HEAR FROM OUR HOMEOWNERS

"We looked at a LOT of homes in Bend, and the quality of the Solaire construction and finishes was just flat out better than everything else we saw."

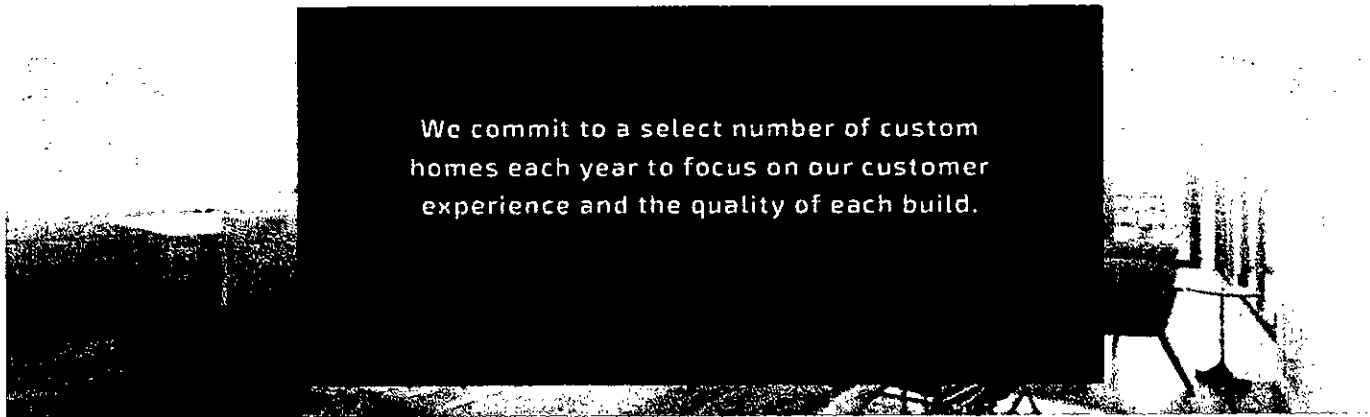

JANE W., SOLAIRE HOMEOWNER

Your legacy deserves a master builder who understands every detail of constructing an incredible custom home.

We build custom homes in Deschutes, Crook & Jefferson Counties in Central Oregon.

SOLAIRE HOMEBUILDERS

Ready to Build?

Our passion is custom built homes that are aesthetically stunning while incorporating as many energy-saving features as your budget allows.

STEP ONE

Pick Your Style

Solaire Homebuilders has been building energy-efficient homes in Bend and throughout Central Oregon since 1955. From Craftsman to Contemporary and everything in between, Solaire has the skills and experience to make your dream a reality.

STEP TWO

Enjoy Savings

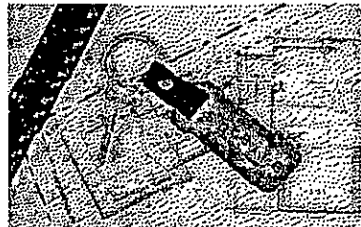

With many Bids to our credit, like building the first LEED-certified home in Central Oregon, our experienced team can help you maximize your home's energy efficiency and long-term energy savings.

STEP THREE

Join Our Family

The Solaire team will be your partner and guide throughout your entire custom homebuilding journey. Our team of experienced, professional construction professionals will give you a sense of comfort and pride for years to come. By the time you get the keys and move into your beautiful new home they will feel like extended family.

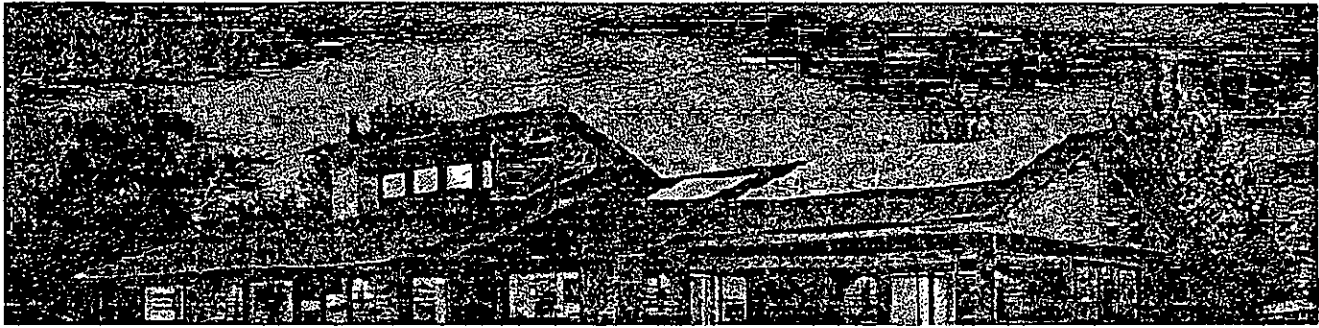

STEP FOUR

Get Certified

We offer third-party certifications for all our customers. Every home will be LEED Earth Advantage and ENERGY STAR certified. LEED for Homes certification (Leadership in Energy and Environmental

READY TO BUILD YOUR DREAM HOME?

COLEBILMERBODILOFAS

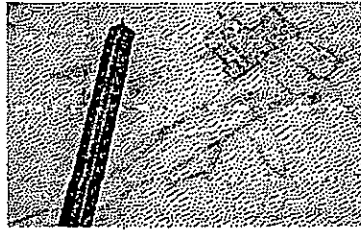

Our Net-Zero Home Building Process

Building high-performance, energy efficient homes requires intentional and thoughtful design. It's not just about installing solar panels on your roof or re-insulating your walls—it's an integrated process that results in a healthy, sustainable home.

STEP ONE

Plan for the elements

Building your net-zero home starts with site orientation. A property's orientation, location, and placement of the house all determine its energy use and influences energy consumption. We'll position your home to take full advantage of the sun in every season, so the low-lying high-rising summer sun will be tamed by carefully designed overhangs to keep you cool in the heat. This intentional site orientation will require less energy to heat or cool your home.

STEP TWO

Create an airtight home shell

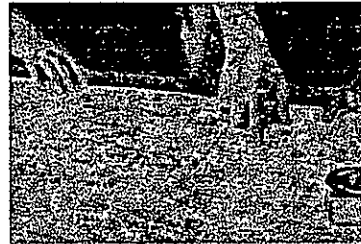

Designing, constructing, and optimizing your home shell is one of the most important parts of the net-zero home building process. For example, we use advanced materials such as triple-paneled windows and advanced framing and air-seal techniques so you'll experience a well-insulated, airtight home. Best of all, your optimized net-zero home shell will reduce energy consumption and eliminate drafts so you can enjoy even, comfortable temperatures in every room of your home.

STEP THREE

Reduce energy consumption

In other words, we improve energy efficiency by installing high performance products. High-efficiency furnaces and heat pumps can save you 50-75% in heating and cooling costs. We can integrate ground source heat pumps, energy recovery ventilators and solar hot water systems for even greater efficiency. LED lighting strategies will improve your indoor comfort, brighten home work areas, and use 85% less energy than incandescent light bulbs.

STEP FOUR

Improve air quality

With a net-zero home shell that is well-insulated and airtight, your indoor air quality is equally important to manage. Your energy

recovery ventilator will continuously bring in fresh air and exhaust stale air. As with every step in the net-zero home building process, this step is as efficient as possible. As fresh air comes in, your ventilator will filter out bacteria, pollen, and more, while pre-conditioning the air to nearly match current room temperature. In the end, you breathe easier while your high-efficiency home uses significantly less energy. And we're not done yet.

STEP FIVE

Conserve the earth's resources

This is a core belief for Solaire Homebuilders. And while every building project has a significant amount of waste, we believe in doing our part to use efficient building practices. We do this by recycling waste from the building process and using recycled building materials, sustainably harvested lumber (PSCL), water-wise plumbing fixtures, low-impact site planning, and WaterWise and native landscaping techniques.
