procedure within six hours of hospital admission.

(2) The Division shall designate a maximum of two Level I hospitals and shall not designate any Level III or Level IV hospitals in Clackamas, Multnomah and Washington Counties.

Hospital Designation Criteria

(1) The Division shall utilize criteria as set forth in OAR 333-200-0090(4) and may, in addition, utilize the following criteria for selecting trauma system hospitals:

(a) Locations of major trauma incidents; and

(b) Geographical barriers which impede air or ground transportation.

(2) The Division shall consider the information contained in **Resources for Optimal Care of the Injured Patient: Committee on Trauma American College of Surgeons, 2014**, when interpreting the standards for the purpose of designating trauma system hospitals. This publication is not adopted as part of these rules.

DIVISION 250

AMBULANCE SERVICE LICENSING

333-250-0000
Effective Date and Preemption

(1) No person shall operate an ambulance service unless issued an ambulance service license by the Oregon Health Authority, Public Health Division.

(2) These rules preempt any local ambulance ordinances and county ambulance service area plans that are in conflict. This rule does not prevent a city or county from establishing requirements more stringent than those set forth in these rules.

Stat. Auth.: ORS 682.015 & 682.215

Stats. Implemented: ORS 682.017 - 682.117, 682.991

Hist.: HD 18-1994, f. 6-30-94, cert. ef. 7-1-94; OHD 7-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07

333-250-0010
Definitions

(1) "Advertise" means to communicate information to the public, or to any person concerned, by any oral, written, or graphic means including, but not limited to, handbills, newspapers, television, billboards, radio, Internet and telephone directories.

(2) "Agent" means a medical or osteopathic physician licensed under ORS Chapter 677, actively registered and in good standing with the Oregon Medical Board, a resident of or actively participating in the area in which the emergency service is located, designated by the supervising physician to provide direction of the medical services of EMS providers as specified in OAR chapter 847.

(3) "Ambulance" or "Ambulance Vehicle" means any privately or publicly owned motor vehicle, aircraft, or watercraft that is regularly provided or offered to be provided for the emergency transportation of persons who are ill or injured or who have disabilities.

(4) "Ambulance Based Clinician" means a registered nurse, physician, or physician assistant who:

(a) Has an active license in Oregon and is in good standing with the Oregon Board of Nursing or the Oregon Medical Board; and

(b) Staffs an ambulance for a licensed ambulance service.

(5) "Ambulance Service" means any person, governmental unit, corporation, partnership, sole proprietorship, or other entity that operates ambulances and that holds itself out as providing prehospital care or medical transportation to persons who are ill or injured or who have disabilities.

(6) "Ambulance Service Area (ASA)" means a geographic area served by one ground ambulance service provider, and may include all or portion of a county, or all or portions of two or more contiguous counties.

(7) "Authority" means the Emergency Medical Services and Trauma Systems Program, within the Oregon Health Authority.

(8) "Business Day" means Monday through Friday when the Authority is open for business, excluding holidays.

(9) "Emergency Care" means the performance of acts or procedures under emergency conditions in the observation, care and counsel of the ill, injured or disabled; in the administration of care or medications as prescribed by a licensed physician, insofar as any of these acts is based upon knowledge and application of the principles of biological, physical and social science as required by a completed course utilizing an approved curriculum in prehospital emergency care. However, "emergency care" does not include acts of medical diagnosis or prescription of therapeutic or corrective measures.

(10) "EMS" means Emergency Medical Services.

(11) "EMS Medical Director" has the same meaning as "Supervising Physician" in ORS 682.025.

(12) "Emergency Medical Services Provider (EMS Provider)" means a person who has received formal training in prehospital and emergency care and is state-licensed to attend to any ill, injured or disabled person. Police officers, fire fighters, funeral home employees and other personnel serving in a dual capacity, one of which meets the definition of "emergency medical services provider" are "emergency medical services providers" within the meaning of ORS Chapter 682.

(13) "EMT-Paramedic" has the same meaning as Paramedic.

(14) "Employee" means any full-time paid or part-time paid person acting within the scope of his or her duties and for or on behalf of an ambulance service.

(15) "Fraud or Deception" means the intentional misrepresentation or misstatement of a material fact, concealment of or failure to make known any material fact or any other means by which misinformation or false impression is knowingly given.

(16) "License" means the documents issued by the Authority to the owner of an ambulance service when the service and its ambulance are found to be in compliance with ORS Chapter 682, OAR chapter 333, division 255 and OAR chapter 333, division 250.

(17) "Non-emergency Care" means the performance of acts or procedures on a patient who is not expected to die, become permanently disabled or suffer permanent harm within the next 24-hours, including but not limited to observation, care and counsel of a patient and the administration of medications prescribed by a physician licensed under ORS Chapter 677, insofar as any of those acts are based upon knowledge and application of the principles of biological, physical and social science and are performed in accordance with scope of practice rules adopted by the Oregon Medical Board in the course of providing prehospital care as defined by this rule.

(18) "Owner" means the person having all the incidents of ownership in an ambulance service or an ambulance or, where the incidents of ownership are in different persons, the person, other than a security interest holder or lessor, entitled to the possession of an ambulance vehicle or operation of an ambulance service under a security agreement or a lease for a term of 10 or more successive days.

(19) "Paramedic" means a person who is licensed by the Authority as a Paramedic.

(20) "Patient" means a person who is ill or injured or who has a disability and who is transported in an ambulance.

(21) "Person" means any individual, corporation, association, firm, partnership, joint stock company, group of individuals acting together for a common purpose, or organization of any kind and includes any receiver, trustee, assignee, or other similar representative thereof.

(22) "Physician" means a person licensed under ORS Chapter 677, actively registered and in good standing with the Oregon Medical Board as a Medical Doctor (MD) or Doctor of Osteopathic Medicine (DO).

(23) "Prehospital Care" means that care rendered by EMS providers as an incident of the operation of an ambulance as defined by ORS Chapter 682 and that care rendered by EMS providers as incidents of other public or private safety duties, and includes, but is not limited to "emergency care" as defined by ORS Chapter 682.

(24) "Prehospital Care Report Form (PCRF)" means an Authority-approved form or electronic field data format that is completed for all patients receiving prehospital assessment, care or transportation to a medical facility.

(25) "Procedure" means a written, dated and signed course of action to carry out a directive. A procedure must be able to answer the questions; who, what, why, when and where.

(26) "Qualified Driver" means someone who is not licensed by the Authority and who meets Authority requirements to operate a ground ambulance.

(27) "Volunteer" means a person who is working without wages and is acting within the scope of his or her duties for an ambulance service, but who may receive reimbursement for personal expenses incurred.

333-250-0020

Application Process to Obtain an Ambulance Service License

(1) Every person who furnishes, operates, conducts, maintains, advertises, engages in, proposes to engage in, or professes to engage in the provision of ambulance service must apply for and receive an ambulance service license from the Authority before offering such service to the public.

(2) The applicant for an ambulance service license must possess at least one ambulance, facilities, equipment, and a communications system meeting the requirements of ORS Chapter 682 and OAR chapter 333, division 250. In addition, an applicant must have a sufficient number of EMS providers, a number approved by the Authority, to appropriately staff each ambulance.

(3) An applicant for an ambulance service license must submit an application to the Authority on a form specified by the Authority. A completed application form must contain, at a minimum:

(a) The name and address of the person or public entity owning the ambulance service;

(b) If other than the applicant's true name, the name under which the applicant is doing business;

(c) If for a corporation, a limited partnership, or a limited liability company, attach to the application:

(A) A written statement from the Oregon Secretary of State's Corporation Division that the ambulance service is registered in accordance with the requirements of the Secretary of State's Corporation Division and that the ambulance service is in good standing and has filed all its annual reports, together with filing fees;

(B) The name of the registered agent of the ambulance service that is on file with the Secretary of State's Corporation Division; and

(C) All trade names recorded with the Secretary of State's Corporation Division for this business entity, and if this business entity is a subsidiary, all trade names or names of all other subsidiaries recorded with the Secretary of State's Corporation Division.

(d) If for a public agency, documentation from local city or county authorizing operation as an ambulance service;

(e) A copy of a signed signature authorization form or a power of attorney;

(f) The name of the principal contact person that the ambulance service wants contacted regarding official communications with the Authority, if different than identified in subsection (3)(a) of this rule;

(g) The mailing and actual street address of the principal place of business of the ambulance service and the actual street address of all fixed locations where an ambulance is parked when not in operation;

(h) Proof of financial responsibility as specified in ORS 682.105. Proof must be in the form of a certificate of insurance;

(i) Copies of all licenses issued by the Federal Communications Commission (FCC) for the operation of the ambulance service's communications equipment and radio configuration data as required by the Authority or written authorization from a FCC license holder to use the license holder's frequencies;

(j) If laboratory tests are conducted that require a license, a copy of that license;

(k) A copy of the operator's Air Carrier Operating Certificate, if the service will be operating an air ambulance;

(l) A copy of the operator's US Coast Guard Certificate of Compliance, if the service will be operating a marine ambulance;

(m) Copies of all telephone book yellow pages and the website addresses, where ambulance service advertising appears;

(n) A copy of a Prehospital Care Report Form or electronic field data format, which must be approved by the Authority, if not using the Authority's Prehospital Care Report Form;

(o) Name of the approved EMS medical director;

(p) A roster of all EMS providers, ambulance based clinicians, and qualified drivers in alphabetical order, who shall either operate an ambulance or attend to patients, or both, along with the following information for each employee and volunteer:

(A) The full legal name;

(B) The employment status as either full-time paid, part-time paid or volunteer;

(C) The level of professional license held; and

(D) License numbers, including EMS provider license numbers, driver and pilot license numbers for those persons operating the ambulance.

(q) A list of all ambulances to be operated by the ambulance service under the ambulance service license along with the information required for an ambulance license pursuant to ORS Chapter 682 and these rules;

(r) A statement under the penalties of perjury that certifies the following:

(A) There has been no attempt to knowingly and willfully falsify, conceal, or omit a material fact, or make any false, fictitious, incomplete or fraudulent statements or representations, or make or use any false writing or document knowing the same to contain any false, fictitious, or fraudulent statement or entry for the purpose of obtaining or attempting to obtain an ambulance service license to operate in the State of Oregon. Where an applicant relies on documents submitted by employees, volunteers or agents, the applicant has made a reasonable effort to verify the validity of those documents;

(B) The applicant authorizes any persons or entities, including but not limited to hospitals, institutions, organizations, or governmental entities to release to the Authority any information, files, or records requested by the Authority in connection with the processing of an application; and

(C) Upon receiving an ambulance service license, the licensee authorizes disclosure of information by insurance companies, physicians, health care facilities, including but not limited to hospitals, nursing homes, or free standing medical centers, to the Authority relating to service provided by the ambulance service to those facilities or to patients being taken from or to those facilities.

(s) The completed application must contain the signature(s) of the person(s) having the lawful responsibility for the overall operation of an ambulance service or the person having the power of attorney, or the authorized person empowered to sign on behalf of the ambulance service; and

(t) Such other information as the Authority may reasonably require.

(4) If the applicant's primary ambulance service business office is located in another state, the applicant must:

(a) Meet requirements listed in sections (1) through (3)(t) of this rule; and

(b) Attach copies of their current ambulance service and ambulance license(s) for that state to the application.

(5) The completed application to license an ambulance service must be accompanied by a nonrefundable licensing fee of:

(a) $75, when the service has a maximum of four full-time paid positions; or

(b) $250, when the service has five or more full-time paid positions.

(6) Upon review of the completed initial application and nonrefundable fee, the Authority shall schedule an inspection of the applicant's facilities, records and ambulances. The applicant must successfully complete the inspection to be issued an ambulance service license. A license shall be issued within 10 business days of successful inspection.

Stat. Auth.: ORS 682.017
Stats. Implemented: ORS 682.017 - 682.117, 682.991
Hist.: HD 18-1994, f. 6-30-94, cert. ef. 7-1-94; OHD 7-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07; PH 11-2010, f. 6-30-10, cert. ef. 7-1-10; PH 1-2013, f. & cert. ef. 1-25-13

333-250-0030
Issuance of License to Operate an Ambulance Service

(1) When the completed ambulance service license application with the appropriate nonrefundable licensing fee has been received by the Authority, and if it is found that the submitted data, facilities and records comply with the requirements of ORS Chapter 682 and these rules, the Authority shall issue an ambulance service license for the specified ambulance service.

(2) The ambulance service license:

(a) Shall be valid until June 30 of each year, unless sooner revoked or suspended. The initial licensing period may not exceed 15 months;

(b) Shall expire on June 30 of the following year, if a license is applied for and issued between April 1 and June 30; and

(c) Must be conspicuously displayed in the main business office of the ambulance service, or otherwise as directed by the Authority.

(3) Except when specifically exempted by ORS 682.035, an out-of-state ambulance service that operates or advertises in Oregon must be licensed by the Authority. An out-of-state ambulance service is not required to obtain an ambulance service license and ambulance license for the following situations:

(a) Transporting a patient through the state;

(b) Delivering a patient to a medical facility or other location within the state, if the beginning of the transport originated outside of the state;

(c) Picking up a patient at a medical facility or airport within the state for the purpose of transporting the patient to a medical facility or other location outside of the state, unless prohibited by the county's Ambulance Service Area plan; or

(d) In the event of a man-made or natural disaster declared by federal, state or local officials and resulting in the need to utilize all available resources to provide patient care and transportation in the affected area.

(4) If an ambulance service license becomes lost, damaged or destroyed, the licensee must apply for a replacement license. The licensee must submit, to the Authority, the completed application with a $10 nonrefundable fee for each replacement license.

(5) An ambulance service license is not transferable to a new owner of a purchased ambulance service.

(6) When an ambulance service is found to be in non-compliance with ORS Chapter 682 or these rules, the Authority may deny, suspend or revoke an ambulance service license or place the ambulance service on probation.

333-250-0031
Ambulance Service Requirements with Use of Qualified Drivers

(1) If a licensee is using a driver of a ground ambulance who is not licensed as an EMS provider by the Authority, a licensee must ensure the driver has:

(a) A valid driver's license;

(b) Emergency ground ambulance operator's training that meets Authority standards;

(c) Current healthcare provider cardiopulmonary resuscitation (CPR) card or proof of course completion that meets or exceeds the 2010 American Heart Association Emergency Cardiovascular Care (ECC) guidelines or equivalent standards approved by the Authority;

(d) Bloodborne pathogen and infectious disease training that meets or exceeds standards found in OAR chapter 437;

(e) Hazardous materials awareness training that meets or exceeds the Oregon Occupational Safety and Health Division standards found in OAR chapter 437; and

(f) A signed statement by a driver not certified or licensed through the Authority that he or she is:

(A) Not addicted to alcohol or controlled substances and is free from any physical or mental condition that might impair the ability to operate or staff an ambulance; and

(B) Physically capable of assisting in the extrication, lifting and moving of a patient at the direction of an EMS provider.

(2) A licensee must have a certified copy of the qualified driver's license check done through the Oregon Department of Motor Vehicles Automated Reporting System Program or equivalent reporting program as approved by the Authority. If the driver has an out-of-state driver's license, the licensee must obtain an equivalent certified copy from that state, if available and if not available, conduct an annual driving record check. The latest copy must be kept in the driver's personnel file.

333-250-0040
Ambulance Service Operational Requirements

(1) The licensee must ensure that the service, employees, volunteers and agents:

(a) Comply with all of the requirements of ORS chapter 682, ORS 820.300 through 820.380 and other applicable federal, state and local laws and regulations governing the operation of a licensed ambulance service;

(b) Notify the Authority, upon making initial application or within 14-days of the date of registration, of any new "trading as", "division of", or "doing business as" names utilized by the licensee; and

(c) Transport only patients for which it has the resources to provide appropriate medical care and transportation unless in transfers between medical facilities, the sending or receiving facility has provided medically appropriate life support measures, personnel, and equipment to sustain the patient during the transfer.

(2) The licensee shall document that each employee or volunteer:

(a) Is provided an initial orientation program that addresses, at a minimum, the ambulance service standing orders, ambulance service policies and procedures, driving and operating requirements for ambulance vehicles, and operations of equipment. The initial orientation program must be completed prior to the employee or volunteer being allowed to staff an ambulance; and

(b) Has access to current copies of these rules, and the documents referred to within these rules that are incorporated by reference.

(3) The licensee must have written policies and procedures to carry out daily ambulance service operations including, but not limited to:

(a) Work practice controls for bloodborne pathogens in compliance with OAR chapter 437;

(b) Storage of medications including controlled substances if authorized by the EMS medical director and meeting the requirements of the Oregon Board of Pharmacy in OAR chapter 855 and the US Drug Enforcement Administration found in 21 CFR 1301.75(b);

(c) Destruction of outdated medications including controlled substances if authorized by the EMS medical director and meeting the requirements of the Oregon Board of Pharmacy in OAR chapter 855 and the US Drug Enforcement Administration found in 21 CFR 1307.21;

(d) Notifying the licensee when an employee is impaired by excessive fatigue, illness, injury or other factors that may reasonably be anticipated to constitute a threat to the health and safety of patients or the public;

(e) Reporting of suspected child abuse as required in ORS 419B.005 through 419B.050;

(f) Reporting of suspected elderly abuse as required in ORS 124.050 through 124.095;

(g) Patient rights in accordance with OAR 333-250-0085; and

(h) Providing secure transport for patients in custody in accordance with OAR 309-033-0435, if the licensee has been authorized to perform this service.

Stat. Auth.: ORS 682.017
Stats. Implemented: ORS 682.017 - 682.117, 682.991
Hist.: HD 18-1994, f. 6-30-94, cert. ef. 7-1-94; OHD 7-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07; PH 11-2010, f. 6-30-10, cert. ef. 7-1-10; PH 1-2013, f. & cert. ef. 1-25-13; PH 14-2016, f. & cert. ef. 4-28-16

333-250-0041
Ambulance Service Personnel Educational Requirements and Quality Improvement

(1) The licensee shall provide, coordinate, and document the following:

(a) An orientation program for all new EMS providers, ambulance based clinicians and qualified drivers. The initial orientation program must include but is not limited to the subjects listed in OAR 333-250-0040(2)(a); and

(b) The training of all EMS providers and ambulance based clinicians on the:

(A) Proper use of any new equipment, procedure or medication prior to being placed into operation on an ambulance; and

(B) Secure transportation of patients in custody in accordance with OAR 309-033-0437, if the licensee has been authorized to perform this service.

(2) Before the licensee permits a person to staff an ambulance, the licensee shall ensure that the person has current training that includes but is not limited to:

(a) Bloodborne pathogen and infectious disease training that meets or exceeds standards found in OAR chapter 437;

(b) Hazardous materials awareness training that meets or exceeds the Oregon Occupational Safety and Health Division standards found in OAR chapter 437;

(c) Emergency ground ambulance operator's training that meets Authority standards when operating a ground ambulance;

(d) Air medical crew training that meets Authority standards when operating an air ambulance; and

(e) Marine crew training that meets Authority standards when operating a marine ambulance.

(3) The licensee shall ensure that there is verifiable written documentation placed in the employee's or volunteer's training file that the employee or volunteer has completed the training and the documentation shall include when and where the training was obtained.

(4) Any EMS related or required continuing education offered by the licensee or designee must be documented as follows:

(a) A class roster that contains:

(A) Name of the ambulance service;

(B) Full name of the instructor;

(C) Full name of the person attending the class;

(D) Class date;

(E) Class subject; and

(F) Class length; or

(b) A computer-generated printout history of an individual's continuing education record that contains:

(A) The full name of the person attending the class;

(B) Name of the ambulance service;

(C) Class dates;

(D) Class subjects; and

(E) Class lengths.

(5) Documentation required in section (4) of this rule must be maintained in a secure manner with limited access for a minimum of four years.

(6) The licensee must establish a procedure to release copies of all records of continuing education completed by an EMS provider or employee through the service in a verifiable format to the requesting party within five business days of being requested.

(7) The licensee must have a written quality improvement program that is approved by the EMS medical director.

(8) To assist the licensee and the EMS medical director in determining if appropriate and timely emergency medical care was rendered, the ambulance service designated official may request the following information from the hospital receiving the patient as authorized by ORS 682.056:

(a) Patient admit status and unit admitted to;

(b) Any procedure listed in section D04_04 of the National Highway Transportation Safety Administration dataset dictionary, version 2.2.1, and performed on the patient within the first hour of being admitted;

(c) Any medication administered to the patient within the first hour of being admitted; and

(d) Trauma system entry by emergency department staff.

(9) Information provided under section (8) of this rule is considered confidential pursuant to ORS 682.056. Any employee or volunteer participating in a quality improvement session must have a signed confidentiality statement in their personnel file.

(10) If the licensee accepts students for Paramedic internships from an accredited teaching institution, the licensee must:

(a) Have a signed and dated contract with each teaching institution providing internship students; and

(b) Use qualified preceptors, as defined by OAR 333-265-0000, who will be assigned to supervise, document and evaluate the Paramedic interns.

Stat. Auth.: ORS 682.017

333-250-0042
Ambulance Operational Requirements

(1) The licensee must ensure that the service, employees, volunteers and agents providing ground ambulance service:

(a) Comply with all applicable statutes in the 2007-2008 Oregon Motor Vehicle Codes relating to motor vehicle and emergency vehicle operations, ORS 820.300 through 820.380 and ORS Chapter 445.

(b) Successfully complete an emergency vehicle operator's course of instruction prior to independently operating an ambulance. The course must meet or be equivalent to the National Safety Council for Emergency Vehicle Operators Course (CEVO 2 or 3) or National Fire Protection Agency (NFPA) Driver.

(c) Comply with the licensee's procedures.

(2) A licensee shall have a procedure:

(a) Detailing the operation of an ambulance for both emergency and non-emergency situations;

(b) To remove an ambulance from service when the mechanical condition of an ambulance is sufficiently unreliable so as to endanger or potentially endanger the health, safety, or welfare of a patient or crew member;

(c) To handle a mechanical breakdown and to repair or replace a damaged tire or wheel when the ambulance is in operation; and

(d) Detailing what steps are to be followed when an ambulance is involved in an accident. The procedure must include the submission of a legible copy of the Department of Motor Vehicles Accident Report to the Authority within 10 business days of the accident.

(3) The licensee must ensure that the service, employees, volunteers and agents providing air ambulance service:

(a) Comply with the Federal Acquisition Regulation (FAR), 14 CFR Part 135 of the Operating requirements; Commuter and on demand operations and rules governing persons on board such aircraft; and

(b) Successfully complete the 2004 Association of Air Medical Services (AAMS) Guidelines or equivalent. There must also be an annual review of the Air Medical Crew course material, the length of which must be established by the EMS medical director.

(4) A licensee may only utilize an ambulance for the provision of providing ambulance service that has been issued a license by the Authority and that complies with all requirements of ORS Chapter 682, OAR chapter 333, division 255, and these rules.

(5) A licensee must not allow or schedule an employee or volunteer to serve on an ambulance who is impaired by excessive fatigue, illness, injury or other factors that may reasonably be anticipated to constitute a threat to the health and safety of patients or the public.

333-250-0043
Ambulance Service Personnel Record Keeping and Reporting Requirements

(1) The licensee must:

(a) Maintain a complete and current personnel file, training file, and medical file for each employee and volunteer, including but not limited to:

(A) Full name;

(B) Current home mailing address;

(C) Affiliation status, listed as either an employee full-time paid, employee part-time paid, volunteer, or agent;

(D) Copies of:

(i) Reportable actions forms as required under OAR 333-250-0043(5);

(ii) Applicable professional certificates or licenses;

(iii) A current driver's license;

(iv) A current pilot's license if the employee or volunteer operates an air ambulance;

(v) A certified court printout of initial driver's license check done through the Oregon Department of Motor Vehicles Automated Reporting System Program or equivalent reporting program as approved by the Authority, and any subsequent reported convictions, accidents or license suspensions. If the driver has an out-of-state driver's license, the licensee must participate in a similar program for that state, if available and if not available, conduct an annual driving record check; and

(vi) Current healthcare provider CPR card or proof of course completion that meets or exceeds the 2010 American Heart Association ECC guidelines or equivalent standards approved by the Authority.

(b) If the licensee contracts with or employs ambulance based clinicians for the purpose of providing advanced level care, the licensee shall ensure that the clinicians:

(A) Meet all of the applicable requirements in OAR chapter 333, division 250;

(B) Have documentation of a current Advanced Cardiac Life Support course or other Authority-approved equivalent course completion;

(C) Have documentation of current Pediatric Advanced Life Support or other Authority-approved equivalent course completion; and

(D) Have documentation of completing a current Prehospital Trauma Life Support, Basic Trauma Life Support, Trauma Emergency Assessment Management or Trauma Nurse Core Course. The Trauma Emergency Assessment Management and Trauma Nurse Core Course must include a supplemental prehospital rapid extrication training session.

(c) Documentation that an employee or volunteer has completed:

(A) An ambulance service initial orientation program that includes requirements set forth in OAR 333-250-0040(2)(a) and (b);

(B) A bloodborne pathogen and infectious disease training course that meets standards found in OAR 437-002-0360 and 437-002-1030 and an annual refresher training course;

(C) A Hazardous Materials Awareness training course that meets or exceeds the Oregon Occupational Safety and Health Division standards found in OAR chapter 437 and an annual refresher training course;

(D) An Authority-approved emergency vehicle operator's course for ground ambulance drivers only. The course must meet or be equivalent to the standards of the National Safety Council for Emergency Vehicle Operators Course, (CEVO II-IIIAMB) or NFPA Driver;

(E) The US Department of Transportation's Air Medical Crew National Standard Curriculum course or equivalent and annual refresher training for persons staffing air ambulances only;

(F) Initial Tuberculosis (TB) screening and any subsequent TB screenings;

(G) Hepatitis-B immunizations or a signed statement of declination;

(H) A signed statement by a driver not certified or licensed through the Authority that they are:

(i) Not addicted to alcohol or controlled substances and are free from any physical or mental condition that might impair the ability to operate or staff an ambulance; and

(ii) Physically capable of assisting in the extrication, lifting and moving of a patient.

(2) A licensee shall have documentation of items listed in section (1) of this rule prior to the employee or volunteer being allowed to independently staff an ambulance. Note: an employee or volunteer must begin the Hepatitis-B immunization series or have a signed statement of declination prior to independently staffing an ambulance.

(3) All records relating to an ambulance service's operations must be retained by the licensee or the licensee's successors or assigns for not less than seven years from the date of implementation, purchase, dispatch, creation or longer if so required by law or regulation. The record keeping mechanism may be in any permanent form including paper or on magnetic media provided that the information can be made readily available for inspection by the Authority.

(4) The licensee must promptly submit to the Authority such information, including survey information that the Authority may reasonably require.

(5) The licensee must submit a completed reportable action form to the Authority, within the times specified, for any of the following actions:

(a) Hiring a new employee or volunteer, within 14 business days;

(b) Terminating or suspending an employee or volunteer for cause, within 14 business days; and

(c) Disciplinary action taken by the licensee or the EMS medical director for unprofessional conduct as listed in OAR 333-265-0000, within 14 business days.

Prehospital Care Report Form or Electronic Field Data Format Completion Requirements

(1) The licensee must complete a PCRF in each instance where an ambulance arrives on the scene and patient contact is initiated.

(2) A complete PCRF or electronic field data format as specified by the Authority must be prepared by ambulance personnel and delivered to appropriate hospital staff at the time patient care is transferred, unless the PCRF is provided electronically under section (3) of this rule.

(3) If a PCRF is provided via electronic format, a licensee shall ensure that personnel verbally relay pertinent patient care information to hospital staff prior to leaving the hospital. A completed electronic report must be submitted to the hospital at a location designated by the hospital within 12 hours of the patient being transported to the hospital.

(4) If the ambulance crew is unable to complete the PCRF at the time patient care is transferred, the ambulance crew may depart after receiving verbal verification from an emergency department employee involved with providing patient care that sufficient patient information has been transferred to support safe and timely continuation of patient care.

(5) The licensee must return the ambulance crew to the hospital when requested by the attending physician for the purpose of obtaining the completed PCRF or additional patient care information. If acceptable to the attending physician, a completed PCRF can be faxed or electronically sent to the hospital;

(6) A licensee must ensure that a PCRF or electronic field data form contains data points as defined by version 2.2.1 of the National Highway Transportation Safety Administration Uniform Pre-Hospital Emergency Medical Services Dataset; and

(a) For any patient meeting the criteria for trauma patient as defined in OAR 333-200-0010(26):

(A) Trauma band number; and

(B) Triage criteria as defined in OAR 333-200-0010, Exhibit 2.

(7) Notwithstanding the requirements in this rule, a completed PCRF or electronic field data form is not required when there is a disaster or a multiple patient incident consisting of more than five patients or the number of patients prescribed in the county's ASA plan, and which results in a single ambulance transporting two stretcher patients at the same time or when an ambulance is required to make more than one trip to and from the incident site. In those situations, a completed triage tag that includes listing of the trauma systems identification bracelet number, recording of the times and results of all vital signs taken and the times, name and dosage of any medication given is acceptable patient care documentation. However, every reasonable attempt must be made by the ambulance personnel or ambulance based clinicians to complete an approved PCRF or electronic field data form for each patient at the conclusion of the incident.

333-250-0045

Storage, Release and Destruction of Prehospital Care Report Form Requirements

(1) The licensee is responsible for:

(a) Providing secure storage of PCRFs, with limited access to the PCRFs by office and ambulance personnel;

(b) Providing that the PCRFs are organized in a manner that will allow an authorized ambulance service representative to locate a PCRF within a reasonable amount of time, given a patient's name and the date and time of the ambulance call;

(c) Establishing a procedure for when a copy of the PCRF may be released to a medical facility receiving the patient, the patient, the patient's family, the patient's legal guardian, an insurance company, an attorney, a law enforcement officer, or a law enforcement agency;

(d) Protecting the confidentiality of patient information during quality improvement sessions by limiting access to the PCRF and having all persons having access to PCRFs sign a confidentiality statement; and

(e) Establishing a procedure for the method and verification of the destruction of a PCRF:

(A) An ambulance service may not destroy a medical record or report about a patient for 10 years after the record or report is made, or longer if so required by law or regulation unless the patient is notified.

(B) In the case of a minor patient, a medical record or report may not be destroyed until the patient attains the age of majority plus three years or for 10 years after the record or report is made, whichever is later, unless the parent or guardian of the minor patient is notified.

(i) Notification of a minor patient or the parent or guardian of the minor patient of the potential destruction of a prehospital care report must:

(I) Be made by first class mail to the last known address of the patient;

(II) Include the date on which the record of the patient shall be destroyed; and

(III) Include a statement that the record or synopsis of the record, if wanted, must be retrieved at a designated location within 30 days of the proposed date of destruction.

(2) Under no circumstances shall an employee, volunteer or agent make a copy of a PCRF for their own personal record or remove the original or a copy of a completed PCRF from the licensee's files or facilities without having written approval of the licensee.

(3) All PCRFs must be made available for inspection and duplication when requested by the Authority as authorized by ORS 41.675 and 41.685.

333-250-0046
Ambulance Service Communications and Dispatching Operational Requirements

(1) The licensee is responsible for:

(a) Having a valid license from the Federal Communications Commission (FCC) to operate an EMS radio on assigned frequencies, or proper authorization from another agency holding a valid FCC license to operate on designated radio frequencies;

(b) Having 24-hour-a-day phone answering and dispatching capabilities or having a signed agreement or contract with a recognized primary or secondary Public Safety Answering Point (PSAP), who will provide telephone answering and emergency dispatching services;

(c) Providing a reliable means of alerting and communicating with an ambulance crew before, during and after an ambulance call;

(d) Immediately routing all emergency calls received from the public on any of the licensee's 10-digit telephone number to the primary PSAP. When a licensee receives a request for an emergency ambulance and the licensee is a recognized secondary PSAP, the licensee shall dispatch the ambulance and notify the primary PSAP for coordination of other emergency responder agencies;

(e) Ensuring that any request for an ambulance received on the licensee's 10-digit telephone number is answered by a live person or that there is an answering machine referring the caller to the appropriate emergency telephone number; and

(f) Maintaining ambulance dispatch records as prescribed in ORS 820.330 and 820.340. The records must be kept by the licensee or the licensee must have a signed agreement with the PSAP, service or agency that provides telephone answering and dispatching services that they will maintain and make available copies of the official dispatch records for a minimum of seven years.

(2) When the licensee employs dispatchers for the purpose of answering the telephone, taking information regarding the need for an ambulance and dispatching the ambulance, the dispatcher must have written documentation of completing:

(a) The Department of Public Safety Standards and Training's Emergency Medical Dispatcher's Course or equivalent; and

(b) Four hours of annual refresher training for dispatchers that meets the standards set forth by the Department of Public Safety Standards and Training.

(3) Air ambulance must meet Federal Acquisition Regulation (FAR), 14 CFR Part 135 of the Operating requirements; Commuter and on demand operations and rules governing persons on board such aircraft.

333-250-0047
Ambulance Service EMS Medical Director Operational Requirements

(1) The licensee must have a single EMS medical director except:

(a) When the licensee operates in non-contiguous counties, then the licensee may have one EMS medical director in each non-contiguous county of operation; or

(b) Where a county or regional EMS system prescribes that multiple agencies within a county or region must have a governmentally appointed EMS medical director, that agency may have a different EMS medical director in contiguous counties. In this event, the signed agreement or contract may be between the EMS medical director and the county or regional EMS system.

(2) The licensee must ensure that the EMS medical director:

(a) Meets the requirements and duties as prescribed in OAR 847-035-0020 through 847-035-0030;

(b) Has a written set of treatment protocols for each level of service offered by the licensee; and

(c) Has a signed and dated agreement or contract with the licensee.

(3) When an EMS medical director authorizes the administration of controlled substances, the EMS medical director must have on file with the licensee:

(a) A US Drug Enforcement Administration License listing the name of the ambulance service and address where the controlled substances are stored when not on an ambulance; and

(b) A signed and dated procedure as to the amount stored on the ambulance and how controlled substances will be stored, accessed, recorded, administered, destroyed and secured. It is the responsibility of the EMS medical director to ensure that the procedure meets the minimum US Drug Enforcement Administration requirements found in 21 CFR 1301.75(b).

(4) The licensee must notify the Authority in writing of:

(a) The denial, suspension, or voluntary surrender of an EMS medical director's medical license or US Drug Enforcement Administration license within 72 hours; and

(b) A change in the EMS medical director, 21 days prior to the change.

333-250-0048
Ambulance Service Ambulance Personnel Operational Requirements

(1) The licensee must ensure that the service, employees, volunteers and agents meet the personnel requirements as prescribed in these rules.

(2) The licensee must not schedule or allow an employee or volunteer to serve on an ambulance who is impaired by excessive fatigue, illness, injury or other factors that may reasonably be anticipated to constitute a threat to the health and safety of patients or the public.

(3) The licensee shall require each person staffing an ambulance or providing prehospital emergency or non-emergency care to display his or her level of licensure on the outermost garment of his or her usual work uniform at all times while staffing an ambulance or rendering patient care, and shall make reasonable efforts to display this information under other circumstances.

(4) The licensee shall ensure that any EMS providers, ambulance based clinicians or qualified drivers:

(a) Are trained to properly operate all ambulances and equipment that he or she is authorized to use; and

(b) Are physically capable and have the ability to lift and move patients and assist in extrication of patients when necessary.

(5) The licensee shall not permit employees or volunteers to operate an ambulance, equipment, or have patient contact if:

(a) They are taking any medications that could impair safe operation and handling of the ambulance, equipment, or patient; or

(b) The employee or volunteer has consumed any alcoholic beverages within the last eight hours.

333-250-0049
Ambulance Service Housing of Personnel, Ambulance and Equipment Operational Requirements

(1) The licensee must provide:

(a) An area where an employee or volunteer working a 24-hour shift may sleep or rest;

(b) An area equipped with adequate toilet, hand-washing and shower facilities with hot and cold running water, antiseptic soap and clean towels for hand and body drying. If the ambulance service facility does not have shower facilities, the licensee must have a signed agreement or contract with a medical facility or other entity to make available shower facilities to ambulance personnel for the purpose of showering after coming in contact with medical or other biohazardous waste;

(c) Separate areas for clean and soiled linen receptacles in accordance with the applicable Oregon Occupational Safety and Health Division and other rules governing the handling of special medical wastes;

(d) A designated secure area for storing, or an alternate method and a procedure for identification and storage of, all medications which are deteriorated, outdated, misbranded, adulterated or otherwise unfit for use. This area or procedure must provide for the physical separation of defective supplies so that products are not confused with usable products. Security procedures for unusable medications, fluids and controlled substances must be the same as for usable supplies;

(e) A separate area to place clearly marked "out of service" malfunctioning patient care equipment until the equipment has been repaired or replaced or enforces a procedure for an alternate method of identification and storage to assure that defective equipment will not be used; and

(f) A reasonable inventory of patient care equipment, supplies and medications, properly secured, or in the alternative, a signed agreement with a medical facility that the medical facility will provide the patient care equipment, supplies, and medications.

(2) A licensee shall ensure that:

(a) Controlled substances, when authorized by the EMS Medical Director, are stored, accessed, inventoried, administered, destroyed and secured in a manner consistent with the signed and dated procedure established by the EMS Medical Director. The procedure must be in accordance with the regulations promulgated by the US Drug Enforcement Administration (DEA) found in 21 CFR 1301.75(b).

(b) A copy of the EMS Medical Director's DEA license is maintained in a secure manner, inaccessible to the public, at each fixed ambulance location where controlled substances are stored other than in the ambulance.

(c) Pharmacological and medical supplies with expiration dates affixed thereon by the manufacturer or packager are removed from service no later than the expiration date. Expired pharmacological and medical supplies must be disposed of in accordance with applicable laws and regulations.

(d) Medications and equipment are stored in a manner that protects viability and proper operation; and

(e) Ambulances available for or subject to a call are maintained to allow immediate starting of the engine and to prevent medications and medical supplies from becoming environmentally degraded.

333-250-0050
Request for Variance from Standards

(1) The licensee may request a variance from the standards established in ORS 820.330 to 820.380, ORS Chapter 682 and these rules when:

(a) The licensee believes that compliance with a rule is inappropriate because of special circumstances which would render compliance unreasonable, burdensome, or impractical due to special conditions or causes, or because compliance would result in substantial curtailment of necessary ambulance service; and

(b) A city ordinance or county ASA plan exists, and the licensee has presented his or her request for a variance to the local city or county governing body and that body has given their approval for the proposed variance.

(2) A written request for a variance must be made to the Authority. The Authority may not grant a variance that may cause danger or harm to the public or to persons operating or staffing the ambulance. A written variance request must include:

(a) Justification for the variance request; and

(b) A detailed and realistic plan to resolve the need for a future variance.

(3) The request for variance may be presented to the State Emergency Medical Service Committee at a regularly scheduled meeting. The Public Health Director or designee, after considering the Committee's recommendation, when requested, may grant a variance:

(a) A variance shall be granted for a period of time as prescribed by the Authority; and

(b) A subsequent variance may only be granted when the licensee has demonstrated to the Authority, insofar as possible, adequate progress in resolving the need for the initial variance as described in the plan.

333-250-0060
Right of Entry and Inspection of an Ambulance Service and Ambulance

(1) The Authority may conduct an inspection for the purpose of evaluating the eligibility of an ambulance service or an ambulance to receive or retain a license and to ensure the health, safety, and welfare of the persons who utilize ambulances. Ambulance services that acquire and maintain current status with a nationally recognized EMS service program accreditation entity that meets or exceeds Oregon requirements may be exempted from the inspection process. A copy of the inspection report from the nationally recognized EMS service program accreditation entity must be filed with the Authority for approval.

(2) Routine inspections of an ambulance service or an ambulance must be scheduled with the management of the ambulance service at least 72 hours in advance of the inspection unless

otherwise mutually agreed upon by the Authority and the ambulance service representative.

(3) Investigative inspections for the purpose of ensuring continued compliance with ORS Chapter 682 and these rules do not require giving advanced notice to the licensee.

(4) In conducting an inspection or interview, the Authority representative must:

(a) Identify him or herself by presenting the Authority identification to the owner, manager, or ranking employee or volunteer present at the site of an inspection or interview;

(b) Inform the ambulance service representative of the purpose for the inspection or interview; and

(c) Inform the ambulance service representative when the inspection or interview has been completed and the results of the inspection only.

(5) The Authority may make photographic or video-graphic documentation as part of an inspection for or an investigation of non-compliance with ORS Chapter 682 and these rules.

(6) Failure of the licensee to produce records for inspection or to permit examination of equipment and facilities by the Authority shall be grounds for the denial, suspension or revocation of an ambulance service or ambulance license.

(7) The Authority may accept local city or county governing body inspections that meet or exceed requirements outlined in ORS Chapter 682 and OAR chapter 333, divisions 250 and 255 in lieu of an inspection by the Authority.

333-250-0070
Denial, Suspension, or Revocation of an Ambulance Service License or Placing an Ambulance Service on Probation

(1) Conduct subjecting an ambulance service to discipline means conduct unbecoming a person who is either applying for or holds an ambulance service license and is detrimental to the best interest of the public and includes, but is not limited to the conduct listed in this rule.

(2) The Authority may, in accordance with the provisions of ORS Chapter 183, deny, suspend, or revoke an ambulance service license or ambulance license. The Authority may also place an ambulance service on probation, the terms of which shall be established by the Authority. In addition to or in lieu of probation, suspension or revocation, the Authority may cite an ambulance service for a violation and request corrective action.

(3) An individual, firm, partnership, limited liability company, corporation, association, or organization shall be considered in violation of ORS Chapter 682 and these rules if the Authority determines that the individual, firm, partnership, limited liability company, corporation, association, or organization has done any of the following:

(a) Been convicted of a crime, including conviction of Medicare or Medicaid fraud, relating adversely to the person's capability of owning or operating an ambulance service;

(b) Violated ORS Chapter 682 or any of these rules, which poses a significant threat to the health and safety of the public;

(c) Made a material omission or misrepresentation of facts on an application for a license or waiver, or in response to an inquiry or investigation. This includes fraud or deceit in obtaining or attempting to obtain a license or waiver or in any other transaction with the Authority;

(d) Failed to employ or contract for an approved EMS medical director, or to operate under the direction of an EMS medical director appointed by an appropriate governmental authority;

(e) Failed to have medical equipment and supplies required for operation at the highest level of service provided;

(f) Lent a license, borrowed, or used the license of another, or knowingly aided or abetted the improper granting of a license;

(g) Defaced, altered, removed or obliterated any portion of any official entry upon a license, licensing decal, or waiver issued by the Authority;

(h) Refused to respond to or render prehospital emergency care as required by protocol because of a patient's race, sex, creed, national origin, sexual preference, age, handicap, medical problem, or financial inability to pay;

(i) Failed to promptly notify the Authority of a change of ownership, or to report any matter the reporting of which is required by ORS 682.220(4);

(j) Disclosed medical or other confidential information;

(k) Altered or inappropriately destroyed medical records;

(l) Willfully prepared or filed false reports or records, or induced another to do so;

(m) Engaged in a pattern of any of the following:

(A) Incompetence, negligence or misconduct in operating the ambulance service or in providing emergency medical care and transportation to patients;

(B) Abuse or abandonment of patients;

(C) Failure to comply with the county ASA plan, area trauma plan, or other lawfully promulgated policies, plans, or procedures;

(D) Failure to meet response time standards as prescribed by the county ASA plan or if no ASA plan is in effect, the area trauma plan;

(E) Misuse or misappropriation of medications or medical materials; and

(F) Other conduct determined by the Authority to pose a significant threat to the public health and safety and the well being of ambulance patients.

(n) Failed to comply with the minimum personnel requirements or failed to have the required equipment in working order on an ambulance as prescribed in these rules;

(o) Had a continuing pattern of violations over a period of two or more years;

(p) Failed to submit a reasonable timetable to correct the violations cited by the Authority;

(q) Interfered with the performance of the Authority's duties; and

(r) Failed to pay all applicable licensing fees or civil penalties set by the Authority.

(4) Upon receipt of a sufficient written or verbal complaint describing specific violations of ORS Chapter 682 or any other relevant statute or rule, the Authority shall initiate an investigation of the allegations. The Authority does not have jurisdiction over and shall not take action on complaints that relate solely to rates charged a patient by an ambulance service.

(5) When an ambulance, upon inspection by the Authority, manifests evidence of a mechanical or equipment deficiency, which poses a significant threat to the health or safety of patients or crew, the Authority shall immediately suspend that ambulance from operation. No ambulance that has been suspended from operation may be operated until the licensee has certified and the Authority has confirmed that all of the violations have been corrected.

(6) The Authority shall confirm by inspection or other appropriate means that all violations have been corrected within 48 hours of notification by the licensee. The licensee must notify the Authority of corrections by personal telephone contact (voice mail messages will suffice), or facsimile, or in person during normal business hours. Notifications received by facsimile outside of business hours will be considered received the next business day. Telephonic notifications shall be deemed received at the time actual voice contact between the licensee and the Authority's ambulance service licensing program representative or designee is established.

(7) In the event that a license is suspended or revoked, the licensee must cease ambulance service operations and no person except the Authority may permit or cause the service to continue.

(8) The licensee must return all indications of licensing, including certificates and the remains of ambulance license decals to the Authority by registered mail, posted within 48 hours of

either receipt of notification of suspension or revocation or the effective date of revocation, whichever is later.

(9) The Authority shall notify applicable local government, county ASA administrator, and supervising physician of the suspension or revocation of an ambulance service license, or the placing of a service on probation.

(10) The Authority may assess civil penalties up to $5000 per violation against any entity or person licensed under these rules or subject to licensure under these rules for a violation of ORS Chapter 682 or these rules.

(11) If a principal owner of an ambulance service has had its ambulance service license revoked, following the opportunity for a hearing as provided by ORS Chapter 183, that person may not be eligible to apply for or hold an ambulance service license for a period of two years from the date of revocation as specified in ORS Chapter 682.

333-250-0080
Surrender of License to Operate an Ambulance Service

(1) An ambulance service license is non-transferable.

(2) When the owner sells or closes an ambulance service, the owner must:

(a) Provide a minimum 30-days written notice of the intent to cease operation to the Authority;

(b) Provide the required notice as prescribed in the county ASA plan to the county health department and the ASA authority in which the ambulance service operates; and

(c) Take such other actions as may be determined to be necessary by the Authority or the county health, or the ASA authority to assure the smooth transition to a new ambulance service provider, including but not limited to permitting the continued operation of the existing provider for more than the required period of legal notice or making equipment and supplies available to an interim ambulance service provider.

(3) Within 10 days of final closing of the ambulance service sale, the owner must return the ambulance service license to the Authority.

(4) An owner may not terminate the ambulance service business or otherwise cease operations in contravention of any provisions, rules or ordinances established under the provision of ORS Chapter 682.

Patient Rights for Emergency Medical Care and Transportation

(1) An ambulance service licensed by the Authority shall maintain written policies and procedures regarding patient rights.

(2) A statement of patient rights shall be distributed to each employee or volunteer and made available in the business office and in each satellite location.

(3) The statement of patient rights shall include, but is not limited to, the following:

(a) Access to appropriate emergency medical care and transportation without regard to race, ethnicity, religion, age, gender, sexual orientation, or disability;

(b) EMS providers will be considerate and respectful to all patients regardless of status;

(c) Opportunity to refuse any medical care or transportation to a medical facility when informed about the care to be provided and the risks associated with refusing medical care or transportation;

(d) Transportation to a clinically appropriate medical facility of the patient's choice without questioning ability to pay. The agency may elect to transport to a closer, appropriate medical facility if a patient's facility of choice:

(A) Is unreasonable due to unsafe conditions; or

(B) Requires an ambulance to be taken out of service for an unreasonable amount of time;

(e) When appropriate, opportunity to request private transport, for example from a friend or family member;

(f) Patient's health information will be protected in accordance with state and federal privacy laws;

(g) Opportunity to receive, upon request, medical information relating to the care or transport provided by EMS providers;

(h) Opportunity to receive, upon request, a reasonable explanation of any charges for emergency medical care provided by EMS providers or for ambulance services; and

(i) Information on how and where to file a complaint about the services performed is posted and available.

(4) Notwithstanding subsection (3)(d) of this rule, a licensed ambulance service may transport a patient against the patient's wishes if it is determined that the patient is incapacitated to make decisions based upon illness, injury or age.

333-250-0100
Advertising of an Ambulance Service

(1) The licensee may advertise only when the ambulance service and ambulance meets the requirements of ORS Chapter 682 and these rules.

(2) If the licensee does not provide the level of service advertised, the license may be denied, suspended or revoked in accordance with the provisions of ORS Chapter 183 for failure to comply.

(3) No licensee shall advertise or promote the use of any telephone number other than "9-1-1" for emergency ambulance service.

(4) A licensee which offers non-emergency service may advertise its non-emergency or business telephone number for other than emergency use, provided that in any print, audio or video advertising the phrase "FOR EMERGENCIES -- CALL 9-1-1" is provided. When using the phrase "FOR EMERGENCIES -- CALL 9-1-1" in print, it must be in bold-faced type at least one and one-half times the point size in which the non-emergency or business telephone number is displayed.

(5) Contents of ambulance service advertising must include:

(a) The legal name of the ambulance service indicated on the license issued by the Authority;

(b) If the licensee advertises 24-hours-a-day operation, the ambulance service must provide uninterrupted service 24-hours-a-day, 7 days-a-week, 365 days-a-year; and

(c) If the licensee provides service for only a portion of a 24-hour day or week, any advertising must specify the hours and days of operation.

(6) Advertising materials disclosure upon request. The licensee must maintain copies of all print, audio, video, and all other types of advertisements for one year after use and distribution have ceased, and must make those copies available to the Authority upon request.

(7) Novelty or promotional items which are not distributed to the general public do not meet the definition of advertisement.

DIVISION 255

AMBULANCE LICENSING

333-255-0000
Definitions

(1) "Advanced Emergency Medical Technician (AEMT)" means a person who is licensed by the Authority as an Advanced Emergency Medical Technician.

(2) "Ambulance" or "Ambulance Vehicle" means any privately or publicly owned motor vehicle, aircraft, or watercraft that is regularly provided or offered to be provided for the emergency transportation of persons who are ill or injured or who have disabilities.

(3) "Ambulance Based Clinician" means a Registered Nurse, Physician, or Physician Assistant who:

(a) Has an active license in Oregon and is in good standing with the Oregon Board of Nursing or the Oregon Medical Board; and

(b) Staffs an ambulance for a licensed ambulance service.

(4) "Ambulance Service" means any person, governmental unit, corporation, partnership, sole proprietorship, or other entity that operates ambulances and that holds itself out as providing prehospital or medical transportation to persons who are ill or injured or who have disabilities.

(5) "Ambulance Service Area (ASA)" means a geographic area served by one ground ambulance service provider, and may include all or portion of a county, or all or portions of two or more contiguous counties.

(6) "Authority" means the Emergency Medical Services and Trauma Systems Program, within the Oregon Health Authority.

(7) "Business day" means Monday through Friday when the Authority is open for business, excluding holidays.

(8) "Emergency Care" means the performance of acts or procedures under emergency conditions in the observation, care and counsel of the ill, injured or disabled; in the administration of care or medications as prescribed by a licensed physician, insofar as any of these acts is based upon knowledge and application of the principles of biological, physical and social science as required by a completed course utilizing an approved curriculum in prehospital emergency care. However, "emergency care" does not include acts of medical diagnosis or prescription of therapeutic or corrective measures.

(9) "EMS" means Emergency Medical Services.

(10) "EMS Medical Director" has the same meaning as "Supervising Physician" in ORS 682.025.

(11) "Emergency Medical Responder (EMR)" means a person who is licensed by the Authority as an Emergency Medical Responder.

(12) "Emergency Medical Services Provider (EMS Provider)" means a person who has received formal training in prehospital and emergency care and is state-licensed to attend to any ill, injured or disabled person. Police officers, fire fighters, funeral home employees and other personnel serving in a dual capacity, one of which meets the definition of "emergency medical services provider" are "emergency medical services providers" within the meaning of ORS Chapter 682.

(13) "Emergency Medical Technician (EMT)" means a person who is licensed by the Authority as an Emergency Medical Technician.

(14) "EMT-Basic" has the same meaning as Emergency Medical Technician.

(15) "EMT-Intermediate" means a person who is licensed by the Authority as an EMT-Intermediate.

(16) "EMT-Paramedic" has the same meaning as Paramedic.

(17) "In Operation" means the time beginning with the initial response of the ambulance and ending when the ambulance is available to respond to another request for service. An ambulance that transports a patient becomes available to respond when the care of the patient has been transferred.

(18) "License" means the documents issued by the Authority to the owner of an ambulance service when the service and its ambulances are found to be in compliance with ORS Chapter 682, OAR chapter 333, division 250 and OAR chapter 333, division 255.

(19) "Non-emergency Care" means the performance of acts or procedures on a patient who is not expected to die, become permanently disabled or suffer permanent harm within the next 24-hours, including but not limited to observation, care and counsel of a patient and the administration of medications prescribed by a physician licensed under ORS Chapter 677, insofar as any of those acts are based upon knowledge and application of the principles of biological, physical and social science and are performed in accordance with scope of practice rules adopted by the Oregon Medical Board in the course of providing prehospital care as defined by this rule.

(20) "Owner" means the person having all the incidents of ownership in an ambulance service or an ambulance or, where the incidents of ownership are in different persons, the person, other than a security interest holder or lessor, entitled to the possession of an ambulance vehicle or operation of an ambulance service under a security agreement of a lease for a term of 10 or more successive days.

(21) "Paramedic" means a person who is licensed by the Authority as a Paramedic.

(22) "Patient" means a person who is ill or injured or who has a disability and who is transported in an ambulance.

(23) "Person" means any individual, corporation, association, firm, partnership, joint stock company, group of individuals acting together for a common purpose, or organization of any kind and includes any receiver, trustee, assignee, or other similar representatives thereof.

(24) "Physician" means a person licensed under ORS Chapter 677, actively registered and in good standing with the Oregon Medical Board as a Medical Doctor (MD) or Doctor of Osteopathic Medicine (DO).

(25) "Physician Assistant (PA)" means a person licensed under ORS Chapter 677, actively registered and in good standing with the Oregon Medical Board.

(26) "Prehospital Care" means that care rendered by EMS providers as an incident of the operation of an ambulance as defined by ORS Chapter 682 and that care rendered by EMS providers as incidents of other public or private safety duties, and includes, but is not limited to "emergency care" as defined by ORS Chapter 682.

(27) "Prehospital Care Report Form (PCRF)" means an Authority-approved form or electronic field data format that is completed for all patients receiving prehospital assessment, care or transportation to a medical facility.

(28) "Qualified Driver" means someone who is not licensed by the Authority and who meets Authority requirements to operate a ground ambulance.

(29) "Registered Nurse (RN)" means a person licensed under ORS Chapter 678, actively registered and in good standing with the Oregon Board of Nursing.

(30) "Rural Ambulance Service" means ambulance service located in an area where all geographic areas are 10 or more miles from the centroid of a population center of 40,000 or more.

(31) "Sanitary" means being free from all body fluids, dirt, dust, grease or other extraneous matter.

(32) "Scope of Practice" means the maximum level of emergency or non-emergency care that an emergency medical technician may provide.

(33) "Specialty Care Transport (SCT)" means interfacility transportation of a critically injured or ill beneficiary by a ground ambulance vehicle, including medically necessary supplies and service, at a level of service beyond the scope of the Paramedic. SCT is necessary when a beneficiary's condition requires ongoing care that must be furnished by one or more health professionals in an appropriate specialty area, for example nursing, emergency medicine, respiratory care, cardiovascular care, or a Paramedic with additional training. Any skill or medication in addition to or not found in the Department of Transportation curriculum for Paramedics would be defined as additional training and is defined by the EMS medical director.

(34) "Standing Orders" means the written detailed procedures for medical or trauma emergencies issued by the EMS medical director to be performed by appropriate certificate holders or licensees in conformance with the scope of practice and level of licensure.

333-255-0010
Application Process to Obtain an Ambulance License

(1) An ambulance service owner that wishes to obtain an ambulance license must apply for and receive an ambulance license from the Authority before placing an ambulance into operation.

(2) The Authority shall issue an ambulance license to the owner of an ambulance service that is not subject to disqualification from licensure for any reason specified in ORS Chapter 682, OAR chapter 333, division 250 or these rules. The ambulance service owner must:

(a) Have a current ambulance service license;

(b) Have paid the fees required by ORS Chapter 682 and these rules;

(c) Agree to comply with all applicable federal, state and local laws and regulations governing the operation of a licensed ambulance; and

(d) Submit a completed application in a form specified by the Authority in accordance with ORS 682.045 and these rules.

(3) An application for an air ambulance license must be made on an Authority-approved form containing at a minimum:

(a) The name and address of the person or public entity owning the aircraft;

(b) If other than the applicant's true name, the name under which the applicant is doing business;

(c) The description of the ambulance:

(A) Indication if the aircraft was purchased from an ambulance service in Oregon;

(B) Type of aircraft:

(i) Fixed-wing; or

(ii) Rotary-wing.

(C) Number of engines;

(D) Make of aircraft;

(E) Model of aircraft;

(F) Year of manufacture;

(G) Federal Aviation Authority (FAA) registration number;

(H) Whether a major repair or alteration has been made to the aircraft, and if so, a FAA Form 337 must be on file in the licensee's office for each repair or alteration made;

(I) Aircraft colors:

(i) Fuselage;

(ii) Stripe; and

(iii) Lettering.

(J) Insigne name, monogram or other distinguishing characteristics. A photo of the air ambulance may be submitted to show these characteristics.

(4) An application for a ground ambulance must be made on an Authority-approved form containing at a minimum:

(a) The name and address of the person or public entity owning the ambulance;

(b) If other than the applicant's true name, the name under which the applicant is doing business;

(c) The description of the ambulance:

(A) Whether the ground ambulance was purchased from an ambulance service in Oregon;

(B) Make of vehicle;

(C) Model type of vehicle;

(D) Year of manufacture;

(E) Whether the vehicle is a remounted chassis;

(F) Conversion manufacturer;

(G) Vehicle Identification Number;

(H) Vehicle license plate number;

(I) Mileage at the time of licensing;

(J) Ambulance colors:

(i) Body;

(ii) Stripe; and

(iii) Lettering.

(K) Insigne name, monogram or other distinguishing characteristics. A photo of the ground ambulance may be submitted to show these characteristics.

(d) A copy of the ground ambulance manufacturers authenticated Star-of-Life certificate or Final Stage Vehicle Manufacturing Certification of compliance;

(A) A previously owned ambulance must have, at a minimum, a January 1, 1995, Star-of-Life certificate; or

(B) A newly constructed ambulance must have at a minimum a Star-of-Life certificate or a Final Stage Vehicle Manufacturing Certificate of compliance.

(5) A completed application for the licensing of a marine ambulance must contain, at a minimum:

(a) The name and address of the person or public entity owning the ambulance;

(b) If other than the applicant's true name, the name under which the applicant is doing business;

(c) The description of the ambulance:

(A) Whether the marine craft was purchased from an ambulance service in Oregon;

(B) Whether the patient-care area is covered or uncovered;

(C) Number of engines;

(D) Type of engines:

(i) Inboard;

(ii) Outboard; or

(iii) Both inboard and outboard.

(E) Make of marine craft;

(F) Model of marine craft;

(G) Year of manufacture;

(H) Marine craft registration number;

(I) Marine craft license plate number;

(J) Ambulance colors:

(i) Hull;

(ii) Stripe; and

(iii) Lettering.

(K) Insigne name, monogram or other distinguishing characteristics. A photo of the marine ambulance may be submitted to show these characteristics.

(d) A signed and dated statement that the application contains truthful information.

(6) The completed ambulance license application must be submitted to the Authority with a nonrefundable ambulance licensing fee of:

(a) $45, when the service has a maximum of four full-time paid positions; and

(b) $80, when the service has five or more full-time paid positions.

Stat. Auth.: ORS 682.017
Stats. Implemented: ORS 682.017 - 682.117, 682.991
Hist. HD 18-1994, f. 6-30-94, cert. ef. 7-1-94; OHD 5-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07; PH 12-2010, f. 6-30-10, cert. ef. 7-1-10; PH 1-2013, f. & cert. ef. 1-25-13

333-255-0020
Issuance of License to Operate an Ambulance

(1) When the completed ambulance license application with a nonrefundable ambulance license fee as specified in OAR 333-255-0010(6)(a) or (6)(b) has been received by the Authority and if it is found that the submitted data complies with the requirements of ORS Chapter 682 and these rules, the Authority shall issue an ambulance license for the specified ambulance within 10 business days.

(2) The ambulance license:

(a) Shall be valid until June 30 of each year, unless sooner revoked or suspended. The initial licensing period may not exceed 15 months;

(b) If issued between April 1 and June 30, shall expire on June 30 of the following year; and

(c) Must be conspicuously displayed in the operator's or patient compartment of the ambulance, or otherwise as directed by the Authority.

(3) Except when specifically exempted by ORS 682.035 and OAR 333-250-0030(3)(a) through (3)(d), an out-of-state licensed ambulance that operates in Oregon must be licensed by the Authority:

(a) An ambulance license shall be granted when the ambulance is currently licensed in another state, the standards of which meet or exceed those of Oregon; and

(b) The owner submits to the Authority:

(A) A completed Oregon ambulance license application;

(B) A non-refundable ambulance licensing fee as specified in OAR 333-255-0010(6)(a) or (6)(b); and

(C) A copy of the current home-state ambulance license.

(4) An ambulance license is not transferable to a replacement ambulance or to a new owner.

(5) An ambulance license shall be issued to an owner of an ambulance used as a reserve, so long as the ambulance meets all construction and mechanical requirements at the time of manufacture. A reserve ambulance shall not be required to have patient care equipment on-board at all times. However, when the ambulance is placed in operation, it must meet all ambulance licensing requirements.

(6) If an ambulance license becomes lost, damaged or destroyed, the licensee must obtain an application for a replacement license from the Authority. The licensee must submit the completed application with a nonrefundable fee of $10 to the Authority for each replacement license and shall receive a replacement license within 10 business days.

(7) When an ambulance is found to be in non-compliance with ORS Chapter 682 or these rules, the Authority may deny, suspend or revoke the ambulance license as authorized by ORS 682.220.

HD 63, f. 6-6-74, ef. 6-25-74; HD 1-1981, f. & ef. 1-14-81; Renumbered from 333-023-0605; HD 19-1984, f. & ef. 9-10-84; HD 16-1986, f. & ef. 9-9-86; HD 19-1991, f. & cert. ef. 10-18-91; HD 18-1994, f. 6-30-94, cert. ef. 7-1-94, Renumbered from 333-028-0005; OHD 5-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07; PH 1-2013, f. & cert. ef. 1-25-13

333-255-0030
Denial, Suspension or Revocation of an Ambulance License

(1) The Authority may, in compliance with proper administrative procedures as prescribed in ORS Chapter 183, deny, suspend, or revoke an ambulance license issued under these rules, or an ambulance service license issued under OAR 333-250-0030, if the Authority determines:

(a) A violation of ORS Chapter 682 or of these rules has occurred that poses a significant threat to the health and safety of the public or an applicant does not meet the requirements of ORS Chapter 682 or these rules;

(b) The ambulance owner makes a material omission or misrepresentation of facts on an application for a license or waiver, or in response to an inquiry or investigation. This includes the intentional misrepresentation or misstatement of a material fact, concealment of or failure to make known any material fact or any other means by which misinformation or false impression is knowingly given or deceit in obtaining or attempting to obtain a license or waiver or in any other transaction with the Authority;

(c) Defacing, altering, removing or obliterating any portion of any official entry upon a license, licensing decal, or waiver issued by the Authority;

(d) Failure to have the appropriate personnel, medical equipment and supplies required for operation at the highest level of service provided when the ambulance is in operation as prescribed by these rules;

(e) When an ambulance, upon inspection by the Authority, manifests evidence of a mechanical or equipment deficiency that poses a significant threat to the health or safety of patients or crew, the Authority shall immediately suspend that ambulance from operation. No ambulance that has been suspended from operation may be operated as an ambulance until the licensee has certified and the Authority has confirmed that the deficiency has been corrected; and

(f) Other reasons determined by the Authority to pose a significant threat to the Authority and safety and the well being of patients.

(2) The licensee must return all indications of licensing, including certificates and the remains of ambulance license decals to the Authority by registered mail, posted within 48 hours of either receipt of notification of suspension or revocation or the effective date of revocation, whichever is later.

(3) The Authority must provide appropriate public notification of the suspension or revocation of an ambulance license.

333-255-0040
Surrender of License to Operate an Ambulance

(1) The ambulance license in the owner's possession must be surrendered to the Authority immediately upon notification by the Authority of the suspension or revocation of an ambulance service or ambulance license, or upon the sale of an ambulance, or upon the termination of operations.

(2) An ambulance license is non-transferable. When the owner sells, trades, or donates an ambulance, or terminates the business, the licensee must notify the Authority within 10 days of the transaction by listing the date that the sale was completed and the full name and address of the purchaser of the ambulance on the back of the ambulance license and surrendering all ambulance licenses for that ambulance to the Authority.

(3) When an ambulance is decommissioned and not sold to another licensed ambulance service, the owner of the ambulance shall be responsible for the removal of the ambulance license decals. Ambulance license decals shall be returned to the Authority within 10 business days. In addition to the removal of the ambulance license decals, the owner of the vehicle shall remove any emblems or markings as defined in OAR 333-255-0060(5) identifying the vehicle as an ambulance.

Hist. HD 63, f. 6-6-74, ef. 6-25-74; HD 1-1981, f. & ef. 1-14-81; Renumbered from 333-023-0610; HD 19-1984, f. & ef. 9-10-84; HD 16-1986, f. & ef. 9-9-86; HD 19-1991, f. & cert. ef. 10-18-91; HD 18-1994, f. 6-30-94, cert. ef. 7-1-94, Renumbered from 333-028-0010; OHD 5-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07; PH 1-2013, f. & cert. ef. 1-25-13; PH 1-2013, f. & cert. ef. 1-25-13

333-255-0050
Right of Entry and Inspection of an Ambulance

(1) The Authority may conduct an inspection of an ambulance vehicle for the purpose of evaluating the eligibility of an ambulance service to receive or retain an ambulance license and to ensure the health, safety, and welfare of the persons who utilize ambulances. The ambulance service may be exempted from the inspection process if;

(a) The ambulance service is accredited by a nationally recognized EMS service program accreditation entity that meets or exceeds Oregon requirements. A copy of the inspection report from the nationally recognized EMS service program accreditation entity must be filed with the Authority for approval; or

(b) The ambulance service and ambulance has undergone inspections from a governmental agency or state designee. A copy of the inspection report from the governmental agency or state designee must be filed with the Authority for approval.

(2) Initial and routine inspections of an ambulance must be scheduled with the management of the ambulance service at least 72 hours in advance of the inspection unless otherwise mutually agreed upon by the Authority and ambulance service representative.

(3) Inspections for the purpose of investigating a complaint do not require giving advanced notice to the licensee. Unless the

Authority gives written approval, no person may give advanced notice of an unannounced inspection.

(4) Upon request of the Authority, an ambulance service owner, manager, employee, volunteer or agent must, at a reasonable time and without delay, permit entry by the Authority onto all premises housing an ambulance for the purpose of an ambulance inspection. No one, including but not limited to, the owner, the manager, employees, volunteers, and agents, may impede the Authority in conducting a lawful inspection of an ambulance to evaluate compliance with ORS Chapter 682 and these rules.

(5) In conducting an inspection, the Authority must:

(a) Identify him or herself by presenting Authority identification to the owner, manager, ranking employee, or volunteer present at the site of an inspection;

(b) Inform the ambulance service representative of the purpose for the inspection; and

(c) Inform the ambulance service representative when the inspection has been completed and the results of the inspection.

(6) The Authority may inspect an ambulance at any reasonable time including, but not limited to, whenever the ambulance is present at the ambulance service office or any satellite-office location.

(7) The Authority shall conduct an inspection without impeding patient care or unreasonably delaying patient transport unless, in the judgment of the Authority, the lack of properly operating patient care equipment, the safety condition of the ambulance, or the patient care being rendered is detrimental or is reasonably likely to be detrimental to the patient's health, safety, or welfare.

(8) When an ambulance is found to be in violation with ORS Chapter 682 or these rules, and requires a second or subsequent on-site inspection, the Authority may impose a civil penalty as authorized in ORS 682.224:

(a) A subsequent on-site inspection must be conducted and passed on the same day as the initial inspection if the ambulance is to remain available for operation;

(b) If the subsequent on-site inspection reveals that all violations have not been corrected and those violations constitute an immediate danger or threat to the public, the Authority may immediately suspend the ambulance license. The suspension shall remain in force until all violations have been corrected;

(c) The Authority shall immediately notify the county health department and the administrator of the county ASA plan of any ambulance license suspension; and

(d) A copy of the completed inspection form shall be given to a representative of the ambulance service and one copy each shall be sent to the county health department and administrator of the county ASA plan.

(9) An Authority representative may accompany an ambulance crew on a call for the purpose of evaluating compliance with the requirements of ORS Chapter 682 and these rules.

(10) The Authority shall have the authority to make photographic or video-graphic documentation as part of an inspection for or investigation of non-compliance with ORS Chapter 682 and these rules.

(11) Failure of the licensee to produce records for inspection or to permit examination of an ambulance or patient care equipment by the Authority shall be grounds for the denial, suspension or revocation of an ambulance license.

Ground Ambulance Construction Criteria

(1) The construction criteria for a new ground ambulance shall comply with June 1, 2008 Federal Specifications for the Star-of-Life Ambulance Certification. Copies of the specifications are available through the Authority.

(2) The construction criteria for a previously owned ambulance must comply with the November 1, 1994 Federal Specifications for the Star-of-Life Ambulance Certification, or standards as defined by the Final Stage Vehicle Manufacturing Certification of compliance. Copies of the specifications are available through the Authority.

(3) The construction criteria for remounting a Type I or Type III ambulance is:

(a) The patient compartment must have been built after November 1, 1994; and

(b) The remounting must be done by a recognized ambulance manufacturer, a recognized vehicle modifier, a remount center, or licensee with an established in-house remount program. The agency doing the remounting must utilize current nationally recognized vehicle modification techniques and industry standard parts and components. The agency doing remounting shall provide a notarized statement that the structural integrity of the specific patient compartment was not compromised during the remounting, and the remounting has not invalidated the Star-of-Life Certification or Final Stage Vehicle Manufacturing Certificate of compliance.

(4) A licensee may establish an in-house remount program by obtaining the necessary training, appropriate equipment and facilities to remount a vehicle to the described standard.

(5) The owner of an ambulance must select an exterior color, emblems, and markings for the ambulance that will ensure the prompt recognition of that vehicle as an ambulance. All ambulance vehicles shall be clearly identified by appropriate emblems and markings on the front, side, roof, and rear of the vehicle.

(a) The size, number and locations of the "Star-of-Life" emblems are:

(A) Sides — a 12 to 16-inch emblem must be located on the left and right side panels.

(B) Roof — a 32-inch emblem must be located on the roof.

(b) The size, number and locations of the word "AMBULANCE" are:

(A) Front — centered, in block letters, not less than four inches high, must be in mirror image and centered above the grille;

(B) Rear — in block letters of not less than six inches in height and centered on the rear door panels or an approved alternative; and

(C) Acceptable alternatives for the word "AMBULANCE" includes generic terms that do not connote any particular level of service, limited to "MEDIC UNIT", "FIRE MEDIC UNIT", "EMERGENCY MEDICAL SERVICES", "EMS UNIT" or other phrases as the Authority, in its sole discretion, may permit.

(c) The locations of additional markings are:

(A) An ambulance shall display the service or organization name or logo on the vehicle;

(B) An ambulance may not display on its exterior any level of service which is not provided at all times when that ambulance is in operation.

(6) An ambulance in operation and a reserve ambulance must be reasonably equipped and maintained, and maintenance records must be kept and made available for inspection by the Authority. An ambulance must be equipped with the following items in satisfactory working condition:

(a) Audio/visual devices must be in compliance with the Star-of-Life Certification or the Final Stage Vehicle Manufacturing Certificate of compliance;

(b) An ambulance shall comply with Federal Motor Vehicle Safety Standards (FMVSS) and Department of Transportation (DOT) vehicle equipment standards for the ambulance at the time of manufacture;

(c) In case of dual batteries, batteries located in the engine compartment must have heat shields. If the batteries are located elsewhere, they must be sealed off from the occupants' compartment in a ventilated area.

333-255-0070
Ground Ambulance Operating Requirements

(1) In order to operate a ground ambulance a licensee shall:

(a) Have a qualified driver that meets the qualifications in OAR chapter 333, division 250;

(b) Have EMS providers or other qualified licensed health care professionals staffing the ambulance, as required by OAR chapter 333, division 250.

(c) Ensure that the appropriate equipment is available and in satisfactory working condition, stored in a sanitary and secure manner that protects the viability and safe operation of medications and equipment, including but not limited to:

(A) Installed medical oxygen cylinder with a capacity of at least 3,000 liters and having not less than 500 psi:

(i) The installed medical oxygen cylinder must be located in a vented compartment; and

(ii) The compartment shall not be utilized for storage of any non-secured equipment. No combustible items shall be stored in the oxygen compartment.

(B) Oxygen pressure regulator:

(i) The oxygen must be delivered by a single-stage regulator which is set to at least 50 psi;

(ii) The pressure regulator controls must be accessible from inside the patient compartment; and

(iii) The pressure regulator or other display must be visible from inside the patient compartment.

(C) Oxygen flow meter, mounted — 2:

(i) The flow meter must be readable from the EMT seat and squad bench; and

(ii) The flow meter must be adjustable over a minimum range of 0 to 15 liters per minute.

(D) Portable medical oxygen cylinder with a capacity of at least 300 liters and having not less that 500 psi:

(i) The oxygen must be delivered by a yoke regulator with a pressure gauge and non-gravity-dependent flow meter that is visible and accessible to the medical personnel; and

(ii) The flow meter must be adjustable over a minimum range of 0 to 15 liters per minute.

(E) Spare portable oxygen cylinder that is full, tagged, sealed and securely mounted;

(F) Oxygen non-rebreathing masks with tubing:

(i) Pediatric — 2; and

(ii) Adult — 3.

(G) Oxygen nasal cannula with tubing that is transparent and disposable, adult — 3;

(H) Bag-valve-mask ventilation device with reservoir. The device must:

(i) Have a standard universal adapter;

(ii) Be operable with or without an oxygen supply;

(iii) Be manually operated and self-refilling; and

(iv) Have bag-valve-mask ventilation devices with reservoir that are transparent and semi-rigid in assorted sizes to include adult, child, and newborn/infant.

(I) Pharyngeal esophageal airway devices in assorted sizes with agency supervising physician approval;

(J) Oxygen Saturation Monitor;

(K) Endtidal CO2 detection device in assorted sizes;

(L) Oropharyngeal airways in assorted sizes to include adult, child, and newborn/infant;

(M) Nasopharyngeal airways in assorted sizes;

(N) Two suction apparatus. Suction apparatus:

(i) Shall be electrically powered or battery powered with pressure regulator.

(ii) If battery powered, shall have enough back-up batteries to maintain suction during routine transport.

(O) Adequate supply of wide-bore tubing, commercial rigid pharyngeal curved suction tips and flexible suction catheters sized from infant to adult;

(P) Collection canisters, either disposable or sealable liners, with adequate capacity.

(Q) Cardiac monitoring equipment including, at a minimum, a portable battery operated automatic external defibrillator (AED) or semi-automatic defibrillator with pediatric capabilities and sufficient pediatric accessories for proper operation on a pediatric patient.

(R) A wheeled stretcher:

(i) Capable of securely fastening to the ambulance body;

(ii) Having a minimum of three restraining devices and an upper torso (over the shoulder) restraint;

(iii) Containing a standard size waterproof foam mattress; and

(iv) Capable of having the head of the stretcher tilted upwards to a 60-degree semi-sitting position.

(S) At least one folding stretcher, the number required based on the stretcher-carrying capacity of the ambulance, or an additional long backboard:

(i) Capable of securely fastening to the squad bench when carrying a patient; and

(ii) Having a minimum of three restraining devices and an upper torso (over the shoulder) restraint.

(T) Fracture immobilization equipment, including but not limited to:

(i) Traction splints in assorted adult sizes or adult child combination;

(ii) Extremity splints in assorted sizes;

(iii) Extrication collars in assorted pediatric through adult sizes;

(iv) Scoop stretcher, folding or non-folding type with necessary restraining devices with sufficient supplies for head immobilization;

(v) Short backboard or equivalent with necessary restraining devices with sufficient supplies for head immobilization;

(vi) Long backboard with necessary restraining devices with sufficient supplies for head immobilization;

(vii) Pediatric backboard with necessary restraining straps with sufficient supplies for head immobilization;

(viii) Bandages and dressings in assorted sizes, sterile and non-sterile; and

(ix) Adhesive or hypo-allergenic tape in assorted sizes.

(U) Miscellaneous equipment, including but limited to:

(i) Emesis containers;

(ii) Stethoscope, pediatric and adult;

(iii) Aneroid sphygmomanometer in assorted sizes;

(iv) Bandage shears;

(v) Hypothermia thermometer;

(vi) Disposable obstetrical kit;

(vii) Chemical heat and cold packs assorted;

(viii) Urinals, female and male, one each;

(ix) Bedpan;

(x) Set of extremity restraining devices;

(xi) Blood glucose level testing kit or blood glucose level test strips;

(xii) Medications and fluids authorized for Basic Life Support (BLS) use as required by the EMS medical director; and

(xiii) Linen supplies and replacements sufficient to cover wheeled stretchers.

(V) Personal protection equipment sufficient for crew and patient(s), including but not limited to:

(i) Non-latex disposable gloves;

(ii) Disposable face masks;

(iii) Protective eyewear;

(iv) Disposable isolation gowns;

(v) Commercial antimicrobial hand cleanser;

(vi) Surface cleaning disinfectant;

(vii) Sharps container for the patient care compartment and a separate container for each kit that contains needles; and

(viii) Infectious waste disposal bags.

(W) Security and rescue equipment, including but not limited to:

(i) Fire extinguisher, 5lb. (2A-10BC type) — mounted and readily accessible in either the driver's or patient compartment;

(ii) Road flares, red colored chemical lights, the number and burning time to equal at least 180 minutes, or a minimum of six reflective triangles;

(iii) Flashlight;

(iv) Leather gloves sufficient for crew;

(v) Reflective vests for each crew member;

(vi) HEPA mask for each crew member; and

(vii) Adequate extrication equipment for agencies that provide initial response without the response of other rescue apparatus or equipment.

(X) The 2008 Department of Transportation Emergency Response Guidebook, (Initial Response to Hazardous Materials Incidents);

(Y) Triage tags — 25;

(Z) Oregon Trauma Systems Identification Bracelets — 5;

(AA) Prehospital Care Report Forms or electronic field data form;

(BB) A copy of BLS standing orders dated within one year and signed by the EMS medical director;

(CC) A universal "No Smoking" sign conspicuously displayed in the driver's and patient compartment; and

(DD) A universal "Fasten Seatbelt" sign conspicuously displayed in the driver's compartment.

(2) An ambulance shall have two-way radio communication equipment to provide reliable contact between the ambulance and central dispatch, the receiving hospital, and online medical direction.

333-255-0071
Ground Ambulance Operating Requirements When Providing Intermediate Level Care

(1) A ground ambulance in operation and providing intermediate life support care must have at a minimum the following staffing:

(a) A qualified driver, an EMT or above, and an advanced emergency medical technician or EMT-Intermediate; or

(b) A driver who is licensed at least at an EMT level and an advanced emergency medical technician.

(2) Notwithstanding section (1) of this rule a rural ambulance service as that term is defined in OAR 333-255-0000(30) is permitted to operate a ground ambulance providing intermediate level care with a qualified driver and one AEMT or an EMT-Intermediate if the rural ambulance service:

(a) Notifies the county responsible in writing for the applicable ASA of the reduced staffing and the county notifies the ambulance service in writing that it does not object to the reduced staffing;

(b) Notifies the licensee's supervising physician in writing of the reduced staffing and the supervising physician notifies the ambulance service in writing that he or she does not object to the reduced staffing; and

(c) Provides, to the Authority in writing by certified mail, the following:

(A) A description of efforts made to comply with the staffing requirements in section (1) of this rule; and

(B) A copy of the county's notice that it does not object.

(3) If a rural ambulance service is operating with reduced staffing pursuant to section (2) of this rule and the ambulance service responds to a call with reduced staffing, a copy of the PCHR must be sent to the Authority within 14 days of responding to the call.

(4) A rural ambulance service operating with reduced staffing pursuant to section (2) of this rule must make a continuous effort to attempt to comply with the staffing requirements in section (1) of this rule and comply with the requirements of section (2) of this rule annually.

(5) A ground ambulance must meet all requirements specified in OAR 333-255-0070.

(6) A ground ambulance in operation and providing intermediate level care must have the following items in satisfactory working condition, kept in a sanitary manner, stored in a secure manner and be readily accessible to the medical personnel:

(a) All items specified in OAR 333-255-0070;

(b) Cardiac Monitoring Equipment:

(A) A portable battery powered manual monitor defibrillator capable of recording ECG reading;

(B) ECG electrodes, adult and pediatric;

(C) Hands-free defibrillation patches, adult and pediatric or defibrillation paddles, adult and pediatric;

(D) Contact gel if using paddles;

(E) Patient cables — 2; and

(F) ECG paper.

(c) Any physiologic isotonic crystalloid solution or combinations thereof — 6000 cc in any size containers;

(d) Medications and fluids authorized for use by an AEMT or EMT-Intermediate as required by the EMS medical director. Storage of controlled substances in an ambulance must adhere to the signed and dated procedures as specified in OAR 333-250-0047(3)(a) and (b);

(e) Vascular access devices:

(A) Over-the-needle catheters in assorted sizes 24-gauge through 14-gauge; and

(B) Specifically-designed needles or device with needles for intraosseous infusions.

(f) A copy of standing orders for AEMTs and/or EMT-Intermediates dated within one year and signed by the EMS medical director.

333-255-0072
Ground Ambulance Operating Requirements When Providing Advanced Level Care

(1) A ground ambulance in operation and providing advanced life support care must have at a minimum the following staffing:

(a) A qualified driver, an EMT or above, and a Paramedic, RN, PA or physician who is trained in prehospital emergency medical care; or

(b) A driver who is licensed at least at an EMT level and a Paramedic.

(2) Notwithstanding section (1) of this rule a rural ambulance service as that term is defined in OAR 333-255-0000(30) is permitted to operate a ground ambulance providing advanced level care with a qualified driver and one Paramedic, RN, PA, or physician if the rural ambulance service:

(a) Notifies the county responsible in writing for the applicable ASA of the reduced staffing and the county notifies the ambulance service in writing that it does not object to the reduced staffing;

(b) Notifies the licensee's supervising physician in writing of the reduced staffing and the supervising physician notifies the ambulance service in writing that he or she does not object to the reduced staffing; and

(c) Provides, to the Authority in writing by certified mail, the following:

(A) A description of efforts made to comply with the staffing requirements in section (1) of this rule; and

(B) A copy of the county's notice that it does not object.

(3) If a rural ambulance service is operating with reduced staffing pursuant to section (2) of this rule and the ambulance service responds to a call with reduced staffing, a copy of the PCHR must be sent to the Authority within 14 days of responding to the call.

(4) A rural ambulance service operating with reduced staffing pursuant to section (2) of this rule must make a continuous effort to attempt to comply with the staffing requirements in section (1) of

this rule and comply with the requirements of section (2) of this rule annually.

(5) A person who is at the Paramedic license level, or an RN, PA or physician who is trained in prehospital emergency medical care must be in the patient compartment when a patient is receiving advanced life support care.

(6) When a RN, PA or physician is staffing an ambulance in lieu of a Paramedic and providing advanced level life support care he or she must have:

(a) A current American Heart Association "Health Care Provider," American Red Cross "Basic Life Support for the Professional Rescuer" or other Authority-approved equivalent cardiopulmonary resuscitation (CPR) course completion document;

(b) A current Advanced Cardiac Life Support course or other Authority-approved equivalent completion document;

(c) A pediatric advanced life support course or other Authority-approved equivalent completion document;

(d) A Prehospital Trauma Life Support, Basic Trauma Life Support, Trauma Emergency Assessment Management or Trauma Nurse Core Course completion document. The Trauma Emergency Assessment Management and Trauma Nurse Core Course must include a supplemental prehospital rapid extrication training session;

(e) The ability to properly assist in extricating, lifting and moving a patient;

(f) Not consumed any alcoholic beverages in the eight hours prior to working on an ambulance; and

(g) Not be taking any medications that could impair the giving of proper patient care.

(7) A ground ambulance must meet all requirements specified in OAR 333-255-0070.

(8) Advanced life support patient care equipment. A ground ambulance in operation and providing advanced level care must have the following advanced life support equipment in satisfactory working condition, kept in a sanitary manner and which is readily accessible to medical personnel:

(a) All items specified in OAR 333-255-0070;

(b) Nasogastric tubes in assorted sizes;

(c) Cardiac monitoring equipment as specified in OAR 333-255-0071(2)(b);

(d) Advanced airway care equipment:

(A) Laryngoscope handle and assorted blade sizes, adult and pediatric;

(B) Spare dated batteries for the laryngoscope handle;

(C) Spare bulbs for the laryngoscope blades;

(D) Endotracheal tubes in assorted sizes, adult and pediatric;

(E) Magill Forceps — adult and child;

(F) Intubation stylettes — adult and child;

(G) Endtidal CO2 detection device;

(H) Oxygen saturation monitor; and

(I) Chest decompression equipment.

(e) Sterile intravenous agents and medications authorized by the EMS medical director;

(f) Vascular access devices:

(A) Over-the-needle catheters in assorted sizes 24-gauge through 14-gauge; and

(B) Specifically-designed needles or device designed for intraosseous infusions.

(g) Storage of controlled substances in an ambulance must adhere to the signed and dated procedures as specified in OAR 333-250-0047(3)(a) and (b); and

(h) A copy of standing orders for Paramedics or ambulance based clinicians dated within one year and signed by the EMS medical director.

333-255-0073

Ground Ambulance Operating Requirements When Providing Only Specialty Level Care

(1) A ground ambulance in operation and providing only specialty level care during inter-facility transfers must have a minimum staff of two qualified persons as defined by the Center for Medicare Services or additional staff, the number and type, requested by the transferring physician:

(a) A qualified driver who complies with the requirements specified in OAR chapter 333, division 250; and

(b) A person who is at the Paramedic license level, RN, PA, physician or other qualified persons who have additional specialty care training and who must be in the patient compartment when a patient is receiving specialty level care.

(2) A ground ambulance must meet all requirements specified in OAR 333-255-0072.

(3) The Paramedics, RNs, PAs, physicians or other qualified persons must have the:

(a) Training to properly operate all patient care equipment carried on an ambulance, including specialty care equipment necessary to care for the patient during the transfer;

(b) Training to do titration of intravenous medications necessary to care for the patient during transfer; and

(c) Ability to properly assist in lifting and moving a patient.

(4) The personnel staffing an ambulance must not:

(a) Have consumed any alcoholic beverages in the eight hours prior to working on an ambulance; and

(b) Be taking any medications that could impair the giving of proper patient care.

(5) A ground ambulance in operation and providing only specialty level care must have the following patient care equipment in a satisfactory working condition, stored in a sanitary and secure manner, and be readily accessible to the medical personnel:

(a) All patient care equipment specified in OAR 333-255-0072; and

(b) Any other patient care equipment or supplies anticipated or required for patient care.

333-255-0079
Exception to the Two Person Staffing Requirement

(1) The Authority may, on application from any full volunteer or part volunteer ambulance service, authorize an exception to the two-person requirement as prescribed by ORS 682.068 and OAR 333-255-0070(1), 333-255-0071(1) or 333-255-0072(1) if provisions acceptable to the Authority have been made to assure timely arrival of the two-person crew as required by ORS 682.068 and OAR 333-255-0070(1), 333-255-0071(1) or 333-255-0072(1).

(2) A full volunteer or part volunteer ambulance service making application for an exception under this rule must submit an application to the Authority in a format prescribed by the Authority:

(a) The application must be approved by the EMS medical director of the ambulance service, the governing body of each municipality for which the exception is being requested and by the county ambulance service planning authority. The application must contain written approval of all such bodies prior to submission to the Authority;

(b) An application for an exception to this provision must provide for and include a description of:

(A) An alerting system which shall make known to the intended responders the location of the emergency and either two-way radio communication between responders such that response can be coordinated by responding personnel, or a fixed schedule of assigned personnel, with designation of the parties who are to respond directly to the scene of an emergency and parties who are to operate the ambulance;

(B) Personnel who respond directly to the scene of an emergency must be individually equipped with equipment necessary to provide initial patient care, including uniform or personal protective clothing, disposable gloves and a pocket ventilation mask or other appropriate ventilatory adjuncts;

(C) Copies of approved standard operating procedures or general orders which address the number of personnel to respond to the scene, organizational policies regarding the operation of motor vehicles by personnel responding to the scene and prohibiting entry into dangerous scenes; and

(D) A method of assuring that neither of the following shall be permitted to occur:

(i) An ambulance driven by a person not licensed as an EMT arrives at an emergency scene but an EMT or higher fails to arrive or arrives substantially later than the responding ambulance; or

(ii) An ambulance driven by an EMT or higher arrives at the scene but no other qualified driver, as specified by these rules, arrives at the scene to operate the ambulance.

(c) Whenever possible, an agency operating under an exception to the general rule granted pursuant to this rule must endeavor to assure that a qualified driver who is not licensed at least to the EMT level is trained to the EMR level and meets the requirements for a qualified driver as specified in OAR 333-250-0031.

Stat. Auth.: ORS 682.017
Stats. Implemented: ORS 682.017 - 682.117, 682.991
Hist.: OHD 5-2001, f. & cert. ef. 4-24-01; PH 2-2007, f. & cert. ef. 2-1-07; PH 1-2013, f. & cert. ef. 1-25-13

333-255-0080
Air Ambulance Configuration and Survival Equipment Requirements

(1) An air ambulance in operation must be in compliance with all Federal Aviation Administration (FAA) regulations contained in Part 135, and ORS Chapter 682, and must be maintained and maintenance records must be kept and made available for inspection by the Authority:

(a) The aircraft must have:

(A) A climate control system to prevent temperature extreme that would adversely affect patient care;

(B) Interior lighting, so that patient care can be given and patient status monitored without interfering with the pilot's vision. The cockpit must be sufficiently isolated, by protective barrier, to minimize in-flight distraction or interference;

(C) At least one outlet per patient and current for 110 volts (50/60 cycle) alternating current or other current which is capable of operating all electrically-powered medical equipment;

(D) A back-up source of electric current or batteries capable of operating all electrically-powered life support equipment for one-hour;

(E) An adequate door to allow loading and unloading of a patient without rotating the patient and stretcher more than 30 degrees about the longitudinal (roll) axis or 45 degrees about the lateral (pitch) axis;

(F) A configuration that allows the medical personnel access to the patient in order to begin and maintain treatment modalities. There must always be complete access to the patient's head and upper body for effective airway management;

(G) The stretcher and medical equipment placed in a manner that shall not impede rapid egress by personnel or patient from the aircraft;

(H) Communications equipment to ensure both internal crew and air-to-ground exchange of information between individuals and agencies appropriate to the mission. Scene response aircraft must be able to communicate with EMS and law enforcement personnel at the scene; and

(I) An installed self-activating emergency locator transmitter.

(b) The aircraft must have survival equipment for crew members and patient consisting of:

(A) Clothes for the season and area to be served;
(B) Thermal (space) blanket;
(C) Plastic tarp, at least 5' x 7';
(D) Signal mirror;
(E) Compass;
(F) Canned smoke signal, or flare pistol and flares or pencil-flares;
(G) Large flashlight;
(H) Orange signal banner;
(I) Noise maker (whistle);
(J) Drinkable water or intravenous fluid;
(K) Tea;
(L) Salt and sugar;
(M) Beef jerky or granola bars;
(N) Waterproof matches; and
(O) Fire extinguisher (ABC rating).

(2) The aircraft owner who does not own their medical equipment or employ their medical personnel, must have on file with the Authority a copy of the signed and dated agreement or contract with the agency that does provide either the medical personnel or medical equipment to be used on the air ambulance. The signed and dated agreement or contract must be filed annually or whenever substantive changes are made, whichever is more frequent.

333-255-0081
Air Ambulance Operating Requirements for Prearranged Inter-Facility Transfers

(1) Fixed-wing aircraft in operation and providing prearranged inter-facility transfers requiring basic level care must have a minimum staff of two persons:

(a) A pilot adhering to all regulations set forth in FAA Part 135 for air medical transport; and

(b) One Paramedic, RN, PA or physician having:

(A) Documentation that at least one member of the medical crew has successfully completed the 2004 Association of Air Medical Services (AAMS) Curriculum Guidelines or equivalent. The curriculum must include emergency care procedures, aircraft safety and altitude physiology. There must be written documentation of an annual review of the Air Medical Crew course material. The

length and content of the review must be established by the EMS medical director and be kept on file with the ambulance service;

(B) A current American Heart Association "Health Care Provider", American Red Cross "Basic Life Support for the Professional Rescuer" or other Authority-approved equivalent CPR course completion document;

(C) The ability to properly assist in lifting and moving a patient; and

(D) The knowledge to properly operate all patient care equipment that may be used.

(2) Fixed or rotary-wing aircraft in operation and providing pre-arranged inter-facility transfers requiring advanced life support care must have a minimum staff of two persons:

(a) A pilot adhering to all regulations set forth in FAA Part 135 for air medical transport; and

(b) One Paramedic, RN, PA or physician meeting the requirements specified in paragraph (1)(b)(A) through (1)(b)(D) of this rule.

(3) Fixed or rotary-wing aircraft in operation and providing pre-arranged inter-facility transfers requiring specialty level care must have a minimum staff of two persons:

(a) A pilot adhering to all regulations set forth in FAA Part 135; and

(b) One Paramedic, RN, PA, physician or other qualified person(s), who must:

(A) Meet the requirements specified in paragraph (1)(b)(A) through (1)(b)(D) of this rule;

(B) Have documentation of completing additional specialty care training as defined by the EMS medical director;

(C) Have training to properly operate specialty care equipment necessary to care for the patient during the transfer; and

(D) Have training to do titration of intravenous medications necessary to care for the patient during the transfer.

(4) An air ambulance in operation and providing specialty level care must have the following patient care equipment in a satisfactory working condition, stored in a sanitary and secure manner, and be readily accessible to the medical personnel:

(a) All patient care equipment specified in subsection (7)(a) through (7)(k) of this rule;

(b) All patient care equipment specified in OAR 333-255-0082(2)(d) through (2)(i); and

(c) Any other patient care equipment required during the transfer.

(5) When an inter-facility transfer is requested, a representative from the ambulance service must contact the attending physician at the sending facility, prior to the transfer, to determine which type of aircraft; fixed-wing, rotary-wing, pressurized or non-pressurized, is needed based on the patient's medical condition and which additional equipment and personnel are required.

(6) Patient Care Equipment. The following patient care equipment, in satisfactory working condition and kept in a sanitary manner, is required on all air ambulance flights. The equipment may be kept separate from the aircraft in modular pre-packaged form, so as to be available for rapid loading, easy securing and easy access aboard the aircraft:

(a) Medical oxygen cylinders and regulators:

(A) Medical oxygen cylinder with a capability of at least 600 liters and having not less than 500psi:

(i) The oxygen cylinder(s) must be securely fastened to the aircraft while in flight;

(ii) The oxygen must be delivered by a yoke regulator with a pressure gauge and a non-gravity-dependent flow meter that is visible and accessible to the medical personnel; and

(iii) The flow meter must be adjustable over a minimum range of 0 to 15 liters per minute.

(B) A spare portable oxygen cylinder that is full, tagged, sealed, and securely mounted.

(b) Medical oxygen administration equipment:

(A) Oxygen non-rebreathing masks with tubing:

(i) Pediatric — 2; and

(ii) Adult — 2.

(B) Oxygen nasal cannula with tubing that is transparent and disposable, adult —2;

(C) Bag-valve-mask ventilation device with reservoir. The device must:

(i) Have a standard universal adapter (15 mm tracheal tube/22 mm mask);

(ii) Be operable with or without an oxygen supply;

(iii) Be manually operated and self-refilling;

(iv) Have valves that operate effectively at temperatures down to 0° F;

(v) Have bag-valve-mask ventilation devices with reservoir that are transparent and semi-rigid in assorted sizes to include adult, child, and newborn/infant.

(c) Airway maintenance devices:

(A) Pharyngeal esophageal airway devices in assorted sizes;

(B) Endtidal CO2 detection device in assorted sizes;

(C) Oropharyngeal airways in assorted sizes to include adult, child, and newborn/infant; and

(D) Nasal airways in assorted sizes.

(d) Suction equipment:

(A) Portable suction aspirator:

(i) The unit must be either a self-contained battery or oxygen-powered unit that can operate continuously for 20 minutes and is rechargeable or be a manually-powered unit;

(ii) The unit must be capable of developing a minimum vacuum of 300 mm Hg within four seconds after the suction tube is closed;

(iii) The unit must provide a free air flow of at least 20 liters per minute;

(iv) The unit must be adjustable for use on children and intubated patients;

(v) The unit must include at least a 300 ml collection bottle; and

(vi) A secondary suction apparatus.

(B) Suction connecting tubing and catheters:

(i) Suction connecting tubing that is at least one-quarter of an inch in diameter, translucent and will not kink or collapse under high suction — 2; and

(ii) Suction catheters in assorted sizes and types for adult, child, and newborn/infant.

(e) Stretcher. The stretcher must:

(A) Be securely fastened to the aircraft in accordance with FAA Part 135; and

(B) Have a minimum of three restraining devices and an upper torso (over the shoulder) restraint.

(f) Miscellaneous equipment:

(A) Emesis containers;

(B) Stethoscope, adult and pediatric;

(C) Aneroid sphygmomanometer in assorted sizes:

(D) Bandage shears;

(E) Hypothermia thermometer;

(F) Chemical heat and cold packs, assorted;

(G) Blood glucose level testing kit or blood glucose level test strips;

(H) Urinals, female and male, one each;

(I) Bed pan (Exempt from rotary-wing aircraft); and

(J) Set of extremity restraining devices.

(g) Personal protection equipment sufficient for crew and patient(s) including:

(A) Disposable gloves;

(B) Disposable face masks;

(C) Protective eyewear;

(D) Disposable isolation gowns;

(E) Hand cleaning solution or foam;

(F) Surface cleaning disinfectant;

(G) Sharps container for each kit that contains needles; and

(H) Infectious waste disposal bags.

(h) Linen supplies and replacements to cover stretcher;

(i) Prehospital Care Report Form or electronic field data form;

(j) A copy of standing orders for EMS providers, RNs and PAs dated within one year and signed by the EMS medical director; and

(k) A universal "No Smoking" sign must be conspicuously displayed in the cockpit and patient compartment.

333-255-0082
Air Ambulance Operating Requirements for Scene Response

(1) Rotary-wing aircraft in operation and providing scene response care must have a minimum staff of two persons:

(a) A pilot adhering to all regulations set forth in FAA Part 135; and

(b) One Paramedic, RN, PA, or physician having:

(A) Documentation that at least one member of the medical crew successfully completed the 2004 Association of Air Medical Services (AAMS) Curriculum Guidelines or equivalent. The curriculum must include emergency care procedures, aircraft safety and altitude physiology. There must be written documentation of an annual review of the Air Medical Crew course material. The length and content of the review must be established by the EMS medical director and be kept on file with the ambulance service;

(B) The ability to properly assist in extricating, lifting and moving a patient; and

(C) The knowledge to properly operate all patient care equipment that may be used.

(2) The following prehospital scene patient care equipment is required on all prehospital scene responses:

(a) All patient care equipment specified in OAR 333-255-0081(7)(a) through (7)(k);

(b) Fracture immobilization equipment:

(A) Traction splints in assorted adult or adult-child combination;

(B) Extremity splints in assorted sizes;

(C) Extrication collars in assorted pediatric through adult sizes;

(D) Short backboard or equivalent with necessary restraining devices with sufficient supplies for head immobilization;

(E) Long backboard with necessary restraining devices with sufficient supplies for head immobilization;

(F) Scoop stretcher with necessary restraining devices with sufficient supplies for head immobilization; and

(G) Pediatric backboard with necessary restraining devices with sufficient supplies for head immobilization.

(c) Bandages and dressings in assorted sizes, sterile and non-sterile;

(d) Adhesive or hypo-allergenic tape in assorted sizes;

(e) Cardiac monitoring equipment:

(A) Manual monitor/defibrillator;

(B) Monitoring electrodes, infant and adult;

(C) Patient cables — 2; and

(D) ECG paper.

(f) Advanced airway care equipment:

(A) Laryngoscope handle and assorted blade sizes, adult and pediatric;

(B) Spare dated batteries for the laryngoscope handle;

(C) Spare bulbs for the laryngoscope blades;

(D) Endotracheal tubes in assorted sizes, adult and pediatric;

(E) Magill Forceps, child and adult;

(F) Intubation stylettes, child and adult;

(G) Endtidal CO2 detection device;

(H) Oxygen saturation monitor; and

(I) Chest decompression kit.

(g) Sterile intravenous agents and medications authorized by the EMS medical director;

(h) Vascular access devices:

(A) Over-the-needle catheters in assorted sizes 24-gauge through 14-gauge; and

(B) Specifically-designed needles for intraosseous infusions.

(i) Nasogastric tubes in assorted sizes;

(j) Storage of controlled substances in an ambulance must adhere to the signed and dated procedures as specified in OAR 333-250-0047(3)(a) and (3)(b);

(k) Oregon Trauma System's Identification Bracelets — 5;

(l) Miscellaneous equipment:

(i) The 2008 Department of Transportation Emergency Response Guidebook (Initial Response to Hazardous Materials Incidents); and

(ii) A copy of standing orders for Paramedics, RNs and PAs dated within one year and signed by the EMS medical director.

(3) In a prehospital resuscitation, when no other practical means of transportation, including any other properly equipped license-holder, is reasonably available, a license-holder may deviate from the rules to the extent necessary to meet the rescue situation.

Stat. Auth.: ORS 682.017

333-255-0090
Marine Ambulance Configuration and Survival/Rescue Equipment Requirements

(1) A marine ambulance in operation must be in compliance with all the requirements which relate to marine ambulances, any applicable federal navigation regulations, ORS Chapter 682, and these rules. Maintenance records must be kept and made available for inspection by the Authority:

(2) Marine craft size and configuration. The marine craft must be of sufficient size to accommodate, at a minimum, the operator, two EMS providers, one patient, and the required supplies and equipment and be configured to allow full access to the patient. The marine craft must have:

(a) Adequate lighting, so that patient care can be given and patient status be monitored;

(b) At least one outlet per patient and current for 110 volts (50/60 cycle) alternating current or other current which is capable of operating all electrically-powered medical equipment;

(c) An adequate door or opening to allow loading and unloading of the patient without rotating the patient and stretcher more than 30 degrees about the longitudinal (roll) axis or 45 degrees about the lateral (pitch) axis;

(d) A configuration that allows the medical personnel access to the patient in order to begin and maintain treatment modalities. There must always be complete access to the patient's head and upper body for effective airway management; and

(e) The stretcher or litter and medical equipment placed in a manner that must not impede rapid egress by personnel or patient from the marine craft.

(3) Marine craft equipment. A marine craft ambulance must have the following items in good working condition:

(a) Anchor with line that is three times the maximum depth of water in areas of usual operation;

(b) Docking fenders — 2;

(c) Mooring lines — 2;

(d) Self or mechanical bailer;

(e) Search light with a minimum of 200,000 candle power of illumination;

(f) Swim harness and 75-foot tethering line;

(g) Waterproof flashlight, six volt minimum;

(h) Navigational charts for service area and navigational aids, including a compass;

(i) A cold water protection device for each crew member;

(j) Life jackets — 2 adult and 2 child; and

(k) Boat hook with minimum of 10 foot capability.

333-255-0091
Marine Ambulance Operating Requirements When Providing Basic Level Care

(1) A marine ambulance in operation and providing basic level care must have a staff of at least two persons:

(a) An operator, who:

(A) Has a valid US Coast Guard pilot's license;

(B) Operates the marine ambulance in compliance with any applicable marine craft statutes;

(C) Has not consumed any alcoholic beverages in the eight hours prior to operating an ambulance; and

(D) Is not taking any medications that could impair the safe operation of the ambulance.

(b) A person who is at or above the EMT license level who must be with the patient at all times. The person at or above the EMT level attending the patient must:

(A) Not have consumed any alcoholic beverages in the eight hours prior to working on an ambulance; and

(B) Not be taking any medications that could impair the giving of proper patient care.

(c) If the operator is not a licensed EMS provider, the operator must meet the requirements specified in paragraphs (1)(a)(A) through (1)(a)(D) of this rule and meet the requirements of a qualified driver specified in OAR 333-250-0031.

(2) Basic life support care equipment. A marine ambulance in operation and providing basic level care must have the following patient care equipment in a satisfactory working condition, kept in a sanitary manner, stored in a secure manner and be readily accessible to the medical personnel:

(a) Medical oxygen cylinders and regulators:

(A) Medical oxygen cylinder with a minimum capacity of 600 liters;

(i) The oxygen must be delivered by a yoke regulator with a pressure gauge and a non-gravity-dependent flow meter that is visible and accessible to the medical personnel; and

(ii) The flow meter must be adjustable over a minimum range of 0 to 15 liters per minute.

(B) A spare portable oxygen cylinder that is full, tagged, sealed and securely mounted.

(b) Medical oxygen administration equipment:

(A) Oxygen non-rebreathing masks with tubing:

(i) Pediatric — 2; and

(ii) Adult — 2.

(B) Oxygen nasal cannulas with tubing that are transparent and disposable, adult — 2;

(C) Bag-valve-mask ventilation device with reservoir. The device must:

(i) Have a standard universal adapter (15 mm tracheal tube/22 mm mask);

(ii) Be operable with or without an oxygen supply;

(iii) Be manually operated and self-refilling;

(iv) Have valves that operate effectively at temperatures down to 0° F; and

(v) Have bag-valve-mask ventilation devices with reservoir that are transparent and semi-rigid in assorted sizes to include adult, child, and newborn/infant.

(c) Airway maintenance devices:

(A) Pharyngeal esophageal airway devices in assorted sizes if the EMS medical director approved use;

(B) Endtidal CO2 detection device in assorted sizes;

(C) Oropharyngeal airways in assorted sizes to include adult, child and newborn/infant; and

(D) Nasal airways in assorted sizes.

(d) Suction equipment:

(A) Portable suction aspirator:

(i) The unit must be either a self-contained battery or oxygen-powered unit that can operate continuously for 20 minutes and is rechargeable or be a manually-powered unit;

(ii) The unit must be capable of developing a minimum vacuum of 300 mm Hg within four seconds after the suction tube is closed;

(iii) The unit must provide a free air flow of at least 20 liters per minute;

(iv) The unit must be adjustable for use on children and intubated patients;

(v) The unit, including at least a 300 ml collection bottle; and

(vi) A secondary suction apparatus.

(B) Suction connecting tubing and catheters:

(i) Suction connecting tubing that is at least one-quarter of an inch in diameter, translucent and will not kink or collapse under high suction — 2; and

(ii) Suction catheters that are in assorted sizes and types for adult, child and newborn/infant.

(e) Cardiac monitoring equipment: Automatic or semi-automatic defibrillator. The unit must be capable of operating independently of an electrical outlet, and delivering total defibrillation energy sufficient to meet the number of shocks and power settings prescribed in the EMS medical director's standing orders and be inclusive of the 2005 American Heart Association guidelines for emergency cardiac care or equivalent standards as approved by the Authority.

(f) Stretcher. The stretcher must:

(A) Be a plastic or metal basket stretcher with a four-point bridle;

(B) Have a locking mechanism which can be securely fastened to the craft below the gunwale level; and

(C) Have a minimum of four restraining devices, one of which shall be a torso (over the shoulder) restraint.

(g) Fracture immobilization equipment:

(A) Traction splints in assorted adult sizes or adult/child combination;

(B) Extremity splints in assorted sizes;

(C) Extrication collars in assorted pediatric through adult sizes;

(D) Short backboard or equivalent with necessary restraining devices with sufficient supplies for head immobilization;

(E) Long backboard with necessary restraining devices with sufficient supplies for head immobilization; and

(F) Pediatric backboard with necessary restraining devices with sufficient supplies for head immobilization.

(h) Bandages and dressings in assorted sizes, sterile and non-sterile;

(i) Adhesive or hypo-allergenic tape in assorted sizes;

(j) Miscellaneous equipment:

(A) Emesis containers;

(B) Stethoscope, pediatric and adult;

(C) Aneroid sphygmomanometer in assorted sizes:

(D) Bandage shears;

(E) Hypothermia thermometer;

(F) Disposable obstetrical kit;

(G) Chemical heat and cold packs assorted;

(H) Urinals, female and male, one each;

(I) Bed pan;

(J) Set of extremity restraining devices; and

(K) Blood glucose level testing kit or blood glucose level testing strips.

(k) Personal protection equipment sufficient for crew and patient(s) including:

(A) Disposable gloves;

(B) Disposable face masks;

(C) Protective eyewear;

(D) Disposable isolation gowns;

(E) Hand cleaning solution or foam;

(F) Surface cleaning disinfectant;

(G) Sharps container for the patient compartment and a separate container for each kit that contains needles;

(H) Infectious waste disposal bags; and

(I) The 2008 Department of Transportation — Emergency Response Guidebook (Initial Response to Hazardous Materials Incidents.)

(l) Medications and fluids authorized for use by an EMT as required by the EMS medical director;

(m) Linen supplies and replacements sufficient to cover stretchers;

(n) Communication equipment. Communications equipment must consist of a VHF/FM marine radio with at least 25 watts of power. In addition, the radio must have the capability to have reliable contact between the marine ambulance and a ground or air ambulance and with a hospital having online medical direction;

(o) Prehospital Care Report Form or electronic field data;

(p) Oregon Trauma System Identification Bracelets — 5;

(q) A copy of standing orders for EMTs dated within one year and signed by the EMS medical director; and

(r) A universal "No Smoking" sign conspicuously displayed in the pilot's and patient area.

333-255-0092
Marine Ambulance Operating Requirements When Providing Intermediate Level Care

(1) A marine ambulance in operation and providing intermediate life support care must have a minimum staff of two persons:

(a) An operator who complies with the requirements specified in OAR 333-255-0091(1)(a)(A) through (1)(a)(D) or (1)(c)(A) through (1)(c)(D); and

(b) A person who is at or above the AEMT license level and who must be with the patient at all times. If the qualified driver is not a licensed EMT, then a second EMT must be available for patient care both in the marine ambulance or on scene.

(2) Intermediate life support care equipment. A marine ambulance in operation and providing intermediate level care must have the following patient care equipment in a satisfactory working condition, kept in a sanitary manner, stored in a secure manner and be readily accessible to the medical personnel:

(a) All of the items specified in OAR 333-255-0091(2)(a) through (2)(r);

(b) Any physiologic isotonic crystalloid solution or combinations thereof — 6000 cc in any size containers;

(c) Medications and fluids authorized for use by an AEMT or EMT-Intermediate as required by the EMS medical director;

(d) Vascular access devices:

(A) Over-the-needle catheters in assorted sizes 24 gauge through 14 gauge; and

(B) Specifically-designed needles for intraosseous infusions.

(e) A copy of standing orders for AEMTs and/or EMT-Intermediates dated within one year and signed by the EMS medical director.

Stat. Auth.: ORS 682.017
Stats. Implemented: ORS 682.017 - 682.117, 682.991

333-255-0093
Marine Ambulance Operating Requirements When Providing Advanced Level Care

(1) A marine ambulance in operation and providing advanced level care must have a minimum staff of two persons:

(a) An operator who complies with the requirements specified in OAR 333-255-0091(1)(a)(A) through (1)(a)(D) or (1)(c)(A) through (1)(c)(D); and

(b) A person who is at the Paramedic license level or an RN, PA or physician who is trained in prehospital emergency medical care must be attending to the patient when a patient is receiving advanced life support care. If the operator is not a licensed EMT, then a second EMT must be available for patient care both on the marine ambulance and on scene. The Paramedic, RN, PA, physician, or other qualified personnel must:

(A) Not have consumed any alcoholic beverages in the eight hours prior to working on an ambulance; and

(B) Not be taking any medications that could impair the giving of proper patient care.

(c) When a RN, PA or physician is staffing an ambulance in lieu of a Paramedic and is providing advanced level care he or she must have:

(A) A current American Heart Association "Health Care Provider", American Red Cross "Basic Life Support for the Professional Rescuer" or other Authority-approved equivalent CPR course completion document;

(B) A current Advanced Cardiac Life Support course or other Authority-approved equivalent completion document;

(C) A pediatric advanced life support course or other Authority-approved equivalent completion document;

(D) A Prehospital Trauma Life Support, Basic Trauma Life Support, Trauma Emergency Assessment Management or Trauma Nurse Core Course completion document. The Trauma Emergency Assessment Management and Trauma Nurse Core Course must include a supplemental prehospital rapid extrication training session;

(E) The ability to properly assist in extricating, lifting and moving a patient; and

(F) The knowledge to properly operate all patient care equipment that may be used.

(2) A marine ambulance in operation and providing advanced level care must have the following advanced life support patient care equipment in a satisfactory working condition, kept in a sanitary manner and which is readily accessible to medical personnel:

(a) All items specified in OAR 333-255-0091(2)(a) through (2)(r);

(b) Cardiac monitoring equipment:

(A) Manual monitor/defibrillator;

(B) Monitoring electrodes, infant and adult;

(C) Patient cables — 2; and

(D) ECG paper.

(c) Advanced airway care equipment:

(A) Laryngoscope handle and assorted blade sizes, adult and pediatric;

(B) Spare dated batteries for the laryngoscope handle;

(C) Spare bulbs for the laryngoscope blades;

(D) Endotracheal tubes in assorted sizes, adult and pediatric;

(E) Magill Forceps, adult and child;

(F) Intubation stylettes, adult and pediatric;

(G) Endtidal CO2 detection device; and

(H) Chest decompression equipment.

(d) Sterile intravenous agents and medications authorized by the EMS medical director;

(e) Vascular access devices:

(A) Over-the-needle catheters in assorted sizes 14-gauge through 24-gauges; and

(B) Specifically-designed needles for intraosseous infusions.

(f) Nasogastric tubes in assorted sizes;

(g) The storage of controlled substances in a marine ambulance must adhere to the procedure specified in OAR 333-250-0047(2)(a) and (b); and

(h) A copy of standing order for Paramedics, RNs and PAs dated within one-year and signed by the EMS medical director.

(3) The special equipment required for a marine ambulance may be kept separate from the craft in modular watertight and buoyant containers for rapid loading and easy access aboard the marine craft.

333-260-0010
Definitions

As used in these rules:

(1) "Ambulance" means any privately or publicly owned motor vehicle, aircraft, or marine craft operated by a Division-licensed ambulance service and that is regularly provided or offered to be provided for the emergency and non-emergency transportation of persons suffering from illness, injury or disability.

(2) "Ambulance Service" means any individual, partnership, corporation, association, governmental agency or other entity that holds a Division-issued ambulance service license to provide emergency and non-emergency care and transportation to sick, injured or disabled persons.

(3) "Ambulance Service Area (ASA)" means a geographic area which is served by one ambulance service provider, and may include all or a portion of a county, or all or portions of two or more contiguous counties.

(4) "Ambulance Service Plan (Plan)" means a written document, which outlines a process for establishing a county emergency medical services system. A plan addresses the need for and coordination of ambulance services by establishing ambulance service areas for the entire county and by meeting the other requirements of these rules. Approval of a plan shall not depend upon whether it maintains an existing system of providers or changes the system. For example, a plan may substitute franchising for an open-market system.

(5) "Ambulance Service Provider" means a licensed ambulance service that responds to 9-1-1 dispatched calls or provides pre-arranged non-emergency transfers or emergency or non-emergency inter-facility transfers.

(6) "County Government or County Governing Body (County)" means a Board of County Commissioners or a County Court.

(7) "Division" means the Public Health Division, Oregon Health Authority.

(8) "Emergency Medical Service (EMS)" means those pre-hospital functions and services whose purpose is to prepare for and respond to medical and traumatic emergencies, including rescue and ambulance services patient care, communications and evaluation.

(9) "Notification Time" means the length of time between the initial receipt of the request for emergency medical service by either a provider or an emergency dispatch center (9-1-1), and the notification of all responding emergency medical service personnel.

(10) "Provider" means any public, private or volunteer entity providing EMS.

(11) "Response Time" means the length of time between the notification of each provider and the arrival of each provider's emergency medical service unit(s) at the incident scene.

333-260-0020
Procedures for Adoption and Approval of Ambulance Service Plans

(1) A county may obtain technical assistance from the Division as available in developing and amending an ambulance service plan.

(2) A county that does not have a Division-approved plan on July 19, 1989, must adopt and submit a plan by December 31, 1990. A county that has a Division-approved plan that does not meet the requirements of these rules must adopt and submit an amended plan by June 30, 2003. This requirement may be met by a plan submitted in conjunction with another contiguous county or counties. A Division-approved plan which is currently in effect, remains in effect until one of the following occurs:

(a) An amended plan is approved by the Division;

(b) There is a failure to submit an amended plan pursuant to this subsection; or

(c) Where an amended plan was required to be submitted pursuant to this subsection and such amended plan was disapproved by the Division, if 120 days have elapsed since such disapproval and no new amended plan has been adopted and submitted to the Division for approval.

(3) After March 31, 2001, a county must submit a plan or amendment(s) to the Division using the following format:

1. CERTIFICATION BY GOVERNING BODY OF COUNTY AMBULANCE SERVICE PLAN
2. OVERVIEW OF COUNTY (DEMOGRAPHIC AND GEOGRAPHIC DESCRIPTION)
3. DEFINITIONS;
4. BOUNDARIES;
(a) ASA Map(s) with Response Time Zones:
(b) ASA Narrative Description:
(c) Map(s) Depicting "9-1-1," Fire Districts and Incorporated Cities:
(d) Alternatives Considered to Reduce Response Times.
5. SYSTEM ELEMENTS:
(a) 9-1-1 Dispatched Calls;
(b) Pre-arranged Non-emergency Transfers and Inter-facility Transfers;
(c) Notification and Response Times;
(d) Level of Care;
(e) Personnel;
(f) Medical Supervision;
(g) Patient Care Equipment;
(h) Vehicles;
(i) Training;
(j) Quality Improvement;
(A) Structure:
(B) Process:
(C) Sanctions for Non Compliant Personnel or Providers:
6. COORDINATION
(a) The Entity That Shall Administer and Revise the ASA Plan;
(b) Complaint Review Process;
(c) Mutual Aid Agreements;
(d) Disaster Response;
(A) County Resources Other Than Ambulances;
(B) Out of County Resources;
(C) Mass-Casualty Incident Plan;
(D) Response to Terrorism;
(e) Personnel and Equipment Resources;
(A) Non-transporting EMS Provider;
(B) Hazardous Materials;
(C) Search and Rescue;
(D) Specialized Rescue;
(E) Extrication;
(f) Emergency Communication and System Access;
(A) Telephone;
(B) Dispatch Procedures;
(C) Radio System;
(D) Emergency Medical Services Dispatcher Training.
7. PROVIDER SELECTION:
(a) Initial Assignment;
(b) Reassignment;
(c) Application for an ASA;
(d) Notification of Vacating an ASA;
(e) Maintenance of Level of Service;
8. COUNTY ORDINANCES AND RULES:

(4) Procedures for the Division's review of a plan submitted under section (3) of this rule are set forth in ORS 682.205(6). Except for the time frames, plans submitted prior to April 1, 2001,

but not yet approved by the Division shall be processed in the same manner.

(5) The Division's approval of a plan or amendments is limited to determining whether there has been compliance with these rules.

(6) A county is required to amend their plan, if necessary, to comply with any amendments made in ORS Chapter 682 or OAR chapter 333, divisions 250, 255 or 260. The Division shall notify the county in writing each time an amendment is made in either the statute or administrative rules that may affect the plan. Anytime a county plan is amended, the county must submit a copy of the amended plan to the Division.

(7) The Division shall review each county plan no less than once every five years to ensure compliance with the statutes and administrative rules pertaining to a county ambulance service area plan. The Division shall notify the county of the results of the review.

(8) The Division may seek the advice of the State Emergency Medical Service Committee concerning plan compliance with these rules.

333-260-0030
Subjects to be Considered in an Ambulance Service Plan

(1) A county is required to include in a plan, each of the subjects or items set forth in these rules and to address and consider each of those subjects or items in the adoption process.

(2) The plan submitted to the Division for approval must contain a certification signed by the governing body of the county that:

(a) Each subject or item contained in the plan was addressed and considered in the adoption of the plan;

(b) In the governing body's judgment, the ASAs established in the plan provides for the efficient and effective provision of ambulance services; and

(c) To the extent they are applicable, the county has complied with ORS 682.205(2)(3) and 682.335 and existing local ordinances and rules.

Stat. Auth.: ORS 682.205, 682.215, 682.275, 682.315, 682.325, 682.335 & 682.345

333-260-0040
Boundaries

(1) The entire county must be included in a plan. One or more ASAs may be established in a plan. The county or contiguous counties are solely responsible for establishing all ASA boundaries within the county's jurisdiction.

(2) A map showing ASA boundaries and response time zones must be included in the plan, along with a narrative description of each ASA.

(3) A map depicting all "9-1-1," fire district and incorporated city boundaries within the county must be included in the plan.

(4) The plan must describe the major alternatives considered, if any, for reducing the effects of artificial and geographical barriers on response times.

Stat. Auth.: ORS 682.205, 682.215, 682.275, 682.315, 682.325, 682.335 & 682.345

333-260-0050
System Elements

(1) The following system elements must be addressed and considered in the county's plan for each ASA:

(a) 9-1-1 dispatched calls;

(b) Pre-arranged non-emergency transfers and inter-facility transfers, by June 30, 2003;

(c) Notification and response times;

(d) Level of care, ranging from basic life support to advanced life support;

(e) Personnel for first response vehicles and ambulances;

(f) Medical supervision of all medically trained emergency response personnel;

(g) Patient care equipment for first response vehicles and ambulances;

(h) Vehicle, vehicle equipment and safety requirements;

(i) Initial and continuing education training for emergency response personnel; and

(j) Quality improvement.

(2) Notification and response times must be addressed and considered in the plan as follows:

(a) Notification times must be expressed in terms of percent of calls which do not exceed a specified number of minutes;

(b) Response times must be expressed in terms of percent of calls which do not exceed a specified number of minutes; and

(c) Multiple response time standards may be established within the ASA to accommodate climate, weather, access, terrain, staffing and other factors as determined by the county.

(3) The plan must address and consider a quality improvement program which at a minimum:

(a) Monitors compliance with pertinent statutes ordinances and rules;

(b) Monitors compliance with standards for prehospital provider notification times, response times and patient care; and

(c) Provides for problem resolution and legal sanctions for non compliant personnel or providers of the plan provisions.

Stat. Auth.: ORS 682.205, 682.215, 682.275, 682.315, 682.325, 682.335 & 682.345

Stats. Implemented: ORS 682.205, 682.215, 682.275, 682.315, 682.325, 682.335 & 682.345

333-260-0060
Coordination

The county may delegate authority for development and administration of the plan to an intergovernmental body. The plan must address and consider:

(1) A process for the county to receive input from prehospital care consumers, providers and the medical community.

(2) Mutual aid agreements for ambulance responses from outside of the service area and responses to other service areas to meet the need for service in unusual circumstances.

(3) Ambulance service providers' responsibilities in the event of a disaster, including: coordination with county resources and determination of methods for obtaining out-of-county resources other than ambulances, a process for adoption of a mass-casualty incident plan that is recognized and approved by the county's emergency management administration.

(4) Personnel and equipment resources in addition to the ambulance provider for response to incidents involving but not limited to:

(a) Hazardous Materials;

(b) Search and Rescue;

(c) Specialized Rescue; and

(d) Extrication.

(5) Emergency radio and telephone communications systems for the county. Mechanisms for the following must be in operation or scheduled for implementation:

(a) Access to the Emergency Medical Services System centralized emergency telephone numbers;

(b) Dispatch of ambulances staffed in accordance with the plan and other emergency resources based on emergency medical protocols; and

(c) U.S. Department of Transportation, National Highway Traffic Safety Administration, Emergency Medical Services Dispatcher: National Standard Curriculum or equivalent training for all emergency medical services dispatchers.

Stat. Auth.: ORS 682.205, 682.215, 682.275, 682.315, 682.325, 682.335 & 682.345

333-260-0070
Provider Selection

(1) The county is solely responsible for designating and administering the process of selecting an ambulance service provider.

(2) The plan must address and consider a process for:

(a) Assigning and reassigning of an ambulance service provider to an ASA;

(b) Responding to an application by a provider for an ASA;

(c) Responding to notification that an ASA is being vacated; and

(d) Maintaining the existing level of service after notification that a provider is vacating an ASA.

(3) The county shall designate one emergency ambulance provider for each ASA. The county may designate one or more non-emergency ambulance provider for each ASA.

Stat. Auth.: ORS 682.205, 682.215, 682.275, 682.315, 682.325, 682.335 & 682.345

DIVISION 265

EMERGENCY MEDICAL SERVICES PROVIDERS

333-265-0000
Definitions

(1) "Advanced Emergency Medical Technician (AEMT or Advanced EMT)" means a person who is licensed by the Authority as an Advanced Emergency Medical Technician.

(2) "Ambulance Service" means any person, governmental unit, corporation, partnership, sole proprietorship, or other entity that operates ambulances and holds itself out as providing prehospital care or medical transportation to sick, injured or disabled persons.

(3) "Authority" means the Emergency Medical Services and Trauma Systems Program, within the Oregon Health Authority.

(4) "Business day" means Monday through Friday when the Authority is open for business, excluding holidays.

(5) "Candidate" means an applicant that has completed training in an emergency medical services provider course and has not yet been licensed by the Authority.

(6) "Clinical Experience (Clinical)" means those hours of the curriculum that synthesize cognitive and psychomotor skills and are performed under a preceptor.

(7) "Continuing Education" means education required as a condition of licensure under ORS Chapter 682 to maintain the skills necessary for the provision of competent prehospital care. Continuing education does not include attending EMS related business meetings, EMS exhibits or trade shows.

(8) "Didactic Instruction" means the delivery of primarily cognitive material through lecture, video, discussion, and simulation by program faculty.

(9) "Direct Medical Oversight" means real-time direct communication by a physician who is providing direction to an emergency medical services provider during a patient encounter.

(10) "Direct Visual Supervision" means that a person qualified to supervise is at the patient's side to monitor the emergency medical services provider in training.

(11) "Emergency Care" means the performance of acts or procedures under emergency conditions in the observation, care and counsel of the ill, injured or disabled; in the administration of care or medications as prescribed by a licensed physician, insofar as any of these acts is based upon knowledge and application of the principles of biological, physical and social science as required by a completed course utilizing an approved curriculum in prehospital emergency care. However, "emergency care" does not include acts of medical diagnosis or prescription of therapeutic or corrective measures.

(12) "EMS" means Emergency Medical Services.

(13) "EMS Medical Director" has the same meaning as "Supervising Physician" in ORS 682.025.

(14) "Emergency Medical Responder (EMR)" means a person who is licensed by the Authority as an Emergency Medical Responder.

(15) "Emergency Medical Services (EMS) Agency" means any person, partnership, corporation, governmental agency or unit, sole proprietorship or other entity that utilizes emergency medical services providers to provide prehospital emergency or non-emergency care. An emergency medical services agency may be either an ambulance service or a nontransporting service.

(16) "Emergency Medical Services Provider (EMS Provider)" means a person who has received formal training in prehospital and emergency care and is state-licensed to attend to any ill, injured or disabled person. Police officers, fire fighters, funeral home employees and other personnel serving in a dual capacity, one of which meets the definition of "emergency medical services provider" are "emergency medical services providers" within the meaning of ORS Chapter 682.

(17) "Emergency Medical Technician (EMT)" means a person who is licensed by the Authority as an Emergency Medical Technician.

(18) "EMT-Basic" has the same meaning as Emergency Medical Technician.

(19) "EMT-Intermediate" means a person who is licensed by the Authority as an EMT-Intermediate.

(20) "EMT-Paramedic" has the same meaning as Paramedic.

(21) "Exam Evaluator" is a person who attends an EMS provider practical examination and who objectively observes and records each student's performance consistent with the standards of the National Registry of EMTs.

(22) "First Responder" has the same meaning as Emergency Medical Responder.

(23) "In Good Standing" means a person who is currently licensed in Oregon, who does not have any restrictions placed on his or her license, or who is not on probation with the licensing agency for any reason.

(24) "Key party" means immediate family members and others who would be reasonably expected to play a significant role in the health care decisions of the patient or client and includes, but is not limited to, the spouse, domestic partner, sibling, parent, child, guardian and person authorized to make health care decisions of the patient or client.

(25) "Licensing Officer" is a person who is responsible for conducting an Emergency Medical Technician (EMT) or EMT-Intermediate practical examination in a manner consistent with the standards of the National Registry for EMTs and the Authority.

(26) "Non-Emergency Care" means the performance of acts or procedures on a patient who is not expected to die, become permanently disabled or suffer permanent harm within the next 24-hours, including but not limited to observation, care and counsel of a patient and the administration of medications prescribed by a physician licensed under ORS Chapter 677, insofar as any of those acts are based upon knowledge and application of the principles of biological, physical and social science and are performed in accordance with scope of practice rules adopted by the Oregon Medical

Board in the course of providing prehospital care as defined by this rule.

(27) "Paramedic" means a person who is licensed by the Authority as a Paramedic.

(28) "Patient" means a person who is ill or injured or who has a disability and who is transported in an ambulance.

(29) "Person" means any individual, corporation, association, firm, partnership, joint stock company, group of individuals acting together for a common purpose, or organization of any kind and includes any receiver, trustee, assignee, or other similar representatives thereof.

(30) "Prehospital Care" means that care rendered by an EMS provider as an incident of the operation of an ambulance as defined by ORS Chapter 682 and that care rendered by an EMS provider as an incident of other public or private safety duties, and includes, but is not limited to "emergency care" as defined by ORS Chapter 682.

(31) "Preceptor" means a person approved by an accredited teaching institution and appointed by the EMS agency, who supervises and evaluates the performance of an EMS provider student during the clinical and field internship phases of an EMS provider course. A preceptor must be a physician, physician assistant, registered nurse, or EMS provider with at least two years field experience in good standing at or above the level for which the student is in training.

(32) "Protocols" has the same meaning as standing orders.

(33) "Reciprocity" means the manner in which a person may obtain Oregon EMS provider licensure when that person is licensed in another state and certified with the National Registry.

(34) "Scope of Practice" means the maximum level of emergency or non-emergency care that an EMS provider may provide that is set forth by the rules adopted by the Oregon Medical Board.

(35) "Skills Lab" means those hours of the curriculum that provides the student with the opportunity to develop the skills for the level of training obtained.

(36) "Standing Orders" means the written protocols that an EMS provider follows to treat patients when direct contact with a physician is not maintained.

(37) "Successful completion" means having attended 85 percent of the didactic and skills instruction hours (or makeup sessions) and 100 percent of the clinical and field internship hours, and completing all required clinical and internship skills and procedures and meeting or exceeding the academic standards for those skills and procedures.

(38) "Teaching Institution" means a two-year community college or four-year degree granting college or a licensed vocational school that is accredited by the Office of Career and Technical Education, or the Department of Community Colleges and Workforce Development/Oregon Department of Education.

(39) "Unprofessional Conduct" has the meaning given that term in ORS 682.025.

(40) "Volunteer" means a person who is not compensated for their time to staff an ambulance or rescue service, but who may receive reimbursement for personal expenses incurred.

333-265-0010
Application for Approval of EMT, AEMT, EMT-Intermediate, and Paramedic Courses

(1) The Authority is responsible for approving EMT, AEMT, and Paramedic courses.

(2) EMT, AEMT, and Paramedic courses must be offered by a teaching institution accredited by the Oregon Department of Education or the Oregon State Board of Higher Education and must meet the standards established by the Oregon Department of Education in OAR chapter 581, division 49.

(3) Notwithstanding section (2) of this rule, the Authority may allow a hospital to conduct an EMT course if there is no training available at a teaching institution in a rural part of the state. A hospital that wishes to conduct an EMT course in a rural area must send a request to the Authority in writing explaining why there is a need and why there is no training available in its area. The Authority will inform the hospital in writing whether it has permission to conduct the EMT course.

(4) EMT, AEMT, and Paramedic courses must meet the requirements prescribed by the Authority in OAR 333-265-0014.

(5) EMT, AEMT, and Paramedic courses must be taught by instructors that meet the requirements of OAR 333-265-0020.

(6) A teaching institution described in section (2) of this rule or a hospital approved by the Authority under section (3) of this rule must submit an application to the Authority on a form prescribed by the Authority that includes all the information necessary to determine whether the course meets the Authority's standards. The form must be received by the Authority at least 30 business days prior to the first day of class.

(7) The Authority will return an application that is incomplete to the applicant.

(8) The Authority will inform an applicant in writing whether the application has been denied or approved.

(9) No teaching institution shall conduct an EMT, AEMT, or Paramedic course until the Authority has approved the course.

(10) The Authority may deny or revoke the approval to conduct an EMT, AEMT, or Paramedic course in accordance with ORS 183.310 through 183.550 for failure to comply with OAR chapter 333, division 265.

333-265-0011
Applications for Approval of EMT-Intermediate Courses

(1) The Authority is responsible for approving EMT-Intermediate courses.

(2) EMT-Intermediate courses must be offered by an accredited teaching institution or an EMS agency.

(3) Notwithstanding section (2) of this rule, the Authority may allow a hospital to conduct an EMT-Intermediate course if there is no training available at a teaching institution or EMS agency in a rural part of the state. A hospital that wishes to conduct an EMT-Intermediate course in a rural area must send a request to the Authority in writing explaining why there is a need and why there is no training available in its area. The Authority will inform the hospital in writing whether it has permission to conduct the EMT-Intermediate course.

(4) EMT-Intermediate courses must meet the requirements prescribed by the Authority in OAR 333-265-0014.

(5) EMT-Intermediate courses must be taught by instructors that meet the requirements of OAR 333-265-0020.

(6) A teaching institution or EMS agency described in section (2) of this rule or a hospital approved by the Authority under section (3) of this rule must submit an application to the Authority on a form prescribed by the Authority that includes all the information necessary to determine whether the course meets the Authority's standards. The form must be received by the Authority at least 30 business days prior to the first day of class.

(7) The Authority will return an application that is incomplete to the applicant.

(8) The Authority will inform an applicant in writing whether the application has been denied or approved.

(9) No teaching institution, EMS agency, or approved hospital shall conduct an EMT-Intermediate course until the Authority has approved the course.

(10) The Authority may deny or revoke the approval to conduct an EMT-Intermediate course in accordance with ORS 183.310 through 183.550 for failure to comply with OAR chapter 333, division 265.

333-265-0012
Requirements for Conducting Emergency Medical Responder Courses

(1) An ambulance service or any other entity in Oregon may conduct EMR courses that meet the requirements of OAR 333-265-0014.

(2) An entity that wants to conduct an EMR course must submit an application to the Authority on a form prescribed by the Authority that includes all the information necessary to determine whether the course meets the Authority's standards and whether the course director meets the requirements in OAR 333-265-0018. The form must be received by the Authority at least 30 business days prior to the first day of class.

(3) The Authority shall return an application that is incomplete to the applicant.

(4) No entity shall conduct an EMR course until the Authority has approved the course.

(5) The Authority may deny or revoke the approval to conduct an EMR course in accordance with ORS 183.310 through 183.550 for failure to comply with OAR chapter 333, division 265.

333-265-0014
EMS Provider Course Requirements

(1) All EMS provider courses must have a medical director. The EMS medical director must meet the qualifications of a supervising physician as defined in OAR 847-035-0020.

(2) All EMS provider courses must have a course director as defined in OAR 333-265-0020.

(3) An Oregon teaching institution conducting EMT, advanced EMT, or Paramedic courses must have program faculty consisting of a designated program director, course medical director, course directors, and may have guest instructors. The number of persons carrying out the responsibilities of conducting an EMT, AEMT, or Paramedic course may vary from program to program. One person, if qualified, may serve in multiple roles.

(4) An Oregon teaching institution, EMS agency, or approved hospital conducting EMT- Intermediate courses must have program faculty consisting of a designated program director, course medical director, course directors, and may have guest instructors. The number of persons carrying out the responsibilities of conducting an EMT-Intermediate course may vary from program to program. One person, if qualified, may serve in multiple roles.

(5) An EMR course must include:

(a) A curriculum that meets or exceeds the National Emergency Medical Services Education Standards published by the National Highway Traffic Safety Administration, January 2009 (DOT HS 811 077B);

(b) Didactic and skills instruction; and

(c) A practical and cognitive examination.

(6) An EMT course must include:

(a) A curriculum that meets or exceeds the National Emergency Medical Services Education Standards published by the National Highway Traffic Safety Administration, January 2009 (DOT HS 811 077B);

(b) Didactic and skills instruction;

(c) Clinical education of at least eight hours in a hospital or acute care department or other appropriate clinical or acute care medical facility where the skills within an EMT scope of practice are performed under the supervision of a preceptor; and

(d) Prehospital experience of at least eight hours under the supervision of an EMT or above where the skills within an EMT scope of practice are performed.

(7) An advanced EMT course must include:

(a) A curriculum that meets or exceeds the National Emergency Medical Services Education Standards published by the National Highway Traffic Safety Administration, January 2009 (DOT HS 811 077B);

(b) Didactic and skills instruction; and

(c) A field internship that is described in OAR 333-265-0015.

(8) An EMT-Intermediate course must include:

(a) The EMT-Intermediate curriculum as prescribed by the Authority;; and

(b) Didactic and skills instruction.

(9) A Paramedic course must include:

(a) Paramedic curriculum that meets or exceeds the National Emergency Medical Services Education Standards published by the National Highway Traffic Safety Administration, January 2009 (DOT HS 811 077B);

(b) Didactic and skills instruction;

(c) Clinical experience in hospital clinical areas where the skills within a Paramedic scope of practice are performed under the supervision of a preceptor; and

(d) A field internship that is described in OAR 333-265-0016.

(10) All EMS provider courses must include instructions on Oregon statutes and rules governing the EMS system, medical-legal issues, roles and responsibilities of EMS providers, and EMS professional ethics.

(11) The Authority may deny or revoke course approval in accordance with the provisions of ORS 183.310 through 185.550 for failure to comply with the requirements of this rule.

(12) A person must have a current Oregon EMT license or higher at the time of enrollment in an advanced EMT or Paramedic course.

(13) A person must have a current Oregon advanced EMT license at the time of enrollment in an Oregon EMT-Intermediate course.

(14) A person must maintain a current Oregon EMT license or higher throughout the interval of the advanced EMT or Paramedic cognitive and practical exams.

(15) A person must maintain a current Oregon advanced EMT license throughout the interval of the EMT-Intermediate cognitive and practical exams.

333-265-0015
Advanced Emergency Medical Technician Field Internships

(1) A field internship is required as part of an advanced EMT course and shall include:

(a) Clinical experience performed under the supervision of a preceptor of at least eight hours and 20 patient contacts in a hospital emergency department or medical clinic where the skills within an AEMT scope of practice are performed under the supervision of a preceptor; and

(b) Prehospital experience of at least eight hours under the supervision of an AEMT or above where the skills within the scope of practice of an AEMT are performed.

(2) A field internship must provide a student the opportunity to demonstrate the integration of didactic, psychomotor skills, and clinical education necessary to perform the duties of an entry-level AEMT.

(3) The student must successfully demonstrate a skill in the classroom lab or hospital clinical setting before that skill is performed and evaluated in a field internship.

(4) During a field internship a student must participate in providing care. All EMS calls shall be under the direct visual supervision of a preceptor. In order for a call to be accepted, the preceptor must document and verify satisfactory student performance, includ-

ing application of specific assessment and treatment skills required of a licensed advanced EMT.

(5) For purposes of this section, "EMS call" means a prehospital emergency medical services response requiring patient care at the advanced life support level and "ambulance call" means an advanced life support prehospital emergency medical services response, which includes dispatch, scene response, patient care while riding in the patient compartment of an ambulance, and participating in specific assessment and treatment skills required of a licensed advanced EMT.

333-265-0016
Paramedic Field Internships

(1) A field internship is required as part of a Paramedic course.

(2) A field internship must provide a student the opportunity to demonstrate the integration of didactic, psychomotor skills, and clinical education necessary to perform the duties of an entry-level paramedic.

(3) The student must successfully demonstrate a skill in the classroom lab or hospital clinical setting before that skill is performed and evaluated in a field internship.

(4) During a field internship a student must participate in providing care in at least 40 EMS calls with no less than eight each in cardiac, respiratory, general medical, and trauma emergencies, and with at least 30 of the calls being advanced life support ambulance calls. All EMS calls shall be under the direct visual supervision of a preceptor. In order for a call to be accepted, the preceptor must document and verify satisfactory student performance, including application of specific assessment and treatment skills required of a licensed Paramedic.

(5) The intern must not be one of the minimum staff required for an ambulance as described in OAR chapter 333, division 250.

(6) For purposes of this section, "EMS call" means a pre-hospital emergency medical services response requiring patient care at the advanced life support level and "ambulance call" means an advanced life support pre-hospital emergency medical services response, which includes dispatch, scene response, patient care while riding in the patient compartment of an ambulance, and participating in specific assessment and treatment skills required of a licensed Paramedic.

333-265-0018
Course Director Qualifications for EMR Courses

(1) An ambulance service or entity that has contracted with the Authority to conduct an EMR course must have a qualified Course Director.

(2) An EMR Course Director must:

(a) Have appropriate training and experience to fulfill the role and have the credentials that demonstrate such training and experience;

(b) Be currently licensed in Oregon as an EMT or higher with three years of pre-hospital care experience and in good standing with the Authority, or an EMS medical director;

(c) Have a current healthcare provider CPR instructor card or certificate of course completion that meets or exceeds the 2010 American Heart Association ECC guidelines or equivalent standards approved by the Authority;

(d) Have successfully completed one of the following:

(A) The National Association of EMS Educator Course, developed by the U.S. Department of Transportation, 2002;

(B) The National Fire Protection Association (NFPA) Fire Instructor I or Fire Service Instructor I and II programs developed by the Department of Public Safety Standards and Training (DPSST);

(C) Have at least 40 hours of the Instructor Development Program offered by the DPSST; or

(D) A minimum of three college credits in adult educational theory and practice or vocational educational theory and practice from an accredited institution of higher learning.

(e) Have participated in a course director program offered by the Authority; and

(f) Agree to participate in the course director program updates offered by the Authority.

(3) An EMR Course Director:

(a) Is responsible for course planning and organizing, including scheduling lectures, coordinating, arranging, and conducting the written and practical course completion and licensure examination;

(b) Is the primary instructor, who conducts at least 50 percent of the didactic sessions, unless this requirement is waived by the Authority in advance;

(c) Must ensure, if guest instructors are used, that the guest instructor is qualified to teach the subject matter, meets requirements set forth in OAR 333-265-0020, and presents lessons that address all objectives identified in the course curriculum for the topic being presented. A guest instructor must:

(A) Be qualified and have the expertise in the specific course subject; and

(B) Follow the course curriculum and meet the course objectives for that specific subject.

(d) Must ensure that after completion of the course and successfully passing the written and practical examinations each student completes an application form prescribed by the Authority and that the completed application forms are collected and submitted to the Authority within 30 calendar days of the completion of the course.

(e) Must have written documentation showing whether a student has successfully completed the course as defined in OAR 333-265-0014.

333-265-0020
Approved EMT, AEMT, EMT-Intermediate, and Paramedic Course Director

(1) A course director for a specific course must:

(a) Be an EMS Medical Director; or

(b) Hold at least the level of Oregon licensure as the course being taught and be in good standing with the Authority, and have at least three years of experience at that licensure level or higher, and:

(A) Have a current healthcare provider CPR instructor card or certificate of course completion that meets or exceeds the 2010 American Heart Association ECC guidelines or equivalent standards approved by the Authority;

(B) Have successfully completed one of the following:

(i) The National Association of EMS Educator Course, developed by the U.S. Department of Transportation, 2002;

(ii) The National Fire Protection Association (NFPA) Fire Instructor I or Fire Service Instructor I and II programs developed by the Department of Public Safety Standards and Training (DPSST);

(iii) At least 40 hours of the Instructor Development Program offered by the DPSST; or

(iv) A minimum of three college credits in adult educational theory and practice or vocational educational theory and practice from an accredited institution of higher learning;

(C) Participated in the Course Director Program offered by the Authority; and

(D) Participated in the Course Director Program updates offered by the Authority.

(2) In addition to the Course Director requirements in section (1) of this rule, a Paramedic Course Director must:

(a) Be an EMS Medical Director and hold a current:

(A) American Board of Emergency Medicine Certificate; or

(B) Advance Cardiac Life Support (ACLS) Instructor certificate and Advance Trauma Life Support certificate or equivalent as approved by the Authority; or

(b) Be a licensed Paramedic in good standing with the Authority with at least three years of experience at the licensure level and:

(A) Possess at least an associate's degree from an accredited institution of higher learning;

(B) Hold an Advance Cardiac Life Support (ACLS) Instructor certificate from the American Heart Association or equivalent that has been approved by the Authority; and

(C) Hold a Basic Trauma Life Support (BTLS) Instructor certificate or equivalent that has been approved by the Authority, or a Pre-hospital Trauma Life Support (PHTLS) Instructor certificate or equivalent that has been approved by the Authority.

(3) A guest instructor must:

(a) Be qualified and have the expertise in the specific course subject; and

(b) Follow the course curriculum and meet the course objectives for that specific subject.

333-265-0022
Program Administrator and Faculty Responsibilities

(1) A Program Administrator is responsible for course planning, the organizing and administration of courses, periodic review of courses, program evaluation, and continued development and effectiveness of courses.

(2) A course EMS Medical Director shall:

(a) Provide medical direction for the didactic, clinical and field internship portions of an EMS Provider course; and

(b) Act as the ultimate medical authority regarding course content, procedures and protocols.

(3) A Course Director for a specific course:

(a) Is responsible for course planning and organizing, including scheduling lectures, coordinating and arranging clinical rotations, and field internships;

(b) Is the primary instructor, who conducts at least 50 percent of the didactic sessions, unless this requirement is waived by the Authority in advance;

(c) Must ensure, if guest instructors are used, that the guest instructor is qualified to teach the subject matter, meets requirement set forth in OAR 333-265-0020, and presents lessons that address all objectives identified in the course curriculum for the topic being presented;

(d) Must ensure that:

(A) On the first day of class each student completes a registration form prescribed by the Authority;

(B) Each student is informed that failure to complete a registration form will make them ineligible to take the licensure exam; and

(C) The completed registration forms are collected and submitted to the Authority within 21 calendar days of the first day of class.

(e) Must have written documentation showing whether a student has successfully completed the course as defined in OAR 333-265-0014.

333-265-0023
EMS Provider Examinations

(1) EMR Exam:

(a) In order to be licensed as an EMR, a candidate shall complete and pass both a cognitive and practical examination.

(b) The EMR cognitive and practical examination must be administered by an entity approved by the Authority to conduct EMR courses and shall use a cognitive and practical exam approved by the Authority.

(2) EMT Exam:

(a) In order to be licensed as an EMT, a candidate shall complete and pass both the cognitive and practical examination designated by the National Registry of Emergency Medical Technicians (NREMT.)

(b) The Authority has adopted the NREMT exam standard: Emergency Medical Technician, Psychomotor Examination User Guide; November 1, 2011, incorporated by reference.

(c) An EMT examination for licensure will be administered by a licensing officer and hosted by a teaching institution that offers EMT courses.

(d) An EMT practical examination must be attended by a licensing officer approved by the Authority who:

(A) Is licensed in Oregon at least at the level of examination they are administering with a minimum of two years field experience at that level or above and is in good standing with the Authority; and

(B) Has completed any training offered by the Authority explaining the role and responsibilities of a licensing officer.

(3) AEMT Exam:

(a) In order to be licensed as an AEMT, a candidate shall complete and pass both the cognitive and practical examination designated by the NREMT.

(b) The Authority has adopted the NREMT exam standard: Advanced Level Examination Coordinator Manual; August 1, 2013, incorporated by reference.

(c) An AEMT practical examination is an NREMT examination offered at various times during the year by the Authority. An AEMT candidate may also take the appropriate practical examination in any state.

(4) EMT-Intermediate Exam: In order to be licensed as an EMT-Intermediate, a candidate shall complete and pass a practical examination in accordance with OAR 333-265-0024.

(5) Paramedic Exam:

(a) In order to be licensed as a Paramedic, a candidate shall complete and pass both the cognitive and practical examination designated by the NREMT.

(b) The Authority has adopted the NREMT exam standard: Advanced Level Examination Coordinator Manual; August 1, 2013, incorporated by reference.

(c) A Paramedic practical examination is an NREMT examination offered at various times during the year by the Authority. A Paramedic candidate may also take the appropriate practical examination in any state.

(6) The Authority shall establish the passing scores for EMR and EMT-Intermediate exams. The NREMT shall establish the passing scores for EMT, AEMT and Paramedic exams.

(7) A candidate seeking accommodation under the American with Disabilities Act shall notify:

(a) The NREMT for the EMT, AEMT or Paramedic exam; or

(b) The Authority for the EMR or EMT-Intermediate exam.

(c) The NREMT or the Authority shall consider and act on the request in accordance with its policies and relevant laws.

333-265-0024
EMT-Intermediate Provider Examination

(1) The EMT-Intermediate examinations for licensure will be administered by a licensing officer and hosted by a teaching institution, EMS agency, or approved hospital that offers EMT-Intermediate courses.

(2) An EMT-Intermediate candidate who fails:

(a) Three or fewer skill stations of the EMT-Intermediate practical examination may retest those skill stations failed on the same day with no additional charge by the Authority.

(b) One or more skill stations a second time must submit a re-examination fee and be scheduled through the Authority to retest any skill station failed.

(c) More than three skill stations of the EMT-Intermediate practical examination must schedule a retest for a separate day, and submit a re-examination fee to the Authority.

(3) If a candidate fails the practical examination three times, the candidate must submit official documentation of remedial education before becoming eligible to re-enter the licensure examination process. Following successful completion of remedial education, a candidate must re-take and pass the practical examination within three additional attempts.

(4) A candidate must pass the practical examination within 24 months after the completion of the required courses.

(5) A candidate who fails the practical examination six times or does not complete the examination process within 24 months of the completion date of the initial required courses, must successfully complete the entire EMT-Intermediate course and reapply for licensure.

(6) No accommodation shall be provided for a practical licensure examination.

(7) An EMT-Intermediate practical examination must be attended by an Authority-approved licensing officer who:

(a) Is licensed in Oregon at least at an EMT-Intermediate level with at least two years field experience at that level or above and is in good standing with the Authority; and

(b) Has completed training offered by the Authority explaining the role and responsibilities of a licensing officer.

333-265-0025
Application Process to Obtain an EMS Provider License

(1) For any person to act as an EMS provider a license must be obtained from the Authority.

(2) An applicant for EMR must:

(a) Be at least 16 years of age;

(b) Submit proof of successfully completing an approved course, including completion of all clinical and internship requirements, if applicable;

(c) Submit proof of passing the required cognitive and practical examinations;

(d) Submit a completed application on a form prescribed by the Authority along with the applicable fee;

(e) Consent to a criminal background check through the Law Enforcement Data System (LEDS), including a nationwide criminal record check by fingerprint identification under the authority of ORS 181.534 and 181.537 if required:

(A) The Authority may use information obtained through FBI criminal history records to determine suitability for licensure.

(B) If the Authority determines the information contained in the criminal history record may result in denial of the application or imposed sanctions on the license the applicant will be afforded reasonable time to complete, challenge, or correct the accuracy of the record before a final disposition or sanction is imposed.

(C) Procedures for obtaining a change, correction, or updating of an FBI identification record are set forth in Title 28, C.F.R., 16.34. Procedures for obtaining a change, correction, or updating of an Oregon criminal history record are set forth in OAR 257-010-0035.

(f) Provide authorization for the release of information, as necessary, from any persons or entities, including but not limited to educational institutions, employers, hospitals, treatment facilities, institutions, organization, governmental or law enforcement agencies.

(3) An individual who wishes to become licensed as an EMT, advanced EMT, EMT-Intermediate, or Paramedic shall:

(a) Be at least 18 years of age;

(b) Submit a completed application on a form prescribed by the Authority along with the applicable fee;

(c) Submit proof of successfully completing an approved course, including all clinical and internship requirements if applicable;

(d) Submit proof of passing the required cognitive and practical examinations;

(e) For an EMT, advanced EMT or EMT-Intermediate applicant, submit proof that the applicant received a high school diploma or equivalent or a degree from an accredited institution of higher learning;

(f) For a Paramedic applicant submit proof that the applicant has received an associate's degree or higher from an accredited institution of higher learning;

(g) Consent to a criminal background check through the Law Enforcement Data System (LEDS), including a nationwide criminal record check by fingerprint identification under the authority of ORS 181.534 and 181.537 if required:

(A) The Authority may use information obtained through FBI criminal history records to determine suitability for licensure.

(B) If the Authority determines the information contained in the criminal history record may result in denial of the application or imposed sanctions on the license the applicant will be afforded reasonable time to complete, challenge, or correct the accuracy of the record before a final disposition or sanction is imposed.

(C) Procedures for obtaining a change, correction, or updating of an FBI identification record are set forth in Title 28, C.F.R., 16.34. Procedures for obtaining a change, correction, or updating of an Oregon criminal history record are set forth in OAR 257-010-0035.

(h) Provide an authorization for the release of information, as necessary, from any persons or entities, including but not limited to educational institutions, employers, hospitals, treatment facilities, institutions, organizations, governmental or law enforcement agencies in order for the Authority to complete the review of the application; and

(4) EMT and EMT-Intermediate applications for licensure must be received by the Authority three weeks prior to the date of the licensing practical examination.

(5) Advanced EMT and Paramedic applications for licensure must be received by the Authority four weeks prior to the date of the practical examinations.

(6) Any fee for a criminal background check through LEDS or a nationwide criminal background check shall be the responsibility of the applicant.

(7) An applicant for an initial license as an EMS provider, who completed training in a program outside Oregon and has never been licensed in another state, must:

(a) Meet all requirements for that level as established in OAR 333-265-0000 through 333-265-0023;

(b) Demonstrate proof of current National Registry certification; and

(c) Make application within 24 months from the date that their training program was completed, unless an applicant has been on active duty in the military within the last four years and in that case, the application may be submitted more than 24 months from the date the training program was completed.

(8) An initial license must not exceed 30 months.

(9) If an applicant has been on active duty in the military within the past four years and the applicant can demonstrate proof of current National Registry certification for the level of license desired, current licensure in another state is not mandatory.

(10) The Authority may return any application that is incomplete or is not accompanied by the appropriate fee.

Fees for Licensure and License Renewal of an EMS Provider

(1) Beginning on July 1, 2011 through June 30, 2013 the following fees apply:

(a) Initial application for EMR — $40;

(b) The initial application and same-day practical examination fees for EMTs:

(A) EMT — $100;

(B) Advanced EMT — $110

(C) EMT-Intermediate — $110; and

(D) Paramedic — $275.

(c) Cognitive re-examination fees for EMT-Intermediate — $60.

(d) Practical re-examination fees:

(A) EMT — $50;

(B) Advanced EMT — $75

(C) EMT-Intermediate — $75; and

(D) Paramedic — $95.

(e) Reciprocity licensure fees:

(A) EMR — $40;

(B) EMT — $125;

(C) Advanced EMT — $150

(D) EMT-Intermediate — $150; and

(E) Paramedic — $300.

(f) Provisional licensure fee is an additional $50.

(g) License renewal fees:

(A) EMR — $20;

(B) EMT — $50;

(C) Advanced EMT — $80

(D) EMT-Intermediate — $80; and

(E) Paramedic — $140.

(2) Beginning on July 1, 2013 the following fees apply:

(a) Initial application for EMR — $45;

(b) The initial application and same-day practical examination fees for EMTs:

(A) EMT — $110;

(B) Advanced EMT — $125

(C) EMT-Intermediate — $125; and

(D) Paramedic — $290.

(c) Cognitive re-examination fees for EMT-Intermediate — $60.

(d) Practical re-examination fees:

(A) EMT — $55;

(B) Advanced EMT — $85

(C) EMT-Intermediate — $85; and

(D) Paramedic — $100.

(e) Reciprocity licensure fees:

(A) EMR — $50;

(B) EMT — $140;

(C) Advanced EMT — $165

(D) EMT-Intermediate — $165; and

(E) Paramedic — $300.

(f) Provisional licensure fee is an additional $50.

(g) License renewal fees:

(A) Licensed EMR — $23;

(B) EMT — $55;

(C) Advanced EMT — $85

(D) EMT-Intermediate — $85; and

(E) Paramedic — $150.

(3) As authorized by ORS 682.216, a license renewal application submitted or postmarked after May 1 of the license renewal year must include a $40 late fee in addition to the license renewal fee.

(4) If an EMS Provider has been on active military duty for more than six months of a license renewal period which prevented them from accessing continuing education, the Authority may approve an extension of the current license to permit obtaining the required educational hours.

(5) An ambulance service or rescue service which utilizes volunteers to provide a majority of its services may request that the Authority waive the EMS Provider license renewal fee for its volunteers by applying for a waiver on forms prescribed by the Authority that includes:

(a) A statement certifying that the ambulance or rescue service is unable to maintain an adequate number of volunteer EMS Providers due to the required EMS Provider license renewal fees; and

(b) A copy of a signed agreement between the volunteer service and the volunteer EMS Provider attached to the EMS Provider's application for license renewal specifying that the EMS Provider:

(A) Is not employed as an EMS Provider elsewhere;

(B) Will be affiliated with the volunteer service for the entire upcoming licensure period;

(C) Will be scheduled monthly to staff the ambulance or rescue service; and

(D) Will immediately pay the Authority the required current EMS Provider license renewal fee if the EMS Provider is not scheduled monthly or is no longer affiliated with a volunteer ambulance or rescue service and wants to remain licensed as an EMS Provider.

(6) An Oregon-licensed EMS Provider wishing to obtain a duplicate EMS Provider license must submit a written request to the Authority in the form required by the Authority and pay a fee in the amount of $25.

(7) All fees established in this section are nonrefundable except that the Authority may waive a subsequent examination fee for a person who fails to appear for an examination due to circumstances that are beyond the control of the candidate.

(8) The fees established in sections (1) and (2) of this rule apply to any application submitted on or after the effective date of these rules.

Licensure as an EMS Provider

(1) The Authority will review an application for licensure as an EMS Provider and will conduct a criminal background check.

(2) If there are no issues that arise during the review of the application and the applicant meets all the requirements of ORS Chapter 682 and these rules, the Authority will grant the applicant a license.

(3) If the applicant does not meet the standards for licensure or there are criminal history or personal history issues that call into question the ability of the applicant to perform the duties of a licensed EMS Provider in accordance with ORS Chapter 682 or these rules, the Authority may deny the applicant on the basis of the information provided in the application, or conduct an additional investigation in accordance with OAR 333-265-0085.

(4) Following an investigation the Authority may:

(a) Deny the application;

(b) Grant the application but place the applicant on probation;

(c) Grant the application but place practice restrictions on the applicant; or

(d) Grant the application if the criminal or personal history issues were resolved through the investigation to the Authority's satisfaction.

(5) Final actions taken by the Authority in denying an applicant, placing an applicant on probation, or by placing restrictions on the applicant's practice shall be done in accordance with ORS Chapter 183.

(6) Nothing in this rule precludes the Authority from taking an action authorized in ORS Chapter 682.

(7) The licenses of EMRs expire on June 30 of even-numbered years.

(8) The licenses of EMTs, Advanced EMTs, EMT-Intermediates and Paramedics expire on June 30 of odd-numbered years.

333-265-0050
EMS Provider Licensure by Reciprocity

(1) A person registered with the National Registry of EMTs as an EMR, first responder, EMT, EMT-Basic, advanced EMT, EMT-Intermediate I-99, EMT-Intermediate I-85, Paramedic, or EMT-Paramedic may apply to the Authority for licensure by reciprocity until January 1, 2015 at which time only National Registry EMR, EMT, advanced EMT, and Paramedic will be accepted for reciprocity.

(a) A National Registry EMT-Intermediate I-99 may apply for an Oregon EMT-Intermediate licensure by reciprocity until January 1, 2015 at which time National Registry EMT-Intermediate I-99 will no longer be accepted for reciprocity.

(b) A National Registry EMT-Intermediate I-85 may apply for an EMT licensure by reciprocity until January 1, 2015 at which time National Registry EMT-Intermediate I-85 will no longer be accepted for reciprocity.

(2) A person applying for Oregon EMS provider licensure by reciprocity shall:

(a) Submit a completed application on a form prescribed by the Authority along with the applicable nonrefundable fee;

(b) Submit documentation of the EMS provider training which meets or exceeds the requirements for Oregon EMS provider licensure at the level of licensure for which the person is applying;

(c) If applying for Paramedic licensure by reciprocity, submit proof of having received an associate's degree or higher from an accredited institution of higher learning or submit proof of having worked for at least three years out of the last five years as a Paramedic in either another state or in the United States military at the National Registry Paramedic level.

(d) Be in good standing with the applicant's current licensing agency and with the National Registry of EMTs; and

(e) Consent to a criminal background check in accordance with OAR 333-265-0025(3).

(3) The Authority shall review an application for licensure by reciprocity and shall conduct a criminal background check.

(4) If there are no issues that arise during the review of the application and the applicant meets all the applicable requirements of ORS Chapter 682 and these rules, the Authority shall grant the applicant a license by reciprocity.

(5) If the applicant does not meet the standards for licensure, or there are criminal history or personal history issues that call into question the ability of the applicant to perform the duties of a licensed EMS provider, in accordance with ORS Chapter 682 or these rules, the Authority may deny the application on the basis of the information provided, or conduct an additional investigation in accordance with OAR 333-265-0085. Following such an investigation the Authority may take any action as specified in OAR 333-265-0040(4).

(6) The Authority shall be the sole agency authorized to determine equivalency of EMS provider course work presented from an out-of-state accredited institution of higher learning.

(7) The Authority shall be the sole agency authorized to determine equivalency of work experience in lieu of the associate degree requirement for Paramedics.

(8) The Authority shall return any application that is incomplete, or cannot be verified.

333-265-0056
Temporary Licensure for Wildland Fire Response

(1) Notwithstanding OAR 333-265-0050, an individual licensed and in good standing as an emergency medical services provider in another state and currently certified by the National Registry of EMTs (NREMT) may apply for a temporary license at the same level the EMS provider is currently certified by the NREMT for the purpose of providing emergency or non-emergency care to other individuals involved in responding to a wildland fire in Oregon.

(2) To apply for temporary licensure an individual must complete a temporary license application and provide any additional information required in the application.

(3) The Authority may conduct a criminal background check on an individual applying for temporary licensure.

(4) If the Authority issues a temporary license that license is only valid:

(a) For 90 calendar days from the date issued;

(b) While the individual is deployed firefighting or otherwise responding to a wildland fire; and

(c) For the purpose of treating individuals engaged in wildland fire response in Oregon.

(5) An individual licensed under this rule must:

(a) Function within the Oregon scopes of practice for EMS providers as described in OAR 847-035-0030;

(b) Practice with written standing orders issued by a supervising physician as defined in OAR 847-035-0001; and

(c) Comply with ORS chapter 682 and all rules adopted under ORS chapter 682.

333-265-0060
Paramedic Provisional Licensure

(1) As authorized by ORS 682.216, the Authority may issue a provisional Paramedic license to an out-of-state licensed Paramedic who meets the requirements in OAR 333-265-0050, except for the educational requirements in 333-265-0050(3)(a) and is in the process of obtaining an associate's degree or higher from an accredited institution for higher learning.

(2) A provisional license shall only be provided in the event that the associate's degree or higher is obtainable within two years.

(3) An applicant shall comply with the application requirements in OAR 333-265-0050 and shall submit:

(a) A letter of recommendation from the applicant's most recent medical director;

(b) A letter from an Oregon EMS agency specifying that the person shall be immediately employed or has a conditional offer of employment, whether in a paid or volunteer capacity; and

(c) A letter from the applicant's prospective EMS medical director stating that the EMS medical director will serve as his or her EMS medical director while being provisionally licensed.

(4) The Authority may return any application that is incomplete, cannot be verified, or is not accompanied by the appropriate fee.

(5) A Paramedic with a provisional license issued under these rules shall enter into an agreement with the Authority and shall submit quarterly reports to the Authority describing the license holder's progress in obtaining an associate's degree or higher from an accredited institution for higher learning.

(6) A Paramedic provisional license shall be revoked if the person:

(a) Ceases active involvement in emergency medical services;

(b) Fails to meet the conditions set forth in the agreement;

(c) Fails to cooperate or actively participate in a request from the Authority in order to obtain more information or required materials;

(d) Has his or her EMS provider scope of practice revoked or restricted by his or her EMS medical director; or

(e) Does not submit written documentation of the successful completion of any of the educational requirements set out in this rule

333-265-0070
Licensure as an EMS Provider of Any Person in Another State

(1) Any person who provides pre-hospital emergency or non-emergency care in Oregon must be licensed as an Oregon EMS Provider and function under an Authority-approved EMS Medical Director.

(2) Oregon EMS Provider licensure is not required when:

(a) Specifically exempted by ORS 682.035;

(b) An out-of-state licensed EMS Provider is transporting a patient through the state;

(c) An out-of-state licensed EMS Provider is caring for and transporting a patient from an Oregon medical facility to an out-of-state medical facility or other out-of-state location;

(d) An out-of-state licensed EMS Provider is caring for and transporting a patient originating from outside of Oregon to a medical facility or other location in Oregon; or

(e) A disaster or public health emergency has been declared under ORS Chapter 401 or 433 and licensing provisions have been waived by the Governor.

333-265-0080
Reportable Events; Investigations and Discipline of License Holders

(1) In accordance with ORS 676.150 and using a form prescribed by the Authority, EMS Providers must notify the Authority of the actions or events listed in section (3) of this rule. Failure to comply with the reporting requirements of this rule may result in disciplinary action against the EMS Provider.

(2) An EMS Provider who has reasonable cause to believe another EMS Provider has engaged in prohibited, dishonorable or unprofessional conduct as defined in ORS 676.150, 682.025 and 682.220 shall report that conduct to the Authority without undue delay, within 10 days, after the EMS Provider learns of the conduct unless state or federal laws relating to confidentiality or the protection of health information prohibit such a disclosure.

(3) Within 10 calendar days an EMS Provider shall report to the Authority the following:

(a) Conviction of a misdemeanor or felony;

(b) A felony arrest;

(c) A disciplinary restriction placed on a scope of practice of the license holder by the EMS Medical Director;

(d) A legal action being filed against the license holder alleging medical malpractice or misconduct;

(e) A physical disability that affects the ability of the license holder to meet the Functional Job Analysis, Appendix A of the EMT, National Standard Curriculum, incorporated by reference, and the license holder continues to respond to calls and is providing patient care; or

(f) A change in mental health which may affect a license holder's ability to perform as a licensed EMS Provider.

(4) State or federal laws relating to confidentiality or the protection of health information that might prohibit an EMS Provider from reporting prohibited or unprofessional conduct include but are not limited to:

(a) Public Law 104-191, 42 CFR Parts 160, 162, and 164 (The Health Insurance Portability and Accountability Act, HIPAA);

(b) 42 CFR Part 2 (federal law protecting drug and alcohol treatment information);

(c) ORS 192.518 through 192.529 (state law protecting health information); and

(d) ORS 179.505 (written accounts by health care providers).

333-265-0083
Conduct or Practice Contrary to Recognized Standards of Ethics

The following list includes, but is not limited to, conduct or practice by an EMS Provider that the Authority considers to be contrary to the recognized standards of ethics of the medical profession:

(1) Knowing or willful violation of patient privacy or confidentiality by releasing information to persons not directly involved in the care or treatment of the patient;

(2) Illegal drug use on or off duty;

(3) Alcohol use within eight hours of going on duty or while on duty or in an on-call status;

(4) Violation of direct verbal orders from a physician who is responsible for the care of a patient;

(5) Violation of orders given by an online medical resource physician, whether delivered by radio or telephone;

(6) Violation of standing orders without cause and documentation;

(7) Use of invasive medical procedures in violation of generally accepted standards of the medical community;

(8) Any action that constitutes a violation of any statute, municipal code, or administrative rule that endangers the public, other public safety officials, other EMS Provider, patients, or the general public (including improper operation of an emergency medical vehicle);

(9) Instructing, causing or contributing to another individual violating a statute or administrative rule, including EMS Provider acting in a supervisory capacity;

(10) Participation in the issuance of false continuing education documents or collaboration therein, including issuing continuing education verification to one who did not legitimately attend an educational event;

(11) Signing-in to an educational event for a person not actually present;

(12) Knowingly assisting or permitting another EMS Provider to exceed his or her lawful scope of practice;

(13) Unlawful use of emergency vehicle lights and sirens;

(14) Providing false or misleading information to the Authority, to the State EMS Committee, to the Subcommittee on EMT Licensure and Discipline, to an EMS teaching institution or clinical/field internship agency;

(15) Responding to scenes in which the EMS Provider is not properly dispatched ("call-jumping"), whether in a private auto, ambulance, or other vehicle, in contravention of local protocols, procedures, or ordinances, or interfering with the safe and effective operation of an EMS system;

(16) Cheating on any examination used to measure EMS related knowledge or skills;

(17) Assisting another person in obtaining an unfair advantage on an EMS Provider examination;

(18) Defrauding the Authority;

(19) Knowingly providing emergency medical care aboard an unlicensed ambulance;

(20) Violation of the terms of a written agreement with the Authority or an order issued by the Authority;

(21) Sexual misconduct that includes but is not limited to:

(a) Sexual harassment; and

(b) Engaging or attempting to engage in a sexual relationship, whether or not the sexual relationship is consensual, with a patient, client, or key party;

(c) Using the EMT-patient, EMT-client, or EMT-key party relationship to exploit the patient, client or key party by gaining sexual favors from the patient, client or key party.

(22) Arriving for duty impaired or in a condition whereby the EMS Provider is likely to become impaired through fatigue, illness, or any other cause, as to make it unsafe for the employee to begin to operate an ambulance or provide patient care;

(23) Failure to cooperate with the Authority in an investigation, including failure to comply with a request for records, or a psychological, physical, psychiatric, alcohol or chemical dependency assessment; and

(24) Any violation of these rules or any law, administrative rule, or regulation governing ambulances, EMS Providers, or emergency medical service systems.

333-265-0085
Investigations

(1) The Authority may conduct an investigation of an EMS provider if:

(a) The Authority receives a complaint concerning an EMS provider;

(b) Personal or criminal history questions arise during a review of an application that raise questions about the EMS provider's ability to safely perform the duties of an EMS provider;

(c) A reportable action is received pursuant to OAR 333-265-0080; or

(d) The Authority receives information in any manner that indicates an EMS provider has violated ORS Chapter 682 or these rules, may be medically incompetent, guilty of prohibited, unprofessional or dishonorable conduct or mentally or physically unable to safely function as an EMS provider.

(2) The Authority may investigate the off-duty conduct of an EMS provider to the extent that such conduct may reasonably raise questions about the ability of the EMS provider to perform the duties of an EMS provider in accordance with the standards established by this division.

(3) Upon receipt of a complaint about an EMS provider or applicant, the Authority may conduct an investigation as described under ORS 676.165 and 682.220. Investigations shall be conducted in accordance with ORS 676.175.

(4) The fact that an investigation is conducted by the Authority does not imply that disciplinary action will be taken.

(5) During an investigation the Authority may do any of the following:

(a) Request additional information from the EMS provider;

(b) Conduct a phone or in-person interview; or

(c) Request or order that the EMS provider undergo a psychological, physical, psychiatric, alcohol or chemical dependency assessment.

Stat. Auth.: ORS 676.165, 676.175
Stats. Implemented: ORS 682.017, 682.220, 682.224
Hist.: PH 13-2010, f. 6-30-10, cert. ef. 7-1-10; PH 15-2011, f. 12-28-11, cert. ef. 1-1-12; PH 1-2013, f. & cert. ef. 1-25-13

333-265-0087
Discipline

(1) Upon completion of an investigation the Authority may do any of the following:

(a) Close the investigation and take no action;

(b) Issue a letter of reprimand or instruction;

(c) Place the EMS Provider on probation;

(d) Place a practice restriction on the EMS Provider;

(e) Suspend the EMS Provider;

(f) Revoke the license of the EMS Provider;

(g) Enter into a stipulated agreement with the EMS Provider to impose discipline; or

(h) Take such other disciplinary action as the Authority, in its discretion, finds proper, including assessment of a civil penalty not to exceed $5,000.

(2) Any disciplinary action taken by the Authority will be done in accordance with ORS Chapter 183.

(3) The Authority may assess the costs of a disciplinary proceeding against an EMS Provider. Costs may include, but are not limited to:

(a) Costs incurred by the Authority in conducting the investigation;

(b) Costs of any evaluation or assessment requested by the Authority; and

(c) Attorney fees.

(4) Voluntary Surrender:

(a) An EMS Provider may voluntarily surrender his or her license if the EMS Provider submits a written request to the Authority specifying the reason for the surrender and the Authority agrees to accept the voluntary surrender.

(b) The Authority may accept a voluntary surrender of the EMS Provider on the condition that the EMS Provider does not reapply for licensure, or agrees not to reapply for a specified period of time.

(5) If an EMS Provider who voluntarily surrendered his or her EMS Provider license applies for reinstatement, the Authority may deny that person's application if the Authority finds that the person has committed an act that would have resulted in discipline being imposed while they were previously licensed.

(6) If an EMS Provider's license is revoked he or she may not reapply for licensure for at least two years from the date of the final order revoking the license.

333-265-0090
Reverting to a Lower Level of EMT Licensure

(1) An EMT, Advanced EMT, EMT-Intermediate, or Paramedic may revert to a lower level of licensure at any time during a license period if the EMT, Advanced EMT, EMT-Intermediate, or Paramedic:

(a) Submits a written request to the Authority specifying the reason for the change in the licensure level;

(b) Submits an application for license renewal for the lower level of licensure sought with the appropriate fee;

(c) Surrenders his or her current EMT, Advanced EMT, EMT-Intermediate, or Paramedic license to the Authority;

(d) Is in good standing with the Authority;

(e) Adequately documents appropriate continuing education hours and courses for the licensure level the individual would revert to; and

(f) Receives written approval from the Authority for a change in licensure level.

(2) If an EMT, Advanced EMT, EMT-Intermediate, or Paramedic requests reinstatement of the higher level of licensure within one year of reverting to a lower level of licensure the EMT, Advanced EMT, EMT-Intermediate, or Paramedic must complete the requirements specified in OAR 333-265-0100(3) and 333-265-0105.

(3) If an EMT, Advanced EMT, EMT-Intermediate, or Paramedic requests reinstatement of the higher level of licensure after one year, but less than two years the EMT, Advanced EMT, EMT-Intermediate, or Paramedic must complete the requirements specified in OAR 333-265-0105.

333-265-0100
Expiration and Renewal of EMS Provider License

(1) The licenses of EMRs expire on June 30 of even-numbered years.

(2) The licenses of EMTs, Advanced EMTs, EMT-Intermediates and Paramedics expire on June 30 of odd-numbered years.

(3) An applicant for license renewal must:

(a) Complete and sign an application form prescribed by the Authority certifying that the information in the application is correct and truthful;

(b) Meet the requirements of ORS Chapter 682 and these rules;

(c) Consent to a criminal background check in accordance with OAR 333-265-0025(3);

(d) Provide an authorization for the release of information to the Authority, as necessary, from any persons or entities, including but not limited to employers, educational institutions, hospitals, treatment facilities, institutions, organizations, governmental or law enforcement agencies in order for the Authority to make a complete review of the application.

(e) Complete the continuing education requirements in OAR 333-265-0110; and

(f) Submit a fee set out in OAR 333-265-0030.

333-265-0105
Reinstatement of an EMS Provider License

(1) To reinstate an expired Oregon EMR, EMT, advanced EMT, EMT-Intermediate, or Paramedic license that has been expired for less than one year, an applicant must:

(a) Submit a completed application for license renewal;

(b) Submit the appropriate license renewal fee plus a late fee; and

(c) Provide evidence of completion of continuing education requirements as specified in Appendices 1 through 3, incorporated by reference, and courses completed from the license holder's last successful application through the date of the present application for license renewal, as specified in this rule:

(A) EMR before July 1, 2012 or on or after July 1, 2014 refer to Appendix 1;

(B) EMR on or after July 1, 2012 but before July 1, 2014 refer to Appendix 2;

(C) EMT, AEMT, EMT-Intermediate, and Paramedic before July 1, 2013 or on or after July 1, 2015 refer to Appendix 1;

(D) EMT, AEMT, EMT-Intermediate, and Paramedic on or after July 1, 2013 but before July 1, 2015 refer to Appendix 3;

(2) Reinstatement of an EMR license that has been expired for more than one year will require retaking and passing the course and examinations.

(3) Reinstatement of an EMT-Intermediate license that has been expired for more than one year will require retaking and passing the course and examinations.

(4) To reinstate an Oregon EMT or EMT-Paramedic license that has been expired for more than one year, but less than two years, a license holder must submit a completed application for licensure with the appropriate fee and successfully complete an Authority-approved reinstatement program described in these rules.

(5) Reinstatement program for an EMT:

(a) Obtain an American Heart Association "Health Care Provider," or American Red Cross "Basic Life Support for the Professional Rescuer," or other Authority-approved equivalent CPR course completion document;

(b) Complete the EMT Authority-approved Refresher Training Program;

(c) Pass the EMT cognitive and practical examinations within three attempts, including a same-day re-examination; and

(d) Complete the above listed program requirements within 730 calendar days from expiration date.

(6) Reinstatement program for an advanced EMT:

(a) Obtain an American Heart Association "Health Care Provider," or American Red Cross "Basic Life Support for the Professional Rescuer," or other Authority-approved equivalent CPR course completion document;

(b) Complete a Basic Trauma Life Support (BTLS) course, or Pre-Hospital Trauma Life Support (PHTLS) course, provider or instructor course; and

(c) Complete the above listed program requirements within 730 calendar days from expiration date.

(7) Reinstatement program for a Paramedic:

(a) Complete an Advanced Cardiac Life Support (ACLS) course, provider or instructor course;

(b) Complete a Basic Trauma Life Support (BTLS) course, or Pre-Hospital Trauma Life Support (PHTLS) course, provider or instructor course;

(c) Complete an Advanced Pediatric Life Support (APLS), Pediatric Advanced Life Support (PALS), Pediatric Education for Pre-hospital Professionals (PEPP), or Neonatal Advance Life Support (NALS) course, provider or instructor course;

(d) Complete the U.S. Department of Transportation, National Highway Traffic Safety Administration 2001 Paramedic: National Standard Curriculum Refresher Training Program, incorporated by reference;

(e) Pass the Paramedic cognitive and practical examinations within three attempts, including the same-day re-examination;

(f) Complete the above listed program requirements within two years of applying for reinstatement; and

(g) Document completion of a DOT Paramedic Training Program taken after January 1, 1977.

(h) If the requirements described in OAR 333-265-0105(6) cannot be met prior to 730 calendar days from expiration date an applicant must follow the National Registry's re-entry requirements to obtain a new National Registry certification before applying for a new license as outlined in OAR 333-265-0025.

333-265-0110
Licensed EMS Provider Continuing Education Requirements for License Renewal

(1) An EMR is required to:

(a) Complete 12 hours of continuing education as specified in Appendix 1, incorporated by reference;

(b) On or after July 1, 2012 but before July 1, 2014 an EMR must complete 12 hours of continuing education as specified in Appendix 2, incorporated by reference during which period a current National Registry of Emergency Medical Technicians certification will not be accepted in lieu of requirements listed in Appendix 2

(c) On or after July 1, 2014 an EMR must complete 12 hours of continuing education as specified in Appendix 1, incorporated by reference; or

(d) Complete all requirements of the National Registry of Emergency Medical Technicians for EMR re-registration.

(2) An EMT is required to:

(a) Complete 24 hours of continuing education as specified in Appendix 1, incorporated by reference;

(b) On or after July 1, 2013 but before July 1, 2015 an EMT must complete 24 hours of continuing education as specified in Appendix 3, incorporated by reference during which period a current National Registry of Emergency Medical Technicians certification will not be accepted in lieu of requirements listed in Appendix 3;

(c) On or after July 1, 2015 an EMT must complete 24 hours of continuing education as specified in Appendix 1, incorporated by reference; or

(d) Complete all requirements of the National Registry of EMT or Emergency Medical Technician re-registration.

(3) An advanced EMT is required to:

(a) Complete 36 hours of continuing education as specified in Appendix 1, incorporated by reference;

(b) On or after July 1, 2013 but before July 1, 2015 an advanced EMT must complete 36 hours of continuing education as specified in Appendix 3, incorporated by reference during which period a current National Registry of Emergency Medical Technicians certification will not be accepted in lieu of requirements listed in Appendix 3;

(c) On or after July 1, 2015 an advanced EMT must complete 36 hours of continuing education as specified in Appendix 1, incorporated by reference; or

(d) Complete all requirements of the National Registry of EMTs re-registration.

(4) An EMT-Intermediate is required to:

(a) Complete a course with published standards and guidelines for cardiopulmonary resuscitation and emergency cardiac care in which the EMT has demonstrated knowledge and skills in the performance of subcutaneous (SQ) injections, automated external defibrillator (AED) operation, one and two person rescuer cardiopulmonary resuscitation (adult, child, and infant) and relief of foreign body airway obstruction; and

(b) Obtain at least 36 hours of continuing education as specified in Appendix 1, incorporated by reference; or

(c) On or after July 1, 2013 but before July 1, 2015 an EMT-Intermediate must complete 36 hours of continuing education as specified in Appendix 3, incorporated by reference during which period a current National Registry of Emergency Medical Technicians certification will not be accepted in lieu of requirements listed in Appendix 3; or

(d) On or after July 1, 2015 an EMT-Intermediate must complete 36 hours of continuing education as specified in Appendix 1, incorporated by reference.

(5) A Paramedic is required to:

(a) Complete all requirements of the National Registry of EMTs re-registration; or

(b) Obtain at least 48 hours of continuing education as specified in Appendix 1, incorporated by reference; or

(c) On or after July 1, 2013 but before July 1, 2015 a Paramedic must complete 48 hours of continuing education as specified in Appendix 3, incorporated by reference during which period a current National Registry of Emergency Medical Technicians certification will not be accepted in lieu of requirements listed in Appendix 3; or

(d) On or after July 1, 2015 a Paramedic must complete 48 hours of continuing education as specified in Appendix 1, incorporated by reference.

(6) All continuing education credits specified in sections (1) through (5) of this rule shall be completed between the date of the license holder's last successful application to the date of the license holder's current license renewal application.

(7) Continuing education credit shall be granted hour-for-hour for:

(a) Attending training seminars, educational conferences, and continuing education classes within the license holder's scope of practice;

(b) Attending live, webinar, or interactive online courses for the same or higher level of licensure;

(c) Online continuing education that provides a certificate of completion and is approved by the Continuing Education Coordinating Board for Emergency Medical Services (CECBEMS);

(d) Related accredited college courses will count one hour per credit hour received; and

(e) Authority-approved license renewal courses.

(8) Up to 50 percent of the hours of continuing education credits for each subject listed in section 1 of the appropriate appendix as incorporated by reference may be obtained by:

(a) Watching a video, CD-ROM, or other visual media;

(b) Being an EMT practical licensure exam evaluator, if the license holder is qualified as such;

(c) Reading EMS journals or articles; and

(d) Teaching any of the topics listed in the appendices as incorporated by reference, if the license holder is qualified to teach the subject.

(9) In addition to the hours of continuing education required in this rule, any affiliated EMS provider license holder must, as specified in section 2 of the appendices, incorporated by reference, demonstrate skills proficiency through a hands-on competency examination supervised by the EMS medical director or his or her designee. An EMS medical director may require successful performance in a minimum number of clinical skills in these areas on either human subjects or mannequins (e.g. venipunctures, endotracheal intubations, etc.).

(10) An EMS medical director may require additional continuing education requirements and skill competency.

(11) When a license holder obtains an initial license and there is:

(a) Less than six months until license renewal, no continuing education credits are required to obtain license renewal;

(b) More than six months but less than one year until license renewal, the license holder must complete 50 percent of the continuing education credits in each category; or

(c) More than one year until license renewal, the license holder must complete all continuing education credits.

(12) Continuing education credits are granted on an hour-for-hour basis.

(13) It shall be the responsibility of each license holder to ensure the hours obtained meet the Authority's license renewal requirements.

(14) A license holder must submit proof, in a manner prescribed in OAR 333-265-0140 that the continuing education requirements have been met.

(15) Education programs, journals and articles used towards continuing education must be approved by the EMS medical director or the Authority.

333-265-0140

Maintaining Licensed EMS Provider Continuing Education Records

(1) A license holder is responsible for retaining records that show successful completion of all required continuing education for the two previous licensure periods.

(2) The Authority will accept as proof of successful completion:

(a) A class roster that contains:

(A) The name of the teaching institution or EMS agency;

(B) The date of the class;

(C) The class topic;

(D) The length of the class;

(E) The full name of the license holder attending the class; and

(F) The full name of the instructor.

(b) A computer-generated printout history of the license holder's continuing education record that contains:

(A) The full name of the license holder;

(B) The name of the teaching institution or EMS agency conducting the classes;

(C) The dates of the classes;

(D) The class topics;

(E) The length of each class; and

(F) The full name of each instructor.

(c) A certificate of course completion for one or more topics that contains:

(A) The name of the teaching institution or EMS agency conducting the course;

(B) The date(s) of the course;

(C) The course topic(s);

(D) The length of the course; and

(E) The full name of the license holder attending the course.

(d) If the certificate does not list each course topic, then a copy of the program listing each course topic and length of each presentation must be attached to the certificate.

333-265-0150
Licensed EMS Provider Continuing Education Records Audit

(1) The Authority may conduct an audit of a license holder's continuing education records:

(a) The Authority shall notify the license holder by certified mail that he or she is being audited and provide him or her with the necessary audit forms and the date the completed forms are to be returned to the Authority; and

(b) Upon the return of the completed audit forms to the Authority, the Authority shall begin the process of verifying the continuing education records.

(2) If, in the course of an audit of continuing education records, the Authority learns that, contrary to the sworn statement in the application for license renewal or in the official audit form, the license holder has not completed all necessary continuing education requirements, the Authority may:

(a) Discipline the license holder as set out in OAR 333-265-0080;

(b) Assess a monetary penalty in the amount of $10 per each hour of deficient continuing education; or

(c) Require the license holder to demonstrate his or her knowledge and psychomotor skills by taking and passing a cognitive and practical examination conducted by the Authority.

(3) The actions taken by the Authority in section (2) of this rule will be done in accordance with ORS Chapter 183.

333-265-0160
License Holder's Responsibility to Notify the Authority of Changes

(1) A license holder must keep the Authority apprised of and report the following changes within 30 calendar days of a change in:

(a) EMS medical director, unless the license holder is affiliated with an ambulance service that is on file with the Authority;

(b) Legal name;

(c) Mailing address;

(d) Electronic mail address;

(e) Main contact phone number; or

(f) EMS affiliation.

(2) When reporting a new affiliation an EMS provider must supply the Authority with verification of completion of skills competency as referenced in Appendix 1 and it must be signed by his/her medical director or designee unless verification was completed during the most recent license renewal period.

333-265-0170
Displaying EMS Provider Licensure Level

(1) A licensed EMS Provider providing patient care must display his or her level of licensure on the outmost garment of his or her usual work uniform.

(2) A licensed EMS Provider-licensure level need not be displayed on emergency work apparel not normally worn during the provision of pre-hospital patient care, such as haz-mat suits, anti-contamination or radiation suits, firefighting apparel, etc.

(3) A licensed EMS Provider responding from home or other off-duty locations shall make a reasonable effort to display his or her licensure level. Baseball-type hats, T-shirts, safety vests, etc. are accepted for this purpose.

DIVISION 270

OREGON POLST (PHYSICIAN ORDERS FOR LIFE-SUSTAINING TREATMENT) REGISTRY

333-270-0010
Purpose

(1) These rules establish a registry (the Oregon POLST Registry) within the Oregon Health Authority for the collection of POLST forms and the dissemination of information from POLSTs to help ensure that medical treatment preferences for individuals nearing the end of the individual's life are honored.

(2) The Registry may be operated and maintained by a contractor of the Authority.

Stat. Auth: ORS 127.666

Stats. Implemented: ORS 127.663-127.684

Hist.: PH 12-2009, f. & cert. ef. 12-3-09

333-270-0020
Scope and Applicability

(1) The requirements for submitting a POLST form or a revocation in OAR 333-270-0040 apply to POLST forms signed on or after December 3, 2009.

(2) The Authority is not responsible for and these rules do not:

(a) Prescribe the content or form of a POLST;

(b) Provide for the dissemination of POLST forms;

(c) Provide POLST teaching resources;

(d) Provide for educating the public about POLST; or

(e) Provide training for health care professionals about POLST.

(3) The Authority and the POLST Registry Advisory Committee may cooperate with organizations and agencies active in POLST issues to help carry out the activities described in section (2) of this rule.

(4) The Registry shall accept POLST forms signed by a physician, nurse practitioner, or physician assistant:

(a) Licensed in Oregon at the time the POLST form information is entered into the Registry; or

(b) Permitted to practice in Oregon under ORS 677.060(1) or 678.031(1).

(5) A person who is the subject of the POLST form (meeting the requirements defined below) need not be a resident of Oregon in order for the form to be included in the Registry.

(6) A more recently executed POLST form automatically voids a previous POLST form.

333-270-0030
Definitions

As used in OAR chapter 333, division 270:

(1) "Ambulance service" has the meaning given that term in ORS 682.025.

(2) "Authority" means the Oregon Health Authority.

(3) "Authorized user" means a person authorized by the Authority to provide information to or receive information from the Registry.

(4) "Hospice program" has the meaning given that term in ORS 443.850.

(5) "Hospital" has the meaning given that term in ORS 442.015.

(6) "Life-sustaining treatment" means any medical procedure, pharmaceutical, medical device or medical intervention that maintains life by sustaining, restoring or supplanting a vital function. "Life-sustaining treatment" does not include routine care necessary to sustain patient cleanliness and comfort.

(7) "Long term care facility" means nursing facilities, assisted living and residential care facilities and adult foster homes licensed under OAR chapter 411, divisions 85, 54, and 50, or facilities federally funded to care for veterans.

(8) "Non-transporting emergency services agency" means any individual, partnership, corporation, association, governmental agency or unit or other entity that uses certified first responders or EMTs to provide emergency care or non-emergency care in the out-of-hospital environment to persons who are ill or injured, but does not transport patients to a hospital.

(9) "Nurse practitioner" has the meaning given that term in ORS 678.010; and means a nurse practitioner permitted to practice in a federal facility pursuant to ORS 678.031(1).

(10) "Patient" means the person who is the subject of the POLST form.

(11) "Personal representative" has the meaning given that term in ORS 192.519.

(12) "Physician" has the meaning given that term in ORS 677.010.

(13) "Physician assistant" has the meaning given that term in ORS 677.495.

(14) "POLST" means a Physician Order for Life-Sustaining Treatment signed by a physician, nurse practitioner or physician assistant.

(15) "POLST form" means a form, prescribed by the Oregon Health & Science University that contains a POLST, and any revision of the POLST.

(16) "Registry" means the Oregon POLST Registry authorized by Oregon Laws 2009, chapter 595, sec. 1184.

(17) "Revocation" means the cancellation of a POLST form in any written form.

333-270-0040
Submission of POLST Forms

(1) Physicians, nurse practitioners, and physician assistants are required to submit or cause to be submitted:

(a) Completed POLST forms they have signed, unless the patient has opted out of the Registry; and

(b) Revocations of which they are aware.

(2) Any person may submit a completed POLST form or revocation to the Registry, regardless of when the POLST form was completed.

(3) In order for a POLST form to be considered complete, the form (and any supporting documentation) shall include, but is not limited to:

(a) The patient's full name;

(b) The patient's date of birth;

(c) Orders related to cardiopulmonary resuscitation;

(d) The legible, printed name and the signature of the physician, nurse practitioner or physician assistant; and

(e) The date the order was signed.

(4) If a POLST form is submitted and determined to be incomplete, the Registry will notify the submitter that the form is incomplete, describe the missing information, and request that the form be resubmitted once it is complete.

(5) A POLST form submitted under this rule may be submitted by fax or mail. If the Registry develops a secure method of accepting POLST forms electronically, POLST forms may be submitted electronically.

(6) The Registry shall record in the Registry records, as soon as reasonably possible after receipt of the POLST form, the following:

(a) The information from a POLST form described in subsections (3)(a) through (e) of this rule; and

(b) Instructions if any, regarding medical interventions, use of antibiotics, and artificially administered nutrition.

(7) If a revocation is submitted to the Registry, that patient's POLST form shall be removed as soon as reasonably possible from the active Registry database. The Registry shall retain the POLST form for documentation, program evaluation and research purposes.

(8)(a) The first time a physician, nurse practitioner, or physician assistant submits a POLST form to the Registry, the Registry shall verify that the physician, nurse practitioner, or physician assistant is licensed, in Oregon, or is otherwise permitted to practice under ORS 677.060(1) or 678.031(1).

(b) Verification of licensure status under this section is not necessary for POLST forms signed before December 3, 2009.

(9) The Registry shall notify, in writing, a patient, or a patient's personal representative if known, and the health care provider who signed the POLST form or revocation when the Registry has received a POLST form or revocation. The notification required by this section only applies if the POLST form or revocation contains contact information for the patient, patient's personal representative, and health care provider. The notification shall inform the person to contact the Registry if any of the information on the POLST form or revocation is incorrect.

(10) Notification under section (9) of this rule shall be documented by the Registry and the documentation shall include the date of notification and who was notified.

(11) A person reporting information to the Registry in good faith is immune from any civil or criminal liability that might otherwise be incurred or imposed with respect to the reporting of information to the Registry.

(12) The Registry or any contractor that operates and maintains the Registry is not responsible for:

(a) Verifying the accuracy of the information on a POLST form or revocation submitted to the Registry, except as specified in section (8) of this rule; or

(b) Actions taken pursuant to information that was fraudulently submitted to the Registry.

NOTE: Practitioners may obtain POLST forms by contacting the Oregon Health and Science University, at: polst@ohsu.edu, or visiting www.POLST.org

Access to the Registry

(1) Registry staff, including its Emergency Communications Center staff, shall have access to POLST Registry information as needed to perform Registry functions. Registry staff and the Authority shall have access to Registry information as needed to conduct program evaluation.

(2) The following persons are authorized to contact the Registry's Emergency Communication Center and obtain information about a patient currently being treated:

(a) A licensed health care provider working in or for:

(A) A hospital emergency department or acute care unit where a patient is admitted;

(B) A licensed ambulance service; or

(C) A non-transporting emergency services agency.

(b) A staff person calling on behalf of a person described in subsection (a) of this section.

(3) The Registry shall release to a person described in section (1) of this rule, by phone:

(a) Whether the patient being treated has a POLST form recorded in the Registry, and if so;

(b) The POLST orders.

(4) The following persons, facilities, or programs are authorized to contact the Registry's office to determine whether a patient being treated by that person, at that facility, or by that program has a POLST form recorded in the Registry, whether the form is current, and the POLST orders:

(a) A physician, nurse practitioner or physician assistant who signed and submitted a POLST form to the Registry;

(b) Licensed or accredited:

(A) Long term care facilities;

(B) Hospice programs; or

(C) Hospitals.

(c) A patient's health care professional.

(d) A staff person calling on behalf of a person described in subsection (a) or (c) of this section.

(5) A patient or a patient's personal representative may contact the Registry to determine if that patient has a POLST form, whether the form is current, and the POLST order.

(a) The Registry shall request that a patient verify certain information in the Registry to ensure that the patient is who he or she purports to be, prior to the release of any Registry information.

(b) The Registry shall require a patient's personal representative to provide proof of the personal representative's identity and authority to act on behalf of the patient, and if necessary and legally required, provide an Authorization for the Release of Information that meets HIPAA requirements, prior to releasing information.

(6) The Registry may, in its discretion, require that a person described in section (2) or (4) of this rule provide proof of his or her identity, authority, licensing status, or need for the information prior to releasing any information from the Registry

(7) The Registry may provide the information requested under section (4) or (5) of this rule by fax, mail, or electronically, but may not release information over the phone.

(8) A person acting on information obtained from the Registry in good faith is immune from any civil or criminal liability that might otherwise be incurred or imposed with respect to acting on information obtained from the Registry.

(9) A person who requests information from the Registry who does not have the authority to obtain the information, or obtains information from the Registry for fraudulent reasons may be subject to a civil penalty of $500 per violation.

Confidentiality of Registry Information

(1) Registry information may only be released to:

(a) Persons and facilities described in OAR 333-270-0050 or 333-270-0080; and

(b) Authorized researchers.

(2) Registry information may only be released for the purposes specified in OAR 333-270-0050 or 333-270-0080.

(3) All information collected or developed by the Registry that identifies or could be used to identify a patient, health care provider or facility is confidential and is not subject to civil or administrative subpoena or to discovery in a civil action, including but not limited to a judicial, administrative, arbitration or mediation proceeding.

(4) Only the minimum amount of information needed to accomplish the intended purposes shall be released under this rule.

POLST Registry Advisory Committee

(1) The POLST Registry Advisory Committee is composed of individuals meeting the requirements in Oregon Laws 2009, chapter 595, section 1186 and committee members are appointed by the director of the Authority.

(2) The Committee shall:

(a) Meet at least four times per year;

(b) Advise the Authority regarding the implementation, operation, and evaluation of the Registry;

(c) Consult with the Authority in drafting rules on the implementation, operation, and evaluation of the Registry; and

(d) Review proposals from researchers to access Registry information and advise the Authority on whether access should be granted.

(3) The Authority shall provide appropriate staff support for the Committee.

333-270-0080
Access to Registry Information by Researchers

(1) The Authority may approve the release of Registry information to qualified researchers for appropriate research projects if an institutional review board has approved the research in accordance with 45 CFR Part 46.

(2) A researcher's application shall be reviewed by the POLST Registry Advisory Committee prior to release of information. Such request to the Authority for release of information may be made on a standard POLST Data Request Form or by such other manner approved by the Authority.

(3) If a researcher is permitted access to information in the Registry, the researcher shall agree, in writing, to maintain the confidentiality of the information received from the Registry, provided that this shall not limit aggregation, de-identification and other use and disclosure of such information for appropriate research purposes.

(4) Any Registry information released to a researcher under this rule may be de-identified by the Registry before release if deemed by the Authority as appropriate and reasonable under the circumstances.

DIVISION 275

HEMODIALYSIS TECHNICIANS LICENSING PROCEDURES AND DEFINITIONS

333-275-0001
Purpose

The purpose of OAR 333-275-0001 through 333-275-0180 is to establish standards for the training, testing and certification of hemodialysis technicians. These rules are adopted pursuant to ORS 688.625 through 688.665.

Stat. Auth.: ORS 688.625 - 688.665
Stats. Implemented: ORS 688.625 - 688.665
Hist.: OHD 2-2001, f. & cert. ef. 1-18-01

333-275-0010
Definitions

As used in OAR chapter 333, division 275, unless the context requires otherwise, the following definitions apply:

(1) "Abbreviated training program" means a training program consisting of a minimum of sixteen (16) hours of theory related to hemodialysis and/or supervised clinical learning experiences to train a hemodialysis technician or demonstrate the clinical competencies of an experienced hemodialysis technician.

(2) "Certificate" means a document identifying the legal privilege and authorization to perform specific functions and procedures in the State of Oregon.

(3) "Certified Hemodialysis Technician" (CHDT) has the meaning given the term in ORS 688.625, and includes, but is not limited to, a person who is certified by the Oregon Public Health Division to assist with the direct care of a patient undergoing hemodialysis.

(4) "Competency" means the demonstration of knowledge in a specific area and the ability to perform specific skills and tasks in a safe, efficient manner.

(5) "Contact Hour" means a fifty (50) minute hour of training.

(6) "Continuing Education" is planned learning experiences beyond a basic technician educational program. These experiences are designed to promote the development of knowledge, skills and attitudes for the enhancement of patient care. The Division must determine the appropriateness of all continuing education programs.

(7) "Dialysis" means a process by which dissolved substances are removed from a patient's body by diffusion from one fluid compartment to another across a semipermeable membrane. The two types of dialysis that are currently in common use are hemodialysis and peritoneal dialysis.

(8) "Dialysis Facility or Center" means a place awarded conditional or unconditional status by the federal Health Care Financing Administration to provide dialysis services.

(9) "Direct Supervision" means that the registered nurse, nurse practitioner, licensed practical nurse, or licensed physician is physically present and accessible in the immediate patient care area and available to intervene, if necessary."

(10) "Division" means the Public Health Division, Oregon Health Authority.

(11) "Division approved certification" means a process of national certification of hemodialysis technicians currently available or developed in the future, with requirements that, after review and approval by the Health Division, can be substituted wholly or partially for requirements of the Oregon certification of hemodialysis technicians program. Approved national certifications and requirements include, but are not limited to, the Board of Nephrology Examiners for Nursing and Technology (BONENT) certification examination.

(12) "End-Stage Renal Disease" (ESRD) means that stage of renal impairment that appears irreversible and permanent, and requires either the replacement of kidney function through renal transplantation or the permanent assistance of those functions through dialysis.

(13) "Extended training program" means a training program designed for the minimally experienced or inexperienced trainee to gain the skills necessary to become a CHDT.

(14) "Law Enforcement Data System (LEDS)" means a program organized within the Oregon State Police, Law Enforcement Data System Division, which provides a criminal justice telecommunications and information system for the State of Oregonhttp://picture.vzw.com:80/mi/470840425_1647195384_447681338_1260983139999.jpeg?limitsize=345,345&outquality=56&ext=.jpg&border=2,0,0,0, and is the control point for access to similar programs operated by other states and the federal government.

(15) "License" is a document identifying the legal privilege and authorization to practice within a professional category.

(16) "National certification examination" means examinations that have documented validity, reliability, and interrater reliability, are provided on a national level, and are approved by the Oregon Public Health Division. Approved national certification examinations include, but are not limited to, the Board of Nephrology Examiners for Nursing and Technology (BONENT) certification.

(17) A "Preceptor" is an individual with a minimum of one (1) year of clinical hemodialysis experience who supervises and observes students providing direct patient care in a dialysis facility or center.

(18) "Registry" means the listing of Oregon Certified Hemodialysis Technicians maintained by the Division. The Registry contains identifying demographic information on each CHDT, the date of initial and most recent certification. Division sanctions against a CHDT certification are noted on the Registry. Findings of incompetence, unprofessional or dishonorable conduct, or mental or physical inability to perform the functions of a CHDT are noted on the Registry.

(19) "Subject individual" means the applicant for hemodialysis certification.

(20) "Trainee Hemodialysis Technician" means an uncertified hemodialysis technician enrolled in an abbreviated or extended training program, working under the direct clinical supervision of a nurse educator, clinical preceptor, or technician educator.

333-275-0020
Certification of Hemodialysis Technicians Required

After January 1, 2000 hemodialysis technicians must have a current, valid Oregon CHDT certificate and be listed on the CHDT Registry prior to assuming or continuing hemodialysis technician duties.

(1) A hemodialysis technician hired before January 1, 2000, and who has been employed as a hemodialysis technician for a minimum of 1,000 hours since January 1, 1998, must participate in a Division-approved, abbreviated hemodialysis technician training program and having done so, pass a Division-approved examination prior to certification. Evidence of successful completion of a Division-approved, national certification examination will be accepted as meeting the requirement for an examination.

(2) A hemodialysis technician hired after January 1, 2000, and who has been employed as a hemodialysis technician for a minimum of 1,000 hours within the preceding twenty-four (24) month period, must participate in a Division-approved, abbreviated hemodialysis technician training program and having done so, pass a Division-approved examination prior to certification. Evidence of successful completion of a Division-approved, national certification examination will be accepted as meeting the requirement for an examination.

(3) A hemodialysis technician hired after January 1, 2000, and who has not been employed as a hemodialysis technician for a minimum of 1,000 hours since January 1, 1998, must participate in a Division-approved hemodialysis technician extended training program and having done so, pass a Division-approved examination prior to certification.

333-275-0030
Application for Certificate and Certification of Hemodialysis Technicians by Exam

(1) In order to meet the prerequisites, the hemodialysis technician applicant must:

(a) Provide evidence that the applicant has received a high school diploma or its equivalent;

(b) Complete a Division-approved hemodialysis technician training program;

(c) Complete an application for certification;

(d) Complete the required examination application within the deadlines and according to all instructions including remittance of required fee to the testing entity; and

(e) Complete a consent for a criminal records check.

(2) Application and fees for the hemodialysis technician certification examination must be submitted to the Division by the application deadline.

(3) Applications containing fraudulent or misrepresented information shall be the basis for denial of certification.

(4) Incomplete applications for certification become null and void one (1) year after date of last activity.

(5) If an applicant fails to appear for the examination, the applicant must resubmit the application and fees.

Stat. Auth.: ORS 688.625 - 688.665
Stats. Implemented: ORS 688.640
Hist.: OHD 2-2001, f. & cert. ef. 1-18-01

333-275-0040
Criminal Conviction History

(1) The Public Health Division shall conduct a criminal records check of all applicants prior to certification.

(2) Failure to provide written consent for a criminal records check or failure to provide completed fingerprint cards for a Federal Bureau of Investigation (FBI) check, where required, shall be grounds for denial of an application.

(3) Criminal offender information will be obtained through the Oregon Law Enforcement Data System (LEDS). Nationwide criminal records checks, if necessary, shall be conducted by the Oregon State Police (OSP) through the FBI. In conducting criminal records checks on subject individuals, the Division shall act in accordance with its obligations under ORS 181.537.

(4) The Division has determined that serious felonies and misdemeanors involving violence or unauthorized sexual conduct with the vulnerable or disabled are fundamentally inconsistent with the responsibility of care for the dialysis patient and thereby related to the fitness of the hemodialysis technician to practice hemodialysis. Conviction of crimes listed in **Table 1** of this rule shall disqualify a CHDT subject individual from receiving certification, unless the subject individual provides sufficient evidence of suitability as described in section (7) of this rule.

(5) The Division has determined that serious felonies and misdemeanors involving theft, fraud, or deception, crimes against the state and public justice, and major traffic violations may substantially jeopardize the safety of the dialysis patient and thereby are related to the fitness of the hemodialysis technician to practice hemodialysis. If any subject individual was convicted of a crime listed in **Table 2** of this rule, [Table not included. See ED. NOTE.] the Division will seek to obtain and review information on all intervening circumstances and other background information related to criminal activity, subject to section (7) of this rule. Based on this information, the Division will make a decision whether to approve certification given the individual subject meets all other requirements for certification.

(6) These rules also apply to:

(a) Any attempts, solicitations or conspiracy to commit a crime listed in **Table 1** or **Table 2**, and;

(b) Conviction of a crime, in another jurisdiction, which is the substantial equivalent of a crime listed in **Table 1** or **Table 2** or any attempts, solicitations or conspiracy to commit a crime, in another jurisdiction, which is the substantial equivalent of a crime listed in **Table 1** or **Table 2**.

(7) Factors in Suitability Determination:

(a) Factors to be considered in determining suitability, based on information available to the Division and information provided by the subject individual, include:

(A) The nature of the crime;

(B) The facts that support the conviction;

(C) The making of a false statement on the consent for criminal records check related to the disqualifying crimes;

(D) The relevancy of the subject individual's criminal conviction history to the fitness of the hemodialysis technician to practice hemodialysis;

(E) Intervening circumstances relevant to the responsibilities and circumstances of the position, services or employment. Such circumstances include but are not limited to:

(i) Passage of time since the commission of the crime;

(ii) The age of the person at the time of the crime;

(iii) The likelihood of a repetition of offenses;

(iv) The commission of other relevant crimes, including the type and number of offenses;

(v) The recommendation of an employer.

(b) Under no circumstances shall a subject individual be barred from certification because of the existence or contents of a juvenile record, which has been expunged pursuant to ORS 419A.260 to 419A.262.

(8) Process for Federal Criminal Records Check:

(a) When conducting a criminal records check on a subject individual, the Division may conduct a federal criminal history check when:

(A) The subject individual has lived outside the state of Oregon any time during the preceding 18 months;

(B) The Oregon record shows "Multi-state Offender" status;

(C) The Division has information about the applicant having crimes in other states.

(b) An applicant subject to the federal criminal records check must submit to the Division:

(A) Properly completed FBI fingerprint cards;

(B) Properly completed consent for criminal records check form;

(C) A description of the crime and conviction if the subject individual acknowledges conviction of a crime; and

(D) The fee for the FBI check.

(9) A subject individual who passes the Oregon criminal records check but is waiting for the FBI criminal records check to be processed may receive a conditional certificate, based upon the Oregon criminal records check and a review of the application, if all other prerequisites are met. This conditional certificate is subject to revocation in the event the FBI criminal records check contains a disqualifying conviction.

(10) Criminal offender information is confidential and shall not be disclosed by the Division. A subject individual may inspect the subject individual's own Oregon record at the Division. The Division may not disclose FBI information to the subject individual or other persons or entities.

(11) If an applicant wishes to challenge the accuracy or completeness of information provided by OSP or the FBI, the subject individual must make a challenge directly to the department, bureau or agency providing that information and not through the contested case hearing process set forth in OAR 333-275-0170.

333-275-0060

Hemodialysis Technician Certification Renewal

Beginning January 1, 2000, CHDTs are required to renew certification on or before June 30 every second year:

(1) Application for renewal must be postmarked before midnight on May 31 to allow time for a review of the application;

(2) The certificate shall automatically lapse if the certificate holder fails to renew by the appropriate renewal date and an individual who fails to renew by this deadline is considered delinquent;

(3) The Division may renew any lapsed certification upon payment of all past unpaid renewal and delinquent fees;

(4) A CHDT who submits his/her application for renewal greater than ninety (90) days after the June 30 renewal date must retake the extended Division-approved training program, and must retake the Division-approved examination, or show evidence of the successful completion of a Division-approved certification;

(5) Each application must be accompanied by a nonrefundable renewal fee payable to the Division.

Stat. Auth.: ORS 688.625 - 688.665

333-275-0070
Requirements for Renewal of Certification

(1) A complete application form must be submitted for recertification.

(2) Employment Requirements for Renewal of Certification:

(a) At the time of certification renewal, the applicant must be prepared to provide evidence of a minimum of 1,000 hours worked as a CHDT during the twenty-four (24) month period immediately preceding certification renewal;

(b) An applicant who is unable to provide evidence of the minimum 1,000 hours worked as a CHDT during the twenty-four month period immediately preceding certification renewal or the prorated required hours worked as a CHDT according to the chart under section (4) of this rule, shall satisfy all of the requirements of a new applicant to obtain certification;

(c) Applicable hours worked as a CHDT are not limited to hours spent providing direct patient care but may include a variety of other tasks commensurate with the individual's abilities and job description.

(3) Continuing Education Requirements for Renewal of Certification:

(a) At the time of certification renewal, the applicant must be prepared to provide evidence of a minimum of twenty (20) contact hours of Division-approved continuing education accrued within the twenty-four (24) months immediately preceding renewal. The Oregon Public Health Division shall determine the appropriateness of all continuing education programs. For those CHDTs completing the training program, the training program hours may be applied towards the continuing education requirement as outlined in OAR 333-275-0110;

(b) An applicant who is unable to provide evidence of the minimum 20 hours of Division-approved continuing education during the twenty-four month period immediately preceding certification renewal, or the prorated required hours of Division-approved continuing education hours according to the chart under section (4) of this rule, shall satisfy all of the requirements of a new applicant to obtain certification.

(4) Prorated Requirements Based on Testing Schedule: The following table shall be applied to prorate the required number of hours worked as a CHDT and the required number of continuing education contact hours for those CHDTs receiving a certification less than twenty-four (24) months prior to the June 30 renewal date as per OAR 333-275-0050. See OAR 333-275-0180 Fees for the proration of the certification fee. [Table not included. See ED. NOTE.]

Provisional Certificates

(1) A provisional certificate is issued to:

(a) A hemodialysis technician who was hired prior to January 1, 2000, who has worked a minimum of 1,000 hours prior to January 1, 2000, and who is enrolled in a Division-approved abbreviated training program or has completed a Division-approved abbreviated training program and is waiting for a certification examination or;

(b) A hemodialysis technician hired after January 1, 2000, who has completed an approved training program, and is waiting for a certification examination.

(2) Provisional certificates are valid for a period of six (6) months and are renewable two times from January 1, 2000 until January 1, 2001. After January 1, 2001, provisional certificates are renewable one (1) time only. The technician must apply for the renewal of the certificate three (3) calendar weeks prior to the expiration date of the original provisional certificate.

(3) A provisional certificate will be revoked pursuant to ORS 183.310 to 183.550 when a hemodialysis technician holding a provisional certificate fails a certification examination.

(4) A hemodialysis technician who fails to pass the certification examination can work as a trainee hemodialysis technician until the next scheduled examination. Should a technician fail the examination a second time, that technician cannot practice within a dialysis facility as a technician.

333-275-0090
Scope of Practice of Hemodialysis Technician

(1) Authorized Functions of Certified Hemodialysis Technicians: CHDTs who hold full or provisional certification by the Oregon Public Health Division may, under the direct supervision of a physician licensed under ORS Chapter 677 or a registered nurse licensed under ORS 678.010 to 678.410:

(a) Perform venipunctures for dialysis access;

(b) Collect data, i.e. pre-weight, complaints, and vital signs, to be utilized by the registered nurse in developing the nursing assessment;

(c) Obtain lidocaine from a stock source and inject intradermal lidocaine in preparation for dialysis access;

(d) Obtain heparin from a stock source and administer a heparin bolus;

(e) Administer a bolus of normal saline;

(f) Connect a dialysis access to normal saline or heparinized normal saline;

(g) Initiate or discontinue dialysis treatment via central lines; and

(h) Administer oxygen on the basis of standing orders, facility protocol, or at the direction of a physician, registered nurse, or licensed practical nurse.

(2) Prohibited functions of the Certified Hemodialysis Technician: CHDTs who have been certified by the Oregon Public Health Division may not:

(a) Administer medications by oral, intramuscular, intravenous, or subcutaneous routes except as addressed in 333-275-0090(1);

(b) Perform arterial punctures outside of dialysis access;

(c) Determine the frequency or duration of dialysis treatments;

(d) Administer blood or blood products;

(e) Accept verbal or telephone orders from a physician or his/her representative;

(f) Perform hemodialysis on a hospitalized intensive care unit patient.

(3) An individual facility may elect to further limit the scope of practice of hemodialysis technicians working in that facility. If so, then the CHDT shall comply with that facility's job description.

333-275-0100
Trainee Hemodialysis Technicians

(1) A trainee hemodialysis technician may perform the duties of a CHDT when it is an integral part of the training program and the trainee hemodialysis technician is working under the direct clinical supervision of a nurse educator, clinical preceptor, or technician educator. The duties of a CHDT are determined by the scope of practice of the CHDT as defined under OAR 333-275-0090 and the job description of the hemodialysis technicians of the dialysis facility or center in which the clinical training occurs. The job description must not exceed the scope of practice of the CHDT.

(2) Trainees must be selected without discrimination as to age, race, religion, gender, sexual preference, national origin, or marital status.

(3) A person working as a trainee because the person failed to pass the certification examination as provided in OAR 333-275-0080(4) must work under the direct clinical supervision of a nurse educator, clinical preceptor, or technician educator.

333-275-0110
Approval Guidelines and Minimal Curriculums for Hemodialysis Technician Training Programs to Qualify for Continuing Education Credit

(1) In addition to continuing education programs of varying length of contact hours as defined earlier, there shall be two (2) separate learning programs approved by the Division for training or continuing education credit. These are:

(a) An abbreviated training program to train a hemodialysis technician or demonstrate the clinical competencies of an experienced hemodialysis technician is a training program consisting of a minimum of sixteen (16) hours of theory and/or supervised clinical learning experiences related to hemodialysis as it is performed in a particular facility or facilities or dialysis center;

(b) An extended training program which is designed for the minimally experienced or inexperienced trainee to gain the skills necessary to become a CHDT. There shall be a minimum of eighty (80) hours of classroom study, and a minimum of one hundred sixty (160) hours of supervised clinical experience.

(2) Qualifications and Competencies of Faculty:

(a) The nurse educator shall be a registered nurse and shall hold a current unencumbered license to practice in Oregon.

(b) The nurse educator shall have at least two (2) years of nursing practice experience including at least one (1) year of nursing experience in dialysis. Previous nursing experience in critical care and nursing education is desirable.

(c) The nurse educator shall have a minimum of nine (9) contact hours of continuing education annually in nephrology or be certified by a nationally recognized body.

(d) Clinical preceptors shall have at least one (1) year of clinical dialysis experience. Clinical preceptors shall demonstrate knowledge and skills in clinical dialysis.

(e) Technician educators will be under the supervision of a nurse educator. These technicians shall possess national certification by the Board of Nephrology Examiners for Nursing and Technology (BONENT) and have at least two (2) years experience in hemodialysis and possess current CHDT certification.

(f) A CHDT under direct supervision of the nurse educator and/or approved clinical preceptor may be assigned to assist with the clinical experience\orientation of hemodialysis technician trainees.

(3) Minimum Standards for Approval of Hemodialysis Technician Training Programs for Continuing Education:

(a) Administration and Organization: The hemodialysis technician training program shall employ a nurse educator to administer the training program; he/she shall be responsible for the development, implementation, and evaluation of the training program, arrangements for and supervision of trainees' clinical experiences, and communications with the Health Care Regulation and Quality Improvement (HCRQI) section of the Division.

(b) Objectives: There shall be written objectives for the training program, which serve as the basis for planning, implementing, and evaluating the program. The training program faculty shall develop the objectives. The training program objectives shall describe the knowledge and skills expected of the CHDT, and shall be consistent with the authorized functions of the CHDT and the approved core curriculum.

(c) The training program's nurse educator shall develop a written systematic plan for curriculum and program evaluation.

(d) Training Program Record Retention Requirements: The program shall maintain the orientation checklists and any appropriate certification documentation in employees' personnel files as part of the permanent file.

(e) The nurse educator will submit the objectives of the training program, the names and qualifications of the nurse educator(s) and clinical preceptor(s), the program curriculum, the program schedule, and the program evaluation plan to the Division prior to implementing the program to receive approval for continuing education credit applicable to the CHDT continuing education requirements. If both abbreviated and extended programs are to be offered by the hemodialysis facility or center, the above materials for each program must be submitted for Division approval. The materials must be sent to: Hemodialysis Technician Certification Program, Health Care Regulation and Quality Improvement, Suite #640, Oregon Health Division, PO Box 14450, Portland, OR 97293-0450.

(4) Curriculum:

(a) The curriculum shall extend over a period of time sufficient to provide essential, sequenced learning experiences, which enable the trainee to develop competence and shall show evidence of an organized pattern of instruction consistent with principles of learning and sound educational practices.

(b) Supervised clinical experience shall provide opportunities for the application of theory and for the achievement of stated objectives in a patient care setting and shall include clinical learning experiences to develop the skills required by technicians to provide safe patient care. The nurse educator and/or clinical preceptor must be physically present and accessible to the trainee when the trainee is in the patient care area.

(c) Required core curriculum content for both the abbreviated and extended training programs can be found in Appendix A.

(5) Continuing education credit shall be approved for the actual hours spent in training in an initial abbreviated or an initial extended training program for a single, initial certification period; these hours are not transferrable to subsequent certification periods.

333-275-0130
Dishonorable Conduct Derogatory for a Hemodialysis Technician Defined

A CHDT whose conduct fails to conform to the standards for certified hemodialysis technicians, or who may adversely affect the health, safety, and welfare of the public, may be found to have committed dishonorable conduct for a CHDT. Such conduct shall include, but is not limited to, the following:

(1) Conduct related to the patient's safety and integrity:

(a) Failing to report through proper channels facts known regarding the incompetent, unethical, unsafe, or illegal practice of any health care provider;

(b) Failing to respect the dignity and rights of patients, regardless of social or economic status, age, race, religion, sex, sexual preference, national origin, nature of health problems or disability;

(c) Engaging in sexual contact with a patient.

(2) Conduct related to other federal or state statute/rule violations:

(a) Abusing a patient. The definition of abuse includes, but is not limited to, intentionally causing physical and/or mental harm or discomfort, striking a patient, intimidating, threatening, or harassing a patient;

(b) Neglecting a patient. The definition of neglect includes, but is not limited to, carelessly allowing a patient to be in physical discomfort or be injured;

(c) Failing to report actual or suspected incidents of patient abuse through the proper channels in the work place and to the appropriate state agencies;

(d) Aiding, abetting, or assisting an individual to violate or circumvent any law, rule or regulation intended to guide the conduct of CHDTs or other health care providers.

(3) Conduct related to communication:

(a) Falsifying a patient or agency record; including, but not limited to, filling in another person's omissions, signing another person's name, recording care not given, fabricating data/values;

(b) Altering a patient or agency record: this includes, but is not limited to, changing words/letters/numbers from the original document to mislead the reader of the record, adding to the record after the original time/date without indicating a late entry;

(c) Destroying a patient or agency record;

(d) Directing another person to falsify, alter, or destroy patient or agency records.

(4) Conduct related to clinical practice: Performing acts beyond the authorized scope of practice.

(5) Conduct related to impaired function:

(a) Practicing as a CHDT when unable/unfit to perform procedures and/or make decisions due to physical impairment as evidenced by documented deterioration of functioning in the practice setting and/or by the assessment of a health care provider qualified to diagnose physical condition/status;

(b) Practicing as a CHDT when unable/unfit to perform procedures and/or make decisions due to psychological or mental impairment as evidenced by documented deterioration of functioning in the practice setting and/or by the assessment of a health care provider qualified to diagnose mental condition/status;

(c) Practicing as a CHDT when physical or mental ability to practice is impaired by use of drugs, alcohol, or mind-altering substances.

(6) Conduct related to certification violations:

(a) Allowing another person to use one's CHDT certification for any purpose;

(b) Resorting to fraud, misrepresentation, or deceit during the application process for certification, while taking the certification exam, or while obtaining initial certification or renewal of certification;

(c) CHDT impersonating any applicant or acting as a proxy for the applicant in any certification examination;

(d) Disclosing the contents of the certification examination or soliciting, accepting or compiling information regarding the contents of the examination, before during or after its administration.

Duty to Report, Confidential Information, and Liability of Person who Reports

(1) Any dialysis facility or center, any certified hemodialysis technician certified under ORS 688.650, any physician licensed under ORS Chapter 677, or any registered nurse licensed under ORS 678.010 to 678.410 shall report to the Health Care Regulation and Quality Improvement section of the Oregon Health Division any information the person may have that appears to show that a CHDT is or may be medically incompetent or is or may be guilty of unprofessional or dishonorable conduct or is or may be mentally or physically unable to safely function as a hemodialysis technician.

(2) Information provided to the Division pursuant to this section is confidential and shall not be subject to public disclosure, nor shall it be admissible as evidence in any judicial proceeding (as outlined in ORS 685.655(4)).

(3) Any person who reports or provides information to the Division under this section and who provides information in good faith shall not be subject to an action for civil damage as a result thereof (as outlined in ORS 685.655(5)).

Grounds for Denying, Suspending or Revoking Certificate

Causes for denial, suspension or revocation of certificate: In the manner prescribed in ORS 183.310 to 183.486 for a contested case, the Division may deny, suspend, or revoke any certificate to perform the duties of a certified hemodialysis technician for the following causes:

(1) Failure to work as a hemodialysis technician 1000 hours over the 24 months preceding recertification or as prorated in OAR 333-275-0070;

(2) Failure to complete the continuing education requirement of 20 contact hours over the 24 months preceding recertification or as prorated in OAR 333-275-0070;

(3) Failure to complete the consent for criminal record check;

(4) Failure to pass the hemodialysis certification examination;

(5) The use of fraud or deception in receiving a certificate;

(6) Use of any controlled substance or intoxicating liquor to an extent or in a manner injurious to the certificate holder or others or to an extent that such impairs the ability to conduct safely the duties of a CHDT;

(7) The presence of a mental disorder that demonstrably affects a technician's performance, as certified by two psychiatrists retained by the Public Health Division, Oregon Health Authority;

(8) Conviction of a CHDT for a criminal offense deemed by the Division to be related to the fitness of the CHDT to practice hemodialysis as in OAR 333-275-0040;

(9) Suspension or revocation of a hemodialysis technician certificate issued by another state;

(10) Gross negligence or repeated negligence in rendering hemodialysis care;

(11) The CHDT has been found to have committed dishonorable conduct for a CHDT as outlined in OAR 333-275-0130.

333-275-0160
Disciplinary Action and Civil Penalty

(1) When a CHDT has admitted the facts of a complaint alleging the CHDT is in violation of one or more of the grounds for denying, suspending or revoking a certificate as listed in OAR 333-275-0150 or been found to have committed in accordance with ORS 183.310 to 183.550 of one or more of the grounds for denying, suspending or revoking a certificate as listed in OAR 333-275-0150; the Public Health Division may take one or more of the following actions:

(a) Place the CHDT on probation;

(b) Suspend the CHDT's certificate;

(c) Revoke the CHDT's certificate;

(d) Place limitations on the ability of the CHDT to practice hemodialysis in Oregon;

(e) Assess the cost of disciplinary proceedings, not to exceed $1,000, as a civil penalty;

(f) Assess a civil penalty not to exceed $1,000.

(2) The Public Public Health Division may temporarily suspend the CHDT's certificate without a hearing while simultaneously commencing proceedings under ORS 183.310 to 183.550 after receiving evidence that indicates that the continued practice of the CHDT constitutes an immediate danger to the public.

(3) A civil penalty not to exceed $1,000 may be imposed as provided in ORS 183.090, in addition to disciplinary action against the CHDT's certificate. Disciplinary action against the CHDT certificate does not preclude imposing a civil penalty. Criminal conviction does not preclude imposition of a civil penalty for the same conduct.

(4) The civil penalty shall be payable to the Division by cash, cashier's check or money order.

(5) Civil penalties may be imposed pursuant to ORS 183.090 according to the following schedule:

(a) Conviction of a criminal offense as defined in 333-275-0040 that relates to the fitness of the CHDT to practice hemodialysis — $100–$1000.

(b) Gross negligence or repeated negligence in rendering hemodialysis — $500–$1000.

(c) Use of any controlled substance or intoxicating liquor to an extent or in a manner injurious to the certificate holder or others

or to an extent that such impairs the ability to conduct safely the duties of a CHDT — $250–$1000.

(d) The CHDT has been found to have committed dishonorable conduct — $100–$1000.

HOSPITALS, GENERALLY

DIVISION 500

DEFINITIONS, APPLICATION AND RENEWAL PROCEDURES, FEES, FACILITY CLOSURE

333-500-0005
Applicability

Unless a specific rule provides otherwise, OAR chapter 333, divisions 500 through 535 apply to a hospital classified as general, low occupancy acute care, or psychiatric or mental and do not apply to a hospital classified as a special inpatient care facility.

Stat. Auth.: ORS 441.025
Stats. Implemented: ORS 441.025

333-500-0010
Definitions

As used in OAR chapter 333, divisions 500 through 535, unless the context requires otherwise, the following definitions apply:

(1) "Assessment" means a complete nursing assessment, including:

(a) The systematic and ongoing collection of information to determine an individual's health status and need for intervention;

(b) A comparison with past information; and

(c) Judgment, evaluation, or a conclusion that occurs as a result of subsections (a) and (b) of this definition.

(2) "Authentication" means verification that an entry in the patient medical record is genuine.

(3) "Authority" means the Oregon Health Authority.

(4) "Certified Nursing Assistant" (CNA) means a person who is certified by the Oregon State Board of Nursing (OSBN) to assist licensed nursing personnel in the provision of nursing care.

(5) "Chiropractor" means a person licensed under ORS Chapter 684 to practice chiropractic.

(6) "Conditions of Participation" mean the applicable federal regulations that hospitals are required to comply with in order to participate in the federal Medicare and Medicaid programs.

(7) "Deemed" means a health care facility that has been inspected by an approved accrediting organization and has been approved by the Centers for Medicare and Medicaid Services (CMS) as meeting CMS Conditions of Participation.

(8) "Discharge" means the release of a person who was an inpatient of a hospital and includes:

(a) The release and transfer of a newborn to another facility, but not a transfer between acute care departments of the same facility;

(b) The release of a person from an acute care section of a hospital for admission to a long-term care section of a facility;

(c) Release from a long-term care section of a facility for admission to an acute care section of a facility;

(d) A patient who has died; and

(e) An inpatient who leaves a hospital for purposes of utilizing non-hospital owned or operated diagnostic or treatment equipment, if the person does not return as an inpatient of the same health care facility within a 24-hour period.

(9) "Direct ownership" has the meaning given the term 'ownership interest' in 42 CFR 420.201.

(10) "Division" means the Public Health Division within the Authority.

(11) "Emergency Medical Services" means medical services that are usually and customarily available at the respective hospital in an emergency department and that must be provided immediately to sustain a person's life, to prevent serious permanent disfigurement or loss or impairment of the function of a bodily member or organ, or to provide care to a woman in labor where delivery is imminent if the hospital is so equipped and, if the hospital is not equipped, to provide necessary treatment to allow the woman to travel to a more appropriate facility without undue risk of serious harm.

(12) "Emergency Psychiatric Services" means mental health services that are usually and customarily available in an emergency department at the respective hospital and that must be provided immediately to prevent harm to the patient or others including but not limited to triage and assessment; observation and supervision; crisis stabilization; crisis intervention; and crisis counseling.

(13) "Financial interest" means a five percent or greater direct or indirect ownership interest.

(14) "Full compliance survey" means a survey conducted by the Division following a complaint investigation to determine a hospital's compliance with the CMS Conditions of Participation.

(15) "Governing body" means the body or person legally responsible for the direction and control of the operation of the hospital.

(16) "Governmental unit" has the meaning given that term in ORS 442.015.

(17) "Health care facility" (HCF) has the meaning given the term in ORS 442.015.

(18) "Health Care Facility Licensing Laws" means ORS 441.005 through 441.990 and its implementing rules.

(19) "Hospital" has the meaning given that term in ORS 442.015.

(20) "Indirect ownership" has the meaning given the term 'indirect ownership interest' in 42 CFR 420.201.

(21) "Licensed" means that the person to whom the term is applied is currently licensed, certified or registered by the proper authority to follow his or her profession or vocation within the State of Oregon, and when applied to a hospital means that the facility is currently licensed by the Authority.

(22) "Licensed nurse" means a nurse licensed under ORS Chapter 678 to practice registered or practical nursing.

(23) "Licensed Practical Nurse" means a nurse licensed under ORS Chapter 678 to practice practical nursing.

(24) "Major alteration" means any structural change to the foundation, roof, floor, or exterior or load bearing walls of a building, or the extension of an existing building to increase its floor area. Major alteration also means the extensive alteration of

an existing building such as to change its function and purpose, even if the alteration does not include any structural change to the building.

(25) "Manager" means a person who:

(a) Has authority to direct and control the work performance of nursing staff;

(b) Has authority to take corrective action regarding a violation of law or a rule or a violation of professional standards of practice, about which a nursing staff has complained; or

(c) Has been designated by a hospital to receive the notice described in ORS 441.174(2).

(26) "Minor alteration" means cosmetic upgrades to the interior or exterior of an existing building, such as but not limited to wall finishes, floor coverings and casework.

(27) "Mobile Satellite" means a MRI, CAT Scan, Lithotripsy Unit, Cath Lab, or other such modular outpatient treatment or diagnostic unit that is capable of being moved, is housed in a vehicle with a vehicle identification number (VIN), and does not remain on a hospital campus for more than 180 days in any calendar year.

(28) "NFPA" means National Fire Protection Association.

(29) "Nurse Midwife/Nurse Practitioner" means a registered nurse certified by the OSBN as a nurse midwife/nurse practitioner.

(30) "Nurse Practitioner" has the meaning given that term in ORS 678.010.

(31) "Nursing staff" means a registered nurse, a licensed practical nurse, or other assistive nursing personnel.

(32) "OB Unit" means a dedicated obstetrical unit that meets the requirements of OAR 333-535-0120.

(33) "On-call" means a scheduled state of availability to return to duty, work-ready, within a specified period of time.

(34) "Oregon Sanitary Code" means the Food Sanitation Rules in OAR 333-150-0000.

(35) "Patient audit" means review of the medical record or physical inspection or interview of a patient.

(36) "Person" has the meaning given that term in ORS 442.015.

(37) "Physician" means a person licensed as a doctor of medicine or osteopathy under ORS Chapter 677.

(38) "Physician Assistant" has the meaning given that term in ORS 677.495.

(39) "Plan of correction" means a document executed by a hospital in response to a statement of deficiency issued by the Division that describes with specificity how and when deficiencies of health care licensing laws or conditions of participation shall be corrected.

(40) "Podiatrist" has the same meaning as "podiatric physician and surgeon" in ORS 677.010.

(41) "Podiatry" means the diagnosis or the medical, physical or surgical treatment of ailments of the human foot, except treatment involving the use of a general or spinal anesthetic unless the treatment is performed in a licensed hospital or in a licensed ambulatory surgical center and is under the supervision of or in collaboration with a physician. "Podiatry" does not include the administration of general or spinal anesthetics or the amputation of the foot.

(42) "Public body" has the meaning given that term in ORS 30.260.

(43) "Registered Nurse" means a person licensed under ORS Chapter 678 to practice registered nursing.

(44) "Respite care" means care provided in a temporary, supervised living arrangement for individuals who need a protected environment, but who do not require acute nursing care or acute medical supervision.

(45) "Retaliatory action" means the discharge, suspension, demotion, harassment, denial of employment or promotion, or layoff of a nursing staff person directly employed by the hospital, or other adverse action taken against a nursing staff person directly employed by the hospital in the terms or conditions of employment of the nursing staff person, as a result of filing a complaint.

(46) "Satellite" means a building or part of a building owned or leased by a hospital, and operated by a hospital in a geographically separate location from the hospital, with a separate physical address from the hospital but that is within 35 miles from the hospital, through which the hospital provides:

(a) Outpatient diagnostic, therapeutic, or rehabilitative services;

(b) Psychiatric services in accordance with OAR 333-525-0000 including:

(A) Inpatient psychiatric services; and

(B) Emergency psychiatric services through an emergency department in accordance with OAR 333-520-0070; or

(c) Emergency medical services in accordance with OAR 333-500-0027.

(47) "Special Inpatient Care Facility" means a facility with inpatient beds and any other facility designed and utilized for special health care purposes that may include but is not limited to a rehabilitation center, a facility for the treatment of alcoholism or drug abuse, a freestanding hospice facility, or an inpatient facility meeting the requirements of ORS 441.065, and any other establishment falling within a classification established by the Division, after determination of the need for such classification and the level and kind of health care appropriate for such classification.

(48) "Stable newborn" means a newborn who is four or more hours post-delivery and who is free from abnormal vital signs, color, activity, muscle tone, neurological status, weight, and maternal-child interaction.

(49) "Stable postpartum patient" means a postpartum mother who is four hours or more postpartum and who is free from any abnormal fluctuations in vital signs, has vaginal flow within normal limits, and who can ambulate, be independent in self-care, and provide care to her newborn infant, if one is present.

(50) "Statement of deficiencies" means a document issued by the Division that describes a hospital's deficiencies in complying with health care facility licensing laws or conditions of participation.

(51) "Survey" means an inspection of a hospital to determine the extent to which a hospital is in compliance with health facility licensing laws and conditions of participation

Application for Hospital License

(1) An applicant wishing to apply for a license to operate a hospital shall submit an application on a form prescribed by the Division and pay the applicable fee as specified in OAR 333-500-0030.

(2) A single hospital license may cover more than one building if the applicant meets the requirements in OAR 333-500-0025.

(3) If the applicant is proposing a new hospital the applicant shall also submit evidence of plans review approval as required by OAR chapter 333, division 675.

(4) An applicant that has a certificate of accreditation and deemed status for Medicare certification from the Joint Commission or an accrediting organization approved by the Division shall provide the certificate to the Division with its license application, and shall include:

(a) All Joint Commission or approved accrediting organization survey and inspection reports; and

(b) Written evidence of all corrective actions underway, or completed, in response to Joint Commission or approved accrediting organization recommendations, including all progress reports.

(5) No license shall be issued for any hospital for which a certificate of need is required, unless a certificate of need has first been issued under ORS 442.315.

333-500-0025
Indorsement of Satellite Operations

(1) The Division may indorse, under a hospital's license, a satellite or mobile satellite of a hospital.

(2) In order for a satellite to be indorsed under a hospital's license, the applicant or licensee shall pay the appropriate fee and provide evidence to the Division that:

(a) The satellite meets the requirements in OAR chapter 333, divisions 500 through 535;

(b) The services at the satellite are integrated with the hospital;

(c) The financial operations of the satellite are integrated with the hospital;

(d) The hospital and the satellite have the same governing body;

(e) The satellite is under the ownership and control of the hospital;

(f) Staff at the satellite have privileges at the hospital;

(g) Medical records of the satellite are integrated with the hospital into a unified system;

(h) The facility is not subject to certificate of need requirements in ORS 442.315 to 442.361; and

(i) If the satellite is intended to provide emergency medical services, the satellite can comply with OAR 333-500-0027.

(3) A hospital applying for an emergency medical services satellite indorsement must also submit for its emergency department, the information described in OAR 333-500-0027(1)(e), for the previous six months.

(4) A satellite shall be subject to a plans review and must pass life safety code requirements.

(5) In order for a mobile satellite to be indorsed under a hospital's license, the applicant or licensee shall pay the appropriate fee and provide evidence to the Division that:

(a) The mobile satellite is operated in whole or in part by the hospital through lease, ownership or other arrangement;

(b) The services at the mobile satellite are integrated with the hospital;

(c) The financial operations of the mobile satellite are integrated with the hospital;

(d) The mobile satellite is physically separate from the hospital and other buildings on the hospital campus by at least 20 feet; and

(e) It meets the 2000 NFPA 101 Life Safety Code for mobile units.

(6) A mobile satellite shall keep and provide to the Division and the Fire Marshal upon request, a log that shows where the mobile satellite is located every day of the year, and its use. A copy of the log shall be kept in the mobile satellite at all times.

(7) A hospital that has a satellite that provides inpatient services that is indorsed under its license as of October 1, 2009, may continue to have that satellite indorsed under its license. On or after October 1, 2009, a satellite must meet the definition of satellite in OAR 333-500-0010(46) and comply with all other rules related to satellites in order to have a satellite indorsed under a hospital license.

(8) Nothing in these rules is meant to:

(a) Prevent a satellite as defined in OAR 333-500-0010(46) from providing outpatient medical services; or

(b) Permit the indorsement of satellite under a hospital license as a means to circumvent the certificate of need laws in ORS Chapter 442 and OAR chapter 333, divisions 545 through 670.

(9) The Division may revoke the indorsement of a satellite at any time if it determines a hospital or its satellite:

(a) Is not complying with this rule or OAR 333-500-0027, as applicable; or

(b) Is unable to ensure the safety of patients at the satellite.

333-500-0027
Emergency Medical Services Satellites

(1) A facility indorsed as a satellite under a hospital license for the provision of emergency medical services must, in addition to any requirements in OAR 333-500-0025:

(a) Operate 24 hours a day, seven days a week, 365 days a year;

(b) Comply with the hospital emergency department rule in OAR 333-520-0070;

(c) Develop written emergency department policies and procedures for all emergency medical services satellite operations including but not limited to:

(A) The type and scope of emergency medical services provided at the satellite;

(B) Integration of satellite operations with parent hospital surgical, laboratory, radiology, pharmacy, nutrition, and other departments to ensure timely provision of services;

(C) For a patient who cannot be provided the type and level of care needed to complete treatment of the patient's injury or condition within 24 hours of arrival at the satellite:

(i) Transport of the patient to the parent hospital for continuing care using appropriate transportation and personnel; or

(ii) Transfer to another receiving hospital with capability and capacity.

(d) Coordinate with:

(A) Any 9-1-1 jurisdiction within the 9-1-1 service area as those terms are defined in ORS 403.105 to ensure, to the greatest extent possible, that only patients who can receive an appropriate level of care at the satellite are transported to the satellite to limit the need for multiple emergency transports; and

(B) Ambulance services within the ambulance service area as those terms are defined in OAR 333-250-0010 to ensure, to the greatest extent possible, that only patients who can receive an appropriate level of care at the satellite are transported to the satellite to limit the need for multiple emergency transports; and

(e) On a quarterly basis, report to the Division, for each patient evaluated or treated at the satellite, a basic emergency medical services data set including but not limited to:

(A) Unique patient ID;

(B) Gender;

(C) Ethnicity;

(D) Race;

(E) Year of birth;

(F) Date and time of patient presentation to satellite;

(G) Chief complaint;

(H) Diagnosis;

(I) Discharge disposition;

(J) Date and time of patient discharge;

(K) Transport mode to and from the facility, including ambulance service provider, if applicable; and

(L) Facility transferred to, if applicable.

(2) A facility indorsed as a satellite under a hospital license for the provision of emergency medical services may not:

(a) Be located:

(A) In a county with three or more hospitals with an emergency department; or

(B) In a city with a hospital with an emergency department.

(b) Receive a trauma center categorization by the Division;

(c) Keep a patient for more than 24 hours; or

(d) Provide inpatient care.

333-500-0030
Annual License Fee

(1) The annual license fee for a hospital is as specified in ORS 441.020.

(2) If a hospital license covers a satellite or mobile satellite approved by the Division under OAR 333-500-0025, the applicable license fee shall be the sum of the license fees which would be applicable if each location or unit was separately licensed.

(3) The Authority may charge a reduced hospital fee or hospital satellite fee if the Division determines that charging the standard fee constitutes a significant financial burden.

333-500-0031
Fees for Complaint Investigations and Compliance Surveys

(1) In addition to an annual fee, the Division may charge a hospital a fee for:

(a) A complaint investigation, in an amount not to exceed $850;

(b) A full compliance survey, in an amount not to exceed $7,520;

(c) An on-site follow-up survey to verify compliance with a plan of correction, in an amount not to exceed $225; and

(d) An off-site follow-up survey to verify compliance with a plan of correction, in an amount not to exceed $85.

(2) During one calendar year, the Division may charge to all hospitals a total amount not to exceed:

(a) $91,000 for complaint investigations;

(b) $15,000 for full compliance surveys; and

(c) $6,700 for follow-up surveys.

(3)(a) The Division shall apportion the total amount charged under section (2) of this rule among hospitals at the end of each calendar year based on the number of complaint investigations, full compliance surveys and follow-up surveys performed at each hospital during the calendar year.

(b) The Division may not include investigations of employee complaints in a hospital's total number of complaint investigations.

(c) A hospital may not be charged fees in any calendar year under section (2) of this rule for more complaint investigations than the greater of:

(A) The rolling average for the hospital for the previous three years; or

(B) Two complaint investigations for a small hospital and five complaint investigations for a large hospital.

(d) Notwithstanding subsection (3)(c) of this rule, the Division may not charge a hospital for a number of complaint investigations that exceeds the number of complaint investigations actually conducted at the hospital during the calendar year.

333-500-0032
Classification

(1) A hospital shall be classified as one of the following:

(a) General Hospital;

(b) Low Occupancy Acute Care Hospital; or

(c) Mental or Psychiatric Hospital.

(2) A hospital's classification shall be determined by the type of services it provides, as described in OAR chapter 333, divisions 520 and 525, and the staffing requirements related to the provision of those services.

(a) A hospital classified as a general hospital shall:

(A) Provide at least general medical, maternity and surgical services;

(B) Have an emergency department;

(C) Have available on-site or through contract, dietary, laboratory, and radiology services;

(D) Have an on-site pharmacy;

(E) Have a pharmacist on call 24 hours a day, 7 days a week (24/7) to staff the pharmacy; and

(F) Have on-site or in-house 24/7 staffing for its laboratory and radiology services.

(b) A low occupancy acute care hospital shall:

(A) Have 25 or fewer inpatient beds;

(B) Provide at least general medical services;

(C) Have an emergency department;

(D) Have available on-site or through contract, dietary, laboratory, and radiology services;

(E) Have an on-site pharmacy or a drug room; and

(F) Have appropriately trained laboratory, radiology, and pharmacy staff on-site or on-call 24/7.

(c) A mental or psychiatric hospital shall:

(A) Be devoted primarily to the care of people suffering from mental illness;

(B) Have available on-site or through contract, dietary, laboratory, and radiology services;

(C) Have an on-site pharmacy or a drug room;

(D) Have appropriately trained laboratory, radiology, and pharmacy staff on-site or on-call 24/7; and

(E) Comply with the requirements in OAR 333-525-0000.

(3) The classification of each hospital shall be included on the license.

(4) A hospital licensed by the Division may not assume a descriptive title or hold itself out under a descriptive title other than the classification title established by the Division and under which the hospital is licensed. This rule applies to the name on the hospital and any stationery, advertising, media, or other representations made by the hospital. A general hospital and a low occupancy acute care hospital may be described as a "hospital" without any modifications. A mental or psychiatric hospital shall use a descriptive title that describes or is reflective of the specialty services it offers.

(5) A hospital may not change its license classification unless it reapplies for licensure on a form prescribed by the Division and submits a fee as required by ORS 441.020. The Division shall conduct an on-site survey prior to granting a hospital a new classification to determine compliance with this rule.

(6) No person shall hold itself out to the public as an emergency department (ED), emergency room (ER), emergency-, emergent- or emergi-care center or use any derivative term in a posted name or advertising that would give the impression that emergency medical services as that is defined in OAR 333-500-0010 is provided by the person at a particular facility unless that facility is a hospital licensed under ORS 441.025 with an emergency department. Use of the words "urgent" or "immediate" shall not be considered derivative terms.

333-500-0034
Application Review

(1) In reviewing an application for a new hospital the Division shall:

(a) Verify compliance with the applicable sections of ORS Chapters 441 and 476, and OAR 333-500 through 535, 675, and chapter 837;

(b) Determine whether a certificate of need is required and was obtained;

(c) Conduct an on-site licensing survey in coordination with the State Fire Marshal's Office; and

(d) Verify compliance with conditions of participation if the applicant has requested Medicare or Medicaid certification.

(2) In determining whether to license a hospital the Division shall consider factors relating to the health and safety of individuals to be cared for at the hospital and the ability of the operator of the hospital to safely operate the facility, and may not consider whether the hospital is or shall be a governmental, charitable or other nonprofit institution or whether it is or shall be an institution for profit.

333-500-0036
Approval of License Application

(1) The Division shall notify an applicant in writing if a license application is approved, and shall include the license with the appropriate classification.

(2) A license shall be issued only for the premises and persons or governmental units named in the application and it is not transferable or assignable.

(3) The license shall be conspicuously posted in an area where patients are admitted.

(4) No hospital licensed pursuant to the provisions of ORS Chapter 441 shall in any manner or by any means assert, represent, offer, provide or imply that such person or hospital is or may render care or services other than that which is permitted by or which is within the scope of the license issued to the hospital by the Division nor shall any service be offered or provided which is not authorized within the scope of the license issued to the hospital.

Expiration and Renewal of License

(1) Each license to operate a hospital shall expire on December 31 following the date of issue, and if a renewal is desired, the licensee shall make application and pay the appropriate fee at least 30 days prior to the expiration date upon a form prescribed by the Division.

(2) For emergency preparedness planning and licensing purposes, a licensee shall provide, in its application for license renewal:

(a) The number of beds currently in use or capable of being used;

(b) The total number of beds that could be used with only minor alterations, taking into consideration existing equipment, the ancillary service capability of the facility, and the physical environment required by OAR 333-500 through 535, as applicable; and

(c) The number of beds to be licensed.

(3) A single hospital license may cover more than one location if the licensee meets the requirements in OAR 333-500-0025.

(4) An applicant that has a certificate of accreditation and deemed status for Medicare certification from the Joint Commission or an accrediting organization approved by the Division shall provide the certificate to the Division with its renewal application, and shall include:

(a) All Joint Commission or approved accrediting organization survey and inspection reports; and

(b) Written evidence of all corrective actions underway, or completed, in response to Joint Commission or approved accrediting organization recommendations, including all progress reports.

(5) If an applicant wishes to renew its license and increase the number of beds licensed from the previous licensing year, the applicant shall include:

(a) Evidence of plans review approval as required by OAR 333-535 and 675 as applicable; and

(b) Evidence that a certificate of need was obtained, or is not required.

(6) The Division may not renew a license for any hospital if a certificate of need is required and has not been obtained pursuant to ORS 442.315.

(7) If the Division intends to deny a license renewal application, it shall issue of Notice of Proposed Denial of License Renewal Application in accordance with ORS 183.411 through 183.470.

Discontinuance and Recommencement of Operation of Hospitals

(1) If a hospital wishes to temporarily discontinue operation but retain its license to operate, the hospital shall notify the Division of the fact at least 14 days prior to the temporary discontinuance.

(2) A hospital shall issue a multimedia press release within 24 hours of the temporary discontinuance, notifying the public of hospital closure. Such notice shall include a procedure by which individuals may obtain their medical records.

(3) Before any patient is admitted to a hospital that has temporarily discontinued operation, the hospital shall request that the Division conduct an on-site survey to determine whether the hospital is in compliance with health facility licensing laws and conditions of participation, if applicable.

(4) A hospital may not renew operation until it receives approval, in writing, from the Division.

333-500-0060
Return of Hospital License and Hospital Closure

(1) If a hospital's license is suspended, revoked, expires, or if a hospital decides to permanently close, the license certificate in the licensee's possession shall be returned to the Division immediately.

(2) If the hospital is voluntarily permanently closed, the hospital shall issue a multimedia press release within 24 hours, notifying the public of facility closure. Such notice shall include a procedure by which individuals may obtain their medical records.

(3) A hospital shall notify the Division of a hospital's closure under section (2) of this rule at least 14 days prior to the closure and submit a plan for the storage and disposal of medical records. Medical records not claimed that are more than seven years old from the last date of discharge may be destroyed. Medical records not claimed that are less than seven years old from the last date of discharge shall be stored until they are more than seven years old from the last date of discharge. Medical records may be thinned to include only the admission/discharge sheet (face sheet), discharge summary, history and physical, operative report(s), pathology report(s), and X-ray report(s).

333-500-0065
Waivers

(1) While all hospitals are required to maintain continuous compliance with the Division's rules, these requirements do not prohibit the use of alternative concepts, methods, procedures, techniques, equipment, facilities, personnel qualifications or the conducting of pilot projects or research. A request for a waiver from a rule must be:

(a) Submitted to the Division in writing;

(b) Identify the specific rule for which a waiver is requested;

(c) The special circumstances relied upon to justify the waiver;

(d) What alternatives were considered, if any and why alternatives (including compliance) were not selected;

(e) Demonstrate that the proposed waiver is desirable to maintain or improve the health and safety of the patients, to meet the individual and aggregate needs of patients, and shall not jeopardize patient health and safety; and

(f) The proposed duration of the waiver.

(2) Upon finding that the hospital has satisfied the conditions of this rule, the Division may grant a waiver.

(3) A hospital may not implement a waiver until it has received written approval from the Division.

(4) During an emergency the Division may waive a rule that a hospital is unable to meet, for reasons beyond the hospital's control. If the Division waives a rule under this section it shall issue an order, in writing, specifying which rules are waived, which hospitals are subject to the order, and how long the order shall remain in effect.

333-501-0010
Investigations

(1) As soon as practicable after receiving a complaint, taking into consideration the nature of the complaint, Division staff will begin an investigation.

(2) A hospital shall permit Division staff access to the facility during an investigation.

(3) An investigation may include but is not limited to:

(a) Interviews of the complainant, patients of the hospital, patient family members, witnesses, hospital management and staff;

(b) On-site observations of patients, staff performance, and the physical environment of the hospital; and

(c) Review of documents and records.

(4) In determining whether a violation has occurred under OAR 333-501-0020(8), the Division will consider the facility name, advertising used, and related content.

(5) Except as otherwise specified in 42 CFR § 401, Subpart B, information obtained by the Division during an investigation of a complaint or reported violation under this section is confidential and not subject to public disclosure under ORS 192.410 to 192.505. Upon the conclusion of the investigation, the Division may publicly release a report of its findings but may not include information in the report that could be used to identify the complainant or any patient at the health care facility. The Division may use any information obtained during an investigation in an administrative or judicial proceeding concerning the licensing of a health care facility, and may report information obtained during an investigation to a health professional regulatory board as defined in ORS 676.160 as that information pertains to a licensee of the board.

333-501-0015
Surveys

(1) The Division shall, in addition to any investigations conducted under OAR 333-501-0010, conduct at least one on-site licensing survey of each hospital every three years to determine compliance with health care facility licensing laws and at such other times as the Division deems necessary.

(2) In lieu of an onsite inspection required under section (1) of this rule, the Division may accept:

(a) CMS certification by a federal agency or an approved accrediting organization; or

(b) A survey conducted within the previous three years by an accrediting organization approved by the Division, if:

(A) The certification or accreditation is recognized by the Division as addressing the standards and condition of participation requirements of the CMS and other standards set by the Division. Health care facilities must provide the Division with the letter from CMS indicating its deemed status;

(B) The health care facility notifies the Division to participate in any exit interview conducted by the federal agency or accrediting body; and

(C) The health care facility provides copies of all documentation concerning the certification or accreditation requested by the Division.

(3) A hospital shall permit Division staff access to the facility during a survey.

(4) A survey may include but is not limited to:

(a) Interviews of patients, patient family members, hospital management and staff;

(b) On-site observations of patients, staff performance, and the physical environment of the hospital facility;

(c) Review of documents and records; and

(d) Patient audits.

(5) A hospital shall make all requested documents and records available to the surveyor for review and copying.

(6) Following a survey Division staff may conduct an exit conference with the hospital administrator or his or her designee. During the exit conference Division staff shall:

(a) Inform the hospital representative of the preliminary findings of the inspection; and

(b) Give the person a reasonable opportunity to submit additional facts or other information to the surveyor in response to those findings.

(7) Following the survey, Division staff shall prepare and provide the hospital administrator or his or her designee specific and timely written notice of the findings.

(8) If the findings result in a referral to another regulatory agency, Division staff shall submit the applicable information to that referral agency for its review and determination of appropriate action.

(9) If no deficiencies are found during a survey, the Division shall issue written findings to the hospital administrator indicating that fact.

(10) If deficiencies are found, the Division shall take informal or formal enforcement action in compliance with OAR 333-501-0025 or 333-501-0030.

333-501-0020
Violations

In addition to non-compliance with any health care facility licensing law or condition of participation, it is a violation to:

(1) Refuse to cooperate with an investigation or survey, including but not limited to failure to permit Division staff access to the hospital, its documents or records;

(2) Fail to implement an approved plan of correction;

(3) Fail to comply with all applicable laws, lawful ordinances and rules relating to safety from fire;

(4) Refuse or fail to comply with an order issued by the Division;

(5) Refuse or fail to pay a civil penalty;

(6) Fail to comply with rules governing the storage of medical records following the closure of a hospital;

(7) Establish, conduct, maintain, manage or operate a health care facility or health maintenance organization, without a license; or

(8) Use the terms “emergency,” “emergency department (ED),” “emergency room (ER),” “emergency-,” “emergent-,” or “emergi- care center” or any derivative term in a posted name or advertising that would give the impression that emergency medical services as that is defined in OAR 333-500-0010 is provided by the person at a particular facility unless that facility is a hospital licensed under ORS 441.025 with an emergency department. Use of the words “urgent” or “immediate” shall not be considered derivative terms.

(9) A person not licensed as a hospital under ORS 441.025 with an emergency department using the terms prescribed in section (8) of this rule has 90 days from November 15, 2016 to come into compliance.

333-501-0025
Informal Enforcement

(1) If, during an investigation or survey Division staff document violations of health care facility licensing laws or conditions of participation, the Division may issue a statement of deficiencies that cites the law alleged to have been violated and the facts supporting the allegation.

(2) A signed plan of correction must be received by the Division within 10 business days from the date the statement of deficiencies was mailed to the hospital. A signed plan of correction

will not be used by the Division as an admission of the violations alleged in the statement of deficiencies.

(3) A hospital shall correct all deficiencies within 60 days from the date of the exit conference, unless an extension of time is requested from the Division. A request for such an extension shall be submitted in writing and must accompany the plan of correction.

(4) The Division shall determine if a written plan of correction is acceptable. If the plan of correction is not acceptable to the Division, the Division shall notify the hospital administrator in writing and request that the plan of correction be modified and resubmitted no later than 10 working days from the date the letter of non-acceptance was mailed to the administrator.

(5) If the hospital does not come into compliance by the date of correction reflected on the plan of correction or 60 days from date of the exit conference, whichever is sooner, the Division may propose to deny, suspend, or revoke the hospital license, or impose civil penalties.

333-501-0030
Formal Enforcement

(1) If, during an investigation or survey Division staff document substantial failure to comply with health care facility licensing laws, conditions of participation or if a hospital fails to pay a civil penalty imposed under ORS 441.170, the Division may issue a Notice of Proposed Suspension or Notice of Proposed Revocation in accordance with ORS 183.411 through 183.470.

(2) The Division may issue a Notice of Imposition of Civil Penalty for violations of health care facility licensing laws.

(3) At any time the Division may issue a Notice of Emergency License Suspension under ORS 183.430(2).

(4) If the Division revokes a hospital license, the order shall specify when, if ever, the hospital may reapply for a license.

333-501-0035
Nurse Staffing Audit Procedure

(1) The Authority shall conduct an on-site audit of each hospital once every three years to determine compliance with the requirements of ORS 441.152 to 441.177 and 441.192. The Authority shall notify the hospital and both co-chairs of the hospital nurse staffing committee three business days in advance of the audit.

(2) During an audit, the Authority shall review any hospital record and conduct any interview or site visit that is necessary to determine that the hospital is in compliance with the requirements of ORS 441.152 to 441.177 and 441.192.

(3) In conducting an audit, the Authority shall interview:

(a) Both co-chairs of the hospital nurse staffing committee; and

(b) Any additional hospital staff members deemed necessary to determine compliance with applicable nurse staffing laws. Interviews may address, but are not limited to, the following topics:

(A) Implementation and effectiveness of the hospital-wide staffing plan for nursing services;

(B) Input, if any, provided to the hospital nurse staffing committee; or

(C) Any other fact relating to hospital nursing services subject to the Authority's review.

(4) In conducting an audit, the Authority may also interview:

(a) Hospital staff that does not voluntarily come forward for an interview during an audit; and

(b) Hospital patients or family members. Interviews may address, but are not limited to, any concerns or complaints related to nurse staffing in the hospital.

(5) Following an audit, the Authority shall issue a written survey report that communicates the results of the audit no more than 30 business days after the survey closes. This survey report:

(a) Shall be issued to the hospital and both co-chairs of the hospital nurse staffing committee; and

(b) May include a notice of civil penalties that complies with ORS 441.175 and OAR 333-501-0045.

(6) If the survey report identifies any area of noncompliance, the hospital shall submit a written plan to correct each identified deficiency. This plan:

(a) Shall be called the plan of correction;

(b) Shall be submitted no more than 30 business days after receiving the Authority's survey report; and

(c) Shall be evaluated by the Authority for sufficiency.

(7) No more than 30 business days after receipt of the hospital's plan of correction, the Authority shall issue a written determination that communicates whether the plan of correction is sufficient. This determination:

(a) Shall be issued to the hospital and both co-chairs of the hospital nurse staffing committee; and

(b) Shall require the hospital to either:

(A) Revise and resubmit the rejected plan of correction no more than 30 business days after receiving the Authority's determination that the plan is insufficient; or

(B) Implement the approved plan of correction no more than 45 business days after receiving the Authority's determination that the plan is sufficient.

(8) Following the approval of the plan of correction, the Authority shall conduct a second audit of the hospital to verify that the hospital has implemented the approved plan of correction. This audit shall be conducted within 60 business days of the plan of correction approval date.

(9) The identity of an individual providing evidence during an audit will be kept confidential to the extent permitted by law.

333-501-0040
Nurse Staffing Complaint Investigation Procedures

(1) The Authority shall conduct an unannounced on-site investigation of a hospital within 60 calendar days after receiving a valid complaint against the hospital for violating a provision of ORS 441.152 to 441.177. A complaint is valid when an allegation, if assumed to be true, would violate a requirement of ORS 441.152 to 441.177.

(2) During an investigation, the Authority shall review any hospital record and conduct any interview or site visit that is necessary to determine whether the hospital has violated a provision of ORS 441.152 to 441.177.

(3) In conducting an investigation, the Authority may:

(a) Review any documentation that may be relevant to the complaint, including patient records; and

(b) Interview any person who may have information relevant to the complaint, including patients and family members.

(4) In reviewing information collected during an investigation, the Authority shall consider:

(a) The amount and strength of objective evidence, if any, that substantiates or refutes the complaint; and

(b) The number and credibility of witnesses, if any, who attest to or refute an alleged violation.

(5) Following an investigation, the Authority shall issue a written investigation report that communicates the results of the investigation no more than 30 business days after the investigation closes. This investigation report:

(a) Shall be issued to the hospital and both co-chairs of the hospital nurse staffing committee; and

(b) May include a notice of civil penalties that complies with ORS 441.175 and OAR 333-501-0045.

(6) If the investigation report identifies any area of noncompliance, the hospital shall submit a written plan to correct each identified deficiency. This plan:

(a) Shall be called the plan of correction;

(b) Shall be submitted no more than 30 business days after receiving the Authority's investigation report; and

(c) Shall be evaluated by the Authority for sufficiency.

(7) No more than 30 business days after receipt of the hospital's plan of correction, the Authority shall issue a written determination that communicates whether the plan of correction is sufficient. This determination:

(a) Shall be issued to the hospital and both co-chairs of the hospital nurse staffing committee; and

(b) Shall require the hospital to either:

(A) Revise and resubmit the rejected plan of correction no more than 30 business days after receiving the Authority's determination that the plan is insufficient; or

(B) Implement the approved plan of correction no more than 45 business days after receiving the Authority's determination that the plan is sufficient.

(8) Following the approval of the plan of correction, the Authority shall conduct a second investigation of the hospital to verify that the hospital has implemented the approved plan of correction. This investigation shall be conducted within 60 business days of the plan of correction approval date.

(9) The identity of an individual providing evidence during an investigation will be kept confidential to the extent permitted by law.

333-501-0045
Civil Penalties for Violations of Nurse Staffing Laws

(1) For the purposes of this rule, "safe patient care" has the meaning given to the term in OAR 333-510-0002.

(2) The Authority may impose civil penalties for a violation of any provision of ORS 441.152 to 441.177 and 441.185 if there is a reasonable belief that safe patient care has been or may be negatively impacted.

(3) Each violation of the written hospital-wide staffing plan shall be considered a separate violation.

(4) If imposed, the Authority will issue civil penalties in accordance with Table 1 of this rule.

(5) In determining whether to issue a civil penalty, the Authority will consider all relevant evidence including, but not limited to, witness testimony, written documents and observations.

(6) A civil penalty imposed under this rule shall comply with ORS 183.745.

(7) The Authority shall maintain for public inspection records of any civil penalties imposed on hospitals penalized under this rule.

333-501-0050
Civil Penalties for Violation of Smoking Prohibition

(1) If the Division determines that an administrator or person in charge of a hospital permits a person to smoke tobacco in a hospital or within 10 feet of a doorway, open window or ventilation intake of a hospital, the Division may assess a civil penalty of not more than $500 per day against the administrator or the person in charge of a hospital.

(2) In determining whether an administrator or person in charge of a hospital has permitted a person to smoke tobacco in violation of ORS 441.815, the Division shall consider whether:

(a) A hospital administrator or person in charge of a hospital has taken steps to enforce the smoking prohibitions, including calling law enforcement to report a violation;

(b) The hospital administrator or person in charge of a hospital took affirmative action to address any complaints about smoking in a hospital or within 10 feet of a doorway, open window or ventilation intake of a hospital; and

(c) A hospital administrator or person in charge of a hospital has taken steps to educate the public and staff about the smoking ban.

(3) A civil penalty issued under this rule shall not exceed $2,000 in any 30-day period.

(4) A civil penalty imposed under this rule shall comply with ORS 183.745.

Stat. Auth.: ORS 441.815

Hist.: PH 11-2009, f. & cert. ef. 10-1-09

333-501-0055
Civil Penalties, Generally

(1) This rule does not apply to civil penalties for violations of ORS 441.155, 441.166, 441.815, or 435.254 or rules adopted to implement these statutes.

(2) A person that violates a health care facility licensing law, including OAR 333-501-0020 (violations), is subject to the imposition of a civil penalty not to exceed $500 per day per violation.

(3) In addition to the penalties under section (2) of this rule, civil penalties may be imposed for violations of ORS 441.030 or 441.015(1).

(4) In determining the amount of a civil penalty the Division shall consider whether:

(a) The Division made repeated attempts to obtain compliance;

(b) The licensee has a history of noncompliance with health care facility licensing laws;

(c) The violation poses a serious risk to the public's health;

(d) The licensee gained financially from the noncompliance; and

(e) There are mitigating factors, such as a licensee's cooperation with an investigation or actions to come into compliance.

(5) The Division shall document its consideration of the factors in section (4) of this rule.

(6) Each day a violation continues is an additional violation.

(7) A civil penalty imposed under this rule shall comply with ORS 183.745.

333-501-0060
Approval of Accrediting Organizations

(1) An accrediting organization may request approval by the Division to ensure that hospitals meet state licensing standards.

(2) An accrediting organization shall request approval in writing and shall provide, at a minimum:

(a) Evidence that it is recognized as a deemed organization by CMS; or

(b) If the accrediting organization is not a deemed organization under CMS, provide:

(A) Documentation of program policies and procedures that its accreditation process meets state licensing standards;

(B) Accreditation history; and

(C) References from a minimum of two facilities currently receiving services from the organization.

(3) If the Division finds that an accrediting organization has the necessary qualifications to certify that state licensing standards have been met, the Division will enter into an agreement with the accrediting organization.

333-505-0005
Governing Body Responsibility

(1) In a multi-hospital system, one governing body may oversee multiple hospitals.

(2) The governing body of a hospital shall be responsible for the operation of the hospital, the selection of the medical staff and the quality of care rendered in the hospital. The governing body shall ensure that:

(a) All health care personnel for whom a state license or registration is required are currently licensed or registered;

(b) Qualified individuals allowed to practice in the hospital are credentialed and granted privileges consistent with their individual training, experience and other qualifications;

(c) Procedures for granting, restricting and terminating privileges exist and that such procedures are regularly reviewed to assure their conformity to applicable law;

(d) It has an organized medical staff responsible for reviewing the professional practices of the hospital for the purpose of reducing morbidity and mortality and for the improvement of patient care;

(e) A physician is not denied medical staff privileges at the facility solely on the basis that the physician holds medical staff membership or privileges at another health care facility;

(f) Licensed podiatric physicians and surgeons are permitted to use the hospital in accordance with ORS 441.063;

(g) All hospital employees and health care practitioners granted hospital privileges have been tested for tuberculosis in compliance with OAR 333-505-0080; and

(h) A notice, in a form specified by the Division, summarizing the provisions of ORS 441.162, 441.166, 441.168, 441.174, 441.176, 441.178, 441.192 is posted in a place where notices to employees and applicants are customarily displayed.

(3) A hospital may grant privileges to nurse practitioners in accordance with ORS 441.064 and subject to hospital rules governing credentialing and staff privileges.

(a) Privileges granted to nurse midwife nurse practitioners, if any, must be consistent with privileges granted to other medical staff and include:

(A) Admitting privileges that do not require a nurse midwife nurse practitioner to co-admit a patient with a physician who is a member of the medical staff; and

(B) Voting rights.

(b) A hospital may refuse to grant privileges to nurse practitioners only upon the same basis that privileges are refused to other licensed health care practitioners.

(4) A hospital shall require that every patient admitted shall be and remain under the care of a member of the medical staff as specified under the medical staff by-laws.

333-505-0010
Administrator

(1) Each hospital shall employ or contract with a chief executive officer (CEO) or administrator who is responsible for the operation of the hospital and hospital based services in a manner commensurate with the authority conferred by the governing body, supports the delivery of high quality hospital care and services and ensures compliance with all hospital policies and applicable state and federal laws and regulations. In determining the appropriate number of facilities for which a CEO or administrator is responsible, the governing body of the hospital or health system should consider distance between hospitals and the size and complexity of each facility.

(2) For hospitals with attached long-term care facilities, the CEO may function as administrator of both the hospital and the long-term care facility.

(3) The hospital shall notify the Division, in writing, of the voluntary or involuntary termination of the CEO or administrator as well as the appointment of a new CEO or administrator.

333-505-0020
Medical Staff

(1) The medical staff is responsible for reviewing the professional practices of the hospital for the purpose of reducing morbidity and mortality and for the improvement of patient care, and is accountable to the governing body.

(2) The hospital's medical staff organized pursuant to OAR 333-505-0005(1) shall include Medical Doctors and Doctors of Osteopathy, and may include other licensed health care practitioners as permitted by the governing body.

(3) The medical staff shall adopt and enforce by-laws, medical staff policies, and medical staff rules and regulations to carry out its responsibilities. The by-laws, medical staff policies, and medical staff rules and regulations must be approved by the governing body.

(4) By-laws, medical staff policies, and medical staff rules and regulations shall include but are not limited to:

(a) The organization of the medical staff, including qualifications for serving on the medical staff, nominations, election, appointment or removal of officers, and periodic review of its members;

(b) Criteria for credentialing health care practitioners and the process for applying for credentials;

(c) Criteria for restricting or terminating hospital privileges and the process for restricting or terminating hospital privileges;

(d) A process for periodically reviewing the procedures for granting, restricting, or terminating hospital privileges to ensure that procedures are being followed;

(e) Procedures for insuring that licensed health care practitioners with hospital privileges are acting within their scope of practice and acting consistent with the privileges granted;

(f) Procedures for the acceptance of verbal orders by those individuals authorized by law or their scope of practice to accept verbal orders;

(g) Criteria for tissue specimens and appliances that are subject to a macroscopic or microscopic pathology examination;

(h) Procedures for responding to medical emergencies, including contacting at least one physician in the event of a medical emergency; and

(i) Procedures for notifying patients orally and in writing of any financial interest as required by ORS 441.098.

(5) Amendments to medical staff by-laws shall be accomplished through a cooperative process involving both the medical staff and the governing body. Medical staff by-laws shall be adopted, repealed or amended when approved by the medical staff and the governing body. Approval shall not be unreasonably withheld by either. Neither the medical staff nor the governing body shall with-

hold approval if such appeal, amendment or adoption is mandated by law, statute or regulation or is necessary to obtain or maintain accreditation or to comply with fiduciary responsibilities or if the failure to approve would subvert the stated moral or ethical purposes of this institution.

(6) Physicians and all other health care practitioners with individual admitting privileges are subject to applicable provisions of the medical staff by-laws and rules governing admission and staff privileges.

333-505-0030
Organization, Hospital Policies

(1) As used in this rule, "lay caregiver" means:

(a) In paragraph (4)(b)(A), an individual who, at the request of a patient, agrees to provide aftercare to the patient in the patient's residence.

(b) In paragraph (4)(b)(B), which applies to patients that are hospitalized for mental health treatment:

(A) For a patient who is younger than 14 years of age, a parent or legal guardian of the patient;

(B) For a patient who is 14 years of age or older, an individual designated by the patient or a parent or legal guardian of the patient to the extent permitted under ORS 109.640 and 109.675.

(2) A hospital's internal organization shall be structured to include appropriate departments and services consistent with the needs of its defined community.

(3) A hospital shall adopt and maintain clearly written definitions of its organization, authority, responsibility and relationships.

(4) A hospital shall adopt, maintain and follow written patient care policies that include but are not limited to:

(a) Admission and transfer policies that address:

(A) Types of clinical conditions not acceptable for admission;

(B) Constraints imposed by limitations of services, physical facilities or staff coverage;

(C) Emergency admissions;

(D) Requirements for informed consent signed by the patient or legal representative of the patient for diagnostic and treatment procedures; such policies and procedures shall address informed consent of minors in accordance with provisions in ORS 109.610, 109.640, 109.670, and 109.675;

(E) Requirements for identifying persons responsible for obtaining informed consent and other appropriate disclosures and ensuring that the information provided is accurate and documented appropriately in accordance with these rules and ORS 441.098; and

(F) A process for the internal transfer of patients from one level or type of care to another.

(b) Discharge and termination of services policies that address:

(A) For patients who identify a lay caregiver to provide aftercare, development of a discharge plan for continuity of patient care including but not limited to:

(i) Assessment of the patient's ability for self-care;

(ii) Opportunity for both the patient and lay caregiver to participate in discharge planning;

(iii) Instructions or training provided to the patient and lay caregiver, prior to discharge, for the lay caregiver to provide assistance with activities of daily living, medical or nursing tasks such as wound care, administering medications, or the operation of medical equipment, or other assistance relating to the patient's condition; and

(iv) Notification of the lay caregiver that patient is being discharged or transferred.

(B) On and after July 1, 2016 for patients hospitalized for mental health treatment, requirements that the hospital:

(i) Encourage the patient to sign an authorization form allowing for the disclosure of information that is necessary for a lay caregiver to participate in the patient's discharge planning and to provide appropriate support measures to the patient;

(ii) Assess the patient's risk of suicide with input from the patient's lay caregiver, if applicable;

(iii) Assess the long-term needs of the patient which include but are not limited to:

(I) Community-based services;

(II) Capacity for self-care; and

(III) Appropriate patient care where patient resided at time of admission;

(iv) Develop a process to coordinate the patient's care and transition the patient to outpatient treatment that may include community-based providers, peer support, lay caregivers or other individuals who can implement the patient's care plan; and

(v) Schedule a follow-up appointment for no later than seven days after discharge. If a follow-up appointment cannot be scheduled within seven days, the hospital must document why.

(c) Patient rights;

(d) Housekeeping;

(e) All patient care services provided by the hospital;

(f) Maintenance of the hospital's physical plant, equipment used in patient care and patient environment;

(g) Treatment or referral of acute sexual assault patients in accordance with ORS 147.403; and

(h) Identification of patients who could benefit from palliative care in order to provide information and facilitate access to appropriate palliative care in accordance with ORS 413.273.

(5) Discharge policies developed in accordance with paragraph (4)(b)(A) of this rule must be publically available and:

(a) Must specify requirements for documenting who is designated by the patient as the lay caregiver and details of the discharge plan;

(b) May incorporate established evidence based practices;

(c) Must ensure that discharge planning is appropriate to the needs and acuity of the patient and the abilities of the lay caregiver;

(d) Must not delay a patient's discharge or transfer to another facility; and

(e) Must not require the disclosure of protected health information without obtaining a patient's consent as required by state and federal laws.

(6) In addition to the policies described in section (3) of this rule, a hospital shall, in accordance with the Patient Self-Determination Act, 42 CFR 489.102, adopt policies and procedures that require (applicable to all capable individuals 18 years of age or older who are receiving health care in the hospital):

(a) Providing to each adult patient, including emancipated minors, not later than five days after an individual is admitted as an inpatient, but in any event before discharge, the following in written form, without recommendation:

(A) Information on the rights of the individual under Oregon law to make health care decisions, including the right to accept or refuse medical or surgical treatment and the right to execute directives and powers of attorney for health care;

(B) Information on the policies of the hospital with respect to the implementation of the rights of the individual under Oregon law to make health care decisions;

(C) A copy of the directive form set forth in ORS 127.531, along with a disclaimer attached to each form in at least 16-point bold type stating "You do not have to fill out and sign this form."; and

(D) The name of a person who can provide additional information concerning the forms for directives.

(b) Documenting in a prominent place in the individual's medical record whether the individual has executed a directive.

(c) Compliance with Oregon law relating to directives for health care.

(d) Educating the staff and the community on issues relating to directives.

(7) A hospital's transfer agreements or contracts shall clearly delineate the responsibilities of parties involved.

(8) Patient care policies shall be evaluated triennially and rewritten as needed, and presented to the governing body or a des-

ignated administrative body for approval triennially. Documentation of the evaluation is required.

(9) A hospital shall have a system, described in writing, for the periodic evaluation of programs and services, including contracted services.

Personnel

(1) A hospital shall:

(a) Maintain a sufficient number of qualified personnel to provide effective patient care and all other related services.

(b) Have written personnel policies and procedures that are available to personnel.

(c) Provide orientation for new employees.

(d) Have an annual continuing education plan.

(e) Have a job description for each position that delineates the qualifications, duties, authority and responsibilities inherent in each position.

(f) Provide an annual work performance evaluation for each employee with appropriate records maintained.

(g) Have an employee health screening program for the purpose of protecting patients and employees from communicable diseases, including but not limited to requiring tuberculosis testing for employees in accordance with OAR 333-505-0080.

(2) A hospital shall restrict the work of employees with restrictable diseases in accordance with OAR 333-019-0010.

(3) The actions taken by a hospital under this rule shall be fully documented for each employee and made available to Division representatives upon request.

333-505-0050

Medical Records

(1) A medical record shall be maintained for every patient admitted for care in a hospital.

(2) A legible reproducible medical record shall include, but is not limited to (as applicable):

(a) Admitting identification data including date of admission.

(b) Chief complaint.

(c) Pertinent family and personal history.

(d) Medical history, physical examination report and provisional diagnosis as required by OAR 333-510-0010.

(e) Admission notes outlining information crucial to patient care.

(f) All patient admission, treatment, and discharge orders.

(A) All patient orders shall be initiated, dated, timed and authenticated by a licensed health care practitioner in accordance with section (7) of this rule.

(B) Documentation of verbal orders shall include:

(i) The date and time the order was received;

(ii) The name and title of the health care practitioner who gave the order; and

(iii) Authentication by the authorized individual who accepted the order, including the individual's title.

(C) Verbal orders shall be dated, timed, and authenticated promptly by the ordering health care practitioner or another health care practitioner who is responsible for the care of the patient.

(D) For purposes of this rule, a verbal order includes but is not limited to an order given over the telephone.

(g) Clinical laboratory reports as well as reports on any special examinations. (The original report shall be recorded in the patient's medical record.)

(h) X-ray reports bearing the identification of the originator of the interpretation.

(i) Consultation reports when such services have been obtained.

(j) Records of assessment and intervention, including graphic charts and medication records and appropriate personnel notes.

(k) Discharge planning documentation in accordance with OAR 333-505-0030(5)(a).

(l) Discharge summary including final diagnosis.

(m) Autopsy report if applicable.

(n) Such signed documents as may be required by law.

(o) Informed consent forms that document:

(A) The name of the hospital where the procedure or treatment was undertaken;

(B) The specific procedure or treatment for which consent was given;

(C) The name of the health care practitioner performing the procedure or administering the treatment;

(D) That the procedure or treatment, including the anticipated benefits, material risks, and alternatives was explained to the patient or the patient's representative or why it would have been materially detrimental to the patient to do so, giving due consideration to the appropriate standards of practice of reasonable health care practitioners in the same or a similar community under the same or similar circumstances;

(E) The manner in which care will be provided in the event that complications occur that require health services beyond what the hospital has the capability to provide;

(F) The signature of the patient or the patient's legal representative; and

(G) The date and time the informed consent was signed by the patient or the patient's legal representative.

(p) Documentation of the disclosures required in ORS 441.098.

(3) A medical record of a surgical patient shall include, in addition to other record requirements, but is not limited to:

(a) Preoperative history, physical examination and diagnosis documented prior to operation.

(b) Anesthesia record including preanesthesia assessment and plan for anesthesia, records of anesthesia, analgesia and medications given in the course of the operation and postanesthetic condition.

(c) A record of operation dictated or written immediately following surgery and including a complete description of the operation procedures and findings, postoperative diagnostic impression, and a description of the tissues and appliances, if any, removed. When the dictated operative report is not placed in the medical record immediately after surgery, an operative progress note shall be entered in the medical record after surgery to provide pertinent information for any individual required to provide care to the patient.

(d) Postanesthesia recovery progress notes.

(e) Pathology report on tissues and appliances, if any, removed at the operation.

(4) An obstetrical record for a patient, in addition to the requirements for medical records, shall include but is not limited to:

(a) The prenatal care record containing at least a serologic test result for syphilis, Rh factor determination, and past obstetrical history and physical examination.

(b) The labor and delivery record, including reasons for induction and operative procedures, if any.

(c) Records of anesthesia, analgesia, and medications given in the course of delivery.

(5) A medical record of a newborn or stillborn infant, in addition to the requirement for medical records, shall include but is not limited to:

(a) Date and hour of birth; birth weight and length; period of gestation; sex; and condition of infant on delivery (Apgar rating is recommended).

(b) Mother's name and hospital number.

(c) Record of ophthalmic prophylaxis or refusal of same.

(d) Physical examination at birth and at discharge.

(e) Progress and nurse's notes including temperature; weight and feeding data; number, consistency and color of stools; urinary output; condition of eyes and umbilical cord; condition and color of skin; and motor behavior.

(f) Type of identification placed on infant in delivery room;

(g) Newborn hearing screening tests in accordance with OAR 333-020-0130.

(6) A patient's emergency room, outpatient and clinic records, in addition to the requirements for medical records, shall be maintained and available to the other professional services of the hospital and shall include but are not limited to:

(a) Patient identification.

(b) Admitting diagnosis, chief complaint and brief history of the disease or injury.

(c) Physical findings.

(d) Laboratory and X-ray reports (if performed), as well as reports on any special examinations. The original report shall be authenticated and recorded in the patient's medical record.

(e) Diagnosis.

(f) Record of treatment, including medications.

(g) Disposition of case with instructions to the patient.

(h) Signature or authentication of attending physician.

(i) A record of the pre-hospital report form (when patient is brought in by ambulance) shall be attached to the emergency room record.

(7) All entries in a patient's medical record shall be dated, timed and authenticated.

(a) Authentication of an entry requires the use of a unique identifier, including but not limited to a written signature or initials, code, password, or by other computer or electronic means that allows identification of the individual responsible for the entry.

(b) Systems for authentication of dictated, computer, or electronically generated documents must ensure that the author of the entry has verified the accuracy of the document after it has been transcribed or generated.

(8) The following records shall be maintained in written or computerized form for the time period specified:

(a) Permanent:

(A) Patient's register, containing admissions and discharges;

(B) Patient's master index;

(C) Register of all deliveries, including live births and stillbirths;

(D) Register of all deaths; and

(E) Register of operations.

(b) Seven years:

(A) Register of outpatients; and

(B) Emergency room register.

(c) Blood banking register shall be retained for 20 years.

(9) The completion of the medical record shall be the responsibility of the attending qualified member of the medical staff. Any licensed health care practitioner responsible for providing or evaluating the service provided shall complete and authenticate those portions of the record that pertain to their portion of the patient's care. The appropriate individual shall authenticate the history and physical examination, operative report, progress notes, orders and the summary. In a hospital using interns, such orders must be according to policies and protocols established and approved by the medical staff. An authentication of a licensed health care practitioner on the face sheet of the medical record does not suffice to cover the entire content of the record:

(a) Medical records shall be completed by a licensed health care practitioner and closed within four weeks following the patient's discharge.

(b) If a patient is transferred to another health care facility, transfer information shall accompany the patient. Transfer information shall include but is not limited to:

(A) The name of the hospital from which they were transferred;

(B) The name of physician or other health care practitioner to assume care at the receiving facility;

(C) The date and time of discharge;

(D) The current medical findings;

(E) The current nursing assessment;

(F) Current medical history and physical information;

(G) Current diagnosis;

(H) Orders from a physician or other licensed health care practitioner for immediate care of the patient;

(I) Operative report, if applicable;

(J) TB test, if applicable; and

(K) Other information germane to patient's condition.

(c) If the discharge summary is not available at time of transfer, it shall be transmitted to the new facility as soon as it is available.

(10) Diagnoses and operations shall be expressed in standard terminology. Only abbreviations approved by the medical staff may be used in the medical records.

(11) Medical records shall be filed and indexed. Filing shall consist of an alphabetical master file with a number cross-file. Indexing is to be done according to diagnosis, operation, and qualified member of the medical staff, using a system such as the International or Standard nomenclature systems.

(12) Medical records are the property of the hospital. The medical record, either in original, electronic or microfilm form, shall not be removed from the hospital except where necessary for a judicial or administrative proceeding. Treating and attending physicians shall have access to medical records. When a hospital uses off-site storage for medical records, arrangements must be made for delivery of these records to the hospital when needed for patient care or other hospital activities. Precautions must be taken to protect patient confidentiality.

(13) Authorized personnel of the Division shall be permitted to review medical records and patient registers as necessary to determine compliance with health care facility licensing laws.

(14) Medical records shall be kept for a period of at least 10 years after the date of last discharge. Original medical records may be retained on paper, microfilm, electronic or other media.

(15) Medical records shall be protected against unauthorized access, fire, water and theft.

(16) If a hospital changes ownership, all medical records in original, electronic or microfilm form shall remain in the hospital and it shall be the responsibility of the new owner to protect and maintain these records.

(17) If a hospital closes, its medical records and the registers required under section (8) of this rule may be delivered and turned over to any other hospital in the vicinity willing to accept and retain the same as provided in section (12) of this rule. A hospital which closes permanently shall follow the procedure for Division and public notice regarding disposal of medical records under OAR 333-500-0060.

(18) All original clinical records or photographic or electronic facsimile thereof, not otherwise incorporated in the medical record, such as X-rays, electrocardiograms, electroencephalograms, and radiological isotope scans shall be retained for seven years after a patient's last exam date if professional interpretations of such graphics are included in the medical records. Mammography images shall be retained for 10 years after a patient's last exam date.

(19) If a qualified medical record practitioner, RHIT (Registered Health Information Technician) or RHIA (Registered Health Information Administrator) is not the Director of the Medical Records Department, periodic and at least annual consultation must be provided by a qualified medical records consultant, RHIT/RHIA. The visits of the medical records consultant shall be of sufficient duration and frequency to review medical record systems and assure quality records of the patients. The contract for such services shall be made available to the Division.

(20) A current written policy on the release of medical record information including a patient's access to his or her medical record shall be maintained in the medical records department.

(21) A hospital is not required to keep a medical record in accordance with this rule for a person referred to a hospital ancillary department for a diagnostic procedure or health screening by a private physician, dentist, or other licensed health care practitioner acting within his or her scope of practice.

(22) Pursuant to ORS 441.059, the rules of a hospital that govern patient access to previously performed X-rays or diagnostic laboratory reports shall not discriminate between patients of chiropractic physicians and patients of other licensed health care practitioners permitted access to such X-rays and diagnostic laboratory reports.

(23) Nothing in this rule is meant to prohibit or discourage a hospital from maintaining its records in electronic form.

333-505-0060
Quality Assessment and Performance Improvement

(1) The governing body of a hospital must ensure that there is an effective, written, facility-wide quality assessment and performance improvement program to evaluate and monitor the quality and appropriateness of patient care.

(2) All organized services related to patient care, including services furnished by a contractor, must be evaluated.

(3) Written documentation of quality assessment and performance improvement activities shall be recorded at least quarterly.

(4) Healthcare associated infections, adverse drug reactions, errors in administration of drugs, and blood and blood product transfusions must be evaluated.

(5) All medical and surgical services performed in the hospital must be evaluated as they relate to appropriateness of diagnosis and treatment.

(6) The hospital must have an ongoing plan, consistent with available community and hospital resources, to provide and make available social work, psychological, and educational services to meet the medically-related needs of its patients.

333-505-0070
Infection Control and Prevention

(1) A hospital shall establish and maintain an active facility-wide program for the control and prevention of infection. This program shall, at a minimum, include the following:

(a) Identification of existing or potential infections in patients, employees, medical staff, and health care practitioners with hospital privileges;

(b) Control of factors affecting the transmission of infections and communicable diseases;

(c) Provision for orienting and educating all medical staff, health care practitioners with hospital privileges and employees on the cause, transmission and prevention of infections; and

(d) Collection, analysis and use of data relating to infections in the hospital.

(2) A hospital shall be responsible for the development, implementation and periodic review of policies under section (1) of this rule.

(3) In the hospital, the infection control program shall be managed by a qualified individual and overseen by a multidisciplinary committee with responsibility for investigating, controlling and preventing infections in the facility. The composition of the committee may vary but shall include at least representation from major departments and services and shall provide for consultation both from other departments and services and to them.

(4) A hospital shall comply with all rules of the Division for the control of communicable diseases.

(5) A hospital shall have a system of isolation that prevents the transmission of infections in hospitals.

(a) A system of isolation shall:

(A) Follow the principles of epidemiology and disease transmission;

(B) Include precautions to interrupt the spread of infection by all routes that are likely to be encountered in the hospital; and

(C) Be reviewed and approved by a committee responsible for the oversight of the infection control program.

(b) Guidelines for isolation precautions are published periodically by the Hospital Infection Control Practices Advisory Committee (HICPAC) and may be used by a hospital as a reference in order to maintain up-to-date isolation practices.

(6) The hospital multidisciplinary committee shall oversee all aspects of the infection control program, and will ensure that the

system of isolation implemented addresses the following fundamentals of infection control:

(a) Handwashing and gloving;

(b) Patient placement;

(c) Transport of infected patients;

(d) Protective apparel;

(e) Patient care equipment and articles;

(f) Linen and laundry;

(g) Dishes, glasses, cups, and eating utensils; and

(h) Routine and terminal cleaning.

(7) A hospital shall have policies and procedures related to cleaning, disinfection, sterilization, and disposal of patient care items.

(a) All instruments or equipment used in patient care should be disinfected or sterilized based on whether the item is critical, semi-critical, or non-critical.

(A) Critical items are those patient care items which enter the vascular system. These items must be sterile and should be sterilized by a Federal Drug Administration (FDA) approved method or purchased sterile for use.

(B) Semi-critical items are those patient care items which come into contact with mucous membranes or nonintact skin. These items must be free of all organisms except spores. Semi-critical items require high level disinfection using wet pasteurization or chemical sterilants which are FDA-approved.

(C) Non-critical items are those items that come into contact only with intact skin. Low level disinfectants may be used which have been approved by the Environmental Protection Agency (EPA) as hospital disinfectants.

(b) All patient care items shall be disposed of properly at discharge or processed according to the categorization of the items, i.e. critical, semi-critical, or non-critical. Single patient use equipment must be disposed of or sent home with the patient at discharge.

333-505-0080
Tuberculosis Control

(1) As used in this rule, "person" means any:

(a) Hospital employee;

(b) Hospital contractor;

(c) Health care practitioner granted privileges by the hospital; or

(d) Hospital volunteer or student.

(2) A hospital shall comply with the Guidelines for Preventing the Transmission of Mycobacterium tuberculosis in Health-Care Settings, 2005, published in the Morbidity and Mortality Weekly Report by the Centers for Disease Control and Prevention (CDC), December 30, 2005, and incorporated by reference.

(3) A hospital shall obtain documentation that tuberculosis (TB) testing has been conducted in a manner consistent with the CDC guidelines for any person who enters a hospital and who has contact with patients, enters rooms that patients may enter, or who handles clinical specimens or other material from patients or their rooms.

(4) A hospital shall require documentation of baseline TB screening conducted in accordance with the CDC Guidelines, within six weeks of the date of hire, date of executed contract or date of being granted hospital credentials.

(5) A hospital that is classified as "potential ongoing transmission" under CDC Guidelines shall consult with the Oregon TB control program within the Division, for guidance on the extent of TB testing required.

(6) If a hospital learns that a person or a patient at the hospital is diagnosed with communicable TB, the hospital shall notify the local public health authority and conduct an investigation to identify contacts. If the Division or local public health authority conducts its own investigation, a hospital shall cooperate with that investigation and provide the Division or local public health authority with any information necessary for it to conduct its investigation.

(7) A hospital shall notify the local public health administrator of its intent to discharge a patient known to have active TB disease.

333-505-0090
Request for Tissues and Organs

(1) A hospital administrator or his or her designee shall contact the appropriate organ or tissue procurement organization when a patient dies at the hospital or when a patient's death is imminent.

(2) After consultation with an organ or tissue procurement organization, the hospital administrator or his or her designee shall communicate with the patient or legal next-of-kin and request that the patient's organs and tissue be donated as an anatomical gift, unless:

(a) The medical record shows that the patient has made an anatomical gift;

(b) The appropriate procurement organizations or the medical examiner has ruled out the potential donor based on accepted medical standards;

(c) The legal next-of-kin are not available because:

(A) They cannot be located in a timely manner after reasonable effort by the procurement organizations or the hospital; or

(B) They are mentally incompetent.

(d) In the opinion of the attending physician after consulting with the procurement organization, it is determined that the request would contribute toward the severe emotional distress of the patient or legal next-of-kin.

(3) For purposes of this rule, "legal next-of-kin" is the class of persons described in ORS 97.965 and in addition to spouse, includes Oregon registered domestic partner.

(4) The hospital shall document the request or the absence of a request, in the medical record of the decedent and provide information on the request and its disposition to the person filing the death certificate.

(5) An anatomical gift by a legal next-of-kin or authorized person may be made by a document of gift signed by the donor or made by his or her telegraphic, recorded telephonic or other recorded message.

(6) A hospital or training requestor who acts or omits to act with probable cause in accord with the terms of ORS 97.951 through 97.978 and these rules is not subject to criminal or civil liability.

333-505-0100
Training for Requestors

(1) All persons making requests for donations of organs, tissues, and eyes shall have received hospital-provided or procurement organization-provided training in accordance with this rule.

(2) Training for requestors shall include but is not limited to:

(a) The legal requirements of ORS 97.951 through 97.978 and these rules, and the necessity for completion of the portion of the death certificate regarding organ, tissue and eye retrieval.

(b) Specifics of organ tissue and eye donation, including: identification of potential donors; medical uses of donated organs, tissues, and eyes; the history and success of transplant programs; reimbursement mechanisms for expenses relating to organ, tissue, and eye retrieval;

(c) A review of the psychological, social, cultural, ethical and religious factors affecting willingness to donate organs, tissues, and eyes, and resistance to organ, tissue, and eye donation, and a review of materials developed to train individuals to request organ, tissue, and eye donation with reasonable discretion and sensitivity;

(d) The family's right to refuse and the need to respect this right;

(e) The effect on funeral arrangements and cost; and

(f) The importance of consulting with the attending physician.

(3) Requestors shall be able to demonstrate knowledge of the training content as defined in this rule.

333-505-0110
Hospital Compliance

(1) A hospital shall demonstrate compliance with OAR 333-505-0090 and 333-505-0100 by maintaining a file, available for Division review, including the following:

(a) Training curriculum;

(b) Hospital policy and procedure regarding request and training for tissues, eyes, and organs;

(c) If not included in policy and procedure, criteria for selection of requestor;

(d) Method by which 24-hour scheduling of requestor(s) is established; and

(e) Policies and procedures for communicating with procurement organizations regarding the availability of donor organs, tissues, and eyes.

(2) Hospitals may provide appropriate procurement organization personnel access to medical records of decedents on a periodic basis. The timing of this review will be mutually agreed to by both the hospital and procurement organizations. Procurement organizations will provide appropriate staff to conduct the review in the hospital. The purpose of this review will be to provide information to the hospital to assist in compliance with state and federal regulations related to organ, tissue and eye donation. If the hospital agrees to the review, all findings will remain strictly confidential.

(3) In the case of a hospital in which organ transplants are performed, the hospital must be a member of the Organ Procurement and Transplantation network established under Section 372 of the Public Health Service Act and abide by its rules and requirements.

333-505-0120
Emergency Contraception

(1) A hospital providing care to a female victim of sexual assault shall:

(a) Promptly provide the victim with unbiased, medically and factually accurate written and oral information about emergency contraception;

(b) Promptly orally inform the victim of her option to be provided emergency contraception at the hospital; and

(c) If requested by the victim and not medically contraindicated, provide the victim of any child bearing age with emergency contraception immediately at the hospital, notwithstanding ORS 147.397 (defining the availability of the Sexual Assault Victims' Emergency Medical Response fund "SAVE Fund").

(d) For purposes of this rule, "emergency contraception" means the use of a drug or device that is approved by the United States Food and Drug Administration to prevent pregnancy after sexual intercourse.

(2) A hospital shall post a written notice, approved by the Division, to inform victims of their right to be provided emergency contraception at the hospital.

(3) Pursuant to ORS 109.640, anyone under the age of 18 has the right to consent to birth control information and services, including emergency contraception.

(4) A hospital shall document in writing that the information required to be given to a female victim of sexual assault in section (1) of this rule, was provided. Failure to have such documentation may result in the issuance of a civil penalty.

(5) A hospital may only provide the victim informational materials about emergency contraception that has been approved by the Division.

(6) The Division shall investigate complaints of violations of sections (1) or (2) of this rule in accordance with ORS 441.057.

(7) In addition to investigating complaints, the Division shall monitor compliance with ORS 435.254 and this rule during scheduled visits to hospitals.

(8) The Division may impose a civil penalty, not to exceed $1000, against a hospital for each violation of ORS 435.254 or these rules. In addition to the assessment of a civil penalty, the Ore-

gon Health Authority will require corrective actions from the hospital.

(a) For the first violation the civil penalty shall be $250;

(b) For the second violation the civil penalty shall be $500;

(c) For the third and any subsequent violations, the civil penalty shall be $1000.

DIVISION 510

PATIENT CARE AND NURSING SERVICES IN HOSPITALS

333-510-0001
Applicability

These rules apply to all hospitals, regardless of classification.

Stat. Auth.: ORS 413.042, 441.055
Stats. Implemented: ORS 441.055 & 442.015
Hist.: HD 21-1993, f. & cert. ef. 10-28-93; PH 11-2009, f. & cert. ef. 10-1-09

333-510-0002
Definitions

As used in OAR chapter 333, division 510, the following definitions apply:

(1) "Direct Care Registered Nurse" means a nurse who is routinely assigned to a patient care unit, who is replaced for scheduled and unscheduled absences and includes charge nurses if the charge nurse is not management services.

(2) "Direct Care Staff" means registered nurses, licensed practical nurses and certified nursing assistants that are routinely assigned to patient care units and are replaced for scheduled or unscheduled absences.

(3) "Direct Care Staff Member" means an individual who is a direct care registered nurse, licensed practical nurse or certified nursing assistant who is routinely assigned to a patient care unit and is replaced for a scheduled or unscheduled absences.

(4) "Epidemic" means the occurrence of a group of similar conditions of public health importance in a community or region that are in excess of normal expectancy and that are from a common or propagated source.

(5) "Evidence Based Standards" means standards that have been scientifically developed, are based on current literature, and are driven by consensus.

(6) "Hospital" means a hospital as described in ORS 442.015 and an acute inpatient care facility as defined in ORS 442.470.

(7) "Mandatory Overtime" is any time that exceeds those time limits specified in ORS 441.166 unless the nursing staff member voluntarily chooses to work overtime.

(8) "Nurse Manager" means a registered nurse who has administrative responsibility 24 hours a day, 7 days a week for a patient care unit, units or hospital and who is not replaced for short-term scheduled or unscheduled absences.

(9) "Nursing care intensity" means the level of patient need for nursing care as determined by the nursing assessment.

(10) "Nursing staff" means registered nurses, licensed practical nurses and certified nursing assistants.

(11) "Nursing staff member" means an individual who is a registered nurse, licensed practical nurse or a certified nursing assistant.

(12) "On Call" means a scheduled state of availability to return to duty, work-ready, within a specified period of time.

(13) "On Call Nursing Staff" means individual nursing staff members or nursing service agencies maintained by a hospital that are available and willing to cover nursing staff shortages due to unexpected nursing staff absences or unanticipated increased nursing service needs.

(14) "Patient acuity" means the complexity of patient care needs requiring the skill and care of nursing staff.

(15) "Potential Harm" or "At Risk of Harm" means that an unstable patient will be left without adequate care for an unacceptable period of time if the assigned nursing staff member leaves the assignment or transfers care to another nursing staff member.

(16) "Quorum" means that a majority, or one-half plus one, of the staffing committee members are present during a staffing committee meeting.

(17) "Safe Patient Care" means nursing care that is provided appropriately, in a timely manner, and meets the patient's health care needs. The following factors may be, but are not in all circumstances, evidence of unsafe patient care:

(a) A failure to implement the written nurse staffing plan;

(b) A failure to comply with the patient care plan;

(c) An error that has a negative impact on the patient;

(d) A patient report that his or her nursing care needs have not been met;

(e) A medication not given as scheduled;

(f) The nursing preparation for a procedure that was not accomplished on time;

(g) A nursing staff member who was practicing outside his or her authorized scope of practice;

(h) Daily unit-level staffing that does not include coverage for all known patients, taking into account the turnover of patients;

(i) The skill mix of employees and the relationship of the skill mix to patient acuity and nursing care intensity of the workload is insufficient to meet patient needs; or

(j) An unreasonable delay in responding to a request for nursing care made by a patient or made on behalf of a patient by his or her family member.

(18) "Staffing Committee" means the hospital nurse staffing committee.

(19) "Staffing Plan" means the written hospital-wide staffing plan for nursing services developed by the hospital nurse staffing committee.

(20) "Standby" means a scheduled state of availability to return to duty, work-ready within a specified period of time.

(21) "Waiver" means a variance to the hospital-wide staffing plan requirements as described in ORS 441.164.

Stat. Auth.: ORS 413.042 & 441.151 – 441.177

333-510-0010
Patient Admission and Treatment Orders

(1) No patient, including patients admitted for observation status, shall be admitted to a hospital except on the order of an individual who has admitting privileges. The admitting physician or nurse practitioner shall provide sufficient information at the time of admission to establish that care can be provided to meet the needs of the patient. Admission medical information shall include a statement concerning the admitting diagnosis and general condition of the patient. Other pertinent medical information, orders for medication, diet, and treatments shall also be provided, as well as a medical history and physical.

(2) Within 24 hours of a patient's admission, a hospital shall ensure that:

(a) The patient's medical history is taken and a physical examination performed, unless:

(A) A medical history and physical examination has been completed within 30 days prior to admission, as provided in the medical staff rules and regulations; or

(B) The patient is readmitted within a month's time for the same or related condition, as long as an interval note is completed.

(b) The patient is given a provisional diagnosis.

(3) Even if a medical history or physical examination at the time of admission is not required under section (2) of this rule, a hospital shall ensure that any changes crucial to patient care are noted in an admission note.

(4) Visits from licensed health care providers shall be according to patient's needs. Initial and ongoing assessments shall be performed for each patient and the results and observations recorded in the medical record.

(5) A Doctor of Medicine (MD) or Doctor of Osteopathy (DO) or nurse practitioner with admitting privileges shall be responsible, as permitted by the individual's scope of practice for the care of any medical problem that may be present on admission or that may arise during an inpatient stay.

(6) No medication or treatment shall be given except on the order of a licensed healthcare professional authorized to give such orders within the State of Oregon.

333-510-0020
Nursing Care Management

(1) The nursing care of each patient, including patients admitted for observation status, in a hospital shall be the responsibility of a registered nurse (RN).

(2) The RN will only provide services to the patients for which the RN is educationally and experientially prepared and for which competency has been maintained.

(3) The RN shall be responsible and accountable for managing the nursing care of the RN's assigned patients. The RN shall only assign the nursing care of each patient to other nursing personnel in accordance with the patient's needs and the specialized qualifications and competence of the nursing staff available. The responsible RN shall ensure that the following activities are completed:

(a) Document the admission assessment of the patient within four hours following admission and initiate a written plan of care. This shall be reviewed and updated whenever the patient's status changes.

(b) Develop and document within eight hours following admission a plan of care for nursing services for the patient, based on the patient assessment and realistic, understandable, achievable patient goals consistent with the applicable rules in OAR chapter 851, division 045.

(c) Observe and report to the nurse manager and the patient's physician or other responsible health care provider authorized by law, when appropriate, any significant changes in the patient's condition that warrant interventions that have not been previously prescribed or planned for:

(A) When the RN questions the efficacy, need or safety of continuation of medications being administered to a patient, the RN shall report that question to the physician or other responsible health care provider authorized by law authorizing the medication and shall seek further instructions concerning the continuation of the medication.

(4)(a) A hospital shall maintain documentation of certification of certified nursing assistants (CNAs), which shall be available on request to Division personnel.

(b) A nursing assistant who works in a hospital must be certified prior to assuming nursing assistant duties in accordance with OAR chapter 851, division 062.

(c) A hospital shall maintain documentation that CNAs whose functions include administration of non-injectable medications, are qualified. This documentation shall be available on request to Division personnel.

333-510-0030
Nursing Services

(1) The hospital shall provide a nursing service department, which provides 24-hour onsite registered nursing care, 7 days per week.

(2) The nursing services department shall be under the direction of a nurse executive who is a registered nurse, licensed to practice in Oregon.

(3) All nursing personnel shall maintain current certification in cardiopulmonary resuscitation.

Stat. Auth.: ORS 413.042, 441.055
Stats. Implemented: ORS 441.160 - 441.192
Hist.: HB 183, f. & ef. 5-26-66; HB 209, f. 12-18-68; HD 11-1980, f. & ef. 9-10-80; HD 5-1981, f. & ef. 3-30-81; Renumbered from 333-023-0172; HD 29-1988, f. 12-29-88, cert. ef. 1-1-89, Renumbered from 333-072-0015(2); HD 21-1993, f. & cert. ef. 10-28-93; HD 2-2000, f. & cert. ef. 2-15-00; PH 21-2006, f. & cert. ef. 10-6-06; PH 11-2009, f. & cert. ef. 10-1-09; PH 7-2016, f. & cert. ef. 2-24-16

333-510-0040
Nurse Executive

(1) The nurse executive position shall be full-time (40 hours per week). Time spent in professional association workshops, seminars and continuing education may be counted as duties in considering whether or not the nurse executive is full-time. If the nurse executive has responsibility for direct patient care activities, sufficient time must be available to devote to administrative duties. For hospitals with attached long-term care facilities, the nurse executive may function as the nurse executive for both the hospital and the long-term care facility.

(2) The nurse executive shall have had progressive responsibility in managing in a health care setting. The nurse executive shall be a registered nurse licensed in Oregon. In addition, the nurse executive must have a baccalaureate degree, other advanced degree, or appropriate equivalent experience, with emphasis in management preferred.

(3) The nurse executive shall have written administrative authority, responsibility, and accountability for assuring functions and activities of the nursing services department and shall participate in the development of any policies that affect the nursing services department. This includes budget formation, implementation and evaluation. The nurse executive shall ensure the:

(a) Development and maintenance of a nursing service philosophy, objective, standards of practice, policy and procedure manuals, and job descriptions for each level of nursing service personnel;

(b) Development and maintenance of personnel policies of recruitment, orientation, in-service education, supervision, evaluation, and termination of nursing service staff or ensure it is done by another department;

(c) Development and maintenance of policies and procedures for determination of nursing staff's capacity for providing nursing care for any patient seeking admission to the facility;

(d) Development and maintenance of a quality assessment and performance improvement program for nursing service;

(e) Coordination of nursing service departmental function and activities with the function and activities of other departments; and

(f) Ensure participation with the administrator and other department directors in development and maintenance of practices and procedures that promote infection control, fire safety, and hazard reduction.

(4) Whenever the nurse executive is not available in person or by phone, the nurse executive shall designate in writing a specific registered nurse or nurses, licensed to practice in Oregon, to be available in person or by phone to direct the functions and activities of the nursing services department.

333-510-0045
Nurse Staffing Posting and Record Requirements

(1) On each hospital unit, a hospital shall post a complaint notice that:

(a) Summarizes the provisions of ORS 441.152 to 441.177;

(b) Is clearly visible to the public; and

(c) Includes the Authority's complaint reporting phone number, electronic mail address and website address.

(2) A hospital shall also post an anti-retaliation notice on the premises that:

(a) Summarizes the provisions of ORS 441.181, 441.183, 441.184 and 441.192;

(b) Is clearly visible; and

(c) Is posted where notices to employees and applicants for employment are customarily displayed.

(3) A hospital shall keep and maintain all records necessary to demonstrate compliance with ORS 441.152 to 441.177. These records shall:

(a) Be maintained for no fewer than three years;

(b) Be promptly provided to the Authority upon request; and

(c) Include, at minimum:

(A) The staffing plan;

(B) The hospital nurse staffing committee charter;

(C) Staffing committee meeting minutes;

(D) Documentation showing how all members of the staffing committee were selected;

(E) All complaints filed with the staffing committee;

(F) Personnel files for all nursing staff positions that include, at minimum, job descriptions, required licensure and specialized qualifications and competencies required for the individual's assigned nurse specialty or unit;

(G) Documentation showing work schedules for nursing staff in each hospital nurse specialty or unit;

(H) Documentation showing actual hours worked by all nursing staff;

(I) Documentation showing all work schedule variances that resulted in the use of replacement nursing staff;

(J) Documentation showing how many on-call hours, if any, required nursing staff to be on the hospital premises;

(K) Documentation showing how many required meeting, education and training hours, if any, were required of nursing staff;

(L) The hospital's mandatory overtime policy and procedure;

(M) Documentation showing how many, if any, overtime hours were worked by nursing staff;

(N) Documentation of all waiver requests, if any, submitted to the Authority;

(O) Documentation showing how many, if any, additional hours were worked due to emergency circumstances and the nature of those circumstances;

(P) The list of on-call nursing staff used to obtain replacement nursing staff;

(Q) Documentation showing how and when the hospital updates its list of on-call staff used to obtain replacement nursing staff and how the hospital determines eligibility to remain on the list;

(R) Documentation showing the hospital's procedures for obtaining replacement nursing staff, including efforts made to obtain replacement staff;

(S) Documentation showing the hospital's actual efforts to seek replacement staff when needed;

(T) Documentation showing each actual instance in which the hospital implemented the policy described in OAR 333-510-0110(2)(g) to initiate limitations on admission or diversion of patients to another hospital; and

(U) All staffing committee reports filed with the hospital administration following a review of the staffing plan.

333-510-0050
Inservice Training Requirements for Nursing

(1) The nurse executive or her or his designee shall coordinate all inservice training for nursing. Each year the inservice training agenda shall include at least the following:

(a) Infection control measures;

(b) Emergency procedures including, but not limited to, procedures for fire and other disaster;

(c) Application of physical restraints (if the facility population includes any patient with orders for restraints); and

(d) Other special needs of the facility population.

(2) Training for procedures for life-threatening situations, including cardiopulmonary resuscitation shall be provided every two years.

(3) The facility, through the nurse executive, shall assure that each licensed or certified employee is knowledgeable of the laws and rules governing his or her performance and that employees function within those performance standards.

(4) Documentation of such training shall include the date, content and names of attendees.

Stat. Auth.: ORS 441.055

333-510-0060
Patient Environment

(1) A hospital shall provide for each patient:

(a) A good bed, mattress, pillow with protective coverage, and necessary bed coverings;

(b) Items needed for personal care; and

(c) Separate storage space for clothing, toilet articles, and other personal belongings.

(2) In multiple-bed rooms, opportunity for patient privacy shall be provided by flame retardant curtains or screens. In hospitals caring for pediatric patients, cubicle curtains or screens are not required for beds assigned these patients.

(3) No patient shall be admitted to a bed in any room, other than one regularly designated as a bedroom or ward. The placing of a patient's bed in a diagnostic room, treatment room, operating room or delivery room is expressly prohibited, except under emergency circumstances.

(4) No towels, wash cloths, bath blankets, or other linen which comes directly in contact with the patient shall be interchangeable from one patient to another unless it is first laundered.

(5) Temperature-controlled pads shall be so covered that the patient cannot be harmed by excessive heat or cold and carefully checked as to temperature and leakage. Electrical heating pads, blankets, or sheets shall be used only on the written order of the physician or other health care practitioner authorized by law.

(6) The use of torn or unclean bed linen is prohibited.

(7) In facilities caring for pediatric patients, an emergency signaling system for use by attendants summoning assistance and a two-way voice intercommunication system between the nurses' station and rooms or wards housing pediatric patients shall be provided.

333-510-0105
Nurse Staffing Committee Requirement

(1) Each hospital shall establish and maintain a hospital nurse staffing committee. The staffing committee shall develop a written hospital-wide staffing plan for nursing services in accordance with ORS 441.155 and OAR chapter 333, division 510 rules. In developing the staffing plan, the staffing committee's primary goal shall be to ensure that the hospital is adequately staffed to meet the health care needs of its patients.

(2) The staffing committee shall meet:

(a) At least once every three months; and

(b) At any time and place specified by either co-chair of the staffing committee.

(3) The hospital shall release a member of the staffing committee from his or her assignment to attend committee meetings and provide paid time for this purpose.

(4) The staffing committee shall be comprised of an equal number of hospital nurse managers and direct care staff. Direct care staff members shall be selected as follows:

(a) The staffing committee shall include at least one direct care registered nurse from each hospital nurse specialty or unit as t h e specialty or unit is defined by the hospital to represent that specialty or unit;

(b) In addition to the direct care registered nurses described in subsection (a) of this section there must be one position on the staffing committee that is filled by a direct care staff member who is not a registered nurse and whose services are covered by the staffing plan;

(c) If the direct care registered nurses working at the hospital are represented under a collective bargaining agreement, the bargaining unit shall coordinate voting to allow the direct care registered nurses who work at the hospital to select each direct care registered nurse on the staffing committee;

(d) If the direct care registered nurses working at the hospital are not represented under a collective bargaining agreement, the direct care registered nurses belonging to each hospital nurse specialty or unit shall select the direct care registered nurse to represent it on the staffing committee; and

(e) If the position that must be filled by a direct care staff member who is not a registered nurse and whose services are covered by the staffing plan is represented under a collective bargaining agreement, the bargaining unit shall coordinate voting to allow the direct care staff members who are not registered nurses to select the direct care staff member who is not a registered nurse to represent them on the staffing committee.

(f) If the position that must be filled by a direct care staff member who is not a registered nurse and whose services are covered by the staffing plan is not represented under a collective bargaining agreement, the direct care staff members who are not registered nurses shall select the direct care staff member who is not a registered nurse to represent them on the staffing committee.

(5) The staffing committee shall have two co-chairs. One co-chair must be a hospital nurse manager elected by a majority of the staffing committee members who are hospital nurse managers. The other co-chair must be a direct care registered nurse elected by a majority of the staffing committee members who are direct care staff.

(6) The staffing committee must develop a written charter that documents the policies and procedures of the staffing committee. At minimum, the charter must include:

(a) How meetings are scheduled;

(b) How members are notified of meetings;

(c) How agendas are determined;

(d) How input from hospital nurse specialty or unit staff is submitted;

(e) Who may participate in decision-making;

(f) How decisions are made; and

(g) How the staffing committee shall monitor, evaluate and modify the staffing plan over time.

(7) Staffing committee meetings must be conducted as follows:

(a) A meeting may not be conducted unless a quorum of staffing committee members is present;

(b) Except as set forth in subsection (c) of this section, a meeting must be open to all hospital nursing staff as observers and to any other individual as either observer or presenter by invitation of either co-chair of the staffing committee;

(c) Either co-chair of the staffing committee may temporarily exclude all non-members from a meeting during staffing committee deliberations and voting; and

(d) Each staffing committee decision must be made by majority vote; however, if a quorum consists of an unequal number of hospital nurse managers and direct care staff, only an equal number of hospital nurse managers and direct care staff may vote.

(8) The staffing committee must document meeting proceedings by keeping written meeting minutes that include, but are not limited to, the following information:

(a) The name and position of each staffing committee member in attendance;

(b) The name and position of each observer or presenter in attendance;

(c) Motions made;

(d) Outcomes of votes taken;

(e) A summary of staffing committee discussions; and

(f) Instances in which non-members have been excluded from staffing committee meetings.

(9) The staffing committee shall approve meeting minutes prior to or during the next staffing committee meeting.

(10) The staffing committee shall provide meeting minutes to hospital nursing staff and other hospital staff upon request no more than 30 calendar days after the meeting minutes are approved by the staffing committee.

Nurse Staffing Plan Requirements

(1) Each hospital shall implement a written hospital-wide staffing plan for nursing services that is developed and approved by the hospital nurse staffing committee established in accordance with ORS 441.154 and OAR chapter 333 division 510 rules.

(2) The staffing plan:

(a) Must be based on the specialized qualifications and competencies of the nursing staff and provide for the skill mix and level of competency necessary to ensure that the hospital is staffed to meet the health care needs of patients;

(b) Must be based on a measurement of hospital unit activity that quantifies the rate of admissions, discharges and transfers for each hospital unit and the time required for a direct care registered nurse belonging to a hospital unit to complete admissions, discharges and transfers for that hospital unit;

(c) Must be based on total diagnoses for each hospital unit and the nursing staff required to manage that set of diagnoses;

(d) Must be consistent with nationally recognized evidence-based standards and guidelines established by professional nursing specialty organizations such as, but not limited to: The American Association of Critical Care Nurses, American Operating Room Nurses (AORN), or American Society of Peri-Anesthesia Nurses (ASPAN);

(e) Must recognize differences in patient acuity and nursing care intensity;

(f) Must establish minimum numbers of nursing staff, including licensed practical nurses and certified nursing assistants, required on specified shifts, provided that no fewer than one registered nurse and one other nursing staff member is on duty in a unit when a patient is present;

(g) Must include a formal process for evaluating and initiating limitations on admission or diversion of patients to another hospital when, in the judgment of a direct care registered nurse or a nurse manager, there is an inability to meet patient care needs or a risk of harm to patients;

(h) Must consider tasks not related to providing direct care, including meal breaks and rest breaks;

(i) May not base nursing staff requirements solely on external benchmarking data;

(j) May not be used by a hospital to impose upon unionized nursing staff any changes in wages, hours or other terms and conditions of employment unless the hospital first provides notice to and, upon request, bargains with the union; and

(k) May not create, preempt or modify a collective bargaining agreement or require parties to an agreement to bargain over the staffing plan while a collective bargaining agreement is in effect.

333-510-0115
Nurse Staffing Plan Review Requirement

(1) The staffing committee shall:

(a) Review the staffing plan at least once per year; and

(b) At any other time specified by either co-chair of the staffing committee.

(2) In reviewing the staffing plan, the staffing committee shall consider:

(a) Patient outcomes;

(b) Complaints regarding staffing, including complaints about a delay in direct care nursing or an absence of direct care nursing;

(c) The number of hours of nursing care provided through a hospital unit compared with the number of patients served by the hospital unit during a 24-hour period;

(d) The aggregate hours of mandatory overtime worked by nursing staff;

(e) The aggregate hours of voluntary overtime worked by nursing staff;

(f) The percentage of shifts for each hospital unit for which staffing differed from what is required by the staffing plan;

(g) Any other matter determined by the committee to be necessary to ensure that the hospital is staffed to meet the health care needs of patients; and

(h) Any report filed by a nursing staff member stating the nursing staff member's belief that the hospital unit engaged in a pattern of requiring direct care nursing staff to work overtime for nonemergency care.

(3) Following its review of the staffing plan, the staffing committee shall issue a written report to the hospital that indicates whether the staffing plan ensures that the hospital is adequately staffed and meets the health care needs of patients. If the report indicates that it does not, the staffing committee shall modify the staffing plan as necessary to accomplish this goal.

Stat. Auth.: ORS 413.042 & 441.156
Stats. Implemented: ORS 441.156
Hist.: PH 22-2016, f. & cert. ef. 7-1-16

333-510-0120
Nurse Staffing Plan Mediation

(1) If the staffing committee is unable to reach an agreement on the staffing plan, either co-chair of the staffing committee may invoke a waiting period of 30 business days.

(a) During the 30-day waiting period, the staffing committee shall continue to develop the staffing plan; and

(b) The hospital shall promptly respond to any reasonable requests for data that is related to the impasse and is submitted by either co-chair of the staffing committee.

(2) If at the end of the 30-day waiting period, the staffing committee remains unable to reach an agreement on the staffing plan, one of the staffing committee co-chairs shall notify the Authority of the impasse. This notification shall include:

(a) Documentation that the staffing committee voted on the provision or provisions in question and a deadlock resulted;

(b) Documentation that either co-chair of the staffing committee formally invoked a 30-day waiting period;

(c) Documentation that during the 30-day waiting period, the staffing committee continued to develop the staffing plan including documentation of options the staffing committee considered after invoking the 30-day waiting period;

(d) Documentation of any reasonable requests for data submitted to the hospital by either staffing committee co-chair and the hospital's response, if any; and

(e) Documentation that the staffing committee voted on the provision or provisions in question again after the 30-day waiting period formally ended and another deadlock resulted.

(3) No more than 15 business days after receiving notice of an impasse, the Authority shall assign the staffing committee a mediator to assist the staffing committee in reaching an agreement on the staffing plan.

(a) Mediation shall be consistent with requirements for implementing and reviewing staffing plans set forth in ORS 441.155 and 441.156 and OAR chapter 333 division 510 rules; and

(b) Mediation shall be provided for no more than 90 calendar days.

(4) The Authority may impose civil monetary penalties against a hospital, if the staffing committee is unable to reach an agreement on the staffing plan after 90 days of mediation.

333-510-0125
Replacement Nurse Staffing Requirements

(1) A hospital must maintain and post or publish a list of on-call nursing staff that may be contacted to provide qualified replacement or additional nursing staff in the event of a vacancy or unexpected shortage. This list must:

(a) Provide for sufficient replacement nursing staff on a regular basis; and

(b) Be available to the individual who is responsible for obtaining replacement staff during each shift.

(2) When developing and maintaining the on-call list, the hospital must explore all reasonable options for identifying local replacement staff and these efforts must be documented.

(3) When a hospital learns about the need for replacement nursing staff, the hospital must make every reasonable effort to obtain adequate voluntary replacement nursing staff for unfilled hours or shifts before requiring a nursing staff member to work overtime and these efforts must be documented. Reasonable efforts include, but are not limited to:

(a) The hospital seeking replacement nursing staff at the time the vacancy is known; and

(b) The hospital contacting all available resources on its list of on-call nursing staff as described in this rule.

Stat. Auth.: ORS 413.042, 441.155 & 441.166
Stats. Implemented: ORS 441.155 & 441.166
Hist.: PH 22-2016, f. & cert. ef. 7-1-16

333-510-0130
Nursing Staff Member Overtime

(1) For purposes of this rule "require" means to make compulsory as a condition of employment whether as a result of a previously scheduled shift or hours actually worked during time spent on call or on standby.

(2) A hospital may not require a nursing staff member to work:

(a) Beyond the agreed-upon and prearranged shift, regardless of the length of the shift;

(b) More than 48 hours in any hospital-defined work week;

(c) More than 12 hours in a 24-hour period;

(d) During the 10-hour period immediately following the 12th hour worked during a 24-hour period. This work period begins when the nursing staff member begins a shift; or

(e) During the 10-hour period immediately following any agreed-upon and prearranged shift in which the nurse worked more than 12 hours in a 24-hour period.

(3) Time spent by the nursing staff member in required meetings or receiving education or training shall be included as hours worked for the purpose of section (2) of this rule.

(4) Time spent on call or on standby when the nursing staff member is required to be at the hospital shall be included as hours worked for the purpose of section (2) of this rule.

(5) Time spent on call or on standby when the nursing staff member is not required to be at the hospital may not be included as hours worked for the purpose of section (2) of this rule.

(6) Nothing in this rule precludes a nursing staff member from volunteering to work overtime.

(7) A hospital may require an additional hour of work beyond the hours authorized in section (2) of this rule if:

(a) A staff vacancy for the next shift becomes known at the end of the current shift; or

(b) There is a potential harm to an assigned patient if the nursing staff member leaves the assignment or transfers care to another nursing staff member.

(8) Each hospital must have a policy and procedure in place to ensure, at minimum, that:

(a) Mandatory overtime, when required, is documented in writing; and

(b) Mandatory overtime policies and procedures are clearly written, provided to all new nursing staff and readily available to all nursing staff.

(9) If a nursing staff member believes that a hospital unit is engaging in a pattern of requiring direct care nursing staff to work overtime for nonemergency care, the nursing staff member may report that information to the staffing committee. The staffing committee shall consider the information when reviewing the staffing plan as described in OAR 333-510-0115.

(10) The provisions of sections (2) through (8) of this rule do not apply to nursing staff needs:

(a) In the event of a national or state emergency or circumstances requiring the implementation of a facility disaster plan; or

(b) In emergency circumstances that include:

(A) Sudden and unforeseen adverse weather conditions;

(B) An infectious disease epidemic suffered by hospital staff;

(C) Any unforeseen event preventing replacement staff from approaching or entering the premises; or

(D) Unplanned direct care staff vacancies of 20 percent or more of the nursing staff for the next shift hospital-wide at the Oregon State Hospital if, based on the patient census, the Oregon State Hospital determines the number of direct care staff available hospital-wide cannot ensure patient safety.

(11) Nothing in section (10) of this rule relieves the Oregon State Hospital from contacting voluntary replacement staff as described in OAR 333-510-0125 and documenting these contacts.

(12) A registered nurse at a hospital may not place a patient at risk of harm by leaving a patient care assignment during an agreed upon scheduled shift or an agreed-upon extended shift without authorization from the appropriate supervisory personnel as required by the Oregon State Board of Nursing OAR, chapter 851.

(13) Until the Authority defines "other nursing staff" as that term is described in ORS 441.166(1), this rule applies only to "nursing staff member" as that term is defined in these rules.

333-510-0135
Nurse Staffing Plan Waiver

(1) At a hospital's request, the Authority may waive any staffing plan requirement set forth in ORS 441.155 provided that a waiver is necessary to ensure that the hospital is staffed to meet the health care needs of its patients.

(2) All requests for a waiver must:

(a) Be submitted to the Authority in writing;

(b) State the reason or reasons for which the hospital is seeking the waiver;

(c) Explain how the waiver is necessary for the hospital to meet patient health care needs; and

(d) Include verification that the hospital notified the staffing committee of the request for a waiver prior to its submission.

333-510-0140
Nurse Staffing Plan During an Emergency

(1) A hospital is not required to follow the staffing plan developed and approved by the staffing committee in the event of:

(a) A national or state emergency requiring the implementation of a facility disaster plan;

(b) Sudden and unforeseen adverse weather conditions; or

(c) An infectious disease epidemic suffered by hospital staff.

(2) In the event of an emergency circumstance not described in section (1) of this rule, either co-chair of the staffing committee may specify a time and place to meet to review and potentially modify the staffing plan in response to the emergency circumstance.

Sanitary Precautions

(1) Provision shall be made for the proper cleaning of linen and other washable goods and proper disposal of all refuse.

(2) All garbage and refuse shall be stored and disposed of in a manner that will not create a nuisance or a public health hazard. Infectious waste shall be stored and disposed of in accordance with OAR chapter 333, division 56.

(3) Measures shall be taken to prevent the entry of rodents, flies, mosquitoes, and other insects. Adequate measures shall include but are not limited to preventing their entry through doors, windows, or other outside openings.

(4) The walls and floors shall be of a durable and cleanable composition necessary to maintain a sanitary environment appropriate to the use of the area. The building shall be kept clean and in good repair.

333-515-0030
Safety and Emergency Precautions

(1) A hospital shall:

(a) Have a physical plant and overall hospital environment that is developed and maintained in such a manner that the safety and well-being of patients are provided for.

(b) Have telephone or another communication method to summon help in case of fire or other emergency.

(c) Comply with ORS chapter 479, its implementing rules, and all other requirements of the State Fire Marshal.

(d) Have emergency power facilities that are tested monthly and are in readiness at all times for use in the delivery, operating and emergency rooms, nurseries and other areas as required in NFPA 99 and the National Electrical Code.

(2) In collaboration with local emergency medical services, a hospital shall develop, maintain, update, train, and exercise an emergency plan for the protection of all individuals in the event of an emergency, in accordance with OAR chapter 837, division 040.

(a) A hospital shall conduct at least two drills every year to demonstrate that employees have practiced their specific duties and assignments, as outlined in the emergency preparedness plan. A hospital shall document the drills.

(b) An emergency plan shall:

(A) Include the contact information for the hospital's local emergency management.

(B) Address all applicable hazards that may include, but are not limited to, the following:

(i) Chemical emergencies;

(ii) Dam failure;

(iii) Earthquakes;

(iv) Fire;

(v) Flood;

(vi) Hazardous material;

(vii) Heat;

(viii) Hurricane;

(ix) Landslide;

(x) Nuclear power plant emergency;

(xi) Pandemic;

(xii) Terrorism; or

(xiii) Thunderstorms.

(C) Address the provision of sufficient supplies for patients and staff to shelter in place for a minimum of four days under the following conditions:

(i) Extended power outage;

(ii) No running water;

(iii) Replacement of food or supplies is unavailable; and

(iv) Staff members do not report to work as scheduled.

(D) Address evacuation, including:

(i) Identification of individual positions' duties while vacating the building, transporting, and housing residents;

(ii) Method and source of transportation;

(iii) Planned relocation sites;

(iv) Method by which each patient will be identified by name and facility of origin by people unknown to them;

(v) Method for tracking and reporting the physical location of specific patients until a different entity resumes responsibility for the resident; and

(vi) Notification to the Division about the status of the evacuation.

(E) Address the clinical and medical needs of the patients, including provisions to provide:

(i) Storage of and continued access to medical records necessary to obtain care and treatment of patients, and the use of paper forms to be used for the transfer of care or to maintain care on-site when electronic systems are not available;

(ii) Continued access to pharmaceuticals, medical supplies and equipment, even during and after an evacuation; and

(iii) Alternative staffing plans to meet the needs of the patients when scheduled staff members are unavailable. Alternative staffing plans may include, but are not limited to, on-call staff, the use of travelers, the use of management staff, or the use of other emergency personnel.

(c) A hospital shall ensure that its emergency plan is available to Division staff during licensing and certification surveys.

(d) A hospital shall re-evaluate and revise its emergency plan as necessary or when there is a significant change in the facility or population of the hospital.

333-520-0020
Dietary Services

(1) All hospitals, regardless of classification, shall comply with this rule.

(2) A hospital shall:

(a) Have an organized dietary department, directed by qualified personnel, that conforms to the requirements in OAR 333-150-0000, the Food Sanitation Rules.

(b) Employ supportive personnel competent to carry out the functions of the dietary service, including a full-time director with overall supervisory responsibility for the dietary service and who is:

(A) A qualified dietitian who is registered by the Commission on Dietetic Registration of the Academy of Nutrition and Dietetics;

(B) A person who has received a baccalaureate or higher degree with major studies in food, nutrition, diet therapy or food service management and has at least one year of supervisory experience in a health care dietetic service, and participates in continuing education related to the dietetic profession;

(C) A graduate of a dietetic technician or dietetic assistant training program, corresponding or classroom, approved by the Academy of Nutrition and Dietetics;

(D) A graduate of a state approved course that provides 90 or more hours of classroom instruction in food service supervision and has one year's experience as a supervisor in a health care institution; or

(E) Has training and experience in food service supervision and management in a military service equivalent in content to one of the above criteria for qualifying.

(c) Contract with a dietician with the qualifications listed in paragraph (2)(b)(A) of this rule, if the Director is not a qualified dietitian under paragraph (2)(b)(A) of this rule, and:

(A) Consult at least quarterly with the contractor;

(B) Have on file a contract signed by the consultant and the hospital administrator stating the relationship of the consultant to

the hospital, services to be provided, length of contract, terms and hours; and

(C) Require the contractor to submit quarterly reports to the hospital administrator and the committee, council or other reviewing body designated by the hospital as having responsibility for dietary services that include:

(i) The date(s) of visit(s) and length of time spent on premises;

(ii) Staff members seen;

(iii) Services performed;

(iv) Action taken on previous reports;

(v) Problems identified; and

(vi) Recommended action and distribution of the report.

(d) Require the on-site visits of the Consulting Dietitian to be of sufficient duration and frequency to review dietetic systems and assure quality food to the patient.

(e) Provide dietetic services to patients in accordance with a written order by the responsible physician, or other health care practitioner authorized within the scope of his or her professional license, and record appropriate dietetic information in the patient's medical record including the following:

(A) Timely and periodic assessments of the patient's nutrient intake and tolerance to the prescribed diet modification, including the effect of the patient's appetite and food habits on food intake;

(B) A description of the diet instructions given to the patient or family and assessment of their diet knowledge;

(C) A description or copy of the diet information forwarded to another institution upon patient discharge; and

(D) Nutritional care follow-up with the patient's health care practitioner or a health care agency.

(f) Regularly review and evaluate the quality and appropriateness of nutritional care provided by the dietetic service including the nutritional adequacy of all menus.

(g) Ensure that the Dietetic Service is represented on hospital committees concerned with nutritional care.

(h) Serve food that has an appetizing appearance, is palatable, is served at proper temperature and is cooked and served in such a way as to retain the nutrient value of food.

(i) Restrict admittance to the kitchen area to those who must enter to perform assigned duties.

(j) Develop written procedures for cleaning equipment and work areas and enforce those procedures.

Laboratory Services

(1) All hospitals, regardless of classification, are required to comply with this rule.

(2) A hospital shall:

(a) Have on-site or use a licensed clinical laboratory that meets the requirements of ORS 438.010 through 438.510 and OAR 333-024; or has been issued a valid certificate from the federal government under the Clinical Laboratory Improvement Amendments of 1988 (CLIA 88), and that provides timely laboratory services to support a hospital's medical, surgical and other services.

(b) Have on staff or under contract a clinical pathologist to oversee clinical laboratory testing including pathology services.

(c) Have appropriately trained laboratory staff on-site or on-call 24 hours a day, 7 days a week (24/7).

(3) If a hospital performs clinical laboratory testing at point of care, the requirements of subsection (2)(a) of this rule shall be met and the hospital shall:

(a) Have a written policy for point of care testing that is reviewed by a committee, council or other reviewing body designated by the hospital as having responsibility for laboratory services;

(b) Designate a person responsible for the direction and supervision of this testing;

(c) Assure that in addition to manufacturers instructions there are procedures to cover specimen collection and preservation;

(d) Maintain documentation of staff specific orientation, training, and ongoing competency for two years; and

(e) Maintain documentation of instrument calibration, quality control records and preventative maintenance for two years.

(4) Blood banking transfusion records shall be maintained and kept for 20 years.

333-520-0035
Pharmacy Services

(1) A general hospital is required to have an on site pharmacy and a pharmacist on call 24/7 to staff the pharmacy.

(2) Low occupancy acute care hospitals and mental or psychiatric hospitals may have an on-site pharmacy or a drug room.

(3) Low occupancy acute care hospitals and mental or psychiatric hospitals shall have appropriately trained pharmacy staff on-site or on-call 24/7.

(4) A pharmacy in a hospital shall comply with the applicable requirements in ORS Chapter 689 and OAR chapter 855, including 855-041-0120 through 855-041-0132.

(5) A drug room in a hospital shall comply with the applicable requirements in ORS Chapter 689 and OAR 855-041-0135 through 855-041-0140.

(6) All hospitals, regardless of classification shall dispose of old medications, including special prescriptions for patients who have left the hospital, by incineration or another equally effective method, except narcotics and other drugs under the drug abuse law, which shall be handled in the manner prescribed by the Drug Enforcement Administration of the U.S. Department of Justice.

Radiology Services

(1) All hospitals, regardless of classification shall have on-site or contract radiology services that:

(a) Comply with ORS Chapter 453 and its applicable implementing rules;

(b) Support the hospital's medical, surgical and other services; and

(c) Are available on a timely basis.

(2) All hospitals, regardless of classification, shall:

(a) Employ or contract with a radiologist to certify the quality and adequacy of all radiology; and

(b) Have on-site or in-house radiology staff available 24/7.

333-520-0050
Surgery Services

(1) For purposes of this rule:

(a) "Circulating nurse" means a registered nurse who is responsible for coordinating the nursing care and safety needs of the patient in the operating room and who also meets the needs of the operating room team members during surgery.

(b) "Rural or medically underserved community" means a geographic area of Oregon that is 10 or more miles from the geographic center of a population center of 40,000 or more individuals.

(c) "Surgical technology" means intraoperative surgical patient care that involves:

(A) Preparing an operating room for surgical procedures by ensuring that surgical equipment is functioning properly and safely;

(B) Preparing an operating room and the sterile field for surgical procedures by preparing sterile supplies, instruments and equipment using sterile techniques;

(C) Anticipating the needs of a surgical team based on knowledge of human anatomy and pathophysiology and how those fields relate to the surgical patient and the patient's surgical procedure; and

(D) Performing tasks as directed in an operating room, including:

(i) Passing instruments, equipment or supplies;

(ii) Sponging or suctioning of an operative site;

(iii) Preparing and cutting suture material;

(iv) Transferring fluids or drugs;

(v) Handling specimens;

(vi) Holding retractors and other equipment;

(vii) Applying electrocautery to clamps on bleeders;

(viii) Connecting drains to suction apparatus;

(ix) Applying dressings to closed wounds; and

(x) Assisting in counting supplies and instruments, including sponges and needles.

(2) General hospitals are required to comply with this rule. A low occupancy acute care or mental or psychiatric hospital shall comply with this rule if it offers surgery services.

(3) A hospital that provides surgical services shall have operating rooms that conform to the applicable requirements in OAR chapter 333, division 535.

(4) A hospital's operating rooms must be supervised by an experienced registered nurse or doctor of medicine or osteopathy.

(5) The duties of a circulating nurse performed in an operating room of a hospital shall be performed by a registered nurse licensed under ORS 678.010 through 678.410. In all cases requiring anesthesia or conscious sedation, a circulating nurse shall be assigned to, and present in, an operating room for the duration of the surgical procedure unless it becomes necessary for the circulating nurse to leave the operating room as part of the surgical procedure. While assigned to a surgical procedure, a circulating nurse may not be assigned to any other patient or procedure.

(6) Nothing in section (5) precludes a circulating nurse from being relieved during a surgical procedure by another circulating nurse assigned to continue the surgical procedure.

(7) In order for a person to practice surgical technology at a hospital, the hospital's governing body shall ensure that the following provisions are met by the individual:

(a) Documentation showing that the person has completed a training program for surgical technologists in a branch of the armed forces of the United States or in the United States Public Health Service Commissioned Corp and completes 16 hours of continuing education as described in section (11) of this rule every two years; or

(b) Completion of a surgical technology education program accredited by the Commission on Accreditation of Allied Health Education Program (CAAHEP) or the Accrediting Bureau of Health Education Schools (ABHES) and certification as a surgical technologist issued by the National Board of Surgical Technology and Surgical Assisting (NBSTSA); or

(c) Documentation that a person has practiced surgical technology at least two years between January 1, 2014 and January 1, 2017 in a hospital, ambulatory surgical center or as an employee of a federal government agency or institution and completes 16 hours of continuing education as described in section (11) of this rule every two years.

(8) Notwithstanding subsection (7)(b), a hospital may allow a person who is not certified by the NBSTSA to practice surgical technology at the hospital for 12 months after the person completes an educational program accredited by the CAAHEP or ABHES.

(9) A hospital located in a rural or medically underserved community may allow a person to practice surgical technology at the hospital who does not meet the requirements specified in section (7) of this rule until July 1, 2017. After July 1, 2017 a person not meeting the requirements specified in section (7) of this rule may work at a hospital in a rural or medically underserved community while the person is attending an educational program accredited by the CAAHEP or ABHES. Such persons are exempt from these educational requirements for three years from the date on which the person began practicing at the hospital.

(10) These rules do not prohibit a licensed practitioner from performing surgical technology if the practitioner is acting within the scope of the practitioner's license and a hospital allows the practitioner to perform such duties.

(11)(a) The continuing education requirements described in subsections (7)(a) and (7)(c) shall:

(A) Consist of 16 hours every two years;

(B) Be tracked by the surgical technologist and is subject to audit by the hospital in which the person is practicing; and

(C) Be relevant to the medical-surgical practice of surgical technology.

(b) Continuing education may include but is not limited to:

(A) Continuing education credits approved by the Association for Surgical Technologist;

(B) Healthcare sponsored conferences, forums, seminars, symposiums or workshops;

(C) Online distance learning courses;

(D) Live lectures at national conferences; or

(E) College courses.

(12) A hospital shall conduct a random audit of a representative sample of the surgical technologists employed by the hospital every two years to verify compliance with educational requirements.

(13) The requirements identified in section (7), (8) and (10) through (12) of this rule become effective on July 1, 2016.

333-520-0060
Maternity Services

(1) General hospitals are required to comply with this rule. A low occupancy acute care hospital shall comply with this rule if it offers maternity services.

(2) A hospital that provides maternity services shall have separate maternity facilities and a maternity care department that:

(a) Has labor, delivery, recovery, postpartum, and nursery rooms that conform to the applicable requirements of OAR chapter 333, division 535;

(b) Requires every person in the delivery room during a delivery to be appropriately attired according to the hospital's Infection Control Policy;

(c) Has appropriate resuscitation equipment immediately available to rooms where deliveries are planned and where newborn infants are kept;

(d) Has a warmed blanket or incubator for newborns to prevent thermal loss;

(e) Has incubators for premature infants equipped with a governor to control the flow of oxygen at 40 percent or under, and an oxygen analyzer;

(f) Has an accurate scale for weighing of infants; and

(g) Includes a nursery and a separate bassinet for each infant with a clean mattress covered with suitable sheeting, washable pads, and bed linen that is kept clean at all times.

(3) A health care practitioner attending the birth of a newborn shall evaluate and treat a newborn at risk for chlamydial or gonococcal ophthalmia neonatorum in accordance with OAR 333-019-0036.

(4) A parent or legal representative that refuses to allow prophylaxis for an infant shall be informed by the attending health care practitioner of the risks of the refusal and must sign a witnessed affidavit that attests they have been so informed and nonetheless refuse to allow prophylaxis.

(5) A hospital shall ensure that all newborns are given Vitamin K at birth as required by ORS 433.303 through 433.314.

(a) A physician or midwife attending the mother at the birth of the child shall be responsible for ensuring that the newborn infant receives Vitamin K within 24 hours of birth to protect the infant against hemorrhagic disease of the newborn.

(b) The Vitamin K forms suitable for use are:

(A) Vitamin K 1 (Phytonadione) for oral or injectable use;

(B) Mephyton for oral use; or

(C) Aquamephyton or konakion for injectable use.

(c) A parent may, after being provided a full and clear explanation, decline to permit the administration of Vitamin K based on religious tenets and practices. If a parent or legal representative declines Vitamin K, the parent shall sign a form acknowledging his or her understanding of the reason for administration of Vitamin K and possible adverse consequences in the presence of a person who witnessed the instruction of the parent, who shall also sign the form. The form shall become a part of the medical record of the newborn infant.

(6) A hospital shall ensure that every newborn infant born in the hospital is tested for Metabolic Diseases as required by OAR 333-024-0210 through 333-024-0235 and instructions to the parents or legal representative regarding the testing that be documented in the medical record.

(7) A hospital shall ensure that every newborn infant born in the hospital receives a Newborn Hearing Screening Test as required by ORS 433.321 and OAR chapter 333, division 20.

(8) A hospital must perform pulse oximetry screening on every newborn infant delivered at the hospital before discharging the newborn infant in conformance with the following requirements:

(a) The pulse oximetry screening must be performed using evidence-based guidelines such as those recommended by Strategies for Implementing Screening for Critical Congenital Heart Disease, AR Kemper et al., Pediatrics 2011;128(5): e1259–1267.

(b) The hospital must have policies and procedures based on the guidelines required by subsection (a) of this section for:

(A) Determining what is considered a positive screening result; and

(B) Determining what follow-up services, treatment, or referrals must be provided if a newborn infant has a positive screening result.

(c) A Federal Drug Administration (FDA) approved motion tolerant pulse oximeter must be used.

(d) The pulse oximetry screening must be performed no sooner than 24 hours after birth or as close to discharge of the newborn infant as possible.

(e) If a newborn infant is admitted to a hospital as the result of a transfer from another hospital or Birthing Center before a pulse oximetry screening is performed, the hospital from which the newborn infant is discharged to home is responsible for performing the screening.

(f) The hospital must provide the following notifications and document them in the newborn infant's medical record:

(A) Prior to the pulse oximetry screening, notify a parent or legal representative of the newborn about the reasons for the screening and the risks and consequences of not screening.

(B) Following the pulse oximetry screening, notify the health care provider responsible for the newborn infant and the infant's primary care provider of the results of the screening.

(C) Following the pulse oximetry screening and prior to discharge, notify a parent or legal representative of the newborn infant of the screening result, an explanation of its meaning and, if it is a positive screening result, provide information about the importance of timely diagnosis and intervention.

(g) A parent or legal representative of a newborn infant may decline pulse oximetry screening and, if screening is declined, the hospital must document the declination in the newborn infant's medical record.

(h) Following the pulse oximetry screening, the hospital, in accordance with the applicable standard of care, must provide any appropriate follow-up services or treatment for the newborn infant if necessary or provide a referral to a parent or legal representative of the newborn for follow-up services or treatment if necessary.

(i) The hospital must document in the newborn infant's medical record that the screening was performed, the screening result, the names of the health care providers who were notified of the screening result, and any follow-up services or treatment or referral for services or treatment.

(j) No newborn infant may be refused screening because of the inability of a parent or legal representative to pay for the screening.

(9) Every infant born in a hospital shall be marked for identification before the infant is removed from the place of delivery and such identification shall not be removed from the infant until the infant is discharged.

(10) A hospital shall not admit visitors to a delivery room, maternity rooms, wards, units, or the nursery except in accordance with the hospital's visiting policy.

(11) A hospital shall ensure that persons entering the nursery are attired according to the hospital infection control policy and that hands are washed before touching an infant.

(12) A hospital shall follow its infection control policy when handling and storing linens.

(13) Formula feedings and any other feedings shall be given only as prescribed in writing by the physician or certified nurse midwife.

(14) A hospital shall maintain and preserve a log of births giving date of birth, name of newborn, and mother's name and chart number, in addition to complying with the requirements of the Authority's Center for Health Statistics.

(15) A hospital may use a part of the maternity department for selected, non-communicable non-obstetrical patients as defined by hospital policy and approved by the hospital's infection control program under the following conditions:

(a) Patients admitted or transferred to the maternity department shall be instructed by appropriate maternity service personnel as to their responsibilities regarding use of the facility.

(b) Patients admitted to the maternity department shall be limited to obstetrical patients admitted for delivery, patients with obstetric complications, and selected non-communicable, non-obstetrical patients.

(c) Obstetrical patients and medical/surgical patients shall not occupy the same room.

(d) If necessary, one or more medical/surgical patients shall be transferred to another service in order to admit obstetrical patients.

(16) A hospital shall adhere strictly to the guidelines for standard precautions developed by the Hospital Infection Control Practices Advisory Committee (HICPAC) when caring for obstetrical patients with infectious conditions. Patients with infectious conditions requiring strict isolation according to the above guidelines shall be transferred out of the maternity department following delivery, and given care in an area of the hospital where that isolation can be provided. If a maternity patient is found to have an infectious condition during surgery or delivery, the patient shall be returned to the maternity department and isolated according to hospital infection control policy.

(17) A delivery room suite may be used for surgical procedures on non-obstetrical patients if approved by the Chief of Obstetrics in accordance with medical staff rules and regulations.

(18) A hospital with maternity services may place stable postpartum patients and stable newborns, as those terms are defined in

OAR 333-500-0010, on another acute care unit on a periodic basis under the following conditions:

(a) When a postpartum patient or newborn to be transferred out of the OB unit meet the hospital's criteria for care on another unit as described in this rule;

(b) Where the decision to place a postpartum patient or newborn on another unit is based on currently accepted postpartum and newborn care standards and the ability of that unit to meet the needs of the patient; and

(c) When nursing staff on the non-OB unit have received training required by this rule and have demonstrated continuing competence.

(19) A hospital that provides care to postpartum patients and newborns on non-OB units shall:

(a) Develop and implement policies and procedures that include but are not limited to:

(A) The transfer of postpartum patients and newborns to non-OB units including a delineation of the authority for medical, clinical and administrative nursing staff, and, when applicable, nurse practitioner staff to make the decision;

(B) Staffing guidelines for the nursing care of postpartum patients and newborns on the non-OB unit;

(C) Provision of information to maternity patients of possible or intended placement on a non-OB unit;

(D) Provision of consumer information related to the availability and location of specialty maternity services;

(E) Infection control practices including the use of standard precautions;

(F) Procedures for patient placement, privacy, and safety that prohibit postpartum patients and newborns from occupying the same room as non-obstetrical patients;

(G) Protocols for the placement of newborns without mothers;

(H) Procedures to assure the inclusion of the care of postpartum patients and newborns on non-OB units in the hospital's quality assurance program; and

(I) Delineation of hospital protocols for the return of postpartum patients and newborns to the OB unit, including addressing situations when safe care can no longer be provided on the non-OB unit.

(b) Develop and implement staff training, continuing education, and continuing competency program that includes but is not limited to:

(A) Postpartum nursing care;

(B) Nursing care of the newborn;

(C) Newborn resuscitation;

(D) Newborn feeding;

(E) Maternal and family education;

(F) Infection control practices including the use of standard precautions; and

(G) Maternity services policies and procedures including those required in subsection (19)(a) of this rule.

333-520-0070
Emergency Department and Emergency Services

(1) Hospitals classified as general and low occupancy acute care shall have an emergency department that provides emergency services.

(2) A hospital with an emergency department shall:

(a) Provide emergency services 24 hours a day including providing immediate life saving intervention, resuscitation, and stabilization;

(b) Have a licensed health care practitioner with admitting privileges on-call, 24 hours a day;

(c) Have at least one registered nurse, appropriately trained to provide emergency care within the emergency service area;

(d) Have adequate medical staff and other ancillary personnel necessary to provide emergency care either present in the emergency service area or available 24 hours a day in adequate numbers to respond promptly;

(e) Ensure that when surgical, laboratory, and X-ray procedures are indicated and ordered, due regard is given to promptness in carrying them out;

(f) Ensure that it has items for resuscitation, stabilization, and basic emergency medical care, including airway equipment and cardiac resuscitation medications and supplies for adults, children and infants;

(g) Have a communication system and personnel available 24 hours a day to ensure rapid communication with ambulances and departments of the hospital including, but not limited to, X-ray, laboratory, and surgery;

(h) Have a plan for emergency care based on community needs and on hospital capabilities which sets forth policies, procedures and protocols for prompt assessment, treatment and transfer of ill or injured persons, including specifying the response time permissible for medical staff and other ancillary personnel;

(i) Provide for the prompt transfer of patients, as necessary, to an appropriate facility in accordance with transfer agreements, approved trauma system plans, consideration of patient choice, and consent of the receiving facility;

(j) Have written transfer agreements for the care of injured or ill persons if the hospital does not provide the type of care needed;

(k) Ensure that personnel are able to provide prompt and appropriate instruction to ambulance personnel regarding triage, treatment and transportation;

(l) Develop, maintain, and implement current written policies and procedure that include clearly-defined roles, responsibilities, and reporting lines for emergency service personnel;

(m) Maintain emergency records in accordance with OAR 333-505-0050;

(n) Establish a committee of the emergency department staff who shall at least quarterly, review emergency services by evaluating the quality of emergency medical care given, and engage in ongoing development, implementation, and follow-up on corrective action plans; and

(o) Ensure it provides appropriate training programs for hospital emergency service personnel.

(3) If a hospital is also designated or categorized as a trauma hospital under ORS 431.607 through 431.671, the hospital shall:

(a) Comply with the applicable provisions in OAR chapter 333, division 200 through 205;

(b) Report trauma data to the State Trauma Registry in accordance with the requirements of the Division; and

(c) Fully cooperate with the approved area trauma system plan.

(4) An officer or employee of a general or low occupancy acute care hospital licensed by the Division may not deny a person an appropriate medical screening examination needed to determine whether the person is in need of emergency medical services if the screening is within the capability of the hospital, including ancillary services routinely available to the emergency department.

(5) An officer or employee of any hospital licensed by the Division may not deny services to a person diagnosed by a physician as being in need of emergency medical services because the person is unable to establish the ability to pay for the services if those emergency medical services are customarily provided at the hospital.

(6) A mental or psychiatric hospital shall assess and provide initial treatment to a person that presents to the hospital with an emergency medical condition, as that term is defined in 42 CFR 489.24. The hospital shall admit the person if the emergency medical condition falls within the specialty services provided by the hospital under OAR chapter 333, division 525.

333-520-0075
Respite Care

(1) A general hospital or low occupancy acute care hospital may provide respite services.

(2) Application for permission to accept respite care guests shall be made to the Division on a form provided by the Division.

(3) The Division may grant permission for a hospital to accept respite care guests if:

(a) Admittance of a respite care patient will not interfere with the care to be provided to other patients.

(b) The hospital has written policies that address respite care services that are evaluated annually, and are implemented and followed by hospital staff. These policies shall address:

(A) Type(s) of guests who may be admitted;

(B) Scope of services provided;

(C) Length of stay (which shall not exceed 30 consecutive days);

(D) Emergency care provisions;

(E) Written criteria delineating situations which necessitate physician contact;

(F) Written criteria delineating situations which necessitate family or personal representative contact; and

(G) Written criteria for administration and storage of medications.

(4) Sufficient physical space shall be provided for respite care guests for dining and activities. Space shall allow for mobility and exercise. Respite care areas shall provide for bathing and toileting facilities. Each respite care guest shall have an assigned licensed bed and storage area for personal belongings. Regular acute care licensed beds may be utilized for respite care guests; however, respite care guests shall not share a room with acute care patients. Activities which are suitable to the needs of respite care guests shall be provided.

(5) Respite care guest records:

(a) There shall be available for each respite care guest an admission summary form containing the guest's name, address, telephone number, and other demographic data including the name, address, and telephone number of attending qualified member of the medical staff and nearest relative or personal representative.

(b) The guest record shall include admission evaluation, medication administration record, flow sheets, assessments, and progress notes as required by paragraph (7)(d)(C) of this rule.

(6) Medical supervision:

(a) The name and telephone number of the guest's physician or other qualified member of the medical staff shall be readily available to respite care staff members.

(b) A qualified health care practitioner order shall not be required for admission to respite care.

(c) An order from a qualified health care practitioner authorized by law shall be required for any new medications or treatments.

(7) Registered nurse (RN) supervision:

(a) Respite care services shall be supervised by an RN.

(b) The RN shall review the guest's medications and usual diet and verify information within four hours of admission. Documented intake information shall include, but not be limited to, current medications, dietary needs, level of ability for assisted or self-care, and any other information germane to the guest's condition. The RN shall document an evaluation of the guest's need on admission.

(c) If the respite care guest stays seven days or more, a nursing assessment shall be performed and documented by the RN on the eighth day and weekly thereafter. If the respite care guest is initially planning to stay for seven or more days, a nursing assessment shall be performed and documented by an RN on admission and weekly thereafter.

(d) In addition to the documentation required in subsections (7)(b) and (c) of this rule, the hospital shall maintain:

(A) Activities of daily living (ADL) sheet by shift;

(B) Medication administration record; and

(C) Weekly progress notes by caregivers.

(8) Medication administration:

(a) Respite care guests taking medication prescribed by their physicians or other qualified health care practitioners may bring such medications in the original containers to the facility. All prescription medications brought in by guests shall be verified by a pharmacist prior to administration.

(b) All medications shall be clearly labeled with the name of the medication, strength/dose, directions for administration, expiration date, and guest's name.

(c) No outdated medication shall be administered.

(d) Any change or alteration in medication shall require an order from a health care practitioner authorized by law.

(e) Medications may be independently self-administered, self-administered under supervision of an RN/LPN, or administered by an RN, LPN, or certified medication aide, depending on the guest's ability. The type of administration shall be determined by the RN. This determination shall be in writing. Medications administered and the type of administration shall be documented on medication administration records.

(9) Quality assurance:

(a) Respite care services shall be included in the hospital-wide quality assurance program.

(b) A mechanism for quality assurance activities shall be defined and implemented.

(c) There shall be documentation of ongoing quality assurance activities.

(d) Quality assurance activities shall be reported to the hospital committee, council, or other reviewing body designated by the hospital as having responsibility for quality assurance.

(10) Nothing in this rule shall be interpreted for creating any obligations for third party payors to reimburse hospital respite care.

Psychiatric Services

A hospital classified as mental or psychiatric or a general or low occupancy acute care hospital that provides inpatient psychiatric services and has an inpatient psychiatric unit shall comply with OAR 333-525-0000(2) through (10).

Stat. Auth.: ORS 441.055

DIVISION 525

SPECIALTY HOSPITALS

333-525-0000
Mental or Psychiatric Hospital

A hospital classified as mental or psychiatric shall:

(1) Be devoted primarily to the diagnosis and treatment of mentally ill persons.

(2) Have adequate numbers of qualified professional and supportive staff to evaluate patients, formulate written, individualized comprehensive treatment plans, provide active treatment measures, and engage in discharge planning, including:

(a) A clinical director, service chief, or equivalent who:

(A) Is qualified to provide the leadership required for an intensive treatment program;

(B) Meets the training and experience requirements for examination by the American Board of Psychiatry and Neurology or the American Osteopathic Board of Neurology and Psychiatry;

(C) Monitors and evaluates the quality and appropriateness of services and treatment provided by the medical staff; and

(D) Supervises inpatient psychiatric services.

(b) Doctors of medicine or osteopathy and other appropriate professional personnel available to provide necessary medical and surgical diagnostic and treatment services. If medical and surgical diagnostic and treatment services are not available within the hospital, the hospital must have an agreement with an outside source of these services to ensure that they are immediately available or a satisfactory agreement must be established for transferring patients to a licensed hospital.

(c) A director of psychiatric nursing services who:

(A) Is a registered nurse with a master's degree in psychiatric or mental health nursing, or its equivalent from a school of nursing accredited by the National League for Nursing Accrediting Commission, or the Commission on Collegiate Nursing Education, or is qualified by education and experience in the care of the mentally ill; and

(B) Demonstrates competence to participate in interdisciplinary formulation of individual treatment plans; to give skilled nursing care and therapy; and to direct, monitor, and evaluate the nursing care furnished.

(d) Registered nurses, licensed practical nurses, and mental health workers to provide nursing care necessary under each patient's active treatment program and to maintain progress notes on each patient.

(e) The availability of a registered professional nurse 24 hours each day.

(f) The availability of staff to provide other psychological services to meet the needs of the patients.

(g) A director of social services who:

(A) Has a master's degree from an accredited school of social work or is qualified by education and experience in the social services needs of the mentally ill; and

(B) Monitors and evaluates the quality and appropriateness of social services furnished.

(h) At least one staff member with a master's degree in social work if the director of social services does not have such a degree.

(i) Social service staff with responsibilities that include, but are not limited to, participating in discharge planning, arranging for follow-up care, and developing mechanisms for exchange of appropriate information with sources outside the hospital.

(j) Qualified therapists, support personnel, and consultants adequate to provide comprehensive therapeutic activities consistent with each patient's active treatment program.

(k) In a satellite as defined in OAR 333-500-0010(46)(b), the prompt availability of at least one psychiatrist to provide emergency psychiatric services or other psychiatric services to meet the needs of the patients 24 hours each day in person or using telemedicine technology.

(3) Have a therapeutic activities program that is appropriate to the needs and interests of patients and directed toward restoring and maintaining optimal levels of physical and psychosocial functioning.

(4) Maintain medical records in a manner that permits determination of the degree and intensity of the treatment provided to individuals who are furnished services in the institution. Medical records shall stress the psychiatric components of the record, including history of findings and treatment provided for the psychiatric condition for which the patient is hospitalized. A patient's medical record shall include:

(a) The patient's legal status;

(b) The provisional or admitting diagnosis, including the diagnoses of intercurrent diseases as well as the psychiatric diagnoses;

(c) The reasons for admission as stated by the patient or others significantly involved;

(d) The social service records, including reports of interviews with patients, family members, and others, including an assessment of home plans and family attitudes, and community resource contacts as well as a social history;

(e) When indicated, a complete neurological examination recorded at the time of the admission physical examination;

(f) Documentation of all active therapeutic efforts; and

(g) A discharge summary that includes a recapitulation of the patient's hospitalization and recommendations from appropriate services concerning follow-up or aftercare, as well as a brief summary of the patient's condition on discharge.

(5) Have a psychiatrist perform a psychiatric evaluation of each patient that:

(a) Is completed within 60 hours of admission;

(b) Includes a medical history;

(c) Contains a record of mental status;

(d) Notes the onset of illness and the circumstances leading to admission;

(e) Describes attitudes and behavior;

(f) Estimates intellectual functioning, memory functioning, and orientation; and

(g) Includes an inventory of the patient's assets in descriptive, not interpretative, fashion.

(6) Develop a written individual comprehensive treatment plan that is based on an inventory of the patient's strengths and disabilities that includes:

(a) A substantiated diagnosis;

(b) Short-term and long-range goals;

(c) The specific treatment modalities utilized;

(d) The responsibilities of each member of the treatment team; and

(e) Adequate documentation to justify the diagnosis and the treatment and rehabilitation activities carried out.

(7) Ensure that progress notes are recorded by:

(a) The doctor of medicine or osteopathy responsible for the care of the patient; and

(b) Nurses, social workers and, when appropriate, others significantly involved in active treatment modalities.

(8) The frequency of progress notes is determined by the condition of the patient but must be recorded at least weekly for the first two months and at least once a month thereafter and must contain recommendations for revisions in the treatment plan as indicated as well as precise assessment of the patient's progress in accordance with the original or revised treatment plan.

(9) Provide discharge planning in accordance with OAR 333-505-0030.

(10) Comply with the applicable rules of the Authority's Health Systems Division, Mental Health Services, OAR chapter 309, divisions 31 and 33.

333-535-0010
General Rules

(1) When conditions make certain changes to existing institutions impractical to accomplish, minor variations from these requirements (other than fire and life safety requirements) may be permitted if the intent of the requirement is met, the care and safety of patients will not be jeopardized, and with written approval of the Oregon Health Authority, Public Health Division (Division). (Refer to OAR 333-500-0065.)

(2) Sizes: The sizes of various departments will depend upon program requirements and organization of services within the hospital. Some functions requiring separate spaces or rooms in these minimum requirements may be combined, provided that the resulting plans will not compromise the best standards of safety and of medical and nursing practices, and with written approval of the Division.

(3) Conflicts of requirements: Certain projects may be subject to the regulations of several different federal, state and local agencies. Should a difference in requirements occur, the more stringent requirement shall be applied. In cases of conflicting or opposing regulations, the problem shall be directed to the responsible programs for resolution.

(4) All departmental requirements included in these rules are not necessarily applicable to all institutions. Each service element provided in the hospital must, however, comply with requirements found herein.

333-535-0025
Medical/Surgical Patient Care Unit

Except as permitted under OAR 333-535-0010(1) or 333-500-0065, each patient care unit shall include the following:

(1) Patient rooms. Each patient room shall meet the following requirements:

(a) For new construction projects, maximum room capacity shall be two patients. For major alteration projects, the maximum room capacity shall be the present capacity or four patients, whichever is less.

(b) For new construction, patient rooms shall be constructed to meet the needs of the Functional Program and shall have a minimum of 100 square feet of clear floor area per bed in multiple bedrooms and 120 square feet of clear floor area in single patient rooms, exclusive of toilet rooms, closets, lockers, wardrobes, alcoves, or vestibules. The dimensions and arrangements of rooms shall be such that there is a minimum clearance of 3 feet around the perimeter of the bed and any wall or any other fixed obstruction. In multiple bedrooms, a clearance of 4 feet shall be available at the foot of each bed to permit the passage of equipment and beds, and 4 feet shall be provided between beds. Minor encroachments, including columns and hand washing stations, that do not interfere with function may be ignored when calculating required space. For renovation projects, every effort shall be made to meet the requirement set out in this subsection for new construction. However, if full compliance is not practical for a renovation project, the Division may permit deviations from these requirements as long as patient rooms include at least 80 net square feet of clear floor area per bed in a multiple bedroom and 100 net square feet of clear floor area in a single patient room.

(c) Patient room windows:

(A) Operable windows are not required in patient rooms. If operable windows are provided, operable sections shall be designed to inhibit possible escape or suicide attempt.

(B) A minimum window area of 16 square feet shall be provided for each patient room. The maximum sill height shall be 3 feet above the finished floor. A minimum of 8 square feet of window shall be viewable by the patient from the bed. Walls and other non-moveable items shall not block the view of the window.

(C) Windows located in outside walls shall be 20 feet or more from another building or opposite wall and 10 feet or more from the property line except when the window faces on a street or public right of way of greater than 20 feet in width.

(D) For renovation projects where the exterior wall is being retained, windows shall be permitted to vary from the requirements of this subsection if approved by the Division.

(d) Hand-washing stations: A hand-washing station shall be provided serving each patient room. A hand-washing station shall also be located in each patient toilet room. For new construction, the patient room hand-washing station shall be located within the room and shall be situated for convenient access by staff and to prevent splash on patients. For renovation projects involving single patient rooms that have a private toilet room, a hand-washing station shall be located in either the toilet room or the patient room. Hand-washing stations shall comply with the requirements of OAR 333-535-0260.

(e) Patient toilet rooms: Each patient shall have access to a toilet room without having to enter the corridor. One toilet room shall serve no more than four beds and no more than two patient rooms. The toilet room shall contain a toilet, hand-washing station, and bathing facilities. Patient toilet rooms and central bathing facilities shall comply with the requirements of OAR 333-535-0260.

(f) Each patient shall have a separate wardrobe, locker, or closet suitable for hanging full-length garments and for storing personal effects within the room.

(g) Visual privacy from casual observation by other patients and visitors shall be provided for each patient. The design for privacy shall not restrict patient access to the entrance, hand-washing station, toilet, or nurse call system.

(2) Service areas. Provision for the services listed below shall be in or readily available to each patient care unit. The size and location of each service area will depend upon the numbers and types of beds served. Identifiable spaces are required for each of the indicated functions. Each service area may be arranged and located to serve more than one patient care unit but, unless noted otherwise, at least one such service area shall be provided on each nursing floor. Where the words "room" or "office" are used, a separate, enclosed space for the one named function is intended; otherwise, the described area may be a specific space in another room or common area.

(a) Administrative center(s) or nurses' station(s): This area shall include a desk, storage and work counters and shall have convenient access to a hand-washing station within 20 feet and not through a door, to meet infection control standards. It may be combined with or include facilities for reception and communication systems;

(b) Private consultation/administrative office;

(c) Charting facilities: Charting facilities shall have sufficient surface space to provide for charting by staff and physicians to meet the functional needs of the unit;

(d) Toilet room(s) conveniently located for staff use (may be unisex);

(e) Staff facilities: In addition to lounge facilities, securable closets or cabinet compartments shall be provided for the personal articles of nursing personnel. At a minimum, these shall be large enough for purses and billfolds. Coats may be stored in closets or cabinets on each floor or in a central staff locker area;

(f) Multi-purpose room(s) for staff, patients, patients' families for patient conferences, reports, education, training sessions, and consultation. These rooms shall be accessible to each patient care unit but may be located on other floors if convenient for regular use;

(g) Clean and soiled utility rooms shall be provided in accordance with OAR 333-535-0260(5);

(h) Medication station: Provision shall be made for convenient and prompt 24hour distribution of medicine to patients. This shall be from a medicine preparation room, a self-contained medicine dispensing unit, or by another system approved by the Division. A medicine preparation room or unit shall be under the visual control of the nursing or pharmacy staff. It shall contain a work counter, hand-washing station, and an electrical receptacle for a lockable refrigerator and locked storage for biologicals and drugs. A secured medicine dispensing unit may be located at the nurses' station, in the clean utility room or area, or in an alcove or other space under the direct control of the nursing or pharmacy staff. This area shall have adequate lighting to easily identify drugs;

(i) Clean linen storage: Each patient care unit shall contain a designated area for clean linen storage. This may be within the clean utility room or area, a separate closet, or a distribution system approved by the Division on each floor. If a closed cart system is used, storage may be in an alcove;

(j) Nourishment area: There shall be a nourishment area with sink, work counter, refrigerator, storage cabinets, and equipment for hot and cold nourishments between scheduled meals. The nourishment area shall include space for trays and dishes used for non-scheduled meal service. Provisions and space shall be included for separate temporary storage of unused and soiled dietary trays not picked up at mealtime. A hand-washing station shall be in or immediately accessible from the nourishment area;

(k) Ice machine: Each nursing unit shall have direct access to equipment to provide ice for treatments and nourishment. Ice-making equipment may be in the clean utility room or area or at the nourishment station. Ice intended for human consumption shall be from self-dispensing icemakers;

(l) Equipment storage room(s) or alcove(s): Appropriate room(s) or alcove(s) shall be provided for storage of equipment necessary for patient care as required by the Functional Program, the location of which shall not interfere with the flow of traffic. Each patient care unit shall provide sufficient storage area(s) located on the patient floor to keep the required corridor width free of all equipment and supplies, but at least 10 square feet per patient bed shall be provided. If stretchers and wheelchairs are stored on the patient care unit, additional storage space shall be provided;

(m) In remodel projects that do not include bathing facilities in all existing patient rooms, common use showers and bathtubs shall be provided in accordance with OAR 333-535-0260(6);

(n) Emergency equipment storage: Space for emergency equipment such as cardiopulmonary resuscitation (CPR) carts shall be provided. This space shall be out of traffic, under the direct control of the nursing staff and proximate to the nurses' station;

(o) Housekeeping room: One housekeeping room shall be provided for each patient care unit or nursing floor. It shall be directly accessible from the patient care unit or floor and may serve more than one patient care unit on a floor. At least one housekeeping room per floor shall contain a service sink or floor receptor and space for the storage of supplies and housekeeping equipment and cart. A minimum of 35 square feet shall be provided for each housekeeping room. This housekeeping room shall not be used for other departments and patient care units that are specifically required by rule to have separate housekeeping rooms; and

(p) Low voltage room/closet(s), electrical room/closet(s) and other technical support spaces shall be provided as required to meet the service needs of the patient care unit.

(3) Patient care units shall comply with the requirements of OAR 333-535-0260, 333-535-0270, 333-535-0280, 333-535-0300 and 333-535-0310. Additional rule requirements may apply to specialty patient care units.

333-535-0035
Infection Control Physical Requirements

(1) An Infection Control Risk Assessment (ICRA) shall be provided for all projects that include Airborne Infection Isolation Rooms, Protective Environment Rooms, surgical facilities, emergency departments, hospital immediate care and minor emergency facilities, and any other identified areas of special risk related to infection. As used in division 535, an Infection Control Risk Assessment is documentation focusing on reduction of risk from infection. The assessment shall have input from the hospital's infection control personnel, and be based on current Centers for Disease Control guidelines or other applicable rules and guidelines. Each subject health care facility shall also comply with the requirements of OAR 333-505-0070. The Infection Control Risk Assessment shall include at least the following elements:

(a) A statement explaining the needs and risks of the patient population to be served that includes:

(A) The number, location, and type of airborne infection isolation and protective environment rooms;

(B) Location(s) of special ventilation and filtration such as emergency department waiting and intake areas; and

(C) Air-handling and ventilation needs in surgical services, airborne infection isolation and protective environment rooms, laboratories, local exhaust systems for hazardous agents, and other special areas.

(b) Statements regarding infection control risk mitigation recommendations including:

(A) Patient placement and relocation;

(B) Standards for barriers and other protective measures required to protect adjacent areas and susceptible patients from airborne contaminants;

(C) Temporary provisions or phasing for construction or modification of heating, ventilating, air conditioning, and water supply systems; and

(D) Measures to be taken to train hospital staff, visitors, and construction personnel.

(c) Management of potentially infectious patients that includes:

(A) Location of patients by susceptibility to infection and definition of risks to each; and

(B) Infection control risk mitigation recommendations that describe the specific methods by which transmission of air and waterborne biological contaminants will be avoided during the course of the construction project.

(d) Infection control risks during construction and plan for containment that includes:

(A) The impact of disrupting essential services to patients and employees;

(B) Location of known hazards;

(C) Determination of the specific hazards and protection levels for each;

(D) Assessment of external as well as internal construction activities; and

(E) Impact of potential outages or emergencies and protection of patients during planned or unplanned outages, movement of debris, traffic flow, cleanup, and testing and certification.

(2) Airborne Infection Isolation Room(s): Airborne Infection Isolation Rooms are single occupancy patient care rooms where environmental factors are controlled in an effort to minimize the transmission of those infectious agents usually spread from person to person by droplet nuclei associated with coughing and inhalation. Airborne Infection Isolation Room requirements shall be predicated on the Infection Control Risk Assessment (ICRA) and the needs of specific community and patient populations served, and shall include the following:

(a) Each facility shall have at least one Airborne Infection Isolation Room. These rooms may be located within individual patient care units and used for normal acute care when not required for isolation cases, or they may be grouped as a separate isolation unit. The number of airborne infection isolation rooms for individual patient units shall be increased based upon an ICRA or by a multidisciplinary group designated for that purpose. Each room shall contain only one bed and shall comply with the requirements of OAR 333-535-0025, and ventilation requirements of OAR 333-535-0300.

(b) Each Airborne Infection Isolation Room shall have an area for hand-washing, gowning, and storage of clean and soiled materials located directly outside or immediately inside the entry door to the room.

(c) Airborne infection isolation room perimeter walls, ceilings, and floors, including penetrations, shall be sealed tightly so that air does not infiltrate the environment from the outside or from other spaces.

(d) Each Airborne Infection Isolation Room shall have a self-closing device on all room exit doors, or doors shall be signed "Door shall be closed at all times."

(e) A separate toilet, bathtub (or shower), and hand-washing station shall be required for each Airborne Infection Isolation Room and shall be accessible without having to enter the corridor.

(f) Each Airborne Infection Isolation Room shall have a permanently installed visual mechanism to constantly monitor the pressure status of the room when occupied by a patient with airborne infectious disease. The mechanism shall continuously monitor the direction of the airflow.

(3) Protective Environment Room(s): Protective Environment Rooms are patient care rooms where severely immuno-suppressed patients are cared for (e.g. bone marrow transplant units). Protective Environment Rooms shall meet all rules for Airborne Infection Isolation Rooms as required by subsection (2)(a) through (f) of this rule but shall provide positive air pressure relative to adjoining spaces, with all supply air passing through filters in compliance with OAR 333-535-0300. When determined necessary by an ICRA, special design considerations and air ventilation to ensure the protection of patients shall be required. The appropriate number and location of Protective Environment Rooms shall be determined by the ICRA. Each Protective Environment Room shall contain only one bed.

(4) Surgical facilities, emergency departments, immediate care and minor emergency facilities and other identified areas of special risk related to infection: Requirements shall be predicated on the ICRA in addition to the rules applicable to each type of area.

(5) Infectious waste:

(a) Soiled utility or soiled holding room(s) shall include segregated infectious waste storage and recycle storage if part of hospital operations unless a separate designated room for waste storage is provided.

(b) The infectious waste storage spaces shall have a floor drain, cleanable floor and wall surfaces, lighting and exhaust ventilation, and safe from weather, animals and unauthorized entry.

(c) Infectious waste management shall be in accordance with the requirements of OAR 333-056-0010 through 333-056-0050.

(d) Refrigeration requirements for such storage facilities shall also comply with OAR 333-535-0300 and the Oregon Mechanical Specialty Code.

333-535-0041
Critical Care Units

(1) Critical Care Units: Generally, Critical Care Units require special space and equipment considerations for effective staff functions. In addition, space must be arranged to include provisions for immediate access for emergency medical equipment from other departments. Critical Care Units shall comply in size, number and type with the requirements of this rule and with the hospital's Functional Program. This rule is intended for the more common types of critical care services. Where specialized services are required, the Division may allow such additions and modifications as are necessary for efficient, safe and effective patient care. (See also OAR 333-535-0300 for mechanical requirements and 333-535-0310 for electrical requirements.)

(2) Adult Critical Care Units: Each Adult Critical Care Unit shall comply with the following requirements:

(a) The location shall be convenient for access from emergency, respiratory, laboratory, radiology, surgery, and other essential departments and services, and be located so that medical emergency resuscitation teams may respond promptly to emergency calls;

(b) The location shall be arranged to eliminate the need for through traffic;

(c) For new construction, a private room shall be provided for each patient. A minimum of 200 square feet of clear floor area shall be provided exclusive of anterooms, vestibules, toilet rooms, closets, lockers, wardrobes, and alcoves. A combined total of at least 7 feet of clear space shall be available at the head and foot of the bed. Minimum head wall width shall be 13 feet;

(d) Renovation projects shall comply with subsection (2)(c) of this rule except when existing structural conditions make full compliance impractical. In such cases, the Division may allow the following deviations: Private patient room size may be reduced to 160 square feet with a minimum headwall width of 11 feet 6 inches. The combined total of clear space available at the head and foot of the bed may be reduced to a minimum of 6 feet. Multiple bed rooms may be provided with cubicle curtains for patient privacy. The minimum patient cubicle size shall be 130 square feet with a minimum headwall width of 11 feet for each bed. Three of the 7 feet of combined total clear space required at the head and foot of the bed may be outside the curtained cubicle area;

(e) In private rooms or curtained cubicles, visual access to the corridor shall be provided. In multiple bed rooms, cubicle curtains or other alternative methods approved by the Division shall be provided for visual privacy from casual observation by other patients and visitors;

(f) Where only one door is provided to a bed space, it shall be at least 3 feet 8 inches in clear width and arranged to minimize interference with the movement of beds and large equipment. Sliding doors shall not have floor tracks and shall have hardware that minimizes jamming. When a secondary door is desired for staff use, it may be of a smaller width;

(g) For the purpose of allowing day from night orientation, newly constructed patient rooms shall include at least one window meeting the requirements of OAR 333-535-0025(1)(c), arranged to allow direct visual access by the patient to the outside. Patient

rooms and cubicles in renovation projects shall also meet this requirement except when the Division determines that existing structural conditions make it impractical to do so. In these instances, patients must have direct visual access to an outside window, but it may be a clerestory type and the distance from the patient bed to the outside window may be up to 50 feet;

(h) A nurse call device shall be provided at each bed for patient use. A staff use emergency call station shall also be provided in each patient room to summon assistance. In multiple bed rooms, at least one such emergency call station shall be provided for each eight patient beds;

(i) Hand-washing stations shall be convenient to nurses' stations and patient bed areas. One hand-washing station shall be provided in each patient room. The hand-washing station shall be located near the entrance of the patient room, designed to minimize splashing water onto the floor, and shall be equipped with hands-free operable controls. In multiple bed rooms allowed under paragraph (2)(b)(D) of this rule, if the Division determines that existing structural conditions make it impractical to comply with this requirement, there shall be at least one hand-washing station provided for every two beds in multiple bed rooms. The hand-washing station shall be located near the entrances to patient cubicles;

(j) A toilet shall be provided within each patient room or in a separate private toilet room entered directly from the patient room. Space shall be provided adjacent to toilets to allow for staff assistance. An exception to this requirement may be granted by the Division when the project is within an Oregon Health Authority designated Level 1 Trauma Center Hospital and patients typically are unable to utilize toilets. In renovation projects if the Division determines that existing structural conditions make it impractical to comply with this paragraph, a minimum of one enclosed toilet room and hand-washing station shall be provided for each eight patient beds. In these instances, portable toilets are permitted in place of fixed toilets within each patient room or cubicle. If portable toilets are used, facilities for cleaning and storing them shall be conveniently located within or adjacent to the Critical Care Unit;

(k) The nurses' station or a substation with space for charting, monitoring and a hand-washing station within 20 feet not through a door, shall be located so that nurses will have direct visual observation of each patient. In larger Critical Care Units, more than one nurses' station may be needed to provide for observation of all patients;

(l) Individual patient closets or lockers shall be provided for the secure storage of clothing and personal effects. This storage may be within patient rooms or in a central location convenient to the Critical Care Unit; and

(m) Each Critical Care Unit shall provide space for equipment used for continuous physiological monitoring, including a bedside and remote visual display for each patient.

(3) Airborne Infection Isolation Room: At least one Airborne Infection Isolation Room shall be provided for use by Critical Care Unit patients. The number and location of Airborne Infection Isolation Rooms shall be determined based upon an Infection Control Risk Assessment conducted in accordance with OAR 333-535-0035(1). Each Airborne Infection Isolation Room shall comply with the requirements of OAR 333-535-0035(2) with the following exceptions:

(a) The requirement for the bathtub or shower may be eliminated;

(b) Compact, modular toilet/sink combination units may replace the requirement for a toilet room if discussed and allowed through the ICRA; and

(c) Toilets may be eliminated entirely from patient rooms of Oregon Health Authority designated Level 1 Trauma Center Hospitals when patients typically are unable to utilize a toilet.

(4) Service areas: One service area may serve two or more adjacent Critical Care Units. The size and location of each service area will depend upon the number of beds to be served. The following service areas shall be located in, or readily available to, each Critical Care Unit:

(a) Charting facilities. Documentation and information review spaces shall be provided within the unit to accommodate the recording of patient information. The documentation space shall be located within or adjacent to the patient bed space. It shall include a countertop that will provide for a large flow sheet typical of critical care units and a computer monitor and keyboard. There shall be one documentation space with seating for each patient bed. There shall be a specifically designated area within the unit for information review located to facilitate concentration;

(b) Staff lounges and toilet(s). The following may be located outside the unit if conveniently accessible:

(A) Staff lounge(s) and toilet(s) shall be located so that staff may be recalled quickly to the patient area in emergencies;

(B) The lounge shall have telephone or intercom and emergency code alarm connections to the critical care unit it serves;

(C) Lounge facilities shall be sized in accordance with the Functional Program but shall not be less than 100 square feet; and

(D) Staff personal effects storage. Space located at or near the nurses' work area for the secure storage of the personal effects of nursing personnel. If not provided elsewhere, provisions for the storage of coats, etc., shall be made in this area.

(c) Sleeping and personal care accommodations shall be provided for staff on 24-hour call work schedules;

(d) Clean utility or clean storage room. This room shall be provided in accordance with OAR 333-535-0260(4), for the storage and distribution of all clean medical and surgical supplies kept in the Critical Care Unit;

(A) This room shall be immediately available in each critical care suite.

(B) More than one critical care unit shall be permitted to share a clean utility or clean storage room provided direct access is available from each.

(C) Such rooms shall be separate from and have no direct connection with soiled utility or soiled holding rooms.

(D) If the clean utility room is used to prepare patient care items, it shall contain a work counter, a hand-washing station, and storage facilities for clean and sterile supplies.

(E) If the room is used only for storage and holding as part of a system for distribution of clean and sterile materials, omission of the work counter and hand-washing station shall be permitted.

(e) Clean linen storage. Location of the designated area within the clean utility room, a separate closet, or an approved distribution system on each floor shall be permitted. If a closed cart system is used, storage of clean linen carts in an alcove shall be permitted. The cart storage must be out of the path of normal traffic and under staff control;

(f) Appropriate room(s) or alcove(s) shall be provided for storage of equipment necessary for patient care and as required by the Functional Program. Each unit shall provide sufficient storage area(s) located on the patient floor to keep its required corridor width free of all equipment and supplies, but not less than 10 square feet per patient bed shall be provided;

(A) Equipment storage room or alcove. Appropriate room(s) or alcove(s) shall be provided for storage of large items of equipment necessary for patient care and as required by the Functional Program. Each Critical Care Unit shall provide sufficient storage area(s) in addition to subsection (4)(f) of this rule, located on the patient floor to keep its required corridor width free of all equipment and supplies, but not less than 20 square feet per patient bed shall be provided. Additional space shall be provided for stretcher or bed storage if stored on the floor.

(B) Emergency equipment storage. Space shall be provided for emergency equipment that is under direct control of the nursing staff, such as a cardiopulmonary resuscitation (CPR) cart. This space shall be located in an area appropriate to the Functional Program but out of normal traffic.

(g) Soiled utility room. Each patient Critical Care Unit shall include at least one soiled utility room that meets the requirements of OAR 333-535-0260(5);

(h) Medication station. Medication stations shall be in accordance with the requirements of OAR 333-535-0025(2)(h). The

medication station shall be designed to allow for secure, convenient, and prompt 24-hour distribution of medicine to patients;

(i) Nourishment station. A nourishment station with sink, work counter, refrigerator, storage cabinets, and equipment for hot and cold nourishments between scheduled meals shall be provided. The nourishment station shall include space for trays and dishes used for non-scheduled meal service. Provision and space shall be included for separate temporary storage of unused and soiled dietary trays not picked up at meal time. Nourishment stations shall not share storage, counters, sinks or refrigerator space with medical supplies or pharmaceuticals;

(j) Ice machine. Equipment to provide ice for treatments and nourishment shall be provided. Ice-making equipment may be in the clean work room or at the nourishment station. Ice intended for human consumption shall be from self-dispensing icemakers;

(k) Visitors' waiting room. A visitors' waiting room shall be provided that is designed to accommodate the long stays and stressful conditions common to such spaces, including provisions for privacy, means to facilitate communications, and access to toilets. The waiting room may be located outside the unit if conveniently accessible. The locations and size shall be appropriate for the number of patients and units served, with a seating capacity of not less than one family member per patient bed;

(l) Multipurpose room(s). Multipurpose room(s) shall be provided for staff, patients, and patient's families for patient conferences, reports, education, training sessions, and consultation. These rooms shall be accessible to each nursing unit; and

(m) Housekeeping room. A housekeeping room shall be provided within or immediately adjacent to the critical care unit. This room shall not be shared with other nursing units or departments. It shall contain a service sink or floor receptor and provisions for storage of supplies and housekeeping equipment.

(5) Pediatric Critical Care Unit:

(a) If a facility has a distinct Pediatric Critical Care Unit, the Functional Program must include consideration for staffing, control, and the safe transportation of critically ill pediatric patients with life support and environmental systems from other areas of the facility. The Pediatric Critical Care Unit may be an open ward plan or may have private or semi-private patient rooms. Private rooms at the rate of at least one per 10 beds shall be provided. In addition, at least one private room for each Pediatric Critical Care Unit shall be provided for seclusion and airborne infection isolation. The room(s) provided for seclusion and airborne infection isolation shall comply with the requirements for Airborne Infection Isolation Rooms set forth in OAR 333-535-0035(2). (See also OAR 333-535-0300 for mechanical requirements and 333-535-0310 for electrical requirements.)

(b) In addition to complying with the requirements of sections (1), (2), (3) and (4) of this rule, each Pediatric Critical Care Unit shall also include the following features:

(A) Space in the patient room for family and visitors. Sleeping space for parents who may be required to spend long hours with the patient. This sleeping space may be provided at the patients' bedside. If the sleeping area is separate from the patient area, a system for communication with Pediatric Critical Care Staff must be provided. Storage for associated bedding shall be provided;

(B) If an examination and treatment room is required by the Functional Program, it shall be located in or directly accessible from the Pediatric Critical Care Unit. Examination and treatment rooms shall have a floor area of at least 80 square feet and shall include a hand-washing station, storage facilities and a surface for charting;

(C) Provisions shall be made for the storage of formula or breast milk. Formula/breast milk storage may be outside the unit but should be available for use at all times. The Functional Program should determine the location and size of formula/breast milk storage;

(D) Consultation/demonstration room within, or convenient to, the Pediatric Critical Care Unit for private discussions; and

(E) Separate storage cabinets or closets for toys and games.

(6) Newborn Intensive Care Units (NICU): Each Newborn Intensive Care Unit shall include or comply with the following requirements:

(a) The NICU shall have a clearly identified entrance and reception area with a counter for charting and enclosed storage for supplies. The area shall permit visual observation of, and contact with, all traffic entering the NICU. A hand-washing station shall be provided for visitors entering the NICU.

(b) The NICU shall be designed as part of an overall safety program to protect the physical security of infants, parents, and staff and to minimize the risk of infant abduction. There shall be controlled physical access and controlled egress to and from the NICU.

(c) In a multiple-bed room, every bed position shall be within 20 feet of a hands-free hand-washing station. Where an individual room concept is used, a hands-free hand-washing station shall be provided within each infant care room. All hand-washing stations shall be large enough to contain splashing.

(d) At least one door to each patient room in the NICU must be large enough in both width and height to accommodate portable X-ray and ultrasound equipment.

(e) The NICU shall be located proximate to Labor and Delivery Departments when that service is also provided at the facility.

(f) When viewing windows are provided, provisions shall be made to control casual viewing of infants. Each patient care space shall be designed to allow privacy for the infant and family.

(g) Noise control:

(A) Infant bed areas and the spaces opening onto them shall be designed to produce minimal background noise and to contain and absorb much of the transient noise that arises within the NICU;

(B) The combination of continuous background sound and transient sound in any patient care area shall not exceed an hourly Leq of 50dB and an hourly L10 of 55dB, both A-weighted slow response. The Lmax (transient sounds) shall not exceed 70dB, A-weighted slow response;

(C) Ceilings shall have a noise reduction coefficient (NRC) of at least 0.90; and

(D) The ceiling construction shall limit passage of particles from above the ceiling plane into the clinical environment. If a t-bar acoustic tile ceiling system is used, the tiles shall be clipped down, weighted or gasketed to limit passage of particles and be easily cleanable and non-friable.

(h) Lighting:

(A) Provisions shall be made for indirect lighting and high-intensity lighting in the NICU;

(B) Controls shall be provided to enable lighting to be adjusted over individual patient care spaces from one to 60 foot-candles at 3 feet above the floor level;

(C) Darkening sufficient for trans-illumination shall be available when necessary;

(D) No direct ambient lighting shall be permitted in the infant care space, and any direct ambient lighting used outside the infant care area shall be located or framed to avoid a direct line of sight from any infant to the fixture. This does not exclude the use of direct procedure lighting; and

(E) Lighting fixtures shall be easy to clean.

(i) Space requirements: Each infant care space shall contain a minimum of 150 square feet per bassinet, excluding sinks and aisles. Each bassinet shall have a minimum clearance of 4 feet to walls or any permanent obstruction. When single infant rooms or fixed cubicle partitions are used, there shall be an adjacent aisle of not less than 8 feet in clear unobstructed width to permit passage of equipment and personnel. In multiple bed rooms, there shall be a minimum of 8 feet between infant care beds. Each infant care space shall be designed to allow privacy for the baby and family.

(j) A medication station meeting subsection (4)(h) of this rule.

(k) At least one Airborne Infection Isolation Room is required within the NICU. The room shall be enclosed and separated from other areas of the nursery with provisions for visual observation of the infant from adjacent nurseries or control area(s). All Airborne

Infection Isolation Rooms shall comply with the requirements of OAR 333-535-0035(2), except that a separate toilet, bathtub, or shower are not required.

(l) Rooms at the rate of at least one per 15 infant isolettes shall be provided within the NICU to allow parents and infants to spend extended private time together.

(A) These room(s) shall have direct, private access to a hand-washing station and toilet facilities;

(B) Communication linkage with the NICU staff;

(C) Electrical and medical gas outlets as specified for other NICU beds;

(D) Sleeping facilities for at least one parent; and

(E) Sufficient space for the infant's bed and equipment.

(m) Lactation support space. Dedicated space shall be provided for lactation support and consultation in or immediately adjacent to the NICU. Provision shall be made, either within the room or conveniently located nearby, for a hand-washing station, counter, refrigerator and freezer, storage for pump and attachments, and educational materials.

(n) Charting facilities shall have adequate linear surface space to ensure that staff and physicians may chart and have simultaneous access to information and communication systems.

(o) A clean utility room or clean supply room shall be provided in accordance with the requirements of subsection (4)(d)of this rule.

(p) A soiled utility room or soiled holding room shall be provided in accordance with the requirements of subsection (4)(g) of this rule.

(q) A lounge, locker room, and staff toilet shall be provided within or adjacent to the NICU for staff use in accordance with the requirements of subsection (4)(b) of this rule.

(r) Space for storage of emergency equipment shall be provided in accordance with the requirements of paragraph (4)(f)(B) of this rule.

(s) A housekeeping closet directly accessible from the unit and dedicated for the exclusive use of the NICU shall be provided in accordance with the requirements of subsection (4)(m) of this rule.

(t) A visitors' waiting room shall be provided in accordance with the requirements of subsection (4)(k) of this rule.

(u) A nurses'/supervisors' office or station shall be provided in accordance with the requirements of subsection (2)(k) of this rule.

(v) Multipurpose room(s) for staff, patients, and patients' families for patient conferences, reports, education, training sessions, and consultation. These rooms must be accessible to each NICU. They may be located on other floors if convenient for regular use. One such room may serve several nursing units or departments.

(w) Equipment storage or alcove shall be provided in accordance with paragraph (4)(f)(a) of this rule.

333-535-0050
Pediatric Patient Care Unit

Young children and adolescents shall be housed in a patient care unit separate from adults or in a separate pediatrics room of a general nursing unit. This unit shall meet the following requirements:

(1) Patient rooms. The requirements noted in OAR 333-535-0025 shall be applied to a pediatric and adolescent care unit containing hospital beds or cribs, except that patient rooms used for cribs shall contain at least 60 square feet of clearance for each crib with no more than six cribs in a room.

(2) Nursery. Each nursery serving pediatric patients shall contain no more than eight bassinets. The minimum clear floor area per bassinet shall be 40 square feet. Each room shall contain a lavatory equipped for hand-washing, nurses' emergency calling system, and glazed viewing windows for observing infants from public areas and workroom.

(3) Nursery workrooms. Each nursery shall be served by a connecting workroom that shall contain:

(a) Gowning facilities at the entrance for staff;

(b) Work counter;

(c) Refrigerator;

(d) Storage facilities; and

(e) A hand-washing station.

(f) One workroom may serve more than one nursery provided that required services are convenient to each.

(g) The workroom serving the full-term and continuing care nurseries may be omitted if equivalent work and storage areas and facilities, including those for scrubbing and gowning, are provided within that nursery. Space required for work areas located within the nursery is in addition to the area required for infant care.

(h) Provision shall be made for storage of emergency cart(s) and equipment out of traffic.

(i) Provision shall be made for the sanitary storage and disposal of soiled waste.

(j) Visual control shall be provided via borrowed lights or view panels between the staff work area and each nursery.

(4) Examination/Treatment Rooms. An examination/ treatment room shall be provided for pediatric and adolescent patients. A separate area for infant examination and treatment shall be permitted within the pediatric nursery workroom. It shall contain a work counter, storage facilities, and a hand-washing station. Examination/treatment rooms shall have a minimum floor area of 120 square feet.

(5) Service areas. The service areas in the pediatric and adolescent nursing unit shall conform to the conditions listed in OAR 333-535-0025 and shall meet the following additional conditions:

(a) Multipurpose or individual room(s) shall be provided within or adjacent to areas serving pediatric and adolescent patrons for dining, educational and developmentally appropriate play and recreation, with access and equipment for patients with physical restrictions. Insulation, isolation, and structural provisions shall be made to minimize the transmission of impact noise through the floor, walls, or ceiling of the multipurpose room(s).

(b) Space for preparation and storage of infant formula or breast milk shall be provided in the unit or other convenient location. The Functional Program should determine the location and size of formula/breast milk storage. Provisions shall be made for continuation of special formula that may have been prescribed for the infant prior to admission or readmission.

(c) Patients' toilet room(s) with hand-washing stations in each room, in addition to those serving bed areas, shall be convenient to multipurpose room(s) and to each central bathing facility.

(d) Storage closets or cabinets shall be provided for toys, and educational and recreational equipment.

(e) Storage space shall be provided to permit exchange of cribs and adult beds.

(f) Storage space shall be provided for equipment and supplies (including cots, recliners, extra linen, etc.) for parents who stay with the patient overnight.

(g) Separate clean and soiled utility or holding rooms shall be provided in accordance with OAR 333-535-0260(4) and (5).

(h) Housekeeping closet shall be provided for each nursery per OAR 333-535-0260(8).

Stat. Auth.: ORS 441.060
Stats. Implemented: ORS 441.060

333-535-0061
Psychiatric Patient Care Units and Rooms

(1) The design of inpatient psychiatric patient care units shall be supportive of the types of psychiatric therapies provided for patients and their psychiatric care needs. Interior finishes, lighting and furnishings shall, to the extent practicable, reflect a residential

rather than an institutional setting with an emphasis on natural light and exterior views while not compromising patient privacy and safety design. Inpatient psychiatric patient care units shall include patient rooms meeting the requirements of section (4) of this rule and service areas meeting the requirements of section (5) of this rule.

(2) Patient and Staff Safety Assessment. The hospital psychiatric care staff and the hospital administration, in consultation with the project architects, shall develop a Patient and Staff Safety Assessment that addresses security and safety design features and devices. A copy of this Assessment shall accompany construction documents submitted to the Licensing Plans Review Program. The Patient and Staff Safety Assessment shall include at least the following elements:

(a) A statement explaining the psychiatric population groups served;

(b) A discussion of the capability for staff visual supervision of patient ancillary areas and corridors;

(c) A discussion of the risks to patients, including self-injury, and the project solutions employed to minimize such risks;

(d) A discussion of building features and equipment, including items which may be used as weapons, that is intended to minimize risks to patients, staff and visitors;

(e) A statement explaining how potentially infectious patients will be managed; and

(f) A discussion of outdoor areas used by patients. Discussion must include, but is not limited to, the number of patients each outdoor area will serve at one time, staffing, security and shifts.

(3) Except as permitted under OAR 333-500-0065, every hospital classified as mental or psychiatric and other hospitals, regardless of classification, that provide psychiatric services, shall have at least one psychiatric seclusion room which meets the requirements of section (7) of this rule and OAR 309-033-0727.

(4) Psychiatric patient care rooms shall comply with the requirements of OAR 333-535-0025, except as follows:

(a) A nurse call system is not required. If included, provisions shall be made for easy removal or covering of call buttons;

(b) Patient toilets shall not have bed pan flushing devices;

(c) Hand-washing stations are not required in patient rooms;

(d) Visual privacy in multi-bed rooms (for example, cubicle curtains) is not required;

(e) Each patient room shall be provided a private toilet room and hand-washing station. Grab bars are only required in rooms required to be accessible to the disabled;

(f) All hardware shall have tamper-resistant fasteners; and

(g) Patient rooms shall comply with the requirements of section (6) of this rule.

(5) Psychiatric patient care unit service areas shall comply with the requirements of OAR 333-535-0025, except as follows:

(a) A secured storage area shall be provided for patients' belongings that are determined to be potentially harmful;

(b) A secured storage station will be provided for storing law enforcement weapons prior to officers entering the patient care unit;

(c) The medication station shall include provision against unauthorized access;

(d) Between meal nourishment(s) facilities within the unit shall be one, or a combination of the following:

(A) A nourishment station;

(B) A kitchenette, designed for patient use, with a sink and a keyed switch or other acceptable method for staff control of any heating and cooking devices; or

(C) A kitchen service within the unit that includes a hand washing station, storage space, refrigerator and facilities for full meal preparation. A keyed switch or other acceptable method for staff control of any heating and cooking devices is required.

(e) All storage spaces within the psychiatric patient care unit shall be secured from patient access;

(f) A bathtub or shower shall be provided for every six beds not otherwise served by bathing facilities within the patient rooms. Bathing facilities shall be designed and located for patient safety, convenience, privacy and shall comply with section (6) of this rule;

(g) A separate charting area shall be provided with provisions for visual and acoustical privacy. Viewing windows to permit observation of patient areas by the charting nurse or physician may be used if the arrangement is such that patient files cannot be read from outside the charting area. Viewing windows shall meet the requirements of subsection (6)(g) of this rule;

(h) At least two separate social spaces, one appropriate for noisy activities and one for quiet activities shall be provided. The combined area shall be at least 40 square feet per patient with each space being at least 120 square feet in size. These spaces may be shared by dining activities;

(i) Space for group therapy shall be provided. This space may be combined with the quiet space required by subsection (5)(h) of this rule when the unit accommodates 12 or fewer patients and when at least 225 square feet of closed private space is available for group therapy activities;

(j) Securable patient laundry facilities with an automatic washer and dryer and secured space for chemicals shall be provided;

(k) Each psychiatric patient care unit shall include, or have close access to, a soiled utility room that meets the requirements of OAR 333-535-0260(5) or a soiled holding room. A soiled holding room shall meet all the requirements of a soiled utility room except that a clinical sink may be omitted;

(l) The following elements shall also be provided, but shall be permitted to serve several nursing units and may be on a different floor if conveniently located to the unit for routine use:

(A) Space requirements. Examination rooms shall have a minimum floor area of 120 square feet, excluding space for vestibule, toilets, and closets. The room shall contain a hand-washing station, storage facilities and a surface for charting. In existing psychiatric facilities exam rooms may continue to be 80 square feet excluding space for vestibules, toilets and closets;

(B) Separate consultation room(s), lockable from the outside. Each consultation room shall have a minimum floor space of 100 square feet and shall be provided at a room-to-bed ratio of one consultation room for every 12 psychiatric beds. The room(s) shall be designed for acoustical and visual privacy and be constructed to achieve a level of voice privacy of 50 STC;

(C) Separate space for patient therapy/multipurpose use. The greater of at least 300 square feet or at least 15 square feet per patient shall be provided. The space shall include a hand-washing station, work counter(s), storage and space for displays and may serve more than one psychiatric patient care unit. However, when a psychiatric patient care unit contains less than 12 beds, the therapy and other functions may be performed within the noisy activities area required by subsection (5)(h) of this rule if at least an additional 10 square feet per patient is provided; and

(D) A conference and treatment planning room, for use by psychiatric patient care unit staff, constructed to achieve a level of voice privacy of 50 STC.

(m) Outside area shall be provided for all patients. The area shall be discussed as part of the Functional Program per subsection (2)(f) of this rule.

(6) Patient and staff safety features, security and safety devices shall not, to the extent practicable, be presented in a manner to attract or invite tampering by patients. Design, finishes and furnishings shall be designed and installed to minimize the opportunity for patients to cause injury to themselves or others. Special design considerations for prevention of self injury and injury to staff and others shall include:

(a) Visual control of nursing unit corridors, passive activity areas and outdoor areas shall be provided;

(b) Hidden alcoves are prohibited;

(c) Non-patient areas, including staff support rooms, mechanical and electrical spaces shall be secured from patients;

(d) Door closers and door and cabinet hardware, including hinges in patient areas, shall be designed to prevent attachment of other articles and to limit possible patient or staff injury;

(e) Doors to patient toilet and shower rooms shall not swing into the room. These doors shall either not be lockable from within the room or shall be provided with privacy locks that can be opened by staff with a key or tool. Hardware shall be designed to preclude patients from tying the door closed;

(f) Furnishings, movable equipment and accessories shall be addressed by the Patient and Staff Safety Assessment required by section (2) of this rule;

(g) Windows, including interior and exterior glazing, shall be non-operable and shall be of break-resistant material and will not shatter. Window sills, curtains and blinds shall be constructed to prevent attachment of other articles;

(h) Curtains and blinds shall be constructed to break-away with a vertical load of greater than 40 pounds;

(i) Ceilings in patient bedrooms, toilet and shower rooms shall be of continuous bonded construction. T-bar ceilings with lay-in tiles are not allowed;

(j) The ceiling and air distribution devices, lighting fixtures, sprinkler heads, smoke detectors, and other appurtenances shall be designed and installed to be tamper resistant, non-breakable, prevent the attachment of other articles and to limit possible patient or staff injury in patient rooms, toilet and shower rooms;

(k) Flooring base in patient rooms, toilet and shower rooms shall be installed to preclude removal by patients;

(l) Shower, bath, toilet and sink plumbing fixture hardware and accessories, including grab bars and toilet paper holders, shall prevent attachment of other articles and removal by patients. Shut-offs under patient sinks shall be covered and secured to prevent patient access;

(m) Grab bars, if provided, shall be contiguous to the wall so that nothing can pass between the edge of the rail and the wall;

(n) Toilet flush valves shall be recessed or of the push button type;

(o) Hand-washing station faucet hardware shall be recessed or of the push button type to preclude patient or staff injury;

(p) Shower curtains, if provided, shall have a breakaway maximum of 40 pounds and be supported on curtain tracks attached or flush to the ceiling. Shower curtains shall not be permitted where facilities accommodate children whose weight is close to, or within the breakaway weight limits;

(q) Shower heads shall be sloped or otherwise designed to prevent attachment of other articles;

(r) Fire extinguisher cabinets and fire alarm pull stations shall be located or installed to prevent inappropriate use;

(s) Electrical outlets in patient areas shall be of a ground fault interrupter type ("GFI") or shall be protected by GFI breakers at electrical panels;

(t) Patient mirrors shall be non-breakable and shatterproof;

(u) Medical gas outlets, if provided, shall be located or installed to prevent patient access;

(v) All devices attached to walls, ceilings and floors and all door and window hardware shall be tamper resistant and be securely fastened with tamper proof screws;

(w) All exit door hardware shall have concealed rods, if any are used, and they shall not be removable by patients. Door closure and panic bars, if provided, shall not allow attachment of other articles;

(x) Time delay closers shall not be used on locked doors; and

(y) Outdoor areas shall be secured in accordance with the Patient and Staff Safety Assessment required by section (2) of this rule.

(7) Psychiatric Seclusion Rooms. Psychiatric seclusion rooms shall comply with the following requirements:

(a) As required by section (3) of this rule, and except as permitted by OAR 333-500-0065, each hospital classified as general or psychiatric shall have at least one psychiatric seclusion room. A minimum of one psychiatric seclusion room is required for every 24 psychiatric beds or fraction thereof. The rooms shall be proximate to a nurses' station. Each room shall be for only one patient and shall be at least 80 square feet in size. The design of the room shall prevent patient hiding and minimize the potential for escape and self injury;

(b) Psychiatric seclusion rooms shall meet the requirements of section (6) of this rule;

(c) Outside room corners, door hardware protrusions and other projections shall be avoided to minimize points for possible patient injury;

(d) No items shall be attached to the walls and there shall be no exposed curtains, drapes, rods or furniture, except a portable bed which can be removed if necessary. Beds that are securely fastened to the floor are allowable but must have no sharp protrusions, such as bed posts or corners;

(e) Wall and other room finish materials shall be securely constructed to resist attempts at intentional damage;

(f) Exposed pipes or electrical wiring is prohibited. Electrical outlets, if provided, shall be permanently capped or covered with a metal shield that opens with a key and shall be circuited and controllable from outside the room. Ceiling lights shall be unbreakable and shall be either recessed or surface mounted;

(g) Room construction shall contain no readily combustible materials (for example, wood or vinyl wall covering surfaces). If the room interior is padded with combustible materials, such materials shall meet the requirements of the National Fire Protection Association (NFPA) 101 Code as enforced by the State Fire Marshal;

(h) Sprinkler heads shall be of a recessed pop-down type and shall have a breakaway strength of under 80 pounds;

(i) A toilet and hand-washing station that meets the requirements of section (6) of this rule shall be available for patient use but shall not be located within the room;

(j) The door to the room shall open outward and shall include a viewing window of shatterproof glass or plastic through which the entire room may be viewed from the outside before entering; and

(k) The door to the room shall be lockable from the outside and shall include tamper-proof hardware. The lock must release with initiation of the fire alarm, sprinkler flow or power failure as required for controlled egress in accordance with the Oregon Structural Specialty Code and NFPA 101 Code as enforced by the appropriate building codes agency and fire marshal.

(8) Child and Adolescent Psychiatric Units. The requirements of sections (1) through (6) of this rule, and of section (7) of this rule if a psychiatric seclusion room is provided, shall apply to child and adolescent psychiatric units, except as follows:

(a) The environment of the unit shall reflect the age, social and developmental needs of children and adolescents, including space to accommodate family and other caregivers;

(b) At least one single occupancy timeout room shall be provided;

(c) An outdoor activity area shall be provided with a minimum of 50 square feet per patient but not less than 400 total square feet;

(d) Child and adolescent care units shall be physically and visually separate from one another and from adult care units; and

(e) Showers. Shower curtains shall not be permitted in child adolescent care units.

(9) Geriatric, Alzheimer and Other Dementia Units. The requirements of sections (1) through (6) of this rule, and of section (7) of this rule if a psychiatric seclusion room is provided, shall apply to geriatric, Alzheimer and other dementia units, except as follows:

(a) Single patient rooms shall be at least 120 square feet in size. Multiple patient rooms shall provide at least 80 square feet per patient exclusive of closets, vestibules and bathroom facilities and allow for a minimum of 3 feet between beds;

(b) A nurse call system meeting the requirements of section (6) of this rule shall be provided. Provisions shall be made for the removal or covering of call button outlets as required by the Patient Safety Assessment. Call cords or strings in excess of six inches shall not be permitted;

(c) Handrails shall be provided on both sides of corridors used by patients. These handrails shall be contiguous with the wall so that nothing may pass between the rail and wall;

(d) Doors to patient rooms and patient ancillary use areas shall be a minimum of 3 feet 8 inches in clear width;

(e) Slip resistant flooring surfaces shall be provided in all bathing rooms; and

(f) Secure storage for wheelchairs shall be provided in a location readily accessible to the unit.

(10) Forensic Psychiatric Units. The requirements of sections (1) through (6) of this rule shall apply to forensic psychiatric units, except as follows:

(a) Security vestibules or sally ports are required at the unit entrance;

(b) Additional treatment areas, police and courtroom space, and special security considerations shall be provided in accordance with the Patient and Staff Safety Assessment; and

(c) Children and adolescents shall be separated from one another as defined by the Functional Program. Children and adolescents shall also be physically and visually separate from adult care units.

333-535-0065
Detoxification Rooms

(1) In hospitals that provide drug or alcohol detoxification services, a minimum of one patient room for detoxification, located to allow direct observation by nursing staff, shall be provided.

(a) Windows in detoxification rooms shall be of a security type that can only be opened by keys or tools that are under the control of the staff.

(b) An adjoining or closely available toilet room and a hand-washing station serving detoxification patients only is also required.

(2) All secured portions of the detoxification facility must comply with the Group I, Division 2 occupancy classification requirements in accordance with the Oregon Structural Specialty Code.

333-535-0070
Newborn Nursery Units

(1) General. Newborn infants not cared for in a "rooming in" program in post-partum or LDR rooms, shall be housed in nurseries that comply with the standards below. Location shall allow for transfer of infants to post partum and birthing and LDR rooms without going through unrelated departmental or public corridors and spaces. The nursery shall be located and arranged to preclude the need for non-related pedestrian traffic. No nursery shall open directly into another nursery. See OAR 333-535-0050(2) for pediatric nurseries. See OAR 333-535-0041(4) for neonatal intensive care nurseries. Refer to mechanical and electrical sections for ventilation, oxygen, suction, medical air and electrical standards. All nurseries shall contain the following:

(a) At least one hand-washing station for each eight infant beds equipped with controls that can be operated without use of hands.

(b) Nurses' emergency calling system to summon assistance without leaving the patient area. Alternate technologies shall be permitted for emergency or nurse call systems. If radio frequency systems are utilized, consideration shall be given to electromagnetic compatibility between internal and external sources. Refer to OAR 333-535-0310, Electrical Requirements.

(c) Glazed observation windows to permit viewing infants from public areas, from workrooms, and from adjacent nurseries.

(d) Provisions shall be included for storage and convenient access at each nursery room for linens and infant supplies.

(2) Full-Term Nursery. Each full-term nursery shall contain no more than 16 standard infant stations. The minimum floor area shall be 24 square feet for each infant station exclusive of auxiliary work areas. When a "rooming-in" program is used, the total number of bassinets provided in these units may be appropriately reduced, but the full-term nursery may not be omitted in its entirety from any facility that includes obstetrical services. (When facilities use a "rooming-in" program in which all infants are returned to the nursery at night, a reduction in nursery size may not be practical.)

(3) Continuing Care Nursery. Hospitals having 25 or more maternity beds shall have a separate nursery that provides continuing care for infants who need close observation. The minimum floor area per infant shall be 50 square feet, exclusive of auxiliary work areas, with provisions for at least 4 feet between and at all sides of bassinets. The Division, however, may waive this requirement for low-risk obstetrical services in service areas where a second, full service nursery exists, and a safe method for transfer is in place and discussed in the Functional Program.

(4) Charting Facilities. Charting facilities shall have linear surface space to ensure that staff and physicians may chart and have simultaneous access to information and communication systems.

(5) Nursery workrooms. Each nursery shall be served by a connecting workroom that shall contain:

(a) Gowning facilities at the entrance for staff;

(b) Work counter;

(c) Refrigerator;

(d) Storage facilities; and

(e) A hand-washing station.

(f) One workroom may serve more than one nursery provided that required services are convenient to each.

(g) The workroom serving the full-term and continuing care nurseries may be omitted if equivalent work and storage areas and facilities, including those for scrubbing and gowning, are provided within that nursery. Space required for work areas located within the nursery is in addition to the area required for infant care.

(h) Provision shall be made for storage of emergency cart(s) and equipment out of traffic.

(i) Provision shall be made for the sanitary storage and disposal of soiled waste.

(j) Visual control shall be provided via borrowed lights or view panels between the staff work area and each nursery.

(6) Examination and Treatment Room or Space for Infants. Such areas, when required by the Functional Program shall contain a work counter, storage, and a hands-free hand-washing station. Exam and Treatment space may be located within the nursery workroom.

(7) Isolation Nursery. A separate isolation nursery is required unless other provision for the isolation of infants who are suspected of being infectious is made and included in the hospital's infection control policy.

(8) Infant Formula Facilities. Where infant formula is prepared on site, direct access from formula preparation room to any nursery room is prohibited. The room must include clean-up washing and sterilization facilities, separate facilities for formula preparation, and refrigerated storage and warming facilities. If commercial infant formula is used, storage and handling may be done in the nursery workroom or other appropriate room in the hospital that is accessible at all hours. The preparation area shall have a work counter, a hand-washing station, and storage facilities.

(9) Housekeeping Closet. In hospitals with continuing care nurseries, a housekeeping closet directly accessible from the unit and dedicated for the exclusive use of the Newborn Nursery, containing a floor receptor or sink and storage space for housekeeping equipment and supplies, shall be provided.

333-535-0080
Emergency Department

(1) Hospitals offering emergency patient care services shall include facilities required under section (2) of this rule. If outpatient clinical services are to be included as a part of the Emergency Department, elements under OAR 333-535-0085 shall also be provided.

(a) Except as permitted under OAR 333-500-0065, every hospital classified as mental or psychiatric and any other hospital, regardless of classification, that provides psychiatric services shall have at least one psychiatric seclusion room that meets the requirements of section (7) of OAR 333-535-0061 and 309-033-0727.

(2) Hospitals providing emergency services shall include the following:

(a) Entrance located on the same level and proximate to the emergency department, sheltered from the weather, and with provision for ambulance and disabled pedestrian access. Emergency entrance location shall be marked by a lighted sign. The emergency access shall be paved to permit discharge of patients from automobiles and ambulances. Temporary parking convenient to the entrance shall be provided;

(b) A reception, triage and control area conveniently located near the entrance, waiting area(s), and treatment room(s). The control station(s) shall be located to permit staff observation and control of access to treatment areas, pedestrian and ambulance entrances and public waiting area;

(c) Public waiting space with toilet facilities, public telephone, and drinking fountain;

(d) Examination and Treatment room(s):

(A) Space requirements. Each examination room shall have a minimum clear floor area of 120 square feet exclusive of toilets, waiting area and casework.

(B) Each examination room shall contain an examination light, medication storage, work counter, a hand-washing station, medical gas outlets per Table 5 (OAR 333-535-0300), electrical outlets above floor level to accommodate required equipment, suction, and space for storage of emergency equipment such as emergency treatment trays, defibrillator, cardiac monitor, and resuscitator.

(C) Treatment cubicles:

(i) Where treatment cubicles are in open multiple-bed areas, each cubicle shall have a minimum of 80 square feet of clear floor space with a minimum of 5 feet between beds and shall be separated from adjoining cubicles by curtains.

(ii) Hand-washing stations shall be provided at a rate of one per four treatment cubicles.

(e) Trauma/cardiac rooms for emergency procedures, including emergency surgery shall have:

(A) At least 250 square feet of clear floor space.

(B) Additional square footage and cubicle curtains for privacy shall be provided to accommodate more than one patient at a time in the trauma room.

(C) Cabinets and emergency supply shelves, image readers, examination lights, and counter space for writing in each room.

(D) Provisions in each room for monitoring equipment.

(E) Storage provided for immediate access to protective attire for infection control.

(F) Doorways leading from the ambulance entrance to the cardiac trauma room shall be a minimum of 5 feet wide to simultaneously accommodate stretchers, equipment, and personnel.

(G) Medical gas outlets shall equal that required of an operating room in Table 5, OAR 333-535-0300;

(f) Provisions for orthopedic and cast work. There shall be storage for orthopedic supplies including but not limited to: splints, traction hooks, portable image readers or exam lights. These provisions may be in a separate room(s) or in a treatment room. If a sink is used for the disposal of plaster of paris, a plaster trap shall be provided. The amount of clear floor space for this area shall be dependent on the Functional Program, procedures planned and the equipment needed;

(g) Scrub stations or hand-washing stations located in or adjacent to each trauma or orthopedic room;

(h) Provisions for infection control and for the handling of a patient requiring isolation in accordance with the hospital's ICRA. If so determined by the hospital's ICRA, the emergency department waiting area and triage areas shall require special measures to reduce the risk of airborne infection transmission. These measures may include enhanced general ventilation and air disinfection similar to inpatient requirements for airborne infection isolation rooms;

(i) Communication center with related equipment shall be convenient to the control station(s), nursing station and have radio, telephone, and intercommunication systems;

(j) Access to radiology and laboratory services;

(k) Storage area out of line of traffic for stretchers and wheelchairs with access from emergency entrances;

(l) Staff work and charting area(s). This may be combined with reception and control area or located within the treatment room;

(m) Storage out of traffic and under staff control for general medical/surgical emergency supplies, medications and equipment such as a ventilator, defibrillator, pumps, patient monitoring, portable image readers and splints;

(n) Soiled utility room or area per OAR 333-535-0260(5) containing clinical sink, work counter, a hand-washing station, waste receptacle, and linen receptacle;

(o) Patients' toilet room convenient to treatment room(s) that shall include a nurse call device or other approved alternative to summon staff; and

(p) Security station. Where dictated by the Functional Program, a security station system shall be located near the emergency entrances and triage/reception area.

(A) Accommodation for hospital security staff, police officers and monitoring equipment, for example, silent alarms, panic buttons, intercom systems or visual monitoring devices.

(B) Located near emergency entrance and triage/reception area.

[ED. NOTE: Tables referenced are available from the agency.]

333-535-0085
Hospital Licensed Urgent Care Facilities

This section applies to immediate care and minor emergency facilities that are physically separate from the Emergency Department and do not possess a trauma level designation as defined by OAR 333-200-0080. Such services may be located within an inpatient facility or in a satellite location as defined by 333-500-0025, that is under direct control of a general hospital and is licensed as a part of the general hospital. The following elements shall be provided:

(1) Administration and public areas:

(a) Entrance. Located at grade level or accessible by ramp, sheltered from weather, and disabled accessible.

(b) Lobby and waiting areas. These shall include access to:

(A) Wheelchair storage space(s);

(B) Reception and information counter or desk;

(C) Waiting space(s);

(D) Public toilet facilities;

(E) Public telephone(s). Access to a telephone shall be provided to public, patients and patient's family regardless of the installation of a public pay telephone installed by the telephone company; and

(F) Provisions for drinking water. Conveniently accessible provisions for drinking water shall be provided. This may be outside the patient area, in shared facilities.

(c) Interview space(s) for private interviews relating to social service, credit, and admissions. Multipurpose rooms for conferences, meetings, and health education shall be provided. In small facilities, the room may also serve for consultation and other purposes.

(d) An office area for business transactions, records, and other administrative functions, separate from public and patient areas for confidentiality, shall be provided.

(e) Secure storage for employees' personal property. Locked storage (cabinets or secure drawers) convenient to workstations shall be provided for staff valuables.

(f) General storage facilities for office supplies, equipment, sterile supplies, and pharmaceutical supplies shall be provided within or convenient to administrative areas.

(g) Housekeeping requirements. At least one housekeeping room per floor shall be provided. Each housekeeping room shall contain a floor sink or service sink and storage for housekeeping supplies and equipment.

(2) Clinical Areas:

(a) Examination room(s) for medical, obstetrical, and similar examinations shall have a net minimum floor area of 80 square feet, excluding such spaces as vestibule, toilet, closet, and work counter (whether fixed or movable). Arrangement shall permit at least 2 feet 8 inches clearance at each side and at the foot of the examination table. A hand-washing station and a counter or shelf space for writing shall be provided.

(b) Treatment room(s) for minor surgical procedures and cast procedures shall have a minimum floor area of 120 square feet, excluding such spaces as vestibule, toilet, closet, and work counter (whether fixed or movable). The minimum room dimension shall be 10 feet. A minimum clearance of 3 feet around the perimeter of the treatment table shall be provided. Work counters, storage cabinets, and a hand-washing station shall be provided.

(c) Documentation space for charting and writing clinical records shall be provided. Work counter, communication system, and space for supplies shall be provided. A separate space may be omitted if these functions are accommodated in each examination room and each treatment room.

(d) A Cardiac Pulmonary Recitation emergency cart shall have a dedicated storage space away from traffic but immediately available to all areas including entrance and receiving areas. (See OAR 333-535-0310, Electrical Requirements)

(e) Medication storage meeting Board of Pharmacy administrative rules OAR 855, division 41.

(f) Clean storage. A separate room or enclosed closet(s) for storing clean and sterile supplies shall be provided. This storage shall be in addition to cabinets and shelves in treatment rooms. Sterile items shall be protected from dust.

(g) Soiled holding area. Provisions shall be made for separate collection and disposal of soiled materials. A hand-washing station shall be provided.

(h) Sterilizing facilities. A system for sterilizing equipment and supplies shall be provided. Sterilizing procedures may be done on or off-site. Disposable items may also be used to satisfy functional needs.

(i) Laboratory facilities, meeting laboratory licensing rules under OAR 333-024 and 333-535-0090 shall be readily available either within the department or through an effective contract with nearby hospitals or laboratory services.

(j) Staff lounge and toilet facilities shall be readily available to the unit.

(k) Patient toilets. Provide patient toilet(s) readily available or within the clinic space.

(l) If radiographic equipment is provided, the installation shall meet rules of the Oregon Health Authority, Public Health Division, Radiation Protection Services under OAR 333-100 through 120.

(m) Medical records storage requirements. Filing cabinets and storage shall be provided for the safe and secure storage of patient records with provisions for ready retrieval.

(n) A toilet room containing a hand-washing station shall be accessible from all examination and treatment rooms. Where a facility contains no more than three examination or treatment rooms, the patient toilet shall be permitted to serve waiting areas.

(o) Basic diagnostic procedures (these may be part of the outpatient service, off-site, shared, by contract, or by referral) shall be provided and shall include the following for imaging facilities:

(A) Support areas for imaging facilities:

(i) Viewing and administrative areas;

(ii) Film and media processing facilities in accordance with the Functional Program; and

(iii) Storage facilities for exposed film as required by the Functional Program.

(B) Support areas for patients that include dressing rooms or booths with convenient toilet access. Toilet rooms with hand-washing stations shall be accessible to procedure room(s) where the procedure may result in the immediate need for toilet facilities.

333-535-0086
Hospital Licensed Physician's Offices and Outpatient Clinics

This rule applies to Physician Outpatient Clinics that are under the license of a general hospital and either physically connected or in freestanding, satellite locations, as defined by OAR 333-500-0025(1)(a).

(1) OAR 333-535-0085 shall apply except as follows:

(a) Subsection (1)(a) shall not apply except the entry shall be disabled accessible;

(b) Subsection (2)(d) shall not apply;

(c) Subsection (2)(j) shall not apply; and

(d) Subsection (2)(n) shall apply except in existing conditions where public toilet rooms do not exist, then patient toilets may be used for public when addressed by the hospital's Functional Program.

(2) The ventilation requirements of OAR 333-535-0300 and electrical requirements of 333-535-0310 shall not apply, but spaces shall conform to the requirements of the Oregon Mechanical Specialty Code, the Oregon Electrical Specialty Code, and the Oregon Structural Specialty Code as they are enforced by the Oregon Building Codes Division and Authorities having Jurisdiction.

(3) For Outpatient Clinics where only counseling or non-clinical services are provided, wheelchair storage space(s), examination room(s), treatment room(s), drug distribution station, clean workroom or clean holding room, and soiled workroom or soiled holding room may be omitted.

[Publications: Publications referenced are available from the agency.]
Stat. Auth.: ORS 441.060

Hist.: OHD 2-2000, f. & cert. ef. 2-15-00; OHD 1-2002, f. & cert. ef. 2-28-02; PH 10-2009, f. & cert. ef. 10-1-09

333-535-0090
Laboratory Suite

(1) Inpatient hospital laboratory facilities shall be provided for hematology, clinical chemistry and urinalysis, and may include cytology, pathology, immunohematology, microbiology, serology, and immunology to meet requirements for services as stated in General Rules (OAR 333-535-0010). These may be provided within the hospital or through an effective contract arrangement with a nearby laboratory service. Hospital laboratories located in freestanding clinics shall conform to rules under section (2) of this rule. The following shall be provided:

(a) Laboratory work counter(s) with space for microscopes, appropriate chemical analyzer(s), incubator(s), and centrifuge(s). Work areas shall include sinks with water and access to electrical services as needed;

(b) Refrigerated blood storage facilities for transfusions shall be provided. Blood storage refrigerator shall be equipped with temperature-monitoring and alarm signals located for 24-hour response. Blood banks must be provided emergency power for continued cooling during an interruption of the normal power supply;

(c) Dedicated hand-washing stations shall be located within 20 feet of each workstation and within each room with a workstation;

(d) Appropriate storage facilities, including refrigeration shall be provided for reagents, patient specimens, controls, and supplies;

(e) Urine and feces collection rooms shall be equipped with a toilet and hand-washing station. This may be outside the laboratory suite;

(f) Blood collection facilities shall include a work counter, conveniently located hand-washing station, space for patient seating and sharps container(s);

(g) Chemical safety provisions, which may include emergency shower, eye flushing devices, and appropriate storage for flammable liquids shall be provided in accordance with Oregon State Public Health Laboratory Licensing rules, OAR 333-024-0005 through 333-024-0055, and Oregon OSHA Administrative Rules;

(h) Facilities and equipment for sterilization of contaminated specimens before transport to incineration facilities in accordance with Oregon State Public Health Laboratory Licensure Rules and Oregon OSHA Administrative Rules;

(i) If radioactive materials are used or stored, facilities shall be available for their safe storage and disposal;

(j) Administrative areas including offices as well as space for clerical work, filing, and record maintenance shall be provided apart from testing or storage areas;

(k) Lounge, locker, and toilet facilities shall be conveniently located for laboratory staff. These may be outside the laboratory area and shared with other departments; and

(l) The Functional Program shall describe the type and location(s) for all special laboratory equipment that is to be wired, plumbed, or plugged in, and the building utility systems required to operate each.

(2) Laboratory services serving hospital outpatient clinics may be onsite or through an effective contractual arrangement with a laboratory service or through the primary hospital laboratory. Services may include hematology, clinical chemistry, urinalysis, cytology, pathology, microbiology, serology, immunology, and immunohematology. When these services are not effectively provided elsewhere, the following shall be available within the clinic:

(a) Laboratory work counter(s), with sink;

(b) Designated sink equipped for hand-washing station in addition to process sink(s);

(c) Storage cabinet(s) or closet(s);

(d) Specimen collection room with a toilet, hand-washing station, and an area for handling and storing specimens;

(e) Blood collection facilities including secure seating, a work counter, and access to a hand-washing station. Collection facilities may be within the laboratory or in satellite location(s); and

(f) Refrigeration for storage of reagents, controls and patient specimens as necessary. Separate refrigeration must be provided for injectibles and food or drink that is to be consumed by patients or staff.

(3) Laboratory units shall conform to OAR 333-024-0000 and the rules there under regarding laboratory requirements. Standards contained in NFPA 99 regarding laboratories and health related institutions are also required.

333-535-0100
Imaging Facilities

(1) General: Imaging facilities are those which provide fluoroscopy, radiography, mammography, tomography, computerized tomography scanning, ultrasound, magnetic resonance, angiography, and other similar techniques. Room layouts, including clearances, must meet equipment manufacturers' minimum recommendations.

(2) Radiation Protection: All imaging facilities and radiation producing equipment installations must comply with Oregon Health Authority, Public Health Division, Regulations for Control of Radiation, OAR 333-100 through 123, and be licensed by Radiation Protection Services of the Division.

(a) Where protected alcoves with view windows are required, a minimum of 1 foot 6 inches between the view window and the outside partition edge shall be provided.

(3) Angiography. The following shall be provided:

(a) Procedure rooms shall be a minimum of 400 square feet in size exclusive of fixed cabinets and built-in shelves;

(b) A control room shall be provided to house associated staff and equipment. A view window shall be provided to permit full view of the patient;

(c) Area for image reading;

(d) A scrub sink, as referenced in OAR 333-535-0260, located outside the staff entry to the procedure room shall be provided for staff use;

(e) Facilities shall be available for patients waiting on stretchers that are out of the line of traffic;

(f) Storage for equipment; and

(g) Facilities shall be available within the facility for extended post-procedure observation of outpatients.

(4) Cardiac Catheterization Lab. Facilities for cardiac catheterization may be combined with the imaging department or be part of the surgery suite. If provided, cardiac catheterization lab facilities shall meet the rules for angiography rooms under section (3) above. The following additional requirements shall be provided:

(a) A separate scheduling and staff work space, cardiologist's office and staff toilet shall be provided when the facilities are located outside the imaging suite; and

(b) There shall be access to a clean assembly/workroom with Hi-vacuum or gravity steam sterilizers and sterilization equipment to accommodate heat sensitive equipment.

(c) Electrophysiology labs. If electrophysiology labs are also provided in accordance with the approved Functional Program, these labs may be located within the catheterization suite or located in a separate functional area proximate to the cardiac care unit.

(d) For Cardiac Catheterization Lab combined with Surgery refer to OAR 333-535-0110 to be used in conjunction with this section.

(5) Computerized Tomography (CT) Scanning. The following shall be provided:

(a) Procedure rooms shall be configured to accommodate equipment in accordance with the equipment manufacturers' recommendations;

(b) When required by the Functional Program, control room(s) shall be located to allow for film processing and designed to accommodate the computer and other controls for the equipment. When viewing of patients is required, a window shall be provided to permit full view of the patient; and

(c) A conveniently available patient toilet.

(6) Diagnostic X-ray (Radiography). The following shall be provided:

(a) Radiography room(s), sized to accommodate the Functional Program;

(b) Each X-ray room shall include a shielded control alcove designed to provide a full view of the patient when the table is in the tilt position or the chest X-ray is being utilized. For mammography machines with built-in shielding for the operator, the alcove may be omitted when approved by the Oregon Health Authority, Public Health Division, Radiation Protection Services; and

(c) Rooms primarily utilized for fluoroscopy shall have direct access to a toilet room.

(7) Magnetic Resonance Imaging (MRI). The following shall be provided:

(a) MRI procedure room(s) to accommodate the Functional Program and meet equipment manufacturers' recommendations;

(b) Secure storage for patient belongings;

(c) A control room with full view of the MRI;

(d) A computer room as needed to support the specific equipment installation;

(e) Cryogen storage when service to replenish supplies is not otherwise available;

(f) Power conditioning and voltage regulation equipment as well as direct current (DC) when required by the equipment manufacturer;

(g) Magnetic shielding and radio frequency shielding when required by the equipment manufacturer;

(h) Patient holding area convenient to the MRI unit and large enough to accommodate stretchers;

(i) Venting of cryogen exhaust to the outside; and

(j) Signage shall be provided for the purpose of limiting ferrous material.

(8) Ultrasound. The following shall be provided:

(a) Procedure room(s) meeting equipment manufacturers' minimum room size and configuration recommendations; and

(b) A patient toilet room shall be accessible to every three procedure rooms without traveling through public areas.

(9) Nuclear medicine. The nuclear medicine area shall include the following: (See also, OAR 333-535-0105(3))

(a) Space requirements. Space shall be adequate to permit entry of stretchers and beds and able to accommodate imaging equipment, electronic consoles, and if present, computer terminals;

(b) Hand-washing stations provided within each procedure room;

(c) Dose administration area(s) as specified by the Functional Program shall be provided near the preparation area. The area shall provide for visual privacy from other areas due to long periods for dose effects, as well as features for comfortable seating, varied lighting, and entertainment; and

(d) Positron Emission Tomography (PET). When provided, in addition to the nuclear medicine requirements, PET facilities shall be in accordance with the Functional Program, including the following:

(A) Laboratory and equipment space shall be provided as follows:

(i) Scanner room should be not less than 300 square feet and space for the cyclotron room should be not less than 225 square feet with 16 square feet of space safe for storage of parts that may require cool-down periods of one year or more;

(ii) Both hot (radioactive) labs and cold labs, each requiring a minimum of 250 square feet. Blood labs having a minimum of 80 square feet;

(iii) Patient holding areas capable of accommodating a minimum of two stretchers; and

(iv) Gas storage areas large enough to accommodate sufficient bottles of gas piped individually to the cyclotron or the lab.

(B) Construction requirements capable of providing protection from the high radiation generated from the cyclotron shall be provided.

(C) Ventilation adequate for the occupancy shall be provided as follows:

(i) Compressed air, or equivalent, shall be provided to pressurize a water circulation system;

(ii) Special ventilation systems together with monitors, sensors, and alarm systems shall be provided to vent gases and chemicals; and

(iii) Regarding heating, ventilating, and air-conditioning systems, the highest pressure shall be in the coldest (radiation) areas and the exhaust shall be in the hottest (radiation) areas. (Redundancy may be important.)

(D) A redundant plumbing system connected to a holding tank shall be required to prevent accidental leakage of contaminated water into the regular plumbing system.

(10) Support Spaces. The following spaces shall be common to the imaging department and shall be minimum requirements unless stated otherwise:

(a) Patient waiting areas shall provide seating capacity in accordance with the Functional Program;

(b) Control desk and reception area;

(c) Patient holding area under staff control, designed to accommodate inpatients on stretchers or beds and outpatients, that is not in the path of traffic. This area may be shared with the dose administration area and patient waiting areas provided there is visual privacy between the areas;

(d) Patient toilet room with hand-washing station shall be provided and reserved for nuclear medicine patients convenient to waiting and procedure rooms and directly accessible from each fluoroscopy room;

(e) Patient dressing rooms. Dressing rooms with convenient access to waiting areas and procedure rooms shall include a seat or bench, a mirror, and provisions for hanging patient's clothing and securing valuables;

(f) Access to staff toilet, lounge and locker facilities which shall be within or closely available to the department;

(g) Film storage facilities for active and inactive files under departmental administrative control shall be provided to properly secure and protect film against loss or damage. This storage is permitted to be off site;

(h) Storage for unexposed film;

(i) Contrast media preparation area with sink, counter and storage to allow mixing of contrast media. Where prepared media is used, this area may be omitted and storage shall be provided for the prepared media;

(j) A darkroom shall be provided for film processing unless the processing equipment does not require a darkroom for loading and transfer;

(k) If automatic film processors are used, a receptacle of adequate size with hot and cold water for cleaning processor racks shall be provided;

(l) Quality control room. An area or room for immediate viewing of film after processing shall be provided unless other viewing facilities are immediately available;

(m) Housekeeping facilities, including a service sink or floor receptacle and storage for cleaning equipment and supplies;

(n) A hand-washing station shall be provided in each procedure room unless it is used only for routine diagnostic screening such as for chest X-rays and where the patient is not physically handled by the staff. A hand-washing station shall be provided convenient to MRI, CT and ultrasound rooms, but it need not be within the room;

(o) Clean storage area. Provisions shall be made for storage of clean supplies and linens (See OAR 333-535-0260 for clean storage details and definitions);

(p) Soiled holding area. Provisions shall be made for a separated holding area for soiled materials, linens and trash. Handwashing facilities shall be closely available. If cleaning and disinfecting of equipment occurs within the imaging department, a counter, sink, hand-wash station and exhaust ventilation shall be provided (See OAR 333-535-0260 for clean storage details and definitions);

(q) Provisions shall be made for locked storage of medications and drugs when the program includes their use; and

(r) When the Functional Program requires a centralized computer area, it shall be a separate room with access terminals available within the imaging rooms.

333-535-0105
Radiation Oncology Facility or Department

All radiation oncology installations must comply with provisions of the Oregon Health Authority, Public Health Division, Regulations for Control of Radiation, OAR 333-100 through 123 and be licensed by Radiation Protection Services of the Division.

(1) Treatment Rooms:

(a) Rooms and control areas shall be provided as necessary to accommodate the radiation oncology Functional Program. Equipment manufacturers' recommendations should be sought and fol-

lowed. Any radiotherapeutic (i.e. cobalt, linear accelerators, high dose rate after loading, etc.) treatment room shall be sized in accordance with manufacturers' recommended standards and shall accommodate a stretcher;

(b) Control areas shall have visual and audio contact with the patient in the treatment room as appropriate to the radiation protection needs of the equipment;

(c) If invasive procedures take place in the treatment room, the room must also meet the rules for surgery facilities, OAR 333-535-0110; and

(d) Hyperthermia room, when provided, shall be of adequate size to accommodate equipment, stretcher, and a hand-washing station. This may be combined with an examination room.

(2) Treatment Support Areas:

(a) Simulator room and control area shall be sized to accommodate equipment and stretcher per the manufacturers' recommendations. A hand-washing station shall be provided within the room.

(b) The control area shall have visual and audio contact with the simulator room.

(c) Darkroom or film processing area shall be convenient to the treatment room(s) and simulator area, and shall include a utility sink in or convenient to this area. Film storage for unprocessed film shall be provided.

(d) Block fabrication, when provided, shall have seamless flooring and integral coved base. Non-porous counter tops shall have backsplash, and a hand-washing station shall be provided. Exhaust hoods shall be provided.

(e) Treatment planning, if provided, shall be sized to accommodate manufacturers' dosimetry system requirements.

(3) Hot lab, if provided, shall include the following features:

(a) Seamless flooring and integral coved base.

(b) Non-porous counter tops with backsplash.

(c) Adequate storage and work area for multiple types of radioactive material, with adequate shielding and security including additional support areas for cobalt room for hot lab storage.

(d) A hand-washing station shall be accessible. If located in the hot lab, the sink must have a filtration trap. Refer to OAR 333-535-0300(5)(e)(G) for mechanical requirements.

(e) If radiopharmaceutical preparation is performed on site, an area adequate to house a radiopharmacy shall be provided with appropriate shielding.

(A) Space requirements shall include the following:

(i) Adequate space for storage of radionuclides, chemicals for preparation, dose calibrators, a film file area, and record-keeping;

(ii) If pre-prepared materials are used, storage and calculation area may be considerably smaller than that for on site preparation; and

(iii) Space shall be adequately provided for dose calibration, quality assurance, and record-keeping.

(B) Radiation protection requirements. The area may still require shielding from other portions of the facility.

(C) Construction requirements shall include the following:

(i) Floors and walls constructed of materials that are easy to decontaminate;

(ii) Vents and traps for radioactive gases shall be provided if such are used; and

(iii) Hoods for pharmaceutical preparation shall be in accordance with mechanical requirements of OAR 333-535-0300 and other applicable standards.

(f) Nuclear Waste Disposal. See Code of Federal Regulations (CFR), Title X, parts 20 and 35, concerning the handling and disposal of nuclear materials in health care facilities.

(4) Patient Support Areas: These areas shall include, but not be limited to:

(a) Examination rooms equipped with a hand-washing station. At least one examination room shall accommodate stretcher patients;

(b) Patient reception and waiting area. The waiting area shall be out of traffic, under staff control, and both shall have seating capacity in accordance with anticipated needs. If the suite is routinely used for outpatients and inpatients at the same time, separate waiting areas shall be provided with screening for visual privacy between the waiting areas;

(c) Patient toilet rooms. Toilet rooms shall be provided accessible to the waiting rooms and shall be equipped with an emergency call station; and

(d) Patient dressing rooms. Dressing rooms shall be provided in accordance with the anticipated needs, shall be accessible to the waiting areas with the provision for safe storage of valuables and clothing. At least one space shall be large enough for staff-assisted dressing.

(5) General Support Areas: These areas shall include, but not be limited to:

(a) Clean storage. Provisions shall be made for the storage of clean supplies and linens, in or closely available to the department;

(b) Soiled holding area. Provisions shall be made for handling and separately holding contaminated items. If toxic chemicals are used, exhaust shall be provided. Whenever soiled items are handled, a hand-washing station shall be provided;

(c) Housekeeping closet shall be equipped with service sink or floor receptor. The closet shall be large enough for equipment or supplies storage;

(d) Staff facilities. Toilets shall be convenient for staff use. Staff lounge with lockers is required if not available elsewhere; and

(e) Film and radiation oncology patient record file area.

Stat. Auth.: ORS 441.060
Stats. Implemented: ORS 441.060
Hist.: OHD 2-2000, f. & cert. ef. 2-15-00; PH 10-2009, f. & cert. ef. 10-1-09

333-535-0110
Surgical Facilities

A surgical unit shall consist of but not be limited to facilities as follows for exclusive use of the surgery department, unless otherwise noted:

(1) The number of operating rooms and recovery beds and the sizes of the service areas shall be based on the expected surgical workload. The surgical suite shall be located and arranged to prevent non-related traffic through the suite. Also see OAR 333-535-0300 for mechanical rules and 333-535-0310 for electrical rules which apply;

(2) Certain rules of this section differ dependent upon the type of surgical procedures performed. These are classified as one of the following three categories:

(a) Unrestricted areas for Minor Surgical and Diagnostic Procedures: Unrestricted areas include a central control point established to monitor the entrance of patients, personnel, and materials. Street clothes are permitted in this area and traffic is not limited. Minor procedures are those that conform to the criteria listed in paragraphs (2)(a)(A) through (D) of this rule based on an assessment of the patient. These procedures are non-invasive and require no general anesthetic.

(A) Anesthesia is limited to local anesthesia or conscious sedation;

(B) Procedure time (duration) is less than two hours;

(C) Procedure is non-invasive with low risk for infection; and

(D) Patient assessment indicates no special risks for cardiorespiratory complications.

(b) Semi-restricted areas include the following:

(A) The peripheral support areas of the surgical suite, and storage areas for clean and sterile supplies, work areas for storage and processing of instruments, and corridors leading to the restricted areas of the surgical suites; and

(B) Traffic in this area is limited to authorized personnel and patients. Personnel are required to wear surgical attire and cover all head and facial hair.

(c) Restricted areas for Major Surgical and Diagnostic Procedures are those which exceed the criteria described for Minor Surgical and Diagnostic Procedures in OAR 333-535-0110(2)(a). Restricted areas include the following:

(A) The operating and procedure rooms, the clean core, and scrub sink areas.

(B) Where surgical attire, hair coverings, and masks are required due to the presence of open sterile supplies, scrubbed people or similar circumstances.

(3) Operating Rooms:

(a) One or more operating rooms shall be provided. Each operating room shall provide a system for emergency communication with the surgical control station which can be operated without use of the hands, but which is not foot operated. No plumbing fixtures or open drains shall be provided in operating rooms except as stipulated in subsection (3)(d). Each operating room shall have a minimum clear area as follows:

(A) Existing operating rooms shall have not less than 360 square feet exclusive of fixed cabinets and built-in shelves. The minimum dimension shall be 18 feet between fixed cabinets and built-in shelves. At least one image reader shall also be provided.

(B) In new construction, operating rooms shall have a minimum clear area of 400 square feet exclusive of fixed or wall-mounted cabinets and built-in shelves, with a minimum of 20 feet clear dimension between fixed cabinets and built-in shelves. At least one image reader shall also be provided.

(b) Operating room(s) for orthopedic surgery, when provided, shall in addition to meeting subsection (a) of this section, have enclosed storage space for splints and traction equipment. Storage may be outside the operating room but must be located for convenient access. If plaster of paris is used for cast work, also provide a plaster sink outside the operating room, but within the operating suite.

(c) Operating rooms for cardiovascular surgery, when provided, shall provide appropriate plumbing connections in both the cardiovascular operating room and pump room and shall in addition to meeting subsection (a) of this section, provide a minimum clear area as follows:

(A) Existing facilities shall have not less than 400 square feet exclusive of fixed cabinets and built-in shelves with a minimum of 20 feet clear dimension between fixed cabinets and built-in shelves; and

(B) In new construction, rooms for cardiovascular, orthopedic, neurological, and other special procedures or combination of procedures such as cardiac catheterization lab and surgery that require additional personnel or large equipment shall have, in addition to the above requirements for general operating rooms, a minimum clear area of 600 square feet with a minimum room dimension of 20 feet clear dimension exclusive of fixed or wall-mounted cabinets and built-in shelves.

(d) Operating rooms for surgical cystoscopic and surgical endoscopic procedures and operating rooms dedicated to eye surgery, when provided, shall meet requirements of subsection (a) of this section, but clear area of the room shall be as follows:

(A) Existing facilities shall have not less than a minimum of 250 square feet exclusive of fixed cabinets and built-in shelves.

(B) In new construction, rooms for surgical cystoscopic and other endourologic procedures shall have a minimum clear area of 350 square feet exclusive of fixed or wall-mounted cabinets and built-in shelves, with a minimum of 15 feet clear dimension between fixed cabinets and built-in shelves. If cystoscopy rooms are used for procedures other than cystoscopy, provisions must be made to allow cleaning and sealing of any floor drains, and such procedures must be included in the hospital's written infection control policy.

(e) Operating rooms for minor surgical procedures, as defined in section (2) of this rule, shall meet requirements of subsection (a) of this section, except that clear area of the room shall be a minimum of 200 square feet exclusive of fixed cabinets and built-in shelves and minimum dimensions do not apply. Film illuminators are required only if procedures involve the use of X-rays.

(f) Despite requirements under subsections (a) through (e) of this section, needs for some procedures may require additional clear operating room space, and special plumbing and mechanical features. Such specialized operating rooms are not addressed by subsections (a) through (e) of this section, and are the responsibility of the hospital and their design consultants.

(4) Service areas: Services, except the enclosed soiled utility room mentioned in subsection (f) of this section and the housekeeping closet in subsection (q) of this section, may be shared with obstetrical facilities if the Functional Program and project design reflect this concept. Service areas, when shared with delivery rooms, shall be arranged to avoid the need for patients or staff to pass between the operating room and the delivery room areas. (See also obstetrical rules under OAR 333-535-0120.) The following services shall be provided:

(a) Control station located to permit visual observation of all traffic into and within the suite;

(b) Administrative and administrative support space in accord with the hospital's program needs;

(c) Sterilizing facility(ies) with high speed autoclave(s) for emergency use. Other facilities for processing and sterilizing reusable instruments may be located in another hospital department such as Central Services. Immediate access to sterilizing facilities is not required where only disposable supplies, instruments and equipment are used. Sterilization equipment shall conform to the Oregon Boiler and Pressure Vessel Specialty Code, ORS 480.525(1)(e);

(d) Medication storage and distribution facilities. Provisions shall be made for storage and preparation of medications administered to patients. A refrigerator and storage system meeting the requirements of Oregon Board of Pharmacy rules, OAR chapter 855, division 41 shall be provided. A hand-washing station shall be provided in or accessible to each area or room;

(e) Scrub facilities. For major surgical procedures, two scrub facilities shall be provided near the entrance to each operating room. Two scrub positions may serve two operating rooms if both are located adjacent to the entrance of each operating room. For minor surgical procedures, a scrub sink or a hand-washing station shall be provided in or accessible to each room. This sink shall be equipped with fittings usable without the use of hands;

(f) Soiled utility room. An enclosed soiled utility room for the exclusive use of the surgical suite staff or soiled holding room that is part of a system within the building for the collection and disposal of soiled material shall be provided. The soiled utility room shall contain a clinical sink or equivalent flushing type fixture, work counter, sink equipped for hand-washing, waste receptacle, and linen receptacle. When a soiled holding room is used, the clinical sink and work counter may be omitted from that room. (Also see subsection (g) of this section for fluid waste disposal facilities.) Soiled utility or holding areas shall not have direct connection with operating rooms or other sterile activities. The maximum travel distance to soiled utility or holding rooms shall be not more than six rooms or 180 feet;

(g) Fluid waste disposal facilities. These shall be located convenient to, but not connected with, the operating rooms. A clinical sink or equivalent equipment in a soiled utility room or in a soiled holding room would meet this standard if convenient for use. When the surgical program does not include procedures with substantial liquid or solid wastes (for example, minor eye surgery), a clinical sink is not required;

(h) Clean utility room or a clean supply room. A clean utility room is required when clean materials are assembled within the surgical suite prior to use. A clean utility room shall contain work counter, a hand-washing station, and space for clean and sterile supplies. If the Functional Program defines a system for the storage and distribution of clean and sterile supplies in a clean supply room, the counter and sink may be omitted. The clean workroom or supply room may be shared with the delivery suite when provisions for joint use are included in the hospital's infection control policy and arrangement allows for direct access from both surgery and delivery suites. (See also obstetrical rules under OAR 333-535-0120.);

(i) Medical gas storage facilities. Storage of bulk medical gases shall be provided outside or inside the facility. Provisions shall be made for additional separate storage of reserve gas cylinders to complete at least one day's procedures. Storage

facilities shall be in compliance with National Fire Protection Association (NFPA) 99;

(j) Anesthesia workroom. Inhalation anesthesia workroom for cleaning, testing, and storing anesthesia equipment shall contain a work counter and sink. Provisions shall be made for separated storage of clean and holding of soiled items. When facilities for cleaning and testing are available elsewhere in the building or the surgical program does not involve substantial anesthesia, a separate utility room is not required;

(k) Anesthesia storage. Anesthesia storage facilities shall be provided for anesthesia-related materials stored within the surgery suite;

(l) Equipment storage room(s) for equipment and supplies used in surgical suite. Ten percent of the surgical suite shall be devoted to equipment storage space. See OAR 333-535-0270 for storage requirements;

(m) Staff clothing change areas. Appropriate areas shall be provided for male and female personnel including orderlies, technicians, nurses and doctors working within the surgical suite. Each area shall contain lockers, showers, toilets, hand-washing stations, and space for donning scrub attire. In surgical suites providing general anesthesia and invasive surgical procedures, these areas shall be arranged to encourage a traffic pattern so that personnel entering from outside the surgical suite can change and move directly into the surgical suite. Showers are not required in suites limited to minor procedures;

(n) Pre-surgical waiting area. In facilities with two or more operating rooms, a room or separate area shall be provided to accommodate stretcher patients waiting for surgery. This may be adjoining the post anesthesia recovery area and be serviced by the same staff nurse when feasible. The area shall be located to allow for nursing supervision and emergency communications;

(o) Storage areas for portable equipment used in surgery, such as portable X-ray unit, stretchers, fracture tables, warming devices or auxiliary lamps. These areas shall not infringe on the width of exit corridors;

(p) Lounge, toilet facilities, and dictation and report preparation space for surgical staff. These facilities shall be provided in hospitals having three or more operating rooms and shall be located to permit use without leaving the surgical suite. A toilet room shall be provided near the recovery room(s);

(q) Housekeeping closet. A closet containing a floor receptor or service sink and storage space for housekeeping supplies and equipment shall be provided exclusively for the surgical suite;

(r) For major procedures, an area for preparation and examination of frozen sections. This may be part of the general laboratory if the system and procedures provide immediate results that will not unnecessarily delay the completion of surgery;

(s) Ice machine to supply ice for patient use and treatments;

(t) Provisions for refrigerated blood bank storage when major procedures are included; and

(u) Post anesthesia care unit for major surgical procedures. Each recovery unit shall be designed to provide:

(A) A medication distribution station, hand-washing stations (at a rate of one sink per four beds), nurses' station with charting facilities and clinical sink. Provisions for bedpan cleaning, storage space for stretchers, supplies and equipment shall be closely available.

(B) Clearance space of at least 5 feet between patient beds and 4 feet between sides of beds and adjacent walls.

(C) Patient privacy such as cubicle curtains.

(D) Provisions shall be made for isolation of infectious patients, although a separate isolation room is not mandated. At least one door to a recovery unit shall access directly from the surgical suite without crossing uncontrolled common hospital corridors. Separate and additional recovery space may be necessary to accommodate surgical outpatients, where applicable but is not required.

(5) Separate Hospital Licensed Outpatient Surgical Facilities. The following additional features shall be provided when an outpatient surgical facility is outside the inpatient hospital building or remote from the inpatient suite:

(a) Visual privacy shall be provided for registration, preparation, examination and recovery. Audible privacy shall be provided during registration;

(b) Provisions shall be made for patient examination, interview, testing and preparation prior to surgery;

(c) Outpatient surgical facilities not part of an inpatient hospital structure shall meet the requirements of the Oregon Structural Specialty Code and the NFPA 101 and 99; and

(d) Outpatient surgery change areas. If the Functional Program defines an outpatient surgery component as part of the inpatient surgical suite, facilities shall be provided where outpatients may change from street clothing into hospital gowns and be prepared for surgery. This would include facilities for waiting, storage of clothing, toilets, and space for gowning. Separate clothes changing areas are not required when sufficient pre-operative holding cubicles are available;

(e) Phase 1 recovery. If the facility provides outpatient surgery, rooms or cubicles for postanesthesia care and recovery shall be provided. At least 3 feet shall be provided at each side of each bed or recovery lounge chair and at the foot of each bed as needed for circulation of staff and gurneys and wheelchairs. Recovery spaces shall be observable from a nursing station. Provide hand wash stations at a rate of one sink per six recovery beds; and

(f) Phase 2 recovery spaces. Dedicated recovery spaces or a dedicated recovery lounge shall be provided in facilities where the surgical program includes patients who do not require postanesthesia recovery or who have completed postanesthesia recovery, but need additional time for observation by staff prior to leaving the facility. Access to toilet facilities shall be provided.

(g) Administrative and public areas. The following shall be provided:

(A) A patient and visitor waiting room or area and information and reception desk or counter;

(B) Public telephone or other phone(s) usable by patients and visitors;

(C) Space(s) for private interviews relating to social services, credit and admission;

(D) Office space(s) for business transactions, records, and administrative and professional staff, and space and equipment for medical records dictating, recording and retrieving. These shall be separate from public and patient areas with provisions for confidentiality of records;

(E) Secure storage for staff clothing and personal effects; and

(F) General storage for administrative supplies.

(6) Dental operations: Dental surgery facilities not part of a multi-specialty surgical unit shall meet the requirements of sections (1) through (4) of this rule. Operating rooms dedicated to dental surgery shall also conform to the following:

(a) Operating rooms used for invasive maxillofacial and reconstructive dental procedures with general anesthesia shall meet the rules of an operating room for major surgical procedures, except that room size shall be a minimum of 250 square feet; and

(b) Operating rooms for extractions and minor operative procedures within limited anesthesia or conscious sedation shall provide a minimum of 132 square feet of clear space and include the following features:

(A) Four feet or more of clear space at one side of the dental chair and a clear access route for a stretcher or gurney; and

(B) Mechanical and electrical features of a minor surgical procedure room according to OAR 333-535-0300 and 333-535-0310.

333-535-0115
Endoscopy Facilities

If diagnostic endoscopy procedures are performed, the following shall apply:

(1) Diagnostic Procedure Room(s):

(a) Each diagnostic procedure room shall have a minimum clear area of 200 square feet exclusive of fixed cabinets and built-in shelves. If portable equipment is used for vacuum and oxygen, room size shall be increased to 225 square feet.

(b) A hand-washing station with hands-free controls shall be available in each procedure room.

(c) Station outlets for oxygen, vacuum (suction), and medical air shall be provided in accordance with Table 5, OAR 333-535-0300. Use of portable equipment is allowable when a piped-in central system is not available.

(d) Mechanical ventilation shall comply with OAR 333-535-0300, including Tables 2 and 3 of the same rule. If endoscopy rooms also serve for bronchoscopy services, these systems must meet ventilation requirements for this service in Table 2, OAR 333-535-0300.

(2) Instrument Processing Facilities. There shall be dedicated processing room(s) for cleaning and disinfecting instrumentation. Cleaning spaces shall allow for flow of instrumentation from the contaminated area to the clean area and, then to clean storage cabinets which may be in enclosed cabinets in the procedure rooms. Clean equipment spaces, including storage, must protect equipment from contamination. The following space and equipment shall also be included:

(a) If scopes are cleaned by hand, two separate utility sinks, arranged to prevent splash from one to the other, one for clean and one for soiled equipment processing;

(b) A separate hand washing sink;

(c) Space and facilities for the disposal of waste materials;

(d) When automatic endoscope cleaners and sonic processors are used, space and plumbing fixtures for this equipment shall be provided;

(e) Ventilation system: Negative air pressure and exhaust air from the room per Table 2, OAR 333-535-0300, shall be maintained. A hood is recommended for off-gassing and sterilants that cause respiratory irritation; and

(f) Outlets for vacuum and/or compressed air shall be provided in accordance with the Functional Program.

(3) Patient Holding and Recovery Area (if not shared with surgical recovery). The following shall be provided:

(a) Each patient cubicle shall allow a minimum 3 feet between stretchers or recovery chairs;

(b) Each patient cubicle shall be equipped with oxygen and vacuum outlets in accordance with Table 5, OAR 333-535-0300;

(c) Provisions for respiratory isolation shall be provided if bronchoscopy patients are also served in patient cubicles. When procedures are to be performed on persons who are known to have or suspected of having airborne infectious diseases, these procedures shall be performed only in a room meeting airborne infection isolation ventilation requirements or in a space using local exhaust ventilation. See also the CDC "Guidelines for Preventing the Transmission of Mycobacterium Tuberculosis in Healthcare Facilities";

(d) Medication preparation and storage with a hand-washing station;

(e) Toilet facilities;

(f) Change areas and secure storage for patients' personal property. Patient recovery cubicles may be used when scheduling and capacity allows;

(g) Nurses' reception and charting area that allows for visual observation of patients;

(h) Storage provisions for clean supplies;

(i) A dedicated housekeeping closet;

(j) A nurse call system or other workable system that allows for summoning staff assistance; and

(k) A soiled utility or soiled holding room as referenced in OAR 333-535-0260(5) shall be located to serve the endoscopy facility.

[ED. NOTE: Tables referenced are available from the agency.]

333-535-0120
Obstetrical Facilities

The maternity unit shall consist of, but not be limited to, facilities as follows for exclusive use of the maternity department, unless otherwise noted:

(1) General:

(a) The maternity unit shall be located in one area of the hospital and include delivery rooms, labor rooms, recovery rooms, postpartum rooms, labor, delivery, recovery (LDR) and/or labor, delivery, recovery, postpartum (LDRP) rooms, and the support features described in this section to support the estimated obstetrical workload;

(b) The obstetrical care unit shall be located and arranged to prohibit non-related traffic through the unit;

(c) When delivery and non-obstetrical operating rooms are part of the same suite, access and service arrangements shall be such that neither staff nor patients need to travel through one area to reach the other;

(d) At least one delivery room shall be provided within the obstetrical unit for performing Caesarean sections (C-sections) and complex deliveries except for hospital-based obstetrical centers limited to less than 300 low-risk deliveries per year. In such centers, mothers requiring emergency C-sections and complex deliveries may be transferred to surgery, provided a clean operating room can normally be made available, and infants can be transported back to the obstetrical unit in a controlled transport environment such as an isolette;

(e) When the program indicates wide usage of LDR and/or LDRP rooms in place of separate labor, delivery, recovery and postpartum rooms, the number of labor and postpartum rooms may be reduced or eliminated in accord with the hospital's obstetrical program and workload. Delivery rooms shall be provided per subsection (d) of this section; and

(f) Service areas may be arranged to serve LDR rooms, LDRP rooms and delivery rooms. However, gowning facilities, clean supply, soiled utility rooms, and anesthesia facilities must be arranged to conveniently serve delivery rooms used for C-sections and allow for a sterile operating suite environment. When such support areas are not immediately adjacent, the program and infection control policy must be submitted for Oregon Health Authority, Public Health Division approval and shall account for such arrangement.

(2) The following patient care facilities shall be provided in accord with section (1) of this rule for exclusive use of the maternity department, unless otherwise noted:

(a) Postpartum patient rooms must meet the same rules as medical and surgical patient rooms under OAR 333-535-0025(1);

(b) Each delivery room shall have a minimum clear area of 300 square feet exclusive of fixed cabinets and built-in shelves and shall be not less than 16 feet wide. Delivery rooms that are routinely used for C-sections shall have not less than 360 square feet of clear area. An emergency communications system that can be activated without use of hands shall be connected with the obstetrical suite control station. Resuscitation facilities (electrical outlets, oxygen, suction, and compressed air) shall be provided for newborn infants within each delivery room in addition to the facilities required for the mother;

(c) LDR and LDRP rooms, when provided, shall be entered from a corridor within the maternity department where public access is under direct control of maternity staff and include the following features:

(A) Each room shall be for single occupancy and provide for a minimum of 5 feet of clear space at the sides and foot of the bed during delivery procedures. Additional space shall be provided for relatives and significant others, a chair for mothers who are breastfeeding, and an infant cribbette;

(B) Mechanical and electrical services for LDR and LDRP rooms shall meet applicable requirements stated in OAR 333-535-0300 and 333-535-0310; and

(C) Each room shall contain or be closely served by each of the following:

(i) Enclosed storage cabinets or space for a covered cart for supplies used in normal spontaneous vaginal delivery and the immediate care of a normal newborn, unless the program indicates centralized storage and distribution from a nearby clean supply room;

(ii) Storage space for equipment utilized in medical emergencies for mother and infant;

(iii) A hand-washing station or scrub sink equipped with a wrist blade fitting or equivalent fitting allowing operation without use of the hands;

(iv) Toilet facility and shower;

(v) A window is required in each patient room as noted in OAR 333-535-0025;

(vi) Storage space for clothing, toilet articles, and other personal belongings of the patient;

(vii) An electrically operated nurses' calling system as specified under electrical requirements of this division; and

(viii) Examination lighting shall be provided but may be built-in or portable.

(d) Labor rooms. When provided, these rooms shall be single bed or two-bed rooms with a minimum clear area of 100 square feet per bed. In facilities having only one delivery room, two or more labor rooms or LDRP rooms shall also be provided. When two labor rooms only are utilized in connection with a single delivery room, one labor room shall be large enough to function as an emergency delivery room with a minimum of 160 square feet and have at least two oxygen and two suction outlets. Each labor room shall contain a hand-washing station and shall have direct access to a toilet room. One toilet room may serve two labor rooms. Labor rooms shall be closely served by facilities for medication, charting, and storage for supplies and equipment. At least one shower for use of labor room patients shall be provided. A water closet shall be accessible to shower facility. Windows, if provided, shall be located, draped or otherwise arranged, to preserve patient privacy from observation from outside.

(e) Recovery room. It shall contain not less than two beds, charting facilities located to permit staff to have visual control of all beds, facilities for medicine dispensing, hand-washing stations at a rate of one per four beds or a minimum of one, clinical sink with bedpan flushing device, and storage for supplies and equipment. The recovery room may be omitted in hospitals with fewer than 300 annual births.

(3) Service Areas. Individual rooms shall be provided as indicated in the following standards. Otherwise, alcoves or other open spaces that do not interfere with traffic may be used. Services, except the father's waiting room mentioned in subsection (c) of this section, soiled workroom in subsection (g) of this section, and the housekeeping closet in subsection (p) of this section, may be shared with the surgical facilities if the Functional Program reflects this concept. Where shared, areas shall be arranged to avoid direct traffic between the delivery and operating rooms. The following services shall be provided:

(a) Control station located to permit visual surveillance of all traffic that enters the obstetrical suite.

(b) Supervisor's office or station.

(c) Fathers' waiting room located convenient to the labor room area with provisions for personal communication between fathers and staff. Toilets, telephones, and drinking fountains shall be convenient to the waiting room. In hospitals with less than 300 deliveries per year, a separate fathers' waiting room is not required when a general purpose waiting area can be made available.

(d) Sterilizing facility(ies) with high speed autoclave(s) conveniently located to serve all delivery rooms. When a written program indicates that adequate provisions have been made for replacement of sterile instruments during a delivery, sterilizing facilities in the obstetrical suite will not be required.

(e) Drug distribution station. Provision shall be made for storage, preparation, and dispensing of medication.

(f) Scrub facilities. Two scrub stations shall be provided near the entrance to each delivery room; however, two scrub stations may serve two delivery rooms if the scrub stations are located adjacent to the entrance of each delivery room. Scrub facilities shall be arranged to minimize any incidental splatter on nearby personnel or supply carts.

(g) An enclosed soiled utility room for the exclusive use of the obstetrical suite staff or a soiled holding room that is part of a system for the collection and disposal of soiled materials. The soiled utility room shall contain a clinical sink or equivalent flushing type fixture, work counter, a hand-washing station, waste receptacle, and linen receptacle. If a soiled holding room is used, the hand-washing station and work counter may be omitted. Soiled utility and/or holding areas shall not have a direct connection with delivery rooms or other sterile activities.

(h) Fluid waste disposal facilities shall be provided in a location convenient to but not connected with the delivery rooms. (The clinical sink or equivalent equipment in a soiled utility room or soiled holding room would meet this standard.) See OAR 333-535-0260(5) for sanitary references.

(i) Clean utility room(s) or clean supply room(s). A clean utility room is required when clean materials are assembled within the obstetrical suite prior to use. A clean utility room shall contain a work counter, a hand-washing station, and space for clean and sterile supplies. A clean supply room shall be provided when the program defines a system for the storage and distribution of clean and sterile supplies that would not require the use of a clean utility room. When clean supplies and equipment used in LDR and LDRP rooms are kept in a central location, the room shall be sized to reflect this concept. (A clean utility room or supply room may be shared with surgery department when provisions for joint use are included in the hospital's infection control policy and arrangement allows direct access to both delivery and surgery suites.).

(j) Anesthesia storage facilities. Unless the narrative program and official hospital board action in writing prohibit use of flammable anesthetics, a separate room shall be provided for storage of flammable gases in accordance with the requirements detailed under the mechanical section of these rules (OAR 333-535-0300). (Anesthesia storage facilities may also serve the surgery suite when provision is made for direct access from both surgery and delivery suites.).

(k) Anesthesia utility room or space for cleaning, testing, and storing anesthesia equipment. It shall contain a work counter, sink, and provisions for separation of clean and soiled items. This may occur at a location outside the suite, provided that sufficient clean equipment and supplies are available at all times. The anesthesia utility room may be omitted when a narrative statement and hospital board policy are submitted stating that no anesthetics are utilized.

(l) Equipment storage room(s) for equipment and supplies used in obstetrical suite.

(m) Staff's clothing change areas. Appropriate areas shall be provided for male and female personnel (technicians, nurses, aides, and doctors) working within the obstetrical suite. The areas shall contain lockers, showers, toilets, hand-washing stations, and space for donning scrub apparel. A receptacle for discarding soiled surgical gowns and boots shall be located to minimize contact with clean personnel. (The same clothes change areas may serve the surgery suite when provision for joint use is included in the hospital's infection control policy and arrangement allows for direct access from both surgery and delivery suites.).

(n) Lounge and toilet facilities for obstetrical staff convenient to delivery, labor, recovery, LDR and LDRP rooms. A separate lounge may be omitted, however, in hospitals with less than 300 deliveries per year.

(o) Facilities for physician waiting, charting, and sleeping are recommended where the obstetrical staffing program and workload indicate need for such, but are not required.

(p) Housekeeping closet. A dedicated closet containing a floor receptor or service sink, in accordance with OAR 333-535-

0260(7), and storage space for housekeeping supplies and equipment shall be provided exclusively for the obstetrical suite.

(q) Stretcher storage area. This area shall be out of direct line of traffic.

333-535-0130
Rehabilitation Therapy Department

(1) If a formal rehabilitation therapy service is provided, facilities and equipment shall be required for the effective function of the program. Where two or more rehabilitative services are included, items may be shared between service elements, in accordance with the Functional Program.

(2) The rehabilitative therapy department shall include the following, which may be shared or provided as separate units for each service, in accordance with the Functional Program:

(a) Office space with provision for filing and retrieval of patient records;

(b) Patient waiting space with provisions for wheelchairs out of traffic;

(c) Treatment area(s) as programmed for thermo-therapy, diathermy, ultrasonic and hydrotherapy. Cubicle curtains shall be provided around each individual treatment area. Hand-washing stations shall be provided at a rate of one per four treatment spaces. Facilities for collection of wet and soiled linen and other materials shall be provided;

(d) Exercise area;

(e) Storage for clean linen, supplies, and equipment;

(f) Patient dressing areas and toilet rooms with hand-washing stations accessible to wheelchair patients;

(g) A conveniently accessible housekeeping closet and service sink;

(h) Wheelchair and stretcher storage shall be provided out of traffic and treatment space areas, but shall be conveniently located;

(i) Secure storage shall be available to the department for staff personal property;

(j) Convenient access to toilets shall be provided.

333-535-0140
Occupational Therapy Suite

The occupational therapy suite shall include the following elements:

(1) Office space.

(2) Activities area. A hand-washing station shall be provided. Facilities for collection of waste products prior to disposal shall be provided, in accordance with the Functional Program.

(3) Storage for supplies and equipment.

(4) Ready access to patient toilet facilities.

333-535-0160
Morgue and Autopsy

(1) These facilities shall be directly accessible to an outside entrance and shall be located to avoid transfer of cadavers through public areas.

(2) The following elements shall be provided when autopsies are performed within the hospital:

(a) Refrigerated facilities for body-holding equipped with temperature monitoring and alarms.

(b) Autopsy room. This room shall contain:

(A) Work counter with a hand-washing station;

(B) Storage space for supplies, equipment, and specimens;

(C) Autopsy table;

(D) Clothing change area with shower, toilet, and lockers, within the area; and

(E) Housekeeping service sink or receptacle.

(3) If autopsies are performed outside the facility, only a well-ventilated body-holding room need be provided within the hospital.

333-535-0170
Pharmacy Suite

(1) The size and type of services to be provided in the pharmacy will depend upon the type of drug distribution system to be used in the hospital and whether the hospital proposes to provide, purchase, or share pharmacy services with other hospitals or other medical facilities.

(2) Provision shall be made for the following functional areas:

(a) Hand-washing stations shall be provided within each separate room where open medication is prepared for administration;

(b) Dispensing area;

(c) Editing or order review area;

(d) Sterile products area. (For the compounding of IV admixtures and other sterile products. May also be used for extemporaneous compounding). If intravenous (IV) solutions are prepared in the pharmacy, a sterile work area with a laminar-flow workstation designed for product protection shall be provided. See OAR 333-535-0300;

(e) Administrative areas. (Office area for the chief pharmacist and any other offices required for the proper maintenance of records and reports and also for purchasing, accounting, and personnel activities.);

(f) Storage areas (bulk, active, refrigeration, vault, volatile liquids);

(g) Drug information area;

(h) Packaging area. (Provide only if required by program.);

(i) Bulk compounding area. (Provide only if required by program.); and

(j) Quality control area. (Required only if either packaging or bulk compounding areas are provided)

(3) The pharmacy suite shall be in conformance with statutes and administrative rules pertaining to the State Board of Pharmacy.

Stat. Auth.: ORS 441.060
Stats. Implemented: ORS 441.060

333-535-0180
Dietary Facilities

(1) Food service facilities may consist of an on-site conventional food preparing system, a convenience food service system, or an appropriate combination of the two, and shall meet the requirements of the Oregon Food Sanitation Rules OAR 333-150-0000.

(2) Functional elements. The following facilities shall be provided in the size required to implement the type of food service selected:

(a) Control station for receiving food supplies.

(b) Storage space for four days' supply including food requiring cold storage.

(c) Food preparation facilities. Conventional food preparation systems require space and equipment for preparing, cooking, and baking. Convenience food service systems such as frozen prepared meals, bulk packaged entrees, and individual packaged portions, or systems using contractual commissary services require space and equipment for thawing, portioning, cooking, and/or baking.

(d) Hand-washing stations located in the food preparation area.

(e) Patients' meal service facilities. Examples are those required for tray assembly and distribution.

(f) Dining space for ambulatory patients, staff, and visitors.

(g) Ware-washing space located in a room or an alcove separate from food preparation and serving area. Commercial-type dishwashing equipment shall be provided. Space shall also be provided for receiving, scraping, sorting, and stacking soiled tableware and for transferring clean tableware to the using areas. A hand-washing station shall be conveniently available.

(h) Pot-washing facilities.

(i) Storage areas and sanitizing facilities for cans, carts, and mobile tray conveyors.

(j) Waste storage facilities located in a separate room easily accessible to the outside for direct pickup and disposal.

(k) Office(s) or desk spaces for dietitian(s) or the dietary service manager.

(l) Toilets for dietary staff. A hand-washing station shall be immediately available.

(m) Housekeeping closet. Located within the dietary department and shall contain a floor receptor or service sink and storage space for housekeeping, equipment and supplies.

(n) Self-dispensing ice-making facilities. May be in area or room separate from food preparation area but must be easily cleanable and convenient to dietary facilities.

333-535-0190
Administration and Public Areas

The following areas shall be provided:

(1) Entrance at grade level, sheltered from the weather, and able to accommodate wheelchairs.

(2) Lobby. It shall include:

(a) Storage space for wheelchairs;

(b) Reception and information counter or desk;

(c) Waiting space(s);

(d) Public toilet facilities;

(e) Public telephones; and

(f) Drinking fountain(s).

(3) Interview space(s) for private interviews relating to social service, credit, and admissions.

(4) General or individual office(s) for business transactions, medical and financial records, and administrative and professional staffs.

(5) Multipurpose room(s) for conferences, meetings, and health education purposes including provisions for showing visual aids.

(6) Library facilities.

(7) Storage for office equipment and supplies.

333-535-0200
Medical Records Unit

The following rooms and areas shall be provided:

(1) Medical records administrator/technician office or space.

(2) Review and dictating room(s) or spaces.

(3) Work area for sorting, recording, or archiving records.

(4) Storage area for records.

333-535-0205
Central Services Supply

The following shall be provided:

(1) Soiled utility room. This room shall be physically separated from all other areas of the department. The work space shall be provided to handle the cleaning and initial sterilization/disinfection of all medical/surgical instruments and equipment. Work tables, sinks, flush-type devices, and washer/sterilizer decontaminators shall be provided. Hand-washing stations shall be provided. Lockers, showers, and toilets shall be provided for staff employed in this area if these facilities are not available in adjacent employee facilities servicing other soiled areas.

(2) Clean assembly/utility room. The utility room shall contain work space and equipment for terminal sterilizing medical and surgical equipment and supplies and hand-washing stations.

(a) A sterilization room shall be provided that is used exclusively for the inspection, assembly, and packaging of medical/surgical supplies and equipment for sterilization.

(A) Access to the sterilization room shall be restricted.

(B) This room shall contain Hi-Vacuum or gravity steam sterilizers and sterilization equipment to accommodate heat-sensitive equipment (ETO sterilizers) and ETO aerators.

(C) This room shall contain work tables, counters, a hand-washing station, ultrasonic storage facilities for backup supplies and instrumentation, and a drying cabinet or equipment.

(D) The area shall be designed to accommodate sterilizer carts for loading of prepared supplies for sterilization.

(3) Storage areas for clean supplies and for sterile supplies. A room for breakdown shall be provided for manufacturers' clean/sterile supplies. The clean processing area shall not be in this area but in an adjacent space.

(4) Equipment storage room. Storage for packs, etc., shall include provisions for ventilation, humidity, and temperature control.

(5) Cart storage. This area shall be adjacent and easily available to clean and sterile storage and close to the main distribution point to keep traffic to a minimum and ease workflow.

333-535-0210
General Stores

The following shall be provided:

(1) Off street unloading facilities.

(2) Receiving area. Adequate receiving areas shall be provided to accommodate delivery trucks and other vehicles.

(a) The location of the receiving area shall be located to promote safe, secure, and efficient movement of arriving materials without compromising patient areas.

(A) Dock areas shall be segregated from other occupied building areas and located so that noise and odors from operation will not adversely affect building occupants.

(B) The receiving area shall be convenient to service elevators and other internal corridor systems.

(C) Receiving areas shall be segregated from waste staging and other outgoing materials-handling functions.

(b) Space requirements shall be adequate to enable breakdown, sorting, and staging of incoming materials and supplies.

(A) Balers and other devices shall be located to capture packaging for recycling or return to manufacturer or deliverer.

(B) In facilities with centralized warehousing, adequate space shall be provided at receiving points to permit the staging of reusable transport containers for supplies moving from central warehouses to individual receiving sites.

(3) General storage rooms or storage system shall be provided to meet hospital needs. They shall generally be concentrated in one area, but, in a multiple building complex, they may be in separate concentrated areas in one or more individual buildings on site. Off-site locations for a portion of this storage shall be permitted. The following shall be provided:

(a) Provisions for protection against inclement weather during transfer of supplies.

(b) General storage room(s) with a total area of not less than 20 square feet per inpatient bed shall be provided.

(c) Additional storage areas for outpatient facilities in combination with and in addition to the general stores, or in a central area within the outpatient department shall be permitted. Off-site location(s) for a portion of this storage shall also be permitted.

(d) Additional storage areas for outpatient facilities shall be provided in an amount not less than five percent of the total area of those facilities.

333-535-0220
Linen Services

(1) On-site processing. If linen is to be processed on the hospital site, the following shall be provided:

(a) Laundry processing room with commercial-type equipment that can process seven days' needs within a regularly scheduled workweek. A hand-washing station shall be provided;

(b) Soiled linen utility, room with a hand-washing station and holding rooms. Lockers, showers, and toilets shall be provided for staff employed in this area if these facilities are not available in adjacent employee facilities servicing other soiled areas;

(c) Storage for laundry supplies;

(d) Clean linen inspection and mending room or area;

(e) Clean linen storage, issuing, and holding room or area;

(f) Housekeeping closet containing a floor receptor or service sink and storage space for housekeeping equipment and supplies;

(g) Cart storage area(s). These shall be provided for separate parking of clean- and soiled-linen carts out of traffic;

(h) Arrangement of equipment and procedures shall be in a manner to permit orderly work flow with a minimum of cross-traffic that might mix clean and soiled operations.

(2) Off-site processing. If linen is processed off the hospital site, the following shall be provided:

(a) Soiled linen holding room. A separate room shall be provided for holding soiled linen until ready for pickup or processing;

(b) Clean linen receiving, holding, inspection, and storage room(s). A central clean linen storage and issuing room(s) shall be provided in addition to the linen storage required at individual patient units;

(c) Cart storage area(s). These shall be provided for separate parking of clean- and soiled-linen carts out of traffic.

333-535-0230
Employees' Facilities

In addition to the employees' facilities such as locker rooms, lounges, toilets, or shower facilities called for in certain departments, a sufficient number of such facilities, as required to accommodate the needs of all personnel and volunteers, shall be provided in accordance with the Functional Program.

Stat. Auth.: ORS 441.060
Stats. Implemented: ORS 441.060
Hist.: HB 183, f. & ef. 5-26-66; HB 209, f. 12-18-68; HD 7-1979, f. & ef. 7-17-79; HD 11-1980, f. & ef. 9-10-80; Renumbered from 333-023-0200(24); HD 29-1988, f. 12-29-88, cert. ef. 1-1-89; Renumbered from 333-074-0320; PH 10-2009, f. & cert. ef. 10-1-09

333-535-0250
Waste Processing Services

(1) Storage and disposal. Space and facilities shall be provided for the sanitary storage and disposal of waste by incineration, mechanical destruction, compaction, containerization, removal, or by a combination of these techniques.

(2) Incinerator:

(a) Design and construction of incinerators and trash chutes shall be in accordance with NFPA 82 and State Structural and Mechanical Codes.

(b) Incinerators shall be designed and equipped to conform to requirements prescribed by the Oregon Department of Environmental Quality for emission levels and equipment.

(c) Other technologies for non-incineration. Waste treatment technologies shall be determined by the facility in conjunction with environmental, economic, and regulatory considerations. The Functional Program shall describe waste treatment technology components that include the following:

(A) Safe locations, transfer routes, distances from waste sources, temporary storage and spacing requirements shall be provided that will not cause traffic problems, and limits odor, noise, and visual impact to patients, visitors and the public;

(B) Space shall be determined by the equipment requirements, including associated area for opening waste entry doors, access to control panels, space for hydraulic lifts, conveyors, and operational clearances. The method of waste treatment or disposal is subject to the local regulatory approvals;

(C) Ventilation. Exhaust vents, if any, from the treatment technology shall be located a minimum of 25 feet from inlets to HVAC systems. If technology involves heat dissipation, sufficient cooling and ventilation shall be provided; and

(D) Nuclear Waste Disposal. See Code of Federal Regulations (CFR), Title X, parts 20 and 35, concerning the handling and disposal of nuclear materials in health care facilities.

333-535-0260
Sanitary Environment

(1) A hand-washing station is an area providing a sink for hand-washing with hot and cold water supply and a faucet that facilitates easy on and off mixing capabilities without use of the hands. The station shall include provision of cleansing agents and drying capability. In addition to hand-washing stations required for individual departments, adequate hand-washing stations shall be provided for the total hospital population. Hand-washing stations shall be available in all toilet rooms. For the purpose of providing

accuracy and consistency within these rules, these terms are defined as follows:

(a) Hand-washing sink. Hand-washing sinks are a general component of hand-washing stations that are available in all toilet rooms and provided for the total hospital population.

(b) Scrub sink. Scrub sinks are provided for the exclusive use of staff in restricted and semi-restricted locations within operating and surgical suites and rooms.

(2) Toilet and hand-washing stations shall be available to patient care units as follows, with the exception of intensive patient care units and special locked psychiatric units where provision of these fixtures within the room may pose undue risks or problems:

(a) In newly constructed single patient rooms having a private toilet room, a hand-washing station in both the toilet room and the patient room shall be provided. For renovation projects involving single patient rooms that have a private toilet room, a hand-washing station shall be located in either the toilet room or the patient room;

(b) In single patient rooms having a toilet room connecting two rooms, a hand-washing station shall be provided in the toilet room and in each of the two patient rooms;

(c) All wards of two or more beds, having a separate or connecting toilet rooms shall have a hand-washing station in the toilet room as well as in the ward;

(d) A toilet room shall be directly accessible from each patient room without going through the general corridor;

(e) One toilet room shall serve not more than four patients or two patient rooms; and

(f) In general psychiatric units, the hand-washing station may be omitted from the patient room when a hand-washing station is located in an adjoining toilet room. Toilet and hand-washing stations in special-care, locked psychiatric units may be provided based on patients' needs and the Patient and Staff Safety Assessment.

(3) Toilet rooms, conveniently located and separate from those used by patients, shall be provided for all hospital personnel. No toilet room shall open directly into any room in which food, drink, or utensils are handled or stored.

(4) Clean utility or clean storage: Each patient care unit shall include or have direct access to a clean utility room or area open to the corridor containing a work counter, hand-washing station and facilities for storage and distribution of clean and sterile supply materials. If the room is used for clean storage only, the hand-washing sink may be omitted. If the utility area is open to the corridor, all supply cabinets shall be fully enclosed.

(5) Soiled utility or soiled holding: Each patient care unit shall include or have direct access to a soiled utility room or a soiled holding room as required in other related sections.

(a) Soiled utility rooms shall contain a clinical sink or equivalent flushing rim sink. Where a bed pan flushing device is provided in patient toilet rooms, a utility sink may be provided in the soiled utility room instead of a clinical sink. The utility sink shall be at least 10 inches deep and measure at least 22 inches by 21 inches. Each soiled utility room shall also provide a hand-washing station, work counter, waste receptacle and linen receptacle for collection and disposal of soiled materials, including separate infectious waste storage if not provided elsewhere, and recycle storage if part of hospital operations.

(b) Soiled holding rooms. Soiled holding rooms are intended for temporary holding of soiled material. Clinical sinks and work counters are not required in rooms used only for temporary holding of soiled material. If the flushing-rim clinical sink is not provided, facilities for cleaning bedpans shall be provided elsewhere.

(6) Patients' bathing facilities for medical, surgical, obstetrical, and pediatric patient care units: at least one shower or tub for each 12 beds shall be provided, except that in postpartum units, a minimum of one shower per 12 beds shall be provided. Each tub or shower shall be in an individual room or enclosure that provides space for the private use of the bathing fixture and for drying and dressing. At least one bathing fixture on each patient floor shall have space for a wheelchair with an assisting attendant. In new construction, at least one toilet for each 12 beds shall be provided in the bathing room. Patient/public toilets shall be provided conveniently near multi-purpose rooms.

(7) Housekeeping closets. In addition to closets noted in other sections of these rules, sufficient housekeeping closets, with a floor sink or service sink and storage space for janitorial equipment, cart and supplies, located in each, shall be provided to serve all areas of the hospital and shall also include the following:

(a) A minimum of 35 square feet shall be provided for each housekeeping room;

(b) A minimum of one housekeeping closet shall be provided for each floor; and

(c) If practical, a hand-washing station shall be provided proximate to the housekeeping closet.

(8) Overhead drainage piping. Refer to OAR 333-535-0300(5)(d)(B).

333-535-0270
Details and Finishes

(1) The nonconforming portions of existing facilities that are not being totally modernized shall comply with the safety requirements dealing with interior finishes as listed in chapters 18, 19, 20 and 21 of the National Fire Protection Association (NFPA) 101, when the facility is also to be Medicare or Medicaid certified.

(2) Details and finishes in new construction projects, including additions and major alterations, shall comply with the following:

(a) Details:

(A) Compartmentation, exits, fire alarms, automatic extinguishing system, and other details relating to fire prevention and fire protection shall comply with requirements listed in chapters 18, 19, 20 and 21 of the NFPA101, when the facility is also to be Medicare or Medicaid certified.

(B) Items such as drinking fountains, telephone booths, vending machines, and portable equipment shall be located so as not to restrict corridor traffic or reduce the corridor width below the required minimum.

(C) Rooms containing any of the following: bathtubs, sitz baths, showers, or water closets, subject to occupancy by patients, shall be equipped with doors and hardware that will permit access from the outside in any emergency. When such rooms have only one opening, the door shall be capable of opening outward or be otherwise designed to be opened without need to push against a patient who may have collapsed within the room.

(D) If psychiatric care units are required by the program, suitable hardware shall be provided on doors to patient toilet rooms so that access to these rooms can be controlled by staff.

(E) If required by the program, doors to patient rooms in psychiatric care units shall not be lockable from inside the room.

(F) Windows and other doors that may be frequently left in an open position shall be provided with insect screens.

(G) Patient rooms intended for occupancy of 24 hours or more shall have windows with sills not more than 3 feet above the floor (windows in Intensive Care Unit and Critical Care Unit may be 5 feet above the floor).

(H) Linen and refuse chutes shall meet requirements of NFPA101, and have a minimum cross sectional dimension of not less than 2 feet.

(I) Thresholds and expansion joint covers shall be made flush with the floor surface to facilitate use of wheelchairs and carts. Expansion joints shall be constructed to restrict passage of smoke and fire.

(J) Grab bars shall be provided at all patients' toilets, showers, tubs, and sitz baths, except in psychiatric patient care units. The bars shall have one and one-half inch clearance to walls and shall have sufficient strength and anchorage to sustain a concentrated load of 250 pounds.

(K) Anchoring. Sinks in hand-washing stations shall be securely anchored to withstand an applied vertical load of not less than 250 pounds on the fixture front.

(L) Mirrors shall not be installed at hand-washing stations in food preparation areas or in sensitive areas such as nurseries, clean and sterile utility, storage rooms and scrub sinks.

(M) Hand drying devices. Provision for hand drying shall be included at all hand-washing stations except scrub sinks. Hospital policy shall determine hand drying procedures at scrub sink locations. These shall be single use separate individual paper or cloth units enclosed in such a way as to provide protection against dust or soil and insure single unit dispensing. Hot air dryers are permitted provided that installation is such to preclude possible contamination by recirculation of air.

(N) Radiation protection requirements for Radiographic Imaging and gamma ray installations shall be in accordance with National Council of Radiation Protection Reports Numbers 33 and 49. Provision shall be made for testing the completed installation before use and all defects must be corrected before acceptance. Prior to their use, all installations shall be approved and licensed by the Radiation Control Section of the Oregon Health Authority, Public Health Division.

(O) The minimum ceiling height shall be 7 feet 10 inches with the following exceptions:

(i) Boiler rooms shall have ceiling clearances not less than 2 feet 6 inches above the main boiler header and connecting piping.

(ii) Radiographic, operating and delivery rooms, and other rooms containing ceiling-mounted equipment or ceiling-mounted surgical light fixtures shall have height required to accommodate the equipment or fixtures.

(iii) Ceilings in corridors, storage, toilet rooms, and other minor rooms shall be not less than 7 feet 6 inches.

(iv) Soffits, signage, lights, mechanical items and other suspended items located in the path of normal traffic shall not be less than 7 feet above the floor. Cubicle curtain tracks and television suspensions in individual rooms shall not be less than 6 feet 8 inches above the floor.

(P) Recreation rooms, exercise rooms and similar space where impact noises may be generated shall not be located directly over patient bed area, delivery or operating suites, unless special provisions are made to minimize such noise.

(Q) Rooms containing heat-producing equipment (such as boiler or heater rooms and laundries) shall be insulated and ventilated to prevent any floor surface above from exceeding a temperature of 10°F above the ambient room temperature of the room producing the heat generation.

(R) Sound transmission criteria shown in Table 1 (OAR 333-535-0270) shall apply to partition, floor and ceiling construction in patient areas.

(S) Mechanical equipment located on the same floor or above patient rooms, offices, nurse stations, and similar occupied spaces shall be effectively sound isolated from the floor and structure.

(T) Equipment and supply storage shall be provided for each hospital department in accordance with the Functional Program; however, a minimum of 10 square feet per bed shall be provided in patient care areas. In all other departments, the amount required shall be based on either a study of supply and equipment needs which shall be submitted with construction plans for review or a minimum of 10 percent of gross departmental area. All rooms and corridors within a department shall be included when calculating gross departmental area.

(b) Finishes:

(A) Cubicle curtains and draperies shall be noncombustible or rendered flame retardant and shall pass both the large and small scale tests of NFPA Standard 701.

(B) Flame spread and smoke developed ratings of finishes are covered under the State of Oregon Building Code. Whenever possible, the use of materials known to produce large amounts of noxious gases shall be avoided.

(C) Floor materials shall be easily cleanable and have wear resistance appropriate for the location involved. Floors in areas used for food preparation or food assembly shall be water-resistant and grease-proof. Joints in tile and similar material in such areas shall be resistant to food acids. In all areas frequently subject to wet cleaning methods, floor materials shall not be physically affected by germicidal and cleaning solutions. Floors that are subject to traffic while wet (such as shower and bath areas, kitchens, operating and C-section rooms, clean core areas, recovery areas except step-down recovery and similar work areas) shall have a non-slip surface as recommended by Americans with Disabilities Act, Architectural and Transportation Barriers Compliance Board (Access Board).

(D) Wall bases in kitchens, operating and C-section rooms, clean core areas, surgical scrub corridors, soiled workrooms, endoscopy rooms, housekeeping closets and other areas that are frequently subject to wet cleaning methods shall be made integral and coved with the floor, tightly sealed to the wall, and constructed without voids that can harbor insects.

(E) Wall finishes shall be washable and, in the immediate area of plumbing fixtures, shall be smooth and moisture resistant (orange peel not allowed). Finish, trim, and floor and wall construction in dietary and food preparation areas shall be free from spaces that can harbor rodents and insects.

(F) Floor and wall penetrations by pipes, ducts, and conduits shall be tightly sealed to minimize entry of rodents and insects. Joints of structural elements shall be similarly sealed.

(G) Ceilings in restricted areas such as: surgery rooms, delivery rooms, clean core areas and specialized radiographic rooms shall be constructed with material that are monolithic, scrubbable, and capable of withstanding chemicals, such as gypsum board, and be without crevices that can contain dirt particles.

(H) Ceilings in semi-restricted areas such as: airborne infection isolation rooms, protective environment rooms and central sterile supply spaces shall be smooth, scrubbable, nonabsorptive, nonperforated, capable of withstanding cleaning with chemicals, and without crevices that can harbor mold and bacterial growth.

(I) If lay-in ceiling is provided in semi-restricted areas, it shall be gasketed or clipped down to prevent the passage of particles from the cavity above the ceiling plane into the semi-restricted environment. Perforated, tegular, serrated cut, or highly textured tiles are not acceptable.

(J) Dietary and food preparation areas shall have a finished ceiling covering all overhead duct work and piping.

(K) Finished ceilings may be omitted in general storage areas, and similar spaces, unless required for fire-resistive purposes.

(L) Acoustical ceilings shall be provided for corridors in patient areas, nurses' stations, labor rooms, day rooms, recreation rooms, dining areas, and waiting areas.

(M) In dietary areas and in other areas where dust fallout may present a problem, suspended ceilings shall be provided.

(N) Ceilings of patient rooms in psychiatric care units shall be of monolithic or bonded construction.

(O) Top-set rubber or vinyl wall base, where used, shall be sealed tightly to the floor as well as to the wall.

333-535-0290
Elevators

(1) General. All hospitals having patients' facilities (such as bedrooms, dining rooms, or recreation areas) or critical services (such as operating, delivery, diagnostic, or therapy) located on floors other than the main entrance floor shall have electric or electro-hydraulic elevators. Installation and testing of elevators shall comply with the Oregon Elevator Code.

(2) Number of Elevators:

(a) At least one hospital-type elevator shall be installed where 1 to 59 patient beds are located on any floor other than the main entrance floor.

(b) At least two hospital-type elevators shall be installed where 60 to 200 patient beds are located on floors other than the main entrance floor, or where the major inpatient services are located on a floor other than those containing patient beds. (Elevator service may be reduced for those floors that provide only partial inpatient services.).

(c) At least three hospital-type elevators shall be installed where 201 to 350 patient beds are located on floors other than the main entrance floor, or where the major inpatient services are located on a floor other than those containing patient beds. (Elevator service may be reduced for those floors that provide only partial inpatient services.).

(d) For hospitals with more than 350 beds, the number of elevators shall be determined from a study of the hospital plan and the estimated vertical transportation requirements.

(3) Cars and platforms. Cars of hospital-type elevators shall have inside dimensions that will accommodate all patient beds to be utilized and attendants. The car door shall have a clear opening of not less than 4 feet.

(4) Operation. Elevators, except freight elevators, shall be equipped with a two-way special service switch to permit cars to bypass all landing button calls and be dispatched directly to any floor.

(5) Elevator controls, alarm buttons, and telephone shall be accessible to wheelchair occupants.

(6) Elevator call buttons, controls, and door safety stops shall be of a type that will not be activated by heat or smoke.

333-535-0300
Mechanical Requirements

(1) General standards:

(a) In addition to requirements of this rule, the mechanical system serving hospitals and hospital outpatient facilities may be subject to general review for overall efficiency and life cycle cost, although no requirements will be enforced beyond those included in this rule. Recognized engineering procedures are recommended to achieve specific requirements and performance for the most economical and effective results. Different geographic areas may have climate variations and use conditions that would favor one system over another in terms of overall cost and efficiency. In no case shall patient care or safety be sacrificed for conservation. Construction shall comply with the Oregon Structural Specialty Code (OSSC), the Oregon Mechanical Specialty Code (OMSC), the Oregon Plumbing Specialty Code (OPSC), Oregon Fire Code (OFC), NFPA 90A, and NFPA 99 Health Care Facilities as enforced by the State Building Codes Division and Authorities having Jurisdiction. Responsibility for enforcement remains with these authorities.

(b) The facility shall include provisions for recovery of waste cooling and heating energy (ventilation, exhaust, water and steam discharge, cooling towers, incinerators, etc.) in compliance with local codes.

(c) Recirculating room units (such as induction units and unit ventilators) may be used in individual rooms for heating and cooling purposes. Outdoor air requirements shall be met by separate air handling systems with proper filtration, as noted in Table 3.

(d) To reduce utility costs, facility design shall include consideration of recognized procedures such as variable air volume systems, energy recovery devices, load shedding, programmed controls for unoccupied periods including nights and weekends, and use of natural ventilation where site and climatic conditions permit. Systems with excessive operational or maintenance costs that would negate long-range energy savings should be avoided.

(e) To the extent possible, this rule has been written to permit maximum use of simplified systems including that for variable air volume (VAV). However, care must be taken in design to avoid possibility of large temperature differentials, high velocity supply, excessive noise, and stagnation. Air supply, return, and exhaust in rooms may vary in response to room load provided the total and outside air change rates stay within the limits of Table 2, Note 4. Construction drawing submissions shall include information listing the actual supply air and outside air change rates provided to the areas listed in Table 2 at maximum and minimum terminal unit settings.

(f) To maintain asepsis control, air supply, return, and exhaust quantities should generally be controlled to ensure movement from "clean" to "less clean" areas and maintain directional air movement within the limits of Table 2, Note 2. Special considerations shall be given to sterile areas such as Operating Rooms, Delivery Rooms, and Central Supply.

(g) Variable air volume systems serving inpatient facilities or surgical outpatient facilities shall include controls or equipment necessary to ensure that minimum outside air quantities in cubic feet per minute and the resulting space pressure relationships are maintained over the range of fan operation. Examples of methods to ensure the delivery of minimum quantities of outside air include the installation of airflow monitoring stations or dedicated supply fans.

(h) Prior to acceptance of the facility, all mechanical systems shall be tested, balanced and operated to demonstrate to the design engineer or his or her representative that the installation and performance of these systems conform to the design intent and requirements herein. Test results shall be documented for maintenance files and be available for inspection by Division's surveyors or Authorities having Jurisdiction.

(i) Functional performance tests shall be provided for projects that include the addition or modification of major equipment and systems. These tests shall ensure that mechanical systems operate in accordance with the design intent and in compliance with requirements herein. Description of procedures and test results for each functional performance test shall be documented to demonstrate to the design engineer, or his or her representative, that systems operate in accordance with the design intent. Documentation shall be included in the maintenance files and be available for inspection by the Division's surveyors or Authorities having Jurisdiction. Functional performance tests shall be developed and performed for the following systems and system functions in hospital inpatient facilities where applicable:

(A) Outdoor air ventilation system components and control modes.

(B) Humidity control components and control modes.

(C) Maintenance of space pressure relationships through all modes of air handling system operation.

(D) Airborne infectious isolation and protective environment room ventilation and pressurization monitoring systems.

(E) Smoke evacuation systems serving anesthetizing areas.

(F) Fire/smoke damper controls.

(G) Boiler and generator fuel oil supply transfer systems including alarms.

(H) Laboratory hood systems.

(j) Upon completion of the contract, the facility shall be furnished and retain on file a complete set of building drawings, man-

ufacturers' operating, maintenance and preventive maintenance instructions, parts lists and procurement information with model numbers, and a description of the operation of each piece of equipment. Responsible operating staff persons shall also be provided with instructions in the proper operational use of systems, equipment, and controls. This information shall be available for inspection by the Division's surveyors or Authorities having Jurisdiction.

(k) If inpatient facility system modifications affect greater than 25 percent of the system capacity, designers shall obtain and utilize pre-renovation water/air flow rate measurements to verify that sufficient capacity is available and that renovations have not adversely affected flow rates in non-renovated areas.

(l) Psychiatric patient room fixtures and equipment shall be tamper resistant and shall be selected to meet the requirements of the Patient and Staff Safety Assessment. Equipment shall be selected to minimize the need for maintenance within the room. Refer to OAR 333-535-0061 for additional requirements.

(m) Identification. All piping, including heating ventilation, gas, vacuum and air conditioning (HVAC) except control line tubing, shall be color coded or otherwise marked for easy identification. Major equipment shall be labeled. All valves shall be tagged. Identification and valve schedules shall be provided to the facility for permanent record and reference.

(2) Insulation:

(a) Insulation shall be provided within the building to conserve energy, protect personnel, prevent vapor condensation, and reduce noise.

(b) Insulation on cold surfaces shall include an exterior vapor barrier. (Materials which will not absorb or transmit moisture will not require a separate vapor barrier.)

(c) Insulation, including finishes and adhesives on the exterior surfaces of ducts, piping, and equipment, shall have a flame spread rating of 25 or less and a smoke developed rating not to exceed 50 when tested in accordance with NFPA 255.

(d) If duct lining is used, it shall be coated and sealed and shall meet ASTM C1071. These linings, including coatings, adhesives, and insulation on pipes and ducts in building spaces, shall have a flame spread rating of 25 or less and a smoke developed rating of 50 or less when tested in accordance with NFPA 255.

(e) No duct linings exposed to air movement shall be used in ducts, terminal boxes or other systems downstream of final filters supplying operating rooms, invasive special procedure rooms, C-section delivery rooms, post anesthesia recovery rooms, critical care, nurseries, protective environment rooms, intensive care, and central supply areas. Fully encapsulated lining may be used in terminal boxes serving these areas. Sound traps or duct silencers downstream of final filters shall be all metal with no fill or shall have special coatings over such linings per ASTM C1071.

(f) If existing lined ductwork is reworked in a renovation project, the liner seams and punctures shall be resealed, repaired or replaced.

(3) Steam and hot water systems:

(a) Boilers and domestic water heaters. Boilers shall have the capacity, based upon the net ratings published by the Hydronics Institute, to supply the normal requirements of all systems and equipment. Their number and arrangement shall accommodate facility need during time of breakdown or routine maintenance of any one boiler. The capacity of the remaining boiler(s) shall be sufficient to provide domestic hot water service for clinical, dietary, and patient use; steam for sterilization and dietary purposes; and heating for operating, delivery, labor, recovery, intensive care, nursery, emergency departments, and general patient rooms. If the domestic water heating system is independent of the building heating boilers, the domestic water heating system shall be capable of providing a back-up source of domestic hot water for clinical, dietary, and sterilizer use when the primary domestic water heating system is not operable. These requirements do not apply to outpatient facilities except outpatient surgical facilities providing invasive or anesthetizing procedures shall provide backup equipment for hot water and sterilizer needs only.

(b) Boiler system accessories. Boiler feed pumps, heating circulating pumps, condensate return pumps, heat exchangers, and fuel oil pumps shall be connected and installed to provide normal and standby service where back-up or standby service is required.

(c) Valves. Supply and return mains and risers of cooling, heating and steam systems shall be valved to isolate the various sections of each system. Each piece of equipment shall be valved at the supply and return ends.

(d) Fuel supplies. Fuel used for boiler systems serving hospital inpatient facilities that provide building heating to the areas listed in subsection (3)(a) shall include a backup on-site fuel system if the primary fuel system fuel is not stored on site. The on-site fuel storage system shall have sufficient fuel/power to operate the boiler systems for a minimum of 48 hours, or for a time period consistent with the facility emergency management plan. The on-site fuel system shall include a low level fuel sensor alarmed at a staffed location. On-site fuel systems may be combined with the emergency generator fuel systems per the requirements of NFPA 110.

(4) Air conditioning, heating, and ventilating systems:

(a) The ventilation system shall be designed and balanced to provide ventilation rates and directional flow as shown in Table 2. (See notes 2 and 4 for reduction and shutdown of ventilation systems when room is unoccupied.) The ventilation rates shown in Table 2 shall be used only as model standards; they do not preclude the use of higher rates that may be appropriate. All occupiable rooms and areas in the facility shall have provision for mechanical ventilation. Natural ventilation systems and operable windows shall be permitted to supplement mechanical ventilation where they will not adversely affect required pressure relationships, air change rates, and room temperatures. Freestanding immediate care clinics, physician's clinics, imaging facilities, outpatient physical therapy, dialysis facilities, and occupational therapy facilities that are not part of an inpatient facility are not required to meet the ventilation requirements of Table 2, except endoscopy, isolation, and bronchoscopy areas.

(b) Outside air ventilation intakes shall be located at least 25 feet from exhaust outlets of ventilating systems, combustion equipment stacks, medical-surgical vacuum systems, plumbing vents, cooling towers, or from areas that may collect vehicular exhaust or other noxious fumes in all inpatient areas and in outpatient areas providing invasive or anesthetizing procedures. In non-anesthetizing hospital outpatient facilities, this distance may be reduced to 10 feet. Plumbing vents that terminate above the level of the top of the air intake may be located as close as 10 feet. Outside air ventilation intakes shall be located a minimum of 25 feet from the combustion vents of rooftop air handling units, except that the clearance may be reduced to 10 feet when the vent is above the level of the intake. Outside air ventilation intakes shall be located a minimum of 6 feet from relief/economizer air outlets that do not include required building exhaust. The bottom of outside ventilation air intakes in inpatient facilities shall be located as high as practical but at least 15 feet above ground level or 3 feet above the roof level.

(c) Fans serving exhaust systems shall be located at the discharge end of the system to limit positively pressurized ductwork within the building and shall be conveniently accessible for service. Where existing conditions prohibit fans from being located at the discharge end of the system, alternate systems may be considered provided discharge ductwork is sealed and tested per medium pressure duct requirements. Hospital outpatient facilities are not required to have exhaust fans at the discharge end of the system except endoscopy, isolation, and bronchoscopy area. Exhaust systems may be combined as necessary for efficient use of recovery devices required for energy conservation.

(d) Exhaust systems from areas that may be contaminated shall not be combined with other exhaust systems, shall include fans located outside the building with outlets discharging vertically a minimum of 6 feet above the roof level, and shall be arranged to minimize recirculation of exhaust air into the building. Consideration shall be given to redundant fan systems. Contaminated exhaust ducts and discharge points shall be labeled. Contaminated areas

include infectious isolation, decontamination, ETO sterilizer, non-refrigerated body holding, and bronchoscopy. Contaminated exhaust shall not be served by exhaust systems that may allow cross contamination, such as heat wheels. Where existing conditions prohibit fans from being located outside the building, alternate systems that are designed to limit cross contamination and exposure to workers and patients may be considered. (Refer to OMSC for additional requirements.)

(e) Operating and C-section delivery room air supply shall be from ceiling outlets near the center of the work area to effectively control air movement. Laminar flow design diffusers shall be used in operating rooms. Each operating and C-section delivery room shall have at least two return/exhaust air inlets located near the floor level in opposite corners of the room. (Design should consider turbulence and other factors of air movement to minimize fall of particles into wound site.) Where extraordinary procedures, such as organ transplants, may justify other special designs, the installation shall be as required to properly meet the performance needs. Special designs shall be reviewed on a case by case basis. Installation of equipment requiring service shall be kept to a minimum above operating rooms and sterile core areas. Temperature shall be individually controlled for each operating and C-section delivery room. The air handling systems for operating and C-section delivery rooms shall operate at all times.

(f) Humidity control and smoke vent systems in inpatient facility anesthetizing areas shall be provided as required by NFPA 99, Environmental Systems Chapter. Smoke vent systems shall prevent smoke within individual anesthetizing rooms from affecting adjacent anesthetizing rooms. Adjacent rooms shall remain at a positive pressure in relationship to the areas with detected smoke. Smoke dampers shall not affect the operation of the smoke vent system.

(g) Air supply for intensive care nurseries, airborne infectious isolation rooms, bronchoscopy treatment rooms, and rooms used for invasive procedures shall be at or near the ceiling. Return/exhaust air inlets shall be near the floor level. Special designs shall be reviewed on a case by case basis.

(h) Each airborne infectious isolation room and protective environment room shall have a permanently installed and labeled visual mechanism to constantly monitor the pressure status to the room when occupied by a patient requiring isolation or protection. The mechanism shall continuously monitor the direction of the air flow. Audible alarms, if provided, shall include a silencing switch. Rooms with reversible airflow provisions for the purpose of switching between airborne infectious and protective environment isolation rooms are not acceptable. Rooms used for sputum induction, aerosolized pentamadine treatments, or other cough inducing treatments shall meet the requirements of Table 2 for airborne infectious isolation rooms. Protective environment rooms shall be provided with HEPA filters at 99.97 percent efficiency (MERV 17) per Table 3. Recirculating HEPA filter units may be used in protective environment rooms, but shall not be used to meet the minimum filtering requirements of Table 3.

(i) The bottoms of ventilation (supply/return/exhaust) openings shall be at least 6 inches above the floor.

(j) Emergency waiting rooms and other waiting rooms where airborne infection is a concern, as defined by the Infection Control Risk Assessment, shall have low wall return/exhaust and shall conform to the requirements of Table 2. Special designs shall be reviewed on a case by case basis.

(k) Air handling systems in inpatient facilities shall be fully ducted except when serving non-patient care areas.

(l) All ventilation or air conditioning systems, except individual room units serving non-critical care areas, shall be equipped with filters having efficiencies equal to, or greater than, those specified in Table 3. Where two filter beds are required, filter bed No. 1 shall be located upstream of the air conditioning equipment, and filter bed No. 2 shall be downstream of any cooling coils and blowers. Non-central air handling systems (individual room units) shall be equipped with filters with minimum 60 percent efficiency (MERV 11).

(A) Where only one filter bed is required, it shall be located upstream of the air conditioning coils unless an additional pre-filter is employed.

(B) Filter efficiencies shall be average ratings tested in accordance with American Society of Heating, Refrigeration, & Air Conditioning Engineering Standard 52-1 and MERVs rating shall be based on ASHRAE Standard 52-2, except as noted otherwise.

(C) Filter frames shall be manufactured housings designed for maximum 500 FPM velocity and shall provide an airtight fit with the enclosing ductwork. All joints between filter segments and the enclosing ductwork shall be gasketed or sealed to provide a positive seal against air leakage. Filter housing blank off panels shall be permanently attached to the frame, constructed of rigid materials, and have sealing surfaces equal to or greater than the filter media installed in the filter frame.

(D) Magnahelics or manometers shall be installed across all filter beds having a required efficiency of 75 percent (MERV 12) or more. When these filters are located remote from the air handling unit, monitoring of filter condition shall be provided in a staffed area or through the building control system.

(m) Steam humidifiers shall be used for humidification. Central steam shall be used only if chemical treatment is food grade. Humidifiers shall be located to prevent moisture on filters or lined ductwork. Ductwork with duct mounted humidifiers shall be stainless steel or aluminum construction and shall have a means for water removal. An adjustable high limit humidistat shall be located downstream of the humidifier to reduce the potential for condensation inside the duct. Humidifiers shall be connected to airflow proving switches that prevent humidification unless the required volume of airflow is present. All duct takeoffs shall be sufficiently downstream of the humidifier to ensure complete moisture absorption.

(n) Ducts and piping which penetrate construction intended for X-ray, MRI, RF, or other radiation protection shall not impair the effectiveness of the protection.

(o) Fire and smoke dampers shall be constructed, located, activated, and installed in accordance with the requirements of NFPA 90A, NFPA 101, and OSSC. Fans, smoke dampers, and detectors shall be interconnected so that activation of dampers will not damage the ducts. Access for maintenance shall be provided at all dampers. All damper locations must be shown on drawings. When smoke partitions are required, zones for air handling systems shall be coordinated with compartmentation insofar as practical to minimize the need to penetrate fire and smoke partitions.

(p) Systems shall be provided to exhaust chemicals and fumes that cause respiratory irritation or other hazards to workers, including laboratory processes, instrument processing rooms, radioactive processes, chemo hoods, and pharmacies. If the minimum air change standards in Table 2 do not provide sufficient air for use by hoods and safety cabinets, makeup air shall be provided to maintain the required air flow direction and to avoid depending upon infiltration from outdoors or from contaminated areas.

(q) All laboratory and pharmacy hood systems shall meet OMSC and shall meet the following general standards. (Laminar flow hoods used in clean applications are exempt from these requirements.)

(A) Have an average face velocity of 75 to 125 feet per minute or as required by the hood manufacturer, whichever is greater;

(B) Be connected to an exhaust system to the outside that is separate from the building exhaust system;

(C) Have a labeled exhaust fan located at the discharge end of the system outside the building with the outlet discharging vertically a minimum of 6 feet above the roof;

(D) Have an exhaust duct system of noncombustible corrosion-resistant materials as needed to meet the planned usage of the hood; and

(E) Be equipped with devices and alarms to alert staff of fan shutdown or loss of airflow.

(F) If equipped with HEPA filters, have a means to alert staff when filter change is required.

(G) Each hood that processes highly infectious or radioactive materials shall have a minimum face velocity of 90 to 110 feet per minute or as required by the hood manufacturer; shall be connected to an independent exhaust system; shall have filters with a 99.97 percent efficiency (MERV 17); and shall be designed and equipped to permit the safe removal, disposal and replacement of contaminated filters. Filters shall be as close to the hood as practical to minimize duct contamination.

(H) Hoods that process radioactive materials shall meet requirements of the Nuclear Regulatory Commission and NFPA 801 Facilities for Handling Radioactive Materials, and discharge vertically a minimum of 10 feet above the roof of the building. Radioactive isotopes used for injections, etc., without probability of airborne particulate or gases may be processed in a "clean work bench" type hood where acceptable to the Nuclear Regulatory Commission.

(I) Duct systems serving hoods in which strong oxidizing agents (e.g., perchloric acid) are used shall be equipped with washdown facilities. Provisions shall be made for safe removal of filters during washdown operations.

(r) Exhaust hoods in food preparation centers shall comply with NFPA 96. Dedicated kitchen hood make-up air system intakes may be a minimum of 10 feet from kitchen hood exhaust outlets. The food preparation area may have air movement "in" during cooking and hood operation for odor control. Makeup systems for hoods shall be arranged to minimize "short circuit" of air movement and to avoid reduction in air velocity at the point of contaminant capture.

(s) The ventilation system for medical gas storage rooms shall conform to the requirements of NFPA 99.

(t) The space that houses ethylene oxide (ETO) sterilizers and cylinder storage shall be provided with a dedicated local exhaust system with adequate capture velocity (i.e., with a minimum capture velocity of 200 fpm) to exhaust over sterilizer door, exhaust at sterilizer drain, and exhaust at the aerator and multiple load station. The exhaust shall discharge vertically a minimum of 10 feet above the roof and shall be labeled. An audible and visual alarm shall activate in the sterilizer work area and in a continuously staffed location upon loss of airflow in the exhaust system. Relief vents for safety valves shall be provided and shall terminate outside the building. Installation shall also conform to applicable standards of the sterilizer manufacturer. Testing of installations to standards of the Department of Consumer and Business Services, Oregon Occupational Safety and Health Division shall be made before routine use occurs. Such standards are provided in OAR chapter 437, division 2.

(u) Boiler rooms shall be provided with sufficient outdoor air to maintain combustion rates and to limit workstation temperatures.

(v) Gravity exhaust may be used, where conditions permit, for non-patient areas such as boiler rooms, central storage, etc.

(5) Plumbing and other piping systems:

(a) Plumbing fixtures:

(A) All fixtures used by medical and nursing staff and all lavatories used by patients and food handlers shall be trimmed with valves that can be operated without the use of hands (single lever devices, wrist blades, sensor operated, foot pedal operated, or similar). Blade handles used for this purpose shall not exceed 4.5 inches in length. Standard fittings are allowable on lavatories in patient toilet rooms when a second lavatory is provided in the adjacent patient room(s). In patient care areas, faucet and water closet sensors requiring electrical energy to operate shall be connected to emergency power.

(B) Clinical sinks shall be trimmed with valves that can be operated without hands. Single lever or wrist blade devices shall be permitted. Handles on clinical sink faucets shall be a minimum of 6 inches long.

(b) Potable water supply systems:

(A) Bedpan flushing devices (may be cold water) shall be provided in each inpatient toilet room, except that installation is optional in psychiatric, alcohol abuse, and other units where patients are ambulatory.

(B) Water distribution systems in inpatient facilities and in outpatient surgical facilities shall be arranged to provide for continuous hot water at each hot water outlet. Piping branches from recirculating hot water system mains to individual outlets shall not exceed 30 feet for standard faucets and 10 feet for sensor operated and low flow faucets. Hot water for showers and bathing facilities shall be at appropriate temperatures for comfortable use but shall not exceed 49°C or 120°F (see Table 4).

(c) Hot water systems: The system for heating domestic water shall have sufficient capacity to supply water at the temperatures and amounts indicated in Table 4.

(d) Drainage systems:

(A) Drain lines from fixtures in which acid wastes may be poured shall be fabricated from acid-resistant material.

(B) Sanitary and storm drainage piping shall not be installed overhead whether within the ceiling or exposed, in operating and C-section rooms, pharmacy IV admixture clean rooms, intensive care nurseries, food storage areas, central sterile supply areas, and other sensitive areas. Where overhead drain piping is unavoidable in these areas as may occur in existing facilities special provisions, such as the use of drain pans or FM 1680 approved couplings, shall be made to protect the space below from possible leakage, condensation or dust particles. If drain pans are installed for protection, the pans shall be drained to an open site, air-gap drain and shall be labeled.

(C) Floor drains and cleanouts shall not be installed in operating and C-section delivery rooms. Flushing rim type drains may be used in cystoscopic rooms, except as prohibited by rules for surgical facilities under OAR 333-535-0110(3)(d). Flushing rim valves shall not be located within the cystoscopic room, but the means of actuation may be in the cystoscopic room.

(D) Building sewers shall discharge into a community sewage system. Where such a system is not available, the facility must treat its sewage in accordance with standards of the Oregon Department of Environmental Quality and local governmental agencies having jurisdiction.

(E) Grease interceptors for kitchens shall comply with requirements of OPSC.

(F) Where plaster traps are used, they shall meet standards of OPSC.

(G) Provide traps at hot lab sinks where radioactive materials are processed.

(H) All domestic water service mains, risers, and branch mains shall have shut off valves.

(I) Drain systems for autopsy rooms shall be designed to prevent splatter or overflow onto floors, to prevent back siphonage, and for easy cleaning and trap flushing.

(J) Where decontamination shower areas are provided, waste containment tanks shall be provided and sized in accordance with the Hospital's Emergency Management Plan. Provisions shall be made to divert or pump the waste from the tank for appropriate disposal.

(K) Jetted tubs shall provide for removal of jets for cleaning and for the discharge of all water within piping between uses.

(e) Nonflammable medical gas and vacuum systems: The installation of non-flammable medical gas and vacuum systems shall comply with the requirements of NFPA 99. See Table 5 for rooms that require station outlets and inlets. Installers of medical gas systems shall meet the requirements of ANSI/ASSE Standard 6010 and verification testing agencies shall meet the requirements of ANSI/ASSE Standard 6030.

(A) Medical gas systems verification test results certifying the medical gas and vacuum system testing required in NFPA 99 shall be documented for maintenance files and be available for inspection by Division surveyors or Authorities having Jurisdiction.

(B) When any existing medical gas or vacuum system is altered or augmented, all the new and existing components in the immediate zone or area located upstream for vacuum systems and downstream for medical gas systems of the altered section shall be tested and certified per NFPA 99 requirements.

(C) Each space with piped anesthetic gas and any space routinely used for administering inhalation anesthesia shall be provided with a scavenging system to vent waste gases. Gases from the scavenging system shall be exhausted directly to the outside. If the medical vacuum system is used, the gas collecting system shall be arranged so that it does not interfere with the patient's respiratory system. The anesthesia evacuation system may be a dedicated exhaust fan system with monitoring and alarming through an airflow switch or other means. Separate scavenging systems are not required for areas where gases are used only occasionally such as the emergency room, offices for routine dental work, labor, delivery and recovery rooms, etc. Cautionary comments of NFPA 99 may be especially applicable when vacuum system is being considered for scavenging of anesthetic gases.

(D) Medical vacuum system discharge shall be located a minimum of 25 feet from all doors, windows and other openings into the building, a minimum of 25 feet above grade, a minimum of 25 feet from medical air systems intakes, and a minimum of 10 feet from designated mechanical areas and walkways.

333-535-0310
Electrical Requirements

(1) General:

(a) All material including equipment, conductors, controls, and signaling devices shall be installed in compliance with Oregon Structural Specialty Code (OSSC), the Oregon Electrical Specialty Code (OESC), and NFPA 99 Health Care Facilities. All materials shall be listed as complying with state approved standards;

(b) The electrical installations including, but not limited to, alarm, nurses' call, communication, and emergency generator systems shall be tested to demonstrate that equipment installation and operation is as intended and appropriate. A written record of performance tests of special electrical systems and equipment shall show compliance with applicable codes and standards. Grounding continuity, receptacles and isolated power systems shall be tested as described in NFPA 99;

(c) Functional performance tests shall be provided for projects that include the addition or modification of major equipment and systems. These tests shall be performed to ensure electrical systems operate in accordance with the design intent and in compliance with requirements herein. Description of procedures and test results for each functional performance test shall be documented to demonstrate to the design engineer, or his or her representative, that systems operate in accordance with the design intent. Documentation shall be included in the maintenance files and be available for inspection by the Division's surveyors or Authorities having Jurisdiction. Functional performance tests shall be developed and performed for the following systems and system functions in inpatient facilities where applicable:

(A) Emergency power systems;

(B) Generator fuel oil supply transfer systems including alarms;

(C) Fire alarm systems;

(D) Nurse call systems;

(E) Communication systems;

(F) Grounding systems;

(G) Isolated power systems;

(H) Receptacle continuity and grounding system tests; and

(I) Emergency power system load shedding controls.

(d) When remodels occur in hospitals in which emergency electrical services branches are not divided in accordance with NFPA 99 and OESC, and less than 50 percent of an individual system is affected, the entire system is not required to be made to conform to these codes. Modifications, however, shall be done in a manner to minimize required work should the full system later be brought into conformance;

(e) Upon completion of the electrical contract, the owner shall be furnished, and shall retain on file, a complete set of building drawings, a complete set of operating, maintenance, and preventative maintenance instructions, parts lists, and procurement information for all major electrical equipment and systems, including electrical distribution equipment, generators, nurse call equipment, smoke detection equipment, alarm systems, and arc flash labeling. Responsible operating staff shall be provided with instructions in the proper operational use of system, equipment, and controls. This information shall be available for inspection by the Division's surveyors or Authorities having Jurisdiction.

(f) Psychiatric patient room fixtures and equipment shall be tamper resistant and shall be selected to meet the requirements of the Patient and Staff Safety Assessment. Refer to OAR 333-535-0061 for additional requirements. Equipment shall be selected to minimize the need for maintenance within the room.

(2) Switchboards, power panels, equipment and their installation shall comply with OESC. The normal power main switchboard shall be located in an area separate from the essential electrical system equipment; in an area separate from plumbing and mechanical equipment, except equipment required to support electrical equipment; and in an area accessible only to authorized persons.

(3) Panelboards. Panelboards serving normal lighting and appliance and all critical care circuits shall be located on the same floor as the circuits they serve. Panelboards for life safety circuits may serve no more than one floor above and/or below, and the floor on which they are located. Provide labeling at fixed, major electrical equipment served by the equipment branch indicating the panel designation. New panelboards, serving patient care areas, shall not be located in corridors accessible to the general public.

(4) Lighting:

(a) Lighting shall conform to the recommended lighting standards for public buildings contained in the OSSC (Means of Egress Illumination), Illuminating Engineering Society (IES) RP-28 and RP-29. Approaches to buildings and parking lots, and all occupied spaces within buildings shall have illuminated fixtures as necessary.

(b) Approaches to buildings and parking lots shall have lighting at a minimum of 1 foot-candle to allow for the safe passage of pedestrians.

(c) Inpatients' rooms shall have general illumination, night illumination, reading illumination and exam illumination.

(A) General illumination fixtures shall be provided in each inpatient room. At least one fixture shall be connected to the emergency power system, critical branch.

(B) Night illumination fixtures shall be provided in each inpatient room to light the pathway from the room entrance to the bed and from the bed to the toilet. The night illumination fixture(s) shall be permanently installed low-intensity luminaires mounted at or below the patient bed level. Night luminaires shall be controlled at the room entrance.

(C) Reading illumination fixtures shall be provided for each patient. The patient shall be able to control the reading light without getting out of bed. Flexible light arms, if provided, shall be mechanically controlled to prevent the bulb from coming in contact with bed linen.

(D) Exam illumination fixtures and all lights positioned over the patient bed shall be designed or positioned to prevent damage from intravenous (IV) poles and traction devices when the head of the bed is raised.

(d) All light controls in patient areas shall be of the quiet operating type.

(e) Lighting for intensive care, critical care, and newborn nursery bed and crib areas shall be designed or arranged to permit staff observation of patients, but minimize glare, i.e., no downlights over patient bed areas. Provisions shall be made to allow staff to lower the light levels through switching of alternate lamps or by dimming the lighting. Refer to OAR 333-535-0041(6)(h) for lighting controls required at NICU beds.

(f) Operating and C-section delivery rooms shall have general lighting in addition to that provided by special luminaires at the surgical and obstetrical tables. Each fixed special luminaire at the table shall be connected to an independent circuit. Portable units may share circuits.

(g) Patient care unit corridors shall have general illumination with provisions for reduction of light level at night.

(h) Non-lensed fixtures shall not be allowed in patient care areas.

(i) Adaptable or universal rooms shall be in accordance with the most restrictive use.

(5) Receptacles (Convenience Outlets): See Table 6 for receptacle requirements in specific areas.

(a) In pediatric units, psychiatric units, emergency department waiting areas, and outpatient waiting areas receptacles shall be tamper resistant, hospital grade, safety grounding type;

(b) Anesthetizing locations. Each operating and C-section delivery room shall have a minimum of six independent circuits serving receptacles. Where mobile X-ray equipment requiring special electrical considerations is used, additional receptacles distinctively marked for X-ray use shall be provided. (See OESC for receptacle requirements when capacitive discharge or battery operated mobile X-ray units are used.);

(c) Patient areas. Each patient room shall have duplex grounding type receptacles located as follows: One on each side of the head of each bed, at least one of which shall be connected to the emergency electrical system critical branch; one for the motorized bed; and one on each other wall. A separate receptacle shall be provided for television, if used. Receptacles may be omitted from exterior walls where construction would make installation impractical. Adaptable or universal rooms shall be in accordance with the most restrictive use.

(d) All critical care areas, as defined in OESC and NFPA 99, including pediatric intensive care, trauma, and resuscitation, shall have at least four duplex outlets within 6 feet of the head of each bed, crib, or bassinet, all of which shall be connected to the emergency electrical system critical branch. Additional outlets (which may be shared) shall be available at the head of each bed;

(e) Resuscitation, LDRP, and LDR rooms shall have receptacles at the bed as required for patient rooms and shall have additional receptacles at the crib/bassinet as required for normal newborn nurseries.

(f) Patient areas with renal dialysis water and waste connections shall be provided with GFI protection.

(g) Corridors. Duplex grounded receptacles for general use shall be installed approximately 50 feet apart in all corridors and within 25 feet of the ends of corridors. Receptacles in pediatric unit corridors shall be hospital grade, tamper resistant, safety grounding type. At least one single polarized receptacle marked for use of X-ray only shall be installed in corridors of inpatient areas. Where capacitive discharge or battery-powered X-ray units are used in lieu of the portable electrically powered type, separate polarized receptacles are not required.

(h) Provide duplex outlets for emergency resuscitation carts, connected to the critical branch of the emergency system.

(6) Equipment Installation in Special Areas:

(a) Anesthetizing locations. All electrical equipment and devices, receptacles and wiring shall comply with applicable sections of NFPA 99 and OESC.

(b) X-ray installation. Fixed and mobile X-ray equipment installations shall conform to OESC.

(c) Ground fault protection for personnel shall be provided as follows:

(A) Individual 125 volt ground fault circuit interrupter receptacles shall be provided when located adjacent to any sink or within 6 feet of any shower or tub;

(B) Ground fault circuit interrupter protection shall be provided for all 15 or 20 amp, 125 volt receptacles located within 6 feet of kitchen or other food preparation area sinks; and

(C) When ground fault circuit interrupters are used in critical care areas, provisions shall be made to ensure that other essential equipment is not affected by activation of an interrupter.

(d) In inpatient care areas, electronic faucets and water closets requiring electricity to operate shall be connected to the critical or equipment branch of the emergency system.

(e) Domestic hot water systems in inpatient facilities shall be served by the equipment branch of the emergency system and a minimum of one kitchen refrigerator and one kitchen freezer shall be served by the equipment branch of the emergency system.

(f) All patient care-related telecommunications and information systems shall be powered from the essential electrical system. If installed, electronic surveillance systems including patient location, video/audio monitoring, and infant abduction prevention systems shall be served by the essential electrical system.

(7) Nurses' call system requirements for inpatient facilities and outpatient surgical facilities:

(a) General. Each patient room including diagnostic and treatment areas shall be served by at least one calling station for two-way voice communication, except as exempted elsewhere in this chapter. Each such bed shall be provided with a call button. Two call buttons serving adjacent beds may be served by one calling station. Calls shall activate a visible signal in the corridor at the doors to patient's rooms and in all nurses' work stations including clean utility rooms, soiled utility rooms, medication rooms, and the nursing station of the nursing unit. In multi-corridor nursing units, additional visible signals shall be installed at corridor intersections. All nurses' call stations shall be electronically supervised to indicate when connecting devices are inoperable. Nurses' calling systems that provide two-way voice communication shall be equipped with an indicating light at each calling station that lights and remains lighted as long as the voice circuit is operating.

(b) Emergency call system. A nurses' call emergency system shall be provided for each inpatient toilet, bath, sitz bath, shower room, imaging suite, and renal dialysis toilet room, except as exempted elsewhere in this chapter. This system shall be usable by a collapsed patient lying on the floor. Inclusion of a pull cord will satisfy this standard. The emergency call system shall be designed so that all signal lights will remain lighted until turned off at the patient's calling station. Provisions for emergency calls will also be needed in outpatient and treatment areas where patients may be subject to incapacitation, such as dressing areas and restrooms.

(c) Intensive care. In areas such as intensive care, recovery and pre-op where patients are under constant visual surveillance, the nurses' call system may be limited to a bedside button or station that activates a signal readily seen from the control station.

(d) Nurses' emergency. A calling station that may be used by nurses to summon assistance from other areas for non-life threatening situations shall be provided in each C-section, recovery, emergency examination or treatment area, and in intensive care units, nurseries, special procedure rooms, stress test areas, cardiac catheterization, out-patient surgeries, special procedure rooms, endoscopy, colonoscopy, bronchoscopy, emergency department triage/intake areas, and group areas for psychiatric patients. The call station may be located at the area nurse station in intensive care, nursery, recovery, and emergency department areas. This system shall activate a visual and audible signal at all nurse work areas in the unit and at an additional nurse station in a staffed area.

(e) In critical care, post anesthesia care unit recovery, and inpatient pre-op areas the nurse call system shall include provisions for an emergency code resuscitation alarm to summon assistance from outside the unit.

(f) Each operating room shall be provided with a system for emergency communication with the surgical control station that can be operated without the use of the hands, but which is not foot operated. (Refer to OAR 333-535-0110(3)(a))

(g) In non-invasive and non-critical care areas with CCTV and intercom to monitor the patient, such as radiation therapy and tomotherapy, a patient call station is not required.

(h) Nurse call stations are not required in psychiatric patient care rooms, but if provided, all hardware shall have tamper resistant fasteners and provisions shall be made for the easy removal or covering of call button outlets.

(8) Emergency Electric Service:

(a) General. An emergency source of electricity shall be provided and connected to certain circuits for lighting and power during an interruption of the normal electric supply in accordance with NFPA 99, NFPA 110, and OESC.

(b) Emergency electric services shall be provided to all services that must continue to function during any failure of the normal power source as required in NFPA 99 and OESC, including fire pump if installed. Sufficient fuel/power to operate the emergency electric services for a minimum of 96 hours shall be provided for inpatient facilities. The fuel system shall include a low level day tank alarm, transfer pump flow switch alarm, or other method to detect an interruption of flow between the main fuel tank and the day tank;

(c) Exhaust systems for internal combustion engines shall be of the critical silencer type and be installed to minimize objectionable noise to patient areas. Where a generator is routinely used for reduction of peak loads, protection of patient areas from excessive noise may become critical.

(d) Electrical plans shall include information indicating size of essential electrical service and load served by automatic transfer switch(es). Plans or specifications for facilities utilizing only one transfer switch shall include load calculation summaries showing the volt amp loads on the transfer switch.

(9) Fire Alarm Systems: All health care facilities shall be provided with fire alarm systems in accordance with the Authorities having Jurisdiction. Special attention shall be given to the use of fire alarm appurtenances in anesthetizing locations and control of air handling systems serving anesthetizing and infectious isolation areas.

DIVISION 536

IN-HOME CARE AGENCIES

333-536-0000
Purpose

The purpose of these rules is to establish standards for licensure of In-Home Care Agencies.

Stat. Auth.: ORS 443.340

Stats. Implemented: ORS 443.305 - 443.355

Hist.: OHD 19-2002, f. 12-4-02, cert. ef. 2-1-03; PH 3-2004(Temp), f. & cert. ef. 2-6-04 thru 7-30-04; PH 22-2004, f. & cert. ef. 6-25-04; PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0005
Definitions

As used in OAR 333-536-0000 through 333-536-0125, the following definitions apply:

(1) "Abuse."

(a) As it applies to an adult, includes but is not limited to:

(A) Any physical injury caused by other than accidental means, or that appears to be at variance with the explanation given of the injury.

(B) Neglect that leads to physical harm through withholding of services necessary to maintain health and well-being.

(C) Abandonment, including desertion or willful forsaking of a person or the withdrawal or neglect of duties and obligations owed a person.

(D) Willful infliction of physical pain or injury.

(E) Use of derogatory or inappropriate names, phrases or profanity, ridicule, harassment, coercion, threats, cursing, intimidation or inappropriate sexual comments or conduct of such a nature as to threaten significant physical or emotional harm to a person.

(F) Wrongfully taking or appropriating money or property, of knowingly subjecting a person to harm by conveying a threat to wrongfully take or appropriate money or property, which threat reasonably would be expected to cause the person to believe that the threat will be carried out.

(G) Sexual contact with a non-consenting person or with a person considered incapable of consenting to a sexual act as described in ORS 163.315. As used in this paragraph, "sexual contact" has the meaning given that term in ORS 163.305.

(b) As is applies to a child, has the same meaning as "abuse" as that term is defined in ORS 419B.005.

(2) "Activities of daily living" means self-care activities that must be accomplished by an individual to meet his or her daily needs.

(3) "Agency" means In-Home Care Agency.

(4) "Branch office" means a location or site from which an in-home care agency provides services within a portion of the total geographic area served by the parent agency. The site of the branch office generally does not exceed one hour of travel time from the parent agency. The branch office is part of the in-home care agency and is located sufficiently close to share administration, supervision, and services in a manner that renders it unnecessary for the branch to independently meet the requirements of an in-home care agency.

(5) "Caregiver" means a person providing assistance with activities of daily living or assistance with personal care tasks, household and supportive services, or medication services as authorized by these rules.

(6) "Client representative" means:

(a) A parent, stepparent, foster parent, or other adult with primary caregiving responsibility for the client when the client is a child; or

(b) An individual, paid or unpaid, related or unrelated, who acts on behalf of, or cares for the client when the client is an adult.

(7) "Division" means the Public Health Division of the Oregon Health Authority.

(8) "Home health agency" has the meaning given that term in ORS 443.005.

(9) "Hospice program" has the meaning given that term in ORS 443.850.

(10) "In-home care agency" means an agency primarily engaged in providing in-home care services for compensation to an individual in that individual's place of residence. "In-home care agency" does not include a home health agency or portion of an agency providing home health services as defined in ORS 443.005.

(11) "In-home care services" means personal care services furnished by an in-home care agency, or an individual under an arrangement or contract with an in-home care agency, that are necessary to assist an individual in meeting the individual's daily needs, but do not include curative or rehabilitative services.

(12) "Licensed" means that the person or agency for which the term applies is currently licensed, certified, or registered by the proper authority within the State of Oregon.

(13) "Management experience" means the administration, supervision or management of individuals in a health related field including hiring, assigning, evaluating and taking disciplinary actions.

(14) "Medication administration" means administering medications to a client or directly supervising the client who is not able or not willing to self-direct, but may be physically able to perform the tasks. Medication administration includes but is not limited to taking the client's medications from original containers and putting the medications into closed secondary containers designed and manufactured for this purpose.

(15) "Medication assistance" means helping the client who is able to self-direct with one or more steps in the process of taking medication, but does not mean medication administration as defined in these rules. Examples of medication assistance include,

but are not limited to, opening the medication container, helping the client self-administer his or her medication, and assisting the client with one or more steps of medication administration at the client's direction.

(16) "Medication reminding" means providing a client with an audio, visual or oral reminder to take his or her medication when a client is able to self-direct.

(17) "Medication services" means medication assistance or medication administration but does not include medication reminding.

(18) "Nursing services" means the provision of services that are deemed to be the practice of nursing as defined by ORS 678.010. These services include but are not limited to the delegation of specific tasks of nursing care to unlicensed persons in accordance with the Oregon State Board of Nursing administrative rules, chapter 851, division 047. Nursing services are not rehabilitative or curative, but are maintenance in nature.

(19) "Parent agency" means the in-home care agency that develops and maintains administrative controls of subunits or branch offices.

(20) "Personal care services" means the provision of or assistance with tasks intended to supplement a client's own personal abilities which are necessary to accomplish the client's activities of daily living and other activities as described in OAR 333-536-0045(1), and are preventive and maintaining in nature.

(21) "Professional experience" means having a nursing, medical, therapeutic license, certificate or degree used to work in a health-related field or program or completion of a Division approved training program.

(22) "Qualified entity" means an entity whose training program has been approved by the Division.

(23) "Qualified individual" means an individual who:

(a) Has completed a Division approved training program; or

(b) Is currently licensed as a registered nurse, practical nurse, physician assistant, or pharmacist; or

(c) Is another health care professional not listed in subsection (23)(b) who has been approved by the Division to conduct training.

(24) "Registered nurse" (RN) means a person licensed under ORS Chapter 678.

(25) "Schedule caregivers" means to plan appointments for caregivers to deliver specific in-home care services to clients; the times and dates of these appointments are set by the in-home care agency.

(26) "Self-direct" means to be oriented and to know:

(a) The reason why each medication is taken, i.e. for what condition;

(b) The amount or dose of medication that needs to be taken;

(c) The route the medication needs to be taken; and

(d) The time of day the medication needs to be taken.

(27) "Stable and predictable" means a situation where the client's clinical and behavioral state is known, not characterized by rapid changes, and does not require continuous reassessment and evaluation.

(28) "Subunit" means an in-home care agency that provides for a parent agency in a geographic area different from that of the parent agency and generally exceeding one hour of travel time from the location of the parent agency.

(29) "Survey" means an inspection of an applicant for an in-home care agency license or a licensed in-home care agency to determine the extent to which the applicant or in-home care agency is in compliance with state in-home care agency statutes and these rules.

333-536-0007
Classification

(1) Agencies shall be classified according to the services provided (see Table 1). An agency shall be classified as:

(a) Limited; An agency that provides personal care services that may include medication reminding but does not provide medication assistance, medication administration, or nursing services;

(b) Basic; An agency that provides personal care services that may include medication reminding and medication assistance but does not provide medication administration or nursing services;

(c) Intermediate; An agency that provides personal care services that may include medication reminding, medication assistance and medication administration but does not provide nursing services; or

(d) Comprehensive; An agency that provides personal care services that may include medication reminding, medication assistance, medication administration and nursing services.

(2) Medication services training for caregivers employed by an agency classified as Basic, Intermediate or Comprehensive shall be provided by a qualified individual or entity.

(3) Agencies licensed by the Division must neither assume a descriptive title nor be held out under any descriptive title other than the classification title established by the Division and under which the agency is licensed. No agency licensed by the Division shall provide services or use a classification title in its advertising, publicity, or any other form of communication other than what the agency is licensed to provide.

333-536-0010
Application for Licensure

(1) An agency that establishes, conducts, or represents itself to the public as providing in-home care services must be licensed by the Division and must comply with ORS 443.305 through 443.355 and these rules. The provisions of 443.305 through 443.355 do not apply to organizations licensed, registered or certified under ORS 101.030, 410.495, 443.410, 443.485, 443.725, 443.860, or 443.886. The provisions of 443.305 through 443.355 do not apply to independent individuals, volunteers, family, neighbors, or to agencies offering only housekeeping or on-call staffing for facilities, or to support services provided and funded by the Department of Human Services. Entities that provide referral or matching services that link in-home care services with clients are not required to be licensed under these rules, unless they do one or more of the following:

(a) Schedule caregivers (as defined in OAR 333-536-0005);

(b) Assign work;

(c) Assign compensation rates;

(d) Define working conditions;

(e) Negotiate for a caregiver or client for the provision of services; or

(f) Place a caregiver with a client.

(2) Application for a license to operate an in-home care agency shall be in writing on a form provided by the Division and shall include, but is not limited to, demographic, ownership and administrative information about the agency.

(3) If an owner or administrator has direct contact with a client, the owner or administrator must submit background information to the Division in accordance with OAR 333-536-0093 for the purposes of conducting a criminal records check.

(4) If any of the information delineated in an agency's most recent application changes at a time other than the annual renewal date, an agency shall submit a revised application to the Division within 30 days of the change.

(a) An agency that submits a revised application that contains a change to any of the following must obtain Division approval prior to implementation:

(A) Administrator;

(B) Agency classification;

(C) Branch and subunit; and

(D) Geographic service area exceeding one hour's travel time.

(b) In determining whether to grant approval for changes identified in subsection (4)(a) of this rule, the Division may request agency documents or records for review to determine compliance with in-home care licensing laws and rules, or may conduct an on-site inspection.

(5) No entity shall provide in-home care services or use the term "in-home care agency" in its advertising, publicity, or any other form of communication unless it holds a current valid license as an in-home care agency in accordance with the provisions within.

333-536-0015

Review of License Application

Upon receipt of a completed initial application and the required fee, the Division shall conduct a survey in accordance with OAR 333-536-0041 of an agency or any subunit to determine if an agency or subunit is in compliance with these rules and ORS 443.305 through 443.355, and has the intent to provide in-home care services.

333-536-0021

Approval of License Application

(1) The Division shall notify an applicant in writing if a license application is approved.

(2) A license shall be issued only for an agency and person(s) named in the application and may not be transferred or assigned.

(3) The license shall be conspicuously posted in an office that is viewable by the public.

333-536-0031

Fees

(1) The fee for an initial in-home care agency license shall be $1,500. If the agency has subunits, the fee for an initial license shall be $1,500 for the parent agency, plus an additional $750 for each subunit.

(2) The fee for a renewed in-home care agency license shall be $750. If the agency has subunits, the fee for a renewed license shall be $750 for the parent agency, plus an additional $750 for each subunit.

(3) If the ownership of an agency changes other than at the time of the annual renewal, the licensure fee shall be $350, plus an additional $350 for each subunit.

(4) All application fees are non-refundable.

Hist.: PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0033

Denial, Suspension or Revocation of License

(1) A license for an in-home care agency may be denied, suspended or revoked by the Division when an in-home care agency has failed to comply with ORS 443.305 through 443.355 or with OAR chapter 333, division 536, including but not limited to an owner or administrator of the in-home care agency permitting, aiding or abetting any illegal act affecting the welfare of the client.

(2) The Division may deny, suspend or revoke the license of any in-home care agency for failure to comply with ORS 443.004.

(3) A failure to comply with ORS 443.305 through 443.355 includes but is not limited to:

(a) Failure to provide a written disclosure statement to a client or a client's representative prior to in-home care services being rendered;

(b) Failure to provide the contracted in-home care services; or

(c) Failure to correct deficiencies identified during a Division inspection or complaint investigation.

(4) If the Division intends to suspend or revoke an agency license, it shall do so in accordance with ORS 183.411 through 183.470.

Stat. Auth.: ORS 443.340

Stats. Implemented: ORS 443.315 and 443.325

Hist.: PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0035

Return of Agency License

Each license certificate in the licensee's possession shall be returned to the Division immediately upon the suspension or revocation of the license, failure to renew the license by the date of expiration, or if operation is discontinued by the voluntary action of the licensee.

Stat. Auth.: ORS 443.340

Stats. Implemented: ORS 443.315 & 443.340

333-536-0041

Surveys

(1) The Division shall, in addition to any investigations conducted pursuant to OAR 333-536-0043, conduct at least one survey of each in-home care agency prior to services being rendered and

once every three years thereafter as a requirement of licensing and at such other times as the Division deems necessary.

(2) In lieu of an on-site inspection required by section (1) of this rule, the Division may accept a certification or accreditation from a federal agency or an accrediting body approved by the Division that state licensing standards have been met if an in-home care agency:

(a) Notifies the Division to participate in any exit interview conducted by the federal agency or accrediting body; and

(b) Provides copies of all documentation concerning the certification or accreditation requested by the Division.

(3) An in-home care agency shall permit Division staff access to any location from which it is operating its agency or providing services during a survey.

(4) A survey may include but is not limited to:

(a) Interviews of clients, client family members, agency management and staff;

(b) On-site observations of clients and staff performance;

(c) Review of documents and records;

(d) Client audits.

(5) An in-home care agency shall make all requested documents and records available to the surveyor for review and copying.

(6) Following a survey, Division staff may conduct an exit conference with an agency owner, administrator, or designee. During an exit conference, Division staff shall:

(a) Inform the agency owner, administrator or designee of the preliminary findings of the inspection; and

(b) Give the owner, administrator or designee a reasonable opportunity to submit additional facts or other information to the surveyor in response to those findings.

(7) Following a survey, Division staff shall prepare and provide the agency owner or administrator specific and timely written notice of the findings.

(8) If the findings result in a referral to another regulatory agency, Division staff shall submit the applicable information to that referral agency for its review and determination of appropriate action.

(9) If no deficiencies are found during a survey, the Division shall issue written findings to the agency owner or administrator indicating that fact.

(10) If deficiencies are found, the Division shall take informal or formal enforcement action in accordance with OAR 333-536-0117 or 333-536-0120.

Complaints

(1) Any person may make a complaint verbally or in writing to the Division regarding an allegation as to the care or services provided by an in-home care agency or violations of in-home care agency laws or regulations.

(2) The identity of a person making a complaint will be kept confidential.

(3) Information obtained by the Division during an investigation of a complaint or reported violation is confidential and not subject to public disclosure under ORS 192.410 through 192.505.

(4) Upon conclusion of an investigation, the Division may publicly release a report of its findings but may not include information in the report that could be used to identify the complainant or any client of an in-home care agency. The Division may use any information obtained during an investigation in an administrative or judicial proceeding concerning the licensing of an in-home care agency.

(5) An employee with knowledge of a violation of law or rules of the Division shall use the reporting procedures established by an in-home care agency before notifying the Division or other state agency of the inappropriate care or violation, unless the employee:

(a) Believes a client's health or safety is in immediate jeopardy; or

(b) Files a complaint in accordance with section (1) of this rule.

(6) If a complaint involves an allegation of criminal conduct or an allegation that is within the jurisdiction of another local, state, or federal agency, the Division shall refer the matter to that agency.

333-536-0043
Investigations

(1) An unannounced complaint investigation shall be carried out within 45 calendar days of receipt of the complaint and may include, but is not limited to:

(a) Interviews of the complainant, caregivers, clients, a client's representative, a client's family members, witnesses, and agency management and staff;

(b) On-site observations of the client(s), staff performance, client environment; and

(c) Review of documents and records.

(2) Should the complaint allegation represent an immediate threat to the health or safety of a client, the Division shall notify appropriate authorities to ensure a client's safety, and an investigation shall be commenced within two working days.

(3) An agency shall permit Division staff access to the agency during an investigation.

(4) An agency shall cooperate with investigations of allegations of client abuse and neglect conducted by the Department of Human Services, Oregon Health Authority, Adult Protective Services, and other agencies such as law enforcement.

Stat. Auth.: ORS 443.340

333-536-0045
Services Provided

(1) The services provided by an agency must include the safe provision of or assistance with, personal care tasks related to one or more of the following:

(a) Bathing;

(b) Personal grooming and hygiene;

(c) Dressing;

(d) Toileting and elimination;

(e) Mobility and movement;

(f) Nutrition/hydration and feeding;

(g) Medication reminding.

(2) An agency may provide medication reminding services for clients who can self-direct as defined in OAR 333-536-0005 if the agency:

(a) Documents the client's knowledge of the following information using a standardized form required by the Division:

(A) The reason why each medication is taken;

(B) The amount or dose of each medication that needs to be taken;

(C) The route the medication needs to be taken; and

(D) The time of day each medication needs to be taken.

(b) Retains a copy of the standardized form, signed by the client, where an agency has determined the client can self administer medications.

(3) An agency must evaluate whether a client can continue to self-direct at a minimum of every 90 days. If it is determined that a client can no longer self-direct, arrangements shall be made to transfer the client to an agency with a higher license classification within 30 days if the agency providing current services is not classified as such.

(4) All documentation required in sections (2) and (3) of this rule shall be kept in the client's record.

(5) In addition to personal care tasks, an agency may also provide one or more of the following services upon approval by the Division:

(a) Non-injectable medication assistance;

(b) Non-injectable medication administration; or

(c) Nursing services.

(6) An agency may also provide housekeeping and other supportive services. Such tasks include, but are not limited to:

(a) Housekeeping;

(b) Laundry;

(c) Shopping and errands;

(d) Transportation; and

(e) Arranging for medical appointments.

(7) If an agency has clients who receive only housekeeping and support services, the agency is not required to comply with the following rules for those specific clients: OAR 333-536-0065, 333-536-0070, 333-536-0075, 333-536-0080, 333-536-0085 and 333-536-0090.

(8) Services described in this rule shall be primarily provided at the client's residence. In addition, the services may be rendered at nonresidence locations as specified in the client's service plan.

333-536-0050
Organization, Administration, and Personnel

(1) An agency shall clearly set forth in writing the organization, services provided, administrative control, and lines of authority and responsibility from the owner to the client-care level.

(a) An agency shall not assign administrative and supervisory functions to another agency or organization.

(b) An agency shall control and be responsible for all services provided.

(c) An agency shall be required to maintain administrative and professional oversight to ensure the quality of services provided.

(d) All agency records must be kept separate and distinct from other business entities.

(2) Geographic service area:

(a) An agency shall identify in writing the geographic area in which it generally intends to provide services.

(b) The geographic service area shall be within a distance from a parent agency which ensures appropriate and timely delivery and supervision of services with the following exception:

(A) An agency caregiver may accompany a client outside the geographic service area if all of the following conditions are met:

(i) A client has requested an agency caregiver to accompany the client; and

(ii) The travel plans are described and documented in a client's service plan.

(B) An agency shall require a caregiver who accompanies a client outside the geographic service area to:

(i) Document all services and care provided to the client on a daily basis;

(ii) Report to the agency administrator or designee either by phone or e-mail the status of the client before leaving the geographic service area and immediately upon return;

(iii) Check-in with the agency administrator no less than once per week if the travel results in the client and caregiver being gone for more than one week; and

(iv) Be certified in Cardiopulmonary Resuscitation (CPR).

(C) If the client's condition changes while traveling, the caregiver must contact the agency administrator or designee immediately.

(D) An agency shall develop policies and procedures which address what caregivers must do when their client's condition changes while the client and caregiver are out of the agency's geographic service area.

(3) If an agency operates a branch office:

(a) The branch office shall be located within the parent agency's geographic service area at a distance from the parent agency that generally does not exceed one hour's travel time.

(b) The branch office shall be operated under the management and supervision of the parent agency. Administrative and personnel functions must be retained at the parent agency. The branch office must not function as an independent agency.

(c) Services must not be provided from the branch office until the branch office has been added to the license of the parent agency in accordance with Division procedures.

(4) If an agency provides services from an office generally exceeding one hour of travel time located outside of a parent agency's geographic service area, that office will constitute a subunit of the agency. If the agency has subunits:

(a) The subunit shall have its own staff, separate from parent agency staff, and shall operate independently of the parent agency.

(b) The subunit shall independently meet all licensing requirements, be separately licensed from the parent agency, and pay a separate licensure fee.

(5) An agency's owner or designee shall:

(a) Assume full legal, financial, and overall responsibility for the agency's operation; and

(b) Serve as, or employ, a qualified administrator.

(6) An administrator shall meet the following qualifications:

(a) Possess a high school diploma or equivalent; and

(b) Have at least two years of professional or management experience in a health-related field or program or have completed a training program approved by the Division.

(7) An administrator or designee shall be accessible and available during all hours in which services are being provided to clients and must be able to be on site at the parent agency location within a timely manner as needed. An administrator shall assign, in writing, a qualified designee to act as administrator in his or her temporary absence.

(8) An administrator or designee shall be responsible for:

(a) Organizing and directing the agency's ongoing functions;

(b) Developing and implementing written and current policies and procedures necessary to direct the administrative, personnel, and client care operations of the agency, including but not limited to the requirements in these rules;

(c) Ensuring the completeness and accuracy of all information provided to the public regarding the agency and its services;

(d) Ensuring the provision of safe and appropriate services in accordance with written service plans;

(e) Ensuring that all individuals providing services for the agency meet the qualification, orientation, competency, training, and education requirements in the rules;

(f) Ensuring that personnel and client care practices are consistent with the agency's written policies and procedures.

(g) Ensuring that client care assignments are based on the caregiver's abilities, skills, and competence;

(h) Ensuring that the agency does not accept or retain clients for whom it does not have the capabilities or resources to provide services;

(i) Ensuring the timely internal investigation of complaints, grievances, accidents, incidents, medication or treatment errors, and allegations of abuse or neglect involving individuals providing services for the agency. An agency shall maintain in its records documentation of the complaint or event, the investigation, the results, and actions taken;

(j) Ensuring the timely reporting of allegations of abuse or neglect to the appropriate authority that includes but is not limited to the Department of Human Services, Oregon Health Authority, Public Health Division, or local law enforcement agency.

(9) Personnel records for all caregiver, nursing staff, and employees shall include at a minimum the following:

(a) Evidence of pre-employment screening;

(b) Evidence that the in-home care agency has conducted a criminal records check on all subject individuals in accordance with OAR 333-536-0093.

(A) The in-home care agency must ensure that a criminal records check has been conducted on all subject individuals employed by or volunteering for an agency on or after July 6, 2011.

(B) If the screening indicates that a subject individual has been convicted for crimes against an individual or property, the agency shall make a determination of the individual's fitness to provide care to clients in accordance with OAR 333-536-0093.

(c) Evidence that all position qualifications have been met, including required licensure;

(d) Current position job description(s) signed by the individual(s);

(e) Evidence of orientation, training, competency, and ongoing education;

(f) Evidence of annual performance evaluations; and

(g) Evidence of a valid driver's license with current auto insurance for each individual whose duties include transporting clients in motor vehicles.

(10) An agency shall comply with all applicable state and local laws, statutes, rules, and ordinances.

333-536-0055
Disclosure, Screening, and Acceptance of Clients

(1) When an individual is accepted for agency service, a written disclosure statement shall be signed by the client or the client's representative. Evidence that the disclosure statement was given to the client or the client's representative shall be incorporated into the client's record.

(2) The disclosure statement must include the following:

(a) A description of the license classification and the services offered by the agency according to OAR 333-536-0045, including the extent of registered nurse involvement in the agency's operations and whether nursing services as described in OAR 333-536-0080 are provided;

(b) If the agency provides medication reminding or medication services, the qualifications of the individual(s) providing oversight of the agency's medication administration systems and the medication training and demonstration;

(c) A clear statement indicating that it is not within the scope of the agency's license to manage the medical and health conditions of clients who are no longer stable or predictable;

(d) The qualifications and training requirements determined by the agency for individuals providing direct client care;

(e) The charges for the services provided by the agency;

(f) A description of how the service plans are developed and reviewed and the relationship between the service plans and the cost of services;

(g) A description of billing methods, payment systems, and due dates;

(h) The policy for client notification of increases in the costs of services;

(i) The agency's refund policy;

(j) Criteria, circumstances, or conditions which may result in termination of services by the agency and client notification of such;

(k) Procedures for contacting the agency administrator or designee during all of the hours during which services are provided; and

(l) A copy of the client's rights as written in OAR 333-536-0060.

(3) An agency administrator or designee shall conduct an initial screening to evaluate a prospective client's service requests and needs prior to accepting the individual for service. The extent of the screening shall be sufficient to determine the ability of the agency to meet those requests and needs based on the agency's overall service capability. The screening shall be documented, dated and signed by the individual who conducted it.

(4) An agency shall only accept or retain individuals for services for whom it can ensure the following:

(a) The agency has the capability to meet the in-home care needs of the individual;

(b) The agency employs a sufficient number of trained and competent staff and has adequate resources to provide the requested or needed services; and

(c) The agency is able to coordinate its services with the care and services provided by other organizations and individuals.

(5) The agency shall notify the client, or the client's representative, of the need for a referral for medical or health services if the client's medical or health condition is no longer stable and predictable. The agency may continue to provide in-home care services in the client's residence, but must not manage, or represent itself as able to manage a client's medical or health condition that is not stable and predictable.

333-536-0060
Clients' Rights

(1) The agency owner or administrator shall ensure that the agency recognizes and protects the following rights of each client:

(a) The right to be treated with dignity and respect;

(b) The right to be free from theft, damage, or misuse of one's personal property;

(c) The right to be given the informed choice and opportunity to select or refuse service and to accept responsibility for the consequences;

(d) The right to be free from neglect of care, verbal, mental, emotional, physical, and sexual abuse;

(e) The right to be free from financial exploitation;

(f) The right to be free from physical and chemical restraints;

(g) The right to voice grievances or complaints regarding services or any other issue without discrimination or reprisal for exercising such rights;

(h) The right to be free from discrimination in regard to race, color, national origin, gender, sexual orientation, or religion.

(i) The right to participate in planning of the services and care to be furnished, any changes in the services and care, the frequency of visits, and cessation of services;

(j) The right to have access to his or her client record;

(k) The right to have client information and records confidentially maintained by the agency;

(l) The right to be advised in writing, before care is initiated, of the charges for the services to be furnished, and the amount of payment that will be required from the client;

(m) The right to a written 30-day notice of termination of services by the agency that specifies the reason(s) for the termination with the following exceptions:

(A) The right to immediate oral or written notice of termination of services by the agency at the time the agency determines that the safety of its staff or the client cannot be ensured. If oral notice is given, the agency must also subsequently provide the client a written confirmation of the oral notice of termination of services.

(B) The right to a written 48-hour notice of termination of services by the agency in the event of non-payment in accordance with the agency's disclosed payment requirements.

(2) An agency shall provide each client with a written notice of the client's rights as a part of the disclosure statement, prior to furnishing care to a client. The client's rights notice shall also include:

(a) Procedures for filing a grievance or complaint with the agency;

(b) Procedures for filing a grievance or complaint with the Division, along with the telephone number and contact information of the Division; and

(c) Notice that the Division has the authority to examine clients' records as part of the Division's regulation and evaluation of the agency.

333-536-0065
Service Plan

For clients receiving services described in OAR 333-536-0045, the services provided shall be in accordance with a written service plan developed in conjunction with a client or the client's representative based on the client's or the client's representative's request and an evaluation of the client's physical, mental, and emotional needs. The service plan must be consistent with the agency's capabilities.

(1) The agency administrator or designee shall conduct an initial evaluation of the client. The evaluation must be documented, dated, and signed by the individual who conducted the evaluation, and maintained in the client's agency record.

(2) The agency administrator or designee, in conjunction with the client or the client's representative, shall complete a written service plan within seven days after the initiation of services. The agency administrator or designee shall ensure that the service plan includes a list of individuals participating in development of the plan. The agency administrator or designee shall also sign and date the service plan when it is complete and acceptable to all individuals participating in development of the plan.

(3) The completed service plan shall be client-directed or client representative-directed and include at least the following:

(a) The schedule for the provision of services specifying a range of hours for services per month;

(b) The services to be provided, specifying the tasks to be conducted; and

(c) Pertinent information about the client's needs in relation to the services to be provided to ensure the provision of safe and appropriate care.

(4) A client or a client's representative may request changes in the service plan. All changes must be communicated to the caregiver(s) and documented.

(5) An agency shall maintain the original service plan and all updated service plans in each client's agency record. Complete and legible copies of the service plan shall be given to the client or client's representative upon request.

(6) The administrator or designee must conduct an initial visit at the client's residence within 30 days of the initiation of services to evaluate compliance by the caregiver(s) with the service plan and to assess the client's satisfaction. The initial visit must occur between the 7th and 30th day. An initial visit is not required when:

(a) A client cancels service on or before the 30th day;

(b) A client is residing in a nursing facility or a hospital; or

(c) A client refuses.

(7) The administrator or designee must conduct quarterly monitoring visits after the initial site visit. Quarterly monitoring visits may occur by phone or by other electronic means at the discretion of the administrator or designee under the following circumstances: impending discharge from services; relocation to a facility; when minimal services, such as one shift a month, would cause the client to incur undue financial burden; or, due to other circumstances that are justified in chart note(s). In no case shall the time between the in-person monitoring visits exceed a six-month period.

(8) Each monitoring visit to observe and report on the client's status must be documented, dated, and signed by the administrator or designee. The caregiver may be present during the monitoring visit.

(9) The administrator or designee must determine and document during a monitoring visit:

(a) Whether appropriate and safe techniques have been used in the provision of care;

(b) Whether the service plan has been followed as written;

(c) Whether the service plan is meeting the client's needs or needs to be updated;

(d) Whether the caregiver has received sufficient training for the client;

(e) Whether the client is satisfied with his or her relationship with the caregiver(s); and

(f) Whether appropriate follow-up is necessary for any identified issues or problems.

(10) If services are provided in a non-residential setting in accordance with the service plan, monitoring visits shall take place in the same setting that services are provided and must conform to the requirements set forth in this rule.

333-536-0070
Caregiver Qualifications and Requirements

The personal care provided by an agency shall be rendered by qualified and trained employees under the supervision of the administrator or designee. The services shall be provided as requested by the client or client's representatives in accordance with these rules and the service plan.

(1) The agency owner or administrator shall ensure that the agency has qualified and trained employees sufficient in number to meet the needs of the clients receiving services.

(2) Caregivers must be at least 18 years of age and shall have sufficient communication and language skills to enable them to perform their duties and interact effectively with clients and other agency staff.

(3) Caregivers shall complete an agency-specific orientation, conducted by the agency administrator or designee, before independently providing services to clients.

(a) The orientation shall include, but not be limited to, the following subject areas:

(A) Caregivers' duties and responsibilities;

(B) Clients' rights;

(C) Ethics, including confidentiality of client information;

(D) The agency's infection control policies;

(E) A description of the services provided by the agency;

(F) Assignment and supervision of services;

(G) Documentation of client needs and services provided;

(H) The agency's policies related to medical and non-medical emergency response;

(I) The roles of, and coordination with, other community service providers;

(J) Information about what constitutes medication reminding and its specific limitations; and

(K) Other appropriate subject matter based on the needs of the special populations served by the agency.

(b) The content of the orientation, the date(s) and length, and the name(s) and signature(s) of the instructor(s) shall be clearly documented for each caregiver and maintained in personnel records.

(4) Caregivers shall complete appropriate training and must have their competency evaluated and documented by the administrator or designee before independently providing services to clients.

(a) Caregiver training shall be based on the services provided by the in-home care agency, including, as applicable, the following topics:

(A) Caregivers' duties and responsibilities;

(B) Recognizing and responding to medical emergencies;

(C) Dealing with adverse behaviors;

(D) Nutrition and hydration, including special diets and meal preparation and service;

(E) Appropriate and safe techniques in personal care tasks;

(F) Methods and techniques to prevent skin breakdown, contractures, and falls;

(G) Hand washing and infection control;

(H) Body mechanics;

(I) Maintenance of a clean and safe environment;

(J) Fire safety and non-medical emergency procedures;

(K) Assisting clients with self-directed or client representative-directed non-injectable medication administration; and

(L) Providing basic non-injectable medication services as described in OAR 333-536-0075.

(b) The content of the training, the date(s) and length, and name(s) and signature(s) of the instructor(s) shall be clearly documented for each caregiver and maintained in personnel records.

(c) Caregivers with proof of a current Oregon health-care related license or certificate are exempt from in-home caregiver training.

(d) Caregivers moving from one office to another in the same in-home care agency are not subject to additional training requirements, provided previous training is documented.

(e) Caregivers who have completed training previously, and have documentation of that training, shall have their competency evaluated by an agency representative, and any potential training may be limited to areas requiring improvement after the evaluation.

(f) Documentation of training and competency evaluation shall be included in the caregiver's personnel record.

(5) Caregivers shall receive a minimum of six hours of education related to caregiver duties annually. If a caregiver provides medication administration to a client, one additional hour of education shall be required annually related to providing medication administration.

(6) Caregiver Selection and Review of Service Plan.

(a) The skills of a caregiver must be matched with the care needs of a client. The administrator or designee must assign caregivers to specific clients based on the care needs of the clients and the skills of the caregivers.

(b) The client's service plan must be reviewed with each caregiver before the initial delivery of client care. The date of the review(s), the signature or a unique electronic identifier such as an individual's log-in and password into a computer program or an electronic stamp of the agency administrator or designee and the list of assigned caregivers must be documented.

(c) Caregivers must provide services to clients in accordance with the service plans.

333-536-0075
Medication Services

(1) If an agency has been approved to provide non-injectable medication services, the services shall be rendered by persons who meet the requirements of section (10) of this rule. The services shall be provided as requested by the client or client's representatives in accordance with these rules, accepted standards of medication practice, and the service plan.

(2) If a client representative or family member performs the task of filling secondary non-injectable medication containers from which an agency caregiver is to administer medication, an agency shall:

(a) Obtain a signed agreement from the client representative or family member that identifies their obligation to:

(A) Provide a list of the client's medication and a physical description of each with any special instructions. The list must be updated when changes to the client's medication regimen are made;

(B) Keep the original labeled medication containers in the home for verification should the caregiver have questions; and

(C) Use closed non-injectable medication secondary containers designed and manufactured for that purpose that meet the labeling requirements of subsection (7)(d) of this rule.

(3) Agency staff shall obtain written or telephone orders from a physician or other legally recognized practitioner for all medications managed or administered by an agency under this rule and for any changes to those medications.

(a) Written orders shall be signed or confirmed by a physician or practitioner.

(b) Telephone orders shall be immediately recorded, dated, and signed by agency staff, and transmitted within 72 hours to the physician or practitioner for confirmation. The orders that have been signed or confirmed by the physician or practitioner shall be incorporated into the client's record within 30 days.

(4) An agency owner or administrator shall be responsible for developing and implementing safe and appropriate medication administration delivery systems and policies and procedures that include, but are not limited to:

(a) Provisions to ensure that each client receives the right medication, in the right amount, by the right route, and at the right time;

(b) Provisions to ensure that the caregivers are informed about the potential adverse reactions, side effects, drug-to-drug interactions and food-to-drug interactions, and contraindications associated with each client's medication regimen;

(c) Provisions to ensure that the caregivers promptly report problems or discrepancies related to each client's medication regimen to the caregivers' supervisor, agency administrator or designee;

(d) Provisions to ensure storage of medications at appropriate temperatures based on the manufacturer's recommendations; and

(e) Provisions to ensure the security and integrity of narcotics and controlled substances.

(5) A client's service plan must specify the medication tasks to be performed.

(6) Records for medication administration shall include, but are not limited to, the name of each medication, the dosage to be administered, the route of administration, the frequency of administration, client medication allergies and sensitivities, client specific indicators for administration of as needed medications and other special instructions necessary for safe and appropriate administration.

(7) Packaging and labeling:

(a) Prescription medications shall be in the original pharmacy containers and clearly labeled with the pharmacists' labels.

(b) Samples of medications received from the physician or practitioner shall be in the original containers and have the original manufacturers' labels.

(c) Over-the-counter medications shall be in the original containers and have the original manufacturers' labels.

(d) Secondary containers and all removable compartments must be labeled with the client's name, the specific time the medications in each compartment are to be administered, the date and time the secondary container was filled, and the name of the individual who filled the container.

(e) Liquid and non-pill medications that cannot be put in secondary containers shall be appropriately labeled.

(8) The provision of medication tasks as described in this rule shall be documented by the individuals performing the tasks. The documentation shall include the tasks completed, the date and signature of the individual(s) performing the task(s), and shall be maintained in accordance with agency policies and procedures.

(9) Visits by a registered nurse to evaluate a client's medication regimen and the provision of medication administration services shall be conducted and documented at least every 90 days for each client receiving medication administration services.

(10) Agency caregivers assigned to provide medication services must be given basic non-injectable medication training before providing the services. The medication training must include successful return demonstrations of non-injectable medications tasks by the caregivers.

(a) The medication training shall include at least the following areas:

(A) Medication abbreviations;

(B) Reading medication orders and directions;

(C) Reading medication labels and packages;

(D) Setting up medication labels and packages;

(E) Administering non-injectable medications:

(i) Pill forms, including identification of pills that cannot be crushed;

(ii) Non-injectable liquid forms, including those administered by syringe or dropper and eye and ear drops;

(iii) Suppository forms; and

(iv) Topical forms.

(F) Identifying and reporting adverse medication reactions, interactions, contraindications and side effects;

(G) Infection control related to medication administration; and

(H) Techniques and methods to ensure safe and accurate medication administration.

(b) Prior to providing medication services, caregivers shall demonstrate appropriate and safe techniques in the provision of medication tasks described in this rule.

(c) The content of the medication training, the dates and length of training, the identity of the qualified individual or qualified entity, evidence of successful return demonstrations, and the instructor's statement that the caregiver has been evaluated to be competent to provide the medication services described in this rule shall be clearly documented for each caregiver and maintained in the agency's personnel records.

(d) An individual with a current Oregon State Board of Nursing medication aide (CMA) certification is exempt from the training requirements in this rule.

333-536-0080
Nursing Services

(1) If an agency has been approved to provide nursing services, the services must be provided by an Oregon-licensed registered nurse employed by the agency and provided only to a client whose medical condition and health status is stable and predictable. The services shall be provided as requested by a client or a client's representative and shall be in accordance with these rules, the applicable administrative rules of the Oregon State Board of Nursing (OAR chapter 851, division 047), and the service plan.

(2) Delegation of specific tasks of nursing care to unlicensed persons shall be conducted and documented by the registered nurse as required by the Oregon State Board of Nursing administrative rules chapter 851, division 047. A client's record shall contain documentation that all requirements within those rules have been met, including but not limited to: assessment, instruction, observation, supervision, and re-evaluation.

(3) A client's service plan shall include current identification of the delegated specific task(s) of nursing care to be provided and shall specify the caregivers to whom the task(s) have been delegated.

(4) The provision of nursing services as described in this rule shall be documented by the individual(s) providing the service(s) or performing the task(s). The documentation shall include the services(s) or task(s) completed, the date and signature of the individual(s) performing the service(s) or task(s), and shall be maintained in accordance with an agency's policies and procedures.

(5) For all medications and medical treatments managed or administered by an agency under this rule, and for any changes to those medications or medical treatments, a registered nurse shall obtain written or telephone orders from a physician or other legally recognized practitioner.

(a) Written orders shall be signed or confirmed by a physician or practitioner.

(b) Telephone orders shall be immediately recorded, dated, and signed by the registered nurse, and transmitted within 72 hours to the physician or practitioner for confirmation. The orders that have been signed or confirmed by the physician or practitioner shall be incorporated into the client's record within 30 days.

333-536-0085
Client Records

(1) A client record shall be maintained for every client served by an agency, unless the client receives only housekeeping or support services, and shall be maintained in the agency's office.

(2) A legible, reproducible client record shall include at least the following:

(a) Identification data;

(b) Referral and intake information;

(c) Start-of-service date;

(d) Screening and disclosure documents and documentation required by these rules;

(e) Clients' rights documentation required by these rules;

(f) All client evaluation and assessment documentation;

(g) Client service plan and updates;

(h) Documentation of all services provided;

(i) Service and financial agreement signed by a client or a client's representative before the initiation of services that specifies the services to be provided in accordance with the service plan, and the costs for those services;

(j) End-of-services date; and

(k) End-of-service summary, including the dates of service and the disposition of the client.

(3) All entries and documents in the record must be recorded in ink, typescript, or computer-generated.

(4) All entries in a client's record must be dated and signed, or otherwise authenticated by the person making the entry. For purposes of this rule, authenticated means verification by the author that an entry in the client record is genuine. Electronic authentication is acceptable as long as there is a process for reconstruction of the information and there are safeguards to prevent unauthorized access to the records.

(5) A client record shall be maintained in a manner that renders it easily retrievable.

(6) Reasonable precautions must be taken to protect a client's record and information from unauthorized access, fire, water, and theft.

(7) In an effort to coordinate services and care with other providers, including but not limited to, hospice, home health, and family members, as required in OAR 333-536-0055(4)(c), charting notes within a client's home may be shared, as permitted by law.

(8) Authorized employees of the Division shall be permitted to review client records upon request. Photocopies of the records shall be made upon request.

(9) All clients' records shall be kept for a period of at least seven years after the date of last end-of-service.

(10) Clients' records are the property of the agency.

(11) If an agency changes ownership, all clients' records shall remain in the agency, and it shall be the responsibility of the new owner to protect and maintain these records.

(12) Before an agency terminates its business, the agency shall notify the Division where the clients' records will be stored.

333-536-0090
Quality Improvement

An agency shall establish and maintain an effective, agency wide quality assessment and performance improvement program that evaluates and monitors the quality, safety and appropriateness of services provided by the agency, and shall include at a minimum:

(1) A method to identify, analyze and correct adverse events;

(2) A method to select and track quality indicators by high risk, high volume, problem prone areas and by the effect on client safety and quality of care;

(3) The quality improvement activities shall be conducted by a committee comprised of, at a minimum, agency administrative staff, an agency caregiver, and if the agency is classified as an

intermediate or comprehensive agency, an agency registered nurse; and

(4) Quality improvement activities shall be conducted and documented at least quarterly.

333-536-0093
Criminal Records Checks

(1) For the purposes of this section, the following definitions apply:

(a) "Direct contact with" means to provide in-home care services and includes meeting in person with a potential or current client to discuss services offered by an agency or other matters relating to the business relationship between an agency and client;

(b) "Disqualifying condition" means a non-criminal personal history issue that makes an individual unsuitable for employment, contracting or volunteering for an agency, including but not limited to discipline by a licensing or certifying agency, or drug or alcohol dependency;

(c) "Subject individual" (SI) means an individual on whom an agency may conduct a criminal records check and from whom an agency may require fingerprints for the purpose of conducting a national criminal records check, including:

(A) An employee or prospective employee;

(B) A temporary worker, volunteer or owner of an agency who has direct contact with an agency client or potential client; and

(C) A prospective temporary worker, or volunteer or owner who may have direct contact with an agency client.

(d) "Vendor" means a researcher or company hired to provide a criminal records check on a subject individual.

(e) "Weighing test" means a process in which an agency considers available information to make a fitness determination when an SI has potentially disqualifying convictions or conditions.

(2) An agency shall conduct a criminal records check before hiring an SI and before allowing an SI to volunteer to provide services on behalf of the agency, if an SI will have direct contact with a client of the agency.

(3) An SI who has or will have direct contact with a recipient of in-home care services may not be employed or volunteer with an agency in any capacity if the criminal records check conducted reveals the SI has been convicted of a crime as described in ORS 443.004(3).

(4) An agency shall have a policy on criminal records check requirements that shall include weighing test actions should the records check screening indicate that an SI has been convicted for crimes against an individual or property other than those identified in ORS 443.004(3). The policy must include the following provisions for performing a weighing test:

(a) The agency shall consider circumstances regarding the nature of potentially disqualifying convictions and conditions including but not limited to:

(A) The details of incidents leading to the charges of potentially disqualifying convictions or resulting in potentially disqualifying conditions;

(B) The age of the SI at the time of the potentially disqualifying convictions or conditions;

(C) Facts that support the convictions or potentially disqualifying conditions; and

(D) Passage of time since commission of the potentially disqualifying convictions or conditions.

(b) Other factors that should be considered when available include but are not limited to:

(A) Other information related to criminal activity including charges, arrests, pending indictments and convictions. Other behavior involving contact with law enforcement may also be reviewed if information is relevant to other criminal records or shows a pattern relevant to criminal history;

(B) Periods of incarceration;

(C) Status of and compliance with parole, post-prison supervision or probation;

(D) Evidence of alcohol or drug issues directly related to criminal activity or potentially disqualifying conditions;

(E) Evidence of other treatment or rehabilitation related to criminal activity or potentially disqualifying conditions;

(F) Likelihood of repetition of criminal behavior or behaviors leading to potentially disqualifying conditions, including but not limited to patterns of criminal activity or behavior;

(G) Changes in circumstances subsequent to the criminal activity or disqualifying conditions including but not limited to:

(i) History of high school, college or other education related accomplishments;

(ii) Work history (employee or volunteer);

(iii) History regarding licensure, certification or training for licensure or certification; or

(iv) Written recommendations from current or past employers;

(H) Indication of the SI's cooperation, honesty or the making of a false statement during the criminal records check process, including acknowledgment and acceptance of responsibility of criminal activity and potentially disqualifying conditions.

(c) An agency shall consider the relevancy of an SI's criminal activity or potentially disqualifying conditions to the paid or volunteer position, or to the environment in which the SI will work, especially, but not exclusively:

(A) Access to medication;

(B) Access to clients' personal information;

(C) Access to vulnerable populations.

(5) An agency shall document the weighing test and place in the employee's file.

(6) A criminal records check shall be performed by:

(a) The Department of Human Services, Background Check Unit; or

(b) A vendor that:

(A) Is accredited by the National Association of Professional Background Screeners (NAPBS); or

(B) Meets the following criteria:

(i) Has been in business for at least two years;

(ii) Has a current business license and private investigator license, if required in the company's home state; and

(iii) Maintains an errors and omissions insurance policy in an amount not less than $1 million.

(7) An agency may use the Oregon State Police, Open Records Unit in order to fulfill the state records requirement for a criminal records check, however, an agency must still complete a nationwide check through a qualified vendor.

(8) A criminal records check must include the following:

(a) Name and address history trace;

(b) Verification that the SI's records have been correctly identified, via date of birth check and Social Security number trace;

(c) A local criminal records check, including city and county records for SI's places of residence for the last seven years;

(d) A nationwide multijurisdictional criminal database search, including state and federal records;

(e) A nationwide sex offender registry search;

(f) The name and contact information of the vendor who completed the records check;

(g) Arrest, warrant and conviction data, including but not limited to:

(A) Charge(s);

(B) Jurisdiction; and

(C) Date.

(h) Source(s) for data included in the report.

(9) An agency shall perform and document a query of an SI with the National Practitioner Data Bank (NPDB) and the List of Excluded Individuals and Entities (LEIE).

(10) All criminal records checks conducted under this rule shall be documented in writing and made part of the agency's personnel files.

(11) An agency that has a contract with the Department or Authority for the provision of in-home care services on or after July 1, 2012 and who is subject to the Department's criminal records check rules does not have to comply with section (12) of this rule.

(12) For an SI hired to work or volunteer for an agency on or after July 6, 2011, an agency shall have until October 1, 2012 to ensure that the agency is in compliance with section (3) of this rule.

(13) On or after July 1, 2012 an agency shall ensure that a criminal records check is performed on an SI every three years from the date of the SI's last criminal records check in accordance with these rules.

(14) Notwithstanding sections (12) and (13) of this rule, the Division and not the agency shall conduct a criminal records check on an owner or administrator of any agency who is subject to a criminal records check under subsection (1)(c) of this rule. The Division shall conduct a criminal records check:

(a) At the time of application for a person who applies for a license on or after July 1, 2012 and every three years thereafter.

(b) By July 1, 2013 for an agency that is licensed on or before July 1, 2012, and every three years thereafter.

Waivers

(1) While all agencies are required to maintain continuous compliance with the Division's rules, these requirements do not prohibit the use of alternative concepts, methods, procedures, techniques, equipment, facilities, personnel qualifications or the conducting of pilot projects or research. Requests for exceptions to the rules must:

(a) Be submitted to the Division in writing;

(b) Identify the specific rule for which an exception is requested;

(c) Indicate the special circumstances relied upon to justify the exception;

(d) Identify what alternatives were considered, if any, and why alternatives (including compliance) were not selected;

(e) Demonstrate that the proposed exception is desirable to maintain or improve the health and safety of the clients, and will not jeopardize client health and safety; and

(f) Identify the proposed duration of the exception.

(2) Upon finding that an agency has satisfied the condition of this rule, the Division may grant an exception.

(3) An agency may implement an exception only after receipt of written approval from the Division.

333-536-0105
Operating Without a License

If an agency is found to be operating without a valid license, the agency must, within 14 days of the receipt of an injunction obtained by the Division pursuant to ORS 443.327:

(1) Inform its clients that the agency can no longer provide services;

(2) Refund all fees collected from the clients for services not rendered; and

(3) Cease providing services to clients.

Stat. Auth.: ORS 443.340
Stats. Implemented: ORS 443.315, 443.325, 443.327 & 443.340
Hist.: PH 14-2007, f. 12-19-07, cert. ef. 1-1-08; PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0110
Violations

In addition to non-compliance with any law that governs an in-home care agency, it is a violation to:

(1) Refuse to cooperate with an investigation or survey, including but not limited to failure to permit Division staff access to the agency, its documents or records;

(2) Fail to implement an approved plan of correction;

(3) Refuse or fail to comply with an order issued by the Division;

(4) Refuse or fail to pay a civil penalty;

(5) Fail to comply with rules governing the storage of records following the closure of an agency;

(6) Fail to report suspected abuse of elderly persons as defined in ORS 124.050;

(7) Fail to return a license as provided in OAR 333-536-0035; or

(8) Operate without a license.

Stat. Auth.: ORS 443.340
Stats. Implemented: ORS 443.315 & 443.340
Hist.: PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0117
Informal Enforcement

(1) If during an investigation or survey Division staff document violations of in-home care licensing rules or laws, the Division may issue a statement of deficiencies that cites the law or rule alleged to have been violated and the facts supporting the allegation.

(2) Upon receipt of a statement of deficiencies, an agency shall be provided an opportunity to dispute the Division's survey findings but must still comply with sections (3) and (4) of this rule.

(a) If an agency desires an informal conference to dispute the Division's survey findings, the agency shall advise the Division in writing within 10 business days after receipt of the statement of deficiencies. The written request must include a detailed explanation of why the agency believes the statement of deficiencies is incorrect.

(b) An agency may not seek a delay of any enforcement action against it on the grounds the informal dispute resolution has not been completed.

(c) If an agency is successful in demonstrating the deficiencies should not have been cited, the Division shall reissue the statement of deficiencies, removing such deficiencies and rescinding or modifying any remedies issued for such deficiencies. The reissued statement of deficiencies shall state that it supersedes the previous statement of deficiencies and shall clearly identify the date of the superseded statement of deficiencies.

(3) A signed plan of correction must be mailed to the Division within 10 business days from the date the statement of deficiencies was received by the agency. A signed plan of correction will not be used by the Division as an admission of the violations alleged in the statement of deficiencies.

(4) An agency shall correct all deficiencies within 60 days from the date of the exit conference, unless an extension of time is requested from the Division. A request for such an extension shall be submitted in writing and must accompany the plan of correction.

(5) The Division shall determine if a written plan of correction is acceptable. If the plan of correction is not acceptable to the Division, the Division shall notify the agency owner or administrator in writing:

(a) Identifying which provisions in the plan the Division finds unacceptable;

(b) Citing the reasons the Division finds the provisions unacceptable; and

(c) Requesting that the plan of correction be modified and resubmitted no later than 10 business days from the date notification of non-compliance was received by the agency owner or administrator.

(6) If the agency does not come into compliance by the date of correction reflected on the plan of correction or 60 days from the date of the exit conference, whichever is sooner, the Division may propose to deny, suspend or revoke the agency license or impose civil penalties.

Stat Auth.: ORS 443.340
Stats. Implemented: ORS 443.315, 443.325 & 443.340
Hist.: PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0120
Formal Enforcement

(1) If during an investigation or survey Division staff document a substantial failure to comply with in-home care licensing laws or rules, or if an agency fails to pay a civil penalty imposed under ORS 443.325 and these rules, the Division may issue a Notice of Proposed Suspension or Notice of Proposed Revocation in accordance with ORS 183.411 through 183.470.

(2) The Division may issue a Notice of Imposition of Civil Penalty for violations of in-home care licensing laws.

(3) At any time the Division may issue a Notice of Emergency License Suspension under ORS 183.430(2).

(4) If the Division revokes an agency license, the order shall specify when, if ever, the agency may reapply for a license.

(5) The Division may reissue an agency license that has been suspended or revoked after the Division determines that compliance with these rules has been achieved.

Stat. Auth.: ORS 443.340
Stats. Implemented: ORS 443.315, 443.325 & 443.340
Hist.: PH 10-2012, f. 6-26-12, cert. ef. 7-1-12

333-536-0125
Civil Penalties

(1) An agency that violates in-home care laws or rules, an administrative order, or settlement agreement is subject to the imposition of a civil penalty not to exceed $1,000 per violation and may not total more than $2,000.

(2) An individual who operates an in-home care agency without a license is subject to the imposition of a civil penalty not to exceed $500 a day per violation.

(3) In determining the amount of a civil penalty, the Division shall consider whether:

(a) The Division made repeated attempts to obtain compliance;

(b) The licensee has a history of non-compliance with in-home care licensing laws and rules;

(c) The violation poses a serious risk to the public's health; and

(d) There are mitigating factors, such as a licensee's cooperation with an investigation or actions to come into compliance.

(4) The Division shall document its consideration of the factors in section (2) of this rule.

(5) Each day a violation continues is an additional violation.

(6) A civil penalty imposed under this rule shall comply with ORS 183.746.

(7) Failure to comply with ORS 443.305 through 433.355 includes but is not limited to:

(a) Failure to provide a written disclosure statement to the client or the client's representative prior to in-home care services being rendered;

(b) Failure to provide the contracted in-home care services; or

(c) Failure to correct deficiencies identified during a Division inspection or complaint investigation.

DIVISION 540

CAREGIVER REGISTRIES

333-540-0005
Purpose and Scope

(1) These rules establish minimum standards for the operation and licensure of caregiver registries.

(2) A caregiver registry may provide services in addition to establishing and maintaining a list of qualified private contractor caregivers, but these rules do not govern those additional services.

(3) A caregiver registry may be subject to additional licensure requirements if it qualifies as an in-home care agency, home health agency, or referral agency as defined in ORS 443.005 and 443.305.

(4) A caregiver registry may not employ or compensate, directly or indirectly, caregivers placed on its list, schedule caregivers although they may maintain calendars that track caregiver availability and for referral fee purposes, assign a caregiver to a client, define working conditions, or negotiate for a caregiver or client for the provision of services.

Stat. Auth.: ORS 443.105

333-540-0010
Definitions

As used in this division, the following definitions apply:

(1) "Abuse":

(a) As it applies to an adult, includes but is not limited to:

(A) Any physical injury caused by other than accidental means, or that appears to be at variance with the explanation given of the injury.

(B) Neglect that leads to physical harm through withholding of services necessary to maintain health and well-being.

(C) Abandonment, including desertion or willful forsaking of a person or the withdrawal or neglect of duties and obligations owed a person.

(D) Willful infliction of physical pain or injury.

(E) Use of derogatory or inappropriate names, phrases or profanity, ridicule, harassment, coercion, threats, cursing, intimidation or inappropriate sexual comments or conduct of such a nature as to threaten significant physical or emotional harm to a person.

(F) Wrongfully taking or appropriating money or property, of knowingly subjecting a person to harm by conveying a threat to wrongfully take or appropriate money or property, which threat reasonably would be expected to cause the person to believe that the threat will be carried out.

(G) Sexual contact with a non-consenting person or with a person considered incapable of consenting to a sexual act as described in ORS 163.315. As used in this paragraph, "sexual contact" has the meaning given that term in ORS 163.305.

(b) As it applies to a child, has the same meaning as "abuse" as that term is defined in ORS 419B.005.

(2) "Activities of daily living" means activities related to personal care and include but are not limited to bathing or showering and personal hygiene, dressing and grooming, mobility including walking and transferring, elimination, and eating.

(3) "Caregiver" means a person on a caregiver registry list that may be hired directly by a client or client representative to provide caregiver services to a client within the client's place of residence.

(4) "Caregiver registry" or "Registry" means an agency that prequalifies, establishes and maintains a list of qualified private contractor caregivers that is provided to a client for caregiver services within the client's place of residence.

(5) "Caregiver services" means providing assistance with the activities of daily living and can include more skilled services such as medication reminders, medication assistance, or medication administration or nursing services if the caregiver has the necessary licensure, certification, skills, education, or training to safely provide the skilled services.

(6) "Client" means an individual to whom caregiver services are provided.

(7) "Client representative" means an individual, paid or unpaid, related or unrelated, who acts on behalf of the client when the client is an adult.

(8) "Division" means the Oregon Health Authority, Public Health Division.

(9) "Parent agency" means a caregiver registry that develops and maintains administrative controls of subunits.

(10) "Satisfactory reference" means a positive, verifiable reference, either verbal or written, from a former employer or other person not related to the individual that affirms the ability of the individual to provide caregiver services.

(11) "Subunit" means a caregiver registry that provides services for a parent agency in a geographic area different from

that of the parent agency and generally exceeding one hour of travel time from the location of the parent agency.

(12) "Survey" means an inspection of a caregiver registry to determine the extent to which the registry is in compliance with laws applicable to caregiver registries, including this division.

Application for Caregiver Registry License; Renewal

(1) A person may not establish, conduct or maintain a caregiver registry, or represent to the public that the person is a caregiver registry, without first obtaining a caregiver registry license from the Division.

(2) A person shall apply for a license on a form prescribed by the Division and shall include:

(a) The applicable fee, including fees for subunits, as applicable; and

(b) Forms and fingerprints if requested by the Division, to enable the Division to conduct a criminal background check on the owner and manager of the caregiver registry and any subunits.

(3) The Division shall review the application, verify compliance with these rules, and conduct an on-site inspection prior to granting or denying a license.

(4) The Division shall notify an applicant in writing if a license application is approved, and shall include the license that shall be posted in a conspicuous place.

(5) Each license shall be issued only for the caregiver registry or subunit named in the application and shall not be transferable or assignable. If the ownership of the caregiver registry changes, the new owner shall apply for a license.

(6) If the Division intends to deny a license application, it shall issue a Notice of Proposed Denial of License Application in accordance with ORS 183.411 through 183.470.

(7) An owner or manager's criminal history that reasonably raises questions about that person's ability to appropriately operate or manage a caregiver registry may be grounds for denial of an application.

(8) The Division may deny a license application or renewal application if an applicant fails to comply with these rules.

(9) No entity shall provide caregiver registry services or use the term "caregiver registry" in its advertising, publicity, or any other form of communication unless it holds a current valid license as a caregiver registry in accordance with these rules.

(10) If any of the information in a caregiver registry's most recent application changes at a time other than the annual renewal date, the caregiver registry shall notify the Division in writing within 60 days of the change.

(11) A caregiver registry license shall be renewed annually. Each licensee shall submit:

(a) A renewal application form prescribed by the Division within 60 days of the license expiring;

(b) The applicable fees; and

(c) Forms and fingerprints if requested by the Division, to enable the Division to conduct a criminal background check on the owner and manager of the caregiver registry and any subunits.

(12) The Division shall notify an applicant in writing if a license renewal application is approved, and shall include the license that shall be posted in a conspicuous place.

(13) If the Division intends to deny a license renewal application, it shall issue a Notice of Proposed Denial of License Application in accordance with ORS 183.411 through 183.470.

(14) An owner or manager's criminal history that reasonably raises questions about that person's ability to appropriately operate or manage a caregiver registry may be grounds for denial of an application.

333-540-0025
Caregiver Registry Organization, Administration, and Personnel

(1) A caregiver registry shall have written policies and procedures that include but are not limited to:

(a) The organization of the Registry;

(b) Services provided by the Registry;

(c) The relationship between the caregiver registry and caregivers placed on the registry;

(d) Fees charged to caregivers and clients;

(e) Selection of caregivers for placement on the registry and for removal from the registry;

(f) A process for ensuring that a caregiver has satisfied basic competency requirements and has the necessary education, skills and training to provide the level of care the caregiver proposes to offer to clients;

(g) Procedures for conducting criminal background checks on caregivers, including a description of criminal convictions that disqualifies a caregiver from being placed on the registry, in accordance with OAR 333-540-0035;

(h) A process for dealing with a complaint from a client, a member of a client's family, or a client's representative, about a caregiver or the caregiver registry;

(i) A process for reporting suspected abuse or neglect of a client to the Division and other appropriate agencies; and

(j) Record keeping, including physical security of documents and record confidentiality.

(2) A caregiver registry shall provide each caregiver who meets the requirements for placement on the registry with an orientation that includes, but is not limited to, the following:

(a) Review of the registry's policies and procedures;

(b) Requirements for placement on the registry;

(c) Requirements for continuation of caregivers' names on the registry;

(d) Reasons for removal from the registry;

(e) Requirements for reporting abuse and/or neglect; and

(f) Continuing education requirements.

(3) A caregiver registry shall require caregivers placed on the registry to report, within 10 days, any:

(a) Criminal conviction;

(b) Arrest, indictment, or charge for a sexual offense or property crime;

(c) Disciplinary action taken by a licensing board or agency;

(d) Citation for driving while under the influence of intoxicants; and

(e) Revocation of driving privileges.

(4) A caregiver registry shall not delegate any administrative functions to another agency or organization.

(5) A caregiver registry's owner or designee shall:

(a) Assume full legal, financial, and overall responsibility for the caregiver registry's operation; and

(b) Serve as or employ a qualified manager.

(6) A manager of a caregiver registry hired on or after July 1, 2010 shall have:

(a) A high school diploma or equivalent; and

(b) At least two years of professional or management experience.

(7) A caregiver registry manager shall designate, in writing, a qualified individual to act as manager in his or her absence.

(8) A caregiver registry manager or designee shall be responsible for:

(a) Organizing and directing the caregiver registry's ongoing functions;

(b) Developing and implementing written and current policies and procedures necessary to direct the administrative operations of the caregiver registry, including but not limited to the requirements in these rules;

(c) Ensuring the completeness and accuracy of all information provided to the public regarding the caregiver registry and its services;

(d) Ensuring that all caregivers on the registry meet the qualifications required by these rules and the caregiver registry policies;

(e) Cooperating with the Division in the event of a survey or investigation; and

(f) Ensuring the timely reporting of allegations of abuse or neglect to the appropriate authority that includes but is not limited to the Division or local law enforcement agency.

Requirements for Placement on Caregiver Registry; Continuing Education

(1) In order to be placed on a caregiver registry a caregiver must be at least 18 years of age and have sufficient communication and language skills to enable them to perform their duties and interact effectively with clients and registry staff.

(2) A caregiver registry shall, prior to placing a caregiver on its registry:

(a) Conduct a criminal background check in accordance with OAR 333-540-0035;

(b) Verify the caregiver's licensure status, if applicable, with the appropriate licensing agency;

(c) Conduct a face-to-face interview with the individual;

(d) Obtain at least two satisfactory references for the individual that the individual has worked for within the past five years; and

(e) Ensure that the caregiver has satisfied basic competency requirements and has the necessary education, skills and training to provide the level of care the caregiver proposes to offer to clients.

(3) A caregiver placed on a registry shall annually complete three hours of continuing education on topics related to the caregiver services the caregiver offers to clients.

Criminal Background Checks

(1) A caregiver registry shall, prior to placing a caregiver on its registry, conduct or arrange for a criminal background check through the Oregon state police or a private vendor.

(2) If the criminal background check or other information obtained by a caregiver registry indicates a caregiver has been convicted of a crime against a person or property that reasonably raises questions about the ability of that caregiver to safely provide caregiver services, the caregiver registry shall notify the individual in writing that they have been found unfit to be placed on the registry.

(3) A caregiver registry shall keep the information obtained from criminal background checks confidential and use it solely to determine a caregiver's eligibility to be placed on the registry.

(4) A caregiver registry shall perform a criminal background check on a caregiver placed on the registry every three years.

Stat. Auth.: ORS 443.105

333-540-0040
Caregiver Registry Records

(1) A caregiver registry shall:

(a) Keep records for each caregiver placed on the registry including, but not limited to:

(A) Documentation of the required criminal background check;

(B) Documentation of satisfactory references;

(C) Documentation that the caregiver has satisfied basic competency requirements and has the necessary education, skill and training to provide the services proposed to be offered to clients;

(D) Documentation that the caregiver received the caregiver registry's orientation;

(E) Documentation of continuing education;

(F) Documentation of licensure status, if applicable;

(G) A copy of picture identification; and

(H) Upon acceptance to the registry, and every three years afterwards, proof of current driver's license and auto insurance for any caregiver who provides transportation services for clients.

(b) Maintain a record of clients served by caregivers on the registry, including but not limited to the client's name, contact information, and address.

(c) Maintain client records in a manner that makes them easily retrievable.

(d) Maintain records of any complaints received and documentation of any investigation conducted by the Division or other investigative body, including any action taken and any corrective action required.

(e) Keep caregiver and client records for at least seven years from the date a caregiver is terminated with the caregiver registry.

(2) Documents kept in registry files, including but not limited to background checks, reference checks, verification of basic competency and skill requirements, and training certificates must be legible and dated, signed, or otherwise authenticated by the administrator or the administrator's designee.

(3) If a caregiver registry changes ownership, all records shall remain in the registry, and it shall be the responsibility of the new owner to protect and maintain these records for at least seven years from the date a caregiver is terminated with the caregiver registry.

(4) Before a registry terminates its business, the registry shall notify the Division where the records will be stored.

(5) Caregiver registry records shall be maintained in a secure manner that protects the confidentiality of the records, and protects the records from destruction or theft.

333-540-0045
Caregiver Registry Disclosure Statements

(1) A caregiver registry shall provide a disclosure statement to:

(a) A caregiver, prior to placing a caregiver on the registry; and

(b) To a client who intends to hire a caregiver from the caregiver registry, as soon as a caregiver registry is notified that a caregiver may be hired.

(2) Both the caregiver and client disclosure statements must state: "The client or the client's representative is responsible for selecting, interviewing, hiring, scheduling, and supervising the work of the caregivers."

(3) In addition to section (2) of this rule, a caregiver registry disclosure statement provided to a caregiver shall include, but is not limited to:

(a) Information on the services offered by the caregiver registry;

(b) Fees charged to a caregiver, if applicable;

(c) Insurance and bonding requirements, if applicable;

(d) Criminal background checks and disqualifying convictions;

(e) Information on the orientation process; and

(f) Information on the process for verifying the competency, education, skills and training of a caregiver.

(4) In addition to section (2) of this rule, a disclosure statement provided to a client shall include but is not limited to:

(a) The extent to which the client may be responsible for payroll taxes, wage and hour claims, and any other employment related costs;

(b) Fees charged by a caregiver registry to a client, if any, and that 30 days notice is required before any fee increases or changes in billing or payment procedures;

(c) Whether a caregiver has liability insurance and/or is bonded;

(d) Services that may be offered by a caregiver;

(e) The extent to which the registry verifies that a caregiver has a current driver's license and auto insurance if those services are provided;

(f) The process the caregiver registry uses to ensure that a caregiver meets basic competency requirements and has the necessary training, education and skills to provide the caregiver services offered by a caregiver to a client;

(g) The process for placing a caregiver on a caregiver registry;

(h) A description of the criminal background checks required for a caregiver;

(i) How to file complaints about the caregiver registry or a caregiver to the caregiver registry and the Division, including reports of abuse or neglect; and

(j) A description of client rights including but not limited to:

(A) The right to be treated with dignity and respect;

(B) The right to be free from theft, damage, or misuse of one's personal property;

(C) The right to be given the informed choice and opportunity to select or refuse service and to accept responsibility for the consequences;

(D) The right to be free from neglect and from verbal, mental, emotional, physical and sexual abuse;

(E) The right to be free from financial exploitation;

(F) The right to be free from physical and chemical restraints;

(G) The right to voice grievances or complaints regarding services or any other issue without discrimination or reprisal for exercising such rights;

(H) The right to be free from discrimination in regard to race, color, national origin, gender, sexual orientation, or religion; and

(I) The right to participate in planning of the services to be provided by a caregiver and care to be furnished, any changes in the services and care, the frequency of visits, and cessation of services, except where the health and safety of the caregiver is at risk.

(5) A caregiver registry shall document that a copy of the disclosure statement was given to the caregiver, client or client's representative and shall place this documentation in a caregiver's file and in the caregiver registry's records.

Complaints

(1) Any person may make a complaint verbally or in writing to the Division regarding an allegation against a caregiver registry of a violation of law applicable to a caregiver registry.

(2) The identity of a person making a complaint will be kept confidential.

(3) An investigation will be carried out as soon as practicable after the receipt of a complaint.

(4) Information obtained by the Division during an investigation of a complaint or reported violation under this rule is confidential and not subject to public disclosure under ORS 192.410 through 192.505.

(5) Upon the conclusion of the investigation, the Division may publicly release a report of its findings but may not include information in the report that could be used to identify the complainant or any client of the caregiver registry. The Division may use any information obtained during an investigation in an administrative or judicial proceeding concerning the licensing of a caregiver registry.

(6) If the complaint involves an allegation of criminal conduct or an allegation that is within the jurisdiction of another local, state, or federal agency, the Division will refer the matter to that agency.

Investigations

(1) As soon as practicable after receiving a complaint, taking into consideration the nature of the complaint, Division staff will begin an investigation.

(2) A caregiver registry shall permit Division staff access to the caregiver registry place of business during an investigation.

(3) An investigation may include but is not limited to:

(a) Interviews of the complainant, caregivers, clients, a client's representative, a client's family members, witnesses, caregiver registry management and staff;

(b) On-site observations of caregiver registry management, staff, or caregivers; and

(c) Review of documents and records.

333-540-0060
Surveys

(1) The Division shall, in addition to any investigations conducted under OAR 333-540-0055, conduct at least one general survey of each caregiver registry to determine compliance with caregiver registry laws every three years and at such other times as the Division deems necessary.

(2) A caregiver registry shall permit Division staff access to the caregiver registry place of business during a survey.

(3) A survey may include but is not limited to:

(a) Interviews of caregivers, clients, client representatives, client family members, and caregiver registry management and staff;

(b) On-site observations of caregiver registry management, staff, or caregivers; and

(c) Review of documents and records.

(4) A caregiver registry shall make all requested documents and records available to the surveyor for review and copying.

(5) Following a survey, Division staff may conduct an exit conference with the caregiver registry owner or his or her designee. During the exit conference Division staff shall:

(a) Inform the caregiver registry representative of the preliminary findings of the inspection; and

(b) Give the person a reasonable opportunity to submit additional facts or other information to the surveyor in response to those findings.

(6) Following the survey, Division staff shall prepare and provide the caregiver registry owner or his or her designee specific and timely written notice of the findings.

(7) If the findings result in a referral to another regulatory agency, Division staff shall submit the applicable information to that referral agency for its review and determination of appropriate action.

(8) If no deficiencies are found during a survey, the Division shall issue written findings to the caregiver registry owner or designee indicating that fact.

(9) If the surveyor's written notice of findings indicates that the caregiver registry was in compliance with caregiver registry laws and no deficiencies were cited, the caregiver registry's owner or designee shall sign and date the written notice and return it to the Division.

(10) If deficiencies are found, the Division shall take informal or formal enforcement action in compliance with OAR 333-540-0070 or 333-540-0075.

Stat. Auth.: ORS 443.105

333-540-0065
Violations

In addition to non-compliance with any law that governs a caregiver registry, it is a violation to:

(1) Refuse to cooperate with an investigation or survey, including but not limited to failure to permit Division staff access to the caregiver registry place of business, its documents or records;

(2) Fail to implement an approved plan of correction;

(3) Refuse or fail to comply with an order issued by the Division;

(4) Refuse or fail to pay a civil penalty;

(5) Fail to comply with rules governing the storage of records following the closure of a caregiver registry;

(6) Fail to report suspected abuse of elderly persons as defined in ORS 124.050;

(7) Fail to return a license as provided in OAR 333-540-0085; or

(8) Operate without a license.

Stat. Auth.: ORS 443.105
Stats. Implemented: ORS 443.105
Hist.: PH 9-2010, f. 6-17-10, cert. ef. 7-1-10

333-540-0070
Informal Enforcement

(1) If, during an investigation or survey Division staff document violations of a law governing a caregiver registry, the Division may issue a statement of deficiencies that cites the law alleged to have been violated and the facts supporting the allegation.

(2) A signed and dated plan of correction must be received by the Division within 10 business days from the date the statement of deficiencies was mailed to the caregiver registry. A signed plan of correction will not be used by the Division as an admission of the violations alleged in the statement of deficiencies.

(3) A caregiver registry shall correct all deficiencies within 60 days from the date of the exit conference, unless an extension of time is requested from the Division. A request for such an extension shall be submitted in writing and must accompany the plan of correction.

(4) The Division shall determine if a written plan of correction is acceptable. If the plan of correction is not acceptable to the Division, the Division shall notify the owner of the caregiver registry, in writing or by telephone:

(a) Identifying which provisions in the plan the Division finds unacceptable;

(b) Citing the reasons the Division finds them unacceptable; and

(c) Requesting that the plan of correction be modified and resubmitted no later than 10 working days from the date the letter of non-acceptance was mailed to the owner.

(5) If the caregiver registry does not come into compliance by the date of correction reflected on the plan of correction or 60 days from date of the exit conference, whichever is sooner, the Division may propose to deny, suspend, or revoke the caregiver registry's license, or impose civil penalties.

Stat. Auth.: ORS 443.105

333-540-0075
Formal Enforcement

(1) If, during an investigation or survey, Division staff document a failure to comply with caregiver registry laws, the Division may issue a Notice of Proposed Suspension or Notice of Proposed Revocation in accordance with ORS 183.411 through 183.470.

(2) The Division may issue a Notice of Imposition of Civil Penalty for violations of caregiver registry laws.

(3) At any time the Division may issue a Notice of Emergency License Suspension under ORS 183.430(2).

(4) If the Division revokes a caregiver registry license, the order shall specify when, if ever, the caregiver registry may reapply for a license.

333-540-0080
Civil Penalties

(1) A caregiver registry that violates caregiver registry laws, including OAR 333-540-0065 (violations), is subject to the imposition of a civil penalty not to exceed $1,000 per violation and may not total more than $2,000.

(2) In determining the amount of a civil penalty, the Division shall consider whether:

(a) The Division made repeated attempts to obtain compliance;

(b) The licensee has a history of noncompliance with caregiver registry laws;

(c) The violation poses a serious risk to the public's health;

(d) The licensee gained financially from the noncompliance; and

(e) There are mitigating factors, such as a licensee's cooperation with an investigation or actions to come into compliance.

(3) The Division shall document its consideration of the factors in section (2) of this rule.

(4) Each day a violation continues is an additional violation.

(5) A civil penalty imposed under this rule shall comply with ORS 183.745.

Hist.: PH 9-2010, f. 6-17-10, cert. ef. 7-1-10

333-540-0090
Applicability of Rules

(1) A caregiver registry already in operation on July 1, 2010 shall apply to the Division for a license and pay the applicable fee by August 1, 2010.

(2) The Division shall allow a caregiver registry already in operation on July 1, 2010, three months from its date of application before an on-site inspection is conducted, in order to allow a caregiver registry to come into compliance with these rules.

(3) A caregiver registry already in operation on July 1, 2010 shall conduct criminal background checks on all caregivers placed on its registry prior to July 1, 2010 if the caregiver has not had a criminal background check in the last three years.

DIVISION 545

PURPOSE, APPLICABILITY AND DEFINITIONS FOR CERTIFICATE OF NEED

333-545-0000
Purpose of Certificate of Need

(1) ORS Chapter 442 establishes state planning for health services and facilities in light of the following findings and in furtherance of health planning policies of the state as established through legislative and executive agency action. The certificate of need program of the Public Health Division has as its purpose the achievement of reasonable access to quality health care, at a reasonable cost. Therefore, decisions regarding proposed new health services and facilities shall be made for reasons having to do with the most urgent community health needs in the various parts of the

state. The burden of proof for need and viability shall be on the applicant, taking these legislative findings into account:

(a) Many citizens are unable to pay for necessary health care, being covered neither by private insurance nor by publicly funded programs such as Medicare and Medicaid;

(b) Health care costs are rising at rates which exceed substantially the general rate of inflation;

(c) There is insufficient price competition in the delivery of health care services and therefore insufficient cost consciousness among providers, payors and consumers;

(d) There are inadequate incentives for the use of less costly and more appropriate alternative levels of health care;

(e) There is insufficient or inappropriate use of existing capacity; there are duplicated services; and there is failure to use less costly alternatives in meeting significant health needs; and

(f) There are insufficient primary and emergency medical care services in medically underserved areas of the state.

(2) In responding to the legislative findings listed in section (1) of this rule and to health planning policies of the state, the certificate of need program shall be administered with the goal of containing capital investment and the objectives of:

(a) Promoting development of more effective methods of delivering health care;

(b) Improving distribution of health care facilities and services;

(c) Controlling increase of health care costs, including the promotion of improved competition between providers;

(d) Promoting planning for health care services at the facility, regional and state levels;

(e) Maximizing the use of existing health care facilities and services which represent the least costly and most appropriate levels of care; and

(f) Minimizing the unnecessary duplication of health care facilities and services.

(3) The division recognizes that:

(a) The objective of reasonable access must be tempered by acknowledgment that decentralized services may not be safe, effective, or economical if utilization is below identified standards;

(b) The objective of reasonable cost in any part of the state requires consideration of the actual and potential capacity of all facilities and services available or feasible to serve persons resident in that part of the state, so as to maximize the use of existing capacity, minimize unnecessary duplication, and give priority to the least costly alternatives feasible to meet significant health needs;

(c) Realistically, price competition among providers of any given type of institutionally-based care is limited and may jeopardize quality, so that regulation of market entry through certificate of need, and maintenance of quality through strict licensure standards, is necessary;

(d) Market competition between providers of institutional and alternative care contributes to the objective of reasonable access to quality health care at reasonable cost by reducing the likelihood of utilization of higher cost care when lower cost care would meet health needs, and should, therefore, be encouraged;

(e) Public and private funds available for health care and related social services are limited by available revenues and by demand for other expenditures. Therefore, institutionally-based health care capacity should be regulated so that the proportions of available funds, whether publicly or privately paid, committed to less or more intensive service levels are determined by the balance of needs among the population to be served, rather than by pressure to fully utilize excess institutional capacity;

(f) Health care regulatory, planning, and public and private reimbursement mechanisms should be coordinated so as to give incentives to providers to select the least costly treatment consistent with acceptable risk, and to give necessary care in the least costly setting;

(g) Specific projects to modernize facilities at a particular facility do not necessarily contribute to the statewide objective of reasonable access to quality health care at a reasonable cost, and must be carefully reviewed against that standard.

333-545-0010
Purpose and Applicability of Rules

(1) OAR 333-545 through 670 establish procedures for the certificate of need program.

(2) OAR 333-545 through 670 apply to the division and persons subject to provisions of the certificate of need law.

(3) The authority for OAR 333-545 through 670 is ORS 431.120(6) and 442.315.

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315

333-545-0020
Definitions

As used in OAR 333-545 through 670 unless the context requires otherwise:

(1) "Adjusted Admission" means the sum of all inpatient admissions divided by the ratio of inpatient revenues to total patient revenues.

(2) "Administrator" means the administrator of the Public Health Division.

(3) "Amendment to an Application" means any substantial change in the data on which the application is based; a substantial change in either the proposed services, equipment, construction, price, project schedule, financing of the project, budget of the project, or financial position of the applicant; or other changes which the division determines to constitute an amendment which may directly affect the division's decision or which substantially change the proposal.

(4) "Affected Person" means a person who, as determined by the division, either has an interest in the outcome of the division's proceeding or represents a public interest. "Affected person" has the same meaning as given to "party" under ORS 183.310(6) and includes:

(a) Each person or agency entitled as of right to a hearing before the division;

(b) Each person or agency named by the division to be a party; and

(c) Any person requesting to participate before the division as a party or in a limited party status which the division determines either has an interest in the outcome of the division's proceeding or represents a public interest in such result. The division's determination is subject to judicial review in the manner provided by ORS 183.482 after the division has issued its final order in the proceedings.

(5) "Applicant" means a person intending, or who is required, to apply for a certificate of need. The applicant must be the person making or obligating the expenditure or the person who holds the facility license.

(6) "Bed Capacity" means the maximum number of inpatient care bed spaces in a facility which can be made readily available for inpatient use in accord with Public Health Division rules governing acute inpatient care and Seniors and People with Disabilities Division rules governing long-term care facilities:

(a) Inpatient beds permanently removed from service to allow conversion of rooms for other than direct inpatient nursing care will not be considered part of "bed capacity," if the space for these beds is no longer readily available for inpatient use. Temporary removal of beds from patient rooms for purposes of cleaning, maintenance, renovation, or nonuse is allowable without a change in "bed capacity";

(b) In the case of licensed special inpatient care facilities, "bed capacity" refers to the number of patient care stations;

(c) In determining the number of approvable beds in a hospital remodel project, "bed capacity," as defined in this section, may be adjusted on the basis of an evaluation of the proportion of private rooms. The number of bed spaces set up as private, single patient

rooms in each general medical, surgical and obstetrical unit at the time the application is submitted, shall be compared to the total bed capacity of each unit at that time. For each unit in which the ratio of private bed spaces to total bed spaces does not equal or exceed 20 percent, to the nearest whole number of bed spaces, the number of private bed spaces necessary to cause each unit to reach that ratio shall be calculated. In review of the project, if the applicant so desires, a compensating number of semi-private rooms will be considered as having capacity for only one bed space. This adjustment will facilitate remodeling of general units to include 20 percent private rooms, when desired, without ultimately increasing total licensed bed capacity at the facility;

(d) A patient room shall be considered as being readily available for use at its maximum potential bed capacity in accord with per bedroom space requirements of the Public Health Division or Seniors and People with Disabilities Division when the placement of such beds requires no or only minor alterations to conform to Public Health Division or Seniors and People with Disabilities Division rules. Minor alterations include installation of such items as additional electrical outlets, over bed lights, oxygen and vacuum outlets, and cubicle curtains, but do not include the moving of walls or the addition of required plumbing fixtures except when rough plumbing has previously been done.

(7) "Complete Application (Application)" means an application substantially as described in division 580 of this chapter, which contains all the information specified in the application form and instructions necessary to enable a proper review and decision.

(8) "Days" unless otherwise specified, mean calendar days. In determining elapsed time for notices, etc., the first day is not counted. In this context, "first day" is the date of mailing of the notice. If the last counted day falls on a weekend or holiday, the last day is the next business day.

(9) "Develop" has the meaning given the term "develop" in ORS 442.015(9) and includes arrangements or commitments for financing, which, under applicable state law, are binding upon a health care facility.

(10) "Director" means the director of the Oregon Health Authority.

(11) "Division" means the Public Health Division.

(12) "Expenditure" or "Capital Expenditure" means an expenditure which, under generally accepted accounting principles, is not properly chargeable as an expense of operation and maintenance and includes leases or comparable arrangements, or donations which would have been a capital expenditure if the lease, comparable arrangement, or donation had been a purchase. Interest charges are not included in determining the amount of capital expenditures.

(13) "Gross Revenue" means the sum of daily hospital service charges, ambulatory service charges, ancillary service charges, and other operating revenue. "Gross revenue" does not include contributions, donations, legacies, or bequests made to a hospital without restriction by the donors.

(14) "Health Maintenance Organization (HMO)" has the meaning given the term in ORS 442.015(11).

(15) "Health Service Area" refers to one of three areas into which the State of Oregon has been divided for health planning purposes. These areas are defined as follows:

(a) Health service area I includes Clackamas, Clatsop, Columbia, Multnomah, Tillamook, and Washington Counties;

(b) Health service area II includes Benton, Coos, Curry, Douglas, Jackson, Josephine, Lane, Lincoln, Linn, Marion, Polk, and Yamhill Counties;

(c) Health service area III includes Baker, Crook, Deschutes, Gilliam, Grant, Harney, Hood River, Jefferson, Klamath, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, and Wheeler Counties.

(16) "Inpatient" means a person who has been admitted to a health care facility and who remains for at least one overnight stay. Inpatients, discharged from a health care facility for purposes of utilizing non-hospital owned or operated diagnostic or treatment equipment, and who are then returned as an inpatient of the same health care facility within a 24-hour period, are considered "inpatients," despite their temporary absence from such facility.

(17) "Licensed Health Care Facility" refers to the license to offer specified health services, issued to a hospital by the state Public Health Division or to a nursing home by the Seniors and People with Disabilities Division. The license is not necessarily issued to the owner of the property, but to the provider. Any change in provider requires a new license. A certificate of need is required when a change of provider results in a new hospital or long-term care facility or service, as defined in OAR 333-550-0010(2) and (3)(a).

(18) "Net Revenue" means gross revenue minus deductions from revenue.

(19) "Operating Expenses" means the sum of daily hospital service expenses, ambulatory service expenses, ancillary expenses, and other operating expense, excluding income taxes.

(20) "Project Cost" as used in the fee schedule, OAR 333-565-0000(4), means the greater of:

(a) "As built project cost," in accord with Capital Expenditure Estimate Form CN-3, line (i), of the application;

(b) Projected annual operating expense for the first full year of operation of a service.

(21) "Proposal" or "Project" means an expenditure for one or more new health services for which the applicant intends to apply under a single certificate of need application as required by ORS 442.315.

(22) "Public Hearing" or "Reconsideration Hearing" means a contested case hearing held pursuant to ORS Chapter 183.

(23) "Service" or receipt of any notice, order, or document shall be accomplished by the division when the document is mailed, and by any other party when the document is received by the division.

(24) "Service Area" means a group or area from which the applicant expects to draw a substantial portion of patients. Such area must be identified in the application, and its use must be substantiated. Service areas of other applicants and health care facilities may overlap. Not all patients in the applicant's service area need to be expected to receive their health services from the applicant.

(25) "State Agency" means the Office of the Director of the Oregon Health Authority.

(26) "Total Deductions from Gross Revenue" or "Deductions from Revenue" means reductions from gross revenue resulting from inability to collect payment of charges. Such reductions include bad debts; contractual adjustments; uncompensated care; administrative, courtesy and policy discounts and adjustments, and other such revenue deductions. The deduction shall be net of the offset of restricted donations and grants for indigent care.

(27) "Type A Rural Hospital" refers to a hospital which is small and remote, has 50 or fewer beds and is greater than 30 miles from another acute inpatient care facility, and which has been designated a Type A rural hospital by the Office of Rural Health.

(28) "Type B Rural Hospital" refers to a hospital which is small and rural and has 50 or fewer beds, and is 30 miles or less from another acute inpatient care facility, and which has been designated a Type B rural hospital by the Office of Rural Health.

DIVISION 550

PROJECTS OR PROPOSALS SUBJECT TO CERTIFICATE OF NEED REVIEW

333-550-0000
Categories that Are "Subject" or "Exempt"

(1) Any person not excluded under section (2) or (3) of this rule, or not excluded pursuant to ORS 441.065, that proposes to offer or develop a new hospital, as defined in ORS 442.015(17) and OAR 333-550-0010(2) or offer or develop a new long-term

care facility or service, as defined in ORS 442.015(18) and OAR 333-550-0010(3) is subject to certificate of need review by the division. Persons subject to review under ORS 442.315 include:

(a) Hospitals, including special inpatient care facilities; and

(b) Long-term care facilities (nursing homes).

(2) Pursuant to ORS 442.325(1) and (2), a certificate of need shall be required when an HMO proposes to develop or establish a health care facility, or proposes health services normally subject to review under OAR 333-550-0010. However, any activity of an HMO which does not involve the direct delivery of health services, but, instead, consists of arrangements for indirect delivery of health services through contracts with providers, shall be exempt from the certificate of need law.

(3)(a) Except as required in ORS 442.315(1) and OAR 333-550-0010(1) through (3) for a new hospital or new skilled nursing or intermediate care service or facility not operating as a Medicare swing bed program, rural hospitals as defined in ORS 442.470(5)(a)(A) and (B) and OAR 333-545-0020(27) and (28) are exempt from certificate of need requirements;

(b) Rural hospitals which are exempt from review under subsection (a) of this section are required to report any action taken by the hospital that would have required a certificate of need if this exemption did not exist. Within 90 days of undertaking any project that would have otherwise been subject to certificate of need, the hospital shall notify the Public Health Division in writing. This notification shall include a detailed description of the project to be undertaken and include at least the following information:

(A) The amount of capital expenditure involved;

(B) A budget forecast for the first three years of operation showing gross revenues, direct expenses, indirect expenses and deductions from revenue; and

(C) The units of service per year for the first three years of operation.

(4) The division shall review all components of a project for which a health service related linkage exists, including any project components which, if they were to be done independently, would not be subject to review. Section (6) of this rule will be used to determine whether a health service related linkage exists.

(5) A project which includes multiple "subject" components as integral parts shall be reviewed according to the schedules and procedures applicable to the component or part, or combination of these, which requires the most stringent review.

(6) A series of projects having a health service related linkage which in the aggregate exceeds any of the certificate of need thresholds described in OAR 333-550-0010 is subject to the certificate of need law as a single proposal when 12 months or less can be expected to elapse or have elapsed between the completion of the first component of the project and the start of the next component of the project. A health service related linkage exists between any projects which affect a single health service, patient care unit, or area within the facility; or a series of projects which cannot be independently constructed:

(a) The start date of a project component shall be considered to be the earliest of the following dates:

(A) The date on which construction or remodeling work associated with the project begins; or

(B) The date that any new service, area, or facility associated with the project begins to treat patients.

(b) The completion date shall be considered to be the date on which the new service, area, or facility begins to treat patients.

(7) Where a particular health service is involved, the division shall apply the appropriate need methodology for that service adopted in administrative rule, if any.

333-550-0010
Health Services Subject to Review

(1) Pursuant to ORS 442.315(1), a certificate of need must be obtained from the division prior to the offering or development of any new hospital or new skilled nursing or intermediate care service or facility, other than a facility, as defined in ORS 441.065.

(2) A new hospital is any facility that did not offer inpatient hospital services on a regular basis within its service area within the prior 12-month period and is initiating or proposing to initiate such services. For the purposes of this section, the service area of an existing general hospital will be determined in accordance with the provisions of OAR 333-590-0040 but shall not extend beyond a seven-mile radius from the main hospital campus. A new hospital is not created by the reinstatement of services by an established hospital which has experienced an interruption of services of less than 12 months. A change in category of license for an already operating hospital does not create a new hospital unless the hospital proposes to offer one or more new services not encompassed within its existing license (e.g., a facility for the treatment of alcoholism or drug abuse which proposes to offer inpatient psychiatric services). A new hospital does not include the expansion of an existing hospital at its current site; but it does include any replacement, rebuilding or relocation of an existing hospital that involves a substantial increase or change in the services offered. The definition of "rebuilding" contained in subsection (3)(c) of this rule will also be used for the purposes of this section. For the purposes of this section, a substantial increase in services will be considered to include any increase in the total facility bed capacity or in the bed capacity of any hospital service of greater than ten beds or ten percent of the bed capacity of the facility or service. A substantial change in the services offered will be considered to include any establishment of a new health service, as defined in section (4) of this rule.

(3) A new skilled nursing or intermediate care service or facility includes any of the following:

(a) The initiation of inpatient skilled nursing or intermediate care services by a new facility or by a health care facility that did not offer such services within the prior 12-month period. A change in ownership of a long-term care facility is not considered to constitute establishment of a new facility. A change in the services of an existing long-term care facility is not considered to constitute the establishment of a new facility or service, unless the new services are not within the scope of services allowable under a long-term care facility license and require licensure under a hospital licensure category;

(b) An increase in the skilled nursing or intermediate care bed capacity of a long-term care facility by more than 10 beds or more than 10 percent of the current long-term care bed capacity, whichever is less, within a two-year period after the most recent previous increase in beds at the facility. The date of the most recent increase in capacity will be considered to be the date on which a revised license was issued by the Seniors and People with Disabilities Division reflecting the new licensed capacity. In calculating 10 percent of a facility's capacity, the division will round up to the nearest whole number;

(c) The rebuilding of an existing long-term care facility. "Rebuilding" is considered to include any construction project in which at least 50 percent of the square footage of the existing building or buildings is demolished and replaced through new construction; or remodeling which is so extensive that the cost of the remodeling is at least 50 percent of the estimated replacement cost of the facility; or remodeling which involves replacement through new construction of at least 50 percent of the facility's structural bed capacity;

(d) The relocation of an existing long-term care facility building to a new site;

(e) The relocation of existing long-term care beds from one licensed health care facility to another.

(4) A new hospital health service is any health services except basic health services as defined in ORS 442.315(9) that were not offered in or through the hospital on a regular basis within the 12-month period prior to the time such services are proposed to be offered, provided that the annual operating expenses exceed $500,000 in the first full year of operation at normal levels of utilization. Such operating expenses shall include a full allotment of

ongoing expense items attributable to the health service. In other words, if any expense item is budgeted in the first year of operation at a level substantially lower than that which will be incurred routinely in future years, the routine level of allocation will be used. However, the development of operating units or areas of the hospital dedicated exclusively to the provision of ambulatory surgery services shall not be subject to review. In addition, the reinstatement of an established service which has been interrupted for less than 12 months shall not be considered to constitute the establishment of a new service.

(5) In determining whether annual operating expenses for a proposed new hospital service exceed $500,000, the division will consider all direct and indirect costs which are properly allocable to the service, whether or not such costs are already being incurred.

(6) A service is considered to have been established as an existing service once it has been continuously offered by the hospital for a period of at least 12 months.

(7) In determining, under section (4) of this rule, whether a health service has been or will be offered on a regular basis, the division shall consider, as appropriate and among others, the following:

(a) Whether there was or will be a change in staffing in terms of quantity, training or qualifications;

(b) Whether there has been or will be substantial change in the amount of reimbursement as a result of the proposed service;

(c) Whether there has been or will be substantial change in the standards of care, levels of care, or methods of care;

(d) Whether there has been or will be substantial change in the type or category of patients;

(e) Whether there has been or will be a fixed and definable area for the primary use of the service;

(f) Whether there has been or will be specialized equipment available for use in connection with the service;

(g) The number of patients served during the last 12 months versus the number of patients expected to be served in the subsequent 12 months; and

(h) The current maximum number of patients which can be served versus the proposed maximum number of patients to be served.

(8) Section (7) of this rule can also be used to distinguish one health service from another.

(9) In determining, under section (4) of this rule, whether a health service is or will be offered in or through a hospital, the division shall consider, as appropriate, the following:

(a) Whether or not the majority of patients served or to be served by such health services are the hospital's patients;

(b) Whether or not the staff or portions of the staff for the health service will be employed or contracted by the hospital;

(c) Whether the hospital will receive reimbursement for the rendering of health services;

(d) Whether inpatients of a hospital will be served; and

(e) The type of legal entity involved, its ownership, and its corporate parts and relationships.

(10) Pursuant to ORS 442.315(6), a certificate of need shall not be transferred. A transfer will be considered to have occurred if there is a change in ownership of a service, item of equipment, or facility prior to the completion of a project for which a certificate of need has been issued, provided that the change of ownership will result in the provision of affected services in a substantially different manner of different location from that contemplated in the certificate of need application.

(11) Nothing in this chapter limits the responsibility of the applicant to provide, or the division to require sufficient data on which to assess the capital costs and the financial impact of a proposal prior to issuing a certificate of need decision. Where determined appropriate by the division, Forms CN-3 through CN-9 and additional forms, when necessary, together with suitable explanations and required narrative, will be required of a lessor, owner, or other provider of land and/or improvements to the applicant. See division 580.

DIVISION 555

CERTIFICATE OF NEED LETTERS OF INTENT

333-555-0000
Letters of Intent, Required

(1) Pursuant to ORS 442.315(2), all applicants for a certificate of need shall submit a letter of intent. Such letter of intent shall be filed prior to implementing any part of the project. In cases in which more than one party is potentially subject to review, both parties shall file letters of intent. However, as provided in OAR 333-570-0010(3), only one application will be required if such a project is ruled subject to review.

(2) Letters of intent shall be sent to the Public Health Division.

(3) If the division believes that any person is considering or undertaking a project for which a certificate of need might be required or for which a letter of intent is required under section (1) of this rule, but that person has not submitted a letter of intent, the division may order the person to submit a letter of intent for the project, or may institute proceedings in the circuit courts to enforce obedience to applicable statutes, rules, or orders by injunction or by other processes, mandatory or otherwise, as provided in ORS 442.315(10).

Stat. Auth.: ORS 431.120(6) & 442.315

Stats. Implemented: ORS 431.120(6) & 442.315

Hist.: HD 13-1994, f. & cert. ef. 4-22-94; OHD 11-1998, f. & cert. ef. 10-22-98

333-555-0010
Letters of Intent, Filing Periods

(1) Applicants may submit letters of intent at any time during the calendar year.

(2) Applications which are ruled subject to full review under OAR 333-555-0030(1) may not be filed sooner than the first day of the month following the publication and mailing of notice of the letter of intent in the *Certificate of Need Update*, published monthly by the division. For example, a letter of intent submitted in the first half of May would have a notice published in the June 1 edition of the *Certificate of Need Update*. The application could then be submitted no earlier than July 1.

(3) A letter of intent automatically expires 365 days following the division's ruling under OAR 333-555-0030. No extension will be granted. An applicant may anticipate the expiration of a current letter of intent by filing a new letter of intent, upon which the division will rule under OAR 333-555-0030. In order to ensure that the previous letter of intent does not expire before an application can be submitted under the new letter of intent, the applicant should file the new letter of intent at least 60 days in advance of the expiration of the previous letter of intent.

Stats. Implemented: ORS 431.120(6) & 442.315

Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-555-0020
Letters of Intent, Application Form

(1) The contents of the letter of intent shall provide sufficient information to support necessary rulings by the division. The division shall determine, from the letter of intent, whether or not the proposed project is subject to the certificate of need law. A person submitting a letter of intent shall disclose all information which may affect the division's ruling under certificate of need law. There shall be sufficient information to determine the provision(s) of division 550 of this chapter under which a project may be subject. There shall also be sufficient information to determine whether review of the project may be abbreviated under division 560 of this chapter. Finally, sufficient information shall be provided so that other parties with an interest in the project may have fair opportunity to submit inquiries, letters of intent, and competing applications for delayed review under division 560 of this chapter.

(2) The letter of intent shall be submitted on Form LOI-1. If additional information is needed to meet the requirements of section (1) of this rule, the division shall inform the person filing the letter of intent in advance or in response to the letter of intent under OAR 333-555-0030(1)(d).

[ED. NOTE: Forms referenced are available from the agency.]

Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-555-0030

Letters of Intent, Notification

(1) As soon as possible after receiving and reviewing a letter of intent, the division shall send copies of the letter of intent to any persons known to the division as offering similar services to residents of the area which would be served by the project, together with a notice that the division will consider comments regarding the proposed letter of intent if such comments are received at least two working days prior to the deadline for the division's ruling on the letter of intent. The purpose of providing such notice is informational, so that the division can gather data that may be relevant to its decision regarding the letter of intent. Persons who are sent copies of the letter of intent or who submit comments on the letter of intent are not considered to be parties in the division's review of the letter of intent. The division will not recognize any affected parties in regard to a letter of intent other than the party submitting the letter of intent. Within 15 days of receipt, the division shall give written notification to the person filing the letter of intent and to any parties who have submitted comments of its ruling that:

(a) The proposal is not subject to the certificate of need law and state the reasons; or

(b) The proposal is subject to full review under the certificate of need law;

(c) The proposal is subject to the certificate of need law, and is eligible for abbreviated review pursuant to OAR 333-560-0010 and 333-560-0020; or

(d) The letter of intent contains insufficient information to make a determination;

(e) The proposal is subject to certificate of need law and is eligible for expedited review pursuant to OAR 333-560-0110 and 333-560-0120.

(2) Letters of intent containing insufficient information to make a determination shall not satisfy the requirement of OAR 333-555-0000(1) nor 333-555-0010(2).

(3) Except as provided under section (4) of this rule, a ruling under subsection (1)(a) of this rule may not be made to terminate if the person who filed the letter of intent can demonstrate that the person's position has changed in a material and substantial way as a result of relying on such ruling.

(4) Rulings under subsection (1)(a) of this rule apply only to the costs and other relevant conditions as stated in the letter of intent. If these costs or other conditions change or if the person submitting the letter of intent fails to submit information which could affect the division's ruling, the ruling will not apply to the project, and a new letter of intent will be required.

(5) Following the division's ruling on a letter of intent, applicant may request a meeting, or "preapplication conference" with division staff, to discuss development of the application.

(6) If the original letter of intent contains insufficient information to make a determination regarding appropriate review categories, the division shall notify the person filing the letter of intent under subsection (1)(d) of this rule that additional information must be provided in writing. Within 15 days of receipt of sufficient written information, the division shall give written notification under section (1) of this rule.

(7) The division may, on its own initiative and at its discretion, extend the time period for response to a letter of intent, as specified in section (1) of this rule, to up to 30 days, in the case of letters of intent that raise complex issues or that require research or consultation by division staff. If the division elects to extend this time period, the division will inform the person filing the letter of intent and any other parties receiving notice under section (1) of this rule.

(8) If additional information or modifications to a letter of intent are received from the person filing the letter of intent prior to the division's ruling under section (1) of this rule, the deadline for the division's ruling will be 15 days after receipt of such additional information or modification.

Stat. Auth.: ORS 431.120(6) & 442.315

DIVISION 560

ABBREVIATED CERTIFICATE OF NEED REVIEW, DELAY OF REVIEW, WAIVER OF REVIEW FOR FACILITIES, AND EXPEDITED REVIEW

333-560-0010

Abbreviated Certificate of Need Review for Specific Projects

The following types of projects are eligible for abbreviated review:

(1) The establishment of new health services or new facilities which, based on documentation submitted by the applicant and found acceptable by the Division, will predominantly or exclusively service medically indigent patients:

(a) Such documentation should include any admissions policies or needs tests to be used by the applicant in determining the appropriateness of admissions. Documentation should also include information on projected revenues for the facility or service, including the sources of such revenues;

(b) If the facility or service, in the future, wishes to provide services to persons who are not medically indigent, either because of a change of ownership or for other reasons, the applicant must submit a new letter of intent detailing the proposed changes in the population to be served. The Division may consider such a change to constitute the establishment of a new health service subject to review, if it concludes that the patients to be served will no longer be predominantly medically indigent, and if it concludes that there will be a substantial impact on the cost of patient care;

(c) For the purposes of this section, persons will be considered to be medically indigent if they are uninsured by either public or private insurers or payers for the types of services being proposed and if their household or family income is equal to or less than 200 percent of the poverty income established in federal regulations. Except for projects involving long-term care facilities or services, persons will also be considered to be medically indigent if they are eligible for Medicaid services.

(2) Partnerships or joint ventures between hospitals/health systems and existing non-hospital-based, long-term care facilities neither of which is owned or controlled by the same entity, when all of the following criteria are met:

(a) The project does not result in a net increase in licensed long-term care beds in the service area. In this context "service area" has the same meaning as it is given in OAR 333-610-0030(1);

(b) The partnership or joint venture is for a minimum of two years and is terminable only for cause. As used in this rule, the term "partnership" is intended to be defined broadly, so that it covers collaboration beyond just a legal partnership including, but not limited to, a jointly owned corporation or a limited liability corporation. Not withstanding OAR 333-550-0010(3)(a), if the beds operated under the partnership or joint venture are proposed to be sold or otherwise transferred, the transfer shall be subject to the full review process detailed in division 570 of this chapter and to the application and review criteria established in division 580, or if applicable, an expedited review under this chapter. If as part of the partnership or joint venture, conversion of existing space within a hospital building occurred, expedited review cannot later be sought under 333-560-0110. If the beds operated under the partnership or joint venture are to be relocated back to the non-hospital-based, long-term care facility the bed relocation is eligible for an abbreviated review;

(c) The hospital/health system and the long-term care facility can demonstrate to the satisfaction of the Division that projected per diem inpatient routine service costs in the partnership or joint venture setting (calculated in conformance with Medicare cost report parameters) will not exceed 125 percent of the per diem routine service cost limitation computed by the fiscal intermediary for freestanding skilled nursing facilities in its urban or rural location during the first two years of operation. The routine cost limitation may be adjusted, as appropriate, to allow for reasonable inflation as measured by the DRI (HCFA) McGraw Hill Nursing Facility Market Basket Index;

(d) The applicant shall submit a completed copy of Forms CN-3 and CN-11. The applicant shall also submit a summary for the first two years of operation of projected revenue, expenses, operating income, non-operating revenue and net income with and without the project;

(e) Projects approved under OAR 333-560-0010(2) are subject to the full review process detailed in division 570 of this chapter and to the application and review criteria established in division 580, or, if applicable, an expedited review under this chapter, if the cost limitation required under subsection (2)(c) of this rule is not maintained for the first two years of operation.

(3) A project involving the relicensing of long-term care beds by a facility participating in a Seniors and People with Disabilities Division approved Nursing Home Vision 2000 Project ("Vision 2000 Project"), if all of the following conditions are met:

(a) The number of long-term care beds to be added by the facility does not exceed the number of long-term care beds delicensed by the facility because of participation in the Vision 2000 project; and

(b) Relicensure of beds to be added will occur within five years of the date that the first bed or beds were delicensed at the facility because of participation in the Vision 2000 Project; and

(c) Notwithstanding OAR 333-565-0000(4), an application fee of $1,500 is paid;

(d) The following applies to Seniors and People with Disabilities Division approved Vision 2000 Projects:

(A) Notwithstanding any contrary provision in OAR chapter 333, during the five-year period referred to in subsection (3)(b) of this rule, the delicensed beds will be counted as existing long-term care beds for determining the need for additional long-term care beds in the geographical service area under division 610 of this chapter. The delicensed beds will not be considered existing long-term care beds for the purpose of 333-560-0110 and 333-560-0120;

(B) Notwithstanding paragraph (3)(d)(A) of this rule, if a Vision 2000 Project participating facility notifies the Division in writing of its intention not to seek relicensure of some or all the beds within the five-year period, these beds will not be counted as existing long-term care beds for determining the need for additional long-term care beds in the geographical service area under division 610 of this chapter, and the facility will be foreclosed from seeking the addition of these beds under section (3) of this rule;

(C) The sale of a Vision 2000 Project participating facility does not affect the ability of the facility to seek the addition of beds under section (3) of this rule as long as the other requirements of the rule are met.

(4) Development of a freestanding hospice facility, as that term is used in OAR 333-500-0010(1)(a), if all the following conditions are met:

(a) The number of freestanding hospice facilities that can be approved under this section is limited to a total of six. Facilities approved under this section will be required to report the information specified in subsection (4)(e) of this rule to the Certificate of Need Program which will allow it to monitor the effect of these facilities and to develop appropriate rules by which to judge the need for any future facilities;

(b) Projects will be considered for abbreviated review in the order in which a completed letter of intent is received for the project. The provisions of OAR 333-560-0030 shall not apply;

(c) The applicant shall submit a completed copy of Forms CN-1 and CN-3;

(d) The applicant shall submit a population-based needs assessment for the proposed facility. The needs assessment shall include, but not be limited to, the following elements:

(A) A discussion of why this facility is needed in the geographic area served by the applicant. This discussion shall take into account the actual and projected death rates by age and sex; an estimate of how many of those individuals would have been eligible for hospice services and the historical utilization of hospice services; an estimate of how many of those individuals would have benefited from inpatient hospice care and the historical utilization of inpatient care for hospice patients; the applicant's market share of hospice services and any anticipated changes in that market share; the effect of the proposed facility on the utilization of inpatient care in all settings both by the patients served by the applicant and by other hospice providers in the geographic area (if any); projected population growth by age and sex for the area; and household composition, particularly the number of people living alone by age and sex. The discussion shall also include information about the availability of inpatient care in the geographic area, an explanation of why it is preferable for patients to receive care in the proposed facility as opposed to other possible settings and an explanation of how the availability of the proposed facility will impact the continuum of care available in the geographic area; and

(B) A projected income statement for the first five years of operation of the facility accompanied by a narrative explaining the assumptions underlying the projections. Information concerning payer source, number of admissions, numbers of deaths and discharges, and length of stay shall be provided. If the facility is to provide residential care beds, such information shall also be provided for those beds. The income statement shall follow the format used by Form CN-5.

(e) The applicant agrees to provide the following information to the Certificate of Need Program on an annual basis for a period of five years after the facility begins operation:

(A) An income statement accompanied by a narrative discussion of the information provided. Information concerning payer source, number of admissions, numbers of deaths and discharges, and length of stay shall be provided. If the facility provides residential care beds, such information shall also be provided for those beds. The income statement shall follow the format used by Form CN-5;

(B) A statement with supporting data discussing the impact on the age adjusted rates of nursing home and hospital deaths in the geographic area served by the applicant; the impact on the rate of hospice admissions to nursing homes and hospitals in the area; and the impact on the rate of deaths of hospice patients in nursing homes and hospitals; and

(C) A statement discussing data collected from a satisfaction survey tool which measures whether families and other persons closely associated with the patient were satisfied with the different aspects of their loved one's end-of-life care and the environment provided by the facility.

(5) Development of a new Oregon State Hospital facility.

(a) A project for a new Oregon State Hospital is not required to meet any review criteria and notwithstanding OAR 333-565-0000(4) an application fee is not required.

(b) Notwithstanding OAR 333-560-0020(5), the granting of abbreviated review may be rescinded following an informal hearing only if the Division finds that the project is not a new Oregon State Hospital facility.

333-560-0020
Procedures for Abbreviated Review

(1) Abbreviated review may be granted by the division either upon request by the applicant or on the division's own initiative. Decisions to grant or to not grant abbreviated review shall be based on a letter of intent which has been properly filed by the applicant under OAR 333-555-0000 through 333-555-0020 and on the division's findings concerning the applicable criteria for abbreviated review under OAR 333-560-0010. In addition to a letter of intent, applicants seeking abbreviated review shall submit information and narrative necessary to allow the division to make findings regarding the applicable criteria for abbreviated review.

(2) The division shall provide written notification to the applicant that abbreviated review is:

(a) Denied and state the reason; or

(b) Granted.

(3) If abbreviated review is granted, the proposal is exempt from the full review process detailed in division 570 of this chapter, with the exception of OAR 333-570-0070(4) through (10); and from the application requirements and review criteria established in division 580. The notification to the applicant shall include a proposed order granting the certificate of need. Such an order shall contain findings sufficient to justify the granting of abbreviated review, but need contain no other findings.

(4) The proposed order on an abbreviated review is subject to an informal hearing, as provided in OAR 333-570-0070(5) through (9). Notwithstanding the provisions of OAR 333-570-0070(8), within ten days following the close of an informal hearing on an abbreviated review, the division will either issue a final order approving the application, or will rescind its granting of abbreviated review and require the project to undergo full review.

(5) The granting of abbreviated review may be rescinded following an informal hearing only if:

(a) The division finds that the project does not meet the criteria for abbreviated review; or

(b) The division finds that significant issues have been raised regarding the appropriateness of the proposed project.

(6) The final order in an abbreviated review is subject to a reconsideration hearing, as provided in OAR 333-570-0070(10) and division 670 of this chapter.

(7) Projects granted a certificate of need under the abbreviated review provisions are not exempt from the monitoring and reporting requirements of OAR 333-575-0000 and 333-575-0010.

333-560-0030
Delayed or Simultaneous Review

(1) An applicant who has submitted a letter of intent may request the division to delay consideration of an application for the purpose of simultaneous review. The division may, on its own initiative, delay consideration of an application pursuant to subsection (1)(b) and section (2) of this rule:

(a) The requesting party must state reasons for the request which shall include the determination in section (2) of this rule and must show reasonable evidence supporting the request;

(b) A request and determination that an application will be subject to simultaneous review must be made prior to the first of the affected applications being declared complete by the division. Although a determination may be made at the letter of intent stage, delay of review will not begin until the application is submitted and declared complete. However, if a delay is already in effect, additional applications may be considered as part of the simultaneous review process if they are declared complete before one of the events in section (3) of this rule occurs.

(2) The division may delay the consideration of an application for the purpose of simultaneous review when the division has determined that all of the following conditions have been met:

(a) More than one letter of intent sufficient for a ruling by the division has been received;

(b) Each letter of intent proposes to provide a similar service or to meet closely related needs to substantially the same area and population;

(c) There is a reasonable expectation that the approval of two or more applications in question may not be justified; and

(d) There is a reasonable expectation that the additional application(s) to be submitted will be declared complete by the division not later than 105 days after the division commences the delay of the first application held for simultaneous review.

(3) The start of review of an application must occur the day after the first of the following events:

(a) Lapse of 105 days from written declaration by the division of completeness of the first application, without receipt of a second complete application;

(b) Actual receipt of a second complete application, unless additional applicants have been granted simultaneous review;

(c) Notice or information that additional applications will not be received within 105 days of written declaration of completeness of the first application; or

(d) Receipt, by the division, of additional applications which are not declared complete within 105 days of written declaration of completeness of the first application.

(4) In the event that a proposal is subject to simultaneous review in more than one service area, review will not start on any of the affected applications in any of the service areas until one of the events listed in section (3) of this rule has occurred in each service area.

(5) Once consideration of the application is commenced, the division shall notify the applicant that a simultaneous review is in effect.

333-560-0110
Expedited Review for Relocation or Replacement of Long-Term Care Beds

Under certain circumstances, the Public Health Division may approve relocation or replacement of existing long-term care beds under the expedited review process set forth in this rule and OAR 333-560-0120 without the analysis of service area need specified in OAR 333-610-0030 when all of the following conditions are met:

(1) Relocation or replacement, under this rule, shall include:

(a) Rebuilding of all or part of a long-term care facility within its service area; or

(b) Relocation of all or part of the beds in two existing long-term care facilities within the same service area, at either one of the facilities, or at a new location in the service area; or

(c) Combinations of the above;

(d) For the purposes of this rule, relocation or replacement shall not include the conversion of existing space within a hospital building;

(e) Regardless of subsection (b) of this section, if the applicant can demonstrate to the satisfaction of the Public Health Division that a location outside of the original service area is appropriate based upon the unique nature and characteristics of the population served by the facility and can satisfactorily demonstrate the appropriateness of an alternative site for the replaced facility, the Public Health Division may waive the requirement that the beds be relocated or replaced within the original service area. To qualify under this subsection, the applicant must demonstrate to the satisfaction of the Public Health Division that the facility has a statewide or regional service area and that it specializes in serving a distinct population with unique medical needs such as children or ventilator

dependent individuals with specific programmatic services. Only beds which serve this type of distinct population are eligible for relocation or replacement under this subsection.

(2) The applicant shall submit, with the letter of intent, a copy of a letter that has been sent to Seniors and People with Disabilities requesting irrevocable delicensure of the relocated or replaced beds, effective as of the date of licensure of the replacement beds. The Public Health Division will confirm that Seniors and People with Disabilities has received the letter before ruling the project eligible for expedited review. The applicant must provide a written statement to the Public Health Division stating that it will not withdraw this letter if it is granted a certificate of need for its project.

(3) In any event, the relocation or replacement process shall not result in a net increase in the number of licensed long-term care beds in the geographical service area except as provided under OAR 333-550-0010(3)(b) or 333-560-0110(1)(e) when applicable.

(4) If the project involves construction of a new facility, the design and construction of the entire relocated or replaced facility must meet all Senior and People with Disabilities criteria for new construction standards in long-term care facilities or has received a waiver from Seniors and People with Disabilities based on a showing that full compliance with new construction standards is not required. If the project involves relocating beds to an existing facility, the patient rooms that will house the relocated beds and areas of the existing facility that support the relocated beds must meet all Seniors and People with Disabilities criteria for new construction standards in long-term care facilities or a waiver must be obtained from Seniors and People with Disabilities based on a showing that full compliance with new construction standards is not required. The applicant must submit schematic plans for the project.

(5)(a) The applicant must demonstrate, to the satisfaction of the Public Health Division, that the physical environment for patients and the ability to provide patient care both at the new setting and, if it remains open, at the original setting will significantly improve as a result of the proposed project. The Public Health Division may waive this requirement if the applicant can demonstrate, to Health Service's satisfaction, that failure to undertake the project will result in serious adverse economic consequences for the applicant that will jeopardize its ability to continue to provide nursing facility services. A waiver under this section will only be granted if the applicant can demonstrate to the satisfaction of the Public Health Division that the physical environment for patients and the ability to provide patient care will remain the same or improve as a result of the project. The Public Health Division may, at its discretion, perform an on-site evaluation of all existing facilities involved.

(b) Examples of the types of improvements that the Public Health Division may consider under this section include, but are not limited to: reduction of the number of residents in rooms; increased square footage per resident rooms; increased or remodeled dining, activities, social services, therapy, kitchen, laundry, and nursing station space; improved fire and life safety; improved resident toilet, hand washing and bathing areas; improved electrical systems including alarms and call systems; and improved heating and ventilation systems.

(6) The applicant shall demonstrate, to the satisfaction of the Public Health Division, that the applicant's proposal is financially viable and shall indicate the impact on patient charges. The applicant must demonstrate financial viability and the impact on charges at the new setting. If the original setting remains open, the applicant must demonstrate that reducing the number of beds at the original setting will not adversely impact the financial condition of that facility. Applicants must submit completed Forms CN-3 through CN-12 and a narrative discussion of the items identified in OAR 333-580-0060. Forms or narrative discussion which are not relevant to the proposal need not be completed, however. Applicants should contact the Public Health Division to determine which forms and narrative discussion are relevant to their proposal.

Hist.: HD 13-1994, f. & cert. ef. 4-22-94; OHD 1-1998, f. & cert. ef. 1-6-98; PH 28-2004, f. & cert. ef. 8-19-04

333-560-0120
Procedures for Expedited Review

(1) The expedited review process shall be initiated upon the written request of the applicant, payment of the fee specified in OAR 333-565-0000(4), and submission of four copies of the completed forms and narrative discussion identified in section (2) of this rule. The forms and narrative discussion must be completed to the satisfaction of the Public Health Division. As soon as possible after receiving and reviewing such forms and narrative, the Public Health Division shall notify the applicant whether or not the forms and narrative discussion are complete. Within five working days of the date that the Public Health Division notifies the applicant that the forms and narrative discussion identified in section (2) of this rule are complete, the Public Health Division shall rule the project eligible for expedited review. Notwithstanding the previous sentence, however, a project shall not be ruled to be eligible for expedited review sooner than the date of the Public Health Division ruling on the letter of intent for the project.

(2) Projects undergoing expedited review are exempt from the full review process detailed in division 570 of this chapter, with the exception of OAR 333-570-0070(3) to (10); and from the application requirements and review criteria established in division 580 of this chapter, with the exception of OAR 333-580-0060, 333-580-0090 and 333-580-0100. Applicants must complete Forms CN-1 through CN-12 and submit four copies of these forms along with four copies of the narrative discussion required by OAR 333-580-0060 at the time that expedited review is requested under section (1) of this rule. Forms which are not relevant to the proposal need not be completed, however. Applicants should contact the Public Health Division to determine which forms are relevant to their proposal.

(3) If all of the conditions specified in OAR 333-560-0110 have been met, the Public Health Division shall issue a proposed order granting the certificate of need for the project. The date of this proposed order shall be no later than 15 days from the date that the Public Health Division rules the project eligible for expedited review. Such an order shall contain findings to justify the granting of a certificate of need under this rule and OAR 333-560-0110, but need contain no other findings.

(4) Projects granted a certificate of need under the expedited review provisions are not exempt from the monitoring and reporting requirements of OAR 333-575-0000 and 333-575-0010.

[ED. NOTE: Forms referenced are available from the agency.]

333-560-0130
Expedited Review for Relocation of Long-Term Care Beds to Hospitals

(1) Under certain circumstances, the Public Health Division may approve relocation of existing long-term care beds to a hospital-based setting under the expedited review process set forth in this rule without the analysis of service area need specified in OAR 333-610-0030, provided that all of the following conditions are met:

(a) The long-term beds are relocated from one existing long-term care facility to not more than one location which is or will be licensed as a long-term care facility at the time of the relocation and is within the same standard metropolitan statistical area or within 15 miles of the hospital, whichever is greater.

(b) The project involves the relocation of not more than 50 percent of the licensed long-term care beds from one site to another.

(c) The applicant shall submit, with the letter of intent, a letter to Seniors and People with Disabilities Division requesting irrevocable delicensure of the remaining long-term beds at the facility from which the beds are transferred pursuant to this rule, which request shall be effective as of the date of licensure of the beds being transferred. The Public Health Division will determine

whether this letter provides substantial assurance that the remaining beds will in fact be delicensed. No application will be approved under this rule unless the Public Health Division determines that such assurance exists.

(d) The facility from which the long-term care beds are to be transferred shall be closed as a long-term care facility and shall not offer or develop a new skilled nursing or intermediate care service or facility as described in OAR 333-550-0010(3) without approval pursuant to full certificate of need review.

(e) Notwithstanding subsections (1)(c) and (1)(d) of this rule, the facility from which beds are relocated may be allowed to continue operation if it can be demonstrated to the satisfaction of the division that the continued operation of the facility is necessary to maintain adequate bed capacity in the service area and provided that it reduces its current licensed bed capacity by twice as many beds as are relocated.

(f) The design and construction of the renovated space must either meet all Seniors and People with Disabilities Division criteria for new construction standards in long-term care facilities or receive a waiver from Seniors and People with Disabilities Division based on a showing that full compliance with the new construction standards is not appropriate. The applicant shall submit schematic plans for the proposed project.

(g) Serious structural and fire and life safety problems, or other problems significantly affecting the care and well-being of patients must be demonstrated to exist at the facility whose beds are proposed to be relocated. The procedure for demonstrating these physical problems is the same as that set out in OAR 333-560-0110(7)(a) through (d).

(h) The applicant must demonstrate to the satisfaction of the division that projected per diem inpatient routine service costs in the hospital-based setting (calculated in conformance with Medicare cost report parameters) will not exceed 125 percent of the per diem routine service cost limitation computed by the Medicare fiscal intermediary for freestanding skilled nursing facilities in its urban or rural location during the first two years of operation. The routine cost limitation may be adjusted, as appropriate, to allow for reasonable inflation as measured by the DRI (HCFA) McGraw Hill Nursing Facility Market Basket Index. Notwithstanding anything to the contrary in the two immediately preceding sentences, if the hospital has owned or controlled the long-term care facility from which it proposes to move beds for at least three years, the applicant must demonstrate to the satisfaction of the Division that projected per diem actual inpatient routine service costs in the hospital-based setting will either not exceed 125 percent of actual per diem inpatient routine service costs experienced in its current setting during the first two years of operation or will not exceed 125 percent of the per diem routine service cost limitation computed by the Medicare fiscal intermediary for freestanding skilled nursing facilities in its urban or rural location during the first two years of operation.

(i) The applicant shall submit a completed copy of Forms CN-3 and CN-11. The applicant shall also submit a summary for the first two years of operation of projected revenue, expenses, operating income, non-operating revenue and net income with and without the project.

(j) Projects approved under this rule are subject to the full review process detailed in division 570 of this chapter and to the application and review criteria established in division 580, or if applicable, an expedited review under this chapter, if the cost limitations required under subsection (1)(h) of this rule are not maintained for the first two years of operation of the relocated beds.

(2) For the purposes of this rule, relocation shall include the conversion of existing space within a hospital building to house the relocated long-term care beds.

(3) The procedure for expedited review set out in OAR 333-560-0120 is not applicable to projects proposed under this rule. For the purposes of OAR 333-560-0130 the following procedure shall be followed:

(a) The expedited review process shall be initiated upon the written request of the applicant, payment of the fee specified in OAR 333-565-0000(4) and submission of the information and materials necessary to support the request for expedited review as specified in section (1) of this rule. Within 5 working days of the date that the division notifies the applicant that the necessary information and materials have been provided, the division shall rule the project eligible for expedited review. Notwithstanding the previous sentence, however, a project shall not be ruled to be eligible for expedited review sooner than the date of the division's ruling on the letter of intent for the project.

(b) If all of the conditions specified in section (1) of this rule have been met, the division shall issue a proposed order granting the certificate of need for the project. The date of this proposed order shall be no later than 20 working days from the date of the division's finding under OAR 333-560-0110(7)(c) or (d), as applicable. Such an order shall contain findings to justify the granting of a certificate of need under this rule but need contain no other findings.

(c) Projects undergoing expedited review under this rule are exempt from the full review process detailed in division 570 of this chapter, with the exception of OAR 333-570-0070(4) through (10); and from the application and review criteria established in division 580.

(d) Projects undergoing expedited review under this rule are not exempt from the monitoring and reporting requirements of OAR 333-575-0000 and 333-575-0010.

333-560-0140
Accelerated Certificate of Need Review for Specific Projects

The following types of projects are eligible for accelerated review: The development of a "new hospital" as that term is defined in OAR 333-550-0010(2) when all of the following conditions are met:

(1) The new hospital is the result of a relocation of an existing general hospital under OAR 333-500-0070(1)(a) and does not involve a "substantial increase in services" or "change in the services offered" as those terms are defined in OAR 333-550-0010(2) and determined by the Authority;

(2) The existing general hospital must be delicensed and acute inpatient care must not be provided at that location without approval pursuant to certificate of need review. The applicant must provide the Public Health Division with assurances that this condition will be met. No application will be approved under this section without adequate assurances of these conditions as determined by the Authority;

(3) New hospital health services will not be offered for a period of three years after licensure of the new facility. A new hospital health service must have been offered at the applicant's existing hospital for a period of at least one year prior to the licensure of the new facility in order for such service not to be considered a new hospital health service when offered at the new facility. For purposes of this section, the term "new hospital health service" has the same meaning as is found in OAR 333-550-0010(4) and 333-550-0010(5) through (9) apply to this definition. Projects approved under this section are subject to the full review process detailed in division 570 of this chapter and to the application and review criteria established in division 580 if a new hospital health service is offered at the new facility within this three year period. The applicant must provide the Public Health Division with assurances that this condition will be met. No application will be approved under this section without adequate assurances of these conditions as determined by the Authority;

(4) The location of the new general hospital will not result in the loss of the critical access status of an existing federally designated critical access hospital;

(5) A general hospital, unaffiliated with the applicant, proposes to relocate its main hospital campus into the service area of applicant's existing hospital. As used in this section, the term "unaffili-

ated" means under independent ownership or control. The Authority must have ruled, based upon a letter of intent, that the relocation of the unaffiliated hospital is not subject to certificate of need review. As used in this section, the term "service area" will be determined in accordance with the provisions of OAR 333-550-0010(2).

(6) The applicant must demonstrate, to the Authority's satisfaction, that relocation of the unaffiliated hospital will have an adverse economic impact on the applicant's hospital operations and that this adverse impact will jeopardize the applicant's ability to continue to operate. The applicant must further demonstrate to the Authority's satisfaction that loss of applicant's services will result in a significant decrease in provider competition and consumer choice.

(7) The new hospital will be sited within the boundaries of the service area of the hospital that is proposing to relocate into the service area of the applicant's existing hospital. In addition, the applicant's new hospital must be located at a site that is no further than half the distance between the main campus of the hospital that is proposing to relocate into the applicant's service area and either the new site of the main campus of the hospital that is proposing to relocate into the applicant's service area or the site of any other existing general hospital.

333-560-0150
Procedures for Accelerated Review

(1) The accelerated review process will be initiated upon the written request of the applicant and payment of the fee specified in OAR 333-565-0000(4). Decisions to grant or not to grant accelerated review will be based on a letter of intent which has been properly filed by the applicant under 333-555-0000 through 333-555-0020 and on the Authority's findings concerning whether the conditions for accelerated review under 333-560-0140 and the requirements of this rule have been met. In addition to a letter of intent, applicants seeking accelerated review must submit sufficient information and narrative to allow the Authority to make findings regarding the conditions and requirements for accelerated review set out in 333-560-0140 and this rule. The applicant must provide the letter of intent and other materials submitted for review in both electronic and paper formats.

(2) The Authority will hold at least one public meeting in the geographical area affected by the proposed relocation prior to issuing a decision. The purpose of the public meeting is to discuss issues relevant to the project under review and to allow submission of documents or other evidence relevant to the application:

(a) Authority staff will chair and conduct the meeting.

(b) Any person may speak at a public meeting, and any person who speaks at the public meeting may be questioned by the Authority's staff. No questions by other than staff of the Authority will be allowed, unless permission is given by the chair. The chair may set time limits for testimony in order to assure a timely and equitable presentation of information.

(c) Notice of the public meeting will be given to the applicant; any hospitals located in the affected service areas; newspapers providing general circulation to the affected service areas; and persons who have requested and been granted designation as affected parties.

(d) The Authority will not unnecessarily delay scheduling the public meeting(s).

(3) The applicant must provide the Authority with the following documents:

(a) A copy of a city council or county board of commissioners resolution supporting the siting of the facility in its jurisdiction. A city council resolution is required if the facility is to be located within the boundaries of a city, otherwise a county board of commissioners resolution is required; and

(b) Proof that zoning approval for the facility has been applied for or obtained.

(4) The division will provide written notification to the applicant that accelerated review is:

(a) Denied and state the reason; or

(b) Granted.

(5) If accelerated review is granted, the proposal is exempt from the full review process detailed in division 570 of this chapter, with the exception of OAR 333-570-0070(3) through (10); and from the application requirements and review criteria established in division 580. The notification to the applicant will include a proposed order granting the certificate of need. Such an order will contain findings sufficient to justify the granting of accelerated review, but need contain no other findings.

(6) The proposed order on an accelerated review is subject to an informal hearing, as provided in OAR 333-570-0070(5) through (9). Notwithstanding the provisions of 333-570-0070(8), within ten days following the close of an informal hearing on an accelerated review, the Authority will either issue a final order approving the application, or will rescind its granting of accelerated review and require the project to undergo full review.

(7) The granting of accelerated review may be rescinded following an informal hearing only if:

(a) The Authority finds that the project does not meet the criteria for accelerated review; or

(b) The Authority finds that significant issues have been raised regarding the appropriateness of the proposed project.

(8) The final order in an accelerated review is subject to a reconsideration hearing, as provided in OAR 333-570-0070(10) and division 670 of this chapter.

(9) Projects granted a certificate of need under the accelerated review provisions are not exempt from the monitoring and reporting requirements of OAR 333-575-0000 and 333-575-0010.

DIVISION 565

CERTIFICATE OF NEED FEES AND PENALTIES

333-565-0000
Fees, Application for Certificate of Need

(1) The Public Health Division sets application fees for certificates of need (checks shall be payable to the Public Health Division).

(2) The application fees shall not be waived, except in the case of projects which are intended to predominantly serve medically indigent persons provided that such projects are eligible for abbreviated review under OAR 333-560-0010(1).

(3) Application fees shall not be refundable after the application is considered complete by the Division, except as provided under subsection (6)(b) of this rule.

(4) The application fee for projects shall be in accordance with the fee schedule contained in **Table 4**.

(5) An applicant who has submitted an application which was withdrawn before being declared complete may receive a refund of 90 percent of the application fee, less any legal fees incurred by the Division in review of the application or its letter of intent, provided that the applicant makes a written request for return of the fee. However, incomplete applications which are not completed within one year of their initial submission shall not be eligible for any refund of the fee.

(6) If the total project costs reported upon completion of the project under OAR 333-575-0000(8) differ by more than 10 percent from the costs projected in the initial application, the Division will:

(a) Order the applicant to pay an additional fee, if the actual costs upon completion would have required a higher fee under section (4) of this rule; or

(b) Make a refund to the applicant, if the actual costs upon completion would have resulted in a lower fee than that which was paid at the start of the review.

333-565-0010
Civil Penalties

(1) The Public Health Division may impose civil penalties upon any person who violates ORS 442.315 through 442.347, any rule promulgated thereunder, or any order issued by the Division under this authority, including the violation of any condition set forth in an order granting a certificate of need.

(2) A notice of civil penalty shall include a statement of appeal rights as provided in ORS 183.745.

(3) Civil penalties imposed under this rule shall not exceed $500 a day per violation.

DIVISION 570

CERTIFICATE OF NEED REVIEW REQUIREMENTS AND PROCEDURES

333-570-0010
Submission of Certificate of Need Application

After the letter of intent is properly filed and the waiting period determined under OAR 333-555-0010 has elapsed, an applicant which is not eligible for abbreviated review shall submit to the division:

(1) Four completed copies of the application form provided by the division which shall be substantially as shown in division 580 of this Chapter; and

(2) The appropriate application fee made payable to the State Treasurer.

(3) Only one applicant is required to apply for a certificate of need for any one project. If more than one party has submitted a letter of intent and been ruled subject to review for the same project, the parties shall decide among themselves who will apply for the certificate of need. If these parties cannot agree on who shall apply, they may submit competing applications. In such cases, the applications will be reviewed under the simultaneous review procedures in OAR 333-560-0030.

333-570-0020
Initial Review of Application

(1) After receiving the application and fee, the division shall notify the applicant in writing not later than 15 days after receipt by the division of the application and fee that:

(a) The application is complete;

(b) The application is not complete, and request additional information; or

(c) The application is not complete and is being returned to the applicant for necessary revision and resubmission.

(2) An application shall not be found incomplete if it contains the information prescribed and adopted by rule by the division as being necessary.

(3) If the division fails to make a determination within 15 days after receipt of the application and fee, the application shall be automatically considered by the division as complete.

(4) An application which remains incomplete for at least one year following its submission shall be considered to have been withdrawn.

333-570-0030
Notice

(1) After determining an application complete, the division shall provide by direct mailing written notification to the following that the application is complete:

(a) The applicant;

(b) Any health care facilities and HMOs located in the service area which provide similar institutional health services;

(c) The chairperson of the council;

(d) Newspapers providing general circulation to the affected community; and

(e) Persons who have requested and been granted designation as affected parties.

(2) Notices shall include the following information:

(a) The division, under ORS 442.315 and this chapter, is considering the application;

(b) A proposed schedule of review to include, but not limited to:

(A) The date by which the division must render a decision pursuant to OAR 333-570-0070(1);

(B) That persons potentially affected may request to receive correspondence relating to the application; and

(C) The mailing address for all communications relating to the application for a certificate of need.

333-570-0050
Modification to Application

(1) An applicant may withdraw its certificate of need application from review at any time.

(2) An applicant may amend its application provided that such amendments are received not later than 45 days following submission of a complete application. This section applies only during the course of review of an application and does not apply to an application undergoing reconsideration or appeal:

(a) In accord with OAR 333-545-0020(3), any substantial change in a proposal shall be considered an amendment, whether or not such change is in response to concerns raised by the division. Amendments include, but are not limited to, modifications such as those described in 333-575-0000(4)(a) to (k). Clarifications or explanations of aspects of a proposal, which do not involve material changes in the project, will not be considered amendments;

(b) Amendments proposed after 45 days following submission of a compete application may be made only if the division agrees to accept the amendment;

(c) The division may condition the consideration of any amendments submitted after the deadline stated in this section on the applicant granting an extension of the review period sufficient, in the division's judgment, to allow consideration of the new material.

333-570-0060
Public Meeting

(1) Any person affected by an application which is not subject to abbreviated review may request the division to hold a public meeting and, if the request is timely, the division shall hold such a meeting. The purpose of the public meeting is to discuss issues rel-

evant to the application(s) under review and to allow submission of documents or other evidence relevant to the application.

(2) Requests for a public meeting shall be made not later than 21 days before the division's decision is due. Applicants and other interested parties are advised to submit requests for public meetings at the earliest possible opportunity, because in some cases the division may issue its proposed order more quickly than required.

(3) The division may hold a public meeting at its initiative.

(4) Any person may speak at a public meeting, and any person who speaks at the public meeting may be questioned by the division's staff. No questions by other than staff of the division will be allowed, unless permission is given by the chair.

(5) The administrator of the Public Health Division, or the administrator's designee, shall chair and conduct the meting.

(6) Notice of a public meeting during the course of review shall be served on the parties specified in OAR 333-570-0030(1).

Stat. Auth.: ORS 431.120(6) & 442.315

333-570-0070
Decision on Approval or Denial of Application

(1) Within 90 days of a written declaration by the division of a complete application not eligible for abbreviated review, unless time is extended pursuant to subsection (c) of this section or OAR 333-560-0030, the division shall:

(a) Make written findings and a decision; and

(b) Serve by registered or certified mail on the following, the findings, decision and notice of opportunity for reconsideration:

(A) The applicant; and

(B) Persons who have requested and been granted designation as affected parties.

(c) The 90-day time frame for review may be extended by the division with the written agreement of the applicant. In the case of applications subject to simultaneous review under OAR 333-560-0030, extension of the time frame for review will require the written agreement of all applicants involved in simultaneous review, and the same extension must be applied to all such applications. If an applicant submits additional information within two weeks of the date that the proposed or final decision is due, the division may extend the time frame for review on its own initiative, in order to allow sufficient time to review the material submitted.

(2) The chairperson of the council shall be sent a copy of the findings and decision by regular (not registered or certified) mail.

(3) The division may approve or deny the application in whole or in part:

(a) The division may place conditions on an application which is being approved that apply to the implementation of the project. Any condition must be directly related to the project under review and to review criteria and standards which have been adopted into rule;

(b) A binding arrangement allowing purchase of the site, should the application be approved, or acquisition itself, is required to have occurred before an application may be approved.

(4) The decision reached according to section (1) of this rule shall be the "proposed decision" referred to in ORS 442.315(5)(a) and shall become the final decision of the division unless, within ten days after service of the "proposed decision," the request for informal hearing is received by the division.

(5) Upon request of the applicant or any affected person who is dissatisfied with the proposed decision, the division shall grant an informal hearing prior to a final decision. A request for an informal hearing must be received by the division within ten days after service of the proposed decision. The division will give notice of the date, time and place of the informal hearing and will hold the hearing not later than 15 days following receipt of the request.

(6) The informal hearing is for the purpose of providing an opportunity to the applicant or any affected person requesting the hearing to discuss the proposed decision with the division. The hearing may include the provision of new information, or other actions that may result in the division amending its proposed decision. The application may be modified at the informal hearing only if the provisions of OAR 333-570-0050(2) are met.

(7) The informal hearing will be conducted in the following manner:

(a) The informal hearing will be conducted by the administrator, or the administrator's designee;

(b) No minutes or transcript of the informal hearing will be made;

(c) The party requesting the informal hearing does not have to be represented by counsel and will be given ample opportunity to present information;

(d) Other affected parties will be allowed to testify at the informal hearing following the requestor's testimony;

(e) Only staff of the Public Health Division will be allowed to question people testifying at the informal hearing, unless permission is given by the hearing officer for others to question those testifying;

(f) The administrator, or the administrator's designee, may set time limits for testimony in order to assure a timely and equitable presentation of information;

(g) The party requesting the informal hearing may be requested by the administrator, or the administrator's designee, to submit, in writing, new information that has been presented orally;

(h) The administrator, or the administrator's designee, may allow information to be submitted after the adjournment of the informal hearing. In such an instance, a specific date for receiving such information will be established and will serve as the date when the informal hearing will be considered closed.

(8) The division will render a final decision within ten days of the closing of the informal hearing.

(9) When a request for informal hearing has been made in a timely manner but is later withdrawn, the order on the affected application shall become final either on the date the request is withdrawn or ten days from the date of service of the proposed order, whichever comes later.

(10) The final decision of the division shall be subject to a reconsideration hearing according to provisions of division 670 of this chapter, if a petition for hearing is received within 60 days after service of the final decision.

(11) A certificate of need granted to a health care facility is the property of the licensed provider, not of the owner of a physical plant, if these are different.

DIVISION 575

MONITORING OF IMPLEMENTATION AND COMPLETION OF PROJECTS WITH CERTIFICATES OF NEED

333-575-0000
Monitoring of Implementation, Completion and Project Changes Subsequent to Approval

(1) The Public Health Division shall require reporting by the applicant necessary and sufficient to monitor the project to assure that it conforms to the certificate of need as issued by the division.

(2) The division shall require reporting by the applicant, not less often than once every three months of the project's progress following date of the certificate of need issuance (until the project is complete). Reporting required by this section shall be on Form

SIM-1. Any applicant who fails to provide such reports for one year shall be deemed to have abandoned its certificate of need for the project, provided that the division has requested such reports in writing.

(3) A change of size or type in any of the items in section (4) of this rule, from that specified in the certificate of need shall be reported by the applicant to the division not later than 15 days prior to the change, and shall be approved or denied in advance of the change by the division. Such reporting shall be on Forms SIM-1 and SIM-2 which shall be obtained from the division as needed.

(4) Items in which a change in subject to advance reporting in accordance with section (3) of this rule are:

(a) Change of site, or significant changes in location of the project on the site;

(b) General arrangement or relocation of department areas or other sections within the project;

(c) An increase or decrease of ten percent or more in allocated space for the project;

(d) Number of beds;

(e) Increase or decrease of potential bed capacity (shelled-in or finished space for beds);

(f) Modifications of lease or purchase agreements unless the changes will increase or decrease cost of the least or purchase agreements by less than ten percent (reported according to accepted accounting principles); or new lease or purchase agreements (reported according to accepted accounting principles);

(g) Project costs or construction cost increase or decrease in excess of ten percent of the approved totals;

(h) Project completion dates later than 90 days after the approved project schedule contained in the application;

(i) Financing term, interest rate on borrowings, amount of borrowings, balloon payments, or loan fees if these changes singly or in combination will result in cost or charge increase of ten percent or more in the total cost of the project including interest or in charges to the patient;

(j) The addition of a new health service or expenditure which was not specified in the application or order issuing the certificate of need; or

(k) Changes in the applicant's corporate status or ownership (except stock transfers), including but not limited to development of a joint venture or partnership as a part of the implementation of the project.

(5) When a project is found to have substantially exceeded the scope of an approved certificate of need, as defined in section (4) of this rule, and the division has not approved the project changes or cost overrun, or both, the division may institute proceedings in the circuit courts to enforce obedience to the certificate of need order issued by the division, as provided in ORS 442.315(6) and (10).

(6) For any projects that involve remodeling or new construction, the applicant shall provide written notification to the division of the date the project is to be occupied for service.

(7) Before construction, remodeling or modernization begins, the applicant shall submit to the division the final architectural plans of the project, as required by Division 675 of this Chapter.

(8) Upon completion of the project for which a certificate of need was issued, the applicant shall report to the division actual final capital expenditures as a revision of Form CN-3 of the application form and total project cost including interest as a revision of Form CN-4.

(9) Upon completion of a project, as indicated by submission to the division of correctly completed Forms SIM-1, CN-3, and CN-4, the division shall respond within 30 days with a statement acknowledging that the project is complete. The division shall also either acknowledge that the project is within the scope of the approved certificate of need and any approved changes to the certificate of need or shall indicate areas that are not within the scope of the approved certificate of need. If the project is not within the scope of the approved certificate of need, the division may seek an injunction from the circuit courts or other action to enforce obedience to the certificate of need order, as provided in ORS 442.315(6) and (10). The division's monitoring of projects, and the requirements that the applicant report to division concerning projects, terminate at the time a project is completed.

(10) A project is considered to be completed on the date that the new service, area, facility, or equipment begins to treat patients. The certificate of need shall be considered to have expired at the time that the project for which it was issued is completed.

333-575-0010

Financial Reporting Requirements

Applicants are subject to the following financial policy and reporting requirements following approval of a certificate of need application, when these reporting requirements have not been met during the review process itself. The applicant shall report on the receipt of the items listed below, on Form SIM-1:

(1) Each applicant must submit within 30 days after it becomes available, a copy of the financial feasibility report if the applicant arranges for such a report.

(2) When a bond rating report is issued in conjunction with a proposed bond issue to fund a certificate of need proposal, the applicant must submit a copy of the report to the division within 30 days of its issuance

(3) When debt financing is used for a certificate of need project, the actual rate of interest obtained must be reported within 30 days of securing financing.

DIVISION 580

CERTIFICATE OF NEED APPLICATION INSTRUCTIONS AND FORMS

333-580-0000

General Instructions

All applications must be completed in accordance with the instructions contained in this division. Only those parts which are pertinent and appropriate to the proposed project need be completed, but when a particular criterion or section is not applicable, the applicant must briefly explain why it does not apply. All documents submitted to the Public Health Division are public information. Assistance, or additional copies of the certificate of need rules, can be obtained upon request by contacting: Certificate of Need Review Coordinator, Public Health Division, 800 N.E. Oregon, #21, Portland, OR 97232. Phone: (971) 673-1108. Review of all applications not subject to abbreviated review under OAR 333-560-0010 will be governed by the following considerations:

(1) The review process is governed by divisions 545 through 670 of OAR chapter 333.

(2) An application must have been preceded by a letter of intent on which the division has ruled; and the waiting period defined in OAR 333-555-0010 must have been completed.

(3) A single application should be filed for a project involving two or more project types when most aspects of the overall project are interdependent for purposes of making a decision.

(4) All application contents must be typed or legibly printed.

(5) To assist in achieving the equitable and objective review and determination, all replies required by this division should be as complete as possible. Incomplete applications will delay the review process.

(6) Any schedules or continuation sheets called for must be attached to the applicable section.

(7) External documents (e.g., an applicant's long-range plan, or consultant's study report, etc.) may be incorporated by reference as part of the application to avoid duplication of effort by the applicant. When this option is taken, the application *must* show the

chapter, page or section reference number of the external document where the respective responses are contained, and the document referenced must be provided to the division.

(8) Burden of proof for justifying need and viability of a proposal rests with the applicant.

(9) Each certificate of need application must be accompanied by an application fee made payable to the Public Health Division, in the amount as shown in the Fee Schedule, OAR 333-565-0000(4).

(10) The division must make a determination of completeness of all pertinent sections of the application with 15 days of receiving it, as provided in OAR 333-570-0020. The division will notify the applicant in writing of the determination of any additional information needed, or of completeness.

(11) Any amendments to the application must be in writing, and will be considered in reference to OAR 333-570-0050. Amendments may cause the application to be treated as a new application if submitted more than 45 days following the division's written determination that the application is complete, unless the division agrees to accept the amendment.

(12) Applications may be withdrawn at any time without prejudice (OAR 333-570-0050(1)). Applicants shall notify the division in writing of any withdrawal. Application fee refunds may only be made if withdrawal is made in writing prior to the division's determination of completeness (OAR 333-565-0000(3) and (5)), or if the actual costs of a completed project are over ten percent less than the approved costs (OAR 333-565-0000(6)(b)).

(13) Applicants must complete all appropriate sections of the application, and submit to the division the required number of copies of application forms (printed on white paper), and all attachments describing the project, or responding to the review criteria.

(14) Upon request by the applicant, the division may waive the requirement for the completion of some parts of the application. This will provide an opportunity for the applicant and the division to eliminate unnecessary collection and submission of information.

(15) Applicants for a certificate of need shall provide four copies of the *entire* application to: Certificate of Need Review, Public Health Division, 800 N.E. Oregon, #21, Portland, OR 97232. Four copies shall also be submitted to the division of any amendments to the application or supplementary materials.

(16) Preapplication conferences are encouraged; and these application instructions are designed to make application for a certificate of need relatively simple. However, Public Health Division staff are available to further assist the applicant in this process.

Stat. Auth.: ORS 431.120(6) & 442.315

Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-580-0010
Application Format

The application should be presented in four sections:

(1) Section A — Introduction;

(2) Section B — Narrative discussion addressing the proposal's relationship to the statutory certificate of need review criteria as defined in OAR 333-580-0040 through 333-580-0060;

(3) Section C — Completed required forms; and

(4) Section D — Appendices.

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-580-0020
Section A — Introduction

The applicant shall provide a short introductory narrative of the proposal outlining the major aspects of the proposal.

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-580-0030
Section B — Review Criteria

(1) The applicant must demonstrate in narrative form that its proposal satisfies the criteria specified in OAR 333-580-0040 to 333-580-0060 and the applicable service-specific need methodologies and standards in divisions 585 through 645. The application must have narrative sections corresponding to each section of OAR 333-580-0040 to 333-580-0060 (those statements labeled "(1)," "(2)" etc.). In each section, the criterion to be addressed is shown in italics. An explanation of the way in which the criterion is to be addressed and specific issues to be discussed is then provided. The narrative should address each of these issues.

(2) The division will make findings and base its decision on the extent to which the applicant demonstrates that the criteria and standards referenced in section (1) of this rule are met. Criteria will be considered to have been met if the applicant can demonstrate that the questions posed in the criteria can be answered in the affirmative. An application will be decided in accordance with the statutes and rules in effect at the time of filing of a completed letter of intent for that application. A completed letter of intent will be considered to have been filed only if the division finds that it includes all of the information required under OAR 333-555-0020(1).

(3) Each relevant issue in the outline of criteria must have a written explanatory response which includes supporting evidence and identifies the source of evidence, assumptions, methodologies used in projections, estimates, etc.

(4) Applicants are encouraged to include any additional information relevant to the review criteria which was not specifically requested by the state, but which would further support the proposal.

(5) Applicants must demonstrate to the division that a proposal is approvable. All other application sections are supportive of this section.

333-580-0040
Need

Applicants must provide a narrative discussion of each of the following:

(1) Criterion: Does the service area population need the proposed project?

(a) The applicant must identify the service area's need for the proposal in the past, present and future;

(b) In establishing the magnitude of present and future need for each service element, the applicant will:

(A) Use appropriate indicators of a population's need (i.e., population-based use-rates, population-based "medical necessity" rates, or established productivity standards);

(B) Use the standards and need methodologies specified in divisions 585 through 645 of OAR chapter 333 applicable to the services or facilities being proposed;

(C) Consider industry standards and historical experience as appropriate comparisons where plans are silent;

(D) In the case of nursing home beds, determine whether the added beds are consistent with plans adopted by the relevant area agency on aging and the state Seniors and People with Disabilities Division.

(2) Criterion: If the project involves remodeling or replacement of an existing health facility structure, are there significant functional inefficiencies, obsolescence or structural problems which the facility has which seriously compromise the effective delivery of health care to patients, and which would be substantially corrected by the proposed project? The narrative should:

(a) Identify and demonstrate all significant functional inefficiency (including physical access) problems;

(b) Identify and demonstrate all significant obsolescence problems; and

(c) Identify and demonstrate all significant structural problems.

(3) Criterion: Will the proposed project result in an improvement in patients' reasonable access to services? The applicant will identify any potential problems of accessibility including traffic

patterns; restrictive admissions policies; access to care for public-paid patients; and restrictive staff privileges or denial of privileges.

(4) Criterion: If the project proposes to serve the needs of members of a health maintenance organization, do these members need the proposed project, considering the special needs and health care utilization rates of this population?

(a) HMOs shall:

(A) Identify the needs of their members, subscribers and enrollees for the proposal;

(B) Demonstrate that the identified needs are reasonable when related to the health care costs of present and future members, subscribers and enrollees;

(C) Describe the proposal's potential for reducing the use of inpatient care in a community through an extension of preventive health services and the provision of more systematic and comprehensive health services;

(D) Identify the availability, and estimate the cost, of obtaining proposed beds, services or equipment from existing providers in the area, who are not HMOs.

(b) A certificate of need shall be issued to meet the needs or reasonably anticipated needs of group members when beds, services or equipment are not available from non-plan providers in the area to be served. Beds, services or equipment are not available to an HMO from a non-HMO provider unless:

(A) They would be available through a long-term contract of sufficient duration and with sufficient provisions for notice of termination to enable the HMO to negotiate an alternative contract with another non-HMO provider, or to develop facilities and/or service capabilities and operate same after notice of contract termination from the non-HMO provider;

(B) They would be available and accessible to physicians associated with the HMO on a basis comparable to physicians not affiliated with the HMO (e.g., HMO physicians have or will have staff privileges);

(C) They could be provided by a non-HMO provider in a manner that can demonstrate to be as cost effective as if they were developed and operated by the HMO; and

(D) They would be available in a manner that is consistent with the HMO's basic method of operation (e.g., acute care centralized at one non-HMO provider as opposed to contracts for care at multiple non-HMO providers).

Stat. Auth.: ORS 431.120(6), 442.315 & 442.325
Stats. Implemented: ORS 431.120(6), 442.315 & 442.325

333-580-0050
Availability of Resources and Alternative Uses of Those Resources

Applicants must provide a narrative discussion of each of the following:

(1) Criterion: Does the proposed project represent the most effective and least costly alternative, considering all appropriate and adequate ways of meeting the identified needs?

(a) The applicant must demonstrate that the best price for the proposal has been sought and selected;

(b) The applicant must demonstrate that proposed solutions to identified needs represent the best solution from among reasonable alternatives:

(A) Internal alternatives:

(i) The applicant must list the major internal operational adjustments considered which could lower the cost and improve the efficiencies of offering the beds, equipment or service;

(ii) The applicant must demonstrate that the alternative considered represents the best solution for the patients, and discuss why other alternatives were rejected;

(iii) If the proposal is for an inpatient service, whether new or expanded, applicant must demonstrate this method of delivery is less costly than if done on an outpatient basis;

(iv) The applicant must demonstrate that the selected architectural solution represents the most cost effective and efficient alternative to solving the identified needs.

(B) External alternatives:

(i) If the proposed beds, equipment or services are currently being offered in the service area, applicant must demonstrate:

(I) Why approval of the application will not constitute unnecessary duplication of services;

(II) Why the proposal is an efficient solution to identified needs;

(III) Why the proposal represents the most effective method of providing the proposal; and

(IV) That the applicant can provide this proposal at the same or lower cost to the patient than is currently available.

(ii) If paragraphs (A)(i) to (A)(iv) of this subsection cannot be demonstrated, the applicant must show that without the proposal, the health of the service area population will be seriously compromised.

(C) Less costly alternatives of adequate quality:

(i) If a less costly and adequately effective alternative for the proposal is currently available in the area, the applicant must demonstrate why its proposal is:

(I) Not an unnecessary duplication; or

(II) A more efficient solution to the identified needs.

(ii) Applicants must demonstrate that the identified needs of the population to be served cannot be reasonably served under current conditions, or by alternative types of service or equipment or equal quality to the proposal. "Alternatives of adequate quality" does not imply that they need be exactly like those being proposed, but only that they meet identified needs at state approved levels.

(D) If there are competing applications for the proposal, each applicant must demonstrate why theirs is the best solution, and why a certificate of need should be granted them.

(2) Criterion: Will sufficient qualified personnel, adequate land, and adequate financing be available to develop and support the proposed project? The applicant must demonstrate that there are, or will be sufficient physicians in the area to support the proposal; sufficient nurses available to support the proposal; sufficient technicians available to support the proposal; adequate land available to develop the proposal and accommodate future expansion; and the source(s) and availability of funds for the project.

(3) Criterion: Will the proposed project have an appropriate relationship to its service area, including limiting any unnecessary duplication of services and any negative financial impact on other providers?

(a) The applicant must identify the extent to which the proposal and its alternatives are currently being offered to the identified service area population, or, in the case of acute inpatient beds, could be offered on the basis of an analysis under division 590 of this chapter;

(b) The applicant will discuss to the best of his or her knowledge, any negative impact the proposal will have on those presently offering or reimbursing for similar or alternative services. Areas to be discussed are utilization, quality of care, and cost of care;

(c) The applicant must demonstrate that jointly operated or shared services between the applicant and other providers have been considered and the extent to which they are feasible or not;

(d) The applicant must demonstrate that all necessary support services and ancillary services for the proposal are available at acceptable levels to insure that patients will have the necessary continuity in their health care.

(4) Criterion: Does the proposed project conform to relevant state physical plant standards, and will it represent any improvement in regard to conformity to such standards, compared to other similar services in the area?

(a) The proposed project must comply with state licensing, architectural and fire code standards;

(b) If the proposal is already being offered in the defined service area, the applicant must describe, to the best of his or her knowledge, to what degree the existing service complies with state licensing, architectural and fire code standards.

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-580-0060
Economic Evaluation

Applicants must provide a narrative discussion of each of the items below. The entity actually proposing to implement a certificate of need must submit the required financial data. Additional financial data may be required to be presented by the applicant or a related entity to isolate the financial activities of the proposal:

(1) Criterion: Is the financial status of the applicant adequate to support the proposed project, and will it continue to be adequate following implementation of the project?

(a) Any financial forecasts which deviate significantly from the financial statements of the five-year historical period presented in the application must be fully explained and justified;

(b) An applicant must describe how it will cover expenses incurred by the proposal in the event the proposal fails to meet budgeted revenues in any forecasted year;

(c) Applicants must discuss the results of ratio analysis required by Form CN-9 and OAR 333-580-0100(4), explaining strengths and weaknesses. The discussion should refer to each ratio as detailed in **Table 1** of OAR 333-580-0100(4). Specifically:

(A) Applicants must describe their debt capability in terms of the required ratio analysis;

(B) The discussion of liquidity should include comments on the adequacy of cash, the collection period for patient accounts receivable, and the payment period for accounts payable;

(C) The profitability ratios required by OAR 333-580-0100(4) and Form CN-9 must be discussed.

(d) Board designated assets: The intended uses of this fund are to be discussed in general terms. Alternative uses or contingent availability of these funds, such as to meet a cash requirement, also need to be addressed. Additionally, the proportion (percent) of depreciation that was or is to be funded is to be identified for each financial period presented;

(e) The applicant must discuss the availability of other sources of funding, including, but not limited to, donor restricted assets, assets of parent or subsidiary corporations, or a related foundation which may be acquiring assets and/or producing income that is for the purpose of, or could be used for the purpose of, capital expenditure by the applicant;

(f) Money market conditions must be discussed in terms of their impact on project financing, including interim financing, if applicable. Include the month and year in which financing is to be secured in this narrative:

(A) The estimated rate of interest must be justified by the applicant. If debt financing is secured before or during the review process, the actual rate of interest obtained should be reported within 30 days of securing financing;

(B) When a bond rating report is issued before or during the review period in conjunction with a proposed bond issue to fund a certificate of need proposal, the applicant must submit a copy of the report to the division within 30 days of its issuance;

(C) The financing term selected must be supported with evidence showing the benefits of its selection.

(g) Patient days, admissions and other units of service used in forecasting projected expenses and revenues, both for the facility as a whole and for services affected by the proposed project, must be consistent with projections used to determine area need. All assumptions must be discussed;

(h) An applicant must identify and explain all inflation assumptions and rates used in projecting future expenses and in completing the forms described in OAR 333-580-0100. It is important that the assumptions used by the applicant in preparing financial forecasts be carefully considered. All relevant factors pertaining to historical experience of the applicant, together with upcoming changes affecting the future, should be considered in forecasting the financial condition of the entity. Specifically:

(A) Projected changes in wages and salaries should be based on historical increases or known contractual obligations and planned future personnel increases. Considerations should include expected full-time equivalent staffing levels, including increases resulting from the proposal;

(B) Projected deductions from revenues should be explained and justified;

(C) Expected changes in the intensity and/or complexity of services provided must be considered in addition to the rate of inflation in arriving at an overall rate of increase in revenues or expenses;

(D) Projected gross revenue must reflect:

(i) Patient day increases/decreases;

(ii) Outpatient activity increase/decrease;

(iii) All debt service coverage requirements; and

(iv) Other significant impacts the proposal will make on revenue projections.

(i) Each applicant must submit within 30 days, a copy of the financial feasibility report if the applicant arranges for such a report and it becomes available before or during the review period.

(2) Criterion: Will the impact of the proposal on the cost of health care be acceptable?

(a) The applicant must discuss the impact of the proposal both on overall patient charges at the institution and on charges for services affected by the project:

(A) An applicant must show what the proposal's impact will be on the gross revenues and expenses per inpatient day and per adjusted patient day;

(B) When a health service is affected by the proposal, an applicant must demonstrate what impact the proposal will have on related patient charges and operating expenses. Expenses and patient charges for individual health services will be compared to historical and forecasted rates of increase for the facility as a whole.

(b) The applicant must discuss both the proposed or actual charges for the proposed service and the profitability of the proposed service, compared to other similar services in the state (if any);

(c) The applicant must discuss the projected expenses for the proposed service, and demonstrate the reasonableness of these expense forecasts;

(d) If the proposed service is currently not being provided in the area, the applicant should identify potential travel cost savings by:

(A) Establishing what the existing travel costs are to patients;

(B) Establishing what the travel costs will be to patients after implementation of the proposal; and

(C) Showing what the difference is between the figures in paragraphs (A) and (B) of this subjection.

(e) The applicant must discuss the architectural costs of the proposal:

(A) An applicant must demonstrate that the existing structure will last long enough to derive full benefits from any new construction or remodeling;

(B) General construction costs must be within reasonable limits (within high/low range as described in the most current issue of the Dodge Research Report adjusted for location).

333-580-0070
Special Requirements for Certain Types of Proposals

(1) As required by ORS 442.584, applications proposing any of the technologies or services selected for assessment by the Health Resources Commission must include the information specified in section (2) of this rule. This requirement shall not apply until such time as the Health Resources Commission has selected the technologies that it will assess under ORS 442.583.

(2) Applications for projects involving any equipment or services selected for assessment by the Health Resources Commission must include the following information in a separately identified section or appendix to the application:

(a) The estimated number of patients needing the service or procedure who are not currently being served and who cannot be served by existing programs in the service area;

(b) The anticipated number of procedures to be performed per year for a five-year period commencing on the date the service is started or the technology is acquired;

(c) The anticipated number of patients to be served by the applicant, based on the incidence in the population to be served or the conditions for which the technology or service will be used;

(d) Clinical indications for ordering use of the technology or service, with appropriate references to relevant literature;

(e) An estimate of the treatment decisions likely to result from the technology or service;

(f) A proposed method for collecting data on the patients served, costs engendered directly or indirectly and the health outcomes resulting from use of the technology or service.

(3) The information required under this rule will not be used as a basis for any decision to approve or deny any application.

333-580-0080
General Instructions for Section C — Completion of Forms

Applicants must complete Forms CN-1 through CN-12 and include these forms with the application, except that forms which are not relevant to the proposal need not be completed. Applicants should contact the Public Health Division to determine which forms are relevant to their proposal. Additional tables and graphs may be provided, and should appear as appendices in Section D and be referenced to the applicable discussion and criteria in Section B. Form CN-1 should be included as the first page of the application (after any cover pages and table of contents).

[ED. NOTE: Forms referenced are available from the agency.]
Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-580-0090
Completion of Architectural Forms

In completing Form CN-3, "Capital Expenditure Estimate," all costs identified on this form, which will be incurred at a future date, must reflect the effects of inflation.

[ED. NOTE: Forms referenced are available from the agency.]
Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-580-0100
Completion of Financial Forms

The applicant must submit financial information regarding the proposed service and the facility or organization as a whole on Forms CN-4 through CN-12. Projects with costs of under $1,000,000 need only forecast three years financial information. Other projects should forecast five years. If there is more than one entity with a financial interest in a proposal, the entity actually proposing to implement the project must submit the required financial data. Additional financial data may be required to be presented regarding other entities with an involvement in the project. All forms should be filled out using the accrual basis of accounting, unless the division has specifically approved another method:

(1) In completing Form CN-4, "Project Cost Estimate," the applicant should fill in all of the appropriate fund sources.

(2) In completing Form CN-5, "Income Statement," Form CN-6, "Balance Sheet," and Form CN-7, "Statement of Changes in Financial Position," the applicant should provide all line items requested. The applicant may use its own facility format if it includes all the line items requested, but in such cases the format used by the applicant should include a reference to the appropriate certificate of need form number.

(3) In completing Form CN-8, "Debt Service Coverage," the applicant should forecast debt service coverage using the accrual basis of accounting. Debt service coverage is to be computed as follows:

$$\frac{\text{Net Income + Depreciation + Interest Expense}}{\text{Principal + Interest Expense}}$$

(4) The applicant should complete Form CN-9, "Ratio Analyses," for the years requested. Financial performance of the applicant organization proposing the project will be evaluated by commonly accepted health care industry indicators related to financial soundness, plausibility of economic assumptions used, and overall effect on patient charges. These financial ratios are listed in **Table 1**. Applicants must use the formulas shown in **Table 1** in completing Form CN-9:

(a) If an applicant believes that some analysis, in addition to the Ratio Analysis, gives a more appropriate measure, the applicant may present such other analysis, together with an explanation of why it is more appropriate. The division will determine whether or not such alternative analysis is acceptable;

(b) As used in this rule:

(A) "Net Operating Income" means total operating revenue less total operating expenses;

(B) Total operating revenue is exclusive of nonoperating revenue;

(C) "Fund Balance" means the unrestricted fund balance at the end of the period;

(D) Average annual outpatient revenue and inpatient days should be taken from the applicant's audited financial data.

(5) In completing Form CN-10, "Volume-Adjusted Expenses and Revenues," the number of patient days used must be consistent with those cited elsewhere in the application. Unless otherwise approved by the division, historical figures will be derived from the Annual Reports of health facility utilization required by ORS 442.463.

(6) In completing Form CN-11, "Financial Analysis for Individual Services," all new or proposed revenue-producing clinical or nonclinical services which, by themselves, qualify for certificate of need review whether alone or a subpart of a project, must each have a financial analysis separate from the institution as a whole, and a separately-completed Form CN-11.

(7) In completing Form CN-12, "Sources and Uses of Funds for the Proposed Project," the applicant must provide all items requested.

(8) In providing all of the financial forecasts required by this rule, the applicant must base its forecast on estimates of the most probable financial position, results of operations, and changes in financial position for future periods. "Most probable" means that the assumptions have been evaluated by management and that the forecast is based on management's judgment of the most likely set of conditions and its most likely course of action.

DIVISION 585

GENERAL CRITERIA FOR DEMONSTRATION OF NEED IN CERTIFICATE OF NEED APPLICATIONS

333-585-0000
General Criteria for Demonstration of Need in Certificate of Need Applications

The applicant is responsible for providing information to the Public Health Division to adequately demonstrate that the applicant's proposal satisfies criteria specified in applicable rules:

(1) General criteria, application instructions and forms are contained in division 580 of this chapter. As part of meeting these criteria and requirements for a particular health service, the applicant must provide an analysis using the applicable methodology for demonstration of need for that service as adopted by the division elsewhere in this chapter.

(2) In the event that an applicant, at the time of filing a letter of intent, is proposing a service for which the division has not adopted, as rule, a methodology for demonstration of need; or for which the adopted methodology may appear to require modification

or clarification; the applicant may request, or the division or the applicant may initiate, rulemaking procedures under the state Administrative Procedure Act. In such circumstances, the division will make reasonable efforts to complete rulemaking procedures prior to the first possible filing date for the proposed application under this chapter, based on the letter of intent and other information received However, the actual application may raise unanticipated issues necessitating additional rulemaking procedures prior to written findings and decision by the division.

DIVISION 590

DEMONSTRATION OF NEED FOR ACUTE INPATIENT BEDS AND FACILITIES

333-590-0000
General

The applicant, in providing information to the Public Health Division to demonstrate need for a proposed new hospital, must satisfy the criteria specified in the Certificate of Need Application Instructions (division 580). This response will include completing an analysis using the methodology of the division (division 590).

Stat. Auth.: 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-590-0010
Definitions

As used in is division:

(1) "Acute Inpatient Care" means care provided in hospital beds, involving at least one overnight use of a bed. Acute inpatient care does not include skilled nursing facility, intermediate care facility, long-term care or supportive routine care for chronic disease or disability, convalescent care, or rest cures. Neither does acute inpatient care include outpatient or clinic care, emergency room care, outpatient laboratory tests, or ambulatory surgery. Acute inpatient care does include general medical/surgical care and short-stay specialty and sub-specialty acute care, including but not limited to gynecological, obstetrical, pediatric, ICU/CCU, psychiatric, alcoholism, chemical dependency, and rehabilitation care.

(2) "Acute Inpatient Bed" means a space with physical facilities which is being used to provide inpatient care to a patient located in a hospital and is intended primarily for occupancy by a patient who will be fed, lodged and treated on an overnight basis, except that newborn nursery bassinets, neonatal intensive care and labor room beds are not included.

(3) "Acute Inpatient Bed Capacity" is defined in OAR 333-545-0020(6), and means any space which could be made readily available for use as an acute inpatient bed, even if this space is not presently being used for this purpose.

(4) "Population-Based Discharge and Use-Rates" means rates based on geographical area patient origins and population rather than on the statistics of utilization of a single facility.

333-590-0020
Estimates of Need

The assumptions and methods described in this division are applicable to the interpretation of OAR 333-580-0040. Their practical purpose is to generate a range of quantitative estimates, against which to weigh the impact of qualitative factors, in determining bed need. This composite approach is necessary, in the absence of theoretically perfect and complete information about past, present and future.

Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-590-0030
Assumptions

The following general assumptions are made with respect to the balance between bed capacity and anticipated future utilization. In specific cases, certain assumptions may or may not apply:

(1) The annual patient days needed by the population of a health service area can be more confidently forecasted than the demand at a single hospital or local market area.

(2) Hospital service area patient days can be more confidently forecasted by isolating the trends in the area's population from trends in the area's use-rate (annual patient days per 1,000 population). The two trends can then be recombined by multiplication.

(3) Population-based acute inpatient use-rates (annual patient days in nonfederal, nonspecialty, short-term Oregon hospitals, divided by forecasted Oregon population) have declined for the past ten years, and are likely to continue to decline for the next ten years:

(a) Within the area to be served by the proposal, factors such as changing age structure of the population, transportation patterns and locations of physician specialists, may modify this effect, as may changes in the intensity or types of services delivered; and documented commitments to develop other procompetitive initiatives such as alternative delivery systems, selective contracting, successful competitive bidding, and other market oriented changes;

(b) At the applicant's request, the division may modify the general assumption that use-rate will decline. One basis for such modification can be documentation (which the division can validate) by the applicant that its facility does, or proposes to provide 30 percent or more of its services to meet elective acute care needs (which cannot be met at existing facilities in the hospital service area as defined in OAR 333-590-0050(1)) to individuals not residing within 50 miles by road in the case of nonemergency acute services; or 25 miles by road in the case of emergency acute services. In such a case, the applicant's population base for purposes of calculating use-rate will take into account the number of persons from outside the area to be served by the facility who are projected to use the facility;

(c) At the request of the applicant, the division may also modify the general assumption that use-rate will decline if the applicant provides documentation (which the division can validate) that its facility proposes to provide all or some of its services to members, subscribers and enrollees of institutions, HMOs or health care plans. In such cases, the population to be served by the facility will be considered to be the members, subscribers and enrollees of such institutions, HMOs or health care plans who reside in the facility's service area. In cases where the applicant provides or proposes to provide only a portion of its services to such members, subscribers and enrollees, the population to be served by the proposal will be adjusted on a proportionate basis. Assumptions as to the use-rate of such members, subscribers or enrollees will be based either on past experience of the institution, HMO or health care plan or, in the case where no past experience exists, on past experience of similar institutions, HMOs or health care plans in the state;

(d) At the request of the applicant, the division may also modify the general assumption that use-rate will decline if the applicant documents that its facility is either:

(A) A medical or other health professions' school; or

(B) A multidisciplinary clinic; or

(C) A specialty center; or

(D) A facility established or operated by a religious body or denomination to meet the needs of members of such religious body or denomination for care and treatment in accordance with their religious or ethical convictions, when these religious and ethical convictions demonstrably preclude use of established health care facilities in the area, and particular health care facilities provided for the purpose of rendering health care to such members. Utilization and beds at such facilities shall not be counted when considering the need for services at other facilities in the hospital service area.

(e) In such cases as stipulated in paragraph (d)(A), (B), (C), or (D) of this section, modification of the basic use-rate assumption shall be based on documentation (which the division can validate) by the applicant that a population different from or in addition to the hospital service area population (as defined in OAR 333-590-0050(1)) is served or will be served by the facility, and that this population has experienced trends in hospital use-rates which are different from those in the applicant's health service area. The use-rate assumption shall be modified only to the extent that the additional service area population or geographic area is taken into account. For example, if an applicant demonstrates that it draws patients from the entire state, then the use-rate would be assumed to decline at the statewide historical rate of decline.

(4) The share of patient days captured by a hospital in a given service area will generally be stable for the next ten years, unless local factors change.

(5) In estimating future market share, current hospital discharge data will be the basis against which the effects of factors such as population shifts; changes in future or past hospital location, service mix, age mix, or reimbursement mix; documented commitments to develop procompetitve initiatives such as alternative delivery systems, selective contracting and successful competitive bidding; and other evidence which may indicate changes in market share, such as projected decreases in market shares of other facilities, will be evaluated. The burden of proof shall be on the applicant.

(6) The use-rate of persons, ages 0–14, 15–44, 45–64, or 65 plus, from counties of origin expected to contribute substantially to future utilization of the hospital should be taken into account in interpreting quantitative estimates of future general use-rates, patient days and bed need.

(7) The number of beds needed to provide an anticipated range of patient days in a given hospital should be calculated to include an allowance for enough excess capacity to meet statistically estimated peak demand, taking into account number of beds, proximity to other hospitals, and feasibility of improved utilization through effective scheduling and other manage-ment actions.

333-590-0040
Determination of Service Area for Existing Hospitals

For purposes of divisions 545 through 670 of OAR chapter 333, the service area for an existing general hospital will be defined as including those zip codes from which either ten percent or more of the hospital's discharges originate, or in which the hospital has at least a 20 percent market share. Minor adjustments to the boundaries of the hospital service area may be made to create a contiguous service area or to conform more closely to the boundaries of demographic units for which census data are reported (county, county census division, enumeration district, or zip codes if conversion has been done).

(1) Discharge and patient day market shares in the service area of the applicant facility should be calculated from the most recent statewide patient origin studies. Changes in relative market shares should be examined if two or more such studies are available. Appropriate steps should be taken to adjust for comparability between these studies if they differ in number of hospitals included, and/or other pertinent factors. More recent patient origin data on a less than statewide basis may also be considered if a method of adjustment for balance-of-state origins and utilization acceptable to the division and the applicant can be developed prior to filing the application.

(2) Federal (V.A.) hospitals may be excluded from the calculation of discharge and patient day market shares, and from other steps in this methodology, but if federal hospitals are excluded from any step, they must be excluded from all steps. For instance, market shares cannot be calculated using nonfederal patient days when the service area use-rate is calculated based on combined federal and nonfederal patient days. If explicit adjustments for projected declines in users eligible for care in federal facilities acceptable to the division and the applicant can be developed prior to filing the application, this factor must be considered.

(3) In the absence of evidence to the contrary, current market shares will be expected to be stable. Factors to which consideration may be given include population shifts; different rates of population growth among subareas within the hospital service area; changes in hospital location service mix, age mix, reimbursement mix, transportation patterns, locations of physician specialists; projected changes in amount or types of utilization among other providers with market shares in the hospital service area; and documented commitments to develop procompetitive initiatives such as alternative delivery systems, selective contracting, successful competitive bidding, and other market oriented changes.

333-590-0050
Bed Need Methodology for Proposed New Hospitals

The method for estimating bed need at a proposed new general hospital shall be consistent with the principles enumerated in OAR 333-590-0030, and the legislative findings and policy of ORS 442.025:

(1) Determine the service area of the applicant facility as those zip codes from which either ten percent or more of the hospital's discharges are reasonably expected to originate, or in which the hospital would have at least a 20 percent market share. Minor adjustments to the boundaries of the service area may be made to create a contiguous service area or to conform more closely to the boundaries of demographic units for which census data are reported (county, county census division, enumeration district, or zip codes if conversion has been done). If a project proposes to serve a population group with special needs or beliefs, those factors must be taken into consideration as indicated in OAR 333-590-0030(3).

(2) Determine the estimated population for the hospital service area identified in section (1) of this rule for the benchmark years 1970, 1980, 1985, 1990 and 1995, as a basis for estimating population for individual past and future years. Available historical information regarding changes in hospital service area, because of factors identified in section (1) of this rule, may justify numerical adjustments to base populations and increments under each of the following steps:

(a) For 1970 and 1980, use the available U.S. census counts;

(b) For 1985, use the estimates developed by the Center for Population Research and Census at Portland State University;

(c) For 1990 and 1995, official population forecasts developed by the Center for Population Research and Census (CPRC) should be used. If previously prepared forecasts are not available from CPRC for the service area, then the applicant should contact the division to prepare a joint request for preparation of a service area forecast compatible with county and state forecast series. The applicant shall pay any associated costs. All reports prepared by CPRC must be made available to the division;

(d) To ensure the consistency of special forecasts prepared by CPRC for applicant facilities, the division may develop a memorandum of understanding with CPRC which specifies that the method used to produce these special forecasts is the same as that used to produce the official county-level forecasts coordinated to the state forecasts;

(e) If CPRC does not make available single-year projections, use linear interpolation to obtain estimated service area population for years between 1980, 1985, 1990 and 1995;

(f) The most recent CPRC estimates for years prior to the present year will be utilized;

(g) If age-specific forecasts are available, changes over time in the age composition of the service area population should be examined, and their implications for use-rates taken into consideration.

(3) Determine current year hospital service area and historical health service area population-based discharge and patient day use-rates from statewide patient origin studies. More recent patient origin data on a less than statewide basis may also be considered if

a method of adjustment for balance-of-state origins and utilization acceptable to the division and applicant can be developed. The historical rate of change in health service area average use-rate shall be estimated by the median of the annual percentage changes for the years 1977 through 1983. For health service areas I, II and III, the annual rates of change are, respectively, minus 2.875 percent, minus 0.774 percent, and minus 2.788 percent. This general assumption regarding future use-rate may be modified if one or more of the conditions specified in OAR 333-590-0030(3)(b), (c) or (d) are met:

(a) Determine current year and historical utilization, by the service area population of existing facilities, using available patient origin studies and data from the Annual Reports for Hospitals for each of the prior ten years, unless a request is approved to use the Medicare Cost Reports. List, chronologically, factors which may have affected these statistics, such as population shifts, and changes in hospital location, service mix, age mix, reimbursement mix, transportation patterns, locations of physician specialists, and changes in the intensity or types of services delivered;

(b) Estimate future utilization rates by the hospital service area population, based on CPRC projected age/sex breakdowns, according to consideration of each of a range of age/sex adjusted use-rates based on the most recent available statewide patient origin study for:

(A) The state as a whole;

(B) The health service area;

(C) The nearest facilities with service mixes most comparable to the proposed facility;

(D) The nearest facilities with comprehensive service mixes;

(E) Available HMO age/sex use-rate data for California, Oregon and Washington.

(4) Develop a consistent and reasonable set of well-documented assumptions regarding the appropriate use-rates reviewed in section (3) of this rule, and regarding the extent to which utilization at the proposed hospital will be "new" utilization and the extent to which it will replace utilization at existing hospitals.

(5) Analyze the advantages and disadvantages of both "new" and "replacement" components of utilization, with respect to both the population to be served and existing facilities, considering the legislative findings cited in ORS 442.025 with respect to reasonable access to quality health care at a reasonable cost.

(6) Given all information from the preceding steps, and the five- and ten-year population estimates, compute the range of possible future patient days in five years and in ten years at the facility, allowing appropriate adjustments for out-of-area utilization and other special factors or considerations indicated in OAR 333-590-0030(3). The division will assume that health service area use-rates will decline for the next ten years at the rate indicated in section (3) of this rule. The burden of proof for any different assumption will be on the applicant.

(7) Convert each computed value of forecasted patient days based on preceding sections of this rule to average daily census (ADC).

(8) For each of the values computed under section (7) of this rule, estimate the statistical variability, or standard deviation, of the daily census by the following rules:

(a) For hospitals with an ADC of 50 or greater, the standard deviation of the daily census is estimated as 5.08 + .064 ADC;

(b) For hospitals with an ADC less than 50, the estimate of the standard deviation is indicated in **Table 1**:

Table 1

Average Daily Census	Estimated Standard Deviation
10	4.0
15	5.0
20	5.6
25	6.2
30	6.7
35	7.2
40	7.6
45	8.0

(9) Estimate the statistically expected daily census at the facility by applying an appropriate multiplier to the results of section (8) of this rule, and adding that product to the results of section (7) of this rule. Select the appropriate multiplier by the following rules:

(a) If the facility is more than ten miles by road from the nearest alternative facility, use a multiplier of 2.88 to assure an available bed on all but one day out of each 500 days, a 99.8 percent probability;

(b) If the facility is ten miles or less by road from the nearest alternative facility, use a multiplier of 2.33 to assure an available bed on all but four days out of each 365, a 99 percent probability.

(10) Using a ten-year projection from the calendar year of submission of the application, and the analysis in sections (4) and (5) of this rule, select from the results of section (7) of this rule the most likely average daily census, noting the assumption in section (6) of this rule. Include consideration of the following factors:

(a) Whether it is planned that new health services will be added, or existing ones expanded, decreased or deleted; the best feasible mathematical estimates of appropriate utilization levels and patient days generated because of such changes; and the best available evidence of whether these will be "new" days areawide, or will shift present areawide utilization patterns for the service(s), or both;

(b) Whether any new or expanded services will involve:

(A) Adding physicians up to, but not beyond, established minimum physician-to-population ratios for applicable specialists; or

(B) Adding physicians beyond such ratios.

(c) Utilization generated as a result of addition of physician staff members, up to ratios specified in paragraph (10)(b)(A) of this rule may be considered in addition to utilization projected using the use-rate assumption in section (3) of this rule. In the event that the proposed situation is as in paragraph (10)(b)(B) of this rule, the estimated utilization so generated will not be counted as need. Physician-to-population ratios will not be used as a basis for reducing projected utilization derived from the basic use-rate assumptions in section (3) of this rule;

(d) Established minimum physician-to-population ratios for various specialties are to be derived from the following references: **Report of the Graduate Medical Education National Advisory Committee to the Secretary, Department of Health and Human Services,** Vol. II, Modeling, Research and Data Technical Panel, DHHS Publication No. (HRA) 81–652, September 1980, p. 22; and M.A. Bowman, et. al., **"Estimates of Physician Requirements for 1990 for the Specialties of Neurology, Anesthesiology, Nuclear Medicine, Pathology, Physical Medicine and Rehabilitation, and Radiology,"** Journal of the American Medical Association, 250 (November 18, 1983): 2623–27, p. 2625. Physician-to-population ratios are to be derived using the estimated physician requirements in each specialty nationwide for the year 1990 from these studies; and the middle series projection of the 1990 U.S. population from "Projections of the Population of the United States: 1982 to 2050 (Advance Report)," Population Estimates and Projections, Series P-25, No. 922, Bureau of the Census, October 1982. This projection is 249,731,000 persons.

(11) Select, from the results of section (9) of this rule, the peak daily census associated with the result of section (10) of this rule. If this number of beds exceeds the present number of acute inpatient beds within 50 miles by road of the population to be served, the applicant must evaluate the extent to which admissions scheduling by the applicant or by existing institutions could alleviate the need for new beds. The division shall evaluate the extent to which procedures and treatments that could be accomplished on an outpatient basis are planned to be handled on an inpatient basis at the applicant facility, and may make a compensatory adjustment in the bed need estimate. In performing this evaluation, the division shall consult with professional review organizations, third-party payers, and professional and provider organizations. One indication of need for compensatory adjustment may be a case mix adjusted Medicare diagnosis related group (DRG) length of stay or admission rate in excess of those at comparable facilities.

(12) If the result of section (11) of this rule indicates that added beds may be needed in the proposed hospital service area, an

applicant for a new facility shall weight its against the availability of beds at other facilities within 50 miles by road of the proposed facility's location and against the feasibility of alternative health care services, under OAR 333-590-0060.

(13) A certificate of need will be issued to meet the indicated need based on sections (11) and (12) of this rule, if supported by provisions of OAR 333-590-0060 and the division's findings on the criteria in division 580.

(14) If the number of beds proposed at the applicant facility cannot be justified under these general acute inpatient rules, a certificate of need for new specialty beds will not be issued unless an adjustment is indicated because conversion of other beds to sufficient specialty beds to meet calculated specialty bed need is not architecturally and economically feasible.

[Publications: Publications referenced are available from the agency.]

333-590-0060
Relationship of Proposed New Hospitals to Existing Health Care System

An applicant proposing a new acute inpatient facility, rather than replacement or expansion of an existing facility, must weigh its plans against the availability of beds at existing, reasonably accessible facilities, especially those within the proposed service area of the applicant; and against the feasibility of development of alternative facilities and services. To develop a quantitative estimate of the situation, the following methodology will be used. Its results are to be evaluated against factors such as quality of care; types of services; levels of care available; anticipated changes in hospital locations, patient origins, service mix, age mix, reimbursement mix, transportation patterns, population shifts, and locations of physician specialists; and documented commitments to develop pro-competitive initiatives such as alternative delivery systems, selective contracting, successful competitive bidding, and other market oriented changes:

(1) Identify as other significant providers, those hospitals located within the service area of the applicant facility.

(2) For the applicant and for each other significant provider, estimate the anticipated commitment ratio, considering the ratio of each facility's patient days originating from the service area of the applicant facility, to the total patient days originating from that service area, using the most recent available statewide patient origin data, or a more recent less than statewide study, properly adjusted for balance-of-state origins and utilizations.

(3) Calculate expected first year average daily census at the applicant facility, based on OAR 333-590-0050(7), and for each other significant provider for that year.

(4) Calculate peak daily census for that year at each facility by applying the methodology in OAR 333-590-0050(6) through (9) to the service area and utilization statistics for these facilities, using a multiplier of 2.33 in order to adjust for the low probability that all facilities will simultaneously be full.

(5) Estimate the commitment of beds by each facility to the hospital service area at peak occupancy as defined in section (4) of this rule, by multiplying the results of section (4) of this rule by the commitment ratios calculated in section (2) of this rule.

(6) To estimate available beds at each facility, subtract the peak occupancy of each, as defined in section (4) of this rule, from:

(a) The capacity defined in OAR 333-590-0010(3); and

(b) The measure in subsection (a) of this section, plus "shelled space," that is, convertible space which requires construction rather than merely changing furniture.

(7) Estimate the number of beds in excess of peak occupancy which could readily be committed to the service area of the applicant, by multiplying the results from section (6) of this rule by the commitment ratios developed in section (2) of this rule.

(8) Taking into consideration the factors listed at the beginning of this rule, evaluate the feasibility and costs of meeting the estimated future need at the applicant facility, as determined under OAR 333-590-0050, from the inventory of available beds identified in section (6) of this rule. Consider the financial feasibility of utilizing "shelled space" rather than new construction. The impact of approval of the proposal on the financial viability of facilities which share the applicant's market area shall be evaluated by the division using the financial ratios specified in OAR 333-580-0100(3) and (4).

(9) If need for acute inpatient beds is not demonstrated under OAR 333-590-0050; or if need is demonstrated but, under this rule, it is found that the need can be met by utilization of available beds at existing facilities which are within 50 miles by road of the proposed facility's location; the applicant must consider whether an alternative health facility, such as a freestanding emergency center, backed up by one or more existing acute inpatient facilities, would be the least costly way to solve the applicant's problem of meeting health care needs of the population involved. In addition, the applicant may prepare an analysis related to:

(a) Whether one or more of the factors indicated in OAR 333-590-0030(3)(b), (c) or (d) is likely to generate at least 30 percent or more of reasonably estimated acute inpatient care utilization by the population proposed to be served, and if so;

(b) Whether the applicant can document unsuccessful good faith efforts, prior to submission of the letter of intent, to arrange for utilization of existing facilities and/or services (if any such facilities or services exist within 50 miles by road of the proposed facility's location), consistent with meeting the needs of the population to be served in the least costly, least duplicative manner; and, if OAR 333-590-0030(3)(c) applies, consistent with the intended HMO service model and the provisions of section (10) of this rule.

(10) The division shall take into account the acute inpatient care needs of members, subscribers and enrollees of institutions, HMOs or health care plans, as defined in OAR 333-545-0020(14), that operate or support particular health care facilities for the purpose of rendering health care to such members, subscribers and enrollees:

(a) An applicant to serve such groups shall:

(A) Identify the needs of their members, subscribers and enrollees for the proposed facility or service;

(B) Demonstrate that the identified needs are reasonable when related to the health care costs of present and future members, subscribers and enrollees;

(C) Describe the proposal's potential for reducing the use of inpatient care in the community through an extension of preventive health services and provision of more systematic and comprehensive health services;

(D) Identify the availability, and estimate the cost, of obtaining proposed beds, services or equipment from existing providers in the proposed hospital service area, other than the applicant.

(b) A certificate of need shall be issued to meet the needs or reasonably anticipated needs of such group members when beds, services or equipment are not available from non-plan providers in the area to be served. Beds, services or equipment are not available to an HMO from a non-HMO provider unless:

(A) They would be available through a long-term contract of sufficient duration and with sufficient provisions for notice of termination to enable the HMO to negotiate an alternative contract with another non-HMO provider, or to develop facilities and/or service capabilities and operate same after notice of contract termination from the non-HMO provider;

(B) They would be available and accessible to physicians associated with the HMO on a basis comparable to physicians not affiliated with the HMO (e.g, HMO physicians have or will have staff privileges);

(C) They could be provided by a non-HMO provider in a manner that can demonstrate to be as cost effective as if they were developed and operated by the HMO; and

(D) They would be available in a manner that is consistent with the HMO's basic method of operation (e.g., acute care centralized at one non-HMO provider as opposed to contracts for care at multiple non-HMO providers).

(11) Based on subsections (9)(a) and (b), and (10)(a) and (b) of this rule, the division may consider proposed findings of need and feasibility, taking into account such factors as:

(a) At least 70 percent of the population to be served is more than 50 miles by road from the nearest hospital with 45,000 patient days or more in the most recent year for which data are available;

(b) Population base sufficient to sustain the new facility or service;

(c) Community effectively isolated from reasonable access to acute care services, given road and weather conditions;

(d) Financial condition of applicant adequate to handle consequences of failure of facility or service to open or to stay open, without financial impact on proposed population to be served;

(e) Whether the proposed service(s) and bed capacity(ies) represent the least costly approach, in relation to capital and operating expenses, to meet acute inpatient care need;

(f) Whether the facility, sized as required under subsection (e) of this section, is designed so that future expansion would be architecturally feasible;

(g) Restrictive admissions policies;

(h) Access to care for public paid patients;

(i) Restrictive staff privileges and/or denial of privileges at existing and proposed facilities.

DIVISION 600

DEMONSTRATION OF NEED FOR 24-HOUR HEALTH FACILITY INPATIENT CHEMICAL DEPENDENCY SERVICES

333-600-0000
General

In providing information to the Public Health Division to demonstrate need for various types of chemical dependency treatment services, the applicant must satisfy the criteria in the Certificate of Need Application Instructions (division 580). In completing the discussion of service area needs required by OAR 333-580-0040, the applicant should use the methodology in this division (division 600).

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-600-0010
Definitions

The definitions of OAR 333-590-0010 also apply to this division. The following definitions categorize specific types of chemical dependency treatment services. Certificate of need is required for sections (1) and (3) of this rule if the project involves the establishment of a new facility:

(1) "Medical Facility-Based Detoxification" means a short-term treatment, provided in a hospital during which medication is used under continuous medical supervision to restore physiological functioning.

(2) "Nonmedical Facility-Based Detoxification" means primarily nonmedical treatment by means of rest and fluid, with intermittent or limited medical supervision, not provided in a hospital, to restore physiological functioning.

(3) "Inpatient Hospital Services" means all medical and nursing services provided to persons who require 24-hour supervision as a result of acute or chronic medical and/or psychiatric illnesses associated with chemical dependency. Inpatient services may be delivered in a general or specialty hospital.

(4) "Residential Treatment Services" means services designed to facilitate treatment and rehabilitation of the chemically dependent person by creating a structured, therapeutic environment. Residential treatment services may be provided in the following:

(a) "Twenty-four hour residential treatment" means treatment in a residential treatment facility, non-hospital based, housing individuals who require 24-hour support and supervision;

(b) "Partial residential treatment" means a part-time day and night and/or weekend residential treatment facility for people who are able to work, or able to live at home, but not both, and who may need further support or supervision.

(5) "Rehabilitation Services" means a facility-based program of rehabilitation usually greater than 30 days.

(6) "Residential Maintenance Care" means 24-hour care other than that previously defined as detoxification, residential treatment, or rehabilitation and may include care provided in foster homes, small group homes, or boarding homes for chemically dependent persons.

(7) "Outpatient Treatment" means individual, family, or group services provided in a physician's office or clinic; generally on an individual appointment basis rather than the structured, scheduled group programs covered in subsection (4)(b) of this rule.

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94; OHD 11-1998, f. & cert. ef. 10-22-98

333-600-0020
Principles

(1) Chemical dependency service systems should provide a continuum of care which gradually increases demands for personal responsibility.

(2) Chemical dependency services systems should allow entry at any point in the treatment continuum based on individual need.

(3) All levels of chemical dependency treatment should be readily available for use with no person remaining too long at one level because of the lack of services at the next level.

(4) The chemical dependency service system should be designed to allow people to remain in less intensive treatment modes longer than in the initial, more intensive modes.

(5) Chemical dependency services should be delivered in the least expensive, least restrictive setting required to produce the desired results.

(6) Chemical dependency services systems should provide a variety of treatment approaches to meet any given level of need.

(7) Quick geographical access is considered essential for outpatient care, detoxification care and day treatment. If 90 percent of the chemically-dependent persons in the proposed service area who need to use a specific non-24-hour treatment program such as outpatient, day treatment, or detoxification are more than 35 miles by road from existing programs of the type that is needed, then more treatment capacity may be needed in a location accessible to the population.

(8) Quick geographical access is not considered essential for inpatient hospital care or other types of 24-hour treatment programs. If 90 percent of the chemically-dependent persons in the proposed service area who need to use a specific 24-hour treatment program such as inpatient hospital, residential treatment, rehabilitation, or residential maintenance care are more than 75 miles by road from existing programs of the type that is needed, then more beds may be needed in a location more accessible to the population.

333-600-0030
Need Methodology

The method for estimating the needed number of beds or service capacity for each type of chemical dependency treatment setting consists of the following steps:

(1) For a service which is designed to serve persons in the present service area of a given hospital or hospitals, determine the hospital service area according to OAR 333-590-0040.

(2) For a service with a geographical targeting different from section (1) of this rule, evaluate the proposed service area according to OAR 333-600-0020(7) and (8), considering also the likelihood of contractual commitments to serve specific groups of potential clients.

(3) Determine the estimated population for the service area for the calendar year five years beyond the letter of intent year of the application.

(4) Obtain the estimated number of problem drinkers in the service area in five years for adults by calculating seven percent of the service area's population age 19 and over; and for adolescents by calculating 19 percent of the 12–18 year old population.

(5) Determine the estimated number of problem drinkers who will seek treatment in a one-year period, by calculating 15 percent of the number derived in section (4) of this rule.

(6) Determine the specific levels and kinds of services required to meet the need, for all services other than outpatient: Multiply the number derived in section (5) of this rule by the beds per contact figure from **Table 1**, for the particular type of chemical dependency treatment service requested and divide by .90 to allow for occupancy variations. For outpatient service, utilize the service ratios figures in **Table 1**:

Table 1

Chemical Dependency Treatment Services	Beds per Contact	Service Ratios
Medical facility-based detoxification	.0014	1
Nonmedical facility-based detoxification	.0127	9
Inpatient hospital services	.0072	5
Residential treatment, 24-hour	.00689	49
Residential treatment, partial (day, night, or weekend)	.00641	46
Rehabilitation (long-term)	.00336	24
Residential maintenance care	.01160	83
Outpatient care	---	781

(7) Determine the number of existing beds or service capacity for each of the service elements in the service area.

(8) Subtract the level of existing services determined in section (7) of this rule from the projected need for services derived in section (6) of this rule.

(9) Evaluate the estimated need against the principles in OAR 333-600-0020 to determine need for proposed service.

(10) Although separate bed need standards are not established for specialty types of chemical dependency beds, the division recognizes that chemical dependency beds could be used to deliver various subspecialty services, such as adolescent or geriatric chemical dependency programs, and programs for patients with both a mental illness and a chemical dependency problem ("dual diagnosis" patients).

DIVISION 610

DEMONSTRATION OF NEED FOR LONG-TERM CARE SERVICES

333-610-0000
General

In order to demonstrate need for nursing home beds, an applicant must satisfy the criteria specified in the Certificate of Need Application Instructions (division 580). Where appropriate, responses to these instructions shall be based on the methodology of this division (division 610).

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315
Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-610-0010
Definitions

As used in this division:

(1) "Alternative Services" means any long-term care services other than nursing homes.

(2) "Adult Foster Care" means supervised living, like licensed residential care facility (home for the aged) but for five or fewer persons.

(3) "Closed System Provider" means a facility or campus arrangement offering a continuing care contract for both unsupervised housing and licensed nursing facility care.

(4) "Community Services/Nonresidential Services" means alternative services which do not involve 24-hour living outside of one's own home and may include in-home services or services provided outside of the home, such as meals, social activities, clinics, classes, organized day programs, etc.

(5) "Continuing Care Contract" means a legally binding agreement between an individual and a closed system provider, which remains in effect for longer than two years, sometimes for the resident's lifetime. The contract states what shelter and services the home will provide to the resident over the time specified, and it states what obligations, including financial obligations, the resident will have to the home for the same time period. The contract will specify the nursing home services that the community will provide to residents, but will not be solely for the purpose of providing nursing home services. The primary purpose of the contract will be to provide a living situation to elderly persons who will usually be ambulatory and in good health upon entry into the community. Continuing care contracts are known by a variety of names, including life care contracts, entrance fee agreements, sustaining gift contracts, occupancy agreements, accommodation fee agreements, member trust fund contracts, founders' fees contracts, and community residence agreements.

(6) "Home for the Aged/Rest Home." See licensed residential care facility.

(7) "Home Nursing Care" or "Home Health Service" means nursing care provided in the home by a private duty nurse, visiting nurse, proprietary home care agency, or county home health agency.

(8) "In-Home Services" means alternative services delivered to the home; may include telephone reassurance, home delivered meals, housekeeper, heavy chores, homemaker, personal care, home nursing care, special care or therapy.

(9) "Institutional Care" means nursing home care.

(10) "Intermediate Care Facility (ICF)" means a licensed long-term care facility (nursing home) providing care for persons with significant but stable health problems requiring availability of a registered nurse for one eight-hour shift daily, five days a week, together with additional light or heavy aide care. ICFs for the mentally retarded are not included in this definition.

(11) "Licensed Residential Care Facility" (formerly called home for the aged). Under ORS 443.400(5), this type of substitute home/supervised living means "a facility that provides, for six or more physically handicapped or socially dependent individuals, residential care…". Under Seniors and People with Disabilities Division rules, residents may not require continuous nursing care but may require routine medication; special diets; assistance with activities of daily living; palliative skin care; simple dressings; maintenance of casts, braces, and prostheses. Periodic licensed nursing care (catheter irrigation, dressing change, or periodic injections) may be provided on contract just as in a person's own home.

(12) "Long-Term Care Facility (LTCF)" refers to Oregon's current licensing category for all nursing home beds, as defined in Seniors and People with Disabilities Division licensure rules, whether freestanding or part of a hospital, and whether the patients are at skilled level of care or intermediate level.

(13) "Long-Term Care Services/Continuum of Care" means the entire set of possible services for persons in need of long-term health and/or social services.

(14) "Nursing Home" means long-term care facility, as defined in Seniors and People with Disabilities Division licensure rules, providing skilled and/or intermediate level nursing care.

(15) "Personal Care" means physician prescribed, registered nurse supervised, services delivered by trained individuals, including: Basic personal hygiene; bowel and bladder care; assistance with self-administered medications and oxygen; assistance with mobility, transfers and comfort; assistance with meal preparation and feeding; care of confused and/or mentally ill client; first aid and handling of emergencies; housekeeping necessary for health

and safety; assistance to and from appointments; monitoring of client status.

(16) "Retirement Home" means a place where relatively independent older persons live together with little supervision with some common services such as housekeeping and some meals provided.

(17) "Satellite Apartment" means a periodically supervised living arrangement associated with a home for the aged, nursing home, or other 24-hour residential facility.

(18) "Semi-Independent Living" means cooperative small group living in freestanding housing, with limited supervision and assistance on the basis of daily or less frequent visits.

(19) "Skilled Nursing Facility (SNF)" means a licensed long-term care facility providing care for persons with severe and/or unstable health problems which cannot be managed at the intermediate care level, requiring the availability of a registered nurse 24 hours daily, seven days a week, but not requiring the levels of nursing, physician and specialized services available in a hospital.

(20) "Substitute Home/Supervised Living" means nonmedical alternative services involving 24-hour care and supervision. In Oregon, includes licensed residential care facility (home for the aged), adult foster care, satellite apartments, or semi-independent living.

Stat. Auth.: ORS 431.120(6) & 442.315

Hist.: HD 13-1994, f. & cert. ef. 4-22-94

333-610-0020
Principles

The following principles will be applied in the review of applications for certificate of need for nursing home beds:

(1) Clinical and epidemiological research indicates that, on the average, 30 nursing home beds per 1,000 persons age 65 and over would be sufficient to meet the need for care for those functional deficits for which nursing home care is medically necessary and cost effective. This does not include utilization which is socially convenient rather than medically necessary. The experience of some states and some Oregon counties indicates that when sufficient alternatives are available, a ratio of less than 30 nursing home beds per 1,000 persons age 65 and over may be sufficient to meet the population's needs.

(2) Oregon data are consistent with section (1) of this rule. Because about ten percent of Oregon nursing home residents are not age 65 and over, and to allow for local variations, a goal of 40 beds (actually, a range of 35 to 45) (per 1,000 persons age 65 and older is hereby set, 33 percent greater than the research figure in section (1) of this rule. No county should exceed this bed ratio; although, as noted in section (1) of this rule, ratios well under 40 beds per 1,000 persons age 65 and over are often sufficient to meet community needs.

(3) By 1991, there shall be no more than 40 nursing home beds per 1,000 persons age 65 and over in any Oregon county:

(a) For counties which had 54 or fewer beds per 1,000 in 1980, the goal is to be reached by 1986;

(b) For counties which had more than 54 beds in 1980, or have population densities below the state median, up to five additional years are allowed (see **Tables 1**, **2**, and **3**), recognizing the greater amount of time required to organize the expansion of alternative care under such circumstances.

(4) An average county or service area minimum occupancy of 95 percent, before adding beds, is to be used except when plans of state agencies utilizing beds, anticipated population changes, plans of other service area providers, and considerations of maintaining access at reasonable cost indicate that 90 percent is appropriate.

(5) Proposed beds are evaluated in relation to the entire local long-term care system; to resources in the local service area and in the health service areas as a whole; to plans of state and local agencies; and to state policies expressed by the legislature. Additional beds will not be approved simply on the basis of "need" at a specific facility.

(6) Need should be projected on the basis of forecasted elderly population in three years. This time period will be extended for counties with population densities below the state median. It will be shortened when utilization of beds by state agencies has declined, and compensating utilization of alternative care has occurred and is projected to continue.

(7) For future years, population projections prepared and published by the Portland State University Center for Population Research and Census (CPRC) in **Population Projections**, **Oregon and Its Counties: 1980 to 2000**, **June 1984**, will be used unless the applicant can demonstrate invalidity. If existing projections are shown to be invalid, an alternative acceptable to both the Public Health Division and CPRC will be substituted.

(8) Separate capacity levels for ICF and SNF beds are not set because these bed categories are not separately licensed.

333-610-0030
Need

The following method is an extension of the general requirements for analysis of need set forth in OAR 333-580-0040(1):

(1) Determine service area:

(a) Except as provided in subsections (b) and (c) of this section, the geographical service area of the applicant will be considered to be the county in which the facility is located;

(b) Service areas in health service area III are defined as follows: Hood River, Sherman and Wasco Counties; Crook, Deschutes and Jefferson Counties; Gilliam, Morrow and Wheeler Counties; Union and Wallowa Counties; Baker County; Malheur County; Grant County; Harney County; Lake County; Umatilla County; and Klamath County;

(c) An applicant may propose an alternative service area to that specified in subsection (a) or (b) of this section. Such alternative service area, if accepted by the division, will be applied only to the review of the applicant's proposal, and shall not affect the applicability of subsections (a) and (b) of this section to other applications. The appropriateness of such an alternative service area must be demonstrated by the applicant to the division's satisfaction. In demonstrating the appropriateness of the proposed alternative service area, the applicant shall discuss and provide data on the following:

(A) Patient origin and length of stay by zip code for admissions for the most recent completed fiscal or calendar year for all nursing homes in the proposed service area. The applicant should list zip code of origin and length of stay for each admission, but should not use any patient names. The proposed service area should account for at least 75 percent of all admissions to service area nursing homes. It is recognized that nursing homes other than the applicant may sometimes be unwilling to provide such data but at a minimum data must be provided for the applicant facility, and documentation must be submitted to show that other facilities were asked to provide data;

(B) Travel patterns and highways between the proposed service area and adjacent areas;

(C) Historical market patterns for health and other services; and

(D) Geographic or other considerations that might delineate the proposed areas as a distinct service area.

(2) Estimate population age 65 and over in service area:

(a) As a basis for estimating service population for particular past and future years, determine the population age 65 and over in the service areas as of 1970, 1980 through 1985, 1990 and 1995;

(b) For 1970 and 1980, use the U.S. census counts;

(c) For 1990 and 1995, use the projections provided in **Population Projections, Oregon and Its Counties: 1980 to 2000**, Center for Population Research and Census (CPRC), Portland State University, June 1984;

(d) For 1981 through 1986, use estimates of population age 65 and over developed by CPRC;

(e) Estimate the population age 65 and over for the tenth year prior to the application through 1979 using the following method:

(A) Determine the ratio of elderly to total population in both 1970 and 1980 by dividing the population over age 65 by the total population for each of these years;

(B) Estimate these ratios for the tenth year prior to the application through 1979 by applying linear interpolation to the 1970 and 1980 ratios from paragraph (A) of this subsection;

(C) Obtain estimates for total service area population in each year from the tenth year prior to the application through 1979 from CPRC's "Inter-Censal Estimates of Oregon, by County: 1970–1980," April 1982;

(D) To estimate the population age 65 and over for the tenth year prior to the application through 1979, multiply the ratio in paragraph (B) of this subsection by the total population from paragraph (C) of this subsection for each year.

(f) To estimate the population age 65 and over for the years 1987 through 1989, apply linear interpolation to the 1985 and 1990 figures for population age 65 and over;

(g) To estimate the population age 65 and over for any of the years 1991 through 1994 (if required by subsection (11)(a) of this rule), apply linear interpolation to the 1990 and 1995 projections of population age 65 and over.

(3) Obtain historical nursing home patient days: For each of the last 10 years, from the Annual Reports for nursing homes and hospital-based long-term care facilities, obtain the October 1 through September 30 yearly total patient days of nursing home care delivered in the service area.

(4) Determine historical use-rates:

(a) Based on section (2) of this rule, prepare a table, showing for each 10 years prior to the application to the fifth year following the year of submission of the application, the estimated age 65 and over population for the service area;

(b) Add to the table, a column, based on section (3) of this rule, showing annual historical patient days for each year from 10 years prior to the application to present;

(c) Determine use-rates (number of patient days per 1,000 persons age 65 and over in the service area) by dividing each figure entered under subsection (b) of this section, by the corresponding figure entered under subsection (a) of this section, divided by 1,000.

(5) Determine potential patient days: To the table prepared in section (4) of this rule, add columns as follows:

(a) For each year from 10 years prior to the application to present, the number of licensed nursing home beds (including hospital-based) in the service area. The two most recent years are available from the division. Historical data are available from the Seniors and People with Disabilities Division;

(b) For each bed number in subsection (a) of this section, multiply by 365 to obtain potential calendar year patient days available in the service area.

(6) Determine average occupancy: To the table prepared in sections (4) and (5) of this rule, add a column computed by dividing the historical patient days for each year, by the potential patient days, and converting to percent.

(7) Evaluate occupancy:

(a) If, in the most recent October 1 through September 30 year for which Annual Report data are available, average occupancy for the service area was 95 percent or more, more beds may be needed;

(b) If average occupancy for the service area was less than 95 percent, more beds may not be needed. Applicant must demonstrate, under these circumstances, that a combination of factors will assure 95 percent service area occupancy if the application is approved. Such factors may include the plans of state agencies utilizing nursing home beds; projected increases of user populations; plans of other nursing home providers in the service area;

(c) If 95 percent service area occupancy cannot be demonstrated, but 90 percent can be demonstrated, and applicant demonstrates that approval would result in maintaining access to nursing home care in the service area at reasonable cost, the beds may be needed.

(8) If, under section (7) of this rule, beds may be needed, proceed with the analysis.

(9) Determine future bed inventory: To the most recent available Seniors and People with Disabilities Division inventory of licensed nursing home beds (including hospital-based) in the service area, make the following adjustments:

(a) Add beds in the service area not yet licensed, for which there is an approved certificate of need in effect;

(b) Subtract beds in the service area for which there is a documented commitment to the division for delicensure within the next three years.

(10) Determine the year by which to demonstrate need:

(a) Ordinarily, this will be three years after the calendar year of the letter of intent;

(b) If, according to **Table 1**, the estimated 1985 population density of the service area is in the lowest quartile of Oregon counties, this will be five years;

(c) If the population density is in the second quartile, this will be four years;

(d) If the data available from the central offices of the state agencies utilizing nursing home care in the service area meet the following criteria, then the indicated times in subsections (a), (b) and (c) of this section will be shortened by one year:

(A) Utilization of nursing home care in the service area by state agencies has decreased during the most recent 12 months;

(B) Utilization of alternative care in the service area by state agencies has increased, correspondingly, in the most recent 12 months;

(C) Projections and plans for utilization of nursing home care in the service area, and for alternative care, by state agencies, indicate stabilization or continuance of the trends in paragraphs (A) and (B) of this subsection, respectively.

(11) Construct table for analysis of need:

(a) Provide a column for each of the five years starting with the letter of intent year;

(b) Provide a row for the service area population age 65 and over for each year, estimated in section (2) of this rule;

(c) Provide a row for each of the following possible use-rates:

(A) The 1980 service area bed supply per 1,000 persons age 65 and over, based on **Table 2**;

(B) The upper and lower bed supply objectives from **Table 3** for the year identified in section (10) of this rule;

(C) The most recent use-rate identified in section (4) of this rule, divided by 365;

(D) The use-rate based on a projection of the use-rates for the last 10 years, divided by 365;

(E) If the series of use rates in section (4) of this rule shows a maximum or a minimum year prior to the most recent year, the use-rate based on a projection of the use-rates for the years starting with that maximum or minimum year, divided by 365;

(F) Standard bed supply figures of 30, 35, 40, and 45 nursing home beds per 1,000 persons age 65 and over.

(d) Review prior years' bed supply as tabulated in section (5) of this rule in order to determine whether the rates projected in paragraphs (c)(D) and (E) of this section reflect changes in utilization with constant bed supply, or changes in utilization correlated with changes in bed supply. If the latter is the case, calculate alternative projections for paragraphs (c)(D) and (E) of this section;

(e) Review performance and plans of state agencies utilizing nursing home and alternative care, as obtained for section (10) of this rule, in order to determine whether alternatives to the projections in paragraphs (c)(C), (D) and (E) of this section, adjusted numerically because of the performance and the plans, would lead to different projected rates and should also be tabulated.

(12) Complete table for analysis of need: Fill in the table constructed in section (11) of this rule by multiplying the estimated service area population age 65 and over (second row), for each year, by the various flat, projected and adjusted use-rates indicated in subsections (11)(c), (d) and (e) of this rule. For each use-rate based projection (those based on the assumptions in paragraphs (11)(c)(C), (D) and (E) of this rule), divide the result of this multiplication by 0.95, in order to assume 95 percent occupancy.

(13) Evaluate impact of application: Add the requested beds to the existing future inventory in section (9) of this rule. Compare the result to the column of the table completed in section (12) of this rule for the year selected in section (10) of this rule, and to the bed need indicated for that year in a county or service area plan, if available, that meets the criteria of section (14) of this rule.

(14) Service area plans: For use in analysis by the division, a county or service area plan must meet the following criteria:

(a) Satisfy the service area definition in section (1) of this rule;

(b) Cover a time period, year-by-year, of at least five years, projecting:

(A) Nursing home caseloads; and

(B) Alternative care caseloads.

(c) Be within the yearly upper limits on service area bed supply established by application of section (10) and paragraph (11)(c)(B) of this rule, unless an analysis under subsection (16)(b) of this rule demonstrates that higher limits are justified;

(d) Be prepared by the local area agency on aging and/or the state Seniors and People with Disabilities Division, and approved by the Seniors and People with Disabilities Division.

(15) Compare application to state goals:

(a) If a service area plan as defined in section (14) of this rule is available, the applicant is expected to demonstrate consistency with that plan and justify any inconsistencies;

(b) If there is no service area plan as defined in section (14) of this rule, then, depending on the relationship of the impact of the application on bed supply to the upper and lower bed supply objectives identified in paragraph (11)(c)(B), subsections (c), (d) or (e) of this section will apply;

(c) If approval of the application would result in:

(A) More beds than the 1980 ratio identified in **Table 2**, if that ratio is above the lower limit identified in paragraph (11)(c)(B) of this rule; or

(B) More beds than the upper limit identified in paragraph (11)(c)(B) of this rule; or

(C) Addition of beds in a service area which includes all or part of any county which is in the highest quartile of beds per 1,000 persons age 65 and over (see **Table 2**, or subsequent annual revisions as available), then the applicant is expected to demonstrate under subsection (16)(b) of this rule that, by the calendar year identified for paragraph (11)(c)(B) of this rule, there are no feasible long-term care alternatives to an increase in nursing home beds.

(d) If none of paragraphs (c)(A), (B) or (C) of this section are the case, and the approval of the application would result in:

(A) Maintaining the 1980 ratio identified in **Table 2**, if that ratio is above the lower limit identified in paragraph (11)(c)(B) of this rule but below the upper limit; or

(B) Falling below that ratio, but above the lower limit identified in paragraph (11)(c)(B) of this rule, then the applicant is expected to show that alternative care capacity in the locality has not been increasing; that nursing home utilization has not been decreasing; and there is no reasonable expectation that these utilization rates would change in those respective directions prior to the year determined in section (10) of this rule. Alternatively, applicants whose projects fall into one of the categories of this subsection may demonstrate need under the criteria specified in subsection (16)(b) of this rule.

(e) If neither subsection (c) nor (d) of this section is the case, then approval of the application would result in increasing the 1980 ratio identified in **Table 2**, up to or closer to the lower limit identified in paragraph (11)(c)(B) of this rule. In this case, the applicant is expected to inventory the alternative capacity and utilization in the locality and to indicate the criteria under which the nursing home will refer prospective patients to each alternative rather than admit them to the nursing home.

(16) Justification of bed capacity above state goals:

(a) If the criteria in subsection (15)(a), (d) or (e) of this rule apply and are satisfied, beds in the service area may be added or relocated provided all criteria specified in OAR 333-580-0040 through 333-580-0060 are met;

(b) If subsection (15)(c) of this rule applies, then the applicant must demonstrate that there are no feasible long-term care alternatives in the service area by the calendar year identified in paragraph (11)(c)(B) of this rule by demonstrating that at least one of the following conditions exist:

(A) Applicant must show that superior and accessible alternatives to the proposed added or relocated beds, in terms of appropriateness, efficiency, effectiveness or cost, have not been developed, and cannot be developed by this provider or another potential provider in time to meet needs, or would not be financially feasible; or have insufficient capacity, which could not be expanded in time to meet needs, or expansion is not financially feasible;

(B) Applicant may show that utilization of service area nursing home beds by persons under age 65 (mentally or emotionally disturbed, mentally retarded or developmentally disabled, alcohol or drug dependent, or physically handicapped) is occurring in numbers greater than 15 percent of the service area nursing home average daily census. This may justify adding or relocating beds under subsection (15)(c) of this rule to the extent that the placements are appropriate under the authorization criteria of the central offices of the state Department of Human Services;

(C) Applicant must show that the efficiency and appropriateness of utilization of existing nursing home beds and alternatives in the service area is as high as can be expected;

(D) Applicant must show that persons for whom nursing home care is necessary would experience serious problems in terms of availability, accessibility and cost in obtaining such care without the added or relocated beds;

(E) If proposal involves either permanent or "swing" utilization of hospital beds as long-term care beds, and subsection (15)(c) of this rule applies, applicant must present a justification consistent with paragraphs (A) to (D) of this subsection;

(F) If subsection (15)(c) of this rule applies, applicant may demonstrate need by showing that there is provider commitment to phase out (close, or convert to other uses) sufficient presently existing, specific beds so as to bring the local level of nursing home capacity back below the limit at which subsection (15)(c) of this rule would apply for future years, within 12 months after the projected opening of beds if the application is approved.

333-610-0060
Hospital Long-Term Care Beds

(1) Long-term care facility services and beds offered in or through a hospital must be separately licensed by the Seniors and People with Disabilities Division. Therefore, the creation of a long-term care facility by a hospital will be considered to constitute the establishment of a new health care facility, subject to review under OAR 333-550-0010(1). Additions to the bed capacity of such facilities will be subject to review if such additions are greater than 10 percent of the existing capacity of the long-term care facility, or greater than 10 beds, whichever is less, as provided in OAR 333-550-0010(3).

(2) When a hospital proposes to create a new long-term care facility which will either be associated with, or located in, the hospital; or increase the number of long-term care beds (as defined in OAR 333-610-0010(12)) in such a facility by more than 10 beds or 10 percent of the facility's bed capacity, whichever is less, or when a hospital proposes to relocate long-term care beds to such a facility, the project will be subject to certificate of need on the same basis as any freestanding nursing home project would be under OAR 333-610-0000 to 333-610-0030.

Stat. Auth.: ORS 431.120(6) & 442.315

Hist.: HD 13-1994, f. & cert. ef. 4-22-94; HD 3-1995(Temp), f. & cert. ef. 8-18-95; HD 10-1995, f. & cert. ef. 11-14-95

333-610-0070
Swing Long-Term Care Beds in Hospitals

When a hospital proposes to utilize a given number of its licensed hospital acute beds intermittently as skilled nursing facility swing beds under applicable federal regulations, the hospital is expected to submit a letter of intent to the Public Health Division. The organized and regular provision of skilled nursing facility services within the licensed physical plant of the hospital may be subject to review as a new long-term care facility under OAR 333-550-0010(3)(a). In addition:

(1) The proposal will not be subject to county-specific nursing home bed need criteria under OAR 333-610-0000 to 333-610-0030 because it will not create permanent new nursing home beds. The division, in reviewing the proposal for need under OAR 333-580-0040 and for alternative uses of resources under OAR 333-580-0050, will take into consideration such factors as:

(a) Health policy of the state, as reflected in ORS 410.010, 410.020, 410.050 and 410.060; ORS Chapter 442 generally; and other applicable statutes;

(b) Interpretation of that policy, as reflected in the plans and administrative rules of the Health Division and the Senior and Disabled Services Division. In considering strategies for increasing the accessibility of nursing home beds, priority will be given to increasing the utilization of appropriate alternative care (thereby freeing up existing nursing home beds), rather than increasing the number of nursing home beds;

(c) Comparative experience with, and quality of, long-term care provided by staff in licensed acute care hospitals and in licensed long-term care facilities.

(2) The division, in reviewing the proposal for financial feasibility under OAR 333-580-0060, will take into consideration such factors as:

(a) A conservative projection of Medicare utilization according to the current stringent "skilled" level of care criteria of the fiscal intermediaries;

(b) Estimated potential for diversion of public and private funds now available for alternative care into facility-based long-term care when the patient needs involved could be met, at equal or lesser cost, through provision of alternative care;

(c) Balanced against section (3) of this rule, estimated potential for diversion of public and private funds now available for acute care into facility-based and alternative long-term care;

(d) Comparative costs of long-term care provided in licensed hospitals and in licensed long-term care facilities, and the feasibility of the hospitals contracting for skilled care in an existing long-term care facility at equal or lesser cost; and

(e) Potential that the proposal will or will not increase Medicare costs, per illness episode, beyond those allowed for under diagnosis-related groups reimbursement.

333-610-0080
Residential Care Beds in Long-Term Care Facilities

When a long-term care facility chooses to obtain a Seniors and People with Disabilities Division license as a "licensed residential care facility" as described in OAR 333-610-0010(11) for all, or for a separate and distinct part of its currently licensed long-term care facility bed capacity, it is not required, under statute, to accept a correspondingly reduced Seniors and People with Disabilities Division "long-term care facility" license as described in OAR 333-610-0010(12). Federal regulations, however, may require this under some circumstances. The following certificate of need rules will apply at such time that appropriate, coordinated licensing rules are adopted by the Seniors and People with Disabilities Division:

(1) Future reconversion of such beds from residential care to long-term care (nursing home) beds will be considered an expansion of the then existing Seniors and People with Disabilities Division licensed long-term care facility service, and may be subject to the certificate of need law under applicable thresholds regarding expansions in long-term care bed capacity; and

(2) In evaluating a reconversion project, the division shall give strong consideration to the costs, compared to new construction, and to the comparative quality and cost of care currently provided at the facility; and

(3) Reconversion projects as described in this rule will be subject to county-specific bed need criteria under OAR 333-610-0020 to 333-610-0030.

333-610-0090
Intermediate Care Facilities for the Mentally Retarded

Distinct part intermediate care beds for mentally retarded or developmentally disabled individuals, when the facility houses any individuals who require nursing care services of a level, frequency and duration equivalent to intermediate facility care nursing as defined by the Seniors and People with Disabilities Division, must be licensed by the Seniors and People with Disabilities Division, rather than by the Addictions and Mental Health Division, and are subject to certificate of need according to ORS Chapter 442. In determining need, the division shall take into account long-range plans of the Addictions and Mental Health Division; shall consider comparative bed ratios in other states; and shall search, review and analyze existing professional literature and reports. The division shall evaluate local, substate, regional and statewide need, considering access, quality and costs. Public and private facility beds shall be considered as equivalent for purposes of meeting the limited need for this category of care.

DIVISION 615

DEMONSTRATION OF NEED FOR PSYCHIATRIC INPATIENT BEDS

333-615-0000
General

The purpose of this division is to assure provision of accessible, quality care with the least incremental impact in overall community health care capital and operating costs. Treatment of the psychiatric patient requires special staff, facilities, programs and management policies. These may be accomplished either in a unit in a general hospital, or in a specialized hospital. In order for Oregon to have a complete mental health system, both general hospital units and multispecialty units are needed. However, because of Oregon's population size and distribution, the need for subspecialty services is limited, and the need for local access to quality general psychiatric inpatient care is great. Therefore, the number of large, multispecialty, freestanding units feasible in Oregon is limited. The applicant, in providing information to the Public Health Division to demonstrate need for psychiatric inpatient beds other than those directly operated by the federal Veterans' Administration or the state Addictions and Mental Health Division, must satisfy the criteria specified in the Certificate of Need Application Instructions (chapter 333, division 580). Where appropriate, responses to these instructions shall be based on the following:

(1) The methodology of this division (division 615), in order to estimate the appropriate number of psychiatric beds; and

(2) Comparison of estimates of costs and quality arising from conversion of certain of the identified existing licensed capacity, to estimates of costs and quality generated by creation of a new facility.

(3) Statements of preference or priority in this division are expressions of general policy based on Oregon statute and the current literature. Such statements do not necessarily preclude possible approval of an application embodying a less preferred or a lower priority characteristic. Rather, the applicant must bear the burden of demonstrating that any such features are compensated for by other aspects of a proposal, in order to best achieve the policy of ORS 442.025(1). For example, freestanding units under new licenses are not precluded, but the lack of feasible alternatives which better implement state policy must be demonstrated.

(4) In reviewing applications for psychiatric inpatient beds, the division, recognizing that treatment of the psychiatric patient requires special staff, facilities, programs and management policies, shall critically evaluate any proposal for a psychiatric unit which incorporates:

(a) Routine interchangeability of general psychiatric and general acute care in the same unit or on a "swing bed" basis;

(b) Conversion of existing licensed capacity to psychiatric use amounting to no more than minimal cosmetic changes to existing patient rooms without meeting state licensing standards in applicable Public Health Division rules, or Joint Commission on Accreditation of Healthcare Organization standards, as appropriate;

(c) Consideration of costs outweighing adequate quality;

(d) Evidence of insufficient opportunity for potentially affected clinicians to present their views and to obtain serious consideration of these views by any applicant.

(5) To be ruled complete, an application for psychiatric beds must include a narrative organized in the following sequence of separate major sections:

(a) A complete response to each rule of division 615;

(b) If a new facility is proposed, analysis under division 590, the rules for acute hospital beds in general;

(c) Based on the foregoing, and other information included directly or as appendix materials or exhibits, a complete response to the general application form narrative instructions regarding the general statutory criteria which apply to all health care facility requests, in the sequence given in the instructions.

333-615-0010
Definitions

The definitions of OAR 333-590-0010 shall apply, in addition to the following:

(1) As used in this division, "alternatives" include, but need not be limited to, the following:

(a) Nonhospital, 24-hour residential treatment;

(b) Hospital or nonhospital day or partial hospitalization programs;

(c) Outpatient treatment by a qualified mental health professional (a licensed psychiatrist or clinical psychologist, a psychiatric nurse practitioner within the legal scope of practice, or licensed or registered clinical social worker); and

(d) Outpatient treatment through a mental health program approved by the Addictions and Mental Health Division.

(2) As used in this division, psychiatric "subspecialty beds" do not include general or adult beds, nor chemical dependency treatment beds (see division 600 of this chapter), but do include:

(a) Holding rooms and freestanding mental health emergency centers, created by a public or private agency under ORS 426.241, in response to legislative policy reductions in the operating capacity of Oregon State Hospital with respect to patients originating in the service area, when the general psychiatric inpatient unit or units in that service area, as defined in OAR 333-615-0030(1)(b), do not offer appropriate programs to meet the needs of the anticipated utilizing population;

(b) Child;

(c) Adolescent;

(d) Geriatric;

(e) Drug;

(f) Secure;

(g) Long-term intensive treatment;

(h) Long-term maintenance care; and

(i) Dual diagnosis (person with both a mental health and a substance abuse diagnosis).

(3) Psychiatric inpatient service areas are defined in OAR 333-615-0030 according to the principles stated in OAR 333-615-0020.

(4) Quality of psychiatric inpatient care for purposes of this division is defined in OAR 333-615-0050.

Stat. Auth.: ORS 431.120(6) & 442.315
Stats. Implemented: ORS 431.120(6) & 442.315

333-615-0020
Principles

Under ORS 442.025(1), state policy gives priority to the achievement of reasonable access to quality health care at a reasonable cost. It is legislative policy under ORS 430.610(3) that to the greatest extent possible, mental health services be delivered in the community where the person lives in order to achieve maximum coordination of services and minimum disruption in the life of the person. Under ORS 430.021(3), it is state policy to encourage and assist community general hospitals to establish psychiatric services. Consistent with legislative policy, priority is given in this division to establishment of access to local hospitalization in geographically distributed, quality psychiatric units, within community hospitals; and hospitalization is to be utilized only when an individual's needs cannot be safely and effectively met by less costly alternatives. The following principles, therefore, are applicable to this division:

(1) Service areas for general psychiatric beds other than those directly operated by the state Addictions and Mental Health Division or the federal Veterans' Administration, shall be delineated so as to encourage the greatest feasible utilization of community

hospitals, and of alternatives to hospitalization, by both private and public patients. The division will use as a basis for general psychiatric inpatient service areas the state administrative districts. The districts are based on natural market areas defined by geographical barriers, transportation networks and historical patterns of general trade. In addition, community mental health services in Oregon are organized on a county or multicounty basis, compatible with these districts, thus facilitating planning and coordination with, and access to, local inpatient services in such districts.

(2) Service areas for psychiatric specialty beds, other than those directly operated by the state Addictions and Mental Health Division or the federal Veterans' Administration, as defined in OAR 333-615-0010(2), other than holding rooms, shall be delineated so as to assure availability of quality service at reasonable cost in economically viable subspecialty units:

(a) Factors to be considered in delineating such service areas shall include the sizes of the respective populations at risk in Oregon; the current rates of inpatient hospitalization in Oregon for those groups; and the availability, accessibility, quality and levels of utilization of existing inpatient services addressing the needs of those groups in Oregon. These factors will generally lead to delineation of subspecialty service areas according to health service area, multiple health service area or statewide boundaries;

(b) In order to assure viable, quality subspecialty units, economies of scale shall be given greater weight than geographical distribution;

(c) In estimating subspecialty need, the state will consider the population ratios proposed in "total system" models such as Nebraska (1981) and California (1981);

(d) For each subspecialty service, an applicant will be expected to indicate the anticipated percentage and origins of utilization from outside the general psychiatric service area, based on section (1) of this rule, in which the facility is, or will be located, and to provide the evidence and assumptions related to the analysis.

(3) Service areas for holding rooms shall be based on local considerations of access, demand and feasibility.

(4) The development of a number of psychiatric units, of economically and programmatically viable size, in general hospitals, rather than the development of a few large, multispecialty, freestanding facilities, shall be emphasized. The division recognizes that equivalent programs, in terms of quality, can be developed in either setting, to meet the needs of particular populations; that, in order to attract and retain staff, as well as for quality program design and economic efficiency, consideration must be given to minimum feasible unit size; but that, nonetheless, programs located within acute general hospitals have the advantage of close administrative relationships and proximity to acute medical and surgical consultation, diagnosis and treatment. Among the considerations leading to an emphasis on geographically decentralized psychiatric units in general hospitals, are the following:

(a) Improved geographic access in the various regions of the state, and therefore;

(b) Greater likelihood of reduced utilization of state and federal hospitals for short-stay intensive inpatient care;

(c) Reduced separation of psychiatric patients and staffs from specialty medical care for psychiatric patients at a reasonable cost, substantial numbers of whom have that need;

(d) Improved access to quality psychiatric staff for general medical patients;

(e) Greater access to diversity in medical and support staff, and extent of ancillary services available;

(f) Possibility of reduced construction and operating costs, through development of economically and programmatically viable sized units by conversion of small amounts of existing licensed capacity, where available, rather than new, large scale freestanding construction;

(g) Relative ease of reconversion of the unit at minimal cost, to other hospital associated use if psychiatric utilization is so low as to necessitate closing the unit;

(h) Smaller size of unit necessary to maintain quality at reasonable cost per treatment, because indirect costs are spread over a larger base; and reduced impact of smaller unit on ability of other, existing units, serving the same population, to maintain quality at reasonable cost per treatment.

(5) Demonstration of need for general psychiatric beds will be population based, rather than facility based. According to Office for Oregon Health Policy and Research studies of actual utilization in Oregon, taken together with legislative reduction of the number of inpatient days mandated for coverage under group health insurance policies in Oregon, the "range of need" criteria based on the then available literature and consultant advice, together with existing provisions in this chapter, provide adequate safeguards against overbedding, but the legislative policy requires more stringent standards for demonstration that any proposed beds are the appropriate response to need for psychiatric care. Therefore, there shall be a moderate standard of evidence of need if a project would result in up to .40 beds per 1,000 population in a service area in the third year after the date of the letter of intent; and a high standard, if the result would exceed .40. The bed-to-population ratio shall not be taken, by itself, as evidence justifying a certain number of beds in a service area. In determining need, the division shall take into account and the applicant shall supply, for each factor in subsections (a) to (f) of this section, a numerical, descriptive and analytic response sufficient for the division to take each factor into account:

(a) The historical utilization of psychiatric inpatient beds by persons in the service area involved;

(b) The historical utilization in other Oregon service areas of comparable size, population and characteristics; and

(c) Based on the level of placement criteria developed by the Office for Oregon Health Policy and Research or developed by insurers under ORS 743.556(16)(b), findings that, with limited exceptions based on clinical judgment in individual cases, inpatient beds are needed for immediate, short-range control of symptoms and protection of the patient when less intensive or supportive placement will not suffice; or for immediate, short-range protection of the community;

(d) The major portion of nonstate, nonfederal inpatient stays are expected to be 12 to 15 days. Approximately 10 percent of stays, at most, are expected to be longer term: Seriously disturbed, usually younger, patients for whom the benefits of 30 to 40 days of hospitalization exceed those of brief hospitalization followed by systematic, long-term residential or outpatient care; and a limited number of chronically mentally ill persons who cannot be maintained safely in the community;

(e) Inpatient beds are not considered the major resource for continued treatment of the typical schizophrenic patient, which, according to the literature, is usually most effective and economical when provided in other ways;

(f) Alternatives, as defined in OAR 333-615-0010(1), do not replace necessary inpatient utilization as described in subsections (c), (d) and (e) of this section, but are usually more effective and economical for meeting other needs for mental health treatment and care.

Stat. Auth.: ORS 430.021(3), 430.610(3), 431.120(6), 442.025, 442.315 & 743.556(16)

333-615-0030
Estimates of Need

The following methods are applicable to the interpretation of OAR 333-580-0040(1):

(1) Based on OAR 333-615-0020(1), service areas for general psychiatric beds shall be identified as follows:

(a) Geographic service areas for general acute, nonsubspecialty psychiatric beds, other than those directly operated by the state Addictions and Mental Health Division or the federal Veterans' Administration, may be less than an entire health service are in order to maximize access provided there is sufficient projected population in the third year after the date of the letter of intent to make possible an economically feasible inpatient unit of acceptable quality, low capital cost and low operating costs. Thus, for example in health service area I, Clatsop-Columbia-Tillamook could be considered separately from Multnomah-Washington-Clackamas. Within a given health service area, all service areas shall be defined at one time, rather than proceeding application by application;

(b) The service areas described in subsection (a) of this section shall in general consist of single state administrative districts, or combinations of such areas. Available patient origin data may be interpreted by the division and taken into account in adding or deleting minor portions of such areas, or in combining districts. The division shall consider whether a lesser area, or a combination of areas, will better serve the policies and principles of this division; whether there are, or will be, enough clinicians in practice to staff the program; and whether there will be sufficient diversity of staff to meet the needs of the service area. The geographical units on which general psychiatric inpatient service areas shall be based will be the 14 state administrative districts, which are as follows:

(A) In health service area I: Clatsop-Columbia-Tillamook; Multnomah-Washington-Clackamas;

(B) In health service area II: Marion-Polk-Yamhill; Benton-Linn-Lincoln; Lane; Douglas; Coos-Curry; Jackson-Josephine;

(C) In health service area III: Hood River-Sherman-Wasco; Crook-Deschutes-Jefferson; Klamath-Lake; Gilliam-Grant-Morrow-Umatilla-Wheeler; Baker-Union-Wallowa; Harney-Malheur.

(c) The service areas identified in subsection (b) of this section shall be used for population-based review, as required by state and federal law. The methods of this division are intended to assure that population needs are met by the service or services within the service area. Different facilities within a given service area share the responsibility for meeting the needs of the population of that area;

(d) Based on OAR 333-615-0020(2), the geographic service areas for subspecialty psychiatric beds, other than those directly operated by the state Addictions and Mental Health Division or the federal Veterans' Administration, as defined in OAR 333-615-0010(2), other than holding rooms, shall be the state as a whole;

(e) The geographic service areas for holding rooms shall be determined by the division on a case-by-case basis;

(f) Clinicians in each part of the state are encouraged to work with prospective applicants to develop proposals which meet the general psychiatric inpatient needs of individual service areas and/or subspecialty service areas.

(2) Need for beds per 1,000 population in the service area shall be evaluated in relation to availability of alternatives according to the following criteria. A complete description of all alternatives under subsection (a) or (b) of this section means more than a list; it means at least, for each type of alternative listed in OAR 333-615-0010(1), an inventory with provider names, addresses, bed or slot capacity, and occupancy or utilization averages for each of the past several years:

(a) If a proposed project would result in up to .40 beds, other than those directly operated by the state Addictions and Mental Health Division or the federal Veterans' Administration, per 1,000 population in the third year following the date of the letter of intent, a complete description of all alternatives, as defined in OAR 333-615-0010, available in the service area shall be required; there shall be substantial evidence that appropriate existing alternatives in the service area will be fully utilized; there shall be substantial evidence that further development of alternatives by the applicant is not feasible; and there shall be substantial evidence that further development of less costly or more effective alternatives by any other prospective provider is not feasible. In addition, with respect to the proposed project itself, there shall be substantial evidence that project design and program alternatives have been considered and evaluated comparatively, with the least costly one selected that will meet identified need without substantial adverse impact on the quality of patient care;

(b) If the consequence of approval of a project would be in excess of .40 beds per 1,000 population in the third year following the date of the letter of intent, evidence submitted by the applicant shall:

(A) Demonstrate an average occupancy of applicant's existing capacity, if any, in excess of the appropriate criterion in **Table 1**, based on the method in section (3) of this rule, for the year ending September 30 prior to the formal application; and

(B) Be comprehensive with respect to the availability and feasibility of appropriate alternatives by meeting the requirements of subsection (a) of this section.

(c) The division may take into account evidence with respect to problems of quality or cost in other units serving the area in evaluations under subsection (b) of this section;

(d) In future years, by amendment of this rule, the division may raise the population-based limit at the same time as programmed decreases in utilization of state and federal beds serving the service area take place. This, however, may not be necessary if alternatives become more available and the scope of reimbursement is expanded. Because of the factors cited in OAR 333-615-0020(5), it may be appropriate, in future years, to reduce the population-based limit.

(3) When expansion of an existing unit is under consideration, an allowance for peak-to-average utilization ratios may be made:

(a) An average bed utilization consistent with the principles and methods of this division shall be evaluated for peak bed need by applying to the anticipated average census, a formula taking into account the anticipated peak demand, allowing for greater peak-to-average ratios for smaller units;

(b) The average census entered into the formula shall be consistent with the principles and methods of this division and justified by the applicant on the basis of historical utilization from the service area and any reasonably anticipated growth in the population at risk;

(c) The method to be used should be analogous to that found in OAR 333-590-0050, except that the standard deviation is estimated by raising the anticipated average census to the 0.468 power rather than taking its square root (the 0.500 power). The standard deviation is then multiplied by a factor of 2.06 (7.30 days/year at or above 100 percent occupancy) for units in service areas with other, interacting units, or a factor of 2.33 (3.65 days/year at or above 100 percent occupancy) or a unit which is the only one in its service area, or which can be shown not to interact with others in its service area;

(d) The results of calculations according to this method, for a range of values are shown in **Table 1**;

(e) The calculation in subsection (c) of this section does not take into account the extent to which elective admissions could be postponed, so as to smooth out the variations and reduce the peak-to-average ratio. This calculation only sets an upper limit of peak bed need for a given average bed need;

(f) The division will not automatically approve an application requesting the peak needs indicated by the formula without examining the schedulability of the proposed case load and the commitment to scheduling on the part of the applicant.

(4) General considerations applicable to review of need for psychiatric inpatient beds include the following:

(a) As with hospital inpatient beds in general and in other specialties, new psychiatric beds, whether general or subspecialty, except under unusual circumstances with respect to nonavailability, access and less costly alternatives, shall not be approved if the net effect of the project would be additional licensed short-term acute inpatient capacity (other than state Addictions and Mental Health Division operated or federal hospital beds) in the psychiatric

service area, unless additional acute hospital beds are justified in that area by the criteria for acute inpatient beds in division 590 of this chapter. The principles and methods in division 590 shall apply in reviewing applications for psychiatric beds to the extent that the issues involved are not addressed in this division;

(b) Unusual circumstances shall be determined in relation to an evaluation of the feasibility of meeting service area needs by the higher priority methods indicated in OAR 333-615-0040;

(c) Review of subspecialty beds other than chemical dependency inpatient beds, holding rooms, and freestanding mental health emergency centers shall take into account historical service area utilization and substantiated projections, rather than according to the population-based criteria for general psychiatric beds in this rule. The service areas for subspecialty beds are defined in subsections (1)(d) and (e) of this rule. Need for subspecialty units shall be evaluated with respect to population-based need; availability of existing capacity in the service area; effect on viability of existing quality providers; and proposed size of the unit in relation to economies of scale;

(d) Chemical dependency inpatient beds shall be reviewed according to the principles and methods of division 600 of this chapter;

(e) Need for holding rooms and freestanding mental health emergency centers shall be evaluated in relation to local considerations of access, demand and feasibility.

[ED. NOTE: Tables referenced are available from the agency.]

Availability of Alternative Uses for Resource

The following principles shall be applicable to the interpretation of OAR 333-580-0050(1) and (2). The term "quality unit" is explained in OAR 333-615-0050:

(1) The methods of meeting acute psychiatric bed need, in order of preference, shall be:

(a) Conversion of existing licensed space to purposes of psychiatric treatment where such conversion is feasible to provide an adequate inpatient program at less cost than building new licensed space, especially when the average daily census for the facility as a whole for the most recent year ending September 30, converted to expected peak occupancy under the methods of OAR 333-590-0050(8) and (9), does not exceed the current licensed number of beds at the facility;

(b) A project resulting in the smallest feasible net increase in acute licensed capacity within an existing general hospital or specialty hospital license, especially when the average daily census to the facility as a whole, for the most recent year ending September 30, converted to expected peak occupancy under the methods of OAR 333-590-0050(8) and (9), equals or exceeds the current licensed number of beds at the facility;

(c) A separately licensed new psychiatric hospital, not part of a general hospital, that will provide adequate psychiatric inpatient care at the most reasonable charges per day and per spell of treatment, for care that must be rendered on an inpatient basis, taking into consideration the factors in OAR 333-615-0000(2).

(2) A proposed psychiatric inpatient bed project shall be related to alternatives, as defined in OAR 333-615-0010(1), with preference given in the following order:

(a) Projects which include development of alternative care resources as part of the project, if an unmet need for such resources in the service area is demonstrated;

(b) Projects for which formal arrangements, together with triage criteria and mechanisms, are documented in the application with respect to all levels of low cost alternative care resources listed in OAR 333-615-0010(1). Documentation of triage criteria and mechanisms should include discussion of the relation of such criteria to the level of placement criteria developed by the Office of Health Policy and insurers under ORS 743.556(16)(b). Applicants should show that their triage criteria and mechanisms will be consistent with such level of care screening criteria.

(3) If, in the service area defined in OAR 333-615-0030(1), there does not exist a quality unit of minimum economically viable size, sections (1) and (2) of this rule apply.

(4) If, in the service area defined in OAR 333-615-0030(1), there does exist one quality unit, and its occupancy (from the designated service area) is above the appropriate criterion in **Table 1** for the year ending September 30 preceding the formal application, and available private acute beds do not exceed the interim population-based limit indicated in OAR 333-615-0030(2), a minimum economically viable increment may be needed. In addition to sections (1) and (2) of this rule, the following options will be considered, in order of preference:

(a) The existing quality unit may be expanded;

(b) An additional unit in the service area may be developed, provided that considerations of cost, access and quality outweigh the estimated economic advantages, if any, of expansion of the existing unit.

(5) If, in the service area defined in OAR 333-615-0030(1), there exist two or more units, sections (1), (2) and (4) of this rule apply, preference being given to expansion of the highest quality existing unit unless consideration of the factors in subsection (4)(b) of this rule leads to preference for an additional unit.

(6) In evaluating the relationship of any proposed project to the existing health care system of the service area, the division shall address possible compromising of quality of care. The division shall consider the conformity to state safety and program standards of both the proposed project and existing, related health services now provided to the population of the service area; the impact of the project, once completed and operational, upon the financial ability of providers of related services to maintain present quality; and the feasibility that the proposed project will be sufficiently efficient to maintain quality standards at reasonable cost. Impact on total community health care costs, not merely charges per day or charges per stay, shall be considered.

Quality and Costs

All proposed psychiatric beds must meet the licensure, certification and accreditation criteria of the Public Health Division, Medicare and the Joint Commission on on Accreditation of Healthcare Organizations, as appropriate. "Quality" for purposes of review of certificate of need proposals is a description of threshold factors to be considered, not a presumption of clinical judgment, nor a substitute for the licensing or accreditation functions. A proposal for a quality psychiatric unit shall include explicit policies, and specific examples and detail regarding each factor below:

(1) Triage criteria and mechanisms, including documentation that such criteria and mechanisms will be consistent with the level of placement criteria developed by the Office of Health Policy and insurers under ORS 743.556(16)(b);

(2) Data and record systems;

(3) Length of stay related to treatment goals, and averaging no more than 15 days for treatment of adults;

(4) Nonmaintenance, high-level treatment goals beyond mere restoration to the level just permitting release;

(5) Low recidivism; compare to data available;

(6) Rates which reflect low capital and operating costs and a justifiable rate of return; and

(7) Rapid access to quality general and multispecialty medical inpatient care.

DIVISION 645

DEMONSTRATION OF NEED FOR REHABILITATION SERVICES

333-645-0000
General

(1) The purpose of this division is to assure provision of accessible, quality care with the least incremental impact in overall community health care costs. Rehabilitation services assist people with a wide range of physical disabilities, focused on gaining optimum mobility and functioning. Least costly alternatives will be considered in determining an appropriate level of care.

(2) The applicant, in providing information to the Public Health Division to demonstrate need for inpatient rehabilitation services, must satisfy the criteria specified in the Certificate of Need Application Instructions (division 580) and in this division (division 645).

(3) Division 645 is not intended to apply to rehabilitation beds in long-term care facilities.
